swered generally with such food as would prevent starvation, not with such as would afford pleasure.” This passage I have chosen to illustrate the temperate style for this reason, that here the author does not urge those who have not yet consecrated themselves to virginity to do so, but treats of what the character of those should be who have thus consecrated themselves. For, that the heart be led to make so important and so serious a decision, it must certainly be aroused and set on fire by the grand style of oratory. Cyprian, the martyr, has written on the dress of virgins, not on embracing the profession of virginity. And still this bishop inflames women even as to this, with great eloquence.

49. But I shall draw illustrations of the grand style from a subject which both have treated. For both have inveighed against those women who color, or rather discolor, their faces with paint. The first, in his condemnation of this, says among other things: “If some artist had painted the features, form, and outward appearance of a certain person in colors rivaling nature’s, and when the picture had been painted and finished, another hand, as if being more skilled, should set about doing over what had already been conceived and painted, the insult to the first artist would seem to be a serious one, and his indignation just. And you, do you think that you can carry through such shameless and daring insolence, an offense against God, the great Artist, without being punished? For although toward man you are not unchaste, nor are you corrupted in heart through your meretricious adornments, yet in spoiling and violating what is God’s, you are a worse adulteress. That you consider yourself adorned and beautified, this is an insult to the divine work, a violation of truth. The Apostle’s word of admonition is: *Purge out the old leaven that you may be a new paste, as you are unleavened. For Christ our Pasch is sacrificed. Therefore let us feast, not with the old leaven, nor with the leaven of malice and wrongdoing; but with the unleavened bread of sincerity and truth.* But can sincerity and truth remain when what is sincere is polluted, and when what is true is turned into a lie by immodest coloring and deceitful cosmetics? Your Lord says: *Thou canst not make one hair white or black,* and do you wish to be

more powerful, so as to set at naught the words of your Lord? With insolent daring and sacrilegious contempt, do you dye your hair; with evil presage of the future, do you make your locks flame-colored?" It would take long to quote all that follows.

50. And the later writer, speaking against such women, says: "Hence arise those allurements to sin, that they seek color with which to paint their cheeks, fearing to lose the good opinion of men; and from adultery of their faces, they consider adultery of their chastity. What folly is this to change the appearance of nature, and to seek merely for its likeness, and while fearing a husband's disapproval, to betray one's own! For that woman is the first to pronounce against herself who wishes to change what nature has made; and so, while she studies to make herself pleasing to another, she is already not pleasing to herself. What truer judge shall we ask, oh woman, of your want of beauty, than yourself, since you fear to be seen? If you are beautiful, why do you hide it? If ugly, why do you pretend to be beautiful, enjoying neither peace in your own conscience, nor satisfaction in misleading others? For he loves another; you wish to please another; and you are angry if he loves another, being taught adultery by you. You are the evil teacher of your own wrong. For a woman who has been the victim of the panderer, still herself refuses to pander, and bad woman as she is, still she sins not so much against another as against herself. The sin of adultery is almost more tolerable than yours, for in the first instance modesty is corrupted; in the second, nature." It is certainly clear, I think, that here women are eloquently and passionately dissuaded from spoiling their faces by paint, and are urged to modesty and fear of self. We recognize, therefore, not the subdued style of oratory here, but the grand style throughout. But in these two authors whom out of many I have chosen in illustration, and in the other ecclesiastical writers who speak on worthy subjects, and in a worthy way, that is, as the matter demands, to the point, eloquently, and passionately, these three styles can be found scattered through their many writings and treatises, and can, through abundant reading and hearing, with the addition of practice, become engrafted in students' minds.

51. No one should suppose that it is against the rule to mingle these three styles. On the contrary, as far as it can properly be done, one should vary his diction by using all three. For when a speech is surfeited with one style, it does not keep the listener's attention. But when a change is made from one to another, even if the discourse is stretched out to some length, it proceeds in a more pleasing fashion; although each style, too, has variations of its own in the language of the eloquent, which do not allow the attention of the audience to grow languid or to cool off. However, we can more readily bear the subdued style alone for a longer time, than the grand style alone. For the higher the pitch to which the feelings are to be excited in order to gain the assent of the audience, the shorter the time that this can be maintained once they have been sufficiently excited. And so we must take care lest desiring to lift higher what is already lifted high, there be rather a fall from the pitch of excitement already attained. But by interspersing matter which requires rather the subdued style, a pleasing return can then be made to the subject calling for grand expression, so that the flow of diction comes and goes like the tides of the sea. Hence it is that the grand style of diction, if it has to be continued for some time, must not be used alone, but must be varied by the interspersion of the other styles. The whole discourse, however, is attributed in kind to the style which predominates.⁴⁰

52. It is, therefore, a matter of importance to know what style should be interspersed with what other style, and what kind should be used in definite, necessary places. For even in the grand style, properly the introduction should always, or nearly always be moderate.⁴¹ And the orator has the right in some places to speak in the subdued style, even when the grand style could have been

⁴⁰Augustine brings out the necessity of rhetoric to dialectic, and *vice versa*, in *De Dial.* 7. The dialectician must, at times, borrow some of the graces of rhetoric if he sees the need of attracting his audience; the orator, on the other hand, must strengthen his cause by making dialectic the bones and sinews, as it were, of his persuasion. [Tr.]

⁴¹Although certain places call for the grand style, there is no violation of principle to use a lesser style in part, in order by contrast to enhance the grand style when used. [Tr.]

used, so that what he expresses in the grand style may by comparison become even grander, and as it were, through the shadows of the other appear even more luminous. But whatever the style, if some knotty question demands solution, acumen is called for, And this the subdued style claims as its own.⁴² And for this reason, this style must be used even in the other two, when such questions arise in them; just as when something requires praise or censure, and it is not a question of the condemnation or the acquittal of anyone, nor of a person's assent to some course of action, no matter what the kind of style used when this occurs, the moderate style must then be taken up and interposed. And so in the grand style and in the subdued also, the other two find place.⁴³ The temperate style, on the other hand,⁴⁴ not indeed

⁴²As the plain style accomplishes the *officium* of *docere*, and is used particularly in judicial oratory (considering classical *genus*; dialectic, considering Augustine's conception of kind of speech), and in the *narratio*, *confirmatio*, *confutatio* (considering parts of a speech), so the moderate style accomplishes the *officium* of *delectare*, and is used particularly in deliberative oratory (considering classical *genus*; panegyric in Augustine's conception), and in the *exordium* (aiming to make the audience *attentos*, *dociles*, *beneuolos*) and *rationis confirmatio*, or elaboration of the proof (considering parts of a speech). [Tr.]

⁴³In a speech preponderatingly grand, the plain style has place (1) where *docere* is the object, *i.e.*, clearly to define a position, or to prove or refute an argument, (2) in more elevated thought, in order to enhance the grand by contrast. In a speech outstandingly grand, the moderate style has place (1) where *delectare* is the aim, *i.e.*, to conciliate the audience in the *principium*, and to please in the amplification of the proof, (2) in oratory leaning to the panegyric, where violence of feeling is not called into play. Considering, on the other hand, a speech preponderatingly plain, or dialectical, the moderate style has place where the circumstances just mentioned are evident, and the grand style has place where, as Augustine will emphasize below, the audience needs to be persuaded, by the moving of their emotions, to do that which, through reasoning, they realize is right. Cicero expresses this last relation in the conclusion to the quotation given above (in note: *in quocumque . . . uindicat*) where he speaks of the styles in their connection with the various parts of a speech (Orat. 36, 125). [Tr.]

⁴⁴There is a difference in regard to the temperate style. It, at times, uses the plain style, when the circumstances are such as explained above, where the plain was found necessary to the *genus grande*. But it has no need of the grand style, from the very nature of its purpose, *delectare*, which does not seek to rise to *flectere*, as *docere* often does, but is rather an aim in itself. Augustine, though he maintains the threefold division traditional and popular in Roman rhetoric, still often recog-

always, but still sometimes requires the subdued style if, as I have said, some question occurs whose difficulty demands solution, or when something which could be embellished is not embellished, but expressed in subdued language that it may furnish a more conspicuous place for certain bows, as it were, of embellishment. But moderate diction does not need the grand style, for it is used to please the mind, not to move it.

53. If a speaker get frequent and loud applause, it should not on that account be imagined that he is talking in the grand style, for this is the effect of the acumen of the subdued style, and of the ornament of the temperate.⁴⁵ But the grand style does generally silence all voices by its impressiveness, and calls forth tears. In fact, when at Caesarea in Mauritania,⁴⁶ I was urging the people against civil strife or worse than civil strife, which they called *caterva*—for not only fellow citizens, but also relatives, brothers, even fathers and sons, setting themselves into two divisions, fought each other with stones for several days at a time regularly each year at a certain

nizes, as here, that style is fundamentally twofold, as the Peripatetics conceived it, λόγος πρὸς τὰ πράγματα and λόγος πρὸς τοὺς ἀχρωμένους, and that the grand and the temperate styles are connected in being merely phases of the latter. [Tr.]

⁴⁵The grand style appeals not merely to the mind; it touches the heart. Therefore, though the plain and the temperate styles may receive great applause, the grand style is heard rather in hushed silence, or with tears. Augustine must have frequently experienced this himself. He gives one example of it below, in the instance of the effect of his address at Caesarea. Another interesting one is found in *Retract.* 2, 51, where he describes the utter silence with which Emeritus, the Donatist bishop, heard the discourse delivered in answer to the charges he had brought against the church: *ubi non inueniens quid responderet, totum sermonem meum quem de solis Maximianistis in auribus eius et omnium quo aderant explicauit tamquam mutus audiuit.* Turning to the *De Gestis cum Emerito*, to examine the speech itself for evidence of its power, while one recognizes that the force of its dialectic must have had a strong effect in silencing Augustine's opponent, still it is evident that the moving eloquence of its final words, spoken in the unadorned grand style, could not but have helped powerfully not only to hold silent the Donatist bishop himself, but also to move to tears the Catholic bishops who were also present at the conference. [Tr.]

⁴⁶Sister Thérèse summarizes evidence to indicate that Augustine made this trip to Caesarea in 418 C.E., on Church business. [Ed.]

season, and each killed whomever he could⁴⁷ — I pleaded indeed in the grand style to the best of my power, to root out and dispel by my words so cruel and inveterate an evil from their hearts and lives; still, it was not when I heard their applause, but when I saw their tears, that I felt I had gained something. For by their applause they showed that they understood and were pleased, but that they were won, they made evident by their tears. When I saw these, I knew, even before they proved it by the actual fact, that that barbarous custom, handed down from fathers, grandfathers, and far back from their ancestors, which had obsessed, or rather possessed their hearts in so savage a manner, was conquered. And directly my discourse was ended, I turned their hearts and lips to offering thanksgiving to God. And behold, it is now almost eight or more years since, through the grace of Christ, anything of that kind has been attempted there. And there are also many other experiences through which I have found out that men manifest the effect of the grandeur of grave eloquence not by shouting, but rather by groans, sometimes by tears, finally by change of life.⁴⁸

54. But even by the subdued style many have been changed, but only to know what they were ignorant of, or to believe what seemed unbelievable to them, not, however, to do what they already knew they should do, and did not wish to do.⁴⁹ For truly to bend stubbornness of this kind,

⁴⁷Augustine refers to a very turbulent celebration held in honor of the god Mars, the festival of the October horse. . . . [Tr.]

⁴⁸The effect of the grand style, when successful, is the touching of the heart and the moving of the will, revealed immediately by the restraint of the audience rather than by a demonstration, and ultimately by conversion of life. [Tr.]

⁴⁹The temperate style, aiming primarily to please, may however, through its aptness to praise or blame, influence its audience to change of life in accordance with this censure or praise. But unlike the other two styles, the middle style does not directly set out to effect change in its hearers, and does so only at times, not as a rule. Augustine's language here is also in imitation of the style under discussion. His use of the figure of derivation, paragenon (laudibus: laudabiliter: uituperationibus: uituperabiliter), accompanied by chiasmus (laudabiliter appetant fugiantque uituperabiliter) is more ornate and pleasing than the simpler figure of polyptoton used in the sentence above, explaining the plain style, since the latter implies only the more usual difference of mood and tense in the repetition of a word (agerent . . . agendum . . . agere), though

the grand style is necessary. For even when praise and censure are expressed eloquently, though merely in the moderate style, some people are so affected that they are not only pleased by the eloquence with which the praise or censure are expressed, but they seek to live in a manner deserving praise, and they avoid living in one deserving censure. But who will claim that all who are pleased by a speech, model themselves on it, as all who are moved by the grand style act in accordance with it, and all who are instructed by the subdued style understand or believe the truth of which they are ignorant?

55. From this we may conclude that the end which the two last named styles aim to bring about is very important to those who desire to speak with wisdom and eloquence.⁵⁰ But the end in view in the moderate style, namely, to please by eloquence, is not in itself worthy of being used, except, through the very pleasing quality of the expression, to gain a somewhat more willing assent or a firmer hold for a matter which is useful and good⁵¹ but which does not require explanation or persuasive eloquence, since it already has its audience well informed or favorably disposed. For since the function of all eloquence, no matter in which of these three styles, is to speak in a way adapted to persuasion, and the end, that is, what you aim at, is to persuade by speaking,

this too is accompanied by paronomasia (nesciebant: scirent; incredibile: crederent), used however not to please the fancy, but to clarify the thought. [Tr.]

⁵⁰All of Augustine's teaching in regard to the temperate style tends toward, and finds its conclusion in this chapter. He here differentiates definitely between Christian ideals and Sophistic, in regard to that all important tenet of sophistic teaching, "art for art's sake." [Tr.]

⁵¹Augustine's expression of this fundamental truth of Christian oratory could not be clearer or more concise. He has been preparing for it in all he has taught above, especially in chapters 13 and 14, so that he can afford here to state his ground in the most succinct, decisive terms: "Art for art's sake" has no place in Christian oratory; "art for truth's sake" should have, and has. This can be illustrated from almost any of Augustine's own sermons. An interesting example is found in Serm. 52, 14. There, being assured that he has made his point as to *docere* in regard to the mystery of the Blessed Trinity, he concludes by a summary of the doctrine, but in order to gain a prompt and firmer hold on the audience (ut promptius . . . uel tenacius . . . adherescat assensus) he clothes his reasoning in an attractive style. . . . [Tr.]

so, in whatever of the three styles indeed an orator speaks in a manner adapted to persuasion, unless he does persuade, he does not attain the end of eloquence.⁵² For instance, in the subdued style he persuades his audience that what he says is true; he persuades them in the grand style, to do what they now know they ought to do, but are not doing; he persuades them in the moderate style that he is expressing himself in beautiful and elegant language. But of what use to us is this end? Let them aim at it who glory in fine language, and who show off in panegyrics and such like modes of speech, in which the aim is not to instruct the audience, nor to move them to some course of action, but merely to please them. But as for us, let us turn this end to another end;⁵³ for instance, to aim to bring about, even by this style, what we aim to effect in a speech in the grand style, that is, to make good morals esteemed or evil morals avoided, if the audience are not so hostile to this course of action as to seem to need urging to it by the grand style, or if they are now following it, to make them follow it with greater zest and to persevere in it with constancy. Thus it is that we use even the ornament of the moderate style not ostentatiously, but wisely, not content with its own purpose, namely, merely to please the audience, but rather striving for this, to help them even thereby to the good toward which our persuasion aims.⁵⁴

56. And so those three points which we named above as ends to be striven for by everyone who

⁵²Augustine has in mind the general classical teaching: cf. again the standard authorities quoted above in chapter 13: Arist. Rhet. 1, 1, 1354a; De Invent. 1, 5, 6; De Orat. 1, 61, 260; *ibid.* 1, 31, 138; *ibid.* 1, 49, 213, etc. Since persuasion is the end of oratory, it is likewise the end of each and all of the styles; and unless one succeeds in persuading, he does not attain the end of oratory. A. wants to prove that the middle style also aims at persuasion—in its case, merely this: that it is persuading well—a wholly unlawful end, and therefore to be rejected, or rather turned into something useful and fitting, by the Christian orator. [Tr.]

⁵³The insinuation is unmistakable: Let Sophists vaunt themselves in the middle style; the Christian orator must turn *delectatio* to a nobler end. [Tr.]

⁵⁴A.'s conclusion: The ornament of the middle style is to be used as an aid to the other styles, and in order to insure the accomplishment of their ends.—Note how well Augustine recognizes this in practice, as for instance in the sermon quoted above. [Tr.]

desires to speak with wisdom and with eloquence,⁵⁵ namely, to make one's words understood, enjoyed, and persuasive, are not to be so taken as to be applied only respectively to the three styles of speaking: being understood, to the subdued style; being enjoyed, to the moderate style; and being persuasive to the grand style; but rather in such a way that the orator ever aims at all three, and employs them all, in so far as it is possible, even when he is concerned with each one of them separately. For it is not our desire that even what we say in the subdued style be tiresome, but through this style we wish not only to make ourselves understood, but even enjoyed.⁵⁶ And why do we enforce what we have to say in teaching, by quotations from Holy Scripture, but to make ourselves persuasive, that is, to make our audience believe us, with the assistance of Him to whom it is said, *Thy testimonies are become exceedingly credible?*⁵⁷ What too does he desire except to be believed, who tells a story to an audience even though in the subdued style?⁵⁸ But who would wish to give one his attention unless the latter could hold his listener by some charm of style? For who does not know that one who is not understood cannot make himself either pleasing or persuasive? For as to this subdued style,⁵⁹ many times when it unravels

⁵⁵In chapter 12, Augustine discussed the three *officia oratoris*; in chapter 17, he showed their relation to the three styles, *i.e.*, how they give rise to the plain, the middle, and the grand styles respectively (is erit igitur eloquens, etc.), *docere* being the end of the plain style, *delectare*, of the middle, *flectere*, of the grand. But viewing the styles in a broader way, *viz.* as all being the vehicles of persuasion, and as all having, in reality, this one end, namely, to persuade, the conclusion is here drawn that each style while aiming particularly at its own special *officium*, must necessarily include the other *officia* also, in order to reach the general end, *persuadere*.—Augustine thus logically proves how the individuality of each style merges into a unity, perfect in its interlocked relation of part to whole, and part to part. [Tr.]

⁵⁶The plain style aims at *docere*, but without tedium, hence it includes also *delectare*. [Tr.]

⁵⁷The plain style aims to teach, but when scriptural proofs are adduced, it aims to teach so as to persuade, hence it involves *docere* and *flectere*. [Tr.]

⁵⁸A narration belongs to the plain style, but it exhibits this style in its most attractive form, hence it belongs both to necessity and to charm, involving *docere* and *delectare*. [Tr.]

⁵⁹The plain style, even of the *argumentative* type, when it is accompanied by a natural grace (*decus naturale*), and a

very difficult questions, and proves them by an unexpected explanation, when it unearths and displays the most penetrating observations from obscure caverns, as it were, whence they were not expected, when it proves an opponent's error, and shows that to be false which seemed to have been stated as unassailable by him, especially if a certain grace accompanies it, not aimed at, but, in a certain measure natural, and some use of rhythm in clausulae, not obtrusive, but, as it were, necessary, and, so to speak, drawn out of the subject itself, it excites such applause that one would scarcely believe it to be the subdued style. For from the very fact that it does not come forth adorned and armed, but stalks out stripped bare, as it were, for that very reason it does not fail to crush its opponent by its very sinew and muscle, and to overwhelm and destroy the resistance of falsehood by its own strong arm. But whence comes it that such speakers are so frequently and greatly applauded except that truth thus set forth, thus defended, thus rendered unassailable, gives pleasure? And, therefore, in this subdued style, that teacher and speaker of ours ought to strive not only to make his discourse understood, but also to make it enjoyable and persuasive.

57. The eloquence of the moderate type, too, in the case of the ecclesiastical orator is not left unadorned,⁶⁰ and yet it is not unbecomingly adorned, nor does it only aim at giving pleasure, the sole end that it professes in the hands of others, but in holding up those things which it praises or censures, on the one hand as matters worthy of being sought for and firmly maintained, on the other, as deserving to be avoided and rejected, it also certainly aims at being per-

rhythm of cadences (*numerositas clausularum*), inherent in the subject itself, often accomplishes, because of its unadorned simplicity and its evident strength and truth, all three ends, *docere*, *delectare*, and *flectere*, just as well as does the narrative plain style. The conclusion is that the plain style is naturally apt to the accomplishment of the three *officia*. [Tr.]

⁶⁰The temperate style calls for ornament, but ornament in moderation. Note how A., in his final summary of the styles, repeats the points he has made above as essentials. *Moderation* in the use of the florid style was insisted on in chapter 14, where the excess of the Sophists was decried. Consideration so far is only of *delectare* in the middle style. [Tr.]

suasive. But if it is not understood, neither can it give pleasure. And so all three ends, viz., that the audience should understand, be pleased, and be persuaded, must be striven for even in this one style, where giving pleasure holds first place.

58. But when it is necessary to move and convince a listener by the grand style—as it is when one's opponent grants the truth and attractiveness of what is said, but is unwilling to act upon it—one must without doubt express himself *grandly*. But who is moved if he does not understand what is said, or whose attention is held if he is not pleased? Wherefore, in this style also, when an obdurate heart has to be bent by the grand manner of speech, unless the speaker makes himself both understood and enjoyed, he cannot make himself persuasive.⁶¹

59. But the life of the speaker has greater force to make him persuasive than the grandeur of his eloquence, however great that may be. For the man who speaks wisely and eloquently, but lives evilly, instructs indeed many who are eager to learn⁶² though *he is unprofitable to his own*

⁶¹A final summarizing sentence. This chapter is a good example of Augustine's admirable power as a teacher and a dialectician. Every link in his chain of reasoning is perfectly welded and connected with what precedes and with what follows, so that the conclusion is accepted by the reader as a simple matter of course. Such paragraphs represent Augustine's power of expressing clearly, simply, and succinctly the relation of part to part, of his subject, and by linking-summaries, the connection between part to whole. Such treatment is only possible to a mind at once lucid and penetrating, and as simple as profound. [Tr.]

⁶²The classical student may be struck by the fact that here Augustine's views seem less strict, and more compromising than Quintilian's. Cf. Quint. 12, 1, 2-3: *mutos enim nasci et egere omni ratione satius fuisset, quam providentiae munera in mutam perniciem conuertere . . . neque enim tantum id dico, eum qui sit orator, uirum bonum esse oportere, sed ne futurum quidem oratorem nisi uirum bonum*. In reality, Quintilian and Augustine deal with different circumstances, in their respective discussions. Quintilian has to do with the legal orator whose ideals are not set for him, but who is guided wholly by the case in hand, and the attitude which he himself brings to bear upon it. Such a one when evil minded, Quintilian cannot but consider a menace to the public. Augustine realizes that the ecclesiastical orator, dealing as he does with the Word of God, possesses an instrument which will effect its end, even though the speaker himself is not exemplary of life. The Christian in his possession of Truth can meet and combat error in a way of which the pagan is wholly incapable. Moreover, Quintilian in his discussion is expressing

soul, as it is written. And so the Apostle says: *Whether by occasion, or by truth, Christ be preached.* Now Christ is truth and still, truth can be preached, even though not with truth, that is when by a mean and deceiving heart righteousness and truth are preached. Thus, indeed, Jesus Christ is preached by those who seek their own ends, not those of Jesus Christ. But since good Christians obey not any man whatsoever, but the Lord Himself, who says: *Whatsoever they say to you, do: but according to their works, do you not, for they say and do not,* therefore are they heard with profit, even though they themselves do not lead profitable lives. For they are zealous in seeking their own ends, but they dare not teach their own from the high place, forsooth, of ecclesiastical authority, which sound doctrine has established. For this reason the Lord Himself, before saying what I have just quoted about men of this kind, declared: *They have sitten on the chair of Moses.* That chair, therefore, which was not theirs but Moses', forced them to say what was good, even though they were not doing what was good. And so they pursued their own ends in their lives, but to teach their own, that, the chair which belonged to another did not allow them to do.

60. And so they do good to many by preaching even what they do not live up to; but far more would they do good to by practicing what they preached. For there are many who seek to defend their own evil lives by their very superiors and teachers, answering in their hearts, or even if they go so far, saying with their lips, "What you tell me to do, why do you not do yourself?" And so it comes about that they do not follow one who does not follow his own preaching, and they condemn the word of God which is preached to them, along with the preacher himself.⁶³ Accord-

his ideal of a *perfect* orator; Augustine, speaking from a more practical standpoint, explains the ideal, *i.e.*, eloquence coupled with nobility of character, but he also has to recognize the truth, *viz.* that Holy Scripture, explained eloquently, even without a corresponding integrity in the speaker, is necessarily effective, since it is the Word of God. [Tr.]

⁶³Cf. the pagan's realization of a similar loss accruing, in his case, to eloquence: The harm done by the Christian is incomparably greater, since it involves contempt for the Word of God. [Tr.]

ingly, the Apostle, in writing to Timothy, after saying, *Let no man despise thy youth,* adds how he would avoid being despised, saying, *Be thou an example of the faithful in word, in conversation, in charity, in faith, in chastity.*

61. Such a teacher, to render himself persuasive, may without presumption express himself not only in the subdued and in the moderate style, but also in the grand style, because his life is beyond reproach. For truly he so chooses to live a good life as not indeed to neglect a good reputation, but especially so as to forecast what is good before God and man, in as far as possible, by fearing God and by caring for man.⁶⁴ Even in his very speech he should prefer to please through his matter rather than through his words, and he should consider that a thing is not well said unless it be truthfully said; nor should the teacher serve words, but words, the teacher.⁶⁵ For this is what the Apostle says: *Not in wisdom of speech lest the cross of Christ be made void.* Of the same purport, too, is what he says to Timothy: *Contend not in words, for it is to no profit, but to the subverting of the hearers.* This, however, is not said to the end that we should say nothing in defense of truth whenever opponents attack it. And where will be what, among other things, he said when he was showing what character a bishop ought to be: *That he may be able in sound doctrine, also to convince the gainsayers?* For to contend in words is not to care how error may be overcome by truth, but how your style may be preferred to another's. However, the man who does not contend in words, whether he expresses himself in the subdued, or in the moderate, or in the grand

⁶⁴Sincerity should be dominant in the Christian orator, and a singleness of purpose that aims first at pleasing God, then, as a necessary consequence, at pleasing men. A good reputation naturally follows, but is not primarily sought for. Augustine, of course, is guarding his disciples against the pitfalls of Sophistic. This, his next words make clear. [Tr.]

⁶⁵A. crystallizes in a brief sentence what he has tried to inculcate throughout the entire treatise. With the Christian orator, matter is of first importance, style is secondary; truth is the grand object, ornament must be subservient to it. As shown above in chapter 5, in quotations from Cicero, this was recognized and practiced by the best speakers of classical times, but the prevalent formalism of the third and fourth centuries was, in A.'s time, a factor that had to be combatted, and this is done here by a trenchant restatement of old ideals. [Tr.]

style, has this aim in speaking, that truth be made clear, that truth be made pleasing, that truth be made convincing; for not even love itself, which is the end of the commandment and the fulfilling of the law, can in any way be right if the objects of love are not true but false.⁶⁶ For as one whose body is comely, but whose heart is depraved is more to be pitied than if his body also were deformed, so those who express falsehood with eloquence are more to be deplored than if they should express the same in an unseemly way.⁶⁷ And so what is it to speak not only with eloquence but also with wisdom, except to employ words which are adequate, in the subdued style; striking, in the temperate style; and strong, in the grand style—in regard to truth, of course, which it is fitting should be heard?⁶⁸ But if a person cannot do both, let him speak with wisdom, even though he cannot with eloquence, rather than with eloquence without wisdom. But if even this is impossible, let him so conduct himself as not only to deserve a reward for himself, but also to offer an example to others; and in his case, let his manner of life be, as it were, a flowing speech.⁶⁹

⁶⁶This is A.'s culminating statement in regard to the three styles and the three *officia*. Having carefully explained their nature, relation, and effects, their striking individuality, and their yet grander unity, he here shows that in the highest oratory, they find their most complete *one-ness* in the singleness of their matter, *i.e.*, in *ueritas*. [Tr.]

⁶⁷This expresses, in its proper connection with *ueritas* as the dominating factor of eloquence, the contrary practice of the Sophists, of clothing falsehood in fine language. See chapter 14 for Augustine's full treatment of this point. [Tr.]

⁶⁸A. again looks back to his earlier discussion (cf. chapter 5), and connects with the styles and their common subject-matter, *ueritas*, the eloquence and wisdom there differentiated and explained. He now states that the orator who would speak *eloquently* must use the styles, but that if he would also speak *with wisdom* he must (1) make the subject of these, *truth*, and (2) apply the styles to this subject in such a way as to be adequate in the plain style, attractive in the temperate, and moving in the grand. This second point is nothing else than the application of the old classical ideal of τὸ πρέπον, *decorum*, "fittingness." It is characteristic of Augustine thus to lead up to the orator's supreme quality, which though hinted at, wherever it was fitting to do so, throughout the treatise, is here given its proper importance. . . . [Tr.]

⁶⁹A spiritual point of view, showing how the Christian standard transcends the pagan. Cicero concedes that eloquence without wisdom is of small avail, but the idea that wisdom (particularly that, expressed by integrity of life) without eloquence can effect anything in oratory, is something quite beyond his conception. [Tr.]

62. But there are, indeed, some men who can deliver a sermon well, but who cannot think out its matter. Now if they take what has been eloquently and wisely written by others, and commit it to memory, and deliver it before the people, if they assume this character, they do no wrong.⁷⁰ For thus, as is certainly profitable, many become preachers of truth, though not many, teachers, if they all speak the same thing of one true teacher, and there are no schisms among them. Nor need they be frightened by the word of Jeremias the Prophet, through whom God rebukes those who steal His words, everyone from his neighbor. For those who steal take what belongs to another, but the word of God belongs to those who obey it; and that man rather speaks the words of another, who speaks well but lives badly. For whatever good sentiments he expresses seem to proceed from his own thought on them, but they do not belong to his way of living. And so God has said that those men steal His words who wish to appear good by speaking God's word, though they are evil in following a course of their own. And indeed it is not they themselves who speak the good that they speak, if you study the matter closely. For how can they express in words what they do not express in deeds? Truly not for nought does the Apostle say of such: *They profess that they know God: but in their works they deny Him*. And so in a certain sense they speak, and again in another sense they do not, since both these verses are true, because Truth itself utters them. For, again, speaking of such as these, He says: *What they shall say to you, do; but according to their words, do ye not*. That is, "What from their lips you hear, that do, but what in their works you see, that do not do." *For they say*, he continues, *and do not*. And so though they *do not*, still they *say*. But in another place, rebuking such men, He says: *Hypocrites, how can you*

⁷⁰This in no wise proves that Augustine himself was accustomed first to write his sermons and then to memorize them, nor that he in any way rejects extempore address either for himself or for others. On the contrary, as expressed above, in chapters 3, 4, 5, 10, Augustine inculcates the doctrine of adaptation to one's matter and audience—a thing which is only perfectly attainable in speeches that are extemporaneous. What he says here in regard to memorizing a set speech is clearly by way of concession, for one of mean abilities. . . . [Tr.]

speak good things, whereas you are evil? And from this it would seem that even what they say when they speak good things, they do not themselves say, since forsooth in will and in deed, they gainsay what they say. And so it may happen that an eloquent man, though bad, may himself compose a sermon in which truth is set forth to be delivered by another who, though not eloquent, is good. And when this is done, the former gives as from himself what belongs to another, while the latter receives from another what is really his own. But when good Christians render this service to good Christians, both speak what is their own, because God is theirs, and to Him belong the words which they speak;⁷¹ and they make these, too, their own, though they were not able to compose them, if they compose their lives in accordance with them.

63. But whether a person is now making ready to speak before the people or before any other group whatever, or to compose something neither to be delivered before the people or read by those who wish or can do so, he should pray God to put a fitting discourse upon his lips. For if Queen Esther prayed when she was about to address the king in regard to the temporal affairs of her people, that God might give her a well-ordered speech in her mouth, how much more ought he to pray to receive such a gift who labors in word and teaching for the eternal welfare of mankind? Those, too, who are to deliver what they receive from others, even before they receive it, ought to pray for those from whom they receive it, that

⁷¹Another evidence of that dependence on faith which distinguishes Christian from pagan oratory. [Tr.]

what they wish to receive, may be given to them; and when they have received it, they should pray that they themselves may deliver it well, and that those to whom they speak may take it; and for the successful issue of their discourse, they should give thanks to Him from whom they cannot doubt but that they have received it, that he who glories may glory in Him in whose hand are both we and our words.

64. This work has turned out longer than I had wished, and than I had planned. But if it is interesting to one who reads it or listens to it, it will not be long; if, however, anyone finds it long, he should read it in parts if he still wishes to become acquainted with it; on the other hand, one who is not interested in making its acquaintance should not complain of its length.⁷² But for my part, I give thanks to God that in these four books, I have treated with whatever little ability I have, not of such a one as I myself am, for I have many deficiencies, but of such a person as he should be who in sound teaching, that is in Christian teaching, strives to labor not only for himself, but also for others.⁷³

⁷²A. can never entirely rid himself of his training as a dialectician. Here, even in his words of apology for a long work, he is not able to refrain from getting the better of his reader by this clever turn of a dilemma, which is all the more characteristic of him by being expressed in the order of the figure of *climax*. [Tr.]

⁷³Augustine ends on the note which he has tried to keep dominant throughout this book, viz., that the instruction aimed at by the Christian speaker is, unlike that prevalent in the schools of the Sophists, a thoroughly sound and wholly natural one. It is for this reason that passing over the popular rhetorical precepts of the fourth century, he returns to the same theory of classical times. This, vivified by the Christian spirit, he puts forward as a new-old ideal. [Tr.]

Boethius

ca. 480–524 C.E.

Anicius Manlius Severinus Boethius was born into a patrician Roman family, received an excellent classical education, and served as a senator while pursuing his avocation in philosophy. In its bare outlines, his life thus resembles Cicero's. But Boethius was born after the fall of the last Roman emperor. He served the court of Theodoric the Great, an illiterate Ostrogoth. With Cassiodorus, his contemporary, and other Christian and pagan scholars, Boethius undertook to educate Theodoric's family, to write his official correspondence, and to deliver panegyrics for the court. Theodoric had him executed in 524 on suspicion of plotting with the Byzantine emperor Justinian I to retake the Italian peninsula from its pagan overlords. Boethius describes his own offense (in *The Consolation of Philosophy*) as defending the rights of the Roman senate, still extant in his day but subservient to the pagan rulers. A Christian, like most of the Roman aristocrats of his day, Boethius is also regarded as a martyr for his faith, and he was beatified by the Roman Catholic Church in 1883.

Aware that Greco-Roman culture was in danger of being lost, Boethius tried to preserve what he could through his own scholarship, which was enriched by contacts with classical scholars of the Byzantine empire. He became an important source of classical learning for medieval scholars. Boethius aimed to translate the whole of Plato and Aristotle into Latin. This project was cut short by his death, but Boethius was right to think that it was necessary: Before the thirteenth century, almost the only Greek philosophy known to western Europe was in his translations. Boethius also wrote widely read commentaries on Aristotle and Cicero. Considering his importance to the history of rhetorical theory, it is ironic that Boethius, like so many later medieval intellectuals, was not particularly interested in rhetoric. He saw himself as a philosopher. Indeed, one of his most influential works up to the present time is *The Consolation of Philosophy*, which was written while he was in prison awaiting execution and which poignantly describes the power of philosophy to help one prepare for death.

The most important work by Boethius on rhetoric is actually a treatise on logic, *De Topicis Differentiis* (ca. 522), which was well known throughout medieval times under the title *Topica Boetii*. Here Boethius focuses on topical logic, that is, logic that uses rhetorical topics or commonplaces to explore ideas. In the first three books of the treatise, Boethius analyzes and compares various classical systems of topical invention, concentrating primarily on Aristotle's and Cicero's. In the last book, he turns to the theoretical issue implicitly raised by the borrowing of rhetorical topics for philosophical inquiry: namely, the exact boundaries between philosophy and rhetoric. Boethius holds that philosophical argument, or dialectic, deals with general questions—theses—whereas rhetorical argument deals with specific instances—hypotheses. Dialectic employs complete syllogisms, which can be examined in dialogue with an adversary, whereas rhetoric employs truncated syllogisms, which are simply presented persuasively to the audience.

These distinctions subordinate rhetoric to dialectic. Rhetoric becomes a means of applying general rules of argumentation, established by dialectic, to specific cases. Rhetorical argument has no epistemological force of its own. Speech communication scholar Michael Leff has argued that this treatment of rhetoric places Boethius squarely in the Aristotelian tradition—not surprising, given Boethius’s interest in all of Aristotle’s works. Boethius goes further than Aristotle, however, in denying rhetoric a separate knowledge-generating status. It is merely the servant of dialectic, a method of applying arguments. Boethius thus works against what Leff denotes as the other, Ciceronian tradition of classical rhetoric, a more humanistic approach that treats language and knowledge as interrelated and thus affords rhetoric some parity with philosophy.¹

Boethius’s Aristotelian approach proved most attractive to later medieval scholars in the universities, which were dominated by the dialectical study of theology and law. As Boethius seemed to advocate, rhetoric takes a preliminary and subordinate place in the medieval university curriculum. Book IV of the *Topica Boetii* was often used alone as a textbook on rhetoric, thus forming a digest very like Boethius’s “Overview of the Structure of Rhetoric” (included here). The “Overview” almost appears to be a summary of *Topica Boetii*, Book IV, in that it sometimes uses similar wording and similar examples (e.g., the young man seen exiting the brothel).

The most important classical source of this work is the *Rhetorica ad Herennium*. By and large, Boethius uses its terminology, and his treatment also reflects that work’s emphasis on invention (which occupies about two and a half of its four books). But Boethius barely mentions style, memory, and delivery, giving the reader very little sense of how rhetoric might actually be used to affect an audience. In this light it is suggestive that when he mentions the “duties” of rhetoric, “to teach and to move,” he omits the third duty listed in the Ciceronian source of this traditional definition, namely, “to please.” Boethius’s characteristic approach may be seen in his attempt, so to speak, to philosophize rhetoric by treating it only in the most general way, in a series of definitions that analyze its parts. As historian of rhetoric James J. Murphy has observed, it seems that Boethius wishes only to “account for” rhetoric, not to explore it: to place it in an intellectual system hierarchically dominated by dialectic.²

Selected Bibliography

Joseph M. Miller’s translation (reprinted here) of “An Overview of the Structure of Rhetoric” is taken from *Readings in Medieval Rhetoric* (ed. Joseph M. Miller, Michael H. Prosser, and Thomas W. Benson, 1973). Eleonore Stump has translated *Boethius’s “De Topicis Differentiis”* (1978) and has provided helpful notes and longer discussions of difficult terms; she also explains her preference for the version of the work’s title used here, instead of the more commonly seen *De Differentiis Topicis*.

¹Michael Leff, “Boethius and the History of Medieval Rhetoric,” *Central States Speech Journal* 24 (1973): pp. 134–41.

²James J. Murphy, *Rhetoric in the Middle Ages* (Berkeley: University of California Press, 1974), p. 69.

Most histories of medieval rhetoric discuss Boethius. See also the capsule biography in George Kennedy's *Classical Rhetoric and Its Christian and Secular Tradition from Ancient to Modern Times* (1980). A longer treatment, with information on Boethius's education program and views on the seven liberal arts, can be found in Henry Chadwick, *Boethius: The Consolations of Music, Logic, Theology, and Philosophy* (1981). More biographical information can be found in "Anicius Manlius Severinus Boethius," by John Matthews, which details the political contexts of Boethius's life and work, and in "The Scholar and his Public," by Helen Kirkby, focusing more on his (and Cassiodorus's) educational background and cultural contexts (both in *Boethius: His Life, Thought and Influence*, ed. Margaret Gibson, 1981).

An excellent overview of Boethius's thought, with further bibliography, is Michael Leff, "Boethius and the History of Medieval Rhetoric" (*Central States Speech Journal* 24 [1973]: 134-41). See also Howard Rollin Patch, *The Tradition of Boethius: A Study of His Importance in Medieval Culture* (1935), which discusses his influence both as Neoplatonist and as expounder of Aristotle, and his effect on medieval literature, particularly Chaucer and Dante.

An Overview of the Structure of Rhetoric

1. It is not easy to analyze the strength of the structural bond which holds rhetoric together; the listener can hardly ever recognize it, and it is certainly not easy to describe. The angry disputes which center about the rules governing each of its parts may lead to a serious error: [Readers] may investigate each of the separate parts of the act and ignore the final product. It is this treatment of the whole, heretofore neglected, to which we now address ourselves as best we can. So we shall treat of the genus of the art, its species, its parts, its tools and the parts of the tools, the duty of its practitioners, and its goals. With this general outline of what is to be covered, we conclude the exordium of this investigation.

2. By genus, rhetoric is a faculty; by species, it can be one of three: judicial, demonstrative, deliberative. It is clear that the genus is what we have said. What we have said about the species, moreover, is true because rhetoric deals with all these processes. There is one special kind of rhetoric for judicial matters, based upon their special goals; there are other kinds of deliberative and demonstrative purposes. These species of rhetoric depend upon the circumstances in which they are used; all cases deal either with

general principles or with the specific application of those principles, in either case using one of the three species we have already identified. For example, judicial rhetoric can treat either of general topics like rendering just honor or demanding satisfaction, or of individual cases, like paying honor to Cornelius or demanding satisfaction of Verres. Likewise, cases which involve deliberation fall under the heading of deliberative rhetoric in the same way: they may deal with general topics like war and peace or with specific issues like the Pyrrhic war and the peace which followed. Similarly, in demonstrative oratory, we deal with what deserves praise or blame; we may do this either in a general way, as when we praise bravery, or in a particular case, as when we praise the bravery of Scipio.

3. The subject matter for the faculty is any subject at all which can be proposed by speaking; it is usually a question of civil importance. On such a matter, the three species of rhetoric act as molds which shape the topic to themselves; as soon as one of these forms is applied to the question, it is held to that particular structure, as will be evident in what follows. Thus, when a question of public interest which has not yet been given a form is directed at a specific goal, it immediately becomes part of one of the species of

Translated by Joseph M. Miller.

rhetoric. So a civil question can take any of the forms: when it seeks the ends of justice in a court of law, it becomes judicial; when it asks in an assembly what is useful or proper, then it is a deliberative act; and when it proclaims publicly what is good, the civil question becomes demonstrative rhetoric. So the category into which the material falls comes from the rhetoric; otherwise the faculty would be unable to work with the topic which requires special parts of its own; for when those other parts are not present, then rhetoric itself is missing.

4. But since we are treating of the species of rhetoric and how those species relate to the case being dealt with, we must make clear that they apply to every kind of business which can arise in civil matters. Anything seeking justice for its goal is judicial; anything dealing with what is useful or proper in public action is deliberative; and anything treating of the propriety, justice, or goodness of an act already performed in a matter of public interest is demonstrative. But enough of this.

5. And now we must treat of the parts of rhetoric. Rhetoric has five parts: invention, disposition, style, memory, and delivery. These are referred to as parts because if an orator lacks any one of them, then his use of the faculty is imperfect. And clearly it is not absurd to call those elements of the faculty of rhetoric its parts when, if taken together, they make the faculty itself complete. But, since these are the parts of the faculty of rhetoric and since they comprise the whole of that faculty, it is absolutely necessary that wherever rhetoric is to be used, they must be present as well. Now if rhetoric is completely present in each of its species, then all these parts must be present in each of the species. Therefore they all must be used in treating any public business when the issues are clearly assigned to one of the above-mentioned species of rhetoric. It makes no difference whether the matter is treated in a judicial manner, in a deliberative manner, or in a demonstrative manner; invention, arrangement, style, memory, and delivery must all be present.

6. Since nearly every faculty must use a tool to accomplish what it can do, we must look for some tool here. That tool is the oration, which is sometimes a civil nature, sometimes not. We are

speaking now of the [rhetorical], which deals with some such question or is designed to expedite a solution to such a question. When that kind of oration treats an issue of civil importance, it moves forward without a break in continuity; when it does not deal with matters of public concern, it is developed through questions and answers. The former is rhetoric, the latter is called dialectic. They differ because the former treats of civil hypotheses, the latter of theses; the former is an unbroken oration, the latter is interrupted; the former needs both an adversary and a judge, the latter has for a judge the same person who acts as adversary.

7. The rhetorical oration has six parts: the introduction or exordium, the argument,¹ the partition, the proof, the refutation, and the peroration. These therefore are the parts of the tool of the rhetorical faculty, and since rhetoric is completely present in each of its species, these also must be present in each of them. Nor can they be any more present than to accomplish what they are intended for. And so the structure of introduction and narration and of all the other parts of the tool is necessary in the judicial type of rhetoric, just as it is all necessary in the deliberative and demonstrative types. Now it is the duty of the faculty of rhetoric to teach and to move;² the same duty falls no less to the lot of these six elements, which are the parts of the oration. Now the parts of rhetoric, being parts of a faculty, are themselves faculties; therefore the tools which work in the entire oration must also function in each part of the oration, and so they must be present in order to work. For unless the previously mentioned parts of rhetoric are present, that is, unless the author discovers suitable material, clothes it in a good style, arranges it properly, remembers it and delivers it well, he accomplishes nothing. And the same is true regarding the parts of the tool: unless all parts of the oration have them [the parts of rhetoric], they will be useless. And, in conclusion, the practitioner of this faculty

¹In this list of the parts of a speech, the text uses the word *ratio* rather than the traditional *narratio* to indicate the second part. This may be a corrupt reading, since the ms. is unedited; at any rate, all subsequent references are to *narratio*. [Tr.]

²For some reason, the text omits the traditional third function: Cicero's *delectare* (to please). [Tr.]

is the orator, whose duty it is to speak in such a way as to persuade.

8. The orator must look for his goal both in himself and in his audience. In himself, because he must be able to say upon completion of the act that he has spoken well—that is, that he has spoken in a way calculated to persuade; in his audience, because he must in truth have persuaded them. For if a deficiency in any of those qualities which are expected of orators causes him to fail to persuade, then, even though the act of speaking be complete, the goal is not attained. And also, one who is truly wrapped up in his work and tied to it, will succeed when the task is done, but one who is unconcerned usually will not succeed. Nor does an orator lessen the dignity of his oratory because he seeks to attain his goal. And all of these factors are all bound together in the same way that rhetoric is complete in each of its species, and each species is a complete piece of rhetoric. Now the parts of cases are known as the *status*;³ and we must now make a detailed examination of them. How can they be considered parts of a case if “parts of a case” means the same things as “species of a genus”? And how is it possible that in one case there should be many *constitutiones*? The answer is that the species are very closely bound in with one another. There are indeed many *constitutiones* in a case; but they are no more “parts of cases” than *status* is “part of the species.” This is all the more clear because no species strengthens another species opposed to itself insofar as content is concerned; however each *constitutio* adds strength to every other *constitutio*. Besides, it is impossible that there should be as many parts of cases as there are parts of an entire oration. Nothing composed of one part can be whole and entire, but a single *constitutio* can be enough to build a whole case.

9. Then what is there to be said about this? It

³At this point it becomes quite difficult to translate Boethius’s explanation. The reason for this is that he uses two terms which should be synonymous, *status* (Quintilian’s word for “issue”) and *constitutio* (the word used in *Ad Herennium*); at times he seems to consider them synonymous, but at other times he seems to maintain that *status* is the “case” being discussed and *constitutio* the individual issues. Because of this confusion, I shall not attempt to translate the two words, but shall use them as Boethius did. [Tr.]

is clear to one who thinks it out. No *constitutio* can be called a “part of the case” in which it figures, because it is the subject of the dispute and the status establishes it as an issue. This is especially true when we consider that a *status* which is added to the case after one *constitutio* has been settled is not considered principal, but subsidiary. Besides, in one affair there are as many points to be argued as there are *constitutiones*, and there are as many cases as there are points to be argued; and, even granted that one piece of business may need to consider all of them, yet the cases themselves are different, despite the fact that they are so closely related to one another. For example, if a husband sees a young man coming out of a brothel, and a few minutes later sees his own wife coming out of the same place, he may accuse the young man of adultery. This, then, is the one matter to be decided; yet there are two cases: one is a conjectural one, if the young man denies that he has done anything; the other is a case of definition, which hinges on whether an act of intercourse in a brothel can be considered adulterous. But for the man who denies having done anything wrong, the conjectural *status* is not part of the controversy; to the one who is arguing definition, the definition is not part of the controversy: it is the whole controversy. Of course, I am not speaking now of “a case” in the generic sense of that word, but of an argument based on a particular *constitutio*.

10. The *constitutiones* are, however, parts of the case as a genus in this sense. For if every case were conjectural, and if there were no other status to be investigated, then the conjectural *status* would not be just a part of the case, but would be the very case itself, without exception. But since every case depends partly upon the conjectural, partly upon the end, partly upon the quality, and partly upon objection,⁴ the *constitutio* is part of

⁴In identifying these four questions, Boethius ignores the approach of *Ad Herennium*, to which he has adhered thus far, and returns to the *staeseis* as identified by Hermagoras: (1) Conjecture, “Did it happen?”; (2) Definition, “Was it really theft?”; (3) Quality, “Did circumstances justify it?”; and (4) Objection, “Does this assembly have the right to judge?” It seems, moreover, that the text of Boethius’ list is corrupt, since it reads, “*partim conjectura, partim sine, partim qualitate, partim translatione,*” while the customary Latin words

the case—not of the one particular case on which it imprints its mark, but of the case generically, because it is one of the alternative approaches which can be used independently of the others, like cutting one member off from the others. The *constitutiones* are, therefore, parts in the sense of species of the genus case, but there are not parts of any given case in which they function as necessary to the structure.

11. In summary, then, the faculty of rhetoric is a genus of which the species are judicial, demonstrative and deliberative. The subject matter is any question of civil importance, called “a case.” The parts of this subject matter are the *constitutiones*. The parts of rhetoric are invention, arrangement, style, memory, and delivery. The tool used is the oration, and the parts of the tool are the exordium, the narration, the division, the proof, the refutation, the peroration. The function of the oration is to teach and to move. The practitioner is the orator, his duty is to speak well, and his goal is to have spoken well and to persuade.

12. All rhetoric is contained in each one of its species; and the species exercise final control over the content, so that they truly make it their own. We can understand this from the fact that each of the species controls completely all the material which it contains. Thus you may find four *constitutiones* in judicial rhetoric, and in deliberative or demonstrative rhetoric you may expect to find the same four. From this we may conclude that if each of the species has all the parts of a case, speaking generically, that is of a civil question to be decided, then the case is the combination of all those parts. The entire case it-

would have been *conjectura, fine, qualitate, and tralatione*. See M. L. Clarke, *Rhetoric at Rome* (London, 1953), pp. 26–27. [Tr.]

self, then, which is the civil question, is determined by the species. It is much like the way a word comes to the ears of many people at once, complete in all its parts, that is in its syllables; for the whole case with all its parts comes under the different species at one time.

13. But when the species asserts itself over the subject matter, which is the civil question, and imposes itself upon the subject with all its parts, then it brings with it into the question the faculty of rhetoric, and also, in consequence, all the parts of rhetoric. Therefore the parts of rhetoric are necessary in each of the *constitutiones*. But when rhetoric is given authority over the material, it brings in its tool with it: it applies the oration, with all its peculiar parts. So there will be in each *constitutio* an exordium, a narration, and so on. And when the instrument is brought into play, it in turn adds its own function to the civil question; it will, therefore, teach and persuade concerning each *constitutio*. But none of these elements can enter the picture unless there is someone to move them, like an operator or an architect. This person, then, is the orator, who comes into the case and makes it his own project. Therefore he must speak well in every manner of case and in every *constitutio*. The orator also must seek his goal, both to speak well on every *constitutio* and to persuade as well.

We have treated in this discussion, now, everything about rhetoric in general terms. Later, if it is possible, we shall go into greater detail about each item separately.⁵

⁵Whether Boethius carried out this promise is not certain. There are no extant tracts about the subjects he has discussed; however, we do have his short treatise on the rhetorical places, as well as tracts on some of the works of Aristotle and Cicero. [Tr.]

Anonymous

fl. ca. 1135

Ars dictaminis is usually translated as the “art of letter writing.” Early in the medieval period, this art was assumed to apply to any written text—that is, any text dictated to a scribe, as written texts usually were. As such, it could have referred to the composition of poems, sermons, and other sorts of texts as well as letters. Later in the medieval period, however, the phrase came to refer to the composition of letters only, and this is how it is generally used today. Separate arts arose for the composition of poems (see p. 503) and sermons (see p. 525). Until the very end of the medieval period, the texts covered by all these arts were usually written in Latin, not in the various vernaculars of the composers.

If a literary discipline devoted exclusively to letter writing seems strange to modern readers, they should realize that from classical times and throughout the medieval period letters were regarded as important compositions. Letters might be more informal and intimate than public documents and orations, but given the high costs of acquiring literacy and preparing and preserving writing materials, letters were never treated quite so casually as they are today. The private correspondence of noted authors was collected and published. For example, Cicero’s letters were widely read and imitated, Paul’s letters achieved canonical status in the Christian New Testament, and the letters of Church leaders such as Augustine and Gregory the Great were treated as important theological statements.

Moreover, letters took on significant legal and political functions as the Roman Empire declined and illiterate rulers came to control most of Europe. Letters written for a monarch, such as those that Cassiodorus and Boethius (p. 486) composed for Theodoric, became the only record of many governmental transactions. Such letters had to express official positions clearly and thoroughly and to record the relative status of all parties involved in the transaction, by means of carefully graded salutations and the learning displayed in the body of the letter. Collections of model letters helped scribes meet these requirements. One such early collection was the *Variae* of Cassiodorus (d. 585 C.E.), and other collections survive from the 800s and 900s.

A full-fledged *ars dictaminis*, or art of letter writing, did not emerge until after 1000 C.E. With the establishment of a separate Roman Catholic Church (1054), the jurisdiction of the Church administration (the Curia) increased, along with the need to produce documents legislating Church doctrine and government. In the secular world, too, as commerce grew and feudal governments formed, civil law, like canon law, increased its range of control and its need for documentation. Also, the laws became more complicated as their range spread, necessitating more accurate written records. Scholars in the Benedictine abbey of Monte Cassino, one of the oldest Christian institutions in Europe, brought classical learning to the problem of refining letter writing for Church purposes. In the 1080s, one of these monks, Alberic, produced two seminal treatises on style and form in letters. These treatises, which show the influence of Cicero, draw illustrative examples from classical prose and

poetry. Alberic's *Breviarium de Dictamine* encourages the use of rhythmic Latin, which would develop into a formal rhythmic style used for letters, the *cursus*. Alberic's pupil John of Gaeta would make the *cursus* standard in letters of the Curia when he became Pope Gelasius II. Alberic's *Dictaminum Rarii* moves beyond providing model letters to discussing how to compose letters, giving attention to tropes and figures.

In developing this method, Alberic draws heavily on Cicero. Cicero had listed six parts of a speech: *exordium* (introduction), *narratio* (background information), *divisio* (outline of parts of the upcoming argument), *confirmatio* (argument or proof), *refutatio* (rebuttal of opposing arguments), and *peroratio* (conclusion). Alberic insists that what Cicero says of speech can also be applied to writing. This makes sense given the fact that official letters were usually read aloud by, or to, their recipient, often in front of an audience of courtiers or counselors. Alberic reduces the parts of the letter to four: *exordium*, *narratio*, *argumentatio*, and *conclusio*. He says very little about the *argumentatio* and *conclusio* and recommends brevity as the chief virtue of the *narratio*. He devotes most of his attention to the *exordium*, which he embellishes with a *salutatio* preceding the *exordium* proper.

This emphasis is appropriate because Alberic is concerned primarily with letters that do not make arguments but rather state official positions or make official requests (hence a later name for the *argumentatio*, the *petitio*). His main concern, then, is to prepare the reader or hearer to accept the letter's pronouncement or act on its request. Alberic concentrates on how to use the two opening sections to make the recipient "attentive, docile, and well-disposed," the Ciceronian goals for the *exordium*. One of Alberic's phrases became a later synonym for the *exordium* performing this function: the *captatio benevolentiae*.

Secular authors quickly began to produce treatises on letter writing, particularly in Bologna, where such works were associated with legal studies at the university. Increasingly, however, they did not show Alberic's strong grounding in classical rhetoric and classical literature. They focused more narrowly on the legal forms to be observed in official documents and presented the material schematically, with fewer classical allusions or lengthy appendixes of contemporary model letters. One Italian master of the genre, Boncompagno (d. ca. 1240), asserted (incorrectly) that he never even mentioned Cicero in his lectures.

The anonymous *Rationes Dictandi*, or *The Principles of Letter Writing* (excerpted here), produced in Bologna ca. 1135, is typical of this later focus. Such manuals were used not only by practicing notaries but also by university students who studied them in conjunction with lessons from a *dictator*, a master of letter writing. The manual refreshes their memory of the lectures and provides basic guidelines. This kind of manual spread quickly into France and Germany, and the art of letter writing dominated rhetoric instruction in continental schools from about 1150 to 1350. In France, where Orleans became a center of the *ars dictaminis* that rivaled Bologna, the style recommended in the manuals remained more embellished and classically influenced than in Italy. The French introduced the *cursus*, already being used in Church writings, into secular documents. In Germany imitating model letters was emphasized more than elsewhere. In England, however, the *ars dictaminis*

spread more slowly. Before the fourteenth century, few English scholars attempted to compose their own treatises on letter writing, and the art was known mostly through Italian works.

The art of letter writing was generally regarded as a rhetorical art, not, perhaps, because classical rhetoricians such as Cicero influenced mature Italian versions of these treatises, but because the treatises dealt with verbal compositions—usually presented orally—that were intended to move people to action, to persuade in a special sense. Moreover, the artful letter exhibited rhetorical tropes and figures and was written in a rhythmic style, allowing even for some rapprochement between the art of letter writing and the art of poetry writing, which developed somewhat later. Medievalist Martin Camargo has traced these confluences in the work of Geoffrey of Vinsauf (p. 503), author of the best-known manual of poetry writing. According to historian of education Louis Paetow, he taught the *ars dictaminis* at Bologna and even wrote a manual on it for his students.

Because the art of letter writing was taught in medieval universities, it might be presumed to be the exclusive province of men, who made up the overwhelming majority of university students. As medievalist Malcolm Richardson has shown, however, women often participated in business affairs in the Middle Ages, and thus might learn from experience what was required in formal letter writing. Working-class women might be members of craft guilds and might participate in drawing up the guild's official correspondence. Middle-class women could assist in running the family business, composing the correspondence necessary to that task. Upper-class women might have heavy responsibilities for managing the family estates, again with attendant correspondence, especially when their husbands were absent on military or political business. As Richardson shows, extant letter collections demonstrate women's ability to practice this genre even without university instruction, although they apparently wrote most often in vernacular languages, not Latin.

At many medieval universities, instruction in "rhetoric" came to be exclusively instruction in the art of letter writing. Masters of this art, the *dictatores*, sometimes also taught other verbal arts, such as the study of tropes and figures in poetry traditionally associated with the work of the grammarian (see headnote to Geoffrey of Vinsauf, p. 503). At some universities, too, rhetoric teaching that did not involve the *ars dictaminis* still took place—students studied commentaries on Cicero, Boethius, or Aristotle or schematic representations of classical rhetoric such as Martianus Capella's. It could be said that the *ars dictaminis* emphasized the practical application of rhetoric over theoretical considerations and that this practical orientation became increasingly dominant.

Over the next two hundred years, strengthening this trend, the *ars dictaminis* was gradually absorbed by law. Treatises became increasingly formulaic, finally reaching a point where a letter could be assembled from sections in the manual, without any original content. This development brought the art of letter writing more and more in line with the technical knowledge of the notary, which was concerned with the physical format of documents; how they looked, rather than how they sounded, became increasingly important. After 1300, little new work was done on letter writing, although old manuals continued to be used. Interest now centered on the notary

and on legal studies generally, although letter writing continued to be taught as a separate university subject, at least at Bologna.

In the Renaissance, letters came to be regarded as more informal and intimate (although still important) compositions, as they had been in earlier, classical times. By the fifteenth century, Renaissance scholar Ronald Witt argues, Italian humanists were openly using classical models for public oratory and private letters written in Latin, and the vernacular languages were also increasingly employed in public and private genres. If the *ars dictaminis* still dominated official documents, such documents themselves were beginning to wane in power as more diplomatic and trade agreements were conducted by face-to-face negotiation. The form of letters came to be treated in etiquette manuals, as it still is today.

Selected Bibliography

Little material from medieval treatises on letter writing exists in English translation. *Readings in Medieval Rhetoric* (ed. Joseph M. Miller, Michael H. Prosser, and Thomas W. Benson, 1973) contains an excerpt from the work of Alberic of Monte Cassino. James J. Murphy has translated about half of a medieval manual on the art of letter writing: Anonymous, *The Principles of Letter Writing* (in *Three Medieval Rhetorical Arts*, ed. James J. Murphy, 1971). His translation is excerpted here. Joseph Purkart has translated *Rota Veneris* by Boncompagno da Signa (1975), and Ann Dalzell has translated *Introductiones Dictandi* by Transmundus (1995).

The best introduction to the medieval *ars dictaminis* is in James J. Murphy's *Rhetoric in the Middle Ages* (1974). A good overview can also be found in Martin Camargo, *Ars Dictaminis, Ars Dicandi* (Typologies des sources du moyen âge occidental, fasc. 60, 1991). Earlier and later periods in the development of the genre are covered, respectively, in William D. Patt, "The Early *Ars Dictaminis* as Response to a Changing Society" (*Viator* 9 [1978]: 133–55), and Ronald Witt, "Medieval *Ars Dictaminis* and the Beginnings of Humanism: A New Construction of the Problem" (*Renaissance Quarterly* 35 [1982]: 1–35). An engaging essay that illustrates the use of model letters is Charles H. Haskins's "The Life of Mediæval Students as illustrated by their Letters" [Haskins's capitals] (in *Studies in Mediæval Culture*, 1929). For a greater emphasis on the social context of letter writing, see Sidney J. Hill Jr., "Dictamen: That Bastard of Literature and Law" (*Central States Speech Journal* 24 [1973]: 17–24).

Martin Camargo traces the relations between the arts of letter writing and poetry writing in "Toward a Comprehensive Art of Written Discourse: Geoffrey of Vinsauf and the *Ars Dictaminis*" (*Rhetorica* 6 [spring 1988]: 167–94).

On the place of the *ars dictaminis* in university instruction, see Louis Paetow, *The Arts Course at Medieval Universities with Special Reference to Grammar and Rhetoric* (1910); for an analysis that modifies Paetow and traces the influence of the *ars* on early humanism, see Helene Wieruszowski, "Rhetoric and the Classics in Italian Education of the Thirteenth Century" (in *Politics and Culture in Medieval Spain and Italy*, 1971).

On medieval women's participation in the *ars dictaminis*, see Malcolm Richardson, "Women, Commerce, and Rhetoric in Medieval England" (in *Listening to Their Voices: The Rhetorical Activities of Historical Women*, ed. Molly Meijer Wertheimer, 1997).

From *The Principles of Letter Writing*

I. PREFACE

We are urged by the persistent requests of teachers to draw together in a brief space some certain points about the principles of letter writing. But we ask that the expert should not laugh, that the spiteful tooth of the envious should not bite, and that the unskilled in the art should not back away—for after all, even if the fullness of the moon is wanting, this undertaking is not on that account useless in every part.¹ Therefore let honest men hear honestly what is here honestly set forth, and by hearing understand, and lock what they understand securely in the treasure box of the heart. And even let those who are advanced in this art add in some other points, just as grain is thrown by the handful on the threshing floor for the sake of separating it out.

II. WHAT A WRITTEN COMPOSITION SHOULD BE

A written composition is a setting-forth of some matter in writing, proceeding in a suitable order. Or, a written composition is a suitable and fitting treatment of some matter, adapted to the matter itself. Or a written composition is a suitable and fitting written statement about something, either memorized or declared by speech or in writing.

Now, some written compositions are metrical, others rhythmic, others prosaic.²

Translated by James J. Murphy.

¹This type of flamboyant opening, often using multiple metaphors, is common to the authors of the *ars dictaminis*. Note for instance the “treasure box” and “threshing floor” metaphors later in the same paragraph. Nevertheless the actual text of the treatise is quite sober and businesslike. For an interesting study of this phenomenon see Ernst Kantorowicz, “An ‘Autobiography’ of Guido Faba,” *Medieval and Renaissance Studies* I (1941), 253–80. The Medieval tradition goes back at least to the fifth-century writer Martianus Capella, who introduces a dry compendium of rhetorical theory with a fanciful account of “Lady Rhetoric” in his encyclopedic *The Marriage of Philology and Mercury* (Latin text, *De Nuptiis Philologiae et Mercurii*, ed. Wilhelm Dick, Leipsiz, 1925). [Tr.]

²This three-part division was to become standard in the

A metrical composition is a written presentation which is properly distinguished by prescribed measures of feet and duration.

A rhythmic composition is one which is bound together syllabically according to a fixed numerical rule.

But since it is our intention to treat only prose composition, let us describe more carefully what it is and how it should be written.

A prose composition is a written presentation ignoring the measures of meter, and proceeding in a continuous and suitable order. Now, here let us describe the proper meaning of this first term, for, in Greek, *proson* is said to be “continuous.” Then, we say that a written statement is “suitable” in which we treat the subject under discussion in words ordered according to the grammatical rules for prose or poetry.

Let us now examine particularly how to fashion this kind of composition, either in an approved and basic format or in accordance with circumstances.

The terms “approved and basic” (*recta et simpliciter*) are used at this point because the words of the writer might reach even the least educated or the most ignorant persons; for example, for this purpose I might say: “O loyal one and most beloved, I well believe that it is known to you what great trust I have in you concerning all my affairs.”

By the term “accordance with circumstances” we mean a method for the more experienced writers. It is an apt accordance, a set of words ordered in a way different from ordinary syntax; it must by all means be made harmonious and clear, that is, like a flowing current.

Although we could discuss a correct arrange-

middle ages. Another Italian writer, Thomas of Capua (d. 1239), added the names of writers as examples to set up a widely-used statement on the subject: “There are three kinds of writing known from of old: prosaic as in Cassiodorus, metrical as in Virgil, rhythmical as in Primatis.” Thomas’s text is edited by Emmy Heller, in *Die Ars dictandi des Thomas von Capua* (Heidelberg, 1929). [Tr.]

ment of words at this point, even though that will be decided more by the ear than anyone's teaching could explain, nevertheless we have enough to do here simply to provide some form of introduction to those untrained in this art.

III. THE DEFINITION OF A LETTER

An epistle or letter, then, is a suitable arrangement of words set forth to express the intended meaning of its sender. Or in other words, a letter is a discourse composed of coherent yet distinct parts signifying fully the sentiments of its sender.

IV. THE PARTS OF A LETTER

There are, in fact, five parts of a letter: the Salutation, the Securing of Goodwill, the Narration, the Petition, and the Conclusion.

V. WHAT THE SALUTATION IS

The Salutation is an expression of greeting conveying a friendly sentiment not inconsistent with the social rank of the persons involved.

Now, every salutation is said to be either "prescribed," "subscribed," or "circumscribed."

It is said to be "prescribed" if the name of the recipient is written first, followed by those things which are joined with that person's name, in this manner: "To *G*——, the most intimate of friends and the most eminent in the glory of all worthiness, *F*——, the student of letters who is ever so slow yet is also persistent, expresses greetings and the feeling of warm affection."

Next, a salutation is called "subscribed" if the name of the recipient is placed at the end, with those things which are joined with it coming before in such a way that the name is as clearly revealed in the preceding salutation as it would be if the whole were written in the opposite order.

A salutation is said to be "circumscribed" if the name of the recipient is written in several places in this way: "To Innocentius, revered in Christ our Lord, by the grace of God the highest Pontiff and universal Pope of all the holy church, *R*——, the bishop of Verona conveys due reverence in Christ."

What Should Be Included in a Salutation

Next, we must consider carefully how somewhere in the Salutation we want some additions to be made to the names of the recipients; above all, these additions should be selected so that they point to some aspect of the recipient's renown and good character.

Now, if we want to add something to the names of the senders, let it at least be made suitable, since it should be chosen to indicate humility and certainly not pride. It is therefore necessary for us to be guided by the ranks of the persons involved in such a way that, as often as names of ecclesiastical ranks or professional status are joined with the names of the senders, they will be qualified by added phrases so that through them no pride whatsoever is displayed; for example, if it is a clerk or someone of ecclesiastical status, he should always be titled thus: "Johannes, clerk" or "deacon" or "bishop" or "abbot," . . . "although unworthy" or "undeserving" or "sinful." In secular positions or offices, of course, it is not necessary for it to be done in this way, if we say for instance: "*N*——, friend of the Tuscans," or "*N*——, Duke of Venice," or "Marshall of Tusca" and the like.³

Next, it should be noted in regard to salutations that the names of the recipients should always be placed before the names of the senders, whether with all their adjectives in the dative case or, likewise with all their adjectives in the accusative, unless—and only when—a more important man is writing to a less important man. For then the name of the sender should be placed first, so that his distinction is demonstrated by the very position of the names.⁴

³The author frequently uses the letter *N* to stand for "Name" (*nomen*) indicating that the letter writer can fill in whatever name suits his particular purpose when writing. [Tr.]

⁴While the complex matter of case endings is difficult to understand because of the differences between Latin and English, it is important as a further indication of the great stress placed on the exact shadings of meaning used to point out the social relationships between recipient and writer. The gist of the admonition is that if you address someone in the dative case (English: "to John"), then you are obliged to end the whole Salutation with a declined word of either objective case, possessive case, or case of agency. [Tr.]

Now, when the name of the recipient is written with its adjectives in the dative case, then without fail we should end the salutations with declined words; that is, they should be added in the accusative or genitive or in a strong ablative, according to the discretion of the writer. A salutation is concluded in the accusative when we say: *salutem et intime dilectionis affectum* ("greeting, and of profound pleasure the feeling"). If, on the other hand, we should change the order, the salutation is concluded in the genitive, as we would say: *affectum intime dilectionis* ("feeling of profound pleasure"). It will conclude in the ablative if we add: *cum salute perenni* ("with continuing greeting") or something similar.

But if we write the names of the recipients with all their adjectives in the accusative case, it is absolutely necessary that we close the salutation itself with infinitives or in some way in which its words are related to the infinitive construction; for instance: "Gregorius, by divine grace, resplendent in the splendors of universal wisdom, *N*— wishes to live in happy prosperity and to abound always in success in the future," or "to carry on with continued success"—implying in this salutation, of course, the word "hopes" or "wishes" or "desires," just as in another salutation the word "sends" or "directs" or "entrusts" would be implied.

Next, let us show briefly what is proper in salutations sent to all sorts of persons.

Of course, among all people some are outstanding; others are inferior, and still others just in between. Now, people are said to be "outstanding" to whom no superiors are found, like the Pope or the Emperor.

Therefore, when a letter-writer (*dictator*) undertakes to write, and the difference between the ranks of the persons involved is known, he must take into consideration from the first whether the purpose is for one man to write to one other man, or for one to write to several, or several to one, or several to several; and whether equal is writing to equal, inferior to superior, or superior to inferior.

Next, the kind of subject must be considered, so that the writer may fashion the salutation with words suitable and prescribed according to it.

Next, the writer should know what is fitting to

be attached to the names of the persons involved, as for instance the proper ending of any salutation.

If one man is writing to one or several, or several to one or several, and the writing happens to be among equals, or from inferiors to superiors, the names of the recipients should be placed first, in the order of the salutation, in the dative or accusative case with their adjectives. The names of the senders, on the other hand, with their corresponding adjectives, should be placed last, in the nominative case. But if superiors are writing to inferiors, the names of the senders should be placed first so that their rank may be indicated by the sequence of the writing itself.

The Salutations of a Ruler to the Pope and of Every Subject to the Prelates

Furthermore, if the salutation is ever directed to the Pope from the Emperor himself, or from some man of ecclesiastical rank, it is best for it to be sent in the following form or one like it: "To the venerable in the Lord and Christ *N*—, by the grace of God highest and universal Bishop of all the Holy Church, *N*— by the grace of God august ruler of the Romans," or "*N*—, priest of the Ravenna church, although unworthy, expresses due reverence in Christ," or "steadfastness of due obedience," "stewardship of due reverence," "allegiance of due servitude," or "obedience of due allegiance."

Now, these salutations or ones similar to them are fittingly sent among ecclesiastics, at least from subordinates to prelates, and "in Christ" or "in the Lord Jesus Christ" must always be added.

In fact, there are particular terms which we are accustomed to put in salutations of this kind: "reverence," "allegiance," "devotion," "obedience," "servitude," and "servanthood."

And from these nouns adjectives should be developed which are similar to the nouns, and should be included in the salutation in the manner written above.⁵

⁵This idea is taken from medieval grammar which developed the ancient idea of word change (*metaplasmus*) into a highly complex pattern of word variation called Transsumption (*transsumptio*). For an example of its use in verse writing see Geoffrey of Vinsauf's *New Poetics*. [Tr.]

The Pope's Universal Salutation

"Bishop Innocentius, servant of the servants of God⁶ in His beloved son Christ, to *N*——, august emperor of the Romans, sends greetings and papal blessings."

The Emperor's Salutations to All Men

"*N*——, august emperor of the Romans by the grace of God, expresses friendship and good wishes to the Bishop of Faventia," or "to the Earl of Pictava," or "to the people of Pisa."

But when any bishop or duke or people of any city writes to the emperor, the following things or ones like them should be added in conjunction with the name of the ruler: "To the renowned, most excellent, most invincible, most eminent conqueror and always august emperor of the Romans, *C*——, *N*——, archbishop of Pisa, though unworthy, expresses his due obedience in Christ," or something similar to the forms above.

Salutations of Ecclesiastical among Themselves

"*N*——, by the grace of God bishop of the holy church of Bologna, although unworthy, sends unceasing good wishes in Christ," or "greeting in Christ eternal," fraternal greetings and prayers in the Lord," "desires an increase of fraternal goodwill and love," "expresses a feeling of brotherly affection," or "sends greetings and heartfelt prayers in the Lord."

Now, it may happen that prelates have reverend persons under their authority to whom not "blessings" but "greetings and an increase of true" or "sincere" or "pure piety" should be written.

Principally to Monks

"... An increase of true piety in Christ," "the reward of holy conversation," "the reward of eternal bliss."

For truly, in writing to monks we are accus-

⁶This standard formula "servant of the servants of God" (*servus servorum dei*) is still used by the Pope. [Tr.]

tomed to make mention always of "piety" or "holy conversation."

Salutations of Prelates to Their Subordinates

"*N*——, by the grace of God bishop of the holy church of Bologna, although unworthy, sends to *P*——, servant of the church of Holy Mary, greetings and blessings," "greetings and an increase of blessings," or "blessings in the Lord with good wishes."

For, indeed, it is always customary for ecclesiastical prelates in their salutations to their subordinates to pronounce a blessing.

And it should also be noted that the same prelates of churches, even if they are writing to subordinates who are under their own authority, do not send "blessings" to them unless they are priests; "greetings with a feeling of friendship" or whatever is appropriate are sent between friends. If, on the other hand, they are not priests, they should be sent "greetings with a feeling of esteem."

In a letter of suspension, excommunication, or harsh reproof, they should write simply as follows: "*N*——, by the grace of God bishop of Faventia, to *N*——, an elder"—and nothing else, as "writes this letter" will be understood. If, however, it is necessary to convey a warning, the salutation should say "greetings according to merit," or "favor where it is considered deserved," or "friendship which is deserved by worthiness," or "greetings as they can be deservedly bestowed."

Whoever would wish to know the salutations suitable from subordinates to prelates, would learn that there are six words appropriate to the composition of these: "allegiance," "reverence," "obedience," "devotion," "servitude," and "servanthood." And to whichever of these we could use, we would add an adjective which suits it: adding "due allegiance," or "veneration," or inserting "in Christ," or "in the Lord," or "in Jesus Christ," or "in the Lord Jesus Christ" in this way: "due veneration in Christ," or "due allegiance in Christ Jesus."

Now if we should want to vary the form, the accusatives should be changed to genitives, and

whichever of the things mentioned above that would be suitable should be added on, so that we would say: "the servitude," or "allegiance of due veneration in Christ," or "the veneration of due servitude in the Lord."

We may make these as humble as we might suitably wish, as in "the most devoted veneration in Christ," or "the servitude of the most devoted veneration"; moreover, "in Christ Jesus," or "in those who are of Christ" might also be added.

Salutations among Noblemen, Princes, and Secular Clergy

"To the vigorous soldier and noble friend, Earl *N*——, *P*——, the Duke of Venice, sends greetings and wishes for every good fortune," "greetings and warm affection," or "uninterrupted affection with unceasing good wishes," if perhaps one of these forms is suitable to be sent between these men. The following passage will show which forms are clearly appropriate to be sent between comrades and friends.

Salutations of Close Friends or Associates

"To *N*——, the closest of friends," or "the most beloved of comrades," or "the dearest of favorites," or "bound to one another by a mutual union of affection," or "linked together by an indissoluble chain of affection," or "*N*——, devoted to the study of letters, sends greetings and a feeling of warm affection," "the affection of warm feeling with unceasing good wishes," "steadfastness of personal fellowship," "the sweetness of the dearest friendship," "the constancy of sincere goodwill," or "the sweetness of imperishable love."

Another example of uniting in friendship: "Guido, already bound by a sincere bond of affection, *N*——, follower of the profession of logician, wishes to be bound further to him by a mutual chain of affection and to be disturbed by no hostility, wishes him to live forever and to abound in all good things, to live always honorably and never to cease in his affection, to possess always wisely a happy life, and to hold always more firmly to the rightful ways."

These salutations are also sent appropriately to comrades or close friends, since the different ranks of these persons can be indicated by a rather easy variation. For where, "Guido, already bound by a sincere bond of affection" is written, "friendship" or "fellowship" or "brotherhood" could be written where "of affection" is written, in whichever way the truth of the matter will require.

Salutations of Subjects to Their Secular Lords

When secular subordinates write a salutation to their lords, they should not under any circumstances say "veneration" or "allegiance," but should say instead "service," "compliance," "servitude," "loyalty," "subordination," and the like.

"To his most beloved lord" or else "to his most pre-eminently esteemed and most worthy excellency," "*N*——, his loyal servant" or "his devoted follower" or "subject to him in all things," "declares his loyal servitude," "earnestness in the highest loyalty," "obedience of due servitude," "servanthood of due obedience," "loyalty and all manner of servitude," "servitude in the warmest loyalty," and the like.

Salutations of These Same Lords to Their Subordinates

"*N*——, son of Guido, *N*——, loyal servant" or "devoted follower," "sends greetings and goodwill," "greetings and enduring good wishes," "goodwill and every support," "unceasing assistance, with greetings," and the like.

Salutations of Lords to Blamable and Offending Subordinates

"*N*——, bishop of Faventia although unworthy, to John, presbyter of the church of Holy Mary, sends greetings and pardon according to merit," "greetings as they have been deserved," "pardon insofar as it is considered deserved," or "greetings proportionate to his iniquity" and the like.

The Salutation of a Teacher to His Pupil

"N——, promoter of the scholastic profession, wishes N——, his most dear friend and companion, to acquire the teachings of all literature, to possess fully all the diligence of the philosophical profession, to pursue not folly but the wisdom of Socrates and Plato."

The Salutation of a Pupil to His Teacher

"To N——, by divine grace resplendent in Ciceronian Charm,⁷ N——, inferior to his devoted learning, expresses the servitude of a sincere heart," or "always obedient honorable service," or some other phrase corresponding to those suitable to be sent from subordinates to prelates.

What Should Be Included in Parents' Salutations to Their Sons

In salutations which are sent out of a feeling of love from parents to their sons, we are accustomed always to put the term "blessings"; this is stipulated since it is written: "The obedience of sons gladdens their parents, and the sons are always enriched by their blessings."

Salutations of Parents to Their Sons

"Peter the father and Mary the mother, to John their most beloved son, send parental blessings with their greetings," or "fresh greetings and eternal blessings."

Salutations of Sons to their Parents

On the other hand, a salutation of a son to his parents should by all means be one which is described above as appropriate to be sent to superiors by subordinates, as for example, "filial veneration with love," "servitude of filial veneration," and the like.

⁷Cicero was popularly acknowledged in the Latin middle ages as "Master of Eloquence" (*magister eloquentiae*) even by those who had never read his rhetorical works or seen the widely distributed collections of his speeches. See James J. Murphy, "Cicero's Rhetoric in the Middle Ages," *Quarterly Journal of Speech* 53 (1967), 334-41. [Tr.]

Salutations of Delinquent Sons to the Same Parents

"To Peter and Mary his parents, N——, once their son but now deprived of filial affection," "once dear to them but now without cause become worthless, does whatever he can though he seems to be able to do nothing."

Another example: "To N——, most beloved lord," or "dearest father" or "relation" or "brother" or "comrade," "N——, shackled by iron chains" or "subjected to the harshest confinement of prison" or "tied by heavy bonds," "sends wishes for all manner of good fortune which he himself utterly lacks," "sends wishes with his greetings for all the prosperity he does not have," and the like.

Considerations in Salutations

It is necessary to reflect carefully at this point so that we may apply ourselves to preparing several such letter salutations as will be appropriate to the subject we are going to take up later in the letter.

For instance, if someone wanted to chide someone else who seemed to have deserted good customs and devoted himself to vicious ones, he should express his greetings thus: "Alderic, indecently devoting himself to vicious conduct and presenting himself otherwise than is proper, N——, his brother" or "once his close friend," "advises him to abandon vices altogether and to return to the pursuit of honor."

Another Consideration

Furthermore it is a custom to take the material of the salutation from the name of the recipient in such a way that we urge him to greater goodwill.⁸ In this way, for example, if he is called Benedictus or Gratianus or Johannes (which means "grace of God"), or Benignus or Amatus or some similar names, we can begin in someone's salutation as follows:

To Benedictus by name: "To the man of all

⁸Note that Geoffrey of Vinsauf begins his Preface to the *New Poetics* with a play on the name of Pope Innocent III. [Tr.]

wisdom by divine grace, Benedictus by grace, Benedictus by name, Benedictus even by deed, *N*—offers loyal service and wishes the protection of divine blessings.”

The Gratianus by name: “Gratianus, resplendent by divine grace both in deeds and in honors, *N*—wishes to be uplifted always by divine grace and not ever to be disturbed by any evil.”

To any whatsoever: “Maximus” or “Honorius” or “Odorius, blessed with invigorating spirits,” or “Desiderius, desirable according to the meaning of his name itself, *N*—wishes to flourish in prosperous successes and to shine forth in the fame of all honor.”

VI. THE SECURING OF GOODWILL

Now that these things have been explained, especially the varieties of salutations, let us turn to the Securing of Goodwill. The Securing of Goodwill (*benevolentiae captatio*) in a letter is a certain fit ordering of words effectively influencing the mind of the recipient.

Now this may be secured in a letter in five ways: from the person sending the letter, or from the person receiving it, or by both at once, or from the effect of circumstances, or from the matter at hand.

Goodwill will be secured by the person sending the letter if he mentions humbly something about his achievements or his duties or his motives.

On the other hand, it will be secured according to the person receiving the letter when not only the humility of the sender but also the praises of the recipient are duly indicated.

Goodwill will be secured also from the effect of circumstances if something is added which would be appropriate to both persons involved, or which would be in the purpose of things, or could be suitably or reasonably connected to goodwill, such as “intimacy,” “affection,” “fellowship,” “familiarity,” “lordship and service,” “fatherly feeling and filial feeling,” and the like.

In any case, goodwill will be secured from the matter at hand if the extent of its future importance is openly set forth. That kind of securing of goodwill is also used in the conclusion of a letter.

If however the situation arises for a combative letter to be written, that is, for enemies or opponents, the goodwill could in fact be sought in it according to the persons of the adversaries, namely in that fashion which Cicero introduces in his *Books on Rhetoric*; ⁹ this method should be used, by all means, if we would lead our opponents into hatred, jealousy, or contention. If the matter at hand is honorable, or if the auditor is known to be friendly, we should seek goodwill immediately and clearly; if it is not honorable, we should use indirection and dissimulation. As a matter of fact, opponents are led into hatred if their disgraceful deeds are cited with cruel pride; into jealousy if their bearing is said to be insolent and insupportable; and into contention if their cowardice or debauchery is exposed.

Besides, very often the largest part of the securing of goodwill is in the course of the salutation itself. For that reason we should devise our letters in such a way that whenever the humility of the sender or the merits of the recipient are advanced at large in the salutation, we should either begin the rest of the letter immediately with the narration or with the petition, or we should point out our own goodwill rather briefly and modestly.

Also, in the remaining parts of the letter a not inconsiderable goodwill is expressed again and again—such as in certain names indicating the honor or glory of the recipient’s office or rank. The recipient himself would be called many times “father” or “lord” or “eminent pontiff” or “noble duke” or “closest of comrades” according to the principles of variation noted earlier.

⁹Probably Cicero’s *De Inventione*, which includes a discussion of means for countering prejudice or hostility in an audience (I. xvii). However, the same material appears in the pseudo-Ciceronian *Rhetorica ad Herennium* (I. v.). Both works were readily available in twelfth-century Bologna. [Tr.]

Geoffrey of Vinsauf

fl. ca. 1200

The life of Geoffrey of Vinsauf is known primarily through autobiographical references in four works on language use. These are the *Poetria Nova* (excerpted here; written between 1200 and 1216); the *Documentum de Modo et Arte Dictandi et Versificandi* (covering in prose the same material as the *Poetria*, and probably written at about the same time), the *Summa de Coloribus Rhetoricis* (a list of tropes and figures), and the *Causa Magistri Gaufredi Vinesauf* (a short poem). According to historian of rhetoric James J. Murphy, Geoffrey's surname derives from the title of a small treatise he wrote on the preservation of wines. He was an Englishman who studied in Paris and taught in Hampton, England, and possibly also in Bologna. At some point he journeyed to Rome, although it is unlikely he ever met Pope Innocent III, to whom the *Poetria* is dedicated. Geoffrey's *Poetria Nova* was apparently the most popular of the *ars poetriae*, or manuals of poetry writing, that flourished in Europe from around 1170 to around 1280. Medievalist Douglas Kelly says that over two hundred manuscripts of Geoffrey's work exist from all over Europe, as opposed to forty-three for the next most popular author, Eberhard the German. Furthermore, Geoffrey's text itself was the subject of numerous commentaries that have also survived.

As Kelly points out, calling treatises like Geoffrey's "arts of poetry" is somewhat misleading, for these works usually also discuss prose that uses figures or rhythmic patterns. Poetry and prose were not as sharply distinguished in the Middle Ages as they are today; both were intended to persuade, and the important distinction was whether the persuasion was to be undertaken orally or in writing. The treatises on poetry writing focused on ornaments for written texts, whether verse or prose, but might also give some attention to the larger formal concerns of the *ars dictaminis*, or arts of letter writing (see p. 492), which dealt primarily with the prose of official letters. Overlap was appropriate because the documents discussed by the *ars dictaminis* were ornamented with figurative language, as well as being written in a rhythmic form of prose called the *cursus*. Geoffrey's *Documentum* differs from the *Poetria Nova* in adding some attention to letter writing.

The treatises on poetry writing usually concentrate on instruction concerning tropes and figures, verse form, and the construction of rhythmic prose styles; the content varies, in part according to the level of student addressed and the degree to which all five canons of classical rhetoric are acknowledged. Geoffrey's treatise goes further than most by giving at least brief attention to invention, arrangement, memory, and delivery as well as style. Murphy suggests that Geoffrey probably thought of himself as a grammarian, not a rhetorician. For the most part, the manuals of poetry writing codified the teaching of medieval grammarians. At the same time, the boundaries between grammar and rhetoric were blurred, and depending on the age and ability of the students, the grammarian might well introduce rhetorical matters, or even alternate teaching personae as grammarian or as rhetorician.

Grammar was always the beginning subject in the verbal liberal arts in the Middle Ages, whether followed by dialectic, as in the classical scheme, or rhetoric, as was increasingly the medieval practice. Dialectic gained prominence as supposedly the most advanced of these arts. Although grammarians worked usually with younger students, they did more than teach correct Latin. In a typical lesson, the grammarian worked slowly through a section of classical poetry, analyzing its grammar and pointing out the parts of speech and how they were used, but also identifying any tropes and figures and explaining any historical or literary allusions. The students took notes on these lectures and were then asked to imitate the analyzed texts and compose original work to be read aloud or declaimed from memory. Medieval grammar classes, then, resembled today's English literature and composition classes. Students advanced their ability not only to read and write Latin (a second language for every educated person by 1000 C.E., if not sooner), but also to appreciate classical literature as well as the culture reflected in these works.

Before the manuals on poetry writing appeared, medieval grammarians had sometimes written commentaries on classical poets or on the Latin poet Horace's treatise on poetry writing, the *Ars Poetria*. But the manuals on poetry writing systematically summarize this kind of teaching. Their lists of tropes and figures are accompanied by illustrations drawn from classical literature or composed by the author, and sometimes, too, by references to Horace or Cicero. As necessary companion texts to his work, Geoffrey cites Horace, Cicero's *De Inventione*, and the *Rhetorica ad Herennium*. Book IV of the *Rhetorica ad Herennium* (p. 243) was the source of the figures listed in the treatises on poetry writing by Geoffrey and others. Because more advanced students might also study the larger text structures with the grammarian, matters of form and arrangement are sometimes also treated in these works, as seen in the *Poetria Nova*. Clearly, as students advanced, their work became increasingly rhetorical, as they produced longer, more ambitious compositions. The blurred line between grammar and rhetoric at this level can be seen in Geoffrey's treatise, which acknowledges the importance of invention as a first step in composing, even if it gives little advice on how to invent, and which very briefly touches on memory and delivery at the end of the treatise (relevant topics in that much medieval poetry and prose was intended to be heard, not read).

As Geoffrey's work shows, the manuals on poetry writing often took care to differentiate among various organizational and stylistic options. For arrangement, students are advised that a text is composed in "natural order" if it narrates events in chronological order, or follows the geographical layout of the scene of the story, or uses something similar to the classical parts of a speech, in which an opening narration is followed by positive points, refutation of opponents, and conclusion. "Artificial orders" violate these conventions—one might begin a story in the middle of the action, for example. Concerning style, the student is told that in the proper "material style" the degree of ornateness corresponds to the social class of the people being discussed—more ornament is appropriate to noble subjects, and so on (this is the medieval adaptation of the classical high, middle, and low styles). The "ornata difficultas or gravitas," the difficult or grave style, uses tropes, especially metaphor, and was thought to be more suitable to upper-class material and to tragic themes.

The “ornata facilitas or levitas,” the facile or light style, uses figures and was deemed more suitable to middle- and lower-class material and to comedy. In general, ornamentation may be achieved by amplification, using tropes and figures that restate and elaborate, or by abbreviation, using figures—chiefly metaphors—that convey much in a few words.

The treatises on poetry writing were widely used as school texts to supplement the lessons of the grammarian, not only during the period when most were composed, but later on into the early Renaissance. Geoffrey’s text was particularly valued in the schools because he habitually exemplifies the techniques he describes, treating amplification at length and abbreviation briefly, and so on. In the late thirteenth century and after, material from the earlier treatises began to be adapted for texts on the vernacular languages. Chaucer acknowledges Geoffrey’s influence in a salute (possible exaggerated) in the *Nun’s Priest’s Tale*, and in *Troilus and Criseyde*, in which he uses Geoffrey’s opening analogy between the writer and an architect. The positive influence of Geoffrey lasted at least until the time of Erasmus (see p. 581), who equated him with Cicero, Quintilian, and Horace as a valuable source of literary training. Although the detail of the manuals on poetry writing may seem tedious to the modern reader, medieval and Renaissance writers found that these manuals produced good habits of composition that students could carry over into adult work.

Selected Bibliography

All of the extant *ars poetriae* have been translated into English, though not all of these translations have been published. A thorough listing of the available texts can be found in Douglas Kelly’s *The Arts of Poetry and Prose* (Typologies des sources du moyen âge occidental, fasc. 59, 1991). Well-regarded translations of the *Poetria Nova* include *The “Poetria Nova” and Its Sources in Early Rhetorical Doctrine* (1971), by Ernest Gallo, which reprints E. Faral’s edition of the original Latin text with facing English translation; “*Poetria Nova*” of Geoffrey of Vinsauf, by Sr. Margaret F. Nims (1967); and the translation excerpted here, by Jane Baltzell Kopp, in *Three Medieval Rhetorical Arts* (ed. James J. Murphy, 1971). Gallo’s edition also traces Geoffrey’s classical sources in detail.

James J. Murphy’s discussion of the *ars poetriae* in *Rhetoric in the Middle Ages* (1974), though now somewhat dated, is the best short introduction to the genre. Murphy’s account helpfully locates these works in the tradition of grammar study from classical times to their own day, and provides synopses of all the major treatises, including the *Poetria Nova*. Also extremely helpful is Kelly’s *The Arts of Poetry and Prose*. In addition to a thorough history of the genre, Kelly provides current bibliography on both primary and secondary sources, and an outline showing where in the major treatises can be found material on the five canons of rhetoric, the parts of a speech, particular tropes and figures, and special topics (e.g. “the student”).

An excellent short introduction to Geoffrey and the *Poetria Nova* is “Geoffrey of Vinsauf: Introduction” by O. B. Hardison Jr., in *Classical and Medieval Literary Criticism* (1974). Hardison’s introduction to the medieval section in the same volume covers forms of literary study from late classical times to the fourteenth century and helpfully locates the *ars poetriae* in this tradition. Martin Camargo discusses the relations between the arts of letter writing and poetry writing in “Toward a Comprehensive Art of Written Discourse: Geoffrey of Vinsauf and the *Ars Dictaminis*” (*Rhetorica* VI.2 [spring 1988]: 167–94).

For a better view of how Geoffrey's text would have been used in grammar classrooms of the day, see Marjorie Curry Woods, "Some Techniques of Teaching Rhetorical Poetics in the Schools of Medieval Europe" (in *Learning from the Histories of Rhetoric*, ed. Theresa Enos, 1993). Woods also shows how the sections of the *Poetria Nova* correspond to the five canons of classical rhetoric and the six parts of a classical speech.

From *Poetria Nova*

If a man has a house to build, his hand does not rush, hasty, into the very doing: the work is first measured out with his heart's inward plumb line, and the inner man marks out a series of steps beforehand, according to a definite plan; his heart's hand shapes the whole before his body's hand does so, and his building is a plan before it is an actuality.¹

Poetry herself may see in this analogy what law must be given to poets: let not the hand be in a rush toward the pen, nor the tongue be on fire to utter a word; commit not the management of either pen or tongue to the hands of chance, but let prudent thought (preceding action, in order that the work may fare better) suspend the offices of pen and tongue and discuss long with itself about the theme.

Let the mind's inner compass circumscribe the whole area of the subject matter in advance. Let a definite plan predetermine the area in which the pen will make its way or where it will fix its Gibraltar.²

Ever circumspect, assemble the whole work in the stronghold of your mind, and let it be first in the mind before it is in words.

When a plan has sorted out the subject in the secret places of your mind, then let Poetry come to clothe your material with words. Inasmuch as she comes to serve, however, let her prepare herself to be apt for the service of her mistress; let her be on guard, lest either a head of tousled hair, or a body clothed with rags, or any minor details

be displeasing. Neither let her spoil anything in one place by overdoing something in another: for if a single part turns out, in whatever manner, to be inept, the whole arrangement can attract blame from that quarter alone. A little gall makes all the honey bitter; a single blemish mars a whole face; therefore consult your material carefully, lest it deserve to dread reproaches.

Let the beginning of your poem, as if it were a courteous servant, welcome in the subject matter. Let the middle, as if it were a conscientious host, graciously provide it hospitality. Let the ending, as if it were a herald announcing the conclusion of a race, dismiss it with due respect. In each section, let everything in its own way do honor to the poem; neither let anything in any section sink or in any way suffer eclipse.

Now in order that your pen may not be uninformed as to what it may look for in the use of a plan, notice that the following discussion provides itself here in advance with a course based upon a plan.³ And since the ensuing discussion takes its own course from a plan, of primary importance is, from what boundary line the plan

³Geoffrey makes the point here that he is following his own advice and exemplifying it even as he writes. That is, he has determined in advance that his treatise will have four parts concerned respectively (as later appears more clearly), with where and how to begin; how to make particular parts of narrative material more or less prominent by augmenting or curtailing the amount of treatment accorded to them; how to enhance style by the use of figures of speech; and how to manage face and voice in oral delivery. This four-fold division is probably derived from classical rhetoric's four divisions (i.e., invention, arrangement, style, memory, and delivery), but obviously it represents a radical transformation of them: classical oratory was concerned with argument, deliberation, and panegyric almost exclusively; Geoffrey, on the other hand, is concerned with literary *narrative*. [Tr.]

Translated by Jane Baltzell Kopp.

¹With this whole passage, cf. Chaucer's *Troilus and Criseyde*, I, 11. 1065-69. [Tr.]

²In the text, *Gades*, i.e. Cadiz or Gibraltar, traditionally metaphorical for a limit or terminus. [Tr.]

ought to run; the next concern, how to balance several weights against one another in the scale, if the *sententia*⁴ is to weigh out correctly; the third task,⁵ to insure that the herd of words is not wild but domesticated; the final labor, to see that a voice managed discreetly may enter the ears of the hearer and feed his hearing, being seasoned with matched spices of facial expression and gesture.

Arrangement's road is forked: on the one hand, it may labor up the footpath of art; on the other, it may follow nature's main street. The line of nature's avenue governs when the action and the words follow the same course and the discourse does not deviate from the natural order of events.⁶ The work proceeds along the footpath of art, on the other hand, if, as being more suitable, the plan places ensuing things first, or draws to the rear things intrinsically prior. But in the latter arrangement, neither do the things ensuing incur shame from what precedes (their order having been transposed), nor is what precedes shamed by those things that follow; on the contrary, without strife they take up their alternate positions, and freely, and in a spirit of good humor they cede to one another willingly. Skillful art so inverts the material that it does not pervert it; art transposes, in order that it may make the arrangement of the material better. More sophisticated than natural order is artistic order, and far preferable, however much permuted the arrangement be.

The first sort of order is barren, but the second branch is fertile; and from that origin one branch miraculously grows up into many, the single into

⁴This term, whose simple meaning is "sense, meaning, signification, idea, notion, proverb," etc. (and probably "theme" in a literary work) is perhaps used in a special sense in medieval literary theory. For extended discussion, see two articles by D. W. Robertson Jr.: "Historical Criticism," in *English Institute Essays: 1950*, ed. Alan S. Downer (New York, 1951), pp. 3–31, and "Some Medieval Literary Terminology, with Special Reference to Chrétien de Troyes," *Studies in Philology*, XLVIII (1951), 669–92. [Tr.]

⁵In the text, *studor*, i.e. "sweat." On sweat as a metaphor for literary composition, see Curtius, *op. cit.*, p. 468, n. 1. [Tr.]

⁶That is, as Geoffrey goes on to explain, the narrative poet may either keep to the natural temporal sequence of the events in his plot, or, for the order in which he presents them, he may permute the natural temporal sequence. [Tr.]

several, one into eight. Now in the area of this technique the air may seem to be dark, the path rugged, the doors closed, and the problem knotty. The following words, then, are doctors of this malady: ponder them. There will be found the means by which you may cleanse the shadows from the light, the foot on which you may traverse the rugged ground, the key with which you may open the doors, and the finger with which you may loose the knots. Look, a road lies open! Guide the reins of your mind by the law of this road.

Let the part of the material which is first in natural order wait at the entrance of your work; let the end, an apt forerunner, enter first and preempt a place—as if it were a more distinguished guest, or even the master himself. Nature has placed the end last in order, but art shows deference to it, and, taking up the lowly, raises it on high.

The first peak of the work is not only luminous with light⁷ from the very end, but its glory is twofold: coming either from the end of the theme, as has been said, or from the middle of it. Art draws from either an elegant beginning. It plays, as it were, the prestidigitator, and arranges that the last may be made first, the future present, the bias straight, the far near; thus may the rustic be made urbane, the old new, the public private, black white, and vile precious.

If the first part of the work aims at even greater splendor (the natural sequence of the theme being kept intact), let a well-chosen *sententia*⁸ incline in no respect to the particular, but rather raise its head higher, to something universal;⁹ and in its new splendor, let it not desire to

⁷Metaphors based on light (shining, gleaming, splendor, illumination, etc.) are pervasive in the *Poetria nova*. A possible source is Horace, *Ars Poetica*, 11, 15 and 143. The metaphor of food, also frequent in the *Poetria Nova*, is discussed by Curtius, *op. cit.*, pp. 134–36. [Tr.]

⁸See n. 4 above. In this section of the *Poetria Nova*, Geoffrey perhaps means by the word no more than a traditional proverb. But he may also have in mind an original generalized moral, to be drawn by the poet himself after reflection on the implications of his plot. [Tr.]

⁹That is, the *sententia* should not be confined, in the form of its statement, to particulars of the specific plot, but rather should be couched in abstract terms suitable for wider application. [Tr.]

remember the actual form of the material, but refuse to rest in the embrace of that, just as if that were unworthy. Let the *sententia* stand above the given theme, but glance straight at it; let it say nothing outright, but develop its thought therefrom.

This kind of beginning is threefold, rising from three shoots. The shoots are the first, second, and third parts within the material. From their common trunk, another shoot sends itself forth, and thus is wont to be born, so to speak, from a triform mother. But it remains in hiding and obeys only when summoned; it is not in the habit of coming forward at the mind's bidding; it has, as it were, a proud nature; neither spontaneously does it offer itself, nor to everyone; it comes only unwillingly, if not, indeed, actually forced to come.

In the aforesaid way, *sententiae* may lend splendor to the work. And no less appropriately may *exempla* stand in the foremost position; but the same splendor proceeds from each, and the distinction is equal in each. Indeed *sententiae* alone compare, for beauty, with *exempla*. Art has produced other ways of beginning,¹⁰ but it prefers these two; they have more dignity. The other devices are of less worth and considerably more tender age; the greater antiquity is to be found in these two. In them, the footpath winds up more narrowly, the usage is more fitting, the art is greater: a thing we come to see both by art and by experience.

So these are the three principal branches discovered by diligent study: beginning at the end, at the middle, and with *sententiae*; a fourth way is with an *exemplum*. But this last also, like the next-

¹⁰Matthew of Vendôme and Évrard l'Allemand, for example, recommend beginning with constructions featuring the rhetorical figures *zeugma* and *hypozeuxis* as alternatives to beginning with a *sententia*. To these, Matthew as a sole voice adds the possibility of beginning with the rhetorical figure *metonymy*. John of Garland recognizes the procedure of beginning with proverbs and *exempla*, but also approves beginning with a simile or metaphor or with an "if," "since," or "while" clause, or (in Latin) with an ablative absolute construction. For Matthew's and Évrard's remarks on ways of beginning, see Edmond Faral, *Les Arts poétiques du xii^e et du xiii^e siècle* (Paris, 1924), pp. 111-16 and 346-47 respectively; for John of Garland's treatment, see *Romanische Forschungen*, XIII (1902), 905-7. [Tr.]

to-last, grows up in three branches. And in these eight branches,¹¹ all told, the pen prides itself.

That your eyes may see as witnesses what we have said to the ear, take that fable in which the first part is about Minos, the middle about the death of his boy, the end about the confounding of Scylla.¹²

Natural order begins it something like this:

Apart from the gifts of Fortune, whose number streamed to him abundantly, over-flowing as from a torrent, Nature brightens the renown of Minos with another splendor:¹³ for she arms his body with special strength; she tints his limbs in a certain novel way; likewise she refines the gold of his mind and the silver of his tongue; she polishes everything fully, infusing a marvelous sweetness into his manners. Charm, as much as becomes a king, answers alike in all his parts.

Or, from the end of the material, art extracts this beginning for the poem:

The treachery of Scylla led Scylla herself to ruin; she was injured by the same wound with which she gave injury, and she who betrayed her parent lost what most she longed for; and because she wrought destruction, in like destruction she was caught. In suitable requital of her treachery, treachery recoiled upon its authoress in like measure.

¹¹What he means is simply not clear in the Latin at this precise point. From his examples and earlier discussion, it appears that he thinks all the following are artistic or "unnatural" (and therefore, for him, desirable) ways of beginning: 1) at the end of a story; 2) at the middle of a story; 3) at the beginning with a *sententia*; 4) at the middle with a *sententia*; 5) at the end with a *sententia*; 6) at the beginning with an *exemplum*; 7) at the middle with an *exemplum*; and 8) at the end with an *exemplum*. He considers 3 and 6 to be artistic, even though they begin with the chronological beginning, simply because they prefix a *sententia* or an *exemplum*. He does not consider beginning at the beginning without adornment as one of the "eight ways discovered by diligent study" because he thinks that to begin so is "natural" and requires no "study." [Tr.]

¹²Scylla was the daughter of Nisus of Megara. For love of Minos, she cut off her father's hair, upon which his life depended; she was transformed as a consequence into the bird Ciris. See Ovid, *Metamorphoses*, VIII. Geoffrey relates the full story he has in mind in the *Documentum de Modo et Arte Dictandi et Versificandi*, I. 2-17 (Faral, *op. cit.*, pp. 265-68). [Tr.]

¹³Faral prints 1. 161 as "Minois titulos; alios natura nitore," but shows "Minoris" as a variant reading for "Minois" in two manuscripts. [Tr.]

From the middle, we are able to imagine a beginning in a form like this:

Envy, observing the intelligence and the years of Androgeos, perceives him to be in the latter regard a boy, in the former an old man. For, mature in intellect, the boy has no air of boyishness about him. On account of his very triumphs, he begins to be wretched: because his praises mount on high, he is for this very reason brought low; in that he is so glorious, he makes against his own destiny; and his intelligence works against his own youth.

Or, near the very beginning of the material, this generalization is apposite:

Anything very much wished for is very apt to evanesce. Everything is certain to pass away, and prosperous times are all the more prompt of ruin. Cruel Fortune is always laying her stratagems with an innocent face, and Good Fortune is always planning her own sudden departure.

In the middle, this common sentiment may be referred to:

Worst of all things is envy, pure mortal venom: to the evil alone a good, only against the good an evil. It silently conceives in advance of every evil possibility, and gives birth publicly to whatever bitter thing it conceives.

The ending, in this form of expression, amounts to an adage:

That law is just, which provides that injury strike back with injury, that hurt redound on the head whence it originated.

This model image may serve at the beginning:

A gloomy wind rages unexpectedly under a clear sky. A cloudy atmosphere rains beneath a bright sun.

Or, for the middle, choose an exemplum in form like this:

Against the sown seed the weed, foster child of the nursing earth, gloomily conspires: it contends against the seed when it is longing to be born, and, blocking all its exits, grudges it the sprouting.

And likewise, with a similar choice, will you be able to prelude the end:

Often the arrow manages to strike back upon the archer, and a blow, reversed, to rebound against the author of that blow.

As aforesaid, art has given a varied purport to the beginning of the poem. Now progress beckons you farther. Direct your step and your course farther along the path, overall structure being now the consideration stressed.¹⁴

The path is pursued in one of two ways. For either your path will be broad or narrow, either a river or a rivulet; either you will proceed discursively, or you may skip along hastily; either you will note a thing briefly, or draw it out in an extended treatment. Not without toil is either path pursued; if you wish to be well guided, commit yourself to a dependable guide: turn over the following remarks in your mind; they will guide your pen and will teach you those things which are to be taught about either length.

The mass of the subject matter, like a lump of wax, is at first resistant to handling; but if diligent application kindles the intellect, suddenly the material softens under this fire of the intellect and follows your hand wherever it leads, docile to anything. The "hand" of the inner man leads, in order that it may either draw out or compress the material.

If you make your path the broad one, proceed with this first step: though your sententia be one single thing, let it not come content with one costume, but rather let it vary its apparel and assume changes; take up again with other words what has already been said; repeat one clause in many clauses; let one and the same thing be disguised in multiple form; be various and yet the same.¹⁵

¹⁴Having concluded the first part of his treatise, which was concerned with where and how to begin, Geoffrey proceeds to his second topic, how to make particular parts of the narrative material more or less prominent by augmenting or curtailing the amount of treatment accorded to them, i.e. by "amplification" or "abbreviation." For discussion of amplification and abbreviation as concepts in medieval literary theory see J. W. H. Atkins, *English Literary Criticism: The Medieval Phase* (Cambridge, England, 1943), p. 102; E. R. Curtius, *op. cit.*, p. 492; and Jane Baltzell, "Rhetorical 'Amplification' and 'Abbreviation' and the Structure of Medieval Narrative," *Pacific Coast Philology*, II (1967), 32-39 [Tr.]

¹⁵The procedure that Geoffrey refers to in this paragraph obviously amounts to a technique of repetition, perhaps to be identified as *expositio* or *interpretatio*. This passage from Chaucer (*Canterbury Tales*, B², II. 1637-41) may be an example:

My lady Prioress, by youre leve,
So that I wiste I sholde yow nat greve,

Then, it is a step onward when, since a statement merely hops through the ears if the expression of it be abrupt, a substitute phrasing is made for it in the form of a long sequence of statements, and a difficult sequence at that. In order that the work may be longer, do not put down the simple nouns for things: set down other particulars; neither plainly lay bare, but rather intimate a thing through little clues; do not let your expression march squarely through the subject, but, circumscribing it with long roundabout routes, circle what was on the point of being said abruptly, and retard your tempo, so giving increase of words.¹⁶ And a little forethought may spin out the various ways of expressing a thing, when abrupt statements abdicates in order that a long passage may be its heir. With a threefold lock the plain matter may be closed up: either in the noun itself, or in the verb, or in both. Let neither the noun, nor the verb, nor both together specify it, but let an invented form be offered, either in place of the verb or in place of the noun, or in place of both.

The third step is a comparison, which may be performed by a twofold principle, either covertly or openly.¹⁷ Note that certain things are linked with grace enough, but yet certain signs reveal the knot of the joining. That comparison made openly, which signs expressly reveal, behaves in such a manner. There are three of these signs: "more than," "less then," "just as."¹⁸ The com-

parison that is made covertly, on the other hand, comes with no tell-tale sign; it does not come in its own mien, but disguised, as if there were no comparison there, but rather some new transformation were being marvelously ingrafted; whence the idea may thus cautiously settle in your narrative as if born of your theme. The new concept is, of course, borrowed from elsewhere, but it seems native; it is foreign, but not completely evident as such; and it appears to be integral with your material, but it is not there either. Thus it fluctuates, as it were, between intrinsic and extrinsic, now here and now there, now near and now far; there is a difference and yet there is a similarity. This is that kind of plant,¹⁹ which, if planted in the garden of your subject-matter, so operates that the treatment will be rendered more agreeable; this is that stream in a spring where the spring runs purer; this is the form of subtle joining, the device in which the things joined come together and meet as if they were not contiguous; they are continuous, rather, as if the hand of art had not joined them, but rather the hand of Nature. This mode of comparison has more art in it; there is in it a more distinguished usage by far.

In order that you may run still more at large, let apostrophe be the fourth device of delay, by which you may conserve the material, and within which you may expand by the hour.²⁰ You may give pleasure with this device; without it your meal may be abundant enough, but with it your mere dishes become excellent courses. A parade of courses coming more numerous, and tarrying at the banquet table that proceeds more deliberately, is a mark of distinction. Long and richly we feed the ears with varied material, this food being to the ear flavorful, and fragrant, and precious when it comes. But now let an example of this theory serve me: the eye is a more accurate

I wolde demen that ye tellen sholde
A tale next, if so were that ye wolde.
Now wol ye vouche sauf, my lady deere?

It should be noted, too, that Geoffrey probably illustrates the procedure with his own synonymous phrases in this very paragraph of the *Poetria Nova*. [Tr.]

¹⁶Periphrasis (*circuitio*, *circumlocutio*), the substitution of a descriptive word or phrase for a proper noun or otherwise more straightforward statement, appears to be the procedure under discussion here in the *Poetria Nova*. Cf. Chaucer's *Franklin's Tale*, 11. V (F) 1016-18:

. . . The brighte sonne loste his hewe;
. . . th'orisonte hath reft the sonne his lyght, —
This is as muche to seye as it was nyght!

¹⁷The procedure that Geoffrey terms "comparison" (*collatio*) evidently includes both simile ("that comparison made openly, which signs expressly reveal") and metaphor ("the comparison that is made covertly"). [Tr.]

¹⁸The reference here is apparently to standard introductions for extended similes, as, for example, "more savage

than a lioness when her cubs are threatened . . .," "less audible than a breeze at dawn . . .," and "just as (or like) a mountain rising from the plain . . ." [Tr.]

¹⁹Note that at this point, where he begins to introduce several "covert comparisons" of his own, Geoffrey is exemplifying the figure even as he expounds it. [Tr.]

²⁰Apostrophe, of course, involves direct address of an absent person, an inanimate object, or a personified abstraction. [Tr.]

witness than the ear; neither does one instance suffice: my number of examples will be full; from my copiousness gather fully what kind of instance may justify apostrophizing what kind of thing, and in what kind of form.

If a man's heart leaps up excessively in time of joy, then do you, Dame Apostrophe, rise up and rebuke him thus:

O why do joys so great unsettle your senses? Bring your hand-clapping to a circumspect end, and do not stretch its limit out beyond what is meet. O mind heedless of disaster about to come, rather emulate Janus: look behind and in front of you, if things are now going well. Regard not beginnings, but rather endings: describe the day by its sunset, not by its dawning. If you would be wholly secure, fear things to come: just when you believe everything to have been won, the snake is lurking in the grass. Take the Sirens for a warning: be taught by them always, when in a better state, to beware a worse. There is no constancy in nature: poison follows after honey, and black night ends the day, and clouds close up a clear sky. Although all human affairs, fortunately, are subject to change, still, adversity has a way of returning with the greater facility.

If a boastful presumptuousness should even more shamelessly puff him up, anoint his swelling with this mild unguent of words:

Let your eyes run before your stride: search out your own intention, and take measure of your strength. If you are powerful, dare great things; if weak, lay lesser burdens on your shoulders; if of moderate strength, love moderate goals. Take on nothing in which, once it is taken on, you are obviously being presumptuous. In all affairs there is a single virtue: that is, staying within bounds. Recalling this, impress it upon your mind: when you are greater than your fellows, believe yourself lesser and be deceived about yourself; neither shove others into a bottomless pit nor pitch yourself sky-high. Let your deed outdo your declaration: boasting will diminish your reputation.

If in adverse circumstances a man gives the bit to fear, help the timid fellow with this powerful feat of words:

Be not afraid; but if by chance you are afraid, have the mind of a man who is experiencing fear, not the mind of a frightened man. Whenever fear manages to penetrate the door of your mind, let it be a mere

transient there, not a permanent dweller. Learn how to be afraid: if you are afraid, be afraid by yourself—without any witness. And do not let your face show knowledge of your mind's alarm. For if inner terror consumes and wastes your features, a more jovial state of mind will accordingly nourish and fatten your enemy, and sorrow sucking the marrow from your limbs will afford him delight. More advisedly, then, if fear bring your heart to its knees, simulate an upright bearing, and run to the aid of your fear with a shield for your face, so that if your spirit is afraid, your glance, at least may be such as to be feared. However, may you far rather desire to have hope, and may it shame you, when you are afraid, to turn pale after the fashion of the crowd. If possible, swell your constricted heart; if your body be weak, at least your spirit may be strong. And remember to round out your powers, when they are lacking, with lavish good hope. Lightweight performance should be a heavy disgrace to the man of fighting spirit; and heaviness of spirit should be a light matter to the willing man. In this way, only desire as much and it will be easy to be a man fearful of nothing.

In a time of prosperity, in a time of happy fate, this can you say with your eloquence—this, foretelling of future sorrow:²¹

England, queen of realms so long as your king, Richard,²² lives, whose glory is the wide fame of so great a name, to whom alone the sway of the world is entrusted, under whose great command the faith is secure: Your king is a mirror in which you, beholding yourself, feel pride; a constellation, in whose radiance you shine; a column, on whose support you flourish; lightning, which you hurl against your enemies; honor, because of which you send up your gables almost to heaven. But why mention details one by one? One better than he could not have been formed, nor did Nature wish him to have an equal. But beware of having absolute faith in his powers: death is that which breaks all strong things. Trust not, England, in your good omens. If for a short while these omens have been bright for you, fateful clouds are about to close out the fair sky, and twilight will lead in the night. Soon now may be shattered the mirror in

²¹The sorrow in question is, as the ensuing example of apostrophe immediately makes clear, the death of Richard Coeur de Lion. Presumably writing the *Poetria Nova* after Richard's actual death, Geoffrey is able in this model to make effective use of dramatic irony. [Tr.]

²²Richard Coeur de Lion (1157–1199). [Tr.]

whose reflex is so much glory for you; the constellation by which you shine may suffer eclipse; the column from which you draw strength may, being broken, sway; the bolt of lightning whereat your enemies tremble will die away; and, from a prince, you will be made a slave. Happy omens are about to bid you adieu: you now take your ease, you will toil; you now laugh, you will weep; you now grow rich, you will be in want; you now flourish, you will wither; you now *are*, soon you will barely be. Still, whence may you know all this? What can you do? Will you examine diligently by ear the murmurings of the birds? Or their motion with your eye? Or destiny with the aid of Apollo? Away with astrologers! The augur is deaf, the soothsayer blind, and the prophet demented. It is permitted to mankind to know the present, and to God alone to know the future. This false hope has no homeland here; that ancient error may take itself home again, and the father of pagan falsehood may feed that which he engendered, since true religion has dragged out of the sight of the Church the tripods of Phoebus and the throne of the Sybil. This one thing you may know in advance; that no power has power to endure, though it be stubborn; that Fortune decrees that times of prosperity shall be brief. If you want examples, look back on ancient lives. That flowering prosperity of former men has withered away: Minos overthrew Athens, the son of Atreus overthrew Ilium, Scipio overthrew the bulwarks of great Carthage, and many a one overthrew Rome. The dice-toss of Fate was reversed in a twinkling. Brief is the extent both of all happiness and all sorrow; night is the neighbor of day. These other instances advise, but your own experience, too, will teach you.

In time of sorrow, express sorrow with these words:²³

England, once defended under the shield of King Richard, now defenseless, witness your sorrow with this lament: let tears ooze from your eyes; let terror distend your lips; let twisting knot your fingers; let inner sorrow bleed; and let wailing beat against the sky. All of you dies in his death; the death was not his but yours. Not private, but public,

²³The following lament on the death of Richard (cast by Geoffrey in the form of an apostrophe) is presumably the one alluded to by Chaucer in the *Nun's Priest's Tale*, 11. B 4537–44. See Karl Young, "Chaucer and Geoffrey of Vinsauf," *Modern Philology*, XLI (1943–44), 172–82. [Tr.]

the source of that death. O tearful day of Venus.²⁴ O cruel star! That day was night for you, and Venus was that poison.²⁵ She gave the wound; but worst was that day, the one first after the eleventh, which, stepfather to life, ended his life.²⁶ Both days were homicides shocking in their cruelty. A sheltered man aggressed against one in the open, a hidden man against one exposed, a wily man against one unsuspecting; an armed soldier against one unarmed, and that his own king.²⁷ Why, soldier, soldier in treachery, soldier of the troop of treachery, did you dare such a thing—you being the disgrace of the world, the vilest scum of the military, and soldier only by the making of his own hands? And did you dare this heinous crime, this outrage? O woe, O more than woe, O death, O grim death: would God that death were dead! What did you think, Death, when you dared such villainy? Did it please you to take away the sun and to doom the day with shadows? Do you know whom you took? He was a radiant star before the eyes, and a sweet thing to the ears, and a wonder to the intelligence. Do you know, impious one, whom you have carried off? He was master of arms, glory of realms, darling of the world. Nature could have invented nothing more to add to him; he was everything she could produce. But that was why you seized him: precious things you snatch, and vile things you leave as if unworthy. About you, too, Nature, I complain, for were you not, while the universe was still young, while it lay in its cradle newborn,²⁸ already designing him? Your design is not finished, then, until his old age. Why so much travail to bring this wondrous being into the world, if so brief an hour was to see so much labor carried off? Did it please you to stretch forth your hand to the world and then withdraw it again? So to give and then take back your gift? Why do you try the patience of

²⁴Richard was wounded in the shoulder by a crossbow bolt on March 26, 1199, which was a Friday, the day traditionally associated with Venus. [Tr.]

²⁵Geoffrey exploits the similarity in sound of *Venus*, the Latin name of the goddess, and *venenum*, the Latin word for poison. [Tr.]

²⁶His wound mortifying as a result of unskillful treatment or his own neglect of it, Richard died on April 6, 1199, the twelfth day after he was wounded. [Tr.]

²⁷This account of Richard's injury makes the slayer a man of the king's own army. [Tr.]

²⁸Faral prints this phrase as *dum nata jaceres / In cunis* (11. 397–99), which would make Nature herself the newborn; but I have preferred the variant reading *natusque jaceret* also given by Faral. [Tr.]

the world? Either give back the one now buried or else give us his like again. But you no longer have the wherewithal: all that you had, precious or wonderful, you spent on him; your treasuries of charms were in him exhausted. In creating him, you were made most rich; you know yourself made bankrupt by his loss. If very happy you were, before, you are now as miserable as previously you were glad. If it be permitted, I even accuse God. God, best of beings, why in this case are you so unlike yourself? Why, hostile, do you strike down a friend? If you recall, Jaffa makes a case for the king. Jaffa, beleaguered by so many soldiers, which he alone defended;²⁹ and likewise Acre, which he restored to you by his valor;³⁰ and the enemies of the Cross, all of whom he so terrified when alive that he is feared by them even dead. He it was in whose keeping all that is yours was safe. If, God, you are faithful, just, upright, as you must be, and if you are apprised of wickedness, why then did you cut short his day? You could have spared him to the world; the world had need of him. But you preferred him to be with you rather than with the world. You preferred him rather to benefit heaven than earth. Lord, if divine law permit, I will say, and may it please you: you might have acted more ceremonially and less hastily—at least waited until he had put the bit into the mouth of the enemy. (And no real delay would have been involved: victory was at the threshold.) Then he could more honorably have gone to abide with you. But in all this you have given us to know how brief is the laughter, how long the heartbreak of the world.

If you wish to inveigh fully against foolish people, attack in this way:³¹ praise, but facetiously; accuse, but bear yourself good humoredly and in all ways becomingly; let your gesture more than your words nip the ones mocked. Lo, what was concealed under shadows will suffer under the light. A quick hit is turned so: “Boys are taken on high and made gods.” Or, let this same young lordship move outright laughter:

²⁹Ancient Jaffa or Joppa, now part of the metropolis Tel Aviv–Jaffa, was recaptured for the crusaders by Richard in 1191. [Tr.]

³⁰The long siege of Acre (1189–1191), an epic of medieval warfare, is narrated in detail in the Anglo-Norman poem *Carmen Ambrosii*. [Tr.]

³¹The rhetorical effect that Geoffrey begins here to describe, nominally under apostrophe, would seem to be more properly identified as verbal irony. [Tr.]

Though himself fit still for the ferule, now he sits above others freely endowed with the dignity of a master. To the common people he is authenticated by the freeman’s hat on his head, the cut of his clothes, the gold on his fingers, his seat on high, and the numerous commoners in his study.

You may laugh at a ridiculous man—suppose there is such a one: “As much in his own opinion as in the opinion of the vulgar, he is a learned man.” But suppose you feel exactly as I do: that a certain ape is among the learned doctors.³² I have said as much, but secretly, lest anyone clearly hear. But he nevertheless flaunts himself, and, facing about, he promises wonders indeed. “Now let everyone run up to hear; now the mountain will labor to give birth, but his offspring, in the end, will be a mouse,”³³ Anticipating his desire, greet him as “master”; nonetheless, in the meantime, laugh at him obliquely. Peck at him, as it were, with the “beak” of your hands; or writhe your jaws; or hold your nose: to describe such men, not the tongue but the nose should be used.

So, therefore, Apostrophe may change her face: either in the manner of a teacher she may eagerly seize upon a wicked error; or, with a lament, she may plunge into grief about all hard circumstances; or she may swell in wrath on account of a great crime; or she may be carried by ridicule against ridiculous men. When presented in such causes, Apostrophe achieves both beauty and copiousness.

Come, Prosopopoeia, fifth helpmeet in extending the journey. To a thing which has no power of speech, give the power lawfully to speak, and let license endow it with tongue.³⁴ Thus the earth, having experienced Phaeton’s heat, expostulated with Jove; thus Rome with disheveled hair resounded with a tearful voice at the death sleep of Caesar. If novelty of example pleases you, listen to this model: here is a

³²Cf. the *Laborintus* of Évrard l’Allemand, 1. 984 (Faral, *op. cit.*, p. 370). [Tr.]

³³Cf. Horace, *Ars Poetica*, 1. 139. [Tr.]

³⁴Geoffrey’s explanation can hardly be improved upon. Prosopopoeia involves investing abstractions or inanimate objects with human qualities, emotions, or abilities, especially the power of speech. [Tr.]

complaint in this form made in the voice of the Holy Cross.³⁵

I, the Cross, having been seized, make wail— seized by force and by bestial hand, and polluted by the touch of dogs. Long ago I was shamefully seized, and not to this day have I been taken back or redeemed by the sword. Tell me, man, did I not grow for you? Did I not bear you fruit? Did I not bear sweet fruit—salvation—for you? Speak, man, speak to me; tell me, man corrupt whom I redeemed, have I deserved to be so seized without an avenger? And have I deserved so to perish? The power of the enemy could not have brought it to pass that I could be taken from you; rather it was your vice which did so. And since I have seen your crimes to be so numerous, I, being taken, was glad to be taken: it was less shameful to be soiled in foreign camps than in my own. And whether or not you were soiled—even if it escaped the notice of the world—He who sees all things, your God, saw, and knew you to be fully soiled both in heart and in flesh and he took me from you. According to the demanding rigor of the law, a heavy penalty ought to have been inflicted: death without end. But “I have come,” the Sympathizer says, “to be wretched with those in misery, not to press for judgment. I have come to spare, not to punish.” Beware. Consider. Repent at last, Sunamite, lest you perish. I, if you will turn, will turn toward you, and instantly I will have mercy on your contrite hearts. Rise quickly. Hasten. The hour is speeding and hastening toward you. Why do you sleep? Awake! If the holy Cross redeems you, do you by the sword redeem the Cross, and thereby be made redeemer of that by which you were redeemed. Who that is sound in body can be sluggish in such a cause? The Lord labored on the Cross: and, then, does his servant rest? Take up your cross; He took up his. He tasted vinegar. Do you the same! Will the servant stand upon dignity if the lord does not? If you desire to be his follower, it is necessary to follow in his torments with torments. The road to heaven is not through pleasures: therefore pay that death which you owe to release you from Nature, to God; die in Him. Seeing that death is, of necessity, not to be avoided, translate it into a form of virtue: let me be to you a cause of war and even of death. If you

³⁵The following appeal would have pleased Innocent, one of whose major interests was the organization of Crusades for the relief of the Holy Land. The Cross had been captured by Saladin in 1187. [Tr.]

are conquered, as a consequence you triumph. But to be conquered is more than to conquer: a victory enjoys only the hope of a crown; those vanquished by the Cross, the reward of a crown. Therefore, break off delays: impose continence on your flesh; suspend pleasures; and stir a prompt hand quickly toward your weapons, and let a winged will beat back delays.

Another example of prosopopoeia may likewise aid the ornamental object when, now so worn, it says to the table:

I was accustomed to be an ornament of the banquet table when the springtime of my life was in flower, when I bore a face without a flaw. But since I am old and have a ruined face, I am not willing to come. Table, I am retiring: farewell.

And thus Prosopopoeia performs with two mouths: now she speaks sternly, and now humorously.

Or, if an old example does not suffice, here is a new one. Harsh Pride, natural in a military stronghold commanding the brow of a mountain, was seen to speak as follows:

Why, France, do you prattle? Whence come such threats? Why such proud language? Lower that eyebrow! Learn something about threatening postures! Whence the shields at your side? Or the spears? Or the swords? Effeminate crew, abandon the mannerisms of men so that your carriage may match your deeds. Strip off your shield and the crest of your helmet. It would behoove you to do the day's spinning and unwind the distaff. Why, therefore, or of what, do you feel proud? Put a lock on your tongue; be wary of puffing up with words; I will give a bit to your jaws and hang chains on your neck, and will render you a slave in no time. I am taken up with a mere nothing when I meet you decked out as if powerful in war; let other enemies arise in numbers as great as you please, they are not equal to me; but I am rather to them good reason for misery—I, fashioned on the model of the heart of Richard the King.

If the lines of the treatise need to be stretched out still farther, step outside the confines of the subject matter and give a little ground and divert your stylus; but do not divert it far off, to a point from which it may be troublesome to recall your

step. This device³⁶ requires a discreet talent lest it be a bypath longer than is meet. Indeed, it is a kind of digression when I pass over things which are near, presenting in inverted order what is at a distance. For now and then, being about to proceed to the middle, I leave off, and by a leap as it were, I vault over a certain matter; then I revert to the point whence I had before digressed. Lest the notion of digression be wrapped in a sooty cloud; I illustrate it in this fashion:

The knot of a single love bound two spirits into one. An unexpected occasion separated their bodies. But before the departure, mouth fixed kisses on mouth; a mutual embrace circles and strains fast both lovers. The fountain of their eyes pours down tears upon their faces; and an intervening sob cuts parting words asunder. And love is a spur to sorrow and sorrow testifies to the power of love. Winter gives place to spring. A breeze disperses the clouds and heaven woos the earth. Warm and moist he wantons with her, and because the air is masculine the earth feels herself woman. The flower, her son, comes forth in air and laughs upon his mother. The first leaves adorn the treetops; dead seeds wake into life; young corn about to sprout stirs in the blade. This season stimulates the birds. This time of year parted the lovers whom love made not yet separate.

The seventh device, Description, pregnant with words, follows that the work may swell.³⁷ But though she be large, let her be delightful: let her be handsome as well as big. Let the matter manage to marry with the words in due form. If she seeks to be nourishment and full refreshment for the mind, let not her brevity be too terse nor her conventional nature too trite. Let the following stand as illustrations varied by new turns of phrase, so that the eye and the ear may rove amid variety.

³⁶Digression, or brief departure from a subject or its main course of treatment, evidently illustrated in Geoffrey's example by the passage on the season of the year. [Tr.]

³⁷Geoffrey's explanation of description is brief and does little to elucidate the principles that underlie his examples. His exemplar in the matter, however, was evidently Sidonius, whose own technique for the description of persons, like Geoffrey's, involves presentation of details of costume, anatomy, equipment, and the like. Geoffrey mentions Sidonius by name in the *Documentum de Modo et Arte Dictandi et Versificandi* II.2.10 (Faral, *op. cit.*, p. 273). For a good example of Sidonius' technique, see his description of Theodoric, *Letters*, Bk. I, ii. [Tr.]

If you wish to shape a full picture of feminine beauty:

Let Nature's compass describe first a circle for her head. Let the color of gold be gilt in her hair; let lilies spring in the eminence of her forehead; let the appearance of her eyebrow be like dark blueberries; let a milk-white path divide those twin arches. Let strict rule govern the shape of the nose, and neither stop on this side of, nor transgress, what is fitting. Let the lookouts of her brow, her eyes, shine, both of them, either with gems' light or with light like that of a star. Let her face rival the dawn, neither red nor bright, but at once both and neither color. Let her mouth gleam in a form of brief extent and, as it were, a semicircle; let her lips, as if pregnant, rise in a swell, and let them be moderately red: warm, but with a gentle heat. Let order compose her snowy teeth, all of one proportion; let the fragrance of her mouth and that of incense be of a like scent. And let Nature, more potent than art, polish her chin more highly than polished marble. Let a milk-white column be with its precious color a handmaiden to the head, a column which bears up the mirror of the face on high. From her crystal throat let a kind of radiance go forth which can strike the eyes of a beholder and madden his heart. Let her shoulders adjust together with a certain discipline, and neither fall away as if sloping downward, nor stand, as it were, upraised, but rather rest in place correctly; and let her arms be pleasing, as slender in their form as delightful in their length. Let substance soft and lean join together in her slender fingers, and appearance smooth and milk white, lines long and straight: the beauty of the hands lies in these qualities. Let her breast, a picture of snow, bring forth either bosom as if they were, in effect, uncut jewels side by side. Let the circumference of her waist be narrowly confined, circumscribable by the small reach of a hand. I am silent about the parts just below: more fittingly does the imagination speak of these than the tongue. But let her leg for its part realize its length in slenderness; let a foot of excellent smallness sport in its own daintiness.

And thus let beauty descend from the top of the head to the very roots, and everything together be highly polished down to the very fingernail.³⁸

³⁸Cf. Horace, *Ars Poetica*, I. 294. H. Rushton Fairclough, ed. *Horace: Satires, Epistles, and Ars Poetica* (Cambridge, Mass., 1961), p. 66, explains that the Latin expression (*ad unguem*) "involves a metaphor from sculpture, for the artist

If to beauty so portrayed you wish to add clothing:

Let her hair, dressed down her back in braids, be entwined with gold. Let a band of gold give radiance to the brightness of her brow; let her face be bare, clothed only in its own color; let a starry necklace circle her milk-white neck; let her hem be white with linen, her mantle burn with gold; let a girdle everywhere bright with jewels cover her waist; let her arms be rich in bracelets; let gold circle her fine fingers, and a jewel prouder than gold pour forth its beams; let art contend with fabric in her bright attire. Let neither hand nor imagination be able to add anything to such array. But her face will be more than all the rich apparel. Who is there who is ignorant of the fire in this torch? Who is there who has not discovered this flame? If Jove in his time had seen her, he would not have sported with Alcmena in the shape of Amphitryon; nor assumed Diana's speech in order, Callisto, to deflower you; nor deceived Io by the cloud; nor Antiope by the satyr; nor Agenor's daughter by the bull; nor you, Mnemosyne, by the shepherd, nor Asopo's daughter by the fire, nor you, Deo's daughter, by the serpent, nor Leda by the swan, nor Danae by the gold.³⁹ He would have courted her alone and seen all others in a single woman.

But since the description of physical appearance is, as it were, a thing trite and outworn, let an example be found in these lines, in which the usage is more unusual:⁴⁰

With kings and potentates of the realm reclining on the welcoming couch, Ceres adorned—the very image of milk whiteness—introduces the delights of the feast. An old wine⁴¹ grows young again in a gold goblet: there alone, or imbued with nectared fragrance if you will, he allows his bouquet to escape and wanton round. Royal pomps of courses, coming on armed in gold, by turns are vain of themselves and of the gold. The guests note, above

would pass his finger-nail over the marble, to test the smoothness of its joints." [Tr.]

³⁹With this whole sentence compare Ovid, *Metamorphoses*, VI, 11. 110–20. [Tr.]

⁴⁰The following example is of another kind of description, representation of what might be called an "action scene." The procedure in this case seems to be presentation in rapid-fire order of many individual visual, aural, and kinaesthetic images. [Tr.]

⁴¹In the text, "Bacchus senex," literally old Bacchus. [Tr.]

all, the paragon of the board: His countenance vies with Paris, with Parthenopaeus his age, with Ceresus his wealth, with Caesar his breeding. If you would consider the rest—what is on his body—his linen vies with the snow, with flames the purple dye of it contends, his jewel with a star. You would see that particular details savor the more, seasoned, as they are, to the taste of the guests. Other delights, which the eye may covet and the ear, an entertainer affords. Taste is not the same for everyone, and to each his own! A varied pleasure has more honeyed sweetness. Tinkling tambourines fly, feasting the eyes of kings, and the hands alternate, and against one lively tambourine another rises in the clash. They hasten out and they return; and they rise again and fall again; and they feign threats, and put on the likeness of friendly combatants; and they flee from each other and pursue each other. Here in another sporting hand, twin cymbals play in the face of the sound. Nor does the foot go idle; rather, it frequently moves out, returns, and flits back with a light step to the same place. Charming voice and charming step. At the same time, in the air there sounds a song and the noise of a cymbal sounds in air. A third man spins himself with agile motion in a circle, or flies full length, or lifts up his supine limbs in a graceful leap, or bends his flexible joints in the form of a bow, neck to ankles, or sends up the point of a sword, and, resolute, leaps in amid its juggled edges. These individual things you may admire. But, even though up to this point you have proceeded pleasantly, now the clapping grows rapturous, now the fingers snap in playful art, now the arms, undivided, curve in a graceful arch, the motion of the shoulders is made frenzied by the swift and sidewise movement of the hands. And you may see the instruments follow the action, there being from them for every man his own kind of pleasure: the feminine hautboy, the masculine tuba, the raucous tympany, the clear-voiced cymbals, the harmonious symphonia, the sweet pipe, the soporific cithers, and the jolly fiddles. All applaud vigorously; such pleasures both lengthen out the hour and are becoming to the banquets of kings.

Thus you may celebrate feasts of kings and the joys of the banquet table; thus we protract a brief theme with long speech.

There remains even yet something which yields copious language: any statement you please may be dressed in twofold form. One sets out the thing proposed and the other denies the

reverse of it.⁴² A twofold mode thus harmonizes into one statement, and the stream of words flows in two branches. The two streams flow together; the words issue from a double stream. Let this be an example:

That youth is wise; his form is youthful and not aged. Give youth of countenance and take away age; give maturity of mind and take away juvenility. His mind is mature and not juvenile.

As is possible, too, if, for instance, your tongue discourses within limit such as this:

His cheek is not that of an old man, but that of a youth; his mind, however, is not that of a youth, but that of an experienced man.

Or, taking up something associated with the idea, you will go even farther—like this:

That face is not wrinkled, nor is the skin dry; the heart is not weakened with age, nor are the lungs spent, nor the limbs stiff, nor the spine bent: his body's age is youth, his mind's long-lived maturity.

Thus may a great deal of corn spring from a paucity of seed: great rivers have their source in an insignificant spring; from a slender sapling a great tree evolves.

If you wish to be brief, first cut out all the aforementioned devices, which make for conspicuousness; and let there be compressed into a modest circumference a little summary of the material, which you may effect by this sort of process: Let *Dame Emphasis*,⁴³ acting as speaker, bind many things straitly; let *Articulus*,⁴⁴

⁴²The procedure in question here is close to both oxymoron and paradox. That is, a suggestion is first made positively and then seemingly denied. Thus, "a *two-fold* mode harmonizes into *one* statement," "the streams *flow together*, [but] the words issue from a *double stream*." [Tr.]

⁴³The rhetorical figure that leaves more to be suspected than has been actually asserted. See [Cicero] *ad C. Herennium*, trans. Harry Caplan (Cambridge, Mass., 1954), IV.liv.67, pp. 401–03. Subsequent page references to this work, which will hereafter be designated the *ad Herennium*, are to Caplan's translation. [Tr.]

⁴⁴The classical figure indicated by this name involved single words set apart by pauses in staccato speech, as, for example: "By your vigor, voice, looks you have terrified your adversaries." Cf. the *ad Herennium*, IV. xix. 26, p. 295. However, as Geoffrey explains it here, and as he appears to illus-

trated in short phrases, compress broad roundabout things in a brief expression; the Ablative has certain abridged constructions in which it may stand alone without a "rower" [i.e., a preposition];⁴⁵ let the same thing disdain to be heard twice; let the skill of your expression signify what is not said in what is said; let no conjunction be at the joining of clauses, but leave them to go alone; or the hand of the artificer may so combine many matters in one, that by the insight of the mind many things may be apparent in a single statement.

By means of this brevity you can cinch in an extensive theme; in this small boat you can cross an ocean. Narration of action elects this form of expression, which, performed discreetly, does not spread a cloud, but, every such cloud being far away, ushers in the sun.

These abbreviating devices may operate together, therefore, but always only as is fitting: emphasis, articulus, the free ablative case without a rower, skillful indication of one thing among the rest, chains removed from between clauses, the sense of many clauses in one, no repetition of the same word. Use either all these things, or at least whatever the particular instance itself allows. Here is a model of abbreviation that reflects the whole technique:⁴⁶

Her husband being away at some distance engaged in increasing his wealth, the wife, adulterous, gives birth to a child. To him, returned after much time, she pretends that the boy was conceived of the snow. A reciprocal fraud: wily, he goes along with it. He carries off the child and sells him, bringing back to the mother a mocking likeness which he represents as the boy melted by the sun.

If your brevity needs to come to a stop at a still shorter boundary mark, let the whole of your *sententia*⁴⁷ at first be dormant. Consent not to be mindful of the verb, but with the heart's pen

trate it in the "Snowchild" anecdote, articulus seems to involve the deliberate use of sentence fragments. [Tr.]

⁴⁵That is, the Latin ablative absolute construction. [Tr.]

⁴⁶P. S. Allen quotes medieval analogues for Geoffrey's tale of the Snowchild in *The Romanesque Lyric* (Chapel Hill, N.C., 1928), pp. 215–76 and 357–58. [Tr.]

⁴⁷See notes 4 and 8 above. Here, Geoffrey probably means simply "thought" or "idea." [Tr.]

write only the nouns that belong to your notions: in the nouns all the strength of the theme dwells. In doing this, work as if by the process of a blacksmith:⁴⁸ the iron of the subject matter, seethed with the fire of the mind, transfer to the anvil of study. Let the hammer of the intellect, whose close coming to grips may form from the unformed mass words more fit, work it all through. Later, the bellows of reason may fuse verbs (the elements being also added which follow verbs)—the nouns to verbs and verbs to the nouns—which express nothing either more or less than what is fitting.

The practice of the new brevity is more penetrating. This subscript serves as a brief example of it.

Whom the adulterous mother represents as having been conceived by the snow, the husband, selling, represents as having been melted by the sun. The husband, because his wife pretends that he whom she has brought forth was engendered by the snow, sells him and pretends by analogy that he has melted from the sun.

Be it brief or long, let your discourse always “color” itself [i.e., with figures of speech] within and without, the color being chosen by a careful plan.⁴⁹ First, muse upon the spirit of an expression, and only lastly upon its countenance; and be not credulous about the color of the latter: unless the inward color conforms to the outer, it is insulting to the intelligence. To paint the surface of an expression is like a picture made of mud,⁵⁰ a thing fabricated, a false beauty, a whitewashed wall, and a mime feigning some speech for him-

⁴⁸The blacksmith metaphor for the writer appears in several places in the *Poetria Nova*. [Tr.]

⁴⁹Cf. the *ad Herennium*, IV. xi. 16, p. 269: *quae si rarae disponentur, distinctam sicuti coloribus* (“distributed sparingly, these figures set the style in relief as with colors”). In his discussion of the “metaphorics” of medieval poetics, E. R. Curtius (*op. cit.*, pp. 128–44) does not mention the very common one of color. But cf. Chaucer, *Franklin’s Prologue*, which also uses the images, dear to Geoffrey as well, of “dyeing” and “painting” and of a “flowery meadow.” In this section of his treatise, Geoffrey expounds the so-called figures of diction, or tropes. Cf. the *ad Herennium*, IV. xxxi–iv, pp. 333–47. Geoffrey first considers the four tropes *transferatio*, or metaphor, *permutatio*, or allegory, *pronominationio*, or antonomasia, and *nominatio*, or onomatopoeia, under the general heading of “transsumption.” [Tr.]

⁵⁰Cf. Horace, *Ars Poetica*, II. 361–62. [Tr.]

self although he has none. Its form conceals its deformity; it flaunts itself outwardly, but has nothing within; it is a picture that pleases when distant, that does not please when near. Therefore remember: be not hasty; but in those things that you intend to say, be an Argus and spy out words for your proposed subject with sharp eyes. If your meaning be dignified, let its dignity be preserved to it: let no ignoble word dishonor it. But in order that all things may be governed by rule, let rich content be dignified by rich expression; do not let a wealthy matron blush in a pauper’s gown.

In order, then, that your theme may assume a rich costume, if the expression is old, be a physician and make the old veteran a new man. Do not always be willing to allow a word to rest in its usual place; such monotonous lodging is a shame to the word itself; let it avoid its usual haunts, and wander elsewhere and build a pleasing abode on another’s site; let it be there a novel guest and give pleasure by reason of its novelty. If you mix this antidote, you will make the face of a word grow young.

This method teaches how to “transsume” words properly.⁵¹ If it be a person about whom the discourse is made, let your speech transfer to its subject something *like* the thing being portrayed: when I see what its proper apparel is in a similar situation, I change it and transform for myself, out of old clothes, something new. See, here, what I mean: In strictly correct speech one says “yellow gold,” “white milk,” “scarlet rose,” “sweet-flowing honey,” “fiery flames,” “white mass of snow.” Say therefore: “snowy teeth,” “flaming lips,” “honied taste,” “rosy face,” “milky forehead,” “golden hair.” Well suited to each other are: “teeth” and “snow”; “lips” and

⁵¹Under discussion first is the trope metaphor (*transferatio*, in Geoffrey’s terminology). Geoffrey first illustrates the two main possibilities: metaphorical transfer of the attributes of inanimate objects to man; and metaphorical transfer of human attributes to inanimate objects. Next he discusses certain refinements: metaphorical use of adjectives to clarify the significance of metaphorical verbs; apparent opposition of meaning between noun and verb (i.e. paradox); and union of literal and figurative meaning in the same verb. Finally he shows how the metaphorical effect of a verb can apply either to its subject, to its object, or to both; and how an adjective, similarly, can have metaphorical force variously, according as it modifies different units of the syntax of a sentence. [Tr.]

“flames”; “taste” and “honey”; “face” and “rose”; “forehead” and “milk”; and “hair” and “gold.”

And, because an association of very similar things is obvious in that case, too, if the object of which you speak is not a person, twist the reins of the mind around to what it would be in the case of a person. Tastefully substitute a verb that a similar statement fittingly places in the same position. So that, if you wish to say vividly that “Springtime adorns the earth, the first flowers thrust up, the weather becomes pleasant, storms cease; the sea is smooth, its motion without turbulence; the valleys are deep, the mountains lofty,” then consider a like theme in the life of us men, which has verbs of its own to express it. If you are producing ornament, “you paint”; finding your beginning, “you are born”; if mild in speech, “you soothe”; ceasing from all action, “you sleep”; motionless, “you stand with fixed foot”; borne down, “you plunge”; raised in air, “you loom up.” Then the verb has good savor if you say:

Springtime “paints” the earth with flowers; flower buds are “born”; pleasant weather “soothes” us; the storms, now ceasing, “sleep”; the ocean “stands” as if immobile; the deep valleys “plunge”; the lofty mountains “loom up.”

When you transsume your own material, it has more pungency because it derives from what is your own. Such transsumption of language is like a mirror for you, since you see yourself in it and recognize your own sheep in a strange field. Now look at several such transsumptions—as, perchance, if we should wish to present in such transsumed form winter’s shameless behavior:

Winter, hardened in despotic cruelties, is always “opening wide his jaws”; clouds during his reign “grieve” the sky; fog “blinds” the day; the wind “gives birth to” storms; snow “closes” the roads; winter’s season “pierces” the bone marrow; hail “lashes” the earth; ice “locks” the waves.

Or, if we speak of weather fit for ships:

The north wind does not “chide” the waters, nor does the south wind “inebriate” the air; but the ray of the sun, like a broom “sweeps” the sky clean of murky air, and with bright face the season “flatters” the sea; the wind with secret whisper makes the ocean “stand still” and the sailing vessels “race.”

Or if we speak of a blacksmith’s procedures in this language:

The flames “wake” to the bellows; the unformed mass is “buried” in the fire; a pair of tongs “transmits” the fired mass from the freshened fire to the anvil. The hammer, as teacher, administers frequent “blows,” and vigorously “corrects” it with hard strokes, so that it performs as he wishes. Either he “entices” from it the circle of a helmet, useful “counsel” for the head, or he “fathers” a sword, lawful “companion” for a man’s side, or work proceeds on a coat of mail, “host” for the body. The more lowly greaves are “born” together with these, a “shield” which the shins “elect,” and the spur, the horse’s “instigator,” which the ankle “adopts”; and likewise the other kinds of armor which cunning prepares. Such a “dissonant” array of things, such varied kinds of arms, “exhaust” the iron. The hammer then “restrains” its blow; the bellows, their journey ended, “pant”; the work “crosses the finish line,” and “completes its meal.”

In this fashion, place your verbs with distinction; so placed, they will be transparent to the mind’s eye. But to place the verbs is indeed a weighty matter, as regards the application required. This mode of expression is both burdensome and easy: the discovery of the verb is a heavy task; the heart is easy after it is hit upon. So opposites mingle; but they pledge peace, and enemies stay on as friends.

In this, there is a certain blending process. Let not the verb be light, cheap, or rude: a verb draws charm and worth from a degree of seriousness. But let not its gravity be swollen or obscure; a light touch⁵² will promote clarity and check bombast; let the one correct the other. Therefore so speak, so join the sober with the light, that the one thing may not detract from the other, but that they may meet and enjoy the same abode, and a harmonious discord reconcile their quarrel.

In order that the transsumption of a verb may be more urbane, let it not come in the sole company of a noun. Give it an adjective, and let that be such as may be fully helpful and clear away

⁵²Pervasive in the section of the *Poetria Nova* devoted to style, the concepts of “lightness” or “ease” and of “heaviness,” “seriousness” or “soberness” require clarification. Words are considered to be used with a “light touch” when they are employed in their literal senses. They are regarded as “heavy,” “dignified,” or “sober” in effect when they are used not literally but metaphorically. [Tr.]

the cloud, if there be such present in the verb; if not, let it elucidate the verb more fully and shed full light upon it.

See now, if I portray something in the following form—the laws are “soft” or the laws are “stiff”—it does not yet adequately shed light, but the transsumption of the verb lurks, as it were, under a cloud. And whereas, so placed, the verb remains in obscurity, an adjective may lend light and assist it. Better say, therefore: “Merciful, the laws are ‘soft’; strict, they are ‘stiff.’” Now the adjective conveys the verb, for certainly strictness conveys rigor and rigid measures, whereas devout mercy tempers and softens the laws. But what if the transsumed verb is quite clear, in and of itself? Nonetheless, an adjective may help it; the light therefrom redoubles that of the verb. Suppose that I speak felicitously enough if I say: “The earth drank the dew of the sky more than was meet, and the rainstorm doled it out irresponsibly.” Nevertheless, you will express that better and more sweetly if you say: “A sottish earth drank the waters more than was meet, and the spendthrift rain distributed them irresponsibly”—because these images accompany each other and intertwine in the manner of ivy, as if they would not suffer to be separated from each other. Rather they swear a merger into one entity, and are companions of a single mind. Discrimination of this kind has “rubbed the file,” since the rust has been removed from the words.

But your picture masters this color better still when the substantive has strife with the verb, and they have the appearance of hating each other, and yet within all is love and concord in meaning. A technique which this illustrates:

He pours out lavishly, but in pouring out his riches,
he renews them; his hand is never tired except
when it rests.

And also this: “Before the face of God, devout silence cries aloud.” Consider other instances and you will be surprised to find the same possibility in them:⁵³

⁵³Faral prints the following paradoxes about lovers (illustrating opposition of meaning between a noun and its verb complement) as a part of Geoffrey’s remarks rather than as an italicized example. [Tr.]

When lovers make war with mutual wrangling,
peace of mind grows from the strife of tongues. By
this hate, love is established.

So it is, too, with these examples: their inner statements love one another, although their exteriors are at enmity. The quarrel is all in their sounds, and the sense of what they say settles all the dispute.

Yet another light by which a transsumed word may shine is when, once chosen, it is at the same time a transferred and a proper usage—as, for example, in this passage:

That ancient skill of Rome armed tongues with
laws and bodies with steel, in order to prepare
tongues and bodies for war at the same time.

Or let this be an example, since this brief speech has more savor: “Faith arms them in heart, steel in body.”

So verb, adjective, and noun seek to be transsumed. But the transsumption of a verb may be varied, by reason either of the words preceding or of those following, or of both cases at once. By reason of the words preceding, as in this example:

In springtime the clouds “stand still,” the air “grows tame,” the breeze “hushes,” the birds “joke,” conversing among themselves; the sea “sleeps,” the streams “frolic,” the branches “sprout beards,” the fields are “painted,” and the land “frisks.”

By reason of what comes after, as in this example:

If the Pope, mighty in words, loose his tongue, he
“sows grain” from his mouth, whence he “feeds”
the eyes and “makes drunk” the ears, and “sates”
the whole soul.

By reason of both, as in these examples:

When the mouth of the Pope “pledges a toast” in
sweet words, alert ears, while he speaks, “drink”
the words from his mouth as he speaks, and the
things heard “sleek down” their spirits with peace.

The adjective may similarly be transsumed in three different respects. Either by reason of its noun, to which it joins itself in an unusual way, as in this example:

Do away with speech that is either “raw” or “boiled
to pieces,” “watery” or “desiccated,” “shaggy” or

“combed to death,” “uncouth” or “effete,” “penniless” or “vulgarily wealthy.”

Or by reason of the complement of the noun, as in the passage below:

What may our king do, “unarmed” with counselors, “girt round” with ill will, “naked” of friends?

Or by reason of both, as when “eloquent in speech” is expressed as “flowery in eloquence,” or “an old man weak with age” as “a pauper in the thing you possess.”

Next follows transsumptions of the noun.⁵⁴ If the noun transsumed is a common noun, it gives to the verbs some such color as this: “the ‘thunder’ of the people struck the city”; or of this sort:

A “trumpet” of lightning, a “shock” of air, “quarrels” of the winds, “din” of the sea, the “wrath” of tempests.

If it should be a proper noun, it is transsumed either on the one hand, to the end that you may praise or blame with it, as if it were a nickname—you may praise with such words as “that Paris,” similarly you may blame by saying “that Ther-sites”—or, on the other hand, to the end that there may be a kind of analogy, as, obviously, in this example: “that master, our Tiphys, rules the boat”—or, as I may give it again, “that rustic fellow, our leader and our Automedon.”⁵⁵ Or I transfer a noun for other reasons, that it may not be a true resemblance, but rather through antiphrasis, derision as it were, as when someone deformed in body is called “Paris,” or someone savage at heart “Aeneas,” or when someone of feeble strength is called by the nickname of “Pyrrhus,” or someone of rude speech “Cicero,” or someone wanton “Hippolytus.”⁵⁶ Such change rejuvenates a word.

⁵⁴The first means of transsumption of a noun treated by Geoffrey is onomatopoeia (*nominatio* in Geoffrey’s terminology), i.e. a figure of speech whereby a thing that has no name, or an inadequate one, receives an appropriate name. Cf. the *ad Herennium* IV. xxxi. 42, pp. 333–35. [Tr.]

⁵⁵Here the second means of transsumption of a noun is indicated, namely antonomasia (*pronominatio* in Geoffrey’s terminology), the figure of speech whereby another epithet is substituted for a common or proper noun. Cf. the *ad Herennium* IV. xxxi. 42, p. 335. [Tr.]

⁵⁶Finally Geoffrey discusses transsumption of a noun by allegory (*permutatio* in his terminology), i.e. the figure of

Thus a simple change transsumes a single word. When there are several, it is as in this pattern of speech: “the shepherds are stealing the sheep.” Here you transfer the two nouns “shepherds” and “sheep”: you transsume the noun “shepherd” to prelates and the noun “sheep” to their subjects. Moreover, the whole location is transsumed, and not part of it, a technique which a speech like the following illustrates: “He plows the seashore, he washes a brick, he flogs the air.” These are the ways in which *transsumptio* colors words.

Transsume by well-tryed methods. Yet be moderate, neither inflated nor swollen. Honor and the onerous, these two, are intermingled: it is onerous to transsume a word as is fitting, but it is an honor when it is transsumed fittingly. Whenever your meaning comes clothed in apparel of this sort, the sound of the words is sweet to the happy ear, and it soothes the inner mind with an unexpected delight.

Transfero, permuto, pronomino, nomino—these verbs produce from themselves further words,⁵⁷ and they are the names of rhetorical colors, all of which transsumption alone includes in itself. Get for yourself these viands and these liquors: this feast gives content; this drink makes drunk the ears.

Skilled art has woven other garments of lighter value, but still there is in these, too, weight and a becoming usage. There are ten such bouquets of words, counted on this side and that: six on one side and four on the other.⁵⁸ This ten-count of colors dyes words with a gravity that is foreign, not intrinsic; their sound colors by an artificial technique. One thing is common to all: clearly, the position⁵⁹ of the words is uncommon and the

speech whereby one thing is denoted by the letter of the words but another by their meaning. Cf. the *ad Herennium*, IV. xxxiv. 46, pp. 345–47. [Tr.]

⁵⁷That is, the Latin verbs just mentioned yield the Latin nouns *transferatio, permutatio, pronominatio, nominatio*; “they” (the nouns) are the names of rhetorical figures. [Tr.]

⁵⁸Geoffrey has previously dealt with four tropes (*transferatio, permutatio, pronominatio, nominatio*). He states that he will now proceed to consider six others. Again, cf. the *ad Herennium*, IV. xxxi–xxxiv, pp. 333–47. [Tr.]

⁵⁹Here in question is not word order, i.e., a word’s “position” in the syntax of a sentence, but rather figurative as dis-

choice of words is exotic. Lest perchance your mind, doubtful, should hesitate about this, the following examples will give it confidence.

Let such a thought as this come forth for general consideration:

The sick man seeks a doctor; the mourner, consolation; the needy man, relief.

The words flower better in this arrangement:

Sickness needs a doctor; mourning, consolation; neediness, relief.

Intrinsic to these words is the charm of placing the abstract for the concrete:⁶⁰ thus, changing “the sick man” into “sickness”; “the mourner,” into “mourning”; “the needy man” into “neediness.”

What does dread produce? Turning pale. What does anger produce? Turning red. Or what does the plague of pride produce? Swelling. So, we rephrase: “Fear pales; wrath reddens; pride swells.” And it delights greatly and savors more sweetly in the ear when I apply to the cause what the effect claims for itself.

Let service of a comb part in order the hairs of that head that has first been washed. Let scissors cut away from the hair every superabundance, and a razor renew the face.

Thus art teaches us to attribute to an instrument (in a facetious manner) that which in fact it is the user’s to do with it. So arises, from art, the power to avoid trite paths and to proceed with greater distinction.

Likewise splendid is speech chosen like this:

We stripped bodies of their steel, purses of their silver, fingers of their gold.

tinguished from literal usage. A word is in normal “position” when used with its literal meaning; used figuratively, it is in uncommon or exotic “position.” [Tr.]

⁶⁰In the preceding example Geoffrey has illustrated the trope metonymy, i.e. the rhetorical figure whereby the name of one thing is substituted for the name of another that it suggests or is closely related to. Traditionally, metonymy has (and Geoffrey explicitly distinguishes) several subdivisions: the abstract for the concrete, the cause for the effect, the instrument for the user, the constituent material for the object, the container for the contained. Cf. the *ad Herennium*, IV, xxxii. 43, pp. 335–37. [Tr.]

—not because zeugma paints the words with its colors,⁶¹ but because, about to convey the whole of something, I suppress the abstract word for it and instead make a point of the constituent material. A more unsophisticated technique states both, but art is silent about one, and so serves two in one. This method, once introduced, brings with it three advantages: for it cuts down on expenditure of words, it “colors” the topic, and it is good for the work with respect to meter. The mode of expression cuts down on verbiage: i.e., a word is more succinct than a statement; and the more skilled word usage in this artistic arrangement gives aesthetic “color” to your material; and it is good for the work with respect to meter where the oblique case⁶² requires a word whose company the verse must avoid. All of which is evident in the following: “My finger sports in gold.” “Gold” is a shorter word; “a ring of gold” is more drawn out. The latter expression specifies the object itself, the former puts it more subtly. In the one instance, the metrical feet go along with the case requirements; in the other, they are rebellious.

Use the thing which contains, rather than the thing contained, putting down verb, noun, or adjective as you please, so long as it is done suitably. Insert the noun thus: “drunkard England,” “weaver Flanders,” “braggart Normandy.” Or place the adjective thus:

The “loud” forums; “close-lipped” silence; the “mournful” prison; the “cheerful” house; the “quiet” night; the “busy” day.

Likewise, use select verbs:

Salerno by its medical virtue heals the sick from diseases. Bologna with its laws arms those bared to

⁶¹The foregoing example happens, incidentally, to be an instance of zeugma (the stylistic figure whereby a word is used to modify or govern two or more words, with only one of which it makes strict sense: here the verb “stripped,” which Geoffrey considers to be only appropriate, strictly speaking, to “bodies” in the quotation); but Geoffrey’s interest in the example is, as he explains, something else, namely its illustration of metonymy. [Tr.]

⁶²The oblique case is any case except the nominative and vocative. Latin nouns in their oblique cases may of course be considerably changed from their forms in the nominative, and their forms in the oblique cases may be inconvenient or impossible for a given meter. [Tr.]

litigations. Paris dispenses through its arts those loaves wherewith it gives the hardy to eat. Orleans educates infants in their cradles with the milk of the great authors.

Give hyperbole⁶³ its head, but do not allow the speech to gallop away out of hand: let reason rein it in and let it give pleasure by a sensible termination, so that neither the mind nor the ear may abhor the excess. As, for example, in this passage:

A heavy rain, as it were, of javelins is falling on the foe. The shattered heap of spears resembles a forest. A wave of blood is flowing, after the fashion of the sea, and corpses burden the valleys.

This technique wonderfully diminishes or augments praise. Even excess pleases, when both ear and usage approve it.

When you are about to say, "I have studied three years," you may, if you will, color your words more attractively than that. The "color" above is a color crude and outworn. Rework that raw material as follows. Let your file redo the old phrase with these words:

A third summer found me in study; a third autumn enveloped me; a third winter involved me in its cares; three springs I completed.

I express a statement more subtly when the whole is so subordinated, when, by the methods aforesaid, I imply a whole by its parts.⁶⁴ Suppose part of the year is wet: say "it is a wet year." If part is dry, "it is a dry year"; if part is hot, "it is a hot year"; if part is mild, "it is a mild year." I appropriate for a whole year what belongs to part of it. With that same figure of speech, you, Gion,⁶⁵

⁶³Overstatement. Cf. the *ad Herennium* IV. xxxiii. 44, pp. 339-41. [Tr.]

⁶⁴This trope is usually known as synecdoche. Cf. the *ad Herennium* IV. xxxiii. 44-45, p. 341. [Tr.]

⁶⁵This reference is obscure. A likely explanation is Gihon, the river mentioned in Genesis ii. 13. It may, however, refer to one of the two French towns of Guillon. Guillon in the department of Yonne is traditionally famous for its wines; Guillon in the department of Doubs, for its mineral waters. There is also the Spanish port Gijon, famous in Roman times for its mineral baths. The Gion referred to by Geoffrey appears to be a liquid of some kind: depending on what liquid, the various adjectives employed would lend themselves to slightly different translation. [Tr.]

will be assessed for your various attributes: muddy and clear, narrow and broad, bitter and savory. Again, the day should be described by a like process as "dry" or "wet" still according to one of its parts. Since either color may be pleasing, you will please with either color.

And it is polite *abusio*,⁶⁶ when neither the proper nor the conventional word is chosen, but rather one that is a neighbor to the proper one. Consider if this be proposed: "The strength of the Ithacan is 'little' but his wit is 'great.'" *Abusio* may change the word like this: "Ulysses was 'short' on strength, but 'long' on wit"; for there are some boundaries belonging in common to the words "long, great" and "short, small."

In the figures mentioned above there is a certain effect of color and a certain gravity which arises from the fact that the statement does not show itself in public with a bare face or avail itself of its own voice, but rather uses a strange voice. And thus it covers itself, as it were, with a cloud (still clear, however, under its cloud).

In addition, a certain gravity arises out of mere word order when what the grammatical construction associates, the order separates⁶⁷ — as is the case in this permuted construction: *rege sub ipso; tempus ad illud; ea de causa; rebus in illis*; or an inversion of this kind: *Dura creavit pestiferam fortuna famem; letalis egenam gente fames spoliavit humum*. Thus stand separated in order things which properly constructed would instead stand close. Correct close structure manifests the meaning more readily; but a judicious

⁶⁶Catachresis, or inexact use of a merely like and kindred word in place of an exact one. Cf. the *ad Herennium* IV. xxxii. 45, 343. [Tr.]

⁶⁷The trope hyperbaton. Cf. the *ad Herennium* IV. xxxii. 44, pp. 337-39. Under consideration here is the violation of normal word order, common in Latin but comparatively uncommon in English. The orderly translations of these Latin phrases would run "under the king himself," "up to that time," "for that reason," and "cruel Fortune created a pestilential famine; fatal famine despoiled the impoverished land of its yield." A complex instance of hyperbaton in English is Chaucer's *Troilus and Criseyde*, I, 11. 1-5:

The double sorwe of Troilus to tellen,
That was the kyng Priamus sone of Troye,
In lovyng, how his aventures fellen
Fro wo to wele, and after out of joie,
My purpos is, er that I parte fro ye. [Tr.]

distance between grammatically related words hangs more upon the ear and has more savor.

If you would trust in gravity, use these sails; keep to this harbor; here let the anchor of your mind be fixed. Yet be weighty in such wise that the topic is not covered with a cloud; let your words make for the meaning to which they are bound by rule.

The words that unlock a closed mind are words carefully hit upon, like so many keys to the mind: anyone who wishes to open a closed matter refuses to introduce a cloud of words; however, if he has introduced it, an injury has been done to his words, for he has made a lock out of a key. Be the bearer of a key, therefore; open up your subject the more speedily by means of your words. For if a speech enters through the ears into the mind's sight without light, it builds on river water, it plants in dryness, it flogs air, it draws a furrow in sterile sand. If, therefore, you use exotic or abstruse words, you are only making a show of your powers and you are not observing the law of discourse. Let your tongue recover itself from

such a blot, and see that you fasten a padlock on obscure vocabulary. Use good judgment: it is permitted to you to innovate in all things, being one greater in this than other men; yet still be, in your words, one man among others; be not exclusive but rather social in your eloquence. The advice of the ancients runs: "Speak as the many; think as the few." But at the same time, do not make yourself vulgar: you can be at the same time pleasant and skillful in speech. Therefore, do not have regard to your own powers, but rather his with whom you speak. Give a weight to your words that is suited to his shoulders, and speak words proper to your matter. When you teach a craft, let your speech be that native to the craft; every craft delights in its own vocabulary. But let the craft's words be content with the craft's boundaries. When you come outside into the common forum, let the craft be satisfied to use common terms. In its own house a speech may be its own man; in public, let it suit the public. Thus for each business its own custom should be satisfied. In speech, this is the better practice.

Robert of Basevorn

fl. ca. 1322

Robert of Basevorn is known only as the author of *Forma Praedicandi* (*The Form of Preaching*), a medieval manual on preaching. Because his work is regarded as a good example of the type, it is excerpted here. It illustrates the rhetorically organized art of preaching, or *ars praedicandi*, that began to develop in the twelfth century C.E.

The *ars praedicandi* was the latest of the medieval practical rhetorical arts to develop, postdating both the *ars dictaminis* (p. 492) and the *ars poetriae* (p. 503). Its late development may be attributed to the Church's prevailing attitude that rhetoric should not be used in preaching. One should present God's word with as little embellishment as possible (and, indeed, one might not present it more than three or four times a year in most parishes). Even Augustine, who salvaged classical rhetoric for Christian use in Book IV of his *On Christian Doctrine* (p. 456), does not treat all five canons and cautions against overuse. Moreover, even his cautious recuperation of classical rhetoric was not widely read until late in the medieval period. For a long time, the most influential treatment of preaching was the *Cura Pastoralis* of Pope Gregory the Great (591 C.E.). He insisted that the best sermon was a simple homily, or application of a scriptural text to common human problems, related in plain language. The homily, according to Gregory, might be rhetorical only in the sense that the preacher should try to adapt content to the audience's specific circumstances. Isidore, Alcuin, and others kept Cicero's views on rhetoric alive, but Cicero's work was not widely applied to preaching, in spite of Augustine's example.

Augustine's influence grew after Alcuin's pupil Hrabanus Maurus (778–856) published a treatise entitled *De Clericorum Institutione*, or *On the Education of Clerics*, in which he quotes *On Christian Doctrine* extensively to justify the study of rhetoric for priests. Alain de Lille (ca. 1128–1202) drew on both Gregory and Augustine in his *De Arte Praedicandi*, which began to turn the study of preaching in a more systematic direction. The formal study of preaching was part of the growth of humanistic learning in the so-called renaissance of the twelfth century (see the introduction to Part Two), which encouraged people to think that human reason could analyze and organize knowledge of the natural world, the classical heritage, and even, in the *ars praedicandi*, the word of God. Moreover, the *ars praedicandi* responded to the laity's growing desire to hear preaching during this time period, an appetite stimulated by the new Franciscan and Dominican orders, which were founded especially for preaching.

The sermons of the preaching friars displayed more internal organization and made more use of rhetorical devices than did the traditional homily. They were not as highly organized, however, as the "thematic" sermon, the new form addressed in the preaching manuals that began to appear at the beginning of the thirteenth century. These appeared rather suddenly and in great numbers: Some three hundred are still extant, although few have been edited or translated into modern English.

Among the first theorists of the thematic sermon were English scholars such as Alexander of Ashby, who published a manual around 1200. The earliest collection of thematic sermons was produced in Paris in 1231. These manuals constitute the first full-fledged *ars praedicandi* of the medieval period, and the kind of preaching they advocate continued to be practiced until the Reformation, although older, more informal kinds of pulpit oratory could also be heard.

The thematic sermon begins with a “thema,” or biblical text, chosen for a particular audience or occasion or perhaps dictated by the Church calendar. It is followed by a “prothema,” another biblical text chosen to complement the main text and to make a transition to an appeal for divine aid. Next, rather than simply elaborate on these texts’ lessons for living, the preacher divides the main text into brief phrases, sometimes into single words, and prepares a miniature sermon on each division, which is further subdivided. The method of analysis resembles Scholasticism and probably was influenced by this intellectual movement (see the introduction to Part Two). Each division, with its internal subdivisions, should be related, however distantly, to the lesson the preacher wants to draw from the text as a whole, and each should be developed with further citations from Scripture, the Church Fathers, and other supporting material. Anthologies of such material, including historical anecdotes, fables, and snippets of natural history, were sometimes appended to the manuals or published as companion volumes, as were collections of model sermons. Thematic sermons are also called “university” sermons, perhaps because they were first or most often heard in university towns, especially Oxford and Paris. It is easy to understand how the thematic sermon would require a highly literate audience, since the form is complex and relies heavily on interlocking textual citations.

Forma Praedicandi, or *The Form of Preaching*, published by Robert of Basevorn in 1322, is generally considered an excellent example of a manual on thematic preaching. Very little is known of Robert. Anglican Church historian Charles Smyth says that he was associated with the University of Oxford and that he was not a priest or monk. The initial letters of the treatise’s fifty chapters spell out his name and the dedication of the work to William, Abbot of the Cistercian monastery of Basingwerk, England.

SYNOPSIS OF THE FORM OF PREACHING

Robert’s work is excerpted here. What follows is a synopsis of the whole work.

Citing Boethius, Robert argues that the form of preaching is “the system and method” of theology just as “logic is the system of syllogizing in every field of knowledge.” Thus he gives his rhetoric of preaching a somewhat dialectical cast. He also defends the study of an “artistic” method of preaching as necessary to teaching, an argument that follows Augustine.

Robert goes on to define preaching and the character of the preacher. Of the many correct ways to preach, he announces that he will discuss only the modern methods associated with Paris and Oxford—although these methods abound with

“devices which, as it seems to me, appertain more to curiosity and vanity than to edification.” He notes that the English are the worst offenders here.

Nevertheless, the preacher can certainly use “verbal embellishments,” for “wisdom and eloquence together move us more than either does by itself.” Robert cites Augustine’s *On Christian Doctrine* to argue that the preacher must know how “to teach, please, and move.” He then lists the twenty-two rhetorical “ornaments” he will discuss in detail in subsequent chapters. These ornaments may seem like a strangely assorted lot to the modern reader. By no means do they all focus on stylistic devices, as the term *ornament* might make us think. But Robert probably uses the word in an older sense, meaning something like “equipment” (*ornaments* could also refer to the armor and weapons necessary to a fully appointed knight, for example). Thus in enumerating “ornaments,” he is simply telling what rhetorical features, in his opinion, the well-composed sermon ought to exhibit. In this connection we might recall that Martianus Capella depicted rhetoric as an armed—“ornamented”—woman.

Robert discusses in turn each of the ornaments listed in Chapter 14 of *The Form of Preaching*. Argument can be “by induction, by example, by syllogism, by enthymeme.” Robert says little about induction, but apparently he distinguishes it from example in that induction organizes many illustrations and example uses only a few. The syllogism must be brief and all premises must be proved. Robert discusses enthymeme in terms of “antecedent” and “consequence.” He says “commonplaces” that are probable may be used, but the “compelling” enthymeme will be reducible to a provable syllogism. This discussion once again emphasizes the close relation between rhetorical argument and dialectic, and the tone is rather Aristotelian. Robert refers to *The Prior Analytics*, without mentioning Aristotle, and to Boethius’s *Topics*.

Robert next discusses the “Proof of Parts,” that is, the justification for dividing the theme as one has chosen to do. Robert’s examples here give the reader some idea of what kind of sermon was actually produced through the use of such manuals. He discusses metaphor briefly as a kind of “Amplification,” thus seeming to treat it as something added on to the text’s meaning rather than as something that creates new meaning. He condemns some ornaments as too stylistically involuted. As a model for how to conclude the sermon, he cites Boethius’s *The Consolation of Philosophy*.

Finally, Robert discusses methods of organizing a sermon other than by the thematic structure he has discussed up to this point. A method for the most intelligent audiences requires them to possess considerable ability to pick up image patterns and to catch allusions to authorities who are not named. Robert concludes his treatise with a brief discussion of the last seven ornaments, which are purely stylistic. The *Rhetorica Secunda* of “Cicero”—actually, Book IV of the *Rhetorica ad Herennium* (p. 243)—is cited on tropes and figures and Augustine’s *On Christian Doctrine*, Book IV, is quoted on matching one’s tone of voice to the gravity of the subject matter. Some editions of Robert’s treatise include an addition on use of the *cursus*, the rhythmic prose used in official letters.

Selected Bibliography

There is little material from medieval treatises on preaching in English translation. *Readings in Medieval Rhetoric* (ed. Joseph M. Miller, Michael H. Prosser, and Thomas W. Benson, 1973) contains brief excerpts of several relevant works, including *On the Education of Clerics* by Hrabanus Maurus and *De Arte Praedicandi* by Alain de Lille. Excerpted here is Robert of Basevorn's *Forma Praedicandi*, the complete text of which has been translated by Leopold Krul (in *Three Medieval Rhetorical Arts*, ed. James J. Murphy, 1971). Marianne Briscoe mentions a few other English translations, not all of scholarly quality, in *Artes Praedicandi* (Typologies des sources du moyen âge occidental, fasc. 61, 1992).

James J. Murphy's account of *ars praedicandi* in *Rhetoric in the Middle Ages* (1974) is comprehensive. Harry Caplan's collected essays, *Of Eloquence: Studies in Ancient and Medieval Rhetoric* (ed. Anne King and Helen North, 1970), contains translations of two brief preaching manuals and several helpful studies of *ars praedicandi*, including "Classical Rhetoric and the Medieval Theory of Preaching." Gerald Owst concentrates on preaching in its social context in *Preaching in Medieval England* (1926). For a good idea of how the *ars praedicandi* actually worked in the assembly of a sermon, see Charles Smyth, *The Art of Preaching: A Practical Survey of Preaching in the Church of England 747-1939* (1940); Smyth also includes a detailed chapter on how medieval sermons were embellished with examples from history, mythology, and the like.

From *The Form of Preaching*

The Lord stood with me, and strengthened me, that by me the preaching might be fully known (2 Tim. 4:17).¹ As the Philosopher² says, they who seemed experienced reasoned falsely through bad logic. Not knowing the syllogistic form, they called themselves philosophers, in vain professing Philosophy, of whose beginning and in a way foundation, namely logic, they were ignorant. Grasping some parts of Philosophy's cloak, they vainly thought that the whole of it fell to them, as says Boethius.³ Thus also many presume to preach on Theology and to call themselves preachers, when they do not even know the form of preaching, which is the system and method of preaching on every subject, as

logic is the system of syllogizing in every field of knowledge.

Since preaching and teaching are necessary for the Church of God, that science which presents the form of preaching artistically is equally necessary, or even more so. For this reason I have tried to present this small offering of mine especially for the honor of God and His holy Church, although other concurrent motives strongly suggesting it are also involved. Therefore, since I was in many ways bored, and since I was importuned with many insistent requests by different Religious of various Orders and at the same time by Seculars, and also since I was not pressed by other occupations as once I was, I undertook to write this book. I have done so in the hope that it would please you to whom above all things I am humbly grateful; in the hope that applying my mind to other things I might lighten my boredom; in the hope that in my own little way I might satisfy my companions, whose ardent and constant insistence spurs me on; in the

Translated by Leopold Krul. Edited by James J. Murphy.

hope that the memory of you, my friend, might be the more precisely fixed in me and in our posterity; and, finally, in the hope that I, too, might not grow stale through leisure. It is in these hopes that I undertook to write the present work, which may be called the Form of Preaching.

When after such a beginning some things which ought to be included seemed difficult for me to invent, I began to be moved by doubts about my ability to bring to perfection what I had begun. And when I was anxiously pondering thus, suddenly and wonderfully there rose before my mind and vision the authority touched upon in the introduction above, and fixing itself with vividness it filled me with unwonted joy, so much that it dispelled a great part of my former sadness. Thus when I clearly saw that the first part of the authority was fulfilled in me, namely, that *the Lord stood by me*, strengthening me, I had no doubts about its remaining part, and made bold to continue what I had begun, rightly judging that I must begin from the place in which could be assigned the four causes of this work such as are usually noted in Introductions.

The final cause is designated when is said: *The Lord stood by me and strengthened me*. For this end the Apostle⁴ invites his followers (Eph. 6), saying: *be strengthened in the Lord and in the might of His power*. For he who rightly considers ought to establish Him as an end Who is a soothing consolation in dejection, complete satisfaction of desires, a charming alliance in friendship, and a profitable delight in studies. This end can be rightly expressed in the saying (Ezek. 3:14): *The hand of the Lord was with me, strengthening me*.

Secondly, the efficient cause is designated when is said: *by me*. May God, who is also the end, be primarily the efficient cause influencing the whole, as it were. You, my friend, are like a special attracting force, and the insistence of my colleagues is like a certain continual driving force; whereas I am more immediately the instrument putting the task into execution. However, because the primary cause has more influence, I do not dare to attribute anything to myself as proceeding from me; but I say with the Apostle (Rom. 15): *I dare not speak of any of those things*

which Christ worketh by me, and (Gal. 2): *And I live, now not I, but Christ liveth in me*.

Should any one wish to know who and of what status is that friend to whom this work is dedicated, and who I am and what is my status—I write all this from the beginning to the end—let him look at the capital letters and he will learn.

Thirdly, the material cause is designated when is said: *preaching*, because the form of preaching is here considered as the matter. On this subject, because I know well enough that I am less fit to speak, I must say with Psalmist: *It is good for me to adhere to my God, to put my hope in the Lord God that I may declare all thy praises* (Ps. 72:28), that is, compose a form which should be a guide for all methods of preaching.

Fourthly, the formal cause is designated implicitly when is said: *may be accomplished*, as some books have it. A thing is formally transmitted and taught when a continuation carries through in an orderly way what the beginning of the work promises or proffers for investigation, and what the end brings to a conclusion, as the Apostle enjoins upon Timothy (2 Tim. 4): *do the work of an evangelist, fulfill thy ministry*. As St. Gregory says in the prologue to *Moralium super Job*: *He who treats sacred eloquence ought to imitate the way of a stream. A flowing stream, if it touches hollows along the side, immediately turns into them, and when it has sufficiently filled them, immediately flows back into its bed*. So says Gregory. In a similar way a stream moves gradually, in an orderly manner, from its source to its mouth. Thus one who deals with the divine word—yes, with any orderly treatise—should make sure that in discussing a subject he has an organized method of procedure. He should not dwell too long on the same point nor should he repeat more often than is right. He should hastily progress from one thing to another as the matter allows. An exception may be made when—without deviating too far from the matter—he finds along the way a source of edification into which, as I might say, he turns his stream of language as into a neighboring valley. When he has sufficiently filled the place of added instruction he turns back into the channel of the intended sermon. Whence the saying, in Eccles. 24, about

⁴The Apostle is Paul. [Ed.]

God, who brings about this formal filling, and from whom primarily comes that which seems to come from us. It is said that *He filleth up wisdom as the Phison*, and again, that *He maketh understanding to abound as the Euphrates*. In other words, just as those two rivers, Phison and Tigris, fill their beds in an orderly way, so does God do in the case of those who deal with his wisdom, pouring into them the grace and wisdom, or the knowledge of proceeding in an orderly and formal way, that thus by the opening of His hand all things may be filled with an agreeable goodness.

This filling, the formal cause, or method of procedure (if we may now turn to our proposal, having completed the foregoing Prologue) is treated and taught in fifty chapters. For, as is clearly evident, the Prologue shows to whom this treatise is dedicated, why its title, and its four causes. Here ends the Prologue.

The index for the following work, which is called *The Form of Preaching*, was composed in the year of our Lord 1322.

First chapter: What in the proper sense preaching is, and how much time one sermon should take.

2nd. Who should rightly be called a preacher, and when he deserves the aureole.

3rd. The difference between preachers by office and preachers by privilege.

4th. That three things are necessary for one preaching rightly, namely a good life, sufficient knowledge, and legal authority—that is conscience, knowledge, and power.

5th. That above all a proper limit must be established and fixed beforehand in sermons, from which follows that those eager for gain must not be listened to.

6th. What was the first sermon and who the first preacher if we extend the name “preaching” to “persuasion”; and that Christ did not deign in his preaching to refuse to accept the theme of his precursor; and that Christ’s method and that of the great teachers differ among themselves.

- 7th. That the modern method varies from all the methods mentioned above.
- 8th. In what ways Christ and His precursor preached.
- 9th. In what ways St. Paul preached.
- 10th. The method of St. Augustine’s preaching.
- 11th. The method of St. Gregory.
- 12th. The method of St. Bernard.
- 13th. Disproof of the prevailing notion that preaching should not be embellished.
- 14th. That twenty-two ways of ornamenting a sermon are observed in the English method.
- 15th. What things are required for a good Invention of the Theme; first, that it fit the feast and create a full understanding.
- 16th. Secondly, that the theme must come from a common text of the Bible.
- 17th. Which parts in a theme may be skipped and which not.
- 18th. That a text may not be perverted, and that it is not always perverted when given another sense.
- 19th. How a theme of three statements or one which is convertible into three should be selected.
- 20th. How, according to some, there can be a division into many statements, and yet it is incorrect to put into the theme more than the appropriate number of statements.
- 21st. That a sermon can be built upon one statement, and how it is built up in respect to the antetheme.
- 22nd. That one must foresee that vowel concordances can be found for the statements of the theme, and the number of these.
- 23rd. That the theme and antetheme should be the same, and in what way.
- 24th. Concerning the second ornament, namely Winning the Audience over and the five methods of its use.
- 25th. Concerning the third ornament, namely Prayer, and how it is exercised.
- 26th. From which Books and passages of the Bible the theme can be taken.
- 27th. What themes can be taken according to the aforementioned method *De tempore*, whether in general or in particular.

- 28th. What theme, according to the same method, can be taken from the saints in particular.
- 29th. What themes can be taken from the saints in general and from concurrent feasts.
- 30th. What themes can be taken from emerging material.
- 31st. Concerning the fourth ornament, namely the Introduction, where note the way in which different preachers use different methods of quoting, and four usual methods of Introduction.
- 32nd. How the Introduction should be formed when the theme consists of one statement.
- 33rd. Concerning Division, the fifth ornament.
- 34th. Concerning the sixth ornament, the Statement of the parts.
- 35th. Concerning the seventh ornament which is the Proof of the parts, and especially about the very unusual method of the Parisians.
- 36th. The usual method followed by the Parisians with respect to the antetheme.
- 37th. Their usual method with respect to the treatment, which does not extend beyond the seventh ornament, namely the Proof of the parts, except in the case of Conclusion.
- 38th. How the Oxonians use this ornament.
- 39th. Concerning the eighth ornament, namely Amplification, and its eight methods in general.
- 40th. The method of Amplification in particular, which the Oxonians especially use, and which is called the Subdivision.
- 41st. Concerning the ninth ornament, by some called the Digression, and incorrectly so, because it is properly the Transition.
- 42nd. Concerning Correspondence, which is the tenth ornament.
- 43rd. Concerning Agreement of Correspondence, which is the eleventh ornament.
- 44th. Concerning Circuitous Development, which is the twelfth ornament.
- 45th. Concerning the thirteenth ornament, which by some is called Convolution—to wit, all for all and each for each.

- 46th. Concerning the fourteenth ornament, which is called Unification.
- 47th. Concerning the fifteenth ornament, which is called Conclusion or Ending.
- 48th. Concerning sixteen other and diverse ways of preaching, whose subtleties can be understood from what has been said above.
- 49th. Specially devoted to one method which is in part similar to that of the Parisians, a method which is very effective in every language.
- 50th. Specially devoted to one peculiar method used in Latin which in part is like the Oxford method, and also briefly to the seven remaining ornaments, namely Coloration, Modulation of Voice, Appropriate Gesture, Timely Humor, Allusion, Firm Impression, Weighing of Subject Matter. . . .

CHAPTER XV

For a good Invention of the Theme the following are required: that it concur with the feast, that it beget full understanding, that it be on a Bible text which is not changed or corrupted, that it contain not more than three statements or convertible to three, that sufficient concordances can be found on these three ideas, even vowel concordances, and that the theme itself can serve in place of the antetheme or protheme. For example, concerning the first, suppose that someone has to preach about Advent and he takes as his theme: *Come, Lord Jesus*, from the Nativity: *the Grace of God has appeared*, from the Epiphany: *a great sign has appeared*; thus he will find the above-mentioned conditions concurrent.

Likewise concerning the saints. He should consider what or which things about the saints or saint about whom he preaches he especially wishes to commend. For example, as I consider St. Andrew, I see much that is especially commendable in him: that he hung on the cross for so long and did not waiver, that in spirit he seemed affixed to Christ than corporally to the cross. And thus the saying of his fellow Apostle is seen in his own person: *with Christ I am nailed to the cross* (Gal. 2:19).

Likewise I consider St. Nicholas who was much given over to works of piety and devotion, because of which he was made a bishop. Then one could say about him: his throne is prepared in mercy. And so concerning the rest. All of those fit their feasts well.

The second condition is that the theme create full understanding, that the statement be not uncertain or doubtful, lacking a verb; for example, if the theme on St. Catherine should be: *the virgin daughter of Sion*, such a theme would be judged faulty. This fullness of understanding must be looked at according to the situation, for it should not always be the greatest possible fullness. For example, suppose that the theme about St. Nicholas should be: *and all the Church of the saints shall declare his alms*. This is a full construction. But it is not so full as it would be if the following should be said: *it will declare the alms of the Bishop*, etc. It would be even fuller if the sentence were: *the alms of Nicholas*, etc. But the fullness in the first example is sufficient, and is frequently found to be better.

CHAPTER XVI

Some, on the other hand, use a good and commendable method in addition. They choose such a theme that immediately excites the audience to devotion, no matter what idiom is used, as in Advent: *Come, Lord Jesus*; or on the feast of St. John before the Latin Gate: *The just one is delivered out of distress*; and so concerning the rest. For this reason also such themes as invoke mercy, and consequently indicate misery, are often used by very many preachers, as *Have mercy on me (Lord)*, and *Jesus, son of David, have mercy on me* and the like.

Others also, for the same reason, choose themes in which there is this word which arouses emotion, as from Advent: *Let us put away the works of darkness*; and from Nativity: *Let us see this word*; from Passiontide: *His blood be upon us*; and on the feast of any martyr: *My life is wasted with grief*.

Let a preacher see to it that his theme is from a text of the Bible and not from any antiphony. Hence that theme is wrong which some take on

the feast of the Trinity: *He saw three and adored one*, because it is not a text from the Bible.

Likewise when Holy Writ contains a relative pronoun, in the theme it should not be changed to its antecedent: for example, if the following theme should be used on some saint: *my foot has followed God's step*, this would be faulty because it is not the letter of the Bible. Literally it reads: *His steps*, etc., and it ought be used in that form.

Indeed it is considered incorrect if one puts in his theme a quotation from another translation than the one commonly used. Hence, if for Passiontide the theme would be chosen which has the translation from Ps. 95, *Sing*, i.e., *Say among the nations, the Lord reigneth from the wood (cross)*, it would be incorrect, because literally from the accepted translation it is: *Say among nations, the Lord reigneth*, without anything more. I wonder about this, and do not find sufficient reason why the true translation, indeed, the one which the Church commonly uses, should not be accepted and that that is the literal translation is evident from the verse of the hymn (Passion Sunday hymn Vespers 3 v.): *Fulfilled are the things which (David) sings*, etc. Still, two reasons are assigned for not accepting such themes from an unknown translation: (1) in the first place one who proposes such an unknown theme seems to seek human praise, as if he himself knew unknown things, nor does he preserve the order of learning in which one proceeds from the known to the unknown; (2) if this procedure were allowed, liars, heretics, and ignorant men could make themes as they pleased and devise an unknown translation, of which the exemplar could not easily be found, and there would be a great occasion for error. Therefore, it is better here to follow the common method, that of taking a known theme or one from a known translation. That is why it is said that Christ did not change the theme which His precursor, John, before Him frequently had taken and preached.

CHAPTER XVII

Sometimes, however, we may omit and pass over some parts of speech which are in the Bible, for instance, conjunctions which join sentences.

For example the theme: *Let us put away the works of darkness*, is well taken, although literally it is: *Therefore let us put away*, etc. Likewise, literally, *For now our salvation is nearer*, etc.; and yet in the theme the word *for* can well be omitted and we can say: *Now our salvation*, etc. So also I say about the word *however* as in *now however you are converted*. One can say: *now you are converted*. Similarly a copulative conjunction can be omitted as long as the sentence is complete. For example, if from some saint is taken the theme: *Heal me, O Lord, and I will be healed*. For it is fitting to add the word *and*. And so for the others. Other conjunctions which make the propositions conditional, on which the sentence of the propositions depends, cannot be omitted. Such conjunctions are: *while, since, if, because, or*, and their equivalents, whether they go before or are placed in the middle.

An interjection also that precedes can be omitted, as long as the sentence stays complete. Hence in war, to arouse one's side against the adversary this can be accepted as a theme: *I will comfort myself over my adversaries*; however, literally it is: *Ah! I will comfort myself over my adversaries*. Therefore the interjection may in this way be omitted. Sometimes, however, if it is left out the sentence will remain incomplete. If in a sermon to contemplatives one should take as his theme: *woe is me because my sojourn has been prolonged*, one cannot leave out the interjection on account of the meaning of the sentence. The same must be held about interjections even in the middle of a proposition, for example, the word *also*. The other parts of speech can in no way be skipped nor left out because the omission would change the sentence. For example if on Pentecost would be accepted this theme: *the Spirit of wisdom came*. This would not be valid because the literal sense is: *The Spirit of wisdom came upon me*. However, if it were taken as: *The Spirit came upon me*, and without anything more it would not be incorrect, because, although the words of *wisdom* are missing, the sentence is not changed much.

Nor is it allowed to change one tense of a verb to another tense. Hence the theme which some

take on the Ascension: *He ascended opening the way before them*, is incorrect since the Bible literally has: *he will ascend opening the way before*, etc.

CHAPTER XVIII

Sometimes it happens that the text of the Bible is not changed, yet is perverted; as, if one giving a sermon to contemplatives should take as his theme: *you will believe if I speak of heavenly things*. This seems to me to be a perversion of the letter and sense of Scripture; for Christ in the Gospel uttered this interrogatively and in a negative sense, as if to say: *you will not at all believe*. Therefore it is a perversion if it draws to the opposite of this meaning.

The same perversion occurs when a thing is attributed to someone with whom there is no comparison, for example if a theme is taken from Easter: *Triphon arose*. There is no agreement there; Triphon is the worst of all; Christ, the best.

Likewise it is perversion to transfer a noun from the meaning in Scripture; for example if one should take as a theme on Palm Sunday: *I know O Lord, thy judgments are equity*, and should explain it as referring to his equitation on an ass, when the Scripture speaks of his *equity* which is a noun.

In the case of authorities it is likewise faulty if, for example, for St. Edmund the king this theme should be taken: *the sinners have bent their bow*, and then in the course of the sermon one should adduce an authority of another meaning for *bent* as (bend) *hearken to my voice*, and: *O God, (bend) come to my assistance*.

Similarly there is perversion when an incomplete part of a preceding clause is taken together with the beginning of the following clause, if for example in a sermon to penitents would be taken the theme: *Be sorry / offer up the sacrifice of justice* (Ps. 4 end v. 5 & begin v. 6).

A theme, then, is perverted by shortening, by too great a disagreement, and by too violent a transfer from its proper meaning.

Some shortening, however, is allowable, as is some disagreement, some transfer, as long as it is not excessive. On the first Sunday of Lent this

theme may well be taken: *May you receive the grace of God*; and yet the authority is shortened and what is there negatively is taken affirmatively. For in that locus is said: *Do not receive the Grace of God in vain*, and it is evidently negative. But it must be said that the Apostle urges two things here, that they receive grace, and that they do not receive in vain. For they would receive it in vain if they did not retain it, because it would not minister to them. Therefore, because either is in the intention of the Apostle, either member of the complete construction can be accepted for a theme.

Likewise on Easter Sunday may be accepted for a theme: *The man arose and opened the gate*; or on the Ascension what literally is said in Judges (19–20) about the Levite who divided his wife into twelve parts, between whom and Christ there is a very great disparity; but nevertheless tolerable and not too excessive. And thus also about Nicholas is taken: *the boy grew*, which literally is said about Samson.

Likewise in as far as a transfer can be made from the literal signification to the moral the theme can be taken about St. Paul or Peter, martyr: *He struck the rock and waters flowed forth*. Literally *rock* here means that stone which Moses struck with his rod, and *waters* means those natural waters and that striking was the action of Moses, who was a good man. And conversely, here the striking was that of an evil man. But certainly *rock* can morally mean a heart solid in faith, *water*, doctrine, and *striking* permissively can be God's; and thus it is well accepted.

CHAPTER XIX

Further, in this method of preaching only three statements, or the equivalent of three, are used in the theme—either from respect to the Trinity, or because a threefold cord is not easily broken, or because this method is mostly followed by Bernard, or, as I think more likely, because it is more convenient for the set time of the sermon. A preacher can follow up just so many members without tiring his hearers; and if he should mention fewer, he would occupy too little time.

The reason why a theme may be the equivalent of three statements is that it can happen that

some words which cannot be divided and should not be may fall into a theme. Of such kind are prepositions and conjunctions, and also a general word which is included in every other word. Hence if the theme were: *the just is delivered out of distress*, no division would fall upon *out of* nor upon *is*.

Hence, a division ought not to be made on the word *is* when it is placed thus. Yet sometimes it can. Sometimes it does not stand generally but gives its action to one particular only, as: *who is he who sent me*, and again: *you are the selfsame*. And then because it stands attributively, division can be made of it, so that one may say that identity, stability, uniformity, or the like is noted in it.

No matter how many statements there may be, as long as I can divide them into three, I have a sufficient proposition. Posit that the theme on the Annunciation, on the vigil of Nativity, or on the day, and on the first Sunday within the octave of the Nativity, and on the day of Circumcision: *God sent His Son made of a woman, made under the law, that He might redeem them who were under the law*. Here are seventeen words;⁵ yet the whole can be divided into three so that it may be said that in these words three things are touched upon: (1) There is noted in the doctor a generously-expanded sublimity because it says *God sent His Son*. (2) There is shown how virtuously-shown humility heals because it says *made of a woman, made under the law*. (3) There is shown how fruitfully-extended utility is derived, because it says *that he might redeem them who were under the law*.

But when the theme is thus divided, one must see that the dividing parts correspond with the parts of that which is divided. For example, here is said that in the doctor is noted a sublimity, etc. when is said *God sent* etc. Notice the correspondence, because *God*: sublimity; because *He sent*: expended; because *His Son*: generously. And thus about the rest. There is no lack of artistry if these three things can be confirmed by one authority in which verbally there are the three: *God, sent, and Son* and that in the sentence such great

⁵That is, it has seventeen words in the Latin: *Misit Deus filium suum factum ex muliere, factum sub lege, ut eos qui sub lege erant redimeret*. [Tr.]

nobility is communicated to us. But because such authorities are difficult to find, themes of so many words are not commonly accepted.

Sometimes it happens that there are only two words in the theme which can be turned into three: for example let the division be into three concerning St. Nicholas: *the boy grew*, that it may be said: "In these words St. Nicholas is commended for his state of purity, because it says *boy*, for his advance in dignity because it says *grew*, and in both for his reward of happiness, because it says *the boy grew*." And then it is right that this third member should have authority in which each is used vocally with the sentence of division. It is therefore clear what it is to take three statements for the theme or statements convertible into three because this can happen whether there are more or less than three.

CHAPTER XX

Those who follow this opinion say that if a theme is taken to be divided into four parts, the subdivision ought also to be divided into four, and if the theme is to be divided into five, then the subdivision ought also be divided into five parts, and it should so correspond and follow that the end should agree with the beginning and that there should be at least some evidence of art. With this I also agree, save that he who takes too long a theme and divides it into too many parts seems to show that he is rather incompetent. Yet one may immediately divide his theme into twelve parts or less and follow up with something about each, so that he does not make many divisions. For example, suppose the following theme on the Apostles: *there are twelve hours of the day*. Then immediately one would continue thus: The first hour of the day we may well call St. Peter, and so on with the rest. This method St. Bernard uses frequently. But this method is foreign to the artistic one of which there now is talk.

I have also heard a capable man use the following theme as a whole in a sermon to a synod: *Ask the lord of the harvest to send laborers into his vineyard. Go*. This fellow was a grand master in theology and a great prelate who was expert in problems as well as sermons, yet his theme was generally condemned by all intelligent men espe-

cially for the addition of the word *Go*. On this word alone there could be quite an artistic and useful sermon. And according to the Philosopher, it is inconvenient to do with more what equally and conveniently can be done with fewer words.

CHAPTER XXI

It is incidental to my plan to consider here whether there can be a sermon on one statement. It seems to me that there can be a sermon on one explicit statement, but which implies another statement or more, namely by discussing a word used in exhortation, saying: *understand ye, preach or preach ye, go ye, walk ye*, and the like. But this method is almost totally unknown. And therefore it pleases me, insofar as I am able, at this place to insert an example of such a sermon.

Let those, however, who intend to imitate this method know that it is incorrect to take only one word of which a full understanding is not aroused. For example, if one were to take as his theme on the Purification: *Simeon*; that would be wrong, no matter how interesting the continuation would be.

But that this unknown incidence be made known, let the theme be taken on Peter the martyr of the order of Preachers which is written in the epistle of that feast: *understand ye* (Tim. 2). Just as St. Gregory in his homily *If anyone love* uses as an antetheme: *no one rightly attributes to a man teaching that he understands from the mouth of the teacher, for unless there is one who teaches interiorly, the tongue labors in vain exteriorly*, etc. From this authority it is evident that in fruitful preaching there are three things necessarily required: the supreme teacher, God, teaching the intellect, the listener obeying the words of the teacher, and the teaching itself, useful and advantageous. And these three the Gospel of Luke 24:45 equally embraces. *He opened*, he says *their understanding that they might understand the scriptures. He opened their understanding*, behold the master teaching, *He who opens and no one closes, who closes and no one opens* (in the Apoc.). For sacred Scripture is closed by the mysteries of secrets, but opened through the ministries of preachers, because *the declaration of the word of God illumines and gives understanding*

to the little ones. Secondly, there is required the obeying listener, otherwise there is no understanding. Therefore it says: *that they might understand*. Hence in Eccles. 5:13: *Be meek to hear the word that thou mayest understand*. Thirdly, it is required that the teaching itself be useful and advantageous. And this is the last word: *Scriptures*, it says not *trifles*, of which there is written in Timothy: *All scripture inspired of God is profitable for teaching*; Gloss: first, the ignorant; secondly, to persuade the negligent; thirdly, to reprove those insisting on vain things.

But, as I have said, I doubt whether I can have this of myself; rather it is from the Lord of whom is written, Wis. of Sol. 3:9, *They that trust in the Lord will understand the truth*. Therefore let us ask in the accustomed manner *that he open for us the door of his word*, Col. 4:3, as long as *I sing thus and understand*, Ps. 100:1, for his and his saints' honor, that, as the Scripture says, *rivers of living water*, John 7:38, i.e. graces flow from us indeed, into us. Since this is so, anyone may say to him, at least mentally, *Give me understanding that I may know your testimonies*. Ps. 118:125.

Already there is evident in this antetheme sufficient subtlety because first, it is introduced with an original authority with which the authority of Scripture harmonizes; secondly, the authority of Scripture is divided according to the original and each part is so confirmed that it voices the statement about which there is preaching; thirdly, the third authority includes at the same time itself and the two preceding authorities; fourthly, for asking grace, the parts of the first authority are laid down in order, e.g., against *He opened their understanding* there is placed *may he open for us the door of His word*. And so for the rest.

Later on, further development of this will be shown; now, there is only talk about the antetheme.

Although, in Chapter XV, I said that for the good invention of a theme three statements or statements convertible to three are necessary, and afterwards, in Chapter XIX, that a theme may contain only two statements, and here, only one explicitly is needed, I have not contradicted myself, for the first represents the opinion of those who follow it as a principal method. Considering this fact it happens that another method may be

good enough. It is also evident how two statements can be converted into three. I say that they are converted into three when there can be a continuation in the same manner as if there were three statements, and this can happen even if there are twelve statements, or only two, as was shown, or only one, as will be shown later.

CHAPTER XXII

It is well stated in Chapter XV that in the beginning care must be taken to provide verbal concordance for the statements of the theme, because there are enough such in every language for presenting the proposition and avoiding contradictions. Otherwise the preacher will be rightly considered ignorant, for the Scriptures are definitely extensive enough in themselves so that what is necessary may be quickly and promptly found, once the beginning of a sermon has been well chosen. His ignorance, therefore, is greater because he binds and limits himself where it is not necessary to do so.

Next is found where the agreement of words is, rather than whether it is only real and not verbal. Although the learned Gregory and others do not follow this procedure closely, nevertheless they always observe it in principle. I say "in principle" for this reason: concordances can be well expressed and divided accidentally, just as long as enough is said about the essential division. For example, if the theme established is: *walk ye*, one can say that a road is threefold: straight, level, clear. Concerning the straight, which is the way of commands, it is written: *make straight the paths of our God*. Certainly this is the way, *walk ye* on it to *on the right*, etc., and so also concerning the other members. It is evident that what is said about the way is not a verbal concordance for *walk ye*, but nevertheless the division is concluded through one authority in which *walk ye* is included and this suffices.

But, say that one must preach in English and does not use as his theme: *walk ye*. Could he without fault choose as the main authority one in which there would not be *walk ye* but its convertible *to go*? For example if one would say: one must walk first, freely on the way of God because of definite and just reward; hence the Lord also

says *Go ye also into my vineyard and I will give you what is just?* It seems to me yes. Nor is there any difference in English between one or the other, and I see nothing to prevent this unless there be some learned men who note the authorities in their sermons because in Scripture the difference between *to walk* and *to go* is immediately evident but the unlearned do not know how to discern it.

To avoid all difficulty, and to make a sermon serve all languages and all to whom one preaches, it is better to use verbal agreements a little, in the way described. For example, in the theme: *walk ye*, it is permitted to take an authority in which is contained any derivative of this word. If seven verbal agreements on any statement can be found for the purpose, that is sufficient, and at least so many are required. But it is difficult to find so many that apply to novelty which one strives to attain unless the agreements are very many indeed.

CHAPTER XXIII

In the aforementioned Chapter XV, it is well stated that in selecting a theme, the antetheme and theme should be the same. In former times some preachers used to select one theme for themselves, and then took an authority dealing with some word of the theme in place of an antetheme; that is observable in the sermons of Guido⁶ and many others. Take, for example, the theme: *see how you walk*. Immediately they would add one authority which contained the words *to see* or *to walk*, saying *what I saw I will tell you*, or: *He walked with me in peace and truth and turned many from iniquity*. And then they would follow the second authority for an antetheme, and the first for the theme. I see no need for this unless the second authority is more properly and immediately suited to the preacher of God's word, or to the hearer, or to the word itself, or to all three at the same time, or to two of the three.

But here it must be carefully noted that it is not right to divide the antetheme so thinly that the three members of the division in the authority

⁶The identity of Guido is not known. (Could it be Guido Arezzo, . . . ?) [Tr.]

which is used instead of the antetheme are always explained. It is sufficient to mention the three members on the basis of which allusion is made to the parts of the authority, which is taken as an antetheme. For example, if the theme were: *The just man is delivered from distress*, one way the antetheme could be is:

As St. Gregory says, Christ taught truth and goodness yet he suffered evil; but *a helper in due time in tribulation* comforted him. Thus it is also with those who imitate him, the preachers of God's word. Hence in the preceding words a threefold condition of a preacher is noted namely, gravity of teaching, ferocity of pressure, and proximity of redress. 1. The gravity of teaching, so that about him can be said, Prov. 10:21, *The lips of the just teach many. The just man shall correct me*, says the Psalmist (140:5), *and shall reprove me. But let not the oil of the sinner fatten my head*, i.e., the fawning of a flatterer will not fatten my head, or, he will not overreach my reason, etc. 2. There follows with many the ferocity of pressure. Hence, in Job, according to the exposition of St. Gregory, a good preacher is called a lamp, despised in the thoughts of the rich; a lamp, because of true and lucid teaching; despised, because of the frequently brought-on assault. But, as is written for this one and the former: Wisdom 5:1, *the just shall stand with great constancy against those that have afflicted them*. The reason is that the use and action of these evils of which I now speak is against the Lord who is able to overcome His adversaries and is kind in helping His own. Therefore, no matter how much the pressure of persecution rages there always abounds the redress of consolations which is number three. To this the Psalmist (33:18) attests when he says: *The just cried, and the Lord heard them: and delivered them out of all their troubles*. Therefore, let the just cry through sincere teaching, which is first; and from all tribulations of those raging with pressure, which is second, God will deliver them through his assisting grace, which is third. Let us cry, therefore, in the accustomed manner for gaining that grace, and without a doubt the Lord will hear us, who, as the Psalmist attests (33:18), heard those praying, and will deliver them from all tribulations.

It is now evident that this antetheme is artistic enough, and yet there is only an allusion from the members of the division to the statements of the theme. Proof. It is certain that in the capacity of this word *just* there is not included the gravity of

doctrine, because one can be quite just without teaching anything; and, on the contrary, one can teach right things and yet not be just. And yet the authority which corresponds to this first member includes teaching and explains verbally that statement to which there is an allusion, and this suffices. In the second member the chosen authority does not express that preachers hear distress, nor does it imply this, but merely states it. It also places one authority which alludes to the second statement, as is evident, and this is less than in the first. Yet this suffices. Similarly the third authority does not touch upon preachers more than others, but still with a unique dexterity and subtlety is applied to them because of the connection with the preceding authorities.

CHAPTER XXIV

Now that we have treated in general the first ornament of preaching, to wit, the Invention of the Theme, the second ornament follows, namely the Winning-over of the Audience. The preacher, as far as he can do so according to God, ought to attract the mind of the listeners in such a way as to render them willing to hear and retain. This can be done in many ways. One way is to place at the beginning something subtle and interesting, as some authentic marvel which can be fittingly drawn in for the purpose of the theme. For instance, suppose that the theme is concerned with the Ascension or the Assumption: *a spring rose from the earth*. One could adduce that marvel which Gerald narrates in his book, *De mirabilibus Hiberniae* about the spring in Scicilia: if anyone approaches it dressed in red clothing, immediately water gushes from the place of the spring though none appeared there before, while it remains unmoved in the presence of all other colors. That spring is Christ, about Whom it is written in Eccles. 1: *the word of God is the fountain of wisdom*, to Whom he “approaches dressed red” who, devoutly suffering with Him and as it were incarnadined with the blood of His Passion, intently and inwardly revolves the thought (of Him), and considers the saying of Isaiah: *why is Thy apparel red?* Such a one approaching finds living water, viz. graces, because His blood was of such virtue that, when it was

shed, the earth quaked and the rocks were torn asunder. Much more ought our hearts to quake and be torn by the cry of God’s word, unless they be drier than the earth and harder than rocks.

Likewise if an unknown cause of some saying is used, it is reducible to the same category, for example if a cause is given to explain why the eye does not have a determined color; because if it did have a definite color, it would perceive only that color and there would have to be as many senses as there are colors; and this may be applied to sinners, especially the avaricious and clever ones who do not perceive the word of God or its effect because they are totally determined by its opposite.

Another way is to frighten them by some terrifying tale or example, in the way that Jacques de Vitry talks about some one who never willingly wanted to hear the word of God; finally when he died and was brought to the church, and the priest in the presence of the parish began the eulogy which is wont to be spoken over the body of the dead, the image of Christ standing between the choir and the church tore away and pulled His hands from the nails piercing them and from the wood to which they were fixed, and plugged His ears, as if to intimate that He did not wish to hear the prayer for him who once spurned to listen to Him in His preachers.⁷

Likewise, pertinent to the same topic are the different stories which teach how Christ appeared to some hardened sinners, extending His palm full of blood taken from His side, saying: This blood which you so obdurately contemn will bear witness against you on the day of judgment. After they lived awhile it was frequently disclosed that the blood could not be washed away and they were buried with it. Some repented and confessed and then easily enough, as it were, it disappeared.

This second example I myself have come upon, in connection with an infamous woman hardened to all sermons. Christ appeared to her and took the woman’s hand, putting it into the

⁷Jacques de Vitry was the compiler of a popular collection of such *exempla*. See *The Exempla or Illustrative Stories from the Sermones Vulgares of Jacques de Vitry*. Ed. Thomas F. Crane. Publications of the Folk-Lore Society, vol. 26. London, 1890. [Tr.]

wound in His side, saying, as she herself had said: the blood which you reject will adhere to you for evil, unless you correct yourself. It is well known that she confessed; still it adhered to her and could not be washed away till finally in some way she confessed a great hidden sin and immediately after that it disappeared. Such terrifying stories have great value in the beginning of a sermon.

The third way is to show by an example or story that the devil always tries to hinder the word of God and the hearing of it.

The fourth way is to show that to hear the word of God is a great sign of predestination. To this are reduced those ways which show that other benefits, earthly or heavenly, such as the fertility of the earth, the disposition to penitence, and the like, accrue to those who listen willingly.

The fifth way is to show that the preacher in-

tends only to convert them, and not immediately after that to start begging. He should draw them to the love of God, to the fear of evil, to the honor of God, lest, if it is a principal feast, it may lack due honor. Then he should put the hearers into the right disposition for the Indulgence, which is granted to those who listen to the word of God, and preach like things by which he rightly deems to win over the hearers according to their condition.

Zeal will teach him who does not have an evil intention about these and other methods. If someone should make it his goal to attract hearers in order that glory may follow for himself, he rather repels than attracts. Therefore some who are about to speak with mouth and heart say in the beginning—although beneath their breath lest it be ascribed to hypocrisy—*Not to us, O Lord, not to us*, etc. . . .

Christine de Pizan

ca. 1364–ca. 1430

Medieval women were eloquent. They had to use language effectively to be queens and courtiers, heads of religious houses, partners in family businesses and trades, and guides for the young. They engaged continually in rhetorical activity. The challenge for modern scholarship is to recover this activity for study when few medieval women achieved literacy. Before 1000, those who did were usually members of either a royal family or a religious order; after 1000, to these elite groups were added some middle-class women. Of the minority of women who were literate, few engaged in the forms of literacy regarded by the period as rhetorical, namely, the composition of sermons or legal letters or the formal analysis of poetry (see the introduction to Part Two). Historian of rhetoric Cheryl Glenn has explained how one can study other rhetorical activities by medieval women; she focuses on the religious writings of Julian of Norwich and Margery Kempe. As Glenn suggests, research can also center on works that discuss women's education and how they should use language at court and in other walks of life. One of the first women to compose such work, and indeed, perhaps the first "woman of letters" the West has produced, was Christine de Pizan (ca. 1364–ca. 1430).

Christine was born in Venice; her family name was derived from the town of Pizzano near Bologna, at whose university her father had taken a medical degree and where he lectured on astronomy and astrology. The spelling "Pisan," still often seen, is the French rendering of her name, which gives the misleading impression that she was from Pisa. Christine's father, well educated and well connected both politically and intellectually, had mastered the most advanced science of his day and also knew the early humanists Salutati and Petrarch.

Shortly after her birth, Christine's father accepted an appointment as court astrologer and physician to King Charles V of France, and the family moved to Paris. Educated by her father and court tutors, Christine acquired literacy in Italian, French, and Latin. She knew some classical texts (mostly in vernacular translations) and was widely acquainted with medieval learning. Also, she married one of the French king's legal secretaries, and so learned something about *ars dictaminis* and legal script. Few medieval women could have received a better education.

Nevertheless, it appears that Christine did not think of making a literary career for herself until disaster struck her family. In 1390, her father, her husband, and their patron, the French king, died within a short time. Christine was left at age twenty-five with major debts and with three children, a young niece, and an elderly mother to support. She turned to writing, apparently making some money by copying legal documents, as her husband had taught her to do. But Christine had higher ambitions, both literary and financial. She first achieved fame—and lucrative noble patronage—for her poetic ballads. She also wrote longer poems on moral and romantic themes, enriched with classical imagery and allegory, which she dedicated to various patrons in the French royal house. Her loyalty and skill earned her the

commission from Charles V's brother to write a history of the king's reign. These were all rather familiar literary genres of her day, if highly unusual as areas of endeavor for women.

Christine went even further, and pioneered in several literary areas of special significance to women, for which scholars today see her as a protofeminist. Her first foray involved her in controversy over a popular poem, the *Romance of the Rose*. Written in the thirteenth century, this poem satirizes the sentiments of courtly love while salaciously depicting women as foolish and corrupt, nothing more than legitimate prey for seducers. Christine joined in a discussion of this poem with several of her fellow courtiers, some of whom defended it while she and others attacked it for its immorality. Christine also criticized it for its unfair depiction of women. This "Quarrel of the Rose," as it came to be known, was conducted first in private conversation and then in private letters. Christine published a collection of these letters and became well known both for her advocacy of women and for the high learning and high moral tone evinced in her criticism. Her part in the exchange may well have been the first polemical defense of women against the classical and Christian misogynist tradition the poem invokes.

Christine also produced several writings that describe her own intellectual and spiritual journey, in which she appears not only as the recipient of a dream vision—a familiar medieval device employed in many of her works—but also as the protagonist. Scholars have characterized them as the first examples of autobiography as that genre would come to be known in the West, and they are strikingly modern in their account of female psychology. For example, Christine depicts herself struggling against the weight of tradition, which states that women are intellectually and morally inferior to men, as she tries to urge herself to literary excellence.

Two of Christine's most popular works in her own day, and the two for which she is best known now, transform familiar genres with a feminist edge. Both produced in 1405, they are *The Book of the City of Ladies* and *The Treasure of the City of Ladies (The Book of the Three Virtues)*. The first is a compendium of brief lives of worthy women, imagined as residents of an ideal "city of ladies." The work is modeled upon a volume by Boccaccio that uses examples from classical mythology and ancient history, but Christine adds Christian and other more contemporary examples. Rather than simply proceeding chronologically, as Boccaccio does, Christine sets her accounts of these women into a discussion of socially enforced misogyny and the limitations it has placed on women. In spite of these odds, as her famous examples show, women have achieved far more than their critics give them credit for. In the passage excerpted here, Christine defends the right of women to be educated by citing the rhetorical excellence of classical-era women who were well educated. Significantly, the portraits are presented to Christine by three allegorical figures of virtues, the chief of whom is Dame Reason—not a virtue traditionally associated with women.

The Treasure of the City of Ladies, intended as a companion piece to *The Book of the City of Ladies*, provides instruction that will help fit women of all social ranks for inclusion in Christine's ideal female community. Although the same three

virtues briefly appear to introduce the teachings, the main voice of instruction belongs to a character named Worldly Prudence. This choice is meant to indicate that the book will focus primarily on the active life of a woman engaged in familial and civic affairs, rather than that of one withdrawn into contemplative religion. Christine introduces some interesting variations into the conduct book genre to which this work belongs. For one thing, her work addresses women of all sorts, from queens to prostitutes. Moreover, she discusses the challenges that will face them throughout their lives, rather than simply advising the young on how to prepare for a suitable marriage, as most conduct books did. Also, despite its high moral tone, Christine's advice is notably realistic and practical. Perhaps of most significance for contemporary feminists, her discussion of medieval society recognizes the wide range of roles women were asked to play, even if the roles were not officially sanctioned (a widow might have to defend herself in court, for example—as Christine herself had done), and also acknowledges the many social constraints and barriers that worked against them. Most important to contemporary rhetoricians, Christine advises women on how they should use language to protect themselves and achieve their goals, as shown in the passages excerpted here. As medievalist Liliane Dulac puts it, “The dignity of women’s speech occupies the center stage of this work.”¹

Rhetoric per se is not a frequent concern of Christine's, although, as noted above, in *The Book of the City of Ladies* she uses rhetorical excellence to validate the need for more complete education for women. But even when she does not mention rhetoric as a formal discipline, Christine does frequently attend to the ways women should, and should not, use language, as the passages excerpted here from *The Treasure of the City of Ladies* illustrate. She herself used language, at least in her published texts, in strikingly new ways. As historian Joan Kelly has argued, Christine was one of the first Western women to take the offensive against the misogynist tradition, refuting the critics' charges and also exposing contemporary mistreatment of women. Furthermore, she clearly views gender as a social, not only a biological, category—she shows how sex roles are socially conditioned and how the expectations placed on women give them a group identity and solidarity. Finally, she uses her personal experience of women's talents and virtues to fight against the negative self-image that she and other women have internalized from their detractors.

At the same time that she does all of this, Christine basically supports the existing social order. She is a political conservative and does not apparently wish to overturn the traditional sexual division of labor. Rather, she wants women to receive more credit for what they do, as well as somewhat more freedom of movement, which she justifies as needed for them to meet their family responsibilities. Although many of her writings emphasize her own love of learning, she also intimates that she would not have published if not obliged by the death of male relatives to support her family. Then, too, the powerful women in Christine's texts are

¹Liliane Dulac, “The Representation and Functions of Feminine Speech in Christine de Pizan's *Livre des trois vertus*,” trans. Christine Reno, in *Reinterpreting Christine de Pizan*, ed. Earl Jeffrey Richards with Joan Williamson, Nadia Margolis, and Christine Reno (Athens: University of Georgia Press, 1992), p. 13.

generally shown working behind the scenes. Her princess, for example, uses language to move men to public action; she does not take public action herself.

Nevertheless, one of Christine's last works was a poem of tribute to Joan of Arc, the peasant girl who took a very public role in organizing French military resistance to English domination in the early fifteenth century. After the French defeat at Agincourt in 1415, the French army was in disarray. Various members of the royal family fought for the throne, and factional strife made life in Paris increasingly difficult, adding to the ravages of war with the English. It is thought that Christine, now a middle-aged woman, retreated to a nunnery near Paris where her daughter had already entered religious life. From here Christine heard the heartening news that Joan had led the French troops to a resounding defeat of the English at Orleans and had accomplished the coronation of the Dauphin as Charles VII. Christine completed a poem heralding her courage in that same year, 1429, not failing to mention that Joan's example provided further ammunition against the misogynists.

The exact date of Christine's death is not known. It had certainly occurred by 1434. But Christine's biographer Charity Cannon Willard hopes that Christine may have died earlier, in 1430, before Joan of Arc's fortunes reversed and she was captured and executed by the English. Willard hopes that Christine did not live to see the downfall of her last woman hero.

Although Christine is usually considered a medieval writer, her work also shows signs of the transition to Renaissance humanism then beginning in Europe. Willard identifies as humanist traits her willingness to depict distinctive individuals, including herself, in her work (analogous to the contemporary trend in painting toward more realistic portraiture); her interest in moral teaching through writing, which may show the influence of Petrarch; her valuation of acquired (as opposed to revealed) knowledge that may be used for civic good, and a concomitant concern with the education of princes—and princesses; and her unabashed desire for personal fame, both in her lifetime and after. However, Christine lacks the education in the classics that Renaissance humanists touted, as well as their explicit interest in rhetoric.

Christine has been perceived nonetheless as an important contributor to the Western rhetorical tradition. As early as the sixteenth century, French man of letters Jean Bouchet identified her as a rhetorician in a catalog of illustrious women. Although the few references to rhetoric in her work are respectful, this recognition may come more from her readers' sense that she is indeed forging a new rhetorical identity for the woman writer—one that enables her to speak "as a woman," but with pride, learning, and a trenchant eye for the unfair treatment of her sex.

Selected Bibliography

The standard translation of *The Book of the City of Ladies*, excerpted here, is by Earl Jeffrey Richards (1982). The first English translation of Christine de Pizan's *The Treasure of the City of Ladies: or The Book of the Three Virtues* is Sarah Lawson's (1985; excerpted here). Lawson's introduction is helpful. Charity Cannon Willard has also published a translation of the earliest extant version of this text under the title *A Medieval Woman's Mirror of Honor*:

The Treasury of the City of Ladies (1989). This edition includes useful introductions by Willard and by the editor, Madeleine Pelner Cosman.

The best current bibliography of work by and about Christine is Edith Yenal's *Christine de Pizan: A Bibliography* (2nd ed., 1989). Charity Cannon Willard's *Christine de Pizan: Her Life and Works* (1984) is the standard biography.

In *Rhetoric Retold: Regendering the Tradition from Antiquity through the Renaissance* (1997), Cheryl Glenn discusses the historical and cultural milieu of medieval women and analyzes some of their rhetorical activities. R. Kelso's *Doctrine for the Lady of the Renaissance* (1956, 1978) provides a good overview of the misogynist tradition that Christine combats, summarizes her ideas of courtly conduct from *The Treasury of the City of Ladies*, and locates her work among that of others who advised women on proper behavior. Also placing Christine's work among conduct books for women is Diane Bornstein's *The Lady in the Tower* (1983), which frequently contrasts Christine's approach to issues with those of male writers. Judith Laird compares her with the currently best-known medieval English writer in "Good Women and 'Bonnes Dames': Virtuous Females in Chaucer and Christixswe Pizan" (*The Chaucer Review* 30.1 [1995]: 58–70).

For a summary of the feminist ideas in Christine's work, see Lula McDowell Richardson, *The Forerunners of Feminism in French Literature of the Renaissance, Part I: From Christine de Pizan to Marie de Gournay* (1929). Joan Kelly discusses Christine and locates her in the Western feminist tradition in "Early Feminist Theory and the 'Querelle des Femmes,' 1400–1789" (in *Women, History, and Theory*, 1984). Maureen Quilligan has analyzed Christine's creation of a protofeminist voice in *The Book of the City of Ladies* (*The Treasury of the City of Ladies* is also discussed) and in *The Allegory of Female Authority: Christine de Pizan's "Cité des dames"* (1991).

Jenny R. Redfern argues that *The Treasury of the City of Ladies* addresses rhetoric in "Christine de Pizan and *The Treasury of the City of Ladies*: A Medieval Rhetorician and Her Rhetoric" (in *Reclaiming Rhetorica*, ed. Andrea A. Lunsford, 1995). On Christine's various strictures regarding women's speech in this work, see Liliane Dulac, "The Representation and Functions of Feminine Speech in Christine de Pizan's *Livre des trois vertus*" (trans. Christine Reno, in *Reinterpreting Christine de Pizan*, ed. Earl Jeffrey Richards with Joan Williamson, Nadia Margolis, and Christine Reno, 1992).

From *The Book of the City of Ladies*

Against those men who claim it is not good for women to be educated.

Following these remarks, I, Christine, spoke, "My lady, I realize that women have accomplished many good things and that even if evil women have done evil, it seems to me, nevertheless, that the benefits accrued and still accruing because of good women—particularly the wise

and literary ones and those educated in the natural sciences whom I mentioned above—outweigh the evil. Therefore, I am amazed by the opinion of some men who claim that they do not want their daughters, wives, or kinswomen to be educated because their mores would be ruined as a result."

She responded, "Here you can clearly see that not all opinions of men are based on reason and that these men are wrong. For it must not be presumed that mores necessarily grow worse from

Translated by Earl Jeffrey Richards.

knowing the moral sciences, which teach the virtues, indeed, there is not the slightest doubt that moral education amends and ennobles them. How could anyone think or believe that whoever follows good teaching or doctrine is the worse for it? Such an opinion cannot be expressed or maintained. I do not mean that it would be good for a man or a woman to study the art of divination or those fields of learning which are forbidden—for the holy Church did not remove them from common use without good reason—but it should not be believed that women are the worse for knowing what is good.

“Quintus Hortensius, a great rhetorician and consummately skilled orator in Rome, did not share this opinion. He had a daughter, named Hortensia, whom he greatly loved for the subtlety of her wit. He had her learn letters and study the science of rhetoric, which she mastered so thoroughly that she resembled her father Hortensius not only in wit and lively memory but also in her excellent delivery and order of speech—in fact, he surpassed her in nothing. As for the subject discussed above, concerning the good which comes about through women, the benefits realized by this woman and her learning were, among others, exceptionally remarkable. That is, during the time when Rome was governed by three men, this Hortensia began to support the cause of women and to undertake what no man dared to undertake. There was a question whether certain taxes should be levied on women and on their jewelry during a needy period in Rome. This woman’s eloquence was so compelling that she was listened to, no less readily than her father would have been, and she won her case.

“Similarly, to speak of more recent times, without searching for examples in ancient history, Giovanni Andrea, a solemn law professor in Bologna not quite sixty years ago, was not of the opinion that it was bad for women to be edu-

cated. He had a fair and good daughter, named Novella, who was educated in the law to such an advanced degree that when he was occupied by some task and not at leisure to present his lectures to his students, he would send Novella, his daughter, in his place to lecture to the students from his chair. And to prevent her beauty from distracting the concentration of her audience, she had a little curtain drawn in front of her. In this manner she could on occasion supplement and lighten her father’s occupation. He loved her so much that, to commemorate her name, he wrote a book of remarkable lectures on the law which he entitled *Novella super Decretalium*, after his daughter’s name.

“Thus, not all men (and especially the wisest) share the opinion that it is bad for women to be educated. But it is very true that many foolish men have claimed this because it displeased them that women knew more than they did. Your father, who was a great scientist and philosopher, did not believe that women were worth less by knowing science; rather, as you know, he took great pleasure from seeing your inclination to learning. The feminine opinion of your mother, however, who wished to keep you busy with spinning and silly girlishness, following the common custom of women, was the major obstacle to your being more involved in the sciences. But just as the proverb already mentioned above says, ‘No one can take away what Nature has given,’ your mother could not hinder in you the feeling for the sciences which you, through natural inclination, had nevertheless gathered together in little droplets. I am sure that, on account of these things, you do not think you are worth less but rather that you consider it a great treasure for yourself; and you doubtless have reason to.”

And I, Christine, replied to all of this, “Indeed, my lady, what you say is as true as the Lord’s Prayer.”

From *The Treasure of the City of Ladies*

or *The Book of the Three Virtues*

PART ONE

This princess who would strive to amass virtue upon virtue will remember that St. Paul says that if someone has all other virtues and continually worships, goes on pilgrimages, makes great fasts and great abstinences and does all the good that he can and yet does not have charity in himself, all this will profit him nothing. And for this reason she, ever mindful of this teaching, will wish to have this excellent virtue so that she will be so compassionate towards all people that the wrongdoing of another will pain her like her own. Her charity will make her not only feel sorrow when she sees people in affliction, but oblige her to roll up her sleeves and help them as much as she can. And as a wise doctor of the Church says, charity exists in many modes and is not to be understood as helping another person only with money from your purse but also with help and comfort by your speech and advice wherever the need arises and with all the good that you can do.

And so this lady will be, by pure, mild and holy charity, an advocate and mediator between the prince her husband (or her child if she is a widow) and her people, or all people whom she may be able to help by doing good, depending on the situation. Sometimes it may happen that the prince, by bad counsel or from some other cause, will try to oppress his people with some expense. The subjects will realize that their lady is full of pity, goodness and charity, and will come to her and very humbly beseech her to represent them to the prince, for they are very poor and would not be able to meet such an expense without very great hardship or without being ruined. If they have offended the prince, whether because of someone's gossip of flattery or because they deserve his displeasure, they will come humbly to her to beg her to make peace for them. Or if they wish to ask some favour or privilege, the good princess will never refuse to speak to them, nor

will she make a great show of keeping them waiting. Receiving them very kindly, she will listen patiently and be attentive to everything they have to say. She will be accompanied by wise and upright gentlemen who will counsel her. She will reply wisely and suitably with the help of the good advice of those men; she will excuse her husband and speak well of him. If for any reason her subjects feel disgruntled with her reply, she will say that she promises to try her best to make peace, or to stand as their good friend in the petition they are making and in everything else in her power. She will ask them always to be loyal, good and obedient towards their lord, and in return they can always rely on her for help in emergencies, for she will not fail them in anything she can do.

In this way the noble lady will reply so wisely to the ambassadors of the people or of her subjects that when they go away from her they will be satisfied to the extent that if they previously had some grievance, rebellion or quarrel in mind, they will all be pacified. The good lady will not make them waste their time in vain hope, but without long delay she will scrupulously keep her word about what she has promised them; she will speak to her husband well and wisely, calling in other wise persons if necessary, and will very humbly petition him on behalf of the people. She will show the reasons, which she will understand thoroughly, and she will show how it is necessary for a prince, if he wishes to reign long in peace and glory, to be loved by his subjects and by his people. She will address him according to the form that Seneca lays down in the third book of *De Ira*, which says that although it may be good for everyone to practise kindness, it is especially advisable for the prince to exercise it towards his subjects. And so, in brief, she will make such an effort and pursue the thing so thoroughly that she will have all or part of her request, and so sensibly will she report it to the subjects that they will feel satisfied with the prince and with her, and they will thank her most humbly.

Translated by Sarah Lawson.

8. *How the good and wise princess will make every effort to restore peace between the prince and the barons if there is any discord.*

If any neighboring or foreign prince wishes for any reason to make war against her husband, or if her husband wishes to make war on someone else, the good lady will consider this thing carefully, bearing in mind the great evils and infinite cruelties, destruction, massacres, and detriment to the country that result from war; the outcome is often terrible. She will ponder long and hard whether she can do something (always preserving the honor of her husband) to prevent this war. In this cause she will wish to work and labor carefully, calling God to her aid, and by good counsel she will do whatever she can do to find a way of peace.

Or perhaps some one of the princes of the kingdom or one of the barons or knights or powerful subjects commits some crime, even against the majesty of his lord, or is to blame for it, and she sees that if he is captured and punished or warred against great evil can come to the land. Similar cases have often been seen in France and other places in episodes involving quite an insignificant baron or knight compared to the king of France (who is a great prince) whence have come many great evils and much harm to the kingdom, as the Chronicles of France relate of the Count of Corbeil,¹ the lord of Montlhéry,² and several others. And it even happened not long ago that my lord Robert d'Artois, by his dispute with the king, greatly harmed the kingdom of France to the benefit of the English.

Since the good lady will bear these things in mind and feel pity for the destruction of the people, she will wish to work to make peace. She will urge the people, her husband, and his council to consider this matter carefully before undertaking it, in view of the evil which could result from it. Any prince ought to avoid as far as he can the spilling of blood, especially that of his own sub-

jects. It is no small matter to undertake a new war, and it ought not to be done without deep reflection and serious deliberation. It would be much better to think of some more suitable way to reach agreement. This lady will not hesitate for a moment, but will speak or have someone else speak (preserving her honor and that of her husband) to the one or ones who have committed the misdeed. She will reproach them for it sharply, saying that the misdeed was very serious and that the prince is quite justifiably offended by it and that he has decided to avenge himself for it, as is only right, but nevertheless she, who would always wish the blessing of peace, in the event that they would wish to atone for it or to make suitable amends, would gladly go to some trouble to try if she could by some means to make peace between them and her husband.

With such words or similar ones, the good princess will always be the means of peace as far as she can be, just as the good Queen Blanche, mother of St. Louis, formerly was, who in this manner always exerted herself to make peace between the king and the barons, just as she did with the Count of Champagne and with others. This work is the proper duty of the wise queen and princess: to be the means of peace and concord, to work for the avoidance of war because of the trouble that can come of it. Ladies in particular ought to attend to this business, for men are by nature more courageous and more hot-headed, and the great desire they have to avenge themselves prevents their considering either the perils or the evils that can result from war. But women are by nature more timid and also of a sweeter disposition and for this reason, if they are wise and if they wish to, they can be the best means of pacifying men. In connection with this, Solomon says in Proverbs in the twenty-fifth chapter: "By long forbearing is a prince persuaded, and a soft tongue breaketh the bone." That is, gentle speech softens and breaks its hardness just as the water by its moisture and coldness extinguishes the heat of the fire.

O God, how many great blessings in the world have often been caused by queens and princesses making peace between enemies, between prince and barons, and between the rebellious people and their lords! The Scriptures are full of such

¹At the confluence of the Seine and Essonne, this town gave its name to a line of counts who were immediate vassals of the king of France, with whom they often had stormy relations. [Tr.]

²Near Corbeil. When the barons revolted on the accession of Louis IX, Queen Blanche of Castille took refuge with her son in the Château de Montlhéry. [Tr.]

examples. There is no greater good on earth than the good and wise princess and high-born lady. Happy is the land which has such a one and has had many such. But enough has already been said on this subject in *The Book of the City of Ladies*.³ And what happens to such princesses? All the subjects feel her to be of such knowledge and goodness that they pledge themselves to her, not only because she is their mistress, but because she seems to them a goddess on earth in whom they have the highest hope and faith, and she is the cause of the country remaining at peace. Her works are not without charity, but rather they are so meritorious that a greater good cannot be done. . . .

PART TWO

6. *The fourth point, which is the second of the two that are to be avoided. How women of the court ought to be careful to avoid committing slander. What gives rise to slander, its causes, and occasions.*

We come now to the second point, which is the other vice that the lady, maiden, and woman of the court and all others ought to guard against, that is, the sin of slander, because there is no excuse for slander. To elucidate our case better, we will touch on three causes from which slander commonly comes and arises and which are all common at court, individually and sometimes all three together.

The first of the causes is hatred, the second opinion, and the third is sheer envy. These three causes are indeed wicked, but the one that comes from envy is the least excusable. All three are to be avoided for in no circumstances is slander praiseworthy, but rather it is a most forbidden mortal sin. For this is against two of the Commandments of God: the one that says, "Do unto others as you would have them do unto you," and the other, "Love thy neighbor as thyself." We will discuss these causes and teach ladies the remedies to use in guarding themselves against them.

³In *The Book of the City of Ladies* (1404) Christine attempts to refute misogynist literature of the day by giving examples of good and wise women from all the ages. [Ed.]

First we will touch on the first cause, which is hatred. We will formulate four principal reasons to show why one must not slander another out of hatred, regardless of whatever injury one has received. We do not usually hate someone unless the other person has injured us or, rightly or wrongly, we think he has. Then the injured party is most inclined by hatred and spite to slander the one who she thinks has injured her. This is a frequent occurrence at court. A lady or other woman of the court will find out that some people or a certain person is harming her and getting her in bad with her mistress, or the master, or her friends. This other person or faction may be trying to have her dismissed, and perhaps they will succeed in their intention. This lady or maiden stands to lose her service, her livelihood, and her position because of it, and perhaps her honor as well because of the things that she is accused of, perhaps without foundation. Even supposing that there was a good reason for these allegations, she will hate the person who has made them. She will doubtless slander her, in private and in public, if the person is not so great that she dares not speak of her, otherwise it will be very difficult to complain about it in the slightest. Her heart will ache greatly, and it is no wonder, in saying evil and villainy of this person, both what she knows to be true and also things she does not know. This cause of slander (that is, hatred for some wrong) could possibly seem just to some people, but undoubtedly it is not, and here is our first reason to demonstrate why.

God wishes you and expressly commands you to love your enemy and render him good for evil. Whoever acts against God's commandment damns himself and therefore gains nothing, and so it would be more to his advantage to hold his tongue. Furthermore, another trouble comes to him because of it, and that is our second reason: that he or she acts against his or her own honor. A person of great intelligence would never slander her enemy because she would know that it could seem to other people that she wanted to avenge herself with words. This is the vengeance of people with little power and faint hearts that few wise people use.

The third reason is that those who hear someone who bears a grudge slandering her adver-

saries or enemies will not believe her. They will say that she is saying it out of hatred and it ought not to be believed. The fourth reason is that the person who has already harmed her or is able to harm her will be that much more indignant when she hears that she is slandering her. She will be able to increase the injury and do still worse to her. It would be preferable to receive one injury rather than two.

And so in conclusion, the consequences of slander are well expressed by what is written of the man who decided to declare war on heaven and drew a bow against the sky, and the arrows returned on to his own head and wounded him. In just the same way the slander that the person who bears a grudge speaks of his enemy rebounds on to him and wounds his soul and his honor, as is demonstrated by the four reasons above.

7. Of the same: how women of the court ought to be very careful not to speak evil of their mistress.

The second cause that gives rise to slander is a wrong impression formed in something like the following manner: one person will have the idea that another is bad or at fault in something or in everything, or that she does not always behave well in all circumstances, and for this reason and without knowing the truth of the matter (which is perhaps quite otherwise than she thought), on the flimsiest grounds she will misjudge and slander her widely and blatantly with hardly a second thought. Such situations commonly arise everywhere. Doubtless because of opinion and because of not knowing all the facts of the case, those slander most who already have the tendency to slander anyway. There is commonly not a court of a prince and princess without such slanderers, who for such a cause, that is, opinion only, do not spare a soul, not even master or mistress. Therefore, in speaking of this vice, we must mention the great wrong that every person commits who defames and speaks evil of another, and especially of the one who feeds and cares for him, from whom he has his station and his living. Nevertheless, in many courts, if the servants or those men or women who live there see or imagine they see in a master or mistress any little sign

of some vice, because of a wrong impression they will immediately exaggerate the case, saying that the thing that they only suspected is actually done.

To speak directly to women (although it can just as well apply to men): there are a considerable number of women of all ranks in the courts of many countries who, if they see their lady or mistress merely speaking quietly to a person once or twice, or showing some sign of intimacy or of friendship, or if they see some laughter or some merriment, made perhaps out of youth or ignorance and in all innocence, they will jump to the wrong conclusion. If this mistress is slightly merry or in her clothing comely and neat (things that come to many people from good breeding, more to some than to others), these slanderers will soon be ready to misjudge her, and not just in this case but in all others as well in which for little reason they will sometimes form a bad impression of their mistress. But this misjudging is the least of their offenses, for she is their lady, who gives them food and shelter and good wages from her coffers. Although these people may well curtsy respectfully to her, with one knee touching the ground, and make deep bows and flatter her a great deal, yet they will not keep quiet about gossip, but they will tell each other their impressions, and they will whisper scandal to each other. In a word, they will be just like the bad sheep that is mangy and infects the others. But all of them, you notice, take care that their mistress does not get wind of it. They will be content as long as it is concealed from her alone. They will even agree with and support her, saying that it would be a good idea to do thus and so. They will laugh at her and talk about her behind her back, and they will embroider the story with invented details. A number of servant men and women also do it but for our purposes the ladies, maidens, and women of the court who behave in this way act wrongly to a very serious degree and commit a much greater sin than if they slandered each other or people other than their mistress. There are five principal reasons for this.

The first: the greater a lady she is, the more is her honor or dishonor celebrated throughout the country than that of another ordinary woman. For this reason, she who defames her does worse,

because this slander can spread into many regions. The second, because they betray the one to whom they are outwardly pleasant and obedient. Third, they act against their oath, which was to the effect that they would guard her well-being and her honor. Fourth, they render evil for good to those by whom they are maintained and nourished and to whom they owe their position. And fifth, they judge another, which is contrary to the commandment of God, who says "Judge not, and ye shall not be judged."

Let us suppose now that these women of the court know beyond a shadow of a doubt certain secrets about their mistress, as has already been mentioned, and that she is a very wicked and perverse person. They still ought not to defame her, either among themselves or elsewhere, for words can never be said privately enough that they may not be reported, and these women are obliged to guard her honor and cover her shame. If they hear evil spoken of her they must try to tone down the gossip and explain it away. In truth these women who do otherwise do great dishonor to themselves and they should be held in the contempt their inexcusable actions deserve.

You may say to us, "But I see something I have reason to talk and gossip about, and there is nothing else very interesting about my work."

We answer you: "Go away if you do not like it, but if you need to be employed as a servant and cannot go away because you would suffer too great a financial loss, just keep quiet about it and pretend that you do not see the least thing and that you notice nothing, since it is not within your ability to remedy it, nor is it any of your business. Do loyally what you should and do not get involved in anything else. Pray God that He is willing to help your mistress and that He will give her knowledge. If you see evil, and if you hear someone talk about her, play down the gossip if you can, or if not, keep your mouth shut about it, and for this you will be esteemed the more. God knows that many women who talk about their mistresses do it more out of spite because they are not in on the secret, and out of envy that other women know more about it, than for any other motive or gain."

Now here is what the good lady or maiden or other persons of the court will do who wishes to

enjoy a good conscience: she will love the well-being and honor of her mistress, and when she sees her honor decline and her mistress in peril of very unpleasant consequences, and if she does not dare speak to her or admonish her, she will go to her mistress's confessor and not to anyone else. She will tell him secretly and in confession what is being said about her, and the peril in which she is putting herself and the evil that could come to her from it. She will beg him for the love of God to teach her and not accuse her.

8. How it is unbecoming for women to defame each other or speak evil.

Furthermore, the women of the court ought likewise never to rebuke or defame one another, as much because of the sin and other reasons already mentioned, as for the fact that whoever would slyly defame another is herself defamed. For assuredly the person who knows that someone is defaming her will also slander that person, and she may even make up stories. Nor is any man or woman so upright that he or she ought to say, "I am not afraid of anyone. What could anyone say about me? I know I am blameless, therefore I can talk fearlessly about other people." But it is foolish for those men and women who say that sort of thing to believe it, for there is always something, somewhere, for which one may be reproached. And the Bible supports this when it says, "There is no man without offense," that is, without sin, and if you do not have one particular vice, you may have another one perhaps worse, or two, or three. If you were to look deeply into your conscience you would find plenty of faults there. For although your sin is a secret from everyone else, it is not hidden from God, and He alone knows the one who is a good pilgrim. Moreover, it is a very great shame that down in the town or elsewhere they may say, "The ladies and women of the court certainly know how to slander each other! I have heard about such-and-such a lady or maiden such-and-such a thing, and something else about such another." In this respect the court of a princess ought to be like a well-regulated abbey where the monks have an oath that they will say nothing to outsiders about their secrets or anything that may happen among

them. In just the same way ladies and women of the court ought to love and support each other like sisters. They ought not to quarrel with one another in the ladies' apartments, nor betray each other behind their backs like fishwives, for such things are extremely unbecoming at the court of a princess, and they ought not to be allowed.

We have said previously that the third cause of slander is envy, which makes the slander even less excusable. That is, it is the worst and the most wrong and unreasonable kind of slander. If a man full of hatred speaks harshly of the one who has injured him, it is natural for anyone to feel pain from his wound. If God did not forbid vengeance for the above-mentioned reason, it would be an acceptable thing for you in accordance with human law. He who slanders because of an honest opinion may base his opinion on some evidence or clue that seems clear to him, and he will be sincere in what he says. But he who slanders out of envy does it for no other reason than sheer wickedness, which exists and flourishes in his heart, and therefore it is the more damnable for the man or woman who says it and the more perilous to him or her of whom it is said than any other kind of slander. For never was ser-

pent's sting, thrust of sword, or other wound so envenomed or so dangerous as is the tongue of an envious person, for it strikes and often kills both itself and another, and sometimes in both soul and body. For if we wish to look into it, good Lord, how many kingdoms, how many countries, and how many good people have been destroyed by mischievous gossip based entirely on envy! We could find a number of examples of this, but I will leave them aside in the interest of brevity. It is true that the slander of an envious person stems entirely from unmitigated wickedness, for how has some good person or someone who has many of the qualities of grace, nature, and fortune deserved to be slandered or deserved for someone to try to make him unhappy? If these qualities come easily to him, or if he is happy and fortunate, this slander may not come from anything factual. Therefore, we conclude, as is said above, that it springs from pure wickedness and, therefore, it is the more damnable. We will say no more about this envy (for enough has been said of it before this in the fourth and fifth chapter of this second part). We have also now said quite enough about ladies, maidens, and women of the court.

Part Three

RENAISSANCE RHETORIC

Introduction

The Renaissance, designating roughly the fourteenth to the seventeenth centuries, was a period of violent and sweeping change throughout Europe. For centuries the Roman Catholic Church had been the major intellectual and political as well as religious authority in the region; now its authority was being questioned on all fronts. The Church was shaken by schism and by the secession of Protestant Christian denominations. National governments formed around strong monarchs, and the merchant and professional classes grew. These changes established secular institutions that competed with the Church for people's allegiance. The intellectual movement called humanism emphasized human powers to know and change the world and insisted on scholars' rights to pursue knowledge without being constrained by Church dogma. The humanists directed attention to classical Greek and Roman learning and developed new approaches to studying literature, history, and science. During this period, rhetoric, in a variety of forms, was a central focus. Yet the very dynamism of cultural activity in the period makes it difficult to define Renaissance rhetoric as a cultural phenomenon.

Rhetoric in the Renaissance can scarcely be framed chronologically. Its beginning is often identified with the career of Francesco Petrarca, or Petrarch (1304–1374), a fourteenth-century Italian poet and man of letters. Petrarch revived the classical notion that the accomplished person, like Plato or Cicero (see Part One), unites broad learning, philosophical wisdom, and eloquence. Yet some historians refer to a kind of renaissance in European learning as early as the twelfth century (see the introduction to Part Two). At that time scholars such as Peter Abelard and John of Salisbury began trying to expand the scope of rhetoric and reunite it with philosophy after its earlier medieval reduction to tropes and figures. The end of Renaissance rhetoric is often marked by the founding of the Royal Society of London in 1660. This group of scientists and academics denounced eloquence or, at least, elaborate ornamentation in any language that was used for the serious purposes of philosophy and science. Yet the Renaissance, if nearly over in seventeenth-century England, had still hardly touched the English universities, where medieval Scholasticism continued to be taught.

Defining Renaissance rhetoric from a geopolitical perspective is also problematic. Rhetoric is commonly traced along the path of Renaissance cultural development from Italy to northern Europe and on to England. But the pace of change varied greatly from place to place, and the development of rhetoric was conditioned by the great political, social, and religious changes that also occurred in this period.

It is not too surprising, then, that a comprehensive history of Renaissance rhetoric has yet to be written. Literary historian Wilbur Samuel Howell's *Logic and Rhetoric in England, 1500–1700*, for example, focuses on only about half the Renaissance time period and on a single country. Historian of rhetoric James J. Murphy has characterized Renaissance rhetoric as a period of “one thousand neglected authors.”¹ Scholars have yet to examine fully the relationship between rhetoric and literature through the study of figures and tropes; the struggle between rhetoric and logic or dialectic, which was often played out through the search for a universally applicable method of inquiry; the cultural impact of the printing press in the period; the effect of rhetoric's renewed centrality in education; and the effect on rhetoric of renewed debate on its proper role in public life. Even this partial listing of scholarly problems hints at the vast scope of unexplored or underexplored territory.

The listing may also suggest that in the Renaissance, perhaps more than in other periods, it is misleading to speak of rhetoric as a unified subject of study. There were many rhetorics in the Renaissance. In early Renaissance Italy, the political structure of the city-states created a climate in which rhetoric seemed near to reclaiming the power assigned to it by the Sophists, Isocrates, and Cicero (see Part One). Rhetoric appeared on the verge of attaining so central a function in public life that it could justly be called the source of collective social action and perhaps of all human knowledge. Also, the uses of rhetoric in sacred oratory, already legitimated by Augustine and developed in the medieval art of preaching (see Part Two), were given serious new attention.

But as political conditions changed and large-scale monarchies came to dominate the European scene, rhetoric began to lose its political importance, and its epistemic function began to slip away. Rhetoric as a method for generating knowledge began to be compared unfavorably with dialectic, logic, and, later, science. Rhetoric as a means of bringing about social consensus, whether on political or religious matters, became suspect insofar as it charmed or even deceived, with figurative ornaments essentially superficial to the thought conveyed. By the end of the period, people who were most interested in the power of language seemed most eager to rid this power of any taint of eloquence.

RHETORIC AND ITALIAN HUMANISM

Humanism is generally regarded as the first great intellectual movement of the Renaissance, and to many contemporary scholars, it sets the tone for the whole period. It arose in northern Italy, a relatively safe place during the hard times of the four-

¹James J. Murphy, “One Thousand Neglected Authors: The Scope and Importance of Renaissance Rhetoric,” in *Renaissance Eloquence*, ed. James J. Murphy (Berkeley: University of California Press, 1983), p. 20.

teenth century. Late medieval prosperity, peace, and unity were disrupted after about 1250, as Europe was torn by warfare from within and without. Muslim forces began to subjugate eastern Europe and finally conquered Constantinople in 1453, bringing Byzantine civilization to ruin. France and England bled each other in the Hundred Years War (1337–1453). Xenophobic violence against Jews increased, and Jews were expelled from England in 1290, from France in 1306, and from Spain in 1492. Meanwhile, all Europe was ravaged by plagues: One in the fourteenth century, known as the Black Death, reduced the population by one-third within fifty years. Famine and social unrest followed, and the Roman Catholic Church was torn by schism, with one pope ruling for a time from Avignon while another claimed authority in Rome. The first Protestant reformers, John Wycliffe and John Hus, were silenced firmly; a London synod condemned Wycliffe's works in 1382, and the Church burned Hus for heresy in 1415 (for more details on late medieval history, see the introduction to Part Two).

The northern Italian towns, far away from most of the late medieval warfare, had been populous and prosperous almost continuously since Roman times, and in the Middle Ages they became centers for trade and learning—Padua for medicine, Bologna for law. They were nominally under the control of the Holy Roman Empire, but this meant little, especially after a late-thirteenth-century interregnum. The Roman Church's hegemony also dissipated as controversies directed its attention elsewhere. Although they did suffer from the Black Death, the Italian city-states took advantage of political opportunity to become even more vigorous, independent, and fiercely competitive. They became known as training centers for rhetoric-related professions such as lawyer or notary, and also as places with a rich tradition of public oratory for state occasions and family ceremonies.

Renaissance humanism, like Renaissance rhetoric, is often traced to the career of Petrarch, who flourished in this milieu. He grew up in Avignon, studied law at Bologna, and spent the latter part of his life in Venice, Milan, and Padua, where he died. Petrarch sought a model for thinking, writing, and acting in society that was faithfully Christian yet more conducive to the development of individual talents than Scholasticism seemed to be. Scholasticism was committed to a version of Aristotelian empiricism that stressed the knowledge of external reality rather than emphasizing the mind's power to reimagine and shape reality. Because the usefulness of language as a medium of philosophy was compromised by imaginative overlays, the Scholastics had developed a highly specialized form of Latin to achieve the required precision. Petrarch initiated what would become a typical Renaissance intellectual strategy: clearing a space for one's own position by attacking Scholasticism for its pettifogging arguments and execrable Latin. Scholasticism owed its vices, Petrarch believed, to its limited and servile view of Aristotle (see Part One), whose original eloquence could not be appreciated because no one could read him in Greek.

What was new about Petrarch's approach to the classics? Although a number of classical texts (as noted below) were rediscovered or newly translated in the Renaissance, Cicero and Aristotle had certainly not been unknown during the medieval period. Cicero's works, mainly *De Inventione*, and the *Rhetorica ad Herennium*

thought to be his, were sometimes taught in medieval Italy as part of the lawyer's and notary's training because they promoted stylistic fluency. But Petrarch introduced a self-consciousness about contemporary writers' relationship to classical models. The classics were not there simply to be mined for technical tips. Now they loomed large as an overwhelmingly impressive artistic and intellectual achievement, casting a huge shadow in which contemporary writers struggled to make their own place. The idea of asserting one's individual creative powers, an idea so often associated with the Renaissance, was put forward in the face of this challenging heritage. At the same time, Renaissance intellectuals struggled to develop new ways to understand the past historically—an effort that had profound epistemological implications for them (see below)—and how their own work should reflect its influence.

Petrarch offered a purchase on the classical heritage through a new understanding of the importance of Cicero. In place of the Scholastic model of the intellectual life, Petrarch advocated Cicero's concept of *humanitas*, and this became the seminal concept of Renaissance humanism. *Humanitas*, Cicero's word for the Greek *paideia*, indicated an ideal of cultivated learning. The accomplished man should be able to combine literary art, moral philosophy, and civic responsibility in his writing and oratory. Petrarch admired Cicero for embodying this ideal, an admiration enhanced by Petrarch's discovery in 1345 of a large collection of Cicero's personal letters. For Petrarch, these letters showed how one could adapt the amplified style of Ciceronian oratory to more private purposes, and he modified his own Latin writing style accordingly. Conversely, the letter, primarily a legal and public genre since medieval times, could now be used to display personal talents, could be given an expressive stamp in light of Cicero's example, yet could retain its political significance. Following Petrarch's lead, in the 1400s Italian scholars began to depart from the usual formulas of medieval letter writing and to encourage a more personal and literary style.

According to Petrarch, the Renaissance scholar who would emulate Ciceronian *humanitas* must be equipped to pursue classical learning in the original classical and patristic Latin and Greek texts. Petrarch, like most other scholars of his day, knew little Greek, and he sought in vain for a teacher. Like Petrarch, later humanists would be avid for Greek studies. One also needed historical learning to appreciate classical literature, so that one could understand how the authors had lived and served the state in their own times. Moreover, historical knowledge helped the humanist scholar appreciate the Italian heritage. Italian history aroused patriotic excitement in Petrarch, who dreamed of a return to Roman political and cultural ascendancy. This dream could inspire the humanist citizen, since Renaissance Italy, like classical Greece and Republican Rome, was organized into city-states in which the talented individual had the potential to strongly influence political and cultural life.

Nominally a cleric, Petrarch did not follow a public path himself, although he was the son of a notary and had studied law in his youth. But a whole generation of Italian intellectuals seized from Petrarch a Ciceronian image of the public man who unites eloquence and wisdom, rhetoric and philosophy. These men were profes-

sional rhetoricians, trained as lawyers in the traditional *ars dictaminis* and *ars notaria*. Renaissance scholar Paul Oskar Kristeller has suggested that Italian humanism grew precisely because it appealed to men with this kind of training.² They saw humanism's improved access to historical and classical learning better suiting them for their enlarged rhetorical responsibilities in the city-states, which involved achieving public consensus and harmony through persuasion. The ability to do so was put to the test when Florence stood alone among the city-states and successfully resisted Milanese tyranny in 1401–1402.

First among these humanists was Coluccio Salutati, who served as chancellor of the Republic of Florence from 1375 until his death in 1406. Salutati collected around him a group of younger scholars, including Leonardo Bruni, Poggio Bracciolini, and Lorenzo Valla. These men were also professional rhetoricians who served in the Florentine and papal governments and who advanced humanist learning, occasionally teaching in Italian universities. Poggio recovered many classical texts, including the first complete copy of Quintilian known since classical times (see Part One); he found the document at the monastery of St. Gall in 1416. Bruni succeeded Salutati as chancellor of Florence. He was noted for both historical work, such as his history of Florence, and textual studies. Bruni, one of the first humanists to know Greek well, produced new Latin translations of some of Aristotle's work (not including the *Rhetoric*), which, he claimed, revealed the philosopher's eloquence and—implicitly—his commitment to rhetoric.

Valla, also a textual scholar, produced new Latin translations of Platonic dialogues and proved philologically that the Donation of Constantine, on which the Roman Catholic Church based its claim to temporal power in Italy, was a forgery. In his treatise *On Pleasure or On the True Good* (first version, 1431), Valla defends Epicureanism in order to attack all schools of philosophy, whether ancient or Scholastic, that claim to possess a moral code superseding social convention. Valla argues that seeking after transcendent systems is both an affront to the role of faith in Christianity and an evasion of one's civic responsibility. Thus Valla harmonizes the orator's attention to *kairos*, or the socially defined situation of oratory, with Christianity, and he subordinates philosophy to rhetoric.

The Italians' desire for Greek learning reopened communication between Roman Catholic and Eastern Orthodox Christendom in the late fourteenth century. Manuel Chrysoloras, the Byzantine ambassador, taught Greek in Florence. An important emigrant from Byzantium was George Trebizond, or Trapezuntius, who came to Venice in 1416 to work in the library of humanist aristocrat Francesco Barbaro. In 1426, Trebizond wrote *De Suavitate Dicendi* (*On the Sweetness of Speaking*), which brought to the West the stylistic ideas of Hermogenes, a Greek rhetorician of the Roman Second Sophistic. Trebizond also produced Latin translations of many classical and Christian Greek works previously unknown in the West, including Aristotle's *Rhetoric* (although, oddly enough, this text did not attract much attention

²Paul Oskar Kristeller, "Humanism and Scholasticism in the Renaissance," *Byzantion* 17 (1944): 346–74; rpt. in *Renaissance Thought: The Classic, Scholastic, and Humanist Strains* (New York: Harper, 1961); see also his "Rhetoric in Medieval and Renaissance Culture," in *Renaissance Eloquence*, ed. Murphy.

until the 1500s). Around 1433, Trebizond's *Rhetoricorum Libri V* (*Five Books of Rhetoric*), the first Renaissance rhetoric to treat all five canons of the classical art, appeared and became an instant "classic," often ranked with the work of Cicero and Quintilian. In 1440, Trebizond wrote *Isagoge Dialectica* (*Introduction to Dialectic*), the first humanist logic text, which subordinates logic to rhetoric. In Trebizond's time, Italian knowledge of Greek progressed to such an extent that Marsilio Ficino was able to produce the first complete translation of Plato's works into Latin (1463–1482), a very influential project.

The spread of classical ideas of rhetoric in Italy as a result of all this humanist activity is evinced even in the minority Jewish community, whose members were excluded from most universities and humanist schools. For the few allowed to study medicine at Padua and therefore in need of preliminary rhetorical training, Rabbi Judah Messer Leon published a Hebrew text that drew heavily on the *Rhetorica ad Herennium*, Quintilian, and Aristotle (in Arab scholar Averröes's abridged and annotated version), but that took all its illustrations from the Hebrew Bible (*The Book of the Honeycomb's Flow*, ca. 1475). This Renaissance "Jewish rhetoric" thus amalgamated classical sources and biblical eloquence, as later Christian writers on sacred oratory would try to do.

The Italian humanists, as historian Nancy Streuver has argued, could see rhetoric and philosophy as united—and even rhetoric as supreme—because they began to understand meaning itself as historically established. The historical relativity of truth began to be noticed in the study of classical texts and was informed by the humanists' (often frustrated) desire to recreate the real Cicero or Aristotle in his historical context. Moreover, in the humanists' exercise of their civic responsibilities, the truly good course of action addressed the present situation in persuasive language. For these humanists, rhetoric becomes the means by which history helps to shape usable truth. To be actively useful, the responsible citizen must express philosophical insights in language that is convincing in contemporary circumstances.

Although religious belief might come from an ahistorical source, the humanists recognized that the form of belief was conditioned by social convention, just as other human activities were. One could take it on faith that religious belief was necessary, but one could not be sure that a universally acceptable expression of that belief did or could exist. Hence the humanists supported religious tolerance: People should follow the form of belief appropriate to their circumstances, while recognizing that all human beings possessed creative mental powers precisely because all people were made in the divine image. Although such a view of religious belief leaves much scope for sacred rhetoric, the early Italian humanists did not pay much attention to it; that field would be dominated by humanists in northern Europe, many of whose ideas would be imported back to Italy in Counter-Reformation treatises on preaching in the 1500s.

Streuver notes that the humanist historical consciousness emphasizes personal performance in all intellectual and political action. The individual makes history by attempting to develop personal talents amid the constraints of given historical circumstances; thus individuality is both historically constituted and an act of will. This notion of self as performance gave an aesthetic cast to humanist scholarship

that attracted the interest of aristocrats. One example is Leon Battista Alberti, a wealthy, handsome Florentine who was an accomplished architect, mathematician, musician, and athlete, as well as a humanist man of letters. This polymath is often cited as the quintessential Renaissance man.

The notion of self as performance became increasingly important to humanists in their role as public servants because the city-states in the fifteenth century increasingly came under the control of single families, such as the Medici in Florence. Under these conditions, the Ciceronian public man, who exercised some political power openly in the state, was often replaced by the figure of the courtier, who had to defer to the ruler in public and exercise political influence behind the scenes. The increasingly covert character of the public servant's political power is symbolized in part by the concept of *sprezzatura*, according to which the talented and humanistically learned person should make his or her accomplishments appear to be the outcome of unstudied nature, not art. This hidden exercise of power fosters a rhetoric of dissimulation, not display, as described in Baldesar Castiglione's influential etiquette manual, *The Book of the Courtier* (1528; p. 661).

Even the autocrat must wield power tactfully, as Niccolò Machiavelli urged in *The Prince* (ca. 1513, published 1532). But Machiavelli, a chancellor of Florence who addressed his book to the ruling Medici family, discards the traditional Christian advice that the ruler should embody timeless virtues. Rather, he says, the prince should do whatever the times require to preserve his state in a political world governed not by virtue but by force. Educated as a humanist, Machiavelli believed that successful rule by a single person would eventually lead to more republican forms of government, because the leader had to make his (or rarely, her) ideas acceptable to the populace. The implicit sharing of power would gradually become explicit; that is, even the most brutal "strong man" could not rule by force alone—persuasion was needed. Thus even the most manipulative rhetoric, one could hope, would finally lead to more consensual forms of government such as those which the earlier humanists would have applauded. But Machiavelli insisted on using the full range of rhetorical strategies to reach that goal.

As the times changed and humanist scholars found fewer opportunities in public life, they devoted more energy to work in education. The local ruler would invite a scholar to open a school for his own children, and the operation would grow as more students came from nearby aristocratic and well-to-do merchant families and sometimes even from among the poor, who were supported by aristocratic charity. Vittorino da Feltre opened such a school in 1423 for the children of the Marquis of Mantua, with a curriculum he modeled on Quintilian's recommendations. Another influential early example can be found in the schools of Guarino da Verona: one in Florence, established at the invitation of Leonardo Bruni, when Bruni was chancellor, and another in Verona. The humanist school ultimately provided a model for Roman Catholic and Protestant educators all over Europe.

Yet humanist education was something of a paradox from its very beginning. The humanist educators devised curricula to prepare children to embody the Ciceronian ideal of the public man at a time when to actually enact this ideal was becoming increasingly difficult except for the sons of a few aristocratic families. This

contradiction could perhaps be glossed over with boy students, for they could adapt their literary skills to the demands for accomplished writing that grew as government ramified. They could find places as public servants, even if those roles were the covert ones of courtiers or bureaucrats. But, as historian Anthony Grafton and literary scholar Lisa Jardine have pointed out, the contradiction emerges in full force with respect to the many girl students who were educated alongside the boys in most early humanist schools.³

Except for a few daughters of ruling aristocratic families—the well-educated and eloquent Queen Elizabeth I of England being a notable example—the humanist women were barred from entering public life in any way. Their example thus highlights the mismatch between the claims that humanist educators made for education's accomplishments and the realities of the society in which such education would be used. Elizabeth's tutor Roger Ascham praises her humanist learning, but usually links these praises with the theme of her virginity, thus, perhaps, even for the sovereign, suggesting that there is something removed from the world about her learning. He also lauds tutee Lady Jane Grey for reading Plato's *Phaedo* while the rest of the family was out hunting, but, as literary scholar Walter J. Ong points out, the anecdote suggests that humanist learning was simply to occupy the aristocratic woman's many idle hours, and not to be employed in the male, agonistic realm of politics.⁴

ITALIAN WOMEN HUMANISTS

In Quattrocento Italy, the ranks of humanist-educated women who were accomplished in Latin and Greek literature and well versed in the sciences of the day included Isotta Nogarola (d. 1466) and her sister Ginevra Nogarola, Cassandra Fedele (d. 1558), and Laura Cereta (1469–1499). Their lives followed remarkably similar patterns. All mastered humanist studies in their youth, working with private tutors. They exchanged letters with noted humanist men, which was then the accepted method of breaking into intellectual circles, and received letters of fulsome praise in return. Isotta Nogarola's correspondence was especially varied and copious. Cassandra Fedele was so valued by her native Venice that the senate refused to let her accept an invitation to visit the court of Isabella of Spain in 1488.

Such fame and respect, however, were fragile. When the women married, their public scholarship usually stopped, to resume only if the husband died, as in the case of Fedele. Ginevra Nogarola virtually ceased scholarly activity after her marriage. Isotta Nogarola attempted to escape this fate by refusing both marriage and religious vows, which would have restricted her freedom to study secular literature, but she then had to remain a recluse in the family home. Male scholars' responses to these women suggest that the women were valued only when they were very young—hence prodigies—and virginal—hence no threat to mature men. When the women

³Anthony Grafton and Lisa Jardine, *From Humanism to the Humanities* (Cambridge: Harvard University Press, 1986), pp. 29–57.

⁴Walter J. Ong, S.J., "Latin Language Study as a Renaissance Puberty Rite," in *Rhetoric, Romance, and Technology* (Ithaca: Cornell University Press, 1971), pp. 136–37.

approached maturity, an age and social condition seeming to call for full parity with male scholars, they were rebuffed in a variety of ways: told to limit their secular studies or risk vulgarity, to turn to sacred studies or imperil their souls—or told to cease altogether or be proved unchaste. Isotta Nogarola gave up after Guarino delayed so long in answering a letter from her that the letter seemed an immodest advance rather than a scholarly exchange. An anonymous libel was published against her in her native Verona, accusing her of incest and averring that “the woman of fluent tongue is never chaste.”⁵

It is not surprising, then, that women humanists’ use of rhetoric usually resembled that depicted in *The Worth of Women* (written ca. 1592, published 1600) by Modesta Pozzo, who wrote under the pen name of Moderata Fonte. This work defends the female sex against explicitly misogynist publications by men, thus participating in the traditional *querelle des femmes* begun by Christine de Pizan (see Part Two). It is composed in the form of a conversation among seven well-to-do women of various ages who are enjoying one woman’s beautiful garden. At one point, while they are discussing the wrongs committed by men against women and possible remedies for these injustices, Leonora offers to deliver “a public oration in the demonstrative [or epideictic] genre,” showering men with praise as a means to persuade them to abandon their cruelties. Her most learned interlocutor, Corinna, replies:

Would you really dare stand up in front of all those censors, those know-alls, who do nothing but carp and jeer and mock? You could try all your best logical arguments, dialectical syllogisms, rhetorical colors, but it would all be to no avail. You could form fine concepts, clothe them in fine words, alter your voice, vary your style, draw on all the right figures of speech to construct arguments, prove laws, or recall examples, but you’d still have lost your case even before you started it, and even as you began your proem, you’d find your narration and epilogue already mapped out for you.⁶

Corinna’s speech not only reveals her detailed knowledge of the canons of rhetoric, but also hints at the kind of public censure that kept women from exercising this knowledge in public. Leonora does go on to deliver an oration, but not in public—only to the audience in the garden. She gains some revenge against the male censors, perhaps, by casting her speech in the form of a parody of serious male argument, which draws gales of laughter from her hearers.

First as a young woman and again as an elderly widow, Cassandra Fedele was unusual in that she risked male censure, and charges of unchastity such as silenced Isotta Nogarola, by delivering orations in public, among them an address to the students and faculty of the University of Padua on the value of humanistic learning (1487). If Fedele escaped chastisement, it may be because she was careful always to renounce ambition for a larger public role. In another oration in praise of letters, for example, she denies that humanistic studies can have any practical application for women—these studies are only to provide private enjoyment—and she arms herself only with accoutrements traditionally deemed useful for women:

⁵Quoted in Grafton and Jardine, p. 40.

⁶Moderata Fonte (Modesta Pozzo), *The Worth of Women*, ed. and trans. Virginia Cox (Chicago: University of Chicago Press, 1997), pp. 188–89.

As for the utility of letters . . . [n]ot only is this divine field, abundant and noble, amply useful, but it offers its copious, delightful, and perpetual fruits profusely. Of these fruits I myself have tasted a little and [have esteemed myself in that enterprise] more than abject and hopeless; and, armed with distaff and needle—woman's weapons—I march forth [to defend] the belief that even though the study of letters promises and offers no reward for women and no dignity, every woman ought to seek and embrace these studies for that pleasure and delight alone that [comes] from them.⁷

Laura Cereta attempted unsuccessfully to reject this humble posture. She was educated by her father, an aristocrat of Brescia, and did not suspend her studies upon her marriage in 1484, at the age of fifteen. Rather, she then began to write letters to humanists all over Italy, including Cassandra Fedele. She developed scholarly friendships with humanists in her region and drew the criticism usually heaped on women who made their learning known. Although devastated by her husband's death in 1486, Cereta attempted to gain wider recognition by circulating a manuscript book of her Latin letters in 1488. Among these are arguments in favor of serious education for women and exhortations to women not to be distracted by the frivolous pursuit of physical beauty and male flattery. The book did not receive the attention Cereta desired, however. Perhaps spurred by her father's death, as much as by the cold reception of her book, Cereta took the advice of a Dominican friend and devoted herself to sacred studies until her death in 1499, at the age of thirty. No other works of hers survive.

Nevertheless, women continued to gain access to education in the Renaissance and to use their education for rhetorical purposes. By the late seventeenth century, women such as Margaret Fell in England and Sor Juana Inés de la Cruz in New Spain (Mexico) were defending their religious views, and attacking strictures against expressing these views, eloquently. (For more information on Renaissance women and rhetoric, see the headnote for Margaret Fell.)

The Italian Renaissance ended in 1527, when a Spanish army sacked Rome. In the fifteenth and sixteenth centuries, political power was less centralized in the newly "monarchical" Italian city-states than it was elsewhere. Italy was vulnerable to invasion by a larger national entity such as Spain, which had been united by the marriage of Ferdinand of Aragon and Isabella of Castile in 1469. The German states were tied together more firmly when the Hapsburg archduke of Austria was elected Holy Roman emperor in 1438: This emperor, Charles V (ruled 1519–1556), extended the Empire's holdings in northern Europe and also, by marriage, in Spain with its lucrative American colonies. The Valois took power in France in 1461 and produced strong kings such as Francis I (ruled 1515–1547). The Tudors assumed the throne in England in 1485; powerful monarchs such as Henry VIII (ruled 1509–1547) and Elizabeth I (ruled 1558–1603) came out of that line. If the city-state was the typical setting for Renaissance intellectual life from 1300 to 1500, this setting changed to the monarchic nation from 1500 to 1700, and the understanding of humanism and rhetoric changed accordingly.

⁷Cassandra Fedele, "Oration in Praise of Letters," in *Her Immaculate Hand*, ed. and trans. Margaret L. King and Albert Rabil Jr. (Binghamton: State University of New York Press, 1983), p. 77.

HUMANISM IN NORTHERN EUROPE: AGRICOLA, ERASMUS, AND RAMUS

In addition to political changes, religious controversy also influenced Renaissance thought as Protestants rebelled against Catholicism. The monk Martin Luther presented ninety-five theses critical of the Church in 1517 and went on to found an alternative branch of Christianity strongly tinged with German nationalism. The priest Jean Cauvin, or John Calvin, was moved by Luther's work to publish *Institutes of the Christian Religion* in 1536, but this work rejected nationalist identifications and indeed all forms of hierarchical government, whether religious or secular, in favor of locally governed godly communities. Calvin established such a community in Geneva, Switzerland, and it quickly became a model for Calvinist Protestantism in France, the Netherlands, England, Scotland, and, somewhat later, in New England.

Roman Catholicism reacted vigorously to these challenges, both politically and intellectually. Among political responses was that of the Roman Catholic Philip II of Spain (ruled 1556–1598), who attempted to chastise Protestants in the Netherlands and England; however, his invading armada was destroyed by the Anglican queen Elizabeth's forces in 1588. The Roman Catholic queen of France, Catherine de' Medici (ruled 1560–1589), attempted to extirpate Protestantism in her country and ordered the Saint Bartholomew's Day massacre of Protestants in 1572. But she was deposed by the Protestant duke of Bourbon, who became Henry IV (ruled 1589–1610). He converted to Catholicism on taking the throne but also passed the first laws of religious toleration in any European country, thereby protecting the Protestant minority.

The Church's intellectual responses were perhaps more successful, especially as embodied in Ignatius Loyola's order of religious "soldiers," the Society of Jesus, or Jesuits, which was recognized by the pope in 1540. One of the Jesuits' first goals was to establish a Roman Catholic alternative to humanist education for the ruling classes. The Jesuits adopted many humanist emphases, however, such as the grounding in classical languages, interest in rhetorical training, and attention to individual talent. Their approach to rhetoric followed the Italian humanists in using all five canons to prepare students for persuasion in public life. Their educational program, the *Ratio Studiorum*, was published in 1586. By the end of the 1500s the Jesuits ran schools and colleges throughout Europe and did indeed control the education of the aristocracy in the Catholic countries of Austria, France, and Spain.

Humanist learning moved north in the 1400s and 1500s, facilitated in part by the increased availability of printed books. Gutenberg's press had begun operating around 1450, and soon German printers were setting up shops all over Europe. Walter Ong, among others, has suggested that the spread of printing was crucial to the spread of humanism.⁸ In northern Europe, humanist scholars maintained the Italian interest in linking rhetoric and statecraft, but they also showed much more interest in the function of rhetoric in education, especially a version of humanist education

⁸Walter J. Ong, S.J., *Ramus, Method, and the Decay of Dialogue* (Cambridge: Harvard University Press, 1958), pp. 308–11.

directed to reform-minded Catholic or Protestant religious ends. Learning continued to be disseminated by charismatic humanists as well as by books, and the scholars increasingly viewed themselves as citizens of the world or of an international community of scholars rather than of one state. That two influential examples are Dutch is understandable, considering the worldwide spread of Dutch mercantile power during this period; they are Rodolphus Agricola and Desiderius Erasmus.

Agricola (ca. 1444–1485), originally trained as a Scholastic, studied in Italy for ten years. He translated the *Progymnasmata* of Aphthonius into Latin, thereby creating one of the most widely used Renaissance rhetoric schoolbooks, a set of exercises based on hypothetical cases. Around 1480, he also began to circulate the manuscript of his influential *On Dialectical Invention* (*De Inventione Dialectica*). Unlike the Italian humanist Valla, who had located logic under rhetoric as a part of invention, Agricola separates logic and rhetoric and thus seems to give relatively more importance to dialectic as a site of invention. He places logic with dialectic. In this work, however, Agricola presents a dialectic that is heavily influenced by rhetoric. His dialectic treats all arguments about the probable and incorporates many elements of invention and arrangement that are traditionally parts of rhetoric. Following Boethius (see Part Two), Agricola recommends using the classical rhetorical *topoi* to generate dialectical arguments. These arguments should then be arranged in the order Cicero ascribed to the parts of an oration. Agricola downplays stylistic rhetoric, however, associating it with pleasing the audience, or engaging the audience emotionally, which should be a distinctly secondary goal to instructing the audience and moving them to right action.

The whole tone of Agricola's work suggests that it is aimed at teachers, not at lawyers or politicians. The high praise given Agricola by contemporaries and his widespread and lasting influence, especially in northern Europe, in spite of the derivative quality of *De Inventione Dialectica*, may be explained by the fact that Agricola reduces rhetoric to a teachable method (thus, perhaps, showing the lingering effects of his Scholastic training in a fondness for schematizing knowledge). Rather than stay with a humanist mentor for many years, poring over classical texts line by line (in the Italian fashion) until the mind is sufficiently stocked to produce eloquence, Agricola's reader can supposedly use his method of invention and arrangement to construct an argument for any occasion.

Educators avidly sought for method in education in the 1500s, without, perhaps, being quite sure what it would mean. Protestant educators such as Philipp Melanchthon (1497–1560) needed to reach a much wider audience than the elitist Italian humanists if all men and women were to become responsible for their own Bible-guided spiritual lives. Moreover, since he was establishing schools all over Germany, Melanchthon needed some universally applicable system to control the quality of education wherever he could not be present. His *Rhetorica* (1519) and *Dialectica* (1520) were widely used, especially in the training of Protestant preachers, as was a collection of his advice to preachers compiled by his students and published in 1535 under the title *Ratio Brevis Sacrarum Concionum Tractandarum*. In these works Melanchthon struggles with the function of emotion in religious instruction. Although he acknowledges that it is appropriate, even necessary, for

preachers to arouse emotion in their audiences, he favors a minimally ornamented style that would be moving primarily because of the speaker's own passion.

The possibility of a universal method had powerful charm, as literary historian Frances Yates has shown: It seemed to promise an almost magical power that would align the knower and the known and confirm and extend the human mind's dominion over nature. What we now call the scientific method may have been another outcome of these same efforts. Moreover, two important yet very different thinkers were influenced by Agricola's search for method—Erasmus and Peter Ramus.

Erasmus (ca. 1469–1536; p. 581) had met Agricola at the humanist school in Denter, where Erasmus was educated. This school was associated with the Brothers of the Common Life, a lay Catholic order whose members took no vows but who devoted themselves voluntarily to simple communal living and local acts of charity. Agricola was a close friend of the headmaster of the school, and Erasmus tended to connect him with the Brothers' enlightened piety. Agricola claimed that his method was conducive to this piety. Erasmus, who was training to be a monk, valued this form of religious life over the Roman Catholic abuses that he attacked. But he also defended the Church from the Protestantism of Martin Luther.

Though he was a monk, Erasmus became a well-traveled and widely known scholar. His impact on humanist language studies was great, especially through his *Adagia* (1508), a collection of three thousand proverbs culled from classical sources, and his edition of the New Testament in Greek (1516), the first ever in the West and a work of great theological as well as philological importance. Erasmus also produced the period's first complete rhetoric text devoted to sacred oratory, *Ecclesiastes* (1535; p. 628). Although this work was still influenced by medieval schematic approaches to composing sermons, Erasmus greatly expanded the scope of sacred rhetoric. He followed Augustine's lead in claiming that the preacher must seek to move as well as teach and in exploring stylistic means for doing so. As literary scholar Debora Shuger has argued, Erasmus "make[s] the Christian grand style possible" with this work, recovering a full range of rhetorical resources for religious persuasion.⁹ Other Renaissance writers on preaching, however (such as Melancthon—see above), would debate the question of just how much art could legitimately be used in oratory that must seek to move primarily by the sincere passion and moral example of the preacher.

Consistent with his willingness to encourage the Christian preacher to awaken pious emotions in hearers, Erasmus's intellectual position resembled Lorenzo Valla's in that he was skeptical of reason and left room for the operation of faith. Erasmus was perhaps less sanguine than Valla, however, about the humanist scholar's ability to synthesize rhetoric and philosophy into an effective *modus operandi* for the man of affairs. *Moriae Encomium* (*The Praise of Folly* [1511]) is a biting commentary on scholarly and religious pretensions, including the search for a universal method. *De Copia Verborum ac Rerum* (*Copia: Foundations of the Abundant Style* [1512]; p. 597) is an ostensibly stylistic rhetoric that, while taking the

⁹Debora Shuger, *Sacred Rhetoric: The Christian Grand Style in the English Renaissance* (Princeton: Princeton University Press, 1988), p. 64.

need for an accomplished style quite seriously, can also be seen as a protest against stylistic display. Another significant rhetorical work by Erasmus is *On the Writing of Letters* (*Opus de Conscribendis Epistolis* [completed 1498, published 1522]), which provides advice on letter writing but departs so far from medieval formulae as to suggest that letters might encompass all three forms of classical rhetoric—the epideictic, forensic, and deliberative—and deal with virtually any topic. In none of these works does Erasmus adopt Agricola's confidence in a simplified method for framing and expressing arguments. Rather, Erasmus "followed" Agricola in wishing that such a method were possible, without giving in to his older, admired friend's assurance that this wish had in fact come true.

Of all the Renaissance seekers after method, however, the one to achieve the greatest influence was another northern European follower of Agricola, Pierre de la Ramée, Latinized as Petrus or Peter Ramus (1515–1572). Ramus was a professor at the University of Paris. In 1543 he published his seminal work advocating a new intellectual method, *Training in Dialectic* (*Dialecticae Partitiones*), and his most controversial work, *Remarks on Aristotle* (*Aristotelicae Animadversiones*), which attacked the Scholastic method derived from Aristotle. Over the next few years, several works expressing Ramus's views on rhetoric also appeared, published under the name of his close friend and collaborator, Omer Talon, or Audomarus Talaeus. These works include the *Rhetoricae Distinctiones in Quintilianum* (*Arguments in Rhetoric against Quintilian*, 1549; p. 681). In spite of the bitter controversy his work aroused in Paris and the political sanctions sometimes brought to bear against him, Ramus eventually rose to a high position in the university before he was killed in the Saint Bartholomew's Day massacre of Protestants in 1572. His works went into many editions, and his view of rhetoric as "mere" style became increasingly prevalent into the 1700s.

Ramus's thinking begins with the most violent rejection of Scholasticism that the period had yet produced, an attack that seemed all the more dramatic to contemporaries because it was hurled in the teeth of the greatest Scholastic stronghold in Europe, the University of Paris. Ramus condemned Scholastic reasoning as needlessly cumbersome and claimed that his own method was not only more clear but also more effective in accomplishing the Scholastics' goal of representing reality. And whereas earlier humanists carefully separated medieval scholarship from the classical authors they claimed it had corrupted, Ramus wished to throw off all authorities, classical or medieval. Hence he lays out his theoretical program by attacking Aristotle, Cicero, and Quintilian in turn. He also downplays the importance of classical languages in his educational scheme. Ramus was one of the first academics to publish his works in the vernacular—French, in his case—as well as in Latin. His attack on classical thought and language is so vigorous that one might question whether he can be called a humanist at all.

Ramus's positive program calls for the union of philosophy and eloquence, but by this he most emphatically does not mean the Ciceronian ideal. Like Agricola, Ramus simply includes in dialectic various activities of invention and arrangement that had been the province of rhetoric. He recommends sorting one's material according to its level of generality, proceeding from most general to most particular

by way of dichotomies. Meanwhile, by *rhetoric* Ramus means only the study of stylistic ornamentation, a harmless pastime with which he is little concerned (he gives some small attention to delivery as well); for serious business, a plain style is best. Ramism appealed especially to the Protestant bourgeoisie and flourished in areas where it was dominant: Germany, Scandinavia, the Netherlands, England, and, somewhat later, New England. The appeal of Ramism may be partly credited to Ramus's cachet as a Protestant martyr and partly to the way that the Ramistic dialectic, greatly simplifying material to fit into the dichotomies, proved to be a useful pedagogic tool.

In spite of Ramism's triumph, however, the classicizing view of rhetoric promoted by the Italian humanists was not without supporters in the north. One was Johann Sturm (b. 1507), another follower of Agricola but also a student of Hermogenes, about whom he lectured at the University of Paris and whose entire body of works he translated into Latin. Sturm separated rhetoric and dialectic in books published in 1539, *The Structure of Dialectic* (*Partitiones Dialecticae*; two volumes) and *Dialogues on the Structure of Cicero's Orator* (*In Partitiones Oratorias Ciceronis Dialogi*). The second of these, drawing on Cicero and Aristotle as well as Hermogenes, treats all five canons of rhetoric, and both books affirm the function of rhetoric in invention and arrangement. At least in Sturm's work, rhetoric is not reduced to style.

Classical rhetoric was also preserved in the work of Roman Catholic thinkers who resisted Protestant reforms in a so-called Counter-Reformation movement and who sought to revitalize Catholic preaching in the wake of Lutheran gains. Because of the spread of larger, monarchical governments in Europe, rhetoric might be declining as a tool of statecraft, but it still had an important adult audience to address for Christian preaching. The Protestants, as noted above, had already devoted considerable attention to effective preaching, by which they won adherents, and they produced several important manuals, most notably by Melancthon. In Counter-Reformation Italy of the late 1500s and early 1600s, Catholics now sought to do the same, borrowing sometimes from Melancthon and from Erasmus's *Ecclesiastes*, but relying most heavily on Augustine's *On Christian Doctrine* (see Part Two). The new Catholic ecclesiastical rhetorics sought to discourage Scholastic preaching that involved intricate arguments about doctrine. Rather, the preacher—whether addressing august prelates at Rome in Latin or common parishioners in the vernacular—should strive to set out virtue and vice, salvation and damnation in their true colors, and move his hearers to piety and right living. His style might vary from the grand or sublime, obviously ornamented and heated with emotion, to the plain style of clear exposition. This fluency was a product of the humanistic education that was increasingly required for priests (and advocated by the Jesuits, as noted above). His matter might also include those simple elements of Church doctrine that people needed to know in order to follow the right path—and to distinguish the Roman Catholic Church from Protestant “heresies.” But above all, though equipped for his task with rhetorical education drawing on Cicero, Quintilian, and Aristotle, the preacher must be sure that he lived the virtues he exalted, thereby establishing that crucial element for persuasion, a Christian ethos.

HUMANISM AND RHETORIC IN ENGLAND: RAMUS VERSUS CICERO

Humanism in England began in the fifteenth century with the work of a group of statesmen and educators led by Sir Thomas More, now a saint in the Roman Catholic Church. More was trained as a lawyer, knew Latin and Greek, and modeled his career on that of the early Italian humanist-statesmen. He translated into English the Latin biography of one of these men, Pico della Mirandola. More rose to the high office of chancellor of England, but he was executed in 1535 by Henry VIII for refusing to acknowledge the king's religious supremacy when Henry broke with the Roman Catholic Church.

More was attracted by the Epicureanism of Valla, especially as it had been further Christianized by Erasmus, a good friend of More's and a frequent visitor to his circle. In *Utopia* (1516), More imagines the application of this philosophy to political science, in a country where pleasure seeking becomes a Platonic motion toward transcendence. More and Erasmus see rhetoric's place within the polity as similar to the powerful position it had with early Italian humanists. Through his versatile use of language, the man of wisdom influences history and guides political affairs. Erasmus's *Copia*, intended for use by boys in an English school founded by one of More's friends, aims to develop the students' rhetorical versatility so that later on, as public men, they may use words amply and impressively or clearly and concisely, as the situation directs.

As the Tudor dynasty took control of England, however, English humanism experienced a pressure to change similar to that which had shaped Italian humanism as the city-state governments became autocracies. The power of the individual public man diminished—symbolized, in effect, by More's martyrdom—and political rhetoric increasingly became the province of the courtier or government functionary. In *Logic and Rhetoric in England, 1500–1700*, historian of rhetoric W. S. Howell refers to “traditional Ciceronians” as those whose understanding of rhetoric prevailed at the time Ramism began to enter England in the later sixteenth century.¹⁰ But these Ciceronians, while still seeing rhetoric as the “traditional” five-part classical art, already had a more limited focus than More or Erasmus. They tended to emphasize the study of style and to treat rhetoric more as a courtly accomplishment than as a powerful political tool. For example, in *The Scholemaster* (1570), Roger Ascham announces himself for Cicero and against Ramus, but this means promoting a version of rhetoric very close to Castiglione's, albeit with a bit more emphasis on the scholarly mastery of classical languages. This courtly focus reflects Ascham's role as teacher of the Tudor offspring, including the future Queen Elizabeth.

Ciceronian rhetoric was not only for aristocrats in sixteenth-century England, however. Scholars attempted to adapt it to the educational purposes of a broader social spectrum beyond the clergy and such learned professions as law and medicine. The Roman Catholic educational system had, of course, been dispossessed whole-

¹⁰Wilbur Samuel Howell, *Logic and Rhetoric in England, 1500–1700* (New York: Russell & Russell, 1956), p. 65ff.

sale after the Tudors established the Anglican Church, and Tudor monarchs generally favored humanist education as a replacement. They not only employed humanists as tutors for their children but also supported the foundation of humanist schools to serve a mixture of upper-class, middle-class, and some lower-class students.

In contrast, the university population in England, which had become more democratic in the late Middle Ages, was now more limited to the upper social classes, for now those of the classes below them who sought professional careers could prepare in the schools and in professional apprenticeships. At the same time, as government became more centralized, the young aristocrats had less to do with governing and so had more need of the occupation provided by university studies. Humanist education made little impact in the universities, where Scholasticism remained the basis of the curriculum into the 1600s. This meant subordination for rhetoric. Subjects were divided into the sciences, such as physics and mathematics, which generated knowledge, and the arts, where students learned how to put this knowledge to use. Among the arts, logic studied how ideas should be arranged and ethics studied the human passions; both contributed to rhetoric, essentially the art of style. A number of liberal arts subjects, such as poetry and history, were grouped under rhetoric, on the grounds that they provided various kinds of ornaments for effective writing and speech. Composition took place in Latin and involved the imitation of classical models and exercises on set topics such as whether Caesar was justly put to death—a far cry from the more creative and individualized humanist approach.

Rhetoric textbooks began to emerge to serve the new humanist schools and also adults who wanted access to humanist learning. These books showed that a vernacular language such as English could be shaped by classical rhetorical precepts. The earliest rhetoric textbook in English was Leonard Cox's *The Arte or Crafte of Rhetoryke* (ca. 1530); the book is Ciceronian in that it mentions all five parts of rhetoric, focusing on invention and borrowing extensively from Melancthon. *The Arte of Rhetorique* (1553; p. 702), by Thomas Wilson (ca. 1523–1581), was the first textbook in English not only to acknowledge rhetoric's five-part structure but to discuss all five parts in some detail. The examples of rhetorical performance included in Wilson's book, which are mostly written texts (one by Erasmus), suggest the extent to which rhetoric under the Tudors was a written art. This book, frequently reprinted, was the most influential English rhetoric in the sixteenth century. Another rhetoric book that relies heavily on model written texts was Richard Rainolde's *The Foundacion of Rhetorike* (1563).

As literary historian Frank Whigham has shown, the popularity of these rhetorics derived partly from the ambitions of social climbers in volatile Elizabethan society. The texts are thus allied with courtesy books, of which the original model is Castiglione's *The Book of the Courtier*. They were sources of information on how to behave, talk, and write like a member of the upper social classes. Social mobility reinforced the idea of identity as performance, since the courtier, possibly newly arrived at a high rank, had to show that he or she belonged there. Even if born into an aristocratic family, one was required to give a seemingly effortless imitation of an aristocrat to prove that one's rank was justified. This version of *sprezzatura* relies

heavily on the audience, which ratifies that one's performance has been successful, and requires continual vigilance on the part of the performer, who can never regard himself or herself as offstage. Rhetorically, it calls for a variety of talents, such as the ability to compose—or ghostwrite—political speeches, love letters, occasional poetry, and more on demand, and to praise the patron gracefully and denigrate his or her enemies. Whigham compares these verbal arts to those that flourished in ancient Rome as it moved from republic to empire.

In addition to complete rhetorics like Wilson's, sixteenth-century Ciceronian rhetorics focusing primarily on style were also popular. They sought to help the English language develop its semantic and syntactic resources, which were perceived as inferior to Latin's, without directly borrowing too much from Latin. Examples are Richard Sherry's *A Treatise of Schemes and Tropes* (1550), which draws heavily on the work of Erasmus, and Henry Peacham's *The Garden of Eloquence* (1577). To the modern reader, these works might appear similar to the Ramist rhetorics in English that began to appear in the latter part of the century, such as Gabriel Harvey's *Rhetor* (1577) and Abraham Fraunce's *The Arcadian Rhetorike* (1588), which draws heavily on the work of Ramus's collaborator Talaeus. According to W. S. Howell, the significant difference is that the Ciceronian stylistic rhetorics focused on figures and tropes but acknowledged that these were only a part of the study of style and that style was only the third of a five-part structure of rhetoric.¹¹ The Ramist stylistic rhetorics, on the other hand, reduced style to nothing but figures and tropes and rhetoric to nothing but style and, treated very briefly, delivery.

As Ramist influence—and with it the stylistic emphasis—grew in the later sixteenth century, rhetoric made a happier alliance with poetry than with statecraft. Rhetoric texts such as Fraunce's show the Ramist influence by dichotomizing their subject matter and then using examples drawn largely from poetry. In Ramist fashion, Fraunce divides rhetoric into two parts, elocution and pronunciation; elocution (style) into two parts, congruity (correct grammar) and bravery (ornamentation); bravery into two parts, tropes, or turnings, and figures, or fashionings; tropes into two kinds, the first containing *metonymia* and *ironia* and the second containing metaphor and synecdoche; and figures into two kinds, in the word or in the sentence. He then illustrates tropes and verse forms with extracts from a variety of classical and contemporary poets, including more than a hundred excerpts from the poetry of Sir Philip Sidney, then circulating in manuscript.

Although Sidney's allegiance to Ramism is debatable, he encourages a Ramist-influenced linkage between rhetoric and poetic in *The Apology for Poetry* (ca. 1583, published 1595). He says that poetry and "oratory" have a great "affinity in the wordish consideration," in that good style in both is characterized by an artless art that employs stylistic devices only as they would occur naturally in speech, in the heat of emotion.¹² He praises Cicero and Demosthenes for their style, but condemns their imitators—those modern academics, preachers, and poets who sprinkle devices derived from classical models all over their discourse. Renaissance rhetori-

¹¹Howell, p. 318ff.

cians and poets sometimes called tropes and figures “flowers” or “colors” of rhetoric—hence the images of the garden or bower that appear in many titles of rhetorics and poetry collections of the period. Readers relished highly colored discourse, but the degree and kind of stylistic ornamentation were open to debate and stricture such as that expressed by Sidney.

Fraunce’s rhetoric is frequently anthologized in twentieth-century collections of English Renaissance literature, and literary-critical discussions often focus on the prevalence in English poetry of figures and tropes also found in rhetoric. This focus and indeed the identification of rhetoric and poetic that Ramism encouraged are not contradictory to the overall spirit of rhetoric in the Renaissance. Style was a principal consideration of Renaissance rhetoricians from Petrarch forward. Like the earliest Sophists, students of rhetoric in the Renaissance did not want to separate rhetoric sharply from poetic, since both pertained to style—even though the Sophists and some Renaissance rhetoricians conceived of rhetoric as encompassing much more than style. Indeed, literary critic Brian Vickers has argued that figures and tropes were understood not merely as ornamenting thought but as shaping it at the level of phrase and sentence. Thus, even to the most stylistically oriented Renaissance rhetorician, figurative language had epistemic functions.

If Ramist influence did not separate rhetoric and poetic, it did, however, encourage rhetoricians to separate rhetoric sharply from logic, and this separation drained rhetoric’s epistemic power even if the identification with poetic did not. W. S. Howell has argued that Ramism’s triumph was virtually complete in England by 1700.¹³ Hence the process of generating knowledge shifted from rhetorical invention, or what Howell calls “mental interpretation,” such as searching for ideas in commonplaces or employing stasis theory, to empirical research on what he calls “external realities,” which anticipated the new science. The shaping power of language, though it might function in learned as well as popular discourse, was deplored. Simplicity in arrangement and style was more highly valued, and the vernacular language was used increasingly for all kinds of discourse. Howell suggests that the “best” language was seen as a value-neutral tool of inquiry, not a value-laden medium of communication.

Howell’s account of Ramism’s triumph links it to the rise of modern science, just as Walter Ong’s account links Ramism with the rise of the bourgeoisie and capitalism.¹⁴ Scientists and entrepreneurs alike could focus on “external realities” with a new eagerness to explore and manipulate them. We should remember that in the Renaissance, Europeans also traveled extensively to the Americas and Asia, in voyages that typically combined scientific, religious, and mercantile interests. Even the universe was expanding. Dutch scholar Nicholas Copernicus (d. 1543) had published his heliocentric theories from his deathbed; they had not attracted much notice since he had presented them as merely an aid to regularizing the Church calendar. But the findings of Galileo Galilei, published in the early 1600s, made a great impact, even though the Roman Inquisition compelled him to recant after the

appearance of *Dialogue on the Two Chief Systems of the World*, the Ptolemaic and the Copernican (1632), in which he sides boldly with the latter. The publication of René Descartes's *Discourse on Method* (1637) is often regarded as both the starting point of modern science and the beginning of the end of Renaissance rhetoric. In a letter of 1640, Descartes wrote: "One can talk of persuasion whenever there is ground for further doubt. One can talk of science however only when there is an unshakable ground."¹⁵

The rise of Cartesian science renewed discussions about the status of knowledge, especially concerns over when one should doubt versus when one should seek certainty. In the early Renaissance, philologically sophisticated humanist scholars and Protestant reformers had questioned received cultural and religious wisdom. They felt that individual human reason was capable of such a critique. Human beings, although shaped by their culture, could take a critical distance from it. Now, however, this critical distance was not enough. The new science attempted to elevate reason to an even more exalted position, claiming that it could free itself from all learned cultural dispositions and replace received wisdom with newly discovered universals or absolutes. Thus other forms of knowledge, including the earlier enlightened work in literature, history, and religion, tended to be devalued because they were obviously not universal but historically situated. In other words, with the rise of science, culture-bound knowledge began to seem second-rate, and with it rhetoric, both secular and sacred, that drew on cultural knowledge.

The early Italian humanists had valued historical knowledge because, among other things, it helped them to appreciate the culture of their own times and the potential for its future achievements, to which they could contribute as public servants. But now historical knowledge was diminished in stature and so could not be counted on to raise patriotic interest in culture. Instead, social convention and the cultural values that ratified it seemed merely arbitrary. Acting in society was no longer so much a matter of creating a whole personality by one's performance. To be sure, one performed by conforming to social conventions, but this performance was merely a matter of creating a facade that would allow one to live comfortably and profitably in the society in which the conventions happened to be current. There was no necessary connection between individuality and this particular set of conventions or social circumstances. Behind the facade of one's performance, one remained alone with one's private thoughts, testing them for the presence of any knowledge that could be scientifically established. The individual was thus more isolated than when performance could be conceived as *sprezzatura*, both because the performance with *sprezzatura* was imagined to actually constitute identity and because others played a more integral part in its success, since their approval and participation with the performer were required. With an individual's true identity harder to perceive, the assignment of moral responsibility became more tenuous, and public men emerged who were consummate stylists but whose intellectual life seemed divorced from their political functions. Two examples are Michel de Montaigne and Francis Bacon.

¹⁵Quoted in Samuel IJsseling, *Rhetoric and Philosophy in Conflict*, trans. Paul Dunphy (The Hague: Martinus Nijhoff, 1976), p. 62.

Montaigne (d. 1592), who came from a well-to-do family, was a French diplomat who also was interested in humanist learning. His most important publication was *Essays* (complete edition 1588). This book comprises mostly short, personal essays, written in the vernacular (French), in which Montaigne describes and studies his own opinions about everything under the sun, concluding that he really can understand nothing except how powerful convention and education have been in shaping his opinions. Montaigne's tone in most of these essays is one of gentle cynicism or equally gentle melancholy. But in one long essay, "Apology for Raimond Sebond," he lays out his skepticism more seriously and maintains that human reason is incapable of any true knowledge. To some of his contemporaries as well as later scholars, Montaigne's position here is similar to that of Erasmus, who discredited reason so as to discredit rational arguments against religion. But to others, Montaigne is making a more radical move, casting off the authority of all received wisdom because such wisdom must change with changing historical circumstances, and thus clearing the ground for modern science.

The Englishman Francis Bacon (1561–1626; p. 736), also a professional politician from a well-to-do family, published his own collection of vernacular (English) *Essays or Counsels, Civill and Morall* (complete edition 1625), in which he propounds a worldly wisdom that takes for granted accommodation to convention. He disliked the bloodless prose of Ramism, and his own writing style makes elegant use of tropes and figures. But in *The Advancement of Learning* (1605; excerpted p. 740) and *Novum Organum* (1620; excerpted p. 745), Bacon demotes rhetoric to a technical skill that will simply help the one who knows convey knowledge to the less able. Bacon is more interested in the generation of knowledge by scientific means. He argues that the limitations that convention and human mental frailty have placed on knowledge in the past need not necessarily hold for the future. Perhaps humankind has known nothing or very little, but that is not to say that we can never attain knowledge—especially if we adopt Bacon's inductive program for interrogating nature. Doubt is a useful tool, but it must not disable us with despair.

The new scientific approach to learning had little impact on education at first. Indeed, in some places Scholasticism was still in force. But in most European schools and universities, humanist education had taken hold, only to harden into an elitist curriculum which avoided modern history, literature, and science even though it gave somewhat more attention to the vernacular languages as time went on. Signs of change did begin to emerge, however, in the seventeenth century. John Amos Comenius, a Moravian minister and educator, claimed to follow Bacon's advice to add practical experience to the teaching of general rules. Knowledge should come first through the senses; hence Comenius prepared the first schoolbook with pictures, *Orbis Sensualim Pictus* (*The World in Pictures*, 1658). This was essentially an illustrated word list; the words were given in Latin and several European vernaculars, and the illustrations, as Renaissance scholar Frances Yates has shown, were taken from mystical memory treatises.¹⁶ Comenius may have felt that his *Orbis Pictus* gained some sanction from what Bacon had said in praise of rhetoric, that it created lively "pictures" to impress the mind.

¹⁶Frances Yates, *The Art of Memory* (Chicago: University of Chicago Press, 1966), p. 377.

Another source of school reform in the period was a Roman Catholic sect, the Jansenists, at Port Royal, France. The Church eventually suppressed the movement, but not before it had attracted such notable intellectuals as Antoine Arnauld and Blaise Pascal. The Port-Royalists operated small schools that demanded asceticism and piety from the students, who were under close supervision, while at the same time advocating modern studies in the spirit of Descartes. Port-Royal schools were quite unusual for their attention to the vernacular. French was the language of instruction, and students learned composition in French before turning to the classics. The schools also taught modern history and science.

Arnauld, who is known to the history of philosophy chiefly for his insightful strictures on the reasoning of Descartes, wrote a widely influential textbook on logic, *L'Art de penser* (1662; English edition, *The Art of Thinking*, 1674), in which he popularizes the Cartesian method of inquiry. In Arnauld's eyes, human depravity seems to taint rhetoric, perhaps because rhetoric requires close knowledge of and accommodation to corrupt human nature. True knowledge is a knowledge of things, not words. Hence his logic text recommends beginning from personal experience and pursuing induction to achieve knowledge, just as the Port-Royalists tried to do in their schools. Language, to be sure, can be studied, but only to ensure that it does not get in the way of understanding. Arnauld did not publish a rhetoric to accompany his logic. Bernard Lamy's *De l'art de parler* (1675; English edition, *The Art of Speaking*, 1676), though not composed under Port-Royalist auspices, was widely regarded as embodying Port-Royalist attitudes toward rhetoric, because Lamy, also a follower of Descartes, rejects rhetorical invention.

In seventeenth-century England, the attitude toward rhetoric that developed from the works of Bacon and the Cartesian Port-Royalists is perhaps best exemplified in *The History of the Royal Society* (1667) by Thomas Sprat. Sprat's history amounts to a declaration of principles for the new scientific organization initiated by Oxford academics in 1660, and one of the principles rejects ornamentation: "Who can behold, without indignation, how many mists and uncertainties, these specious Tropes and Figures have brought on our knowledge?"¹⁷ Yet even this rejection of rhetorical style constitutes a style, one of directness and simplicity. A classical provenance was found for this kind of style: It was characterized as Senecan. The Senecans opposed seventeenth-century neo-Ciceronians, a stylistic school that acknowledged the five-part domain of rhetoric and hence attempted to preserve it from scientific reductionism. The neo-Ciceronians also focused on style and advocated more freedom with amplification and ornament than did the Senecans. The debate seemed to replay the controversy between Asianists (the neo-Ciceronians) and Atticists (the Senecans) in Roman times.

As in Roman times, the controversy had political overtones. French literary historian Marc Fumaroli has suggested that the neo-Ciceronians tended to be associated with monarchical government and Roman Catholic or High Church Protestant religion, whereas the Senecan sympathies were thought to lie with republicanism

¹⁷Thomas Sprat, *The History of the Royal Society of London*, ed. J. I. Cope and H. W. Jones (St. Louis: Washington University Press, 1958), p. 112.

and the more austere forms of Protestantism. These political overtones gave style serious consequences in a century beset by interrelated political and religious violence. England and Germany were torn by wars between Catholics and Protestants. The English king Charles I (ruled 1625–1649) was deposed and executed by a coalition of Puritans and supporters of Parliament, but then his Catholic-leaning Stuart line was restored, after the death of rebel leader Cromwell, with the reign of Charles II (ruled 1660–1685). The Thirty Years War bled Germany and an increasingly weakened Spain, which was involved as an ally of the German Catholics.

Meanwhile, Catholic influence grew in France, and a great neo-Ciceronian literary flowering occurred during the long reign of Louis XIV (ruled 1643–1715). A leader of French salon society was Madeleine de Scudéry, an aristocrat best known for her novels. She published a collection of imaginary speeches by women of antiquity (*Les Femmes illustres or The Heroick Harangues of the Illustrious Women*, 1641, English edition 1681) and a series of dialogues among invented classical interlocutors (*Conversations*, volume I 1680, English edition 1683, volume II 1685), all of which expressed the concept that conversation was the rhetorical realm in which women could excel. Scudéry did not challenge women's exclusion from public oratorical forums, but she suggested that women were naturally eloquent and could use language better than men in private conversation and private letters to improve their social standing, smooth social intercourse, and exert behind-the-scenes political power. Scudéry imagined that women's language, rather than showing evidence of education in classical rhetoric, would appear to be artless, and therefore more effective. Such a view of rhetoric gave women considerable power in a society in which the rule of an absolute monarch strictly limited the scope of public deliberations. Scudéry's views resemble those of Baldesar Castiglione (p. 651), which were written for a similarly constrained political world. However, as Renaissance scholar Jane Donawerth has argued, Scudéry goes much further than Castiglione to suggest that the ultimate goal of women's language should be conciliation and pleasure.

It would be a mistake, therefore, to suppose that all Ciceronian amplifications, all the Renaissance abundance of powerful rhetorical styles, fled before the strictures of Descartes and other adherents of the new science. But rhetoric from the late 1600s on, whether secular or sacred, was deeply discredited by the assumptions that rhetoric is no more than tropes and figures and, even if there were more to it, is unworthy of serious study. Those who in the future would rehabilitate its study would have to be prepared to defend rhetoric first on the ground of style, for if rhetoric as style could be valued once again, it might recover yet more of its ancient, extensive domain.

Selected Bibliography

Although, as James J. Murphy has contended, much primary material in rhetoric is not readily available, modern editions exist for most of the writers mentioned in this introduction. Sources for those excerpted here are cited in the headnotes. Murphy has edited a microfiche archive of fifty-five works (*Renaissance Rhetoric: Key Texts, A.D. 1479–1602*, 1987), which includes Latin works by Agricola, Melancthon, Ramus, and George Trebizond. See also

Murphy's *Renaissance Rhetoric: A Short Title Catalogue* (1981), which covers mostly primary sources "from the beginning of printing to A.D. 1700."

Editions of other works include Judah Messer Leon's *The Book of the Honeycomb's Flow* (ed. and trans. Isaac Rabinowitz, 1983); *Her Immaculate Hand: Selected Works by and about the Women Humanists of Quattrocento Italy* (ed. and trans. Margaret L. King and Albert Rabil Jr., 1983), which includes works by Isotta and Ginevra Nogarola, Cassandra Fedele, and Laura Cereta; Moderata Fonte (Modesta Pozzo), *The Worth of Women* (ed. and trans. Virginia Cox, 1997); Leonard Cox, *The Arte or Crafte of Rhetoryke* (ed. Frederic Ives Carpenter, 1899); Richard Sherry, *A Treatise of Schemes and Tropes* (ed. Herbert W. Hildebrandt, 1961); Henry Peacham, *The Garden of Eloquence* (ed. William Garrett Crane, 1954); Richard Rainolde, *The Foundacion of Rhetorike* (ed. Francis R. Johnson, 1945); Gabriel Harvey, *Ciceronianus with an Introduction and Notes by Harold S. Wilson* (trans. Clarence A. Forbes, 1945); Abraham Fraunce, *The Arcadian Rhetorike* (ed. Ethel Seaton, 1950); Sir Philip Sidney, *The Apology for Poetry* (ed. Albert Feuillerat, 1923); Michel de Montaigne, *The Complete Works of Montaigne* (ed. and trans. Donald Frame, 1967); and Thomas Sprat, *The History of the Royal Society of London* (ed. J. I. Cope and H. W. Jones, 1958).

Good introductory bibliographies that cite both primary and secondary sources are Don Paul Abbott's "The Renaissance" (in *The Present State of Scholarship in Historical and Contemporary Rhetoric*, ed. Winifred Bryan Horner, second edition 1990); and Charles Stanford's "The Renaissance" (in *Historical Rhetoric: An Annotated Bibliography of Selected Sources in English*, ed. Winifred Bryan Horner, 1980).

Still an influential history of the Renaissance period, though modern scholars dispute many of its conclusions, is Jakob Burckhardt's *The Civilization of the Renaissance in Italy* (1890). A good modern history of the Renaissance period is Fernand Braudel's *The Mediterranean* (1972). The rhetorical temper of the age is captured in Stephen Greenblatt's *Renaissance Self-Fashioning* (1982). There is no comprehensive book-length history of Renaissance rhetoric, although a good overview is John Monfasani's "Humanism and Rhetoric" (in *Renaissance Humanism: Foundations, Forms, and Legacy. Volume III*, ed. Albert Rabil Jr., 1988). R. R. Bolgar's *The Classical Heritage and Its Beneficiaries* (1958) is helpful on Italian humanism and the transition from Scholasticism. Hans Baron's *The Crisis of the Early Italian Renaissance* (1955; rev. ed. 1966) explores political forces that affected the development of humanism. W. J. Bouwsma's pamphlet, *The Culture of Renaissance Humanism* (1973), provides a good overview of Italian humanism and its ramifications in northern Europe. The standard work on the return of Byzantine learning to Renaissance Europe is John Monfasani's biography, *George Trebizond* (1976). Wilbur Samuel Howell's *Logic and Rhetoric in England, 1500-1700* (1956) is authoritative in its organization of summaries of numerous works from the title period; for a corrective of Howell and a good account of stylistic rhetoric, see Sister Miriam Joseph, *Rhetoric in Shakespeare's Time* (rev. ed. 1962). On later Renaissance rhetoric, see Marc Fumaroli, "Rhetoric, Politics, and Society: From Italian Ciceronianism to French Classicism" (in *Renaissance Eloquence*, ed. James J. Murphy, 1983). The end of Renaissance rhetoric in its conflict with the new science is discussed in Samuel IJsseling's *Rhetoric and Philosophy in Conflict* (trans. Paul Dunphy, 1976).

Essay collections perhaps best represent the state of scholarship on Renaissance rhetoric. Most major scholars in the field contributed to James J. Murphy's collection, *Renaissance Eloquence* (1983). A good recent collection has been edited by Peter Mack: *Renaissance Rhetoric* (1994). In *The Renaissance and English Humanism* (1962), Douglas Bush's four essays survey English relations with Continental humanists, as well as depicting poet John Milton as the "last Christian humanist." Morris Croll's influential essays on sixteenth- and seventeenth-century stylistic issues are collected in *Style, Rhetoric, and Rhythm* (1966). In

Rhetoric, Romance, and Technology (1971), Walter Ong's essays range over Renaissance education, arts of memory, and connections between Ramism and the rising bourgeois class. W. S. Howell's *Poetics, Rhetoric, and Logic* (1975) includes "Renaissance Rhetoric and Modern Rhetoric: A Study in Change." The influential work of Paul Oskar Kristeller connecting classical and Renaissance rhetoric is collected in *Renaissance Thought and Its Sources* (1979).

On rhetorical theory, Hanna Gray's "Renaissance Humanism" (*Journal of the History of Ideas* 24 [1963]: 497–514) is a seminal essay on the importance of rhetoric as a source of probable knowledge. On the meaning and use of rhetorical commonplaces, see Jean Lechner, *Renaissance Concepts of the Commonplace* (1962). A good overview of philosophical issues is Eugenio Garin's *Italian Humanism: Philosophy and the Civil Life* (trans. Peter Munz, 1965). Especially helpful on Lorenzo Valla is Jerrold Siegel's *Rhetoric and Philosophy in Renaissance Humanism* (1968). For more on the complex relations of humanist rhetoric to philosophy, see Victoria Kahn, *Rhetoric, Prudence, and Skepticism in the Renaissance* (1985). Charles Trinkhaus addresses the religious implications of Italian humanism in *In Our Image and Likeness* (vol. I, 1970). On humanist historical consciousness, see Nancy Streuver, *The Language of History in the Renaissance* (1970). Depicting Renaissance rhetoric as essentially skeptical and given to exploring all sides of a question, with Erasmus and Thomas Wilson as exemplars, is Thomas O. Sloane's *On the Contrary: The Protocol of Traditional Rhetoric* (1997). In contrast, placing the emphasis on Renaissance rhetoricians' obsession with issues of power and control is Wayne Rebhorn's *The Emperor of Men's Minds: Literature and the Renaissance Discourse of Rhetoric* (1995).

In *Sacred Rhetoric: The Christian Grand Style in the English Renaissance* (1988), Debora Shuger traces sacred oratory from Augustine to the end of the Renaissance. For more on Augustine's influence, see John Monfasani, "The *De Doctrina Christiana* and Renaissance Rhetoric" (in *Reading and Wisdom: The "De Doctrina Christiana" of Augustine in the Middle Ages*, ed. Edward D. English, 1995). For a more specific focus on Roman Catholic rhetoric, see Frederick J. McGinness, *Right Thinking and Sacred Oratory in Counter-Reformation Rome* (1995). Peter Matheson discusses polemical argument as pursued by Protestants, Catholics, humanists, and political radicals in *The Rhetoric of the Reformation* (1998).

A major work on stylistic rhetoric is Brian Vickers, *Classical Rhetoric in English Poetry* (1970; rpt. 1989); he summarizes his position in "Rhetorical and Anti-Rhetorical Tropes: On Writing the History of *Elocutio*" (in *Comparative Criticism: A Yearbook*, ed. Schaffer, 1981). Vickers criticizes Kennedy, Murphy, and Streuver for tending to dismiss stylistic rhetoric and Howell for discussing it in isolation from the imaginative literature of the period. Annabel Patterson explains the importance of the stylistic ideas of Hermogenes, a Greek rhetorician of the Second Sophistic, in *Hermogenes and the Renaissance* (1970). An excellent overview of the development of English prose style is William Garrett Crane's *Wit and Rhetoric in the Renaissance* (1937); see also Morris Croll's work cited above, and Richard Jones, *The Seventeenth Century* (1951). A fascinating account that relates late Renaissance poetry and prose to skepticism is Thomas O. Sloane's *Donne, Milton, and the End of Humanistic Rhetoric* (1985), which discusses Wilson and Bacon as well as the title figures.

On the rhetoric of the courtier, see works cited in the headnotes to Thomas Wilson, Baldesar Castiglione, and Madeleine de Scudéry, and also Gerald Mohrmann, "The Civile Conversation: Communication in the Renaissance" (*Speech Monographs* 39 [1972]: 193–204); E. Raimondi, "Machiavelli and the Rhetoric of the Warrior" (*MLN* 92 [1977]: 1–16); and Frank Whigham, *Ambition and Privilege: The Social Tropes of Elizabethan Courtesy Theory* (1984). Victoria Kahn surveys the Renaissance reception of Machiavelli in both

his “Machiavellian” and republican aspects, and provides a useful overview of scholarship in *Machiavellian Rhetoric: From the Counter-Reformation to Milton* (1994).

The development of humanism and its versions of rhetoric are intimately tied to the development of education in the Renaissance. Still authoritative is William Woodward’s *Studies in Education in the Age of the Renaissance* (1906), which surveys the entire Renaissance period and all of Europe. For a more recent overview, see Bruce Kimball’s *Orators and Philosophers: A History of the Idea of Liberal Education* (1986). Regional studies include P. O. Kristeller’s “The Platonic Academy of Florence” (*Renaissance News* 14 [1961]: 147–59), on Marsilio Ficino’s extramural study group; *Schooling in Renaissance Italy: Literacy and Learning, 1300–1600* (1989), in which Paul Grendler provides detailed information on teachers, students, and Latin and vernacular curricula; *From Humanism to the Humanities* (1986), in which Anthony Grafton and Lisa Jardine trace the northern European transformation of Italian humanism, with special emphasis on women humanists and on Erasmus; Kenneth Charlton’s *Education in Renaissance England* (1965), which also treats the transition from medieval education; *The Scholastic Curriculum at Early Seventeenth-Century Cambridge* (1958), a detailed account of what students actually read and wrote, by William Costello, S.J.; and R. Kelso’s *Doctrine for the Lady of the Renaissance* (1956), which provides a good overview of the various forms of education for Renaissance women. Walter J. Ong’s *Fighting for Life: Contest, Sexuality, and Consciousness* (1981) ascribes a male-oriented agonistic bias to Western education up to modern times.

Joan Kelly-Gadol’s important essay on the social history of Renaissance women is “Did Women Have a Renaissance?” (in *Becoming Visible: Women in European History*, ed. R. Bridenthal and C. Koonz, 1977). Her generally negative answer to this question is supported by the account of Italian women humanists in *From Humanism to the Humanities*, but for a slightly more positive view, see Margaret L. King, *Women of the Renaissance* (1991). Four of the eight essays in *Beyond Their Sex: Learned Women of the European Past* (ed. P. H. Labalme, 1980) discuss Renaissance women. In “Thwarted Ambitions: Six Learned Women of the Italian Renaissance” (*Soundings* 59 [1976]: 280–304), Margaret L. King discusses the Nogarola sisters and Cassandra Fedele and provides useful bibliography; see also her “The Religious Retreat of Isotta Nogarola” (*Signs* 3 [1978]: 807–22). For more on Laura Cereta, see Albert Rabil Jr., *Laura Cereta: Quattrocento Humanist* (1981), and *Laura Cereta: Collected Letters of a Renaissance Humanist* (1997), translated and edited by Diana Robin, whose introduction also provides a helpful overview of Italian women humanists. Focusing on women in the English Renaissance is Cheryl Glenn’s “Inscribed in the Margins: Renaissance Women and Rhetorical Culture,” in her *Rhetoric Retold: Regendering the Tradition from Antiquity through the Renaissance* (1997). On French Renaissance woman rhetor Madeleine de Scudéry, see Jane Donawerth, “‘As Becomes a Rational Woman to Speak’: Madeleine de Scudéry’s Rhetoric of Conversation” (in *Listening to Their Voices: The Rhetorical Activities of Historical Women*, ed. Molly Meijer Wertheimer, 1997). Stephanie Merrim discusses seventeenth-century Spanish, Mexican, French, and English women’s efforts to defend their sex and to obtain better education for women in *Early Modern Women’s Writing and Sor Juana Inés de la Cruz* (1999); in addition to her central focus on Sor Juana (p. 780), she also mentions Margaret Fell (p. 748) and Mary Astell (p. 841). For treatment of women in Renaissance literature, see *Rewriting the Renaissance*, ed. Margaret Ferguson, Maureen Quilligan, and Nancy Vickers (1986).

Frances Yates’s *The Art of Memory* (1966) is a magisterial work tracing her subject from classical times to its mystical relations with alchemy and Platonism in the Renaissance.

Desiderius Erasmus

1469–1536

Desiderius Erasmus was born in Holland. The illegitimate son of a priest and a doctor's daughter, Erasmus was, from infancy, destined for holy orders. His parents placed him in a humanist school in Deventer. Agricola was a friend of the headmaster, and Erasmus saw him at the school around 1481, shortly before Agricola's death. After his parents' deaths in 1483, Erasmus was sent to a monastery school to prepare for entering the Augustinian order (the same order to which Martin Luther belonged). He entered in 1488 and was ordained a priest in 1492. Wishing to escape monastic life, Erasmus in 1494 obtained a post as Latin secretary to the bishop of Combrai, with whom he hoped to travel to Rome to further his humanist studies. Instead, Erasmus was sent to study theology in Paris, where he met a group of English students with humanist interests. One of them, Lord Mountjoy, brought him to England in 1499. From this point on, Erasmus was given considerable freedom by his order to pursue learning. He would not be formally recalled to the monastery until 1514, when the pope gave him leave to remain in the world.

In England, Erasmus befriended the humanists John Colet and Thomas More and was a frequent visitor to their circle for the next fifteen years. In 1500 he returned to the Continent to study Greek. Erasmus greatly admired the philological work of Lorenzo Valla, and his ambition was to follow Valla's hints for the production of a textually accurate Greek New Testament. Erasmus worked on this project for more than a decade, publishing it in 1516. The book was tremendously influential as a model of humanist scholarship. It also encouraged theologians to focus their study more on the early Church Fathers than on Scholastic commentaries.

Erasmus had obtained Greek manuscripts of the New Testament on a journey to England in 1504. His English friends secured him the post of tutor to the sons of Henry VIII's doctor, and in 1506 Erasmus traveled with the family to Italy, where he took a doctorate of divinity at Turin. He studied in Italy for the next three years, and in 1508 at Venice he published *Adagia*, a collection of three thousand proverbs from classical sources with accompanying explanatory essays. This work first established his reputation as a scholar. When Henry VIII, of whom the humanists had great hopes of patronage, ascended the throne in 1509, Erasmus returned to England. On this journey, he may have begun writing *The Praise of Folly* as a gift for More, who would be his host. The work was originally composed in Latin and was sprinkled with Greek and even a little Hebrew; it was entitled *Moriae Encomium*, the title Erasmus preferred. The Greek word for folly, which is Anglicized *Moria*, provided a pun on More's name. The book was published in Paris in 1511.

In England, Erasmus accepted a lectureship in Greek at Cambridge, a post he held until 1514. His friend John Colet, now dean of St. Paul's Cathedral, was about to open a humanist school for boys at St. Paul's, and around 1512 Erasmus wrote *Copia: Foundations of the Abundant Style* (*De Copia Verborum ac Rerum*; usually called *On Copia*; excerpted here) as a Latin textbook for this school. Erasmus was

deeply interested in education. For the common good, he hoped that peace would come if humanity were united in one political state (as in ancient Rome), with one religion (Roman Catholicism) and one language (Latin). For this dream to be realized, education must play an important role, since fluency in Greek and Latin would have to be encouraged from an early age. Classical and patristic texts would be the focus of instruction. Rhetoric would be a natural extension and aid of this work, because the only surviving classical textbooks treated rhetoric and because rhetoric's methods would help to analyze Greek and Latin texts. Erasmus draws heavily on Quintilian in his thinking on education, and his educational treatises have much of the same kindly, practical tone.

On Copia is generally regarded as Erasmus's most influential work on rhetoric. It dominated rhetoric instruction in both Latin and the vernacular languages throughout northern Europe for most of the sixteenth century. *On Copia* is intended to help the novice attain *copia*, or abundance, in his Latin style, and ultimately to attain that flow of powerful words and ideas that mark the accomplished rhetor. The work is divided into two books, the first variously translated as "abundance of expression" or "of words" and the second as "abundance of subject matter" or "of ideas." In the Toronto edition, Book I is divided into no fewer than 206 chapters (Chapter 206 is entitled "No Further"), which treat a wide variety of figures, tropes, and other methods of amplification. In addition to discussing such stylistic devices as metalepsis, metonymy, and synecdoche, Erasmus lists various ways of expressing syntactic relationships. For example, Chapter 129, "Nothing But," contains the following examples: "You are nothing but a poet, you are nothing else but a poet, you are nothing other than a poet, you are merely a poet, you are nothing more than a poet," and so on.¹ Excerpted here is a passage in which Erasmus demonstrates amplification by giving 150 ways to express the sentiment "Your letter pleased me very much" (something the Renaissance student might well want to know, given that one source of humanism was the *ars dictaminis* and that letters were a major vehicle of scholarly exchange). Erasmus frequently cites the authority of Cicero, and he displays his prodigious classical learning as well as his own ingenuity in fashioning illustrations.

Erasmus's Latin style was and is generally regarded as excellent. His relationship to stylistic rhetoric is subtle, however. He opposed the rigid Ciceronianism of his day, which advocated that the writer in Latin use no word or expression that could not be found in the classical master and which thus produced a highly labored and artificial style. At the same time, he was distrustful of *sprezzatura*, that ideal of Italian courtly conversation that hid art and learning in the verbal performance. Erasmus thought the good style need not avoid stylistic ornamentation and rhetorical polish, nor scruple to display learning and wit, yet it should remain flexible and adapted to its current uses. Erasmus both defended and exemplified the principle that the eloquent man of wisdom should take public stands on important issues of the day, as well as share his scholarship across national boundaries, and such a man

¹Desiderius Erasmus, *Copia: Foundations of the Abundant Style*, trans. Betty I. Knott, *Collected Works of Erasmus*, ed. Craig R. Thompson, 42 vols. (Toronto: University of Toronto Press, 1978), vol. 24: p. 500.

needed a command of Latin that would be equal to these tasks. Erasmus hoped that a Latin language revived and liberated by his stylistic principles could become, once again, the universal language of a united Christian civilization. His approach gained wide influence when stylistic elaborations such as Euphuism gradually began to cloy some palates. By the turn of the seventeenth century, however, although neo-Ciceronians still supported a concept of *copie*, it was increasingly under attack by advocates of the new science and of the plainer, so-called Senecan style that they developed from Bacon forward (see the introduction to Part Three).

Although it was best known later as a work on style, one should not see *On Copia* as merely a catalog of stylistic devices, as scholar of French literature Terence Cave has explained.² In fact, although Erasmus does discuss many tropes and figures in Book I, he never exhaustively catalogues them as in other rhetoric texts of the day. Rather, he seems to encourage a sort of superabundant verbal play (illustrated in our excerpt from *On Copia* by the variations on “Your letter pleased me very much”) that is designed to increase fluency of both words and ideas—the two are mutually generative. Although he provides many classical examples, too, Erasmus never advocates slavish imitation of them, as did some of his Ciceronian contemporaries. The ultimate goal seems to be to equip a rhetor so that he can improvise as the occasion demands, powerfully amplifying his speech or increasing its impact with terseness. As Cave points out, this is a classical notion of *copie*—an abundantly varied flow of speech that impresses with its energy and inventiveness and wrings assent from the audience. It is neither simplistic nor repetitive in style or content. As classicist Alvin Vos has argued, then, Erasmus’s approach in *On Copia* can be seen as a method of attaining not just stylistic fluency, but all the ends of classical rhetorical training.

A companion volume to *On Copia* is *On the Writing of Letters* (*Opus de Conscribendis Epistolis*), which was completed in 1498 but not published until 1522. This work was perhaps even more popular than *On Copia*. It too discusses rhetorical matters, but in the context of the important Renaissance genre of the letter. Rather than providing formulas as do the medieval manuals of letter writing, Erasmus suggests that letters might encompass all three forms of classical rhetoric—the epideictic, forensic, and deliberative—and might deal with virtually any topic. *On the Writing of Letters* was also widely used as a school text since, as Erasmus presents them, letters can be used for a variety of rhetorical exercises.

When Erasmus returned to the Continent around 1515, he traveled widely and also made frequent visits to England. He helped establish another humanist school, at Louvain. In Basel, he worked with printer Johann Froben to bring out an edition of his works, as well as a new series of editions of the Church Fathers. His health began to fail, however, and he also became embroiled in increasingly bitter religious controversies. Erasmus supported the Roman Catholic Church while vigorously criticizing its abuses, as in *The Praise of Folly*, and advocating a more simple piety. These views earned him the hostility of conservative Churchmen. He hoped

²Terence Cave, *The Cornucopian Text: Problems of Writing in the French Renaissance* (Oxford: Clarendon Press, 1979), pp. 17–31 and passim.

that reformed preaching could draw people back to the Church, and so he accepted a correspondent's suggestion in 1519 to prepare a manual on preaching that adapted classical precepts to Christian needs.

This project became the massive *Ecclesiastes* (*Ecclesiastes sive De Ratione Concionandi*, loosely translated as *The Preacher, or The Theory of Public Speaking*; excerpted here; summary below), Erasmus's longest and last published work, which finally appeared in 1535, the year before his death. As Debora Shuger has pointed out, this was a worthy project for a rhetorician in the classical mold, for sacred oratory was steadily becoming the only kind of public oratory in Renaissance Europe. The increasing consolidation of nations under monarchs limited the scope of political rhetoric (see the introduction to Part Three). But there was still a need, indeed a pressing need in view of the religious controversies of the day, to speak eloquently on sacred matters. Erasmus wished to put his humanist learning to the service of a self-reformed Roman Catholic Church by instructing its preachers. He himself never preached, except perhaps a few times in his youth; his treatise conveys the insights of an acute critic of other men's pulpit oratory. Although Erasmus was dissatisfied with the treatise he finally published, regarding it as badly organized and unfinished, it was a tremendous success; it ran through nine editions in ten years after its publication and inspired many imitators, both Catholic and Protestant.

Religious historian John W. O'Malley sees *Ecclesiastes* as nothing short of revolutionary. He argues that this work single-handedly routed the medieval thematic sermon (as explicated in the *ars praedicandi*; see Part Two). For scope, erudition, and impact, says O'Malley, the work can be compared only with Augustine's *On Christian Doctrine* (see Part Two), by which it is influenced (other influences were Quintilian and, to a lesser extent, Jerome). Erasmus calls for a type of sermon that is structured along classical lines, with an exordium, narratio, divisio, and so on. It is thus much more flexible than the thematic sermon, but not as loose as the patristic homily. It is to be based on accurate philological interpretation of Scripture, which will naturally reveal the simple truths of Christianity. Erasmus uses rhetorical methods to pursue this interpretation, not only seeking tropes and figures in biblical language, but also, for example, borrowing forensic methods of evaluating witnesses and documents to resolve doubtful readings. Since the sermon's purpose is both to instruct in the truths of religion and to persuade to right action, Erasmus classifies the sermon as a kind of deliberative rhetoric aimed at a popular audience; he thereby departs from the Italian humanists who saw sacred oratory as epideictic (Erasmus does retain a role for praise and blame, but within a larger deliberative context).

In spite of the attention he gives in *Ecclesiastes* to what rhetoric can add to the preacher's power, Erasmus insists, following Augustine, that a pure faith and the divine aid it will invoke are the factors most crucial to a preacher's success. This view would seem to harmonize well with Erasmus's basic skepticism about the powers of human reason, a skepticism that was congenial to the acceptance of Church doctrine on faith, as a necessary aid to social cohesion. In 1524 he attacked Martin Luther in print for insisting on certainty in religious matters and for relying on his human reason to achieve it; Luther replied angrily. Although increasingly attacked from all sides, Erasmus continued to work for peace and internal Church reform until his

death in Basel in 1536. While Protestant polemicists attempted to discredit him as an opportunist and lackey of the Church, the Spanish Inquisition extirpated his Catholic followers in Spain, and his works were placed on the Index of forbidden books in 1559.

Erasmus is generally held to be a key figure in the Renaissance, both for bringing Italian learning north and for making major contributions in his own right. Historian Anthony Grafton and literary scholar Lisa Jardine argue that Erasmus attempted to professionalize humanism as a philological discipline.³ Professional training for this discipline required early exposure to Greek and Latin, and the role of educator thus became an important one for Erasmus. Through publications on the topic and through his work at humanist schools, he ensured that these languages were taught so as to guarantee fluency without employing the brutal pedagogy of the day, a pedagogy that ignored the aptitudes of individual students. While such training suited young men for secular leadership roles, Erasmus argued, it was especially important for the clergy. The humanist analysis of sacred texts that Erasmus modeled and taught could become a means not only to verbal fluency but also to spiritual insight and piety. Contact with Scripture, free from needlessly elaborate and philologically inaccurate medieval commentaries, could inspire the priest with the true, original spirit of Christianity, which would then shine out in his life and, with the aid of some rhetorical art, in his preaching—hints for which Erasmus provided in the *Ecclesiastes*.

This monumental final work summarizes Erasmus's hopes both for humanist education and for a newly inspired and united Christendom. At the same time, Erasmus's enduring skepticism must have made him wonder if the hoped-for outcomes were possible. He was too good at seeing all sides of an issue not to see the strengths of the opposition he faced. Indeed, rhetorician Thomas O. Sloane believes that Erasmus's most characteristic intellectual method is expressed not in the *Ecclesiastes* but in *The Praise of Folly*.⁴ Sloane argues that Erasmus, through the persona of Folly, identifies himself with the Greek Sophists and their method of exploring arguments through contraries, or *dissoi logoi*. Sloane maintains that Erasmus saw all intellectual methods as leading ultimately to insight into the fallibility of human knowledge, not to a self-evident world system. If every issue has at least two sides, then one must argue for the most probable. Failing that, one must surrender to folly—that is, give up the idea that reason will provide a definitive answer, and decide on the basis of historically determined constraints and personal circumstances. For most people most of the time, the fallibility of human knowledge requires accepting social conventions, including common beliefs, as the delusions necessary to collective life. For some people at exceptional moments, awareness of this fallibility leads to the rejection of conventional wisdom in favor of a quest for spiritual transcendence that will seem mad to the common folk but that is the only possible antidote to the limits of human knowledge.

SUMMARY OF *ECCLESIASTES*⁵

Book I

Book I focuses on the character of the preacher. Drawing parallels between political and religious oratory, Erasmus begins by pointing out that both secular and sacred assemblies persuade the people, the former to obey the laws of earthly princes and the latter to obey those of the Divine Ruler. Both work together to keep the state peaceful and to conduce people to Christian devotion. But why, then, are only the carefully selected and trained allowed to speak on secular matters, while it seems that anyone can preach? Erasmus corrects this error by conveying the importance of the preacher's office. Jesus is the most perfect preacher of God's words, but his pious and well-trained followers can also be God's messengers. Thus Scripture bestows many honorific names on prophets and preachers.

Humans are most like God in their minds and speech. One must have God in the mind and heart for true piety to flow forth in speech. A pure heart is the preacher's first requirement, and it comes from God alone; it must be sought in prayer. The preacher must also live virtuously, avoiding vice or even the appearance of vice. In addition to being virtuous, the preacher must be thoughtful, able to adapt his message to the condition and circumstances of his audience. He must know when to bend the rules of rhetoric to suit particular cases. The ability to be thoughtful, too, comes from God, though it is aided by rhetorical precepts that can be quickly learned. Moral discipline and humility are more important than fasting and other ascetic practices for putting the preacher in the right frame of mind. Jesus himself did not practice the austerities of John the Baptist, nor require them of his disciples. The biblical prophets acknowledge that all these gifts of preparation and of good effect on the hearers come from God. Of all traits of the preacher, the most important for persuasion is to love what you are preaching.

Erasmus now discusses the depiction of the high priest Aaron in the Old Testament, his consecration, purity of life, vestments, and so on, and the allegorical meaning of all these details for the Christian preacher. Yet Aaron taught only how to live rightly and avoid punishments in this world; the Christian preacher speaks of the eternal world to come.

Nevertheless, though the preacher's most important gifts must come from God, many examples show that God wants us to improve these gifts with training. Therefore, the future preacher should be educated for his office from early youth. He will be, as it were, an ambassador of the Divine King, and he must behave suitably. One should not seek for candidates just anywhere, and their office requires at least as much expertise as a secular calling such as medicine. The quality of the recruits is more important than their quantity. Erasmus instructs bishops on how to perform the selection task properly, with examples. Current challenges to the faith require that the Church send competent workers into the field.

The challenges should not daunt us. If secular princes can command courage

⁵Because our excerpts from *Ecclesiastes* are drawn from a number of places in Book II, we will not interrupt this summary by noting, as we usually do, where in the summary excerpted passages begin and end. [Ed.]

from their followers, how much more should God be able to do so. God's prizes for bravery are much more valuable than any that princes can bestow. Christians show courage in going on pilgrimages and in submitting to monastic asceticisms; how much more important is it to spread the word of God to the benighted. The preacher's office is ultimately more powerful and important than the king's because of the rewards and punishments of which the preacher speaks.

The preacher must correctly read the Christian allegories of the Old Testament, as Jews foolishly refuse to do. Saint Paul excelled in this. Because our preachers offer eternal life, they are superior to the Jewish prophets, who spoke only of the good of this world. As Christ's divine nature is greater than his humble earthly embodiment, so the spiritual meaning of the Bible is much greater than the literal meaning.

Bishops administer the sacraments, pray for the people, judge, ordain, and teach—all offices greater than any king's. Of these, teaching is supreme because it brings people to the Lord. How terrible, therefore, is the priest who lowers himself to base pleasures. Touched by God, he should have too much self-respect to do so. Erasmus now cites more biblical texts on the dignity and power of the preacher's office. Great preaching is still needed, for not all have accepted Christ—the Jews, wicked people, and others deny him.

How can the preacher gain authority with his people? By love. He must be truly virtuous. He must make good use of whatever he has in common with his congregation, such as homeland or kinship. He should try, so far as possible, to give himself a pleasing appearance and to avoid contemptible vices. He must keep himself free from obligations to any person, for example, by accepting a costly gift. He should not participate in ridiculous local customs or sanction local superstitions, although he may have to allow them to prevent worse from taking their place. He may accept money but should use only a very modest portion to live on, dispensing the rest to the needy. Nothing wins love more effectively than kindness and charity—thus even savage beasts are tamed. If a preacher has any annoyingly excessive personality trait, or any weakness due to age, national origin, and so on, he must try to correct it.

Although the preacher may be discouraged by his audience's inattention, he should not be—however, the audience should be ashamed. Erasmus compares the preacher's vicissitudes to those of an actor, sometimes applauded for trifles and sometimes hissed off the stage. Erasmus exhorts audiences to listen carefully and not to condemn the preacher for trivial reasons.

Book II

Erasmus says that those well endowed by God, as described in Book I, need little instruction in how to preach. Besides, if the preacher is suspected of using art, he hurts his credibility. Furthermore, too great a devotion to study can keep the preacher from doing his proper work. It is best to learn what is needed in early youth. God expects us to improve His gifts with training.

First, the future preacher must learn grammar—not through mere drills, but

through extensive reading of the best classical authors. One must know the correct names of every thing, person, and place, which is not easy when often the names have changed since antiquity. One must know details in order to interpret scriptural allegories—for example, that the palm tree stays always green. One must also be able to compose good sentences. The study of grammar encompasses reading in history, poetry, cosmography, and more. Deep knowledge is not necessary, only enough to understand Scripture and to be ready with illustrations for one's sermons.

The good speaker must be aided by four things in particular: nature, art, imitation of good examples, and practice. Only minor impediments of nature can be overcome by the other three.

The future preacher must know Hebrew, Greek, and Latin so he can understand the holy writings, but he must also be fluent in the vernacular of his congregation, for this is the language in which he will preach. His teacher should take the young man to hear preachers of the day and should critique their performances with him. The teacher should also make sure that the young man reads examples of the best classical and patristic oratory; Erasmus names names.

Saint Augustine has encouraged us also to acquaint the preacher with the precepts of the rhetoricians, who classify three types of speeches. Although forensic oratory is far removed from the preacher's duties, its status theory will help him perceive the main points in any argument. The preacher is mainly concerned with teaching, which must not only inform about God's word but also persuade the hearers to embrace it and change their way of living. (This is deliberative oratory.) Finally, there is the encomiastic (epideictic) type of speech, which is useful for praising and thanking God.

When teaching, the preacher must delight his audience. There are many ways to do this, as Erasmus enumerates, but the preacher should be sure not to use foolish or scurrilous methods.

The parts of the orator's task are invention, arrangement, expression, memory, and performance. The preacher should also consider the parts of a speech: exordium, narration, division, confirmation, refutation, and conclusion. Of course, the Scriptures command attention in and of themselves, but the preacher can also make the sermon stronger by using rhetorical precepts correctly. They should not be applied rigidly. Erasmus gives many examples of both inept and skillful exordia. He now turns to the narration, about which he claims to have nothing to add (perhaps because he has covered the use of stories under exordia). He next discusses division. This part directs the hearer's attention to what follows, and hence implicitly promises that the topics it lists will indeed follow. Erasmus outlines the advantages and disadvantages of forecasting the parts of a sermon. To divide correctly requires knowing what the main points are, but the speaker should not list too many of them. The next parts of a speech to examine, Erasmus says, are confirmation and refutation. These must be accurately divided (hence their connection with what he's just discussed), and they comprise the speech's argument, which is why Erasmus says his next topic should be argument. But discussing argument would require a review of status theory, which he does not want to do at this point; instead, he will take up the "suasorial" (deliberative) and encomiastic types of speech first.

In suasorial speech, the speaker must be very clear about how to present his point to his particular audience, given his own ethos. We deliberate only over doubtful issues. The parts of a suasorial speech are based on its definitions of the honorable and the useful, which will vary with circumstances. Erasmus gives some other deliberative topics but concludes with the warning that not all will be useful in every speech. The preacher must be selective.

Erasmus now turns to the encomiastic type of speech, used mainly to praise God and the saints. He gives many hints on how they may be praised, what qualities to highlight, and so on. He warns against inflating praise with incredible miracles.

Erasmus now discusses “exhortation,” a type of suasorial speech that attempts to affect behavior but that makes special use of praise and blame, like an encomiastic speech, to arouse the audience’s emotions. The exhorter can urge people to emulate virtuous examples, holding out hope of glorious success and invoking the shame of not trying. He should offer rewards, both in this world and the next, and should be careful not to be so vehement as to give offense.

Next Erasmus speaks of the “consolatory” speech, in which the preacher either attempts to mitigate immoderate grief or shows that grief is appropriate and can lead to spiritual growth. The approach taken depends on the circumstances. Erasmus suggests topics for supporting both approaches.

Erasmus now discusses sermons in which one must rebuke sin. He gives the following cautions: Be gentle; do not describe the sin in such detail that you instruct the innocent in how to commit it; be sure to show how error may be corrected and damage repaired; and do not turn your rebuke into veiled flattery of the wealthy and powerful, whose sins come from their high position. The one who rebukes must lead as blameless a life as possible, while remaining aware that he is not and cannot be perfect.

Erasmus now returns to the issue of status that he promised to discuss earlier. Though employed primarily in court cases to determine the nature of the deed in question, status theory is also useful to the preacher to help him identify the main points of his argument and avoid digressions. Erasmus also gives examples of how status analysis can help clarify a scriptural interpretation or moral question.

Erasmus next moves to a discussion of propositions, the main points of the argument. He considers the extent to which a preacher should take his points from his adversaries. He urges that the main points be identified through a consideration of the whole case. One must then put these points in order, ideally in such a way that one point provides a step to the next. It is important to cover the whole case and answer any adversaries, including those silent listeners who may be harboring objections in their minds, and to present supporting arguments in an effective order. One may imagine hypothetical cases. On rare occasions, one may be able to argue from a person’s individual circumstances.

Propositions, of course, must be proved. To convince, the speaker must know what he is talking about, and he must be known as virtuous and full of good will toward his hearers. Proofs strengthen one’s position and weaken that of one’s adversaries. A preacher may use “nontechnical” proofs, such as documents or testimonies, or “technical” ones. Erasmus elaborates on the uses of nontechnical proofs

in sacred oratory, devoting the lengthiest section to advice on how to maintain the dignity of the authorities you cited.

Before turning to technical proofs, Erasmus offers some cautions: Don't argue for propositions the audience already completely believes. Don't think that mere assertion or denial constitutes an argument. It may be useful to introduce an argument with a comment on its appropriateness, provenance, and so on. Native intelligence may help to devise proofs, but early training in dialectic will help, too, provided it is not given over to foolish elaborations and pointless quarrels.

Technical proofs may be derived from the persons involved or from the case itself. Erasmus lists the attributes of a person, such as his or her homeland or education, and explores each in detail for its usefulness in sacred oratory. He cites classical literature as a rich source of examples. The preacher may also use these same attributes to analyze his hearers, suggesting how they may be best approached.

Properties of the case itself include cause and effect, matter and form, purpose or end, place where the event occurred, time when it occurred, the supposed agent's ability and willingness to do the deed, what instruments were used, and how it was done. Erasmus gives examples.

Erasmus now discusses what he calls common sources of arguments, *topoi* or *loci*. Although rhetoricians do not agree on the meaning of these terms, Erasmus means general sources of arguments drawn from the properties of things, including whether a thing exists, what it is (definition), and of what sort it is. The preacher seldom has to handle questions concerning the existence of his main subject matter, such as God. Questions of definition are much more common, and Erasmus explores these at length. He discusses different methods of defining, such as by describing the beginning, middle, and end of an event, or by comparing the present case with examples drawn from everyday life, classical sources, and so on. Such arguments work best when they mount up.

Another type of technical proof argues from cause and effect. Again, Erasmus illustrates variations with many examples.

Erasmus concludes his discussion of technical and nontechnical proofs with a list of each group. Next he briefly reviews some of those he called "topoi" or "loci" with an eye to their special usefulness to the preacher, and then illustrates their use in a sample sermon on baptism. He talks about how to meet an adversary's propositions with one's own, and then discusses paradoxes, many of them witty. Erasmus cautions the preacher not to be as pedantic in his use of loci as a dialectician. Erasmus now treats the locus of induction, not previously covered. It is a way of handling a large number of examples. Erasmus illustrates with religious topics and concludes his review of the loci by giving examples of how they can be related to one another.

Rhetoricians structure an argument using three to five parts: the "proposition," that which is to be proved; the "reason," which proves it; the "confirmation," which supports the reason; the "exornation," which adds illustrative enrichment to the argument; and the "complexion," which summarizes and concludes it. All but the first two parts are optional. The first three parts may be combined in a syllogism. You can influence your audience to accept an argument if you tell them that it is rigor-

ous. Also, you must not forget to keep the audience awake with occasional figures of speech, jests, evocations of emotion, and so on. Don't omit an epilogue or conclusion, which helps your hearers remember what you have said and rouses the appropriate emotions toward your message. Above all, convey your love for what you are teaching.

Book III

Book III begins with a discussion of *arrangement*, which has four meanings. First, it refers to word order, which must be clear, musical, and vigorous. Second, it concerns the order of propositions in a speech, which, as noted before, should be stepwise. Third, it refers to the parts of individual arguments within a speech. Fourth, it refers to large sections of the whole speech, such as chronological order in a history.

Erasmus now runs through various methods of arranging a whole sermon, such as following the order of ideas suggested by the Scripture reading. He gives many examples, of arrangements both good and bad. The best order is that which presents the propositions most convincingly, with stronger arguments at the beginning and end and weaker ones in the middle.

Concerning memory, Erasmus debunks elaborate schemes that assign parts of the speech to images; it is simpler just to memorize the whole speech. It is permissible to use written notes. One should avoid that which harms memory, such as drunkenness and indiscriminate reading.

According to Erasmus, a pleasing delivery comes partly from natural endowments and partly from practice. A friend can advise you concerning any unpleasant mannerisms. Imitate good examples. Training and sobriety can improve a weak voice. You should be able to be heard without shouting and should vary your tone of voice as emotion suggests, without exaggerating like a stage actor. Use refined, but not overly refined, pronunciation. Above all, let your variety of expression suit what you are saying. Next, Erasmus gives advice on how to use pauses of various lengths. Facial expression is also important, especially the eyes. Hand gestures are the most eloquent movements, but they should not be overused. Avoid all excessive movements and facial expressions, as well as melodramatic props, such as skulls. It is important to dress modestly and neatly. Above all, Erasmus says, use those methods of delivery that emphasize your own individual strengths and minimize your faults.

Erasmus now turns to the issue of how to add power and eloquence to a speech. To do so, a preacher may employ "commonplaces," that is, "amplifications" suggested by the subject matter, such as expanding on the merits of modesty when praising a bishop for possessing this virtue. All the virtues and vices provide such commonplaces, as do the common occasions of social relations and life events. Another method of amplification involves increasing or diminishing, as one might want to magnify or reduce the seriousness of a crime under discussion. Erasmus discusses several ways to do this. There is also comparison, which brings in many similar or dissimilar examples. Erasmus notes that he has treated this technique as a method of proof, but it should also be regarded as amplification. He gives many

examples of comparison. Another method of amplification is “ratiocination,” in which one adduces reasons from what follows, precedes, or occurs simultaneously with the main topic. One may also amplify by praising or blaming someone for doing something first, alone, and so on. Erasmus gives examples. Metaphor and related figures of speech amplify, since they add emphasis and richness. A related method heaps up synonyms or synonymous phrases. Most effective is to use maximizing and minimizing methods of amplification together.

Since amplification is related to arousing emotion, Erasmus now turns to this issue. Although Aristotle says you should not corrupt a judge by arousing his emotions, you need to use emotional appeals when dealing with the ignorant masses. The two main classes of emotion are gentle, everyday feelings such as love between parents and children, and more violent, powerful, painful and unusual emotions such as the tragic love of Phaedra for Hippolytus. One arouses emotions of either kind by appealing to either the facts of the case or the people involved. Erasmus shows with several examples that the material treated by Christian preachers is more appropriate to arousing the emotions than is the material of pagan orators. The simple truths of the Christian story will arouse emotion; but the preacher may also try to arouse pity and mercy for the innocent who are afflicted and anger against vices and their instigator, Satan. Above all, the preacher should arouse love of God. He who feels the emotions he seeks to arouse will be most successful. He should paint powerful word images and tell affecting stories to arouse emotion. (Examples follow.) The preacher should not try to keep the congregation at the height of emotion all the time but should build up gradually to the most powerful moments and then bring the people down gently from them. Erasmus demonstrates how to do this incorrectly, such as by using ridiculous, melodramatic props.

Erasmus now turns to the figures of speech. Figures add clarity, believability, pleasure, force, and splendor to oratory. Since rhetoricians disagree about the names of figures, Erasmus uses those from the *Rhetorica ad Herennium*. He begins with figures that add forcefulness to a speech. For several dozen figures, Erasmus gives their names, explains how they work, and provides examples either from his classical and patristic reading or from his own imagination. One group of figures involves inventing characters who will speak in the sermon, perhaps in dialogue with the speaker. Erasmus cautions against using these devices except at the height of emotion. The speaker is like a painter when he brings such characters and their settings before the audience’s eyes. Next Erasmus considers figures that add pleasure, clarity, and impressiveness. Again, he names them, explains how they work, and gives examples. Some, he notes, have already been treated in his *On Copia* (excerpted here). Common sayings about everyday life, which the Greek call “gnome,” also greatly enhance a speech if not used excessively or indecorously. They are most effective used in pairs. Erasmus gives many examples, from traditional folk wisdom and classical and patristic sources.

Examples also ornament a speech. They may be drawn from Scripture, pagan sources, animal life, and elsewhere. Amplification and diminution of the significant traits in the examples should be used to increase their effectiveness. Fictitious or indecent examples should not be used in sermons.

Erasmus now turns to the most powerful verbal device of all, metaphor, which transfers a word from its normal meaning to another, as when we speak of a man “blazing” with anger. If all the language in a text is metaphorical, it is an allegory. A “similitude” relates two words as does a metaphor, but spells out the transfer of meaning explicitly. Giving many examples, Erasmus says that further directions on forming similitudes can be found in his *On Copia* and in Quintilian.

The preacher must have all these verbal devices ready to hand and must use his judgment in deciding how to deploy them in a particular sermon. Erasmus provides a sample sermon on the story of the paralytic brought to Jesus, from the Book of Matthew, in which he employs many figures and comments on their use.

Erasmus notes that Scripture is full of figures, and he gives many examples. The preacher must know how to interpret these correctly, using context, comparable passages, ancient sources, and the guidance of prayerful faith. At the same time, he must be careful not to read as a figure something that has an unproblematic plain sense. Also, certain scriptural words that seem to have a plain sense—such as *world* or *holy*—must be interpreted in their orthodox meaning, as the Church teaches. Erasmus explores several of these, pointing out errors in their use. The preacher should equip himself with Greek, Latin, and Hebrew so he can consult both original Bible texts and patristic sources. Erasmus cites some problematic scriptural passages and shows how philological knowledge helps to resolve them.

The preacher must take equal care when explaining allegories, whether biblical or patristic. Erasmus looks at many examples of interpretations, both astute and twisted. This leads into a discussion of allegory in general. Erasmus mentions that Augustine’s *On Christian Doctrine* contains useful advice on this topic. He reminds his readers that an allegory is really a collection of metaphors, and he discusses several types of extended metaphor, both praiseworthy and faulty. He notes the traditional fourfold method of interpreting Scripture: the literal, which reads for the plain sense; the “tropological,” which looks for moral lessons for individuals; the allegorical, which refers to the life of the Church in this world; and the “anagogical,” which refers to the triumph of the Church at the end of time and the mystical qualities of the triune God. Erasmus gives a lengthy example illustrating all four types and pointing out pitfalls.

While reading metaphors into literal meanings where they are not needed is wrong, so too is it an error to read metaphorical passages literally: This gives rise to many superstitions, such as those found among the Jews. Erasmus gives examples of both kinds of error. One should allegorize only when the literal meaning suggests something obviously false or absurd. Some scriptural allegories resist interpretation, but they are useful for stimulating the intellect. In *On Christian Doctrine*, Augustine offers a convincing explanation of why God would allow some passages of Holy Writ to be obscure: The veils protect sacred truth from the wicked, while yielding meaning to the pious. Also, the allegories delight us and lead us to study harder. Finally, the process of analysis gradually reveals divine truth so that we can absorb it, which we could not do if it were revealed all at once.

The preacher must be discriminating in his use of allegories, choosing the least far-fetched. Tropological analysis is often the best for sermons. Even if the allegory

is obscure, the preacher's words should be clear. Erasmus notes some sources of ambiguity that should be avoided. Once again, he calls frequently on the advice of Augustine. Because Augustine admired them, Erasmus cites the rules for interpreting allegory of an otherwise heterodox writer, Ticonius. Erasmus also discusses Augustine's rules for reconciling apparent contradictions between the Old and New Testaments. Rather than multiply rules, however, the preacher should rely primarily on his love of God and prayerful guidance to interpret allegories.

Erasmus says he cannot conclude Book III without keeping his promise in Book I to discuss judgment and counsel, those tools the preacher uses to apply general advice to particular cases. In fact, Erasmus claims to have been discussing judgment all along, as when he gave advice on how to judiciously select and interpret allegories. Erasmus proceeds, nonetheless, to give classical and biblical examples of orators who fitted their remarks to their audiences especially well. This sagacity is still needed even in a largely Christian world, because the preacher may still have to establish his personal authority tactfully or to criticize or praise others with decorum. The preacher must also carefully judge his audience's intelligence so he does not allow members to think that the saving grace of Christ abrogates their responsibility to do good works.

Book IV

Book IV, less than half the length of the other three, provides an index of topics for the preacher. Erasmus begins with an anatomy of God's domain: The heavenly world consists of angels and blessed souls; the ecclesiastical world is made up of Christians still living on earth, both the faithful and the erring; and the political world is that of civic society, its laws, and so on. God rules all, and each person has a soul that draws him or her to obey divine laws in spite of the flesh.

God's immensity can scarcely be represented in human language. His immutable powers are well described in the Old Testament, and preachers should refer to these powers frequently. No one should fail to understand that seemingly natural events, such as earthquakes, are God's doing. The Bible anthropomorphizes God only to assist our childish understanding. God is one, though in three persons, Father, Son, and Holy Spirit. The Father is invisible, the Son appeared in a human body, and the Spirit has appeared as a dove or tongues of flame. The Son has three natures: his divinity, his human soul, and his human body. God redeemed the Church through the Son and governs it through the Holy Spirit. God presides over all three worlds. In the heavenly world, his angels are his ministers; in the ecclesiastical world, his bishops and preachers fill this role, as do good magistrates in the political world. In all creation God's preeminence is expressed by the very appearance of every thing. His spirit, too, rules in the hearts of the pious.

Satan as tyrant is opposed to God as monarch. God uses Satan to test the faithful and punish the wicked. Satan corrupts God's good creation as best he can, with the help of demons. Law creates a stable, happy community, none more so than divine law. Satan's laws bring only death. Erasmus discusses the immutability of God's

laws, their various applications, and the contrast between Old Testament and New Testament laws, both of which have their worthy purposes. Moral laws do not change, but those prescribing ceremonies do. Penalties may change. Next Erasmus catalogues the kinds of sin and death. He then treats true faith: what it is, how it is nurtured, and how it relates to hope and charity. Erasmus enumerates virtues and vices, with hints as to how to develop each in preaching. He calls these “loci” (rhetorical commonplaces).

At this point Erasmus presents an outline of the topics addressed in all of the preceding material. He follows this with “Sylva,” that is, suggestions for elaborating on each topic: reasons, confirmations, witnesses, types and figures, examples, and more. He does not get very far into these elaborations, however, before he breaks off, admitting that the work will have to remain incomplete.

Erasmus then adds a few remarks comparing matrimony with celibacy that is dedicated to God—both worthy conditions. He looks at several Old Testament figures—Enoch, Noah, Abraham—with hints on how to interpret them; this is intended to serve as a model for additional work that the reader can do for himself. Erasmus concludes by discussing the concept of concord, earthly and divine, of which his final example is friendship.

Selected Bibliography

The University of Toronto Press series provides the standard modern edition, excerpted here: *Collected Works of Erasmus. Literary and Educational Writings, Volume 2: De Copia. De Ratione Studii.* (ed. Craig R. Thompson, *De Copia* trans. Betty I. Knott, 1978). Volumes 25 and 26 in this series provide a translation, with commentary, of *Opus de Conscribendis Epistolis, On the Writing of Letters*, by Charles Fantozzi (1985). *Ecclesiastes* is not available in English translation, although the University of Toronto Press plans to bring out an edition. Our translation of excerpts was prepared for this volume by James L. Butrica. *Desiderius Erasmus of Rotterdam: “On Copia of Words and Ideas”* (trans. D. B. King and H. D. Rix, 1963), though not a complete edition, reproduces the flavor of Erasmus’s Latin more accurately than Knott’s translation. A good new translation of *The Praise of Folly* is Clarence Miller’s (1979). See also “*Stultitiae Laus*”: *A Facsimile of the Froben 1515 Edition with Marginal Drawings by Holbein* (ed. H. A. Schmid, 1931). In *Controversies over the Imitation of Cicero in the Renaissance* (1991), Izora Scott translates Erasmus’s dialogue against Ciceronian excesses, the *Ciceronianus*, as well as several Italian humanist counterattacks, and she provides an excellent historical overview of the entire controversy.

Biographies include Roland Bainton’s *Erasmus of Christendom* (1969) and J. Kelley Soward’s *Desiderius Erasmus* (1975), which gives more attention to Erasmus’s writings. Cornelis Augustijn’s *Erasmus: His Life, Works, and Influence* (1986; trans. J. C. Grayson, 1991) incorporates more current scholarship and helpfully places Erasmus in historical and cultural contexts. Lisa Jardine’s *Erasmus, Man of Letters* (1993) illuminates the ways in which Erasmus crafted the “man of letters” identity for himself, particularly through alliances with important Renaissance printers.

Still useful is William H. Woodward’s summary, *Desiderius Erasmus Concerning the Aim and Method of Education* (1904, rpt. 1964, ed. Craig R. Thompson). Woodward includes abbreviated translations of two treatises on education by Erasmus, *Upon the Right Method of*

Instruction (De Ratione Studii [1511]) and *The Argument of Erasmus of Rotterdam That Children from Their Earliest Years Be Trained in Virtue and Sound Learning (De Pueris Statim ac Liberaliter Instituendis Libellus* [1529]).

An overview of Erasmus's theory and practice of rhetoric, discussing *On Copia* and *Ecclesiastes* and providing helpful bibliography, is Richard J. Schoeck's "'Going for the Throat': Erasmus' Rhetorical Theory and Practice" (in *Renaissance Rhetoric*, ed. Heinrich Plett, 1993). An excellent discussion of Erasmus's concept of *copia* and its sources can be found in Terence Cave, *The Cornucopian Text* (1979). For more on the classical sources, see Alvin Vos, "De Copia and Classical Rhetoric" (*Classical and Modern Literature* 7 [summer 1987]: 285–94).

Providing an excellent history of pulpit oratory, with some remarks on *Ecclesiastes*, is Debora Shuger's *Sacred Rhetoric: The Christian Grand Style and the English Renaissance* (1988). In "Erasmus and the History of Sacred Rhetoric" (*Erasmus of Rotterdam Society Yearbook* 5 [1985]: 1–29), John W. O'Malley also provides an overview of preaching from Jesus to Erasmus, and is especially helpful on the text's influence. See also John Michael Weiss, "Ecclesiastes and Erasmus: The Mirror and the Image" (*Archive for Reformation History* 65 [1974]: 83–108), which discusses Erasmus's use of rhetorical methods in biblical exegesis and the text's place in his entire body of work. For more on Erasmus's biblical hermeneutic, see Manfred Hoffman, *Rhetoric and Theology: The Hermeneutic of Erasmus* (1994), which also contains a more detailed summary of *Ecclesiastes* than the one provided here.

Discussions of the skepticism of Erasmus can veer toward either its political or its mystical implications. On the practical side is Marjorie O'Rourke Boyle's *Rhetoric and Reform: Erasmus' Civil Dispute with Luther* (1983). She argues that Erasmus's skepticism led him to espouse a sort of deliberative rhetoric, in opposition to the judicial rhetoric to which Luther was led by his Stoicism. Victoria Kahn's *Rhetoric, Prudence, and Scepticism in the Renaissance* (1985) studies Erasmus, Montaigne, and Hobbes as they grapple with the problem of defining right political action from a skeptical, morally relativistic mind-set. Thomas O. Sloane discusses Erasmus's preference for two-sided argument in *Donne, Milton, and the End of Humanist Rhetoric* (1985), and more recently in *On the Contrary: The Protocol of Traditional Rhetoric* (1997), a tour de force in which he traces this form of rhetorical invention from Erasmus through a number of Renaissance writers, including Ascham, Sidney, and Thomas Wilson.

Erasmus's praise of folly connects him with a long European tradition of the fool as a licensed questioner of social convention and, at times, a forerunner on the way to spiritual transcendence of social norms. See Walter Kaiser's *Praisers of Folly* (1963), which focuses on Rabelais, Erasmus, and Shakespeare, and W. Willeford's *The Fool and His Scepter* (1969), which mentions Erasmus throughout while tracing the fool figure, especially his or her mystical implications, from medieval to modern times.

From *Copia*: Foundations of the Abundant Style

BOOK I. ABUNDANCE OF EXPRESSION

I. *Copia*: Dangers Inherent in Its Pursuit

The speech of man is a magnificent and impressive thing when it surges along like a golden river, with thoughts and words pouring out in rich abundance. Yet the pursuit of speech like this involves considerable risk. As the proverb says, “Not every man has the means to visit the city of Corinth.”¹ We find that a good many mortal men who make great efforts to achieve this godlike power of speech fall instead into mere glibness, which is both silly and offensive. They pile up a meaningless heap of words and expressions without any discrimination, and thus obscure the subject they are talking about, as well as belaboring the ears of their unfortunate audience. In fact, quite a few persons of no real education or understanding have, heaven help us, undertaken to give instruction in this very subject, and these, while professing a mastery of *copia*, have merely revealed their own total lack of it.

Such considerations have induced me to put forward some ideas on *copia*, the abundant style, myself, treating its two aspects of content and expression, and giving some examples and patterns. Some of my material I have extracted from works dealing specifically with rhetorical theory. I have also drawn on my own now considerable experience of the art of speaking and writing, and on what I have observed in the course of wide reading over a considerable range of authors. It is not my intention to write a book dealing exhaustively with the whole subject, but rather a short

Translated by Betty I. Knott.

¹Horace *Epistles* 1.17.36, a favorite line of Erasmus', quoted again in chaps. 50, 154; see *Adagia* 1.iv.i. The proverb refers to the exorbitant price charged by the famous Corinthian courtesan Lais, who would receive no one, however distinguished, if he could not pay. [Tr.]

In the notes a simple reference indicates that Erasmus is quoting an example in the exact words of the original or with slight divergence; “cf” indicates a wider divergence from the original; “see” means that Erasmus is either using the subject-matter of the passage identified, or has invented a grammatical example with the quoted example in mind. [Tr.]

treatise in which I hope merely to open up the way for teachers and students and provide the raw material for future work. One of my reasons is that I have undertaken this task solely out of a desire to be helpful, so I shall be quite content for another to reap the glory, so long as I am ultimately responsible for some benefit reaching the students. Also I am committed to more serious studies which prevent me from expending a great deal of labor on topics which, in spite of their considerable contribution to serious subjects, themselves seem unimportant.

2. *Copia*: Its Invention and Practice

Now in case anyone should feel inclined to despise it as some newfangled discovery recently brought into the world within the four walls of my own study, I would have him know that this whole idea of being able to express one's meaning in a variety of ways is in a number of places touched on by that learned and thorough writer Quintilian,² further, that a number of famous sophists blazed a trail,³ showing how to compress and abridge what was being said, and this they could not have done without at the same time demonstrating how to expand it. If their books were extant, or if Quintilian had been prepared to set out his recommendations in full, there would not have been such need of these modest injunctions of mine.

The whole business is further recommended by the fact that men who were the intellectual leaders of their day were by no means averse from constant practice in it. We have a number of marvelous passages where Virgil tried his skill: descriptions of a mirror, a frozen river, a rainbow, a sunrise, the four seasons, the constellations.

²In *Institutio Oratoria*, where the importance of *varietas* in every aspect of speaking is mentioned in passing in many places; see fn 15. [Tr.]

³Itinerant teachers who traveled from city to city in Greece in the fifth century B.C., giving instruction (for a fee) which purported to enable students to get on in life; the systems of many of them included instruction in the art of speaking. A list is given in Quintilian 3.1.8ff. [Tr.]

There is further evidence in Apuleius' treatment of Aesop's fable about the fox and the crow: first he skims over it briefly with a wonderful economy of words, and then he sets it out expansively and in great detail, thus exercising and displaying his talents. But after all, who could possibly regret an enthusiasm for this subject after observing that Cicero, the great father of all eloquence, was so dedicated to this kind of exercise that he used to vie with his friend, the actor Roscius, to see whether Roscius could express the same material more often using different gestures, or Cicero himself applying the resources of eloquence and using different language? . . .

7. *Copia Is Twofold*

The abundant style quite obviously has two aspects. Quintilian,⁴ for example, among other virtues which he attributes to Pindar, especially admires his magnificently rich style, manifested both in subject matter and expression. Richness of expression involves synonyms, heterosis or enallage, metaphor, variation in word form, equivalence, and other similar methods of diversifying diction. Richness of subject matter involves the assembling, explaining, and amplifying of arguments by the use of examples, comparisons, similarities, dissimilarities, opposites, and other like procedures which I shall treat in detail in the appropriate place.⁵ It might be thought that these two aspects are so interconnected in reality that one cannot easily separate one from the other, and that they interact so closely that any distinction between them belongs to theory rather than practice. Even so, I intend to separate them as a teaching procedure, doing it in such a way that I lay myself open to the charge neither of drawing hair-splitting distinctions, nor of being careless about details.

8. *Advantages of Studying This Subject*

To encourage students to embark on this study with more enthusiasm I shall briefly set out the advantages it confers. First of all, exercise in ex-

⁴See 10.1.61. [Tr.]

⁵Erasmus deals with the first group in book 1 chapters 11-32, the second group in book 11. [Tr.]

pressing oneself in different ways will be of considerable importance in general for the acquisition of style. In particular however it will help in avoiding ταυτολογία, that is, the repetition of a word or phrase, an ugly and offensive fault.⁶ It often happens that we have to say the same thing several times. If in these circumstances we find ourselves destitute of verbal riches and hesitate, or keep singing out the same old phrase like a cuckoo, and are unable to clothe our thought in other colors or other forms, we shall look ridiculous when we show ourselves to be so tongue-tied, and we shall also bore our wretched audience to death. Worse than ταυτολογία is ὁμοιολογία [identical repetition], which, as Quintilian says, has no variety to relieve the tedium and is all of one monotonous color. Who has got ears patient enough to put up even for a short time with a speech totally monotonous? Variety is so powerful in every sphere that there is absolutely nothing, however brilliant, which is not dimmed if not commended by variety. Nature above all delights in variety; in all this huge concourse of things, she has left nothing anywhere unpainted by her wonderful technique of variety. Just as the eyes fasten themselves on some new spectacle, so the mind is always looking round for some fresh object of interest. If it is offered a monotonous succession of similarities, it very soon wearies and turns its attention elsewhere, and so everything gained by the speech is lost all at once. This disaster can easily be avoided by someone who has it at his fingertips to turn one idea into more shapes than Proteus himself is supposed to have turned into.⁷ Also this form of exercise will make no insignificant contribution to the ability to speak or write extempore, and will prevent us from standing there stammering and dumbfounded, or from disgracing ourselves by drying up in the middle. Nor will it be difficult to divert a speech, even when we have embarked upon it rather hastily, into the course we desire when we have so many expressions lined up ready for action. We shall also find it of great assistance in commenting on authors, translating books from foreign languages, and writing verse.

⁶For this section see Quintilian 8.3.50-2. [Tr.]

⁷A favorite figure of Erasmus. [Tr.]

Otherwise, if we are not instructed in these techniques, we shall often be found unintelligible, harsh, or even totally unable to express ourselves.

9. Exercises to Develop the Powers of Expression

It remains for me now to give some brief advice on the exercises by which this faculty may be developed. Once we have carefully committed the theory to memory, we should frequently take a group of sentences and deliberately set out to express each of them in as many versions as possible, as Quintilian advises,⁸ using the analogy of a piece of wax which can be molded into one shape after another. This exercise will be more profitable if a group of students competes together orally or in writing on a common theme; they will all be helped individually by the suggestions made by other members of the group, and each of them will have his imagination stimulated by being given a starting point. Second, we shall treat a connected line of thought in a number of ways. Here it will be best to copy the expertise of the famous Milo of Croton and develop our powers gradually,⁹ first of all rendering it twice, then three times, and eventually treating it over and over again, so as to attain such facility in the end that we can vary it in two or three hundred ways with no trouble at all. In addition we shall add greatly to our linguistic resources if we translate authors from the Greek, as that language is particularly rich in subject matter and vocabulary. It will also prove quite useful on occasion to compete with these Greek authors by paraphrasing what they have written. It will be of enormous value to take apart the fabric of poetry and reweave it in prose, and vice versa, to bind the freer language of prose under the rules of meter, and also to pour the same subject matter from one form of poetic container into another. It will also be very helpful to emulate a passage from some author where the spring of eloquence seems to bubble up particularly richly, and en-

deavor in our own strength to equal or even surpass it. We shall find it particularly useful to “thumb the great authors by night and day,” especially those who were outstanding in the rich style, such as Cicero, Aulus Gellius, and Apuleius. We must keep our eyes open to observe every figure of speech that they use, store it in our memory once observed, imitate it once remembered, and by constant employment develop an expertise by which we may call upon it instantly. . . .

II. Variety of Expression (I): Use of Synonyms

The first and simplest form of variation¹⁰ depends on using different words which indicate the same thing, so that as far as meaning goes it does not matter which you prefer to employ. The grammarians call these *synonyms*. Opposite to these are words called *homonyms*. These two types have also been called *equivocal* and *univocal*, although according to the logicians these terms are more applicable to the things signified than to the signifying words.¹¹ It will be more accurate to call different words signifying the same thing *ισοδυναμούσαι* [isodynamic] and their opposites *πολυσήμοι* [polysemantic]. Examples of the first sort are *ensis, gladius* “sword”; *domus, aedes* “house”; *codex, liber* “book”; *forma, decor, pulchritudo* “beauty.”

One should collect a vast supply of words like this from all sides out of good authors, provide oneself with a varied equipment, and, as Quintilian remarks, heap up riches so that we find we have a wealth of words to hand whenever we require it. It will not be sufficient to prepare a copious apparatus or an abundant store of such words unless you have them not only at the ready but in full view, so that they present themselves to the eyes even if you are not looking for them. But here we must take special care not to do what some do and use the first thing that presents itself out of the heap in any context without exercising any choice at all. For in the first place you will

¹⁰For the first section see Quintilian 10.1.5–15. [Tr.]

¹¹See Aristotle *Categories* 1; the terms *aequivoca* and *univoca* were used to represent *δμώνυμα* and *συνώνυμα* by Boethius in his Latin translation of this work. [Tr.]

⁸For this whole section see Quintilian 10.5. [Tr.]

⁹The famous athlete who lifted a calf every day until it had grown into a bull; see Quintilian 1.9.5. [Tr.]

hardly find two words anywhere so isodynamic that they are not kept apart by some distinction. What could be more identical in meaning than *men* and *mortals*? Yet the man who on every occasion said *all mortals* for *all men* was stigmatized in the words of the Greek proverb,¹² τὸ ἐν φαχῆ μύρον (sweet oils on lentils). Sometimes *litterae* and *epistola* signify the same thing [that is, letter], sometimes something different.

Even if we allow that there is absolutely no distinction in meaning, yet some words are more respectable than others, or more exalted, or more polished or delightful or powerful or sonorous, or more conducive to harmonious arrangement.¹³ Accordingly the man who is about to speak should exercise choice and take what is best. Judgment is necessary when bringing out of stock, whereas industry is necessary when storing away. You will learn to exercise judgment by carefully observing elegant and appropriate diction, while the assiduous reading of every type of author will allow you to fill your store.

There are many things for which the poets use one set of words, orators another. There are also words peculiar to different ages and centuries, and even the same authors often express the same thing by different means. So the first thing is to extract the best words one can from every type of writer, and, whatever they are like, add them to the collection. No word is to be rejected, provided it occurs in an author who is at all respectable, for there is no word which would not be the best one in some place or other. So however vulgar, unusual, poetic, archaic, novel, obsolete, harsh, barbarous, or foreign it may be, lay it up in its proper niche with its fellows, so that you may summon it if ever a use for it arises. If we are afraid that the antiquity or novelty of our word may offend the ears of our audience, the best thing will be to take Quintilian's advice¹⁴ and remember to forestall criticism by comment-

¹²English equivalent, "jewel of gold in a swine's snout"; *Adagia* 1 vii 23. See Aulus Gellius 13.29.5–6 where Fronto warns against overuse of *mortales*, quoting the proverb from Varro's *Satires*; Erasmus is quite fond of *mortales* himself (see chaps. 1, 10, 47), no doubt following the example of Salust, with whose writings he is thoroughly familiar. [Tr.]

¹³See Quintilian 8.3.16. [Tr.]

¹⁴8.3.37. [Tr.]

ing on the word ourselves. Here are some sample ways of doing this: Cato, a glutton for books, if it is right to use such a word of such a noble subject; the master's self, to use a phrase of Plautus'; for why should I not use words employed by Ennius? for I am glad to use a word of Horace's; for that is how your favorite moderns speak; you will recognize a barrack-room word; as the poets say; as they used to say long ago; to speak after the ancient fashion; if I may so express myself; if you allow me to use an everyday turn of phrase; I will say it in Greek, to express my meaning better.

We must do the same with χαχέμματα [cacemphatic words],¹⁵ that is, those that lend themselves to an obscene interpretation.

Vulgar Words

Vulgar words are those which will strike the hearer as rather too common for the dignity of the context, like calling one's familiar friend one's "old hearty," or an avid reader "a glutton for literature." I am surprised that Seneca found the words *acetum*, *spongia*, *pulegium* [vinegar, sponge, flea-bane] vulgar. I think one could more properly call vulgar the word he himself used in one of his letters: *pilicrepi*, *botularii*, *crustularii* [ballplayers, sausage makers, pastry cooks]. Words derived from low trades and occupations, like bath attendant, cook, tanner, and eating-house keeper, are usually vulgar, but we must of necessity use these words if we have to discuss such subjects. Surgeons and doctors often have to use words that are appropriate rather than fine. Pliny jokingly refers to words that originated in the army, and thieves' kitchens have provided us with the word *tuburcinari* "to guzzle."¹⁶ Some words are vulgar of themselves, others only in the wrong context, applied to the wrong persons and circumstances. For example, *dung* and the verb *to dung* are not vulgar if you are talking about farming to farmers, but they are if you are making a speech on affairs of state in the presence of the ruler.

¹⁵Quintilian 8.3.47. [Tr.]

¹⁶Probably gleaned from Nonius Marcellus 179, a lexicographer of the fourth century A.D., who quotes many excerpts from early poets illustrating interesting word usages, and whom Erasmus appears to be using extensively in this chapter. [Tr.]

Unusual Words

At one time common usage had a great deal of authority. Horace says as much in the lines: "Many words that now are dead will come to life again / Words honored now ill die the death, shall usage so proclaim." But nowadays we acquire our way of speaking not from the community at large but from the writings of learned men, so usage does not have the same prescriptive power. Even so, words can be considered unusual when they do not occur with any frequency in those authors which provide the bulk of scholars' reading. Today we have to take care not to speak in an artificial manner, and to keep a good distance between ourselves and the aspirations of those who think to speak strangely is to speak well—a mannerism which Cicero remarked on in Lucius Sisenna, who was in many respects a learned man. These same people also think themselves clever if one has to be clever to understand them, as Diomedes wittily remarked,¹⁷ and prefer to write something that will result in amazement rather than comprehension.¹⁸

An expression can be unusual in several ways, as will be made clear by what follows; to give some examples, the form of expression will be unusual if anyone says *passos senes* "prune-faced old men" for *rugosi* "wrinkled"; uses the [archaic] forms *interduatim* "somewhat" and *interatim* "in the mean" instead of *interdum* "sometimes" and *interim* "meanwhile";¹⁹ employs *titivillitium* "jot and tittle" for something of no account;²⁰ and the [less usual] form *vagor* for *vagitus* "wailing."

Poetic Words

There are also words in the poets which should be used only sparingly, especially when writing prose. In Horace for example we have *eliminare* "turn out of doors" used to mean "carry a confi-

²⁰*Adagia* iv viii 3; in medieval fancy a goblin Titivillus gathered up in a sack the unconsidered trifles of careless speech let fall by monks. [Tr.]

dence to the outside world" (though Cicero does use it in the sense "eject");²¹ *iuvenari* "act the irresponsible youth," a word modeled on the Greek verb *νεανίξειν* or *νεανεύειν* [with the same meaning]; *furiare* "furiate"; *clarare* "luminare"; *aeternare* "deathlessly memoriate"; *inimicare* "hostilize"; *pauperare* "pauperize"; or a form like *cinctutis* "girthed," instead of *cinctis* "girt"; or [the passive form] *invideor* "I am felt a grudge" instead of *mihi invidetur* "a grudge is felt against me"; or in Virgil *agmen* [usually "line" or "group in motion"] for "movement" or "course" in *leni fluit agmine Thybris* "The Tiber swells with gentle course"; or *indomitum furit* "he rages a boundless rage" instead of using [the adverb] *indomite* "boundlessly"; also *acerba tuens* "glaring savagely" instead of "glaring savagely"; or *sperare* "hope" in the sense of "fear" or "expect, foresee": "Could I this mighty grief foresee [*sperare*] / Then, sister dear, can I endure it." Likewise in Terence: "Now as for your expectation [*speras*] of keeping at bay . . ." Yet Cicero was quite prepared to use this turn of phrase in his letters to friends: "I had no expectation [*non sperabam*] that your feelings towards myself and my family would be so changeable."

The Greeks had a wonderful knack for forming compounds, and the Latin poets sometimes achieved a like felicity when imitating them, but the Latin orators never seemed to be quite so successful at it. Examples of such compounds are *vulnificus* "wound-inflicting," *tristificus* "grief-causing," *tabificus* "corruption-bearing," *fatidicus* "fate-uttering," *laurigeri* "laurel-crowned," *caprigenum pecus* "goat-natured flock," *velivolium mare* "sail-studded sea," *vitisator* "vine-planter," and many more of the same sort. Cato was bold enough to try *vilitigator* "fault-picker," another person *officiperda* "favor-waster."²²

The vocabulary of the historical writers is nearly as bold as that of the poets.

²¹There seems to be no record of Cicero's using this word. Possibly Erasmus has confused it with *exterminare* or *expectorare* which have a related meaning. Nonius Marcellus quotes all three (39, 27, 16), giving quotations from Cicero for *exterminare* and *expectorare*. [Tr.]

²²*Disticha Catonis* ed M. Boas (Amsterdam 1952) 4.42; this collection of gnomic sayings in verse was much read in the Middle Ages, and supposed to have been composed by

Archaic Words

Archaic words add charm if they are incorporated in small quantities and in appropriate places like inlaid decorations: for example, *expectorare* "disbosom," meaning to bring out thoughts and feelings with words;²³ *actutum* "straightway" for *quamprimum* "at once"; *antigerio*,²⁴ *oppido*, both meaning "verily," in place of *valde* "very"; *creperum bellum* "the twilight of war," for *dubium bellum* "doubtful or undecided war"; *hostire*, *hostimentum* "requite, requital" for *pensare*, *pensatio* "compensate, compensation"; *vitulantes* "joyful" for *gaudentes* "glad"; *iumentum* "carriage" for *vehiculum* "vehicle"; the [old] words *perduellis* and *perduellio* "foeman";²⁵ *duellum*, an [old] form of *bellum* "war"; *cernere* "determine the issue" for *pugnare* "fight"; *temetum* "mead" for *vinum* "wine"; and *Aemathia* [an old name] for Thessaly.

Obsolete Words

Unusual words are those which appear only occasionally, archaic ones those culled by later generations from texts discarded because of their antiquity, such as the Twelve Tables, Ennius, Lucilius, Naevius, Pacuvius. Obsolete ones have fallen completely out of use and passed into oblivion, for example, *bovinari*, the equivalent of *tergiversari* "to shuffle, evade"; *apludam edit et flocces bibit* "he eats draff and drinks the lees of wine" (using *apluda* and *flocces* instead of *furfur* and *faeces* for chaff and dregs)—an expression that Gellius derides with good reason. The ancients used *hostis*, now meaning "enemy," for "guest" and "stranger," but anyone would look a fool who tried to use it in that sense now.

I cannot see what use could arise for obsolete words, unless by way of joke and irony—if for example one wanted to stigmatize some bungling imitator of antiquity by calling him a fellow who deserves "to eat draff and drink lees."

the Elder Cato, though actually belonging to a period several centuries later. It was edited by Erasmus and published at Louvain in 1514; see 628.20n. [Tr.]

²³Quintilian 8.3.31. [Tr.]

²⁴Rejected as excessively antique by Quintilian 1.6.40, as is *oppido* 8.3.25. [Tr.]

²⁵*Rhetorica ad Herennium* 4.10.15, where this word is given as an example of affected archaism. [Tr.]

On this question of words we must take into account not only the actual date, but also the predilections and affectations of writers. There is a stage of antiquity already superseded, and one still crude, as we see it at the time of Livius Andronicus; at which period the slow process of refinement began, and continued until the period of Cicero, when Roman eloquence attained such a peak of perfection that there was no possibility of further development, but, as is usual in human affairs, a gradual decline from that brilliance followed; it was inevitable that later generations should speak worse when they tried to speak differently. Yet, although Sallust wrote at the same period as Cicero, his style is more like Cato the Censor's than like Cicero's; and Maecenas²⁶ lived at much the same time, yet he falls very far short of the pure style of his age. Likewise Valerius Maximus, who belonged to the period of the Emperor Tiberius, when the brilliance of the Ciceronian age had not yet declined, nonetheless writes more in a style peculiar to himself than in that of his contemporaries. I shall say nothing of Tacitus, Suetonius, the two Plinys, Aelius Lampridius,²⁷ and other later writers.

While one must applaud the practice of those who set themselves to imitate the felicities of that great age, all the same I cannot approve of those who shudder at anything they find in the later writers as if it were a barbarism, especially as it is possible that the very feature from which they recoil was actually used by Cicero in books which have not come down to us.²⁸

Harsh Words

Harsh expressions are those used in an uncomfortable metaphorical sense. One speaker earned censure²⁹ by saying that Rome was "castrated" by the death of Camillus, meaning that

²⁶The literary patron of Virgil and Horace; his Latin style was considered extravagant and decadent. See Seneca *Epistles* 114.4–8. [Tr.]

²⁷Historian of the fourth century A.D. [Tr.]

²⁸A reference to Erasmus' long-standing battle with those who applied strict canons of classical conformity and would have no prose author used as a model but Cicero. See Erasmus *Ciceronianus* (1528). [Tr.]

²⁹See Cicero *De Oratore* 3.164; Quintilian 8.6.15 (death of Africanus, not Camillus). [Tr.]

the strength of the city collapsed at his death. Horace³⁰ obliquely censures a certain Furius for writing “Jove has the Alps with hoary snow bespewed.” Another similar example is: “He destroyed the plains of peace, and raised the mountains of war.”³¹ The metaphor would have been less violent if the writer had used the image of a calm sea and a stormy one.

Foreign Words

Foreign words also have a charm of their own when introduced in the appropriate place, like using *gazae*, a word meaning “treasures” taken from the Persians, since the Persians are famous for their opulence and for the luxury that accompanies it. *Acinaces* “scimitar” for *gladium* “sword” is borrowed from the Medes, and *essedum* “wagon” for *raeda* “carriage” from the British. *Ungulum* is Oscan for *anulus* “ring,” *cascus* for *vetulus* “old” Sabine. *Uri* “wild oxen” is Gallic, as also *merga* “marle,” the marrow or fat of the land, which is dug out to manure the fields, also *gaesa*, a sort of weapon. *Parasang*, a distance of thirty stades, is Persian. *Camurus* “with crumpled horn,” that is, turned in on itself, will also be listed among foreign words.

The early Christians adopted the words *nonnus* and *nonna* “holy man, holy woman” from Egypt, because it was in Egypt that crowds of male and female recluses were at one time earning their reputation for holiness.

If ever we are forced to use barbaric words, we must always preface their introduction with an apology, as Pliny says. There are many other words which have found their way in, together with the things they name, from barbarian nations to the Greeks, and from the Greeks to us, such as *sinapi*, *piper*, *zinziber* [mustard, pepper, ginger], etc.

Indecent Words

Indecent words should be utterly unknown to Christian speech, and no attention should be paid to the Cynics, who consider no act shameful to name that is not shameful to perform, and an act

that is not shameful to perform in private not shameful to perform in public, like making water or evacuating the bowels. On the other hand, it is not automatically shameful to talk about an act that is shameful to perform. One can name parricide and incest without less of modesty, though they would both be utterly shaming if committed. Again there are certain parts of the body which are not dishonorable in themselves, yet are kept covered because of a sense of decency peculiar to civilized man; likewise there are some actions which in themselves are neither good nor bad which nonetheless are kept private for modesty’s sake. Yet it is not automatically shameful to use the appropriate word for an act that it would be indecent to perform openly. One can talk about giving birth with decency, but it would be shameful for it to happen in public. “To piss” is not an indecent word (though “to make water” is a more decorous expression), but it is immodest to piss in public. On the other hand, “shit” is an improper word, though the action is neutral. The belly can be named with decency, but it is indecent to show it. The word “vulva” is respectable, but “cunt” is highly indecent.

How then do we recognize indecency? Only from usage, and I do not mean the usage of all and sundry, but of those whose speech is modest. The poets, in particular the satirists, have allowed themselves too much freedom in the employment of such words.

Sometimes a metaphorical expression is far more indecent than the direct word, as in “to grind others’ wives” (Horace) and “piss into an upper-class hole,” or in Catullus “he spat down his uncle” and “take the skin off men.” Some perfectly respectable words have been distorted in the direction of obscenity, like *dare* “give, allow” (a modest enough term in *dare fidem* “give one’s word”), which nonetheless appears in the *Priapeia*³² in an obscene sense: “Much simpler would good plain Latin be: Give me—you know what.” And also in Martial: “To give way you wish, but not to give away.”

Such obviously obscene words must be totally shunned, but neutral ones can be accommodated

³⁰*Satires* 2.5.41, referred to in Quintilian 8.6.17. [Tr.]

³¹See *Ad Herennium* 4.10.15, the passage that criticizes *perduellio* above 312:10. [Tr.]

to a decent meaning, like using *exosculari* or *dis-suaviari* [literally “to kiss passionately”] to express great pleasure at the ready wit of some person, or like calling the aspirant after learning “a wooer of Philology.”

New Words

Innovations can be taken in three ways: completely new creations, existing words diverted into a new meaning, and new words made by compounding existing forms. An example of the first is Nero’s *morari* with a long first syllable, meaning “to fool about,” from the Greek word μωρός [stupid];³³ of the second, Sallust’s³⁴ *ductare exercitum* “lead an army,” since *ductare* “lead about” as an indecent sense in Terence and other early writers, for example, *ut meam ductes gratis* “so that you can lead off my girl for nothing.” Likewise *patrare bellum*, equivalent to *gerere bellum* “wage war,” since *patrare* “achieve, perform” was earlier used of the endeavor to beget children. Of the third, *vitiligator*, “brawler,” compounded from *vitium* “the fault,” *litigandi* “of picking quarrels,” which I mentioned earlier, and *bubsequa* [from *bos* “ox” and *sequor* “follow”], equivalent to *bubulcus* “cowherd,” and Pacuvius’³⁵ *Nerei repandirostrum incurvicervicum pecus* “the snout-upturned, neck-arching flock of Nereus,” all examples which Quintilian mentions. To this class belong new words created by derivations from existing forms, like *vituperones* “vituperists,” *amorabundus* “love-bound,” *nupturire* “be wedding-mad,” *verbigerari* “word-bandy,” the sort of words particularly favored by Apuleius, Martianus Capella,³⁶ Sidonius Apollinaris,³⁷ and those who model themselves on those writers. Such words have their own charm, if they are sprinkled here and there with discretion

³³See Suetonius *Nero* 33, where Nero says of Claudius *morari eum desisse inter homines*, punning on the already existing verb *morari* with a short vowel, meaning “stay, hang about”; Erasmus explains this in detail in *De Recta Pronuntiatione* LB I 945B–C. [Tr.]

³⁴*Jugurtha* 38.1; See Quintilian 8.3.44, who comments on the change of meaning. [Tr.]

³⁵Quoted by Quintilian 1.5.67. [Tr.]

³⁷Christian Latin poet and bishop (fifth century A.D.). [Tr.]

and in the appropriate place. As Quintilian³⁸ neatly remarked, in food a touch of sharpness can at times give pleasure.

Not a little charm is added by the judicious mingling of Greek forms with the Latin. This can be when the Greek word is more expressive, like λογομαχία [battle of words] for “dispute” or “quarrel”; or shorter, like φίλαυτος [self-lover] for a man who is self-satisfied; or more forceful, like γυναιχομανής [mad on women] for a man who is over-fond of women; or more agreeable, like using μετεωρολεσχεῖν [star-gazing] for a man prating on involved but useless topics, or calling μωρόσοφος [fool-wise] a man who is a fool but thinks himself wise.

No Latin expression can approach the charm of a Greek one in which we allude to a passage or remark of some author; if, for example, in reprimanding someone for speaking without thinking, we quote Homer’s line ποῖου ἔπος . . . [“What a word escaped . . .”] or, in pointing out that someone has failed to keep to the point at issue, we say in Greek ἄμας ἀπήτουν [I was needing sickles]. If we were to say in Latin *falces petebam*, all the attractiveness disappears.

There is an allusion also in Horace’s lines: “Anointed, thrice through Tiber’s waves shalt pass, / At eve, in liquor soaked *corpus habeas*.” The speaker is Trebatius, a legal expert, and they enjoy words out of the Twelve Tables, a feature that Cicero imitates in his books on the laws.

Finally we can use Greek words when we wish our meaning not to be understood by all and sundry; and—not to go through every possibility—whenever there is a certain convenience, we are justified in mixing Greek with Latin, especially when writing for the educated public. But to produce a half-Greek, half-Latin mixture of set purpose when there is no particular justification for it may possibly be forgiven in the young who are endeavoring to acquire facility in both languages, but in grown men, in my opinion, such exhibitionism would be quite out of place, and would no more suggest seriousness of purpose than writing a book in a mixture of prose and verse—though we observe that some educated men have done even that, like

³⁸9.3.27. [Tr.]

Petronius Arbiter³⁹ whose book however has a certain air of mad irresponsibility, and Seneca in his mock-encomium of Claudius.⁴⁰ Boethius,⁴¹ more surprisingly, did so in a serious work, though in the poems he is so different from his usual self that scholars are not inclined to believe that he wrote them unaided. Boethius was copied by Jean Gerson⁴² who would be a writer of some standing if his lot had fallen in the present age.

It sometimes happens that we either have to express our meaning by a circumlocution, or borrow from the Greeks, for example, πολυπραγμοσύνη [officious meddling in many affairs], φιλαυτία [esteem for oneself], ἀφάμαρτοεπιής [talking at random], πολυφιλία [abundance of friends], δυσωπία [being put out of countenance], περισσολογία [talking too much], ταυτολογία [saying the same thing again], βαττολογία [talking gibberish],⁴³ and thousands more of the same sort, which I shall perhaps discuss on another occasion.

There are quite a number of Greek words which were given Latin citizenship in the classical period, and these may be used just like native Latin ones, for example, *rhettor/orator*; *hypotheca/pignus* “surety”; *elleborum/veratrum* “hellebore”; *feniculum/marathrum* “fennel”; *sycophanta/calumniator* “slanderer”; *praebibo* (used by Apuleius) *propino* “drink a health”; *mastigia/verbero* “scoundrel.” In some cases the borrowed word has become the standard one and there is no native Latin form, for example, *philosophus*, *theologus*, *grammatica*, *dialectica*, *epigramma*. With these words we can provide variety by declining them sometimes according to the Greek pattern, some-

³⁹Nero’s famous “Arbiter of Elegance” in the *Satyricon*, a picaresque novel detailing the adventures of three rascals; the *editio princeps* (without the section known as *Trimalchio’s Feast*) appeared in 1482. [Tr.]

⁴⁰*Apocolocyntosis* “The Pumpkinification,” first printed in 1513; included in Erasmus’ edition of Seneca (Basel 1515). [Tr.]

⁴¹*Consolatio Philosophiae*, in which verse and prose alternate. [Tr.]

⁴²1363–1429, a distinguished chancellor of the University of Paris; in his *Consolatio Theologiae* (1418) he deliberately imitates the form of Boethius’ work and the meters used. [Tr.]

⁴³From Battus, a bad poet whose verses were full of repetitions; *Adagia* II i 92. [Tr.]

times according to the Latin, for example, *scorpius/scorpio*; *elephantus/elephas*; *delphinus/delphin*; *lampas/lampada lampadae*; *grammatica grammaticae/grammaticae grammatices*. . . .

33. *Methods 1–20: Practical Demonstration*

To make it easier to understand what I have been saying, let us have a practical demonstration. We will take one or two sentences and see how far we can go in transforming the basic expression into a Protean variety of shapes — not that every method of variation can be applied to any one sentence, but we shall apply the ones that lend themselves to the example in question. Let us, for example, take this sentence: “Your letter pleased me mightily” *tuae litterae me magnopere delectarunt*.

your: There is no synonym for “your,” but a periphrasis is possible: Your excellency’s, your highness’s, your majesty’s. If we insert a proper name such as “Faustus”⁴⁴ and say “Faustus’ letter,” we employ two forms of heterosis, the substitution of a noun for a pronoun and of a third person for a second. If we say “Faustine letters,” using a derivative adjective instead of the genitive of the noun, that is yet another form of heterosis.

letter: epistle, letter, note (synonym); epistolet, letterette, notelet (heterosis, [using a diminutive form]); pages, lines (synecdoche); what you wrote to me (periphrasis).

pleased:⁴⁵ delighted, refreshed, exhilarated (synonyms, though “exhilarated” is better considered a metaphor); brought pleasure, were a pleasure, were delightful (these and similar expressions illustrate periphrasis); bathed in delight, were honey-sweet, and so on (transferred or metaphorical expressions); were not unwelcome, not unpleasing (these result from the interchange of opposites).

⁴⁴Erasmus is presumably thinking of his friend of early days in Paris, the poet Fausto Andrelini. See Ep 84 introduction. [Tr.]

⁴⁵The arrangement of LB I 23E–F, where the sections follow the Latin word order of the specimen sentence, has been adjusted to accord with the English word order. [Tr.]

me: my spirits, my heart, my eyes (periphrasis or synecdoche); us (enallage of the number); Erasmus (heterosis of the person).

mightily: greatly, intensely, extremely, wonderfully, marvelously, extraordinarily (synonym); mightily, hugely, superlatively, exceedingly, singularly (αὔξησις heightening); in no scant measure, on no small scale, in no common manner (opposites and negatives); it is impossible to say how much, it is beyond belief, I could not find words to express (these and similar expressions are on the way to hyperbole).

Other points can be conveniently illustrated only in the context of a complete sentence, so let us move on to our demonstration:

Your letter mightily pleased me; to a wonderful degree did your letter please me; me exceedingly did your letter please. (So far hardly anything has been changed but the word order.)

By your letter was I mightily pleased; I was exceedingly pleased by your letter. (Here only the voice of the verb is altered.)

Your epistle exhilarated me intensely; I was intensely exhilarated by your epistle; your brief note refreshed my spirits in no small measure; I was in no small measure refreshed in spirit by your grace's hand; from your affectionate letter I received unbelievable pleasure; your affectionate letter brought me unbelievable pleasure. (Here we have both hyperbole and reciprocal expression.)

Your pages engendered in me an unfamiliar delight; I conceived a wonderful delight from your pages; your lines conveyed to me the greatest joy; the greatest joy was brought me by your lines; we derived great delight from your excellency's letter. (Again we have examples of reciprocal expression.)

In the other examples the reader will easily identify the figure for himself:

From my dear Faustus' letter I derived much delight.

At your words a delight of no ordinary kind came over me.

I was singularly delighted by your epistle. In these Faustine letters I found a wonderful kind of delectation.

To be sure, how your letter delighted my spirits!

Your brief missive flooded me with inexpressible joy. (Here we have a metaphor.)

As a result of your letter, I was suffused by an unfamiliar gladness.

Your communication poured vials of joy on my head. (Again a metaphor.)

Your epistle afforded me no small delight.

How delighted I was to read your letter!

The perusal of your letter charmed my mind with singular delight.

Your epistle was delightful to a degree.

Your letter affected me with extraordinary gladness.

As a result of your letter I was affected with singular gladness.

Your epistle was the greatest joy to me.

Your missive was to me a very great delight.

Your epistle was an incredible joy to me.

How exceedingly agreeable did we find your epistle!

You could scarce credit what relief I find in your missive. (Cicero frequently uses "find relief" in the sense "take pleasure.")

Your epistle was to us one of great delightfulness.

Your letter was very sweet to me.

Your letter was the source of singular gladness.

Your letter made me positively jump for joy.

Your letter having arrived, I was transported with joy.

When your letter was delivered, I was filled with delight.

Once I had read your affectionate letter, I was carried away with a strange happiness.

On receipt of your letter, an incredible delight seized my spirits.

Your epistle poured the balm of happiness over me.

Your writing to me was the most delightful thing possible.

The fact that you had written to me was extremely pleasurable to me.
Your honoring me with a letter was the most agreeable of occurrences.
Your brief note made me burst with joy.
How overjoyed I was by your letter!
I was both pleased and delighted that you communicated with me by letter.
When your letter arrived, you could have seen me jumping for all the joy I felt.
That you paid your respects by letter was assuredly a satisfaction to me.
Nothing more wished for than your letter could have been brought me.
Your letter has reached us, and eagerly looked for it was.
Nothing more desired than your letter could have been brought us. (These last three illustrate metalepsis, or at any rate synecdoche, for things that we greatly desire are pleasurable when they arrive.)
Faustine letters cannot but be most delightful to Erasmus.
Not displeasing was your epistle to me.
Your by no means displeasing letter has arrived.
Your missive by no means failed of a welcome.
Your epistle was to me the sweetest of the sweet.
I read and reread your letter with great pleasure.
It was not without the greatest pleasure that I received your letter.
The man who delivered your letter conveyed a wealth of joy.
Wonderful to relate how your letter entranced me.
The pages I received from you sent a new light of joy stealing over my heart.
Your letter promptly expelled all sorrow from my mind.
I sensed a wonderful happiness in my spirits when your letter was handed me.
From your letter an unaccustomed happiness swept over my spirits.
Your letter caused me to rejoice to the full.
Because of your letter my whole self exulted with joy.

It is difficult to say how much happiness was occasioned in me by your letter.
I can hardly find words to express the extent of the joy to which your letter gave rise.
It is wonderful to tell what a ray of delight beamed forth from your letter.
Good God, what a mighty joy proceeded from your epistle!
Heavens, what causes for joy did your letter provide!
Ye gods, what a power of joy did your missive supply!
The happiness occasioned by your communication is greater than I can describe.
Your messenger brought me a deal of pleasure.
You could scarce credit the load of happiness your letters conveyed to my mind.
I cannot find words to tell the joys that your letter loaded on me. (Why hesitate to use such an expression, when Terence spoke of the day being "loaded" with blessings?)
Your letter heaped joy upon me.
I rejoiced greatly at your letter.
I found singular pleasure in your letter.
Your missive showered a wealth of gladness upon me.
Your epistle was most delightful to me.
Your letter caused me quite to smooth my brow.
At the sight of your letter the frown fled from my mind's brow.
As I read the words you wrote me, a marvelous happiness stole over my mind.
As soon as I looked into your letter, a strange force of joy occupied my mind.
As my eye fell on your letter, an incredible tide of joy swelled in my breast.
When I received your most gracious letter, boundless happiness occupied every recess of my soul.
May I die the death if anything more delightful than your letter ever came my way.
May I perish if I ever met with anything in my whole life more agreeable than your letter.
As I aspire to the love of the Muses, nothing more gladsome than your letter has ever ere this befallen me.

Never believe that fortune could cast anything
more delightful in my path than your letter.
As you are dear to my soul, even so does your
letter delight me.
Ye heavens, what joy your letter roused in
me!
What gaiety, what applause, what exultation
your letter occasioned!
Reading your tasteful letter, I experienced an
uncommon joy.
Your pen sated me with delight.
Your epistle provided me with much pleasure.
Your graceful epistle filled me wholly with
delight.
Your charming epistle filled every corner of
my heart with delight.
Your letter cast a dew of rare joy upon me.
Your epistle bedewed my spirit with an unfa-
miliar delight.
Nothing more delightsome than your letter
ever came my way.
I never set eyes on anything more gladly than
your letter.
There is not a thing that I would receive with
more pleasure than the latest letter from my
dear Faustus.
Can you imagine the tide of joy on which I
rode as I perceived in your letter your af-
fection for me?
When the messenger handed me your letter,
my spirit immediately felt the motions of
an inexpressible delight.
What need have I to tell you of the pleasure
that stirred the soul of your Erasmus on the
receipt of your letter?
My soul overflowed with joy when your letter
was delivered.
How glad I was to receive your epistle!
After your note was handed me, my spirit
quite bubbled over with joy.
I was beside myself with joy when I received
your letter.
The charm of your letter put shackles of de-
light on my soul.
I cannot but rejoice mightily whenever a mis-
sive of yours comes flying to me.
Your letter was pure honey to me.
Whatever kind of a letter leaves your hand seems
to me flowing with sweetness and honey.

I was most luxuriously refreshed at the sump-
tuous banquet of your letter.
What you wrote is sweeter to me than any am-
brosia.
The pages of my dear Faustus were more
splendid to me than Sicilian feasts.⁴⁶
There is no pleasure, no delight, that I would
willingly compare with your letter.
All else is utterly repellent compared with
your letter.
In the perusal of your affectionate letter the
heart of Erasmus leapt for joy.
The pages scratched by your pen filled every
part of me with joy.
Anything that arrives written by you is pure
delight to my heart.
Your epistle exudes nothing but joy.
The man who brought your letter brought a
feast day.
A triumph came with the man who delivered
your letter.
Nectar I would not prefer to a message from
you.
Could I possibly compare Attic honey with
your dear letter?
Sugar is not sugar when set beside your letter.
The lotus tastes not as sweet to any mortal
man as your letters do to me.
Your letters are to me like wine to a thirsty
man.
Like clover to the bee, willow leaves to goats,
honey to the bear, even so are your letters
to me.
You highness's letter was to me more hon-
eyed than any honey.
Once I had received your longed-for letter,
you might have said Erasmus was drunk
with joy.
When your letter was delivered, you might
have seen us tipsy with excess of delight.
I love you as no one else, and I delight in your
letters as in nothing else.
Your lines seem to me pure enchantment.

⁴⁶A proverbial expression; see Horace *Odes* 3.1.18: *Siculae Dapes*; *Adagia* 11 ii 68; ultimately derived, like the expressions on 354;6, 8, 10, 12, from *Paroemiographi Graeci*, a collection of proverbs originating in antiquity but given definite form in the early Middle Ages. [Tr.]

Sweetmeats do not so delight the palate as
your letter charms my soul.

No delicacies give such pleasure to the palate
as your communication to the mind.

The man who delivered your letter brought
ἀμάξας ῥόδων [cartloads of pleasure].

Your messenger brought Δάθον [an Eldorado]⁴⁷ of joy when he delivered your letter.

He who handed over your pages, brought with
him θάλασσαν [a sea] of joys.

Your letter was to me a positive Διὸς
ἐγχείφαλος [choice morsel] for a Persian,
as the Greeks say.

If anyone thinks that some of these suggestions would hardly be tolerable in prose, he should remember that this exercise is designed for the composition of verse as well.⁴⁸ . . .

BOOK II. ABUNDANCE OF SUBJECT MATTER

Enrichment of Material: Method 1

We have now presented as briefly as possible such thoughts as occurred to us on the subject of abundance of expression, so our next task is to review with equal conciseness abundance of subject matter. To start off this part of the work with material as similar as possible to that used in the corresponding section in Book 1, the first method on enriching what one has to say on any subject is to take something that can be expressed in brief and general terms, and expand it and separate it into its constituent parts. This is just like displaying some object for sale first of all through a grill⁴⁹ or inside a wrapping, and then unwrapping it and opening it out and displaying it fully to the gaze.

Here is an example of the method. Let us take the sentence: *He wasted all his substance in riotous living*. This is expressed in summary fashion, and is, so to speak, wrapped up. We can

⁴⁷Dathus was a colony of the Thasians, proverbial for its wealth; *Adagia* 1 iii 33. [Tr.]

⁴⁸Erasmus was himself an accomplished writer of Latin verse, which is collected in Reedijk. Most humanists wrote Latin (and sometimes Greek) verse, with greater or less skill, and schoolboys were expected to compose verses. [Tr.]

⁴⁹Cicero, *De Oratore* 1. 162. [Tr.]

open it out by enumerating all the different types of possessions and setting out the various ways of wasting them: All he had inherited from mother or father or acquired by the death of other relatives, all that was added by his wife's dowry (and that was nothing in the ordinary run of things), all the increase that accrued from various legacies (and that increase was very considerable), all he received by the prince's generosity, all that he raked in during his military service, all his money, plate, clothes, estates and land, together with farm buildings and stock, in short everything, chattels and real estate, even his very household, he threw away on degrading affairs with low women, revelry every day, extravagant parties, nights spent wining and dining, luxurious foods, perfumes, dicing and gambling, and all in a few days so squandered, gobbled up, and sucked it out that he did not leave himself two half-pennies to tub together.

In this way the two phrases "all his substance" and "wasted in riotous living" are explicated via their constituent parts.

Here is another example: *He completed a thoroughly comprehensive education*. This general statement can be expanded by listing all the separate disciplines and every aspect of learning: There is absolutely no area of learning in which he is not meticulously versed; there is no branch of learning which he has not grasped down to the last detail, and so grasped that he would appear to have labored at it to the exclusion of the rest; he has such a wonderful knowledge of all the tales of all the poets; he is so richly supplied with the finest turns of expression employed by the orators; he has so sifted the laborious rules of the grammarians; he is skilled in the subtleties of dialectic; he has probed the secrets of physical science; he has scaled the heights of ultramundane knowledge; he has penetrated the inmost recesses of the theologians; he has a thorough understanding of the demonstrations of mathematics; such is his knowledge of the movements of the stars, the principles of number, the dimensions of the various lands, the position and name of cities, mountains, rivers, springs, the harmony and intervals of musical sounds; such is his memory of ancient and modern history; every good writer, whether

of ancient or of modern times, he has them all; add to all this an equal skill in Greek and Latin language and literature; in short, whatever learning has been discovered and handed on by distinguished authors, this one man has completely assimilated and understood and holds fast in his memory.

Again, to expand the phrase *Endowed with every blessing of nature and fortune*, one can mention every separate good point of the body and then every separate gift of intelligence and spirit, and finally birth, wealth, nationality, success, and whatever comes to us from fortune. A third example is provided by *Hippias the omniscient*.⁵⁰ To elaborate this, one may introduce all the things listed by Apuleius in his description of this person in the *Florida*, a passage that is incidentally not devoid of diversity and richness of expression.

There is a very good example of this procedure in Lucian's *Harmonides*, where he could have said baldly τὴν ἀσλητικὴν ὅλην ἐχμεμάθηχα [I have thoroughly learned the art of flute-playing], but he preferred to make a display of *copia* by setting out the parts inherent in the total idea. The passage does not go very easily into Latin, but I will make some attempt to translate it for the sake of those who do not know Greek: "You have by now taught me to tune the flute accurately and breathe into the mouthpiece gently and tunefully, to put the fingers down flexibly and in time with the constant rise and fall of the melody, to move with the beat and play in unison with the chorus, and to observe the characteristics of the different modes, the sublime frenzy of the Phrygian, the Dionysiac storming of the Lydian, the solemnity and dignity of the Dorian, the elegance of the Ionian. [All this I have learned from you.]"

If we had decided to do with all the separate disciplines in our example above what Lucian has done here with the single discipline of music,

⁵⁰Of Elis, a sophist (297:14n and 583:5) contemporary with Socrates; equipped with a wide if superficial knowledge of many branches of learning and of art, combined with practical skills; he professed to be able to speak on any topic, and declared that everything he wore was made with his own hands. He was a celebrated figure, though criticized for arrogance and boastfulness. [Tr.]

you can see what riches of material would have been thus provided.

Here I would make what I think is a helpful suggestion: have the general statement set out right at the beginning, and then take it up again in a different form of words, returning to the basic idea as if you have wearied of enumerating details, even if in fact nothing has been omitted.

Furthermore, we should take care not to throw the proper order of the various parts into confusion by mixing everything up in an indiscriminate chaos of utterances, and piling up a boring mass of words totally devoid of attraction; but instead we should rather prevent tedium in reader or hearer by skillful arrangement, appropriate allocation, and elegant disposition.

Division of a Whole into Parts

We may include here the kind of example where some whole made up of subordinate parts rather than of a group of disparate items is separated out into its parts. Take the sentence: *He is a total monster*. This will be filled out by first dividing the man into body and mind, and then touching on the separate parts of the body followed by the separate parts of the mind: He is a monster both in mind and in body; whatever part of mind or body you consider, you will find a monster—quivering head, rabid eyes, a dragon's gape, the visage of a Fury, distended belly, hands like talons ready to tear, feet distorted, in short, view his entire physical shape and what else does it all present but a monster? Observe that tongue, observe that wild beast's roar, and you will name it a monstrosity; probe his mind, you will find a horror; weigh his character, scrutinize his life, you will find all monstrous; and, not to pursue every point in detail, through and through he is nothing but a monster.

It is clear what fullness that speech would acquire if anyone chose to dwell on the depiction of any of these separate items.

Here is another example: *He was quite drenched*; he was drenched with rain from the top of his head to the soles of his shoes; head, shoulders, chest, belly, legs, his entire body in fact, dripped with rainwater.

A small point, but one quite worth mentioning as possibly applicable to this type, is the intro-

duction of the genus if we are speaking of a species. This is usually done just for the sake of amplification: Learning of every kind both adorns and assists the race of men, but philosophy does so pre-eminently; Lust is disgusting at any age, but is most disgusting of all in old age; Prudence is of great importance in all human affairs, but especially in war. Here the simple statement would have been: Prudence is of great importance in war. Cicero has an example of this type in his speech *De domo sua*, delivered before the college of priests: “Our ancestors, your reverences, invented and established many practices in their extraordinary wisdom, but nothing was more striking than their decision that you, the priests, should direct both the worship of the immortal gods and the highest affairs of state.”

But there is little point in quoting this one specimen when examples of the type lie ready for the finding on every side.

Variation: Method 2

The second method of variation is very like the first. It arises when we are not satisfied with stating the final outcome and leaving preceding events to be deduced, but rehearse in detail everything which led up to the final result. Here is an example of what I mean: *Cicero crushed Catiline’s designs*. This may be elaborated as follows: The wicked designs of Catiline, put into effect through young men of desperate character plotting the ruin and destruction of the whole Roman state, the consul Marcus Tullius Cicero immediately sniffed out with his customary sagacity, hunted down with remarkable vigilance, caught by exercising great prudence, revealed with wonderful devotion to the country, convicted with incredible eloquence, broke by the weight of his authority, extinguished by the use of force, and with the aid of fortune removed for ever.

Here is another: *He acknowledged a son born to him from the girl*. You may expand this as follows: He fell passionately in love with the girl, who was extremely pretty. Unable to control his affection, he assailed her simple mind with promises, bribed her with gifts, cajoled her with flattery, induced her by kindnesses to return his

affection, and overcame her by his insistence. Finally he became intimate with her and deflowered her. After some time the girl’s belly began to swell as, of course, a child had been conceived. At the end of nine months she went into labor and produced a boy.

Here is yet another example: *He took the city*, which may be amplified as follows: First of all the heralds were sent to demand reparations and also to offer terms of peace. When the inhabitants refused to accept these, he gathered forces from all quarters, brought in a great supply of engines of war, and moved his army and the machines up to the city ramparts. The inhabitants replied by fiercely repelling the enemy from the walls, but the general eventually got the upper hand in the fighting, and, scaling the walls, invaded the city and seized control of it.

Method 9

The ninth method consists of amplification or building up, of which Quintilian⁵¹ lists a considerable number of types. We shall briefly deal with those that are relevant to our present purposes.

The first type uses augmentation, in which one advances by regular steps not only to the maximum, but even in a way beyond the maximum. An example of this may be found in Cicero’s fifth speech against Verres:⁵² “It is an offense to tie up a Roman citizen, a crime to flog him, equal to the murder of a kinsman to put him to death. What shall I call crucifying him? It is not possible to find a word to fit such a heinous act.”

There is also a variety of this figure in which we heap up “circumstances” while observing some kind of order, and let one run on from another so arranged that the next thing is always greater than the one that went before, as in Cicero’s passage in the *Second Philippic*⁵³ about Antony’s vomiting: “What a disgusting thing, not only to see but even to hear! If this had happened at dinner when you were quaffing those monstrous

⁵¹8.4, from which chapter Erasmus takes his examples. [Tr.]

⁵²*Verrines* 5.170; quoted in Quintilian 8.4.4. [Tr.]

⁵³*Philippics* 2.63; Quintilian 8.4.8. [Tr.]

tankards of yours, who would not think it disgraceful? But it was a formal assembly of the people of Rome, engaged in conducting the business of the state, holding the office of Master of the Horse, for whom it would be a disgrace even to belch, that this fellow spewed up morsels of food stinking of wine all over himself and all over the speakers' platform." Here each individual word has more effect than the one before. In the first place the action was disgusting in itself even if it had not been in an assembly, or if in an assembly not one of the people, or not of the Roman people, or if he had not been conducting formal business, or not formal public business, or if he were not Master of the Horse.

If anyone took these items separately and dwelt on the individual stages, he would indeed extend his material, but an amplification of this type would be less effective than the one we have.

The opposite method to this is comparison. In augmentation, the movement is constantly towards something more impressive; a comparison gets its effect by starting from something less striking. The comparison may be based on a supposition or may employ a real event. We had a supposition, for which the Greek term is ὑπόθεσις, in the first part of the example we quoted from Cicero, for he puts forward the supposition that it happened at a dinner party to a person holding no public office. There is another one in the well-known passage from one of the *Catilinarian*⁵⁴ speeches. "Upon my word, if my slaves feared me the way all your [fellow citizens] fear you, I should feel that I had better get out of my house."

When a real situation is used, we put forward a genuine circumstance that has some similarity with the thing we are boosting, and proceed to show how this is very close to it, or equal to it, or even greater. This is what Cicero does in the *Pro Cluentio*.⁵⁵ He describes how a certain woman of Miletus received money from the reversionary heirs in return for having an abortion. He goes on: "While Oppianicus shares the crime committed, he deserves much greater punishment. She

⁵⁴1.17; Quintilian 8.4.10. [Tr.]

⁵⁵*Pro Cluentio* 32; Quintilian 8.4.11. [Tr.]

ill-treated her own body and brought suffering on herself, but he achieved the same result through another person's suffering."

In this type we not only compare one whole situation with another, but we can compare one detail with another, as is done in this passage from the *Pro Milone*.⁵⁶ "Scipio, that distinguished figure, when holding no public office, killed Tiberius Gracchus when he was causing a moderately serious political upheaval in Rome; shall we, when clothed with the dignity of consul, stand by while Catiline seeks to lay the whole world waste with fire and slaughter?" Here Catiline is compared with Gracchus, the situation in Rome with the world, a moderate upheaval with slaughter and burning and desolation, a man holding no office with those who are entrusted with the highest. Again if anyone wished to expand these sections, he would have topics full of possibility at every point.

The second method of amplification uses the rhetorical figure known as inference; in this we actually build up one thing, and this suggests the build-up of another, as in this passage: "You, with a gullet of that capacity, with a chest of that girth, with a physique which would do credit to a gladiator, swilled so much wine at Hippias' wedding that the next day you couldn't help being sick in full view of the Roman people." Here one can infer how much wine Antony drank because, in spite of his gladiator's physique, he was not able to carry so much and digest it.

Associated with this is the procedure by which we take the most dreadful deeds and rouse the strongest resentment against them, and then deliberately tone them down so that what follows may seem even more serious, as in this passage from Cicero:⁵⁷ "In a prisoner like this these crimes are trivial. The commander-in-chief of the fleet of a noble city had to pay money to save himself from the fear of being flogged. But that's a human enough crime." We must needs expect something absolutely appalling, if deeds which are shocking seem human and normal beside it.

Another method of build-up is the piling up of

⁵⁶Actually *Catilinarians* 1.3; Quintilian 8.4.13. [Tr.]

⁵⁷*Verrines* 5.117; Quintilian 8.4.19. [Tr.]

words and phrases meaning the same thing. This is very like συναθροισμός [accumulation of synonyms] which I discussed earlier. Cicero uses this in his speech *Pro Ligario*:⁵⁸ “What was that sword of yours doing, Tubero, that you drew on the field of Pharsalus? Whose ribs was that weapon-point seeking? what was the purpose of your weapons? what was your own mind? what sort of eyes, what sort of hands did you have, what passion drove you on? what did you seek? what desire?” Here the speech grows like a heap by addition. Sometimes the emotional tone of the additions rises ever higher with each one, as in this:⁵⁹ “Present was the keeper of the prison gate, the praetor’s thug, the destruction and terror of allied and Roman citizens alike, the lictor Sextius.”

We can also build up by using a form of “self-correction,”⁶⁰ as Cicero does in this passage from the *Verrines*:⁶¹ “We have brought to your court not a mere thief but a brigand, not an adulterer but a stormer of chastity, not a temple-robber but a sworn enemy of religion and all that is sacred, not a cut-throat but a savage murderer of citizens and allies alike.”

There are just as many ways of toning down what we have to say as there are of building it up.

Our utterances may be expanded by everyday and unremarkable methods such as adding adverbs, nouns, and other parts of speech, either to express approval or censure: Cicero delights me to an inordinate extent: it is beyond words how well disposed your father-in-law is toward you; I cannot find words to express what pleasure I take in Cicero—but I have dealt with these methods of extension in Book 1.⁶²

A well-known and common method of expansion is to attach a species to its genus: All the disciplines of a liberal education bestow on a man either grace or advantage; eloquence does so beyond all others—though I have dealt with this method before too.⁶³

Method 10

The tenth method of expansion depends on inventing as many propositions as possible.⁶⁴ I am speaking of rhetorical propositions or themes, which are demonstrated to be true by the exposition of arguments. As for inventing propositions, Quintilian⁶⁵ says that this skill cannot be learned as a technique, but comes from imagination and practice. Hence we find that a group of people may have received the same instruction, and may use similar types of argument, and yet one will discover more material than another.

Propositions or themes are derived partly from generalities, partly from the circumstances of the case. We can demonstrate the method with an example chosen by Quintilian:⁶⁶ “When Alexander overthrew Thebes, he discovered documents recording that the Thebans had lent the Thes-salians a hundred talents. These documents he handed over to the Thessalians as a reward for supporting him with troops in the campaign. The Thebans later had their fortunes restored by Cas-sander, and demanded repayment of the debt from the Thessalians. The case was taken before the Amphictyonic Council. It was not disputed that the Thebans had lent a hundred talents, and that this sum had not been repaid—the point at issue was the claim that Alexander had given the Thessalians the documents. Nor was it disputed that Alexander had not actually presented them with the money they owed the Thebans.”

In arguing this out we need to invent themes and sections of the following sort to provide the framework for our case: (1) Alexander’s gift was of no effect; (2) he had no power to give; (3) he did not actually give.

In the first section the first proposition on behalf of the Thebans will be that one has the right to demand back through the law what has been taken away by force. On behalf of the Thes-salians it will be propounded that the documents were not simply removed by force but by war, and the rights of war are the most powerful ones known in human affairs; by them are determined

⁶⁴See Quintilian 4.4. [Tr.]

⁶⁵5.10.119–21. [Tr.]

⁶⁶5.10.111–18; Erasmus changes Quintilian’s statement of the case slightly. [Tr.]

kingdoms and peoples and the territories of nations and cities. In answer to this the Thebans declare that not everything falls into the victor's power by the rights of war; the rights of war have no validity in matters which belong to the sphere of civil justice; that things seized by force of arms can only be retained by exercising that same force of arms; where arms hold sway, there is no place for a judge, but where there is a judge, arms have no authority. Here we argue from the circumstances special to the case, which enables us to show why this particular case differs from others. To support this last proposition, we can put forward as a parallel a statement of general validity: Captives become free again if they regain their native land, because ownership of things acquired in war can only be asserted by exercising the same physical force by which they were first acquired. The third proposition on behalf of the Thebans will also depend on the special circumstances of this case: In any case in which the Amphictyonic Council⁶⁷ is the judge, the main consideration must be equity. (The same lawsuit requires different handling according to where it is heard, for example, before the Centumviral Court⁶⁸ or before an arbitrator.) The effect of these arguments is again to show that this case is on a different footing from those where the rights of war should determine the issue.

In the second section we can state on behalf of the Thebans that the victor had no power to make a gift of a right, because only what can be seized belongs to the victor: a right is an incorporeal thing, and cannot be physically held. To support this proposition we can bring in an argument from the dissimilar: An heir and a conqueror are not in the same case; the right passes to the heir, the material object to the conqueror. The circumstances of the case provide the next proposition, which reinforces the previous one: Even if we concede that in other cases a right passes to the

⁶⁷Because it was associated with the shrine of Apollo at Delphi, which in theory meant that the council had dignity and authority and that its decisions carried religious sanction. [Tr.]

⁶⁸A court in ancient Rome dealing with property suits; Pliny began his legal career there, and speaks of it in his *Letters*. [Tr.]

conqueror, certainly the right attached to a state loan could not in any way pass to the conqueror, because if a loan is made by the whole people, the sum is owed to the whole people, and as long as one individual survives, he is the creditor to whom the sum is due; but not all the Thebans fell into Alexander's power. This argument needs no further support.

In the third section we can have a general proposition (that is, one not specifically tied to any case): When he gave the documents, Alexander did not really give anything, for rights do not reside in documents. This proposition can be supported by arguments of all kinds; such as arguments from a similar case: The man who possesses documents proving inheritance does not necessarily have the right of inheritance; or: If a creditor happens to lose his documentary proof, the debtor is not forthwith released from his debt. The second proposition in this section depends on conjecture: Alexander did not present the Thessalians with the documents to reward them, but to deceive them. This will have to be demonstrated by various suggestions and hypotheses. The third one is not simply a contribution to this stage of the argument, but is more or less the introduction of a new issue. It depends on material proper to the case, and takes this form: Even if we grant the Thessalians all this—that the law of war has authority in civil disputes in general, and before these judges in particular, and in the case of a state loan, and all the other points—all the same, whatever the Thebans lost when conquered by Alexander, they should have recovered when restored by Cassander, especially when this was Cassander's express wish. . . .

Method 11

The eleventh method⁶⁹ of enriching our style depends on the accumulation of proofs and arguments. The Greek word for these is *πίστεις* [reasons for belief]. Different reasons can be brought forward to confirm one and the same proposition,

⁶⁹This section summarizes material in Quintilian 5.9 and 10. The material is so compressed as to be difficult to follow; Quintilian's more extended version with examples is much clearer. [Tr.]

and the reasons themselves can be supported by further arguments.

Proofs fall into two classes: ἔντεχνοι [of the art], invented or artificial proofs, and ἄτεχνοι [not of the art], given proofs.⁷⁰ This second type is drawn mainly from previous legal judgments, hearsay, evidence extracted under torture, written evidence, oaths, and witnesses. The former type is derived first from “indications,” which are very like the ἄτεχνοι. (Of these “indications,” some are “compelling,” for which the Greek term is τεχμήρια [evidence], some are “noncompelling,” σημεῖα [signs].) Second, they are derived from “arguments”—Quintilian at any rate makes a distinction between these and “indications.” Arguments can be likely, possible, and not impossible. Most of these are derived from the circumstances of the case, which cover persons or things. “Persons” takes in family, nation, country, sex, age, education, physical condition, material circumstances, state, disposition, occupation, ambition, previous actions, previous statements, motives, purpose, name; “things” includes cause, place, time, opportunity, previous contemporary and subsequent events, means, instrument, method.

Commonplaces

There are also certain topics appropriate to all types of speech or even to all sections of a speech, whereas the ones I have just been discussing, though they can on occasion be handled in other contexts, are more suited to controversial issues dealt with in a court of law, and within this class, to cases which turn on a question of fact.

Generally speaking, arguments are derived from definition or defining formulae, from description, from exposition of the meaning of a word, which is a form of definition, or from things which definition by its very nature includes: genus,⁷¹ species, properties, differentiating characteristics, subdivision, classification (this last takes various forms, for example, a consideration of aspects such as commencement, completion, development); or from deductions based on similar or dissimilar situations; from

contraries, contradictions, consequences, related propositions, causes, results, comparisons (of which there are three forms: comparison with something greater, smaller, or equivalent), and from self-evident statements,⁷² and from all the others that have been suggested, since writers agree neither on the order of presentation, nor on the number, nor on the names to be used. The subject has been dealt with at length by Aristotle⁷³ and Boethius,⁷⁴ in fair detail but not very clearly by Cicero,⁷⁵ briefly by Quintilian.⁷⁶ Anyone training with a view to acquiring eloquence will have to look at all the possible topics in turn, go knocking from door to door⁷⁷ so to speak, to see if anything can be induced to emerge; but with practice the right ones will come to suggest themselves naturally, without this process being necessary.

Again, arguments can be derived from a “supposition,” which is itself appropriate to many contexts, and finally from the circumstances peculiar to the case in question.

[Illustrative Examples]

A most effective means of making what we are saying convincing and of generating *copia* at the same time is to be found in illustrative examples, for which the Greek word is παραδείγματα.⁷⁸ The content of the examples can be something like, unlike, or in contrast to what we are illustrating, or something greater, smaller, or equivalent. Contrast and dissimilarity reside in features such as type, means, time, place, and most of the other “circumstances” I enumerated above. We include under “examples” stories, fables, proverbs, opinions, parallels or comparisons, similitudes, analogies, and anything else of the same sort. Most of these are introduced not only to make our case look convincing, but also

⁷²For example, those who perform a just act, act justly; Quintilian 5.10.58. [Tr.]

⁷³*Topica*. [Tr.]

⁷⁴He translated Aristotle's *Topica* and wrote a commentary in six books on Cicero's *Topica*. [Tr.]

⁷⁵In *Topica*, professedly based on Aristotle's work. [Tr.]

⁷⁷Quintilian 5.10.122. [Tr.]

⁷⁸Quintilian 5.11.1. [Tr.]

⁷⁰Quintilian 5.1. [Tr.]

⁷¹See Quintilian 6.3.66, a section on sources of jests. [Tr.]

to dress it up and brighten, expand, and enrich it. Anyone therefore who chooses to furnish himself with a mass of material from the possibilities here listed can make what he has to say as copious as he likes, without thereby producing a meaningless accumulation of words; furthermore the variety of the material will prevent boredom. This is not the place⁷⁹ to discuss how to discover such material or how to apply it, but anyone who wants this information may find it in Aristotle,⁸⁰ Hermogenes,⁸¹ and Quintilian, who have written in great detail on these very topics. I shall deal with anything relevant to *copia*, but only briefly, so as not to appear to have written a whole book rather than a set of notes.

In the development of *copia*, then, illustrations play a leading role, whether the speech is the sort that debates what action should be taken, or urges to a particular course of action, or is intended to console someone in grief, or is laudatory or vituperative; in short, whether one is trying to convince one's audience, move them, or give them pleasure.

It is not enough to provide oneself with an enormous and very varied supply of illustrations, and to have them ready for use at a moment's notice; one must also be able to handle them with variety. Variety can be provided by the very nature of the illustrative examples themselves. They can be things done or said in the past, or be derived from the customs of various nations. There will be differences according to whether they are drawn from historians, or from poets (and poets include writers of comedy, tragedy, epigrams, epic, and pastoral poetry), or from philosophers (and again there are various schools of philosophers), or from the theologians, or the books of the Bible. Some variety will be provided by the differences between nations: the institutions and illustrative examples of the Romans are different from those of the Greeks, and

⁷⁹He deals with it later, at 635ff: Assembling illustrative material. [Tr.]

⁸⁰*Rhetoric* 2.20ff. [Tr.]

⁸¹Rhetorician of the second century A.D., who wrote a series of textbooks on rhetorical technique much read in succeeding centuries, including four books, *περὶ εὐρεσέων*, on invention. [Tr.]

among the Greeks those of the Spartans are not those of the Cretans and Athenians; nor again do we find the same habits among the Africans, Jews, Spaniards, French, English, or Germans. Or it may be a question of period: early times, then the subsequent periods of antiquity, recent history, and things in our own lives; or some inherent quality in the incident recorded: military or civil actions, examples of clemency or bravery or wisdom (and so on ad infinitum, for there is no end to this list); or the status of the person concerned: one finds different behavior in a prince, judge, parent, slave, rich man, poor man, woman, girl, or boy.

One should therefore apply as many different illustrations as possible at each point, derived not only from the whole range of Greek and Latin literature, but also from the history of other nations. We can also derive material from popular sayings. People are most impressed however by examples that are ancient, splendid, national, and domestic. In fact each nation, each class of person prefers what is his own, or else something that makes him feel superior, such as anecdotes about women, children, slaves, and barbarians.

Treatment of Examples

But examples not only acquire variety in our handling of them; they are also enlarged and expanded. I shall indicate some of the ways of doing this: first by "commendation," when we introduce a section in which we praise the incident, or the author, or the nation from which the illustration is drawn. If one quoted something done or said by a Spartan, for example, one could preface the anecdote by remarking that this people was always superior to the rest in wisdom and in military and civil organization, and abounded in splendid moral object-lessons. Or an example from Plutarch could be introduced by saying that this writer was of all authors particularly worthy of respect in that he combined a thorough knowledge of philosophy with the eloquent style of a historian, so that one would rightly expect to find in him not only a trustworthy account of events, but also the authority and judgment of a revered and learned philosopher. If one wished to use as an illustration the story of how Marcus Atilius

Regulus⁸² returned to the enemy, one could begin with something like this: Among all the honorable examples of Roman courage, there was never any act finer or more celebrated than that of Marcus Atilius.

One may invent little passages of commendation like this, making them long or short according to the requirements of the context; but one should take care to invent one that is appropriate; for example, if one is quoting something to illustrate faithfulness, one will commend one's source for seriousness and good faith, or if one wishes the audience to see something as an example of proper feeling, one will make proper feeling the subject of one's remarks. And so with other qualities.

Second Method of Expanding [Examples]

Next illustrative anecdotes can be presented in a richer form if we expand them and broaden the treatment by incorporating amplifications and extensions. Anyone who is concerned to be brief will find it enough merely to refer to the incident as being well known, as Cicero⁸³ does in the *Pro Milone* when he says: "If it were a crime to put villains to death, we would have to view as criminals famous men like Servilius Ahala, Publius Scipio Nasica, Lucius Opimius, and the whole senate headed by myself as consul."⁸⁴ But the speaker whose purpose is the rich treatment will narrate the incident in a more substantial manner, as we find Cicero doing in another passage from the same speech.⁸⁵ An officer in the army of

⁸²Consul during the First Punic War between Rome and Carthage; he was captured in Africa by the Carthaginians and sent to Rome to arrange an exchange of prisoners, under strict oath to return if he were unsuccessful. He dissuaded the Roman Senate from accepting the terms offered and returned to the enemy, who tortured him to death; see Cicero *De Officiis* 3.99. [Tr.]

⁸³*Pro Milone* 8; Servilius Ahala as Master of Horse in 439 B.C. killed Spurius Maelius on suspicion of aspiring to tyranny; Scipio Nasica, an exconsul, led the mob of senators that killed the reformer Tiberius Gracchus in 133 B.C. (see 593:27ff); Lucius Opimius as consul hounded down Gaius Gracchus in 121 B.C. [Tr.]

⁸⁴A reference to Cicero's execution of the Catilinarian conspirators when he was consul in 63 B.C. [Tr.]

⁸⁵*Pro Milone* 9, quoted in Quintilian 8.5.11; a speech in defense of the young man is found in Quintilian *Declamationes Maiores* 3, *Miles Marianus*; see 500:26n. [Tr.]

Gaius Marius, who was a relative of the commander, made a sexual assault on one of the soldiers, and was killed by the man he was trying to force. Cicero then added one of those remarks which effectively round off a story (*epiphonema*): "The fine young man preferred to act and incur peril rather than submit and incur disgrace." The great Marius acquitted him of guilt and let him go free.

In passages introduced for display purposes one may spend even longer on elaborating such illustrative anecdotes, especially if the subject is such that sheer pleasure will induce the audience to pay attention. For example, if someone were trying to urge the idea that foreign travel and the enlargement of personal experience do much to make a man wiser, he could dwell for a time on the praise of Solon, and then launch into an extended account of the city that Solon left, his reasons for going, the seas he crossed, the foreign peoples he visited, the dangers he encountered among them, the persons he met, the wonders he saw, how long he was away, and how much more famous and more wise he was when he returned to his native land.

Of the same sort are Jerome's anecdotes about the wanderings of Pythagoras and Apollonius in the preface to his complete edition of the Holy Scriptures. But the most convenient example of the whole procedure is to be found right at the beginning of the second book of Cicero's *De inventione*, where he tells the story about Zeuxis, who, when he was going to paint a picture of Helen, asked for a number of girls of outstanding beauty so that he could take the best feature from each and so produce a flawless portrait of beauty. . . .

Judgments

As I said, with examples we can include judgments, which the Greeks call *χρῖσεις*. These are *sententiae* or striking sayings of famous writers, of nations, of wise men, of distinguished citizens. A great supply can be discovered in the celebrated poets of old, also in the historiographers, the philosophers, and mystic writings.⁸⁶ Judgments

⁸⁶Erasmus means books of the Bible, especially those that lend themselves to an allegorical interpretation; he mentions these as a source in *Adagia* prolegomena v (LB II 5c). [Tr.]

accordingly show the same variety as examples. Collections of such things have been made by some of the Greeks, notably by one Stobaeus.⁸⁷ There are also apophthegms⁸⁸ of wise men, like “The sayings of famous men,” and the things recorded by Plutarch.⁸⁹ Here too the material is varied: as regards subject-matter, we have military and philosophical sayings; as regards speakers, we have kings, wise men, ordinary citizens; as regards tone, we have serious, humorous, and witty sayings. We can include here proverbs, whether extracted from authors or from popular speech. National customs are in my opinion no different from examples; oracles and replies from higher powers can certainly be included with judgments, for example, if one were to approve Socrates as a wise man, because this was the judgment pronounced by the oracle of Apollo.

Maxims

Next we come to *sententiae* or maxims, which are not extracted from authors but invented by ourselves to suit the matter in hand. These can be introduced into any part of the speech. One passage often generates quite a number of maxims. They can occur in the narration and in passages intended to stir the emotions of the audience, as well as in the proof section. Quite often the transition from one section to another is made by means of one of these terse sayings. By introducing them in appropriate contexts you will provide yourself with a not inconsiderable source of *copia*, which at the same time will lend your speech weight or attractiveness.

There are various forms of maxim.⁹⁰ Some of them are $\chi\alpha\theta\omicron\lambda\iota\chi\alpha\acute{\iota}$ [of universal application], such as: Envy brings its own punishment. Others will only do in certain contexts, such as: Nothing is so popular as generosity. Some need a specific

⁸⁷Author of an anthology of excerpts from earlier literature; see *Adagia* prolegomena iii (LB II 4A) where he is cited as a source. [Tr.]

⁸⁸Erasmus published a collection of such sayings, *Apophthegmata*, in 1531 (LB IV 93A–380D). [Tr.]

⁸⁹Collected sayings of kings and commanders, *De scite dictis regum ac imperatorum* (*Apophthegmata*). [Tr.]

⁹⁰For this whole section see Quintilian 8.5.3ff. [Tr.]

person: A prince who will know everything has many things to learn.⁹¹

Some *sententiae* are simple. Love conquers all. Some have some kind of reason incorporated: In every dispute the richer party, even if he is the victim, nevertheless seems the aggressor because he has more power. Some are double, composed of two contrasting statements, without any reason being expressed: Complaisance wins friends; truth begets ill will. Some consist of two distinct statements: Death is not unpleasant; the approach to death is unpleasant. If the argument is spelled out in each section, the *sententia* becomes four-fold.⁹² Those who think the faults of youth should be condoned are wrong (this is the first section; now the reason is appended), because that age is [not] a hindrance to sound study; (now the third section) those think wisely who punish the young most severely (now the reason) in order that they may wish to acquire at the age most suitable those virtues which will assist them throughout their lives. Although this example occurs in the *Rhetorica ad Herennium*, I do not think much of it. However, it is not difficult to invent another one of the same sort: Hard work is a good thing in the young, because (reason) it is disgraceful to squander on idleness and base pleasures those gifts which nature supplies in those years so that we may acquire worthwhile skills; but, on the other hand, affluence is a good thing in old age, so that (reason) that period of life which is somewhat lacking in the resources of nature may at least be supported by the props of material benefits. Or another: Old age, if destitute, is piteous; if ignorant, disgraceful; for it is misery to be in need just when the weakness of nature especially needs the support of money, and shameful to be ignorant of all that is best just at the time when not to be learning is right and proper, to be instructing others particularly becoming.

A maxim can be plain:⁹³ The miser is without

⁹¹This translates the readings of 1512, 1514, 1526, 1534, and LB: *necesse habet multa cognoscere*. Modern texts of Quintilian read *ignoscere* “must pretend not to know many things.” [Tr.]

⁹²Example taken from *Ad Herennium* 4.17.25, the section on *sententiae*. [Tr.]

⁹³For this section see Quintilian 8.5.6ff. [Tr.]

what he has as much as what he has not;⁹⁴ or it can incorporate a figure of speech: I had the power to preserve—and dost thou ask / Whether I have power to destroy?⁹⁵ The straightforward way of expressing this would be: It is easier to destroy than to preserve. It may have a general reference: It is easy to harm, harder to help; or be adapted to specific persons, in which case it is less clearly a maxim, as in this example from Cicero: “Caesar, your exalted position has bestowed on you no greater gift than your ability to save, nature no better gift than your willingness to do so.”

There is also the kind of unspoken and concealed maxim that we find in Virgil’s line: “She is consumed with hidden fire.” Ovid makes it explicit: “More fiercely burns the fire that is concealed.” Another form is the type that narrates a past event: The larger party has defeated the better. If this were made explicit, it would be: It usually happens that the larger party defeats the better.

Another form of maxim is the type the Greeks call ἐπιφώνημα, Quintilian “acclamation,”⁹⁶ that is a final triumphant remark appended either to a narrative, as in Virgil’s: “Such toil it was to found the Roman race”; or to the conclusion of an argument, as in this example from Cicero’s *Pro Ligario*:⁹⁷ “The pardon of these people, Caesar, is the glory of your clemency. Shall their language goad you into cruelty like their own?” Not every *epiphonema* is automatically a maxim, though it usually is, but anything in the closing section of an utterance which strikes on the ear as shrewd and pungent can be called an ἐπιφώνημα.

This is a particular feature of epigrams, as in the one about the sheep feeding with her milk the cubs of the wolf: Never once is nature changed

⁹⁴Publilius Syrus *Sententiae* ed W. Meyer (Leipzig 1880) 628; part of a collection of moral sayings drawn from the *Mimes* of Publilius and from other writers, going under the name of Seneca throughout the Middle Ages. Erasmus extracted those belonging to Publilius and ascribed them to their true author in an edition of 1514 which included the *Disticha Catonis* and other texts (see Ep 298:11–16). [Tr.]

⁹⁵From Ovid’s lost tragedy *Medea*, quoted in Quintilian 8.5.6. [Tr.]

⁹⁶8.5.11. [Tr.]

⁹⁷10, quoted in Quintilian 8.5.10. [Tr.]

by kindness. Martial’s poems very often end with such a clinching remark: “Either don’t sleep, Nasidienus, or dream about yourself”; or this one: “Shall I tell you what you are? You’re a jack-of-all-trades.”

Valerius Maximus makes great use of this sort of thing, and Seneca also usually closes his *Epistles* with a summing-up remark. There have been people so fond of using the *epiphonema* that they thought they must work in such an exclamatory appendage all over the place after anything they said. One should however show discretion in using all maxims, including these triumphant conclusions, and only employ them where the context demands it, or at least allows it.

The *noema* is a form of terse remark which is not expressed but understood, as in the story of the man who sued his sister for damages after she had cut off his thumb while he slept, because she was tired of buying him out of the gladiatorial school. She said “you were fit to have your hand complete,” implying “so that you could go back and fight as a gladiator all your days.”⁹⁸

Hortensius’ famous remark is much the same, I think. He said he had never been reconciled with his mother or sister, which gives one to understand that he had never quarrelled with them.

There are novel types of maxim⁹⁹ based on the unexpected, on allusion, on metaphorical uses, on using two words instead of one, on contraries. Examples of these may be found in Quintilian by anyone who wants them.

Elaboration

There is a certain affinity between the type of maxim which, as I showed above, consists of four subsections and the procedure known as “elaboration.”¹⁰⁰ In this we dwell for some time on the same point, vary the same maxim in all kinds of different ways, and thus enrich it. We may employ variation in language, expressing

⁹⁸See Quintilian 8.5.12. [Tr.]

⁹⁹A very compressed recollection of Quintilian 8.5.15–18. [Tr.]

¹⁰⁰See *Ad Herennium* 4.42.54–8. [Tr.]

the same sentiment in different words and different figures of speech; or variation in delivery, using different facial expressions, gestures, and tone of voice; or variation in treatment, first saying something in our own person, then putting it into the mouth of someone who expresses it rather differently; or we can put forward an argument coolly, and then produce it in a fierce and heated manner.

A complete "elaboration" contains seven parts: statement, reason, rephrasing of statement (to which one can add the reason restated), statement from the contrary, comparison, illustrative example, conclusion. Here is a specimen.¹⁰¹ The wise man will shirk no danger required by his country, because it often happens that a man who refuses to perish for his country of necessity perishes with it; and, since all blessings are received as the gift of our native land, no burden should be considered irksome when borne for our native land. (This is the first part, where the basic statement is simply set out and supported by its reasons. Next comes the rephrased statement, expanded by an equal or greater number of reasons.) For men are fools to run away from a danger that must needs be faced for the country's sake (statement—reason) because such a danger cannot be escaped, and because to do so reveals them as ungrateful to the state. (Next comes the section using the contrary statement.) The really wise men are those who at peril to themselves ward off the perils of their native land—(reasons) as they both render the state the respect they owe it, and prefer to perish for the multitude rather than with it. (Now we get opposites.) It is quite indefensible to surrender to nature, when you are forced, that life which you indeed received from nature but preserved by means of the state, and to refuse to give that life freely to the state when you are asked; to prefer, when you could perish for your country with courage and honor, to live in shame and cowardice; to be prepared to face danger for friends and parents and relations, to be unprepared to enter into peril for the state, which holds within itself every name revered by men, including the revered name of

¹⁰¹The whole example is taken from *Ad Herennium* 4.44.57. Erasmus merely interposes his own comments. [Tr.]

Fatherland. (Next we have a comparison.) Just as we rightly despise a voyager who prefers his own safety to that of the ship, so we execrate a man who, when the state is in peril, consults his own safety rather than the safety of all. (Now we put in the kind of parallel in which we move towards something bigger.) When a ship has been wrecked, many have often escaped unharmed; no one can swim away with his life from the wreck of the ship of state. (Now an illustrative example.) This was well understood by Decius, who, according to the story, vowed his own life, and to preserve the legions hurled himself into the midst of the enemy. (Next some maxims.) He parted with his life; he did not lose it. In return for something of little worth, he bought something of great value. He gave his life; he received his country. He gave his soul, and received a glory which, transmitted with renown from times long past, each day shines forth ever more splendidly. (Finally we have the conclusion as a kind of epilogue.) If we have proved by reasoning and demonstrated by example that one should embrace danger for the sake of the state, we must consider those men wise who shirk no danger that involves the safety of their native land.

Boys being trained in *copia* may be usefully exercised with themes of this sort—although I do not myself care much for this particular example either, which I have again taken from the *Rhetorica ad Herennium*, except that it does at least illustrate the method. It could be expanded even further if you piled in several rephrasings and reasons to go with them, several similes, and several examples. . . .

Scriptural Allegories

Whenever we are endeavoring to turn men towards piety or from wickedness, we shall find very useful anecdotes drawn from the Old or the New Testament, that is from the Gospels. The hidden meaning of these can be variously handled; it can be explained in terms of human life, or of the body of the church joined and connected to Christ the head, or of the fellowship of heaven, or of those early days when the faith was newborn, or of our own times. However, I shall deal at greater length and in more detail with this subject

in a short work I have in hand on scriptural allegories.¹⁰²

All these types I have mentioned are to be classed as “examples.” I have spent rather a long time on this subject because it is from this depository in particular that the equipment for *copia* is drawn. There are however still a few points I should deal with briefly before leaving the topic altogether.

Assembling Illustrative Material

First of all, my earlier remarks have shown how any illustrative example you choose may be variously incorporated by means of a simile, contrary, comparison, hyperbole, epithet, likeness, metaphor, or allegory. I shall now show by what means we may acquire an ample supply of examples, have them ready in our pocket so to speak. What I shall advise is not so much impressive as useful, and I only wish I had carried it out long ago in my own youth (for it occurred to me even then), as I see how much my first efforts at writing would have gained in weight had I done so. However, a generous spirit does not grudge to young people of promise either what was denied oneself by fortune or what one failed to acquire by application.

Having made up your mind to cover the whole field of literature in your reading (and anyone who wishes to be thought educated must do this at least once in his life), first provide yourself with a full list of subjects. These will consist partly of the main types and subdivisions of vice and virtue, partly of the things of most prominence in human affairs which frequently occur when we have a case to put forward, and they should be arranged according to similars and opposites. Related topics naturally suggest what comes next in the list, and one remembers opposites in the same way.

¹⁰²Perhaps a reference to *Ratio Verae Theologiae* (1518), which uses the “tropological” method of scriptural exposition, as does also *Commentarius in Psalmum 1* (1515); LB V 75ff, 171ff. With certain reservations Erasmus accepted the conventional distinctions between literal and spiritual interpretation of Scripture. In *Enchiridion* (1503) he emphasized the danger of excessive literalism (LB V 8D–E, 29B–F). See also *Ecclesiastes*, his treatise on preaching (and last major publication, 1535), LB V 1026C–56E). [Tr.]

Suppose for the sake of example that the first heading is “Reverence and Irreverence.” To these will be subjoined the related subordinate types. Under “Reverence” we shall have different sorts of proper feeling: reverence towards God, patriotism towards one’s country, love for children, respect for parents or for those whom one should honor as parents, such as teachers and those whose generosity has preserved us. The opposite of this is “Irreverence,” and related to both is “Superstition,” so that should be added here. A wide field now opens up covering outlandish forms of worship, and the different rites of various peoples, also the foolish indulgence of parents towards children, which is a misdirected love for the child.

The next heading could be “Faith,” which you might subdivide into faith in God, human faith, faithfulness to friends, of servants to masters, good faith towards enemies; and “Faithlessness” could be likewise subdivided. Then could come “Beneficence,” and after you have listed its subdivisions, “Gratitude,” which is not a subsection of beneficence, nor its opposite, but its consequence and so naturally associated with it.

These topics can be developed through all the standard treatments: what reverence is, how it differs from other virtues, what is its particular characteristic, by what activities it is demonstrated or violated, what nourishes or destroys it, what advantages it brings to man. Here a whole field of illustrative examples and judgments opens up.

But each person should draw up a list of virtues and vices to suit himself, whether he looks for his examples in Cicero or Valerius Maximus or Aristotle or St. Thomas. If he prefers, he can make his list alphabetical—it does not matter much; although I would not have him putting into his lists every smallest hair-splitting subdivision of a topic, but only those that look as if they will often be of use in speaking. This can be discovered by looking at the topics that occur in various types of speech, epideictic, deliberative, and judicial. The headings in Valerius Maximus are mostly of this sort, and quite a lot of those in Pliny.

Topics that do not come under the head of vices and virtues belong partly to “examples,”

partly to "commonplaces." The first group covers things like: remarkable longevity, vigorous old age, old head on young shoulders, remarkable happiness, remarkable memory, sudden change of fortune, sudden death, self-inflicted death, horrible death, monstrous births, remarkable eloquence, remarkable wealth, famous men of humble birth, cunning, remarkable physical strength, remarkable beauty, outstanding mind in ugly body, and so on. To each of these heads should be attached their opposites and things associated with them: remarkable eloquence has as its opposite remarkable inarticulateness, and associated with it sweetness of voice, grace of movement, histrionic ability, and so on.

"Commonplaces" covers things like: It is very important what interests you develop as a boy; It matters what company you keep; His own is fair in each man's eyes; Offense is easy, reconciliation hard; The safest course is to believe no one; Love as one soon to hate, hate as one soon to love; He gives twice who gives readily; Each man manufactures his own fortune; The wrath of kings moves slowly; The friendship of princes is perilous; War is pleasant to those who have not experienced it;¹⁰³ A shared kingdom is insecure; The best provision for old age is learning. But what is the point of going on quoting these when there are thousands of them? One must choose from them the ones that seem most suited to speeches.

"Commonplaces" also includes stock comparisons like: Is the married or unmarried state happier? private or public life? Is monarchy preferable to democracy? Is the life of the student better than that of the uneducated?

Any of the commonplaces I quoted above which seem to have some affinity with virtue or vice can be listed under the appropriate heading. For example, under "Liberality" one could include things like these: He gives twice who gives readily; Nothing costs more than the thing for which you must beg; A service given to the worthy does a service to the giver; No gift is wasted as much as one bestowed on the ungrateful; The value of a kindness is destroyed if it is made a ground for reproach.

¹⁰³"Dulce bellum inexpertis," the title of one of Erasmus' most important writings against war, *Adagia* IV 1. [Tr.]

In order to avoid confusion caused by a disorganized mass of material, it will be a good thing to subdivide sections that cover a wide range. "Liberality," for example, could be subdivided as follows: benefits performed promptly and quickly, suitable benefits, benefits bestowed on the worthy and the unworthy, kindness made a ground for reproach, mutual benefit; and everything else which you may consider more suitable, for I am just giving a few examples to illustrate what I mean.

So prepare for yourself a sufficient number of headings, and arrange them as you please, subdivide them into the appropriate sections, and under each section add your commonplaces and maxims; and then whatever you come across in any author, particularly if it is rather striking, you will be able to note down immediately in the proper place, be it an anecdote or a fable or an illustrative example or a strange incident or a maxim or a witty remark or a remark notable for some other quality or a proverb or a metaphor or a simile.

This has the double advantage of fixing what you have read more firmly in your mind, and getting you into the habit of using the riches supplied by your reading. Some people have much material stored up so to speak in their vaults, but when it comes to speaking or writing they are remarkably ill-supplied and impoverished. A third result is that whatever the occasion demands, you will have the materials for a speech ready to hand, as you have all the pigeonholes duly arranged so that you can extract just what you want from them.

No discipline is so remote from rhetoric that you cannot use it to enrich your collection. Mathematics seems utterly remote, yet it will provide you with comparisons: the sphere totally consistent with itself, the square standing firm with its four right angles whichever way it falls, with which one can compare the wise man, entirely self-reliant, independent, firm, and unshaken in his virtue whatever the onslaughts of fortune. To say nothing at the moment of the fact that the theologians frequently look to mathematics when expounding mysteries because of the hidden analogy between things and numbers.

Natural science provides not only similes but

examples. A simile of this type would be: As the lightning most often strikes the tops of hills, so the position of highest authority is exposed to the worst misfortunes; or, As lightning liquifies bronze but leaves wax untouched, even so a prince should show the utmost severity to the rebellious and disobedient, but display clemency to all others. If one wished to inculcate modesty and reticence in pleasure even in the properly married, one could use as an example the elephant, which out of self-respect mates in concealment. Or to urge the care with which parents should guard and train those first vulnerable years of childhood, one could cite dolphins, which accompany their offspring until they are quite grown up, and do not allow their young to go anywhere unless an older dolphin is with them as tutor and chaperon.

So our student will flit like a busy bee through the entire garden of literature, will light on every blossom, collect a little nectar from each, and carry it to his hive. Since there is such an abundance of material that one cannot gather everything, he will at least take the most striking and fit this into his scheme of work.

Some material can serve not only diverse but contrary uses, and for that reason must be recorded in different places. For example, if you are describing the incurable greed of a miser, you may properly bring in the tale of Charybdis; but if you are talking of insatiable gluttony or woman's inexhaustible lust Charybdis will fit again. Likewise, Aesop's fable about the goat and the fox getting into the water-hole together will do either to illustrate forethought, which means that you do not embark on an enterprise without first considering how you may get out of it, or to exemplify false friends who appear to be consulting a friend's interest but are really doing the best they can for themselves.

The death of Socrates¹⁰⁴ can be used to show that death holds no fear for a good man, since he drank the hemlock so cheerfully; but also to show that virtue is prey to ill will and far from safe amidst a swarm of evils; or again that the study of philosophy is useless or even harmful

¹⁰⁴For all this material on Socrates see Plato *Crito* and *Phaedo*; also *Adagia* III iii 1. [Tr.]

unless you conform to general patterns of behavior.

This same incident can be turned to Socrates' praise or blame. He deserves praise for showing such a courageous contempt for death when condemned for no fault of his own but purely out of animosity; he is to be blamed, inasmuch as by his useless pursuit of philosophy and disregard of accepted standards he caused bitter grief to his friends, disaster to his wife and children, and destruction to himself, while others are useful to their country, and are an ornament as well as a support to their families; and for that reason the duty of the true philosopher is at some point to abandon the crabbed precepts of philosophy and accommodate himself to the interests and opinions of the majority, to serve the times, as the saying goes.

If you look at this example of Socrates and determine its successive scenes, how many subject headings you will thus elicit! First of all, we find Socrates accused out of ill will by Anytus and Meletus, two most undesirable individuals. This suggests the subject: Truth begets hatred; or Outstanding virtue earns ill will; or Juries often take more account of noble birth than honest character; or There is nothing more shameless than wealth allied to bad character. (For what could be more preposterous than to have Socrates brought to court by men discredited by every crime imaginable?) Another subject could be: Not every act befits all equally. It was for this reason that Socrates did not throw himself on the jury's mercy, for it was not fitting that a man who throughout his life had taught that death should not be viewed with horror unless it was shameful, should now sink to abject entreaties, apparently through fear of death. This too was the reason why he did not do anything to avoid being brought to court in the first place, did not halfway through the trial opt for exile, and finally would not agree to escape from the prison though the chance was offered him, lest he should appear to be deserting his own principles. This is just the first section.

Then when we find him engaging in philosophical discussion so calmly and unhurriedly as his execution rapidly drew near, and drinking the hemlock as cheerfully as he would wine, and,

just before he died, joking with Phaedo and reminding him to sacrifice a cock to Aesculapius, this suggests the topic: Death is even desirable to those who are conscious of a well-spent life; or this one: The nature of a man's life is revealed most clearly at his death. This is a good illustrative example of a steadfast and entirely consistent life, since Socrates when faced with imminent death looked and spoke just as he had done throughout his whole life.

The third section tells us that, while Socrates was in prison, there was no sign of Alcibiades, Agathon, and Phaedrus, but only of Crito, Phaedo, and Simmias. This leads to the thought that danger reveals who one's real friends are, for those everyday friends whose presence we have when nothing out of the ordinary is required look to themselves at such times.

In the fourth section he spends a long time discussing the immortality of the soul with his friends, but sends away his wife and family after giving them a few instructions. This gives us the heading: The philosopher should not be deeply involved in human relationships. (This tallies splendidly with the teaching of Christ.)

The fifth section shows the crowd immediately after Socrates' death turning its fury on his accusers, and setting up a golden statue to the Socrates whose loss they now regret. From this we may extract the heading: Fickle is the love or hate of the crowd; or this: Virtue's present form we hate / But when 'tis gone, in discontent / We seek it then—too late; or this: Counterfeit glory vanishes with the life, but the splendor of true virtue grows ever brighter after death.

All this makes it quite plain, I think, how many purposes the same illustrative example can serve.

The same is true of the simile. What a wealth of parallels can be derived from ships and sailing! Just as storms demonstrate the good helmsman, so reverses reveal the good general. No one entrusts the rudder to his closest friend but to the expert in navigation; even so no one will hand over the direction of the ship of state to his favorite, but to the man he considers most competent. Even as the crew take in the sails when a following wind blows too strongly, and spread them when the wind is less favorable, likewise

when all is prosperity, the spirit must be curbed to keep it from arrogance; yet when fortune is hostile, it must be expanded and strengthened by courage and hope of better things to come. Again: When we cannot hold a straight course ahead through the storm, we must take a round-about route and make for our goal just the same. When the uncontrolled violence of a storm is too much for the sailors' skill, they furl the sails and drop anchor; in like manner, one must sometimes cease to resist the raging mob until such time as it becomes ready to listen and manageable. As the sailor does not hold his sail always in the same position but raises it or lowers it, or swings it to this side or that to match the way the wind blows, even so the wise man should not at all times and in all places and in all situations keep the tenor of his life unchanged, but should accommodate to present circumstances his expression, his words, his behavior. As in great storms the most experienced sailors take suggestions even from the inexperienced because in a crisis like this different ideas occur to different people, even so a good king in great national dangers will be willing to listen to anyone's advice. When the danger is slight, the steering is still done by a man who has been tossed in grave dangers; even so, the state is safest when headed by a leader who has been tested in serious situations. Just as the helmsman does not consider he is properly performing his function unless he looks about him and tells each man what he should do, so no one properly acts the prince unless he directs and assumes responsibility for the functions of all his subordinate ministers. Any sailor would be crazy who allowed the vessel to be lost because of his hatred of some of the passengers, seeing that he could not survive himself if the ship foundered; likewise, any man is insane if he does not guard the safety of his country because of some party feeling, since he himself cannot remain in safety if the country is destroyed. As sailors drop the sheet anchor only in the most violent tempests, so one should not resort to the final remedy unless in the gravest peril when all hope is practically gone.

But it is foolish to go on like this, as you can see by now that this one topic can be the source of thousands of similes.

Quite often one aspect of a simile can be applied to various purposes. For example, the frequent changes of the moon can be used for the vicissitudes of fortune, or the mutability of human life, or the irresolution of the foolish. One basic idea can be adapted to various uses: A merry companion is a wagon in the way; Life is pleasanter if one does not pass it alone, but joins with pleasant and cheerful friends; One should always carry a good book, so that one can dispel boredom by reading; If a happy spirit and a clear conscience go with you, no part of life will ever be wearisome; The best companion on a journey is one who speaks of happy things; if he constantly reminds you of unpleasantnesses, he wears you to death.

The same is true of proverbs and sayings, and the use of these I demonstrated at the beginning of my own collection of proverbs.

Some extracts must therefore be written out in more than one place, or at least jotted down, for sometimes it will be sufficient to indicate the contents by a word or two accompanied by a reference to the source, especially if it is something that cannot be set out properly in a few words.

To make the whole thing clearer by means of an example, I shall take the heading "Changeableness" or "Irresolution," and see how much material I can collect under it. I shall start with the poets and take from them the god Mercury, a cunning divinity, whom we find assuming various shapes, and operating now among the gods, now in the underworld, now among men, and performing various functions, sometimes playing the part of Ganymede as Jove's cup-bearer or carrying messages, conducting the souls of the dead to Charon, giving help to businessmen and advocates, and playing his lyre or employing his wand. He has a parti-colored hat, and rejoices in names of all kinds. These occur in Aristophanes' *Plutus*, where he is called *στροφαῖος* [versatile], *ἐμπολαῖος* [trafficking], *δόλιος* [wily], *ἡγεμόνιος* [guiding], *ἐναγώνιος* [games-presiding]. In Homer and Hesiod he is *διάχτορος* [Guide] and *Ἀργειφόντης* [Slayer of Argos]. He is also called God of Cyllene and *ἐριούνιος* [Bringer of Luck]. I shall also take the good Vertumnus, who gets his name from the fact that he is continually changing (*vertere*) his form, and also Proteus who

transforms himself into all kinds of incredible things. I shall take Empusa from Aristophanes' *Frogs*, a kind of demon continually presenting itself under different shapes, also Morpheus, assuming any appearance he chooses, and Circe transforming men into various animal shapes with her spells and magic wand (for bad men do not act consistently but are prey to shifting emotions); I shall take *Καιρός* [Opportunity],¹⁰⁵ the mobile god who never stays the same, and one like him, if you will, the Rhamnusia goddess.¹⁰⁶ I shall take Jove, transformed into an eagle, swan, bull, or shower of gold, and Chimaera with the head of a lion, torso of a woman, tail of a dragon, and that variegated monster which Horace invents right at the beginning of the *Ars poetica*. I shall bring in two-faced Janus, and three-bodied Geryon, and Bacchus, to whom the poets attribute *εὐήθεια*, that is a volatile and complaisant nature (and that is how Aristophanes depicts him in the *Frogs*), and any other figures in the poets which exemplify prodigious variety. I shall bring Ulysses, adopting different characters according to the circumstances, which is why Homer, right at the beginning of his poem, calls him *πολύτροπος* [versatile].

Next I shall turn to science, and use the image of the moon which never returns the same in appearance as before, but is half-full, or full, old, new, pale, reddish, whitish, now precedes the sun, now follows him from behind. I shall use the image of the sky different in spring or autumn, now cloudy, now clear, now calm, now boisterous with winds. I shall extract the simile of the sea continually ebbing and flowing with the alternating tides, especially the Euripus which surges

¹⁰⁵The fleeting decisive moment which must be seized by the forelock as it passes; the divinity was variously represented in Renaissance art with wings, a precariously balanced pair of scales, a lock of hair, and, by fusion with the figure of Fortune, as standing on a wheel or a ball; see *Adagia* I vii 70: "Nosce tempus," where Erasmus quotes both Posidippus' epigram (*Anthologia Palatina* 16.275) on Lysippus' statue of *Καιρός*, and Ausonius' (epigram 33) on *Occasio* where the wheel is already present. [Tr.]

¹⁰⁶Nemesis, so called from her celebrated shrine at Rhamnus in Attica; her function was to punish presumption and overconfidence by turning prosperity to misfortune, in which her activities resembled those of the fickle goddess Fortune; *Adagia* II vi 38. [Tr.]

back and forth seven times each day and night. I shall add the polyp, whose changeableness has become proverbial, and the chameleon constantly changing its color, the panther and the pard with their parti-colored spots, and any other animals of the same sort, also the slippery snake, and childhood whose moods change from hour to hour, the peculiar inconstancy of women, the crowd veering at the slightest impulse, the wonderful mobility of quicksilver, the reed bowing to every breeze, the lightness of dry leaves, feathers, shavings, the soft pliable nature of wax, the shifting images of dreams, the mobility of wheels, the weather-vane set atop towers and church spires to record as it swings around the direction of the wind, the pans of the scale lightly dipping to this side and to that, and mosaic work with the wonderful variety of all its little different colored stones.

Some similes can be invented, like comparing the mind of the inconstant man, thinking first of one thing then another, to a reflecting globe hung up in a busy market place, and mirroring a constant succession of different figures as the crowd moves to and fro, or to a glass which appears to take on any color you put beneath it, or to an iron pendulum oscillating to and fro without stopping under the influence of a positive and a negative magnet, or to a ball rolling about on a flat surface.

From the non-fictional writers I shall borrow the inborn lightmindedness of the Greeks, which Juvenal describes; the slippery loyalty of the Allobroges, the Carthaginians of like inconstancy of character, the Scythians changing their pastures daily and having no fixed abode, the rod of Moses changing into one thing after another; Aristippus, playing any part you like, who "was suited by every shade of life," as Horace says, wearing the Cynic's cloak or royal purple as the case may be; also the ἡμίλευχος [half-white man] mentioned by Lucian, Catiline with his incompatible characteristics out of Sallust, Hannibal from Livy and Valerius Maximus¹⁰⁷ (both Catiline and Hannibal displayed a quite different

¹⁰⁷Both authors relate incidents illustrating, for example, Hannibal's skill as a general and his magnanimity, also his superhuman cruelty. [Tr.]

tenor of life in youth and old age), Tigellius out of Horace's third satire:

No consistency that fellow had;
Often he passed as if fleeing for his life,
More often still with solemn gait he paced
Like one bearing Juno's holy symbols.

Comedy will provide us with an example of female inconsistency when Sostrata in the *Adelphi* says "Why man, you must be mad. / Do you consider this a thing to tell abroad?" and then a few lines later says "Not for all the world will I do that. / I'll tell it out." The inconstancy of lovers is demonstrated by Phaedria, who goes to the country and suddenly comes back, the inconstancy of youth by Antipho in the *Phormio*. It would however take too long to pursue this topic properly.

From tragedy I shall borrow Phaedra arguing with herself and changing her mind, now willing, now unwilling; and Medea too, before she murders her children, swayed by different emotions; Byblis and Narcissus from Ovid; and Dido from Virgil at the point where Aeneas is preparing his departure. The poets provide us with countless characters of this type all over their writings.

From fables I shall bring in the countryman who could blow hot and cold from the one mouth to the amazement of the satyr. I could go on, but for the moment I am only illustrating the method. From proverbs I shall borrow τὴν παναγαίαν Ἄρτεμιν [ever-wandering Artemis], ἀνέμου πεδῖον [a field for the wind], εὐμεταβολώτερος χοθόρνου [more adaptable than an actor's sock], ὕδρου ποιχιλότερος [more pied than a water-snake], Λιβυχὸν θηρίον [a Libyan beast] and so on. (I have given the sources for all these in my *Adagia*.) A rolling stone gathers no moss. A tree that is always being moved does not flourish. From apophthegms I shall quote the remark made against Cicero: "to sit in two seats at once," and Sallust's comment on him (written, not spoken), "He says one thing standing up and another sitting down." From Homer we have ἄλλοπρόσ-αλλος [on different sides at different times]—this is the word he uses of the War God when he is favoring neither side definitely, but supporting first one party, then the other. From Ovid, I think, "Constant only in fickleness"; from Horace,

“Lighter than bark,” and “Turn round to square and square again to round,” and “At Rome, as fickle as the wind, / It’s Tivoli I love, at Tivoli it’s Rome”; from Plautus; “lighter than a water-spider”; from Terence’s *Phormio*, “I will, I won’t—I won’t, I will—what’s said is unsaid again,” and so on; from Euripides, “Your mind does not run straight—this you think now, / but something else you thought before, and soon / Will think something else again.”

By now it is clear, I should think, what a wealth of equipment in this line also we can discover out of all the writers at our disposal.

The same considerations apply to maxims, which one may not only extract from authors but invent according to one’s requirements. If you contrast each of these with its opposite, and subjoin related ideas to both headings, you can see what a vast store of speech will be laid up. As all this has so many applications (as I shall explain in detail in my work *De conscribendis epistolis*), there is nothing which you will not be able to apply somehow to the enrichment of your speech. Even opposite ideas can be brought in through irony, or by the adducing of a contrast, or by a comparison. It would be irony if one called Socrates a man who never agreed with himself, when throughout his whole life he was always seen with the same expression. It would be contrast if one said that Julius Caesar never regretted anything he did,¹⁰⁸ whereas this man never decreed anything that he did not before long rescind; a comparison if one said that it was just as difficult to make the famous Cato, whom Cicero calls inflexible, abandon his opinion as to make this man keep to his.

It is easy to modify related ideas and adapt them to neighboring concepts. To take Persius’

¹⁰⁸Erasmus specifically says Julius Caesar; according to Suetonius, Titus on his death-bed said: *neque enim exstare ullum suum factum paenitendum excepto dumtaxat uno* (Titus 10). [Tr.]

phrase, “Live in your own house.” This properly applies to one aiming higher than his lot in life allows, but since being discontented with one’s lot has affinities with inconstancy of mind, it can be wrested in this direction, especially when Seneca writes: “It seems to me a strong indication of a well-ordered mind to be able to stay at home and keep oneself company.”

One can even twist material to serve the opposite purpose. If you were praising a man for all seasons, endowed with a versatile and dexterous mind, you could dip into your “inconstancy” cupboard and bring out the polyp which changes color according to the surface beneath it, and then the Euripus, saying that this sea is not so versatile as this man’s mind. You could bring out the flame which cannot stand still, the sky which constantly presents a different face, the reed bending according as the breezes blow, and say that it is the mark of a wise man to change his views and his way of life according to events, circumstances, places. Only senseless rocks and the brute earth do not move. Of living creatures, those that are most impressive are the most mobile. In the universe things are nobler the further they are from immobility: earth which does not move is the lowest, then comes water which does move, then air which moves more, then fire which moves even more than air, and finally the heaven which moves most of all. This is why the ancients called the mind of man wind and fire, but the stupid, slow, and foolish they called stones and lead, things to which the word “immovability” is particularly applicable.

By means of passages of this sort you will be able to divert much of your equipment of “constancy” to purposes of blame, and that for “inconstancy” to praise. But as I said a short while ago, this will be dealt with more opportunely elsewhere.

Now I shall deal with the remaining methods of expansion.

From *Ecclesiastes*

From *Book II*

I. (247.4–250.80)

Anyone who through God's generosity possesses the characteristics that I mentioned in the previous book would have very little need for verbose instructions and advice, since that pure and perfect state of mind automatically supplies, even to someone who is not seeking them, the eloquence suitable to sacred subjects, not to mention the appropriate pronunciation and becoming gestures. Somehow or other the inner appearance of a mind is transferred into the outer man and alters him completely to its own image, in the same way that unseen ailments of the blood and internal organs reveal themselves in the body's external condition—those ailing in the liver are pale, the jaundiced turn black or yellow, those with gout flinch from pain, spastics and *apoplêktikoi* shake; and so the judgments that skilled physicians make from the eyes, the face, and the overall appearance of the body are no less certain than those made from the urine or the pulse, and the emotions of the heart are not infrequently evident in a person's external appearance. I am not talking now about insanity, about rage, about hate, about love, about modesty, fear, hope, joy, grief, and the other crude emotions that show themselves throughout the body even against our will, but also about those that are harder to judge because they are more hidden, such as humility or arrogance, fear or scorn toward God, indifference or love toward wealth, steadfastness or fickleness, modesty or immodesty, and finally those most spiritual of things, sincere faith, hope, and charity. If human conditions nearly have the power to make a man look completely different, the spirit of Christ is all the more likely to change a man's whole appearance if it occupies his heart. Do we not observe that the Holy Spirit, peaceful, mild, and ignorant of pretense, virtually gleams in the eyes and face of certain people?

Translated by James L. Butrica.

You could tell that there is already at work in them the power of a godhood which is to be completed in the resurrection, as the more powerful spirit somehow changes the very body into itself; on the other hand, those who have simply discarded their fear of God and surrendered to every impiety and every sort of crime seem to display the devil in their physical appearance.

I am concerned therefore that someone might think it foolish to mention rhetorical instructions here on the grounds that the suggestion of artistry is so detrimental to a speaker's credibility that the greatest of all orators considers the source of art to be the concealment of art; whenever someone believes that the person he is listening to is speaking artfully he is reluctant to agree because he thinks that the artist is setting a trap for him, and his attention is concentrated on observing how skillful or how clever his words are, not how salutary. But if we take note that a good many men who had absolutely no acquaintance with artistry have been quite eloquent and thus accept the opinion of certain ancient writers who said that rhetoric was nothing more than thoughtfulness in speaking, I do not see what use rhetorical teaching will bring to a preacher, given that we want him to be a man of outstanding goodness and divinely instructed and endowed with evangelical discretion. By the same reasoning, however, a preacher would not have to learn dialectic, an art so closely related to rhetoric that it is almost the same—if we believe Zeno, who demonstrated the difference by closing, then extending his hand. And yet there is no art that is taught in schools in a more precise and more serious manner than this one, even though—besides its deceitful subtleties and the dangerous nooses of its *paralogisms* [fallacious arguments]—it seems actually to compel and to drag a man by force, bound in chains, as it were, toward its own point of view. But who would trust a schemer, and how many would not prefer being led to being dragged?

But a preacher should come with these skills already learned rather than be learning them, and

should have them learned rather than thoroughly learned, in order to avoid the fate of those many individuals who, as the study becomes daily more appealing, grow old there as if at the Sirens' rocks. These studies suit childhood, though at the same time it is very important that they be imparted soberly, and the nature of the training has a very considerable impact. Those who teach dialectic and other philosophical subjects do substantial harm to boys' talents, since they fail to consider what is useful for their pupils rather than for the display of their own learning and train them more for the wrestling ring than for war, and consequently, by tormenting them with their pointless complications and riddles, they inflict three kinds of damage on their tender minds. First, they often deter the nobler talents from these disciplines. Next, they waste time (which is as valuable as it is fleeting), since the time could have been spent learning something else that it is useful to know. Finally, they cause them to seem more truly inept than trained when they get to serious business, in the same way that few men are more inept for real warfare than those who have learned and have spent their life teaching the art of sword-fighting. In their school they have learned how to cut an arrow with a sword before it reaches its target: but in war the person who is getting ready to shoot does not forewarn the one he is about to attack, and the rules of the swordsman's school are not observed there. Yet it would be useful to have a sound training in these disciplines right from childhood and to have applied the training to the function for which the youth has been intended. As well, someone who is intended for pleading cases in court or for undertaking princes' embassies and someone who is being prepared for sacred oratory should not be trained in the same way even within the same discipline, just as someone who is being trained for the schools must be exercised in dialectic differently from someone who is being trained for theology. Through sound instruction in these disciplines and their appropriate exercise one acquires a certain mental dexterity when it comes to both correct judgment and ease in speaking; when this ability has been acquired through human effort, the richer grace of the Spirit comes over it and,

rather than depleting it, it completes it, rather than taking it away, it assists it. Just as it displays its energy more impressively through an exceptional natural endowment when it finds one (precisely as an outstanding artist displays his artistry more exactly and to happier effect in impressive and tractable material), so that heavenly Spirit not only does not scorn our effort but even demands it, and it does not disdain having its gifts assisted in turn by our own application, so long as no wicked self-confidence is present.

II. (268.484–274.594)

The direction of my discussion reminds us to sample some of the rhetoricians' precepts that seem appropriate to the preacher's function, something that St. Augustine before us attempted in a part of his work *On Christian Learning*. Even if he had omitted nothing, the very different nature of the times still requires simpler and plainer instruction in certain topics.

First of all, then, out of those things that rhetoricians present for immediate consideration—the character of the art, the identity of the artist, the nature of the work—we gladly surrender the claim of artistry, since those very men who have written about the precepts of eloquence are themselves uncertain whether rhetoric is an art, and the greatest father of eloquence concedes that the essence of the art is to conceal its art. But what sort of art is this that harms if it is not concealed? Though we grant that the eloquence of a sacred preacher is not a matter of artistry, let us concede nevertheless that there needs to be a method and an understanding of oratory which consists of judgment and of counsel, and the heavenly Spirit, through whose inspiration the preacher talks, does not scorn human effort so long as it be sober; in the words of that divine orator Paul, “The spirits of the prophets were subject to the prophets.” In the previous book we said enough about the artist, who is the preacher, certainly as far as character and sacred teaching are concerned; here we shall touch briefly upon his duties in speaking and upon the parts of his work, after a brief treatment of his material.

The forensic type is quite remote from the function of the preacher, who is dealing with

human consciences, not with judges, and is treating divine oracles, not human laws, and is not pleading the cases of particular men but accusing in general the consciences of all those who live badly and assisting the consciences of all those who are merely in error or are grieving or are oppressed by some heavy affliction; and his concern is not with winning a human judge's support for some particular accused but with winning over everyone alike for God.

All the same, there are many things for this type which are also useful in the suatorial type and in others, such as the fact that an argument has a main point, which rhetoricians call its *status*. Keeping this in view will make our words internally consistent and prevent us saying something irrelevant and contradicting ourselves in the way that often happens to thoughtless people, with the result that an intelligent listener rightly mutters to himself Horace's words,

It was a wine jug as it started being made:
Why does a pitcher now come off the whirling
wheel?

Besides, it is infantile and pointless to brag and, in Persius' words, "everywhere follow crows with both pot and mud." Also useful would be the instructions about the circumstances of things and of persons from which both arguments and amplifications are derived in every sort of argument. Sometimes a controversy arises regarding the letter and the spirit of something, about seemingly contradictory passages of scripture, for example, about a word for something that is being approached through definition, such as when one asks what usury is, what the Law is, what grace is, or about whether something is inherently just or unjust, such as when one asks whether Abraham acted properly on the occasion when, while traveling in Gerar, he called his wife Sarah his sister and through these words prostituted his wife, so to speak, to the king of Gerar; and here will occur incidentally the conjectural *status* regarding Abraham's intention in doing this, likewise whether Lot's daughters sinned when they filched offspring from their drunken father (this is a *status* of characteristic) and, if they sinned, whether they committed incest, since it is obvious that Adam's offspring could only have been

propagated through the marriage of brother and sister (this is a *status* of definition). There are innumerable things like this in the Bible. Reasoning also occurs when no scripture offers a clear definition of the subject in question and instead God's will is inferred by reasoning from a comparison of several scriptural passages. Other *status* likewise occur, particularly the comparative, most often in language regarding no particular person, but often even when a particular person is designated.

But the preacher is especially occupied with teaching, with persuasion, with exhortation, consolation, advice and admonition. I am not unaware that teaching is involved in all cases and *status*, but I have decided to separate it for my present purpose. Our purpose in teaching is to have our hearer understand, such as when we demonstrate through scripture and through arguments that God is incorporeal, that the human soul is immortal. Our purpose in persuasion is to have our hearer want to embrace the honorable and the useful, such as when we persuade a wealthy miser to share his riches with the needy. Through exhortation we give courage to people who are persuaded but are sluggish or timid so that they are brave enough to approach what they applaud, such as when we urge the troubled to scorn the assistance of this world and commit themselves to God with complete trust. Our purpose in consolation is for them to bear the troubles of this life patiently and even eagerly. We are advising the confused when we show them how to acquire a tranquil conscience. We admonish either through criticism or through entreaty; such were the conversations that the early Christians had among themselves.

That leaves the encomiastic type, which is sometimes involved in doxology and thanksgiving, sometimes in praising the devout, especially the martyrs who have glorified God by their death. Once the congregation used to meet on certain days just for *doxologia* (this is the Greek term) and thanksgiving. There the prophet or bishop would extol in superb language God's goodness toward all creatures; the people would sing to the Lord in hymns and spiritual songs. Some psalms of this kind survive, as well as the hymn about the three boys in the furnace that im-

itates them, likewise certain songs created by later generations, among them the one sung on Palm Sunday in imitation of the Hebrew boys, and another one which is sung on the Spring holy day, and finally the one that is now sung almost daily in mass in imitation of the angels that sang at Christ's birth, "Glory to God in the highest." Hymns were added, and these are now all combined with prayers. Among these the ones by Ambrose have the highest reputation (if only many ignorant, not to say insane, ones had not been added!); some of this kind contain nothing but praying. To these was added the prose which they call the sequence. I grant that some of this kind are learned and devout, but many more are awkward and unworthy of divine worship. Though the Roman church does not allow this part, it has permitted them to the German and French students of singing, who like these additional ones so much that the important ones are passed over for their sake. The Credo is shortened, the Lord's Prayer goes unheard, and the singing of the prose, which no one understands, keeps the congregation for an entire half-hour. Verbal "tails" are added which are equal to or longer than the singing itself. Another custom that we see adopted among the early Christians is for a defunct patron or emperor to be praised publicly in church from the mouth of the priest, in the same way that distinguished men were praised publicly before the people in a funeral oration. Ambrose's two funeral orations, one praising the emperor Theodosius, the other praising Valentinian, demonstrate this; Gregory Nazianzen's monody praising St. Basil demonstrates it, as well as some of Chrysostom's homilies; and if we believe the book concerning the death of the most blessed Virgin, she was celebrated by the encomia of all the apostles in attendance. In similar fashion, the book entitled *Ecclesiasticus* pronounces the praises of distinguished men, but only those whose devotion is commended in sacred scripture. In fact the Lord Himself uses Abraham's example to rebuke the Jews; Peter invites matrons to imitate Sarah. St. Augustine was set afire for Christ by hearing about Antonius, who had just recently been on everyone's tongue and ears: for the holy are a good odor to God everywhere but also a deadly

odor to the wicked, in the same way that ointment of marjoram gives marvellous pleasure to men even though (as he says) it is also bitter poison to swine. Therefore, just as I think that encomia of certain famous men do not altogether deserve to be condemned so long as there is no human emotion and ambitious rivalry (and I add vanity as well), so I believe that our preachers should be quite sparing when it comes to imitating an example that the ancient bishops derived from a public custom of the heathens. In general, one should instruct the speaker not to dwell on the end that rhetoricians prescribe—that is, for the audience merely to have a high opinion of the person we are commending—but to direct everything toward the goal of stirring them up to imitate right deeds. But enough has been said, at least so far as the present passage is concerned, about the materials that the preacher receives; we shall deal with specific points somewhat more expansively in their own place.

III. (279.702–280.744)

Now we shall survey the orator's specific tasks, but keep in mind that we are training a herald of God's word, not a courtroom advocate. Everybody can reel these off, which are invention, arrangement, expression, memory, and performance. Invention, which supplies things, though really it embraces both expression and order: this is in language what bones are in an animal's body, that which must be firm lest all else collapse. Arrangement or order: this is in language what the sinews are in an animal's body, joining the parts of the speech in the proper manner, inasmuch as order not only makes a speech harmonious but also assists the audience's disposition to learn and the speaker's memory, since we both learn more easily and remember more accurately something that is said in a coherent order than something that is said in a scattered and confused manner (in fact, the place where everything is said is quite important for persuasion, since it is improper to entrust some things to minds without prior preparation). Plus expression, which supplies the words and figures suited to the subject: this is in language what flesh and skin are in the body, and gives a seemly covering to the

bones and sinews. Even the Bible has its own charm and attractiveness, though without a hint of pretense and allurements. "But what corresponds to memory?" you will say: breath, that is, life, in the absence of which everything collapses. Performance, like delivery and movement, is a property of a living creature; without its addition an animal will be just like a statue, and so delivery and movement are like the life of life. Even if we concede that Demosthenes was excessive in assigning first, second, and third place to delivery, it still cannot be denied that a speech pronounced in a single voice and with a single gesture, or rather with none, is something half-dead.

Nor would a preacher receive much help from what is taught about the parts of the work—the exordium, the narration, the division, the confirmation, the refutation, and the conclusion—except that these too will give the wise man a chance to become wiser.

In fact, the very majesty of the scriptures that the preacher is expounding and their uncommon usefulness (since they are about eternal joy) are capable on their own of attracting attention, a disposition to be taught, and kindness, especially among Christians. But if the forensic orator foregoes an exordium whenever the case does not require it and the normal aim of the proem has already been attained, some contemporary men are acting foolishly in never ascending the pulpit unless they have an exordium that is carefully prepared and, most absurdly of all, so very remote from their subject that it is a new speech, not an exordium, and they think that the more remote the exordium is, the better it is: experts, however, commend an exordium that is drawn from the heart of the case and is, as far as possible, proper to the theme or at least appropriate and fitting. There is no need to report examples of a faulty exordium here; they are too commonplace, and anyone who is in the habit of hearing sermons often will supply an abundance of them from memory. I personally have heard someone who used the same exordium to preach every day throughout the whole of Lent. The Virgin Mother was being praised on three accounts—because she was holy, for example, because she was a virgin, because she was prophetic; and every day

had its new set of three, as a result of which he was forced to devise many such sets, and some of these were inevitably frigid and forced. Exalting Christ's mother in praise for adoration was devout, but how was this relevant to a time of penitence?

IV. (304.365–318.773)

We will provide some advice regarding division, a word which can be understood two ways. First, "division" refers to only a single element of a speech which has a twofold function, in that it not only shows the listener where to direct his attention but also promises the topics of the address in a precise quantity and order. Take this for example: "In order to discuss Christian marriage, I shall expound as briefly as I can three things that need to be known. In the first place, I shall instruct you in the methods and rites by which a legitimate marriage should be entered into and the many reasons for which it must be sundered if it has been contracted improperly; in the second place, what a holy thing marriage is and how venerable a sacrament it is in Christ and in the Church; in the third place, what an abominable sin adultery is." But the word "division" has a broader application when it is used in place of "arrangement" or "order"; this occurs regularly throughout all the sections of an oration. We shall deal with the former now, with the latter in its place.

A promise of specific sections, though it imports considerable utility, is still not free of inconvenience. It is very much conducive to the audience's memory and disposition to learn, and it assists the speaker insofar as it involves well-defined steps to which he can return from his digressions. But it can be a hindrance to the extent that, while we are speaking, things sometimes occur to us which it is inappropriate to pass over but which do not fit any of the promised sections; thus it happens that they must be omitted to the detriment of the argument, or must be intruded quite inelegantly and roughly some place or other, not to mention that the memory of some people is so feeble that, as Cicero says (of Curio, if I am not mistaken), after promising three parts they either omit one out of forgetfulness or else

add a fourth. Hence it is safer for those who distrust their memory to present merely the gist of their theme, or at least to have the headings of their sermon at hand written out on paper. Augustine apparently did this for some of the Psalms, and perhaps even for all of them, since he has frequent and remote digressions, often speaking extemporaneously, though he was a man with a prodigiously retentive memory. Of course, someone who is going to speak must prepare an order, but he is not therefore required to promise what he has conceived in his mind. A thought can easily be amended, a promise is not so free, and so the affectation of some subtlety in a division when the material does not inherently offer an opportunity for partition and does not have an adjunct cause which requires dividing not only torments a preacher with useless work but even reduces the speaker's credibility and the sermon's appeal, since we are more willing to believe people whose heart, not their training, supplies their flow of words, and things that are commended by their novelty as recent creations are more pleasing than something promised and anticipated. But when a rather obscure or difficult theme needs to be treated, a suitable and appropriate partition will shed much light on it and will give substantial assistance to the listener's disposition to learn by picking the main points of the subject out of the crowd, so to speak, and laying them out for him to see. Similarly, if the material naturally has distinct sections, and if there is no reason why a partition should be avoided, one should shun a minutely detailed division that carves a subject into digits and pieces rather than into limbs, since a multiplicity of sections should always be avoided as far as possible because it spreads a fog even over a subject that is not naturally obscure; it hinders the audience's memory and disposition to learn, while a partition is ridiculous if it introduces or increases the very inconvenience which it is being applied to eliminate or reduce. The sections of Nicolaus of Lyra are generally like this, as are those of Thomas in expounding canonical scripture and of Jean Gerson in his compositions; in their pursuit of subtlety they sometimes carve up into many pieces subjects that are unified or at least so coherent that they are hard to separate. Many

scholastics continue this custom: they propound a mass of propositions; they draw out conclusions by explaining them; at last they produce their maxims, after obscuring the subject instead of explaining it. This manner of dividing, though it can be granted to the schools because of the subtlety of the subject, definitely does not suit the pulpit, where verbal tricks of this kind are either not to be treated or, if there is some reason why they must be touched upon, one should strive to avoid all display of subtlety and to have the actual subject propounded to the congregation as clearly and unambiguously as possible.

But to make a correct division you must identify the principal props of the argument as a whole. These should be promised in the division—no more than three, in the opinion of some, but this need not be observed if the argument has been demarcated by several sections or if we are replying to someone who has proposed specific parts. It can be observed as long as one promises the fewest possible, but if some of the parts are quite minute, it is unnecessary to promise them in the division—it will suffice to add them to the general ones through subdivision while treating them. For example, to speak a eulogy of any saint, he will be able to partition as follows: "I shall explain to you what he was like toward God, toward himself, toward his neighbor." The first part has many subject parts; for example, devotion toward God is distinguished according to a variety of duties, just as governing one's own body and moderating the appetites can be divided into many parts. The word "neighbor" already embraces parents, spouse, children, teachers, relatives, citizens, friends and foes, and each of these parts has many subdivisions. Similarly, if somebody wanted to exhort toward fasting and mentions explicitly in his division all the benefits that arise from fasting, he will produce confusion, not parts, for they are countless. It will suffice to make the following general proposition: "I shall show that there are many reasons why fasting, which most men dread as something harmful and grim, should be embraced. First, nothing is better than devotion; the soul finds fasting useful for this purpose. Some rank good health first among possessions, and fasting assists this in the most marvellous way. Finally, a good part of the

human race deems the possession of wealth a major part of happiness and dreads poverty; sobriety also assists the faculties that debauchery diminishes." But in your treatment you need to distinguish all the ways in which fasting is conducive to devotion: because it thins the body and renders the mind more suitable for sacred teaching and for praying and for contemplating the heavenly; it increases devotion in the devout, reconciles penitents to God; likewise it produces multiple benefits for our bodies, whether because it protects them from the countless illnesses that debauchery spawns or because it cures or alleviates illnesses that are already attacking, often more effectively than physicians' drugs—for all the most experienced physicians, especially in Italy, prescribe nothing but fasting (they regard it as more useful than what the Germans do, who are quick either to cut a vein or to prescribe hot baths); moreover, it renders more delightful those very pleasures that people seek, for after a fast sleep is sweeter and relaxation more pleasant, and intercourse with one's wife more enjoyable and even more fertile, because drunkenness not only numbs the perception of that pleasure but also renders bodies less suitable for procreation; in fact, even a chat with friends is sweeter on a fast than when burdened with a hangover; finally, since pleasure is perceived through the five external senses, each sense brings the more delight in accordance with its function: the eyes see more clearly, the ears hear more sharply, the tongue stumbles less and distinguishes flavors better, the sense of smell is keener in the nostrils, the faculty of touch is more precise in all the limbs.

So it would be a foolish division if someone desiring to deliver an encomium of St. Francis were to promise that "I shall show sixty virtues in Francis in which he outstripped the other saints" and were to list them explicitly in his division when it is enough to promise that he will show that the saint should be compared or even preferred to the principal saints in many considerable virtues. Or, if he wants to urge a mother not to give her infant to someone else for nursing but to use her own breasts to nourish what she bore, he will not present all the forms of his propositions: "First I shall show that driving an infant from its mother's breasts is against nature, which

has given to every animal the nourishment with which to raise its young. Second, I shall show that it is against the teaching of holy scripture and the examples of the devout. Third, I shall demonstrate that those who refuse to nourish their offspring do not even deserve to be called mother or, if they are mothers, they are barely half-mothers. Fourth, I shall say that it is absurd for a woman who nourished something in her womb not to want to nourish something that is now a human being and crying for its mother's help. Fifth, I shall teach that banishing a newborn infant from oneself is hardly less wicked than expelling an unborn one through an abortion induced by drugs. Sixth, I shall show that the unwillingness to raise what you bore is a kind of exposing; the exposed often survive, but many infants die by the fault of their hired nursemaids. Seventh, I shall show that the vigor and flame of innate devotion, which is the greatest virtue, is largely extinguished between parents and children because of this banishing of infants and is transferred to the nursemaids. Eighth, I shall say that unfamiliar milk often harms the infants' bodies if the woman hired is sickly, or has tainted milk, or if she expresses the liquid of her milk more sparingly than necessary because she is using her breasts to nourish a number of babies. Ninth, I am going to prove that it is improbable that some woman hired for money will take the same care of another's infant as its true mother, who is so stirred to her duty by natural affection that she not only feels no annoyance but even does with pleasure everything that seems bothersome to people who are unrelated. Tenth, I shall teach you that, even disregarding all of the above, it is still impossible for someone else's milk to help an infant's tiny body as much as its mother's: even as adults we are nourished better by what is akin and familiar, but the infant has already become accustomed to his mother's fluid in the uterus, since the liquid that nourishes it in the womb and the one that it draws from its mother's nipples is identical except that the latter is more digested and hence more refined. Eleventh, I shall teach you that hired nursemaids harm not only the infants' tiny bodies but their minds and characters as well, especially when one cannot make a free choice given that not all

women have milk or want to hire out their services, and so one ends up often being forced to employ a woman who is pert, a drinker, or wanton: the infant drinks up the quality of these vices along with the milk itself. Twelfth, I will demonstrate to you that this is how the reverence and obedience of growing children toward their parents come to decrease, for they scarcely recognize women as their mothers if they were not nourished by their milk. In thirteenth place I shall instruct you that child-bearing women risk their own safety in consigning their children to others for feeding because retaining and diverting that liquid often produces serious illnesses, and so a woman who was afraid that her breasts would begin to sag if she fed her children puts her own life at risk, and disease ages her far more than the effort of feeding would have done.” This partition is faulty in two ways: because it is verbose, and because it carves the theme as a whole not into limbs but into pieces. Of course the speaker needs to have all of this planned and arranged, but it is uninspired to pledge every single one in the division. However, if one wanted to use a partition, it would be enough to say “I shall instruct you that the practice of mothers hiring out their children for feeding conflicts with natural and divine law; furthermore, that it is useless for both the health and character of the children; finally, that it is unsafe even for the mother”; everything else could be reduced to these three propositions.

Of course, when a theme inherently has a number of parts, it will be better to promise them in summary form than to enumerate them all, at least in the partition. For example, since heretics have devised various deranged fantasies regarding Christ’s person, it is inappropriate to enumerate the errors of each one in the division; it will be sufficient to present the proposition thus: “So that we may have a firmer grasp of catholic truth, I shall briefly expound the varied errors that have led heretics astray from it.” The Apostles’ Creed was divided into many sections, of which a partition should embrace only the general ones, such as “The first article pertains to God the Father, several to God the Son, one to the Holy Spirit, the final ones to Christ’s spiritual body, the Church.” The specific ones that are included in

these four general ones should be inserted in their own places rather than being promised in a division. And if excessively frequent partitions are likely to cause annoyance, small transitions will keep your speech from becoming confused—“You know how devoted he was toward his parents: now hear how devoted he was toward his children,” and the same goes for other cases.

Some adopt a method of division that has them saying the same things twice and promising what they are going to say while simultaneously saying what they are promising; hence the most eloquent men have been right to teach that a partition ought to be clear and brief, neither wrapped up in obscure words nor loaded down with unnecessary ones. In addition, some criticize the kind of partition that makes a number of promises but adds one that makes the others appear superfluous, for example, “I shall show that this man had no reason to commit the crime; I shall show that he had no desire to do so; I shall show that he did not do it,” since the others can seem pointless if he shows “that he did not do it.” Likewise “I shall demonstrate that there was no reason; I shall demonstrate that no suspicion of that kind clings to this man’s character and nature; I shall show that, even if he had had the desire, he would not have had the opportunity: I shall show that he was in Rome while the murder was being committed in Florence”; since the last argument is compelling, the others seem excessive if it is persuasive. Pliny however says that, since people have different natures, one should try everything when speaking, like farmers who sow seed plentifully to ensure that some at least will grow, but this does not seem so relevant to the preacher. The kind of partition that subordinates a specific form to a type is also criticized—“I shall speak of this man’s virtue, I shall speak of his modesty, of his thoughtfulness, justice and fortitude”—since the general heading “virtue” includes these types. Partitions are also difficult when the parts are not inherently consistent. We hear some making promises like this: “In the first place I shall expound to you a parable from the gospel, in the second I shall propound a theological question, in the third I shall relate the life of St. Christopher, finally I shall add a moral story from the *Gesta Romanorum*” (this is the name

given to a work that was assembled from obvious untruths by someone who was trying, I suspect, to mock the practice of twisting theological allegories to a moral meaning). Occurrences of this sort of thing are more tolerable if the question arises from the gospel passage and if the saint's life fits the gospel passage and is worthy in other respects too of being reported in churches; nowhere should there be room for old wives' tales. But some are mistaken in thinking that this division should always be observed; this superstition often causes the question to be frivolous or more suited to scholastic diatribes than to a sermon, and a life is recounted that is unworthy of the preacher's pulpit.

In addition, finding the correct partition is so difficult that some of Cicero's have been criticized by the uninformed, others questioned, only one praised without exception. In a case, the difficulty lies in devising the major parts and arranging them into the proper order once devised.

This ought to be my next topic before moving on to argumentation, but since the knowledge of *status* is associated with this theme, I have decided to try to make the whole business more intelligible by first touching briefly here on what the rhetoricians teach about the suasorial and encomiastic type, since it is with these that the preacher is especially concerned. We shall add along the way anything that seems to be particular to exhortation, consolation, or rebuke: the person who is exhorting is urging courage, the one who is consoling is urging a more moderate grief, the one who is rebuking is urging the recognition of one's own wrongdoing and coming to one's senses, for this is the only aim of someone who rebukes in a Christian fashion.

The principal maxim for the suasorial type is that the speaker should consider what it is that he is intending to urge and what sort of thing it is, who the people are that are in his care, and who he is himself who is urging it. Even though the preacher urges only what is honorable, we still have different ways of urging what is honorable, to the devout, to the wicked and rebellious, to those corrupted by wrong-headed opinions, to those uncertain: since honorable things are easily urged upon honorable persons, the wicked must be handled like wild horses, the corrupted must

have their error removed, the uncertain must be shown what is best. There is also a certain difference in nationality, since it would be inappropriate to talk before Germans in the same way as before Frenchmen or Italians. One should also not speak the same way before men of outstanding erudition and rank and before an ignorant mob, or before monks or nuns and before people who are married or engaged. In addition, something that would be heard fairly by a bishop or by a man otherwise commended by knowledge, age, and the holiness of his life would not be heard in such a way by a different sort of person.

The one that Quintilian calls the suasorial others call the deliberative, but there is no deliberation where no doubt exists. It is possible to doubt whether there is any use in recalling married people to a vow of continence while they are still young: no one deliberates whether marriage should be honored chastely and sincerely, but one does urge the more eager pursuit of something that everyone agrees should be pursued. Thus it is possible to question whether it is right to profess the life of a monk without the knowledge or even against the will of one's parents, who require the attention of their children, but no one doubts that children owe honor and obedience to their parents. Therefore, whenever we are urging something that is unquestionably devout, we are exhorting rather than persuading—except that there are some who are so ignorant as to doubt even the obvious.

Now for the parts of the suasorial variety, from which one takes the division of the entire speech as well as its propositions. The Stoics, who think that nothing is useful which is not honorable and that whatever is honorable is useful precisely because it is honorable, would contend that there is but a single proposition when one persuades; on the other hand, those who distinguish the useful from the honorable still think that the other parts can be reduced, generically as it were, to the useful. Though we grant that it is possible for both of these opinions to be perceptive and true, it is still more useful to an orator's training to have them separated "with a coarser Minerva," as they say. Nor is the honorable a simple category: it can be understood as what is right in itself, and it can be taken as what is fair

and seemly, and what is naturally right is not automatically seemly for everyone. Many things have a nature that permits their inclusion under the category of “right”: the devout, the just, the fair, the noble, the gentle, virtues of all kinds in short, plus the lawful, i.e., what is prescribed by law and especially by sacred scriptures, commended by the examples of famous men and received by daily custom. But even though an honorable reputation naturally follows an honorable act and a dishonorable one follows a disgraceful act, some virtues are still in general more attractive than others, in the same way that some vices entail more disgrace than others: a thief generally has a worse reputation than an adulterer, though the latter crime is more serious than the former, and clemency is more popular than justice, and devotion to one’s parents brings more splendid acclaim than frugality and sobriety. Some have distinguished the praiseworthy from the honorable on the grounds that most mortals are more readily influenced by praise or disgrace than by the honorable itself or by shame (not because people should be left in this state of mind but because they should be led toward virtue by it as if by a teacher), and the fear of disgrace, which lures many people toward sinning and envy and which dishonors the name of God and the dignity of the Church just as they are glorified through the honorable reputation of the good, is not foreign to Christian devotion.

Therefore, the category of the honorable will include right and wrong, whether something is natural or unnatural, piety and impiety toward God and the saints, toward one’s homeland, toward one’s parents and children, toward one’s teachers and the people whose kindness has saved us, all the categories of the virtues and the vices, which are countless. To these must be added the lawful; this is associated with fairness, which is the tempering of the laws, of custom and of what is approved or not by the authority and examples of respected men (since it seems disgraceful that Christians are doing things that were punished even by the laws of the heathens). Besides, disobeying divine laws is a rebellion against God, for anything done contrary to custom, even if it has no association with vice, still disturbs the public peace through its very nov-

elty. Moreover, the authority of custom is so strong that the laws of popes and emperors very often yield to it. Similarly, people regard as oracles the words and deeds of those men whose memory has seized the human mind with a sort of awe. As I have said, the seemly and praiseworthy are connected with all of these.

The safe and the pleasant are put in the category of the useful, which properly resides in acquiring comforts or repelling discomforts, like money, titles, friendships, leisure and retirement and such things. I do not see how the necessary, the possible, the easy can be put here.

The safe consists in protecting the wellness of oneself and of one’s own, for example in respect to life and health.

Nuisance often deters from the honorable; pleasantness attracts. Many are convinced that people who live soberly and continently for the sake of devotion have a grim and disagreeable life; in this case the preacher will teach that those who cultivate true devotion sincerely have a much more cheerful life than those who seem to have every sort of worldly pleasure in abundance.

The necessary is understood in two ways, sometimes as that to which we are driven by fear of a greater ill, sometimes as that which simply cannot be avoided. For example, if a woman has reached such straits that she must incur either rape or death, rape seems the lesser ill because it is excused on account of necessity, though it is possible to doubt in this case whether it should be incurred in preference; but if the situation has come to such a point that either rape must be incurred or the rapist must be killed, Augustine believes that rape should be incurred in preference. An example of the other necessity will be someone urging us to bear patiently whatever ills God sends us because they must be borne whether we are willing or not, or someone urging a miser to share with the poor the wealth that, like it or not, he will soon surrender completely, or someone persuading a priest that he should be voluntarily what he is because he is unable to be something else (this of course is what they mean by the proverb “making a virtue of necessity”).

Even though the absolutely impossible has no place within the suasorial type, one must still

consider first whether the subject of the deliberation is possible, since some things seem *adynata* [impossible] to some people even though they are not. For example, many consider it impossible for a young person to live continently, but this is not impossible, as is demonstrated by the fact that many young men and maidens have lived quite continently. It is impossible for a rich man to enter into the kingdom of God, not in an absolute sense, but if he does not stop putting his faith in money; it is absolutely impossible for someone who has relapsed to wrong-doing after baptism to be restored to innocence through baptism. But people foolishly attempt the impossible and hold on quite zealously to things that cannot be brought back once lost, like youth and the past and the companionship of a departed friend.

Many people are discouraged from cultivating virtue by what everybody says about it, that it entails a difficult effort. Since it is impossible to deny this completely, it has to be mitigated by saying that much of the difficulty can be avoided if we have a wholehearted desire to be good, since nothing is difficult for a lover. Then too, with even a brief familiarity, something that is initially a little annoying first becomes easier, then even enjoyable. Since then there is a mixture of the disagreeable with the agreeable in human life, whoever is persuading will select the agreeable and amplify it through his language; the disagreeable, if it cannot be denied and there is no use in pretending, must be minimized. Whoever is dissuading will do the opposite. Denying consists in showing that the disagreeable is agreeable or the opposite, for example, someone saying that any disgrace that originates from the wicked because of good deeds is not a disgrace but true glory, in the same way that being praised by the low on account of low deeds is not glory but a true disgrace, or that conceding a dispute to an opponent is a gain rather than a loss because peace of mind is worth more than a few coins. Things that are not outstanding or have little weight in persuasion are dissembled; the techniques for each of these will be discussed when we get to amplifications.

But no one should suppose that all of these parts that we have mentioned should always be used, for you could hardly find a topic to which

they would all apply; instead, the case itself will show which ought to be employed. In the division, as was said earlier, either none should be promised or only the important ones. The same procedure should be followed here as in the *loci* of arguments: knock at every one, but pick those that can be useful. For example, somebody who wants to encourage a young person to marry has a variety of parts: first, that it is especially in agreement with nature, so that, while individuals cannot be immortal, the species can become so to the extent possible through the propagation of each person; next, anything that the Creator Himself has founded and Christ has honored is honorable; third, anything that sacred texts approve and that is commemorated by the Church among its sacraments is devout; fourth, it is useful to have a wife as a maidservant to take the bulk of domestic concerns upon herself and to carry them out faithfully, to have children who serve their parent sincerely; fifth, it is a source of pleasure to have someone as the companion of all one's fortunes, to have sweet children in whom a man may, as it were, grow young again and outlive himself; sixth, it is right and fair that a citizen should produce good citizens to increase the state to which he owes the fact of his birth; seventh, it is appropriate for someone young to tend children, while it is less appropriate for the elderly; eighth, something that even the laws of the heathens have honored is lawful, especially if the offspring born demonstrates that the marriage was a true and chaste one; ninth, something that has been approved in both word and deed by the most admired men deserves admiration. The proposition can also be drawn from the safe—because a continent youth exposes himself to the danger of forbidden pleasures; or from necessity—because it is impossible for a young man to live continently for a long time, or because the human race cannot reproduce in any other way. The proposition could also be derived from utility—because a wife brings a dowry, and many friends are acquired through kinship—since the word *utility* has broad application and suggests many propositions, as do pleasantness and the other parts. Nothing will be drawn from the easy and the possible. On the other hand, in dissuading a monk from marriage, no one will resort to

the argument that it is in agreement with nature, unless you twist it so that it is unnatural for someone who is dead to the world to be born to the world. He will take his propositions from the fact that it is illegitimate and conflicts with scripture. He will take them from the seemly and the praiseworthy—though some monk may take a wife, the trumpet of foul repute still follows. He will take them from the impossible—he has no faith to pledge now, having sworn it already to God. It is unnecessary to take anything from the other parts. Similarly, in trying to discourage swearing, someone will say that whatever Christ has expressly forbidden is dishonorable, plus that it is not safe because everyone who swears exposes himself to the risk of perjury, whether because the habit of swearing gradually leads to perjury or because human will is changeable or because you often cannot follow through on your pledge. But enough about the suasorial type, at least as far as this *locus* is concerned.

For the preacher that we are training here, the encomiastic type is generally involved when extolling the praises of God or of the saints, inasmuch as funeral orations are no longer so much the custom among ecclesiastics as they were once; in fact, doxologies are more likely to be sung in the churches today than preached in a sermon. Nevertheless, God's majesty often needs to be exalted: for instance, when we are discouraging from sin, it is appropriate to exaggerate that Majesty which so infinitely surpasses not only the eloquence but the comprehension of all men that it seems a more detestable crime to scorn Him through sin or to prefer any creation to Him, Who is so great that nothing anywhere in Heaven or in earth can be compared to Him even if you imagine creatures far surpassing the Seraphim. He is described as seeing everything, past, present, and future, with a single and absolute gaze so that no one who transgresses in unspoken thought or secretly can hope to hide. He is described as supremely just so that no one can presume freedom from punishment for his wickedness. He is described as possessing infinite mercy so that no one will despair of forgiveness for his sins if he returns to His heart. He is described as supremely truthful so that no one will mistrust His promises. The Greeks call this

type *epideiktikos*, from its "display" of course, but having us understand God's greatness is not the preacher's only aim; he scours everywhere for what is conducive to living well, namely, that we should revere the Supremely Powerful, above all that we should love the Supremely Good. This will be the first part of an encomiastic sermon.

The second part will be about the generosity of the Deity toward the human race, which the Father founded so excellently and for the sake of which He founded the world and whatever is contained in the world, which the Son so mercifully restored from its ruin, which the Holy Spirit props up and sustains with so many gifts and comforts in this wretched life. This gives rise not only to thanksgiving but also to a desire to imitate: "He so loved his enemies; let us love our neighbors. He is kindly toward everyone; let us too strive to serve our neighbors. He freely forgave us all our wrongs; let us too forgive them for our brothers." To be brief, the same goes for the rest. Indeed, Christian prayers also tend to have a doxology combined when they begin "God, from Whom all good things proceed," "God, whose nature is to pity and to spare," then conclude "you Who live and reign," etc.

The third part will be taken up with how God's great power, wisdom, and goodness shine in every creation so that we celebrate the Craftsman in everything wherever we turn our eyes or mind.

The fourth will be how wondrously God has worked in the holy men that He specially selects in order to be glorified in them and through them even among the wicked. This kind of laudatory type is now more common in churches than those earlier ones, and was not uncommon even in antiquity; the panegyric sermons of Basil, the Nazianzen, Chrysostom, Ambrose, and Augustine are the evidence.

Here some of the instructions that the rhetoricians have written will be useful. Praises can be drawn from the past, such as by reporting the oracles, miracles, or prodigies that preceded the Nativity, how Isaac was pledged to Sarah, who had already passed menopause; the oracles as Rebecca felt the twins struggling in the womb and learns from an oracle about those who were being born; John the Baptist made a similar

promise to Zachariah; and Elizabeth sensed the fetus in her womb trying to greet the Virgin; and Bernard's mother was told, "You are going to be the mother of an excellent pup." The present considers the whole sequence of life from birth right up to the end of life except that things that happen to infants are regarded as belonging to the past, and anything outstanding that happens is regarded as more a prediction than a virtue. It is possible to praise character in the young since one can also criticize it. To the future belong the miracles that follow death, and the spring of saving water that leaps out where a martyr's severed head touched the ground, or oil effective for medical treatment that oozes spontaneously from a monument, or demons crushed by martyrs' tombs, which should be regarded as divine witness.

V. (341.372-353.710)

The discussion of *status*, or formulations, which the Greeks call *staseis*, is both verbose and confused in Greek and Latin authors alike; we shall now touch briefly upon only the things that seem likely to be useful for our preacher. A *status* is the essential point of a case or question; the speaker refers everything to it, and the listener keeps his eye on it above all. For example, in court cases one considers especially the factualness of the allegation, its nature, and its identity. The first *status* is called "conjunctural" or "negatory"; the second is the one of character, or "judicial," the third the one of end, or "definitional." In the first, the truth is sought through conjectures; in the second, since there is agreement about what was done, one asks whether it was done legally; in the third, since there is agreement about both of these, the name of the deed is sought through definition. Sometimes, however, a charge is also removed through a change of name. For example, if Milo, who was accused of murder, had denied that he killed Clodius, it would have been a conjunctural *status*; now, because he concedes this, there remains another conjecture as to which ambushed the other, and this includes a *status* of character, since it is conceded that killing someone who attacks by ambush is justified: Thus Orestes does not deny

killing his mother but relies upon a *status* of character in affirming that it was right to kill her. Similarly, if an accused should admit that he took secular money from a sacred place, he would be acknowledging a crime of theft, not one of sacrilege, saying that sacrilege occurs only when a holy object is taken from a holy place; or if someone who had sex with another man's wife in a brothel were to admit illicit intercourse, deny adultery; or if it was a case of whether a woman who gave a potion that created love or hate should be held on a charge of poisoning or one of only injuring. This sip from the rhetorical texts is sufficient to show what a *status* is.

Someone might ask how this is relevant to a herald of the gospel. First, it is useful because, once he considers the theme on which he is to speak, he relates everything to his essential point as if to a target and does not wander from his subject in pointless digressions or stray in his words like a madman, uttering things that are irrelevant or even contradictory. And even though *status* are employed principally in court cases, everyone who is speaking to the people for the purpose of persuading, exhorting, or consoling still sets himself some precise goal which he wishes to accomplish; at all events, it takes the role of the *status*.

Finally, these also turn up frequently in the themes of sermons, more frequently in private conversations or discussions, for example, when wondering about the earthly location of the paradise in which God put Adam and whether purgatory is in the center of the earth or somewhere else, likewise Judas' intention in selling the Lord so cheaply, whether in the hope that He would slip out of their hands as He had done on several other occasions (since it is unlikely that he did this in order to be killed): otherwise he would not have given the denarii back and would not have choked himself with a noose. For example, it is a conjunctural *status* if one asks about Satan's purpose in tempting the Lord so often, likewise if a preacher, urging his congregation to placate God's anger, says that a plague or other calamity has been sent by an angry God because of the wicked life of men, likewise when and through what tokens it was understood that God wanted the rituals of the Jews to be utterly abolished so

that it is now a crime to keep them, plus the intention of Lot's daughters in luring their father into incest, likewise whether the souls of the dead really appear or such things happen through the fakery of demons, also when one inquires the reason for the Law, such as why God in the Law forbade plowing on an ox and an ass or wearing clothing made from wool and linen combined (Augustine calls this aetiology).

A *status* of characteristic can come up anywhere: when doubting whether it is right for clerics or monks to wage war, whether Christians, like Jews, are allowed divorce, whether it is permissible to leave a bride against her will in a lawful but unconsummated marriage because one has professed the monastic life, whether it is right for her to stay unwed until her groom has professed, even if he delays the profession for years by changing monastery or order.

Now, there are countless cases in which one inquires through definition: whether usury has been committed or not, similarly whether someone has committed the crime of forgery by correcting a letter that was written carelessly by a notary in a papal letter of appointment, and whether those who have opposed a prince who is oppressing the liberty of his people through tyranny are guilty of the crime of *lèse majesté*.

In addition, when scripture seems to conflict with scripture, the *status* is from opposing laws, such as when Moses' tablets say, "Honor your parents" and Christ says, "He who does not hate his father and mother is not worthy of me."

When there is an ambiguity or obscurity in the letter, the *status* is from the letter and the spirit, such as when one asks what Paul meant in saying "I wish to become anathema for my brothers in the flesh" and what Francis meant by forbidding his brothers to take money for themselves or for others. Many passages in the canonical scriptures produce ambiguity from the ambiguity of a word or from the arrangement of the words or from a variant reading; but the methods of resolving the contradictions of scripture and of explaining its ambiguity will be stated in the proper place.

Finally, when one questions whether it is more useful to let priests marry by public authority than to tolerate concubines and other indecencies, and whether it is a lesser ill for an unchaste

priest to keep a concubine or to marry contrary to papal law, and whether it is more useful for the Christian religion to have even an unjust peace with the Turks or to fight in a just war.

Also, nothing prevents various *status* occurring in the same theme if it has several parts. For example, in the theme I reported earlier, when we propose that it is unnatural for a mother not to use her own milk to nurture what she has borne, this is a *status* of characteristic. On the other hand, when we propose that the woman who only gives birth and casts it away is not a mother, this is a definitional *status*. When we propose that the character of a wicked nurse passes to the infant through her milk, it will be a conjectural *status*, for it is possible to doubt whether this is true, and someone who disagrees can deny it.

After this brief taste, then, we must get to the invention of parts or propositions, which we started to discuss earlier. In Quintilian's opinion, this is the most difficult of all, and certainly no small part of the difficulty resides here, except that an advocate speaks at greater risk in front of a judge than a preacher in front of a congregation; moreover, as was said above, it is not always necessary for the preacher to state how many parts are to be used and which ones. Moreover, it is rare for a preacher to be involved with the judicial type, but it is not very different from this type when he speaks from his pulpit against the Jews, heretics or schismatics or pagans too. Here the opponents sometimes supply the propositions for the defense. For example, if someone were to propose, "The enemies of the name 'Christian' make three particular charges against us, amongst many others: infanticide, witchcraft, and rebellion against princes and magistrates," there will be three *status* in these three points. When he says, "Nothing is more foreign to Christian morals than infanticide," the *status* will be negatory. On the other hand, if he replies to the second objection that "it is devotion, not rebellion, not to obey princes who give wicked commands," the *status* will concern character or end. If he says to the third that "it is a sacrament, not witchcraft, when we consecrate water, bread, and wine and forgive sins, crush demons with words that are efficacious through Christ's faith; witchcraft is performed with the assistance of

demons," the *status* will be definitional. Or, if someone replying to the slanders that some people make uses the division "Our adversaries accuse us on three points in particular, first because we assign too little to faith, too much to works, then because we go too far in minimizing the force of original sin, lastly because we consider papal decrees equal to God's commands," here the parts are supplied by the opponents instead of being devised, as in the famous division in Cicero's *For Murena*, which is praised without exception: "I understand, jurors, that the parts of the accusation were three in all, and that one of them concerned the criticism of his life, the second a competition for rank, the third charges of corruption." Nothing is more lucid than this partition, and, since it embraces the entire case, nothing is superfluous.

But if the adversaries' charge is confused, the defender will be admired for his talent if he arranges the pile of accusations into distinct columns, distributing the parts in such a way that nothing pertinent to the subject is omitted and nothing is redundant. Moreover, anything that is put separately when it is included in one of the parts is redundant, unless he gives a reason why he has separated things that belong together.

But when an opponent has arranged his speech into parts, it is not always appropriate to cover them in the same order, especially in a division that reaches its peak by steps through supposition. For example, if someone has killed the son of a tyrant whose father, unable to endure the grief, has committed suicide and uses the division "Had I desired and conceived such an outstanding deed only in my mind, would I not be regarded as deserving a reward? Had I only attacked and scaled the tyrant's citadel with this intent, even unsuccessfully, do you think that my reward should be refused? Had I slain even a single attendant, would I not seem to deserve a reward? Had I killed only the son, crueler than his tyrant father and the heir-apparent of his tyranny, would you deny my reward? Now, on top of all this, I have even killed the tyrant himself, more cruelly than if I had slaughtered him with my own hand. But suppose that a different outcome had ensued: a man who has stripped a tyrant of all his henchmen and rendered him

powerless against the liberty of the state—has he not deposed a tyranny? Had I driven the tyrant into exile, would the reward owed to a tyannicide be denied? As an exile he could have waged war against the city; now I have handed over to you in a defenseless state an old man stripped of the son in whom all his hope lay and of all his supporters, so that anyone can kill him with impunity. Had I not foreseen the outcome, would I therefore seem unworthy of a reward because luck supported my courage? In fact I did foresee it, and I spared the tyrant deliberately so that he could perish all the more cruelly, tortured by the death of his son," this arrangement of the parts would not suit someone who was speaking in opposition, and he would not even have to use the same parts, but we shall soon discuss this kind of division. In other cases it will be most convenient to reply in the same order in which the adversary has laid them out unless some particular case suggests a different one. Aeschines praised King Philip of Macedon on three accounts, for his attractive body, for his eloquence, for his ability to handle heavy drinking; Demosthenes mocked these parts by saying that the first compliment was proper to women, not to a king, the second to sophists, the third to sponges, among which the thirstiest is considered best.

Hence we must now discuss how a division is to be invented in themes where it is not supplied from somewhere else or where it is inappropriate to use the same parts but a division is still required by either the difficulty or the variety of the material. The most important instruction that can be given in this regard is that propositions are best invented by considering carefully the parts and circumstances of the whole case. From such a full consideration there will be little trouble in perceiving which are the important ones upon which the whole argument depends. When these have been determined, the next step is to discern the most convenient order of the parts. Moreover, it is most convenient when an earlier part offers and lays a step, as it were, for the one that follows, preparing the audience's minds of course to believe more readily what follows, for example, if one were to divide as follows when speaking against heretics: "First I shall reveal the theater of their life, the falseness and wickedness of their

character; second I shall refute their erroneous dogmas, third their schismatic dogmas, fourth the heretical ones.” Among these the last part is the foremost point of the argument and the others serve it in turn, since an error of understanding is more believable in people whose life is unclean, and the wickedness of schism is more believable in people who have many foul delusions, and schism is in general either connected with heresy or gives rise to it. Thus murder is more believable in the case of a highly impetuous man who has beaten many others, adultery in the case of a licentious one, because the latter deeds are like steps to the former. This is the scheme that St. Jerome uses when mocking Jovinian’s silly and outrageous diction to make it more probable that he is equally mad in his dogmas. It would be highly prejudicial for Vigilantius in his dogmas if the first part of the division should expose a taverner’s occupation in a priest, then the shamelessness of a man who was terrified during an earthquake and leapt naked from his wife into a church still bearing on him some of the traces of his lust, or for the Manichaeans if the abominable secrets of their life are revealed, as also for the Marcionites, in the way that St. Augustine did for the former, Irenaeus for the latter, though in neither case in the context of a partition. On the other hand, if someone has decided to praise the monastic life, the very nature of his theme practically supplies the division since the essence of that institution consists of three things especially, continence, poverty, and obedience; the whole sermon will be taken up with magnifying these. But if it seems that this partition does not embrace all the benefits of that life, another one will be devised from the parts of the suasorial type which I discussed above, to the effect that no other kind of life is more in agreement with evangelical devotion or safer or pleasanter. There is nothing in the benefits of that institution that is not included in these three parts, since many other things are contained in the first proposition besides three vows. It would be harsh to reduce the treatment of the safe to obedience, especially since this is promised to man, not to God. The treatment of the pleasant will never be capable of being related to it; and yet even if these could somehow be related to those three (since safety

has many parts, as pleasantness does likewise), it will be more convenient for them to be separated so that the profusion of particular propositions does not create confusion. By “particular” I mean those that are proper to individual argumentations.

The reader must be alerted to the fact that this word has three meanings in authors who have written about the art of speaking, since “proposition” is sometimes used to mean something at the start that embraces the whole issue of the argument and serves as a title, such as when Ovid begins thus:

If any of this race knows not the art of loving,
Let him read my verse and, having read, love
learnedly.

Some call this an “exposition”; likewise a preacher, “I bring to you the most pure life and most brave death of the blessed Agnes.” This can be single. Sometimes it indicates the outstanding parts and columns, as it were, of the argument that are promised in the division; if a single proposition is put in this, now there is no division. Sometimes “proposition” is used to mean the beginning of any argumentation, and if repeated after the argumentation it is called the conclusion or recapitulation, since anyone approaching an argumentation shows what he has decided to prove, and when his proof is finished he repeats what he has proved and plants it in the minds of his audience. If this is proposed as something doubtful, it is called a “question.” An example will be “It is best for childhood to be imbued immediately with salutary instruction.” This is the proposition—the proof follows: “Because what is impressed upon the untrained minds of children clings most tenaciously, in the same way that a clay pot long retains the scent with which it was first imbued,” in addition, “not only does what is honorable cling more tenaciously: it is also more easily imbibed by minds that are empty and not yet filled with wicked opinions and vices, just as it is easier to write what we want on an empty tablet. Besides, it is more difficult to unteach than to teach.” Here the proposition proved is repeated—now the conclusion: “And so those people are wise who make the effort to have their children instructed right

from infancy with liberal teaching and the precepts of living correctly."

Hence anyone who has given careful consideration to the individual propositions of the argument which will occur in arguing as well as to those which his opponent or the silent reflections of his audience seem likely to object will more easily select from these the general ones that embrace the entire case. Assistance in this will come from knowing *status* and their kin, charge, refutation, motive, affirmation, confirmation, and judgment. These will be most obvious in an example which everyone uses, though with remarkable discrepancies over the words and the deeds alike. The charge is "I accuse Orestes of parricide because he killed his mother," the refutation "He killed her, but rightly." To this is immediately added the motive, "For she had killed Agamemnon, Orestes' father, her own husband; and, not content with this, she took in an adulterer in her victim's place." To this the accuser opposes the affirmation, "But that does not justify a mother being killed by her son without a hearing; she could have been punished by law." To the affirmation the accused opposes the confirmation, "Her attitude toward her children and her whole family was such that there was no one by whom she could be killed more fittingly than by her own children, and Orestes did not do this without authority: he was advised by Apollo's oracle." From these offenses arises the judgment, "Since Clytemnestra killed Agamemnon and brought in an adulterer and was so disposed toward her family, was Orestes right to kill his mother when Apollo advised it?" The only aim of this rhetorical instruction is to make the speaker give careful consideration to what he is doing for himself, what for his opponent or a dissenter, and the judgment is only the final *status* of the case; when it has been found, all that remains is for the judge to pronounce sentence.

Moreover, the reflection of the dissenter during a sermon does the same thing that an adversary does in court. For example, someone who undertakes to praise virginity ought to anticipate mentally what might occur to someone who disagrees or is unsure, say, "Virginity is unnatural," "Virginity does not help the state," "Virginity is exposed to the many dangers of incontinence, so

that having a husband is safer." Likewise, when preaching the praises of fasting, he ought to bear in mind that many of those before him will say that the brain is worn out by fasts, that mental vigor is impaired, that people become disagreeable and irritable, that physical strength is weakened, that countless ailments arise from eating fish, finally that it is useless for the very purpose that it was intended to assist: though intended to make the mind quicker and readier for spiritual exercises, fasting weighs down the mind more with a single meal than if the same amount were consumed in two meals. Other propositions must be devised against these.

A knowledge of the parts that we pointed out in the suasorial, encomiastic, hortatory, and consolatory type will also be conducive to inventing a division. Knowledge of the *loci* which we shall soon discuss will also be conducive, as will that of predicable words and predicates, since it is through them that everything relevant to the nature and quality of each thing is made apparent. The circumstances of things and of persons will also be conducive. Finally, whatever is useful for argumentation can be applied in some way or other to partition. Moreover, skill in many arts, in law, philosophy, and theology, will be conducive. For instance, someone who is speaking against usury will divide this way: "I shall first define usury, then contracts that smack of usury; third, I shall deplore the fact that usury, which even the laws of the heathens ban, is common among Christians; fourth, I shall expose the fraudulent dealings that are worse than any usury." Someone who is experienced in both kinds of law or in philosophy and theology will find it easier to devise these propositions and will produce a better treatment: "Even Aristotle has written that it is unnatural for money to bear money, and the laws of the ancients allowed usury within precise limits, forbade it beyond them. The Jews were permitted to lend to outsiders to the point of usury, though never to their own people, but Christian laws totally condemn usury." In addition, secular and sacred laws alike define which contracts are legitimate, which not, but it is impossible to make a proper comparison between illicit contracts and usury without a knowledge of law and theology. Similarly, if

someone addressing his congregation about marriage were to make the division, "First, I shall state how marriage is contracted legitimately; second, in which cases a marriage not properly contracted should be sundered, in which not; third, the reasons that allow even a legitimately contracted marriage to be sundered; fourth, what is required for a husband to live chastely, peacefully, and pleasantly with a wife," he will hardly be able to discuss this unless he possesses knowledge of the skills that I have mentioned. This is about all the instruction that can be given on the subject of inventing propositions; the rest is a matter of talent and training.

To the above it should be added that there are primary and secondary propositions, of which the former is the principal one, the latter is assumed by supposition and helps the other outside the case as if it were serving as a precedent. Cicero's method of defending Milo is to make his principal proposition "He killed him rightly because he slew him when he attacked in an ambush," the secondary "Even if he had killed a citizen this pestilential in any manner, his courage deserved honor, not punishment." Since it would be unsafe to rely on this proposition, one returns to the other: "He did not kill through ambush, but killed someone who ambushed." But the other is not merely otiose, since a judge becomes better disposed toward the principal defense if he sees that it is also possible to establish the other through some argument.

It's this sort when one reaches the essence of a case by supposition through one or more steps. For example, a preacher urging obedience in a population that is plotting rebellion against their prince would offer this proposition: "Even if a pagan prince of such wickedness had been your lot, scripture still condemns rebellion." This is the step: "Now, since we have a prince who is a Christian and even devout and merciful, consider yourselves how unworthy it is for Christians not to obey him." On the other hand, he will be able to use the proposition against tyrannical princes as follows: "If you were heathens ruling heathens, the law of nature dictates, the edicts of the heathens teach, that princes should exercise their power not in accordance with their own pleasure but in accordance with the good of the state, that

otherwise they will be tyrants, not princes, and the laws of the pagans promise a reward to the tyrannicide. Now, since you are Christians ruling Christians, and a common Lord, a common religion has made them your fellow-slaves rather than your slaves, a common heritage has rendered them your brothers, you have all the more reason to refrain from any semblance of tyranny." Likewise against disobedient children: "If idolatrous and wicked parents had been your lot, you would still offend God if you did not heed them on account of the very fact that they bore and raised you. As it is, you have all the more reason to obey Christian parents who have not only borne you but have also trained you to devotion, with the result that they justifiably seem to have given birth to you twice."

This is only a single step; there could be more. For example, if the subject is whether Pope Julius ought to wage war against the Venetians over some trifling possessions they had seized, the division can have the following steps. "First, I could show through powerful authorities and substantial arguments that no cause makes it right for Christian priests to wage war, since their calling is to war against vices and to battle against airy spirits with spiritual arms." This would be the first step. The second takes it up: "Suppose we grant the propriety of waging war; it is not permissible to do so for the sake of secular possessions which men endowed with ecclesiastical rank should not own inasmuch as they have received a loftier purview, and it is out of harmony with the practice of the Christian religion." The third takes up this one: "Suppose we grant that the propriety exists in the case of other priests; it does not exist for the Roman Pontiff, since he, being the nearer to Christ, Whose role he performs, should be all the purer from everything that Christ scorned and taught should be scorned." The fourth step supports this one: "Though it might befit other popes, it does not befit Julius, who is already old and near death, a man merciful by nature and hitherto peaceful." From here he will jump to the fifth: "But, for the moment, I do not urge this. Let us grant that it is befitting: it is unseemly for the mercy of the highest priest, whose weapons are prayers and tears, to confound the Christian world with

confusion, slaughter, and blood for the sake of some petty earthly wealth; this trivial business could be negotiated through arbiters." From here he will pass to the sixth step: "Though it be permissible, though it be seemly, it is hardly safe; there is the risk that, while trying to claim one or two insignificant possessions through warfare, he might not only lose those that he has but even shake the entire Church with a dangerous schism, for war has a variety of outcomes, and evil is sown from evil. Moreover, the peace of the Church ought to be dearer to its highest shepherd than the possession of a few paltry towns." The seventh step will be "Even discounting all of this, it is still hardly right that, for quite trivial reasons, he should stir up Christian kings against a people who have so often served so excellently not only the Roman See but the whole Christian community as well; had they not driven back the Turks with their own courage, and were they not fending them off even now, perhaps the Pope would not have even Rome as his own." From these steps he will come to his main proposition: "I could say this even if Julius had a just cause for attacking the Venetians. Now I shall demonstrate that, given the nature of the case, Julius should thank the Venetians for rebuilding, enlarging, and enriching the towns, which had declined through papal neglect, rather than harass them in war." Moreover, this proposition includes many particular ones, as do all of those above as well; for example, "The Venetians did not seize the property of others by force of arms but came into property that was neglected as if unoccupied; then what was seized passed by right of demurrer into the control of another; finally, the silence of so many ages is simply a papal assent, since neither force nor secrecy was involved." Along with that, an argument from necessity, that "the Venetians recovered those places into their jurisdiction because they could not protect their own boundaries if they had neighbors who were neglected and ungoverned. It seems a token of remarkable impudence to reclaim as one's own something that has been restored through another's considerable expense when one had not considered it as one's own because it was lifeless." I should like this example to be proposed only as a demonstra-

tion, not in order to make pronouncements about the rights of priests; one could use similar steps to argue on Julius' behalf.

VI. (356.799–358.821)

After the propositions have been devised, then, that leaves the argumentation or proofs; the Greeks call these *pisteis* because they induce belief in something doubtful. On this subject one should say first, in general, what Aristotle indicates, that there are three things that gain a speaker credibility, *phronêsis*, *aretê*, *kai eunoia*, namely, thoughtfulness, virtue, and good will. Without the first, a speaker might unwittingly urge wickedness instead of righteousness. Next, understanding what is useful is inadequate unless he is a good man who does not want to deceive his audience knowingly. Now, even with correct judgment, even with honesty, it will happen without good will that someone may somehow harm knowingly and may thoughtfully urge dangerous counsel; when the devil urged eating the forbidden fruit, he was not unaware of what was best, but those two things, virtue and good will, were absent. Moreover, it is possible for a good man to knowingly urge something harmful as something useful, perhaps for an enemy of his country or for a tyrant who is oppressing the state, but this is irrelevant to the churchman, who should be endowed with such virtue that he bears good will toward his friends and foes alike. Hence the preacher will strive to ensure first that none of these is missing, then that the congregation understands that he is endowed with too much wisdom to be deceived in his judgment, next that he is too good a man to wish to deceive anyone knowingly, finally that his charity is such that he wishes to aid even his enemies.

Having said this, I return to the proofs taught by the rhetoricians. These have a twofold function: to fortify our own position, and to refute the opposing one. The general consensus is that in the division as a whole proofs are divided into *atekhnoi*, which you could call non-technical, and *entekhnoi*, that is, technical. The former kind is comprised of precedents, rumors, the results of torture, documents, an oath, testimonies.

VII. (368.48–374.170)

But even innate intellectual power hardly helps in inventing proofs, since some people perceive logical consequences and contradictions more easily than others. In addition, every confirmation consists either of things that follow or of things that contradict. In addition, some things follow necessarily—for example, that a woman who has given birth has had intercourse with a man, or that someone with an injured heart will die; some follow probably—for example, that a woman who takes pleasure in the revels of young men is unchaste. The same difference applies to things that are contradictory. Breathing and being dead are necessarily contradictory; being a mother and hating one's own son are probably contradictory. Sometimes a proof can be devised from what an opponent has conceded if we demonstrate that something obviously ridiculous follows from it or that it conflicts with an obvious and widely accepted truth, such as when Ctesippus, arguing with Euthydemus in Plato, deduces from what he had conceded that his father is a dog and that the same dog is also the father of all gudgeons, sea-urchins, and piglets and that these are all each other's brothers. The capacity to reason existed before dialectic was promulgated; like all the mathematical disciplines, it belongs to the category of the observed, not with the class of things introduced by human judgment like laws and grammar.

Still, being trained in dialectic from childhood will be of considerable assistance provided that no one, as he says, grows old there as if at the Sirens' rocks and, as Augustine warns, one takes no delight in wrangling. Closely akin to this vice is the thing they today call sophistic, with which innocent youths are immediately tainted in certain quarters; what this teaches is how never to be quiet rather than how to speak. All the books by Aristotle are helpful, his *Logic*, the *Isagoge* (which is in fact Porphyry's work but derived from Aristotle), the *Categories*, *On Interpretation*, the *Prior and Posterior Analytics*, *On Sophistical Refutations*; all of these are still more suitable for judgment or for arguing in the schools than for preaching, where his *Topics* and *Rhetoric* will be more helpful. I am not sure that

a preacher-to-be will be helped by the practice favored by Carneades of speaking on both sides, or the one of treating the discreditable subjects that the Greeks call *adoxoi* [ignoble], the way that Plato's Glaucon maligns justice and one person in my own recollection praised ingratitude, another drunkenness. Since those who have put most of their effort into dialectic or the related field of rhetoric have been trained with the aim of developing this ability, Plato is unwilling to have those who have been chosen for governing his state touch these subjects before the age of thirty. The reason he gives is the desire to prevent them having no firm opinions about the honorable and the dishonorable as a result of habitually arguing both for and against anything at all. Moreover, the ruler of a city ought to have an iron conviction about what deserves to be pursued and what deserves to be shunned and should have the greatest credibility with the people: but this is so much more true for the preacher, who is the real leader of the people. But how will someone make others strong if he is unsteady himself, or who will trust a man who is urging honorable counsel when he knows that he can also argue with equal skill against the counsel he is giving?

Moreover, those who have made dialectic thorny and convoluted with their pointless difficulties—as if that skill had been devised for the display of one's own talent instead of for judging correctly about what is true and false—are impeding judgment. Those who receive too much training in this kind of balderdash tend to experience what regularly happens to people who practice the art of fencing indoors. The whole thing is conducted according to strict rules purely for display, and he has such confidence in his skill that he can use his sword to cut an arrow that has been fired at him from a bow—so long as the person who is to do the shooting stands where he is told to stand and shoots only on command—but they say that nothing is more ridiculous for a serious battle, in a war for example, than this sort of man. Indeed, they often find in their discussions that there is a bloody spectacle any time anger interferes with their exercise of the rules. As to those who have had a life-long training in the schools arguing according to the tenets of Thomas or Scotus, following the path of nominals

or reals, you would call them raw recruits whenever they are invited to give a congregation serious advice or to a serious battle against the Jews or heretics, although there they were unconquerable generals. The sensible study of dialectic assists any natural ability; excessive study interferes with it, in the same way that some devices entail such subtlety and difficulty that preparing the device requires more trouble than it would to carry out the task even without using any device. For example, when a ratiocination is made up of compound propositions, the question can be explained more quickly than an argumentation would be apprehended from the compound propositions, but the artistry is applied as a tool for the same purpose: so that whatever is being questioned can be explained more quickly and more easily through it.

Arguments, then, as has been stated, are sometimes discovered by talent, sometimes derived by artistry, but you can find them more quickly and more easily if you know from your training the *loci* from which arguments are to be drawn. Moreover, every proof is taken from circumstances, the overall division of which is that some derive from the person, some from the case or the matter itself. If someone exhorted toward obedience by saying that "because women are naturally more subject to emotions and are weaker in judgment and reasoning, it is dangerous for them to be left to their own control, but they need to be governed by the guidance of men," likewise that "young people should obey the commands of their elders because inexperience still denies them a wisdom of their own and their tender age makes them somewhat inclined toward vice," here the proof is drawn from the persons of woman and man, youth and elder. Again, if someone says that sobriety and honorable activities are essential for guarding modesty on the grounds that indulgence whets the natural goads like oil poured on a stove and intoxication drives out shame, chastity's principal guardian, and idleness opens a kind of window to lustful thoughts, he is arguing from the thing itself, indulgence, intoxication, and idleness. Hence there will be an advantage in knowing particularly what is proper to each person and what effect each thing produces; a reading of the comic poets

and the historians, a familiarity with philosophy, and the widest possible experience will help with both. These too are called *loci* by the rhetoricians, though they are neither entirely different from those that Aristotle taught nor entirely the same: some are the same, some come down to the same, some differ. The method of instruction differs because rhetoricians are training an advocate, the Philosopher is assisting judgment in general.

Generally speaking, the following are the attributes of persons: family, race, country, sex, age, education or training, physical condition, fortune, rank, personality, occupations, ambition, past words and actions, emotion, counsel, name. Family tells us to consider a person's ancestry (it is appropriate, and a normal occurrence, for children to resemble their ancestors) because this is sometimes the source of influences that lead to living honorably or disgracefully. Race tells us the particular talent or special character of each ethnic group, since a Greek and a Scythian, a Roman and a German, a Frenchman and an Englishman do not share the same nature; likewise every city has its own laws, customs, ability, and character, for a resident of Sybaris and one of Marseilles are substantially different, as are an Athenian and a Theban. Everyone knows the difference of sex. Also, different things suit different ages. Moreover, the teachers that people have had and their teaching methods have more influence than ancestors. Physical condition includes handsomeness or ugliness, strength or weakness; a charge of adultery is more credible against a handsome man than an ugly one, and a violent crime is more credible in a strong man than a weak one. Fortune is a matter of wealth, kin, friends, dependents, rank, honors and their opposites. Rank includes many things: whether someone is renowned or obscure, a magistrate or a private citizen, a father or a son, a citizen or a foreigner, a free man or a slave, married or single, a parent or childless, twice married or once. The human personality shows a manifold variety: some are timid, some brave, some gentle, some forceful, chaste, lustful, boastful, modest, etc. Occupations: the characters of the farmer and the lawyer are different, of the trader and the soldier, the sailor and the physician. They add ambition

to these; whether people are or are not what they wish to seem, the way that each wants to seem is important, such as wealthy or erudite, just or powerful, devout or courtly, cheerful or sombre, a champion of the people or of princes. In a person one examines both past words and past actions because the present and even the future can be judged from the past. Emotion is different from personality in that the latter is constant, the former temporary, so that anger is an emotion, irascibility a personality, and fear is an emotion, fearfulness a personality, intoxication is an emotion, drunkenness or bibulousness a personality, that is, a condition of the mind. To these they add a person's name, but it is seldom a source of arguments in court unless given in accordance with the case (Aristides was called "the Just," Alexander Severus "Mammaea" because he was too deferential to his mother), or unless the name seems to have provided the occasion for committing the crime. For example, because the haruspices¹ had responded from the Sibylline Books that domination was being granted to three Cornelii, Lentulus dared on the basis of this assurance to strive for absolute power because he believed that he was the third Cornelius, being a Cornelius too like them. Quintilian thinks that anything drawn from a name is material for jokes, not for arguments; for example, Cicero makes many jokes on Verres' name, to the effect that this thievish man "converted" everything to his own. He makes similar jokes against a witness as being a Phormio, and Pliny the Elder against an historian who was called "Bibaculus"—and was, he says.²

Now, with your permission, let us review each of these and try to demonstrate how they can be of use to the preacher.

¹The haruspices were priests of the Etruscan religion, especially skilled at the art of divination by reading the entrails of sacrificial animals or, as here, the ancient textual fragments known as the Sibylline Books. They continued to be consulted even after the rise of Rome and Roman religion. The point of the example, inserted here where Erasmus discusses the kinds of arguments that can or cannot be made from a person's name, is that Cornelius Lentulus interpreted one of the haruspices' prophecies as a good omen for him to seek political power on the basis of his name. [Ed.]

²"Thirsty." Perhaps "Boosler" would be an appropriate English parallel. [Tr.]

VIII. (388.530–392.611)

It has been demonstrated that the preacher can derive considerable material for speaking from the accidental characteristics of persons; now it is necessary to indicate what the accidental properties of a thing or case suggest. Quintilian treats these *loci* by combining them with the *loci* that Aristotle included in his eight books of *Topics*, and he puts cause in first place, meaning of course final cause, since as a general rule everything has four causes, the efficient, the material, the formal, and the final, there being nothing but God alone that does not have an author by which it was made. The Son and the Holy Spirit have an author, though they were not made by anyone; therefore God is the universal and the primary cause of everything, the efficient and the final. Likewise there is nothing that does not consist of the two things matter and form, matter being like the receptacle of all the forms, form being what causes it to be what it is instead of something else. For example, a rational soul allows a human body to be a human, and the soul itself, being substance, has its own unnamed form which makes it a soul rather than an angel.

Everything that has been established has been established for a specific end, though nothing forbids a single thing having different ends; for example, nature has given women breasts to feed their young and also to adorn their bodies, just as man was given his tongue for many uses. Nor does anyone of sound mind undertake any business unless he is pursuing something; but nothing is pursued unless it is considered good or advantageous. The adulterer considers pleasure a good thing, and the thief pursues the possession of money as a good thing when he commits murder, even though having money this way is actually wrong and should be avoided. Therefore the end—which is called "final" in the outcome, "first" in the intention—aims at acquiring, increasing, or consolidating advantages, likewise avoiding, diminishing, or averting disadvantages. But in choosing these many people are deceived by a false conviction, and in the delusion of their error they believe that what is impious is pious, for example if someone were led into error to believe that the Arians were right about the Holy Trinity.

Others are duped by a mental disturbance like intoxication and anger, both of which are a sort of insanity, or envy, hostility, unrestrained love.

This *locus*, then, is useful for many purposes: for minimizing or exaggerating a charge, for instance if someone killed a friend while attacking an enemy—he had intended something other than what he did. Again, it is more vicious to kill a man through trickery for the purpose of taking away his wife than if you killed someone by whom you were injured through serious wrongdoing—the provocation mitigates a part of the crime. Peter is not excused from murder if, as is likely, he attacked Malchus to smash his skull, not to cut off his ear, since crimes are judged according to the mind's intention, not by how they turn out. On the other hand, it is mitigated because he was not after loot or any such thing but only wanted to free his most innocent Lord from danger, and was prepared even to die with Him.

The end plays a major role in the suasorial type by presenting the good that should be pursued, the ill that should be avoided. In addition, the end is so important that it alters the name of the action. David is criticized for killing Uriah because what he was after was a crime; but Phineas won praise for killing two men because he did not kill out of hatred, out of envy, or for loot but to deter his people from a shameful example and to reclaim authority for God's law.

Moreover, the end will supply an abundance of material for speaking in admonition and rebuke. "What is the purpose for which man was made? To know, fear, and love his Creator. Whatever man does, then, is to be referred to the glory of God; hence how detestable are they who live as if born for luxury and intoxication and other vices, not to say for the devil. How disgraceful it is that everything else carries out the duties that it was created to perform—the sun shines, clouds send rain, oxen plow, asses carry loads—and man alone does not recognize the reason why he was born." Thus a king must always have his end drilled into him, a bishop his. "What was your reason for becoming a priest? To be available for your sacred duties, not for a luxurious lifestyle or to pile wealth upon wealth." "Why did you become a scholastic? To cultivate your mind with liberal studies, not to give free rein to your frivolity." "Why then should the disciplines be

learned?" In order to live well, of course, and to serve your nation and friends. "Why did you become a monk? To be dead to earthly desires and to be swept along completely toward the heavenly, not to live in luxury and sloth." "Why did you become a judge? To safeguard the innocent, to restrain the wicked, to decide disputes between citizens, not to fill your bookcases." Great happiness would accrue in human existence if everyone kept his eye on his target—not the one that desire has proposed, but the one that God and honorable thought has put before him.

Moreover, the end is so important that everything is judged from it and the success of each endeavour is argued from it. Fasting to attune body to mind for the offices of devotion is a holy work—fasting to be considered holy is hypocrisy. Fasting to increase your wealth is greed—fasting to improve your physical condition, with no aim but good health, is medicine. The same should be said about praying, about giving alms, and about other praiseworthy works.

Those they call secondary ends are judged in the same balance. "You give alms to assist a poor man. Why do you want him to be assisted? For him to thank you and be devoted to you on account of being restored to life? Your work is merely human. To obey Christ and to restore Him in His limbs? You've hit your target. The laws of the heathens that refuse a reward to someone who has killed a tyrant for any reason other than freeing the state also have the same purpose; they too absolve a foreigner who has climbed a wall in defiance of the words of the law and repelled an enemy. In fact, an understanding of laws is gathered from their end; whoever displays it is seen as having fulfilled the law. Moreover, the final end brings a happiness beyond which there is nothing to desire. For example, a sheep has achieved its own happiness when it clothes and feeds someone, since this is the purpose for which the animal was born; if it could talk, a plucked flower delighting someone's eyes and nose would thank its planter because it is happily achieving the end for which it was planted. Hence those who look for happiness in the things that do not satisfy a man's soul and do not bring him tranquility are violently mistaken; anyone wanting a restful soul needs to find rest in God.

Baldesar Castiglione

1478–1529

Baldesar Castiglione was born to an old aristocratic family in Mantua, Italy. His parents provided him with not only an excellent humanist education in Latin and Greek, but also the proper training for a courtier, a role he assumed around 1494 at the court of Ludovico Sforza in Milan. Militarily weak, the Italy of Castiglione's day was divided into small principalities that were prey for surrounding stronger nations, notably Spain and France. When a French invasion drove Ludovico from Milan in 1499, Castiglione's mother introduced him into the service of Francesco Gonzaga, marquis of Mantua, to whom she was related. Castiglione assisted him in several military campaigns and performed diplomatic missions for him. One of these took him to Rome in 1503, where he met Guidobaldo da Montefeltro, duke of Urbino and brother-in-law of the marquis. Castiglione obtained grudging permission from the marquis, who was deeply offended by the request, to enter the duke's service. His principal duties for the duke were diplomatic and included a trip to England to receive the Order of the Garter by proxy for the ailing duke. Castiglione returned from England early in 1507, immediately before Pope Julius II paid a visit to Urbino. Castiglione later commemorated the brilliant conversation of the courtiers assembled for the pope's visit in his most famous work, *The Book of the Courtier* (*Il libro del cortegiano*; 1527; excerpted here).

In 1508 Duke Guidobaldo died, and his designated heir Francesco Maria della Rovere, who had been pressed upon Guidobaldo by the youth's uncle Pope Julius, became duke of Urbino. Castiglione remained in his service, following him in military campaigns and performing diplomatic missions. The latter was his strong suit; although trained in arms and horsemanship, Castiglione probably saw very little action in the field, and his only injury suffered in connection with a military campaign occurred when a mule fell on him behind the lines. In 1513 the duke sent Castiglione as his representative to Rome and rewarded his service by making him count of Novilara. Residing in Rome, Castiglione took part in its vibrant cultural life, developing close friendships with the great artists Raphael, who painted a sensitive portrait of him, and Michelangelo; with papal court officials Pietro Bembo, Jacopo Sadoleto, and Bibbiena (Bernardo Dovizzi); and with Federico Fregoso, then archbishop of Salerno. Several of these personages, those whom Castiglione first met at Urbino, appear as speakers in *The Book of the Courtier*, which he began to write at this time.

In 1516 Francesco Maria della Rovere was stripped of his dukedom by Pope Leo X, who gave it to his nephew Lorenzo de' Medici. The former duke and his wife went into exile in Mantua, and Castiglione followed them there, finally restored to the good graces of Francesco Gonzaga, marquis of Mantua. Castiglione married and continued to work on *The Courtier*, sending a first draft to friends in the fall of 1518. In 1519, when Francesco Gonzaga died, Castiglione continued in the service of his son Federico. In that same year, Lorenzo de' Medici died, and Castiglione returned to Rome to plead for the restoration of della Rovere as duke of Urbino (which did not happen, however, until after Pope Leo died in 1522).

In 1521, his young wife having died in childbirth, Castiglione entered holy orders, a move which facilitated his diplomatic efforts on behalf of the papacy and opened a pathway of advancement for him within the Church. He represented Federico, the new marquis of Mantua, at Rome until 1523, when he obtained the marquis's permission to accept an appointment from Pope Clement VII as his ambassador to the Spanish court of Emperor Charles V, the era's most powerful monarch (he was the son of Philip, the Hapsburg Holy Roman Emperor, and Joanna, the daughter of Ferdinand and Isabella of Spain). While in Spain, Castiglione finally completed *The Book of the Courtier*, which had been circulating in several drafts for almost ten years. Scholars believe that he added Book IV only after the death of Duke Guidobaldo's widow, Elisabetta Gonzaga, in 1526. The text finally went to press in Venice in 1527, while Rome was being brutally sacked by Spanish and German troops and Castiglione's patron Pope Clement VII was in prison. Castiglione remained at the court of Charles V and worked to negotiate Clement's release. He died suddenly of a fever at Toledo in 1529 and received a state funeral at which the emperor Charles himself eulogized him as "one of the best caballeros [noble gentlemen, knights] of the world."¹

The Book of the Courtier was one of the most widely read books of the Renaissance, going into more than eighty editions in several languages by 1619. In the original Italian, it was regarded as a model of good style that would enable that vernacular to accomplish as much in literature as the classical languages had. Emperor Charles V was said to keep *The Courtier* on his bedside table with his Bible and a copy of Machiavelli's *The Prince*. The first English translation, widely read and influential in English Renaissance literature, was Sir Thomas Hoby's, published in 1561. The book aroused some controversy for its supposed hedonism and several anticlerical statements; expurgated versions were published before the book was finally placed on the Index of forbidden texts by the Roman Catholic Church in 1590.

Although scholars believe that Castiglione originally conceived his book as a defense of women (a popular medieval and Renaissance genre), *The Book of the Courtier* is now viewed as largely responsible for the modern conception of a male figure, the so-called Renaissance man. One of his modern editors, Burton Milligan, has summarized this figure's traits thus: He is skilled in warfare and also in sports, especially those that require agility and dexterity; he is a wise, honest counselor to his aristocratic master, refusing to obey evil commands; he never brags about his accomplishments; he is well read in Greek and Roman oratory, poetry, and history, and also in vernacular classics (in Italian, these will be Dante, Petrarch, and Boccaccio); he is skilled in witty conversation, and he can write prose and poetry clearly and without affectation, although he is too modest to show his texts to any but his closest friends; he observes decorum, avoiding lower-class or vulgar behavior of any kind; he chooses friends like himself, who will enhance his reputation; he is not quarrelsome, but moderates his views diplomatically; he is handsome and manly; he is a true and discreet lover who is capable of rising from physical to spiritual love; ideally, though not necessarily, he is of noble birth.

¹Quoted in Robert W. Hanning and David Rosand, eds., *Castiglione: The Ideal and the Real in Renaissance Culture* (New Haven: Yale University Press, 1983), p. xxiv.

As Renaissance scholar Wayne Rebhorn has pointed out (1978), this is a man for whom his own personality is a work of art. In an age of great portrait art, he paints his own portrait, as it were. He wears carefully crafted masks that help him to improve his character. He is always “on stage,” always carefully monitoring how his performance is affecting his audience, the people around him. Above all, he must appear to do everything that he does so wonderfully well without much conscious effort: This is his crowning trait, called in Italian *sprezzatura*. The performance must never appear to be a performance; Rebhorn suggests (1993) that its naturalness testifies to the courtier’s right to be where he is, in contrast to lower-class buffoons who display themselves with vulgarity.

Castiglione himself identified Cicero’s *De Oratore* as the principal influence on *The Courtier*, and modern scholars agree with him. Some passages actually closely paraphrase Cicero in translation, and Castiglione’s ideal courtier shares much with Cicero’s ideal orator, such as a broad humanist education. As Renaissance literary scholar Daniel Javitch has pointed out, however, there are some important differences between Castiglione’s ideal and the orator described in Cicero (and promoted in Italian humanist education). Cicero’s orator is formed for verbal combat, addressing large, socially mixed but largely male audiences and attempting to persuade them to adopt his views on civic questions and to take the action he recommends. In contrast, Castiglione’s courtier must be verbally conciliatory, since he usually addresses small private audiences, often of his social superiors and often including women; he cannot insist on his point of view but must dissemble and attempt to move indirectly, and more often, he is not using his verbal abilities even for this limited political action but is attempting merely to entertain.² It is no coincidence, suggests Javitch (1983), that both *De Oratore* and *The Courtier* were written at a time when democratic freedoms were declining and the political world was increasingly being governed by despots. But whereas Cicero chooses to celebrate a fading ideal in the face of change, Castiglione attempts to fashion one that will be more effective within the new order. Feminist scholar Carla Freccero has suggested that this amounts almost to a feminizing, or emasculating, of the courtier, making the discussion of women and their subjection in Book III central to the text’s political vision.

SUMMARY OF *THE BOOK OF THE COURTIER*

The chief female speakers, of whom only Emilia Pia has many lines, are Elisabetta Gonzaga, wife of Guidobaldo da Montefeltro, duke of Urbino; Lady Emilia Pia, the duchess’s companion and widow of the duke’s half-brother; Margarita Gonzaga, young niece and companion of the duchess; and Costanza Fregoso, young niece of the duke. The chief male speakers, who do most of the talking, are Francesco Maria della Rovere, young nephew and heir of the duke; Federico Fregoso, nephew of the duke, later a cardinal; Ottaviano Fregoso, elder brother of Federico and Costanza, later doge of Genoa; Count Ludovico da Canossa, a kinsman of Castiglione, later bishop of Bayeux; Giuliano de’ Medici, the “Magnifico,” son of Lorenzo the

²Daniel Javitch, *Poetry and Courtliness in Renaissance England* (Princeton: Princeton University Press, 1978), pp. 23–49.

Magnificent, close friend of Castiglione, later duke of Nemours; Bernardo Dovizzi (Bibbiena), a Medici follower, later a cardinal; Cesare Gonzaga, kinsman of the duchess, cousin and close friend of Castiglione; Bernardo Accolti, also called Unico Aretino, a courtier-poet; Lord Gaspar Pallavicino; and Pietro Bembo, Venetian scholar and poet, later a cardinal. These are all historical personages, although Castiglione suppresses unsavory details about some of them.

In the Epistle, the narrator Castiglione says that he wrote *The Book of the Courtier* to commemorate the delights of the court of Duke Guidobaldo. He wishes to publish it now both to forestall pirated editions and to commemorate many of the principal players—especially the duchess—who are now dead. He defends his choice to write “as I speak,” in his own Lombard dialect, and says he has imitated authors fully as good as Boccaccio and therefore should not be required to imitate Boccaccio and his antique Tuscan. Castiglione refers the reader to further discussion of this issue in Book I (excerpted here). He also defends his choice to describe the perfect courtier, even if this ideal is unattainable, because it will give people something to aim for.

In Book I, Castiglione tells the book’s dedicatee, Alfonsus Ariosto (brother of the poet), that he will fulfill his request to describe the perfect courtier by recounting a conversation on the subject that took place at the court of the duke of Urbino while Castiglione was serving there (he modestly denies being present, but he sets the discussion at an actual historical moment, following the visit of Pope Julius II, when he was in Urbino). He credits the duchess with the high quality of the conversation.

The scene is an evening gathering of male and female courtiers in the company of the duchess. The duke’s heir, della Rovere, is not present because he is escorting the pope, who has just departed after a visit to the court (and the duke never takes part in the conversation, being secluded because of ill health). The papal visit has attracted many courtiers, so the company is numerous. The duchess makes the Lady Emilia Pia the “master of ceremonies” for the evening, and she commands the men to come up with a new game for the group to play, that is, a new topic of conversation.

Several of the men offer topics that the Lady Emilia Pia receives in silence. Finally she asks Federico Fregoso to make a suggestion, and he proposes describing the perfect courtier. Without explaining why, the Lady Emilia and the duchess immediately approve this topic, and Lady Emilia assigns the task of exposition to Ludovico da Canossa, because, she says, he will make a hash of it and then the rest of them will get a chance to talk by correcting him. Everyone laughs.

Although pleading his inadequacy to the task, Count Ludovico begins by stating that the perfect courtier should be born a gentleman. Noble birth stimulates virtue. It also improves the chances that the courtier will possess traits necessary to his success, namely, intelligence, personal beauty, and a certain grace that makes everything he does attractive. Lord Gaspar protests that these traits may be found among men of low birth, and folly among the noble. The count does not deny this, but says that if we are talking about the perfect courtier, we may as well give him the adornment of noble birth. It predisposes people to think well of him, a very valuable advantage.

The count explains that the courtier's principal profession should be military. It is important that he be known as a brave man, because if his courage is ever called into question, the damage to his reputation will be hard to repair, just as if he were a woman accused of unchastity. Yet he must not attempt to establish his reputation by bragging about his prowess. Let him be fierce in battle and modest and retiring everywhere else. The courtier must know how to let his accomplishments be known discreetly.

According to the count, the perfect courtier's good looks must be manly, not effeminate. He should be of middle size. He should be skilled in arms both in battle and in private quarrels (duels), and must always show himself brave but not rash. He must be a skilled horseman for battle and for games played on horseback. He should be adept at gentlemanly sports such as hunting, but he should avoid physical accomplishments that are mere tricks, such as juggling.

Here Lord Cesare Gonzaga asks the count to say more about the "certain grace" that should adorn the courtier's actions. Tell us how we can acquire this grace, he says. The count replies that he has not set himself up to be a teacher, but only to describe the perfect courtier's traits, though it is true that grace can be increased with effort. A good way to improve is to imitate men who obviously have it. (Our excerpt begins here.)

Grace must avoid preciousness and any appearance of working hard to do something well. Skill must be masked with a certain appearance of carelessness, just as some orators of old always claimed to be unpracticed in the literate arts. Avoid appearing overly concerned with your appearance. Don't spoil the effect of your skill by trying to add one more nice touch and overdoing it. The count gives examples of various gentlemanly accomplishments.

Above all, the count advises, avoid preciousness in speech—use your own native dialect and avoid foreign and archaic words. There follows a debate about whether archaic words may be used in writing, if not in speech, and whether writing and speech should differ in other ways. The question is raised whether the speaker/writer should make clearness and comprehensibility his chief concern or whether he should place more responsibility on the audience to understand him. The count wants speech and writing to be similar and clear.

Why is the Tuscan dialect thought to be the best? Because it has remained closer to the parent Latin than other Italian dialects and is less polluted with invaders' languages, and because great writers have used it (Dante, Petrarch, Boccaccio). Nevertheless, we should not now use Tuscan words that are archaic and hard to understand, except very rarely. A man should mainly use the dialect with which he is most familiar.

Words and thought cannot be separated—knowledge is required to speak and write well. One's words must be placed in a good order, with vocabulary that is appropriate to the occasion. The courtier should be able to speak humorously on occasion and also to raise various emotions in his hearers.

The count defends the vernacular passionately and says we need a common Italian tongue that borrows what is good from all dialects and does not attempt to reduce the language to rules but follows the usage of the most learned and the "best"

people. There are many different good styles, as we see can when we compare writing with music or painting. A man should develop the style that comes most naturally to him rather than force himself to follow an uncongenial model, no matter how exalted.

Lady Emilia now insists that the discussion has gone too far afield from its original topic, and she commands the count to return to the task of defining the courtier's special grace. He does so by exploring the example of women who attempt to enhance their beauty with cosmetics: To the extent that the beholders are aware that the woman has used cosmetics, her beauty is diminished, not enhanced. The courtier must similarly eschew any obvious attempt to appear skilled; all must seem natural and offhand.

Knowledge must inform the courtier's discourse. This must be the knowledge of virtue, which is not a very complex thing, since it requires only honesty. The courtier also needs book learning; examples of contemporary learned noblemen and classical examples are rehearsed. What should he read? Let him read of ancient military heroes, in hopes that this will inspire him. He should know Greek as well as Latin and read poets, orators, and historians, and he should practice writing in these languages as well as in the vernacular—this will help him especially with the ladies. Moreover, his studies will equip him to judge the writing and speaking of others, a useful skill. He will be able to speak copiously on any subject at short notice—but he must never pretend to know something he does not know, a fatal error. (Our excerpt ends here.) Pietro Bembo and Count Ludovico go on to argue about whether letters or arms constitute the greater accomplishment for the courtier.

The company now complains that the count is asking the impossible of his courtier. He laughs and says that he is not done yet: The courtier also should be able to sing and play, although without seeming to put much effort into these accomplishments. He should also know something about art, enough to judge the work of others. The company then debates which art is better, painting or sculpture. Contemporary and classical examples of heroes and noblemen who honored artists are adduced. Do painters appreciate female beauty more than ordinary men do? This question is being debated when the company is interrupted by the arrival of Francesco Maria della Rovere, who has been escorting the departing pope on his way. The young man is delighted to learn that the guests are discussing the perfect courtier, and he wants the discussion to continue so that he may learn from it, but the ladies suggest that the hour is too late to continue. Therefore, the company relaxes a bit by listening to music while some of the ladies dance, and then all retire to bed.

Book II begins with the narrator Castiglione's criticism of old men for their habit of denigrating everything contemporary as less good than the things of olden time. Although the present age has its vices, it has no more than earlier ages, and certainly as many virtues as well. The court of Duke Urbino, represented in this book, was second to none. Now the tale moves to a second evening of discussion on the traits of the ideal courtier. His need for modesty is stressed. The attributes given him the previous day are reviewed, with some further debate over details.

The courtier should serve his lord cheerfully, not show off the good opinion and easy access he enjoys from his lord, and he should seldom beg for favors for himself. Should the courtier obey if his lord requires him to do evil? This point is debated at some length as the company considers how evil the deed is and what good may come from it, but overall, the group judges that the courtier should not obey evil commands.

The discussion turns to the importance of making a good appearance. The guests discuss what the courtier should wear. They stress that the courtier should choose friends of good reputation to enhance his own reputation. His reputation will precede him and influence people strongly. He should keep himself clean and not indulge too much in eating or drinking.

Francesco Maria della Rovere, present this evening, commands Federico Fregoso to explain how the courtier should use humor. He and Bibbiena, an acknowledged expert, now share the exposition of this subject, using many examples (drawn from Cicero's *De Oratore*). They condemn bawdy jokes. The discussion of word play ends with examples of verbal tricks that men use to seduce women. Women are berated for allowing themselves to be fooled, and they are urged to look for the signs of true affection. The duchess now orders Giuliano de' Medici, the "Magnifico," to provide a portrait of the ideal female courtier. Since the hour is late, that will be postponed until tomorrow.

Book III begins with Lord Gaspar Pallavicino—who, it will appear, is a misogynist—objecting to the topic. The duchess says he's afraid to hear just how excellent a woman might be. Lord Cesare Gonzaga adds that the presence of accomplished ladies is essential to any court. The Magnifico is allowed to proceed.

He says that the virtues of mind that have been outlined for the male courtier should also belong to the ideal female courtier. She should also possess noble birth, a lack of affectation, and that certain grace that makes all her doings seem effortless. She should be witty, and not envious, argumentative, foolish, or given to slander. She should keep her lady's good will without pushing herself forward. She should be tender and mild, with movements full of womanly sweetness in contrast to the stalwart male. She should be beautiful. She must be very careful to defend herself against any accusations of unchastity.

She should know how to manage her husband's household, but her true profession as a courtier, corresponding to arms for the male, is the art of conversation. She should be able to entertain all kinds of men with conversation appropriate to their station and to the time and place. She must be both witty and good, never listening to bawdy talk or gossip. She must be able to pick out what is important in any issue under discussion and speak to the purpose, but never pretend to know what she does not know. She must never praise herself.

She should not engage in the boisterous sports of men. She should be able to dance, sing, and play a musical instrument, but all sweetly and gently—with no rowdiness. She should dress modestly but in a way that enhances her best points. She should be able to judge men's performances in their sports and know something about literature, drawing, and painting. She should be able to devise "sports and pastimes" suitable to the group in which she finds herself.

She should be wise, steady, brave, and temperate. Here Lord Gaspar breaks in sarcastically and asks if the Magnifico will have her running the government and making laws next. He replies that this would not be a bad thing, citing the authority of Plato and his ideal state, and the examples of modern queens. But these are not the tasks of the female courtier.

Lord Gaspar exclaims that Lord Giuliano insults the ladies present by devising an ideal female courtier who is so clearly unattainable—the ladies will know that he is a mere flatterer! He now rehearses a number of arguments for female inferiority, such as Aristotle's claim that women spring from defective embryos, and the Magnifico handily refutes them all. Why then, asks Lord Gaspar tartly, do so many women wish they were men? Only because they want liberty and to be free of male oppression, says the Magnifico.

Moreover, many famous men have been helped by wives, mothers, and sisters. The Magnifico recounts several long stories of women who displayed exemplary love for their husbands. He names learned women, including Diotima and Aspasia. He depicts many women who helped the state, either by spurring their men to bravery in battle or by their own courage in arms. He attacks the view that unchastity is a worse offense in women than in men, implicating men in women's unchastity. He tells stories of women who protected their chastity heroically.

Federico now asks how the gentlewoman should conduct her profession of conversation where love is concerned. The Magnifico replies that she should doubt glib expressions of love and know that the true lover is tongue-tied. She should seek only one, whom she may marry if she is unwed, or who may be no more than an intellectual companion to her, if she is already married. She should not seek to fascinate many men or give out many love tokens. The discussion suggests that the ideal female courtier should have a courtly lover. He should hint at his feelings and look for encouragement, especially by exchanging glances. If he is accepted as a lover, he should keep his love secret from everyone else. Lord Gaspar breaks in to descant upon the unmotivated cruelty of women to their lovers, and before the Magnifico can defend them, Ottaviano Fregoso interjects that both men depict women incorrectly, either too negatively or too positively, and meanwhile, the group has lost sight of what it should be discussing, namely, the traits of the ideal courtier. Very well, says the duchess, tomorrow you may correct these faults.

Book IV begins with Castiglione's brief praise of the male participants in the conversation; he describes the achievements of those who did not die young and commemorates those who did. He also praises the new duchess of Urbino. The discussion resumes with Ottaviano saying that what is missing is the purpose of the (male) courtier's training, without which this training might lead merely to effeminacy. The courtier should gain his master's confidence so that he can advise him to choose virtuous goals and teach him how to attain them. The courtier's training in entertainments (music, sports, and so on) is designed to make him more attractive to his lord and so more persuasive. His real value is as a spur toward good. Too many princes are ignorant and conceited because their courtiers flatter and lie to them. The courtier must be honest, but he must also remember to be tactful and discreet.

The prince who has already been corrupted by bad advisors must be approached indirectly. In other words, the courtier will convey truth and support good by dissembling.

There follows a long debate on whether virtue may be learned. Most say yes. Temperance is presented as a master virtue because it can even harness vices to good ends; for example, it can permit the judicious use of anger to enhance manly authority.

Next there is much dispute on what form of government is best. Although government by one prince, by the people, and by an elite group are all mentioned, the third alternative tends to drop out and the others are seen as the two alternatives. Different views are expressed, but the consensus seems to be that rule by a single prince is best, if that prince is virtuous. Therefore, once again, the possibilities for instructing the prince in virtue are discussed. He should spend more time overseeing his subjects' activities than acting himself. He should seek peace and prosperity for his land rather than wasting its men and substance in wars to enlarge its boundaries. The courtier can help form this virtuous prince by first guiding his everyday habits; only later should the courtier speak directly of virtue. The prince should appoint councils of noblemen and commoners to debate issues for him. His primary concern should be justice. He should try to prevent extremes of wealth and poverty in his realm.

Lord Cesare Gonzaga argues that, in addition to being virtuous, the prince must appear virtuous. He must appear princely. How? He should show himself manly and brave in arms. He should be gentle and courteous in court. He should present pleasing shows, banquets, and games. He should keep magnificent horses, hawks, and hounds. He should erect large and beautiful buildings. Lord Ottaviano adds that he may make war to overthrow tyrants and to convert infidels.

Now follows an explanation of various objections to the idea that the courtier can teach his lord (or her lady). In the process, Ottaviano notes that Aristotle played the courtier to Alexander and Plato to the kings of Sicily. The consensus remains that most princes are teachable; however, if one finds oneself in the service of a master who is too corrupted by long evil practice to change, one should leave him.

An earlier idea, depicting the courtier as a lover, is disputed. What if the courtier is an older man? Won't he look ridiculous playing the lover? Pietro Bembo takes up this question by defining the nature of love. He contrasts physical and spiritual love. The former, most common among young men, is inferior to the latter because it dissipates when its desire is achieved. Spiritual love, however, which does not require the union of bodies, grows ever deeper, and is quite appropriate to older lovers, who can better appreciate it. Spiritual beauty, the object of spiritual love, appears to consist of harmony among parts, both mental and physical—that is, a beautiful nature in a beautiful body, even though the body is not the primary object of attention. A beautiful person cannot be evil unless corrupted by very unusual circumstances. Chief among its many virtues is the fact that spiritual love of a person can lead to divine love. Bembo talks himself into a rhapsody on this subject, and when he finally ceases, the company discovers that dawn is breaking. Nevertheless, Lord

Gaspar interjects that women are not capable of spiritual love, and the Magnifico leaps to their defense. The duchess gently silences them, promising more discussion of this topic tonight.

Selected Bibliography

The standard translation of *The Book of the Courtier* is Charles S. Singleton's (1959), from which our excerpt is taken. A more recent and very readable translation is George Bull's (1967). Sir Thomas Hoby's famous Elizabethan translation is available in *Three Renaissance Classics: The Prince, Utopia, The Courtier* (ed. Burton A. Milligan, 1953). Milligan's introduction provides helpful information on the cultural context of Castiglione in the Renaissance.

There is no modern scholarly biography of Castiglione. Still respected is Julia Cartwright's *Baldassare Castiglione: The Perfect Courtier* (2 vols.; 1908). J. R. Woodhouse's *Baldesar Castiglione: A Reassessment of "The Courtier"* (1978) begins with a helpful short biographical sketch and adds much information on the literary context of *The Courtier*. Frank Whigham's *Ambition and Privilege: The Social Tropes of Elizabethan Courtesy Theory* (1984) relies on Castiglione throughout and helpfully locates him in the Renaissance sociopolitical milieu.

An important collection of essays, edited by Robert W. Hanning and David Rosand, is *Castiglione: The Ideal and the Real in Renaissance Culture* (1983). Wayne Rebhorn explores Castiglione's social and aesthetic ideas in *Courtly Performance: Masking and Festivity in Castiglione's "Book of the Courtier"* (1978). See also his "Baldesar Castiglione, Thomas Wilson, and the Courtly Body of Renaissance Rhetoric" (*Rhetorica* 11 [summer 1993]: 241-74), which further explores Renaissance social ideas through these two writers' depiction of the courtier's physical body.

Many scholars have explored the political implications of *The Courtier*. Treating it as a response to increasing despotism in the Renaissance is Thomas M. Greene, "Il Cortegiano and the Choice of a Game" (in Hanning and Rosand). Daniel Javitch addresses the same theme in his "Il Cortegiano and the Constraints of Despotism," in the same volume, and in his *Poetry and Courtliness in Renaissance England* (1978). Carla Freccero finds feminist implications in this issue in "Politics and Aesthetics in Castiglione's *Il Cortegiano*: Book III and the Discourse on Women" (in *Creative Imitation: New Essays on Renaissance Literature*, ed. David Quint et alia, 1992).

A number of Renaissance philosophical and aesthetic issues are raised in *The Courtier*. Wayne Rebhorn discusses Castiglione's theory of language in "The Enduring Word: Language, Time, and History in *Il Libro del Cortegiano*" (in Hanning and Rosand). On the relationship of ideas of merit in Castiglione and in the new nominalist theology of his day, see Ullrich Langer, *Divine and Poetic Freedom in the Renaissance* (1990). On Castiglione's Neoplatonism, see Christine Raffini's *Marsilio Ficino, Pietro Bembo, Baldassare Castiglione: Philosophical, Aesthetic, and Political Approaches in Renaissance Platonism* (1998). Ottaviano Fregoso's uses of Plato and Aristotle are also discussed in John D. Bernard's "Castiglione's Gentle Art of Persuasion in Book IV of *The Courtier*" (*Renaissance Papers* [1983]: 1-15).

From *The Book of the Courtier*

“But, having thought many times already about how this grace is acquired (leaving aside those who have it from the stars), I have found quite a universal rule which in this matter seems to me valid above all others, and in all human affairs whether in word or deed: and that is to avoid affectation in every way possible as though it were some very rough and dangerous reef; and (to pronounce a new word perhaps) to practice in all things a certain *sprezzatura* [nonchalance], so as to conceal all art and make whatever is done or said appear to be without effort and almost without any thought about it. And I believe much grace comes of this: because everyone knows the difficulty of things that are rare and well done; wherefore facility in such things causes the greatest wonder; whereas, on the other hand, to labor and, as we say, drag forth by the hair of the head, shows an extreme want of grace, and causes everything, no matter how great it may be, to be held in little account.

“Therefore we may call that art true art which does not seem to be art; nor must one be more careful of anything than of concealing it, because if it is discovered, this robs a man of all credit and causes him to be held in slight esteem. And I remember having read of certain most excellent orators in ancient times who, among the other things they did, tried to make everyone believe that they had no knowledge whatever of letters; and, dissembling their knowledge, they made their orations appear to be composed in the simplest manner and according to the dictates of nature and truth rather than of effort and art; which fact, had it been known, would have inspired in the minds of the people the fear that they could be duped by it.

“So you see how art, or any intent effort, if it is disclosed, deprives everything of grace. Who among you fails to laugh when our messer Pierpaolo dances after his own fashion, with those capers of his, his legs stiff on tiptoe, never moving his head, as if he were a stick of wood, and

all this so studied that he really seems to be counting his steps? What eye is so blind as not to see in this the ungainliness of affectation; and not to see the grace of that cool *disinvoltura* [ease] (for when it is a matter of bodily movements many call it that) in many of the men and women here present, who seem in words, in laughter, in posture not to care; or seem to be thinking more of everything than of that, so as to cause all who are watching them to believe that they are almost incapable of making a mistake?”

Here messer Bernardo Bibbiena said, without waiting: “Now you see that our messer Roberto has at last found someone to praise his style of dancing, as it seems that none of the rest of you esteem it at all. For if this excellence consists in nonchalance, in showing no concern, and in seeming to have one’s thoughts elsewhere rather than on what one is doing, then in dancing messer Roberto has no peer on earth, because to make it quite plain that he is giving no thought to what he is doing, he lets his clothes fall from his back and his slippers from his feet, and goes right on dancing without picking them up.”

Then the Count replied: “Since you are determined that I shall go on talking, I will say something more of our faults. Do you not see that what you are calling nonchalance in messer Roberto is really affectation, because we clearly see him making every effort to show that he takes no thought of what he is about, which means taking too much thought; and because it exceeds certain limits of moderation, such nonchalance is affected, is unbecoming, and results in the opposite of the desired effect, which is to conceal the art. Hence, I do not believe that the vice of affectation is any less present in a nonchalance (in itself a praiseworthy thing) wherein one lets his clothes fall off than a studied concern for one’s personal appearance (also, in itself, a praiseworthy thing), bearing the head so stiff for fear of spoiling one’s coiffure, or carrying a mirror in the fold of one’s cap and a comb in one’s sleeve, and having one’s page follow about through the

Translated by Charles Singleton.

streets with a sponge and brush; because such care for personal appearance and such nonchalance both tend too much to extremes, which is always a fault, and is contrary to that pure and charming simplicity which is so appealing to all. Consider how ungraceful that rider is who tries to sit so very stiff in his saddle (in the Venetian style, as we are wont to say), compared with one who appears to give no thought to the matter and sits his horse as free and easy as if he were on foot. How much more pleasing and how much more praised is a gentleman whose profession is arms, and who is modest, speaking little and boasting little, than another who is forever praising himself, swearing and blustering about as if to defy the whole world—which is simply the affectation of wanting to cut a bold figure. And the same holds true in every practice, indeed in everything that is said or done.”

Then the Magnifico Giuliano said: “It holds true as well in music, wherein it is a great mistake to place two perfect consonances one after the other, for our sense of hearing abhors this, whereas it often enjoys a second or a seventh which in itself is a harsh and unbearable discord. And this is due to the fact that to continue in perfect consonances generates satiety and gives evidence of a too affected harmony, which is avoided when imperfect consonances are mixed in, establishing a kind of comparison, by which our ears are held in greater suspense, and more avidly wait upon and enjoy the perfect consonances, delighting in that discord of the second or seventh as in something that shows nonchalance.”

“So, you see,” replied the Count, “that affectation is detrimental in this as in other things. Moreover, it is said to have been proverbial with certain most excellent painters of antiquity that excessive care is harmful, and Protogenes is said to have been censured by Apelles for not knowing when to take his hands from the board.”

Then messer Cesare said: “It seems to me that our fra Serafino has this same fault of not knowing when to take his hands from the board, at least not before all of the food has been taken from it too.”

The Count laughed and added: “Apelles meant

that Protogenes did not know when to stop in painting, which was nothing if not a kind of reproach for his being affected in his work. Thus, this excellence (which is opposed to affectation, and which, at the moment, we are calling *nonchalance*), besides being the real source from which grace springs, brings with it another adornment which, when it accompanies any human action however small, not only reveals at once how much the person knows who does it, but often causes it to be judged much greater than it actually is, since it impresses upon the minds of the onlookers the opinion that he who performs well with so much facility must possess even greater skill than this, and that, if he were to devote care and effort to what he does, he could do it far better.

“And, to multiply such examples, take a man who is handling weapons and is about to throw a dart or is holding a sword or other weapon in his hand: if immediately he takes a position of readiness, with ease, and without thinking, with such facility that his body and all his members fall into that posture naturally and without any effort, then, even if he does nothing more, he shows himself to be perfectly accomplished in that exercise. Likewise in dancing, a single step, a single movement of the body that is graceful and not forced, reveals at once the skill of the dancer. A singer who utters a single word ending in a group of four notes with a sweet cadence, and with such facility that he appears to do it quite by chance, shows with that touch alone that he can do much more than he is doing. Often too in painting, a single line which is not labored, a single brush stroke made with ease and in such a manner that the hand seems of itself to complete the line desired by the painter, without being directed by care or skill of any kind, clearly reveals that excellence of craftsmanship, which people will then proceed to judge, each by his own lights. And the same happens in almost every other thing.

“Therefore our Courtier will be judged excellent, and will show grace in all things and particularly in his speech, if he avoids affectation: which error is incurred by many and sometimes, more than others, by our Lombards who, if they have been away from home for a year, come back and start right off speaking Roman, or

Spanish, or French, and God knows how! All of which stems from an excessive desire to appear very accomplished, and so they put effort and diligence into acquiring a most odious fault. Certainly it would require no little effort on my part if in these discussions I attempted to use those antique Tuscan words which the Tuscans of today have already dropped from use; moreover, I believe you would all laugh at me.”

Then messer Federico said: “It is true that in discussing among ourselves, as we are now doing, it would be bad perhaps to use those antique Tuscan words, because, as you say, they would be irksome both to the speaker and to the listener, and many would understand them only with difficulty. But if one is writing, then I do believe it would be wrong not to use them, because they give much grace and authority to writing, and result in a diction of more gravity and majesty than is had with modern words.”

“I do not know,” replied the Count, “what grace or authority can be given to writing by words that ought to be avoided, not only in such talk as we are presently engaged in (which you yourself admit) but also in any circumstance whatever that one can imagine. For if any man of good judgment had to deliver an oration on weighty matters before the very senate of Florence, which is the capital of Tuscany, or had to speak privately about important business with some person of rank in that city, or yet about amusing things with some close acquaintance, or about love with ladies or gentlemen, or in jokes or jests at feasts, games, or where you will, whatever the time, place, or matter, I am sure he would take care to avoid using those antique Tuscan words; and if he used them, not only would he bring ridicule upon himself but he would give no little annoyance to anyone hearing him.

“Therefore it strikes me as very strange to use as good words in writing those which are eschewed as bad in whatever sort of speech, and to maintain that what is never proper when spoken should be the most proper usage possible in writing. For it is my opinion that writing is simply a form of speaking which endures even after it is uttered, the image, as it were, or better, the soul of our words. Hence, in speech, which vanishes

as soon as it is uttered, some things are permissible; but not so in writing, because writing preserves the words and submits them to the judgment of the reader, giving him time to consider them at length. Wherefore, in the case of writing it is reasonable that greater care should be taken to make it more polished and correct; not, however, that the written words should be different from the spoken, but that in writing those words should be chosen which are the most beautiful in speech. And if what is not permitted in speaking should be permitted in writing, in my opinion a most unhappy thing would result: namely, more license would be taken in that wherein one should take the most care; and the effort that goes into writing would be detrimental rather than good.

“Therefore it is surely true that what is proper in writing is also proper in speaking; and that manner of speaking is most beautiful which resembles beautiful writing. Furthermore, I deem it far more essential to be understood in writing than in speaking, since those who write are not always present to their readers as those who speak are present to those with whom they speak. But I would praise any man who, besides avoiding many antique Tuscan words, would make certain, whether in speaking or writing, that he uses those words which are in current usage in Tuscany and in other parts of Italy and which have a certain grace when pronounced. And it seems to me that he who imposes upon himself any other rule is not quite sure of avoiding that affectation which is so much condemned and about which we were speaking a moment ago.”

Then messer Federico said: “I cannot deny you, Count, that writing is a kind of speech; but I do say that if spoken words have any obscurity in them, such discourse will not penetrate the mind of the listener, and, since it passes without being understood, is to no purpose; which does not happen in writing, because if the words which a writer uses have in them a little, I will not say difficulty, but subtlety that is hidden, and thus are not so familiar as the words that are commonly used in speaking, they do give a certain greater authority to the writing and cause the reader to proceed with more restraint and concentration, to reflect more, and to enjoy the talent and the

doctrine of the writer; and, by judiciously exerting himself a little, he tastes that pleasure which is had when we achieve difficult things. And if the ignorance of the one who reads is so great that he cannot overcome these difficulties, that is no fault of the writer, nor on this account must such a style be judged to be without beauty.

"Therefore I believe that in writing one should use Tuscan words and those only which have been used by the ancient Tuscans, because that is a great proof, tested by time, that they are good and effective in expressing what they signify. And, besides this, they have the grace and venerableness which great age gives not only to words, but to buildings, statues, pictures, and to everything that is able to take it on; and often by such splendor and dignity they make the diction beautiful, by the power and elegance whereof every subject, no matter how mean it may be, can be adorned so as to deserve the highest praise. But this matter of current usage, by which you set such store, to me seems very risky; and it can often be bad. And if some fault of speech is found to prevail among many ignorant persons, it seems to me that it ought not on this account to be taken as a rule and be followed by other persons. Moreover, usage varies a great deal, nor is there a noble city in Italy without its own manner of speech different from all the others. But since you have not felt bound to declare which speech among these is the best, a man might adopt Bergamasque as well as Florentine, and, according to you, there would be nothing wrong in this.

"It seems to me, therefore, that anyone who wishes to avoid all doubt and feel quite sure must set himself to imitating someone who by common consent is acknowledged to be good, and hold to him as to a guide and shield against any adverse critic. And such a model (in the vernacular, I mean) should be none other than Petrarch and Boccaccio; and whoever strays from these two is groping, like someone walking through the darkness without a light, and he will often lose his way. But we are today so forward that we do not stoop to do what the good writers of old did, namely, to practice imitation, without which I deem it impossible to write well. And it seems to me that a great witness of this is seen in Virgil who, though by his own genius and divine judg-

ment he deprived all posterity of the hope of being able to imitate him well, still chose to imitate Homer."

Then signor Gaspar Pallavicino said: "Certainly, this discussion about writing is well worth listening to; and yet it would be more to our purpose if you would teach us the manner the Courtier should observe in speaking, for I think he has greater need of that, since he has to use speech more often than writing."

The Magnifico replied: "Indeed, there is no doubt that a Courtier so excellent and perfect will need to have knowledge of both the one and the other; and without these two abilities perhaps all the rest would not be deserving of much praise. Therefore, if the Count wishes to perform his duty, he will teach the Courtier not only how to speak well but also how to write well."

Then the Count said: "Signor Magnifico, I would not think of undertaking such a task, for it were great folly on my part to presume to teach others what I do not know myself, and (even if I did know it) to think that I could teach in so few words what very learned men have barely been able to do by so much labor and effort—to whose works I would refer our Courtier if I had to teach him to write and speak."

Messer Cesare said: "The Magnifico means speaking and writing in the vernacular and not in Latin; therefore those works of learned men are not to our purpose. But it is for you to tell us what you know about this, and more than that we shall not expect of you."

"I have already told you that," replied the Count; "but if we are speaking of the Tuscan language, perhaps the Magnifico, more than anyone else, ought to give us his judgment on that."

The Magnifico replied: "I cannot, and in reason should not, gainsay anyone who holds that the Tuscan language is more beautiful than the others. It is true, of course, that one meets with many words in Petrarch and Boccaccio that have now been dropped from usage. And I for one would never use these either in speaking or writing; nor do I think that they themselves would use them any longer if they had lived into our time."

Then messer Federico said: "Nay, but they

would! And you Tuscans ought to renew your language and not allow it to die, as you are doing—so that by now we can say that it is less known in Florence than in many other places in Italy.”

Then messer Bernardo said: “Those words which are no longer used in Florence have remained with the peasants, and are rejected by the gentry as words that have been corrupted and spoiled by age.”

Then the Duchess said: “Let us not stray from our original purpose; but let the Count teach the Courtier how to speak and write well, whether it be Tuscan or whatever.”

“Madam,” the Count replied, “I have already told you what I know about this; and I maintain that the same rules which serve to teach the one thing serve also to teach the other. But since you command me to do so, I will say what I have to say to messer Federico, who differs from me on this. And it may be that I shall have to speak at somewhat greater length than is suitable, but it will be all that I am able to say.

“First I will say that, in my opinion, this language of ours which we call the vulgar tongue is still tender and new, although it has been in use now for quite a long time. For, since Italy has not only been harried and ravaged, but long inhabited, by the barbarians, the Latin language has been corrupted and spoiled by contact with those peoples, and out of that corruption other languages have arisen: and, like the rivers that divide at the crest of the Apennines and flow into the sea on either side, so these languages also have divided, and some that were tinged with Latinity have flowed in various channels and in different directions; and one that was tinged with barbarism remained in Italy. The latter was for a long time disordered and uneven, having no one to take any care of it or to attempt to give it any splendor or grace. Yet finally it was cultivated somewhat more in Tuscany than in other parts of Italy. And for this reason it seems to have flourished there from those early times, because that people more than others have kept gentle accents in their speech and a proper grammatical order, and have had three noble writers who expressed their thoughts ingeniously and in the words and

terms that were current in their time; wherein it fell to Petrarch to do this in amorous subjects with more felicity than the others, in my opinion.

“Then, from time to time, not only in Tuscany but in the rest of Italy, among wellborn men versed in the usages of courts, in arms, and in letters, a concern arose to speak and write more elegantly than in that first rude and uncultivated age when the fires of calamity set by the barbarians were not yet extinguished. Thus, both in the city of Florence itself and in all Tuscany, as well as in the rest of Italy, many words were abandoned, and others were taken up in their stead, thereby bringing about the change which takes place in all things human and has always taken place in other languages as well. For if the earliest writings in ancient Latin had survived until now, we should see that Evander and Turnus and the other Latins of those times spoke differently from the last Kings of Rome or the first consuls. For note that the verses which the Salians sang were hardly understood by later generations; but since they had been so composed by those who first gave them their form, out of a religious reverence they were left unchanged. Thereafter, orators and poets gradually abandoned many words that had been used by their predecessors; thus, Antonius, Crassus, Hortensius, and Cicero avoided many of Cato’s words, and Virgil many of Ennius’; and so did many others. For, although they had reverence for antiquity, they did not hold it in so great esteem as to feel bound by it as you would have us be today. On the contrary, wherever they saw fit, they censured it, as Horace who says that his forebears were foolish in their praise of Plautus, and insists on his right to acquire new words. And Cicero in many places reprehends many of his predecessors, and in censuring Sergius Galba declares that his orations have an antique cast to them; and he says that Ennius himself spurned his predecessors in certain things: so that, if we attempt to imitate the ancients, we shall not be imitating them. And Virgil, who (as you say) imitated Homer, did not imitate him in language.

“Therefore I for my part would always avoid using these antique words, save only in certain places and rarely even there; and it strikes me that one who otherwise uses them errs, no less

than one who, in order to imitate the ancients, would choose to feed on acorns when wheat in quantity was already at hand. And because you say that by their very splendor of antiquity, antique words so greatly adorn every subject, however mean, that they can make it worthy of much praise—I say that I do not set such great store either by these antique words or even by good words as to think that in reason they are to be prized if devoid of the pith of fine thoughts; for to separate thoughts from words is to separate soul from body: in neither case can it be done without destruction.

“So, as I believe, what is most important and necessary to the Courtier in order to speak and write well is knowledge: because one who is ignorant and has nothing in his mind worth listening to can neither speak nor write well.

“Next, what one has to say or write must be given a good order. It must then be well expressed in words, which words (if I am not mistaken) must be proper, select, lustrous, and well formed, but above all be words which are still used by the people. Now it is the words themselves that make the greatness and magnificence of an oration; for if a speaker uses good judgment and care, and understands how to choose those words which best express what he wishes to say; and if he elevates them, and shapes them to his purpose like so much wax, he can give them such a disposition and an order such as to cause them to reveal at a glance their dignity and splendor, like paintings when placed in a good and natural light. And I say this as well of writing as of speaking; except that in speaking some things are required that are not needed in writing: such as a good voice, not too thin or soft as a woman’s, nor yet so stern and rough as to have a boorish quality, but sonorous, clear, gentle, and well constituted, with distinct enunciation and with fitting manner and gestures. The latter, in my opinion, consist in certain movements of the entire body, not affected or violent, but tempered by a seemly expression of the face and a movement of the eyes such as to give grace and be consonant with the words, together with such gestures as shall signify as well as possible the intention and the feeling of the orator. But all this would be empty and of little moment if the thoughts expressed by

the words were not fine, witty, acute, elegant, and solemn, according to the need.”

Then signor Morello said: “If this Courtier of ours speaks with so much elegance and gravity, I fear there may be those among us who will not understand him.”

“Nay,” replied the Count, “all will understand him, because words that are easy to understand can still be elegant. Nor would I have him always speak of grave matters, but of amusing things, of games, jests, and jokes, according to the occasion; but sensibly in everything, with readiness and a lucid fullness; nor must he show vanity or a childish folly in any way. Then, whenever he speaks of anything that is obscure or difficult, I would have him explain his meaning down to a fine point, with precision in both words and thoughts, making every ambiguity clear and plain in a manner that is careful but not tiresome. Likewise, when occasion demands, let him know how to speak with dignity and force, and how to stir up those sentiments which are latent within us, kindling and moving them as the need may be; and speak at other times with such simple candor as to make it seem that nature herself is speaking, to soften such sentiments and inebriate them with sweetness, and all this with such ease as to cause the one who listens to believe that with little effort he too could attain to such excellence—but who, when he tries, discovers that he is very far from it.

“Such is the manner in which I would have our Courtier speak and write; and let him not only choose fine and elegant words from every part of Italy, but I should praise him as well if sometimes he used some of those French or Spanish terms that are already current with us. Thus, should the need arise, I should not be displeased if he used *primor* (excellence); or used *accertare* (to succeed); *avventurare* (to hazard); or *ripassare una persona con ragionamento*, meaning to observe someone and associate with him in order to get to know him well; or *un cavaliere senza rimproccio* (a knight without reproach), *attilato* (elegant), *creato d’un principe* (the dependent of a prince) and other like terms, provided he has reason to think he will be understood. I would have him use certain words

sometimes in a sense they do not usually have, transferring them aptly, and, so to say, grafting them like the scion of a tree on some better trunk, in order to make them more attractive and beautiful and, as it were, put things before our very eyes; and, as we say, make us feel them with our hands, to the delight of the listener or the reader. Nor would I have him be afraid even to coin some new words; and he should use new figures of speech, taking these elegantly from the Latins, even as the Latins themselves once took them from the Greeks.

“Therefore if today, among men of letters of good talent and judgment, some took pains to write in this language (in a manner I have described) things worthy of being read, we should soon see it polished and replete with terms and fine figures, and capable of being used in writing as well as any other; and if this were then not pure old Tuscan, it would be Italian, universal, copious, and varied, and like a delightful garden full of a variety of flowers and fruits. Nor would this be anything new, for out of the four languages of which they were able to avail themselves, Greek writers chose words, expressions, and figures from each as they saw fit, and brought forth another that was called the ‘common’ language; then later all five were called simply Greek. And although Athenian was more elegant, pure, and copious than the others, good writers who were not Athenian by birth did not affect it so much as to be unrecognizable by their style and, as it were, by the savor and essence of their native speech. Yet they were not scorned for this; on the contrary, those who tried to seem too Athenian were blamed for it. Among Latin writers also there were many non-Romans who were much esteemed in their day, even though they were not seen to possess that purity of the Roman tongue which is rarely acquired by men born elsewhere. Certainly Titus Livius was not rejected, although there was one who claimed to find a Paduan flavor in him; nor was Virgil rejected on any charge that he did not speak Roman. Moreover, as you know, many writers of barbarian extraction were read and esteemed at Rome.

“But we, being far more strict than the ancients,

impose upon ourselves certain new laws that are inept; and although we have well-traveled roads before our eyes, we try to proceed along byways, for in our own language—the function of which, as of all other languages, is to express well and clearly what the mind conceives—we take pleasure in what is obscure; and, calling it the ‘vulgar tongue,’ we choose to use words in it which are not only not understood by the vulgar, but not even by noble men of letters, and are no longer in use anywhere, careless of the fact that all good writers among the ancients condemn words that have been rejected by usage. Which usage you do not well understand, in my opinion, because you say that if some fault of speech has become prevalent among the ignorant, it ought not to be called usage for that reason, nor accepted as a rule of speech; and, from what I have heard you state on other occasions, you would have us say *Campidoglio* instead of *Capitolio*; *Girolamo* instead of *Jeronimo*; *aldace* instead of *audace*; *padrone* instead of *patrone*—and other like words which are corrupt and spoiled—because they are so written by some ignorant old Tuscan, and because they are so used by Tuscan peasants today.

“Thus, good usage in speech, as I believe, springs from men who have talent, and who through learning and experience have attained good judgment, and who thereby agree among themselves and consent to adopt those words which to them seem good; which words are recognized by virtue of a certain natural judgment and not by any art of rule. Do you not know that figures of speech, which give so much grace and luster to discourse, are all abuses of grammatical rules, yet are accepted and confirmed by usage, because (it being impossible to give any other reason for this) they please, and seem to offer suavity and sweetness to the ear itself? And this, I believe, is what good usage is, whereof Romans, Neapolitans, Lombards, and the rest can be quite as capable as Tuscans.

“It is indeed true that in all languages some things are always good, such as facility, good order, fullness, fine periods of harmonious clauses; and that, on the contrary, affectation and the other things that are opposed to these are bad.

But among words there are some that remain good for a time, then grow old and lose their grace completely, whereas others gain in strength and come into favor; because, just as the seasons of the year divest the earth of her flowers and fruits, and then clothe her again with others, so time causes those first words to fall, and usage brings others to life, giving them grace and dignity, until they are gradually consumed by the envious jaws of time, when they too go to their death; because, in the end, we and all our things are mortal. Consider that we no longer have any knowledge of the Oscan tongue. Provençal, which we might say was but recently celebrated by noble writers, is not now understood by the inhabitants of that region. Hence, I think, even as the Magnifico has well said, that if Petrarch and Boccaccio were living today, they would not use many of the words we find in their writings: hence, it does not seem good to me that we should imitate them in those words. I do indeed praise highly those who can imitate what is to be imitated; nonetheless, I do not think it at all impossible to write well without imitation; and particularly in this language of ours in which we can be helped by usage—which is something I would not venture to say of Latin.”

Then messer Federico said: “Why would you have usage be more esteemed in the vernacular than in Latin?”

“Indeed,” replied the Count, “I hold that usage is the guide in both the one and the other. But since those to whom Latin was as natural as the vernacular is to us today are no longer among the living, we are obliged to learn from their writings what they learned from usage. Nor does ancient speech mean anything more than ancient usage in speech. And it would be a silly thing to love ancient speech for no other reason than to wish to speak as men used to speak rather than as they speak now.”

“So,” replied messer Federico, “the ancients did not imitate?”

“I believe,” said the Count, “that many of them did imitate, but not in everything. And if Virgil had imitated Hesiod in everything, he would not have surpassed him; nor Cicero, Crassus; nor Ennius, his predecessors. Consider that

Homer is so ancient that many believe him to be the first heroic poet in time as well as in excellence of style: and whom would you say he imitated?”

“Someone,” answered messer Federico, “more ancient than he, of whom we have no knowledge owing to his great antiquity.”

“Then whom,” said the Count, “will you say Petrarch and Boccaccio imitated, who we might say have been in the world but a few days?”

“I do not know,” replied messer Federico, “but we can believe that they too were bent on imitating, even though we do not know whom.”

The Count replied: “It must be thought that the imitated were better than their imitators; and, if they were good, it would be very strange if their name and fame had completely vanished so soon. But I think that their true master was talent and their own native judgment. And at this no one should wonder, for it is almost always possible to advance toward the summit of all excellence by several paths. Nor is there anything that does not comprise in its own kind a multiplicity of things which are different from one another and yet equally deserving of praise among themselves.

“Consider music, the harmonies of which are now solemn and slow, now very fast and novel in mood and manner. And yet all give pleasure, although for different reasons, as is seen in Bidon’s manner of singing which is so skilled, quick, vehement, impassioned, and has such various melodies that the spirits of his listeners are stirred and take fire, and are so entranced that they seem to be uplifted to heaven. Nor does our Marchetto Cara move us less by his singing, but only with a softer harmony. For, in a manner serene and full of plaintive sweetness, he touches and penetrates our souls, gently impressing a delightful sentiment upon them.

“Moreover, different things give equal pleasure to our eyes, so that it is difficult for us to judge which things please them most. Consider that in painting Leonardo da Vinci, Mantegna, Raphael, Michelangelo, and Giorgio da Castelfranco are most excellent; and yet they are all unlike one another in their work: so that in his own manner no one of them appears to lack anything, since we recognize each to be perfect in his own style.

“The same holds true of many Greek and Latin poets who, though different in their writing, are equal in fame. Orators, too, have always shown so much diversity among themselves that nearly every age has produced and prized a certain kind of orator peculiar to its time; and these have been different, not only from their predecessors, but also from one another: as it is written of Isocrates, Lysias, Aeschines, and many others among the Greeks, all excellent, yet each resembling no one but himself. Then, among the Latins, Carbo, Laelius, Scipio Africanus, Galba, Sulpicius, Cotta, Gracchus, Marcus Antonius, Crassus, and so many others that it would take long to name them, all good, yet very different from one another; so that if one were to take thought of all the orators that have ever existed, he would find as many kinds of oratory as orators. I seem to remember too that Cicero somewhere has Marcus Antonius say to Sulpicius that there are many who imitate no one and yet attain to the highest degree of excellence; and he speaks of certain others who had begun a new manner and type of oratory, beautiful, but unusual among orators at that time, in which they imitated no one but themselves. Thus, he affirms also that teachers must consider the nature of their pupils and, taking that as a guide, must direct them and help them in the path toward which their talent and natural disposition inclines them. Hence, my dear messer Federico, I do believe that if someone does not feel congenial to a given author, it is not well to force him to imitate him, because the strength of his talent will be weakened and impeded in being turned from the path which it might profitably have taken, if it had not been denied it.

“Therefore, I do not see how it can be well, in place of enriching our language and giving it spirit, greatness, and luster, to make it poor, thin, humble, and obscure, and to attempt to limit it so narrowly that everyone should be forced to imitate only Petrarch and Boccaccio; and that one may not place trust in Poliziano, Lorenzo de’ Medici, Francesco Diacceto, and some others who are also Tuscans and perchance not inferior in learning and judgment to Petrarch and Boccaccio. And truly it would mean a great poverty to call a halt and not go beyond what some one of

the earliest writers may have achieved, and to lose hope that so many men of such noble talents might ever devise more than one beautiful way of expressing themselves in a language which is proper and natural to them. But there are today certain scrupulous souls who, in a kind of cult of the ineffable mysteries of this their Tuscan language, do frighten all so who listen to them as to inspire in many a noble man of learning so much timidity that he dares not open his mouth, and confesses that he does not know how to speak the very language he learned in swaddling clothes from his nurse. But I think we have said more than enough about this. So let us proceed now with our discussion of the Courtier.”

Then messer Federico replied: “I should like to say a little more: I certainly do not deny that the opinions and the talents of men differ from one another; nor do I think it well that someone who has a vehement and impassioned nature should undertake to write about calm things, or that another who is severe and grave should write jests, for in this matter it seems right to me that everyone should follow his own bent. And Cicero was speaking of this, I believe, when he said that teachers should have regard for the nature of their pupils, in order not to act like bad husbandmen who sometimes sow grain in ground that is productive only for vineyards. But I cannot comprehend why, in the case of a particular language which does not belong to all men as do speaking and thinking and many other functions, but is an invention bound by certain limitations, it is not more reasonable to imitate those who speak well than it is to speak at random; or why, just as in Latin we must try to conform to Virgil’s language and Cicero’s rather than to that of Silius or Cornelius Tacitus, it is not better in the case of the vernacular to imitate the language of Petrarch and Boccaccio rather than another’s, but express one’s own thoughts in it, of course, and by so doing to follow one’s own natural instinct, even as Cicero teaches. And in this way it will be found that the difference which you say exists among good orators lies in sense and not in language.”

Then the Count replied: “I fear that we shall enter on a wide sea and depart from our first

subject of the Courtier. Still I would ask you, in what does the excellence of this language consist?"

Messer Federico replied: "In respecting its proprieties, employing it so, and adopting that style and those harmonies which all who have written well have used."

"I should like to know," said the Count, "whether this style and these harmonies that you speak of arise from the thought or from the words."

"From the words," replied messer Federico.

"Then," said the Count, "do you not think that the words of Silius and of Cornelius Tacitus are the same as those which Virgil and Cicero employ? Are they not used in the same sense?"

"They are indeed the same," replied messer Federico, "but some of them are not preserved well and are used in a different sense."

The Count replied: "And if from a book of Cornelius and from one of Silius all those words were removed that are used in a sense different from that of Virgil or Cicero (which would be very few), then would you not say that Cornelius was the equal of Cicero in language, and Silius the equal of Virgil, and that it were well to imitate their manner of speech?"

Then signora Emilia said: "It seems to me that this debate of yours has now become too long and tiresome; therefore it would be well to postpone it to another time."

Messer Federico was about to reply, even so, but signora Emilia kept interrupting him.

Finally the Count said: "There are many who want to judge of styles and who talk about harmonies and imitation, but they are quite unable to explain to me what style and harmonies are, or in what imitation consists, or why things which are taken from Homer or from someone else are so proper in Virgil as to seem enhanced rather than imitated. Perhaps that is due to my inability to understand such persons. But since it is good evidence that a man knows a thing if he is able to teach it, I fear that they understand it but little and that they praise Virgil and Cicero because they hear many praise them, not because they can recognize the difference between these two and the others; for it is truly not a matter of preserving two or three or ten words in a usage different from that of the others.

"In Sallust, in Caesar, in Varro, and in the other good writers, there are some terms used differently from the way Cicero uses them; and yet both ways are all right, because the excellence and force of a language does not lie in such a trifling matter as that: as Demosthenes well said to Aeschines, who made a thrust at him, asking if certain words which he had used (which were not Attic) were monsters or portents; and Demosthenes laughed and answered that the fortunes of Greece did not depend on that. So I too should care little if some Tuscan reproached me for saying *satisfatto* rather than *sodisfatto*, or *onorevole* rather than *orrevole*, *causa* rather than *cagione*, *populo* rather than *popolo* and the like."

Then messer Federico rose to his feet and said: "Listen to these few words, I beg of you."

"The pain of my displeasure," replied signora Emilia, laughing, "be upon him among you who speaks any more about this matter at this time, for I wish to postpone it to another evening. But do you, Count, continue with this discussion of the Courtier, showing us what a good memory you have; for, if you are able to take it up where you left it, I think you will be doing not a little!"

"Madam," replied the Count, "I think the thread is broken. Still, if I am not mistaken, I believe we were saying that the bane of affectation always produces extreme gracelessness in all things and that, on the other hand, the greatest grace is produced by simplicity and nonchalance: in praise of which, and in blame of affectation, many other things could be said; but I wish to add only one thing more. All women have a great desire to be—and when they cannot be, at least to seem—beautiful. Therefore, wherever nature has failed in this regard, they try to remedy it with artifice: whence that embellishing of the face with so much care and sometimes with pain, that plucking of the eyebrows and the forehead, and the use of all those methods and the enduring of those nuisances which you ladies think are hidden to men, but which are well known."

Here madam Costanza Fregosa laughed and said: "It would be much more courteous of you to go on with your discussion, and tell us what the source of grace is, and speak of Courtiership,

instead of trying to uncover the defects of women, which is not to the purpose.”

“On the contrary, it is much to the purpose,” replied the Count, “for the defects that I am speaking of deprive you ladies of grace, since they are caused by nothing but affectation, through which you openly let everyone know your inordinate desire to be beautiful. Do you not see how much more grace a woman has who paints (if at all) so sparingly and so little that whoever sees her is uncertain whether she is painted or not; than another woman so plastered with it that she seems to have put a mask on her face and dares not laugh so as not to cause it to crack, and never changes color except in the morning when she dresses; and, then, for the rest of the entire day remains motionless like a wooden statue and shows herself only by torchlight, like wily merchants who display their cloth in a dark place. And how much more attractive than all the others is one (not ugly, I mean) who is plainly seen to have nothing on her face, it being neither too white nor too red, but has her own natural color, a bit pale, and tinged at times with an open blush from shame or other cause, with her hair artlessly unadorned and in disarray, with gestures simple and natural, without showing effort or care to be beautiful. Such is that careless purity which is so pleasing to the eyes and minds of men who are ever fearful of being deceived by art.

“Beautiful teeth are very attractive in a woman, for since they do not show as openly as the face, not being visible most of the time, we may believe that less care has been taken to make them beautiful than with the face: and yet whoever laughs without cause and solely to display the teeth would betray his art, and, no matter how beautiful they are, would seem most ungraceful to all, like Catullus’ Egnatius. The same is true of the hands which, if they are delicate and beautiful, and are uncovered at the proper time, when there is need to use them and not merely to make a show of their beauty, leave one with a great desire to see them more and especially when they are covered with gloves again; for whoever covers them seems to have little care or concern whether they are seen or not, and to have beautiful hands more by nature than by any effort or design.

“Have you ever noticed when a woman, in passing along the street to church or elsewhere, unwittingly happens (in play or through whatever cause) to raise just enough of her dress to show her foot and often a little of her leg? Does this not strike you as something full of grace, if she is seen in that moment, charmingly feminine, dressed in velvet shoes and dainty stockings. Certainly to me it is a pleasing sight, as I believe it is to all of you, because everyone thinks that such elegance of dress, when it is where it would be hidden and rarely seen, must be natural and instinctive with the lady rather than calculated, and that she has no thought of gaining any praise thereby.

“In such a way one avoids or hides affectation, and you may now see how opposed the latter is to grace, how it deprives of grace every act of the body and the soul: of which so far we have spoken but little, and yet this is not to be neglected; for, as the soul is far more worthy than the body, it deserves to be more cultivated and adorned. And as to what ought to be done in the case of our Courtier, we will lay aside the precepts of the many wise philosophers who have written on this subject to define the virtues of the soul and who discuss their worth with such subtlety; and, holding to our purpose, we will declare in a few words that it suffices if he is, as we say, a man of honor and integrity: for included in this are prudence, goodness, fortitude, and temperance of soul, and all the other qualities proper to such an honored name. And I maintain that he alone is a true moral philosopher who wishes to be good; and for this he has need of few precepts beyond that wish. Socrates was right, therefore, in saying that all his teachings seemed to him to bear good fruit when anyone was incited by them to wish to know and understand virtue: for those persons who have reached the point of desiring nothing more ardently than to be good manage easily to learn all that is needed for that. Hence, we will discuss this no further.

“But, besides goodness, for everyone the true and principal adornment of the mind is, I think, letters; although the French recognize only the nobility of arms and reckon all the rest as nought;

and thus not only do they not esteem, but they abhor letters, and consider all men of letters to be very base; and they think that it is a great insult to call anyone a clerk.”

Then the Magnifico Giuliano replied: “What you say is true; this error has prevailed among the French for a long time now. But if kind fate will have it that Monseigneur d’Angoulême succeed to the crown, as is hoped, then I think that just as the glory of arms flourishes and shines in France, so must that of letters flourish there also with the greatest splendor. Because, when I was at that court not so long ago, I saw this prince; and, besides the disposition of his body and the beauty of his countenance, he appeared to me to have in his aspect such greatness (yet joined with a certain gracious humanity) that the realm of France must always seem a petty realm to him. Then later, from many gentlemen, both French and Italian, I heard much about his noble manners, the greatness of his spirit, his valor and liberality; and I was told, among other things, how he loved and esteemed letters and how he held all men of letters in the greatest honor; and how he condemned the French themselves for being so hostile to this profession, especially as they have in their midst a university such as that of Paris, frequented by the whole world.”

Then the Count said: “It is a great wonder that, at such a tender age, and solely by natural instinct and against the custom of his country, he should of himself have chosen so worthy a path; and, since subjects always imitate the ways of their superiors, it could be, as you say, that the French will yet come to esteem letters at their true worth: which they can easily be persuaded to do if they will but listen to reason, since nothing is more naturally desired by men or more proper to them than knowledge, and it is great folly to say or believe that knowledge is not always a good thing.

“And if I could speak with them or with others who hold an opinion contrary to mine, I would try to show them how useful and necessary to our life and dignity letters are, being truly bestowed upon men by God as a crowning gift; nor should I lack instances of many excellent commanders in antiquity, who all added the ornament of let-

ters to valor in arms. For, as you know, Alexander venerated Homer so much that he always kept the *Iliad* by his bed. And he gave the greatest attention not only to these studies but to philosophical speculations as well, under Aristotle’s guidance. Alcibiades increased his own good qualities and made them greater through letters and the teachings of Socrates. Also the effort that Caesar devoted to study is witnessed by the surviving works he so divinely wrote. Scipio Africanus, it is said, always kept in his hand the works of Xenophon, wherein, under the name of Cyrus, a perfect king is imagined. I could tell you of Lucullus, Sulla, Pompey, Brutus, and many other Romans and Greeks; but I will only remind you that Hannibal, so excellent a military commander, and yet fierce by nature and a stranger to all humanity, faithless and a despiser of men and the gods—had nonetheless some knowledge of letters and was conversant with Greek. And, if I am not mistaken, I think I once read that he even left a book written by him in Greek.

“But there is no need to tell you this, for I am sure you all know how mistaken the French are in thinking that letters are detrimental to arms. You know that the true stimulus to great and daring deeds in war is glory, and whosoever is moved thereto for gain or any other motive, apart from the fact that he never does anything good, deserves to be called not a gentleman, but a base merchant. And it is true glory that is entrusted to the sacred treasury of letters, as all may understand except those unhappy ones who have never tasted them.

“What soul is so abject, timid, and humble that when he reads of the great deeds of Caesar, Alexander, Scipio, Hannibal, and many others, does not burn with a most ardent desire to resemble them, and does not reckon this transitory life of a few day’s span as less important, in order to win to an almost eternal life of fame which, in spite of death, makes him live on in far greater glory than before. But he who does not taste the sweetness of letters cannot know how great the glory is that letters so long preserve, and measures it only by the life of one or two men, because his own memory extends no further. Hence, he cannot value so brief a glory as he would one that is almost eternal (if, to his mis-

fortune, he were not denied knowledge of it); and since he does not much esteem it, we may with reason think that he will not risk such danger to win it as one would who knows of it.

“But I should not want some objector to cite me instances to the contrary in order to refute my opinion, alleging that for all their knowledge of letters the Italians have shown little worth in arms for some time now—which, alas, is only too true. But it must be said that the fault of a few men has brought not only serious harm but eternal blame upon all the rest, and that they have been the true cause of our ruin and of the prostrate (if not dead) virtue of our spirits. Yet it would be a greater shame if we made this fact public than it is to the French to be ignorant of letters. Hence, it is better to pass over in silence what cannot be remembered without pain: and, leaving this subject, upon which I entered against my will, to return to our Courtier.

“I would have him more than passably learned in letters, at least in those studies which we call the humanities. Let him be conversant not only with the Latin language, but with Greek as well, because of the abundance and variety of things that are so divinely written therein. Let him be versed in the poets, as well as in the orators and historians, and let him be practiced also in writing verse and prose, especially in our own vernacular; for, besides the personal satisfaction he will take in this, in this way he will never want for pleasant entertainment with the ladies, who are usually fond of such things. And if, because of other occupations or lack of study, he does not attain to such a perfection that his writings should merit great praise, let him take care to keep them under cover so that others will not laugh at him, and let him show them only to a friend who can be trusted; because at least they will be of profit to him in that, through such exercise, he will be capable of judging the writing of others. For it very rarely happens that a man who is unpracticed in writing, however learned he may be, can ever wholly understand the toils and industry of writers, or taste the sweetness and excellence of styles, and those intrinsic niceties that are often found in the ancients.

These studies, moreover, will make him fluent, and (as Aristippus said to the tyrant) bold and self-confident in speaking with everyone. However, I would have our Courtier keep one precept firmly in mind, namely, in this as in everything else, to be cautious and reserved rather than forward, and take care not to get the mistaken notion that he knows something he does not know. For we are all by nature more avid of praise than we ought to be and, more than any other sweet song or sound, our ears love the melody of words that praise us; and thus, like Sirens' voices, they are the cause of shipwreck to him who does not stop his ears to such beguiling harmony. This danger was recognized by the ancients, and books were written to show how the true friend is to be distinguished from the flatterer. But to what avail is this, if many, indeed countless persons know full well when they are being flattered, yet love the one who flatters them and hate the one who tells them the truth? And finding him who praises them to be too sparing in his words, they even help him and proceed to say such things of themselves that they make the impudent flatterer himself feel ashamed.

“Let us leave these blind ones to their error, and let us have our Courtier be of such good judgment that he will not let himself be persuaded that black is white, or presume of himself more than he clearly knows to be true; and especially in those points which (if your memory serves you) messer Cesare said we had often used as the means of bringing to light the folly of many persons. Indeed, even if he knows that the praises bestowed upon him are true, let him avoid error by not assenting too openly to them, nor concede them without some protest; but let him rather disclaim them modestly, always showing and really esteeming arms as his chief profession, and the other good accomplishments as ornaments thereto; and do this especially when among soldiers, in order not to act like those who in studies wish to appear as soldiers, and, when in the company of warriors, wish to appear as men of letters. In this way, for the reasons we have stated, he will avoid affectation and even the ordinary things he does will appear to be very great things.”

Peter Ramus

1515–1572

Pierre de la Ramée, usually known by his Latinized academic cognomen Petrus, or Peter, Ramus, was born to impoverished parents in Cuts, Picardy. Evidently the family had some ambition for the boy, since he began the study of Latin in Cuts before going to Paris at about the age of eight. About four years later, at age twelve, he entered the University of Paris. His family was unable to finance his university studies, so Ramus, like many other poor scholars, worked his way through school as a servant to wealthier students. He took his master of arts degree in 1536, successfully defending a thesis that outraged his professors, namely, that the work of Aristotle was useless. While a student, Ramus heard German educator Johanne Sturm lecture on Agricola's *On Dialectical Invention* (*De Inventione Dialecticae*), which he later claimed was decisive in shaping his thought. Upon taking his degree, Ramus began to teach dialectic and rhetoric to the boys in various colleges of the university. Apparently he was a charismatic teacher who soon attracted a large following. In 1543 he published two extremely controversial and influential books: *Remarks on Aristotle* (*Aristotelicae Animadversiones*), which attacked Aristotelian dialectic in its classical and Scholastic versions, and *Training in Dialectic* (*Dialecticae Partitiones*), which advocated a new intellectual method.

These books had the effrontery not only to condemn the argumentative methods in use at the University of Paris since at least the twelfth century but also to argue for replacing them with Ramus's way. Led by professor of medicine Jacques Charpentier, all three graduate faculties of the university—law, medicine, and theology—successfully petitioned the French king Charles I to forbid Ramus to teach from the two books, which were publicly burned. As historian of rhetoric James J. Murphy explains, Ramus, far from being chastened by this censure, mounted a vigorous campaign over the next several years to gain acceptance for his ideas.¹ Between 1543 and 1549, eight books appeared by either Ramus or Omer Talon (Latinized as Audomarus Talaeus), who became Ramus's collaborator in 1544. Ramus also defended himself in several public oral disputations with other professors. The books most pertinent to Ramus's views on rhetoric are his attacks on Cicero, *Brutus's Problems* (*Brutinae Quaestiones* [1547]), and on Quintilian, *Arguments in Rhetoric against Quintilian* (*Rhetoricae Distinctiones in Quintilianum* [1549]; excerpted here), and two books outlining a new program for rhetoric, *Omer Talon's Training in Oratory* (*Audomari Talaei Institutiones Oratoriae* [1545]) and *Omer Talon's Rhetoric* (*Audomari Talaei Rhetorica* [1548]). Murphy agrees with literary scholar Walter Ong, S.J., that Ramus habitually published some of his own work under the name of Talaeus to avoid the royal ban on his ideas.² Hence, in spite of their titles, both rhetoric texts, especially the second one, may be Ramus's.³

¹James J. Murphy, "Introduction," Peter Ramus, *Arguments in Rhetoric against Quintilian*, trans. Carole Newlands, ed. James J. Murphy (De Kalb: University of Northern Illinois Press, 1983), p. 9.

²Murphy, pp. 22–26.

³Murphy has recently argued that *Omer Talon's Rhetoric* is definitely by Ramus. See his essay in *A-tour de Ramus*, ed. Kees Meerhoff and Jean-Claude Moisin (Nuit Blanche Editeur, 1997).

Although there is no modern edition of either in English, a flavor for Ramist rhetoric can be obtained from England, where Ramist rhetoric was very influential. Abraham Fraunce's *Arcadian Rhetoric* (1588) contains modified translations of material from these works.

The restrictions on Ramus's teaching were lifted in 1547, when Henry II became king and Charles of Lorraine, a former college classmate of Ramus's who later became Cardinal Guise, interceded on his behalf. Thereafter, Ramus's career prospered. In 1551 he was appointed a regius professor of the university; Professor of Eloquence and Philosophy was the title he devised for himself. He continued to publish profusely, including revised editions of his early controversial works; French translations of these works; grammars for Latin, Greek, and French; and studies of Cicero's oratory. He continued to fight with other professors. In 1565 he was named dean of the regius professors, a group that later became the Collège de France. Meanwhile, in 1561, Ramus had become a Protestant. Religious violence was increasing in France during this period, but for some time Ramus's highly placed friends were able to protect him. This protection weakened after he formally separated from the Roman Catholic Church and thus alienated Cardinal Guise, and after the partisan Roman Catholic Catherine de' Medici became regent. She ordered the Saint Bartholomew's Day massacre of Protestants in 1572, and Ramus was one of its victims. One story has it that the mob was directed to Ramus's college room by a fellow professor he had bested in debate.

RAMUS'S IDEAS ON RHETORIC

Between 1550 and 1650, as Ong's exhaustive bibliography shows, some 750 editions of works by Ramus (including those published under the name of Talaeus) appeared in Europe.⁴ This sudden and great influence may be attributed in part to Ramus's image as a doughty warrior opposing all stultifying traditions. He attacked Aristotle, and thus Scholasticism, at the University of Paris, Scholasticism's greatest bastion. And since Scholasticism and the Paris faculty were still strongly associated in people's minds with the Roman Catholic Church, Ramus's academic arguments took on overtones of religious reform, which were intensified by his martyr's death. Moreover, in attacking Scholasticism, Ramus departed from the humanist strategy of castigating the Scholastic scholars for burying precious classical thinkers under trivialities. Ramus attacked the classical thinkers as well. He even downplayed the importance of education in the classical languages and elevated the vernacular, publishing many of his own works in French. Those looking for reform in the study of science could claim that Ramus was making a space for them. Finally, the intellectual independence of Ramus's thinking was seen to threaten traditional political hierarchies as well—to be downright seditious in a monarchy.

Ramus's dominant idea was that the ability to reason was innate in normal humans. One did not need to learn it from Aristotle or any other classical source. Thus time spent mastering the classical languages and poring over ancient texts was so

⁴Walter J. Ong, S.J., *Ramus, Method, and the Decay of Dialogue* (Cambridge: Harvard University Press, 1958), p. 5.

much time wasted. It was better, once having learned to reason soundly, to set off on one's own pursuit of knowledge. It is easy to see why Ramus was also attracted to Protestant Christianity, with its emphasis on the individual's ability to take responsibility for his or her relationship with God.

Ramus's positive program calls, as he sometimes said, for the union of philosophy and eloquence, but by this he most emphatically does not mean the Ciceronian ideal. Ramus admires Cicero's powerful eloquence and even proposes him as a model of style, if one avoids imitating his tendency to verbosity, but he argues that Cicero's ideas on rhetorical theory are useless because he muddles together rhetoric and dialectic.

Rather, says Ramus, one must place philosophy and eloquence in a proper relation to each other by strictly separating the spheres of philosophy (which for Ramus consists mainly of dialectic) and rhetoric. This separation assigns what were traditionally rhetorical activities to dialectic—namely, invention, arrangement, and memory—just as Agricola had done. Invention and arrangement thus take on new importance, but rhetoric does not benefit from this change because invention and arrangement are no longer part of its domain. Rhetoric, indeed, is much diminished, consisting only of style and delivery, and the orator becomes simply a person skilled in speaking, with good style and delivery. The development of moral qualities in the orator, or even of sound thinking, is no part of rhetoric, according to Ramus.

Ramus's dialectical invention proceeds by the use of ten topics: causes, effects, subjects, adjuncts, opposites, comparisons, names, divisions, definitions, and witnesses. Ramus culls these from the classical commonplaces, as Agricola had done, and, even more boldly than Agricola, he claims that they are universally applicable. Thus dialectic, which in classical systems was usually relegated to dealing only with probable knowledge, becomes a method for testing truth in any sphere of knowledge. Moreover, its universalizing method is based in rhetorical invention, which traditionally dealt with received wisdom and was of questionable status for generating any new knowledge at all, whether probable or certain.

Arrangement, for Ramus, should follow the structure of the syllogism. This means, he says, starting with the most general principles of the subject under discussion and working down through levels of generality to the most minute particulars. This process typically involves the creation of dichotomies at each level. Ramus may be influenced here by Hermogenes' practice of structuring arguments by division or dichotomy, which he would have encountered in the work of George Trebizond. Any subject, Ramus claims, can be analyzed in this way. Another advantage of such arrangement is that it renders other arts of memory unnecessary; since the arrangement supposedly bodies forth the natural structure of both the world and the human mind, anything organized in this way is retained easily and thoroughly.

Ramus suggests organizing material by drawing up bifurcated tree diagrams that lay out the levels from general to particular. Many editions of his works feature illustrations of these diagrams. Ong has argued that such spatial representations of

knowledge could take hold only in a society that had shifted from an auditory to a visual relationship with language. He maintains that such a shift was caused by literacy, which was becoming more widespread in Europe in this period, and was augmented by mechanical printing. The printed page replaced the *viva voce* discourse as the principal means of transmitting knowledge. Scholar of technical communication Elizabeth Tebeaux has shown how methods of graphic representation that originated with Ramus soon began to affect texts in a wide variety of technical subjects; thus, in her view, he had an important influence on the modern fields of document design and technical writing.

Ramus believed that his versions of invention and arrangement constituted the universally applicable method of inquiry that so many intellectuals of his day were seeking. Evidently, many of them agreed with him. Literary historian Frances Yates places Ramist dichotomous diagrams in the hermetic tradition, according to which certain spatial arrangements of symbols magically control, because they duplicate, the order of the world.⁵ The link with this tradition helps to explain how Ramus could present his method of arrangement as the perfect memory system, aligning the mind and the material to be known so that they match and bond.

The Ramist method simplifies as it universalizes: Material is cut away or conflated to fit the ten-topic invention and bipartite arrangement schemes. Ong sees here an implicit tendency to itemize knowledge, to think of it in bits like individual letters that may be rearranged and combined freely on the visual field of the printed page.⁶ The supposed universal applicability of this approach provides the theoretical justification for Ramus's method of packaging knowledge, but, as Ong emphasizes, Ramus sees a pedagogical justification too. Such predigested material may be taught easily to the young teenagers with whom Ramus mainly worked.

Ramus frequently advertises the usefulness of his dialectical method. Of course, humanists such as Guarino and Vittorino also claimed that the education in classical studies they offered would be supremely useful to young aristocrats and public servants. But unlike the Italians, Ramus does not have a specific profession, such as statecraft, in mind. He claims that his method is useful for any worldly activity a person might undertake. Unlike Erasmus, Ramus is reluctant to claim that his method is spiritually useful, that it conduces to Christian piety. Presumably it can help set religious thoughts in order—as Ramus's Puritan followers would show, both in England and in the American colonies—but exactly what order remains a matter for private conscience, as far as Ramus is concerned.

Hence, historian Anthony Grafton and literary scholar Lisa Jardine have argued that Ramus transformed humanism into the humanities.⁷ By subjecting cultural studies to a supposedly universalizing method, Ramus seemed to strip cultural artifacts of their culture-bound qualities. He had no use for historical knowledge. In practice this meant that one no longer had to be steeped in a particular historical,

⁵Frances Yates, *The Art of Memory* (Chicago: Chicago University Press, 1966), p. 234.

⁶Ong, pp. 315–18.

⁷Anthony Grafton and Lisa Jardine, *From Humanism to the Humanities* (Cambridge: Harvard University Press, 1986), p. 162.

philosophical, or religious perspective to appreciate the objects of humanist study. The method purported to give rational beings of all ages and conditions access to the great works of the human intellect—now timeless, though once they originated in a particular time and place. People could gain from the humanities whatever they might need for their own individual, private affairs.

The decontextualization of knowledge that Ramist dialectic sought to accomplish had dire consequences for rhetoric. For Ramus, the province of rhetoric was style and delivery alone. Of these, delivery was of very minor importance, an attitude that is not surprising, given the rise of written communication. Style was greatly simplified: Ramus cut the vast number of tropes to four: metonymy, irony, metaphor, and synecdoche. Style for Ramus seems to be a kind of applied psychology, a study of the way to frame sentences so as to force certain reactions from recalcitrant, mentally inferior audiences. One is allowed to multiply tropes and figures for poetic enjoyment, and many Ramist rhetoric texts do just that; however, for serious business a plain style is best. A supposedly unornamented style was elevated further in religion by the Puritans and in academia by proponents of the new science.

ANALYSIS AND SUMMARY OF ARGUMENTS IN *RHETORIC AGAINST QUINTILIAN*

The opening arguments in Ramus's *Arguments in Rhetoric against Quintilian* anticipate the withering of rhetoric. Putting his most damaging attack first, Ramus utterly denies that the orator must be a good man or that moral philosophy has anything to do with rhetoric. Having thus severely limited rhetoric's domain, Ramus is prepared to prove his chief accusation against Quintilian: that his advice on invention and arrangement is useless. Rhetoric without philosophical content cannot, of course, contribute much to invention and arrangement, but this idea serves Ramus's purpose, making it necessary to turn to dialectic (his method) for help with invention, arrangement, and also memory. In addition, Ramus condemns Quintilian for making the study of arousing emotion a part of rhetoric—this, too, belongs to philosophy.

Modern readers may be struck by the arrogance of Ramus's style. Not only does he insult his adversaries, but he does not trouble to make arguments supporting his own position. He assumes that his readers are thoroughly familiar with his other works in which these arguments are developed. He also assumes that the readers know Quintilian. This highly agonistic tone, however, is typical of intellectual disputation in his day. Modern readers might also note the relentlessly pedagogical focus of Ramus's arguments. Time and again, he fails to understand why Quintilian included in his book anything he did not mean to teach to his students. Ramus seems deaf to the idea that rhetorical theorists might want to discuss such questions as how many parts an oration should have. Ramus believes that one should simply find out the single correct answer to such a question and discard all other speculation.

As the excerpt reprinted here—and the book—begin, Ramus dedicates the *Arguments in Rhetoric against Quintilian* to his protector and former classmate, Charles of Lorraine, now Cardinal Guise. Ramus begins his attack on Quintilian with a critique of the concept of the ideal orator. The orator can be defined only by qualities for which his art gives precepts. Rhetoric gives no precepts on virtue; therefore the orator cannot be defined as virtuous. Precepts on virtue are the province of moral philosophy, which is not one of the five parts into which Quintilian divides rhetoric. Moreover, this division is wrong. One should rather begin, as Ramus does, with the “two universal, general gifts” of nature to humankind, “Reason and Speech.” Dialectic deals with reason, and grammar (the study of using language correctly) and rhetoric deal with speech. Since invention and arrangement are rational activities, they belong to dialectic. Rhetoric should then be divided into two parts: embellishment (style) and delivery. Of course, a good oration requires the aid of dialectic and grammar, as well as of rhetoric, but it is absurd, says Ramus, to consider that anything useful to an art or capable of being treated by it is part of that art. Quintilian should have excluded from his book anything preliminary or ancillary to the study of rhetoric.

Ramus now turns to Quintilian’s treatment of invention. Invention, like arrangement and memory, belongs to dialectic, not rhetoric. Quintilian sometimes seems to realize this when he says that the development of “judgment” (which Ramus treats as a synonym for arrangement) comes from the study of dialectic. Quintilian errs, however, in not realizing that the very same method governs judgment, arrangement, and dialectic. If one questions Ramus’s criticism of Quintilian’s precepts on invention and arrangement, Ramus suggests trying to use these precepts to analyze and appreciate one of Cicero’s brilliant orations, and their absurdity will be clear.

In treating language, according to Ramus, “purity of speech” should be the province of grammar; “subtlety and wisdom in reason” of dialectic; “embellishment by means of tropes and figures” of style; and “grace and dignity of voice and gesture” of delivery. Of course, Quintilian entangles style with irrelevancies. Ramus has the correct division: a trope involves a single word; a figure involves a group of words. A trope turns a word from its proper meaning; in a figure, the proper meaning of words is unaffected. There are only four kinds of trope: metonymy, irony, metaphor, and synecdoche. Moreover, Quintilian’s division of extended passages of discourse into the structured and the “loose-knit” is ridiculous. All discourse is structured, and good structure is always simply rhythmical. One masters this structure by listening to excellent speakers, including one’s teacher, and by imitating them. Nothing is to be gained by reading and writing, as Quintilian claims.

In the final sections, Ramus attacks Quintilian’s treatment of decorum, for decorum is not a part of rhetoric. In addition to the universally applicable tests of what is appropriate to learn from dialectic, specific tests of what is fitting for a particular art may be learned from that art. Ramus approves Quintilian’s condemnation of the classical art of memory and recommends his own dichotomies instead. He denounces Quintilian’s advice on delivery because it is presented in so confused a

fashion. Indeed, says Ramus, unless one is interested in the business practices of a Roman lawyer, Quintilian's whole book is so muddled as to be virtually useless.

Selected Bibliography

Only two of Ramus's texts on rhetoric exist in English translation: Peter Ramus, *Arguments in Rhetoric against Quintilian* (trans. Carole Newlands, ed. and intro. James J. Murphy, 1983; excerpted here), and *Peter Ramus's Attack on Cicero*, a translation of the *Brutinae Quaestiones* (trans. Carole Newlands, ed. and intro. James J. Murphy, 1992). Murphy's introductions to both volumes are helpful, and good bibliographies are included. An exhaustive catalog of editions of Agricola's *De Inventione Dialecticae* and works by Ramus and Talaues is by Walter J. Ong, S.J.: *Ramus and Talon Inventory* (1958). Readers who wish to consult Abraham Fraunce's *Ramist Arcadian Rhetoric* can see Ethel Seaton's 1950 edition. For further bibliography on secondary sources, see Peter Sharratt, "Recent Work on Peter Ramus (1970–1986)" (*Rhetorica* 5 [1987]: 7–58).

The major work on Ramus and the one largely responsible for establishing his importance in the Renaissance period is Walter J. Ong, S.J., *Ramus, Method, and the Decay of Dialogue* (1958). For a good short explanation of Ramus's importance, see Pierre Albert Duhamel's "The Logic and Rhetoric of Ramus" (*Modern Philology* 46 [1949]: 163–71). H. C. Barnard gives a vivid picture of the University of Paris in Ramus's day, and his place there, in *The French Tradition in Education: Ramus to Madame Necker de Saussure* (1922; rpt. 1970). Emphasizing the revolutionary quality of Ramus's intellectual independence (and, as he sees it, providing a corrective to Ong) is George Huppert, "Peter Ramus: The Humanist as Philosopher" (*Modern Language Quarterly* 51 [June 1990]: 208–23). Useful background on the philosophical issues is provided in Neal Gilbert's *Renaissance Concepts of Method* (1960).

For more on Ramus's influence on the new science, see Craig Walton, "Ramus and Bacon on Method" (*Journal of the History of Philosophy* 9 [1971]: 289–302). Frances Yates relates Ramism to alchemy and hermetic mysticism in *The Art of Memory* (1966). For Ramus's influence on Puritanism, especially the American version, see Perry Miller, *The New England Mind: The Seventeenth Century* (1939). For Ramus's influence on education, see Anthony Grafton and Lisa Jardine, *From Humanism to the Humanities* (1986), and Peter Sharratt, "Peter Ramus and the Reform of the University" (in *French Renaissance Studies, 1540–70*, ed. Peter Sharratt, 1976). Elizabeth Tebeaux discusses the influence of Ramism on document design from Renaissance times to the present, with many helpful illustrations, in "Ramus, Visual Rhetoric, and the Emergence of Page Design in Medical Writing of the English Renaissance: Tracking the Evolution of Readable Documents" (*Written Communication* 8 [1991]: 411–45).

From *Arguments in Rhetoric* against *Quintilian*

DEDICATED TO CHARLES OF LORRAINE, CARDINAL GUISE

Most excellent Maecenas, the Greeks have a wise proverb which teaches that each man should practice the art which he knows. Although I have been engaged in the study of rhetoric and dialectic for many years, I should not, like other people, care to boast about them; rather I feel ashamed to look back upon them due to the very meager results they produced. And so do I not seem to have some justification if in my studies of these arts I engage rather frequently in the very same argument? I have a single argument, a single subject matter, that the arts of dialectic and rhetoric have been confused by Aristotle, Cicero, and Quintilian. I have previously argued against Aristotle and Cicero. What objection then is there against calling Quintilian to the same account?

Aristotle's logic both lacked many virtues and abounded in faults. He left out many definitions and partitions of arguments; instead of one art of invention embracing the ten general topics—causes, effects, subjects, adjuncts, opposites, comparisons, names, divisions, definitions, witnesses—he created unfathomable darkness in his two books of *Posterior Analytics* and eight books of *Topics* with their confused account of predictables, predicaments, enunciations, abundance of propositions, and the invention of the middle term; in his treatment of simple syllogisms he did not collect the rarer ones; he gave no instruction on connections; he was completely silent about method; in a loud sophistic debate over quite useless rules he handed down to us nothing about the use of the art as a universal, but only as a particular. We have added to the art the virtues it lacked; we have uncovered these various faults and, I hope, have abolished them; we have revealed its true use and have shown it to be common to all things. Consequently, we have fought this dialectic

contest over the art and its use with vigor and intelligence.

Our second contest was against Cicero. For he had transferred to rhetoric almost all Aristotle's obscurity concerning invention and arrangement, and indeed also style, confusedly making one art from the two, and then applying it confused in this way to the legal process of civil suits. Some time ago we had taught the virtues of invention and arrangement. By means of a defined, organized, and illustrated classification of subjects, my close colleague Audomarus Talaeus cast light on style and delivery and pointed out their deficiencies. To this extent therefore we have here expelled the darkness.

Yet now Quintilian follows Aristotle's and Cicero's confusion of dialectic and rhetoric. Indeed he makes it worse by fabrications of his own, and by including in his teachings all the disputes concerning all the arts he had read or heard something about—grammar, mathematics, philosophy, drama, wrestling, rhetoric. We shall distinguish the art of rhetoric from the other arts, and make it a single one of the liberal arts, not a confused mixture of all arts; we shall separate its true properties, remove weak and useless subtleties, and point out the things that are missing. Thus, just as I previously attacked the Aristotelian obscurity in Cicero, so now in almost the same way I shall attack it in Quintilian. But since the same subject has already been handled in my attack on Aristotle and Cicero, I shall discuss the numerous points more briefly and less rigorously.

Finally, we shall rely on the supreme help of unwavering reason in our attempt to establish the true description and practice of the arts on which, up to this time, I have placed my energy and enthusiasm. For how many days, indeed how many years and ages do we suppose are wretchedly spent on false conjectures about these disciplines? I wish I had not known the wretchedness of wasting so much of my youth in this way. I wish that the scholars of rhetoric and dialectic

Translated by Carole Newlands. Edited by James J. Murphy.

would heed my advice and would sometimes think of the truth and usefulness of their subjects instead of tenaciously and obstinately quarreling over matters which they have naively accepted at a first hearing, without ever giving them proper consideration. As a result, if the arts were taught with greater conciseness they would certainly be more easily understood, and once the true method for their use was revealed, they would be more easy to practice.

But suppose someone should say, "By almighty God, do you attribute such greatness to yourself that you think you have seen faults or virtues in these arts which have escaped this array of such great men?" Indeed, Maecenas (for I address you and those like you, pure-minded judges unclouded by prejudice), if I were to say that Aristotle was a failure in philosophy, and Cicero and Quintilian each a failure in style, I would seem to be not quite sane. Therefore let us allow Aristotle as sharp an intelligence in various subjects and branches of knowledge as any Aristotelian could imagine, for I admit that that philosopher had an amazing fecundity of talent. Thanks to the generosity of Alexander, he compiled a natural science from the inventions and books of all nationalities; in his logic he questioned all philosophers, physical as well as moral and political; sometimes he showed as much syllogistic reasoning in judgment and as much method in arrangement as could be sought in the best of philosophers.

If you wish, attribute to Cicero these equal ornaments of dialectic, invention, and arrangement. I shall not demur. In fact I shall not only gladly but also perhaps truly admit that of all the men who are, have been, and will in the future be, he was the most eloquent. One could scarcely hope for such excellence of style (which we see in his books) and of delivery (which we learn from stories about him).

I would be acting impudently if I were to admit anything similar about Quintilian. For although he showed a certain shrewdness in the ability to conduct civil suits and although he usefully collected certain examples, nevertheless he differs vastly from Cicero in his style, which is possibly his chief virtue. For in individual words Quintilian does not possess the same purity, ap-

propriateness, or elegance. In consequence there is such a great difference that Cicero seems to have spoken in an age of gold, Quintilian in an age of iron. But nevertheless, compared to the eloquent men of that time, he was without doubt counted among the eloquent. I probably could not be like him, even if I should wish so; but in fact if I could, I would not even wish so. Such then were the qualities of Aristotle, Cicero, and Quintilian, and such was their stature. However, must those who excel in one or many virtues necessarily excel in them all? And is it necessary to think them not men, but gods in all things?

At present I am not inquiring after the supreme virtues of other kinds, such as those accorded the Apollos or the Jupiters. I am discussing now the precepts of dialectic and rhetoric, which I admit were almost all in fact either first discovered by those men, to the great glory of their names, or certainly were collected from others. Yet I add the observation that if they had applied as many months as I have years to judging these precepts accurately and to arranging them in order, I certainly do not doubt that they would have left us arts that are far truer and more distinct.

But the writings of these scholars reveal that while they indeed collected a lot of material, they did not evaluate it sufficiently, for in some places I look in vain for a syllogism. And they did not arrange it in a sufficiently fitting order, for elsewhere I find a lack of method. I confidently state that I have truly judged and correctly organized this same material in my teachings. Why so? Because the dialectical and rhetorical arts of Aristotle, Cicero, and Quintilian are fallacious and confused in their treatment of the dialectical and rhetorical usage of reason, and then of speech—the usage, I repeat, which one observes in their books. Mine are truthful and distinct, as both the art and its practice prove when they have been thoroughly investigated. This is the first, the middle, and the final support of my argument. I do not make evil use of the testimonies of men who can lie, but I establish my argument by the truthfulness of unwavering, natural usage, the usage, I repeat, which I have been following for so many years with the greatest effort through daily practice and by experience in the subject.

And so, Maecenas, since I am relying on the very pleasant knowledge of your most just wish, I would be embarrassed if I never wrote what I know about those arts. I shall explain them especially to you since you are not so much my patron as a mutual appreciator of good literature, sent by the grace of God to our France. But we delay too long on the threshold: let us take up the rhetorical controversies.

ARGUMENTS IN RHETORIC AGAINST QUINTILIAN

It will perhaps seem to some people an enormous and very difficult task which I propose to undertake against Quintilian, for I shall undertake to teach that his instructions on oratory were not correctly ordered, organized, described—especially so since he seems to define an orator brilliantly at the start, then to divide elegantly the parts of the subjects covered by the definition and finally to delineate the property and nature of each part with extreme care and accuracy. Thus he seems to have looked at everything with especial thought, to have evaluated all things critically and to have organized them methodically. In this disputation, however, I shall, as far as I may, apply dialectic, the mentor of speaking with truth and constancy, in order that I may evaluate the subject with more incisiveness and wisdom. And so, all you dialecticians—that is, whoever can form a judgment about this question with truth and constancy—come here, pay attention, sharpen your wits, drive far away from you (in case passions of this kind have been ready to seize your minds), drive far away, I say, love, hate, prejudice, levity, fickleness, and rashness. Listen to me with willing and impartial minds to the extent that unwavering reason will convince, to the extent that certain conclusion will establish, finally to the extent that truth itself—which cannot be refuted or disproved—will hold firm.

And so first of all let us put forward the definition in which Quintilian outlined for us his ideal orator, and let us refer to this point of dispute everything relevant from all parts of his *Institutiones*. “I teach,” he says, “that the orator cannot be perfect unless he is a good man. Consequently

I demand from him not only outstanding skill in speaking but all the virtuous qualities of character.” This is the type of orator that Quintilian constructs for us. Afterwards in the twelfth book, where he defines him in similar terms as a good man skilled in speaking well, he identifies those virtuous qualities of character as justice, courage, self-control, prudence, likewise knowledge of the whole of philosophy and of law, a thorough acquaintance with history, and many other attributes worthy of praise.

What then can be said against this definition of an orator? I assert indeed that such a definition of an orator seems to me to be useless and stupid: Why? Because a definition of any artist which covers more than is included in the rules of his art is superfluous and defective. For the artist must be defined according to the rules of his art, so that only as much of the art as the true, proper principles cover—this much is attributed to the artist, and nothing further. For a definition is not only a short, clear explanation of a subject but also it is so appropriate to the subject which is being defined that it perpetually agrees with it and is consistent within itself. The grammarian is defined as skilled in speaking and writing correctly; he is not defined as skilled in speaking, writing, and singing. Why not? Because grammar provides no precepts about the last. The geometrician is not defined as skilled in measurement and medicine. Why not? Because there is no precept in geometry which teaches how to cure illnesses.

Therefore let us hold to our axiom and let us lay down this first proposition of a syllogism:

The definition of an artist which covers more than is included within the limits of the art is faulty.

Then let us add to the first proposition we have put down:

But the definition of the artist of oratory handed down to us by Quintilian covers more than is included within the limits of the art.

For rhetoric is not an art which explains all the virtuous qualities of character. Moral philosophers speculate appropriately and judiciously on the numerous problems involving the moral virtues and the virtues of intelligence and the

mind; mathematicians deal with arithmetic and geometry; men of learning and wisdom, not rhetoricians, discuss separately through their individual studies the remaining important branches of learning including the virtuous qualities of character. I conclude therefore:

Quintilian's definition of the orator is as a result defective.

But suppose Quintilian should say that moral philosophy and the very theory of virtues are proper to rhetoricians, not to philosophers. Then the perfect orator is fashioned who cannot exist unless he has attained all the virtuous qualities of character. However, what if each of these statements is inappropriate and false? Shall we not then confirm the chief point in the conclusion of our syllogism? Accordingly, let us investigate whether instruction in virtues can be considered a part of rhetoric.

Is it because the orator ought to control the state and its citizens that moral training will therefore be a proper part of rhetoric? Undoubtedly it seems this way to Quintilian since he says:

But I would not grant this, that (as certain men have thought) the principles of a good and upright life should be the responsibility of the philosophers since it is that citizen who is fitted for the administration of public and private matters, who can guide cities by his counsels, fortify them with his laws, and correct them with his judgments, who is assuredly none other than the orator. Accordingly, although I admit that I shall make use of certain things which are contained in the books of the philosophers, nevertheless let me argue that these truly and rightly fall within my field and properly belong to the art of oratory.

This is what Quintilian says, and consequently when he wishes to give a name to a human being who is an ideal leader in the republic and is perfect in every virtue and branch of knowledge, he calls him an "orator"—as if to make him a god rather than just a man skilled in a single art. Yet at this point Quintilian has proposed that he should give instructions about one certain art and virtue, not about perfection in every art and virtue. He thinks rhetoric is one of the liberal arts, not in fact a common art, and yet at the same time he deems rhetoric to be an art, a science,

and a virtue. For in these books on oratory he has not described any science of civil skills, any theory of life and its duties, nor finally, in the sections dealing with rhetoric, any instruction in those virtues which he claims are parts of the art of oratory.

Quintilian decrees that there are five parts to the art of rhetoric—I shall talk about these afterwards—invention, arrangement, style, memory, and delivery. He thinks there are no more and no less. Yet in no one of these parts does he fit in the moral philosophy which he now attributes to rhetoric. In fact this man was sadly lacking in a knowledge of dialectic. If he had learned from it that in every art and branch of knowledge one must seek out the true, proper, and primary causes of the subject, he would have decided that an orator should be defined quite differently, and he would have learned that he should speculate quite differently on the proper qualities of the arts.

There are two universal, general gifts bestowed by nature upon man, Reason and Speech; dialectic is the theory of the former, grammar and rhetoric of the latter. Dialectic therefore should draw on the general strengths of human reason in the consideration and the arrangement of the subject matter, while grammar should analyze purity of speech in etymology, syntax, and prosody for the purpose of speaking correctly, and also in orthography for the purpose of writing correctly. Rhetoric should demonstrate the embellishment of speech first in tropes and figures, second in dignified delivery. Next, from these general, universal so-called instruments other arts have been formed: arithmetic with its numbers, geometry with its diagrams, other arts with their other subjects. If these arts have been kept separate and enclosed within their own proper limits, then certainly what grammar will teach in its rightful province will not be confused with rhetoric, and dialectic will not encroach upon what each of the others has clearly described. In use these should be united, so that the same oration can expound purely, speak ornately, and express thought wisely. However, the precepts of pure diction, ornate delivery, and intelligent treatment must be kept separate and should not be confused.

Therefore, from this dialectical distinction of subjects, Quintilian should have defined rhetoric so that first of all he would grasp as a whole the material belonging strictly to the art and distinct and separate from all other art's material; then, when it was separated into parts, he could explain it. Thus to conclude this line of reasoning, I shall recall again two syllogisms:

If moral philosophy were a part of rhetoric, it would have to be expounded in some part of rhetoric.

But in fact Quintilian does this nowhere, nor should it be done at all.

And therefore it is not a part of rhetoric.

Likewise,

The parts of the material which belong to the art of rhetoric are only two, style and delivery.

However, the parts of the art of rhetoric are the parts of its subject matter and they correspond completely to one another.

Therefore there are only two parts of rhetoric, style and delivery.

But Quintilian will persist, as in fact he does, in the same proposition, and indeed he will urge even more keenly that rhetoric is a virtue—this is in the second chapter of the second book—and that no one can be an orator unless he is a good man (this is in the first chapter of the twelfth book) and for this reason, I believe, he will conclude that instruction in virtue is a part of rhetoric.

Nevertheless, it must be seen that each of these statements of Quintilian's opinion is false. For although I admit that rhetoric is a virtue, it is virtue of the mind and the intelligence, as in all the true liberal arts, whose followers can still be men of the utmost moral depravity. Nor is rhetoric a moral virtue as Quintilian thinks, so that whoever possesses it is incapable of being a wicked man. Yet some Stoic philosophers seem to Quintilian—as he points out in the second book—to come cleverly to the following conclusions:

To be self-consistent as regards what should or should not be done is a virtue, which we name prudence. Consequently, to be self-consistent as regards what should and should not be said will be a

virtue. Likewise if a virtue is something whose rudiments have been provided by nature, rhetoric will be a virtue, because its rudiments are provided by nature.

But each one of these supposedly ingenious conclusions is twisted and false. For prudence is not a moral virtue but a virtue of the intelligence and mind. Therefore rhetoric will not be a moral virtue. Moreover it is absurd to think that these things are moral virtues whose origins are from nature, as if vices instead of virtues did not rather have their origins in nature. Thus these philosophers deceive Quintilian in that they fabricate a fraudulent sophism instead of a sound syllogism.

For all that, Quintilian continues and maintains his own opinion that since dialectic is a virtue, so therefore is rhetoric. Quintilian should turn the whole thing around and should more correctly conclude that since dialectic is not a moral virtue which can shape a good man, so neither is rhetoric.

“An orator,” he then adds, “cannot succeed in panegyric if he is not well versed in the distinctions between what is honorable and what is disgraceful; he cannot succeed in the law courts if he is ignorant of the nature of justice; and he cannot succeed amidst the turbulent threats of the people if he is timid.” What then, O Quintilian? Is he who knows what is honest and just, himself honest and just? How few are the spendthrifts and cutthroats who do not know what is honest and just? If the orator should be fearful in the case of Milo, you say he will not speak well.¹ What then is the result? Will rhetoric therefore mean bravery? Undoubtedly the grammarian will not be able to speak correctly if he is frightened, because when he is upset by fear he will pronounce syllables as long instead of short, or short instead of long. And because of his confused memory he will produce impurities of diction and solecisms. Is grammar therefore a moral virtue? Of what sort will the relationship between

¹Cicero was the orator who was fearful in the case of Milo. When he came into court to speak in defense of Milo, the room was packed with armed partisans of Clodius, the man Milo was accused of killing. Cicero left without speaking, because of fear, as he later said. He published a revised and expanded version of his speech for Milo and it is generally considered to be one of his greatest. [Ed.]

the two be? Indeed it is one thing to be something that is necessary to the other—quite another thing to be a part, a limb of it. I shall not object to your opinion that moral virtue is undoubtedly useful and suitable for the use of all arts, but in no way shall I admit that any art is a moral virtue.

Finally Quintilian scrapes together the most stupid trifles, saying that since virtue exists in beasts, and courage exists in robbers, it is therefore no wonder that eloquence is a moral virtue. But Quintilian no longer seems to be inexperienced and ignorant only of dialectic but rather of the whole of philosophy, especially of that main branch of philosophy, which gives instruction in virtue. O Quintilian, although you say that moral virtue fashions good, respectable, and praiseworthy followers, nevertheless you do not give sufficient thought to what you say when you attribute moral virtue to beasts and robbers. For the future I expect better words than this, or you should think up better advice.

But Quintilian does not let the matter rest, for in the twelfth book he drifts back to that same problem and accumulates similar worthless ideas.

“An evil mind cannot have leisure to devote to rhetoric,” he says. Or again, “The greatest part of rhetoric concerns goodness and justice,” and “Virtue’s authority prevails in persuasion.” Of these the first two are absolutely ridiculous and absurd, while the third is like his statement that a timid orator will not plead well. However, let us pass these things by. Meanwhile let us maintain that moral philosophy is not a part of rhetoric, nor is rhetoric itself a moral virtue at all, as Quintilian thought. . . .

My dispute with Quintilian’s first two books has up until now dealt with the part where grammar in particular is confused. In the next five books the discussion concerns dialectic, specifically invention and arrangement. Therefore we must discuss these parts next, as well as the separate chapters. And so in the first chapter of the third book Quintilian gathers together the discoveries of all the Greek and Latin teachers about this art, and with intense but useless diligence he reviews the teachers themselves by name. For

this list of so many names sheds no light on the theory of rhetoric, no more than if in grammar, through his love of vanity, he were to seek out by name all the writers about grammar; this catalogue, I say, sheds no light on the theory. A lack of judgment and of syllogistic reasoning has caused his vanity to overflow.

The next chapter is the same. Here Quintilian does not separate with sufficient sharpness rhetoric’s cause and origins, its nature, its usefulness, its art, and its practice. What is the problem? Were Plato and Cicero wrong? Or was Quintilian himself wrong when in the fifth chapter of this book he teaches that rhetoric is perfected and completed by three things: nature, art, and practice? How is usefulness different from those three causes and origins? For nothing either conceived by nature, described by art, or handled by practice is futile and without some usefulness. This is a dialectical nicety of division indeed, that what you ought to explain in three parts you expand into four by a new creation.

In the third chapter rhetoric is separated into five parts: invention, arrangement, style, memory, delivery. I am now not at all surprised that Quintilian is so bereft of dialectic in this division, for he was unable to recognize that here he has confused dialectic itself with rhetoric, since invention, arrangement, and memory belong to dialectic and only style and delivery to rhetoric. Indeed, Quintilian’s reason for dividing rhetoric into these five parts derived from the same single source of error as did the causes of the previous confusion. The orator, says Quintilian, cannot be perfected without virtue, without grammar, without mathematics, and without philosophy. Therefore, one must define the nature of the orator from all these subjects. The grammarian, the same man says, cannot be complete without music, astrology, philosophy, rhetoric, and history. Consequently there are two parts of grammar, methodology and literary interpretation. As a result Quintilian now finally reasons that rhetoric cannot exist unless the subject matter is first of all discovered, next arranged, then embellished, and finally committed to memory and delivered. Thus these are the five parts of rhetoric.

This reasoning of Quintilian’s often deceived

and misled him without any need (as some men report). I propose rather—as I have already said—that we should argue and deliberate quite differently the questions concerning the proper nature and the true divisions of the arts. I consider the subject matters of the arts to be distinct and separate. The whole of dialectic concerns the mind and reason, whereas rhetoric and grammar concern language and speech. Therefore dialectic comprises, as proper to it, the arts of invention, arrangement, and memory; this is evident because, as we find among numerous dumb persons and many people who live without any outward speech, they belong completely to the mind and can be practiced inwardly without any help from language or oration. To grammar for the purposes of speaking and writing well belong etymology in interpretation, syntax in connection, prosody in the pronunciation of short and long syllables, and orthography in the correct rules for writing. From the development of language and speech only two proper parts will be left for rhetoric, style, and delivery; rhetoric will possess nothing proper and of its own beyond these.

And here I am not arguing like Quintilian on the basis of the *sine qua non* for the subject, but by a proper, legitimate line of reasoning:

In every art one should teach as many parts as exist in its proper, natural subject matter, and no more.

To the subject matter of the art of dialectic, that is to the natural use of reason, belongs the skill of inventing, arranging, and memorizing.

Therefore it should deal with the same number of parts.

Likewise,

To the subject matter of rhetoric pertains only the ascribed skill of style and delivery.

Therefore it should deal with the same number of parts.

Likewise,

The parts of another art should not be intermingled with the art of rhetoric.

Invention, arrangement, and memory are parts of another discipline, namely dialectic.

Therefore they should not be intermingled with rhetoric.

However, in other places Quintilian shows us with his very own testimony that those parts belong to dialectic. For in the last chapter of the fifth book he speaks as follows about dialecticians: “Those learned men, seeking for truth among men of learning, subject everything to a detailed, scrupulous inquiry, and they thus arrive at the clear, acknowledged truth so that they can claim for themselves the parts of invention and judgment, calling the former *topiké*, the latter *kritiké*.” Here Quintilian says that the dialecticians lay claim to invention and judgment (which contains a large part of arrangement in the conclusions of each argument and in syllogisms). And finally in the second chapter of the eleventh book he says that if memory belongs to any art, then it belongs completely to arrangement and order. Therefore he should say that the dialecticians could rightly claim this part also, because in dialectic that has been rightly described, one should teach the truest theory of order and arrangement according to the precepts of the syllogism and method.

In this chapter Quintilian disproves the various opinions concerning the number of these five parts, but he does this in such a way that he himself makes far worse mistakes than do those whose mistakes he censures. Some men added that judgment is rather different from invention and arrangement. Quintilian correctly censures these men, not however with a correct argument but with one that is very clumsy and ignorant of what true judgment is. Quintilian thinks that judgment is so inextricably mixed in with invention, arrangement, style, and delivery that it cannot be separated from them by theory or precepts; he does not recognize any theory of judgment at all but, as he explains later in the last chapter of the sixth book, he considers that judgment can no more be transmitted by art than can taste or smell.

In this way Quintilian reveals himself to be quite ignorant of dialectic, for he has either not heard or not read anything about the role of judging, and about the many types of syllogisms, both simple and complex. He has not remembered that Cicero said the following about the Stoics, that as long as they labored in only the one part of dialectic, they did not reach the arts of invention,

and yet they did diligently follow the paths of judgment.

Nor indeed should we consider it possible that rhetorical judgment is one thing and dialectical judgment another, since for evaluating whether something is truly useful, suitable, fitting, or has the qualities it seems to have, there is one faculty of judgment which the syllogism alone executes and accomplishes. For something to be understood as true or false by the rule of the syllogism is no different than it would be for a subject of control and debate to be spoken truly or falsely. Why should I say here that Quintilian knew nothing of the theory of judgment or of the teaching of the syllogism when he himself denies that any at all can exist? Why should I now make a case with many arguments that Quintilian has no training in dialectic? For he not only confesses what I argue, but openly declares it. He says that two arts are claimed by the dialecticians—one invention, the other judgment—but he does not believe what he says, because he maintains that there is no art of judgment.

Therefore let us continue, and let us still use the art of judgment against this rhetorician who lacks the art and theory of judgment. Let us refer his opinion about the remaining subjects to the standard of dialectical judgment. His next instructions are indeed wonderfully confused.

In the fourth, fifth, sixth, tenth, and eleventh chapters he discusses the orator's subject matter and its separation into parts. Let us therefore first of all take up the debate over this question. First Quintilian decrees that there are three classes of causes, demonstrative, deliberative, and forensic. He uses Aristotle as the author of this division, the very man who—to repeat what I have already taught in my "Observation against Aristotle"—was virtually the sole author and inventor of all the obscurity in this art, who was the first to mix dialectical invention in with the art of rhetoric, and who organized his inquiries so awkwardly and so ridiculously.

I say first of all that this partition is false, since there are countless questions which are not contained in any part of these classes. Quintilian saw this when he said,

But then a feeble attempt was made, first by certain Greeks, then by Cicero in his books of the *De ora-*

tor, and now almost forcibly by the greatest authority of our times, to prove that there are not only more than these three kinds but also that they are practically countless. For if we place the task of praise and denunciation in the third division, in what kind of oratory shall we seem to be engaged when we complain, console, pacify, excite, terrify, encourage, instruct, explain obscurities, narrate, plead for mercy, give thanks, congratulate, reproach, vilify, describe, command, retract, express our desires and opinions, and so on? As a result I must ask pardon, so to speak, for remaining an adherent of the older view, and I must ask what were the motives which caused earlier writers to confine so closely a subject of such variety.

He recites these things with a certain grandeur, so that he appears to have solved a difficult matter; he does not seem to have understood the force of the argument which he uses against himself but, content with a fallacious, faulty solution, he has ensnared and deceived himself.

Quintilian, however, thinks he meets this objection in the following way: "In the course of a thorough examination of all these things," he says, "the following line of reasoning helped, that the entire task of the orator is either in the law courts, or outside the law courts." Agreed: and so? "The type of the objects of investigation in the law courts is obvious," he says. I admit this; what then? "Those matters which do not come before a judge either deal with past or future time," he says. Why, I ask? Can there not exist any question, any dispute, any occasion for speaking that deals with a contemporary subject? When there is an investigation of this syntax, this square, this star, this wound, this rhetoric, or countless matters of this kind, does the investigation concern a past or future rather than a contemporary matter? Consequently this is false.

But go on, nevertheless. "We praise or denounce past action," he says, "we deliberate about the future." But cannot the opportunity also be offered for investigating, consoling, pacifying, exciting, terrifying and doing countless other things that concern past and future? Thus Quintilian here concludes nothing, solves nothing, but confuses himself.

But another clear proof is added to the one above. "All subjects of speech," he says, "must either be certain or doubtful." What then, O

Quintilian? What will you achieve by this division? “We praise or blame what is certain, according to each person’s inclination,” he says. Yet, like Cicero and Caesar in the Cato debate, we do praise and blame many uncertain things, and of course without either praising or blaming we treat many certain things, such as the almost limitless functions of the subjects covered by the liberal and practical arts. Therefore, part of this division is false.

“In some cases,” he says, “dubious matters require deliberation, in other cases, litigation.” Truly I look in vain here for the same statement as in the previous section, that the things which are doubtful to the ignorant are the countless subjects covered by the arts. Should a man who is ignorant of those arts guide the deliberation of the people or the judgment of the law courts according to Quintilian’s precepts, instead of employing and seeking information from a learned, experienced man? O capricious and artless proposal! By this devious argument has Quintilian refuted the objections thrown against him? Has he in this way opposed the greatest author of his times? Yet his method is not to refute false arguments by true arguments, but rather to confirm true arguments by false sophisms.

Quintilian adds to this last quasi-solution one other. He abridges all those other species into the three kinds, but in a quite insolent manner that is inappropriate for a writer of the art. Indeed he wished to overrule us by the force of his authority, since he can prove nothing true by reason. I look in vain here for dialectical wisdom in his partition. Now I am saying not only that Quintilian errs without the art of judgment but also that he rambles on without any understanding of invention.

Partitions of questions of a similar but far greater uselessness follow in the whole of chapters five, six, and eleven. I have decided not to use up the greater part of my discourse against these by teaching that they are stupid and false, but rather I have decided that I should use one comprehensive refutation for so many foolish statements. I say therefore that the whole partition and division of these questions is clearly futile not only in the art of rhetoric, which is composed truly and appropriately from the parts of style and delivery, but also in this confused art of

Quintilian’s which is thrown together from the parts of invention, arrangement, style, memory, and delivery. Since we indeed feel this way, let us repeat this line of argument from our “Observations against Aristotle.”

A theory common to the subjects laid before it for treatment seeks no partition of these subjects.

For instance, in grammar there is no division of the subjects laid before grammar for treatment, because grammar is a common art that deals with all aspects of writing and speaking.

Rhetoric, though confused by Quintilian into five parts, is a theory completely common to the subjects laid before it for treatment.

For there is one art common to memory, delivery, and style, and their parts are not variously adapted to various questions—unless I do not know what is taught concerning the quality of style, and about the classification of arguments as either demonstration, deliberation, or adjudications; even then, there is not another art of tropes and figures, but another use. I shall demonstrate my proof concerning invention and judgment in their place.

But indeed I shall instead agree with Quintilian’s opinion that rhetoric is defined as the science of speaking well, not about this or that, but about all subjects.

Rhetoric therefore requires no partition of its areas of investigation.

Here I am not using fallacious or obscure proofs, but I am explaining the first and most important reason for dividing a question. If a question were to be divided in rhetoric, this would happen because some fixed arts are suited to fixed questions; not all parts of those arts as a whole would agree with all questions. But I contend that this is false, and I hold this to be plain and obvious first of all in respect to the three parts, style, memory, and delivery; in respect to the other two parts, invention and arrangement, I hold the same position about those things necessary for speaking.

Indeed the chief point of the whole confusion is in invention alone. The theory of memory and delivery is not repeated very often and is not confused in so many ways; it is dealt with once, and

in one place only. The teaching of style through tropes and figures is not muddled by the same repeated and confused classifications; although Quintilian burdened this part with many unrelated subjects, still he did handle it altogether in a single place over the eighth and ninth books. In various places Quintilian says many things about the teaching of arrangement, proofs, questions, and the parts of a speech; he infers no universal and general (if I may use his word) precept. I say again that the chief point of this rhetorical confusion occurs entirely in invention; the reason for this we can see from reason and from the developments of history.

For I see that the scholars and teachers of this art have spent greater zeal in collecting the instructions of the ancients and in thinking up new instructions than they have used judgment in discriminating among their own and others' discoveries. The purpose of the early rhetoricians before Aristotle was not to record some general theory for speaking eloquently about all subjects, but only to draw up for forensic and civil cases some advice concerning the rules for amplification through tropes and figures. Other writers suggested other things about how to move the audience to anger, pity, envy, indignation, and similar passions, and about the classification of causes (demonstrative, deliberative, and judicial). Later Aristotle collected all their material together with great eagerness and care, and he mixed up these first arts with the universal, common topics of dialectical invention; he also gave some thought to delivery; later memory was added to rhetoric. Thus he entangled the arts of invention in as many ways as we have them now, despite the fact that only one general theory—separated into the ten topics of causes, results, subjects, adjuncts, opposites, comparisons, names, divisions, definitions, and witnesses—could be adapted to make clear most easily and plainly all questions, all parts of a speech, and finally all subjects.

But someone will say that in the classification of causes and the parts of a speech these lesser arts of invention are described for uneducated novices, whereas the more important and more common arts belonging to the universal topics are described for the pupils who have already

made some progress in those studies. I hear them, I say, and I know that this is said in the second book of Cicero's *De oratore*, for there Antony speaks as follows about these topics of invention:

If, however, I should wish that someone quite unskilled should be taught to speak, I would instead hammer with undivided zeal on the same anvil night and day, and I would thrust all the tiniest morsels, everything chewed very small, as the nurses say, down the young pupil's throat. But if he is generously instructed in the theory and already familiar with some usage, and if moreover he seems to be of sharp enough intelligence, I would snatch him away, not to some remote, landlocked rivulet, but to the source of the mighty, universal river. This site, as the home of all proofs, would reveal them to him through brief illustration and verbal definition.

Thus Cicero spoke there in Antony's voice.

Here I wish to lay down a comprehensive rebuttal to Cicero—namely, that in his rhetorical precepts there is almost nothing of Ciceronian judgment or intelligence; rather, he dealt merely with the rules of teachers and rhetoricians whom he had heard or read, Aristotle in particular. Cicero did not become eloquent from these rules, and his eloquence can easily be seen as splendid, not because of his own mixed-up rules but because of our own rules, which we make conform to his achievements. There is yet another point in respect to the authority of Cicero: Do we wish the authority of any man in a debate concerning an art to be superior to the truth of the case? Consider some similar proof in another body of instruction for an art. Suppose the grammarian should define a noun and should expound as a whole all the circumstantial adjuncts of the noun and its accidents. Because this is comprehensive, because it is general, we consider it sufficient for all nouns. We look for no lesser arts, nor could any particular art be more easily explained than that general one. The same proof obviously holds for the theory of invention.

Our instructor teaches that all things which one can say about anything are either causes, effects, subjects, adjuncts, opposites, comparisons, names, divisions, definitions, or witnesses, and he carefully explains these things; indeed he explains the theory of all reasonings and of all argu-

ments. No instruction trimmed so closely could be more appropriate, nor is there any better or easier way taught for deliberating on and discovering what should be said about a subject brought forward for treatment than these many forms of appraisal which Quintilian uses in the areas of investigation and in the parts of a speech.

For this reason there is no way an excuse can be permitted for such a great muddle.

But let us turn to these arts of invention which Quintilian teaches in the classification of causes, in the divisions of a speech, and in the common topics. Let us teach that nothing apart from our ten topics should be included in them, and that nothing better can be shown for teaching and helping youth. For I allege and assure you that these ten topics are the only ones, and that apart from these there is nothing taught in the numerous inventions of Quintilian that can be truly referred to the rationale of theory.

The seventh chapter deals with demonstration. What topics of praise different from ours does Quintilian handle here? None. Instead he makes a muddle of four of ours and does not adopt them as complete in themselves as causes, effects, adjuncts, and witnesses. For he teaches that the source of demonstration derives from parents and ancestors who in our topics are the procreative causes; likewise it derives from discoveries, exploits, words, and deeds, which are effects; likewise it derives from the condition of mind, body, and fortune, which are adjuncts; likewise from divine witnesses; no classification of argument beyond these is of any concern.

Here therefore Quintilian reveals nothing about invention that is not more useful and suitable in our topics, but here is not even made distinct and separate. He adds a few things about arrangement, namely that we should follow either a chronological order or the distribution of various characteristics. We ought to follow the latter in every dispute which proceeds along straight and orderly lines. We can, however, apply the second to the first, and for the sake of clear understanding we ought to do this. Florus did this in his praise of the Roman people in which he follows a chronological order and yet divides the complete work into four parts. Livy had done the same thing in his complete history

composed in gradual stages. And so Quintilian has shown nothing here that is the true property of demonstration, and the things he thinks are separate can best be joined. For this art of universal invention is likewise also suited to demonstration.

In the chapter dealing with deliberation Quintilian fails to write about the topic of invention, or to make clear any method of arrangement; he expands the whole subject with mere trifles. Moreover, Quintilian taught nothing separately about the judicial classification; he referred to its theory in books four and five. However, these things concerning the parts of a speech, and likewise concerning the common, general topics of invention, are generally taught by other rhetoricians. And so let us conclude first of all that Quintilian in his classification of causes does not describe any arts that are proper to invention; as a result there should be a division of classes into questions and causes. Next let us likewise conclude this, that although I admit that arts of invention for praise or deliberation were shown, none was relevant apart from the one species of causes, the results, the adjuncts, and the divine witnesses. Our ten topics explain all these things thoroughly. For if there is a question concerning praise and advice, without doubt our instructions will open all those sources of dialectical wisdom in the classification of causes, in results, in the many parts and manners of subjects, adjuncts, and opposites, and in the abundant and brimming topics for the remaining arguments. A choice of subjects and a method will almost be difficult for you, since such an abundance of material will be offered.

And so what sort of a dialectician do we acknowledge here, one who says that there is no theory of judgment, and who when he decrees that the art of invention is threefold, puts forward such a useless and sterile art of invention as this first one in the classification of causes? The second art of invention which follows is placed by Quintilian among the parts of a speech. Since he argues first about the number of those parts, we must therefore say something about them.

And so in the ninth chapter Quintilian constructs two duties for a judicial case—the bringing and rebutting of charges—and five parts for

a speech—the introduction, the statement of facts, the proof, the refutation, and the peroration—as if in demonstration and deliberation there were not an argument over the interpretation of an action that leads to either some charge or a rebuttal; as if also these five parts of a speech could not be identified in other questions; and as if all these things, whether duties or parts proper to the judicial question, were not common to all questions. . . .

I come now to Quintilian's third form of invention. We have discussed the invention of causes; we have argued over the invention of exordia and statements of fact; there remains one invention that is common to causes, to parts of speech, and generally to everything. However, Quintilian seems to have placed it in the third part of a speech, that is, in the proof, because he thought that there is no place for arguments in the exordium and the statement of facts, but only in the proof. For if he thought otherwise, why does he attribute to one part what he should reckon common to all? Come then, let us tackle this problem.

I propose, however, that his theory of universal invention is just as careless and as useless as the one above, the specialized invention in causes and in the parts of a speech. Quintilian, following Aristotle, divides proofs into two kinds, so that some are "inartistic" and others are "artistic." He calls those inartistic which are outside art and which the litigant receives from outside himself, such as the decisions of previous courts, rumors, evidence from torture, documents, oaths, and witnesses. Quintilian errs in this along with Aristotle. First, since there are countless questions about those subjects and arts which use the evidence of scholars and learned men although they do not come into the forum, in what way can they be called inartistic? Again, how can we call something inartistic which is taught by the precepts of art? Surely the precepts and arts concerning these arguments are well known. In fact, as the matter stands, I would prefer to call these reasons inartistic because they contain no art at all, because they have only the tiniest particle of true proof from all available arguments, and because on the whole one does not believe the evi-

dence but rather trusts in the causes of the evidence. Therefore Quintilian is misled by a false line of reasoning.

Next he divides the artistic proofs in a rather superficial and foolish fashion so that they concern either a thing or a person, and derive from things preceding, subsequent, or opposite, from past, present, and future time, and from something greater, equal, or less; likewise so that some proofs are necessary, some credible, and others not impossible; or so that because one thing is, another thing is not; or because one thing is, another thing is; or because one thing is not, another thing is; or because one thing is not, another thing is not. What can be more idiotic than this whole category of partitions? Granted that he may fashion out of the most trifling details such infinite sections for every subject, what usefulness has this in any case either for recognizing the nature of the arguments or for dealing with actual practice?

"Therefore all artistic proof," says Quintilian, "consists either of signs, arguments, or examples"—as if examples and signs were not arguments! O sharp and dialectical divider! Let us look at the differences between signs and arguments which Quintilian suggests, so that we can see this marvelous distinction between examples and signs, and arguments.

"Signs," he says, "are not discovered by the orator but are brought to him along with the case." But this is false, for what he calls signs are actually the effects or adjuncts that are visible to the eye; the orator probing into every problem can seek and discover them. But if we suppose that the orator does not discover them but that they are brought to him, they are therefore, I say, inartistic, and consequently not parts of artistic proofs, as you, O Quintilian, make them. In this way you fall into a more serious error of syllogistic judgment.

Quintilian sets out another difference between argument and sign, and enfolds it in an amazing double proposition.

"If signs are infallible," he says, "they are not arguments, because where they exist there is no room for question; even if they are doubtful, they are not arguments because they themselves need the support of arguments." But signs, I insist, are

either infallible or doubtful; arguments therefore—if I may conclude for you—are neither. But truly, O Quintilian, the clearer the arguments the more they remove the problem and the more they prove it, so all the more are they arguments. But you yourself a short while later define an argument as infallible; therefore the first part of your double proposition is false. This one place can indeed prove just how sharp was Quintilian’s judgment, for he makes such feeble arguments, he draws such trivial and inconsistent conclusions, and he deliberates contrary to all dialectical reason.

For from this handsome double proposition you should conclude that no proof is an argument, as follows:

If a proof is infallible, it is not an argument because there exists no room for question. If it is doubtful, it is not an argument, because it needs the support of arguments.

And yet a proof is infallible or doubtful.

Therefore no proof is an argument.

This is the dialectic of Quintilian. But let us look at the definition of an argument, for perhaps this will provide a clearer difference. “Argument,” says Quintilian, “is a process of reason providing proof, which enables one thing to be inferred from another and which confirms facts that are uncertain through facts which are certain.” But this definition of an argument suits both sign and example. His entire partition of artistic proof into sign, example, and argument, where two species are placed along with their class as if they were different classes, is clearly both false and stupid. Almost the whole theory of proofs outlined by Quintilian in the fifth book is the same.

However in the general theory of arguments—which we handle completely in our ten topics of causes, effects, subjects, adjuncts, opposites, comparisons, names, divisions, definition, and witnesses—Quintilian confuses and muddles the topics as if they were general (even though he treats them not only as general but separates them into sections). He confuses, I repeat, those topics drawn from person, such as birth, nationality, country, sex, age, education, physical appearance, fortune, condition, natural disposition, virtue, occupation, previous deeds, previous

words, and name. For our teachings cover these many topics and separate them into the two topics of effects and adjuncts.

Next, Quintilian’s greater weakness concerns effects. For he put these forward in the topics of persons, yet here once again he repeats them as if they were now different. He does the same with time, place, and chance event, which belong to adjuncts, and yet once again he puts adjuncts afterwards as if they were different. He does the same with opportunities, instruments, and methods, treating them as if they were not causes or adjuncts. He does the same with definition, class, species, and proper difference, as if a property were different from adjuncts, or difference were not an opposite. However, Quintilian does talk about this later. He does the same with division, as if class or species, indeed mentioned shortly before, were somewhat separated from the topic of division. He does the same with removal, where Quintilian prates quite childishly in thinking that the removal of parts is a class of argument different from division. He does the same with beginning, amplification, and climax, three topics which provide no universal class of argument but are mixed in with the others. He does the same with similarities, differences, opposites, adjuncts, and references, where Quintilian most ignorantly subordinates adjuncts to references. He does the same with causes and results, which however he enumerated previously. And he does the same with conjugate arguments which Quintilian laughs at, because, he says, “There is no need for proof when a man has the common right to send his cattle to graze in a common pasture.” Quintilian shows the same dialectical judgment here as he did when he previously distinguished signs from arguments: there is no need to prove that because an animal is rational, it is a man. Is anything, O Quintilian, further from dialectic than that judgment according to which a definition is not an argument? What could be more bereft of philosophy? The same can be asked about the major and minor terms.

But at last he draws together the countless topics, variously confused, into a sum total of confusion, so that he draws every argument from persons, causes, places, time, opportunities, means, definition, class, species, differences,

properties, removal, division, beginning, amplification, climax, likes, unlikes, contradictions, consequents, efficient, effects, results, conjuncts, and comparison. He adds to these the supposition he calls "hypothesis," which can be drawn from all arguments because there are just as many fictitious species as there are true.

Here Quintilian cannot be called negligent in seeking out so many items from all over, but certainly he can be seen as quite ignorant of dialectic and without experience of the syllogism, for he does not see that this "hypothesis" is the proposition of a connected syllogism according to which nothing can be argued, proved, or concluded unless a minor proposition, either expressed or understood, is joined to it. I repeat, he does not understand that invention is a process which supplies arguments, whereas arrangement is a different process which organizes arguments. But that "hypothesis" is part of a connected syllogism; it arranges the argument along with the question, and it can grasp every type of argument which a syllogism can. A syllogism, however, is not an argument, nor indeed is the proposition of a syllogism an argument. And although Quintilian mixes these falsehoods so unwisely and confusingly with the general, universal topics, he nevertheless alleges that he can write about many more topics of invention. In this he deceives himself, for there is no class of arguments outside the ten topics of causes, effects, subjects, adjuncts, opposites, comparisons, names, divisions, definitions, and witnesses. In our teachings all the things covered here have been very clearly distinguished according to their classes and parts.

There is a similar confusion over examples. "All arguments," says Quintilian, "must either be from things like, unlike, or contrary." A little later, however, he clearly incriminates himself by also adding arguments from greater and lesser things and from historical authorities. What he thinks are examples of contraries, such as Marcellus' restoration to the Syracusan enemies of the works of art which Verres took from them when they were allies, are in fact unlikes, not contraries.

He says a lot of things that are partly false, partly true, about the use of arguments. He also adds some things about arrangement which have nothing to do with syllogism and method since

they concern a certain type of artistic arrangement. Although Quintilian orders that a speech should not descend from its most powerful to its weakest point, afterwards in the first chapter of the seventh book he will say the opposite, for there he will teach that the strongest argument against the accused must be refuted first before the weakest can be dealt with.

In the chapter concerning refutation, there are similar trivialities, with an utter lack of any instruction concerning invention. Finally Quintilian collects many things about the enthymeme and the epicheireme; by this he proves again what was evident in so many previous places—namely that in dialectic he is without doubt a lightweight. His discussion of the syllogism is clearly rather a description of what he has either heard or read from some author. Quintilian here has Aristotle as the source of his mistake. He separates dialecticians from orators not according to practical use but according to the false fabrications of Aristotle, who taught that the former use syllogisms, whereas the latter more freely use loose-knit speech. This man does not realize that, like grammar, dialectic through all its parts of invention and arrangement has common use in every speech; and that dialogues, lectures, debates, poems, and finally speeches—of whatever kind they may be—are all more dialectical than oratorical. Virtually no speech is without reason and argument, or without the organization of reason and argument which belongs to dialectic. But Quintilian, following the vain imaginings of Aristotle, who made a foolish distinction between dialecticians with their scholastic disputes and rhetoricians with their forensic and civil debates, thinks that orators use the syllogism less frequently than dialecticians; as if in fact the reasoning in the dialogues of Plato were not connected to both dialectic and rhetoric, and as if we do not find as many syllogisms in Cicero's forensic cases as in even the thorniest sophisms of Aristotle. If Quintilian had recognized that the arts of invention and arrangement are distinct, and if he had evaluated Cicero's speeches according to their standard, he would have found more frequent syllogisms in Cicero's speeches than could be observed in any philosophical writings. This mistake by Aristotle deceived Quintilian, for he simply followed Aristotle's fabrica-

tion here and never considered whether it was a true statement. For if he had examined it, most obviously he would have discovered the error of those things upon realizing that the books of poets and orators use and handle dialectic as much as those of philosophers. Such are his statements about the invention of arguments in the third, fourth, and fifth books.

The whole of the following sixth book is taken up with the arts for stirring the emotions and causing delight; here nothing is the property of dialectic or of rhetoric. Since rhetoric and dialectic are general arts, they should therefore be explained in a general fashion, the one in respect to style and delivery, the other in respect to invention and arrangement. Many rivulets arise from these universal fountains, but they should not be intermingled with the precepts of these arts. Three arts of invention are taught by Cicero and Quintilian: for the purpose of teaching they describe topics in the classes of causes, in the parts of a speech, and finally, those that are common to all questions. Secondly, they also lay down some instructions for stirring the emotions, and then for causing delight. But in invention one who is teaching should explain only the topics, since arousal and delight do not have any proper arts. However, they are drawn in common from those topics of invention, and likewise from style and delivery. They are especially drawn from moral training, where you learn to recognize what is virtue, what is vice, what things please honest men, what things delight the wicked, and likewise what offends each. Cicero often provides proof of this, for in his writings on oratory he alleges that this part is therefore most necessary of all parts of philosophy for the orator; and Aristotle, who was responsible for this great confusion of dialectic and rhetoric, alleges that rhetoric by reason of the emotions and passions is in a certain sense part of moral philosophy; he refers the whole art of stirring the emotions to that moral philosophy. For this reason Quintilian himself said in his first book that moral philosophy was a part of rhetoric.

In the last chapter of the sixth book Quintilian discusses the difference between common sense and judgment, and he thinks that judgment, as I said before, can no more be transmitted by art than can taste or smell. Here I do not find Quin-

tilian lacking in care in his collection of material, but I long for prudence in his making of judgments. Previously he stated that there are two parts of dialectic, invention and judgment. Now, as if dialectic were not an art, and as if his instructions concerning judgment in syllogisms were inartistic, he says that judgment cannot be transmitted by art. And yet this theory is so full, so wonderful, and so divine that the man who knows all the other arts but does not know this one from precepts or from some observation seems to have understood nothing truly and to have learned nothing surely. And so these matters concerning invention have been confused by Quintilian.

Quintilian seems to wish to explain the theory of arrangement in the next book, the seventh. If he had done this, he would have taught all the modes of the syllogism, and the correct ways of method, theory, and prudence, just as our teachings have explained. But in the beginning Quintilian declares that there is no fixed art of arrangement which can be formulated for all matters; here he is seriously wrong. For there is a fixed theory of syllogism and artistic method, common to everything which can be treated with order and reason. And so how many things must now be said against this man concerning the art of arrangement, for he not only is ignorant of it but believes that none can exist!

Indeed the countless things which Quintilian writes in the whole of this book under the heading of arrangement in fact concern merely the rules for civil cases and for the practice of litigation in the Roman forum in his own times. But all such things, not being very stable or enduring, merely provide instruction for those specific rules of the Roman forum. Moreover he drags back to this place all those sophisms in the third book concerning types of status, conjectural questions, definition, quality, deed, the letter of the law, its intention, opposing laws, syllogism, and ambiguity—in none of which is there any general precept for arrangement. Also he confuses some precepts for invention in conjecture and definition where they concern causes, deeds, and advice, so that one can most truly allege that in five books (the third, the fourth, the fifth, the sixth, and the seventh), Quintilian does not formulate an art of invention and arrangement;

rather he overwhelms the theory of each part with many false, alien, and useless matters.

Therefore now we may conclude this whole debate on invention and arrangement, and we may put our teaching on a footing with Quintilian's teaching, our usage with his usage, so that in the end we can understand more fully and exactly what it is possible to decide about this subject. We ourselves rightly attribute the arts of invention and arrangement to the art of dialectic, as its proper parts. Quintilian falsely subordinates the theory of dialectic to rhetoric. We define a question and give advice about its parts whatever may be relevant to the use of invention and arrangement; Quintilian does not define the question, and he proposes no use for it; rather, he confuses this part of the theory with sophisms of all kinds. We define invention, we separate its classes, we deal with each species and part of the classes, and we illustrate by excellent examples. Quintilian does not illuminate invention, the classes of invention, the species of the classes, or its parts, with any light at all of true definition and partition, but instead of one brilliant invention that is common to all subjects, he accumulates three most inane and disordered arts—the first dealing with the classes of causes, the second with the parts of a speech, and the third with the general topics common to all causes as well as to all parts of a speech.

We have pursued all the virtues of syllogism and of method, that is of universal arrangement; in this case Quintilian did not in any way perceive any fixed and enduring precept. In the clearest and most suitable order for comprehension we have organized the general rules first, and then the particular rules; in what way, with what order, by what rule of dialectical method did Quintilian put together his whole confusion of so many arts? Plato compares a methodically and rationally organized speech to the perfect figure of a fine animal, whose very head rears above, whose feet stab the ground below, and whose chest, belly, and remaining limbs have an orderly arrangement in the places in between.² He believes that a speech, arranged thus by dialectic, covers the universal subjects in the first,

most important place, the particulars in the least important place, and in between the subjects first of all that are subsidiary to the universals, and then the subjects that are more important than the particulars. As a result a debate is guided from its head through its parts to the final, particular details. But indeed what sort of a monster would we think the animal whose feet were raised above, whose head was thrust down below and along with the stomach was swallowed up by one foot as if by some vortex? Such undoubtedly is Quintilian's triplicate organization of invention: the feet are the particular arts of causes which are in the first, most important place; the stomach is the parts of a speech which are common rather than demonstrative arts, and deliberative causes which are less common than the general topics—while the head is the topics common to all questions; but this theory of speech and common topics is confused in one class of judicial cause, that is, in one foot.

Thus, in his whole explanation of the art Quintilian did not only make all too many absurd mistakes in the subjects themselves, but we see how confused and muddled he was in order and arrangement. Yet what do we think will happen if we seek for practical application of such foolish, useless confusion? Like any other discipline, the theory of invention and arrangement must be practiced in two ways: first, in order that by its means we should through external examples learn common sense from argument, judgment from the manner of conclusion, and complete prudence from the method of arrangement and order; secondly, that by means of the same art we should devise similar examples in speech and writing. But suppose we take some speech of Cicero and investigate invention and arrangement according to Quintilian's arts: of what use first of all for this system of practice is that whole technical doctrine of status that deals with whether the question is reasonable or legal, whether it inquires if something is complex or definite, what it is, or of what sort; whether it arises from an ambiguous basis or is of a syllogistic type, whether it involves contradictory laws, the letter or the spirit of the law, or whether it involves transference—what use, I repeat, will these things be to me for the system of invention?

²This comparison can be found in the *Phaedrus*. [Ed.]

None. For the system of arrangement? None. Indeed, which arts of Quintilian shall I now apply to explain Cicero's intention here and the type and probity of the argument he used; I repeat, which arts of invention shall I apply here? Shall I attack again the classes of causes, shall I abolish the countless teachings on the parts of a speech, and shall I refer here the whole system of common topics? For, good God, why should there be such a great, mixed-up confusion, when the whole matter is very clear and easy?

Do you wish to recognize and to evaluate the wisdom in the speech of Cicero that is set before you? Refer its arguments to either part of the question, consider what its arguments are, whether cause or effect, subject or adjunct, opposite, comparison, rule of name, division, definition, or witness, then follow up the results by a short, easy way—something which you can barely do, and not even barely, by the annoying roughness of Quintilian's road. Finally, granting that there is the same danger in Quintilian's arts concerning arrangement, how shall I come to know Cicero's judgment and his method? But Quintilian is so far from teaching any theory of judgment that he alleges that none at all can be formulated. He is so blind to the entire art of

arrangement that he professes there can be no such art common to all subjects. Aristotle's error is almost equal in foolishness to Quintilian's; in his *Topics* the former denies that a common invention can be formulated, but he entwines it in all the many obscurities that I have pointed out in his books. The latter states with truth that judgment is a part of dialectic, and yet the same man, apparently dreaming, says that there is no theory of judgment and no common theory of artistic arrangement. Accordingly, here I shall now once more ask a question: How can the second system of practice be handled according to Quintilian's arts? Neither wisdom nor judgment nor method in set authors can be understood from them; how therefore will we be able through those arts to pursue the same virtues in writing and speaking?

At this point, then, since the art of invention and arrangement is so carelessly and so senselessly laid out by Quintilian, since nothing is perfectly defined, divided, valued, or arranged, since the true use of these parts cannot in any way be elicited from those teachings—it is for you to decide, O dialecticians whom I summoned at the start as judges of my debate—to decide, I repeat, what sort of dialectician you now reckon this rhetorician to be!

Thomas Wilson

ca. 1523–1581

Thomas Wilson was born to a middle-class family in Lincolnshire, England. Perhaps with the aid of aristocratic friends to whom their royalist sentiments endeared them, Wilson's parents were able to send him to Eton and Cambridge, where he was educated in a humanist curriculum influenced by Erasmus. As a young man, Wilson served as tutor in several aristocratic families. He also published the first logic handbook in English, *The Rule of Reason* (1551), and next, *The Arte of Rhetorique* (1553; excerpted here), the first book in English to deal with invention, arrangement, style, memory, and delivery—all five parts of classical rhetoric. These books were perhaps intended to serve as advertisements of Wilson's verbal abilities, to assist him in gaining the post of tutor or secretary in some royal family. Unfortunately, they also advertised his Protestant religious sympathies, forcing him, as he said later, to leave England in 1553 when the Protestant Edward VI, Henry VIII's young son and heir, died and the Roman Catholic Mary ascended the throne.

Wilson arrived in Padua in 1554 and studied law. While in Italy, he was arrested and tortured by the Roman Inquisition, which claimed that his logic and rhetoric books were heretical. Wilson escaped from prison and returned to England around 1560, shortly after the accession of the Protestant queen, Elizabeth. In 1570 he published a translation of three orations of Demosthenes, and in 1572, the anticapitalist *Discourse on Usury*. During Elizabeth's reign Wilson prospered, rising high above his humble beginnings although never entering the nobility. He held posts as teacher, member of Parliament, ambassador to Portugal and the Netherlands, and, in 1577, secretary of state. He died in this last office.

Wilson's *The Rule of Reason* treats a form of argument much like what Aristotle calls dialectic: a rigorous exchange of views among experts in the subject under discussion. Wilson calls it dialectic or logic. Renaissance scholar Thomas O. Sloane says that Wilson departs from Aristotle by suggesting—at times—that dialectic can achieve certainty, not merely probability.¹ In this, Wilson seems to cling to the medieval view that through reason, people can rectify their fallen state. This view would also place rhetoric in a subordinate position, as merely the method of conveying the truths discovered by logic. Wilson compares logic to a closed fist, driving home its points irresistibly, and rhetoric to an open hand, offering a more conciliatory approach to truth. This popular Renaissance image for logic and rhetoric originated with the ancient Greek philosopher Zeno of Citium, founder of the Stoic school, and was subsequently cited by Cicero and Quintilian.

In *The Arte of Rhetorique*, however, Wilson sometimes speaks as if there is a process of finding and developing arguments, not merely embellishing them, that is proper to rhetoric. He has in mind the “expert” deliberations of lawyers and politicians. The practical rhetorician, moving freely among the strategies offered by in-

¹Thomas O. Sloane, *Donne, Milton, and the End of Humanist Rhetoric* (Berkeley: University of California Press, 1985), pp. 132–34.

vention, arrangement, style, memory, and delivery, creates arguments as he shapes his discourse effectively in response to the exigencies of the moment. As Sloane has argued recently,² Wilson fully exploits the Ciceronian practice of exploring all sides of a question in this process. The five-part structure is, of course, drawn from classical rhetoric, but Wilson's work goes further beyond translation and paraphrase than other rhetorics of the period do. He reshapes the classical sources in his own words, for contemporary needs. Moreover, speech-communication scholar Russell H. Wagner suggests that Wilson's emphasis on getting and holding the audience's attention through emotional appeals may be unique. Sloane sees Wilson as trying to promote the ideal of the wise orator, an ideal that can be found in his major sources, Cicero, Quintilian, and Erasmus. But Wilson's logic text suggests that he is not quite as much of a skeptic as Cicero or Erasmus.

As Sloane points out, *ethos* is very important to the Wilsonian rhetorician, as Wilson himself demonstrates amply in the *Rhetorique*, even if he discusses it only scantily.³ But if the term *ethos* does not appear, literary scholar Lois Agnew has argued that Wilson sees style as the way to create an ethical appeal. He is no Ramist, eschewing elaborate ornamentation, but, Agnew contends, his emphasis on aptness and conciseness aims to win the audience's confidence in the speaker's honesty.

Wagner maintains that Wilson's insistence on a five-part structure for rhetoric underlines its usefulness for public oratory, in opposition to Ramist rhetorics that would reduce rhetoric to style and its manifestations largely to print. Wagner's contention is borne out by Renaissance historian Richard J. Schoeck's argument that Wilson addresses the rhetoric to young men like his own tutees, noblemen and gentlemen who are preparing for careers as public servants or lawyers and so will need oral rhetorical skill. The fact that Wilson, in his opening version of a popular classical myth, casts the rhetor who creates civilization as a preacher of God's word also indicates that he may have hoped that his rhetoric would assist pulpit orators. Be it noted, too, that Wilson's decision to write a rhetoric in his own vernacular, English, rather than Latin bespeaks a commitment to its immediate practical use. Nevertheless, most of the examples in the rhetoric are texts meant to be read. In spite of Wilson's allegiance to the humanism of More and Erasmus, which envisaged a powerful public role for rhetoric, he could not entirely resist the pressure of the times to make rhetoric into a written art.

Whether written or oral, however, language was an important force for social mobility in sixteenth-century England. As literary historian Frank Whigham has explained, this was a time of upheaval in which yeomen could become gentlemen and courtiers could fall unless they relied increasingly on language-based diplomatic abilities rather than military prowess to maintain their positions. Whigham suggests that courtesy books, detailing the manners of a gentleman, proliferated in England at this time because they served as how-to manuals for social climbers, who could

³Sloane, *Donne, Milton*, p. 136.

take hints from them on constructing aristocratic identities for themselves. Appropriate performance became the hallmark of the true courtier more than noble birth, as shown in the model for these texts, Baldesar Castiglione's *Book of the Courtier* (p. 661). Thus even those born into the upper class might need coaching from such books to maintain their position and not appear perilously vulgar. Wilson's rhetoric book appears to be a related genre because of its advice on managing one's language decorously. Renaissance scholar Wayne Rebhorn has shown how both Castiglione and Wilson emphasize appropriate language use, among other attributes, as an important boundary marker between the upper and lower classes, although in Rebhorn's view Wilson was less obsessed with maintaining the distinction than Castiglione. In his more recent work, Sloane suggests that Wilson actually addresses two audiences in his rhetoric and logic texts: those who, like himself at the beginning of his career, had little familiarity with classical sources and the discourse of power but were ambitious to learn, and also those who had already achieved powerful political positions and could better appreciate the perspicuity and wit of Wilson's advice.

Wilson's rhetoric book went through eight editions and was the most popular rhetoric in English in sixteenth-century England. In a 1560 edition, Wilson dedicates the work to John Dudley, Lord Lisle, Earl of Warwick. This young man, a friend of one of Wilson's tutees and known to be a scholar, was just beginning the kind of diplomatic career to which Wilson's conception of rhetoric might be supposed helpful. He was also a well-placed patron who could be useful to Wilson. Wilson opens with an apt example of rhetoric's diplomatic power: the orator Cineas persuading cities to surrender to King Pyrrhus without bloodshed. He also adds a prologue to this 1560 edition, in which he tells bitterly how the first edition brought on the charge of heresy from the Roman Inquisition. Not wishing to be persecuted again, Wilson now disavows responsibility for any harm the work might cause.

SUMMARY OF *THE ARTE OF RHETORIQUE*

In Book I, Wilson opens by taxonomizing his subject in a series of definitions drawing largely from classical sources. Then he treats invention in detail. He gives "places" to search when inventing demonstrative (epideictic or ceremonial) speeches on a person, on an important action, and on virtue and vice. Next, Wilson gives places for the deliberative (political) speech. Interestingly, although this kind of oration would normally be used in a legislative setting, Wilson's sample oration addresses a single listener, a friend whom he is urging to study the laws of England. His second example is a long letter by Erasmus persuading a young gentleman to marry. Wilson gives additional places for the exhortative type of deliberative speech. Finally, by way of giving places for the judicial speech, Wilson describes stasis theory. He concludes his discussion of judicial oratory with advice on how to handle conflicting or ambiguous laws.

Wilson begins Book II by proposing to detail how to develop the seven parts of an oration (in other words, this book will be devoted to disposition or arrange-

ment). In dealing with part one, the “enteraunce” or beginning, Wilson dwells most on how to get the goodwill of hearers who are disposed against one’s case. Part two, the “narration,” should be “briefe, plaine, and probable.” On part three, “division,” Wilson agrees with Cicero that three main points are best. Part four, the “proposicion,” is a pithy saying or proverb that bears on one’s position. To devise part five, the “confirmacion” or arguments for one’s position, Wilson recommends using “the places of logique” but does not give them here (perhaps assuming that his rhetoric text will be used in conjunction with his logic text). This discussion leads into part six, the “confutacion” of the opponent’s position, because the same places should be used to devise arguments here. Part seven, the “conclusion,” should have two parts: a quick summary of the main arguments for and against one’s position, and an emotional appeal to move the hearers toward one’s position.

Wilson now turns to “the figure amplificacion,” an aid to “copie,” or having enough to say. He describes various kinds of amplification and announces that “the beautie of Amplifying, standeth most in apte moving of the affections.” The event itself and the person concerned both move people’s emotions, and Wilson gives commonplaces from Quintilian for developing appeals based on them. He tells how to arouse pity as well as laughter, and illustrates the latter with an unusually large number of examples.

In Book III, Wilson treats elocution or style, and once again he begins with a taxonomy. He condemns overly elaborate or archaic “ynkehorne” terms, intended to display learning, in a famous passage. “Exornation” consists of figures and tropes. Tropes are necessary to enlarge the communicative capacity of language; a trope can affect a single word or a whole sentence. The first word trope Wilson discusses is metaphor. All tropes alter meaning from that which is normal to that which is not normal. Figures alter not the meaning but the shape of a word, for example, by dropping a syllable (“ope” for “open”). Wilson then turns to the “coloures of rhetorique,” which are, in effect, sentence-length analogues of verbal figures; they do not alter meaning but emphasize it. Wilson says he follows Cicero here, and he gives his own English as well as Latin names for the “coloures.” Next he discusses “figures in sentences, called schemes,” which affect word order. Whereas Wilson earlier seems to distinguish the schemes from the “coloures of rhetorique,” at the end of this section he calls these, too, “coloures,” and there is some overlap with items listed as “coloures.”

Wilson now turns to “memorie,” which is partly natural and partly artificial. He tells the well-known story of how the Greek poet Simonides invented the art of memory by realizing that he could identify the mangled bodies in a banquet hall that had just collapsed by visualizing where each person had sat at the feast. Wilson recommends establishing one’s own memory places by memorizing a building and then distributing through its visualized rooms striking objects that symbolize and will evoke the parts of the discourse one wishes to remember. This is standard classical practice. Wilson turns finally to “pronunciation” or “utterance,” touching very briefly on how to speak in a pleasing tone, gesture well, and pronounce correctly.

Selected Bibliography

The excerpts reprinted here are taken from Thomas Wilson, *Arte of Rhetorique* (ed. Thomas J. Derrick, 1982). For a facsimile edition, see *The Arte of Rhetorique* (ed. R. H. Bowers, 1962). An edition of the companion logic text is *The Rule of Reason Conteynyng the Arte of Logique* (ed. Richard S. Sprague, 1972).

A good introductory biography is Peter Medine's *Thomas Wilson* (1986). Thomas O. Sloane discusses Wilson in *Donne, Milton, and the End of Humanist Rhetoric* (1985), and more recently, in *On the Contrary: The Protocol of Traditional Rhetoric* (1997), in which he details the influence on Wilson of Erasmus's method of rhetorical invention that argues all sides of a question. An excellent overview of English courtesy literature and the historical context of Wilson's work can be found in Frank Whigham's *Ambition and Privilege: The Social Tropes of Elizabethan Courtesy Theory* (1984).

For more on Wilson's relation to classical and Renaissance rhetoric, see Russell H. Wagner, "Wilson and His Sources" (*Quarterly Journal of Speech* 15 [1929]: 530–32). Lois Agnew discusses Wilson's adaptations of Ciceronian notions of ethos in "Rhetorical Style and the Formation of Character: Ciceronian Ethos in Thomas Wilson's *Arte of Rhetorique*" (*Rhetoric Review* 17 [fall 1998]: 93–106). Wayne Rebhorn relates Wilson to Castiglione, particularly as each depicts the physical body of the male courtier, in "Baldesar Castiglione, Thomas Wilson, and the Courtly Body of Renaissance Rhetoric" (*Rhetorica* 11 [summer 1993]: 241–74). For more on Wilson's politics, including the implications of his *Discourse on Usury*, see Albert J. Schmidt, "Thomas Wilson and the Tudor Commonwealth: An Essay in Civic Humanism" (*Huntington Library Quarterly* 23 [1960]: 49–60). For further information on Wilson's relation to the legal profession, see Richard J. Schoeck, "Lawyers and Rhetoric in Sixteenth-Century England" (in *Renaissance Eloquence*, ed. James J. Murphy, 1983). Mark Wildermuth discusses the implications of Wilson's rhetoric for preaching in "The Rhetoric of Wilson's *Arte*: Reclaiming the Classical Heritage for English Protestants" (*Philosophy and Rhetoric* 22 [1989]: 43–58).

From *The Arte of Rhetorique*

[FROM BOOK I]

Eloquence first geven by God, after loste by man, and laste repayed by God agayne.

Man (in whom is poured the breathe of lyfe) was made at hys firste beinge an everlivyng Creature, unto the likeness of God, endued with reason, and appoynted Lorde over all other thinges living. But after the fall of our firste father, Sinne so crepte in, that our knowledge was muche darkened, and by corruption of this oure fleshe, mans reason and entendement were bothe overwhelmed. At what time God beinge sore greved

with the folye of one man, pitied of his mere goodnesse, the whole state and posteritie of mankinde. And therefore (wher as throughe the wicked suggestion of our ghostelye enemye, the joyfull fruition of Goddes glorye was altogether loste:) it pleased our heavenly father to repayre mankynde of hys free mercye, and to graunte an everlivynge enheritaunce unto all suche as woulde by constante fayth seeke earnestlye thereafter. Longe it was ere that man knewe himselfe, beinge destitute of Gods grace, so that all thinges waxed savage, the earth untilled, societie neglected, Goddes will not knowen, man againste manne, one agaynste another, and all agaynste order. Some lived by spoyle, some like

Edited by Thomas J. Derrick.

brute Beastes grased upon the ground, some wente naked, some romed lyke woodoses,¹ none did anye thing by reason, but most did what they could, by manhode. None almoste considered the everlivynge God, but all lived moste communely after their own luste. By death they thoughte that all thinges ended, by life they loked for none other livynge. None remembred the true observation of wedlocke, none tendered the education of their chylde, lawes were not regarded, true dealinge was not once used. For vertue, vyc bare place, for right and equitie, might used auctoritie. And therefore where as man through reason might have used order, manne through folly fell into erreure. And thus for lacke of skill, and for wante of grace, evyll so prevayled, that the Devyll was mooste esteemed, and GOD either almost unknowen emonge them all, or elles nothinge feared emonge so manye. Therefore even now when man was thus paste all hope of amendemente, God still tendering his owne workemanship, stirred up his faythfull and elect, to perswade with reason, all men to societie. And gave his appoynted ministers knowledge bothe to se the natures of men, and also graunted them the gift of utteraunce, that they myghte wyth ease wyne folke at their will, and frame them by reason to all good order.

And therefore, where as Menne lyved Brutyslye in open felde, having neither house to shroude them in, nor attyre to clothe their backes, nor yet anye regarde to seeke their best avayle: these appoynted of God called them together by utteraunce of speache, and perswaded with them what was good, what was badde, and what was gainefull for mankynde. And althoughe at firste, the rude coulde hardelie learne, and either for straungenes of the thing, would not gladly receive the offer, or els for lacke of knoweledge could not perceyve the goodnes: yet being somewhat drawn and delighted with the pleasauntnes of reason, and the swetenes of utteraunce: after a certaine space, thei became through nurture and good advisement, of wilde, sober: of cruel, gentle: of foles, wise: and of beastes, men. Suche force hath the tongue, and such is the power of eloquence and reason, that most men are forced even

¹Wild men of the woods, savages. [T.J.D.]

to yelde in that, whiche most standeth agaynste their will. And therefore the Poetes do feyne² that Hercules being a man of greate wisdom, had all men lincked together by the eares in a chaine, to draw them and leade them even as he lusted. For his witte was so greate, his tongue so eloquente, and his experience suche, that no one man was able to withstand his reason, but everye one was rather driven to do that whiche he woulde, and to wil that whiche he did, agreing to his advise both in word and worke, in all that ever they were able.

Neither can I see that menne coulde have bene broughte by anye other meanes to lyve together in felowshyppe of life, to mayntayne Cities, to deale trulye, and willyngelye to obeye one another, if menne at the firste hadde not by Art and eloquence perswaded that, which they ful oft found out by reason. For what manne I praye you being better able to maintayne him selfe by valeante courage, then by living in base subjection: would not rather loke to rule like a lord, then to lyve lyke an underlynge: if by reason he were not perswaded that it behoveth everye man to lyve in his owne vocation, and not to seke anye hygher rowme, then whereunto he was at the first appoynted? Who woulde digge and delve from morne till evening? Who woulde travaile and toyle with the sweate of his browes? Yea, who woulde for his kynges pleasure adventure and hasarde his life, if witte hadde not so wonne men, that they thought nothing more nedefull in this world, nor anye thing whereunto they were more bounden: then here to live in their duty, and to traine their whole lyfe accordynge to their callinge. Therefore where as menne are in manye thynges weake by Nature and subjecte to much infirmitye: I thinke in this one point they passe all other Creatures livynge, that they have the gift of speache and reason.

And emonge all other, I thinke him most worthy fame, and emongest menne to be taken for

²In the introduction to *Heracles* (1, 65) Lucian remarks upon the peculiar aspects of *Heracles Ogmios*, as depicted by the Celts. This Hercules draws with him an eagerly following crowd of men, tethered through the ears by golden chains linked to his tongue. Lucian explains that the Celts considered Hercules a wiseman who relied exclusively on eloquence to achieve his works. Erasmus refers to this detail in *Luciani Dialogi* (I, 321 F). [T.J.D.]

halfe a God, that therin dothe chiefelye, and above all other excell menne, wherin men doo excell beastes. For he that is emonge the reasonable, of all moste reasonable, and emonge the wittye, of all moste wittye, and emonge the eloquente, of all moste eloquente: him thincke I emonge all menne, not onelye to be taken for a singular manne, but rather to be counted for halfe a God. For in sekynge the excellencye hereof, the soner he draweth to perfection, the nygher he commeth to GOD who is the chiefe wisdome, and therefore called God, because he is most wise, or rather wisdome it selfe.

Nowe then seinge that God geveth his heavenlye grace unto all suche as call unto him with stretched handes, and humble harte, never wantynge to those, that wante not to them selves: I purpose by his grace and especial assistance, to set forthe preceptes of eloquence, and to shewe what observation the wise have used in handling of their matters, that the unlearned by seinge the practise of other, may have some knowledge them selves, and learne by their neyghbours devise, what is necessarye for them selves in their owne case.

What is Rhetorique.

Rhetorique is an art to set furthe by utteraunce of wordes, matter at large, or (as Cicero doeth saie)³ it is a learned, or rather an artificiall declaracion of the mynde, in the handelyng of any cause, called it contencion, that maie through reason largely be discussed.

The matter whereupon an Oratour must speake.

Rhetorique occupied aboute all lawes, concernyng man.

An Orator muste be able to speake fully of all those questions, whiche by lawe and mannes ordinaunce are enacted, and appoynted for the use

³In *De Oratore* (I, ii, 5) Cicero states that eloquence depends on the training of highly artistic men, "prudentissimum hominum artibus eloquentiam," and in *De Inventione* (I, v, 7) the subjects of rhetoric he calls the material of art. [T.J.D.]

and profite of man, suche as are thought apte for the tongue to set forward. Nowe Astronomie is rather learned by demonstracion, then taught by any greate utteraunce. Arithmetique smally nedeth the use of eloquence, seeyng it maie be had wholly by nombryng onely. Geometrie rather asketh a good square, then a cleane flowyng tongue, to set out the arte.

Questions of two sortes.

Therefore an Orators profession, is to speake onely, of all suche matters as maie largely be expounded, for mannes behove, and maie with muche grace be set out, for all men to heare them.

Of Questions.

Every question, or demaunde in thynges, is of two sortes.⁴ Either it is an infinite question, and without ende, or els it is definite, and comprehended within some ende.

Questions infinite.

Those questions are called infinite, whiche generally are propounded, withoute the comprehension of tyme, place, and person, or any suche like: that is to saie, when no certain thyng is named, but only woordes are generally spoken. As thus, whether it be best to marie, or to live single. Whiche is better, a courtiers life, or a scholers life.

Questions definite.

Those questions are called definite, whiche set furthe a matter, with the appoyntment, and namyng of place, time, and persone. As thus. Whether now it be best here in Englande, for a

⁴In Cicero's *De Oratore* (I, xxxi, 138) Crassus observes that the orator treats two kinds of question: (1) infinite questions, "de infinitae rei questione," and (2) questions related to particular persons and times, "de re certis in personis ac temporibus locata." Quintilian in his *Institutio Oratoria* (III, v, 5) names this pair of ideas infinite and definite, "aut infinitas aut finitas," and illustrates the distinction with the example of marriage. [T.J.D.]

Prieste to Marie, or to live single. Whether it were mete for the kynges majestie, that now is, to marie with a straunger, or to mary with one of his awn subjectes.

Questions definite, belong properly to an Orator.

Now the definite question (as the whiche concerneth some one persone) is moste agreyng to the purpose of an Orator consideryng particuler matters in the Lawe, are ever debated betwixte certain persones, the one affirmyng for his parte, and the other denyng, as fast again for his parte.

Questions infinite, proper unto Logicians.

Thynges generally spoken without al circumstances, are more proper unto the Logician, who talketh of thynges universally, without respect of persone, time, or place. And yet notwithstanding, Tullie doeth saie,⁵ that whosoever will talke of a particuler matter, must remember that within thesame also, is comprehended a generall. As for example. If I shall aske this question, whether it be lawfull for Willyam Conqueroure to invade Englande, and wyne it by force of armour, I must also consider this, whether it be lawfull for any man, to usurpe power, or it be not lawfull. That if the greater cannot be borne withall, the lesse cannot be neither. And in this respect, a generall question agreeth well to an Orators profession, and ought well to be knowen, for the better futheraunce of his matter, notwithstanding the particuler question, is ever called in controversie, and the generall onely thereupon considered, to comprehende and compasse thesame, as the whiche is more generall.

The ende of Rhetorique.

Three thynges are required of an Orator.⁶

⁵In *De Oratore* (II, xxx, 133) Cicero remarks that all debates can be classified under the notion and quality of the general kind: "omnes controversias ad universi generis vim et naturam referri." In *De Partitione Oratoria* (XVIII, 61) he expresses the similar idea that the infinite contains the definite: "inest enim infinitum in definito." [T.J.D.]

⁶This commonplace appears in Cicero's *De Oratore* (II, xxviii, 121), "concilientur animi et doceantur et moveantur";

Orators bound to perfourme thre thynges.

To teache.
To delight.
And to perswade.

Plain wordes proper unto an Oratour.

First, therefore an Orator muste labour to tell his tale, that the hearers maie well knowe what he meaneth, and understande him wholly, the whiche he shall with ease do, if he utter his mind in plain wordes, suche as are usually received, and tell it orderly, without goyng aboute the busshe. That if he doe not this, he shall never do the other. For what manne can be delited or yet be perswaded, with the onely hearyng of those thynges, whiche he knoweth not what thei meane. The tongue is ordeined to expresse the mynde, that one mighte understande anothers meanyng: Nowe what availeth to speake, when none can tell, what the speaker meaneth? Therefore Phavorinus the Philosophier (as Gellius telleth the tale)⁷ did hit a yong man over the thumbes, very handsomely for usyng over olde, and over straunge woordes.

A Philosophiers wittie sayyng to a yong manne, that sought to speake darke language.

Sirha (quothe he) when our old great auncesters and groundsires wer alive thei spake plainly in their mothers tongue, and used old language, suche as was spoken then at the building of Rome. But you talke me suche Latin, as though you spake with them even now, that were two or thre thousande yeres ago, and onely because you would have no man, to understand what you saie. Now wer it not better for the a thousand fold (thou foolishe fellowe) in sekyng to have thy desire, to holde thy peace, and speake nothyng at all? for then by that meanes, fewe should knowe

in *Brutus* (XLIX, 185), "doceatur . . . delectetur . . . moveatur"; in *Orator* (XX, 69), "probare . . . delectare . . . flectere." [T.J.D.]

⁷Aulus Gellius in *Noctium Atticarum* (I, x, 1-4) recounts the story of Favorinus' chastisement of a young man very fond of old words, renders the philosopher's words to the *homo inepte*, and records Caesar's comparison of an unfamiliar word with a dangerous rock: "ut tamquam scopulum, sic fugias inauditum atque insolens verbum." [T.J.D.]

what were thy meanyng. But thou saiest, the olde antiquitee doeth like thee best, because it is good, sobre, and modest. Ah, live man as thei did before thee, and speake thy mynde now, as menne do at this daie. And remember that, whiche Cesar saith, beware as long as thou livest, of straunge woordes, as thou wouldest take hede and eschewe greate rockes in the Sea.

Orators must use delightful woordes, and saynges.

The next parte that he hath to plaie, is to chere his gestic, and to make them take pleasure, with hearyng of thynges wittely devised, and pleasantly set furthe. Therefore every Orator should earnestly laboure to file his tongue, that his woordes maie slide with ease, and that in his deliv-erance, he maie have suche grace, as the sound of a lute, or any suche instrument doeth geve. Then his sentencies must be well framed, and his woordes aptly used, throughout the whole dis-course of his Oracion.

Thirdly, suche quicknesse of witte must be shewed, and suche pleasaunt sawes so well applied, that the eares maie finde muche delite, whereof I will speake largely, when I shall entreate of movyng laughter. And assuredly nothyng is more nedefull, then to quicken these heavie loden wittes of ours, and muche to cher- ishe these our lompishe and unweldie natures, for excepte menne finde delight, thei will not long abide: delight them, and wyne them: werie them, and you lose them for ever.

Preachers not so diligently heard as common plaiers.

And that is the reason, that menne commonly tary the ende of a merie plaie, and cannot abide the halfe hearyng of a sower checkyng Sermon.

Prechers must sometymes be of merie, when thei speake to the people.

Therefore, even these auncient preachers, must now and then plaie the fooles in the pulpite, to serve the tickle eares of their fleetyng audience, or els thei are like some tymes to preache to the bare walles, for though the spirite bee apte, and our will prone, yet our fleshe is so heavie, and hu-

mours so overwhelme us, that wee cannot without refreshyng, long abide to heare any one thyng.

Delityng nedefull.

Thus we se, that to delight is nedefull, without the whiche, weightier matters will not be heard at all, and therefore hym cunne⁸ I thanke, that bothe can and will ever, myngle swete, emong the sower, be he Preacher, Lawyer, yea, or Cooke ei-ther hardely, when he dresseth a good dishe of meate:

Scurrilitie odious.

now I nede not tell that scurrilitie, or Alehouse jestyng, would bee thought odious, or grosse mirthe would be deamed madnesse: consideryng that even the meane witted doe knowe that al- ready, and as for other, that have no witte, thei will never learne it, therefore God spede them.

Affeccions must be moved.

Now when these twoo are dooen, he muste per- swade, and move the affeccions of his hearers in such wise, that thei shalbe forced to yelde unto his sayng, wherof (because the matter is large, and maie more aptly bee declared, when I shall speake of Amplificacion) I wil surcease to speake any thyng therof at this tyme.

By what meanes Eloquence is attained.⁹

Firste nedefull it is that he, whiche desireth to ex- cell in this gift of Oratorie, and longeth to prove an eloquent man, must naturally have a wit, and an aptnesse thereunto: then must he to his boke, and learne to be well stored with knowlege, that he maie be able to minister matter, for all causes necessarie. The which when he hath gotte plenti- fully, he muste use muche exercise, both in

⁸Variant of "can." [T.J.D.]

⁹*Ad Herennium* (I, ii, 3) contains a summary of the three means: theory, imitation, and practice, "arte, imitatione, ex- ercitatione." A similar triad appears in *De Inventione* (I, i, 2), "artis sive studi sive exercitationis," and *De Oratore* (I, iv, 14), "ingenio . . . studio . . . usus." Quintilian in *Institutio Or- atorica* (III, v, 1) lists "natura, arte, exercitatione" and adds a fourth element, *imitationis*, subordinated to *arte*. [T.J.D.]

wrytyng, and also in speakyng. For though he have a wit and learnyng together, yet shall thei bothe litle availe without much practise.

Practise maketh all thynges perfect.

What maketh the lawyer to have suche utteraunce? Practise. What maketh the Preacher to speake so roundly? Practise. Yea, what maketh women go so fast awaie with their wordes? Marie practise I warraunt you. Therefore in all faculties, diligent practise, and earnest exercise, are the onely thynges, that make men prove excellent. Many men knowe the arte very well, and be in all poyntes throughly grounded, and acquainted with the preceptes, and yet it is not their hap to prove eloquent.

Rhetorique firste made by wise men, and not wise men firste made by Rhetorique.

And the reason is, that eloquence it self, came not up first by the arte, but the arte rather was gathered upon eloquence. For wise menne seyng by muche observacion, and diligent practise, the compasse of diverse causes, compiled thereupon preceptes and lessons, worthie to bee knowen and learned of all men. Therefore before arte was invented, eloquence was used, and through practise made perfecte, the whiche in all thynges is a soveraigne meane, most highly to excell.

Imitacion or folowyng the waies of wise men, is nedefull.

Now before we use either to write, or speake eloquently we must dedicate our myndes wholly, to folowe the moste wise and learned menne, and seke to fashion, aswell their speache and gesturyng, as their wit or endityng. The whiche when we earnestly mynde to do, we cannot but in time appere somewhat like theim. For if thei that walke muche in the sonne, and thinke not of it, are yet for the moste part sonne burnt,¹⁰ it cannot be but that thei, whiche wittingly and willyngly travaile to counterfecte other, muste nedes take some colour of theim, and be like unto theim, in some one thyng or other, accordyng to the Proverbe, by companyng with the wise, a man shall learne wisdom.

¹⁰Wilson employs the same image in the prologue (1560), 13.15. [T.J.D.]

To what purpose this arte is set furthe.

Rhetorique, to what purpose it serveth.

To this purpose and for this use, is the arte compiled together, by the learned and wise men,¹¹ that those whiche are ignorant, might judge of the lerned, and labour (when tyme should require) to folow their workes accordyngly.

Arte, surer guide, then nature.

Again, the art helpeth well to dispose and order matters of our awne invencion, the whiche we may folowe, aswell in speakyng, as in wrytyng for though many by nature without art, have proved worthie menne, yet is arte a surer guide, then nature, consideryng we se as lively by the art, what we do, as though we red a thyng in writyng, wheras natures doynge are not so open to all men. Again, those that have good wittes, by nature, shall better encrease theim by arte, and the blunte also shalbe whetted through art,¹² that want nature to help them forward.

Five thynges to be considered in an Oratour.¹³

Anyone that will largely handle any matter, muste fasten his mynde, first of all upon these five especial poyntes that folowe, and learne theim every one.

Orators must have five thynges to make them perfect.

- i. Invencion of matter.
- ii. Disposicion of the same.
- iii. Elocucion.
- iiii. Memorie.
- v. Utteraunce.

¹¹Cicero in *De Oratore* (I, xxxii, 146) observes that the virtue of the rules of rhetoric resides not in the reputation gained by orators for obeying the precepts but in the collected sayings of eloquent men, and thus eloquence is not born of art, but art of eloquence: "sic esse non eloquentiam ex artificio, sed artificium ex eloquentia natum." [T.J.D.]

¹²Taverner in *Garden*, sig. F7^v, attributes a similar idea to Isocrates: "Bycause whetstones, quoth he, them selves can not cutte, yet they make knyfes and weapons sharpe and able to cut other thynges." Udall in *Floures*, fol. 176^v, ascribes this saying to Horace. [T.J.D.]

¹³The five faculties of the orator, without significant differences, appear in *Ad Herennium* (I, ii, 3), *De Inventione* (I, vii, 9), and *Institutio* (III, iii, 15). [T.J.D.]

Invencion, what it is.

The findyng out of apte matter, called otherwise Invencion, is a searchyng out of thynges true, or thynges likely, the whiche maie reasonably sette furth a matter, and make it appere probable. The places of Logique, geve good occasion to finde out plentiful matter. And therefore thei that will prove any cause and seke onely to teache thereby the truthe, muste searche out the places of Logique, and no double thei shall finde muche plentie. But what availeth muche treasure and apt matter, if man cannot apply it to his purpose.

Disposicion, what it is.

Therefore in the seconde place is mencioned, the settelyng or orderyng of thynges invented for this purpose, called in Latine, *Dispositio*, the whiche is nothyng else, but an apt bestowyng, and orderly placyng of thynges, declaryng where every argument shalbe sett, and in what maner every reason shalbe applied, for confirmacion of the purpose.

But yet what helpeth it though we can finde good reasons, and knowe howe to place them, if we have not apte wordes, and picked sentences, to commende the whole matter.

Elocucion, what it is.

Therefore this poynt must nedes folowe, to beautifie the cause, the whiche beyng called Elocucion, is an applyng of apte wordes and sentences to the matter, founde out to confirme the cause. When all these are had together, it availeth litle, if manne have no Memorie to containe them.

Memorie, what it is.

The Memorie therefore must be cherished, the whiche is a fast holdyng, both of matter and woordes couched together, to confirme any cause.

Be it now that one have all these .iiii, yet if he want the fift, all the other dooe little profite. For though a manne can finde out good matter, and good woordes, though he canne handsomely set them together, and cary them very well awaie in his mynde, yet it is to no purpose, if he have no

utteraunce, when he should speake his minde, and shewe men what he hath to saie.

Pronunciacion, what it is.

Utteraunce therefore is a framying of the voyce, countenaunce, and gesture, after a comely manner.

Thus we se that every one of these must go together, to make a perfecte Oratoure, and that the lacke of one, is an hynderaunce of the whole, and that aswell all maie be wantyng, as one, if we loke to have an absolute Oratour.

***There are .vii. partes in every Oracion.*¹⁴**

Oracions in generall, consist upon seven partes.

- i. The enteraunce or beginnyng.
- ii. The Narracion.
- iii. The Proposicion.
- iiii. The division or severall partyng of thynges.
- v. The Confirmacion.
- vi. The Confutacion.
- vii. The Conclusion.

Enteraunce, what it is.

The Enteraunce or beginnyng, is the former part of the Oracion, whereby the will of the standers by, or of the Judge is sought for, and required to heare the matter.

Narration.

The Narracion, is a plain and manifest poyntyng of the matter, and an evident setting furthe of all thynges, that belong unto thesame, with a brief rehearsall, grounded upon some reason.

¹⁴Wilson's division is unique. Although the *Ad Herennium* (I, iii, 4) and *De Inventione* (I, xiv, 19) each list six parts and exclude "Proposicion," Quintilian in *Institutio* (III, ix, 1) mentions *propositio* as an additional part of a judicial oration normally composed of five parts: "prooemium, narratio, probatio, refutatio, peroratio." Cox, sig. C5^v, writes concerning the deliberative oration: "In this kynde we use but selden hole narracions/oneles we make our oracion afore them that knowe not the history of the acte or dede whiche we be aboute to praise. But in stede of a narracion we use a proposicion." [T.J.D.]

Proposicion.

The Proposicion is a pithie sentence, comprehending in a smale roume, the some of the whole matter.

Division.

The division is an openyng of thynges, wherein we agree and rest upon, and wherein we sticke, and stande in traverse shewyng what we have to saie, in our awne behalfe.

Confirmacion.

The Confirmacion, is a declaracion of our awne reasons with assured and constaunt profes.

Confutacion.

The Confutacion, is a dissolvynge or wipynge awaie, of all suche reasons as make against us.

Conclusion.

The Conclusion is a clarkely gatheryng of the matter, spoken before, and a lappynge up of it altogether.

Now because in every one of these, greate hede ought to be had, and muche arte must be used, to content and like all parties: I purpose in the second boke to set furthe at large every one of these, that bothe we maie knowe in all partes, what to folowe, and what to eschewe. And first when tyme shalbe to talke of any matter, I would advise every man, to consider the nature of the cause self, that the rather he might frame his whole Oracion thereafter.

Every matter is contened in one of these .iiii.¹⁵

Matters in general, stand in .iiii. poyntes.

Either it is an honest thyng, whereof we speake, or els it is filthy and vile, or else betwixte bothe,

¹⁵In *Ad Herennium* (I, iii, 5) the four kinds of causes are named "honestum, turpe, dubium, humile." Quintilian in *Institutio Oratoria* (IV, i, 40) and Cicero in *De Inventione* (I, xv, 20) lists five kinds by adding respectively *anceps* and *obscurum*. [T.J.D.]

and doubtfull what to bee called, or els it is some triflyng matter, that is of small weight.

i. Matters, honest.

That is called an honest matter, when either wee take in hande suche a cause, that all menne would maintein, or els gainsaie suche a cause, that no man can well like.

ii. Matters, filthie.

Then do we hold and defende a filthy matter, when either wee speake against our conscience in an evill matter, or els withstande an upright truthe.

iii. Matters, doubtful.

The cause then is doubtfull, when the matter is half honest, and halfe dishonest.

iiii. Matters, trifelyng.

Suche are triflyng causes,¹⁶ when there is no weight in them, as if one should phantasy, to praise a Gose, before any other beast livyng (as I knowe who did) or of fruict to commende nuttes chefly, as Ovid did, or the fever quartaine, as Phavorinus did, or the Gnatte, as Virgill did, or the battaill of Frogges as Homere did, or dispraise bearded, or commende shaven heddes.

Good hede to bee taken at the firste, upon the handelyng of any matter in Judgement.

Circumstaunces necessary in al causes to bee noted.

Not onely it is necessarie to knowe, what maner of cause wee have taken in hande, when wee

¹⁶The praise of a goose probably refers to some grammar school or university exercise. Ovid wrote an allegorical lament of the nut tree, *Nux Elegia*, and Virgil was thought to have written *Culex*, a poetic dialogue between the soul of a gnat and the shepherd who killed him. Aulus Gellius records in *Noctium Atticarum* (XVII, xii) that Favorinus composed a clever eulogy on the quartan fever (a disease supposedly recurring every fourth day). The battle of frogs refers to a parody of Homer, *BATPAXOMYOMAXIA*, previously attributed

firste enter upon any matter, but also it is wisdom to consider¹⁷ the tyme, the place, the man for whome we speake, the man against whom we speake, the matter whereof we speake, and the judges before whom we speake, the reasons that best serve to further our cause, and those reasons also, that maie seme somewhat to hynder our cause, and in no wise to use any suche at all, or els warely to mitigate by protestacion, the evill that is in them, and alwaies to use whatsoever can bee saied, to wynne the chief hearers good willes, and perswade them to our purpose.

Favoure wynnyng, and affections movyng, when they are moste necessarie.

If the cause go by favour, and that reason cannot so muche availe, as good wil shalbe able to do: or els if movyng affections can do more good, then bryngyng in of good reasons, it is meete alwaies to use that waie, whereby we maie by good helpe, get the over hand.

Adversaries reasons, when they shuld best be confuted.

That if mine adversaries reasons, by me beyng confuted, serve better to help forward my cause, then mine awn reasons confirmed, can be able to doe good: I should wholly bestowe my tyme, and travaill to weaken and make slender, all that ever he bringeth with hym.

Argumentes when they shuld chiefly be used.

But if I can with more ease, prove myne awne saynges, either with witnesses, or with wordes, then be able to confute his with reason, I must labour to withdrawe mennes myndes, from myne adversaries foundation, and require them wholly to herken unto that whiche I have to saie, beyng

to Homer himself (see *Homerica*, collected with Hesiod in the Loeb Classical Library). A commendation of baldness was composed by Synesius, to whom Erasmus refers in *Moriae Encomium* (IV, 402) along with reference to all the rest of Wilson's examples, except the goose. Cf. *Arte*, 92.18. [T.J.D.]

¹⁷Wilson's list of considerations for "any matter in Judgement" resembles the analysis of the *exordium* in *Ad Herennium* (I, vi-vii) and *De Inventione* (I, xvi-xvii). [T.J.D.]

of it self so just and so reasonable, that none can rightly speake against it, and shewe them that greate pitie it were, for lacke of the onely hearyng, that a true matter, should want true dealyng. Over and besides all these, there remain twoo lessons, the whiche wisemenne have alwaies observed, and therefore ought of all men, assuredly to be learned.

Matters, hard to avoide, shuld alwaies bee past over, as though we saw them not at al.

The one is, that if any matter be laied against us, whiche by reason can hardely bee avoyded, or the whiche is so open, that none almoste can deny, it were wisdom in confutyng all the other reasons, to passe over this one, as though we sawe it not, and therefore speake never a worde of it.

Good to bee bolde in moste daungier, if otherwise wee cannot escape.

Or els if necessitie shall force a man to saie some what, he may make an outward bragge, as though there wer no matter in it, ever so speakyng of it, as though he would stande to the triall, makyng men to beleve, he would fight in the cause, when better it were (if necessitie so required) to run clene awaie. And herein though a man do flie and geve place, evermore the gladder, the lesse ravyng there is or stirryng in this matter: yet he flieth wisely, and for this ende, that beyng sensed otherwise, and strongly appoynced, he maie take his adversary at the best advauntage, or at the least, werie hym with muche linyng, and make hym with oft such flyng, to forsake his chief defence.

Better not to hurte a good matter by evil speach, then to further it by good talke.

The other lesson is, that whereas we purpose alwaies to have the victorie, wee should so speake, that we maie labour rather not to hynder, or hurt our cause, then to seke meanes to further it. And yet I speake not this, but that bothe these are right necessarie, and every one that will doo good, muste take peines in them bothe, but yet notwithstanding, it is a fouler faulte a greate

deale, for an Orator to be founde hurting his awne cause, then it should turne to his rebuke, if he had not furthered his whole entent.

Warenesse in speakyng, and forbearyng to speake.

Therefore not onely is it wisdome, to speake so muche as is nedeful, but also it is good reason, to leave unspoken so muche as is nedelesse, the whiche although the wisest can do, and nede no teachyng, yet these common wittes offende muche nowe and then, in this behalfe.

The person before whom we speake, must be well marked.

Some man beyng stirred, shall hurt more our cause then twentie other. Tauntyng wordes before some menne, will not be borne at all. Sharpe rebukyng of our adversary or frumpes geven before some persones: cannot be sufferd at all.

Tyme must be observed.

Yea, sometymes a man must not speake all that he knoweth, for if he doo, he is like to finde small favour, although he have just cause to speake, and maie with reason declare his mynde at large. And albeit that witlesse folke, can soner rebuke that, whiche is fondly spoken, then redely praise that whiche is wisely kept close, yet the necessitie of the matter, must rather be marked, then the fonde judgement of the people esteemed. What a sore sayng were this? When a lawyer should take in hande a matter, concernyng life and death, and another should aske how he hath sped, to hearetel that the lawyer, hath not onely cast awaie his client, but undoen hymself also, in speakyng thynges inconsideratly, as no doubt it often happeneth, that wise men, and those also that bee none evill men neither, maie unwares speake thynges, which afterward thei sore repent, and would cal backe again with losse of a greate somme. Now what a foly it is, not to remember the tyme and the men. Or who will speake that which he knoweth will not be liked, if he purpose to finde favour at their handes, before whom he speaketh, what man of reason will praise that before the Judges, (before whom he knoweth the determinacion of his cause resteth) whiche the

Judges self cannot abide to heare spoken at all? Or doeth not he muche hinder his awne matter, that without al curtesie or preface made, will largely speake evil of those men, whom the hearers of his cause, tenderly doo favour? Or be it that there be some notable faulte in thyne adversary, with whiche the Judges also are infected, were it not foly for thee, to charge thyne adversary with thesame. Consideryng the Judges thereby maie thynke, thou speakest against them also, and so thou maiest perhappes, lose their favour in sekyng suche defence, made without all discrecion. And in framing reasons, to confirme the purpose, if any be spoken plainly false, or els contrary to that, whiche was spoken before, dooeth it not muche hynder a good matter? Therefore in all causes, this good hede ought to bee had, that alwaies we labour to do some good, in furtheryng of our cause, or if we cannot so do, at the least that we doo no harme at all.

***There are three kyndes of causes, or Oracions, which serve for every matter.*¹⁸**

Oracions, or causes of three kyndes.

Nothyng can be handled by this arte, but thesame is contened, within one of these .iii. causes. Either the matter consisteth in praise, or dispraise of a thyng, or els in consultancy, whether the cause be profitable, or unprofitable, or lastly, whether the matter be right, or wrong. And yet this one thyng is to be learned that in every one of these three causes,¹⁹ these three severall endes, maie every of them be contened, in any one of them. And therefore he that shall have cause, to praise any one body, shall have juste cause to speake of justice, to entreate of profite, and joyntly to talke of one thyng with another. But because these three causes, are commonly and for the moste part, severally parted, I will

¹⁸The commonplace division of the occasions of oratory appears in Aristotle's *Rhetoric* (I, iii, 1), *Ad Herennium* (I, ii, 2), and *De Inventione* (I, v, 7). [T.J.D.]

¹⁹The emendation from "four causes," the reading of 53 and 60, to "three causes," the reading of 60 (*err.*) and 62–85, is supported by the existence of only three causes in the text. See the headnote (41.19), the gloss (41.22), and the discussion (41.23). [T.J.D.]

speake of them, one after another, as thei are sette furthe by wise mennes judgements, and particularly declare their properties, all in order.

Oracion Demonstrative.

The Oracion demonstrative, standeth either in praise, or dispraise of some one man, or of some one thyng, or of some one deede doen.

The kynde Demonstrative, wherein chiefly it is occupied.

There are diverse thynges, whiche are praised, and dispraised, as menne, Countreis, Citees, Places, Beastes, Hilles, Rivers, Houses, Castles, dedes doen by worthy menne, and pollicies invented by greate warriers, but moste commonly men are praised, for diverse respectes, before any of the other thynges are taken in hande.

Noble personages, howe thei should be praised.

Nowe in praisyng a noble personage, and in setting furthe at large his worthinesse, Quintilian geveth warnyng,²⁰ to use this threfolded order.

To observe thynges.

- Before his life.
- In his life.
- After his death.

Before a mannes life, are considered these places.

- The Realme.
- The Shire.
- The Toune.
- The Parentes.
- The Auncestours.

In a mannes life, praise muste be parted threfolde. That is to saie, into the gifts of good thyngs of the mynde, the body, and of fortune. Now the giftes of the body, and of fortune, are

²⁰In *Institutio* (III, vii, 10–17) Quintilian discusses the three topics of a demonstrative oration in praise of a man. He divides the first topic, prenatal history, into nationality, parentage, and ancestry; he divides the second topic, deeds, into character, physique, and external matters. [T.J.D.]

not praise worthy, of their awne nature: but even as thei are used, either to, or fro, so thei are either praised, or dispraised. Giftes of the mynde, deserve the whole trumpe and sound commendacion above all other, wherein wee maie use the rehearsall of vertues, as thei are in order, and beginning at his infancie, tell all his doynges, till his laste age.

*The places whereof, are these.*²¹

The birthe, and infancie.	Whether the person be a man, or a woman.
The childhode.	The bringyng up, the nurturyng, and the behaviour of his life.
The stripelyng age, or spryng tide.	To what study he taketh hymself unto, what company he useth, how he liveth.

Whereunto are referred these.

The mannes state.	Prowesses doen, either abrode, or at home.
The olde age.	His pollicies and wittie devises in behove of the publique wele.
The tyme of his departure, or deth.	Thynges that have happened aboute his death.

Of an Oracion demonstrative, for some deede doen.

Oracion Demonstrative of a deede.

The kynd demonstrative of some thyng doen is this, when a man is commended or dispraised, for any acte committed in his life.

²¹Quintilian in *Institutio* (III, vii, 15) suggests either a chronological or a thematic arrangement of topics for the praise of mind (*animus*). Wilson's immediate source is Cox, sig. B6^v: "The persones byrthe. His chyldhode. His adolescencie. His mannes state. His olde age. His dethe and what foloweth after." [T.J.D.]

*The places to confirm this cause, when any one is commended, are sixe in number.*²²

The places of Confirmation.

- i. It is honest.
- ii. It is possible
- iii. Easie to be doen,
- iiii. hard to be doen.
- v. Possible to be doen,
- vi. Impossible to be doen.

Seven circumstaunces, whiche are to bee considered in diverse matters.²³

The circumstaunces.

- i. Who did the deede.
- ii. What was doen.
- iii. Where it was doen.
- iiii. What helpe had he to it.
- v. Wherefore he did it.
- vi. How he did it.
- vii. At what tyme he did it.

Of the Oracion demonstrative, where thynges are sette furthe, and matters commended.

The kynde demonstrative of thynges, is a meane whereby we do praise, or dispraise thynges, as vertue, vice, tounes, citees, castles, woddes, waters, hilles, and mountaines.

*Places to confirme thynges are .iiii.*²⁴

Places of confirmacion.

- i. Thynges honest.
- ii. Profitable.
- iii. Easy to be doen.
- iv. Hard to be doen.

Many learned, will have recourse to the places of Logique in stede of these .iiii. places, when they

²²In *De Partitione Oratoria* (XIX, 66) Cicero only treats honesty, utility, and equity. Wilson's list more closely resembles Cox's division of this topic into three parts. [T.J.D.]

²³Wilson's source for part of this list is Cox's *Arte or Crafte*, sig. C6^r: "what was done/who dyd it/whan/where it was done/amonge whom/by whose helpe." [T.J.D.]

²⁴Wilson takes his topics from Cox, sig. C5^v: "honesty, perfite, lyghtnes or hardines of dede." See Commentary, 54.12. [T.J.D.]

take in hand to commende any suche matter. The whiche places if they make them serve rather to commende the matter, then onely to teache men the truth of it, it were wel done and Oratourlike.²⁵ for seying a man wholly bestoweth his wit to plaie the Oratour, he shoulde chefely seke to compasse that whiche he entendeth, and not do that onely which he but half mynded. for by plaine teachyng, the Logician shewes hymselfe, by large amplification and beautifying of his cause, the Rhetorician is alwaies knowne.

*The places of Logique are these.*²⁶

Definition.
Causes.
Partes.
Effectes.
Thynges adjoynyng.
Contraries.

Logique must be learned for confirmacion of causes.

I do not se otherwise but that these places of Logique are confounded with thother .iiii. of confirmacion, or rather I thinke these of Logique must first be mynded ere thother can well be had. For what is he that can cal a thyng honest and by reason prove it, except he first knowe what the thyng is, the whiche he can not better doe, then by definyng the nature of the thyng. Againe how shal I know whether myne attempte be easie, or hard, if I know not the efficient cause, or be assured how it maie be doen. In affirmyng it to be possible, I shall not better knowe it, then by searchyng thende, and learnyng by Logique what is the final cause of every thyng. . . .

*An Oration deliberative.*²⁷

An Oration deliberative is a meane, wherby we do perswade, or disswade, entreate, or rebuke, exhorte, or dehorte, commende, or comferte any man. In this

²⁵Wilson uses a period as if it were a modern semi-colon: to join parallel sentences or clauses. [T.J.D.]

²⁶Wilson selects all six places from the discussion in his *Rule of Reason* (1551), sig. E4^v–E6^r. [T.J.D.]

²⁷Wilson follows the general definitions of the deliberative mode expressed by Aristotle, *Rhetoric* (I, iii, 3), and *Ad*

kynd of Oration we doe not purpose wholly to praise any body, nor yet to determine any matter in controversie, but the whole compasse of this cause is, either to advise our neighbour to that thyng, whiche we thynke most nedeful for hym or els to cal him backe from that folie, which hindereth mucche his estimacion. As for example, if I would counseil my frende to travaile²⁸ beyond the Seas for knowlege of the tongues, and experience in forein countries: I might resorte to this kinde of Oration, and finde matter to confirme my cause plentifully. And the reasons which are commonly used to enlarge suche matters, are these that folowe.²⁹

The thyng is	Saufe.
honest.	Easie.
Profitable.	Harde.
Pleasaunt.	

Lawful and meete.
Praise worthe.
Necessarie.

Honestie comprehendeth al vertues.

Now in speakyng of honestie, I may by devision of the vertues make a large walke. Againe loke what lawes, what customes, what worthe dedes, or saynges have bene used heretofore, all these might serve wel for the confirmacion of this matter. Lastly where honestie is called in, to establish a cause: there is nature and God hym selfe present from whome commeth al goodnesse.

Profite howe largely it extendeth.

In the seconde place where I spake of profite, this is to be learned, that under the same is comprehended the gettingyng of gaine, and the eschewyng of harme.

Herennium (III, ii, 2). But to the extent that Wilson emphasizes that deliberative speech is directed towards the giving of moral advice ("either to advise our neighbour . . . or els to cal him backe"), he relies on Erasmus in *De Conscribendis Epistolis* (I, 402 A–403 D) from which Wilson extracts the nine places, their subdivisions, and definitions (76. 20–25). [T.J.D.]

²⁸To travel. [T.J.D.]

²⁹Erasmus, *De Conscribendis Epistolis* (I, 402 C): "honesto, utili, tuto, jocundo, facili, necessario. Honestum autem dividitur in rectum et laudabile." Cf. *Ad Herennium* (III, ii, 3). [T.J.D.]

Profite beareth the name of goodnes, whiche is thre folded.

Againe, concernyng profite (which also beareth the name of goodnesse) it partely pertaineth to the bodie, as beautie, strength, and healthe, partely to the mynde, as the encrease of witte, the gettingyng of experience, and heaping together of mucche learnyng; and partely to fortune (as Philosophers take it) whereby bothe wealth, honor, and frendes are gotten. Thus he that divideth profite, can not want matter.

Pleasures, largely sette out.

Thirdely in declaring it is pleasaunt, I might heape together the varietie of pleasures, whiche comme by travaile, firste the swetnesse of the tongue, the holsomnesse of the ayer in other countries, the goodly wittes of the jentlemen, the straunge and auncient buildynges, the wonderful monumentes, the great learned Clerckes in al faculties, with diverse other like, and almost infinite pleasures.

Easeness of travaile.

The easines of travaile may thus be perswaded, if we shew that freepassage is by wholsom lawes appointed, for al straungers, and waie fairers. And seying this life is none other thyng but a travaile, and we as pilgrymes wander from place to place, mucche fondeness it were to thinke that hard, which nature hath made easie, yea and pleasaunt also. None are more healthful, none more lusty, none more mery, none more strong of body, then suche as have travailed countries.

Travaile unto whom it is harde.

Mary unto them that had rather sleape al day, then wake one houre, chosyng for honest labour sleuthful ydlennesse: thinking this life to be none other thyng but a continual restyng place, unto suche pardy, it shal seme painfull to abide any labour. To learne Logique, to learne the Lawe, to some it semeth so harde, that nothyng can enter into their heddes, and the reason is, that thei want a will, and an earnest mynde to do their endeavour.

Good wil makes great burdeines light.

For unto a willyng harte, nothyng can bee harde, laie lode on such a mannes backe, and his good harte maie soner make his backe to ake, then his good will, can graunt to yelde and refuse the weichte. And now where the sweet hath his sower joynd with hym, it shalbee wisdom to speake somewhat of it, to mitigate the sowness thereof, as muche as maie be possible.

Lawfull.

That is lawfull and praise worthy, whiche lawes dooe graunt, good men do allowe, experience commendeth, and men in all ages have moste used.

Necessary two waies taken.

A thyng is necessary twoo maner of waies. Firste, when either we must do some one thyng, or els do worse. As if one should threaten a woman, to kill her, if she would not lie with him, wherin appereth a forcible necessitie. As touchyng travaile we might saie, either a man must be ignoraunt, of many good thinges, and want greate experience, or els he must travaill. Now to be ignoraunt, is a greate shame, therefore to travaill is moste nedefull, if we will avoyde shame. The other kynde of necessitie is, when we perswade men to beare those crosses patiently, whiche God doeth sende us, consideryng will we, or nill we, nedes must we abide them.

*To advise one, to study the lawes of Englande.*³⁰

Again, when we se our frende, enclined to any kynde of learnyng, wee muste counsaill hym to take that waie still, and by reason perswade hym, that it wer the metest waie for hym, to dooe his cuntrye moste good.

Lawes of Englande.

As if he geve his mynde, to the Lawes of the

³⁰Elyot treats the advantages of legal study in *The Governour* (1531), III, i. [T.J.D.]

realme, and finde an aptnes thereunto, we maie advise hym, to continue in his good entent, and by reason perswade hym, that it were moste mete for him so to do. And first we might shew hym, that the study is honest and godly, consideryng it onely foloweth Justice, and is grounded wholly upon naturall reason. Wherein we mighte take a large scope, if we would fully speake of all thynges, that are comprehended under honestie. For he that will knowe what honestie is, must have an understandyng, of all the vertues together.

Vertues especiall and chief foure in number.

And because the knowlege of them is moste necessary, I will briefly set them furth. There are foure especial and chief vertues, under whom all other are comprehended.³¹

Prudence, or wisdom.
Justice.
Manhode.
Temperance.

Prudence what it is.

Prudence or wisdom (for I will here take them bothe for one) is a vertue that is occupied evermore, in searchyng out the truthe. Nowe wee all love knowlege, and have a desire to passe other therin, and thinke it shame to be ignoraunt: and by studyng the lawe, the truth is gotten out, by knowyng the truth, wisdom is attained. Wherefore, in perswadyng one to studie the Lawe, you maie shewe hym that he shall get wisdom thereby. Under this vertue are comprehended.

Partes of Prudence.

Memorie.
Understandyng.
Foresight.

The memorie calleth to accompte those thynges, that wer doen heretofore, and by a

³¹Erasmus in *De Conscribendis Epistolis* (I, 402, C) lists the following division of the virtues: *prudencia, justitia, fortitudo, temperantia*. He divides *prudencia* into *intelligentiam, memoriam, and providentiam*. [T.J.D.]

former remembrance, getteth an after witte, and learneth to avoyde deceit.

Understanding seeth thynges presently dooen, and perceiveth what is in them, waiyng and debatyng them, untill his mynde be fully contented.

Foresight, is a gatheryng by conjectures, what shall happen, and an evident perceivng of thynges to come, before thei do come.

Justice

Justice, what it is.

Justice is a vertue, gathered by long space, gevng every one his awne, myndng in all thynges, the common profite of our countrey, whereunto man is moste bounde, and oweth his full obedience.

Now, nature firste taught manne, to take this waie, and would every one so to do unto another, as he would be doen unto hymself. For whereas Rain watereth all in like, the Sonne shineth indifferently over all,³² the fruct of the yerth encreaseth egually, God warneth us to bestowe our good wil after thesame sort, doyng as duetie byndeth us, and as necessitie shall best require. Yea, God graunteth his giftes diversly emong men, because he would man should knowe, and fele, that man is borne for man, and that one hath nede of another. And therefore, though nature hath not stirred some, yet through the experience that man hath, concernyng his commoditie: many have turned the lawe of nature, into an ordinary custome, and folowed thesame, as though thei were bounde to it by a Lawe. Afterwarde, the wisdom of Princes, and the feare of Goddes threate, whiche was uttered by his woorde, forced men by a lawe, bothe to allowe thynges confirmed by nature, and to beare with old custome or els thei should not onely suffer in the body, temporal punishment, but also lose their soules for ever.

³²Matthew 5:45: "for he maketh his sonne to aryse on the evell, and on the good, and sendeth rayne on the just and on the unjust." [T.J.D.]

Nature, what it is.

Nature is a righte,³³ that phantasie hath not framed, but God hath graffed, and geven man power thereunto, wherof these are derived.³⁴

Religion and acknowlegyng of God.
Naturall love to our children, and other.
Thankfulnesse to all men.
Stoutnesse bothe to withstande and revenge.
Reverence to the superiour.
Assured and constaunt truthe in thynges.

Religion.

Religion is an humble worshippng of God, acknowlegyng hym to be the creatour of creatures, and the onely gever of al good thynges.

Naturall love.

Naturall love is an inward good will, that we beare to our parentes, wife, children, or any other that bee nighe of kynne unto us, stirred thereunto not onely by our fleshe, thinkyng that like as we wold love our selves, so we shuld love them but also by a likenesse of mynde: and therefore generally we love all, because all bee like unto us, but yet we love them moste, that bothe in body and mynd, be moste like unto us. And hereby it cometh that often we are liberal, and bestowe our goodes upon the nedy, remembryng that thei are all one fleshe with us, and should not wante, when we have it, without our greate rebuke, and token of our moste unkynde dealyng.

Thankfulnes.

Thankfulnesse is a requityng of love, for love, and wil, for will, shewyng to our frendes, the like goodnesse that we finde in them, yea, strivyng to passe them in kyndenesse, losyng neither tyme nor tide, to do them good.

³³Cf. Erasmus, *De Conscribendis Epistolis* (I, 402 E): "Natura jus est, quod nobis non opinio, sed quaedam vis innata insevit." [T.J.D.]

³⁴Wilson derives his ideas of these natural rights or powers of human beings from Erasmus. [Ed.]

Stoutnesse.

Stoutnes to withstand and revenge evil, is then used when either we are like to have harme, and do withstand it, or els when we have suffred evill for the truthsake, and therupon do revenge it, or rather punishe the evill, whiche is in the man.

Reverence.

Reverence, is an humblenesse in outward behavior, when we do our dutie to them, that are our betters, or unto suche as are called to serve the kyng, in some greate vocacion.

Assured and constant truth.

Assured and constant truthe is, when we doo beleve that those thynges, whiche are or have been, or hereafter are aboute to be, cannot otherwise be, by any meanes possible.

Right by custome.

Custome without natures grounde, ungodly.

That is right by custome, whiche long tyme hath confirmed, beyng partly grounded upon nature, and partly upon reason, as where we are taught by nature, to knowe the ever livyng God, and to worship him in spirite, we turnyng natures light, into blynde custome, without Goddes will, have used at lengthe to beleve, that he was really with us here in yearthe, and worshipped hym not in spirite, but in Copes, in Candlestickes, in Belles, in Tapers, and in Censers, in Crosses, in Banners, in shaven Crounes and long gounes, and many good morowes els, devised onely by the phantasie of manne, without the expresse will of God. The whiche childishe toyes, tyme hath so long confirmed, that the truthe is scant able to trie them out, our hartes bee so harde, and our wittes be so farre to seke.

Again wher we se by nature, that every one should deale truely, custome encreaseth natures will, and maketh by auncient demeane, thynges to bee justly observed, whiche nature hath appoynced.

As

Bargainyng.

Commons, or equalitee.

Judgement given.

Bargainyng is, when twoo have agreed, for the sale of some one thyng, the one will make his felowe to stande to the bargain, though it be to his neighbors undoyng, restyng upon this poyncte, that a bargain is a bargain, and must stand without all excepcion, although nature requireth to have thynges dooen by conscience, and would that bargainyng should bee builded upon Justice, whereby an upright dealyng, and a charitable love is uttered amongest all men.

Commons.

Communes or equalitee, is when the people by long time have a ground, or any suche thyng among them, the whiche some of them will kepe still, for custome sake, and not suffer it to be sensed, and so turned to pasture, though thei mighte gain ten tymes the value: but such stubbornesse in kepyng of Commons for custome sake, is not standyng with Justice, because it is holden against all right.

Judgement geven.

Judgement geven, is when a matter is confirmed by a Parleme, or a Lawe, determined by a Judge, unto the whiche many hed strong men, wil stande to dye for it, without sufferance of any alteracion, not remembryng the circumstance of thynges, and that tyme altereth good actes.

Right by Lawe.

That is righte by a Lawe, when the truthe is uttered in writyng, and commaunded to bee kepte, even as it is sette furthe unto them.

Fortitude or manhode.

Manhode.

Fortitude is a considerate hassardyng upon daunger, and a willyng harte to take paines in

behalf of the right. Now when can stoutnes be better used, then in just maintenaunce of the lawe, and constaunt tryng of the truthe? Of this vertue there are foure braunches.

Honourableness.
Stoutnesse.
Sufferaunce.
Continuance.

Honorableness.

Honorableness, is a noble orderyng of weightie matters, with a lustie harte, and a liberall using of his wealthe, to the encrease of honour.

Stoutnesse.

Stoutnesse is an assured trust in hymself, when he myndeth the compasse of moste weightie matters, and a couragious defendyng of his cause.

Sufferaunce.

Sufferaunce is a willyng and a long bearyng of trouble and takyng of paines, for the maintenaunce of vertue, and the wealthe of his countrey.

Continuance.

Continuance is a stedfast and constant abidyng, in a purposed and well advised matter, not yeldyng to any manne in querrell of the right.

Temperaunce.

Temperaunce.

Temperaunce is a mesauryng of affeccions, accordyng to the will of reason, and a subduyng of luste unto the Square of honestie. Yea, and what one thyng doth soner mitigate the immoderate passions of our nature, then the perfect knowlledge of right and wrong and the juste execucion appoynted by a lawe, for asswagyng the wilfull? Of this vertue there are three partes.

Sobrietie.
Jentlenesse.
Modestie.

Sobrietie.

Sobrietie is a bridelyng by discrecion the wilfulness of desire.

Jentlenesse.

Jentlenesse is a caulmyng of heate, when wee begin to rage, and a lowly behavior in all our body.

Modestie.

Modestie is an honest shamefastnesse, whereby we kepe a constant loke, and appere sober in all our outward doynge. Now even as we should desire the use of all these vertues, so should we eschewe not onely the contraries herunto, but also avoyde all suche evilles, as by any meanes dooe withdrawe us from well doying.

It is profitable.

After we have perswaded our frend, that the lawe is honest, drawyng our argumentes from the heape of vertues, we must go further with hym, and bryng hym in good beleve, that it is very gainfull.

Hope of rewarde maketh men take paines.

For many one seke not the knowlege of learnyng for the goodnesse sake, but rather take paines for the gain, which thei se doth arise by it. Take awaie the hope of lucre, and you shall se fewe take any paines: No, not in the vineyard of the lorde. For although none should folowe any trade of life, for the gain sake, but even as he seeth it is moste necessary, for theadvancement of Gods glory, and not passe in what estimacion thynges are had in this worlde: yet because we are all so weake of wit, in our tender yeres, that we cannot weigh with our selves what is best, and our body so neshe,³⁵ that it loketh ever to bee cherished, wee take that, whiche is moste gainfull for us, and forsake that altogether, which we oughte

³⁵Tender, delicate, weak. Cf. 46.7. [T.J.D.]

moste to folowe. So that for lacke of honest meanes, and for want of good order, the best waie is not used, neither is Goddes honor in our first yerres remembred. I had rather (saide one) make my child a cobler then a preacher, a tankerd bearer, then a scholer. For what shall my sonne seke for learnyng, when he shall never gette therby any livyng? Set my sonne to that, whereby he maie get somewhat? Do ye not se how every one catcheth and pulleth from the church what thei can? I feare me one day thei will plucke doune church and all. Call you this the Gospell, when men seke onely to provide for their belies, and care not a grote though their soules go to helle? A patrone of a benefice will have a poore yngrame³⁶ soule, to beare the name of a persone³⁷ for .xx. marke, or .x.li: and the patrone hymself, wil take up for his snapshare,³⁸ as good as an .c. marke. Thus God is robbed, learnyng decayed, England dishonored, and honestie not regarded.

The Romaynes lawes for Church dignitees.

Thold Romaines not yet knowyng Christ, and yet beyng led by a reverent feare towards God, made this lawe. *Sacrum sacrove commendatum qui clepserit, rapseritue, parricida est.* He that shall closely steale, or forcibly take awaie that thyng, whiche is holy, or geven to the holy place: is a murderer of his countrey. But what have I said? I have a greater matter in hand, then wherof I was aware, my penne hath run over farre, when my leasure serveth not, nor yet my witte is able to talke this case in suche wise, as it should bee, and as the largenesse therof requireth. Therefore to my lawyer again, whom I doubte not to perswade, but that he shall have the devill and all, if he learne a pase,³⁹ and dooe as some have dooen before hym. Therefore I will shewe howe largely this profite extendeth, that I may have him the soner, to take this matter in hand.

³⁶Ignorant. [T.J.D.]

³⁷Parson. In Elizabethan pronounciation the words were homonyms. [T.J.D.]

³⁸A share or portion obtained as an extra emolument. [T.J.D.]

³⁹Apace, quickly. [T.J.D.]

Lawe, profitable to the purse.

The lawe therefore not onely bryngeth muche gain with it, but also avaunceth men bothe to worshippe, renoume, and honour. All men shall seke his favour, for his learnyng sake: the best shall like his company, for his callyng: and his welth with his skill shalbe suche, that none shalbe able to woorke hym any wrong. Some consider profite, by these circumstaunces, folowyng.

To whom.

When.

Where.

Wherefore.

Circumstaunces, in observyng profite.

Neither can I use a better order, then these circumstaunces minister unto me. To whom therefore is the Lawe profitable? Marie to them that bee best learned, that have redy wittes, and will take paines. When is the lawe profitable? Assuredly both now and evermore, but especially in this age, where all men go together by the eares for this matter, and that matter. Suche alteracion hath been heretofore, that hereafter nedes muste ensue muche altercacion. And where is all this a do? Even in litle Englande, or in Westminster hall, where never yet wanted busines, nor yet ever shall. Wherefore is the lawe profitable? Undoubtedly because no manne could hold his awne, if there were not an order to staie us, and a Lawe to restrain us. And I praie you who getteth the money? The lawyers no doubt. And were not lande sometymes cheaper bought, then got by the triall of a lawe? Do not men commonly for trifles fall out?

Foly in many, that go to the Lawe.

Some for lopping of a tree, spendes al that ever thei have, another for a Gose, that graseth upon his ground, tries the lawe so hard, that he proves him self a Gander. Now when men bee so mad, is it not easie to gette money among them.

Lawyers, never dy beggers.

Undoubtedly the lawyer never dieth a begger. And no marvaill. For an .c. begges for hym, and makes awaie all that thei have, to get that of hym, the whiche the oftener he bestoweth, the more still he getteth. So that he gaineth alwaies, aswell by encrease of lernyng as by storyng his purse with money, wheras the other get a warme sonne often tymes, and a slappe with a foxe taile for al that ever thei have spent. And why woulde they? Tushe, if it were to do againe, thei would do it: therefore the lawyer can never want a livyng, til the yearth want men, and al be voyde.

The lawe easie to many, and harde to some.

I doubt not, but my lawyer is perswaded that the law is profitable: now must I beare him in hand that it is an easie matter to become a lawier. the whiche if I shalbe able to prove, I doubt not, but he will prove a good lawier, and that right shortly. The law is grounded upon reason. And what hardenesse is it for a man by reason to fynde out reason. That can not be straung unto him, the grounde wherof, is graffed in his brest. What, though the lawe be in a straunge tongue, the wordes may be gotte with out any paine, when the matter selfe is compast with ease. Tushe, a little lawe will make a greate showe, and therefore though it be mucche to become excellent, yet it is easie, to get a taist. And surely for getting of money, a litle wil do asmucche good oftentymes, as a great deale. There is not a word in the law, but it is a grote in the lawiers purse. I have knowne diverse that by familiar talkyng, and moutyng together have comme to right good learning without any great booke skil, or mucche beating of their braine by any close studie, or secrete musyng in their chamber. But where some say the lawe is very harde, and discourage young men from the studie therof, it is to be understande of suche as wil take no paines at al, nor yet mynde the knowledge therof. For what is not hard to man, when he wanteth wil to do his best. As good slepe, and saie it is harde: as wake, and take no paines.

The lawe.

Godly.
Juste.
Necessarie.
Pleasaunt.

What nedeth me to prove the lawe to be Godly, just, or necessarie, seeyng it is grounded upon Goddes wil, and all lawes are made for the maintenaunce of justice. If we will not beleve that it is necessarie, let us have rebelles againe to disturbe the Realme. Our nature is so fonde that we knowe not the necessitie of a thyng, til wee fynde some lacke of the same. Bowes are not esteemed as they have bene emong us Englishmen, but if we were ones well beaten by our enemies wee shoulde soone knowe the wante, and with feelyng the smarte lament mucche our folie.

Lawes mainteine lyfe.

Take awaie the lawe, and take awaie our lifes, for nothyng mainteineth our wealthe, our health, and the savegard of our bodies, but the lawe of a Realme, whereby the wicked are condempned, and the godly are defended. . . .

Of Exhortation.

Exhortyng.

The places of exhortyng and dehortyng, are the same whiche wee use in perswadyng and disuadyng, savyng that he whiche useth perswasion, seeketh by argumentes to compasse his devise: he that laboures to exhorte, doeth stirre affections.

Erasmus sheweth these to be the most especial places that do pertaine unto exhortation.

Praise, or Commendacion.
Expectation of al men.
Hope of victorie.
Hope of renowme.
Feare of shame.
Greatnesse of rewarde.
Rehersall of examples, in all ages, and especially of thynges lately doen.

Praisynge a deede.

Praisynge is either of the man, or of some deede doen. We shall exhorte men to doe the thyng, if we shewe them that is a worthy attempte, a Godly enterprise, and suche as fewe men hetherto have adventured.

Praisynge a man, the rather to encourage him.

In praisynge a man, we shal exhorte hym to go forwarde, consideryng it agreeth with his wounted manhode, and that hetherto he hath not slacked to hasarde boldely upon the best and worthiest deedes, requiryng hym to make this ende aunswereable to his moost worthie begynnynge, that he maye ende with honour, whiche hath so long continued in suche renowme. For it were a foule shame to lose honour through folie, whiche hath been gotte through virtue, and to appere more slacke in keyng it, than he semed carefull at the first to atteine it.

Againe whose name is renowmed, his doynges from time to tyme wil be thought more wonderfull, and greater promises wil men make unto them selves of suche mens adventures in any commune affaires, than of others, whose vertues are not yet knowne. A notable Master of fence is marveilouse to beholde, and men looke earnestly to see hym doe some wonder, howe muche more will they looke when they heare tel that a noble Captaine, and an adventurouse Prince shal take upon hym the defence, and savegarde of his countrie against the ragyng attemptes of his enemies?

Expectacion of al men.

Therefore a noble man can not but go forwarde with most earnest wil, seyng al men have suche hope in hym, and count hym to bee their onely comforte, their fortresse, and defense.

Hope of victorie.

And the rather to encourage suche right worthie, we may put them in good hope to compasse their attempte, yf wee shewe them that God is an as-

sured guide unto all those, that in an honest quarell adventure them selves, and shewe their manly stomake. Sathan hym selfe the greatest adversarie that man hath, yeldeth lyke a captive, when GOD dothe take our parte, muche sooner shal al other be subjecte unto hym, and crye *Peccavi*.⁴⁰ for if God be with hym, what matereth who be against hym?⁴¹

Fame foloweth worthy feactes.

Nowe when victorie is got, what honour doeth ensewe? here openeth a large fielde to speak of renowme, fame, and endles honour. In all ages the worthiest men have alwaies adventured their carcasses for the savegarde of their countrie, thynkyng it better to dye with honor, than to live with shame.

Shame foloweth fearfulnesse, when manhode is thought nedeful.

Againe the ruine of our Realme shoulde put us to more shame, than the losse of our bodies should turne us to smarte. For our honestie beyng stained, the paine is endles, but our bodies beyng gored, either the wounde maie sone be healed, or elles our paine beyng sone ended, the glory endureth for ever.

Heaven, the rewarde of hault Capiteines.

Lastely he that helpeth the nedelesse, defendeth his poore neighbours, and in the favour of his countrie, bestoweth his lyfe: wil not God besides al these, place hym where he shall lyve for ever, especially seeyng he hath doen all these enterprises in faith and for Christes sake?

Nowe in al ages to reckon suche as have bene right soverayne, and victoriouse, what name gotte the worthie Scipio that withstood the rage of Annibal? what Brute hath Cesar for his most worthie conquestes? What triumphe of glory

⁴⁰“I have sinned.” The expression occurs frequently in the Vulgate, e.g., Exodus 10:16, 2 Kings 12:13, Job 33:27, Matthew 27:4, Luke 15:18. [T.J.D.]

⁴¹Romans 8:31: “Yf God be on oure syde, who can be agaynst us?” [T.J.D.]

doth sounde in al mennes eares upon the onely namyng of mightie Alexander, and his father Kyng Philippe? And now to come home, what head can expresse the renowned Henry the fifte Kyng of Englande of that name after the conquest? What witte can sette out the wonderful wysedom of Henry the seventh, and his greate foresight to espie mischiefe like to ensewe, and his politique devises to escape daungers, to subdewe rebelles, and mainteyne peace?

Of movyng pitie, and stirryng men to shewe mercie.

Movyng of pitie.

Likewise we may exhorte men to take pitie of the fatherlesse, the widowe, and the oppressed innocent, if we set before their iyes the lamentable afflictions, the tyrannouse wronges, and the miserable calamities, whiche these poore wretches do susteine. For if fleshe and bloude move us to love our children, our wyfes, and our kynsfolke: muche more shoulde the spirite of God and Christes goodnes towards man stirre us to love our neighbours moste entirely. These exhortacions the preachers of God may most aptely use, when they open his Gospell to the people, and have just cause to speake of suche matters.

Of Commendyng.

The maner of commendyng.

In commendyng a man, wee use the reporte of his witte, honestie, faithfull service, painefull labour, and carefull nature to do his maisters will, or any suche lyke, as in the Epistles of Tullie there are examples infinite.

Of Comfortyng.

The maner of comfortyng.

Now after al these, the weake would be comforted and the soroufull would be cherished that there grief might bee aswaged, and the passions of man brought under the obedience of reason. The use hereof is great, aswell in private troubles, as in commune miseries. As in losse of gooddes, in

lacke of frendes, in sicknes, in darthe, and in death. In all whiche losses, the wyse use so to comforte the weake, that they geve them not just cause even at the firste to refuse all comforte.

Comfortyng two waies used.

And therefore they use two waies of chereshyng the troubled mindes. The one is when wee showe that in some cases and for some causes either they shoulde not lament at all, or elles bee sory very litle: the other is when we graunt that they have just cause to bee sadde, and therefore wee are sad also in their behalfe, and woulde remedie the matter, if it coulde be, and thus enteryng into felowshippe of sorowe, wee seeke by litle and litle to mitigate their grief. For all extreme heavynesse, and vehement sorowes, cannot abyde comforte, but rather seeke a mourner that woulde take parte with them.

Therefore muche warenesse ought to be used, when wee happen upon suche excedyng sorowfull, leaste wee rather purchase hatred, than aswage grief.

Those harmes shoulde bee moderatly borne, whiche muste needes happen to every one, that have chaunced to any one. As deathe, whiche spareth none, neither Kyng, nor Cayser, neither poore, nor riche. Therefore to bee impacient for the losse of our frendes, is to fall out with God, because he made us men, and not Aungelles. But the Godly (I truste) will alwaies remitte thorder of thynges to the wil of God, and force their passions to obey necessitie.

Sweatyng disease.

When God lately visited this Realme with the sweatyng disease, and received the two worthie gentlemen Henry Duke of Suffolke, and his brother Lorde Charles: I seeyng my Ladies grace their mother takyng their deathe most greavously could not otherwise for the duetie whiche I then did, and ever shall owe unto her, but comforte her in that her heavynesse, the whiche undoubtedly at that tyme muche weakened her bodie. And because it may serve for an example of comforte, I have been boulded to set it forthe as it foloweth hereafter. . . .

Of an Oration judicial.

The whole burdeine of weightie matters, and the earnest trial of al controversies, rest onely upon judgement. Therefore when matters concernyng lande, gooddes, or life, or any suche thyng of lyke weight are called in Question, we must ever have recourse to this kynde of Oration, and after just examynyng of our causes by the places therof: loke for judgement accordyng to the law.

Oration Judicial what it is.

Oration Judicial is, an earnest debatyng in open assemblie of some weightie matter before a judge, where the complainant commenseth his action, and the defendaut thereupon aunswereth at his peril to al suche thynges as are laied to his charge.

Of the foundacion, or rather principall pointe in every debated matter, called of the Rhetoricians the State, or constitution of the Cause.

Not onely is it nedefull in causes of judgement to conside the scope whereunto wee must leavell our reasons, and directe our invencion: but also we ought in every cause to have a respect unto some one especial pointe, and chief article: that the rather the whole drift of our doynge may seeme to agree with our firste devised purpose. For, by this meanes our judgement shalbe framed to speake with discretion, and the ignoraunt shall learne to perceive with profite, whatsoever is said for his enstruction. But they that take upon them to talke in open audience, and make not their accompte before, what thei wil speake after: shal neither be well liked for their invencion, nor allowed for their witte, nor esteemed for their learnyng. For, what other thyng do they, that boult out their wordes in suche sorte, and without al advisement utter out matter: but showe themselves to plaie as young boyes, or scarre crowes do, whiche showte in the open and plaine felde at all adventures hittie missie.⁴²

⁴²Hit and miss, i.e., randomly. [T.J.D.]

Definition of a thyng must first be knowen ere we speake our mynd at large.

The learned therfore and suche as love to be coumpted Clerkes of understandyng, and men of good circumspection and judgement: doe warely scanne what they chefely mynd to speake, and by definition seke what that is whereunto they purpose to directe their whole doynge. For, by suche advised warenesse, and good iye castyng: they shall alwaies be able both to knowe what to say, and to speake what they ought. As for example if I shal have occasion to speake in open audience of the obedience due to our sovereigne kyng I ought first to learne what is obedience, and after knowelege attained, to direct my reasons to the onely prove of this purpose, and wholly to seke confirmation of the same, and not turne my tale to talke of Robbyn Hoode, and to showe what a goodly archer was he, or to speake wounders of the man in the Mone, suche as are most nedelesse and farthest from the purpose.

Rovyng with out reason.

For then, the hearer lookyng to be taught his obedience, and hearing in the meane season mad tales of archerie, and great mervailles of the man in the Mone: beyng half astonied at his so great straing wil perhappes say to himself: Now, whether the devill wilt thou,⁴³ come in man againe for very shame, and tel me no bytailes, such as are to no purpose but show me that whiche thou diddest promise both to teache and perswade at thy first entrie. Assuredly suche fonde felowes there have been, yea even emong Preachers, that talking of faith, thei have fetcht their ful race from the .xii. signes in the Zodiake.⁴⁴ An other talking of the general resurrection hath made a large matter of our blessed Lady, praisyng her to be so jentle, so courtise, and so kynd, that it were better a thousandfould to make sute to her alone then to Christ her

⁴³Where in the devil are you going? [T.J.D.]

⁴⁴Wilson perhaps has in mind a phrase from Chaloner's *The Praise of Folie*, sig. N3^r. Concerning preachers Folly says, "Or disputyng of fastyng, they fetche theyr race from the .xii. signes of the Zodiake." [T.J.D.]

sonne. And what needed (I pray you) any suche rehearsal beyng both ungodly, and nothyng at all to the purpose? for, what maketh the praise of our lady to the confirmacion of the general dowme? Would not a man think him mad that havynge an earnest errand from London to Dover, would take it the next way to ride first into Northfolke, next into Essex, and last into Kent? And yet assuredly many an unlearned and wittlesse man hath strayed in his talke much farther a great deale, yea truely as farre, as hence to Rome gates.

Plinies counsel for handeling of causes.

Therefore wise are thei that folow Plinies advise,⁴⁵ who would that all men both in writing and speakyng at large upon any matter, should ever have an eye to the chief title and principal ground of their whole entent, never swarving from their purpose, but rather bringyng all thinges together to confirme their cause so much as they can possible. Yea, the wise and experte men will aske of themselves, how hangeth this to the purpose? to what end do I speake it? what maketh this for confirmacion of my cause? and so by oft questionyng either chide their owne folie, if they speake amisse: or els be assured thei speake to good purpose.

A State generally what it is.

A State⁴⁶ therfore generally is the chief ground of a matter, and the princypal pointe whereunto both he that speaketh shoulde referre his whole wit, and thei that heare should chefely marke. A Preacher taketh in hande to showe what praier is, and how nedeful for man, to call upon God: Now, he shoulde ever remembre this his matter, applieng his reasons wholly and fully to this end that the hearers may both knowe the nature of praier, and the nedefulnesse of praier. The

⁴⁵This source is unknown. [T.J.D.]

⁴⁶In *Ad Herennium* (I, xi, 18) the idea of the conflict between accuser and accused occurs in the definition of *constitutio*. Wilson may have taken the term *state* from Quintilian's *statu*, in *Institutio* (III, vi, 1). [T.J.D.]

whiche when he hath doen, his promise is fulfilled, his time wel bestowed, and the hearers wel instructed.

A State, or constitution what it is in matters of Judgement.

In all other causes the state is gathered without contention, and severally handled upon good advisement, as he shall thinke best that professeth to speake. But in matters criminall, where judgement is required: there are two persons at the least, whiche must through contrariety, stande and reste upon some issue. As for example: A serving man is apprehended by a lawyer for felonie upon suspicion. The lawier saith to the serving man: Thou hast done this robbery. Nay, (saith he) I have not doen it. Upon this conflicte and matchyng together, ariseth this State, whether this serving man hath done this robbery, or no? Upon whiche pointe the lawyer must stande, and seeke to prove it to the uttermost of his power.

State in Judgement what it is.

A State therfore in matters of judgement is that thyng, whiche doeth arise upon the first demaunde and denial made betwixt men, whereof the one part is the accuser, and the other part the person, or persons accused.

State, why it is so called.

It is called a State because we doe stande and reste upon some one pointe, the whiche must wholly and onely be proved of the one side, and denied of the other. I cannot better terme it in Englishe than by the name of an issue, the whiche not onely ariseth upon muche debatyng and long traverse used, whereupon all matters are said to come to an issue: but also elsewhere an issue is said to be then and so often as bothe parties stande upon one point, the whiche doth aswell happen at the first begynnyng before any probacions are used, as it doth at the latter endyng after the matter hath at large been discussed.

*The division of States, or issues.*⁴⁷

Now that we knowe what an Issue is, it is nexte most nedeful to showe how many thei are in numbre. The wisest and best learned have agreed upon thre onely, and no lesse, the whiche are these folowyng.

The State.

- i. Conjecturall.
- ii. Legall.
- iii. Juridiciall.

And for the more playne understandyng of these darcke wordes, these three questions folowyng, expounde their meaninge altogether.

- i. Whether the thinge bee, or no.
- ii. What it is.
- iii. What maner of thinge it is.

In the fyrst we consider upon rehearsal of a matter whether anye suche thinge bee, or no. As if one shoulde be accused of Murther, good it were to knowe, whether anye murther were committed at all, or no, if it be not perfectly knowne before: and after to go further, and examine whether suche a man that is accused, have done the dede or no.

In the seconde place, we doubt not upon the thinge done, but we stande in doubt what to call it. Sometimes a man is accused of felonye, and yet he proveth his offence to be but a trespase, wherupon he escapeth the daunger of death. An other beyng accused for killyng a man, confeseth his faulte to be manslaughter, and denieth it utterlye to be any murder, wherupon he maketh frendes to purchase his Pardon. Nowe the lawyers by their learninge muste judge the doubt of this debate, and tell what name he deserveth to have that hath thus offended.

In the thyrde place, not onely the dede is confessed, but the manner of doynge is defended. As if one were accused for killyng a man, to confesse the deede, and also to stande in it that he myght justly so do, because he did it in his owne defence: wherupon ariseth this Question, whether

⁴⁷Wilson derives his categories from *Ad Herennium* (I, xi, 18): "conjecturalis, legitima, juridicalis." [T.J.D.]

his doing be ryght or wrong. And to make these matters more plaine, I will adde an example for every state, severally.

Of the state Conjecturall.

The Assertion. ⁴⁸	Thou hast killed this manne.
The Aunswere.	I have not killed him.
The State or Issue.	Whether he hath killed this man or no. Thus we see upon the avouchinge and deniall, the matter standeth upon an issue.

Of the state Legall.

Assertion.	Thou has committed treason in this facte.
Aunswere.	I denye it to be treason.
State or issue.	Whether his offence done maye be called treason or no. Here is denied that anye suche thinge is in the dede done, as is by word reported, and saide to bee.

Of the state Juridiciall.

Assertion.	Thou hast kylled this manne.
Aunswere.	I graunte it, but I have doone it lawfullye, because I killed him in mine owne defence.
State or issue.	Whether a man may kill one in his owne defence, or no, and whether this man did so, or no.

⁴⁸In *Ad Herennium* (I, xvii, 27) occurs the same form and substance of a typical conjectural state except that Ajax is identified as the victim. Earlier in the same work (I, xii, 21), treason is used as an example of the legal issue and perhaps prompted Wilson's example (191.20–192.3). [T.J.D.]

The Oration conjectural, what it is.

The Oration conjectural is, when matters be examined and tryed out by suspicions gathered, and some likelihode of thinge appearinge. A Souldiour is accused for killinge a Farmar. The Souldioure denieth it utterly, and sayth he did not kyll him. Hereupon riseth the question, whether the Souldioure killed the Farmar or no, who is well knowen to be slayne. Nowe to prove this question, we muste have suche places of confirmation, as hereafter do folowe.

*Places of confirmation, to prove thinges by conjecture.*⁴⁹

- i. Will, to do evill.
- ii. Power, to do evil.

i. In the will⁵⁰ muste be considered the qualite of the man, whether he were like to do suche a dede or no, and what shoulde move him to attempte suche an enterpryse, whether he did the murther upon anye displeasure before conceived, or of a sodayne anger, or els for that he loked by his death to receyve some commoditie, either lande, or office, money, or money worth, or anye other gainefull thinge.

ii. Some are knowen to want no will to kill a manne, because they have bene flesht heretofore, passing as little upon the deathe of a man, as a Bocher dothe passe for killinge of an Oxe, beyng heretofore either accused before a Judge of manslaughter, or els quitte by some general pardon. Now, when the names of such menne are knowen, they make wise men ever after to have them in suspection.⁵¹

iii. The countrey where the man was borne declares sometime his natural inclination, as if he wer borne or brought up among the Tindale, and

⁴⁹Wilson takes from Quintilian's *Institutio* (VII, ii, 27) the division into will and power, *voluerit* and *potuerit*. Melanchthon makes a similar distinction in *Elementorum Rhetorices* (1542), sig. C3^v, between *impulsio* and *ratiocinatio*, but Wilson's terms are derived from Quintilian's. [T.J.D.]

⁵⁰Wilson's ten categories are loosely patterned on the discussion of "motive" and "manner of life," the subdivision of probability listed in *Ad Herennium* (II, ii, 3-iii, 5). [T.J.D.]

⁵¹Suspicion. [T.J.D.]

Riddesdale menne,⁵² he may the soner be suspected.

iiii. Of what trade he is, by what occupation he liveth.

v. Whether he be a gamester, an alehouse haunter, or a panion emong Ruffians.

vi. Of what wealthe he is, and how he came by that whiche he hath, if he have anye.

vii. What apparell he weareth, and whether he loveth to go gaye, or no.

viii. Of what nature he is, whether he be hastye, headye, or readye to pike quarels.

ix. What shifte he hath made from time to tyme.

x. What moved him to do suche an haynous dede.

*Places of Confirmation to prove whether he had power to do suche a dede, or no.*⁵³

i. The grounde where the man was slaine, whether it was in the hygh waye, in a woode, or betwixt two hylles, or els where, nighe to an hedge or secrete place.

ii. The tyme, whether it was earlye in the mornyng, or late at nyght.

iii. Whether he was there about that time or no.

iiii. Whether he ranne away after the dede done, or had anye bloude aboute him, or trembled, or stakerde, or was contrarie in tellyng of his tale, and how he kept his countenance.

v. Hope to kepe his dede secrete, bi reason of the place, time, and secrete maner of doynge.

vi. Witnesses examined of his beyng, either in this or that place.

vii. By comparinge of the strengthe of the murtherer wyth the other mans weakenes, armoure with nakednes, and stoutnes with simplicitie.

viii. His Confession. . . .

⁵²These were traditionally rebellious villages in Northumberland. See 197.6. [T.J.D.]

⁵³Wilson draws on the six topics of "signs" listed in *Ad Herennium* (II, iv, 7): *locum, tempus, spatium, occasionem, spem perficiendi, spem celandi*. In his *Rule of Reason* (1551), sig. Mr^v, Wilson comments that rhetoricians use the places "where" and "when" more commonly than logicians and cites a similar example of a man arrested on suspicion of murder. [T.J.D.]

The interpretation of a lawe, otherwise called the State legall.

In boultynge out the true meaninge of a lawe, we must use to search out the nature of the same, by defining some one worde, or comparing one law wyth an other, judging upon good triall, what is right, and what is wronge.

*The partes.*⁵⁴

- i. Definition.
- ii. Contrarye lawes.
- iii. Lawes made, and thende of the law maker.
- iiii. Ambiguitye, or doubtfulnes.
- v. Probation by thinges like.
- vi. Chalengynge or refusinge.

Definition what it is.

Then we use to define a matter, when wee can not agree upon the nature of some word, the which we learne to know by askyng the question what it is. As for example. Where one is apprehended for killing a man, we laye murder to his charge: wherupon the accused person when he graunteth the killing, and yet denieth it to be murder: we must straight after have recourse to the definition, and aske, what is murder, by defininge whereof, and comparing the nature of the word, with his dede done: we shall sone know whether he committed murder or manslaughter.

Contrarye lawes.

It often happeneth that lawes seme to have a certaine repugnancie, wherof emong many riseth much contencion, wher as if both the lawes wer wel weied and considered according to their circumstances, thei wold appeare nothing contrari in matter, though in wordes they seme to dissent. Christ geveth warning, and chargeth his disciples in the .x.

⁵⁴Wilson develops his topics from the discussion of the legal issue in *Ad Herennium* (II, ix–xii). [T.J.D.]

of Math.⁵⁵ that they preach not the glad tidings of his comming into the world to the Gentils, but to the Jewes only, unto whom he was sent by his father. And yet after his resurrection we do read in the last of Mat.⁵⁶ that he commaunded his disciples to go into all the whole world, and preach the glad tidings of his passion, and raunsome, paied for al creatures living. Now though these .ii. lawes seme contrary, yet it is nothing so. For if the Jewes would have received Christ, and acknowledged him their savioure, undoubtedly they had bene the onely children of God, unto whom the promise and covenaut was made from the beginnige. But because they refused their Saviour, and crucified the Lord of glory: Christ made the lawe generall, and called all men to life that woulde repent, promisinge salvation to all suche as beveled and were baptised. So that the particuler law, beyng nowe abrogated, muste nades geve place to the superioure.

Foure lessons to be observed, where contrarye lawes are called in question.

- i. The inferioure law must geve place to the superiour.
- ii. The lawe generall muste yelde to the speciall.
- iii. Mans lawe, to Gods lawe.
- iiii. An olde lawe, to a newe lawe.

There be Lawes utterde by Christes owne mouthe, the whiche if they be taken accordinge as they are spoken, seme to conteyne great absurditie in them. And therefore the mind of the lawe maker muste rather be observed, then the bare wordes taken onely, as they are spoken. Christ sayth in the .v. of Mathew.⁵⁷ If thy right eye be an offence unto thee, plucke him out, and cast him away from thee. If one geve the a blowe of

⁵⁵Matt. 10:6: "But goo rather to the lost shepe of the house of Israell." [T.J.D.]

⁵⁶Matt. 28.19: "Go ye therefore, and teach all nacions . . . Teachinge them to observe all thinges." [T.J.D.]

⁵⁷Matt. 5:29: "Yf thy ryght eye hynder the, plucke hym out, and cast hym from the." 5:39: "whosoever geve the a blowe on the ryght cheke, turne to hym the other also." [T.J.D.]

thy ryghte cheke, turne to him agayne thy lefte checke (Math.v.). There be some Eunuches, that have gelded themselves for the kyngdome of heaven. Go, and sell all that thou hast, and geve it to the poore (Math.xix.).⁵⁸ He that doeth not take up his crosse and folowe me, is not worthy of me (Math.xvi.)⁵⁹ In all whiche sentences there is no suche meanyng, as the bare wordes uttered seme to yelde. Pluckyng out of the iye, declares an avoydyng of all evill occasions: receivynge a blowe upon the lefte cheke, commendes unto us, modestie and pacience in adversitie. Geldyng, signifieth a subduying of affections, and tamyng the foule luste of pleasure, unto the will of reason. Go and sell all; declares we should be liberal, and glad to part with our gooddes to the poore and neady. Bearyng the Crosse, betokeneth sufferance of all sorowes, and miseries in this worlde. Now to prove that the will of the lawe maker, is none other then I have saied: I maie use the testimonies of other places in the Scripture, and compare them with these sentences, and so, judge by juste examinacion, and diligent searche, the true meanyng of the lawe maker.

Ambiguitee.

Sometymes a doubt is made, upon some woordes or sentence, when it signifieth diverse thynges, or maie diversly be taken, wherupon ful oft ariseth mucche contencion. The lawyers lacke no cases, to fil this parte full of examples.

Lawyers.

For, rather than faile, thei will make doubtles often tymes, where no doubt should be at all. Is his Lease long enough (quoth one): yea sir, it is very long, saied a poore husbände man. Then (quoth he) let me alone with it, I will finde a hole in it, I warrant thee. In all this talke, I excepte alwaies the good lawyers, and I maie well spare them, for thei are but a fewe.

⁵⁸Matt. 19:12: "And ther be chaste, which have made them selves chaste for the kyngdome of hevens sake." 19:21: "go and sell (all) that thou hast, and geve to the poore." [T.J.D.]

⁵⁹"If eny man wil folowe me, let him forsake him selfe and take up his crosse, and folowe me." [T.J.D.]

Probacion by thynges like.

When there is no certain lawe by expresse wordes uttered for some heinous offender, we maie judge the offence worthy deathe, by rehersall of some other Lawe, that soundeth mucche that waie. As thus. The civil lawe⁶⁰ appoyncteth that he shalbe put in a sacke, and cast in the Sea, that killeth his father: well, then he that killeth his mother, should by all reason, in like sort be ordered. It is lawfull to have a Magistrate, therefore it is lawfull to plead matters before an officer. And thus, though the last cannot be proved by expresse wordes, yet thesame is found lawfull, by rehersall of the first.

Chalengyng, or refusyng.

We use this order, when wee remove our sewtes, from one Courte to another, as if a manne should appele from the Common place,⁶¹ to the Chauncerie. Or if one should bee called by a wrong name, not to answeere unto it. Or if one should refuse to answeere in the spirituall court, and appele to the lorde Chauncellor.

The Oracion of right or wrong, called otherwise the state Juridicall.

After a deede is well knowen to be doen, by some one persone, we go to the next, and searche whether it be right, or wrong. And that is, when the maner of doying is examined, and the matter tried through reasonyng, and mucche debatyng, whether it be wrongfully doen or otherwise.

The division.

This state of right or wrong, is twoo waies divided, wherof the one is, when the matter by the awne nature, is defended to bee righte, without any further sekyng, called of the Rhetoricians, the state absolute.

The other (usyng little force, or strengthe to maintein the matter) is, when outward help is

⁶⁰This statute is cited in *Ad Herennium* (1, xiii, 23) as an example of a controversy based on analogy. [T.J.D.]

⁶¹Court of Common Pleas. [T.J.D.]

sought, and bywaies used to purchase favour, called otherwise the state assumptive.

*Places of confirmacion for the first kynd, are seven.*⁶²

- i. Nature it self.
- ii. Goddes lawe, and mannes lawe.
- iii. Custome.
- iiii. Aequitie.
- v. True dealyng.
- vi. Auncient examples.
- vii. Covenantes and deedes autentique.

Tullie in his moste worthy Oracion, made in behalfe of Milo,⁶³ declareth that Milo slewe Clodius moste lawfully, whom Clodius sought to have slain moste wickedly. For (quod Tullie) if nature have graffed this in man, if lawe have confirmed it, if necessitie have taught it, if custome have kept it, if aequitie have mainteined it, if true dealyng hath allowed it, if all common weales have used it, if deedes auncient have sealed this up, that every creature livyng should sense it self, against outward violence: no man can thinke that Milo hath dooen wrong, in killyng of Clodius, except you thinke, that when menne mete with theves, either thei must be slain of them, or els condempned of you.

*Places of confirmacion for the second kynde, are foure.*⁶⁴

- Grauntyng of the faulte committed.
- Blamyng evill companie for it.
- Comparyng thee fault, and declaryng that either they must have doen that, or els have doen worse.
- Shiftyng it from us, and shewyng that wee did it upon commaundement.

⁶²Wilson relies on the topics of the “absolute juridical issue” in *Ad Herennium* (II, xiii, 19): *natura, lege, consuetudine, iudicatio, aequo et bono, pacto*. [T.J.D.]

⁶³In *Pro T. Annio Milone Oratio* (IV, 10) Cicero defends his client’s killing of Publius Clodius on the grounds that nature provides a law of self-defense. The passage does not contain a construction based on “if,” as Wilson uses in 206.6–10. [T.J.D.]

⁶⁴Wilson culls his topics from *Ad Herennium* (II, xv–xvii). [T.J.D.]

Confessyng, what it is.

Confessyng of the faulte, is when the accused person graunteth his crime, and craveth pardon therupon, leavyng to aske justice, and leanyng wholly unto mercie.

Confession of the faulte, used two maner of waies.

The division.

The first is, when one excuseth hymself, that he did it not willyngly, but unwares, and by chauce.

The second is, when he asketh pardone, for the fault doen, consideryng his service to the common weale, and his worthy deeds heretofore dooen, promisyng amendement of his former evill deede: the whiche wordes, would not be used before a Judge, but before a kyng, or generall of an armie. For the Judges muste geve sentence, accordyng to the Lawe: the Kyng maie forgeve, as beyng aucthour of the lawe, and havyng power in his hande, maie do as he shall thinke best.

Blamyng other, how it is saied.

Blamyng other for the faulte doen, is when wee saie that the accused persone, would never have doen suche a deede, if other against whom also, this accusacion is intended, had not been evill men, and geven just cause, of suche a wicked dede.

Comparyng the faulte.

Comparyng the faulte is when we saie, that by slayng an evill man, we have doen a good dede, cuttyng awaie the corrupte and rotten member, for preservacion of the whole body. Or thus: some sette a whole toune on fire, because their enemies should have none advauntage by it.

Saguntines.

The Saguntynes⁶⁵ beeyng tributarie to the Romaines, slewe their awne children, burnte their

⁶⁵Valerius Maximus in *Factorum* (VI, vi) recounts the Saguntines’ defeat. [T.J.D.]

goodes, and fired their bodies, because they would not be subjecte to that cruell Haniball, and lose their allegiaunce, due to the Romaines.

Shiftyng the fault from us.

Shiftyng it from us, is when we saie, that if other had not set us on, wee would never have attempted suche an enterprise. As often tymes the souldiour saieth, his Capitaines bidding, was his enforcement: the servaunt thynketh his Maisters commaundemente, to bee a sufficient defence for his discharge. . . .

[FROM BOOK III]

The third boke. Of apte chusyng and framing of wordes and sentences together, called Elocucion.

And now we are come to that parte of Rhetorique, the whiche above al other is most beautifull, wherby not onely wordes are aptly used, but also sentences are in right order framed. For whereas Invencion, helpeth to finde matter, the Disposicion serveth to place argumentes: Elocucion getteth wordes to set furthe invencion, and with suche beautie commendeth the matter, that reason semeth to bee clad in purple, walkyng afore, bothe bare and naked. Therefore Tullie saieth well,⁶⁶ to finde out reason, and aptly to frame it, is the part of a wise man, but to commend it by wordes, and with gorgious talke to tell our concepte, that is onely propre to an Orator. Many are wise, but fewe have the gift to set furthe their wisdom. Many can tell their mynde in Englishe, but fewe can use mete termes, and apt order: suche as all men should have, and wise men will use: suche as nedes must be had, when matters should be uttered. Now then what is he, at whom all men wonder, and stande in a mase, at the viewe of his wit?

⁶⁶Wilson's discussion of elocution depends generally on the third book of *De Oratore*. For example, his distinction between the wise man and the orator (323.14) is derived from III, xxvi, 104, where the ability of a common speaker to find and arrange matter is contrasted with the orator's superior talent to amplify by means of ornament: "Summa autem laus eloquentiae est amplificare rem ornando." [T.J.D.]

Eloquent men moste esteemed.

Whose doynge are best esteemed? Whom do we moste reverence, and compte half a God emong men? Even suche a one assuredly, that can plainly, distinctly, plentifully, and aptly utter bothe wordes and matter, and in his talke can use suche composicion, that he maie appere to kepe an uniformitie, and (as I might saie) a number in the uttering of his sentence. Now an eloquent man beyng smally learned, can do muche more good in perswading, by shift of wordes, and mete placyng of matter: then a greate learned clerke shalbe able with great store of learnyng, wantyng wordes to set furth his meanyng. Wherefore I muche marvaile that so many seke the only knowlege of thynge, without any mynd to commend or set furthe their entendement: seyng none can knowe either what they are, or what they have, without the gift of utterance. Yea, bryng them to speake their mynde, and enter in talke with suche as are said to be learned, and you shal finde in them suche lacke of utterance, that if you judge them by their tongue, and expressyng of their mynde: you must nedes saie they have no learnyng. Wherin me thinkes they do, like some riche snudges, that havyng great wealth, go with their hose out at heeles, their shoes out at toes, and their cotes out at bothe elbowes. For who can tell, if suche men are worth a grote, when their apparel is so homely, and al their behavior so base? I can call them by none other name, but slovens, that maie have good geare, and nether can, nor yet will ones weare it clenly.

Barbarous clerkes, no better than slovens.

What is a good thyng to a manne, if he neither knowe thuse of it, nor yet (though he knowe it) is able at all to use it? If we thinke it comelinesse, and honestie to set furthe the body with handsome apparell, and thynke them worthie to have money, that bothe can and will use it accordyngly: I cannot otherwise se, but that this part deserveth praise, whiche standeth wholly in setting furthe matter by apte wordes and sentences together, and beautifieth the tongue with greate change of colours, and varietie of figures.

*Foure partes belongyng to Elocucion.*⁶⁷

- i. Plainnesse.
- ii. Aptenesse.
- iii. Composicion.
- iiii. Exornacion.

Plaines what it is.

Emong al other lessons, this should first be learned, that we never affect any straunge ynkehorne termes, but so speake as is commonly received: neither sekyng to be over fine, nor yet livyng over carelesse, usyng our speache as most men do, and ordryng our wittes, as the fewest have doen. Some seke so farre for outlandishe Englishe, that thei forget altogether their mothers language. And I dare swere this, if some of their mothers were alive, thei were not able to tell, what thei say, and yet these fine Englishe clerkes, wil saie thei speake in their mother tongue, if a man should charge them for counterfeityng the kynges English. Somme farre jorneid gentlemen at their returne home, like as thei love to go in forrein apparell, so thei wil poudere their talke with oversea language. He that cometh lately out of France, wil talke Frenche English, and never blushe at the matter. Another choppes in with Englishe Italianated, and applieth the Italian phrase, to our Englishe speaking, the whiche is, as if an Oratour that professeth to utter his minde in plaine Latine, would needes speake Poetrie, and farre fetched colours of straunge antiquitie.⁶⁸ The lawyer wil store his stomack with the

⁶⁷Wilson takes these topics from *De Oratore* (III, x, 37): “ut Latine, ut plane, ut ornate, ut . . . apte,” which correspond to his “Composicion,” “Plainnesse,” “Exornacion,” and “Aptnesse.” Wilson reiterates these four topics in 332.5. [T.J.D.]

⁶⁸Wilson’s complaints about foolish Latinists are inspired by Erasmus’ comments on the affected use of Greek terms, in *Moriae Encomium* (IV, 409 A), as translated by Chaloner, *The Praise of Folie*, sig. A3r: “the Rhetoriciens of these daies, who plainely thynke them selves demygods, if lyke horsleches thei can shew two tongues, I meane to mingle their writings with words sought out of strange langages, as if it were a lovely thyng for them to poudere theyr bokes with ynkehorne termes, although perchance as unaptly applied, as a gold ryng in a sowes nose. That and if they want suche farre-fetched vocables, than serche they out of some rotten Pamphlet four of fyve disused words of antiquitee, therewith to darken unto the reader.” [T.J.D.]

pratyng of Pedlers. The Auditour in makyng his accompt and rekenyng, cometh in with sise sould, and cater denere, for vi.s. iiii.d. The fine Courtier wil talke nothyng but Chaucer. The misticall wise menne, and Poeticall Clerkes, will speake nothyng but quaint proverbes, and blynd allegories, delityng muche in their awne darkenesse, especially, when none can tell what thei dooe saie. The unlearned or foolish phantasticall, that smelles but of learnyng (suche felowes as have seen learned men in their daies) will so latine their tongues, that the simple cannot but wonder at their talke, and thynke surely thei speake by some Revelacion. I knowe them that thynke Rhetorique, to stande wholly upon darke woordes, and he that can catche an ynkehorne terme by the taile, hym thei compt to bee a fine Englishe man, and a good Rhetorician. And the rather to set out this folie, I will adde here suche a letter, as Willyam Sommer himself,⁶⁹ could not make a better for that purpose. Somme will thinke and swere it to, that there was never any suche thyng written, well I wil not force any man to beleve it, but I will saie thus muche, and abide by it to, the like have been made heretofore, and praised above the Monne.

A letter divided by a Lincolneshire man,⁷⁰ for a voide benefice, to a gentelman that then waited upon the lorde Chauncellour, for the tyme beyng.⁷¹

An ynkehorne letter.

Pondering, expendyng, and revolutyng with my self your ingent affabilitee, and ingenious capacitee, for mundane affaires: I cannot but celebrate and extolle your magnificall dexteritee, above all

⁶⁹William Sommers (d. 1560) served as court fool to Henry VIII from 1525 until the king’s death. [T.J.D.]

⁷⁰The source of the ynkehorne letter is disputed. Note that Wilson himself was born in Lincolnshire. [Ed.]

⁷¹H. H. S. Croft, editor of Elyot’s *Governour* (London, 1883), II, 441, note b, cites a dozen instances from the vocabulary of the inkhorn letter that he thinks Wilson drew from Elyot. Of these, some are common words like “Pondering,” “compendious,” “intelligence,” “fortresse,” and “Amen”; others, like the term that begins Croft’s note, “revolutyng,” appear in a different form in Elyot: “revolvinge.” Thus, *The Governour* is not such a likely source for Wilson’s satire as Croft suggests. [T.J.D.]

other. For how could you have adepted suche illustrate prerogative, and dominicall superioritee, if the fecunditee of your ingenie had not been so fertile, and wounderfull pregraunt. Now therfore beeyng accerfited, to suche splendent renoume, and dignitee splendidious: I doubt not but you will adiuuate suche poore adnichilate orphanes, as whilome ware condisciples with you, and of antique familiaritie in Lincolne shire. Emong whom I beeyng a Scholasticall panion, obtestate your sublimitie to extoll myne infirmitie. There is a sacerdotall dignitee in my native countrey, contiguate to me, where I now contemplate: whiche your worshipfull benignitee, could some impetrate for me, if it would like you to extend your scedules, and collaude me in them to the right honorable lorde Chauncellor, or rather Archigrammacion of Englande. You knowe my literature, you knowe the pastorall promocion, I obtestate your clemencie, to invigilate thus mucche for me, accordyng to my confidence, and as you know my condigne merites, for suche a compendious livyng. But now I relinquishe to fatigate your intelligence with any more frivolous verbotie, and therefore he that rules the climates be evermore your beautreux, your fortresse, and your bulwarke. Amen.

Dated at my Dome, or rather Mansion place, in Lincolnshire, the penulte of moneth sextile. *Anno Millimo, quillimo, trillimo. Per me Johannes Octo.*

What wise man readyng this letter, will not take him for a very Caulfe, that made it in good earnest, and thought by his ynkepot terms, to get a good personage. Doeth wit reste in straunge wordes, or els standeth it in wholsome matter, and apt declaryng of a mannes mynd? Do we not speake, because we would have other to understand us, or is not the tongue geven for this ende, that one might know what another meaneth? And what unlearned man can tell, what half this letter signifieth? Therefore, either we must make a difference of Englishe, and saie some is learned Englishe, and other some is rude Englishe, or the one is courte talke, the other is countrey speache, or els we must of necessitie, banishe al suche affected Rhetorique, and use altogether one maner of language. When I was in Cambrige, and student in the kynges College, there came a man out of the toune, with a pinte of wine in a pottle pot, to

welcome the provost of that house,⁷² that lately came from the court. And because he would bestow his present like a clerke, dwellyng emong the schoolers: he made humbly his thre curtesies, and said in this maner. Cha good even my good lord, and well might your lordship vare: Understanding that your lordeship was come, and knowyng that you are a worshipfull Pilate, and kepes a bominable house: I thought it my duetie to come incantivantee, and bryng you a potell a wine, the whiche I beseche your lordeship take in good worthe. Here the simple man beyng desirous to amende his mothers tongue, shewed hymself not to bee the wisest manne, that ever spake with tongue.

Another good felowe in the countrey, beyng an officer, and Maiour of a toune, and desirous to speake like a fine learned man, havyng just occasion to rebuke a runnegate felow,⁷³ said after this wise in a great heate.

*Roperipe chidyng.*⁷⁴

Thou yngram and vacacion knave, if I take thee any more within the circumcicion of my dampnacion: I will so corrupte thee, that all vacacion knaves shall take ilsample by thee.

Another standyng in mucche nede of money, and desirous to have some helpe at a jentlemanns hand, made his complaint in this wise. I praie you sir be so good unto me, as forbear this halfe yeres rent. For so helpe me God and halidrome, we are so taken on with contrary Bishoppes,⁷⁵ with revives,⁷⁶ and with Southsides⁷⁷ to the kyng, that al our money is cleane gone. These wordes he spake for contribucion, relief, and subsidie. And thus we see that poore simple men are mucche troubled, and talke oftentymes, thei knowe not what, for lacke of wit and want of Latine and Frenche, wherof many of our straunge woordes full often are derived.

⁷²John Cheke was elected Provost on April 1, 1548, while still at court. In his new capacity, he first returned to King's in May 1549. [T.J.D.]

⁷³Renegade, fugitive. [T.J.D.]

⁷⁴Ripe for hanging, i.e., scurrilous. [T.J.D.]

⁷⁵Nonsensical form of "contributions" (see 330.22). [T.J.D.]

⁷⁶Nonsensical form of "relief," based on "revives," i.e., "brings to life" (?). [T.J.D.]

⁷⁷This nonsensical form of "subsidy" is the intended reading in this parody. [T.J.D.]

Those therefore that will eschue this folly, and acquaint themselves with the best kynd of speache, muste seke from tyme to tyme, suche wordes as are commonly received, and suche as properly maie expresse in plain maner, the whole conceipt of their mynde. And looke what woordes wee best understande, and know what thei meane: thesame should sonest be spoken, and firste applied to the utteraunce of our purpose.

Now whereas wordes be received, aswell Greke as Latine, to set furthe our meanyng in thenglishe tongue, either for lacke of store, or els because wee would enriche the language: it is well doen to use them, and no man therin can be charged for any affectacion, when all other are agreed to folowe thesame waie. There is no man agreved, when he heareth (letters patentes) and yet patentes is latine, and signifieth open to all men. The Communion is a felowship, or a commyng together, rather Latine then Englishe: the Kynges prerogative, declareth his power royall above all other, and yet I knowe no man greved for these termes, beeyng used in their place, nor yet any one suspected for affectacion, when suche generall wordes are spoken. The folie is espied, when either we will use suche wordes, as fewe man doo use, or use them out of place, when another might serve muche better. Therefore, to avoyde suche folie, we maie learne of that most excellent Orator Tullie, who in his thirde booke, where he speaketh of a perfect Oratoure, declareth under the name of Crassus, that for the choise of wordes, foure thinges should chiefly be observed.

Foure thinges observed, for choise of wordes.

First, that suche wordes as we use, shuld be proper unto the tongue, wherein wee speake, again, that thei be plain for all men to perceive: thirdly, that thei be apt and mete, moste properly to sette out the matter. Fourthly, that woordes translated from one significacion to another, (called of the Grecians, Tropes) bee used to beautifie the sentence, as precious stones are set in a ryng, to commende the golde.

Aptnesse what it is.

Suche are thought apt wordes, that properly agre unto that thyng, whiche thei signifie, and plainly expresse the nature of thesame. Therefore thei that

have regard of their estimacion, do warely speake, and with choise, utter woordes moste apte for their purpose.

Aptnes.

In weightie causes, grave wordes are thought moste nedefull, that the greatnesse of the matter, maie the rather appere in the vehemencie of their talke. So likewise of other, like order muste be taken. Albeit some, not onely do not observe this kynde of aptnes, but also thei fall into muche fondnesse, by usyng wordes out of place, and applying them to diverse matters without all discrecion. As thus.⁷⁸

Unapte usyng of apt wordes.

An ignorant felowe comyng to a jentlemannes place, and seyng a greate flocke of shepe in his pastour, saied to the owner of them, now by my truthe sir, here is as goodly an audience of shepe, as ever I saw in al my life. Who will not take this felowe meter to talke with shepe, then to speake emong menne? Another likewise seeyng a house faire buylded, saied to his felowe thus: good lorde, what a handsome phrase of buildyng is this? Thus are good wordes evil used, when thei are not well applied, and spoken to good purpose. Therefore I wishe that suche untoward speakyng, maie geve us a good lesson, to use our tongue warely, that our wordes and matter maie still agree together.

Of Composicion.

When we have learned usuall and accustomable wordes to set furthe in our meanyng, we ought to joyne them together in apt order, that the eare maie delite, in hearyng the harmonie. I knowe some English men, that in this poynt have suche a gift in the Englishe, as fewe in Latine have the like, and therefore, delite the wise and lerned so muche, with the pleasaunt composicion: that many rejoyce, when thei maie heare suche, and thynke much learnyng is gotte, when thei maie talke with suche.

⁷⁸Wilson takes the two examples of ignorant remarks from Sherry's *Treatise*, sig. C2r: "also if wee shuld saye: a phrase of building, or an audience of shepe, as a certen homey felow dyd." [T.J.D.]

Composicion what it is.

Composicion therefore,⁷⁹ is an apte joynyng together of wordes in suche order, that neither the eare shal espie any jerre,⁸⁰ nor yet any man shalbe dilled with overlong drawing out of a sentence, nor yet muche confounded with myngelyng of clauses, suche as are nedelesse, beyng heaped together without reason, and used without number. For, by suche meanes that hearers will be forced, to forgette full oft, what was saied first, before the sentence be halfe ended: or els bee blynded with confoundyng of many thynges together.

Faultes in composicion.

Some again will bee so shorte, and in suche wise curtall their Sentences, that thei had nede to make a commentarie immediatly of their meanyng, or els the moste that heare them, shalbe forced to kepe counsaill.

Some will speake oracles, that a man cannot tell, whiche waie to take them, some will be so fine, and so Poeticall with all, that to their semyng, there shall not stande one heire amisse, and yet every body els shall thinke them meter for a ladies chamber, then for an earnest matter, in any open assemblee.

Some wil rove so muche, and bable so farre without order, that a manne would thynke, thei had a greate love, to heare themselves speake.

Some repeate one woorde so often, that if suche woordes could be eaten, and chopte in so ofte, as thei are uttered out, thei would choke the widest throte in all England. As thus. If a man knewe, what a mans life wer, no man for any mannes sake, would kill any man, but one man would rather help another man, considryng man is borne for man, to help man, and not to hate man. What man would not be choked, if he chopt all these men at ones into his mouth, and never dronke after it? Some use overmuch repetition of some one letter, as pitiful povertie praieth for a peny, but puffed presumpcion, passeth not a

⁷⁹Wilson borrows the first part of his definition from Sherry's *Treatise*, sig. C3^v: "Composicion is an apte settinge together with wordes, whych causeth all the partes of an oracion to be trymmed alyke." [T.J.D.]

⁸⁰Jar, different sound. [T.J.D.]

poynt, pamperying his panche, with pestilent pleasure, procuring his passe porte to poste it to Hell pytte, there to be punished with paines perpetuall. Some will so sette their wordes that they muste be fayne to gape after everye worde spoken, endinge one worde with a vowell, and beginninge the next wyth an other, whyche undoubtedlye maketh the talke to seme mooste unpleasaunte. As thus. Equitie assuredlye everye injurye avoydeth. Some will set the carte before the horse, as thus. My mother and my father are both at home, even as thoughe the good man of the house ware no breaches, or that the graye Mare were the better Horse. And what thoughe it often so happeneth (God wotte the more pitye) yet in speakinge at the leaste, let us kepe a natural order, and set the man before the woman for maners sake.

An other cominge home in haste after a long journey, sayeth to hys manne: Come hither sir knave, helpe me of with my bootes and my spurres.⁸¹ I praye you sir geve him leave firste to plucke of youre spurres, ere he meddle wyth your bootes, or els your man is like to have a madde pluckinge. Who is so folyshe as to saye the counsayle and the kyng, but rather the Kinge and his counsayle, the father and the sonne, and not contrary. And so likewise in al other, as they are in degree firste, evermore to set them formost.

The wise therfore talkinge of divers worthy menne together, will firste name the worthiest, and kepe a decent order in reportyng of their tale. Some ende their sentences all alike, makyng their talke rather to appeare rimed meter then to seme playne speache, the whiche as it muche deliteth beyng measurablye used, so it muche offendeth when no meane is regarded. I hearde a preacher delityng much in thys kynd of composition, who used so often to ende his sentence with wordes like unto that whiche wente before, that in my judgemente, there was not a dosen sentences in hys whole sermon, but they ended all in ryme for the most part. Some not best disposed, wished the Preacher a Lute, that with his rimed sermon he myght use some pleasaunt melodye, and so the people myghte take pleasure divers wayes, and daunce if they liste. Certes there is a

⁸¹Wilson copies this example from Sherry's *Treatise*, sig. B8^r: "plucke of [i.e. off] my bootes and spurres." [T.J.D.]

meane, and no reason to use any one thinge at all times, seyng nothings deliteth (be it never so good) that is alwayes used.

Quintilian likeneth the coloures of Rhetorique to a mannes eye sighte.⁸² And nowe (quod he) I woulde not have all the bodye to be full of eyes, or nothings but eyes: for then the other partes shoulde wante their due place and proporcion. Some overthwartelye sette their woordes, placynge some one a myle frome his felowes, not contented with a playne and easye composition, but seke to sette wordes they can not tell howe, and therefore one not likynge to be called and by printe published Doctoure of Phisike, would needes be named of Phisike Doctour, wherin appeared a wonderfull composition (as he thought) straunge undoubtedlye, but whether wise or no, lette the learned sitte in judgement upon that matter.

An other. As I rose in the mornynge (quod one) I mette a carte full of stonnes emptye. Belike the manne was fastinge, when the carte was full, and yet we see that throughe straunge composition this sentence appeareth darke.

Some will tell one thinge .xx. times, nowe in, nowe out, and when a man would thinke they had almost ended, they are ready to beginne againe as freshe as ever they were. Such vayne repetitions declare both wante of witte, and lacke of learninge. Some are so homely in all their doynges, and so grosse for their invention, that they use altogether one maner of trade, and seke no varietie to eschewe tediousnes.

Some burden their talke with nedelesse cople, and will seme plentifull, when they should be shorte. An other is so curious and so fine of his tongue, that he can not tell in all the worlde what to speake. Everie sentence semeth commune, and everye worde generallye used, is thought to be folyshe, in his wise judgemente. Some use so manye interpositions bothe in their talke and in their writinge, that they make their saynges as darke as hell. Thus when faultes be knowen, they may be avoyded: and vertue the soner may take place, when vice is forsene, and eschewed as evill.

⁸²*Institutio* (VIII, v, 34) . . . [T.J.D.]

Of Exornation.

When wee have learned apte woordes and usuall Phrases to sette forthe oure meanyng, and can orderlye place them without offence to the eare, we maye boldelye commende and beautifie our talke wyth divers goodlye coloures, and delitefull translations, that oure speache maye seme as bryghte and precious, as a ryche stone is fayre and orient.

Exornation.

Exornation is a gorgiouse beautifyng of the tongue with borrowed woordes, and chaung of sentence or speache, with muche variete. Firste therefore (as Tullie saythe)⁸³ an Oration is made to seme ryghte excellent by the kinde selfe, by the colour and juice of speache.

Thre maner of stiles or enditinges.

Ther are .iii. maner of styles or enditinges, the great or mighty kind, when we use great woordes, or vehement figures:

The smal kinde, when we moderate our heate by meaner woordes, and use not the most stirring sentences.

The lowe kinde, when we use no Metaphores, nor translated woordes, nor yet use any amplifications, but go plainelye to worke, and speake altogether in commune woordes. Nowe in all these three kindes, the Oration is muche commended, and appeareth notable, when wee kepe us styll to that style, whiche wee firste professed, and use suche woordes as seme for that kinde of writinge most convenient.

⁸³*De Oratore* (III, lii, 199). Wilson derives his metaphor, "colour and juice of speache," from Cicero's phrase, "sanguine diffusus debet color." The triple division of style appears here and in *Ad Herennium* (IV, viii, 11): *gravis, mediocris, adtenuata*. Wilson's translation and order follow Sherry's in *Treatise*, sig. B3^v: (1) "The great, the noble, the mightye, and the full kynde. . . . And they that use thys kynde, bee vehement, various, copious, grave"; (2) "The small kynde"; (3) "The mean and temperate kynd of indyghting standeth of the lower, and yet not of the loweste, and most comen woordes and sentences." [T.J.D.]

Francis Bacon

1561–1626

Francis Bacon was the youngest child of Sir Nicholas Bacon, a statesman in the service of Queen Elizabeth. His mother, Lady Bacon, who possessed a good humanist education and devout Puritan beliefs, tutored her sickly but precocious son at home and then sent him to Cambridge at age twelve. When Bacon was eighteen, his father died, leaving debts that did not permit much support for a younger son. Bacon became a lawyer, trading on family connections at court to launch a career in politics. In 1584, at age twenty-three, he won a seat in the House of Commons. He gradually rose in Elizabeth's favor, and under her successor, James I, he became Lord Chancellor. In 1621, he entered the nobility as Lord Verulam, Viscount St. Albans.

Bacon was noted among his contemporaries for his knowledge of law and the pithy eloquence of his speeches on legal and political matters. He supported greater power for the legislative branch of government, although he also held out for the rights of the monarchy. As a practical politician, Bacon negotiated the conflicts and compromises of his career in ways that may sometimes strike us today as unethical. He seemed to believe that one might go along with convention if it was necessary for self-preservation, even if in private one saw its limitations or errors. This attitude may help to explain Bacon's involvement in some distasteful political dealings. Although championed in his early career by the Earl of Essex, Bacon acquiesced to Elizabeth's demand that he prepare the legal prosecution of her former favorite, by which Essex was brought to the scaffold. Bacon's behavior in this case is mitigated, perhaps, by the fact that Essex did indeed seem to be guilty of treason. But there were other spots on Bacon's reputation. He never denied, for example, that he accepted presents—or bribes—from favor seekers. He was convicted of doing so and turned out of office in disgrace in 1621. He then devoted renewed attention to the private philosophical and scientific studies that had always occupied him, even in the midst of his public career. After his death, Bacon's family was left with a mountain of debt, a result of the extravagant manner of living that he had justified as necessary to his political career.

Bacon wrote and published a number of important works: the *Essays* (1597, revised and expanded 1625), *The Advancement of Learning* (1605; excerpted here), *Novum Organum* (1620; excerpted here), *De Augumentis Scientiarum* (an expanded version of *The Advancement of Learning*), and the utopian *New Atlantis* (published posthumously in 1627). His works include a large number of speeches, letters, and collections of aphorisms from the commonplace books that he diligently kept, believing that to do so was essential for the serious orator. In the *Essays*, Bacon tests common wisdom about moral and civic virtue against actual experience, using a concise, aphoristic style in preference to the copious style popular with his contemporaries. In his philosophical works, Bacon seeks to survey and comment on the methods of inquiry and the present state of knowledge in every branch of learning. He argues that “natural philosophy” has made little progress since ancient times and has even deteriorated in some ways. Philosophy should, he claims, reject hollow

Scholasticism, which relies on received wisdom and the tautologies of syllogism and so can discover nothing new. His preferred model is the practice of successful scientists, which combines careful observation, experimentation, and classification with an inductive logic that advances learning by revealing natural laws. In *New Atlantis*, Bacon describes the research institute that would be necessary for the large-scale pursuit of knowledge he proposed. He tried, unsuccessfully, to persuade James I to establish such institutes at Cambridge and Oxford.

Bacon divided knowledge into two branches, theology and philosophy, and then subdivided the latter into theoretical inquiry, which investigates causes, and practical inquiry, which seeks effects. He further subdivided the theoretical into physics and metaphysics, and the scheme brachiates through all the sciences. Bacon used the device of binary opposition popularized by Ramus (p. 674) insofar as it suited his purposes, but he was no advocate of Ramism. Indeed, he regarded Ramist dialectic as no more than a version of Scholasticism, dependent on syllogistic disputation. Moreover, as we shall see, Bacon does not subscribe to the Ramist separation between dialectic and rhetoric.

Bacon hoped that his taxonomy of philosophy and science would foster vigorous empirical study, but he warned against narrow empiricism or what would later be called positivism, an uncritical acceptance of the idea that sense perceptions constitute reality. He urged instead a critical epistemology, which he developed in several ways. First, he separated the mind into faculties—reason, memory, and imagination. Reason is the ability to see regularities, to analyze, and to generalize; philosophy is the branch of learning that develops and appeals to this faculty. Memory, the second faculty, is the storehouse of experienced events and material facts; history is its special genre. Imagination is the faculty that appreciates fiction; hence poesy is its genre. Bacon regarded appetite and will as faculties of a slightly different kind, forces that move us to acquire and act. This description of the psyche dominated psychology for almost three hundred years.

Bacon's second contribution to epistemology is his observation that perception is not infallible, nor are mental operations neutral. In his analysis of the false ideas that he calls "Idols" (reprinted here from *Novum Organum*), he maintains that reason and the senses are warped by common preconceptions, personal predilections, the ambiguities of language, and the misrepresentations of philosophical systems. There may be objective truth in the world, but knowing is subjective. Bacon proposes no strict method for overcoming the perversions of the Idols (as Descartes would do some years later). He relies instead on the strength of observation, experiment, and induction to dispel the mists of prejudice and complacency that hinder learning.

Bacon divides the operation of the intellect into four intellectual arts or, as he calls them in *De Augmentis*, "the branches of logic": (1) inquiry and invention, (2) judgment, (3) memory, and (4) delivery. These arts, which resemble the five parts of classical rhetoric, serve both logic and rhetoric. Bacon would not credit Ramus's fanatical distinctions between the disciplines, distinctions that limited rhetoric to style. Bacon acknowledges practical differences between invention and judgment in philosophy and in rhetoric, but those very differences argue for the

need to allow the two disciplines to overlap. Invention, for example, he wishes to redefine in the modern sense of finding or making something new, at least as it applies to science. In rhetoric, this means recall or recovery and relies on commonplaces of wisdom and knowledge produced by science. Judgment is an extension of invention, the evaluation of knowledge. Here syllogistic logic may be used to guard against fallacious generalization in both logic and rhetoric. In discussing memory, Bacon suggests that mental representations are counters or signs for experiences and information. Finally, he treats the art of communication (delivery) as the means by which knowledge is used and incorporated into social institutions, which are maintained by memory. The parts of Bacon's various schemes do not necessarily match up perfectly, nor need they do so. The Idols appear to develop as an extension of Bacon's reflections on fallacious conclusions in the art of judgment. But it is not clear how the three faculties match up with the four intellectual arts. If anything brings these schemes together, if indeed anything links Bacon's passion for knowledge with his passion for politics, it is rhetoric.

Rhetoric, in Bacon's famous definition, applies reason to the imagination to move the will. Bacon concurs with the ancient Greek philosopher Zeno's popular characterization of dialectic as a fist and rhetoric as an open hand—that is, the idea that scientific discourse is a technical treatment of truth, whereas rhetoric links knowledge to social concerns. Such a distinction, especially in the context of Bacon's high regard for scientific inquiry, suggests a split between thought and speech. For Descartes, this split is decisive. But Bacon will not deride rhetoric, even if he distances it from inquiry. He refutes Plato's argument that rhetoric is a distortion of truth, and in the Idol of the Marketplace the villain is not rhetoric but the ambiguity of words—their inevitable shifts in denotation and connotation. Merely ornamental rhetoric may contribute to such confusions, but that is reason to reform the art on sound psychological principles, not to condemn it. Rhetoric is a serious art and a great responsibility, for it brings knowledge into play in the world. It links morality with reason, although Bacon notes that this is not sufficient in and of itself to enforce ethical behavior.

Certainly Bacon did oppose what he perceived as the excessive ornamentation of the Ciceronian prose of the day, chastising those who “hunt more after words than matter.” But he did not embrace its alternative, the self-proclaimed plainness of the anti-Ciceronians or Senecans. His style has its own particular complexities, though the common view for many years was that his supposed plainness was deliberately suited to the development of science. Scientific style, as we now freely admit, is hardly nonrhetorical, and so Bacon need not be seen as rhetoric's enemy. Bacon's apothegms and aphorisms are not plain but cryptic (as historian of science James Stephens argues), impressing the images of scientific knowledge only upon those superior minds that can penetrate the code.¹ Moreover, framing thought in aphoristic sentences is not just a way of conveying the ideas effectively to the target audience; it actually affects the content of the ideas. Literary historian Lisa Jardine

¹James Stephens, *Francis Bacon and the Style of Science* (Chicago: University of Chicago Press, 1975).

maintains that Bacon recognizes the heuristic quality of the writing process itself.² Bacon's many collections of "colors and antitheses," "apothegms," "formulae," "sentences," and other commonplaces are intended not for mere decoration but as a means of investigating how our knowledge can be formulated in effective language, in discourse that shapes our beliefs and actions.

Selected Bibliography

The standard edition is *The Works of Francis Bacon*, edited by J. Spedding, R. L. Ellis, and D. D. Heath (1859; rpt. 1961). The 1955 Modern Library edition, edited by Hugh G. Dick, follows Spedding et al. The selections printed here are taken from this edition. It contains all of the *Essays*, *The Advancement of Learning*, *The New Organon*, and *New Atlantis*. The full title of *The Advancement of Learning* is *The Twoo Bookes of the Proficiency and Advancement of Learning*, which may help to distinguish it from the nine-book version written eighteen years later, called in Latin *De Augmentis Scientiarum* and in English *Of the Dignity and Advancement of Learning*. There are several editions of this expanded work, in Spedding et al. and elsewhere, which contains Bacon's fullest treatment of rhetoric.

A good introduction to Bacon's life and work is Karl Wallace's *Francis Bacon on Communication and Rhetoric* (1946). For a thorough account of Bacon's political milieu, see Christopher Hill, *The Intellectual Origins of the English Revolution* (1965), and Robert Hanna, "Francis Bacon: The Political Orator" (in *Studies in Rhetoric and Public Speaking in Honor of James Albert Winans*, ed. Drummond, 1962). Paolo Rossi provides more information on Bacon's intellectual setting, relating him to Ramism, Wilson, and Vico, in *Francis Bacon: From Magic to Science* (1968).

For a broad selection of scholarship that considers Bacon as a lawyer and historian as well as a scientist and rhetorical stylist, see Brian Vickers's collection, *Essential Articles for the Study of Francis Bacon* (1968), which also provides further bibliography. Much debate has focused on Bacon's contribution to the development of English prose style and the relationship of style to the rise of modern science. In *The Rise of Modern Prose Style* (1968), Robert Adolf provides a helpful summary of earlier discussions by Croll and Jones (see the bibliography in the introduction to Part Three) and supports Jones's argument that Bacon was neither Ciceronian nor strictly anti-Ciceronian; see also Brian Vickers, *Francis Bacon and Renaissance Prose* (1968). James Stephens, in *Francis Bacon and the Style of Science* (1975), has argued that Bacon's aphoristic style was intentionally cryptic; see also Lisa Jardine, *Francis Bacon: Discovery and the Art of Discourse* (1974). An interesting discussion of "The Most Significant Passage on Rhetoric in the Works of Francis Bacon" by six scholars will be found in *Rhetoric Society Quarterly* 26.3 (summer 1996).

²Lisa Jardine, *Francis Bacon: Discovery and the Art of Discourse* (Cambridge: Cambridge University Press, 1974).

From *The Advancement of Learning*

From *Book II*

The Arts Intellectual are four in number; divided according to the ends whereunto they are referred: for man's labour is to *invent* that which is *sought* or *propounded*; or to *judge* that which is *invented*; or to *retain* that which is *judged*; or to *deliver over* that which is *retained*. So as the arts must be four; Art of Inquiry or Invention; Art of Examination or Judgment; Art of Custody or Memory; and Art of Elocution or Tradition.

Invention is of two kinds, much differing; the one, of Arts and Sciences; and the other, of Speech and Arguments. . . .

The invention of speech or argument is not properly an invention: for to invent is to discover that we know not, and not to recover or resummon that which we already know; and the use of this invention is no other but *out of the knowledge whereof our mind is already possessed, to draw forth or call before us that which may be pertinent to the purpose which we take into our consideration*. So as, to speak truly, it is no *Invention*, but a *Remembrance* or *Suggestion*, with an application; which is the cause why the schools do place it after judgment, as subsequent and not precedent. Nevertheless, because we do account it a Chase as well of deer in an inclosed park as in a forest at large, and that it hath already obtained the name, let it be called invention: so as it be perceived and discerned, that the scope and end of this invention is readiness and present use of our knowledge, and not addition or amplification thereof.

To procure this ready use of knowledge there are two courses, Preparation and Suggestion. The former of these seemeth scarcely a part of Knowledge, consisting rather of diligence than of any artificial erudition. And herein Aristotle wittily, but hurtfully, doth deride the sophists near his time, saying, *they did as if one that professed the art of shoe-making should not teach how to make up a shoe, but only exhibit in a readiness a number of shoes of all fashions and sizes*. But yet

a man might reply, that if a shoemaker should have no shoes in his shop, but only work as he is bespoke, he should be weakly customed. But our Saviour, speaking of Divine Knowledge, saith, *that the kingdom of heaven is like a good householder, that bringeth forth both new and old store*; and we see the ancient writers of rhetoric do give it in precept, that pleaders should have the Places¹ whereof they have most continual use ready handled in all the variety that may be; as that, to speak for the literal interpretation of the law against equity, and contrary; and to speak for presumptions and inferences against testimony, and contrary. And Cicero himself, being broken unto it by great experience, delivereth it plainly, that whatsoever a man shall have occasion to speak of, (if he will take the pains) he may have it in effect premeditate, and handled *in thesi*,² so that when he cometh to a particular, he shall have nothing to do but to put to names and times and places, and such other circumstances of individuals. We see likewise the exact diligence of Demosthenes; who, in regard of the great force that the entrance and access into causes hath to make a good impression, had ready framed a number of prefaces for orations and speeches. All which authorities and precedents may outweigh Aristotle's opinion, that would have us change a rich wardrobe for a pair of shears.

But the nature of the collection of this provision or preparatory store, though it be common both to logic and rhetoric, yet having made an entry of it here, where it came first to be spoken of, I think fit to refer over the further handling of it to rhetoric.

The other part of Invention, which I term Suggestion, doth assign and direct us to certain *marks* or *places*, which may excite our mind to return and produce such knowledge as it hath for-

¹The classical *topoi* or *loci*. Bacon makes further distinctions as he goes on between the common and special topics and collections of "commonplaces." [Ed.]

²In general form, like a "thesis." [Ed.]

merly collected, to the end we may make use thereof. Neither is this use (truly taken) only to furnish argument to dispute probably with others, but likewise to minister unto our judgment to conclude aright within ourselves. Neither may these Places serve only to apprompt our invention, but also to direct our inquiry. For a faculty of wise interrogating is half a knowledge. For as Plato saith, *Whosoever seeketh, knoweth that which he seeketh for in a general notion; else how shall he know it when he hath found it?* And therefore the larger your Anticipation is, the more direct and compendious is your search. But the same Places which will help us what to produce of that which we know already, will also help us, if a man of experience were before us, what questions to ask; or if we have books and authors to instruct us, what points to search and revolve: so as I cannot report that this part of invention, which is that which the schools call Topics, is deficient.

Nevertheless Topics are of two sorts, *general* and *special*. The general we have spoken to; but the particular hath been touched by some, but rejected generally as inartificial and variable. But leaving the humour which hath reigned too much in the schools, (which is to be vainly subtle in a few things which are within their command, and to reject the rest,) I do receive particular Topics, that is places or directions of invention and inquiry in every particular knowledge, as things of great use; being mixtures of Logic with the matter of sciences; for in these it holdeth, *Ars inveniendi adolescit cum inventis*,³ for as in going of a way we do not only gain that part of the way which is passed, but we gain the better sight of that part of the way which remaineth; so every degree of proceeding in a science giveth a light to that which followeth; which light if we strengthen, by drawing it forth into questions or places of inquiry, we do greatly advance our pursuit.

Now we pass unto the arts of Judgment, which handle the natures of Proofs and Demonstrations; which as to Induction hath a coincidence with Invention; *for in all inductions, whether in good or vicious form, the same action of the mind which*

inventeth, judgeth; all one as in the sense; but otherwise it is in proof by syllogism; for the proof being not immediate but by mean, the invention of the mean is one thing, and the judgment of the consequence is another; the one exciting only, the other examining. Therefore for the real and exact form of judgment we refer ourselves to that which we have spoken of Interpretation of Nature.

For the other judgment by Syllogism, as it is a thing most agreeable to the mind of man, so it hath been vehemently and excellently laboured. For the nature of man doth extremely covet to have somewhat in his understanding fixed and immoveable, and as a rest and support of the mind. And therefore as Aristotle endeavoureth to prove that in all motion there is some point quiescent; and as he elegantly expoundeth the ancient fable of Atlas (that stood fixed and bare up the heaven from falling) to be meant of the poles or axle-tree of heaven, whereupon the conversion is accomplished; so assuredly men have a desire to have an Atlas or axle-tree within to keep them from fluctuation, which is like to a perpetual peril of falling; therefore men did hasten to set down some Principles about which the variety of their disputations might turn. . . .

The custody or retaining of knowledge is either in Writing or Memory; whereof Writing hath two parts, the nature of the *character*, and the order of the *entry*. For the art of *characters*, or other visible notes of words or things, it hath nearest conjugation with grammar, and therefore I refer it to the due place. For the *disposition* and *collocation* of that knowledge which we preserve in writing, it consisteth in a good digest of commonplaces; wherein I am not ignorant of the prejudice imputed to the use of commonplace books, as causing a retardation of reading, and some sloth or relaxation of memory. But because it is but a counterfeit thing in knowledge to be forward and pregnant, except a man be deep and full, I hold the entry of commonplaces to be a matter of great use and essence in studying; as that which assureth copie⁴ of invention, and contracteth judgment to a strength. But this is true,

³"The art of invention grows with inventions." [Ed.]

⁴Abundance. [Ed.]

that of the *methods* of commonplaces that I have seen, there is none of any sufficient worth; all of them carrying merely the face of a *school*, and not of a *world*; and referring to vulgar matters and pedantical divisions without all life or respect to action.

For the other principal part of the custody of knowledge, which is Memory, I find that faculty in my judgment weakly enquired of. An art there is extant of it; but it seemeth to me that there are better precepts than that art, and better practices of that art than those received. It is certain the art (as it is) may be raised to points of ostentation prodigious: but in use (as it is now managed) it is barren; not burdensome nor dangerous to natural memory, as is imagined, but barren; that is, not dexterous to be applied to the serious use of business and occasions. And therefore I make no more estimation of repeating a great number of names or words upon once hearing, or the pouring forth of a number of verses or rhymes *ex tempore*, or the making of a satirical simile of every thing, or the turning of every thing to a jest, or the falsifying or contradicting of every thing by cavil, or the like, (whereof in the faculties of the mind there is great copie, and such as by device and practice may be exalted to an extreme degree of wonder,) than I do of the tricks of tumblers, funambuloes, baladines;⁵ the one being the same in the mind that the other is in the body; matters of strangeness without worthiness.

This art of Memory is but built upon two intentions; the one Prenotion, the other Emblem. Prenotion dischargeth the indefinite seeking of that we would remember, and directeth us to seek in a narrow compass; that is, somewhat that hath congruity with our *place of memory*. Emblem reduceth conceits intellectual to images sensible, which strike the memory more; out of which axioms may be drawn much better pratique⁶ than that in use; and besides which axioms, there are divers moe⁷ touching help of memory, not inferior to them. But I did in the beginning distinguish, not to report those things deficient, which are but only ill managed.

⁵Funambuloes are rope-dancers; baladines are theatrical dancers. [Ed.]

⁶Practice. [Ed.]

⁷Many others. [Ed.]

There remaineth the fourth kind of Rational Knowledge, which is transitive, concerning the expressing or transferring our knowledge to others; which I will term by the general name of Tradition or Delivery. Tradition hath three parts: the first concerning the *organ* of tradition; the second concerning the *method* of tradition; and the third concerning the *illustration* of tradition.

For the organ of tradition, it is either Speech or Writing; for Aristotle saith well, *Words are the images of cogitations, and letters are the images of words*; but yet it is not of necessity that cogitations be expressed by the medium of words. For *whatsoever is capable of sufficient differences, and those perceptible by the sense, is in nature competent to express cogitations*. And therefore we see in the commerce of barbarous people that understand not one another's language, and in the practice of divers that are dumb and deaf, that men's minds are expressed in gestures, though not exactly, yet to serve the turn. And we understand further that it is the use of China and the kingdoms of the high Levant to write in Characters Real, which express neither letters nor words in gross, but Things or Notions; insomuch as countries and provinces, which understand not one another's language, can nevertheless read one another's writings, because the characters are accepted more generally than the languages do extend; and therefore they have a vast multitude of characters; as many, I suppose, as radical words. . . .

Now we descend to that part which concerneth the Illustration of Tradition, comprehended in that science which we call Rhetoric, or Art of Eloquence; a science excellent, and excellently well laboured. For although in true value it is inferior to wisdom, as it is said by God to Moses, when he disabled himself for want of this faculty, *Aaron shall be thy speaker, and thou shalt be to him as God*; yet with people it is the more mighty: for so Salomon saith, *Sapiens corde appellabitur prudens, sed dulcis eloquio majora reperiet*,⁸ signifying that profoundness of wisdom will help a man to a name of admiration, but

⁸"The wise-hearted is called discerning, but one whose speech is sweet gains wisdom" (Proverbs 16:21). [Ed.]

that it is eloquence that prevaileth in an active life. And as to the labouring of it, the emulation of Aristotle with the rhetoricians of his time, and the experience of Cicero, hath made them in their works of Rhetorics exceed themselves. Again, the excellency of examples of eloquence in the orations of Demosthenes and Cicero, added to the perfection of the precepts of eloquence, hath doubled the progression in this art; and therefore the deficiencies which I shall note will rather be in some collections which may as handmaids attend the art, than in the rules or use of the art itself.

Notwithstanding, to stir the earth a little about the roots of this science, as we have done of the rest: The duty and office of Rhetoric is *to apply Reason to Imagination* for the better moving of the will. For we see Reason is disturbed in the administration thereof by three means; by Illaqueation or Sophism, which pertains to Logic; by Imagination or Impression, which pertains to Rhetoric; and by Passion or Affection, which pertains to Morality. And as in negotiation with others men are wrought by cunning, by importunity, and by vehemency; so in this negotiation within ourselves men are undermined by Inconsequences, solicited and importuned by Impressions or Observations, and transported by Passions. Neither is the nature of man so unfortunately built, as that those powers and arts should have force to disturb reason, and not to establish and advance it: for the end of Logic is to teach a form of argument to secure reason, and not to entrap it; the end of Morality is to procure the affections to obey reason, and not to invade it; the end of Rhetoric is to fill the imagination to second reason, and not to oppress it: for these abuses of arts come in but *ex obliquo*,⁹ for caution.

And therefore it was great injustice in Plato, though springing out of a just hatred of the rhetoricians of his time, to esteem of Rhetoric but as a voluptuary art, resembling it to cookery, that did mar wholesome meats, and help unwholesome by variety of sauces to the pleasure of the taste. For we see that speech is much more conversant in adorning that which is good than in colouring that which is evil; for there is no man

⁹“Indirectly.” [Ed.]

but speaketh more honestly than he can do or think: and it was excellently noted by Thucydides in Cleon,¹⁰ that because he used to hold on the bad side in causes of estate, therefore he was ever inveighing against eloquence and good speech; knowing that no man can speak fair of courses sordid and base. And therefore as Plato said elegantly, *That virtue, if she could be seen, would move great love and affection*; so seeing that she cannot be shewed to the Sense by corporal shape, the next degree is to shew her to the Imagination in lively representation: for to shew her to Reason only in subtilty of argument, was a thing ever derided in Chrysippus and many of the Stoicks; who thought to thrust virtue upon men by sharp disputations and conclusions, which have no sympathy with the will of man.

Again, if the affections in themselves were pliant and obedient to reason, it were true there should be no great use of persuasions and insinuations to the will, more than of naked proposition and proofs; but in regard of the continual mutinies and seditions of the affections,

Video meliora, proboque;
Deteriora sequor:¹¹

reason would become captive and servile, if Eloquence of Persuasions did not practise and win the Imagination from the Affection’s part, and contract a confederacy between the Reason and Imagination against the Affections. For the affections themselves carry ever an appetite to good, as reason doth; the difference is, that *the affection beholdeth merely the present; reason beholdeth the future and sum of time*; and therefore the present filling the imagination more, reason is commonly vanquished; but after that force of eloquence and persuasion hath made things future and remote appear as present, then upon the revolt of the imagination reason prevaileth.

We conclude therefore, that Rhetoric can be no more charged with the colouring of the worse part, than Logic with Sophistry, or Morality with Vice. For we know the doctrines of contraries are the same, though the use be opposite. It appeareth

¹⁰In *The Peloponnesian War*, III, 9. [Ed.]

¹¹“I see and approve the better things, but follow the worse” (Ovid, *Metamorphoses*, VII, 20). [Ed.]

also that Logic differeth from Rhetoric, not only as the fist from the palm, the one close the other at large; but much more in this, that Logic handleth reason exact and in truth, and Rhetoric handleth it as it is planted in popular opinions and manners. And therefore Aristotle doth wisely place Rhetoric as between Logic on the one side and moral or civil knowledge on the other, as participating of both: for the proofs and demonstrations of Logic are toward all men indifferent and the same; but the proofs and persuasions of Rhetoric ought to differ according to the auditors:

Orpheus in sylvis, inter delphinas Arion:¹²

which application, in perfection of idea, ought to extend so far, that if a man should speak of the same thing to several persons, he should speak to them all respectively and several ways: though this *politic part of eloquence in private speech* [*de prudentia sermonis privati*] it is easy for the greatest orators to want, whilst by the observing their well-graced forms of speech they leese¹³ the volubility of application: and therefore it shall not be amiss to recommend this to better inquiry; not being curious whether we place it here, or in that part which concerneth policy.

Now therefore will I descend to the deficiencies, which (as I said) are but attendances: and first, I do not find the wisdom and diligence of Aristotle well pursued, who began to make a collection of *the popular signs and colours of good and evil, both simple and comparative*, [*colores boni et mali, simplicis et comparati*] which are as the Sophisms of Rhetoric (as I touched before). For example:

SOPHISMA

Quod laudatur, bonum: quod vituperatur, malum.¹⁴

REDARGUTIO

Laudet venales qui vult extrudere merces.
Malum est, malum est, inquit emptor: sed cum recesserit, tum gloriabitur.¹⁵

¹²“As Orpheus in the woods, as Arion with the dolphins” (Virgil, *Eclogues*, VIII, 56). [Ed.]

¹³Lose. [Ed.]

¹⁴“SOPHISM / What is praised is good; what is censured, evil.” [Ed.]

¹⁵“REFUTATION / He who praises his wares wishes to sell them” (Horace, *Epistles*, II, 2). “‘It’s no good, it’s no good,’

The defects in the labour of Aristotle are three: one, that there be but a few of many; another, that their Elenches are not annexed:¹⁶ and the third, that he conceived but a part of the use of them: for their use is not only in probation, but much more in impression.¹⁷ For many forms are equal in signification which are differing in impression; as the difference is great in the piercing of that which is sharp and that which is flat, though the strength of the percussion be the same; for there is no man but will be a little more raised by hearing it said, *Your enemies will be glad of this*:

Hoc Ithacus velit, et magno mercentur Atridæ.¹⁸

than by hearing it said only, *This is evil for you*.

Secondly, I do resume also that which I mentioned before touching Provision or Preparatory store for the furniture of speech and readiness of invention; which appeareth to be of two sorts; the one in resemblance to a shop of pieces unmade up, the other to a shop of things ready made up; both to be applied to that which is frequent and most in request: the former of these I will call *Antitheta*, and the latter *Formulae*.

Antitheta are Theses argued *pro et contra*; wherein men may be more large and laborious: but (in such as are able to do it) to avoid prolixity of entry, I wish the seeds of the several arguments to be cast up into some brief and acute sentences; not to be cited, but to be as skeins or bottoms of thread, to be unwinded at large when they come to be used; supplying authorities and examples by reference.

PRO VERBIS LEGIS

Non est interpretatio, sed divinatio, quæ recedit a literâ.

Cum receditur a literâ, judex transit in legislatorem.¹⁹

says the buyer; but after he goes, he exults in his bargain.” [Ed.]

¹⁶That is, Aristotle has not attached (*annexed*) the logical refutations (*Elenches*) to his examples (*colours* or *sophisms*). [Ed.]

¹⁷That is, the colors are valuable for emotional appeal as well as logical demonstration. [Ed.]

¹⁸“This the Ithacan desires, and for it the sons of Atreus would pay much” (*Aeneid*, II, 104). [Ed.]

¹⁹“FOR THE LETTER OF THE LAW / It is not interpretation but

Ex omnibus verbis est eliciendus sensus qui interpretatur singula.²⁰

divination to depart from the letter of the law. / If the letter of the law is left behind, the judge becomes the legislator." [Ed.]

²⁰"FOR THE SPIRIT OF THE LAW / The meaning of each word depends upon the interpretation of the whole statement." [Ed.]

Formulae are but decent and apt passages or conveyances of speech, which may serve indifferently for differing subjects; as of preface, conclusion, digression, transition, excusation, &c. For as in buildings there is great pleasure and use in the well-casting of the staircases, entries, doors, windows, and the like; so in speech the conveyances and passages are of special ornament and effect. So may we redeem the faults passed, and prevent the inconveniences future.

From *Novum Organum*

From *Book I*

XXXVIII

The idols and false notions which are now in possession of the human understanding, and have taken deep root therein, not only so beset men's minds that truth can hardly find entrance, but even after entrance obtained, they will again in the very instauration of the sciences meet and trouble us, unless men being forewarned of the danger fortify themselves as far as may be against their assaults.

XXXIX

There are four classes of Idols which beset men's minds. To these for distinction's sake I have assigned names — calling the first class *Idols of the Tribe*; the second, *Idols of the Cave*; the third, *Idols of the Market-place*; the fourth, *Idols of the Theatre*.

XL

The formation of ideas and axioms by true induction is no doubt the proper remedy to be applied for the keeping off and clearing away of idols. To point them out, however, is of great use; for the doctrine of Idols is to the Interpretation of Nature what the doctrine of the refutation of Sophisms is to common Logic.

XLI

The Idols of the Tribe have their foundation in human nature itself, and in the tribe or race of men. For it is a false assertion that the sense of man is the measure of things.¹ On the contrary, all perceptions as well of the sense as of the mind are according to the measure of the individual and not according to the measure of the universe. And the human understanding is like a false mirror, which, receiving rays irregularly, distorts and discolours the nature of things by mingling its own nature with it.

XLII

The Idols of the Cave are the idols of the individual man. For every one (besides the errors common to human nature in general) has a cave or den of his own, which refracts and discolours the light of nature; owing either to his own proper and peculiar nature; or to his education and conversation with others; or to the reading of books, and the authority of those whom he esteems and admires; or to the differences of impressions, accordingly as they take place in a mind preoccupied and predisposed or in a mind indifferent and settled; or the like. So that the spirit of man (according as it is meted out to different individuals)

¹Asserted by Protagoras: See the introduction to Part One of this volume. [Ed.]

is in fact a thing variable and full of perturbation, and governed as it were by chance. Whence it was well observed by Heraclitus that men look for sciences in their own lesser worlds, and not in the greater or common world.

XLIII

There are also Idols formed by the intercourse and association of men with each other, which I call Idols of the Market-place, on account of the commerce and consort of men there. For it is by discourse that men associate; and words are imposed according to the apprehension of the vulgar. And therefore the ill and unfit choice of words wonderfully obstructs the understanding. Nor do the definitions or explanations wherewith in some things learned men are wont to guard and defend themselves, by any means set the matter right. But words plainly force and overrule the understanding, and throw all into confusion, and lead men away into numberless empty controversies and idle fancies.

XLIV

Lastly, there are Idols which have immigrated into men's minds from the various dogmas of philosophies, and also from wrong laws of demonstration. These I call Idols of the Theatre; because in my judgment all the received systems are but so many stage-plays, representing worlds of their own creation after an unreal and scenic fashion. Nor is it only of the systems now in vogue, or only of the ancient sects and philosophies, that I speak; for many more plays of the same kind may yet be composed and in like artificial manner set forth; seeing that errors the most widely different have nevertheless causes for the most part alike. Neither again do I mean this only of entire systems, but also of many principles and axioms in science, which by tradition, credulity, and negligence have come to be received.

But of these several kinds of Idols I must speak more largely and exactly, that the understanding may be duly cautioned. . . .

LIX

But the *Idols of the Market-place* are the most troublesome of all: idols which have crept into the understanding through the alliances of words and names. For men believe that their reason governs words; but it is also true that words react on the understanding; and this it is that has rendered philosophy and the sciences sophisticated and inactive. Now words, being commonly framed and applied according to the capacity of the vulgar, follow those lines of division which are most obvious to the vulgar understanding. And whenever an understanding of greater acuteness or a more diligent observation would alter those lines to suit the true divisions of nature, words stand in the way and resist the change. Whence it comes to pass that the high and formal discussions of learned men end oftentimes in disputes about words and names; with which (according to the use and wisdom of the mathematicians) it would be more prudent to begin, and so by means of definitions reduce them to order. Yet even definitions cannot cure this evil in dealing with natural and material things; since the definitions themselves consist of words, and those words beget others: so that it is necessary to recur to individual instances, and those in due series and order; as I shall say presently when I come to the method and scheme for the formation of notions and axioms.

LX

The idols imposed by words on the understanding are of two kinds. They are either names of things which do not exist (for as there are things left unnamed through lack of observation, so likewise are there names which result from fantastic suppositions and to which nothing in reality corresponds), or they are names of things which exist, but yet confused and ill-defined, and hastily and irregularly derived from realities. Of the former kind are Fortune, the Prime Mover, Planetary Orbits, Element of Fire, and like fictions which owe their origin to false and idle theories. And this class of idols is more easily ex-

pelled, because to get rid of them it is only necessary that all theories should be steadily rejected and dismissed as obsolete.

But the other class, which springs out of a faulty and unskilful abstraction, is intricate and deeply rooted. Let us take for example such a word as *humid*; and see how far the several things which the word is used to signify agree with each other; and we shall find the word *humid* to be nothing else than a mark loosely and confusedly applied to denote a variety of actions which will not bear to be reduced to any constant meaning. For it both signifies that which easily spreads itself round any other body; and that which in itself is indeterminate and cannot solidise; and that which readily yields in every direction; and that which easily divides and scatters itself; and that which easily unites and collects itself; and that which readily flows and is put in motion; and that which readily clings to another body and wets it; and that which is easily reduced

to a liquid, or being solid easily melts. Accordingly when you come to apply the word,—if you take it in one sense, flame is humid; if in another, air is not humid; if in another, fine dust is humid; if in another, glass is humid. So that it is easy to see that the notion is taken by abstraction only from water and common and ordinary liquids, without any due verification.

There are however in words certain degrees of distortion and error. One of the least faulty kinds is that of names of substances, especially of lowest species and well-deduced (for the notion of *chalk* and of *mud* is good, or *earth* bad); a more faulty kind is that of actions, as *to generate*, *to corrupt*, *to alter*; the most faulty is of qualities (except such as are the immediate objects of the sense) as *heavy*, *light*, *rare*, *dense*, and the like. Yet in all these cases some notions are of necessity a little better than others, in proportion to the greater variety of subjects that fall within the range of the human sense.

Margaret Fell

1614–1702

Historian Margaret L. King has argued that “something changed [for the better] during the Renaissance in women’s sense of themselves, even if very little changed or changed for the better in their social condition.”¹ Women’s legal and religious disabilities actually increased during the period, causing them to be more strictly subject to men’s authority, but women also seemed to find new ways of evading control and new courage to express themselves.

One factor in this change was increased opportunity for women to be educated and to use their education. Some women, mostly from the upper social classes, had gained early access to Italian humanist education (see introduction to Part Three). Although their education sometimes acquainted them with rhetoric, these women had few opportunities to use their rhetorical knowledge in public; however, there were exceptions—young women who were celebrated by their cities as prodigies, such as Cassandra Fedele, and women who became sovereigns, such as Elizabeth I. Although these exceptional women were few, their presence on the cultural and political scene seems to have made an impact beyond their numbers, providing influential role models for other women. The period was unusually well stocked with powerful female political leaders: not only Elizabeth I, but also her father Henry VIII’s wives Catherine of Aragon and Anne Boleyn, the French regent Catherine de’ Medici, and Mary Queen of Scots, among others.

Moreover, the spread of Protestant Christianity was followed by increasing initiatives to educate young women. In Germany, Scandinavia, and England, schools specifically for girls multiplied, as well as schools where they could be educated with boys. For both sexes, this education often taught little but the most elementary reading and writing, but even such minimal literacy was invested with great religious seriousness, because the effort to educate was justified by the doctrinal need for all Protestant Christians, regardless of gender, to read the Bible for themselves and to write texts of spiritual self-examination.

Certainly women were not encouraged to use this education to question their subordinate status. On the contrary, women’s education was usually defended on grounds that it made them better Christians and more docile daughters and wives. Furthermore, even these new but circumscribed educational opportunities did not result in widespread female literacy. According to social historian David Cressy, no more than 20 percent of English women were sufficiently literate to sign their names by the seventeenth century,² and historian Harvey Graff has shown that the number did not rise to more than 50 percent even by the end of the eighteenth century.³ Such figures must be taken into account when considering the fact that the

³Harvey J. Graff, *The Legacies of Literacy* (Bloomington: Indiana University Press, 1987), pp. 231–32, 250.

historical record preserves very few female-authored texts of any description, rhetorical or otherwise, and few descriptions of female orators, before 1600.

Women were almost completely excluded from university education, where the most advanced education in rhetoric took place, until well into the nineteenth century. As many education theorists declared, women did not need rhetorical education because they were barred from the professions of lawyer and minister where eloquence was practiced.

Nevertheless, as King has suggested, Renaissance women felt more empowered, and this feeling grew not from education alone, but also “[had] its roots in the spiritual experience of women.”⁴ Women began to feel that they answered to a higher authority, even if men censured them. They flocked in disproportionate numbers to the new Protestant sects of Christianity, which were less hierarchical and patriarchal than the established Church. As historian of rhetoric Elizabeth Mazzola has pointed out, Protestant martyr Anne Askew resisted men’s attempts to dictate what she should say about her religious experience, even under torture. In spite of legal prosecution and printed attacks, women joined the ranks of itinerant Protestant preachers who exhorted crowds extemporaneously, using deliberately colloquial, earthy, moving language. Some Protestant sects also encouraged social action on behalf of the poor, prostitutes, slaves, and other abused groups. Given this social action agenda, preaching sometimes shaded over into political oratory. Women who addressed political issues, however, typically retained a religious orientation. The social evils they attacked were, they claimed, so offensive to God that pious Christian women must speak out, even at risk of social condemnation. But in this way women began to discover that, just as religious duty had justified increased educational opportunities for them, so too could it justify increased opportunities to use that education in public as eloquent speakers and writers for social justice.

Quaker women were among the first to speak in public on social issues, and the number of Quakers among women social-activist orators was, and is, high in proportion to the number of Quakers in the population, as historian Margaret Hope Bacon demonstrates. More than virtually any other Christian denomination, the Society of Friends has advocated and practiced sexual equality. Moreover, Quakerism is perhaps the most antihierarchical and individualistic of Protestant denominations. The Quaker emphasis on each person’s right and duty to conduct his or her own life by an “inner light” of spirituality provides a philosophical as well as a theological support for women’s rejection of social constraints as they attempt to act on behalf of social justice. Thus it is not surprising that the English Society of Friends produced Margaret Fell, an important Renaissance thinker on women’s right to speak in public.

Margaret Fell (1614–1702), née Askew, was born in Lancashire to upper-middle-class parents. In 1631, at the age of eighteen, she married Thomas Fell, a man almost twice her age. Thomas was a member of the landed gentry, a judge, and vice-chancellor of the duchy of Lancashire. Within ten years, they had five children; they had nine altogether, of whom eight, seven of them girls, survived to

⁴King, p. 238.

adulthood. Margaret Fell's early married life was unremarkable for a woman of her social class. She did, perhaps, have more domestic authority than usual because her husband was frequently absent riding the circuit court and left her to manage their estates. In this way she began to develop the administrative and leadership abilities that she would later use as a Quaker leader.

Margaret Fell was already inclined toward radical Protestantism when she met George Fox, founder of the Society of Friends, in 1652. She quickly converted to his religious views and helped Fox convince her children and servants and some of her neighbors of the value of his approach to spirituality, the "inner light." Judge Fell did not share his wife's conviction but was sympathetic to it, and he attempted to protect her from legal sanctions as she opened their home, Swarthmoor Hall, to Quaker meetings and made the estate a sustaining center for Quaker activity throughout England. Fox and other Quakers traveled the country preaching the new religion. Margaret Fell managed her large household, supported the itinerants and their families financially, made her estate a center for communication, and herself traveled to London to seek political protection for the Society of Friends.

Margaret Fell was also a prolific writer, foremost among the cadre of early Quaker women who preached and published on behalf of the faith, and one of the most prolific woman writers of the century. Her husband, although tolerant of her religious views, had attempted to discourage her public advocacy of the faith while he lived, even blocking publication of some of her works, but after he died in 1658, she became an even more active supporter of the Society. Without her husband's protection, however, she suffered legal persecution for her activities. Her persecutors threatened to strip her of her estate, and she was jailed several times. She was arrested in 1664 for holding Quaker meetings at Swarthmoor and was imprisoned under grim conditions in Lancashire Castle from 1664 to 1668 (her four youngest daughters, ranging in age from twenty-six to fifteen, managed the estate in her absence). While there she wrote her most famous work, the tract included here: *Women's Speaking Justified, Proved, and Allowed by the Scriptures*. It was first published in 1666, and to the second edition of 1667 she added "A Further Addition" and a "Postscript."

Fell married George Fox in 1669, when she was fifty-five and he was forty-five. From the first, they resolved to have an egalitarian marriage. Fox formally renounced all claim to her property, which as her husband he would have legally controlled. Fell brushed off the criticism of her only son (educated away from the family, he was not a Quaker), who disapproved of her marriage to a man much below her in social position. She also fended off his attempts to gain legal rights to the family estate now that she had remarried. After they married, Fell and Fox continued their separate ministries, seldom living together, as Fox traveled widely in England, Europe, and America.

Historian Bonnelyn Young Kunze believes that Margaret Fell should be regarded as a major architect of the Quaker faith. Although earlier scholarship depicts her somewhat sentimentally as merely a nurturing mother of the nascent denomination, who sustained the destitute out of her family wealth, Fell was also an active controversialist who helped shape the Society's views on a range of issues. She was not

merely an influence on George Fox, but an intellectual leader of the movement in her own right. Moreover, she was uninhibited by her lack of university training, which had prepared the legal authorities and Anglican leaders against whom she argued. Fell deemed that she needed no formal training in rhetoric because she was preaching the truth of God: "The holy Apostles off Xt [Christ] went nott to the university for Xt endued them with his Holy Spirit. . . . By his spiritt he endued them with more knowledge than they could have gotten at the universitys, and soe they need not go thither."⁵

One important part of Margaret Fell's leadership was developing women's egalitarian position in the Society of Friends. For one thing, she raised up more activist women like herself. Of her seven daughters, all but one married late, remaining at Swarthmoor with her and forming a formidable band of devoted women, active supporters of Quakerism. All eventually married Quakers, and the family remained close and united in activism throughout Fell's long life. In 1671 Fell also began the first Quaker meeting exclusively for women that was to convene outside London. A major purpose was to organize support for indigent Quakers, particularly elderly widows and women with small children, who had been impoverished or deprived of male support by the severe persecution periodically visited on their sect. This meeting was notable for ignoring social barriers and admitting women of all social classes to equal fellowship. Taking an aggressive role in controversy within the Society of Friends over the appropriateness of women's meetings, Fell argued that they were necessary to make possible women's spiritual development free from men's inhibiting presence. Evidently she was well aware that, unlike herself, many of her female contemporaries were afraid to speak out for fear of male censure.

Moreover, Fell did not justify her own speaking merely on the grounds that she was possessed by God, prophesying in the grip of a holy vision. Many Protestant women adopted the posture of prophet to justify their public speaking, but this was an inherently humble role, implying that the woman herself did not speak but that God spoke through her, and that she would subside when the divine spirit left her. Fell, in contrast, behaved like a full-scale leader of the Society of Friends throughout her life. She was never silent on any controversy within the Society, and she also used her elevated social position to gain access to the English king in order to plead for increased tolerance toward Quakers and freedom for jailed leaders. A very public speaker and writer, she describes her political activism in her autobiography:

I spake often with the King, and writ many Letters and Papers unto him, and many Books were given by our Friends to Parliament. . . . And I writ and gave Papers and Letters to everyone of the Family several times . . . to the Duke of York, to the Duke of Gloucester . . . the Queen Mother . . . the Prince of Orange, and to the Queen of Bohemia. [I] did lay our Principles and Doctrines before them, and desired that they would let us have Discourse with their Priests, Preachers and Teachers, and if they would prove us Erroneous, then let them manifest it; But if our Principles and Doctrines be found according to the Doctrine of Christ, and the Apostles and Saintes in the Primitive Times, then let us have our Liberty.⁶

⁵Quoted in Bonnelyn Young Kunze, *Margaret Fell and the Rise of Quakerism* (Stanford: Stanford University Press, 1994), p. 201.

⁶Quoted in Kunze, p. 17.

This account shows Fell engaging in the kind of public argument that had hitherto been largely a male preserve. She was the first Quaker leader to address the restored Charles II, and in 1674 she persuaded him to release Fox, who was again in prison. In 1684 she delivered petitions that contributed to James II's declarations of tolerance for religious dissent. In 1697 she encouraged William II to continue his protection of Quakers. Even the few Italian humanist women who gave public orations addressed ceremonial topics, not issues of current and intense political interest. Fell thus resembles Elizabeth I more than Cassandra Fedele in her rhetorical practice, but with the important difference that she was not protected by a crown.

Selected Bibliography

Margaret Fell's *Women's Speaking Justified, Proved, and Allowed by the Scriptures* exists in a facsimile edition published by the Augustan Reprint Society (1979). David J. Latt's introduction provides biographical information. The text printed here is taken from that edition and from the excerpt in *Womanhood in Radical Protestantism, 1525–1675*, ed. Joyce L. Irwin (1979), a collection of primary texts on the roles of women in the Bible, in marriage, and in the Christian faith. Most of these pieces are by men, and they reflect some of the opposition against which Fell protested, as well as Protestant liberalism concerning women. In addition to a transcription of the first part of Fell's pamphlet, the book includes a confirming statement issued by George Fox. Irwin's headnotes and bibliography are helpful.

On literacy and women's education in the period, see David Cressy, *Literacy and the Social Order* (1980), Harvey J. Graff, *The Legacies of Literacy* (1987), and Margaret L. King, *Women of the Renaissance* (1991).

Cheryl Glenn discusses the rhetorical practice of Elizabeth I and Anne Askew, among others, in *Rhetoric Retold: Regendering the Tradition from Antiquity through the Renaissance* (1997). Elizabeth Mazzola's "Expert Witnesses and Secret Subjects: Anne Askew's Examinations and Renaissance Self-Incrimination" can be found in a collection edited by Carole Levin and Patricia A. Sullivan, *Political Rhetoric, Power, and Renaissance Women* (1995), which also contains essays on Elizabeth, other female rulers, playwright Aphra Behn, and other rhetorically active women of the period.

For a discussion of how Renaissance women's language-using practices may be construed as rhetoric, see Glenn, and Jane Donawerth's "The Politics of Renaissance Rhetorical Theory by Women" (in Levin and Sullivan). Judith Kegan Gardiner discusses Fell's development of a strikingly self-confident, maternally inflected rhetoric in "Re-Gendering Individualism: Margaret Fell Fox and Quaker Rhetoric" (in *Privileging Gender in Early Modern England*, ed. Jean R. Brink, 1993).

The standard biography of Margaret Fell is *Margaret Fell: Mother of Quakerism* (1949), by her descendent Isabel Ross. Bonnelyn Young Kunze's *Margaret Fell and the Rise of Quakerism* (1994) provides a helpful reappraisal of Fell's role in the development of the Society of Friends and a wealth of detail about her seventeenth-century social setting, as well as a helpful bibliography. Margaret Hope Bacon's *Mothers of Feminism* (1986) discusses the contributions of Quaker women from Fell to the present day.

Women's Speaking Justified, Proved, and Allowed by the Scriptures

Whereas it hath been an objection in the minds of many, and several times hath been objected by the clergy, or ministers, and others, against womens speaking in the Church; and so consequently may be taken, that they are condemned for meddling in the things of God; the ground of which objection, is taken from the Apostles¹ words, which he writ in his first Epistle to the *Corinthians*, chap. 14. vers. 34, 35. And also what he writ to *Timothy* in the first Epistle, chap. 2, vers. 11, 12. But how far they wrong the Apostles intentions in these Scriptures, we shall shew clearly when we come to them in their course and order. But first let me lay down how God himself hath manifested his Will and Mind concerning women, and unto women.

And first, when *God created Man in his own image; in the image of God created he them, male and female: and God blessed them, and God said unto them, Be fruitful, and multiply: And God said, Behold, I have given you of every herb, etc., Gen. 1.* Here God joins them together in his own image, and makes no such distinctions and differences as men do; for though they be weak, he is strong; and as he said to the Apostle, *His grace is sufficient, and his strength is made manifest in weakness, 2 Cor. 12.9.* And such hath the Lord chosen, even *the weak things of the world, to confound the things which are mighty: and things which are despised, hath God chosen, to bring to nought things that are, 1 Cor. 1.* And God hath put no such difference between the male and female as men would make.

It is true, *The serpent that was more subtle than any other beast of the field, came unto the woman, with his temptations, and with a lie; his subtilty discerning her to be more inclinable to hearken to him; when he said, If ye eat, your eyes shall be opened: and the woman saw that the fruit was good to make one wise, there the temptation got into her, and she did eat, and gave to*

her husband, and he did eat also, and so they were both tempted into the transgression and disobedience; and therefore God said unto Adam, when that he hid himself when he heard his voice, Hast thou eaten of the tree which I commanded thee that thou shouldest not eat? And Adam said, The woman which thou gavest me, she gave me of the tree, and I did eat. And the Lord said unto the woman, What is this that thou hast done? and the woman said, The serpent beguiled me, and I did eat. Here the woman spoke the truth unto the Lord. See what the Lord saith, vers. 15, after he had pronounced sentence on the serpent: *I will put enmity between thee and the woman, and between thy seed and her seed; it shall bruise thy head, and thou shalt bruise his heel, Gen. 3.*

Let this word of the Lord, which was from the beginning, stop the mouths of all that oppose womens speaking in the power of the Lord; for he hath put enmity between the woman and the serpent; and if the seed of the woman speak not, the seed of the serpent speaks; for God hath put enmity between the two seeds, and it is manifest, that those that speak against the woman and her seeds speaking, speak out of the enmity of the old serpents seed; and God hath fulfilled his word and his promise, *When the fulness of time was come, he hath sent forth his Son, made of a woman, made under the Law, that we might receive the adoption of sons, Gal. 4.4, 5. . . .*

Thus we see that Jesus owned the love and grace that appeared in women, and did not despise it, and by what is recorded in the Scriptures, he received as much love, kindness, compassion, and tender dealing towards him from women, as he did from any others, both in his life time, and also after they had exercised their cruelty upon him, for *Mary Magdalene, and Mary the Mother of Joseph, beheld where he was laid: And when the Sabbath was past, Mary Magdalene, and Mary the Mother of James, and Salome, had brought sweet spices that they might anoint him.*

¹The Apostle is Paul. [Ed.]

And very early in the morning, the first day of the week, they came unto the sepulchre at the rising of the sun, And they said among themselves, Who shall roll us away the stone from the door of the sepulchre? And when they looked, the stone was rolled away for it was very great, Mark 16.1, 2, 3, 4. Luke 24.1, 2. and they went down into the sepulchre, and as Matthew saith, The angel rolled away the stone, and he said unto the women, Fear not, I know whom ye seek, Jesus which was crucified: he is not here, he is risen, Mat. 28. Now Luke saith thus, That there stood two men by them in shining apparel, and as they were perplexed and afraid, the men said unto them, he is not here; remember how he said unto you when he was in Galilee, that the *Son of Man* must be delivered into the hands of sinful men, and be crucified, and the third day rise again, and they remembered his words, and returned from the sepulchre, and told all these things to the eleven,² and to all the rest.

It was *Mary Magdalene*, and *Joanna*, and *Mary the Mother of James*, and the other women that were with them, which told these things to the Apostles, *And their words seemed unto them as idle tales, and they believed them not.* Mark this, ye despisers of the weakness of women, and look upon your selves to be so wise: but Christ Jesus doth not so, for he makes use of the weak: for when he met the women after he was risen, he said unto them, *All hail*, and they came and held him by the feet, and worshipped him, then said Jesus unto them, *Be not afraid, go tell my brethren that they go into Galilee, and there they shall see me*, Mat. 28.10; Mark 16.9. And *John* saith, when *Mary* was weeping at the sepulchre, that Jesus said unto her, *Woman, why weepest thou? what seekest thou? And when she supposed him to be the Gardener, Jesus saith unto her, Mary; she turned herself, and saith unto him, Rabboni, which is to say master; Jesus saith unto her, Touch me not, for I am not yet ascended to my Father, but go to my brethren, and say unto them I ascend unto my Father, and to my God, and your God*, John 20.16, 17.

²The eleven are the men Jesus chose to be his disciples, without Judas who left them after he betrayed Jesus to the Romans. [Ed.]

Mark this, you that despise and oppose the message of the Lord God that he sends by women, what had become of the redemption of the whole body of mankind, if they had not believed the message that the Lord Jesus sent by these women, of and concerning his resurrection? And if these women had not thus, out of their tenderness and bowels of love, who had received mercy, and grace, and forgiveness of sins, and virtue, and healing from him, which many men also had received the like, if their hearts had not been so united, and knit unto him in love, that they could not depart as the men did, but sat watching, and waiting, and weeping about the sepulchre until the time of his resurrection, and so were ready to carry his message, as is manifested, else how should his Disciples have known, who were not there?

Oh! blessed and glorified be the glorious Lord, for this may all the whole body of mankind say, though the wisdom of man, that never knew God, is always ready to except against the weak; but the weakness of God is stronger than men, and the foolishness of God is wiser than men.

And in *Act. 18* you may read how *Aquila* and *Priscilla* took unto them *Apollos*, and expounded unto him the way of God more perfectly; who was an eloquent man, and mighty in the Scriptures: yet we do not read that he despised what *Priscilla* said, because she was a woman, as many now do.

And now to the Apostles words, which is the ground of the great objection against womens speaking. And first, *1 Cor. 14.* let the reader seriously read that chapter, and see the end and drift of the Apostle in speaking these words: for the Apostle is there exhorting the Corinthians unto charity, and to desire spiritual gifts, and not to speak in an unknown tongue, and not to be children in understanding, but to be children in malice, but in understanding to be men; and that the spirits of the prophets should be subject to the prophets, for God is not the author of confusion, but of peace: And then he saith, *Let your women keep silence in the Church*, etc.

Where it doth plainly appear that the women, as well as others, that were among them, were in confusion, for he saith, *How is it brethren? when ye come together, every one of you hath a psalm*,

hath a doctrine, hath a tongue, hath a revelation, hath an interpretation? let all things be done to edifying. Here was no edifying, but all was in confusion speaking together. Therefore he saith, *If any man speak in an unknown tongue, let it be by two, or at most by three, and that by course, and let one interpret, but if there be no interpreter, let him keep silence in the Church.* Here the man is commanded to keep silence as well as the woman, when they are in confusion and out of order.

But the Apostle saith further, *They are commanded to be in obedience,* as also saith the Law; and *if they will learn any thing, let them ask their husbands at home, for it is a shame for a woman to speak in the Church.*

Here the Apostle clearly manifests his intent; for he speaks of women that were under the Law,³ and in that transgression as *Eve* was, and such as were to learn, and not to speak publicly, but they must first ask their husbands at home, and it was a shame for such to speak in the Church. And it appears clearly, that such women were speaking among the *Corinthians*, by the Apostles exhorting them from malice and strife, and confusion, and he preacheth the Law unto them, and he saith, in the Law it is written, *With men of other tongues, and other lips, will I speak unto this people,* vers. 2. 21.

And what is all this to women speaking? that have the everlasting Gospel to preach, and upon whom the promise of the Lord is fulfilled, and his Spirit poured upon them according to his word, *Acts* 2. 16, 17, 18. And if the Apostle would have stopped such as had the Spirit of the Lord poured upon them, why did he say just before, *If any thing be revealed to another that sitteth by, let the first hold his peace? and you may all prophesy one by one.* Here he did not say that such women should not prophesy as had the revelation and Spirit of God poured upon them, but their women that were under the Law, and in the transgression, and were in strife, confusion and malice

³Women under the Law were those who, because they had not yet accepted Jesus and the new dispensation he offered, were still subject to Jewish law, or what Christians would call the law of the Old Testament. Fell regards such women as morally inferior to converts and deserving of sterner controls. [Ed.]

in their speaking, for if he had stopped womens praying or prophesying, why doth he say: *Every man praying or prophesying having his head covered, dishonoureth his head; but every woman that prayeth or prophesieth with her head uncovered, dishonoureth her head? Judge in yourselves, Is it comely that a woman pray or prophesy uncovered? For the woman is not without the man, neither is the man without the woman, in the Lord,* 1 Cor. 11.3, 4, 13.

Also that other Scripture, in 1 Tim. 2., where he is exhorting that prayer and supplication be made everywhere, lifting up holy hands without wrath and doubting; he saith in the like manner also, that *Women must adorn themselves in modest apparel, with shamefastness and sobriety, not with broidered hair, or gold, or pearl, or costly array.* He saith, *Let women learn in silence with all subjection, but I suffer not a woman to teach, nor to usurp authority over the man, but to be in silence; for Adam was first formed, then Eve; and Adam was not deceived, but the woman being deceived was in the transgression.*

Here the Apostle speaks particularly to a woman in relation to her husband, to be in subjection to him, and not to teach, nor usurp authority over him, and therefore he mentions *Adam* and *Eve*. But let it be strained to the utmost, as the opposers of women's speaking would have it, that is, that they should not preach nor speak in the Church, of which there is nothing here. Yet the Apostle is speaking to such as he is teaching to wear their apparel, what to wear, and what not to wear; such as were not come to wear modest apparel, and such as were not come to shamefastness and sobriety, but he was exhorting them from broidered hair, gold, and pearls, and costly array; and such are not to usurp authority over the man, but to learn in silence with all subjection, as it becometh women professing godliness with good works.

And what is all this to such as have the power and spirit of the Lord Jesus poured upon them, and have the message of the Lord Jesus given unto them? must not they speak the Word of the Lord because of these undecent and unreverent women that the Apostle speaks of, and to, in these two Scriptures? And how are the men of this generation blinded, that bring these Scriptures,

and pervert the Apostles words, and corrupt his intent in speaking of them? and by these Scriptures, endeavour to stop the message and Word of the Lord God in women, by condemning and despising of them. If the Apostle would have had womens speaking stopped, and did not allow of them, why did he entreat his true yokefellow to help those women who laboured with him in the Gospel? *Phil.* 4.3. And why did the Apostles join together in prayer and supplication with the women, and *Mary the Mother of Jesus*, and with his brethren, *Acts* 1.14, if they had not allowed, and had union and fellowship with the Spirit of God, wherever it was revealed in women as well as others? But all this opposing and gain-saying of womens speaking, hath risen out of the bottomless pit, and spirit of darkness that hath spoken for these many hundred years together in this night of apostacy, since the revelations have ceased and been hid, and so that spirit hath limited and bound all up within its bond and compass, and so would suffer none to speak, but such as that spirit of darkness, approved of, man or woman. . . .

And so here hath been the misery of these last Ages past, in the time of the Reign of the Beast, that John saw when he stood upon the Sand of the Sea, rising out of the Sea, and out of the Earth, having seven Heads and ten Horns, *Rev.* 13. In this great city of *Babylon*, which is the woman that hath sitteth so long upon the Scarlet-coloured Beast, full of names of Blasphemy, having seven Heads and ten Horns; and this Woman hath been arrayed and decked with gold, and pearls, and precious stones; and she hath had a golden Cup in her hand, full of Abominations, and hath made all Nations drunk with the Cup of her Fornication; and all the world hath wondred after the Beast, and hath worshipped the dragon that gave power to the Beast; and this woman hath been drunk with the blood of the Saints, and with the blood of the Martyrs of Jesus; and this hath been the woman that hath been speaking and usurping authority for many hundred years together: And let the times and ages past testify how many have been murdered and slain, in Ages and Generations past; every Religion and Profession (as it hath been called) killing and

murdering one another, that would not join one with another: And thus the Spirit of Truth, and the Power of the Lord Jesus Christ hath been quite lost among them that have done this; and this mother of Harlots hath sitten as a Queen, and said, *She should see no sorrow*, but though her days have been long, even many hundred of years, for there was power, given unto the Beast, to continue forty and two months, and to make war with the Saints, and to overcome them; and all that have dwelt upon the earth have worshipped him, whose names are not written in the Book of the Life of the Lamb, slain from the foundation of the world.

But blessed be the Lord, his time is over, which was above twelve hundred Years, and the darkness is past, and the night of Apostacy draws to an end, and the true light now shines, the morning-Light the bright morning Star, the Root and Off-spring of *David*, he is risen, he is risen, glory to the highest for evermore; and the joy of the morning is come, and the Bride, the Lambs *Wife*, is making her self ready, as a Bride that is adorning for her Husband, and to her is granted that she shall be arrayed in fine linnen, clean and white, and the fine linnen is the Righteousness of the Saints: The *Holy Jerusalem* is descending out of Heaven from God, having the Glory of God, and her light is like a Jasper stone, clear as Christal.

And this is that free Woman that all the Children of the Promise are born of; not the Children of the bond-woman, which is *Hagar*, which genders to strife and to bondage, and which answers to *Jerusalem* which is in bondage with her Children; but this is *the Jerusalem which is free, which is the Mother of us all*; And to this bond-woman and her children, that are born after the flesh, have persecuted them that are born after the Spirit, even untill now; but now the bond-woman and her Seed is to be cast out, that hath kept so long in bondage and in slavery, and under limits; this bond-woman and her brood is to be cast out, and our Holy City, the *New Jerusalem*, is coming down from heaven, and her Light will shine throughout the whole earth, even as a *Jasper stone, clear as Christal*, which brings freedom and liberty, and perfect Redemption to her whole Seed; and this is that woman and

Image of the Eternal God, that God hath owned, and doth own, and will own for evermore.

More might be added to this purpose, both out of the Old Testament and New, where it is evident that God made no difference, but gave his good spirit, as it pleased him both to Man and Woman, as *Deborah, Huldah, and Sarah*. The Lord calls by his prophet *Isaiah: Hearken, unto me, ye that follow after Righteousness, ye that seek the Lord, look unto the Rock from whence ye were hewn, and to the hole of the Pit from whence ye were digged, look unto Abraham your Father, and to Sarah that bare you, for the Lord will comfort Sion, etc.* Isa. 5. And *Anna the Prophetess, who was a widow of fourscore and four years of age, which departed not from the Temple, but served God with fastings and prayers night and day, she coming in at that instant* (when old *Simeon* took the Child Jesus in his arms, and) *she gave thanks unto the Lord, and spake of him to all them who looked for Redemption in Jerusalem, Luke 2.36, 37. 38.* And *Philip* the Evangelist, into whose house the Apostle *Paul* entered, who was one of the Seven, *Acts 6.3.* He had four Daughters which were Virgins, that did prophesy, *Acts 21.*

And so let this serve to stop that opposing Spirit that would limit the Power and Spirit of the Lord Jesus, whose Spirit is poured upon all flesh, both Sons and Daughters, now in his Resurrection; and since that the Lord God in the Creation, when he made man in his own Image, he made them *male and female*; and since that Christ Jesus, as the Apostle saith, was made of a Woman, and the power of the Highest overshadowed her, and the holy Ghost came upon her, and the holy thing that was born of her, was called *the Son of God*, and when he was upon the Earth, he manifested his *love, and his will, and his mind*, both to the Woman of *Samaria, and Martha, and Mary* her Sister, and several others, as hath been shewed; and after his Resurrection also manifested himself unto them first of all, even before he ascended unto his Father. *Now when Jesus was risen, the first day of the week, he appeared first unto Mary Magdalene, Mark 16.9.* And thus the Lord Jesus hath manifested himself and his Power, without respect of Persons; and so let all mouths be stopt that would limit him, whose

Power and Spirit is infinite, that is pouring it upon all flesh.

And thus much in answer to these *two* Scriptures, which have been such a stumbling block, that the ministers of Darkness have made such a mountain of; But the Lord is removing all this, and taking it out of the way.

A further Addition in Answer to the Objection concerning Women keeping silent in the Church; For it is not permitted for them to speak, but to be under obedience; as also saith the Law, If they will learn any thing, let them ask their Husbands at home, for it is a shame for a Woman to speak in the Church: *Now this as Paul writeth in 1 Cor. 14.34. is one with that of 1 Tim. 2.11. Let Women learn in silence, with all subjection.*

To which I say, If you tie this to all outward Women, then there were many Women that were Widows which had no Husbands to learn of, and many were Virgins which had no Husbands; and *Philip* had four Daughters that were Prophets; such would be despised, which the Apostle did not forbid: And if it were to all Women, that no Woman might speak, then *Paul* would have contradicted himself; but they were such Women that the Apostle mentions in *Timothy*, That *grew wanton, and were busie-bodies, and tattlers, and kicked against Christ:* For Christ in the Male and in the Female is one, and he is the Husband, and his Wife is the Church, and God hath said, that his *Daughters* should Prophesie as well as his *Sons*: And where he hath poured forth his Spirit upon them, they must prophesie, though blind Priests say to the contrary, and will not permit holy Women to speak.

And whereas it is said, *I permit not a Woman to speak, as saith the Law:* but where Women are led by the Spirit of God, they are not under the Law, for Christ in the Male and in the Female is one; and where he is made manifest in Male and Female, he may speak, for *he is the end of the Law for Righteousness to all them that believe.* So here you ought to make a distinction what sort of Women are forbidden to speak, such as were under the Law, who were not come to Christ, nor to the Spirit of Prophesie: For *Hulda, Miriam, and Hanna*, were Prophets, who were not forbidden in the time of the Law, for they all prophesied in the

time of the Law: as you may read, in 2 Kings 22. what *Hulda* said unto the Priest, and to the Ambassadors that were sent to her from the King, *Go, saith she, and tell the Man that sent you to me, Thus saith the Lord God of Israel, Behold, I will bring evil upon this place, and on the Inhabitants thereof, even all the words of the Book which the King of Judah hath read, because they have forsaken me, and have burnt Incense to other Gods, to anger me with all the works of their hands: Therefore my wrath shall be kindled against this place, and shall not be quenched. But to the King of Judah that sent you to me to ask counsel of the Lord, so shall you say to him, Thus saith the Lord God of Israel, because thy heart did melt, and thou humblest thyself before the Lord, when thou heardest what I spake against this place, and against the Inhabitants of the same, how they should be destroyed; Behold I will receive thee to thy Father, and thou shalt be put into thy Grave in peace, and thine eyes shall not see all the evil which I will bring upon this place.* Now let us see if any of you blind Priests can speak after this manner, and see if it be not a better Sermon than any of you can make, who are against Womens speaking? And *Isaiah*, that went to the Prophetess, did not forbid her Speaking or Prophesying, *Isa. 8.* And was it not prophesied in *Joel 2.* that *Hand-maids* should Prophesie? And are not *Hand-maids* Women? Consider this, ye that are against Womens Speaking, how in the *Acts* the Spirit of the Lord was poured forth upon Daughters as well as Sons. In the time of the Gospel, when *Mary* came to salute *Elizabeth* in the Hill Country in Judea, and when *Elizabeth* heard the salutation of *Mary*, the Babe leaped in her Womb, and she was filled with the Holy Spirit; and *Elizabeth* spake with a loud voice, *Blessed art thou amongst Women, blessed is the fruit of thy Womb; whence is this to me, that the Mother of my Lord should come to me for lo, as soon as thy Salutation came to my ear, the Babe leaped in my Womb for joy, for blessed is she that believes, for there shall be a performance of those things which were told her from the Lord.* And this was *Elizabeths* Sermon concerning Christ, which at this day stands upon Record: And then *Mary* said, *My soul doth magnifie the Lord, and my Spirit rejoiceth in God my saviour,*

for he hath regarded the low estate of his Hand-maid: for behold, from henceforth all Generations shall call me blessed; for he that is mighty, hath done to me great things, and holy is his Name; and his Mercy is on them that fear him, from Generation to Generation; he hath shewed strength with his Arms; he hath scattered the proud in the imaginations of their own hearts; he hath put down the mighty from their Seats, and exalted them of low degree; he hath filled the hungry with good things, and the rich he hath sent empty away: He hath holpen his servant Israel, in remembrance of his mercy, as he spake to his Father, to Abraham, and to his Seed forever. Are you not here beholding to the Woman for her Sermon, to use her words to put into your Common Prayer?⁴ and yet you forbid Womens Speaking. Now here you may see how these two women prophesied of Christ, and Preached better than all the blind Priests did in that Age, and better then this Age also, who are beholding to women to make use of their words. And see in the Book of *Ruth*, how the women blessed her in the Gate of the City, of whose stock came Christ. *The Lord make the woman that is come into thy House like Rachel and Leah, which built the house of Israel; and that thou mayest do worthily in Ephrata, and be famous in Bethlehem; let thy house be like the house of Pharez, whom Tamar bare unto Judah, of the Seed which the Lord shall give thee of this young woman. And blessed be the Lord, which hath not left thee this day without a Kinsman, and his Name shall be continued in Israel.* And also see in the first Chapter of *Samuel*, how *Hannah* prayed and spake in the Temple of the Lord, *Oh Lord of Hosts, if thou wilt look on the trouble of thy Hand-maid, and remember me, and not forget thy Hand-maid.* And read in the second Chapter of *Samuel*, How she rejoyced in God, and said, *My heart rejoyceth in the Lord; My Horn is exalted in the Lord and my mouth is enlarged over my enemies, because I rejoyce in thy Salvation; there is none holy as the Lord, yea, there is none besides thee; and there is no God like our God: Speak no more*

⁴Common Prayer: that is, the Anglican Book of Common Prayer, read aloud by the priest during the worship service, in which these words of *Mary's* are quoted. [Ed.]

presumptuously, let not arrogancy come out of your mouth, for the Lord is a God of knowledge, and by him enterprises are established; the Bow, and the mighty Men are broken, and the weak hath girded to themselves strength; they that were full, are hired forth for bread, and the hungry are no more hired; so that the barren hath born seven and she that had many Children, is feeble; the Lord killeth, and maketh alive; bringeth down to the Grave, and raiseth up: the Lord maketh poor, and maketh rich, bringeth low and exalteth, he raiseth up the poor out of the dust, and lifteth up the Beggars from the dunghil to set them among Princes, to make them inherit the seat of Glory; for the Pillars of the earth are the Lords, and he hath set the world upon them; he will keep the feet of his Saints, and the wicked shall keep silence in darkness, for in his own might shall no man be strong; the Lords Adversaries shall be destroyed, and out of Heaven shall be thunder upon them; the Lord shall judge the ends of the World, and shall give power to his King; and exalt the Horn of his Anointed. Thus you may see what a woman hath said, when old Ely the Priest thought she had been drunk, and see if any of you blind Priests that speak against Womens Speaking, can Preach after this manner? who cannot make such a Sermon as this woman did, and yet will make a trade of this Woman and other womens words. And did not the Queen of Sheba speak, that came to Solomon, and received the Law of God, and preached it in her own Kingdom, and blessed the Lord God that loved Solomon, and set him on the throne of Israel, because the Lord loved Israel for ever; and made the King to do Equity and Righteousness? And this was the language of the Queen of Sheba. And see what glorious expressions Queen Hester used to comfort the People of God, which was the Church of God; as you may read in the book of Hester which caused joy and gladness of heart among the Jews, who prayed and worshipped the Lord in all places, who jeopardd her life contrary to the Kings command, went and spoke to the King, in the wisdom and fear of the Lord, by which means she saved the lives of the People of God; and righteous Mordecai did not forbid her speaking, but said, *If she held her peace, her and her Fathers house should be destroyed; and*

herein you blind Priests are contrary to Righteous Mordecai.

Likewise you may read how *Judith* spoke, and what noble acts she did, and how she spoke to the Elders of *Israel*, and said, *Dear Brethren, seeing ye are the honorable and elders of the People of God, call to remembrance how our Fathers in time past were tempted, that they might be proved if they would worship God aright; they ought also to remember how our Father Abraham, being tryed through manifold tribulations, was found a friend of God, so was Isaac, Jacob, and Moses, and all they pleased God, and were stedfast in Faith through manifold troubles.* And read also her prayer in the Book of *Judith*, and how the Elders commended her, and said, *All that thou speakest is true, and no man can reprove thy words, pray therefore for us, for thou art an holy Woman, and fearest God.* So these elders of *Israel* did not forbid her speaking, as you blind Priests do; yet you will make a Trade of Womens words to get money by, and take Texts, and Preach Sermons upon Womens words; and still cry out, Women must not speak, Women must be silent; so you are far from the minds of the Elders of *Israel*, who praised God for a Womans speaking. But the *Jezebel*, and the Woman, the false Church, the great Whore, and tatling women, and busie-bodies, which are forbidden to Preach, which have a long time spoke and tatted, which are forbidden to speak by the True Church, which Christ is the Head of; such Women as were in transgression under the Law, which are called a Woman in the *Revelations*. And see further how the wife Woman cried to *Joab* over the Wall, and saved the city of *Abel*, as you may read, *2 Sam. 20.* how in her wisdom she spoke to *Joab*, saying, *I am one of them that are peaceable and faithful in Israel, and thou goest about to destroy a City and Mother in Israel; Why wilt thou destroy the Inheritance of the Lord? Then went the woman to the people in her wisdom, and smote off the head of Sheba, that rose up against David, the Lords Anointed: Then Joab blew the Trumpet, and all the People departed in peace.* And this deliverance was by the means of a Womans Speaking; but tatlers, and busie-bodies, are forbidden to preach by the True Woman, whom Christ is the Husband to the

Woman as well as the Man, all being comprehended to be the Church; and so in this True Church, Sons and Daughters do Prophesie, Women labour in the Gospel; but the Apostle permits not tatlers, busie-bodies, and such as usurp authority over the Man would not have Christ Reign, nor speak neither in the Male nor Female; Such the Law permits not to speak, such must learn of their Husbands: But what Husbands have Widows to learn of, but Christ? And was not Christ the Husband of *Philips* four Daughters? And may not they that learn of their Husbands speak then? But *Jezebel*, and Tatlers, and the Whore that denies Revelation and Prophesie, are not permitted, which will not learn of Christ; and they that be out of the Spirit and Power of Christ, that the Prophets were in, who are in the Transgression, are ignorant of the Scriptures; and such are against Womens Speaking, and Mens too, who Preach that which they have received of the Lord God; but that which they have preached, and do preach, will come over all your heads, yea, over the head of the false Church, the Pope; for the Pope is the Head of the False Church, and the False Church is the Popes Wife: and so he and they that be of him, and come from him, are against Womens Speaking in the True Church, when both he and the false Church are called *Woman*, in *Rev. 17.* and so are in the Transgression that would usurp authority over the Man Christ Jesus, and his Wife too, and would not have him to Reign; but the Judgment of the great Whore is come. But Christ, who is the Head of the Church, the True Woman which is his Wife, in it do Daughters Prophesie, who are above the Pope and his Wife and a top of them; And here Christ is the Head of the Male and Female, who may speak; and the Church is called *a Royal Priesthood*; so the Woman must offer as well as the Man, *Rev. 22. 17. The Spirit saith, Come, and the Bride saith, Come:* and so is not the Bride the Church? and doth the Church only consist of Men? you that deny Womens speaking, answer: Doth it not consist of Women as well as men? Is not the Bride compared to the whole Church? And doth not the Bride say, *Come?* Doth not the Woman speak then? the Husband Christ Jesus, the *Amen*, and doth not the false Church go about to stop the Brides Mouth? But it is not possible for the Bride-

groom is with his Bride, and he opens her Mouth. Christ Jesus, who goes on Conquering, and to Conquer, who kill and slayes with the Sword, which is the words of his Mouth; the Lamb and the Saints shall have the Victory, the true Speakers of Men and Women over the false Speaker.

POSTSCRIPT

And you dark Priests, that are so mad against Womens Speaking and it's so greivous to you, did not God say to Abraham, Let it not be greivous in thy sight, because of the Lad, and because of thy bond-woman? In all that Sarah hath said to thee, hearken to her voice (Mark here) the Husband must learn of the Woman and Abraham did so, and this was concerning the things of God for he saith in Isaac shall thy seed be called, and so Abraham did obey the voice of Sarah, as you may read in Genesis 21. and so he did not squench the good that was in his wife, for that which he spoke to Abraham was concerning the Church.

And you may read Deborah and Barack, and so how a Woman Preacht and sung Judges 5. what glorious triumphing expressions there was from a Woman, beyond all the Priests Servants, whom Barack did not bid be silent, for she Sung and Praised God, and declared to the Church of Israel, which now the hungry Priests that denyes Womens Speaking makes a trade of her words for a livelihood.

And in Judges 13. There you may see, how the Angel appeared to a Woman, and how the Woman came to her Husband and told him, saying, a man of God came to me, whose countenance was like the Countenance of a Man of God, and said that she should Conceive and bare a Son, and again the Angel of the Lord appeared to the Woman, and she made haste and ran, and shewed her Husband and said unto him, behold, he hath appeared unto me that came unto me the other day, and when the Angel of the Lord was gon, the Womans Husband said, we should surely dye because we had seen God, and then you may read how the woman comforted her Husband again, and said, if the Lord were pleased to kill us he would not have shewed us all these things, nor would this time have told us such things as these, and this was a Woman that taught.

Madeleine de Scudéry

1607–1701

Madeleine de Scudéry was born in Le Havre, France, to an old aristocratic family in reduced financial circumstances. In 1613 her parents died, and she was raised in Rouen by an uncle. She received an education typical of upper-class girls of her day, learning basic literacy, dancing, and drawing. Evidently Madeleine was not satisfied with these basics, for she polished her French and later exhorted women to write fluently and correctly. Since her published works are full of classical allusions, she must also have read classical literature in translation, although she did not learn Latin or Greek.

In 1620 she went to live with her brother Georges (b. 1601), and in 1637 they moved to Paris, where they settled in a fashionable suburb called the Marais. Georges had pursued a military career, like his father, but he was also a writer, and by the time they moved to Paris he was a well-known playwright and man of letters. He introduced his sister to the salon of Catherine de Rambouillet, where she made many influential friends.

Madame de Rambouillet had invented the “salon” as a new venue of social interaction for the aristocracy and wealthy bourgeoisie because she wished to reproduce the refinement of court life in her native Italy. She invited her friends to meet at her home, which was a more private space than the royal court but far from secluded. The purpose of these gatherings was amusement. The participants played practical jokes on each other, proposed excursions to a favorite pastry shop or an outlying estate, engaged in literary disputes, poetry contests, and other word games, and above all, conversed wittily on the affairs of the day, current literature, and topics both morally serious and utterly frivolous. The term *précieuse* was originally coined as a reproach for women who frequented the salons. It was meant to imply that they were overly concerned with verbal niceties, but it was adopted as a literary label for all the “Précieux,” male and female, who enjoyed salon society and who also produced some significant literary works—as did Scudéry.

To enter salon society, one should be able to behave like a salon denizen and be witty, imaginative, urbane, and above all, verbally adept in both writing and speech. One’s French had to be refined, fluent, correct but not hypercorrect, and similarly easy and natural whether written or spoken. One must not monopolize the conversation—indeed, no faux pas was worse than insisting on one’s own point of view to the exclusion of all others’—but also, one must never be at a loss for words. Madeleine de Scudéry won instant acceptance in this milieu.

In 1641 Scudéry published her first novel, *Ibrahim*, under her brother’s name. Until Georges died in 1667, everything Madeleine de Scudéry wrote was published under his name. Scholars agree that she was the principal or sole author of the works now attributed to her, although Georges may have contributed to the descriptions of battle scenes in the novels, and brother and sister did weigh plot options together; once they were arrested for treason when a servant at a country inn overheard them discussing killing the king. They were quickly released when they identified

the king in question as a fictional creation. Initially, Scudéry may have wanted her work to appear under her brother's name in hopes that it would sell better, since he already had an established literary reputation. Once the first novel gained great acclaim, however, and everyone quickly figured out who had written it, his name was no longer necessary. It is likely that she continued the pretense of concealing her authorship, publishing anonymously after Georges' death, because to court publicity by putting one's name on published works would be considered a crude breach of etiquette for a *précieuse*.

Ibrahim, a long, involved tale of military heroism and thwarted love set in an exotic locale, launched Scudéry's extremely successful literary career. In her own time, she was best known for her novels, especially the ten-volume *Artamène, ou Le Grande Cyrus*, published from 1649 to 1653, and *Clélie*, another ten-volume work published from 1654 to 1661, which became the best-selling book of the century in France. These complicated stories were packed with plots and subplots and populated by classically named characters among whom Scudéry's friends found themselves portrayed, to their delight. The novels also contained long conversations on moral subjects, especially on love, some of which Scudéry would excerpt for her later volumes of *Conversations*.

Most of the important writers of her day were Scudéry's admirers, including the playwright Molière, fabulists La Fontaine and La Bruyère, women of letters Madame de Lafayette and Madame de Sévigné, and the philosopher Blaise Pascal. Scudéry's biographer Nicole Aronson denies that she was a butt of Molière's satire on salon life, *Les Précieuses ridicules* (1659).¹ The *précieuse* becomes ridiculous only when her sophisticated performance becomes visible as a performance—that is, appears as affectation, and apparently this was a social crime that Scudéry never committed. Scudéry's novels were immediately translated into German, Italian, and English, and they attracted a large following. The English intellectual Mary Astell (p. 841), writing at the end of the seventeenth century, would recommend Scudéry's works for the curriculum of a woman's college she proposed.

In 1642 Scudéry's influential friend Madame de Rambouillet procured a valuable military appointment for Georges de Scudéry at Marseilles, and the brother and sister moved there, a dismal exile for Madeleine de Scudéry from the Paris salon society she loved. In that same year she published *Les Femmes illustres ou Les Harangues héroïques* (English edition, *The Heroick Harangues of the Illustrious Women*, 1681), again under Georges' name. Such catalogues of famous women were a regular feature of the "querelle des femmes," an ongoing literary argument about the worth of women that Christine de Pizan (p. 540) and others had initiated in the fourteenth century. One of Scudéry's imaginary conversations among women in antiquity depicts the Greek poet Sapho (usually spelled "Sappho") exhorting a younger woman, Erinna, to develop all her intellectual powers and to immortalize herself through her literary works rather than waiting for some man to write poems

¹Nicole Aronson, *Mademoiselle de Scudéry*, trans. Stuart R. Aronson (Boston: G. K. Hall/Twayne, 1978), p. 47.

about her. Scudéry expressed her own ambition here, the more clearly since she was known in salon society as Sapho.

In 1647 the Scudérys, although perennially short of money because of Georges' extravagance, were able to return to Paris. In 1643, while they were in Marseilles, Louis XIV had taken the throne at the age of five. Government was in the hands of his powerful minister, Cardinal Jules Mazarin, and shortly after the Scudérys returned to Paris a group of nobles rebelled against his harsh rule. This uprising, known as the Fronde, continued until 1653. Although the Scudérys did not participate in this rebellion, they remained the loyal friends of the Condé family, who did; Madeleine dedicated *Artamène* to Condé's sister, Madame de Longueville, and later visited the Duc de Condé when he was imprisoned after the revolt failed. Thus compromised, Georges fled to a town near Le Havre in 1654 to escape arrest, but Madeleine stayed in Paris, moved to a new house, and began to hold her own salon gatherings, which were soon famed for displaying the highest art of conversation. She also began to publish *Clélie*, and she reached the height of her fame and influence.

Madeleine de Scudéry never married, and she expressed reservations about marriage in her writing. Apparently she deplored the loss of freedom married women incurred. She found even life with her brother constraining. After his marriage in Le Havre, brother and sister never lived together again, although he proposed it when he and his young wife returned to Paris in 1660. In her writing Madeleine celebrated spiritual love between two committed friends who have no need of a physical relationship, and she found her own soul mate in fellow salon habitué Paul Pellisson. He too had influential friends, among them the royal finance administrator Nicolas Fouquet, from whom he won a pension for Scudéry.

In 1661 Fouquet abruptly fell from royal favor, and he and Pellisson were imprisoned. As she had done during the Fronde, Scudéry remained loyal to politically dangerous friends, visiting Pellisson at the Bastille and using all her influence to get the two men reinstated with the king. She failed on Fouquet's behalf, but Pellisson was finally released in 1666 and became Louis XIV's secretary. Far from punishing Scudéry for her partisanship, Louis awarded her a more generous pension and received her graciously at Versailles when she came to thank him.

Scudéry continued to publish novels and other writings. In 1671 she won the first literary prize offered by the newly formed Académie française, and she was even considered for membership in this elite literary group, an unprecedented honor for a woman. In 1680 she published the two volumes of *Conversations sur divers sujets* (English edition, *Conversations upon Several Subjects*, 1683, excerpted here); by 1692 there would be a total of ten volumes in the *Conversations* series, all published anonymously and dedicated to Louis XIV. Like her later novels, these volumes addressed the reading public's new preference for works much shorter than *Clélie*, while at the same time excerpting some of the conversations from this and other earlier works. The *Conversations* fell into the familiar and popular seventeenth-century genre of moralizing literature and also into an overlapping genre, the conduct book. They provided model conversations for those who wanted to know how to behave in salon society.

Scudéry continued to write and to participate in salon society well into old age, although she began to go deaf in the 1660s. She was eighty-five years old when the last volumes of the *Conversations* were published in 1692. Noted from her earliest years for cheerfulness and patience (especially with her boastful, stubborn, and extravagant brother), she continued to enjoy life, as her letters suggest, up to the end, even though she mourned the death of Pellisson in 1693. Her final illness was brief. When she died in 1701 at the age of ninety-four, her books were still in print and popular, and they remained so for another hundred years. Voltaire praised her poetry; after 1800, readers tended to prefer the *Conversations*.

THE RHETORIC OF THE SALON

The rhetoric of the salon is a development of the courtly rhetoric most famously exemplified in Baldesar Castiglione's *The Book of the Courtier* (1527; p. 661), a Renaissance best-seller that was well known in Scudéry's France. In the Italy of Castiglione's day, sovereignty was beginning to concentrate in the hands of a few powerful rulers, a process that would culminate in reigns such as that of Louis XIV. Castiglione saw that, in this political climate, public political oratory of the sort promoted by Italian humanist education and based on classical models was increasingly constrained. Rather, eloquence had to be employed in the more circumscribed and intimate but still politically charged arena of the ruler's court. Castiglione realized that the courtier needed a different set of rhetorical skills than the classical political agent. Moreover, he saw that noble birth was no longer a prerequisite to political power. Anyone who possessed these newly important verbal abilities could gain influence at court.

As Castiglione characterizes it, courtly rhetoric requires a broad humanist education, which confers the ability to converse wittily and to write poetry and prose clearly and without affectation. The male courtier must be able to make love to his mistress eloquently but discreetly, and must respond to her guidance in elevating their relationship to a spiritual plane. Courtiers of both sexes must be verbally conciliatory, since they usually address small, private audiences, often of their social superiors and often including both sexes. They cannot insist on their point of view but must dissemble and attempt to persuade indirectly. Often, persuasion is so indirect that it involves, first, the use of verbal abilities merely to entertain the ruler so that he or she will be disposed to listen to serious advice later. Above all, the courtiers' facility must be exercised with apparent naturalness, as if requiring little conscious effort—a quality Castiglione calls *sprezzatura*.

The salon was a sort of adjunct to the French court, or the place to which courtly conversation of the sort described by Castiglione migrated under Louis XIV, in whose presence even the most circumspect and complaisant speech might be dangerous. Louis had been shaken by the Fronde, and to prevent further rebellions he deliberately tried to weaken the aristocracy. He made his court the only important place of influence. At court, he occupied the aristocrats with gambling and other dissipations, which weakened them financially, and he imposed on them an increasingly elaborate code of etiquette, breaches of which could result in charges of trea-

son. He also admitted newcomers to their ranks, whether through ennoblement or simply high preferment, whenever these social climbers had the money to pay their way. This practice clearly devalued the exclusivity of the old aristocracy's titles, diluted their class solidarity, and thus strengthened the hand of the king.

Salon society offered a brief respite from the scorching spotlight of the king's regard, since it was more informal and at least slightly removed from the king's presence. At the same time, the salons were themselves governed by a code of behavior. In France, as for Castiglione's courtiers, noble birth was not a requirement for entry into salon society. The only requirement was the ability to adhere to the salon's code of behavior (of course, birth into at least the upper middle classes facilitated the acquisition of the skills necessary to this behavior). Thus, too, the salon provided the newly elevated with a way to integrate themselves into upper-class society. As with Castiglione, performance—the ability to behave as if one belonged—becomes of the utmost importance. Indeed, the competition among performers for position and influence was perhaps more intense in the France of Louis XIV than elsewhere because social life was dominated by the one royal court—if one fell from favor there, one had nowhere else to go (unlike Castiglione, whose own fortunes moved him among Mantua, Urbino, and Rome).

The kind of behavior required in the salon was very similar to that described by Castiglione, and its most important aspect was verbal. Scudéry scoffed at the notion that rules could be given for courtly conversation, but she nevertheless illustrated its regularities in her *Conversations*, as well as spelling out some criteria in “Of Conversation,” “Of Speaking too much, or too little. And how we ought Speak” (both included here), “Of Complaisance,” and “Of Rallery” (raillery).

For Scudéry, conversation must draw generously from each participant—no one should remain silent. Each participant's contribution should be roughly equal, and no one should monopolize the discussion. One should carefully choose one's style and content with an eye to the occasion, the company, and one's own character. Moreover, one must disguise differences of opinion and, above all, power imbalances. Harmony among conflicting viewpoints, not the victory of one of them, should be the ultimate goal (and the topics discussed in Scudéry's conversations are usually left unresolved for that reason). “Complaisance” is a valued virtue because it enables its possessor to remain affable while managing and containing disruptive people—those who are too gloomy or too argumentative, for example. Individuality must be expressed very delicately and indirectly, so as not to challenge the illusion of group unity (thus the characters in Scudéry's conversations are scarcely differentiated as to personality, although they may take different positions on the topic under discussion). One's language should not call attention to oneself by neologisms, vulgarities, or any other oddities. Everything should appear natural, effortless—Castiglione's quality of *sprezzatura*, here represented by the French *esprit*.

Women are not only full participants in Scudéry's conversations, but their verbal behavior differs only slightly from men's (in the oaths they may use, for example). Contrasting with Castiglione, in Scudéry the women talk just as much as the men and often lead discussions and defend positions against all comers, as the assertive Melinta, mistress of the art of verbal teasing, does in “Of Rallery.” Women are

often presented as models of verbal behavior; an example is Valeria, who in “Of Conversation” exemplifies all that is excellent in the spoken art. Women’s accomplishments in literature and the other arts, and in the art of conversation itself, are far more important than marriage and children (of which we hear next to nothing in the *Conversations*—though at one point, talking about one’s children is condemned as wearisome). As in Castiglione, the topic of love enters Scudéry’s conversations, and the women are presumed to be helping their lovers refine themselves and ascend to spiritual affection like that celebrated in the Neoplatonic paean at the end of *The Courtier*, but love speeches take up very little space in Scudéry. Mostly, her interlocutors discuss topics of general interest.

In her earlier *Les Femmes illustres*, Scudéry had cast a glow of classical antiquity over eloquent women. Renaissance scholar Jane Donawerth has argued (in a 1997 essay) that Scudéry deliberately manipulated the classical allusions in order to play upon her contemporaries’ nostalgia for the earlier Renaissance revival of classical learning, implying that if classical models of eloquence were good for men in earlier Renaissance years, they will be good for women now. This effort is facilitated by, and perhaps also inspired by, the salon custom of taking classical sobriquets (as noted earlier, Scudéry’s was “Sapho”), and Scudéry gives the participants in her *Conversations* classical names as well. In the *Conversations*, Donawerth points out, salon conversation, led by women, is a civilizing force because it encourages virtue. Thus it is at least equal in civic utility to traditional rhetoric, or perhaps more useful, since most forms of public speech described by traditional rhetoric are impolitic under an autocratic prince. Donawerth has also held that “compliments and graciousness, as well as intelligence and patriotism, move one toward a position of power” through one’s influence in salon society.² In this way, women’s use of language in the semiprivate space of the salon has very public consequences.

Scudéry thus theorizes a new kind of rhetoric, what might be called private discourse with public implications. Under the political pressure of increasingly autocratic rule in fifteenth-century Italy, this rhetoric had first emerged in the work of Castiglione. Scudéry not only elaborates women’s place in it, but also claims it as a rhetorical field in which women can lead.

Selected Bibliography

There is no modern English version of Scudéry’s *Conversations*. Our text is taken from Ferrand Spence’s 1683 translation, which is available on microfilm. Also on microfilm is James Innes’s 1681 translation of *Les Femmes illustres*. In her good introductory biography, *Mademoiselle de Scudéry* (1978), Nicole Aronson lists no English translations of any of Scudéry’s works after the seventeenth century. Aronson’s book also contains plot summaries of the novels and some account of the critical reception of Scudéry’s work from her own time to the present.

Placing special emphasis on Scudéry’s contributions to rhetorical theory is Jane Donawerth’s essay, “‘As Becomes a Rational Woman to Speak’: Madeleine de Scudéry’s Rhetoric

²Jane Donawerth, “Conversation and the Boundaries of Public Discourse in Rhetorical Theory by Renaissance Women,” *Rhetorica* 16.2 (spring 1998), p. 188.

of Conversation” (in *Listening to their Voices: The Rhetorical Activities of Historical Women*, ed. Molly Meijer Wertheimer, 1997). Donawerth locates Scudéry in the context of other Renaissance women rhetorical theorists in “Conversation and the Boundaries of Public Discourse in Rhetorical Theory by Renaissance Women” (*Rhetorica* 16.2 [spring 1998]: 181–99).

For more on Scudéry and the salon milieu, see Carolyn C. Lougee, *Le Paradis des Femmes: Women, Salons, and Social Stratification in Seventeenth-Century France* (1976), and Elizabeth C. Goldsmith, “Exclusive Conversations”: *The Art of Interaction in Seventeenth-Century France* (1988). On the larger concept of elitist performance, see Domna C. Stanton, *The Aristocrat as Art: A Study of the Honnête Homme and the Dandy in Seventeenth- and Nineteenth-Century French Literature* (1980), which discusses Scudéry; Wayne Rebhorn, *Courtly Performance: Masking and Festivity in Castiglione’s “Book of the Courtier”* (1978); and Frank Whigham, *Ambition and Privilege: The Social Tropes of Elizabethan Courtesy Theory* (1984).

Of Conversation

As Conversation is the bond of all humane Society, the greatest pleasure of well-bred People; and the most ordinary means of introducing into the World, not only Politeness, but also the purest Morals, and the love of Glory and Vertue: Methinks, the Company cannot entertain themselves more profitably, nor more agreeably, said *Cilenia*, than in examining what it is People call Conversation. For when Men only speak strictly according to the exigency of their Affairs, it cannot be so termed. The truth is, said *Amilcar*, a Lawyer pleading a Cause at the Barr; a Merchant negotiating with another; a General of an Army giving Orders; a King speaking of Affairs of State in His Council: all this is not what ought to be stiled Conversation. All those People may discourse well of their Interests, and Affairs: and yet not have that agreeable talent of Conversation, which is the sweetest charm of Life, and perhaps more rare than is believed. For my part I do not doubt of it at all, replied *Cilenia*, but methinks, before it can be well defined, wherein principally consists the Charm and Beauty of Conversation, ’tis requisite that all the persons who compose this company, should remember the tedious Conversations which have most troubled them.

Translated by Ferrand Spence.

You are in the right, said *Cerinta*, for by remarking all that is tiresome, we may the better know what is diverting: and to shew you an example of it, added she, I gave Yesterday a Family-Visit, which made me do such Pennance, that it almost weayed me to death. Do but imagine me in the midst of ten or twelve Women, who spoke of nothing else than of all their little Domestic cares, of the faults of their servants, of the good Qualities or Vices of their Children; and there was one Woman amongst the rest who spent above an hour in relating from syllable to syllable the first tatlings of a Son of hers, but of three years old. You may now judge if I did not spend my time after a lamentable manner. I assure you, replied *Nicano*, that I spent mine little better than your self, since I happened to be engaged against my will among a company of Women you may easily guess at, who spent the whole day only in speaking well or ill of their Cloths, and in lying continually as to the price, they cost them. For some out of vanity, said much more than was right, as I was informed by the least silly of them all; and others, to be thought cunning and skilful, said much less. In-somuch that I spent the whole day in hearing such dull and pitiful impertinencies, that it makes me still something out of humor. As for my part,

said the lovely *Athis*, I happened fifteen days ago to be with some Ladies, who though they have Wit enough, did strangely importune me. For in short, to speak the truth, it was with those Women who are professedly gallant, have but one intrigue, and an intrigue that so possesses them, that they think of nothing else. So that when you are not a Confident of their Amours, and happen into their Company, you are uneasie your self, and render them so likewise. And indeed, so long as I was with those I speak of, I heard them always talking without understanding what they said. For there was one on my right hand, telling another who sate by her, that she knew from very good hands, that such a Spark was broke off with such a Lady, and was re-engaged with such an other. And another on my left, who, speaking passionately to a Lady, a friend of hers, entertain'd her with the silliest insipid things you ever heard. After all, said she, in a fret, the Lady, you know, ought not to boast that she has depriv'd me of a Gallant, since her Conquest consists only in a person I had discarded. But if the fancy takes me to recall him, I will do it so effectually she shall never have him again while she lives. On another side, I heard some giving an account of a Collation they were treated at; affecting to say with as much earnestness, that it was mean and sordid: as if they thought to have diminished the Beauty of the Lady on whom it was bestowed, by saying that her Lover was not magnificent enough. In short, I must confess, that in my life I never had so much impatience as I had that day. For my part, replied *Cilena*, if I had been in your place, I would have found the invention of diverting my self at the expence of those who would have made me done Pennance; but I could not hinder being uneasie three days ago, with a Man and a Woman, whose Conversations are always upon two sorts of things; that is to say, of the entire Genealogies of the Families of *Mytelene*; and all the circumstances of their Estates. For in a word, without it be on certain particular occasions, what divertisement is it to hear for a whole day together, *Xenocrates* was the Son of *Tryphon*, *Clidemus* was the Offspring of *Zenophanes*; *Zenophanes* was the Issue of *Tyrtæus*, and so of the rest? And what divertisement is there likewise to hear that

such a House wherein you have no interest, wherein you never was, and whether you'll never go as long as you live, was built by this Man, bought by that, exchanged by another, and that it is at present in the possession of a Man you never knew? This is not very agreeable, without doubt, replied *Alcæus*, but neither is it so mortifying, as to meet with those People who are engaged in some troublesome business, and can speak of nothing else. And in truth, I found a while ago a Sea-Captain, who pretends *Pittacus* ought to recompence him for a Ship. He held me three hours, not only in relating the reasons he pretended to have for the being re-imbursed; but likewise what might be answered him, and what he could reply. And to make me the better apprehend his losses, he fell to telling me the particulars of what his Ship cost him. For that purpose, he told me the names of those who built it, and specify'd to me all the parts of his Ship, one after the other, without any necessity, for the making me understand it was one of the best and dearest, and he had a great deal of injustice done him. I must allow, said *Amithone*, it is a great persecution to meet with those sort of People, but to tell you the truth, those grave and serious Conversations wherein no mirth is allowed of, have something so pestering and heavy, that I never happen into them without being taken with the Headach; for the discourse is always upon the same note; they never laugh, and all is as precise and formal, as if you were at Church.

I agree with you in what you say, said *Athis*, but I must say, to the shame of our Sex, that the Men have a great advantage over us, as to Conversation; and to prove it, I need only tell the Company, that going to *Lycidices* House, I found her in her Mothers Chamber, where was so great a number of Women, there was hardly room for me, but there was not one Man. I cannot tell you after what manner all those Ladies had their Wits turned that day, though some of them were very ingenious. But I am constrained to avow, that the Conversation was not very diverting: for in short, the discourse was only of nauseous trifles; and I may say, that in my life I never heard so many words, and so little sense. But happening to be near *Lycidice*, I could easily perceive how highly she resented it. I must confess, I observed it with

delight, since it made her say a hundred pleasant things. As she was very much wearied with this tumultuous Conversation, which so much grated upon her humour, there came in a Gentleman a Kinman of hers. And this is remarkable, that though this Man is none of those elevated Wits that are so rare to be found, and that he was but of the order of common well-bred People, the Conversation changed on a sudden, and became more regular, more ingenious, and more agreeable, though there was no other change in the company, than the coming in of a Man, who contributed but very little to the discourse. But in short, without being able to tell you the true reason, they fell to talk of other things; they talked much better; and those very persons who tyred me as well as *Lycidice*, diverted me extreamly. However the Company being gone, I stayed alone with *Lycidice*. She no sooner saw her self at liberty, then making her Melancholly give way to Joy; Well, *Athis*, said she to me, will you still condemn me for preferring the Conversation of Men before that of Women? and are you not constrained to allow, that who should write what fifteen or twenty Women say together, would make the worst Book that ever was. I confess, said I to her, laughing, that if all was written in order that I have heard spoke today, it would be a fantastical discourse. For my part, said she, there are some days that I am so incensed against my Sex that I am grieved to the very heart I am a Woman, principally when I happen into one of those Conversations composed all of Dresses, Moveables, Jewels, and such like things. Not that, said she, I am against their being made a subject of discourse; for in short, I am sometimes well enough dress'd to be glad to have it told I am so: and my Cloths are sometimes fine enough, and well enough made, to take delight in hearing 'em commended; but I would not have the Discourse dwell upon these kind of things, but that they be spoken of galantly, and as by the by, without transports and application; and not as some Women do of my acquaintance, who spend all their life in such like talk, and think of nothing else, and whose thoughts of those things are likewise so full of irresolutions, that I am of opinion, that at the end of their days they will not have determined in their minds, whether Carnation be-

comes them better than Blew, or if Yellow is more advantagious to them than Green. I must confess that *Lycidices* discourse made me laugh; and I found it so much the more pleasant, in that 'tis true, that there is a Lady of my acquaintance, who employs all her Wit only in such things; never talks of any thing else, and makes her greatest glory consist in what surrounds her only; that is to say, in the guilding of her Palace, in the Magnificence of her Furniture, in the beauty of her Cloths, and in the richness of her Jewels.

After having laughed at what *Lycidice* said, I would have defended Women in general; and told her, I was perswaded there are as many Men as Ladies, whose Conversation is disagreeable. There are many of 'em without doubt, replied she, whose company is insupportable; but with this advantage, that we can easier get rid of 'em, and we are not obliged to treat them with so exact a Civility. But *Athis*, this is not the thing in dispute, for what I tell you is, that the most amiable Women in the World, when they are a great number together, do hardly say any thing that is to be valued, and are more tired than if they were alone. But as for such Men as are civil and well bred, 'tis not the same with them, their Conversation is not, without doubt, attended with so much mirth when there are no Ladies, as when there are. But commonly, though it be more serious, yet it is more rational; and in short, they can easier be without us, than we without them. In the mean while this vexes me more than I can tell you. For my part, replied I, methinks I could live without thinking the time tedious, though I should never see any but my Female friends, provided they were all of the same stamp with *Lycidice*. I'll tell you, if you please, replied she, in answer to your civility, I should think the time as little tedious as your self, if all mine were like my dear *Athis*; but it is requisite at least to add, provided I might see them but one, two, or three at the most together; for to see twelve of 'em at a time, I should rather choose to see no body. Yes, pursued she, with the most pleasing disdain imaginable, though there were twelve *Athises* in the World, I would not see them daily all together, unless they were accompanied with two or three Men. For though you never say any thing but what is to the purpose, I am certain if there

were twelve of you, you would lash out into extravagancies; or at least, like the rest, you would talk of such kind of things which signifie nothing, and make the Conversation so tedious, and languishing. In fine, said she, what would you have me say more than that, unless you are a great Hypocrite, you will be constrained to allow, there is I know not what, which I am not capable of expressing, that makes a well-bred Man rejoice and divert a company of Ladies more than the loveliest Woman upon Earth can do? Nay, I'll say more, added she, for I maintain that when there are but two Women together, if they are not in friendship with one another, they will divert themselves less, than if each of 'em talk'd with a Man of Sense, though they had never seen him before. Judge you now if I have not reason to murmur against my Sex in general.

Those Conversations are without doubt very vexatious, replied *Amilcar*, but there are of another stamp which do likewise strangely importune me. For I happened to be one day at *Syracuse*, with five or six Women, and two or three Men, who have got a fancy that for the rendring the Conversation agreeable, 'tis requisite to laugh eternally. Insomuch that as long as those persons are together, they do nothing but laugh at all they say to one another, though it be not so over pleasant. And they make so great a noise, that they are no longer able to understand what is spoken in the company: and then they only laugh because the rest laugh, without knowing any other reason. However, they do it as heartily, as if they knew the occasion, and there had been some great jest. But this is strange, their laughing is really sometimes so contagious, one cannot hinder the being taken with their Malady: and happening to be one day with those perpetual laughers, I was so excessively inspired with their laughter, that I laughed almost till I cry'd, without knowing why I did so. But to speak the truth, I was so much ashamed of it within a Quarter of an Hour after, that it turn'd in a moment all my joy into vexation. Though there is a great deal of folly in laughing without reason, said *Valeria*, yet I should not be so uneasie in the company of such sort of People, as to be with those persons, all whose Conversation consists in long, sad, and lamentable stories, extremly tedious. For in a

word, I am acquainted with a Woman who knows all the tragical adventures, whose daily discourse is a Book of Martyrs, and who spends all her time in deploring the misfortunes of life, and in relating lamentable things with a sad and doleful voice, as if she was paid for the bewailing all the Calamities of the World.

Let us not pass over so quickly, said *Plotina*, the fault of too long relations, since in my Opinion, care ought to be taken not to accustome ones self to a perpetual telling of Stories, as I know some who never speak but of what is past; and are always telling what they have seen, without saying any thing of what they see. The truth is, said *Amilcar*, that sometimes those eternal story-tellers, are very much to be dreaded: some of them are confused, others too long, some are so pettish that they will never be interrupted; others, on the contrary, interrupt 'emselves, and at the end, neither know what they have said, nor what they would say. But those who tell things that are indifferent to the Company, and which of themselves are not very agreeable, are the most troublesome of all the tale-telling tribe. I know likewise a Family, replied *Cerinta*, where the Conversation is very importunate; for you never meet with any there, but the little Occurrences of the Neighborhood, which the Courtiers that come thither by chance, have nothing to do with, and which they neither understand, nor are affected withal; and I remember very well, I heard them there talk of a hundred little intrigues, which did not touch me at all, and the noise whereof extended no farther than the Street where they happened; and which besides were so little diverting, that I thought 'em very tedious. It is also a great Mortification, said *Nicanor*, to fall into a great Company where everyone has a secret, principally when you have none, and you have nothing more to do than to listen to the murmur which those make who discourse and whisper in one anothers ears and yet, if they were real secrets, added she, I should have patience; but it very often happens, that those things which are said with so much mystery, are things of no account. I know likewise other People, added *Alceus*, who, in my mind, have something very troublesome, though they have likewise something very agreeable. For in short, they have got such a fancy in

their head to great transactions, that they never speak without it be of giving Battels, or some Siege of a considerable Town, or of some other great Revolution in the World; and you would say to hear them, that the Gods only change the face of the Universe to furnish matter to their Conversation; for unless it be of such great and important Occurrences, they never speak, and cannot bear with any thing of another kind. Inso-much as without knowing at least, to sift Policy to the bottom, and without being well vers'd in History, a person is not to argue with them upon any subject whatsoever. The truth is, replied *Nicanor*, that what you say is not always agreeable. But those other People who without caring for the general affairs of the World, will only listen to particular News, have likewise something very troublesome; for you see them always as busie as if they had a thousand Cares, though they have none of any other nature, than that of knowing all those of others, to go repeat them from House to House, as Publick Spies, who are no more this than that Man's, according as an occasion is offer'd, without having any prospect of advantage from all this bustle. Thus they do not so aim at knowing things for the knowing them, as for the rehearsing them to others.

'Tis also a great imperfection for one, said *Cerinta*, to affect to show all his Wit, and I know a Man who in the very first visits he makes in places where he would render himself acceptable, passes continually from one subject to another, without examining any to the bottom; and I may affirm without exaggeration, that in an hours time I have heard him Speak of all the things that fall under Discourse, since he told not only all that passed at Court, but likewise all that passed in the City. Then he told all that he had done that day; he also related what was said in the places where he had that day been, and asked *Arpasia* what she had done. Afterward he rallied *Melinta* for her silence, and then fell to talk of Musick and Painting. He made several proposals of going abroad, and said so many different things, that a Man in the company taking notice of this great diversity, made others likewise observe it with intention to commend him, for in short, said he, after having caus'd it to be remark'd, there is nothing more tiresome than to

fall into Converse with those sort of People who apply themselves to the first thing that is started, and do so canvas it, that in a whole Afternoon they never change discourse. For as Conversation ought to be free and natural, and that all those who compose the Company have equally right to change it as they think fit, it is an importunate thing to meet with those opinionative People, who leave nothing to be said upon a Subject, and who are ever harping upon it, what care soever is taken to interrupt 'em.

For my part, said *Cilenia*, I am very much concerned to hear you all talk at the rate you do, for in short, if it is not fitting to be always like *Damophilus*, talking of Sciences; if it be tedious to discourse of all the little cares of a Family; if it be not convenient to speak often of Cloths; if it is a want of judgement to discourse only of intrigues of Gallantry; if there is but little diversion in speaking of Genealogies; if it is too mean to discourse of Lands sold or exchange'd; if it be likewise forbidden to speak too much of our own Affairs; if too great a gravity is not diverting in Conversation; if there is folly in laughing too often, and in laughing without reason; if the relations of fatal and extraordinary Accidents are not acceptable, if the little Transactions of the Neighborhood are tedious to those who live not thereabouts; if those Conversations of little things that are whispered in the ear, are importunate; if those People are to blame who only discourse of Great Occurrences; if those eternal seekers of Cabinet Counsels are not in the right, what must we then talk of? and of what must the Conversation be compos'd to render it both rational and pleasing?

It must be of all that we have found fault with, *Valeria* reply'd, agreeably and smiling; in short, though all those People we have mentioned are incommodious, I however boldly maintain, that we cannot Speak but of what they do; and the same subjects may furnish matter agreeably to discourse on, notwithstanding they prove so mortifying in those Peoples management. I easily apprehend what *Valeria* says is true, reply'd *Amilcar*, though it did not seem so to me at first; for I am so perswaded, all sort of things are proper for Conversations, that I do not except any. And indeed, added *Valeria*, it is not in any wise to be imagined, that there are things that are not fit for

Discourse; for 'tis true that there are certain encounters wherein such things might be very properly spoken, that would be ridiculous on any other Occasion. For my part, said *Amithone*, I confess, I could wish there were rules for Conversation, as there are for many other things. The principal rule, replied *Valeria*, is never to say any thing that contradicts the Judgment. But still, added *Nicanor*, I would willingly know more precisely, how you conceive the Conversation ought to be. I conceive, replied she, that to Speak in general, it ought oftner to be of common and gallant things, than of great Transactions; but however, I conceive that nothing is forbidden; that it ought to be free and diversified, according to the times, places and persons with whom we are, and the Secret is of Speaking always nobly of mean things, very plainly of high things; and very gallantly of gallant things, without transport and affectation. Thus the Conversation ought ever to be equally natural and rational; yet I must say, that on some occasions, the Sciences themselves may be brought in with a good grace, and that agreeable follies may likewise have their place, provided they be ingenious, modest and gallant. Insomuch as to Speak with reason, we may for certain affirm, that there is nothing but may be said in Conversation, in case it be manag'd with Wit and Judgement, and the Party considers well where he is, to whom he Speaks, and who he is himself. Notwithstanding though Judgement be absolutely necessary for the never saying any thing but what is to the purpose; yet, the Conversation must appear so free, as to make it seem we don't reject any of our thoughts, and all is said, that comes into the fancy, without any affected design of speaking rather of one thing or another. For there is no thing more ridiculous than those People, who have Subjects on which they talk Wonders; and in such cases, can say nothing but impertinencies. So I would never have it known, what it is we are to say, and yet that we always know well what it is we say. For if this course be taken, Women will not impertinently pretend to be knowing, nor be ignorant to excess, and everyone will say what he ought to say for the rendring the Conversation agreeable. But what is most necessary to make it soft and diverting is, that it must be influenced, with a certain spirit of Politeness, which absolutely ban-

ishes all bitter Raileries, as well as all those, which may in any wise offend Modesty; and in short, 'tis likewise requisite to know the art of turning things so handsomely, that a Gallantry may be told to the severest Woman in the world; that a little Foppery may be related to grave and serious People; that you may speak properly of the Sciences to the ignorant, if you be forced to it, and in sum, that you may change your wit according to the things that are spoken of, and according to the People you discourse with. But besides all I have now said, I would have it likewise governed with a certain spirit of joy, which without having the least taint of those eternal laughers who make so great a noise for so small a matter; do however inspire a disposition into the hearts of all the company, to make every thing contribute to their diversion, and to weary themselves with nothing; and I would have both mean and lofty things said, in case they be spoke well and to the purpose, and yet without being under any constraint of never having anything spoken but what is necessary to be said.

In short, added *Amilcar*, without giving you the trouble of speaking any more upon Conversation, or to make Laws for it, there needs no more than to admire yours, and to do as you do, to merit the admiration of all the earth, for I assure you, that no body will reprehend me though I should affirm, that I never heard you say any thing but what was agreeable, gentile and judicious; and never anybody had to that perfection as you have, the Art of pleasing, charming and diverting. I could wish, reply'd she, blushing, all you say was true, and I might believe you sooner than my self. But to shew you I cannot give you credit, and that I know I am often in the wrong, I declare ingenuously, that I am very sensible I have now said too much, and instead of speaking of all that I conceive of Conversation, I ought to have contented myself with telling all the Company what you have newly said of me.

After this all there present opposing each in his turn the modesty of *Valeria*, We gave her so many Praises, that we had like to have put her out of Humour; and afterwards we made so gallant and chearful a Conversation that it almost lasted until Evening, when this charming Company withdrew to their several Apartments.

Of Speaking too much, or too little. And how we ought Speak

Amilcar seeing four Rivals at a time all round his Mistress, was not without employment. Yet he behaved himself much better than another could have done in so intricate a Juncture, which contributed to the rendring the Conversation much more pleasant than was usual. For one of *Plotina's* Lovers, *Acrisias* by name, was given more to talking, than ever any Man was. *Sicinius* hardly spoke at all. *Telanus* discours'd agreeably upon all Subjects, and *Damon* was much inclin'd to talk of his own Sect. Insomuch that when *Amilcar* found all his Rivals with *Plotina*, there was not one of 'em but whose Conversation was diverting, at the rate *Amilcar* manag'd it: and when they were absent, yet he made 'em furnish Arguments for his Diversion; sometimes by counterfeiting the silence of the one; otherwise, by talking too much as the other; and sometimes by examining pleasantly the new Sect of *Pythagoras*. So that by this course he prejudic'd his Rivals, diverted his Mistress, and was never tired himself.

One day amongst others, *Acrisias* spoke so much, and said so many impertinent things, and *Sicinius* spoke so little, that they were both importunate. For as they had been after one another at *Plotina's* House, she complain'd thereof agreeably to *Amilcar*, in a Visit he made to her after they were gone. Let me make you this request said she to him, as soon as he came into her Room; You would promise me two things; the one is, you'll not talk so much, but that I may bring in a word, when I've a mind so to do; and the other, that I may not be obliged to speak all, but that you would sometimes interrupt my discourse. For I have seen two Men to day, one of whom would not let me say a word, and the other did not say four to me. I easily divine, replied *Amilcar*, that *Acrisias* and *Sicinius* have been to see you. But lovely *Plotina* added he, since you disapprove those two sorts of failures, tell me which is the most insupportable, that I may know which I ought most to avoid.

I assure you, replied she, that they have importun'd me both extreemly. For it is very troublesome to see the Conversation expiring every moment. For my part, added she laughing, I had rather have the care of looking to the Sacred Fire of the *Vestalls*, than to have discourse with those People, who furnish nothing to Conversation; whom you must always be telling News to; who are enemies of long Narratives; who hardly ever say any thing but Yes and No; and who, even sometimes to spare themselves the trouble of uttering a Syllable, give a gracious Nod to shew they understand you. In good earnest, pursued *Plotina*, I know nothing more tedious than that kind of profound silence, which two persons fall into every moment, when one of them speaks too little. Silence on any other occasion has something grateful. But in this it is importunate; and there is no noise, however troublesome soever it be, but pleases me more.

Seriously, reply'd *Amilcar*, the noise of those who talk too much is full as grating, as the silence of those who talk but little, is distasteful; and if you would take it into consideration, you would find it at least as incommodious. For in short, is there any greater mortification, than to hear that vast number of false and impertinent things, which all great talkers say? For I boldly presuppose, that those who talk much, tell Romances, and things that are to no purpose. And what is most incommodious is, that they who make long and unnecessary Relations, hinder others from saying things, which the Company would be glad to know. And indeed, added *Amilcar*, *Acrisias*, *Sicinius*, *Telanus* and my self, were yesterday together, upon the Banks of the Tiber; and as *Telanus*, who is inquisitive, asked me precisely, in what place the Founders of Rome, had markd out the first Compass of their City; when I would have made him an answer, and began to speak, in saying *Romulus*—*Acrisias* interrupted me, and seven times together, as the best Scholar in the World, I began again to speak, saying *Romulus*, without being able to finish my answer

Translated by Ferrand Spence.

to *Telanus*, who could not forbear laughing at my patience and perseverance. But at length I was forced to yield to *Acrisias*, and resolve to listen to him, tho he said a hundred impertinencies, and which one might be content never to hear. For besides as I have already said, those who speak too much as subject to tell Lies, or frivolous things, they likewise tell such as are disagreeable. And how is it possible to be otherwise, when they have not Judgement enough either to let the company speak or know, that Society ought to be free; that there ought to be no Tyranny in Conversation; that each one has his share therein, and a right to speak in his turn; and that in short, this can never be, unless by the attention of those who hear; that those who speak well, have a right to speak more than others.

Valeria and *Caesonia* came in a moment after *Amilcar* had said these words, and were followed by *Æmilius*, *Horace* and *Zenocrates*. So that *Plotina* feeling so many persons capable of judging of the Subject of her Conversation with *Amilcar*, told them the Penance she had done, in having had the company of *Acrisias*, who spoke too much, and *Sicinius* who spoke too little; desiring 'em thereupon to give their Opinions upon those two imperfections. For my part, being lazy, said *Valeria*, I fancy I should rather choose to speak too little than too much. You have reason, added *Caesonia*; for the Women are accused in general, of loving to speak too much, I find a Woman, who talks much, is more importunate than a Man. And indeed, when Women speak too much, commonly their Conversation is only a torrent of impertinencies, and superfluous words, that tire out those who have any Wit or Reason. For my part, return'd *Amilcar*, smiling, I am not of your Opinion. For when a great Talkative Woman is young and beautiful, makes no grimaces in her Discourses, but on the contrary, shews her delicate white Teeth, and Cherry Lips; I listen to her with less pain, than to one of those great talking Men, whose audacious and insolent mien is as ungrateful to the eyes, as their Discourse is to the ears, For my share, said *Æmilius*, being no great Enemy to saying nothing, I confess I would not be a great Talker. But in others, I should better bear with a Man, who

was always talking much, than with a Man to whom one must be always saying much.

I assure you, said *Horace*, that tho all the World speak, yet few People know the Art of speaking. You are undoubtedly in the right, reply'd *Æmilius*, and I also maintain, that there is hardly any thing wherein all Men agree, unless it be that health is a blessing. Beauty it self is not without contest. Riches are sometimes look'd upon, as things injurious. The Sciences are placed by some in the rank of things doubtful. And Physick, the object whereof is only Health and Prolongation of Life, is however considered by some People, as a dangerous Art, which does more hurt than good. So certain is that great uncertainty in the minds of Men. Some approve of what others condemn; and there is hardly any thing which is commended by one Man, without being blamed by another. Thus some believe speaking little is a defect; others that speaking a great deal is a perfection; some, that speaking eloquently is saying great words; others, that speaking well, is speaking naturally and exact; some that Choice Words are requisite; others that we are to speak negligently to avoid affectation, without thinking that affected negligence is the worst of all. There are those likewise who are of Opinion, that to speak well we are to speak Bookishly; and there are those who to avoid this defect, which is without doubt, a very great one, speak as grossly as the *Mobile*, without considering that all Excess is equally bad; and that if it is dangerous to speak too well, 'tis likewise so to speak too ill. But in my Opinion, there is one thing in Language blamed by all the World, which is Impropriety and Obscurity; since it is true, that whoever gives attention, is willing to understand what is told him, and that whosoever speaks is obliged to make himself understood. *Æmilius* has unquestionably reason on his side, said *Zenocrates*, when he says, that they whose Discourse is full of far-fetch'd, ill-digested, or ill-apply'd expressions are condemned by all the World. Indeed there are a great many of 'em, reply'd *Plotina*; but what does most amaze me, is, that I know several sorts of Persons, who are guilty of that Crime, some of whom I know also, cannot be said to be absolutely without Wit.

'Tis undoubtedly true, answered *Æmilius*, and

the reason of it is, there are several sorts of Improperities. But can you tell me clearly, said *Plotina*, why People who have some sort of Wit, do not explain 'emselves neatly and without confusion? They are such People, without Question, reply'd *Æmilius*, who sometimes think pretty near, what is proper to be thought; but whose words so embroil their thoughts, that People cannot guess what they would have understood. Others there are, said *Zenocrates*, who only explain themselves ill, because they do not understand 'emselves; thus they seek not only for the words, they would say, but also for the things they would think. 'Tis therefore evident, reply'd *Æmilius*, that I have reason to maintain, there are Improperities of several kinds. And indeed, those People of whom I spoke first, are only obscure in their Discourse, because they did not choose the words well which might express their thoughts: and the second, of whom *Zenocrates* has now spoken, are so, for that their thoughts being confused, there are no expressions which suit with them, nor can make 'em understood. There are several sorts of Men who speak obscure things, of whom some may be amended. And indeed, I know such persons, who to shew they have a quick and ready fancy, don't give them time, with whom they are in Discourse to finish what they have to say. So that undertaking impertinently to divine their meaning, they interrupt those that are speaking: and speaking 'emselves hastily, we may say they answer before any thing has been propos'd to 'em. For, to speak rationally, a person who has not done speaking, has not yet said any thing, that a proper answer can be grounded upon; in regard, very often the last words of a Discourse do confute the beginning. Thus it almost ever happens, that they, who so inconsiderately interrupt others, and would unseasonably search into their meaning, say things without any sence, and make a strange medley of impertinency; tho otherwise they are well enough stock'd with Wit. For my part, said *Valeria*, I know speakers of obscure things, who are only guilty of that Crime, because their minds are diverted elsewhere; and not listning well to what is said to 'em, and yet out of Custom, making answer, they do it for the most part very improperly. Some persons moreover are guilty of impro-

prieties, said *Horace*, out of a desire to be thought witty and knowing, imagining to gain that Reputation, they must never speak intelligibly. For my part, said *Amilcar*, I know there are Men and women, who are sometimes heard to say nonsensical things, only because they would be the first to make use of those words that have newly got some vogue which Chance introduces, and the caprice of the World gives reception to, and which time and use do sometimes authorize. For these People not knowing their true signification, place 'em improperly, and very often say the contrary to what they mean. There are likewise others, said *Æmilius*, who know not what they say. For that being resolv'd to speak boldly of all, tho they know nothing, they venture with a very mean Wit, to speak of certain things, which can hardly ever be well discours'd on, unless by those who have study'd 'em. And yet there is much more shame in pretending to what we are not capable of, than to be judiciously silent, and in owning we know nothing of the things that are spoke of.

For Heavens sake, said then *Plotina*, let us leave those impertinent talkers, unworthy of busying the Heads of so many persons who speak intelligibly; and let us only speak I beseech you, of those who talk too much or too little. Now I must confess, it is my Opinion, that the latter do so tire 'emselves in tiring others, that I should rather choose to speak too much, than too little. Since at least importuning my friends, I should divert my self. Tho I do not think, reply'd *Æmilius*, one can be of a contrary Opinion to yours without being in the wrong: Yet I must once more say, that I should rather love to speak too little than too much; and yet sometimes should better love the Conversation of a great talker, than that of a Man who hardly speaks at all. And truly it may frequently happen that a Man who speaks but little has good sence; but it can hardly ever happen that a Man who speaks too much has Judgment. You are in the right, reply'd *Amilcar*, But does it not also often happen, that they who hardly speak at all have a great deal of Wit; and it pretty often happens too, that those who speak too much, are very well stock'd. Now for my share, I am perswaded, that Wit is like fire, and that it must absolutely shew it self after some

manner or other, when there is any of it. Yet Great Men have there been, reply'd *Horace*, who did not love to speak. You say true, return'd *Æmilius*. But they made their Wit appear by their Writings, or their Actions, tho they did not shew it by their words. For I am really perswaded, as well as *Amilcar*, Wit cannot be absolutely concealed, and must necessarily shew it self. Yet we may find great Princes, great Philosophers, great Poets, great Painters, and excellent Artificers who speak little. But their Actions or their Works will speak for 'em, and will demonstrate their silence is not an effect of Stupidity. 'Tis not so with those People whose Wit is only in Words, and never employ 'emselves but in speaking: Since I am sure their actions commonly say nothing to their advantage. But, reply'd *Zenocrates*, all People of Judgment are not such great friends to silence. I do not say, answered *Æmilius*, that all who speak a great deal have no Judgment: For I should do injustice to too many ingenious persons; but only that they who speak too much cannot have any. Take my word, reply'd *Plotina*, that between speaking a great deal, and speaking too much, there is often little difference to be made. Liberality and Prodigality are in some sort very near Neighbors, answered *Æmilius*, yet 'tis very well distinguished, that the one is a Vice, and the other a Vertue. Thus we may easily distinguish him, who speaks a great deal and well, from him who talks too much, and talks ill, or at least improperly. But resum'd *Valeria*, are there not some, who speak too much and yet speak well? There are such undoubtedly, answered *Amilcar*; and I know a *Greek* in *Sicily*, who spoke with all the *Attique* purity, and yet was very troublesome, in speaking more than he ought. For to define a Man who speaks too much, 'tis principally by the small number of things, and the great number of words he says, that he is to be known. 'Tis thro the little necessity there is of his speaking perpetually. 'Tis by his eagerness to tell his Opinion, on all occasions, interrupting all People, draining a Subject he speaks of, speaking always, without taking notice sometimes, whether the Company hearken to him, and of not being able to hold his peace, though he be with persons of greater Quality, and more capacity than himself. Not but that I believe, those,

who speak a great deal, are sometimes expos'd tho they speak well, to be importunate to People, who love speaking as well as 'emselves. But as that does not always happen, we must not, for the conveniency of a small number of Persons, condemn People, who speak a great deal and well, and whose Conversation affords a thousand pleasures; because they never say any thing but what is necessary or agreeable.

And indeed, when a Man loves to have all the discourse to himself, because that Nature has gifted him, with an easiness of expression, a copious wit, a quick Fancy, that his Memory is fill'd with a thousand choice and rational things, that his Judgment is Master of his Fancy; and that his Conversation has the true Air of a Courtier; he may unquestionably speak a great deal without speaking too much; and I am sure, if this Man be so as I describe him, he will know how to be silent as often as he thinks convenient; will suffer all those to speak who are desirous so to do; and will not do like a great talker I met with at my Arrival at *Syracuse*, to whom I would have begun to relate a great danger I had run at Sea by a Tempest that arose, and whereof he had desired me to tell him the particulars. For I had hardly began to tell him that the Sea grew rough all of a sudden, than taking me up; This puts me in mind, said he since that in a Voyage once at Sea, I was under the like circumstances. And do you imagine, added he, without remembering what he had requested of me, that after having imbarqued at *Tarentum*, in a very good Ship, whereof the Pilot belongs to *Cumae*, and which was laden with several Merchandizes, because *Tarentum* is a rich and powerful City, where there is a great Commerce of all sorts of things: the Wind changing all on a sudden, the Ship was constrained to stay fifteen days longer in the Haven of *Tarentum*, where there happened to me a good pleasant Adventure. For you must know when I went on Board, I had taken my leave of a very pretty Woman, whom I had Courted for some time, and who in consideration of me, had banished from her House a Lover she had before she received my Vows. But she thought I was gone the Night before, so that when I Landed the next day, and went to her House to let her know I should have still the pleasure of seeing her for some days; I

found her laughing very heartily with my old Rival, tho she took not her leave of me without tears in her eyes. Insomuch as falling into a fury, I quarrelled both with my Rival and my Mistress. My anger cured me of my Passion; and at my coming from that Visit I made another, wherein I fell in Love with a very pretty young Lady, with whom I ingag'd in a Gallantry, and for whom I had so much love, that I let the Ship go, wherein I was embarqued with an intention to depart. But I said to him, interrupting him in my turn, when you interrupted me, I thought it was to represent to me some Tempest, which resembled that which you would have had me given you the description of; and yet, tho you have been embarqued, I see you again on Land engaged in making Love. Have patience said he to me, we are not yet come to that. And indeed, I had great need of it. For thro that prodigious desire he had of speaking always, and of suffering no body to speak, he related to me all that had happened to him most remarkable in his new Amour; he shewed me his Mistresses Letters; he recited to me Songs, and made a Voyage without a Tempest, before he proceeded to tell me of that, wherein he had really like to have been cast away. So this Man, who had had a design to know, how I had like to have been cast away, knew nothing of it, and told me a thousand things that did not at all concern me. Yet he spoke well, and supposed it had been at that time proper to have acquainted me with all he did. One might have said that the Man spoke with an admirable deal of Wit. But as all he said to me was nothing then to the purpose, and I had yet but once or twice told the danger I had run; and as it is pretty natural for all People to love relating a Tempest they have newly escaped from: I suffered more than you can well imagine: and his Eloquence did so turmoile me, that if I had not taken the course of ridiculing him in secret, while he was speaking, his Discourse would have mortified me extreamly.

You have told this story so pleasantly, resum'd *Plotina* laughing, that I should have been sorry, there had never been Persons who had talked too much. And what I find good in it, added she, railing, is, that in counterfeiting a Man that speaks a great deal you do not constrain

yourself so much as another. True as it is, reply'd *Amilcar*, with a smile, that sometimes I am inclinable enough to talk. But to prove to all the Company, that I know how to be silent, when I have a mind; I need only tell 'em, that I have lov'd you above Eight days without making you an Amorous Declaration, tho I had every moment a desire to't. Pray, said *Plotina*, let us not so soon change Discourse; nor amuse our selves in speaking impertinencies, which are as unnecessary to the Company, as your *Greek's* Recital of his Adventures was to you. For as I am no hater of speaking too much, and it is one of the things which is most commonly done in the World; I should not be sorry to learn, how 'tis necessary to speak, for to speak well.

First of all, said *Amilcar*, smiling, a Person must be well stor'd with Wit, have a pretty good Memory, and a great deal of Judgment. Then he must speak the Language of the well-bred People of the Country he is in; and equally avoid that of the Common People and, that of the silly Wits; and that which certain Persons have, who holding a little of the Court, a little of the Mad Vulgar, something of the Past Age, something of the Present, and a great deal of the City, is the most fantastic of all. But still, said *Plotina*, I do not yet find this to be sufficient. For you say well, how we are not to speak; but you do not say precisely, how we are to speak well. I assure you, reply'd *Horace*, there needs no more than to speak as you do, to speak exactly and agreeably. And indeed, added *Æmilius*, the charming *Plotina* speaks as becomes a rational Woman to speak, for the speaking agreeably; for all her expressions are Noble and Natural at the same time; she studys not for what she is to say; there is no constraint in her words; her Discourse is clear and easie; there is a gentile turn in her ways of speaking; no affectation in the sound of her Voice; a great deal of freedom in her actions; and a wonderful coherence betwixt her eyes and her words, which contribute highly to the rendring Speech the more agreeable. But how can all you say be in me, reply'd *Plotina*, who hardly ever think of what I speak? If you thought of it more attentively, reply'd *Zenocrates*, you could not speak so agreeably as you do. For they, who think so much of what they are to say, never say any thing of any value.

But, interrupted *Caesonia*, still would I fain know, what ought to be the difference, there must necessarily be between a Man that speaks well, and a Woman that speaks well. For tho I know for a certainty, that there ought to be a distinction, I know not accurately wherein it consists. They make use of the same words; they speak sometimes of the same things; and they have likewise pretty often thoughts in the same Livery. Yet, as I have already said, a civil Woman must not always speak like a civil Man and there are certain expressions, which the one may properly make use of, yet would be very unbecoming in the other. And indeed, said *Plotina*, there are some things that are altogether fanciful in the Mouth of a Woman, which are not surprising in that of a Man. As for example, if I should Swear by the Sacred Fire, or by *Jupiter*, I should startle those I spoke to. If I should undertake to judge decisively of any difficult Question, I should pass for ridiculous. If I only affirmed what I say with too boyst'rous and confident a tone, People would doubt, if I deserv'd the name of a Maid. If I spoke of War, like a Military Tribune, I should be laugh'd at by all my Friends. However, 'tis necessary to speak well; and 'tis likewise necessary to be cautious of falling into another defect, which is that of speaking with a certain affected simplicity, which favours of a Child, and is very unbecoming. Neither must we speak inconsiderately, and at random; much less listen to our own words, as certain Women do; who really listen to the sound of all the words they utter; as they would do to that of a Harp, they would put in tune; and who with an affected tone of Gravity, speak often very insignificant things in very florid words.

What the amiable *Plotina* says, reply'd *Amilcar*, is admirably well said. But to speak of a defect equally agreeing to Men and Women, is, that we must carefully keep from a certain Popular Accent, which renders the finest things disagreeable. For I'll maintain it is without comparison better, I have a little *African* Accent, in speaking the *Roman* Language, than if I had a fantastical Accent, which is particular to the vilest Artificers. And indeed, I hold there is no place in the World where there is not a difference betwixt the Accent of well-bred Persons, and that of the

Common People; and I must add, that a Stranger is not blameable for keeping that of his own Country; and a Man or Woman of Quality do ill, if they speak like their Slaves. And for my part, who am very nice in all things, I am sensibly toucht with the Sound of the Voice, a soft and pure Accent, and I know not what that's noble which I find in the Pronunciation of certain persons of my Acquaintance, and principally in that of the Charming *Plotina*.

But pray you, said then *Caesonia*, tell me what those can do who do not speak like *Plotina*, for the acquiring of what she has that's good, and losing of what they have that's ill. Frequent the Company of well-bred People, reply'd *Æmilius*, and see few others. For after all, to Books it does not belong to teach speaking; and those who content 'emselves with reading, to be fit for Conversation, are strangely mistaken, and know not what reading is good for. 'Tis without doubt necessary to adorn the Mind, regulate Manners, and inform the Judgment. It may also serve to teach a Language; but for the sweetness of Language, Conversation alone is capable of affording it. And yet 'tis necessary, it be a Conversation of Gentry and well-bred People, and wherein the Women have the greatest share. Otherwise there would be some thing too elevated, too knowing, too insipid, rude or affected in those, who should regulate their ways of speaking by what they read. For as commonly Books do not speak, as People speak in Conversation, neither must we speak in Conversation like Books.

In good earnest, said *Plotina*, I am amazed, that all the World don't learn to speak well, since, methinks, there is nothing more easie to be done, than to be always with well-bred People. But as for all others, 'tis not the like, when People have a mind to learn 'em. On the other side, 'tis sometimes troublesome enough to entertain them, who teach singing, painting or dancing. But since to speak well, there needs no more than the frequenting the Company of Gentile People, and Persons who speak agreeably; I make a Vow to learn all my life to speak, and never to see any others willingly. 'Tis rather for others to court your Company, reply'd *Zenocrates*, than for you to seek for that of others. You say right, said *Amilcar*; but there is another sort of thing which

the lovely *Plotina* has need to learn, which is to listen a little more favourably to what I sometimes say to her. As for that, reply'd she, that is but too soon learnt. But there is another, which I would willingly have those learn, who know it not; which is to think of what is said to 'em, and not fall unseasonably a dreaming in Company. As for a short diversion of thoughts, added she, I pardon it. But as to the succession of continual Dreamings, which certain People have, that are never, where they are seen, and that are not indeed any where, I think 'tis best to correct 'em-selves. And when we have so many things to consider, which are more worth than what we hear spoken, we ought to stay in our Closets, and keep our selves company; since without question, 'tis an incivility not to hearken to what is said where we are, and to slight all the rest of the Company we are engaged in. For my part, I am perswaded, that nothing but the murmur of a River, and the noise of a Fountain, we can

civilly listen to in thinking. Notwithstanding all you can, reply'd *Amilcar*, the liberty of thinking is a sweet thing, and if you would take notice of it, there are every where certain Houses, that are found much more agreeable than others, for this only, that those who are Masters of 'em, don't constrain any Body there. And indeed, one may there be pensive, speak, laugh, sing, and Discourse with whom he has a mind to, may go in and out without saying a word; and enjoy there a freedom which has something so sweet that they are prefer'd before many others. Be it as it will, said *Plotina*, I stick to what *Æmilius* has said. For without learning so many things, it would be much more commodious for me to converse only with well-bred persons. And really, I am resolved to see no other if possible. You did well, to add those last words, reply'd *Amilcar*, since considering the current of the words, 'tis pretty difficult to see only such People as merit to be so termed.

Sor Juana Inés de la Cruz

1648 or 1651–1695

Sor Juana Inés de la Cruz was born Juana Ramirez y Asbaje in Nepantla, Mexico (then called New Spain), a country town near Mexico City. Although local records indicate that she was baptized in 1648, she later gave her birth date as 1651. Her parents, who were *criollos*, that is, people of Spanish descent born in Mexico, were not married, and after two more children were born, the father left the family. Juana spent her early childhood on her maternal grandfather's large ranch in Nepantla, which her mother, though illiterate, helped to manage. Her grandfather was a well-educated man with a large library, and after Juana learned to read in a local dame school, she devoured his books. She learned Latin, too, at an early age, and began writing poetry as a young teenager.

In 1661, Juana was sent to live with relatives in Mexico City, where her position as an illegitimate girl without a dowry was precarious. Her personal charm and beauty, however, as well as her precocious learning, attracted the attention of the Viceroy the Marquis of Mancera and his wife, and she entered their court as a lady-in-waiting in 1664. The viceroy was the head of the colonial government of Mexico. He represented the Spanish king and thus had great political influence in Spain. To attract his and his wife's attention, as Juana did, was to acquire very powerful patrons. So impressed by her was the viceroy that in 1668 he organized a public demonstration of her learning in which she successfully responded to questions by several learned men.

Juana also attracted the attention of the viceroy's confessor, the powerful Jesuit priest Antonio Núñez de Miranda. He interested himself in the problem of what Juana was to do with her life, a pressing issue now that the beautiful young woman was in her late teens. A suitable marriage would have been difficult to arrange for an illegitimate child with no dowry, and in any case, Juana showed no inclination to marry. She was devoted to her studies and her poetry. But there was no place in colonial Mexican society for an unmarried woman to engage in such work, especially a woman without a personal fortune. Núñez encouraged Juana to enter religious life. In the convent, he promised her, she would be able to continue her studies. Although fraught with misgivings, since she did not feel any vocation to become a nun, Juana took the veil at the convent of San Jeronimo in 1669. Father Núñez found a patron to provide the substantial donation required for entry into this convent, which was established for upper-class *criollas*.

Life as a Hieronymite nun at first appeared congenial to Juana's literary and scholarly interests. The order was not ascetic, and each nun had a small suite of rooms and personal servants to attend her; Juana entered the convent with a mulatta slave woman who had come with her from her grandfather's estate. Though cloistered, she could receive visitors. She was able to collect books and musical and scientific instruments, and she amassed a library that was eventually the largest in New Spain. Sor Juana produced a large body of poems on religious, political, and romantic themes, many of them commissioned by her viceregal patrons. She also wrote

plays, some of them domestic comedies and others on religious topics. Although Father Núñez had promised Sor Juana the freedom to write and study in the convent, he soon became dismayed by the scope of her work and the notice it attracted, and increasingly he urged her to stop writing and to spend more time on the duties of religious life.

In 1680 the Marquis de la Laguna assumed the position of viceroy, and he and his wife, the Marquise de la Laguna and Countess de Paredes, quickly became Sor Juana's patrons as well, visiting her frequently at the convent. Perhaps feeling protected by their patronage, around 1681 Sor Juana dismissed Father Núñez as her confessor (a right possessed by every nun) to escape his increasingly strident censures against her writing. The Countess de Paredes became an especially close friend of Sor Juana, and when she and her husband returned to Spain, she arranged for the publication of a collection of Sor Juana's poetry in 1689. The volume was widely acclaimed in Spain and throughout Spain's colonial possessions.

In Mexico, however, this fame only intensified criticism of her behavior by her former confessor and his ally, the powerful archbishop of Mexico, Francisco Aguiar y Seijas, a virulent misogynist. Sor Juana was condemned for departing from what they deemed to be the proper role of a woman, especially a nun. The bishop of Puebla, Manuel Fernandez de Santa Cruz, who had been a good friend to Sor Juana, could not divert this stream of criticism. Sor Juana's position was rendered additionally perilous by the fact that the new viceroy, though friendly to her, exercised much less influence in Mexico than had his predecessors. Natural disasters and civic unrest plagued the colony, and in these circumstances, which seemed to betoken the wrath of God, the archbishop's influence grew.

Then, in 1690, the bishop of Puebla asked Sor Juana to write him a letter detailing her theological criticisms of a famous sermon by the Jesuit Antonio Vieira, which the bishop had apparently heard her discuss at the convent. Without Sor Juana's consent, he published this letter under the title *Carta atenagórica*, or *Letter Worthy of Athena*. Identifying its author, he prefaced the work with a letter of his own, published under the feminine pen name (such as priests often adopted when writing advice to nuns) "Sor Filotea de la Cruz." The letter, while praising Sor Juana's brilliance, cautioned her against secular study and writing of any kind, and against further pursuit of the masculine field of theology.

The publication of the *Letter Worthy of Athena* caused the gathering storm of criticism to break with fury. Although the Countess de Paredes arranged for it to be published in Spain accompanied by testimonials from several clergymen (including two Jesuits), and although this publication brought renewed praise for Sor Juana in Spain and other Spanish-speaking colonies, in Mexico the attacks were unrelenting and nearly unanimous. Faced with this firestorm, in 1691 Sor Juana sent to the bishop of Puebla the text excerpted here, *La Respuesta de la poetisa a la muy illustre Sor Filotea de la Cruz*, or *The Poet's Answer to the Most Illustrious Sister Filotea de la Cruz*. It is a defense of her own life as a writer and scholar, and an impassioned plea for all women's rights to intellectual development. The bishop did not publish it nor, so far as is known, respond to it in any way.

Sor Juana attempted to keep writing. The second volume of her collected works

was published in Spain in 1692; a third volume, including *La Respuesta*, would appear in 1700. But soon she apparently felt that she had to negotiate with her persecutors in Mexico. She was now isolated there, and in his biography of her, Mexican poet Octavio Paz speculates that perhaps the repeated threats of damnation had finally made her fear for her soul. At any rate, late in 1692 Sor Juana gave her library to the archbishop, to be sold for charity, and in 1693 she recalled Father Núñez as her confessor. He required a rigid regimen of penance, and at his insistence she signed a confession renouncing her past life (although never, explicitly, her studies). Shortly thereafter, in 1695, she died during an epidemic.

Sor Juana's literary reputation was not diminished by her humbled last years. She is now regarded as the most important poet of colonial Mexico and the most important woman writer of colonial Spanish America. Moreover, literary scholar Stephanie Merrim locates Sor Juana as a central influence in early modern women's struggle for greater rights. Merrim argues that Sor Juana's writing typifies proto-feminist themes found in the writing of other seventeenth-century European women working to enlarge women's sphere.

SUMMARY OF *LA RESPUESTA*

Excerpted here is that part of *La Respuesta* that has the most to say about women's intellect, learning, and language use. A précis of the entire text follows.

Sor Juana begins *La Respuesta* with lavish expressions of humility and gratitude to "Sor Filotea." Even though she is inadequate to the task, she says, she must speak even if only to name her silence—which she compares to the silence of a mystic rapt by a holy vision. She promises to obey Sor Filotea's direction to apply herself more diligently to sacred studies, noting that she has avoided them out of fear of giving offense to the Inquisition.

Sor Juana asserts that she has written and studied because she was compelled by her nature to do so. She supports this assertion with a review of her life, detailing her efforts from a young age to become educated, which include a girlhood scheme to attend the University of Mexico dressed as a man. Although she admits that she entered the convent primarily to find peace and quiet for her studies, she argues that all secular subjects are necessary to a better knowledge of God.

By way of attesting to the strength of her compulsion to study, Sor Juana emphasizes the obstacles she has overcome. These include her own incapacity, the interruptions of religious life, the distractions of fame, and attacks motivated by jealousy—here comparing herself to Christ persecuted by the envious Pharisees. She notes how she has continued to seek knowledge under the most adverse circumstances, as when, denied books by a particularly assiduous abbess, she carried on her scientific studies by careful observations while gardening and cooking.

Here begins our excerpt, with a catalogue of learned women, both classical and Christian. Sor Juana argues that learned women are particularly useful as instructors to other women and that this activity is clearly permitted if one interprets Saint Paul correctly in historical context. After our excerpt ends, Sor Juana mentions two

learned nuns of her own day who memorized and translated the works of men; Sor Juana regards them as having wasted their talents.

Sor Juana next launches into a defense of her poetry. Here, again, she explains that she has been compelled by her nature to write, verse coming naturally to her from a very early age. Moreover, she argues, poetry cannot be intrinsically evil, for there is much valuable sacred poetry. Poetry should be condemned only if it is aesthetically or morally flawed—but if it is not, why may it not be written by women as well as by men? Faults in Sor Juana's own poetry, she avers, arise from the modesty of her abilities coupled with the haste in which she had to produce many compositions for aristocratic patrons. No doubt haste also marred her critique of Vieira, which she did not intend to be published.

Sor Juana concludes by promising to follow Sor Filotea's advice to restrict her writing and studying. She forgives her detractors and thanks them for helping her to maintain her humility. She encloses with this letter a few copies of two of her religious publications, all the other copies having been already requested by the nuns and her secular friends. She promises to submit any further writings to Filotea's judgment and takes leave of "her" in terms that hint at Sor Filotea's true identity as a male ecclesiastical authority.

Selected Bibliography

Electa Arenal and Amanda Powell have provided an excellent modern edition, *The Answer/La Respuesta, Including a Selection of Poems* (1994). Spanish and English texts are presented on facing pages, with extensive notes on Sor Juana's literary, religious, and political contexts, a helpful introductory biography, and a lengthy bibliography.

Octavio Paz's biography, *Sor Juana, or, The Traps of Faith* (1981; trans. Margaret Sayers Peden, 1988) provides a detailed picture of Sor Juana's cultural and historical contexts, as well as a poet's analysis of her literary work.

In *Early Modern Women's Writing and Sor Juana Inés de la Cruz* (1999), Stephanie Merrim locates Sor Juana as a central figure in a European cultural context in which seventeenth-century women worked against new Renaissance restrictions imposed on them by adapting the vocabulary of the querelle des femmes, begun by Christine de Pizan (p. 540); Merrim discusses French, Spanish, and English writers, including Margaret Fell (p. 748) and Mary Astell (p. 841). Other critical studies in English include two essays by Nina Scott that focus on the passage excerpted here, "'La gran turba de las que merecieron nombres': Sor Juana's Foremothers in *La Respuesta a Sor Filotea*" (in *Coded Encounters: Race, Gender, and Ethnicity in Colonial Latin America*, ed. Francisco Javier Cevallos-Candau, Jeffrey A. Cole, Nina M. Scott, and Nicomedes Suárez-Araúz, 1994), which identifies the women whom Sor Juana cites as her intellectual foremothers and analyzes her selective use of their biographies to support her case; and "Sor Juana de la Cruz: 'Let Your Women Keep Silence in the Churches'" (*Women's Studies International Forum* 8 [1985]: 511–19), which similarly analyzes Sor Juana's uses of Saint Paul and Saint Jerome. For a contemporary collection of essays that discuss Sor Juana's life and her work in various genres, see *Feminist Perspectives on Sor Juana Inés de la Cruz*, ed. Stephanie Merrim (1991).

From *The Poet's Answer to the Most Illustrious Sister Filotea de la Cruz*

If studies, my Lady, be merits (for indeed I see them extolled as such in men), in me they are no such thing: I study because I must. If they be a failing, I believe for the same reason that the fault is none of mine. Yet withal, I live always so wary of myself that neither in this nor in anything else do I trust my own judgment. And so I entrust the decision to your supreme skill and straightway submit to whatever sentence you may pass, posing no objection or reluctance, for this has been no more than a simple account of my inclination to letters.

I confess also that, while in truth this inclination has been such that, as I said before, I had no need of exemplars, nevertheless the many books that I have read have not failed to help me, both in sacred as well as secular letters. For there I see a Deborah issuing laws, military as well as political, and governing the people among whom there were so many learned men. I see the exceedingly knowledgeable Queen of Sheba, so learned she dares to test the wisdom of the wisest of all wise men with riddles, without being rebuked for it; indeed, on this very account she is to become judge of the unbelievers. I see so many and such significant women: some adorned with the gift of prophecy, like an Abigail; others, of persuasion, like Esther; others, of piety, like Rahab; others, of perseverance, like Anna [Hannah] the mother of Samuel; and others, infinitely more, with other kinds of qualities and virtues.

If I consider the Gentiles, the first I meet are the Sibyls, chosen by God to prophesy the essential mysteries of our Faith in such learned and elegant verses that they stupefy the imagination. I see a woman such as Minerva, daughter of great Jupiter and mistress of all the wisdom of Athens, adored as goddess of the sciences. I see one Polla Argentaria, who helped Lucan, her husband, to write the *Battle of Pharsalia*. I see the daughter of the divine Tiresias, more learned still than her

father. I see, too, such a woman as Zenobia, queen of the Palmyrians, as wise as she was courageous. Again, I see an Arete, daughter of Aristippus, most learned. A Nicostrata, inventor of Latin letters and most erudite in the Greek. An Aspasia Miletia, who taught philosophy and rhetoric and was the teacher of the philosopher Pericles. An Hypatia, who taught astrology and lectured for many years in Alexandria. A Leontium, who won over the philosopher Theophrastus and proved him wrong. A Julia, a Corinna, a Cornelia; and, in sum, the vast throng of women who merited titles and earned renown: now as Greeks, again as Muses, and yet again as Pythonesses. For what were they all but learned women, who were considered, celebrated, and indeed venerated as such in Antiquity? Without mentioning still others, of whom the books are full; for I see the Egyptian Catherine, lecturing and refuting all the learning of the most learned men of Egypt. I see a Gertrude read, write, and teach. And seeking no more examples far from home, I see my own most holy mother Paula, learned in the Hebrew, Greek, and Latin tongues and most expert in the interpretation of the Scriptures. What wonder then can it be that, though her chronicler was no less than the unequaled Jerome, the Saint found himself scarcely worthy of the task, for with that lively gravity and energetic effectiveness with which only he can express himself, he says: "If all the parts of my body were tongues, they would not suffice to proclaim the learning and virtues of Paula." Blessilla, a widow, earned the same praises, as did the luminous virgin Eustochium, both of them daughters of the Saint herself [Paula]; and indeed Eustochium was such that for her knowledge she was hailed as a World Prodigy. Fabiola, also a Roman, was another most learned in Holy Scripture. Proba Falconia, a Roman woman, wrote an elegant book of centos, joining together verses from Virgil, on the mysteries of our holy Faith. Our Queen Isabella, wife of Alfonso X, is known to have written on astrology—without mentioning

Translated by Electa Arenal and Amanda Powell.

others, whom I omit so as not merely to copy what others have said (which is a vice I have always detested): Well then, in our own day there thrive the great Christina Alexandra, Queen of Sweden, as learned as she is brave and generous; and too those most excellent ladies, the Duchess of Aveyro and the Countess of Villaumbrosa.

The venerable Dr. Arce (worthy professor of Scripture, known for his virtue and learning), in his *For the Scholar of the Bible*, raises this question: “*Is it permissible for women to apply themselves to the study, and indeed the interpretation, of the Holy Bible?*” And in opposition he presents the verdicts passed by many saints, particularly the words of [Paul] the Apostle: “*Let women keep silence in the churches: for it is not permitted them to speak,*” etc. Arce then presents differing verdicts, including this passage addressed to Titus, again spoken by the Apostle: “*The aged women, in like manner, in holy attire [. . .] teaching well*”; and he gives other interpretations from the Fathers of the Church. Arce at last resolves, in his prudent way, that women are not allowed to lecture publicly in the universities or to preach from the pulpits, but that studying, writing, and teaching privately is not only permitted but most beneficial and useful to them. Clearly, of course, he does not mean by this that all women should do so, but only those whom God may have seen fit to endow with special virtue and prudence, and who are very mature and erudite and possess the necessary talents and requirements for such a sacred occupation. And so just is this distinction that not only women, who are held to be so incompetent, but also men, who simply because they are men think themselves wise, are to be prohibited from the interpretation of the Sacred Word, save when they are most learned, virtuous, of amenable intellect and inclined to the good. For when the reverse is true, I believe, numerous sectarians are produced, and this has given rise to numerous heresies. For there are many who study only to become ignorant, especially those of arrogant, restless, and prideful spirits, fond of innovations in the Law (the very thing that rejects all innovation). And so they are not content until, for the sake of saying what no one before them has said, they speak heresy. Of such men as these the Holy Spirit says: “*For wisdom will not enter into a malicious soul.*” For

them, more harm is worked by knowledge than by ignorance. A wit once observed that he who knows no Latin is not an utter fool, but he who does know it has met the prerequisites. And I might add that he is made a perfect fool (if foolishness can attain perfection) by having studied his bit of philosophy and theology and by knowing something of languages. For with that he can be foolish in several sciences and tongues; a great fool cannot be contained in his mother tongue alone.

To such men, I repeat, study does harm, because it is like putting a sword in the hands of a madman: though the sword be the noblest of instruments for defense, in his hands it becomes his own death and that of many others. This is what the Divine Letters became in the hands of that wicked Pelagius and of the perverse Arius, of that wicked Luther, and all the other heretics, like our own Dr. Cazalla (who was never either our own nor a doctor). Learning harmed them all, though it can be the best nourishment and life for the soul. For just as an infirm stomach, suffering from diminished heat, produces more bitter, putrid, and perverse humors the better the food that it is given, so too these evil persons give rise to worse opinions the more they study. Their understanding is obstructed by the very thing that should nourish it, and the fact is they study a great deal and digest very little, failing to measure their efforts to the narrow vessel of their understanding. In this regard the Apostle has said: “*For I say, by the grace that is given me, to all that are among you, not to be more wise than it behoveth to be wise, but to be wise unto sobriety, and according as God hath divided to every one the measure of faith.*” And in truth the Apostle said this not to women but to men, and the “*Let [them] keep silence*” was meant not only for women, but for all those who are not very competent. If I wish to know as much as or more than Aristotle or St. Augustine, but I lack the ability of a St. Augustine or an Aristotle, then I may study more than both of them together, but I shall not only fail to reach my goal: I shall weaken and stupefy the workings of my feeble understanding with such a disproportionate aim.

Oh, that all men—and I, who am but an ignorant woman, first of all—might take the measure

of our abilities before setting out to study and, what is worse, to write, in our jealous aspiration to equal and even surpass others. How little boldness would we summon, how many errors might we avoid, and how many distorted interpretations now noised abroad should be noised no further! And I place my own before all others, for if I knew all that I ought, I would not so much as write these words. Yet I protest that I do so only to obey you; and with such misgiving that you owe me more for taking up my pen with all this fear than you would owe me were I to present you with the most perfect works. But withal, it is well that this goes to meet with your correction: erase it, tear it up, and chastise me, for I shall value that more than all the vain applause others could give me. *"The just man shall correct me in mercy, and shall reprove me: but let not the oil of the sinner fatten my head."*

And returning to our own Arce, I observe that in support of his views he presents these words of my father St. Jerome (in the letter *To Leta, on the Education of Her Daughter*), where he says: *"[Her] childish tongue must be imbued with the sweet music of the Psalms. [. . .] The very words from which she will get into the way of forming sentences should not be taken at haphazard but be definitely chosen and arranged on purpose. For example, let her have the names of the prophets and the apostles, and the whole list of patriarchs from Adam downwards, as Matthew and Luke give it. She will then be doing two things at the same time, and will remember them afterwards. [. . .] Let her every day repeat to you a portion of the Scriptures as her fixed task."* Very well, if the Saint wished a little girl, scarcely beginning to speak, to be instructed thus, what must he desire for his nuns and spiritual daughters? We see this most clearly in the women already mentioned—Eustochium and Fabiola—and also in Marcella, the latter's sister; in Pacatula, and in other women whom the Saint honors in his epistles, urging them on in this holy exercise. This appears in the letter already cited, where I noted the words *"let her repeat to you . . ."* which serve to reclaim and confirm St. Paul's description, "teaching well." For the *"let her repeat the task to you"* of my great Father

makes clear that the little girl's teacher must be Leta herself, the girl's mother.

Oh, how many abuses would be avoided in our land if the older women were as well instructed as Leta and knew how to teach as is commanded by St. Paul and my father St. Jerome! Instead, for lack of such learning and through the extreme feebleness in which they are determined to maintain our poor women, if any parents then wish to give their daughters more extensive Christian instruction than is usual, necessity and the lack of learned older women oblige them to employ men as instructors to teach reading and writing, numbers and music, and other skills. This leads to considerable harm, which occurs every day in doleful instances of these unsuitable associations. For the immediacy of such contact and the passage of time all too frequently allow what seemed impossible to be accomplished quite easily. For this reason, many parents prefer to let their daughters remain uncivilized and untutored, rather than risk exposing them to such notorious peril as this familiarity with men. Yet all this could be avoided if there were old women of sound education, as St. Paul desires, so that instruction could be passed from the old to the young just as is done with sewing and all the customary skills.

For what impropriety can there be if an older woman, learned in letters and holy conversation and customs, should have in her charge the education of young maids? Better so than to let these young girls go to perdition, either for lack of any Christian teaching or because one tries to impart it through such dangerous means as male teachers. For if there were no greater risk than the simple indecency of seating a completely unknown man at the side of a bashful woman (who blushes if her own father should look her straight in the face), allowing him to address her with household familiarity and to speak to her with intimate authority, even so the modesty demanded in interchange with men and in conversation with them gives sufficient cause to forbid this. Indeed, I do not see how the custom of men as teachers of women can be without its dangers, save only in the strict tribunal of the confessional, or the distant teachings of the pulpit, or the remote wis-

dom of books; but never in the repeated handling that occurs in such immediate and tarnishing contact. And everyone knows this to be true. Nevertheless, it is permitted for no better reason than the lack of learned older women; therefore, it does great harm not to have them. This point should be taken into account by those who, tied to the “*Let women keep silence in the churches,*” curse the idea that women should acquire knowledge and teach, as if it were not the Apostle himself who described them “*teaching well.*” Furthermore, that prohibition applied to the case related by Eusebius: to wit, that in the early Church, women were set to teaching each other Christian doctrine in the temples. The murmur of their voices caused confusion when the apostles were preaching, and that is why they were told to be silent. Just so, we see today that when the preacher is preaching, no one prays aloud.

There can be no doubt that in order to understand many passages, one must know a great deal of the history, customs, rituals, proverbs, and even the habits of speech of the times in which they were written, in order to know what is indicated and what alluded to by certain sayings in divine letters. “*Rend your hearts, and not your garments*”—is that not an allusion to the Hebrews’ ritual of tearing their clothing as a sign of grief, as was done by the evil high priest when he said that Christ had blasphemed? Do not many passages by the Apostle [Paul], on the aid and comfort of widows, refer to the customs of his times? Or that passage concerning the strong woman, “*Her husband is honourable in the gates,*” does it not allude to the custom of placing the judges’ tribunals at the city gates? The saying “*Give land to God,*” does it not stand for making some vow? Was not the term *hiemantes* used for public sinners, because they made their penance out of doors, unlike others who did penance in a doorway? The complaint of Christ to the Pharisee who failed to greet Him with the kiss of peace or the washing of feet, is that not based on the Jewish custom of doing these things? And so it is with infinitely many more passages, not only in divine but in humane letters as well, which are met at every turn, like the phrase “*Honor the purple,*” which meant “Obey

the king”; or the phrase “*to put a hand to him,*” which meant “to emancipate,” referring to the custom and ritual of giving a slave a slap to set him at liberty. Again, Virgil’s “*The heavens thundered,*” alluding to the augury of thunder toward the west, which was thought a good omen. There is Martial’s “*You never ate hare,*” which shows not only the wordplay in *leporem* (which means both “hare” and “jest”), but also a reference to a quality the hare was said to possess. There is the proverb, “*To sail the shores of Malia is to forget all the things of home,*” which refers to the great peril of the promontory of Laconia. The response of the chaste matron to an unwanted suitor, “*No doorframes shall be anointed on my account, nor shall the torches burn,*” to say that she would not marry, alludes to the ritual of anointing the doorways with oil and lighting nuptial torches at weddings; just so, we might say today, “On my account shall no dowry coins be spent, nor shall the priest give his blessing.” And in this vein, much commentary can be made on Virgil and Homer and all the poets and orators. Very well, and in addition to all this, what difficulties do we not find in sacred texts, even in matters of grammar—putting the plural in place of the singular, or moving from second to third person, like the passage in the Song of Songs: “*Let him kiss me with the kiss of his mouth: for thy breasts are better than wine*”? Or putting the adjectives in the genitive case, instead of the accusative, as in “*I will take the chalice of salvation*”? Or again, putting the feminine in place of the masculine; or, on the contrary, calling every sin adultery?

All this requires more study than is supposed by certain men who, as mere grammarians or, at most, armed with four terms from the principles of logic, wish to interpret the Scriptures and cling to the “*Let women keep silence in the churches,*” without knowing how to understand it rightly. So it is with another passage, “*Let the woman learn in silence*”; for this passage is more in favor of than against women, as it says that they *should* learn, and while they are learning, obviously, they must needs keep quiet. And it is also written, “*Hear, O Israel, and be silent,*” where the whole congregation of men and women are addressed,

and all are told to be quiet, for whoever listens and learns has good reason to take heed and keep still. If this be not so, I would like these interpreters and expounders of St. Paul to explain to me how they understand the passage, "*Let women keep silence in the churches.*" For they must understand it either materially, to mean the pulpit and the lecture hall, or formally, to mean the community of all believers, which is to say the Church. If they understand it in the first sense (which is to my way of thinking its true sense, for we can see that indeed it is not permitted by the Church for women to read publicly or to preach), why then do they rebuke those women who study in private? And if they understand it in the second sense and wish to extend the Apostle's prohibition to all instances without exception, so that not even in private may women write or study, then how is it that we see the Church has allowed a Gertrude, a Teresa, a Brigid, the nun of Agreda, and many other women to write? And if they tell me that these women all were saintly, true enough, but that in no way hinders my argument. First, because St. Paul's proposition is absolute and includes all women with no exception made for saints; for saintly, too, in their own day were Martha and Mary, and Marcella, and Mary the mother of Jacob, and Salome, and many other women who took part in the zeal of the early Church, yet Paul makes no exception for them. And in our own time we see that the Church permits writing by women saints and those who are not saints alike; for the nun of Agreda and María de la Antigua are not canonized, yet their writings go from hand to hand. Nor when Sts. Teresa and the others were writing, had they yet been canonized. Therefore, St. Paul's prohibition applied only to public speech from the pulpit; for if the Apostle were to prohibit all writing, then the Church could not permit it. Very well now, I am not so bold as to teach, which would be most unsuitably presumptuous of me; and to write requires more talent than is mine and the greatest deliberation. So says St. Cyprian: "*That which we write requires solemn deliberation.*" All that I have desired has been to study, so as to become less ignorant. For according to St. Augustine,

some things are learned so as to act on them, and others simply for the sake of knowing them: "*We learn certain things in order to know them; others in order to do them.*" Then where is my transgression, if I refrain even from that which is permissible for women—to teach by writing—because I know myself to lack the abundant talent needed for it, following Quintilian's counsel: "*Let each one learn, not so much by the precepts of others, as by following the counsel of his own nature*"?

If my crime lies in the "Letter Worthy of Athena," was that anything more than a simple report of my opinion, with all the indulgences granted me by our Holy Mother Church? For if She, with her most holy authority, does not forbid my writing, why must others forbid it? Is it bold of me to oppose Vieira, yet not so for that Reverend Father to oppose the three holy Fathers of the Church? Is my mind, such as it is, less free than his, though it derives from the same source? Is his opinion to be taken as one of the principles of the Holy Faith made manifest, that we must believe it blindly? Besides which, I have not in the slightest way fallen short of that respect owed such a great man, as his defender has done in this instance, forgetting the observation of Titus Lucius, "*Respect befits the arts.*" Nor did I so much as graze the hem of the blessed Society. Nor did I write for anyone other than the person who suggested it to me; and according to Pliny, "*The situation of one who publishes a thing is different from that of one who speaks it by name.*" For had I thought the letter was to be published, it would not have appeared as unkempt as it was. If it is heretical, as the critic says, why does he not denounce it? Thus he would find revenge and I contentment, for I more greatly value, as I ought, the name of Catholic and obedient daughter of my Holy Mother Church than any praise that might befall me as a scholar. If the letter be crude—as he rightly says it is—then let him laugh at it, though he laugh falsely with what they call rabbit's laughter. I do not say that he should praise me, for just as I was free to disagree with Vieira, any person shall be free to disagree with my judgment.

Part Four

**ENLIGHTENMENT
RHETORIC**

Introduction

The period in European history from the seventeenth through the eighteenth centuries—the period known as the Enlightenment—is marked by revolutions in science, philosophy, and politics. These revolutions altered long-cherished notions about the physical world, knowledge and truth, human nature, and society. Scientists shifted to the experimental method and sought to name the innumerable parts that make up our universe and to discover the common features that linked these parts together. Philosophers reconsidered the source and status of knowledge, paying particular attention to the psychological processes of perception, reflection, and communication in an attempt to determine how it was possible to discover the truths within the physical world that were so important to science’s progress. The philosophers’ search for the universals of human nature led political reformers to argue that if all people had the same perceptions and the same capacity for thought and knowledge, then inequalities in social standing went against nature and reason. Democracy therefore seemed to be the natural form of social organization, which meant that the old order should be torn down and replaced. These vast social and intellectual changes inevitably affected the ways that language, communication, and rhetoric were understood during this crucial period.

RHETORIC IN THE ENLIGHTENMENT: AN OVERVIEW

The scientific and philosophical revolutions of the seventeenth century affected rhetoric in a number of ways. The first effect was indirect, resulting from a change in the conception of logic, a branch of knowledge to which rhetoric was closely allied. The Ramistic doctrines that dominated rhetoric at the beginning of the seventeenth century limited rhetoric to style and delivery, arguing that invention and arrangement were really the concern of logic because logic was the discipline that sought truth (see the introduction to Part Three). But as experimental science and inductive reasoning replaced deductive logic as the standard of inquiry, the

Ramistic distinction became moot. The Ciceronian conception of rhetoric, which included all five classical canons (invention, arrangement, style, memory, and delivery), became once again the foundation of rhetorical study and remained so through the seventeenth and well into the eighteenth century.

Toward the end of the seventeenth century, traditional rhetoric came to be closely associated with the genres of history, poetry, and literary criticism, the so-called *belles lettres*. The belletrists revered the great classical writers and orators and applied the rules of classical rhetoric to literary judgment. Critics of the late seventeenth and early eighteenth centuries held that literature was purposeful, intended to please and instruct the reader. The art of persuasion was thus perfectly consonant with the art of poetry. Moreover, the new theories of psychology and human nature seemed to confirm the idea that reasoning and imagination were the key mental faculties, especially in persuasion. Thus, during the eighteenth century, rhetoric became closely identified with literary criticism, a connection that persisted well into the nineteenth century.

Before the end of the seventeenth century, however, traditional rhetoric came under attack by adherents of the new science, who claimed that rhetoric obscured the truth by encouraging the use of ornamented rather than plain, direct language. Many philosophers called for broad language reforms in an attempt to purify communication, at least for science and philosophy. The call for a plain style, taken up by church leaders and influential writers, made *perspicuity*, or clarity, a watchword in discussions of ideal style during the ensuing centuries.

An even more profound and direct influence on rhetoric at the beginning of the seventeenth century was Francis Bacon's theory of psychology (see Part Three, p. 736), which divides the mind into productive and receptive operations or "faculties" (hence, "faculty psychology"). It was not until the middle of the eighteenth century, however, that a complete psychological or epistemological theory of rhetoric arose, one that focused on appealing to the mental faculties in order to persuade. This approach proved to be powerful and durable, for it linked rhetoric with the most advanced ideas in philosophy and psychology and offered an attractive alternative to classical rhetoric.

The elocution movement, which focused on delivery, began early in the eighteenth century and lasted through the nineteenth. Elocution offered instruction in correct pronunciation in an era obsessed with correctness. Moreover, elocution found support in psychology, for it analyzed the hitherto neglected area of nonverbal appeals to the emotions, an avenue of persuasion newly restored to legitimacy.

In the eighteenth century, then, rhetoric could offer a link to the classical period, an analysis of taste and literary judgment, instruction in correct and effective speaking, and a respectable scientific theory of psychological persuasion.

As this brief overview suggests, the rhetorical theories of the Enlightenment are intimately linked to the intellectual and social developments that shaped the modern world. What follows is a more detailed look at the richness and complexity of rhetoric in this remarkable period.

SEVENTEENTH-CENTURY RHETORIC

Philosophy and Rhetoric in the Seventeenth Century

Bacon's prophetic efforts to reform science and advance learning (see Part Three) begin with a reordering of the canons of knowledge and an investigation of the processes of knowing. Bacon divides the human intellect into the "faculties" of memory, imagination, and reason. To these faculties he adds two others of a slightly different kind, the will and the appetite. Bacon's notion of psychology as a function of different faculties or mental operations was to dominate psychology until well into the nineteenth century. As for rhetoric, Bacon's now-familiar formulation is that rhetoric applies *reason* to the *imagination* to move the *will*. It was all too clear to Bacon that reasoning was not enough to achieve persuasion; to teach people or move them to action, one had to address all the faculties. Thus, though he advocates a plain style and has some harsh words for the rhetoric of tropes and figures, Bacon by no means rejects the art of eloquence.

Bacon's reasonable view counters, in several ways, the Ramistic doctrine that dominated the theory and teaching of rhetoric through the sixteenth and early seventeenth centuries. Bacon dismisses the Ramists' severe division of logic and rhetoric, which put invention and disposition into the former discipline and restricted the latter to style and delivery. Like the neo-Ciceronians, who persistently defended classical rhetoric from Ramistic assault, Bacon restores invention to rhetoric. He draws a distinction, though, between investigation, which is the job of logic, and invention, which is the recovery of pertinent information for argument or teaching. Moreover, Bacon scorns the use of deductive logic (the logic of the Ramists) as a form of inquiry. The syllogism might guard against faulty reasoning, he says, but only inductive thinking can produce new knowledge. In this way, he moves toward a conception of logic that would equate it with reasoning and separate it from communication. The communication of knowledge to all audiences, learned or popular, would then be rhetoric's job—whereas for the Ramists, logic governed dialectical communication (that is, the disputations directed to learned audiences), while rhetoric was for popular discourse only. Bacon hints at the doctrine of investigation versus communication but never makes it explicit. René Descartes, however, would articulate it definitively.

The method of Descartes owes nothing to argument and everything to solitary mental analysis. Even more than Bacon, Descartes rejects the Scholastic logic of disputation. The Cartesian method begins with the self and its thought, taking as true only that which the mind cannot find reason to doubt. Scholarly dispute, says Descartes, turns on the desire to win an argument, not the desire to find the truth. For Descartes, experiment is thus clearly preferable to dispute for scholarly investigation. It follows, too, that logic must be reconstituted as a means of investigation rather than of mere proof. Because syllogism relies on established premises, it can convey knowledge but not produce it; hence Descartes thrusts the syllogism and the commonplaces into the realm of rhetoric and defines the investigative method as a process of building on self-evident truths by careful division, sequential addition,

and the search for causal connection. The commonplaces have no more role in this method than the syllogism does, for they are founded on probability, not indisputable truth. Truth is thus distinguished from mere probability and, of course, from persuasion.

Descartes's ideas were popularized by the *Port-Royal Logic* (1662), which puts them in an orderly pedagogical package. In the *Logic*, authors Antoine Arnauld and Pierre Nicole identify four mental operations: conceiving, judging, reasoning, and ordering. Conceiving means forming ideas and attaching words to them. Judging connects and compares ideas and formulates propositions about them. Reasoning corrects for fallacies and prejudice, using the syllogism as an aid. And ordering organizes ideas for presentation. The Port-Royal scheme clearly distinguishes discovery from presentation. Discovery or analysis is guided by the method of Descartes; it is not to be confused with dialectical disputation or its old-style logic. Presentation appears at the end of the discovery process, where ideas become available for instruction or persuasion. Here, where analysis ends and synthesis begins, it is necessary to recognize that persuasion is a matter not just of correct thinking but of psychology. The Port-Royalists' associate, philosopher Blaise Pascal, argues that the proofs provided by scientific demonstration appeal to the understanding only, and so one must also consider the desires and the will in successful persuasion.

Traditional Rhetoric and the Problem of Style

These new ideas did not revolutionize rhetoric in the seventeenth century, though their influence was considerable. Traditional rhetoric remained strong in schools, courts, parliaments, and pulpits. Ciceronian rhetoricians held to the five canons in opposition to the Ramists, while both Ciceronians and Ramists preserved the syllogism and commonplaces and emphasized the tropes and figures. Ornate style continued to be regarded as beautiful and impressive, and *impressive* was synonymous with *effective*, for the striking phrase would capture the attention of the reader or auditor.

The proper degree of ornateness or plainness of style was a subject of much debate. Bacon was not the first to complain about the excesses of Ciceronian prose. The so-called Senecan style had arisen as an alternative to the Ciceronian and became popular during the seventeenth century. But the Senecan style is "plain" because it avoids stylistic display for its own sake, not because it rejects all verbal ornament and ingenuity. It favors long sentences, less symmetrical than the Ciceronian periods but still carefully structured; it resists Latin borrowings but does not avoid them altogether; and it certainly employs tropes, although it leans toward the less flamboyant of them. Bacon had reservations about this style, too, warning that it often strained after wit and weight that was not earned by the thought expressed.

Pulpit oratory was a frequent target of complaints about stylistic excess. A number of writers decry the state of pulpit oratory, among them François de Salignac de la Mothe Fénelon, archbishop of Cambrai. In his *Dialogues on Eloquence* (written ca. 1679), Fénelon attacks empty, ornamental sermonizing and cites the need for "natural" delivery and gesture, "natural" organization, real knowledge of the subject

matter, and real conviction. These concerns suggest his debt to the emerging epistemology of Descartes and Port-Royal, and his use of the Platonic and Ciceronian dialogue form clearly joins him to the classical tradition, a pattern that we shall see again. Another critic is Bishop John Wilkins, who, in a discourse on preaching (1646), explicitly tries to link preaching with the new philosophy, anticipating the Port-Royalists, who would similarly pair inquiry with teaching as the requisite arts for the successful preacher. “The greatest learning is to be seen in the greatest plainness,” says Wilkins, and he cautions preachers against giving “a starched speech full of a puerile worded Rhetorick.”¹

The Attack on Rhetoric

Some took the opposition of Bacon and Descartes to Ramist views of logic and rhetoric as opposition to rhetoric itself, for plainness was called for and rhetoric seemed to be an art of obfuscation. Rhetoric appeared in some ways to be cut off from both the old logic and the new science. The place of rhetoric in the curriculum of European schools, however, was not threatened. Indeed, it was the new science that was excluded from the schools. The well-established and anti-Cartesian Jesuit schools relied on the classical curriculum, and the newly established Protestant schools, which might have responded to the new science, were simply too poor to hire instructors who could teach it. The *Port-Royal Logic* is largely the result of a short-lived anti-Jesuit experimental school that attempted to create a Cartesian curriculum combining religion, mathematics, science, history, and French. The last item was the most radical. The classics were to be read in French translation, and the students were to learn French composition before Latin. The composition assignments were based on the students’ own experience or their responses to reading. But the small Port-Royal school was soon suppressed. Only private tutors could provide education along Cartesian lines. The aristocratic consumers of such education were interested in Latin education as a gentlemanly acquisition, but some welcomed more practical studies in geography, law, and politics in place of Latin and the classical curriculum. These efforts at reform were very slight ripples on the surface of education. Well into the eighteenth century, until the French Revolution, the educational system in Europe resisted calls to include empirical studies. And rhetorical education continued to focus on style, responding very slowly to the call for reform. The philosophers of the new science sought a plain style for which there seemed to be little sympathy.

The members of the British Royal Society, founded in 1660, envisioned a world without rhetoric, a world where people would speak of things as they really were, without the colorings of style, in plain language as clear as glass—so many words for so many things. Their spokesman, clergyman Thomas Sprat, makes a point of saying this in his *History of the Royal Society* (1667). Sprat first explains that the Society meant to use the experimental method and inductive reasoning to advance

¹John Wilkins, *Ecclesiastes, or, A Discourse Concerning the Gift of Preaching As it falls under the Rules of Art*, 3rd ed. (London, 1651), p. 129; quoted in W. S. Howell, *Eighteenth-Century British Logic and Rhetoric* (Princeton: Princeton University Press, 1971), p. 456.

knowledge, in contradistinction to the outmoded Scholastic philosophy of syllogistic deduction and disputation. The experimenters furthermore resolved, Sprat says, to be wary of their language, for

unless they had been very watchful to keep [it] in due temper, the whole spirit and vigour of their Design, had soon been eaten out, by the luxury and redundance of speech. The ill effects of this superfluity of talking, have already overwhelm'd most other Arts and Professions; insomuch, that when I consider the means of happy living, and the causes of their corruption, I can hardly forbear . . . concluding, that eloquence ought to be banish'd out of all civil Societies, as a thing fatal to Peace and good Manners.²

Sprat forbears because, as Plato (see Part One) and others had pointed out before him, it would not do to leave the power of eloquence only in the hands of the wicked. Rhetoric nonetheless was a source of error. "Who can behold," Sprat writes, "without indignation, how many mists and uncertainties, these specious Tropes and Figures have brought on our Knowledg?" He continues:

For now I am warm'd with this just Anger, I cannot withhold my self, from betraying the shallowness of all these seeming Mysteries upon which, we Writers, and Speakers, look so bigg. And, in few words, I dare say; that of all the Studies of men, nothing may be sooner obtain'd, than this vicious abundance of Phrase, this trick of Metaphors, this volubility of Tongue, which makes so great a noise in the world. But I spend words in vain; for the evil is now so inveterate, that it is hard to know whom to blame, or where to begin to reform. We all value one another so much, upon this beautiful deceit and; labour so long after it, in the years of our education: that we cannot but ever think kinder of it, than it deserves.³

Sprat is certainly correct in pointing to education as the source of rhetorical practices and admiration. What we labor to learn, as Sprat elegantly says, we use and admire, but not all stylists are so elegant as Sprat. As to the problem itself, the Royal Society meant to address it by "a constant Resolution, to reject all the amplifications, digressions, and swellings of style: to return back to the primitive purity, and shortness, when men deliver'd so many things, almost in an equal number of words."⁴

Sprat crosses a modest goal with a mighty one. To prune the excesses of style is one thing; "to return back to the primitive purity" of language, even supposing that there ever was such a thing, is quite another. In 1668, Bishop Wilkins, critic of the ornamental sermon and a founder of the Royal Society, proposed a linguistic reform intended, it would seem, to eradicate rhetoric altogether. Wilkins's *Essay Towards a Real Character and a Philosophic Language* sets forth a new symbol system for linking words with things and dispensing with metaphor and connotation. The symbols of the "real character" language would bear a mathematical relationship to what they represented. Wilkins did not, however, have anything like the symbol

²Thomas Sprat, *The History of the Royal-Society of London for the Improving of Natural Knowledge* (London, 1667; rpt. ed. by I. Cope and H. W. Jones, St. Louis: Washington University Press, 1958), p. 111.

system of modern logic in mind. His scheme follows the suggestion made by Bacon, who had taken Chinese for a model. Chinese, says Bacon, is written “in Characters Real, which express neither letters nor words . . . but things or notions; insomuch as countries and provinces, which understand not one another’s language, can nevertheless read one another’s writing.”⁵ European languages were defective in this regard, said the Royal Society thinkers. Words had too many different uses, changed too much from dialect to dialect, and had too many connotations. And the extravagances of style practiced by many writers simply aggravated matters. Wilkins proposed the rudiments of the “real character” language, with simple, regular roots and modifying particles not unlike Hebrew, along with a simple syntactic structure. The symbols were arbitrary and nonalphabetic but had phonetic value so that they could be pronounced.

Though his announced intention was to create a logical language for scientific purposes, Wilkins plainly sought a more sweeping language reform. Needless to say, the constructed language he projected was unsuitable for either goal, and he did not pursue it beyond the outlines of the initial essay. His project is preserved unflatteringly in Book III of *Gulliver’s Travels*, wherein Jonathan Swift describes several experiments under way in the Grand Academy of Lagado. In one, a professor experiments with a large mechanical random-character generator, hoping to produce unexpected insights. Another professor tries “to shorten discourse by cutting polysyllables into one, and leaving out verbs and participles, because in reality all things imaginable are but nouns.” There is a scheme “for entirely abolishing all words whatsoever” and to speak instead with *things*:

Many of the most learned and wise adhere to the new scheme of expressing themselves by things, which hath this inconvenience attending it, that if a man’s business be very great, and of various kinds, he must be obliged in proportion to carry a great bundle of things upon his back, unless he can afford one or two strong servants to attend him.⁶

Rhetoric and Belles Lettres

While rhetoric was being attacked by the English, the French were reconceiving rhetoric’s long-standing connection with literature. In a development that would have a decisive effect on rhetoric in the succeeding two centuries, French critics linked rhetoric to the genres of history and literary criticism, or *belles lettres*. Under the long reign of Louis XIV, French cultural nationalism flourished. The court supported the arts, including eloquence, and created a cult of French artists and writers. Molière, La Fontaine, Racine, and Corneille were praised as the equals of the classical masters. Madeleine de Scudéry (see Part Three, p. 761) adapted rhetoric to the conversations of the salon, which took place in a private venue but had strong public influence. The French Academy was founded to promote and regulate the native language. Such an environment nurtured a rhetoric that could apply classical theories

⁵See Part Three, p. 742.

to contemporary eloquence and, coincidentally, avoid contact with the problems of scientific inquiry. Associated with belles lettres, rhetoric conveniently did not challenge the remnants of Ramism or the strictures of Cartesian method. History and poetry did not infringe on logic, however it was defined. This connection with belles lettres seemed a perfect application of classical education in rhetoric. At the same time, this rhetoric incorporated the increasingly popular interest in psychology under the rubric of “human nature.” Aristotle, Cicero, and Quintilian (see Part One) are, for the belletrists, unimpeachable authorities on the construction of effective orations because they are superb observers of human nature. Thus, to use the rules of eloquence to make critical judgments in matters of taste was not to employ highly refined aristocratic sensibilities (so the argument goes) but to appeal to human nature—those universal characteristics, desires, and sensibilities common to all people in all ages and places. The effects of this movement in the next century were to be far-reaching, providing, oddly enough, an opening for the rapprochement between rhetoric and science.

John Locke and the Idea of Human Nature

The conceptual link between belles lettres and science was the idea of human nature. Human nature, increasingly regarded as the basis of critical judgment, was still being defined. And as epistemology—the study of human knowledge—became an essential part of the search for truth, common ground was cleared. After Bacon, psychology was the central problem of philosophy. In his *Essay Concerning Human Understanding* (1690; p. 817) John Locke (1632–1704) gave this problem the shape it would have for much of the succeeding century.

Like Bacon, Locke divides the mind into two general faculties, the understanding and the will. The understanding reflects upon perceptions and produces ideas that are then related by association. All general terms, Locke argues, must stand for ideas, not things, since the categories to which such terms refer do not have a concrete external existence. These ideas come into being by reflection upon sensation, which Locke takes to be universal—the same, that is, for all people. *Tree* refers not to a particular tree but to the idea we retain from reflecting upon many instances of seeing particular trees and abstracting their common features. Words refer to ideas, not things, and Locke regards simple or primary ideas, those which result from elemental perceptions, as universal, just as sensation is universal. More complex or secondary ideas may be not universal but culture-bound, communal, or even individual. Thus there is a delicate balance between word and idea that can be easily upset by either incomplete knowledge or unclear communication.

Locke emphasizes (somewhat perversely, a modern reader might think) that our primary ideas are identical and that only words are ambiguous. In this sense Locke attacks rhetoric for increasing obscurity rather than diminishing it. Locke introduces no scheme of “real characters” but, like Wilkins and Sprat, deplors the superfluity of language that thrives on uncertainty, a rhetoric that takes advantage of the faculty of will by befuddling the understanding. Less tolerant than Bacon, Locke will not accept human frailty as an excuse for the existence of rhetoric when it interferes

with human understanding. He allows, reluctantly, that rhetoric may be acceptable in popular discourse but is never appropriate for instructing or informing.

EIGHTEENTH-CENTURY RHETORIC

Epistemology, Semantics, and Linguistics

Swift, somewhat unfairly, accuses the British Royal Society of believing that everything is a noun. The accusation points to the underlying dilemma of semantics and epistemology: What is the relationship between language and knowledge? Locke argues that all ideas are mental combinations of sense perceptions and that words refer not directly to things but to mental phenomena, the ideas we retain and build from sense impressions. The key for Locke is to guarantee that words are used consistently, for then they will bear a simple relationship to ideas. The eighteenth-century passion for “fixing” the language, that is, for preventing further change through dictionaries and prescriptive grammar, may have been fed by Locke’s conclusion. A surprising number of philosophers following Locke proposed ways to purify language for philosophy.

The seventeenth-century German philosopher Gottfried Leibniz, for example, projected an artificially constructed logical language, the “universal characteristic,” whose symbols would bear a “natural” relationship to what they signified. Leibniz restricted his notion of a “real” language to formal, logical propositions. Unlike Wilkins, he did not hope to bring human communication in general under such a scheme. Bishop Berkeley, in *A Treatise Concerning the Principles of Human Knowledge* (1710), wonders what to make of all the language that does not, in anyone’s philosophy, refer to things, ideas, or abstract relations. Many statements are not propositions at all, he argues, but rather are attempts to affect someone’s actions, raise emotions, or create dispositions. Berkeley concludes that the affective power of language is detrimental to philosophy and recommends that philosophers try to reason with ideas stripped of language.

Locke’s ideas about language had a profound effect on Étienne Bonnot de Condillac, who also incorporated some of Berkeley’s insights in his philosophy of language. In his *Essai sur l’origine des connaissances humaines* (1746), Condillac imagines an innate language that is triggered by sensation, an automatic response that is not communicative until it is socially reinforced. This language is the source of our first primitive ideas; the rest of language develops by analogy. Language, for Condillac, is clearly a condition of knowledge. Furthermore, the analysis of knowledge is the primary function of language, since communication can come only after we have shown our ideas to ourselves in internal discourse. But Condillac does not turn from these insights to speculate on the rhetorical quality of external or internal speech. Instead, he looks back to the prevailing concern about perfecting a language for science. If language analyzes and produces knowledge, then we reason well or badly only because our language is well or badly made. In his *Grammaire* (1775), Condillac endorses the search for a universal grammar, believing that such a grammar will represent the relationships of human thought.

The search for a universal grammar stimulated the scientific study of language and led to the founding discoveries of modern linguistics. The *Port-Royal Grammar* of 1660 attempts to examine the common elements of all languages, distinguishing *langues* (particular languages) from *langage* (the universal phenomenon of language). In the *Encyclopédie* of Diderot and D'Alembert (1750–1772), the articles on grammar—some of them by Voltaire, Diderot, and Dumarsais—assume that general grammar is coincident with metaphysics, the fundamental order of language being the same as the fundamental order of thought. In 1801, Destutt de Tracy could define philosophy itself as the combination of ideology (the analysis of sensations and ideas, the content of philosophy), universal grammar (the method of philosophy), and logic (or correct reasoning, the goal of philosophy). So well accepted was this idea in France that in 1795 university chairs of logic and metaphysics were replaced by chairs of universal grammar—though eight years later, the status quo was restored.

Giambattista Vico (1668–1744; p. 862), professor of rhetoric at the University of Naples from 1699 to 1741, uses the language of universal grammar and human nature, but he is no Cartesian. Vico vigorously opposes Descartes's epistemology and its implications for rhetoric. For Descartes, the only true knowledge is that about which there can be no doubt. But Vico argues in "On the Study Methods of Our Time" (1709; p. 865) that too much of human knowledge is contingent to be left outside the purview of philosophy, where the Cartesian commitment to certainty would leave it. Vico also argues that knowledge cannot be separated from language, as Descartes and most other philosophers seemed to desire. An adequate philosophy, for Vico, must recognize that knowledge is bound up in human reason, passion, and imagination; that human beings function in social groups and are limited by historical circumstances; and that all these conditions are expressed in their language. Rhetoric, with its concern for probabilities and language, is better suited than the Cartesian method to investigating human knowledge. Vico goes further, attacking even the supposed certainty of physics and mathematics, which is ultimately a matter of belief, he says, not of such actual knowledge of the world as only God can have. As an educator, Vico is also troubled by the potentially disabling effects of a purely Cartesian education: If the merely probable is left out, what happens to law, ethics, politics, history, and even medicine? The Cartesian method is appropriate for science, with its linear causality, says Vico, but the world of human affairs, with its multiple circumstances and relative causality, must be left to rhetoric.

In *The New Science* (1725), Vico asserts that knowledge of human affairs is the only "certain" knowledge, since we can know what we ourselves have made but not what God has made—the world of nature. Thus Vico searches for the origins of history in the origins of human nature, including the universal language from which all languages spring. He posits three stages to this origin-based history, stages that link society, psychology, and language. In the first stage, the poetic, knowledge develops through metaphor: Words suggest associations that become human knowledge and basic social institutions, such as the family. The next stage, the heroic, is marked by the subordination of the individual to the nation through the creation of laws for civil society. The final stage, the human, is more self-conscious, democratic, and individualistic. Inevitably, this stage must lead to the dissolution of social

bonds, a return to a primitive state, and a repetition of the cycle of stages. Vico's notion of stages and cycles in history, easy enough to criticize or dismiss in itself, serves as a kind of heuristic for thinking broadly about culture, language, and society. His influence outside Italy during his own time, however, was negligible; the work of assimilating Bacon, Descartes, and Locke was not nearly done, and for a long time Vico was seen as a mere reactionary, opposing Cartesian progress in the name of a long-dead Italian humanism.

The Cartesian principle of scientific language study was enshrined in the academies of France and Italy and in the Royal Society in Britain. By the end of the seventeenth century, all had proposed the compilation of dictionaries and grammars for the express purpose of settling and correcting their languages. Indeed, the French and Italian academies had produced their dictionaries by the end of the century, rousing the envy of John Dryden, Daniel Defoe, and Jonathan Swift, who advocated "fixing" the language—that is, establishing by law the definitions of words and their proper usage through the ministrations of an academy akin to or part of the British Royal Society. Several incomplete dictionaries (usually focusing on "hard words") and some haphazard grammars preceded Samuel Johnson's *Dictionary*. Johnson, too, set out to settle once and for all the proper usage of the language, but came to realize that the language could not be fixed, controlled, or replaced deliberately with a more logical system. Johnson's descriptivism was not well accepted. Indeed, we need only remember the furor over *Webster's Third (New International Dictionary, Unabridged)*, or read the fulminations of the Sunday-paper language pundits to see that the controversy over whether the dictionary prescribes or describes is still with us today. Grammar, too, was conceived of as prescriptive, and so the new grammar books were full of rules, proper models, and errors to be corrected. The polymath Joseph Priestley went against the tide in declaring that rules did not determine correct usage: "The prevailing custom . . . can be the only standard for the time it prevails."⁷ And it is the Scottish rhetorician George Campbell whose formulation stands as the modern grammarian's motto: "Good usage," Campbell writes, "is national and reputable and present."⁸

These investigations into language, national and universal, were crowned by the brilliant linguist Sir William Jones's announcement in 1786 that there were fundamental similarities among Latin, Greek, and Sanskrit that could not possibly have been produced by accident. "No philologer could examine them all three," he says, "without believing them to have sprung from some common source, which, perhaps, no longer exists."⁹ The refinement of Jones's search for the original Indo-European language led to the comparative study of modern languages, the scientific study of phonology, the acceptance of the principle that language changes, and the study of dialects—in short, all of modern linguistics.

⁹Paper read to the Royal Asiatic Society of Bengal in 1786, published in *Asiatic Researches* 1 (1799), pp. 421–23.

Not all of these developments found their way into eighteenth-century rhetoric, conditioned as it was by the persistence of the Latin curriculum and separated from philosophy by the philosophers' antipathy. But because of their role in education and the promulgation of language standards, rhetoricians did incorporate into their theories the study of grammar, speculation about the history of language, investigation into the relationship between language and knowledge, and a practical and influential interest in dialectal differences.

The Elocution Movement

The eighteenth-century fetish of correctness in language was not restricted to diction and usage but extended to pronunciation. Contrary to insistent popular fancy, correctness in pronunciation, as in diction and usage, is not an absolute. Language standards are the property of the ruling class; thus the diction, usage, and pronunciation of the power centers of capital cities tend to be the standards for a national language. Linguistic discrimination is a staple of human interaction—it was once quite deadly to mispronounce *shibboleth*. And in the eighteenth century, it could be worth one's favor at court, success on the stage, appointment at the university, or preferment in the church to speak a dialect regarded as low, rustic, comical, or even altogether incomprehensible. This circumstance was felt with some force by the cultural and intellectual leaders of the British Empire's subject nations in the eighteenth century. Many Scots and Irish (and some Americans) who sought a role in the great world for themselves or their sons chose London for their education. Those who remained at home became a ravenous market for the spate of pronouncing dictionaries, hard-word dictionaries, error-hunting grammars, and tracts on elocution produced during this linguistic century. But some leaders went further and attempted educational reforms that would make "proper" English part of the curriculum.

The champion of the elocution movement, Irish actor Thomas Sheridan (1719–1788; p. 879), claimed to be reviving the subject of delivery and restoring it to its proper stature in rhetorical study. The need for greater attention to delivery had been raised in the previous century. Wilkins in 1646 and Fénelon in the dialogues composed around 1679 had complained bitterly about the quality of pulpit oratory. Others offered advice on delivery for preachers and lawyers, with discussions of acting, facial expression, posture, movement, gesture, projection, tone, pace, and modulation. Criticism of preaching persisted in the eighteenth century, with Richard Steele, in a 1711 issue of the *Spectator*, calling for improvement in the clergy's reading of the Common Prayer. Also previous to Sheridan's efforts was the phenomenon of John Henley, always referred to as Orator Henley, who in 1726 opened a school in London where he taught elocution. Belying widespread criticism of his stagy performances, Henley's pronouncements concerned propriety in delivery and argued for restoring the force of conviction to the church service.

But the story of elocution begins in earnest with Sheridan's proposals for the reform of Irish education and the parallel attempts by the Scottish Select Society to do the same in Scotland. In *British Education* (1756), Sheridan argues that the revival

of oratory, by which he means the detailed study and appreciation of oral performance, ought to be the first priority of Britons, for such a revival would, he believed, bring vast improvements to religion, morality, government, and the arts. He extols the classical authors and claims that Britain need only restore eloquence to its ancient stature to match the greatness of Rome. This argument Sheridan would repeat in a number of works on elocution, education, and reading, as well as in the introduction to his well-received pronouncing dictionary.

Sheridan also presented his views in lectures delivered in Dublin and elsewhere from 1756 to 1762, when they were published as *A Course of Lectures on Elocution* (p. 881). Among the many remarkable arguments to be found in the lectures is a complaint about the dominance of writing over speaking. English spelling, Sheridan correctly points out, does not indicate pronunciation; one cannot learn pronunciation through reading. Moreover, punctuation does not indicate sentence emphasis and so does not help in reading aloud. Not content with these practical arguments, Sheridan says that writing is inferior to speech, for speech is a gift from God, whereas writing is an invention of mortals. In a separate lecture to a Dublin audience about the special danger of reading for dialect speakers like the Irish, Sheridan also says that what is needed is a better curriculum in Irish elementary schools, one that would include instruction in English, by which he means the polite London dialect. Irish universities, too, should incorporate study of the liberal arts, including oratory, to introduce the Irish to high culture. Through these reforms, Sheridan hoped to keep at least some Irish intellectuals from going to London for education and to create in Ireland an educational center for all those from the empire's margins.

The *Lectures* discuss what is now standard speech-text material on oral interpretation, vocal expressiveness, and gestures. Words, Sheridan argues, are not the only constituent of language. Expressions and gestures also communicate. Indeed, they are more primitive than words, more natural where words are artificial, more universal where words are national, and more expressive of emotion than is the sophisticated language of words. Locke acknowledged the existence of the passions, says Sheridan, but his researches were limited to the faculty of reason. Sheridan contends that gesture and expression, "the natural language of the passions," may be the key to a complete account of psychology. Sheridan is clearly using philosophy to support his argument rather than trying to advance philosophy. Nonetheless, he suggests an important link between rhetoric and the new science.

Not long before Sheridan published *British Education* and began his lecture series, a group of Edinburgh intellectuals embarked on a mission to reform Scottish education along similar lines, including the introduction of composition in English and practice in English speech delivery to replace Latin declamation. This group, the Select Society, included such luminaries as David Hume, Hugh Blair, Adam Smith, and Lord Kames. Since Smith had spent six years at Oxford and had acquired the proper accent and learning, Lord Kames prevailed on him, in 1748, to present a course of lectures in Edinburgh on correctness in language, taste, and the arts. The Society clearly had "correct" pronunciation as a goal as well (Sheridan was brought in by the Society for two sets of lectures in 1761), although Smith

apparently devoted only one lecture explicitly to correctness and proper pronunciation. But Smith's own "corrected" pronunciation and style may have contributed, as much as anything else, to the popularity of his lectures. Smith focused on the cultural elevation of the Scots through rhetoric and belles lettres; this focus was strongly seasoned with a scientific attitude toward language study and communication. Smith was succeeded in his role by Hugh Blair and George Campbell, both of whom turned Smith's interests into the key components of rhetoric for the following century.

Elocution as a separate subject by no means disappeared because of these developments. Indeed, courses in delivery or elocution became a standard part of the U.S. college curriculum (as they still are in many places), and a large number of treatises and textbooks on proper delivery were published throughout the eighteenth and nineteenth centuries. The most notable of these works is Gilbert Austin's *Chironomia* (1896). In this work Austin, an Irish clergyman, develops an elaborate system of notation for posture, gesture, facial expression, and movement. This system should, he says, make it possible to record and study the actions of successful orators, without which amplification the mere record of their words is incomplete. Moreover, speeches can be choreographed with these notations so that students can be taught proper action. The drawings that Austin published in *Chironomia* are reproduced here (pp. 893–96), along with one example of a speech marked with his notation system. Although the system proved too cumbersome for practical use, analyzing nonverbal performance (using film and videotape) and choreographing speeches are standard practice today.

In London, the center of culture, debate became an important part of speech education. While debating also appeared in the speech curriculum in Dublin, Edinburgh, and Boston, the quest for correctness helped to keep declamation the dominant concern. Thus, in a number of ways, the elocution movement helped to shape the fields of speech communication and English composition that were to emerge in the nineteenth century.

Rhetoric and Belles Lettres

Thomas Sheridan's appeal to the classical authors and the ancient ideal of eloquence allied him with the influential Augustan writers of the early eighteenth century—among them Sheridan's godfather Jonathan Swift. Indeed, the Augustans—chiefly Swift and Pope—saw themselves as rhetoricians. The popular Romantic image of the solitary poet overflowing with spontaneous feelings would come in a few years, spurred by the revival of Longinus's *On the Sublime* (see Part One). But at the beginning of the century, the Augustans held sway. These writers emphasized public matters, taking the study of "man," as Pope and his classical forebear Horace put it, to be the proper activity of the poet. This study relied on the idea that human nature was permanent, that reason was the quintessential human characteristic, and that true knowledge about people came from examining recurrent experiences. It was wrong to spin out one's particular feelings or to dwell on isolated bits of data, on the merely local or personal, however much such activity seemed to be sanc-

tioned by the rising philosophy of empiricism. Swift pictured modern writers—those who felt that experience alone could reveal true knowledge—as spiders spinning filthy webs out of their own guts. Instead, the Augustans wrote to inspire national pride, to improve religion and morality, and to satirize inept government. They were social beings, proud of good conversation, given to writing essays in prose and verse, and much less interested in confessions, lyrics, and ballads than their Romantic successors would be. Seeking to affect their readers and to instruct by pleasing, they employed the tropes and schemes of Aristotelian rhetoric—for persuasion, ideally, and not for show—and were inspired by Cicero and Quintilian’s orator, the good man who fosters goodness in others.

The Augustans were quite familiar with Ciceronian rhetoric, which had, as always, its contemporary advocates. John Ward, who lectured on rhetoric from 1720 to 1755 at Gresham College, defended the Ciceronian model against all the attacks on invention, disposition, *topoi*, and style launched by the philosophers. But such an aggressive classicism, virtually untouched by modern ideas, was increasingly rare. John Lawson’s popular *Lectures Concerning Oratory* (1758), delivered at the University of Dublin, provides an interesting contrast to Ward’s classicism. It is both a standard classical rhetoric and a veritable handbook of Augustan ideas. Lawson gives a history of classical literature, a summary of Aristotle, an explanation of *imitation* in its Augustan sense of describing human nature by adopting classical models, and an outline of classical rhetoric focusing on the figures and tropes and illustrating them with verses. But Lawson downplays invention, justifies the use of rhetoric by citing Bacon on the need to persuade people to accept the truth, and urges speakers to be judicious in the use of tropes, which should express real feelings and convey them to the audience.

Locke’s argument for the uniformity of perception and elementary ideas contributed to the search for the common elements of human nature. For this reason, the Augustans regarded Locke as a humanist. His psychology seemed to point to general laws and common experience and to put a premium on effective communication, correctness, and order. Later, these same ideas would suggest quite different notions, those of equality, democracy, and individuality. Still, in the neoclassical age, empiricism could be seen (as it was by Locke) as the search not for data and details but for the essential truths of human experience.

In France, too, classicism and rationalism were reconciled. As we have already seen, toward the end of the seventeenth century classical rhetoric provided a method for making critical judgments about literature. In 1671 the critic René Rapin, for example, notes that the classical authors excelled not only in oratory but in what he christened the *belles lettres*: poetry, history, and philosophy. Like oratory, the other genres can be judged, he says, on the effectiveness of their appeals to *logos*, *pathos*, and *ethos*. And in discussing the appeals, he uses the language of psychology, noting that *logos* is an appeal to the faculty of understanding and *pathos* to the faculties of affection and will. Whereas some defenders of the ancients rejected modern philosophy altogether (and vice versa), several critics looked for connections between the two. For such critics (notably Nicolas Boileau and Jean de la Bruyère), rationalism was a call to reexamine classical standards of critical judgment in light of their

actual effectiveness. The rules of classical composition were thus tempered, on the one hand, by the sense that there was not always a good explanation for why something worked and, on the other, by the recognition that merely following the rules did not necessarily produce the desired result.

In declaring the genres of poetry, history, philosophy, and later of science writing, to be proper objects of rhetorical analysis, the French critics were also responding to the Cartesian imputation that investigation is a mental rather than a discursive phenomenon and that hence all communication, even of philosophical and scientific knowledge, was outside the province of philosophy. Rhetoric sought not to make original inquiries but to judge whether literary or oratorical performances conformed to such standards of “human nature” as orderliness, clarity, correctness, and good sense.

When Adam Smith gave his lectures in 1748, no argument was necessary for connecting rhetoric and *belles lettres* or for reconciling classicism with empiricism. For example, Smith could dismiss the tropes and figures as “silly” because they did not contribute to clear and effective communication. Rhetoric was not tied to the tropes, after all, but was concerned with the transfer of ideas. Persuasion is a kind of communication, Smith says, and so should conform to contemporary taste. Indeed, taste changes and rhetorical conventions change along with it. Echoing Joseph Priestley, Smith notes that the type of discourse determines the proper form—that is, the nature of science affects scientific writing, just as the legal system affects the form of pleading. All the forms of discourse are rhetorical; rhetoric has simply ceased to be identical to the classical model of composition and style. Rhetoric is now the study of correct grammar and syntax, appropriate style and diction for types of discourse or occasions for speaking, taste or standards of literary and moral judgment, and the means of effective communication in general.

In his lectures on rhetoric and *belles lettres*, delivered at the University of Glasgow during the 1750s and 1760s, Smith searches for a rational origin for language and supposes that there is a universal grammar corresponding to the structure of thought. He treats logic as a guide for reasoning, a corrective to the mind’s natural imperfection. And he describes a rhetoric geared to the mind’s operations. The first goal of rhetoric is to promote “perspicuity” in language—that is, to seek a kind of transparency in conveying ideas, combined with strength of expression. Perspicuity depends on thorough knowledge of the subject and “natural” arrangement (suggested by the subject and not by artificial schemes). Perspicuity does not rule out sentiment and passion, for these faculties of the mind require communication as well, especially in persuasive discourse. Indeed, style conveys the personality of the speaker or writer. This last point is of great significance to Smith.

Smith illustrates his observations on rhetoric with literary examples, which more than explicit argument establish the continuity of rhetoric and literary criticism. His critical method is to treat style as an expression of the author’s character. He describes authors as “accurate” or “affecting,” for example, and treats these characteristics as qualities of mind as well as of style. Reports by his students indicate that Smith was an energetic critic, most in his element when discussing literature and the criteria of taste, though his remarks about authors may seem pedestrian to the twentieth-century

reader. Smith judges authors both ancient and modern. Although he is no stranger to the classics, he seeks to convey their content while limiting their influence. “Antiquity is necessary,” he says cynically, “to give any thing a very high reputation as a matter of deep knowledge. One who reads a number of modern books altho they be excellent will not get thereby the character of a learned man. The acquaintance of the ancients will alone procure him that name.”¹⁰ Among the moderns, the best author is Swift, who writes clearly, shows deep knowledge of his subject, and reveals his personality in his style rather than covering it over with the affected elegance of figurative language—as, Smith complains, Lord Shaftesbury continually does.

Under the banner of rhetoric and belles lettres, Smith brings together many apparently incompatible trends. He accepts the critiques of older rhetoric offered by Locke and the Royal Society, rejecting tropes and classical arrangement and embracing instead “natural” expression and organization. He uses the scientific study of language to support correctness and propriety in style. “Correction” of dialect differences is a matter of improving communication, another Lockean idea brought under rhetoric’s charge in the service of provincial education. And he disengages the study of rhetoric from veneration of the classics while exploiting the neoclassical virtue of propriety as a standard for communication. From Smith’s perspective, rhetoric’s appeal to the passions is not a threat to reason and understanding but a natural part of communication. Literature is an example of the natural tendency to link instruction and entertainment: All that separates history and poetry, says Smith, is that one is prose and the other is verse. Smith does not present his rhetoric as a systematic theory. His lectures—preserved only in a student’s verbatim notes—use repetition and example rather than orderly analysis, and treat the method as common sense rather than as revolutionary theory.

George Campbell and Epistemological Rhetoric

George Campbell (1719–1796), a Scottish clergyman and academic, brings a great deal of order and system to much the same set of ideas in his *Philosophy of Rhetoric* (1776; p. 902), which he began in 1750 and completed as part of his contribution to a philosophical study circle that he helped to found. Thus Campbell is well placed to synthesize the key concerns of rhetoric at the time: the relationship of rhetoric to contemporary philosophy, the practical concern for improving pulpit eloquence, the popular interest in elocution (by which name he identifies two of the three sections of his book), the connection of rhetoric with literature and criticism, and the long-standing claims of classical rhetoric.

Campbell says that his purpose is to give a “sketch of the human mind; and, aided by the lights which the Poet and Orator so amply furnish, to disclose its secret movements, tracing its principal channels of perception and action, as near as possible, to their source.” He will use “the science of human nature” to determine the principles of rhetoric that “operate on the soul of the hearer, in the way of informing,

¹⁰Adam Smith, *Lectures on Rhetoric and Belles Lettres*, ed. J. C. Bryce (Indianapolis: University of Indiana Press, 1985), p. 182.

convincing, pleasing, moving, or persuading.” Arts as well as sciences must seek their first principles in scientific psychology. Logic is based on the faculty of understanding and ethics upon the will, Campbell says, “but there is no art whatever that hath so close a connexion with all the faculties and powers of the mind, as eloquence. . . . It is indeed the grand art of communication, not of ideas only, but of sentiments, passions, dispositions, and purposes.”¹¹ Campbell seeks not only to ground rhetoric in the science of human nature but to make rhetoric an essential element of that science. For each mental faculty, Campbell identifies a corresponding form of communication and its proper style. For example, one addresses the understanding in seeking to inform or convince. Perspicuity is the proper stylistic quality for informing, as argument is for convincing. The fine arts please the faculty of imagination through the quality of beauty. Similarly, *pathos* moves the passions, and vehemence persuades the will to action. Following Bacon, Campbell argues that persuasion is the culmination of the sequence just outlined: informing, convincing, pleasing, moving, and then persuading. Logic alone will not suffice to persuade, though it is needed to convince. Only rhetoric combines appeals to all the faculties, connecting ideas with aesthetic images and emotional desires to produce an action of will.

In his discussion of reasoning, Campbell must refute the arguments of philosopher David Hume (1711–1776), whose empiricism rejects the claim that true knowledge can come from any source except experience and reflection. In Hume’s system, revelation is a fantasy and testimony is unreliable. (Hume’s views were opposed to religion, an additional spur to Campbell’s desire for rebuttal.) To address the dilemma posed by Hume, Campbell distinguishes demonstration from “moral evidence.” The former belongs to the empirical sciences and the latter to rhetoric. In disputes about ethics, law, and religion, there is usually good evidence on both sides of a question. In these areas, science has little to do, and rhetoric much. It is pointless, Campbell argues, to expect moral reasoning to resemble mathematical demonstration. But reasoning is not therefore limited to demonstration. To convince, which is the first step in the process of persuasion, one must appeal to reason; therefore, the rhetorician working in the realm of human affairs must know the “logic” of moral evidence. The types of moral evidence are experience, analogy, testimony, and probability. Campbell shows how much of human knowledge depends on these forms of evidence and sets out the limits of each in contributing to knowledge and belief.

But Campbell then goes one step further; he notes that scientific proof relies on precisely the same basic mental operation as moral reasoning, namely, a belief that we have an accurate memory of a past fact or demonstration or a belief that others have been correct in their proofs. Here, then, is the link between philosophy and rhetoric: The rhetorician appeals to the understanding just as the logician does; moral knowledge and scientific knowledge rest on the same mental operations; the difference between moral and scientific knowledge is a question not of certainty versus probability but of the degree of probability; and the real differences therefore lie only in subject matter. With this firm base in reason, rhetoric can confidently proceed through the steps toward persuasion. Campbell discusses audience, ethical and pathetic appeals, types of discourse, and style. Though not as striking as the

¹¹Campbell, p. xlix.

presentation of his underlying theory, his observations on these topics touch on virtually all the major issues affecting rhetoric in the eighteenth century. Campbell rejects universal grammar and, with it, prescriptive grammar. The only correct usage, he asserts, is that which is “reputable, national, and present” — that is, that which is generally regarded as acceptable at a particular time and place. Standards change, and no effective speaker can pretend otherwise; similarly, style is culturally relative. Nonetheless, Campbell castigates flaws in grammar and diction, excesses of style, and all types of imprecision as needlessly impeding comprehension.

Hugh Blair’s Synthesis: Epistemology and Belles Lettres

Campbell’s *Philosophy of Rhetoric* was reprinted more than twenty times during the eighteenth and nineteenth centuries and was occasionally adopted as a college rhetoric textbook. But the most popular rhetoric book of the period was Hugh Blair’s *Lectures on Rhetoric and Belles Lettres* (1783; p. 950). Blair (1718–1800), a member of Kames’s Select Society, heard Smith’s Edinburgh lectures and, at Kames’s urging, began his own lectures on the subject in 1759, when Smith was at Glasgow and Sheridan was in the midst of his successful lecture tour. In 1760, Blair’s lectures were incorporated into the curriculum of the University of Edinburgh, and in 1762 Blair became Regius Professor of Rhetoric and Belles Lettres. More than Campbell, Blair feeds the popular desire for rules of taste, guidelines for writing and speaking, and well-digested, if not predigested, samples of proper literature. Blair’s own style is clear and lively; he presents his principles in neat aphorisms (“true rhetoric and sound logic are very nearly allied”); he is straightforward about the value of his subject (critical acuity is necessary “to support a proper rank in social life”); he strikes a middle ground between philosophy and politics (culture is relative, but there are a right and a wrong, too); and hardly a page goes by without a judiciously chosen literary illustration, chiefly from contemporary authors.¹²

Blair defines taste as the power of getting pleasure from beautiful things, a natural propensity that may be corrupted by prejudice or enhanced by reason. In his approach to taste, Blair is much influenced by David Hume, whose essay “Of the Standard of Taste” (p. 830) seeks to use two kinds of empirical standards: touchstones of literature and oratory and the judgments of a discriminating critic. Blair’s *Lectures* seem like the ideal fulfillment of Hume’s proposal. The basis of criticism, says Blair, is precisely the practice of carefully observing the sources of aesthetic pleasure and deriving rules of judgment from the best performances. Beauty is a psychological phenomenon for Blair: Something about an object (it is vain to try to specify the “something”) raises pleasing sensations in the mind, whether through the physiological structure of the sense organs or through the association of ideas. Eloquence and poetry can raise these sensations through imitation and description and so have the greatest range and power of all sources of aesthetic pleasure. As part of his discussion of taste and criticism, Blair devotes several lectures to style, figurative language, and sample analyses of literary works.

Rhetoric combines criticism and persuasion, then, because both activities

¹²See pp. 952 and 953 in this book.

concern the way language is used for reasoning and moving. Like Campbell, Blair separates conviction and persuasion. Conviction comes from reason and argument, whereas persuasion combines conviction with techniques for stimulating the feelings that move the will. These techniques are method (or organization), *ethos*, style (aesthetic and pathetic appeals), and delivery. Here Blair draws on classical categories, mixing the familiar rules with modern definitions. Method turns out to be a combination of classical disposition—introduction, narration, argument, and so on—and the Cartesian practice (that is, “method”) of dividing the subject into parts. Argument comprises invention, arrangement, and expression. Invention means knowledge of the subject—not *topoi*—and the subject itself determines the appropriate arrangement and manner of expression. The standard of *ethos* is that of Cicero and Quintilian: a person of good character who is known for being virtuous. Under style, Blair distinguishes between using figurative language for ornament and using it to extend one’s range of expression through metaphor and repetition. He also treats delivery seriously as a part of persuasion and not as mere decoration. Blair’s practical advice on nonverbal expression is barely distinguishable from that in twentieth-century speech textbooks.

Finally, Blair provides a handbook of grammar, usage, and style, prefacing it with a history of language, including a history of writing. The need for such a comprehensive and elegant presentation of the arts of composition, speech, and criticism is attested by the sixty-two editions, fifty-one abridgments, and ten translations of the *Lectures on Rhetoric and Belles Lettres* during the century after its publication. It combined all the features that by the end of that century were split into the separate fields of English, composition, and speech.

Smith, Campbell, and Blair were not alone in bringing to rhetoric the doctrines of epistemology and the combination of rhetoric with criticism. Lord Kames, in his *Elements of Criticism* (1762), sought to discover the basic psychological principles of aesthetic response and included eloquence among the arts. And Joseph Priestley, in his *Lectures on Oratory and Criticism* (given during the 1760s and published in 1777), combined classical rhetoric with modern psychology. Kames’s influence in the intellectual community was considerable, and his effort to ground criticism and the arts in scientific psychology provided support for including the emotions, as well as reason and the understanding, in the study of human nature. Priestley, like Blair, retained the outlines of classical composition transformed into memory (the “natural” form of invention), method (arrangement according to the dictates of the subject itself), style (or effectiveness), and elocution. Priestley’s rhetoric is neither as complete nor as elegant as Blair’s, but Priestley’s prestige as a scientist lent considerable weight to the arguments for seeing the new rhetoric as a legitimate companion to philosophy, rather than as a sentimental holdover from the past.

Education and Society in an Era of Reform

Great cultural and political changes occurred in the eighteenth century. Voltaire’s *Candide* was published in 1759, Rousseau’s *Social Contract* in 1762 (the same year as Kames’s *Elements of Criticism*), and Campbell’s *The Philosophy of Rhetoric* and Adam Smith’s *Wealth of Nations* in 1776, the year of the American Revolution.

Locke's philosophy, positing as it did the universality of sensation and ideas, had not only suggested that knowledge was based on human nature but had also reinforced the belief that human nature in fact existed. In a fundamental sense, it appeared, all people were the same.

Advancing those universalizing hints in another way in his *Two Treatises of Government* (1690), Locke had argued that government is the result of a social contract, tacit or explicit, to protect the fundamental rights to "life, liberty, and estate." Revolution may be necessary, Locke said, to remove despotic governments that do not preserve these natural rights. The revolution in philosophy seemed to call for inquiry into the natural basis for equality, authority, liberty, and individuality. Tradition could no longer be relied on to reveal truth and right action. A scientific attitude demanded a study of the human condition, and that study inevitably suggested reforms in government and education.

Furthermore, in 1681, Archbishop Fénelon, author of the *Dialogues on Eloquence*, had penned a treatise, *On the Education of Girls* (published in 1687), that was remarkable for at least two reasons. First, it took up the problem of education for women, an area neglected since the short-lived innovations of the Renaissance. Although Fénelon did not advocate great learning for women, he argued that ignorance favors frivolity and presented a basic curriculum of reading, writing, arithmetic, and household economy. Second, Fénelon's treatise gave attention to early childhood education, an endeavor that should, he said, encourage natural development. His treatise contributed to the vigorous eighteenth-century discussions of both issues.

In the eighteenth century, many more upper-class women were educated, and a great many women of the middle and serving classes became literate. Although Fénelon's girls' school had not survived, Louis XIV founded the academy of St. Cyr, whose headmistress, Mme. de Maintenon, carried on the fight for more and better education for women. Mary Astell (p. 841), although not able to realize her ambitious plans for a women's college, ended her career as the principal of a school for girls, one of many that sprang up in England in the early eighteenth century. Women made up a large part of the new reading public, and more women became writers of published fiction and poetry. However, few engaged in public discourse, and few seem to have studied rhetoric. No doubt some did—Queen Anne received elocution lessons from the actress Mrs. Barry, for example—but generally, because education was geared to one's "station," women were seldom trained in fields relating to business or public affairs. As for speaking in church, women were barred from participating in Roman Catholic and Anglican services, although several Dissenting churches did allow some participation by women. The Society of Friends, for example, was notable for its sexual egalitarianism even at the time of its founding in the mid-seventeenth century. In 1666, Margaret Fell (see Part Three, p. 748), a vigorous proselytizer for the new faith, had written *Women's Speaking Justified, Proved, and Allowed by the Scriptures* (p. 753), a book that helped cement the Quakers' liberal position on equality. Women's opportunities for higher education and public rhetoric would expand even more in the next century.

Jean-Jacques Rousseau, the dominant figure in the development of the new political philosophies of the later eighteenth century, proposed a system of education

based on natural principles and, seconded as he was by the cultural leaders of the time, decisively turned education toward a study of the psychology of learning. The psychological approach meant training the faculties, first through the sensations and then through simple ideas. Classical education, argued Rousseau, was too complex and quite unnatural for a child; the vernacular, not Latin, was clearly the appropriate language for study. Moreover, education should promote the individual's growth as well as the common good. Rousseau advocated national responsibility for education and universal education for children, but he despaired of all these reforms unless society itself could be reformed first.

The French Revolution in 1789 did not bring the reforms Rousseau had envisioned. Still, educational projects begun before the Revolution proceeded. Despite the violent conservative reaction to the Revolution, which threatened all democratic efforts in Europe, education was nationalized in France and in Germany by the end of the eighteenth century and in England by the end of the nineteenth. Teaching was professionalized, child psychology led to modern primary school practices, and the curriculum at all levels was revised to reflect both liberal ideals of individual development and the needs of modern society.

These movements, accelerated by the Industrial Revolution, continued through the eighteenth and into the nineteenth centuries, making education more widely available and consequently pressuring education to be more attuned to a wider audience. The rhetorics of Blair and Campbell, with their emphasis on science and psychology and their extensive use of vernacular literature, were remarkably appropriate to the new educational environment. For all the battering it had received in the previous century, rhetoric remained central to the curriculum and to preparation for public life.

The great ideas of the Enlightenment—empiricism, rationalism, and psychology—all found a place within rhetoric. Locke's rejection of rhetoric did not succeed in killing it off, nor did Swift's attack on the moderns generate any sustained anti-scientific reaction among the rhetoricians. In dividing conviction and persuasion, rhetorical theorists made room for a psychology of emotion as well as of reason. The influence of classical rhetoric was diminished but did not disappear; indeed, the appeal to *pathos* and the canon of delivery seemed more important than ever. The association of ideas, facilitated by a memory well stocked with both images and knowledge of the subject at hand, not only created arguments and a natural arrangement but spontaneously served up figures of speech. Rhetoricians formulated rules for natural composition and speech and also for judging literary works. Within a hundred years of Sprat's strictures, rhetoric's estate was considerably improved.

Selected Bibliography

Wilbur Samuel Howell covers this period in *Eighteenth-Century British Logic and Rhetoric* (1971) and in the latter part of *Logic and Rhetoric in England, 1500–1700* (1956), both of which provide summaries and analyses of primary works, both British and Continental. Howell's work is the only large-scale investigation of rhetoric in this period. Samuel IJsseling's *Rhetoric and Philosophy in Conflict* (1976) has several helpful chapters, particu-

larly on Bacon and Descartes. George Kennedy surveys the period in his chapter on neoclassical rhetoric in *Classical Rhetoric and Its Christian and Secular Tradition from Ancient to Modern Times* (1980).

Bibliographic sources for primary and secondary works include relevant chapters in *Historical Rhetoric: An Annotated Bibliography of Selected Sources in English*, ed. Winifred Bryan Horner (1980), and Horner's *The Present State of Scholarship in Historical and Contemporary Rhetoric* (1983).

Primary works of particular interest (but not excerpted here) include *The Rhetorics of Thomas Hobbes and Bernard Lamy*, ed. John T. Harwood (1986); Fénelon's *Dialogues on Eloquence*, trans. W. S. Howell (1951); Sprat's *History of the Royal Society*, ed. Jackson I. Cope and Harold Whitmore Jones (1958); Condillac's *An Essay on the Origin of Human Knowledge* (1974); and Adam Smith's *Lectures on Rhetoric and Belles Lettres*, ed. J. C. Bryce (1985). These editions contain valuable introductions.

Peter Gay discusses the intellectual and political climate in *The Enlightenment: An Interpretation*, in two volumes (1966, 1969). Paul Fussell's *The Rhetorical World of Augustan Humanism* (1965) focuses on Swift, Pope, and Johnson but deals incisively with central intellectual issues. W. J. Bate's *From Classic to Romantic: Premises of Taste in Eighteenth-Century England* (1946) also provides a helpful history of ideas in the period. *Swift's Classical Rhetoric*, by Charles A. Beaumont (1961), reveals a good deal about education at the end of the seventeenth century in the process of analyzing Swift's work. John Richetti examines the rhetorical operation of philosophy in *Philosophical Writing: Locke, Berkeley, Hume* (1983). Bruce Kimball looks at the place of rhetoric in the development of the curriculum in both Europe and America, in *Orators and Philosophers: A History of the Idea of Liberal Education* (1986).

More focused on rhetoric are the essays by Nancy Streuver and Brian Vickers in their *Rhetoric and the Pursuit of Truth: Language Change in the Seventeenth and Eighteenth Centuries* (1985). Douglas Ehninger distinguishes four main trends in rhetoric (classicism, psychologism, elocution, and belletrism) in "Dominant Trends in English Rhetorical Thought, 1750–1800" (1952; rpt. in *Readings in Rhetoric*, ed. Lionel Crocker and Paul A. Carmack, 1965). And Barbara Warnick links taste, judgment, propriety, and the sublime in *The Sixth Canon: Belletristic Rhetorical Theory and Its French Antecedents* (1993). In *Things, Thoughts, Words, and Actions: The Problem of Language in Late Eighteenth-Century British Rhetorical Theory* (1994), H. Lewis Ulman focuses on the philosophical rhetorics of Campbell, Blair, and Sheridan.

Warren Guthrie studies "The Development of Rhetorical Theory in America, 1635–1850," in a series of articles in *Speech Monographs*, numbers 13–16 (1946–1949) and number 18 (1951). *History of Speech Education in America*, ed. Karl R. Wallace (1954), contains several essays on rhetorical theory in this period. Michael Halloran's "Rhetoric in the American College Curriculum: The Decline of Public Discourse" (*Pre/Text* 3 [fall 1982]: 245–69) looks chiefly at eighteenth-century developments that point toward changes to come in the nineteenth century.

On conversation as a women's rhetorical genre developed by European women, see Jane Donawerth, "Conversation and the Boundaries of Public Discourse in Rhetorical Theory by Renaissance Women" (*Rhetorica* 16 [1998]: 181–99). On women's rhetorical strategies in more public venues, see Karlyn Kohrs Campbell, "The Sound of Women's Voices" (*Quarterly Journal of Speech* 75 [1989]: 212–21). For more on women's education, see the headnote on Mary Astell.

John Locke

1632–1704

Though not a rhetorical theorist, John Locke powerfully affected the direction of rhetoric, and every other intellectual endeavor as well, in the eighteenth century. He assimilated and extended the epistemological ideas of Bacon and Descartes, presented these ideas in accessible language, and explained them in terms of common experience and common sense. Locke's persuasive account of the mental processes of perception, thinking, and using language, combined with his popular treatises on civil government and the rationality of religion, made him a celebrated public figure and a dominant force in the development of modern philosophy.

At Westminster School, Locke studied the classics as well as Hebrew and Arabic. He went on to Oxford and took his degrees in philosophy, which at that time was still the study and practice of Scholastic disputation. Dissatisfied with this curriculum and increasingly interested in experimental science, Locke studied medicine (influenced in this decision by Robert Boyle) and set up an amateur practice in 1666. That same year, he became personal physician and adviser to Lord Ashley, first Earl of Shaftesbury, who vigorously opposed the succession of the Catholic James II and, in 1682, was forced to flee to Holland. Locke, also under suspicion of conspiracy against the Crown, followed in 1683. For the next six years, he studied and wrote under the protection of William of Orange. When he returned to England after the Glorious Revolution of 1688, Locke published in quick succession his *Two Treatises of Government* (1690), arguing for personal liberty; *An Essay Concerning Human Understanding* (1690; excerpted here), his great work of philosophy; *Some Thoughts Concerning Education* (1693); and *The Reasonableness of Christianity* (1695).

Locke's philosophy, which follows Bacon and the experimental scientists, searches for truth in the physical world and attempts to understand knowledge as a psychological phenomenon. This perspective stands opposed to the traditional doctrines of received truth, innate ideas, and the presumption that direct knowledge is available through revelation or perception. Like Bacon, Locke believes that there is a real external world and that knowledge of it is possible, but only if we understand the processes by which we come to such knowledge. We have direct knowledge only of our own ideas, says Locke. We have direct sensations, of course, but we know only the ideas of these sensations; all other ideas are formed by reflecting upon the primary ideas caused by sensory perception. *Reflection* is the act of relating our ideas to one another, forming mental associations, and examining the mental processes of which we are aware: thinking, doubting, believing, and so on. These operations of the faculty of understanding are the source of all our knowledge. In this connection, Locke notes the uselessness of the syllogism for discovering truth, for the syllogism neither describes nor conforms to this process of achieving knowledge. Locke's epistemological approach raises the question of whether it is possible to know the real essences of things. What we know is, after all, only our ideas and

their relationships to one another. Ideas, says Locke, are the signs of real things. From this semiotic position, Locke finds himself led—against his original intention, he admits—to reflections upon language, for our words are but the signs of our ideas.

Words are also the source of many of our ideas. In Book III of the *Essay*, Locke reviews his theory: Sensation, a universal human phenomenon, generates simple ideas, which are also universally the same. To these ideas we give arbitrary signs: words. But clearly we may learn, through words, of something we ourselves have not perceived. Thus it is possible to have an incomplete or inaccurate idea associated with those words. It is even possible to have an incomplete idea of something within our experience, for a word may designate, for some people, certain features of the thing signified and, for others, different features. Moreover, complex ideas are formed by the connections among simple ideas; words are attached to these complex ideas to keep the connections from being merely personal and ephemeral and to allow us to communicate them to others. Complex ideas are not universal, as we can see by the difficulties of translating from one language to another. Many words name relationships, institutions, and cultural phenomena that do not exist elsewhere and therefore have no exact equivalent in another language. Words, too, may carry cultural connotations—or even personal ones—that complicate the relationship between communicated word and signified idea. These reflections lead Locke to insist on the need for clarity, especially in discussing knowledge. He attacks Scholastic philosophy for creating obscurities through disputation, and he attacks rhetoric for increasing ambiguities through excessive ornamentation. In the excerpts printed here, Locke looks at the inherent properties of language and at the typical problems of communication that contribute to those obscurities and ambiguities. Language is imperfect, he concludes (and philosophers will echo him through our own time); therefore, one task of philosophy is to improve language.

In Book IV, Locke attempts to set forth a method for examining the internal coherence of propositions, on the assumption that verbal propositions stand for mental ones and that mental ones stand for real external phenomena. Locke adheres to a nonrelativistic view of knowledge. Consequently, he bemoans the fact that language is intractably ambiguous and frequently misused, making it, at best, an imprecise means of conveying knowledge. Knowledge itself is independent of language. “We should cast off all the artifice and fallacy of words, which makes so great a part of the business and skill of the disputers of this world,” Locke says, in a memorandum on the abuses of Scholasticism; “pretending to the knowledge of things, [we] hinder as much as we can the discovery of truth, by perplexing one another all we can by a perverse use of those signs which we make use of to convey truth to one another.”¹

Rhetoricians responded strongly to Locke’s critique, first in emphasizing perspicuity (that is, clarity) as the most important quality of a good style, and second in developing a psychological theory of persuasion and taste. Virtually all the major

¹John Locke, *An Essay Concerning Human Understanding*, ed. Alexander Campbell Fraser (1884; rpt. London and New York: Routledge, 1959), 2: p. 131n.

works on rhetoric in the eighteenth century imitated Locke in combining grammatical analysis and speculation about the origins of language as part of the program of promoting perspicuity. Vico, Sheridan, and Campbell, as well as a number of philosophers, pursued Locke's suggestive but incomplete account of the relationship of language and knowledge, though never far enough to link rhetoric explicitly with the process of creating "true" knowledge. These ideas, as we shall see, become significant much later, in the twentieth century.

Selected Bibliography

Our excerpt is from John Locke, *An Essay Concerning Human Understanding*, in two volumes, ed. Alexander Campbell Fraser (1894; rpt. 1959). The standard biography is Maurice Cranston's *John Locke: A Biography* (1957). John W. Yolton's *John Locke and the Way of Ideas* (1956) places Locke in historical context. John Richetti focuses on Locke's style and the way that it shapes his thought, in *Philosophical Writing: Locke, Berkeley, Hume* (1983).

E. P. J. Corbett reviews the scholarly recognition of Locke's influence on rhetoric in "John Locke's Contributions to Rhetoric" (in *The Rhetorical Tradition and Modern Writing*, ed. J. J. Murphy, 1982). Corbett notes that although Locke's importance is well recognized, little work has been done on Locke beyond W. S. Howell's article, "John Locke and the New Rhetoric" (*Quarterly Journal of Speech* 53 [1967]: 319–33), and its expansion in *Eighteenth-Century British Logic and Rhetoric* (1971). Corbett's call has had some recent answers. Jules David Law, in *The Rhetoric of Empiricism: Language and Perception from Locke to I. A. Richards* (1993), examines the visual metaphor of "perception" and the way it shapes empiricism's view of language. Law traces this connection from Locke and shows its implications for rhetoric. Peter Walmsley probes Locke's aversion to disputation and consequent preference for a conversational style of rhetoric in "Dispute and Conversation: Probability and the Rhetoric of Natural Philosophy in Locke's *Essay*," *Journal of the History of Ideas* 54 (July 1993), 381–94. Leigh H. Holmes argues in "John Locke's Rhetoric: Response to the Nominal Quandaries of Legitimate Communities" (*Philosophy and Rhetoric* 29 [1996], 33–50) that, in contradistinction to readings of Locke that emphasize the mental (such as this headnote), rhetoricians should attend more to Locke's views of community and consensus, with their links to understanding and language use.

From An Essay Concerning Human Understanding

From Book III

CHAPTER IX

Of the Imperfection of Words

Words are used for recording and communicating our thoughts.

I. From what has been said in the foregoing chapters, it is easy to perceive what imperfection there is in language, and how the very nature of words makes it almost unavoidable for many of them to be doubtful and uncertain in their significations. To examine the perfection or imperfection of words, it is necessary first to consider their use and end: for as they are more or less fitted to attain that, so they are more or less perfect. We have, in the former part of this discourse often, upon occasion, mentioned a double use of words.

First, One for the recording of our own thoughts.

Secondly, The other for the communicating of our thoughts to others.

Any words will serve for recording.

2. As to the first of these, *for the recording our own thoughts for the help of our own memories*, whereby, as it were, we talk to ourselves, any words will serve the turn. For since sounds are voluntary and indifferent signs of any ideas, a man may use what words he pleases to signify his own ideas to himself: and there will be no imperfection in them, if he constantly use the same sign for the same idea: for then he cannot fail of having his meaning understood, wherein consists the right use and perfection of language.

Communication by words either for civil or philosophical purposes.

3. Secondly, As to *communication by words*, that too has a double use.

I. *Civil.*

II. *Philosophical.*

First, By their *civil* use, I mean such a communication of thoughts and ideas by words, as may serve for the upholding common conversation and commerce, about the ordinary affairs and conveniences of civil life, in the societies of men, one amongst another.

Secondly, By the *philosophical* use of words, I mean such a use of them as may serve to convey the precise notions of things, and to express in general propositions certain and undoubted truths, which the mind may rest upon and be satisfied with in its search after true knowledge. These two uses are very distinct; and a great deal less exactness will serve in the one than in the other, as we shall see in what follows.

The imperfection of words is the doubtfulness or ambiguity of their signification, which is caused by the sort of ideas they stand for.

4. The chief end of language in communication being to be understood, words serve not well for that end, neither in civil nor philosophical discourse, when any word does not excite in the hearer the same idea which it stands for in the mind of the speaker. Now, since sounds have no natural connection with our ideas, but have all their signification from the arbitrary imposition of men, the doubtfulness and uncertainty of their signification, which is the imperfection we here are speaking of, has its cause more in the ideas they stand for than in any incapacity there is in one sound more than in another to signify any idea: for in that regard they are all equally perfect.

That then which makes doubtfulness and uncertainty in the signification of some more than other words, is the difference of ideas they stand for.

Natural causes of their imperfection, especially in those that stand for mixed modes, and for our ideas of substances.

5. Words having naturally no signification, the idea which each stands for must be learned and retained, by those who would exchange thoughts, and hold intelligible discourse with others, in any language. But this is the hardest to be done where,

First, The ideas they stand for are very complex, and made up of a great number of ideas put together.

Secondly, Where the ideas they stand for have no certain connection in nature; and so no settled standard anywhere in nature existing, to rectify and adjust them by.

Thirdly, When the signification of the word is referred to a standard, which standard is not easy to be known.

Fourthly, Where the signification of the word and the real essence of the thing are not exactly the same.

These are difficulties that attend the signification of several words that are intelligible. Those which are not intelligible at all, such as names standing for any simple ideas which another has not organs of faculties to attain; as the names of colours to a blind man, or sounds to a deaf man, need not here be mentioned.

In all these cases we shall find an imperfection in words; which I shall more at large explain, in their particular application to our several sorts of ideas: for if we examine them, we shall find that *the names of mixed modes are most liable to doubtfulness and imperfection, for the two first of these reasons; and the names of substances chiefly for the two latter.*

The names of mixed modes doubtful. First, because the ideas they stand for are so complex.

6. First, The names of *mixed modes* are, many of them, liable to great uncertainty and obscurity in their signification.

I. Because of that *great composition* these complex ideas are often made up of. To make words serviceable to the end of communication, it is necessary, as has been said, that they excite

in the hearer exactly the same idea they stand for in the mind of the speaker. Without this, men fill one another's heads with noise and sounds; but convey not thereby their thoughts, and lay not before one another their ideas, which is the end of discourse and language. But when a word stands for a very complex idea that is compounded and decomposed, it is not easy for men to form and retain that idea so exactly, as to make the name in common use stand for the same precise idea, without any the least variation. Hence it comes to pass that men's names of very compound ideas, such as for the most part are moral words, have seldom in two different men the same precise signification; since one man's complex idea seldom agrees with another's, and often differs from his own—from that which he had yesterday, or will have tomorrow.

Secondly, because they have no standards in nature.

7. Because the names of mixed modes for the most part *want standards in nature*, whereby men may rectify and adjust their significations; therefore they are very various and doubtful. They are assemblages of ideas put together at the pleasure of the mind, pursuing its own ends of discourse, and suited to its own notions; whereby it designs not to copy anything really existing, but to denominate and rank things as they come to agree with those archetypes or forms it has made. He that first brought the word *sham*, or *wheedle*, or *banter*, in use, put together as he thought fit those ideas he made it stand for; and as it is with any new names of modes that are now brought into any language, so it was with the old ones when they were first made use of. Names, therefore, that stand for collections of ideas which the mind makes at pleasure must needs be of doubtful signification, when such collections are nowhere to be found constantly united in nature, nor any patterns to be shown whereby men may adjust them. What the word *murder*, or *sacrilege*, &c., signifies can never be known from things themselves: there be many of the parts of those complex ideas which are not visible in the action itself; the intention of the mind, or the relation of holy things, which make

a part of murder or sacrilege, have no necessary connection with the outward and visible action of him that commits either: and the pulling the trigger of the gun with which the murder is committed, and is all the action that perhaps is visible, has no natural connection with those other ideas that make up the complex one named murder. They have their union and combination only from the understanding which unites them under one name: but, uniting them without any rule or pattern, it cannot be but for such voluntary collections should be often various in the minds of different men, who have scarce any standing rule to regulate themselves and their notions by, in such arbitrary ideas.

Common use, or propriety not a sufficient remedy.

8. It is true, common use, that is, the rule of propriety may be supposed here to afford some aid, to settle the signification of language; and it cannot be denied but that in some measure it does. Common use regulates the meaning of words pretty well for common conversation; but nobody having an authority to establish the precise signification of words, nor determine to what ideas any one shall annex them, common use is not sufficient to adjust them to Philosophical Discourses; there being scarce any name of any very complex idea (to say nothing of others) which, in common use, has not a great latitude, and which, keeping within the bounds of propriety, may not be made the sign of far different ideas. Besides, the rule and measure of propriety itself being nowhere established, it is often matter of dispute, whether this or that way of using a word be propriety of speech or no. From all which it is evident, that the names of such kind of very complex ideas are naturally liable to this imperfection, to be of doubtful and uncertain signification; and even in men that have a mind to understand one another, do not always stand for the same idea in speaker and hearer. Though the names *glory* and *gratitude* be the same in every man's mouth through a whole country, yet the complex collective idea which every one thinks on or intends by that name, is apparently very different in men using the same language.

The way of learning these names contributes also to their doubtfulness.

9. The way also wherein the names of mixed modes are ordinarily learned, does not a little contribute to the doubtfulness of their signification. For if we will observe how children learn languages, we shall find that, to make them understand what the names of simple ideas or substances stand for, people ordinarily show them the thing whereof they would have them have the idea; and then repeat to them the name that stands for it; as *white, sweet, milk, sugar, cat, dog*. But as for mixed modes, especially the most material of them, *moral words*, the sounds are usually learned first; and then, to know what complex ideas they stand for, they are either beholden to the explication of others, or (which happens for the most part) are left to their own observation and industry; which being little laid out in the search of the true and precise meaning of names, these moral words are in most men's mouths little more than bare sounds; or when they have any, it is for the most part but a very loose and undetermined, and, consequently, obscure and confused signification. And even those themselves who have with more attention settled their notions, do yet hardly avoid the inconvenience to have them stand for complex ideas different from those which other, even intelligent and studious men, make them the signs of. Where shall one find any, either controversial debate, or familiar discourse, concerning honour, faith, grace, religion, church, &c., wherein it is not easy to observe the different notions men have of them? Which is nothing but this, that they are not agreed in the signification of those words, nor have in their minds the same complex ideas which they make them stand for, and so all the contests that follow thereupon are only about the meaning of a sound. And hence we see that, in the interpretation of laws, whether divine or human, there is no end; comments beget comments, and explications make new matter for explications; and of limiting, distinguishing, varying the signification of these moral words there is no end. These ideas of men's making are, by men still having the same power, multiplied *in infinitum*. Many a man who was pretty well satisfied

of the meaning of a text of Scripture, or clause in the code, at first reading, has, by consulting commentators, quite lost the sense of it, and by these elucidations given rise or increase to his doubts, and drawn obscurity upon the place. I say not this that I think commentaries needless; but to show how uncertain the names of mixed modes naturally are, even in the mouths of those who had both the intention and the faculty of speaking as clearly as language was capable to express their thoughts.

Hence unavoidable obscurity in ancient authors.

10. What obscurity this has unavoidably brought upon the writings of men who have lived in remote ages, and different countries, it will be needless to take notice. Since the numerous volumes of learned men, employing their thoughts that way, are proofs more than enough, to show what attention, study, sagacity, and reasoning are required to find out the true meaning of ancient authors. But, there being no writings we have any great concernment to be very solicitous about the meaning of, but those that contain either truths we are required to believe, or laws we are to obey, and draw inconveniences on us when we mistake or transgress, we may be less anxious about the sense of other authors; who, writing but their own opinions, we are under no greater necessity to know them, than they to know ours. Our good or evil depending not on their decrees, we may safely be ignorant of their notions: and therefore in the reading of them, if they do not use their words with a due clearness and perspicuity, we may lay them aside, and without any injury done them, resolve thus with ourselves.

*Si non vis intelligi, debes negligi.*¹

Names of substances of doubtful signification, because the ideas they stand for relate to the reality of things.

11. If the signification of the names of mixed modes be uncertain, because there be no real standards existing in nature to which those ideas are referred, and by which they may be adjusted, the names of *substances* are of a doubtful signifi-

¹"If it doesn't make sense, it may be disregarded." [Ed.]

cation, for a contrary reason, viz. because the ideas they stand for are supposed conformable to the reality of things, and are referred to as standards made by Nature. In our ideas of substances we have not the liberty, as in mixed modes, to frame what combinations we think fit, to be the characteristic notes to rank and denominate things by. In these we must follow Nature, suit our complex ideas to real existences, and regulate the signification of their names by the things themselves, if we will have our names to be signs of them, and stand for them. Here, it is true, we have patterns to follow; but patterns that will make the signification of their names very uncertain: for names must be of a very unsteady and various meaning, if the ideas they stand for be referred to standards without us, that either cannot be known at all, or can be known but imperfectly and uncertainly.

Names of substances referred, 1. To real essences that cannot be known.

12. The names of substances have, as has been shown, a double reference in their ordinary use.

First, Sometimes they are made to stand for, and so their signification is supposed to agree to, *the real constitution of things*, from which all their properties flow, and in which they all centre. But this real constitution, or (as it is apt to be called) essence, being utterly unknown to us, any sound that is put to stand for it must be very uncertain in its application; and it will be impossible to know what things are or ought to be called a *horse*, or *antimony*, when those words are put for real essences that we have no ideas of at all. And therefore in this supposition, the names of substances being referred to standards that cannot be known, their significations can never be adjusted and established by those standards.

Secondly, to coexisting qualities, which are known but imperfectly.

13. Secondly, The simple ideas that are *found to coexist in substances* being that which their names immediately signify, these, as united in the several sorts of things, are the proper standards to which their names are referred, and by

which their significations may be best rectified. But neither will these archetypes so well serve to this purpose as to leave these names without very various and uncertain significations. Because these simple ideas that coexist, and are united in the same subject, being very numerous, and having all an equal right to go into the complex specific idea which the specific name is to stand for, men, though they propose to themselves the very same subject to consider, yet frame very different ideas about it; and so the name they use for it unavoidably comes to have, in several men, very different significations. The simple qualities which make up the complex ideas, being most of them powers, in relation to changes which they are apt to make in, or receive from other bodies, are almost infinite. He that shall but observe what a great variety of alterations any one of the baser metals is apt to receive, from the different application only of fire; and how much a greater number of changes any of them will receive in the hands of a chymist, by the application of other bodies, will not think it strange that I count the properties of any sort of bodies not easy to be collected, and completely known, by the ways of inquiry which our faculties are capable of. They being therefore at least so many, that no man can know the precise and definite number, they are differently discovered by different men, according to their various skill, attention, and ways of handling; who therefore cannot choose but have different ideas of the same substance, and therefore make the signification of its common name very various and uncertain. For the complex ideas of substances, being made up of such simple ones as are supposed to coexist in nature, every one has a right to put into his complex idea those qualities he has found to be united together. For, though in the substance of gold one satisfies himself with colour and weight, yet another thinks solubility in *aqua regia* as necessary to be joined with that colour in his idea of gold, as any one does its fusibility; solubility in *aqua regia* being a quality as constantly joined with its colour and weight as fusibility or any other; others put into it ductility or fixedness, &c., as they have been taught by tradition or experience. Who of all these has established the right signification of the word, gold? Or who shall be the judge to

determine? Each has his standard in nature, which he appeals to, and with reason thinks he has the same right to put into his complex idea signified by the word gold, those qualities, which, upon trial, he has found united; as another who has not so well examined has to leave them out; or a third, who has made other trials, has to put in others. For the union in nature of these qualities being the true ground of their union in one complex idea, who can say one of them has more reason to be put in or left out than another? From hence it will unavoidably follow, that the complex ideas of substances in men using the same names for them, will be very various, and so the significations of those names very uncertain.

Thirdly, to coexisting qualities which are known but imperfectly.

14. Besides, there is scarce any particular thing existing, which, in some of its simple ideas, does not communicate with a greater, and in others a less number of particular beings: who shall determine in this case which are those that are to make up the precise collection that is to be signified by the specific name? or can with any just authority prescribe, which obvious or common qualities are to be left out; or which more secret, or more particular, are to be put into the signification of the name of any substance? All which together, seldom or never fail to produce that various and doubtful signification in the names of substances, which causes such uncertainty, disputes, or mistakes, when we come to a philosophical use of them.

With this imperfection, they may serve for civil, but not well for philosophical use.

15. It is true, as to civil and common conversation, the general names of substances, regulated in their ordinary signification by some obvious qualities, (as by the shape and figure in things of known seminal propagation, and in other substances, for the most part by colour, joined with some other sensible qualities,) do well enough to design the things men would be understood to speak of: and so they usually conceive well

enough the substances meant by the word gold or apple, to distinguish the one from the other. But in *philosophical* inquiries and debates, where general truths are to be established, and consequences drawn from positions laid down, there the precise signification of the names of substances will be found not only not to be well established, but also very hard to be so. For example: he that shall make malleability, or a certain degree of fixedness, a part of his complex idea of gold, may make propositions concerning gold, and draw consequences from them, that will truly and clearly follow from gold, taken in such signification: but yet such as another man can never be forced to admit, nor be convinced of their truth, who makes not malleableness, or the same degree of fixedness, part of that complex idea that the name gold, in his use of it, stands for.

Instance, liquor.

16. This is a natural and almost unavoidable imperfection in almost all the names of substances, in all languages whatsoever, which men will easily find when, once passing from confused or loose notions, they come to more strict and close inquiries. For then they will be convinced how doubtful and obscure those words are in their signification, which in ordinary use appeared very clear and determined. I was once in a meeting of very learned and ingenious physicians, where by chance there arose a question, whether any liquor passed through the filaments of the nerves. The debate having been managed a good while, by variety of arguments on both sides, I (who had been used to suspect, that the greatest part of disputes were more about the signification of words than a real difference in the conception of things) desired, that, before they went any further on in this dispute, they would first examine and establish amongst them, what the word *liquor* signified. They at first were a little surprised at the proposal; and had they been persons less ingenious, they might perhaps have taken it for a very frivolous or extravagant one: since there was no one there that thought not himself to understand very perfectly what the word liquor stood for; which I think, too, none of the most perplexed names of substances. However, they were

pleased to comply with my motion; and upon examination found that the signification of that word was not so settled or certain as they had all imagined; but that each of them made it a sign of a different complex idea. This made them perceive that the main of their dispute was about the signification of that term; and that they differed very little in their opinions concerning *some* fluid and subtle matter, passing through the conduits of the nerves; though it was not so easy to agree whether it was to be called *liquor* or no, a thing, which, when considered, they thought it not worth the contending about.

Instance, gold.

17. How much this is the case in the greatest part of disputes that men are engaged so hotly in, I shall perhaps have an occasion in another place to take notice. Let us only here consider a little more exactly the fore-mentioned instance of the word *gold*, and we shall see how hard it is precisely to determine its signification. I think all agree to make it stand for a body of a certain yellow shining colour; which being the idea to which children have annexed that name, the shining yellow part of a peacock's tail is properly to them gold. Others finding fusibility joined with that yellow colour in certain parcels of matter, make of that combination a complex idea to which they give the name gold, to denote a sort of substances; and so exclude from being gold all such yellow shining bodies as by fire will be reduced to ashes; and admit to be of that species, or to be comprehended under that name gold, only such substances as, having that shining yellow colour, will by fire be reduced to fusion, and not to ashes. Another, by the same reason, adds the weight, which, being a quality as straightly joined with that colour as its fusibility, he thinks has the same reason to be joined in its idea, and to be signified by its name: and therefore the other made up of body, of such a colour and fusibility, to be imperfect; and so on of all the rest: wherein no one can show a reason why some of the inseparable qualities, that are always united in nature, should be put into the nominal essence, and others left out: or why the word gold, signifying that sort of body the ring on his

finger is made of, should determine that sort rather by its colour, weight, and fusibility, than by its colour, weight, and solubility in *aqua regia*: since the dissolving it by that liquor is as inseparable from it as the fusion by fire; and they are both of them nothing but the relation which that substance has to two other bodies, which have a power to operate differently upon it. For by what right is it that fusibility comes to be a part of the essence signified by the word gold, and solubility but a property of it? Or why is its colour part of the essence, and its malleableness but a property? That which I mean is this, That these being all but properties, depending on its real constitution, and nothing but powers, either active or passive, in reference to other bodies, no one has authority to determine the signification of the word gold (as referred to such a body existing in nature) more to one collection of ideas to be found in that body than to another: whereby the signification of that name must unavoidably be very uncertain. Since, as has been said, several people observe several properties in the same substance; and I think I may say nobody all. And therefore we have but very imperfect descriptions of things, and words have very uncertain significations.

The names of simple ideas the least doubtful.

18. From what has been said, it is easy to observe what has been before remarked, viz. that the *names of simple ideas* are, of all others, the least liable to mistakes, and that for these reasons. First, Because the ideas they stand for, being each but one single perception, are much easier got, and more clearly retained, than the more complex ones, and therefore are not liable to the uncertainty which usually attends those compounded ones of substances and mixed modes, in which the precise number of simple ideas that make them up are not easily agreed, so readily kept in mind. And, Secondly, Because they are never referred to any other essence, but barely that perception they immediately signify: which reference is that which renders the signification of the names of substances naturally so perplexed, and gives occasion to so many disputes. Men that do not perversely use their words, or on

purpose set themselves to cavil, seldom mistake, in any language which they are acquainted with, the use and signification of the name of simple ideas. *White* and *sweet*, *yellow* and *bitter*, carry a very obvious meaning with them, which every one precisely comprehends, or easily perceives he is ignorant of, and seeks to be informed. But what precise collection of simple ideas *modesty* or *frugality* stand for, in another's use, is not so certainly known. And however we are apt to think we well enough know what is meant by *gold* or *iron*; yet the precise complex idea others make them the signs of is not so certain: and I believe it is very seldom that, in speaker and hearer, they stand for exactly the same collection. Which must needs produce mistakes and disputes, when they are made use of in discourses, wherein men have to do with universal propositions, and would settle in their minds universal truths, and consider the consequences that follow from them.

And next to them, simple modes.

19. By the same rule, the names of *simple modes* are, next to those of simple ideas, least liable to doubt and uncertainty; especially those of figure and number, of which men have so clear and distinct ideas. Who ever that had a mind to understand them mistook the ordinary meaning of *seven*, or a *triangle*? And in general the least compounded ideas in every kind have the least dubious names.

The most doubtful are the names of very compounded mixed modes and substances.

20. Mixed modes, therefore, that are made up but of a few and obvious simple ideas, have usually names of no very uncertain signification. But the names of mixed modes which comprehend a great number of simple ideas, are commonly of a very doubtful and undetermined meaning, as has been shown. The names of substances, being annexed to ideas that are neither the real essences, nor exact representations of the patterns they are referred to, are liable to yet greater imperfection and uncertainty, especially when we come to a philosophical use of them.

Why this imperfection charged upon words.

21. The great disorder that happens in our names of substances, proceeding, for the most part, from our want of knowledge, and inability to penetrate into their real constitutions, it may probably be wondered why I charge this as an imperfection rather upon our words than understandings. This exception has so much appearance of justice, that I think myself obliged to give a reason why I have followed this method. I must confess, then, that, when I first began this Discourse of the Understanding, and a good while after, I had not the least thought that any consideration of words was at all necessary to it. But when, having passed over the original and composition of our ideas, I began to examine the extent and certainty of our knowledge, I found it had so near a connection with words, that, unless their force and manner of signification were first well observed, there could be very little said clearly and pertinently concerning knowledge: which being conversant about truth, had constantly to do with propositions. And though it terminated in things, yet it was for the most part so much by the intervention of words, that they seemed scarce separable from our general knowledge. At least they interpose themselves so much between our understandings, and the truth which it would contemplate and apprehend, that, like the medium through which visible objects pass, the obscurity and disorder do not seldom cast a mist before our eyes, and impose upon our understandings. If we consider, in the fallacies men put upon themselves, as well as others, and the mistakes in men's disputes and notions, how great a part is owing to words, and their uncertain or mistaken significations, we shall have reason to think this no small obstacle in the way to knowledge; which I conclude we are the more carefully to be warned of, because it has been so far from being taken notice of as an inconvenience, that the arts of improving it have been made the business of men's study, and obtained the reputation of learning and subtilty, as we shall see in the following chapter. But I am apt to imagine, that, were the imperfections of language, as the instrument of knowledge, more thoroughly weighed, a great many of the controversies that make such a noise in the world,

would of themselves cease; and the way to knowledge, and perhaps peace too, lie a great deal opener than it does.

This should teach us moderation in imposing our own sense of old authors.

22. Sure I am that the signification of words in all languages, depending very much on the thoughts, notions, and ideas of him that uses them, must unavoidably be of great uncertainty to men of the same language and country. This is so evident in the Greek authors, that he that shall peruse their writings will find in almost every one of them, a distinct language, though the same words. But when to this natural difficulty in every country, there shall be added different countries and remote ages, wherein the speakers and writers had very different notions, tempers, customs, ornaments, and figures of speech, &c., every one of which influenced the signification of their words then, though to us now they are lost and unknown; it would become us to be charitable one to another in our interpretations or misunderstandings of those ancient writings; which, though of great concernment to be understood, are liable to the unavoidable difficulties of speech, which (if we except the names of simple ideas, and some very obvious things) is not capable, without a constant defining the terms, of conveying the sense and intention of the speaker, without any manner of doubt and uncertainty to the hearer. And in discourses of religion, law, and morality, as they are matters of the highest concernment, so there will be the greatest difficulty.

Especially of the Old and New Testament Scriptures.

23. The volumes of interpreters and commentators on the Old and New Testament are but too manifest proofs of this. Though everything said in the text be infallibly true, yet the reader may be, nay, cannot choose but be, very fallible in the understanding of it. Nor is it to be wondered, that the will of God, when clothed in words, should be liable to that doubt and uncertainty which unavoidably attends that sort of conveyance, when even his Son, whilst clothed in flesh, was subject

to all the frailties and inconveniences of human nature, sin excepted. And we ought to magnify his goodness, that he hath spread before all the world such legible characters of his works and providence, and given all mankind so sufficient a light of reason, that they to whom this written word never came, could not (whenever they set themselves to search) either doubt of the being of a God, or of the obedience due to him. Since then the precepts of Natural Religion are plain, and very intelligible to all mankind, and seldom come to be controverted; and other revealed truths, which are conveyed to us by books and languages, are liable to the common and natural obscurities and difficulties incident to words; methinks it would become us to be more careful and diligent in observing the former, and less magisterial, positive, and imperious, in imposing our own sense and interpretations of the latter. . . .

CHAPTER X

Of the Abuse of Words

The ends of language: First, to convey our ideas.

23. To conclude this consideration of the imperfection and abuse of language. The ends of language in our discourse with others being chiefly these three: First, to make known one man's thoughts or ideas to another; Secondly, to do it with as much ease and quickness as possible; and, Thirdly, thereby to convey the knowledge of things: language is either abused or deficient, when it fails of any of these three.

First, Words fail in the first of these ends, and lay not open one man's ideas to another's view: 1. When men have names in their mouths without any determinate ideas in their minds, whereof they are the signs: or, 2. When they apply the common received names of any language to ideas, to which the common use of that language does not apply them: or, 3. When they apply them very unsteadily, making them stand, now for one, and by and by for another idea.

Secondly, to do it with quickness.

24. Secondly, Men fail of conveying their thoughts with all the quickness and ease that may

be, when they have complex ideas without having any distinct names for them. This is sometimes the fault of the language itself, which has not in it a sound yet applied to such a signification; and sometimes the fault of the man, who has not yet learned the name for that idea he would show another.

Thirdly, therewith to convey the knowledge of things.

25. Thirdly, There is no knowledge of things conveyed by men's words, when their ideas agree not to the reality of things. Though it be a defect that has its original in our ideas, which are not conformable to the nature of things as attention, study, and application might make them, yet it fails not to extend itself to our words too, when we use them as signs of real beings, which yet never had any reality or existence.

How men's words fail in all these: First, when used without any ideas.

26. First, He that hath words of any language, without distinct ideas in his mind to which he applies them, does, so far as he uses them in discourse, only make a noise without any sense or signification; and how learned soever he may seem, by the use of hard words or learned terms, is not much more advanced thereby in knowledge, than he would be in learning, who had nothing in his study but the bare titles of books, without possessing the contents of them. For all such words, however put into discourse, according to the construction of grammatical rules, or the harmony of well-turned periods, do yet amount to nothing but bare sounds, and nothing else.

Secondly, when complex ideas are without names annexed to them.

27. Secondly, He that has complex ideas, without particular names for them, would be in no better case than a bookseller, who had in his warehouse volumes that lay there unbound, and without titles, which he could therefore make known to others only by showing the loose sheets, and communicate them only by tale. This man is hindered in his discourse, for want of words to

communicate his complex ideas, which he is therefore forced to make known by an enumeration of the simple ones that compose them; and so is fain often to use twenty words, to express what another man signifies in one.

Thirdly, when the same sign is not put for the same idea.

28. Thirdly, He that puts not constantly the same sign for the same idea, but uses the same words sometimes in one and sometimes in another signification, ought to pass in the schools and conversation for as fair a man, as he does in the market and exchange, who sells several things under the same name.

Fourthly, when words are diverted from their common use.

29. Fourthly, He that applies the words of any language to ideas different from those to which the common use of that country applies them, however his own understanding may be filled with truth and light, will not by such words be able to convey much of it to others, without defining his terms. For however the sounds are such as are familiarly known, and easily enter the ears of those who are accustomed to them; yet standing for other ideas than those they usually are annexed to, and are wont to excite in the mind of the hearers, they cannot make known the thoughts of him who thus uses them.

Fifthly, when they are names of fantastical imaginations.

30. Fifthly, He that imagined to himself substances such as never have been, and filled his head with ideas which have not any correspondence with the real nature of things, to which yet he gives settled and defined names, may fill his discourse, and perhaps another man's head, with the fantastical imaginations of his own brain, but will be very far from advancing thereby one jot in real and true knowledge.

Summary.

31. He that hath names without ideas, wants meaning in his words, and speaks only empty

sounds. He that hath complex ideas without names for them, wants liberty and dispatch in his expressions, and is necessitated to use periphrases. He that uses his words loosely and unsteadily will either be not minded or not understood. He that applies his names to ideas different from their common use, wants propriety in his language, and speaks gibberish. And he that hath the ideas of substances disagreeing with the real existence of things, so far wants the materials of true knowledge in his understanding, and hath instead thereof chimeras.

How men's words fail when they stand for substances.

32. In our notions concerning Substances, we are liable to all the former inconveniences: v.g. he that uses the word *tarantula*, without having any imagination or idea of what it stands for, pronounces a good word; but so long means nothing at all by it. 2. He that, in a newly-discovered country, shall see several sorts of animals and vegetables, unknown to him before, may have as true ideas of them, as of a horse or a stag; but can speak of them only by a description, till he shall either take the names the natives call them by, or give them names himself. 3. He that uses the word *body* sometimes for pure extension, and sometimes for extension and solidity together, will talk very fallaciously. 4. He that gives the name *horse* to that idea which common usage calls *mule*, talks improperly, and will not be understood. 5. He that thinks the name *centaur* stands for some real being, imposes on himself, and mistakes words for things.

How when they stand for Modes and Relations.

33. In Modes and Relations generally, we are liable only to the four first of these inconveniences; viz. 1. I may have in my memory the names of modes, as *gratitude* or *charity*, and yet not have any precise ideas annexed in my thoughts to those names. 2. I may have ideas, and not know the names that belong to them: v.g. I may have the idea of a man's drinking till his colour and humour be altered, till his tongue trips, and his eyes look red, and his feet fail him; and yet not know that it is to be called *drunken-*

ness. 3. I may have the ideas of virtues or vices, and names also, but apply them amiss: v.g. when I apply the name *frugality* to that idea which others call and signify by this sound, *covetousness*. 4. I may use any of those names with inconsistency. 5. But, in modes and relations, I cannot have ideas disagreeing to the existence of things: for modes being complex ideas, made by the mind of pleasure, and relation being but by way of considering or comparing two things together, and so also an idea of my own making, these ideas can scarce be found to disagree with anything existing; since they are not in the mind as the copies of things regularly made by nature, nor as properties inseparably flowing from the internal constitution or essence of any substance; but, as it were, patterns lodged in my memory, with names annexed to them, to denominate actions and relations by, as they come to exist. But the mistake is commonly in my giving a wrong name to my conceptions; and so using words in a different sense from other people: I am not understood, but am thought to have wrong ideas of them, when I give wrong names to them. Only if I put in my ideas of mixed modes or relations any inconsistent ideas together, I fill my head also with chimeras; since such ideas, if well examined, cannot so much as exist in the mind, much less any real being ever be denominated from them.

Seventhly, language is often abused by figurative speech.

34. Since wit and fancy find easier entertainment in the world than dry truth and real knowledge, figurative speeches and allusion in language will hardly be admitted as an imperfection or abuse of

it. I confess, in discourses where we seek rather pleasure and delight than information and improvement, such ornaments as are borrowed from them can scarce pass for faults. But yet if we would speak of things as they are, we must allow that all the art of rhetoric, besides order and clearness; all the artificial and figurative application of words eloquence hath invented, are for nothing else but to insinuate wrong ideas, move the passions, and thereby mislead the judgment; and so indeed are perfect cheats: and therefore, however laudable or allowable oratory may render them in harangues and popular addresses, they are certainly, in all discourses that pretend to inform or instruct, wholly to be avoided; and where truth and knowledge are concerned, cannot but be thought a great fault, either of the language or person that makes use of them. What and how various they are, will be superfluous here to take notice; the books of rhetoric which abound in the world, will instruct those who want to be informed: only I cannot but observe how little the preservation and improvement of truth and knowledge is the care and concern of mankind; since the arts of fallacy are endowed and preferred. It is evident how much men love to deceive and be deceived, since rhetoric, that powerful instrument of error and deceit, has its established professors, is publicly taught, and has always been had in great reputation: and I doubt not but it will be thought great boldness, if not brutality, in me to have said thus much against it. Eloquence, like the fair sex, has too prevailing beauties in it to suffer itself ever to be spoken against. And it is in vain to find fault with those arts of deceiving, wherein men find pleasure to be deceived.

David Hume

1711–1776

David Hume, the most important and influential British philosopher of his day, was born in Edinburgh, Scotland. Shunning the law, for which he had begun to study, Hume pursued his own course of reading (he cites Cicero and Virgil as favorites), which led in 1739 to the publication of *A Treatise of Human Nature*. In this work, Hume sought to combine Lockean empiricism and Newtonian experimentalism in a new and thoroughgoing study of the operations of the human mind. He held to Locke's principle that our ideas come only from sense impressions and our mental operations upon them. He further argued that genuine knowledge can come only by this path and not from pure reasoning, testimony, or revelation.

The *Treatise* sold poorly and was generally reviewed negatively. Disappointed by its poor reception, Hume sought a wider public by publishing an abstract and then several revised versions. The revisions developed ultimately into separate works, the *Enquiry Concerning Human Understanding* (1748) and the *Enquiry Concerning the Principles of Morals* (1751). These efforts, too, met with little success. However, Hume derived real satisfaction from writing and publishing a series of essays that were quite well received. In his brief autobiography, "My Own Life" (composed shortly before his death and published the next year, 1777), Hume delights in his role as a man of letters, writing that "almost all my life has been spent in literary pursuits and occupations" and that "love of literary fame" was "my ruling passion."¹ Except among other philosophers—such as Thomas Reid, James Beattie, and George Campbell, who counted Hume their favorite adversary—Hume was well known for his essays and his *History of England*, not for his philosophical works.

Hume's famous opposition to religion is based upon his rejection of knowledge derived from either testimony or revelation. His book *The Natural History of Religion* (1758), and a chapter on miracles in the *Enquiry Concerning Human Understanding* (arguing that testimony about a breach of nature was far more likely to be false than true), made him a target of religious pamphleteers. Hume steadfastly refused to reply to such attacks, which had the happy side effect of increasing the sales of his books. Upon his deathbed, Hume was visited by Boswell, who wished to see if the famous atheist had changed his views as he contemplated his demise. Boswell was disappointed. Hume looked terrible but cheerfully maintained his unbelief in the face of Boswell's importuning. Boswell observes, interestingly, that upon his visit Hume was reading Campbell's just-published *Philosophy of Rhetoric*.

Two of Hume's essays address rhetorical concerns. "Of Eloquence" (1742) is a rather slight piece that laments the British public's tolerance for poor oratory. The absence of good models (rather than a positive preference for poor speaking) is the cause. Hume recommends the ancient orators, particularly Cicero and Demosthenes, as models. He also urges greater use of pathetic appeals and of histrionic gesture.

¹"My Own Life," in *David Hume, Essays: Moral, Political, and Literary*, ed. Eugene F. Miller (Indianapolis: Liberty Classics, 1985), pp. xxxi, xl.

“Of the Standard of Taste” (1757) takes up an issue of abiding concern to both rhetoricians and philosophers in this period and of considerable consequence for Hume’s philosophy. Taste, for Hume and many of his contemporaries, is no mere matter of preference concerning purely personal matters. Rather, taste is the basis of judgments not only about what is beautiful (or personally pleasing) but also about what is virtuous. Taste, in this way of thinking, supersedes reasoning in aesthetics and morals and is therefore of profound importance, especially to someone like Hume who seeks to understand the operations of mind. Hume begins the essay by noting the diversity of taste, even within a single society. Furthermore, though all people use terms equivalent to *virtuous* or *elegant*, they do not mean the same things by them (as Locke had claimed), so careful definition does not reduce the diversity. Hume considers the possibility that there is, indeed, complete relativism in this matter. But his purpose is to find ways to reduce or eliminate disagreement, to set a standard.

Rules or standards of art are attempts to specify what is good or beautiful. As Jonathan Friday helpfully points out, eighteenth-century neoclassicism held firmly to rules, following the newly revived Aristotle. But Hume, like Samuel Johnson and others at midcentury (moving, Friday says, toward the also-revived Longinus), rejects this view, noting that rigid adherence to rules does not guarantee favorable response and that deviating from rules often produces wonderful results. Though Hume discards the rule standard, he seems to favor two other positions that reduce relativism. One is that some works of art are clearly better than others, a judgment about which nobody would disagree. These works can serve as touchstones. The other is that although taste is personal, clearly some people have better taste than others, people who are more sensitive and knowledgeable, and who therefore can make superior decisions regarding matters of taste in their areas of expertise. Such people can provide us with the standards for criticism.

These two theories—touchstones and ideal critics—are fundamentally empirical, based on experience rather than a priori ideals or abstract rules. They appealed deeply to the public sensibility. In particular, they impressed Hugh Blair, Hume’s contemporary and one of his chief defenders from clerical attack. Blair’s *Lectures on Rhetoric and Belles Lettres* (published in 1783, but first composed in 1758, the year Hume’s essay was first published) focus on the importance of taste and carry out Hume’s program in a remarkable way (see Blair, p. 947). For Blair links the receptive art of criticism with the productive arts of rhetoric—both of which thus depend on good taste—precisely by providing many touchstones of oratory and literature and by demonstrating his own superior taste in his commentaries. Moreover, Blair enacts Hume’s argument that good taste, based as it is on experience, can be learned.

Selected Bibliography

“Of the Standard of Taste” first appeared in *Four Dissertations* (1757), which was included in the 1758 edition of *Essays and Treatises*. Our text is from *David Hume, Essays: Moral, Political, and Literary*, ed. Eugene F. Miller (1985). Modern editions of Hume’s other major

works are *A Treatise of Human Nature*, ed. L. A. Selby-Bigge (1978); *An Enquiry Concerning Human Understanding*, ed. Charles Hendel (1955); *An Enquiry Concerning the Principles of Morals*, ed. J. B. Schneewind (1983); and *The Natural History of Religion*, ed. H. E. Root (1957).

Adam Potkay, in *The Fate of Eloquence in the Age of Hume* (1994), uses “Of Eloquence” as the running anchor for his perceptive analysis of the political fortunes of eloquence in the eighteenth century. To Potkay, Hume is in the midst of a conflict between ancient eloquence and modern politeness as standards of style. Potkay also devotes a substantial chapter to the sources of Hume’s views in *A Treatise of Human Nature* and to Hume’s theory of the polis in his *Natural History of Religion*. Barbara Warnick discusses the main elements of belletristic rhetoric—taste, propriety, and the sublime—in *The Sixth Canon: Belletristic Rhetorical Theory and Its French Antecedents* (1993). Warnick covers Hume’s essay and discusses its influence on Blair and other contemporaries in some detail. John Richetti, in *Philosophical Writing: Locke, Berkeley, Hume*, looks at philosophy as a form of rhetoric.

A lively critical debate focuses on the apparent circularity of Hume’s argument for identifying the ideal critic by his sensitivity to good art while recognizing good art through the offices of the ideal critic. Peter Kivy describes the problem and offers some solutions in “Hume’s Standard of Taste: Breaking the Circle” in the *British Journal of Aesthetics* 7:1 (1967), pp. 1–57. James R. Shelley summarizes and comments on a related debate over the standard of the judge and the problem of the key in the wine in “Hume and the Nature of Taste,” *The Journal of Aesthetics and Art Criticism* 56 (winter 1998): 29–38. David Marshall explains the key-in-the-wine story as the metaphor that drives Hume’s argument for an analogy between aesthetic taste and physiological taste, in “Arguing by Analogy: Hume’s Standard of Taste,” *Eighteenth-Century Studies* 28.3 (1995): 323–43. Jonathan Friday teases out the four standards of taste (not, as Hume claims, one) in “Hume’s Sceptical Standard of Taste,” *Journal of the History of Philosophy* 36.4 (October 1998): 545–66.

See also the bibliography on Campbell (p. 901) for a number of works that treat Hume’s influence on Campbell.

Of the Standard of Taste

The great variety of Taste, as well as of opinion, which prevails in the world, is too obvious not to have fallen under every one’s observation. Men of the most confined knowledge are able to remark a difference of taste in the narrow circle of their acquaintance, even where the persons have been educated under the same government, and have early imbibed the same prejudices. But those, who can enlarge their view to contemplate distant nations and remote ages, are still more surprized at the great inconsistency and contrariety. We are apt to call *barbarous* whatever departs widely from our own taste and apprehension: But soon find the epithet of reproach

retorted on us. And the highest arrogance and self-conceit is at last startled, on observing an equal assurance on all sides, and scruples, amidst such a contest of sentiment, to pronounce positively in its own favour.

As this variety of taste is obvious to the most careless enquirer; so will it be found, on examination, to be still greater in reality than in appearance. The sentiments of men often differ with regard to beauty and deformity of all kinds, even while their general discourse is the same. There are certain terms in every language, which import blame, and others praise; and all men, who use the same tongue, must agree in their application

of them. Every voice is united in applauding elegance, propriety, simplicity, spirit in writing; and in blaming fustian, affectation, coldness, and a false brilliancy: But when critics come to particulars, this seeming unanimity vanishes; and it is found, that they had affixed a very different meaning to their expressions. In all matters of opinion and science, the case is opposite: The difference among men is there oftener found to lie in generals than in particulars; and to be less in reality than in appearance. An explanation of the terms commonly ends the controversy; and the disputants are surprized to find, that they had been quarrelling, while at bottom they agreed in their judgment.

Those who found morality on sentiment, more than on reason, are inclined to comprehend ethics under the former observation, and to maintain, that, in all questions, which regard conduct and manners, the difference among men is really greater than at first sight it appears. It is indeed obvious, that writers of all nations and all ages concur in applauding justice, humanity, magnanimity, prudence, veracity; and in blaming the opposite qualities. Even poets and other authors, whose compositions are chiefly calculated to please the imagination, are yet found from HOMER down to FENELON, to inculcate the same moral precepts, and to bestow their applause and blame on the same virtues and vices. This great unanimity is usually ascribed to the influence of plain reason; which, in all these cases, maintains similar sentiments in all men, and prevents those controversies, to which the abstract sciences are so much exposed. So far as the unanimity is real, this account may be admitted as satisfactory: But we must also allow that some part of the seeming harmony in morals may be accounted for from the very nature of language. The word *virtue*, with its equivalent in every tongue, implies praise; as that of *vice* does blame: And no one, without the most obvious and grossest impropriety, could affix reproach to a term, which in general acceptance is understood in a good sense; or bestow applause, where the idiom requires disapprobation. HOMER'S general precepts, where he delivers any such, will never be controverted; but it is obvious, that, when he draws particular pictures of manners, and represents heroism in

ACHILLES and prudence in ULYSSES, he intermixes a much greater degree of ferocity in the former, and of cunning and fraud in the latter, than FENELON would admit of. The sage ULYSSES in the GREEK poet seems to delight in lies and fictions, and often employs them without any necessity or even advantage: But his more scrupulous son, in the FRENCH epic writer, exposes himself to the most imminent perils, rather than depart from the most exact line of truth and veracity.

The admirers and followers of the ALCORAN insist on the excellent moral precepts interspersed throughout that wild and absurd performance. But it is to be supposed, that the ARABIC words, which correspond to the ENGLISH, equity, justice, temperance, meekness, charity, were such as, from the constant use of that tongue, must always be taken in a good sense; and it would have argued the greatest ignorance, not of morals, but of language, to have mentioned them with any epithets, besides those of applause and approbation. But would we know, whether the pretended prophet had really attained a just sentiment of morals? Let us attend to his narration; and we shall soon find, that he bestows praise on such instances of treachery, inhumanity, cruelty, revenge, bigotry, as are utterly incompatible with civilized society. No steady rule of right seems there to be attended to; and every action is blamed or praised, so far only as it is beneficial or hurtful to the true believers.

The merit of delivering true general precepts in ethics is indeed very small. Whoever recommends any moral virtues, really does no more than is implied in the terms themselves. That people, who invented the word *charity*, and used it in a good sense, inculcated more clearly and much more efficaciously, the precept, *be charitable*, than any pretended legislator or prophet, who should insert such a *maxim* in his writings. Of all expressions, those, which, together with their other meaning, imply a degree either of blame or approbation, are the least liable to be perverted or mistaken.

It is natural for us to seek a *Standard of Taste*; a rule, by which the various sentiments of men may be reconciled; at least, a decision, afforded, confirming one sentiment, and condemning another.

There is a species of philosophy, which cuts off all hopes of success in such an attempt, and represents the impossibility of ever attaining any standard of taste. The difference, it is said, is very wide between judgment and sentiment. All sentiment is right; because sentiment has a reference to nothing beyond itself, and is always real, wherever a man is conscious of it. But all determinations of the understanding are not right; because they have a reference to something beyond themselves, to wit, real matter of fact; and are not always conformable to that standard. Among a thousand different opinions which different men may entertain of the same subject, there is one, and but one, that is just and true; and the only difficulty is to fix and ascertain it. On the contrary, a thousand different sentiments, excited by the same object, are all right: Because no sentiment represents what is really in the object. It only marks a certain conformity or relation between the object and the organs or faculties of the mind; and if that conformity did not really exist, the sentiment could never possibly have being. Beauty is no quality in things themselves: It exists merely in the mind which contemplates them; and each mind perceives a different beauty. One person may even perceive deformity, where another is sensible of beauty; and every individual ought to acquiesce in his own sentiment, without pretending to regulate those of others. To seek the real beauty, or real deformity, is as fruitless an enquiry, as to pretend to ascertain the real sweet or real bitter. According to the disposition of the organs, the same object may be both sweet and bitter; and the proverb has justly determined it to be fruitless to dispute concerning tastes. It is very natural, and even quite necessary, to extend this axiom to mental, as well as bodily taste; and thus common sense, which is so often at variance with philosophy, especially with the sceptical kind, is found, in one instance at least, to agree in pronouncing the same decision.

But though this axiom, by passing into a proverb, seems to have attained the sanction of common sense; there is certainly a species of common sense which opposes it, at least serves to modify and restrain it. Whoever would assert an equality of genius and elegance between

OGILBY and MILTON, or BUNYAN and ADDISON, would be thought to defend no less an extravagance, than if he had maintained a mole-hill to be as high as TENERIFFE, or a pond as extensive as the ocean. Though there may be found persons, who give the preference to the former authors; no one pays attention to such a taste; and we pronounce without scruple the sentiment of these pretended critics to be absurd and ridiculous. The principle of the natural equality of tastes is then totally forgot, and while we admit it on some occasions, where the objects seem near an equality, it appears an extravagant paradox, or rather a palpable absurdity, where objects so disproportioned are compared together.

It is evident that none of the rules of composition are fixed by reasonings *a priori*, or can be esteemed abstract conclusions of the understanding, from comparing those habitudes and relations of ideas, which are eternal and immutable. Their foundation is the same with that of all the practical sciences, experience; nor are they any thing but general observations, concerning what has been universally found to please in all countries and in all ages. Many of the beauties of poetry and even of eloquence are founded on falsehood and fiction, on hyperboles, metaphors, and an abuse or perversion of terms from their natural meaning. To check the sallies of the imagination, and to reduce every expression to geometrical truth and exactness, would be the most contrary to the laws of criticism; because it would produce a work, which, by universal experience, has been found the most insipid and disagreeable. But though poetry can never submit to exact truth, it must be confined by rules of art, discovered to the author either by genius or observation. If some negligent or irregular writers have pleased, they have not pleased by their transgressions of rule or order, but in spite of these transgressions: They have possessed other beauties, which were conformable to just criticism; and the force of these beauties has been able to overpower censure, and give the mind a satisfaction superior to the disgust arising from the blemishes. ARIOSTO pleases; but not by his monstrous and improbable fictions, by his bizarre mixture of the serious and comic styles, by the want of coherence in his stories, or by the continual interruptions of his nar-

ration. He charms by the force and clearness of his expression, by the readiness and variety of his inventions, and by his natural pictures of the passions, especially those of the gay and amorous kind: And however his faults may diminish our satisfaction, they are not able entirely to destroy it. Did our pleasure really arise from those parts of his poem, which we denominate faults, this would be no objection to criticism in general: It would only be an objection to those particular rules of criticism, which would establish such circumstances to be faults, and would represent them as universally blameable. If they are found to please, they cannot be faults; let the pleasure, which they produce, be ever so unexpected and unaccountable.

But though all the general rules of art are founded only on experience and on the observation of the common sentiments of human nature, we must not imagine, that, on every occasion, the feelings of men will be conformable to these rules. Those finer emotions of the mind are of a very tender and delicate nature, and require the concurrence of many favourable circumstances to make them play with facility and exactness, according to their general and established principles. The least exterior hindrance to such small springs, or the least internal disorder, disturbs their motion, and confounds the operation of the whole machine. When we would make an experiment of this nature, and would try the force of any beauty or deformity, we must choose with care a proper time and place, and bring the fancy to a suitable situation and disposition. A perfect serenity of mind, a recollection of thought, a due attention to the object; if any of these circumstances be wanting, our experiment will be fallacious, and we shall be unable to judge of the catholic and universal beauty. The relation, which nature has placed between the form and the sentiment, will at least be more obscure; and it will require greater accuracy to trace and discern it. We shall be able to ascertain its influence not so much from the operation of each particular beauty, as from the durable admiration, which attends those works, that have survived all the caprices of mode and fashion, all the mistakes of ignorance and envy.

The same HOMER, who pleased at ATHENS and

ROME two thousand years ago, is still admired at PARIS and at LONDON. All the changes of climate, government, religion, and language, have not been able to obscure his glory. Authority or prejudice may give a temporary vogue to a bad poet or orator; but his reputation will never be durable or general. When his compositions are examined by posterity or by foreigners, the enchantment is dissipated, and his faults appear in their true colours. On the contrary, a real genius, the longer his works endure, and the more wide they are spread, the more sincere is the admiration which he meets with. Envy and jealousy have too much place in a narrow circle; and even familiar acquaintance with his person may diminish the applause due to his performances: But when these obstructions are removed, the beauties, which are naturally fitted to excite agreeable sentiments, immediately display their energy; and while the world endures, they maintain their authority over the minds of men.

It appears then, that, amidst all the variety and caprice of taste, there are certain general principles of approbation or blame, whose influence a careful eye may trace in all operations of the mind. Some particular forms or qualities, from the original structure of the internal fabric, are calculated to please, and others to displease; and if they fail of their effect in any particular instance, it is from some apparent defect or imperfection in the organ. A man in a fever would not insist on his palate as able to decide concerning flavours; nor would one, affected with the jaundice, pretend to give a verdict with regard to colours. In each creature, there is a sound and a defective state; and the former alone can be supposed to afford us a true standard of taste and sentiment. If, in the sound state of the organ, there be an entire or a considerable uniformity of sentiment among men, we may thence derive an idea of the perfect beauty; in like manner as the appearance of objects in day-light, to the eye of a man in health, is denominated their true and real colour, even while colour is allowed to be merely a phantasm of the senses.

Many and frequent are the defects in the internal organs, which prevent or weaken the influence of those general principles, on which depends our sentiment of beauty or deformity.

Though some objects, by the structure of the mind, be naturally calculated to give pleasure, it is not to be expected, that in every individual the pleasure will be equally felt. Particular incidents and situations occur, which either throw a false light on the objects, or hinder the true from conveying to the imagination the proper sentiment and perception.

One obvious cause, why many feel not the proper sentiment of beauty, is the want of that *delicacy* of imagination, which is requisite to convey a sensibility of those finer emotions. This delicacy every one pretends to: Every one talks of it; and would reduce every kind of taste or sentiment to its standard. But as our intention in this essay is to mingle some light of the understanding with the feelings of sentiment, it will be proper to give a more accurate definition of delicacy, than has hitherto been attempted. And not to draw our philosophy from too profound a source, we shall have recourse to a noted story in DON QUIXOTE.

It is with good reason, says SANCHO to the squire with the great nose, that I pretend to have a judgment in wine: This is a quality hereditary in our family. Two of my kinsmen were once called to give their opinion of a hogshead, which was supposed to be excellent, being old and of a good vintage. One of them tastes it; considers it; and after mature reflection pronounces the wine to be good, were it not for a small taste of leather, which he perceived in it. The other, after using the same precautions, gives also his verdict in favour of the wine; but with the reserve of a taste of iron, which he could easily distinguish. You cannot imagine how much they were both ridiculed for their judgment. But who laughed in the end? On emptying the hogshead, there was found at the bottom, an old key with a leathern thong tied to it.

The great resemblance between mental and bodily taste will easily teach us to apply this story. Though it be certain, that beauty and deformity, more than sweet and bitter, are not qualities in objects, but belong entirely to the sentiment, internal or external; it must be allowed, that there are certain qualities in objects, which are fitted by nature to produce those particular feelings. Now as these qualities may be found in a small

degree, or may be mixed and confounded with each other, it often happens, that the taste is not affected with such minute qualities, or is not able to distinguish all the particular flavours, amidst the disorder, in which they are presented. Where the organs are so fine, as to allow nothing to escape them; and at the same time so exact as to perceive every ingredient in the composition: This we call delicacy of taste, whether we employ these terms in the literal or metaphorical sense. Here then the general rules of beauty are of use; being drawn from established models, and from the observation of what pleases or displeases, when presented singly and in a high degree: And if the same qualities, in a continued composition and in a smaller degree, affect not the organs with a sensible delight or uneasiness, we exclude the person from all pretensions to this delicacy. To produce these general rules or avowed patterns of composition is like finding the key with the leathern thong; which justified the verdict of SANCHO'S kinsmen, and confounded those pretended judges who had condemned them. Though the hogshead had never been emptied, the taste of the one was still equally delicate, and that of the other equally dull and languid: But it would have been more difficult to have proved the superiority of the former, to the conviction of every by-stander. In like manner, though the beauties of writing had never been methodized, or reduced to general principles; though no excellent models had ever been acknowledged; the different degrees of taste would still have subsisted, and the judgment of one man been preferable to that of another; but it would not have been so easy to silence the bad critic, who might always insist upon his particular sentiment, and refuse to submit to his antagonist. But when we show him an avowed principle of art; when we illustrate this principle by examples, whose operation, from his own particular taste, he acknowledges to be conformable to the principle; when we prove, that the same principle may be applied to the present case, where he did not perceive or feel its influence: He must conclude, upon the whole, that the fault lies in himself, and that he wants the delicacy, which is requisite to make him sensible of every beauty and every blemish, in any composition or discourse.

It is acknowledged to be the perfection of every sense or faculty, to perceive with exactness its most minute objects, and allow nothing to escape its notice and observation. The smaller the objects are, which become sensible to the eye, the finer is that organ, and the more elaborate its make and composition. A good palate is not tried by strong flavours; but by a mixture of small ingredients, where we are still sensible of each part, notwithstanding its minuteness and its confusion with the rest. In like manner, a quick and acute perception of beauty and deformity must be the perfection of our mental taste; nor can a man be satisfied with himself while he suspects, that any excellence or blemish in a discourse has passed him unobserved. In this case, the perfection of the man, and the perfection of the sense or feeling, are found to be united. A very delicate palate, on many occasions, may be a great inconvenience both to a man himself and to his friends: But a delicate taste of wit or beauty must always be a desirable quality; because it is the source of all the finest and most innocent enjoyments, of which human nature is susceptible. In this decision the sentiments of all mankind are agreed. Wherever you can ascertain a delicacy of taste, it is sure to meet with approbation; and the best way of ascertaining it is to appeal to those models and principles, which have been established by the uniform consent and experience of nations and ages.

But though there be naturally a wide difference in point of delicacy between one person and another, nothing tends further to encrease and improve this talent, than *practice* in a particular art, and the frequent survey or contemplation of a particular species of beauty. When objects of any kind are first presented to the eye of imagination, the sentiment, which attends them, is obscure and confused; and the mind is, in a great measure, incapable of pronouncing concerning their merits or defects. The taste cannot perceive the several excellencies of the performance; much less distinguish the particular character of each excellency, and ascertain its quality and degree. If it pronounce the whole in general to be beautiful or deformed, it is the utmost that can be expected; and even this judgment, a person, so unpractised, will be apt to deliver with great hesitation and re-

serve. But allow him to acquire experience in those objects, his feeling becomes more exact and nice: He not only perceives the beauties and defects of each part, but marks the distinguishing species of each quality, and assigns it suitable praise or blame. A clear and distinct sentiment attends him through the whole survey of the objects; and he discerns that very degree and kind of approbation or displeasure, which each part is naturally fitted to produce. The mist dissipates, which seemed formerly to hang over the object: The organ acquires greater perfection in its operations; and can pronounce, without danger of mistake, concerning the merits of every performance. In a word, the same address and dexterity, which practice gives to the execution of any work, is also acquired by the same means, in the judging of it.

So advantageous is practice to the discernment of beauty, that, before we can give judgment on any work of importance, it will even be requisite, that that very individual performance be more than once perused by us, and be surveyed in different lights with attention and deliberation. There is a flutter or hurry of thought which attends the first perusal of any piece, and which confounds the genuine sentiment of beauty. The relation of the parts is not discerned: The true characters of style are little distinguished: The several perfections and defects seem wrapped up in a species of confusion, and present themselves indistinctly to the imagination. Not to mention, that there is a species of beauty, which, as it is florid and superficial, pleases at first; but being found incompatible with a just expression either of reason or passion, soon palls upon the taste, and is then rejected with disdain, at least rated at a much lower value.

It is impossible to continue in the practice of contemplating any order of beauty, without being frequently obliged to form *comparisons* between the several species and degrees of excellence, and estimating their proportion to each other. A man, who has had no opportunity of comparing the different kinds of beauty, is indeed totally unqualified to pronounce an opinion with regard to any object presented to him. By comparison alone we fix the epithets of praise or blame, and learn how to assign the due degree of each. The

coarsest daubing contains a certain lustre of colours and exactness of imitation, which are so far beauties, and would affect the mind of a peasant or Indian with the highest admiration. The most vulgar ballads are not entirely destitute of harmony or nature; and none but a person, familiarized to superior beauties, would pronounce their numbers harsh, or narration uninteresting. A great inferiority of beauty gives pain to a person conversant in the highest excellence of the kind, and is for that reason pronounced a deformity: As the most finished object, with which we are acquainted, is naturally supposed to have reached the pinnacle of perfection, and to be entitled to the highest applause. One accustomed to see, and examine, and weigh the several performances, admired in different ages and nations, can alone rate the merits of a work exhibited to his view, and assign its proper rank among the productions of genius.

But to enable a critic the more fully to execute this undertaking, he must preserve his mind free from all *prejudice*, and allow nothing to enter into his consideration, but the very object which is submitted to his examination. We may observe, that every work of art, in order to produce its due effect on the mind, must be surveyed in a certain point of view, and cannot be fully relished by persons, whose situation, real or imaginary, is not conformable to that which is required by the performance. An orator addresses himself to a particular audience, and must have a regard to their particular genius, interests, opinions, passions, and prejudices; otherwise he hopes in vain to govern their resolutions, and inflame their affections. Should they even have entertained some prepossessions against him, however unreasonable, he must not overlook this disadvantage; but, before he enters upon the subject, must endeavour to conciliate their affection, and acquire their good graces. A critic of a different age or nation, who should peruse this discourse, must have all these circumstances in his eye, and must place himself in the same situation as the audience, in order to form a true judgment of the oration. In like manner, when any work is addressed to the public, though I should have a friendship or enmity with the author, I must depart from this situation; and considering myself as a man in gen-

eral, forget, if possible, my individual being and my peculiar circumstances. A person influenced by prejudice, complies not with this condition; but obstinately maintains his natural position, without placing himself in that point of view, which the performance supposes. If the work be addressed to persons of a different age or nation, he makes no allowance for their peculiar views and prejudices; but, full of the manners of his own age and country, rashly condemns what seemed admirable in the eyes of those for whom alone the discourse was calculated. If the work be executed for the public, he never sufficiently enlarges his comprehension, or forgets his interest as a friend or enemy, as a rival or commentator. By this means, his sentiments are perverted; nor have the same beauties and blemishes the same influence upon him, as if he had imposed a proper violence on his imagination, and had forgotten himself for a moment. So far his taste evidently departs from the true standard; and of consequence loses all credit and authority.

It is well known, that in all questions, submitted to the understanding, prejudice is destructive of sound judgment, and perverts all operations of the intellectual faculties: It is no less contrary to good taste; nor has it less influence to corrupt our sentiment of beauty. It belongs to *good sense* to check its influence in both cases; and in this respect, as well as in many others, reason, if not an essential part of taste, is at least requisite to the operations of this latter faculty. In all the nobler productions of genius, there is a mutual relation and correspondence of parts; nor can either the beauties or blemishes be perceived by him, whose thought is not capacious enough to comprehend all those parts, and compare them with each other, in order to perceive the consistence and uniformity of the whole. Every work of art has also a certain end or purpose, for which it is calculated; and is to be deemed more or less perfect, or it is more or less fitted to attain this end. The object of eloquence is to persuade, of history to instruct, of poetry to please by means of the passions and the imagination. These ends we must carry constantly in our view, when we peruse any performance; and we must be able to judge how far the means employed are adapted to their respective purposes. Besides, every kind of

composition, even the most poetical, is nothing but a chain of propositions and reasonings; not always, indeed, the justest and most exact, but still plausible and specious, however disguised by the colouring of the imagination. The persons introduced in tragedy and epic poetry, must be represented as reasoning, and thinking, and concluding, and acting, suitably to their character and circumstances; and without judgment, as well as taste and invention, a poet can never hope to succeed in so delicate an undertaking. Not to mention, that the same excellence of faculties which contributes to the improvement of reason, the same clearness of conception, the same exactness of distinction, the same vivacity of apprehension, are essential to the operations of true taste, and are its infallible concomitants. It seldom, or never happens, that a man of sense, who has experience in any art, cannot judge of its beauty; and it is no less rare to meet with a man who has a just taste without a sound understanding.

Thus, though the principles of taste be universal, and nearly, if not entirely the same in all men; yet few are qualified to give judgment on any work of art, or establish their own sentiment as the standard of beauty. The organs of internal sensation are seldom so perfect as to allow the general principles their full play, and produce a feeling correspondent to those principles. They either labour under some defect, or are vitiated by some disorder; and by that means, excite a sentiment, which may be pronounced erroneous. When the critic has no delicacy, he judges without any distinction, and is only affected by the grosser and more palpable qualities of the object: The finer touches pass unnoticed and disregarded. Where he is not aided by practice, his verdict is attended with confusion and hesitation. Where no comparison has been employed, the most frivolous beauties, such as rather merit the name of defects, are the object of his admiration. Where he lies under the influence of prejudice, all his natural sentiments are perverted. Where good sense is wanting, he is not qualified to discern the beauties of design and reasoning, which are the highest and most excellent. Under some or other of these imperfections, the generality of men labour; and hence a true judge in the finer

arts is observed, even during the most polished ages, to be so rare a character: Strong sense, united to delicate sentiment, improved by practice, perfected by comparison, and cleared of all prejudice, can alone entitle critics to this valuable character; and the joint verdict of such, wherever they are to be found, is the true standard of taste and beauty.

But where are such critics to be found? By what marks are they to be known? How distinguish them from pretenders? These questions are embarrassing; and seem to throw us back into the same uncertainty, from which, during the course of this essay, we have endeavoured to extricate ourselves.

But if we consider the matter aright, these are questions of fact, not of sentiment. Whether any particular person be endowed with good sense and a delicate imagination, free from prejudice, may often be the subject of dispute, and be liable to great discussion and enquiry: But that such a character is valuable and estimable will be agreed in by all mankind. Where these doubts occur, men can do no more than in other disputable questions, which are submitted to the understanding: They must produce the best arguments, that their invention suggests to them; they must acknowledge a true and decisive standard to exist somewhere, to wit, real existence and matter of fact; and they must have indulgence to such as differ from them in their appeals to this standard. It is sufficient for our present purpose, if we have proved, that the taste of all individuals is not upon an equal footing, and that some men in general, however difficult to be particularly pitched upon, will be acknowledged by universal sentiment to have a preference above others.

But in reality the difficulty of finding, even in particulars, the standard of taste, is not so great as it is represented. Though in speculation, we may readily avow a certain criterion in science and deny it in sentiment, the matter is found in practice to be much more hard to ascertain in the former case than in the latter. Theories of abstract philosophy, systems of profound theology, have prevailed during one age: In a successive period, these have been universally exploded: Their absurdity has been detected: Other theories and systems have supplied their place, which again gave

place to their successors: And nothing has been experienced more liable to the revolutions of chance and fashion than these pretended decisions of science. The case is not the same with the beauties of eloquence and poetry. Just expressions of passion and nature are sure, after a little time, to gain public applause, which they maintain for ever. ARISTOTLE, and PLATO, and EPICURUS, and DESCARTES, may successively yield to each other: But TERENCE and VIRGIL maintain an universal, undisputed empire over the minds of men. The abstract philosophy of CICERO has lost its credit: The vehemence of his oratory is still the object of our admiration.

Though men of delicate taste be rare, they are easily to be distinguished in society, by the soundness of their understanding and the superiority of their faculties above the rest of mankind. The ascendant, which they acquire, gives a prevalence to that lively approbation, with which they receive any productions of genius, and renders it generally predominant. Many men, when left to themselves, have but a faint and dubious perception of beauty, who yet are capable of relishing any fine stroke, which is pointed out to them. Every convert to the admiration of the real poet or orator is the cause of some new conversion. And though prejudices may prevail for a time, they never unite in celebrating any rival to the true genius, but yield at last to the force of nature and just sentiment. Thus, though a civilized nation may easily be mistaken in the choice of their admired philosopher, they never have been found long to err, in their affection for a favourite epic or tragic author.

But notwithstanding all our endeavours to fix a standard of taste, and reconcile the discordant apprehensions of men, there still remain two sources of variation, which are not sufficient indeed to confound all the boundaries of beauty and deformity, but will often serve to produce a difference in the degrees of our approbation or blame. The one is the different humours of particular men; the other, the particular manners and opinions of our age and country. The general principles of taste are uniform in human nature: Where men vary in their judgments, some defect or perversion in the faculties may commonly be remarked; proceeding either from prejudice,

from want of practice, or want of delicacy; and there is just reason for approving one taste, and condemning another. But where there is such a diversity in the internal frame or external situation as is entirely blameless on both sides, and leaves no room to give one the preference above the other; in that case a certain degree of diversity in judgment is unavoidable, and we seek in vain for a standard, by which we can reconcile the contrary sentiments.

A young man, whose passions are warm, will be more sensibly touched with amorous and tender images, than a man more advanced in years, who takes pleasure in wise, philosophical reflections concerning the conduct of life and moderation of the passions. At twenty, OVID may be the favourite author; HORACE at forty; and perhaps TACITUS at fifty. Vainly would we, in such cases, endeavour to enter into the sentiments of others, and divest ourselves of those propensities, which are natural to us. We choose our favourite author as we do our friend, from a conformity of humour and disposition. Mirth or passion, sentiment or reflection; whichever of these most predominates in our temper, it gives us a peculiar sympathy with the writer who resembles us.

One person is more pleased with the sublime; another with the tender; a third with raillery. One has a strong sensibility to blemishes, and is extremely studious of correctness: Another has a more lively feeling of beauties, and pardons twenty absurdities and defects for one elevated or pathetic stroke. The ear of this man is entirely turned towards conciseness and energy; that man is delighted with a copious, rich, and harmonious expression. Simplicity is affected by one; ornament by another. Comedy, tragedy, satire, odes, have each its partizans, who prefer that particular species of writing to all others. It is plainly an error in a critic, to confine his approbation to one species or style of writing, and condemn all the rest. But it is almost impossible not to feel a predilection for that which suits our particular turn and disposition. Such preferences are innocent and unavoidable, and can never reasonably be the object of dispute, because there is no standard, by which they can be decided.

For a like reason, we are more pleased, in the course of our reading, with pictures and charac-

ters, that resemble objects which are found in our own age or country, than with those which describe a different set of customs. It is not without some effort, that we reconcile ourselves to the simplicity of ancient manners, and behold princesses carrying water from the spring, and kings and heroes dressing their own victuals. We may allow in general, that the representation of such manners is no fault in the author, nor deformity in the piece; but we are not so sensibly touched with them. For this reason, comedy is not easily transferred from one age or nation to another. A FRENCHMAN or ENGLISHMAN is not pleased with the ANDRIA of TERENCE, or CLITIA of MACHIAVEL; where the fine lady, upon whom all the play turns, never once appears to the spectators, but is always kept behind the scenes, suitably to the reserved humour of the ancient GREEKS and modern ITALIANS. A man of learning and reflection can make allowance for these peculiarities of manners; but a common audience can never divest themselves so far of their usual ideas and sentiments, as to relish pictures which no wise resemble them.

But here there occurs a reflection, which may, perhaps, be useful in examining the celebrated controversy concerning ancient and modern learning; where we often find the one side excusing any seeming absurdity in the ancients from the manners of the age, and the other refusing to admit this excuse, or at least, admitting it only as an apology for the author, not for the performance. In my opinion, the proper boundaries in this subject have seldom been fixed between the contending parties. Where any innocent peculiarities of manners are represented, such as those above mentioned, they ought certainly to be admitted; and a man, who is shocked with them, gives an evident proof of false delicacy and refinement. The poet's *monument more durable than brass*, must fall to the ground like common brick or clay, were men to make no allowance for the continual revolutions of manners and customs, and would admit of nothing but what was suitable to the prevailing fashion. Must we throw aside the pictures of our ancestors, because of their ruffs and fardingales? But where the ideas of morality and decency alter from one age to another, and where vicious manners are described,

without being marked with the proper characters of blame and disapprobation; this must be allowed to disfigure the poem, and to be a real deformity. I cannot, nor is it proper I should, enter into such sentiments; and however I may excuse the poet, on account of the manners of his age, I never can relish the composition. The want of humanity and of decency, so conspicuous in the characters drawn by several of the ancient poets, even sometimes by HOMER and the GREEK tragedians, diminishes considerably the merit of their noble performances, and gives modern authors an advantage over them. We are not interested in the fortunes and sentiments of such rough heroes: We are displeased to find the limits of vice and virtue so much confounded: And whatever indulgence we may give to the writer on account of his prejudices, we cannot prevail on ourselves to enter into his sentiments, or bear an affection to characters, which we plainly discover to be blameable.

The case is not the same with moral principles, as with speculative opinions of any kind. These are in continual flux and revolution. The son embraces a different system from the father. Nay, there scarcely is any man, who can boast of great constancy and uniformity in this particular. Whatever speculative errors may be found in the polite writings of any age or country, they detract but little from the value of those compositions. There needs but a certain turn of thought or imagination to make us enter into all the opinions, which then prevailed, and relish the sentiments or conclusions derived from them. But a very violent effort is requisite to change our judgment of manners, and excite sentiments of approbation or blame, love or hatred, different from those to which the mind from long custom has been familiarized. And where a man is confident of the rectitude of that moral standard, by which he judges, he is justly jealous of it, and will not pervert the sentiments of his heart for a moment, in complaisance to any writer whatsoever.

Of all speculative errors, those, which regard religion, are the most excusable in compositions of genius; nor is it ever permitted to judge of the civility or wisdom of any people, or even of single persons, by the grossness or refinement of

their theological principles. The same good sense, that directs men in the ordinary occurrences of life, is not hearkened to in religious matters, which are supposed to be placed altogether above the cognizance of human reason. On this account, all the absurdities of the pagan system of theology must be overlooked by every critic, who would pretend to form a just notion of ancient poetry; and our posterity, in their turn, must have the same indulgence to their forefathers. No religious principles can ever be imputed as a fault to any poet, while they remain merely principles, and take not such strong possession of his heart, as to lay him under the imputation of *bigotry* or *superstition*. Where that happens, they confound the sentiments of morality, and alter the natural boundaries of vice and virtue. They are therefore eternal blemishes, according to the principle abovementioned; nor are the prejudices and false opinions of the age sufficient to justify them.

It is essential to the ROMAN catholic religion to inspire a violent hatred of every other worship, and to represent all pagans, mahometans, and heretics as the objects of divine wrath and vengeance. Such sentiments, though they are in reality very blameable, are considered as virtues by the zealots of that communion, and are represented in their tragedies and epic poems as a kind of divine heroism. This bigotry has disfigured two very fine tragedies of the FRENCH theatre, POLIEUCTE and ATHALIA; where an intemperate zeal for particular modes of worship is set off

with all the pomp imaginable, and forms the predominant character of the heroes. "What is this," says the sublime JOAD to JOSABET, finding her in discourse with MATHAN, the priest of BAAL, "Does the daughter of DAVID speak to this traitor? Are you not afraid, lest the earth should open and pour forth flames to devour you both? Or lest these holy walls should fall and crush you together? What is his purpose? Why comes the enemy of God hither to poison the air, which we breathe, with his horrid presence?" Such sentiments are received with great applause on the theatre of PARIS; but at LONDON the spectators would be full as much pleased to hear ACHILLES tell AGAMEMNON, that he was a dog in his forehead, and a deer in his heart, or JUPITER threaten JUNO with a sound drubbing, if she will not be quiet.

RELIGIOUS principles are also a blemish in any polite composition, when they rise up to superstition, and intrude themselves into every sentiment, however remote from any connection with religion. It is no excuse for the poet, that the customs of his country had burthened life with so many religious ceremonies and observances, that no part of it was exempt from that yoke. It must for ever be ridiculous in PETRARCH to compare his mistress, LAURA, to JESUS CHRIST. Nor is it less ridiculous in that agreeable libertine, BOC-CACE, very seriously to give thanks to GOD ALMIGHTY and the ladies, for their assistance in defending him against his enemies.

Mary Astell

1666–1731

Mary Astell was born in 1666 in Newcastle, England. Her upper-middle-class family possessed a comfortable income from her father's position as an official in the local coal industry. The entire family, including Mary, was staunchly Royalist and Anglican. Mary's uncle Ralph Astell, an Anglican clergyman suspended from his post for alcoholism, tutored her brother Peter, and Mary, a precocious student, was included in these lessons. Although she did not learn Latin and Greek, Mary read some classics in translation and also studied history, philosophy, mathematics, theology, and probably French.

When Mary was thirteen, her family situation suddenly changed. Her uncle and father died within a year of each other, and the family finances were found to be unsound. What little money remained was dedicated to furthering Peter's education, while Mary lived with her mother and aunt in reduced circumstances. No dowry could be provided for Mary, and she never married. Rhetoric scholar Christine Mason Sutherland has suggested that Mary, pious and learned, might have made a very successful career for herself in the Anglican Church—if only she had been male.¹ Without this recourse, Astell went to London in 1688 to try her fortunes as a writer and educator after her mother and aunt had also died.

Astell had expected help from relatives in London, but they soon abandoned her. Desperate, she appealed to the notably charitable archbishop of Canterbury, William Sancroft, and he introduced her to his well-educated and devout aristocratic female friends and to a London bookseller, Rich Wilkin, who would promote her work. She settled in Chelsea, then a suburb of London and home to several girls' schools. From the archbishop's circle, Astell gained a patron, Lady Elizabeth Hastings, and also became acquainted with other female intellectual leaders such as Lady Mary Wortley Montagu and Lady Catherine Jones. Astell's new friends respected her learning and intelligence and encouraged her to publish her views.

Astell's first book was *A Serious Proposal to the Ladies for the Advancement of Their True and Greatest Interest* (1694), published anonymously but with the author's gender identified ("A Lover of her Sex"). What Astell proposed was the foundation of a women's college or, as she called it, a "Protestant Nunnery," where young women could receive a serious secular education as well as instruction in Anglican Christianity. The institution would be governed by the inmates collectively, without a supervisory hierarchy either male or female. Women might leave this institution to marry and thus benefit their families with their piety and learning, or they might stay on, helping to educate the younger women and finding charitable activities to perform for the larger community. Astell now knew firsthand how desperate the financial situation of an unemployable young woman could be without male supporters and protectors, no matter what her social class, and how empty the

lives of aristocratic women could be without intellectual pursuits to engage them, even if they faced no financial worries. Better education for women could enable them all to use their time to serve God whatever their circumstances and to support themselves through teaching if that became necessary.

Astell's book was an immediate success and had four subsequent printings by 1701. Clearly it met a felt need for new ideas concerning the education of women, since the convents where some had been educated had been disbanded long ago by Henry VIII, and the custom of providing private tutors at least for women of the upper classes had fallen out of favor with the accession of the Stuarts. Astell was not the first seventeenth-century woman to advocate improved education for women; Bathsua Makin had published *An Essay to Revive the Antient Education of Gentlewomen* in 1673, but her proposal was not as extensive as Astell's and claimed only to better fit women for marriage. Astell's *Proposal* established her reputation for wisdom and eloquence well beyond her immediate circle (it is said that Samuel Richardson admired it tremendously and used its ideas in conceiving his heroine Clarissa), and it even attracted an aristocratic sponsor, probably Princess Anne, who contemplated donating £10,000 to establish the school Astell proposed. This donor was eventually discouraged by Gilbert Burnet, bishop of Salisbury, who thought that the nunnery idea sounded a bit too "popish." Even though Protestant women's institutions had been tried before, most notably at Little Giddings in the 1630s, they were always suspected of having Roman Catholic leanings, which were dangerous in a century of violent religious opinions (James II had been deposed in 1688 after he converted to Roman Catholicism).

To argue further for her proposal, in 1697 Astell published *A Serious Proposal to the Ladies, Part II, Wherein a Method Is Offer'd for the Improvement of Their Minds* (excerpted here), which detailed the curriculum for the college. Although Astell recommended that women study virtually every subject that men studied except for classical languages, she did not advocate extensive reading. She wanted her program to be within the reach of every woman—she frequently deprecated any compliments that identified her as "exceptional"—and the heart of her educational scheme was to be a method of thinking that could be applied in any area. Having developed one's rational powers, one could then read as extensively (or not) as one wished. Among the readings in French, Astell recommended René Descartes, from whom she derived her intellectual method (see below), and educational reformer and salon intellectual Madeleine de Scudéry (see p. 761). This book, too, attracted wide notice, though not a donor, even though it was dedicated to Princess Anne.

Between 1694 and 1709 Astell published nine books. Along with the two devoted to women's education, she published five on religious issues, one on politics, and her best-known work after the two volumes of *Serious Proposal*—*Some Reflections upon Marriage* (1700), which indicted abusive husbands. She became a well-known figure in the intellectual controversies of the day. In addition to defending the Anglican Church against dissenters, Astell was a political conservative who attacked philosopher John Locke's arguments that reason endows individuals with the right to overthrow tyrants (a hot issue in a century in which two English kings had been forcibly removed from the throne, and one executed). She found these argu-

ments too individualistic, devoid of the community feeling that should bind Christians together. Her proof that such thinkers would really not keep their fellow beings' best interests at heart was that they always refused, however illogically, to extend their arguments to domestic tyranny and to address the rights of women. Astell felt that the best protection for women lay in a hierarchical social order in which all relationships were infused with a spirit of Christian love.

These books won much praise for Astell, as well as a pension from Anne when she became queen. But they also made her the butt of satire from misogynists of the day, both on the stage and in print; for example, Jonathan Swift lampooned the *Serious Proposal* in *The Tatler* in 1709, supposedly depicting Astell in a ridiculous bluestocking figure, "Madonella."² Eventually, too, after the Hanover line took the throne upon Anne's death, Astell was in disfavor for her continued support of the Stuarts. These pressures may have contributed to her decision to publish no new works after 1709, although she did continue to bring out revised editions of earlier works.

Astell also had a new and consuming interest to draw her away from writing: In 1709 she became the headmistress of a girls' charity school in Chelsea. The charity school movement was spreading rapidly in England at this time. Supported largely by private benefactions, these schools gave poor children rudimentary literacy and numeracy, inculcated high-church Anglicanism and Tory political views, and trained children for jobs as skilled laborers or house servants. Women were especially active in the charity school movement, and Astell's school was no exception. It was supported entirely by donations from her aristocratic female friends; in fact, Astell specified in the charter of the school that it should always be directed by women. Although it had considerably more modest goals than her proposed women's college, this school educated several hundred girls before Astell retired from active teaching in 1724, and it continued in existence until 1862.

In her later years, Astell's health began to fail and she accepted the offer of a home with her friend Lady Catherine Jones. She continued to oversee the curriculum at the Chelsea school and to revise her publications. She died of breast cancer in 1731.

Although neglected in the decades immediately following her death, Astell's work has recently attracted scholarly attention, and has won for her the sobriquet of "first English feminist."³ The title is somewhat misleading given that Astell, a political conservative, never questioned patriarchal hierarchies, whether in the Church, the state, or the family. She supported the aristocracy, from whom she benefited, and this is one of several ways in which her career parallels that of Christine de Pizan (see p. 540). Astell, however, trenchantly criticized the behavior of her contemporaries when it fell short of her Christian ideal. She also insisted that men and women were intellectually equal and were responsible only to God for how they conducted their lives. Women must, then, be as well educated as men so that they

²D. N. DeLuna, "Mary Astell: England's First Feminist Literary Critic," *Women's Studies* 222 (1993): p. 233.

³See, for example, Bridget Hill, ed., *The First English Feminist: Reflections on Marriage and Other Writings by Mary Astell* (New York: St. Martin's, 1986).

can discharge this responsibility to the fullest, albeit in more private venues than those open to men. Astell opposed women's preaching or speaking at the bar or political rostrum, but she advocated a wide sphere of action for women in education and community charitable work. She clearly presented a vision of women as a group who suffered because of their gender and who needed to band together to help each other.

Sutherland has argued that Astell was influenced by several powerful intellectual currents of her day. Perhaps the earliest influence was the so-called Cambridge Platonism, which her uncle Ralph Astell had imbibed as a student and passed on to her. This view of Christianity emphasized that humans had inborn conceptions of the true and the good that naturally attracted them to these qualities when they were encountered in the world. Additionally, innate human reason could identify and explore religious truths. But there was a point of Divine mystery past which human powers could not go. Ultimately the essential truths of religion had to be accepted on faith. Piety, therefore, could not securely survive if nourished by the individual's mental powers alone. It needed the support of religious institutions and rituals, and might wither amid the individualistic practices of the more austere Protestant sects. This may be why Astell always firmly clung to high Anglicanism.

Especially helpful to Astell were the arguments of Descartes that extensive classical learning, from which women had been largely excluded, was not necessary to a vibrant intellectual life: All people were innately capable of reason, the key mental activity (a view which had arisen earlier in the thinking of Ramus; see p. 674). Astell probably knew François Poulain de la Barre's *De l'égalité des deux sexes* (1673; English edition, *The Woman as Good as the Man*, 1677), which applied Descartes's ideas to women, but Astell added a Christian justification for women's equality and exhorted them directly to better themselves. She was also influenced by *L'Art de penser* (1662; English edition, *The Art of Thinking*, 1674), the logic text of the Port Royalists Antoine Arnauld and Pierre Nicole, and *De l'art de parler* (1675; English edition, *The Art of Speaking*, 1676), the rhetoric text of Bernard Lamy, an Oratorian monk. Themselves influenced by Ramus and Descartes, these thinkers assigned invention to the province of logic and focused rhetoric on style. Astell cites both these works in *A Serious Proposal, Part II*. She agrees with Lamy that rhetorical ability is mainly a natural endowment and that one should strive for clarity to accommodate one's audience, while also arousing their interest with a few unusual expressions. Also showing Lamy's influence is Astell's view that one needs little stylistic ornament because people are naturally attracted to truth if they can see it clearly. But Astell goes much further than Lamy in insisting that Christian piety is an aid to rhetoric because it induces the proper charitable attitude toward one's audience and also the proper virtuous behavior in the rhetor's life to inspire confidence. Here Astell seems closer to Augustine, one of Lamy's frequently cited sources, than to Lamy himself.

The theory of rhetoric that Astell developed initially shows the influence of sources that tend to restrict rhetoric's domain and to view it negatively. In *A Serious Proposal, Part II*, she devotes less than half as much space to rhetoric as she does to

logic. She asserts that nature is the best teacher of eloquence. Rules help only a little, and only if they have been derived from nature. Although this view might seem to downplay the importance of rhetoric, it also supports the idea that women can be rhetors if, after all, the primary requirements for eloquence are innate rather than acquired via schooling, to which women may not have access.

In Astell's scheme, invention or the "Method of Thinking" belongs to logic, not rhetoric, a diminution that can be traced back through the Port Royalists to Ramus. Astell does not discuss memory under the domain of rhetoric either. One reason might be that her sources, following Ramus, place memory, too, under logic: If one's content is logical, it will be easy to remember. Or possibly Astell is imagining that women will use rhetoric in situations where memory is not needed, either in written texts or in face-to-face conversations that do not offer the opportunity for long speeches that would need to be memorized.

Astell does give some attention to arrangement (though she does not use that term), even though Ramist rhetoricians would relegate this, too, to logic. She briefly mentions delivery, calling it "Pronunciation" and claiming that women have an advantage over men here, in that their voices are naturally more pleasing and better suited to the mostly private occasions on which Astell imagines women will speak.

Most of Astell's discussion of rhetoric is devoted to style, but this is not for her a matter of cataloging figures and tropes. First, women's language must be correct, but Astell believes that one can pick up the grammar and spelling of one's native language mostly from reading good books. Above all, one's style should be clear. Obscurity, verbosity, and pretentiousness are to be avoided; unusual words are to be used only when they aid clarity and prevent the aforementioned faults. For Astell, women's rhetoric should focus on the art of conversation, as both Sutherland and Renaissance scholar Jane Donawerth have argued. This is women's proper rhetorical sphere, different from but in no way inferior to the public sphere in which men use oratory. Astell also advances the position, unusual for her day, that a woman should write as she speaks—print does not call for an inflated style, and again, clarity should be the primary consideration. Astell argues, however, that it is appropriate to attract the audience's attention with an unusually striking expression here and there, to arouse admiration for the way the woman rhetor uses language.

The guiding principle for the woman rhetor should be to accommodate her audience. Astell derives this principle from Christianity, and she argues that Christian piety actually conduces to eloquence by encouraging a proper attitude toward audiences. An idea unique to Astell is that Christianity helps extirpate vices that lead to bad style: For example, vanity or the desire to deceive can lead to an obscure or verbose style that would confuse the audience. Moreover, Christianity adjures love and charity toward one's readers or interlocutors. The rhetor should not seek to humiliate or triumph over her audience. Rather her goal should be to get them to see the truth, and Astell notes that progress to truth is often impeded for people who do not want to admit that they were wrong. Don't wring such an admission from them, she advises, or make them feel that they are submitting by agreeing with you, and you will move them to truth more quickly. Astell goes well beyond her sources in arguing

for a nondisputatious model of communication; Sutherland suggests that this model evokes the twentieth-century ethic of caring that bespeaks women's values, as feminists have argued.⁴

Ethos is a crucial consideration of this approach. Audiences must believe that the speaker has their best interests at heart. Astell suggests that the woman rhetor can best gain this favorable *ethos* by leading a life that demonstrates her sincere commitment to Christianity, advice which Astell certainly tried to follow herself. Her biographer Ruth Perry testifies that Astell's writings are filled with a genuine love of women and concern for their welfare, both in personal terms, since she was a devoted friend, and in terms of the whole sex. She helped give European women a consciousness of themselves as a distinct group, defined by gender, that needed to unite to improve their situation. In this sense, Mary Astell truly was one of the first feminists.

Selected Bibliography

Modern editions of *A Serious Proposal to the Ladies, Parts I and II* have appeared, one from the Source Book Press (1970), and another edited by Patricia Springborg (1997; our excerpt is taken from this edition). Springborg has also edited a collection of other work, *Astell: Political Writings* (1996). See also Bridget Hill's, *The First English Feminist: Reflections on Marriage and Other Writings by Mary Astell* (1986), a good collection that does not include *A Serious Proposal*.

The standard biography is Ruth Perry, *The Celebrated Mary Astell* (1986). Perry summarizes Astell's thinking in all her areas of interest. Margaret L. King relates her to earlier figures such as Christine de Pizan in *Women of the Renaissance* (1991). Hilda L. Smith places her in the history of feminism in *Reason's Disciples: Seventeenth-Century English Feminists* (1982). A good short introduction that focuses on Astell's contributions to rhetoric is Christine Mason Sutherland's "Mary Astell: Reclaiming Rhetorica in the Seventeenth Century" (in *Reclaiming Rhetorica*, ed. Andrea A. Lunsford, 1995). Sutherland also helpfully discusses the difficulties inherent in reading Astell through a twentieth-century feminist lens in "Women in the History of Rhetoric: The Past and the Future" (in *The Changing Tradition: Women in the History of Rhetoric*, ed. Christine Mason Sutherland and Rebecca Sutcliffe, 1999).

Jane Donawerth discusses Astell's commitment to a conversational model of rhetoric and helpfully relates her to other women rhetoricians of the period, in "Conversation and the Boundaries of Public Discourse in Rhetorical Theory by Renaissance Women" (*Rhetorica* 16.2 [spring 1998]: 181–99). D. N. DeLuna locates Astell in her contemporary context of misogynist satire and the ladies' conduct books that combated it in "Mary Astell: England's First Feminist Literary Critic" (*Women's Studies* 22.2 (1993): 231–42). Christine Mason Sutherland gives more information on sources of Astell's thought in "Outside the Rhetorical Tradition: Mary Astell's Advice to Women in Seventeenth-Century England" (*Rhetorica* 9.2 [spring 1991]: 147–63). For more on Astell's political and social thought, see Ruth Perry, "Mary Astell and the Feminist Critique of Possessive Individualism" (*Eighteenth-Century Studies* 23.4 [1990]: 444–57).

From *A Serious Proposal to the Ladies, Part II*

The Introduction Containing a farther Perswasive to the Ladies To endeavour the Improvement of their Minds

Did the Author of the former Essay towards th' Improvement of the Ladies consult her own Reputation only, she wou'd not hazard it once more, by treating on so nice a Subject in a Curious and Censorious Age, but content herself with the favourable reception which the good natur'd part of the World were pleased to afford to her first Essay.¹ It is not unusual she knows for Writers to mind no more than their own Credit, to be pleas'd if they can make a handsom flourish, get a Name amongst the Authors, come off with but a little Censure and some Commendations. Or if there are a few generous Souls who are got above the Hope or Fear of vulgar breath, who don't much regard that Applause which is dispenc'd more commonly by Fancy or Passion than by Judgment; they rest satisfied however in a good Intention, and comfort themselves that they've endeavour'd the Reformation of the Age, let those look to't who will not follow their Advices. But give her leave to profess, that as she is very indifferent what the Critics say, if the Ladies receive any Advantage by her attempts to serve them, so it will give her the greatest uneasiness if having prov'd that they are capable of the best things, she can't perswade to a pursuit of them. It were more to her satisfaction to find her Project condemn'd as foolish and impertinent, than to find it receiv'd with some Approbation, and yet no body endeavouring to put it in Practice. Since the former wou'd only reproach her own Understanding, but the latter is a shame to Mankind, as being a plain sign that 'tho they discern and commend what is Good, they have not the Vertue and Courage to Act accordingly.

And can you Ladies deny her so cheap a Reward for all the Good will she bears you, as the

Pleasure of seeing you Wise and Happy? Can you envy her the Joy of assisting you at *Your* Triumphs? for if ever she contend for Laurels it shall be only to lay them at the Ladies feet. Why won't you begin to think, and no longer dream away your Time in a wretched incogitancy?² Why does not a generous Emulation fire your hearts and inspire you with Noble and Becoming Resentments? The Men of Equity are so just as to confess the errors which the Proud and Inconsiderate had imbib'd to your prejudice, and that if you allow them the preference in Ingenuity, it is not because you *must* but because you *will*. Can you be in Love with servitude and folly? Can you dote on a mean, ignorant and ignoble Life? An Ingenious Woman is no Prodigy to be star'd on, for you have it in your power to inform the World, that you can every one of you be so, if you please your selves. It is not enough to wish and to would it, or t'afford a faint Encomium upon what you pretend is beyond your Power; Imitation is the heartiest Praise you can give, and is a Debt which Justice requires to be paid to every worthy Action. What Sentiments were fit to be rais'd in you to day ought to remain to morrow, and the best Commendation you can bestow on a Book is immediately to put it in Practice; otherwise you become self-condemn'd, your Judgment reproaches your Actions, and you live a contradiction to your selves. If you *approve*, Why don't you *follow*? And if you *Wish*, Why shou'd you not *Endeavour*? especially since that wou'd reduce your Wishes to Act, and make you of Well-wishers to Vertue and Good sense, become glorious Examples of them.

And pray what is't that hinders you? The singularity of the Matter? Are you afraid of being out of the ordinary way and therefore admir'd and gaz'd at? Admiration does not use to be uneasy to our Sex; a great many Vanities might be spar'd if we consulted only our own conveniency and not other peoples Eyes and Sentiments: And

Edited by Patricia Springborg.

¹Clearly the reception of the first part of *A Serious Proposal* was not entirely good natured. [P.S.]

²Want of thought or reflection (*OED*). [P.S.]

why shou'd that which usually recommends a trifling Dress, deter us from a real Ornament? Is't not as fine to be first in this as well as any other Fashion? Singularity is indeed to be avoided except in matters of importance, in such a case Why shou'd not we assert our Liberty, and not suffer every Trifler to impose a Yoke of Impertinent Customs on us? She who forsakes the Path to which Reason directs is much to blame, but she shall never do any thing Praise-worthy and excellent who is not got above unjust Censures, and too steady and well resolv'd to be sham'd from her Duty by the empty Laughter of such as have nothing but airy Noise and Confidence to recommend them. Firmness and strength of Mind will carry us thro all these little persecutions, which may create us some uneasiness for a while, but will afterwards end in our Glory and Triumph.

Is it the difficulty of attaining the Bravery of the Mind, the Labour and Cost that keeps you from making a purchase of it? Certainly they who spare neither Money nor Pains t'obtain a gay outside and make a splendid appearance, who can get over so many difficulties, rack their brains, lay out their time and thoughts in contriving, stretch their Relations Purses in procuring, nay and rob the very Poor, to whom the Overplus of a full Estate, after the owners Necessaries and decent Conveniences according to her Quality are supplied, is certainly due, they who can surmount so many difficulties, cannot have the face to pretend any here. Labour is sweet when there's hope of success, and the thing labour'd after is Beautiful and Desireable: And if Wisdom be not so I know not what is; if it is not worth while to procure such a temper of mind as will make us happy in all Conditions, there's nothing worth our Thoughts and Care, 'tis best to fold our hands with *Solomon's* Sluggard and sleep away the remainder of a useless wretched Life.³ And that success will not be wanting to our Endeavours if we heartily use them, was design'd to be evinc'd in the former Essay, and I hope I have

³Probably a reference to Solomon's exhortations against idleness in Proverbs 6: 9; "How long wilt thou sleepe, O sluggard?" [P.S.]

not lost my Point, but that the Theory is sufficiently establish'd; and were there but a General Attempt, the Practice wou'd be so visible that I suppose there wou'd remain no more place to dispute it. But this is your Province Ladies: For tho I desire your improvement never so passionately, tho I shou'd have prov'd it feasible with the clearest Demonstration, and most proper for you to set about; yet if you *will* believe it impossible, and upon that or any other prejudice forbear t'attempt it, I'me like to go without my Wishes; my Arguments what ever they may be in themselves, are weak and impertinent to you, because you make them useless and defeat them of the End they aim at. But I hope better things of you; I dare say you understand your own interest too well to neglect it so grossly and have a greater share of sense, whatever some Men affirm, than to be content to be kept any longer under their Tyranny in Ignorance and Folly, since it is in your Power to regain your Freedom, if you please but t'endeavour it. I'me unwilling to believe there are any among you who are obstinately bent against what is praise-worthy in themselves, and Envy or Detract from it in others; who won't allow any of their Sex a capacity to write Sense, because they want it, or exert their Spleen where they ought to shew their Kindness or Generous Emulation; who sicken at their Neighbours Vertues, or think anothers Praises a lessening of their Character; or meanly satisfie ill-nature by a dull Malicious Jest at what deserves to be approv'd and imitated. No Ladies, Your Souls are certainly of a better Make and Nobler temper, your Industry is never exerted to pull down others but to rise above them, the only Resentment that arises at your Neighbours Commendations is a harmless blush for your own Idleness in letting them so far outstrip you, and a generous Resolution to repair your former neglects by future diligence; One need not fear offending you by commending an other Lady in your Presence, or that it shou'd be thought an affront or defect in good breeding to give them their lawful Eulogies: You have too just a Sentiment of your own Merit to envy or detract from others, for no Body's addicted to these little Vices but they who are diffident of their own

worth; You know very well 'tis infinitely better to *be* good than to *seem* so,⁴ and that true Vertue has Beauty enough in her self t'attract our hearts and engage us in her service, tho she were neglected and despis'd by all the World. 'Tis this therefore you endeavour after, 'tis the approbation of GOD and your own Consciences you mainly esteem, which you find most ascertain'd by an humble Charity, and that you never merit Praise so much, because you never make so great a progress in what is truly praise-worthy, as when your own defects are often in your eyes t'excite you to watch against and amend them, and other peoples Vertues continually represented before you in their brightest lustre, to the end you may aspire to equal or surpass them.

I suppose then that you're fill'd with a laudable Ambition to brighten and enlarge your Souls, that the Beauty of your Bodies is but a secondary care, your Dress grows unconcerning, and your Glass is ne're consulted but in such little intervals of time as hang loose between those hours that are destin'd to nobler Employments, you now begin to throw off your old Prejudices and smile on 'em as antiquated Garbs; false Reasoning won't down with you, and glittering Nonsense tho address'd to your selves in the specious appearance of Respect and Kindness, has lost its *haut goust*;⁵ Wisdom is thought as better recommendation than Wit, and Piety than a *Bon-mien*;⁶ you esteem a Man only as he is an admirer of Vertue, and not barely for that he is yours; Books are now become the finest Ornaments of your Closets and Contemplation the most agreeable Entertainment of your leisure hours; your Friendships are not cemented by Intrigues nor spent in vain Diversions, but in the search of Knowledge, and acquisition of Vertuous Habits, a mutual Love to which was the Origin of 'em; nor are any Friends so acceptable as those who tell you faithfully of your faults and take the properest method

⁴Astell appeals to the Socratic dictum, "Be what you wish to appear." [P.S.]

⁵A 17th-century form of *bon gout*, "high flavour" (*OED*). [P.S.]

⁶"*Mien*," the English poetic form of French "*mine*," expression, aspect of countenance, look, appearance (*OED*), so "good appearance." [P.S.]

to amend 'em. How much better are you entertain'd now your Conversations are pertinent and ingenious, and that Wisdom never fails to make one in your Visits? Solitude is no more insupportable; you've conquered that silly dread of being afraid to be alone, since Innocence is the safest Guard, and no Company can be so desirable as GOD's and his holy Angels conversing with an upright mind; your Devotion is a Rational service, not the repetition of a Set of good words at a certain season; you read and you delight in it, because it informs your Judgments, and furnishes Materials for your thoughts to work on; and you love your Religion and make it your Choice because you understand it; the only Conquest you now design and lay out your care to obtain is over Vice and Prophaness; you study to engage men in the love of true Peity and Goodness, and no farther to be Lovers of your selves than as you are the most amiable and illustrious examples of 'em; you find your Wit has lost nothing of its salt and agreeableness by being employ'd about its proper business, the exposing Folly; your Raillery⁷ is not a whit less pleasant for being more Charitable, and you can render Vice as ridiculous as you please, without exposing those unhappy Persons who're guilty of it; your Humour abates not of its innocent gaity now that it is more upon the Guard, for you know very well that true Joy is a sedate and solid thing, a tranquility of mind, not a boisterous and empty flash: Instead of Creditors your doors are fill'd with indigent Petitioners who don't so often go without your Bounty as the other us'd to do without their just demands; nor are you unjust to some under colour of being Charitable to others, and when you give Liberally, give no more than what is lawfully your own. You disdain the base ungenerous Practice of pretending Kindness where you really mean none; and of making a poor Country Lady less instructed in the formalities of the Town than your selves, pay sufficiently for your seeming Civility and kind Entertainment by becoming the Subject of your mirth and diversion as soon as she is gone; but one may now pretty securely rely on your Sincerity, for

⁷Mockery. [P.S.]

when this lower sort of Treachery is abhorr'd, there can certainly be no place for that more abominable one of betraying and seducing unwary Innocence. I do not question Ladies but that this is the Practice of the greatest number of you, and would be of all the rest were it not for some little discouragements they meet with, which really are not so great as their own modesty and diffidence of themselves represent 'em. They think they've been bred up in Idleness and Impertinence, and study will be irksome to them, who have never employ'd their mind to any good purpose, and now when they wou'd they want the method of doing it; they know not how to look into their Souls, or if they do, they find so many disorders to be rectified, so many wants to be supplied, that frighted with the difficulty of the work they lay aside the thoughts of undertaking it. They have been barbarously us'd, their Education and greatest Concerns neglected, and Guardians were busied in managing their Fortunes and regulating their Mien; who so their Purse was full and their outside plausible⁸ matter'd not much the poverty and narrowness of their minds, have taught them perhaps to repeat their Catechism and a few good Sentences, to read a Chapter and say their Prayers, tho perhaps with as little Understanding as a Parrot, and fancied that this was Charm enough to secure them against the temptations of the present world and to waft them to a better; and so thro want of use and by misapplying their Thoughts to trifles and impertinences, they've perhaps almost lost those excellent Capacities which probably were afforded them by nature for the highest things. For such as these I've a world to Kindness and Compassion, I regret their misfortune as much as they can themselves, and suppose they're willing to repair it and very desirous to inform themselves were't not for the shame of confessing their ignorance. But let me intreat them to consider that there's no Ignorance so shameful, no Folly so absurd as that which refuses Instruction, be it upon what account it may. All good Persons will pity not upbraid⁹ their former unhappiness,

⁸Deserving of applause or approval (obsolete) (*OED*). Astell invariably uses the word in this sense. [P.S.]

⁹Allege as a ground for censure (rare); reproach (*OED*). [P.S.]

as not being their own but other Peoples fault; whereas they themselves are responsible if they continue it, since that's an Evidence that they are silly and despicable, not because they *cou'd* not, but because they *wou'd* not be better Informed. But where is the shame of being taught? for who is there that does not need it? Alas, Human Knowledge is at best defective, and always progressive, so that she who knows the most has only this advantage, that she has made a little more speed than her Neighbours. And what's the Natural Inference from hence? Not to give out, but to double our diligence; perhaps we may outstrip 'em, as the Penitent often does him who needs no Repentance. The worst that can be is the perishing in a glorious attempt, and tho we shou'd happen to prove successful, 'tis yet worth our while to've had such a noble design. But there's no fear of ill success if we are not wanting to our selves, an honest and laborious mind may perform all things. Indeed an affected Ignorance, a humorous delicacy and niceness which will not speculate a notion for fear of spoiling a look, nor think a serious thought lest she shou'd damp the gaiety of her humour; she who is so top full of her outward excellencies, so careful that every look, every motion, every thing about her shou'd appear in Form, as she employs her Thoughts to a very pitiful use, so is she almost past hopes of recovery, at least so long as she continues this humour, and does not grow a little less concern'd for her Body that she may attend her Mind. Our directions are thrown away upon such a temper, 'tis to no purpose to harp to an Ass, or to chant forth our Charms in the Ears of a deaf Adder;¹⁰ but I hope there are none so utterly lost in folly and impertinence: If there are, we can only afford them our Pity for our Advice will do no good.

As for those who are desirous to improve and only want to be assisted and put into the best method of doing it, somewhat was attempted in order to do them that service in the former Essay, in which they may please to remember that hav-

¹⁰Possibly a reference to Psalm 58: 4-5, which exclaims of the wicked that "Their poison is like the poyson of a serpent; they are like the deaf adder that stoppeth her eare: which will not hearken to the voice of charmers, charming never so wisely." [P.S.]

ing so mov'd that groundless prejudice against an ingenious Education of the Women, which is founded upon supposition of the impossibility or uselessness of it, and having assign'd the reasons why they are so little improv'd, since they are so capable of improvement, and since tis so necessary that others as well as themselves shou'd endeavour it; which reasons are chiefly Ill-nurture, Custom, loss of time, the want of Retirement, or of knowing how to use it, so that by the disuse of our Faculties we seem to have lost them if we ever had any are sunk into an Animal life wholly taken up with sensible objects; either have no Ideas of the most necessary things or very *false* ones; and run into all those mischiefs which are the natural Consequences of such mismanagements; we then proceeded to propose a Remedy for these Evils, which we affirm'd cou'd hardly be rectified but by erecting a Seminary where Ladies might be duly Educated, and we hope our Proposition was such that all impartial Readers are convinc'd it wou'd answer the Design, that is, tend very much to the real advantage and improvement of the Ladies. In order to which it was in general propos'd to acquaint them with Judicious Authors, give them opportunity of Retirement and Recollection and put them in a way of Ingenious Conversation, whereby they might enlarge their prospect, rectify their false Ideas, form in their Minds adequate conceptions of the End and Dignity of their Natures, not only have the Name and common Principles of Religion floating in their Heads and sometimes running out at their Mouths, but understand the design and meaning of it, and have a just apprehension, a lively sentiment of its Beauties and Excellencies; know wherein the Nature of a true Christian consists; and not only feel Passions, but be able to direct and regulate their Motions; have a true Notion of the Nothingness of Material things and of the reality and substantialness of immaterial, and consequently contemn this present World as it deserves, fixing all their Hopes upon and exerting all their Endeavours to obtain the Glories of the next. But because this was only propos'd in general, and the particular method of effecting it left to the Discretion of those who shou'd Govern and Manage the Seminary, without which we are still of Opinion that the Interest of the Ladies

can't be duly serv'd [yet]¹¹ in the mean time till that can be erected and that nothing in our power may be wanting to do them service, we shall attempt to lay down in this second part some more minute Directions, and such as we hope if attended to may be of use to them. . . .

CHAPTER III

[IV. A Natural Logic]

. . . Now what can be more provoking than the Idea we have of a Designing Person? of one who thinks his own Intellectuals so strong and ours so weak, that he can make us swallow any thing, and lead us where he pleases? such an one seems to have an Intention to reduce us to the vilest Slavery,¹² the Captivation of our Understandings, which we justly reckon to be the highest Insolence. And since every one puts in for a share of Sense, and thinks he has no reason to complain of the distribution of it, whoever supposes that another has an over-weaning Opinion of his own, must needs think that he undervalues his Neighbours Understanding, and will certainly repay him in his own Coin, and deny him those advantages he seems to arrogate.¹³

The most we can say for our selves when the weakness of our Arguments comes to be discover'd, is that we were mistaken thro Rashness or Ignorance, which tho more pardonable than the former, are no recommending Qualities. If we argue falsly and know not that we do so, we shall be more pittied than when we do, but either way disappointed. And if we have added Rash Censures of those who are not of our Mind, Pride or

¹¹"Yet" should be deleted according to Errata list (1697 edn), p. 298. [P.S.]

¹²Astell introduces the rhetoric of slavery, for which *Reflections upon Marriage* (1700) and the 1706 Preface are so famous. [P.S.]

¹³Astell's argument against Locke as an opportunist takes a new twist. Locke, assistant to the Earl of Shaftesbury in the 1670's and '80's, during the period of his commercial involvement in the slave-owning American colonies, had argued strongly against slavery in the second of the *Two Treatises of Government*, bk 2, §149; (Laslett edn, 1988, p. 367). But Astell convicts him of impugning the capacity of human understanding in the *Essay*, in order to enslave people to his opinions. [P.S.]

Positiveness¹⁴ to our Errors as we cannot so handsomely Retreat so neither will so fair a Quarter be allow'd as those who Argue with Meekness, Modesty and Charity may well expect. So that when we have cast up our Account and estimated the Present Advantages that false Arguings bring us, I fear what we have got by a Pretence to Truth, won't be found to countervail the loss we shall sustain by the Discovery that it was no more. Which may induce us (if other Considerations will not) to be wary in receiving any Proposition our selves, and restrain us from being forward to impose our Sentiments on others.

After all, 'tis a melancholy reflection that a great part of Mankind stand in need of arguments drawn from so low a Motive as Worldly Interest, to persuade them to that to which they have much greater inducements. It is strange that we shou'd need any other considerations besides the bare performance of our Duty, and those unspeakable advantages laid up for all such as do it sincerely, hereafter. When we have the Approbation of GOD and the infinite Rewards he has propos'd to those who study to recommend themselves to him, for our Encouragement, how low are we sunk if the Applause of Men and the little Trifles which they can bestow weigh any thing with us! I am therefore almost asham'd of proposing so mean a consideration, but the degeneracy of the Age requir'd it, and they who perhaps at first follow Truth as the Jews did once, for the Loaves only,¹⁵ may at last be attracted by its own Native Beauties.

[V. *Rhetoric propos'd*]

As Nature teaches us Logic, so does it instruct us in Rhetoric much better than Rules of Art, which if they are good ones are nothing else but those Judicious Observations which Men of Sense

¹⁴Subjective certainty, confidence, assurance (*OED*). [P.S.]

¹⁵Astell's phraseology suggests an Old Testament parable, probably 1 Samuel 10: 3-4; 17: 17; 21: 3; 25: 18 or 2 Samuel 16: 1. But she could have the New Testament parable of the loaves and fishes in mind from Matthew 14: 17 to 15: 36; Mark 6: 38 to 8: 19; Luke 9: 13 to 11: 5; or John 6: 9-26. [P.S.]

have drawn from Nature, and which all who reflect on the Operations of their own Minds will find out 'em selves. The common Precepts of Rhetoric may teach us how to reduce Ingenious ways of speaking to a certain Rule, but they do not teach us how to Invent them, this is Natures work and she does it best; there is as much difference between Natural and Artificial Eloquence as there is between Paint and True Beauty. So that as a good Author well observes [*L'art de penser*, p. 22], all that's useful in this Art, "is the avoiding certain evil ways of Writing and Speaking, and above all an Artificial and Rhetorical Stile Compos'd of false Thoughts, Hyperboles and forc'd Figures which is the greatest fault in Rhetoric."¹⁶

I shall not therefore recommend under the name of Rhetoric an Art of speaking floridly on all subjects, and of dressing up Error and Impertinence in a quaint and taking garb; any more than I did that Wrangling which goes by the name of Logic, and which teaches to dispute *for* and *against* all Propositions indefinitely whether they are True or False. It is an abuse both of Reason and Address to press 'em into the Service of a Trifle or an Untruth; and a mistake to think that any Argument can be rightly made, or any Discourse truly Eloquent that does not illustrate and inforce Truth. For the design of Rhetoric is to remove those Prejudices that lie in the way of Truth, to Reduce the Passions to the Government of Reasons; to place our Subject in a Right Light, and excite our Hearers to a due consideration of it. And I know not what exactness of Method, pure and proper Language, Figures,¹⁷ insinuating ways of Address and the like signify, any farther than as they contribute to the Service of Truth by rendering our Discourse Intelligible, Agreeable and Convincing. They are indeed very serviceable to it when they are duly managed, for Good

¹⁶Astell quotes in fact from the introductory Second Discourse of the English edn of the *Port Royal Logic* (1693 edn), pp. 24-5, . . . [P.S.]

¹⁷*The Art of Speaking*, by Bernard Lamy (1640-1715), followed the programme of the *Port Royal Logic* on rhetoric, devoting part 4 to "Figures," defined by him as "Rhetorical Figments, invented for ornaments of discourse" (1676 edn), p. 99. [P.S.]

sense loses much of its efficacy by being ill express'd, and an ill stile is nothing else but the neglect of some of these, or over doing others of 'em.

Obscurity, one of the greatest faults in Writing, does commonly proceed from a want of Meditation, for when we pretend to teach others what we do not understand our selves, no wonder that we do it at a sorry rate. Tis true, Obscurity is sometimes design'd, to conceal an erroneous opinion which an Author dares not openly own, or which if it be discover'd he has a mind to evade. And sometimes even an honest and good Writer who studies to avoid may insensibly fall into it, by reason that his Ideas being become familiar to himself by frequent Meditation, a long train of 'em are readily excited in his mind, by a word or two which he's us'd to annex to them; but it is not so with his Readers who are perhaps strangers to his Meditations, and yet ought to have the very same Idea rais'd in theirs that was in the Authors mind, or else they cannot understand him. If therefore we desire to be intelligible to every body, our Expressions must be more plain and explicit than they needed to be if we writ only for our selves, or for those to whom frequent Discourse has made our Ideas familiar.

Not that it is necessary to express at length all the Process our Mind goes thro in resolving a Question, this wou'd spin out our Discourse to an unprofitable tediousness, the Operations of the Mind being much more speedy than those of the Tongue or Pen. But we shou'd fold up our Thoughts so closely and neatly, expressing them in such significant tho few words, as that the Readers Mind may easily open and enlarge them. And if this can be done with facility we are Perspicuous¹⁸ as well as Strong, if with difficulty or not at all, we're then perplext and Obscure Writers.

Scarce any thing conduces more to Clearness, the great Beauty of writing, than Exactness of Method; nor perhaps to Persuasion, for by putting every thing in its proper place with due Order and Connexion, the Readers Mind is gently led where the Writer wou'd have it. Such a Stile is Easy without Softness; Copious as that

signifies the omission of nothing necessary, yet not Wordy and Tedious; nor stuff with Nauseous Repetitions, which they who do not Think before they Write and dispose their Matter duly, can scarce avoid. The Method of Thinking has been already shewn, and the same is to be observ'd in Writing, which if it be what it ought, is nothing else but the communicating to others the result of our frequent and deep Meditations, in such a manner as we judge most effectual to convince them of those Truths which we believe. Always remembring that the most natural Order is ever best that we must first prepare their minds by removing those Prejudices and Passions which are in our way, and then propose our Reasons with all the Clearness and Force, with all the Tenderness and Good-Nature we can.

And since the Clearness and Connexion as well as the Emphasis and Beauty of a Discourse depends in the great measure on a right use of the Particles, whoever wou'd Write well ought to inform themselves nicely in their Proprieties. a[n]¹⁹ And, a The, a But, a For, Etc. do very much perplex the Sense when they are misplac'd, and make the Reader take it many times quite otherwise than the Writer meant it. But this is not a place to say all that this Subject deserves; they who wou'd have much in a little, may consult an Ingenious Author who has touch'd upon't [**Lock of Hum. Und. B. 3, Ch. 7*],²⁰ and from thence take hints to observe how these little words are applied in good Authors, and how themselves may best use them to express the several Postures of their own Minds.

In a word, I know not a more compendious way to good Speaking and Writing, than to chuse out the most excellent in either as a Model on which to form our selves. Or rather to imitate the Perfections of all, and avoid their mistakes; for few are so perfect as to be without fault, and few so bad as to have nothing good in them. A true Judgment distinguishes, and neither rejects the

¹⁹an, as per Errata list, p. 298. [P.S.]

²⁰Astell's marginal note is to Locke's *Essay Concerning Human Understanding*, bk 3, ch. 7, "Of Particles" (1690 edn), pp. 265–6, in which he discusses the uses of the definite and indefinite articles, conjunctions, etc. This is a topic discussed at length in Lamy's *Art of Speaking*, Part I, chs 1 and 2. [P.S.]

¹⁸Clearly understood, lucid (*OED*). [P.S.]

Good for the sake of the Bad, nor admits the Bad because of the Good that is mingled with it. No sort of Style but has its excellency and is liable to defect: If care be not taken the Sublime which subdues us with Nobleness of Thought and Grandeur of Expression, will fly out of sight and by being Empty and Bombast become contemptible. The Plain and Simple will grow Dull and Object; the Severe dry and Rugged, the Florid vain and impertinent. The Strong instead of rousing the Mind will distract and entangle it by being Obscure; even the Easy and Perspicuous if it be too diffuse, or over delicate tires us instead of pleasing. Good Sense is the principal thing without which all our polishing is of little Worth, and yet if Ornament be wholly neglected very few will regard us. Studied and artificial periods²¹ are not natural enough to please, they shew too much solicitude about what does not deserve it, and a loose and careless Style declares too much contempt of the Public. Neither Reason nor Wit entertain us if they are driven beyond a certain pitch, and Pleasure it self is offensive if it be not judiciously dispenc'd.

Every Author almost has some beauty or blemish remarkable in his Style from whence it takes its name; and every Reader has a peculiar tast of Books as well as Meats. One wou'd have the Subject exhausted, another is not pleas'd if somewhat be not left to enlarge on in his own Meditations. This affects a Grave that a Florid Style; One is for Easiness, a second for Plainness, a third for Strength, and a fourth for Politeness. And perhaps the great secret of Writing is the mixing all these in so just a proportion that every one may tast what he likes without being disgusted by its contrary. And may find at once that by the Solidity of the Reason, the purity and propriety of Expression, and insinuating agreeableness of Address, his Understanding is Enlightned, his Affections subdued and his Will duly regulated.

This is indeed the true End of Writing, and it wou'd not be hard for every one to judge how well they had answer'd it, wou'd they but lay aside Self-Love,²² so much of it at least, as

makes them partial to their own Productions. Did we consider our own with the same Severity, or but Indifferency that we do anothers Writing, we might pass a due Censure on it, might discern what Thought was Crude or ill exprest, what Reasoning weak, what passages superfluous, where we were flat and dull, where extravagant and vain, and by Criticizing on our selves does greater kindness to the World than we can in making our Remarques on others. Nor shou'd we be at a loss, if we were Impartial, in finding out Methods to Inform, Persuade and Please; for Human Nature is for the most part much alike in all, and that which has a good effect on us, will generally speaking have the same on others. So that to guess what success we are like to have, we need only suppose our selves in the place of those we Address to, and consider how such a Discourse wou'd operate on us, if we had their Infirmities and Thoughts about us.

And if we do so I believe we shall find, there's nothing more improper than Pride and Positiveness, nor any thing more prevalent than an innocent compliance with their weakness: Such as pretends not to dictate to their Ignorance, but only to explain and illustrate what they did or might have known before if they had consider'd it, and supposes that their Minds being employ'd about some other things was the reason why they did not discern it as well as we. For Human Nature is not willing to own its Ignorance; Truth is so very attractive, there's such a natural agreement between our Minds and it, that we care not to be thought so dull as not to be able to find out by our selves such obvious matters. We shou'd therefore be careful that nothing pass from us which upbraids our Neighbours Ignorance, but study to remove't without appearing to take notice of it, and permit 'em to fancy if they please, that we believe them as Wise and Good as we endeavour to make them. By this we gain their Affections which is the hardest part of our Work, excite their Industry and infuse a new Life into all Generous Tempers, who conclude there's

²¹Concluding sentences, perorations (archaic). [P.S.]

²²Astell compares the negative form of self-love, *amour*

propre, compared with the positive, *amour-de-soi*, as discussed in the multi-volume *Moral Essays* of Pierre Nicole. . . . [P.S.]

great hopes they may with a little pains attain what others think they Know already, and are asham'd to fall short of the good Opinion we have entertain'd of 'em.

And since many wou'd yeild to the Clear Light of Truth were't not for the shame of being overcome, we shou'd Convince but not Triumph, and rather Conceal our Conquest than Publish it. We doubly oblige our Neighbours when we reduce them into the Right Way, and keep it from being taken notice of that they were once in the Wrong, which is certainly a much greater satisfaction than that blaze of Glory which is quickly out, that noise of Applause which will soon be over. For the gaining of our Neighbour, at least the having honestly endeavour'd it, and the leading our own Vanity in Triumph are Real Goods and such as we shall always have the Comfort of. It is to be wish'd that such Propositions as are not attended with the Clearest Evidence were deliver'd only by way of Enquiry, since even the brightest Truth when Dogmatically dictated is apt to offend our Readers, and make them imagine their Liberty's impos'd on, so far is Positiveness from bringing any body over to our Sentiments. And besides, we're all of us liable to mistake, and few have Humility enough to confess themselves Deceiv'd in what they have confidently asserted, but think they're obliged in Honour to maintain an Opinion they've once been Zealous for, how desirous soever they may be to get rid on't, cou'd they do it handsomely. Now a Modest way of delivering our Sentiments assists us in this, and leaves us at liberty to take either side of the Question as Reason and Riper Considerations shall determine.

In short, as Thinking conformably to the Nature of Things is True Knowledge, so th' expressing our Thoughts in such a way, as more readily, and with the greatest Clearness and Life, excites in others the very same Idea that was in us, is the best Eloquence. For if our Idea be conformable to the Nature of the thing it represents, and in Relations duly stated, this is the most effectual way both to Inform and Perswade, since Truth being always amiable, cannot fail or attracting when she's plac'd in a Right Light, and those to whom we offer her, are made Able and Willing to discern her Beauties. If therefore we

thoroughly understand our Subject and are Zealously affected with it, we shall neither want suitable word to explain, nor perswasive Methods to recommend it.

And since Piety and Vertue should in spite of the mistaken Customs of the Age be the principal Theme of a Christians Conversation; that which those who bear that Sacred Name ought always to regard some way or other, even when it might be unseasonable to speak of it directly, the way to be good Orators is to be good Christians, the Practice of Religion will both instruct us in the Theory, and most powerfully inforce what we say of it. Did we truly relish the Delights of GOD'S Service, we cou'd neither refrain from talking of the Pleasure, nor be so ill-natur'd as not to strive to Communicate it; and were we duly warm'd with a Zeal for his Glory and concern for our Neighbours Soul, no Figures of Rhetoric, no Art of Perswasion wou'd be wanting to us. We shou'd diligently watch for Opportunities, and carefully improve them, accommodating our Discourse to the Understanding and Genius of all we cou'd hope to do good to.

Besides, by being True Christians we have Really that Love for others which all who desire to perswade must pretend to; we've that *Probity* and *Prudence*, that *Civility* and *Modesty* which the Masters of this Art say a good Orator must be endow'd with; and have pluck'd up those Vicious Inclinations from whence the most distastful faults of Writing proceed. For why do we chuse to be Obscure but because we intend to Deceive, or wou'd be thought to see much farther than our Neighbours? One sort of Vanity prompts us to be Rugged and Severe, and so possess'd with the imagin'd Worth and Solidity of our Discourse, that we think it beneath us to Polish it: Another disposes us to Elaborate and Affected ways of Writing, to Pompous and improper Ornaments; and why are we tediously Copious but that we fancy every Thought of ours is extraordinary? Contradiction is indeed for our advantage as tending to make us wiser, yet our Pride makes us impatient under it, because it seems to Lessen that Esteem and Deference we desire shou'd be paid us. Whence come those sharp Reflections,²³

²³Ditto. [P.S.]

those imagin'd strains of Wit, not to be endur'd amongst Christians, and which serve not to Convince but to Provoke, whence come they but from Ill-nature or Revenge, from a Contempt of others and a desire to set forth our own Wit? Did we write less for our selves we should sooner gain our Readers, who are many times disgusted at a well writ Discourse if it carries a tange of Ostentation: And were our Temper as Christian as it ought to be, our Zeal wou'd be spent on the most Weighty things, not on little differences of Opinions.

I have made no distinction in what has been said between Speaking and Writing, because tho they are talents which do not always meet, yet there is no material difference between 'em. They Write best per haps who do't with the gentle and easy air of Conversation; and they Talk best who mingle Solidity of Thought with th' agreeableness of a ready Wit. As for *Pronunciation*, tho it takes more with some *Auditors* many times than Good Sense, there needs little be said of it here, since Women have no business with the Pulpit, the Bar or *St. Stephens Chapel*;²⁴ And Nature does for the most part furnish 'em with such a Musical Tone, Perswasive Air and winning Address as renders their Discourse sufficiently agreeable in Private Conversation. And as to spelling which they're said to be defective in, if they don't believe as they're usually told, that its fit for 'em to be so, and that to write exactly is too Pedantic, they may soon correct that fault, by Pronouncing their words aright and Spelling 'em accordingly. I know this Rule won't always hold because of an Imperfection in our Language which has been oft complain'd of but is not yet amended; But in this case a little Observation or recourse to Books will assist us; and if at any time we happen to mistake by Spelling as we

²⁴St Stephen's Chapel, built by King Stephen, became the meeting place for the House of Commons from 1547, once it had moved venues from the chapter house of Westminster Abbey (*Encyclopaedia Britannica*, vol. 28, p. 551). Astell later uses St Stephen's Chapel to refer metonymically to the Houses of Parliament in *A Fair Way with the Dissenters* (1704), p. 21. Her remarks here may echo the famous epithet of Fénelon in *De l'Education des filles* (1687), (1933 edn, p. 18), that women "ought neither to govern the state, nor make war, nor enter into the sacred ministry." [P.S.]

Pronounce, the fault will be very Venial,²⁵ and Custom rather to blame than we.

I've said nothing of *Grammar* tho we can't Write properly if we transgress its Rules, supposing that Custom and the reading of English Books are sufficient to teach us the Grammar of our own Tongue, If we do but in any measure attend to them. And tho Women are generally accus'd of Writing false English, if I may speak my own Experience, their Mistakes are not so common as is pretended, nor are they the only Persons guilty. What they most commonly fail in is the Particles and Connexion, and that generally thro a Briskness of temper which make them forget, or Hast which will not suffer 'em to read over again what went before. And indeed, those who Speak true Grammar unless they're very Careless cannot write false, since they need only peruse what they've Writ, and consider whether they wou'd express 'emselves thus in Conversation.²⁶

But for this and for Figures Etc. and indeed for all that relates to this Subject, I must refer you to an Ingenious Treatise [**Art of speaking*]²⁷ which handles it fully, and to which I'me oblig'd in great measure for what little skill I have. Observing only, that whatever it is we Treat of, our Stile shou'd be such as may keep our Readers Attent, and induce them to go to the End. Now Attention is usually fixt by Admiration, which is excited by somewhat uncommon either in the Thought or way of Expression. We fall asleep over an Author who tells us in an ordinary manner no more than we knew before: He who wou'd Take²⁸ must be Sublime in his Sense, and must cloath it after a Noble way. His Thoughts must not be superficial, such as every one may fall into at the first glance, but the very Spirits and Essence of Thinking, the sum of many hours Meditation folded up in one handsome and comprehensive Period, whose Language is Intelli-

²⁵Worthy of forgiveness, pardonable (*OED*). [P.S.]

²⁶*The Ladies Library* ch. 13 on "Ignorance" (1714 edn), pp. 438–534, reproduced from Astell's text with only minor changes, concludes at this point. [P.S.]

²⁷Astell's marginal note to Lamy's *The Art of Speaking* (1696), a theory of rhetoric derived, as Lamy's title states, from the *Port Royal Logic*. [P.S.]

²⁸Be effective. [P.S.]

gible and Easy that the Readers may not lose the pleasure of the Kernel, by the pain they find in cracking the Shell. The most difficult Subject must be made easy by his way of handling it; tho his Matter may deserve a Meditation, yet his Expressions must be so Clear that he needs not be read twice to be Understood; *these* are to be Natural and Familiar, condescending to the meanest Capacity, whilst his Thoughts are Great enough to entertain the highest. He Discourses always on a Useful Subject in a manner agreeable to it, and Pleases that he may Instruct; Nothing seems Studied in his whole Composition, yet every thing is Extraordinary, a Beautiful Harmony shining thro all its parts. No Sentence is Doubtful, no word Equivocal, his Arguments are Clear and his Images Lively; all the Ideas he excites in your Mind, as nearly resemble the thing they represent as Words can make them. Whilst th' exactness of his Method, and Force of his Reason Enlighten and Convince the Mind; the Vivacity of his Imagination and insinuating Address, gain the Affections and Conquer the Will. By the weight and closeness of the former you wou'd take him for an Angel, and the tender and affable sweetness of the last bespeaks him a Friend. He considers that as mere Florish and Rhetorick are good for nothing, so neither will bare Reason dull and heavily express'd perform any great matter, at least not on those who need it most, whose Palates being deprav'd their Medicines must be administred in a pleasing Vehicle. Since Mankind are averse to their Real Happiness, he does not only tell 'em their Duty but Interesses them in it; and thinking it not enough to run 'em down with the strength of Reason, he draws 'em over to a Voluntary Submission by th' attractives of his Eloquence. For he has a peculiar Turn and Air which animates every Period, so that the very same Truth which was dry and Unaffecting in a vulgar Authors words, Charms and Subdues you when cloath'd in his. He shews no more warmth than may convince his Readers that he's heartily persuaded of the Truths he offers them; and if it is necessary at any time to make use of Figures to give a more Lively Representation than plain Expressions cou'd, to describe his own Passions and excite the same in others upon a just occasion, in a word to awaken a Stupid and Clear the Mind of

A Prejudic'd Reader, his Figures are duly chosen and discreetly us'd. For he knows that scarce any thing speaks a greater want of Judgment than the shewing concern where there needs none, or is a worse fault in Oratory than the polishing a Wrong or a Trifling Thought, the neatness of whose dress may strike with Admiration perhaps at first sight, but upon a review it will certainly appear Contemptible. And therefore as he does not abound in Superfluous Ornaments, so neither does he reject anything that can promote his End, which is not his own Reputation but the Glory of his GOD and his Neighbours Edification. He considers the narrowness of the Humane Mind, and says all that is necessary but no more; Understands it so well as to know what will move and Please, and has so much command of himself as to give over when he has done enough. Yet he can exhaust the most fruitful Subject without making the Reader weary; for when he enlarges it is in Things not Words, and he mingles Variety without Confusion. All the diverse excellencies of different Stiles meet in his to make up a perfect one, Strength and Ease, Solidity and Liveliness, the Sublime and the Plain. He's neither so Lofty as to fly out of Sight, nor so humble as to become Creeping and Contemptible. His Strength does not make him Rugged and Perplexed nor his Smoothness Weak and Nice; tho every thing is Neat, there's not a grain of Affectation; he is gratefull to the Ear, but far remov'd from jingling Cadence. Brief when there is occasion without Dryness or Obscurity, and Florid enough to entertain th' Imagination without Distracting the Mind. There's not an Antiquated or Barbarous Word to be found in him, all is Decent, Just and Natural; no peculiar or Affected Phrases, whether Courtly or Clownish, Grave or Burlesque. For Plain and Significant Language is ever best, we have a mistaken Idea of Learning if we think to pretend to't by sending our Reader every minute to the Dictionary. Words out of the common way are only allowable when they express our Sense with greater Force than Ordinary ones cou'd, or when they are so significant as to ease us of Circumlocutions, a hard word which I cou'd not avoid without using half a dozen words.

After all, it may not be amiss to take notice

that Ornaments are common to Falshood and Truth, but Clearness and strength of Reasoning are not. They who wou'd propagate Error usually disguise it in Equivocal Terms and Obscure Phrases; they strive to engage our Passions, rather than to Convince our Reason, and carry us away in the torrent of a warm Imagination. They endeavour to refute, or if they can't do that, to Ridicule the contrary opinion, and think this Sufficient to establish their own. Being much better skill'd in pulling down former Systems than in building new ones, for it requires no great skill to Object, and there are many Truths which we're very Certain of, and yet not able to answer every Impertinent Enquiry concerning 'em. Their greatest Art is in confounding things, in giving a probable Air to what they write, in pretending to Demonstration where the nature of the Truth does not require't, and in evading it where it does. An Immoral or Heretical Discourse therefore may be *Cunningly* but not *well* writ, for we can never plead for Error and Vice with true Eloquence. We may trick 'em up in a handsom Garb, adorn 'em with quaint Expressions, and give them such a plausible turn as may enable them to do very much Mischief; but this is only a fulsom Carcass, the substance and Life are not there if Vertue and Truth are wanting.

[VI. *The Application and Use of our Knowledge*]

For it is to little purpose to Think well and speak well, unless we *Live well*, this is our Great Affair and truest Excellency, the other are no further to be regarded than as they may assist us in this. She who does not draw this Inference from her Studies has Thought in vain, her notions are Erroneous and Mistaken. And all her Eloquence is but an empty noise, who employs it in any other design than in gaining Proselytes to Heaven. I am therefore far from designing to put Women on a vain pursuit after unnecessary and useless Learning, nor wou'd by any means persuade them to endeavour after Knowledge cou'd I be convinc'd that it is improper for 'em. Because I know every well that tho a thing be never so excellent in it self, it has but an ill grace if it be not suitable to the Person and Condition it is apply'd to. Fine

Cloaths and Equipage do not become a Beggar, and a Mechanic who must work for daily bread for his Family, wou'd be wickedly Employ'd shou'd he suffer 'em to starve whilst he's solving Mathematical Problems. If therefore Women have another Duty incumbent on 'em, and such as is inconsistent with what we here advise, we do ill to take them from it: But to affirm this is to beg the Question, and is what I will never grant till it be better prov'd than as yet it appears to be. For if the Grand Business that Women as well as Men have to do in this World be to prepare for the next, ought not all their Care and Industry to Centre here? and since the matter is of Infinite Consequence is it equitable to deny 'em the use of any help? If therefore Knowledge were but any ways Instrumental, tho at the remotest distance, to the Salvation of our Souls, it were fit to apply our selves to it; and how much more when it is so necessary, that without it we can't do any thing that's Excellent, or Practise Vertue in the most Perfect manner. For unless we Understand our Duty and the Principles of Religion, we don't perform a Rational Service, it is but by Chance that we are Good or so much as Christians. We are their Property into whose hands we fall, and are led by those who with greatest Confidence impose their Opinions on us; Are as moveable as the different Circumstances that befall us; or if we happen to be Constant in our first way, it is not Reason but Obstinacy that makes us so. A great deal of Good will be omitted, and very much Evil, or Imperfection at least, stick to us, if we are not thoroughly acquainted with the Law of God and the secret springs and windings of our Hearts, which is scarce to be obtain'd without much Meditation and the helps that study affords.

And as when a rash young Traveller is about to run into dangerous places beset with Theives and full of Precipices,²⁹ if you have any hearty

²⁹This complex passage alludes both to the parable of the Good Samaritan (Luke 10: 33), and possibly to the famous examples of the "highway-man" employed by Hobbes in *Leviathan* (1991 edn, ch. 14, p. 98) and Locke in the second *Treatise of Government* (1988 edn, §119, pp. 347-8; §176, p. 385; §182, p. 390; §186, p. 393; §202, p. 401; §207, pp. 403-4). If Astell already knows the provenance of Locke's *Two Treatises of Government*, which she clearly does by *Reflections upon Marriage* of 1700, then this strengthens my

concern for his safety, you'l not think it enough barely to shew him his way, or even to tell him of the Danger, especially if the entrance seems fair and inviting and treacherous Companions are upon the watch to decoy him into it: But you'l expose it in all its frightful Circumstances, endeavour to quicken his vigilance and excite his Passions, and all little enough for his Security. So it cannot be thought sufficient that Women shou'd but just know whats Commanded and what Forbid, without being inform'd of the Reasons why, since this is not like to secure them in their Duty. For we find a Natural Liberty within us which checks at an Injunction that has nothing but Authority to back it; And tho Religion is indeed supported by the Strongest Reasons, and inforc'd by the most powerful Motives, yet if we are not acquainted with 'em, tis all one to us as if it were not. But having spoke of this in the first part we shall not farther enlarge on it here.

Perhaps it will be objected that we've said *the great Truths of Religion carry a force and Evidence suited to the very Vulgar, and that GOD has not design'd All for Philosophers.*³⁰ And therefore if the way to the most necessary Knowledge be so very plain, and all Capacities are not fitted for higher attainments, what needs this ado about th' Improvement of our minds? the only thing necessary is to be good Christians, and we may be that without being Philosophers. Suppose we may: This will Justify such as want Time and Capacity, but can never excuse the Sloth and Stupidity of those who have both.

For unless we have very strange Notions of the Divine Wisdom we must needs allow that every one is placed in such a Station as they are fitted for. And if the necessity of the world requires that some Person shou'd Labour for oth-

case for her importance as the first systematic critic of that work. . . . To the 3rd edn of *Reflections upon Marriage* in 1706, Astell had added a cautionary homily on the pitfalls of marriage, invoking the image of the highway-man to characterize the rogue government of husbands: "And if mere Power gives a Right to Rule, there can be no such thing as Usurpation; but a Highway-Man so long as he has strength to force, has also a Right to require our Obedience" (*Reflections upon Marriage* (1706 edn), p. x). [P.S.]

³⁰The thesis of much of the devotional literature to which Astell refers. . . . [P.S.]

ers, it likewise requires that others shou'd Think for them. Our Powers and Faculties were not given us for nothing, and the only advantage one Woman has above another, is the being allotted to the more noble employment. Nobody is plac'd without their own fault, in such unhappy Circumstances as to be incapable of Salvation, but some are plac'd in such happy ones as to be capable of attaining much greater degrees of Happiness than others if they do not neglect them: And shou'd these last do no more than the very utmost that is expected from the former, I know not how they wou'd acquit themselves, or what account they cou'd give of their great Advantages. And therefore tho no body shall be condemn'd because they *Cou'd* not, yet we have reason to fear if our Case be such as that we *Might* but *Wou'd* not receive Instruction. She then who makes this Objection must not take it amiss if we Judge of her in other Cases according to what she Pleads in this: She must never set up for a Wit, or a censorer of her Neighbours, must not pretend to be a fine Lady or any thing extraordinary: but be content to herd amongst the Drudges of the World who eat Their Bread in the Sweat of their Brows, if she says she wants Leisure; or in a less acceptable rank amongst the Fools and Idiots, or but one degree above them, if she says she wants Capacity for this Employment. It is one thing to be content with Ignorance, or rather with a less degree of Knowledge, on account of the Station that GOD has plac'd us in, and Another to Chuse and Delight in't thro a Stupid Carelessness, a fear of Trouble, or an Inordinate pursuit of the Cares and Pleasures of this Mortal Life. This last only shews our Disesteem of our Souls, our Contempt of GOD and the Talents he has given us, and exposes us to all the dreadful consequences of such a neglect; to Punishments to which not only those who misemploy their Lord's Talent, but even they who don't employ it at all, are Obnoxious.

And indeed as unnecessary as it is thought for Women to have Knowledge, she who is truly good finds very great use of it, not only in the Conduct of her own Soul but in the management of her Family, in the Conversation of her Neighbours and in all the Concerns of Life. Education of Children is a most necessary Employment, perhaps the chief of those who have any; But

it is as Difficult as it is Excellent when well perform'd; and I question not but that the mistakes which are made in it, are a principal Cause of that Folly and Vice, which is so much complain'd of and so little mended. Now this, at least the foundation of it, on which in a great measure the success of all depends, shou'd be laid by the Mother, for Fathers find other Business, they will not be confin'd to such a laborious work, they have not such opportunities of observing a Childs Temper, nor are the greatest part of 'em like to do much good, since Precepts contradicted by Example seldom prove effectual. Neither are Strangers so proper for it, because hardly any thing besides Paternal Affection can sufficiently quicken the Care of performing, and sweeten the labour of such a task. But Tenderness alone will never discharge it well, she who wou'd do it to purpose must throughly understand Human nature, know how to manage different Tempers Prudently, be Mistress of her own, and able to bear with all the little humours and follies of Youth, neither Severity nor Lenity are to be always us'd, it wou'd ruin some to be treated in that manner which is fit for others. An Mildness makes some ungovernable and as there is a stupor in many from which nothing but Terrors can rouse them, so sharp Reproofs and Solemn Lectures serve to no purpose but to harden others, in faults from which they might be won by an agreeable Address and tender application. GOD Himself waits to be gracious and administers his Medicines in the most proper season, and Parents shou'd imitate him in this, for the want of observing it, and of accomodating their Methods to the several Dispositions they have to deal with, is perhaps the reason that many Pious Persons lose the fruit of their Pains and Care.

Nor will Knowledge lie dead upon their hands who have no Children to Instruct; the whole World is a single Lady's Family, her opportunities of doing good are not lessen'd but encreas'd by her being unconfin'd. Particular Obligations do not contract her Mind, but her Beneficence moves in the largest Sphere. And perhaps the Glory of Reforming this Prophane and Profligate Age is reserv'd for you Ladies, and that the natural and unprejudic'd Sentiments of your Minds being handsomly express'd, may carry a more

strong conviction than the Elaborate Arguments of the Learned. Such as fence themselves against the Cannon they bring down, may lie open to an Ambuscade³¹ from you. And whilst the strong arguings of the Schools like the Wind in the Fable,³² seems but to harden these Sturdy Sinners, your Persuasions like the Suns mild and powerful rays, may oblige them to cast off that Cloak of Maliciousness in which they are so much intangled. And surely it is worth your while to fit your selves for this: Tis a Godlike thing to relieve even the Temporal wants of our Fellow Creatures, to keep a *Body* from perishing, but it, is much more Divine, to *Save a Soul from Death!* A Soul which in his estimate who best knows the value of it is worth more than all the World. They who are thus *wise shall shine as the brightness of the Firmament, and they who turn many to Righteousness as the Stars for ever;*³³ which is a Glory we may honestly Contend for, a Beauty we may lawfully Covet; O that we had but Ambition enough to aspire after it! O that we had but so much at least as we see daily thrown away on a poor transitory Earthly Diadem, which sets uneasy on his head who wears it, and which a longer arm may wrest from his Brows! But alas it was in our fore-fathers days that the Kingdom of Heav'n was took by violence; they thought nothing, and we think every thing too much to Do or Suffer to obtain it! Nor but that it is still as bright and glorious, as truly attractive, but we are dull and stupid we shut our eyes and won't behold its Charms. Were we but duly sensible of this we shou'd think no Posterity so desireable as the Offspring of our Minds, nor any state so great as the carrying a large Train of Followers with us to the Court of Heaven! So much Knowledge therefore as is necessary to engage and keep us firm in our Christian Course, to fit us to help others in theirs, to stir us up to pursue, and direct us in our endeavours after one of the brightest Crowns of Glory, does very well become us and more than this I do not contend for, being far

³¹Ambush (obsolete except as a formal military term) (*OED*). [P.S.]

³²Possibly the book of Job which, extremely old and elemental, is full of wind, see esp. Job 8: 2, where the words "of thy mouth be like a strong wind." [P.S.]

³³Daniel 12: 3. [P.S.]

from desiring that any one shou'd neglect her Necessary Affairs to amuse her self with nice Speculations. No, She who has a Family is discharging part of her Christian Calling whilst She's taking care for it's Support and Government, and wou'd be very much out, if she lock'd her self in her Study, when her Domesticks had need of her direction. But there are few of those to whom I write, who have not a good deal of time to spare, if you reckon whats thrown away on fantastic Impertinencies, and tis this I wou'd have better employ'd: Were not a Morning more

advantageously spent at a Book than at a Looking Glass, and an Evening in Meditation than in Gaming? were not Pertinent and Ingenious Discourse more becoming in a visit, than Idle twattle and uncharitable Remarks? than a Nauseous repetition of a set of fine words which no body believes or cares for? And is not the fitting our selves to do Real Services to our Neighbours, a better expression of our Civility than the formal performance of a thousand ridiculous Ceremonies, which every one condemns and yet none has the Courage to break thro?

Giambattista Vico

1668–1744

Giambattista Vico was born in Naples, the son of a bookseller. Although he attended a Jesuit college, his education came chiefly from reading in his father's shop. He characterizes himself in his autobiography as an autodidact, one who is both self-taught and free from academic prejudice. Vico was appointed professor of rhetoric at the University of Naples in 1699 and served until 1741. The professorship of rhetoric was a minor post, and Vico hoped—though in vain—to be appointed to the much more prestigious chair of civil law. Although a growing number of scholars now see Vico as a major figure in the development of a rhetoric with a culturally based epistemology, in his own time he was regarded as a reactionary because of his opposition to Descartes.

In his major works, Vico criticizes the philosophy of Descartes for stressing that mathematics and science are the only legitimate sources of knowledge and treating other branches of human inquiry—such as law, history, and the arts—as inconsequential. Vico argues that rhetoric provides a superior philosophy of knowledge, for all knowledge, even the scientific, is based on argument and conviction. The excerpts here from “On the Study Methods of Our Time” (1709), originally a scholarly address that opened the school year at the University of Naples, include Vico's argument against the Cartesian method, which he refers to as “modern philosophical critique,” and his defense of rhetoric as a modern method of study.

In “On the Study Methods of Our Time,” Vico seeks to reconcile humanism (the wisdom of the ancients) with a modern but non-Cartesian science. He objects to Descartes's insensitivity to the function of language in producing knowledge. Without language, says Vico, the human knower is lost. Language reveals the processes of reason, passion, and imagination, as well as the social conventions and historical circumstances that shape our concerns. The etymology of the national language reveals our social history; similarly, language socializes each individual. Therefore, the university's curricular philosophy or “study methods” will have a profound effect on both the individual and society. What kind of person, what kind of society, will be fostered by Cartesian disdain for the probabilistic knowledge of law, ethics, politics, and medicine? The Cartesian method is useful, Vico concedes, but it cannot be allowed to overpower the kind of *sensus communis* or common sense that the study of eloquence stimulates with its appeals to imagination and memory and its practice in the commonplaces of argument.

Not only is Cartesianism ill suited to the kinds of knowledge that affect the affairs of society, says Vico, but it is not even well founded in the science it so prizes. Mathematical proof is ultimately based on our acceptance of the system of axioms created by human beings: We can point to no demonstration of the applicability of our axioms to the world itself. The world is created by God, not human beings, and cannot be directly known. Moreover, the Cartesian method of division focuses ideally on isolated particles of knowledge, stifling the kind of analogic thinking that generates so many insights. Vico also objects to the Cartesian model of the isolated

inquirer, for dialogue fertilizes thought. As a teaching approach, the Cartesian method fails to encourage independent discovery, proceeding instead on a plodding course from axiom to proof. Such a method oppresses rather than inspires students. Thus, if the educational system accepts Cartesianism, it will unduly privilege natural science and mathematics while devaluing other kinds of knowledge, and it will do so to the detriment of society, which will eventually lack leaders educated in public affairs. Vico recommends balance: The method of Descartes is useful for abstract knowledge that finds elemental causes for multiple effects, whereas eloquence finds many possible causes for single events, revealing the complexity of “merely” probable causes. To expect the Cartesian method to cover both kinds of knowledge, he reiterates, is to ignore the essential differences in their character and provenance.

Vico devotes a long section of his speech to the legal system of ancient Rome. Though the system was designed to support the privilege of the patricians, it encouraged eloquence in defense of equity and justice. Arguments produced under these conditions eventually led to a democratization of the courts and to a more equitable legal philosophy. But, Vico claims, the exceptional eloquence of the old courts was no longer necessary, with the result that, on the one hand, eloquence lost respect and, on the other, legal philosophy languished for want of inspired oratory. Finally, Vico proposes a curriculum that concludes with the study of eloquence, a study which he sees as interdisciplinary and (in modern terms) meta-theoretical, a way to link the other disciplines and bring them to bear on important public issues.

In *The New Science* (first edition, 1725; much-revised third edition, 1744), Vico elaborates the argument begun in “Study Methods” about the relationship between truth and human methods of producing knowledge. If, as the argument proposes, we can truly know only what we have made, then true knowledge is of the Cartesian kind, touching created systems of mathematics and science. Observation and experience (“consciousness,” as opposed to science) produce uncertain, probabilistic judgments. Vico now proposes a link between these two kinds of knowledge: It is possible, according to this argument, to reach true knowledge in the vast realm of human affairs, in a world that is, after all, created by humans and not “natural.” In other words, though history is not a formal system, it is nonetheless made by people, and the appropriate method of study should produce certain knowledge of it. To establish this method, Vico seeks the origins of history in human nature and in an original common language. Through history, human nature and language give shape to social relations and institutions, reflecting historical circumstances and local developments.

Vico posits three stages through which human history evolves: the poetic, the heroic, and the human. In the poetic stage, knowledge is generated by metaphor. Just as young children learn by comparison, Vico argues, humankind in its infancy must have done likewise. In the heroic stage, nations develop, promulgating rigid systems of law to preserve the organization of society. And in the human stage, the self-conscious study of human knowledge leads to greater equity in law and democracy in politics. Here, too, individualism grows, and with it a disdain for communal and national imperatives. As a result, this last stage is fragile, threatened

by revolutions that will fragment society. Once society is shattered, however, the process begins anew.

Vico maintains that historical circumstances determine the characteristics and purposes of social institutions and individual actions. Historians are therefore in error when they try to evaluate earlier periods using the standards of their own time. To understand history, it is necessary to reconstruct the consciousness of the time and place to be studied, using the myths and language of the time. Etymology is invaluable in determining not only the conditions of life in an earlier age but also the psychological responses to them. Speech and thought are inseparable, in Vico's view: They evolve together. Thus, what are for us casual or embedded metaphors can reveal the mental processes and perception of the world of those who first employed them. A persistently metaphoric view of the world will be different, too, from a view in which phenomena are identified by abstractions.

In elaborating and illustrating this view of historical analysis, Vico brought together the study of language and literature, social institutions and law, ideology and class structure, and personal psychology and human nature. His cyclical theory of history is easy enough to criticize, and for too long it obscured his contribution to historiography: the combination of a sympathetic perspective and a broad range of intercontextual knowledge. Moreover, in his theory of rhetoric, as John D. Schaeffer has argued, Vico unites ethics and eloquence through his concept of *sensus communis*, a "common sense" that is both epistemological in function and culturally based. Thus Vico forges a link between rhetoric and philosophy that contemporary thinkers are still exploring.

Selected Bibliography

We take our excerpt from Giambattista Vico, "On the Study Methods of Our Time," ed. and trans. Elio Gianturco (1965). Gianturco's introduction is helpful. Thomas Bergin and Max Fisch have translated *The New Science of Giambattista Vico* (1948) and have included a long and useful introduction. Bergin and Fisch also translated *The Autobiography of Giambattista Vico* (1944).

Twentieth-century interest in Vico has produced a good deal of fascinating scholarly and critical work. Since 1983, the Institute for Vico Studies has been publishing *New Vico Studies* with articles, reviews, and bibliographies, making it an invaluable reference. Molly Black Verene's *Vico: A Bibliography of Works in English 1884–1994* (1994) is not annotated, but it cites reviews of book-length studies.

Vico and Contemporary Thought, ed. Giorgio Tagliacozzo, Michael Mooney, and Donald Verene (1979), contains a number of articles on Vico's rhetorical theory, as does *Vico Past and Present*, ed. Giorgio Tagliacozzo (1981). Donald Verene's study, *Vico's Science of Imagination* (1981), typifies the current understanding and appreciation of Vico's thought. Michael Mooney focuses on rhetoric in *Vico in the Tradition of Rhetoric* (1985). Ernesto Grassi's philosophical essays collected in *Vico and Humanism* (1990) link Vico to earlier Italian humanists and to contemporary thinkers Freud, Marx, and especially Heidegger. John D. Schaeffer's *Sensus Communis: Vico, Rhetoric, and the Limits of Relativism* (1990) shows how Vico links ethics and eloquence in the concept of *sensus communis* and relates his thinking on rhetoric to Hans-Georg Gadamer, Jürgen Habermas, Jacques Derrida, Richard Rorty,

Richard A. Lanham, and others. Taking a more negative view, Brian Vickers traces the decline of rhetoric as a discipline from Vico in "The Atrophy of Modern Rhetoric: Vico to de Man" (*Rhetorica* 6 [winter 1988]: 21–56; extracted from Vickers's *In Defense of Rhetoric*, 1988).

From *On the Study Methods of Our Time*

I

In his small but priceless treatise entitled *De Dignitate et de Augmentis Scientiarum*,¹ Francis Bacon undertakes to point out what new arts and sciences should be added to those we already possess, and suggests how we may enlarge our stock of knowledge, [as far as necessary,] so that human wisdom may be brought to complete perfection.

But, while he discovers a new cosmos of sciences, the great Chancellor proves to be rather the pioneer of a completely new universe than a prospector of this world of ours. His vast demands so exceed the utmost extent of man's effort that he seems to have indicated how we fall short of achieving an absolutely complete system of sciences rather than how we may remedy our cultural gaps.

This was so, I believe, because those who occupy the heights of power yearn for the immense and the infinite. Thus Bacon acted in the intellectual field like the potentates of mighty empires, who, having gained supremacy in human affairs, squander immense wealth in attempts against the order of Nature herself, by paving the seas with stones, mastering mountains with sail, and other vain exploits forbidden by nature.

No doubt all that man is given to know is, like man himself, limited and imperfect. Therefore, if we compare our times with those of the Ancients—if we weigh, on both sides, the advantages and deficiencies of learning—our achievements and those of Antiquity would, by and large, balance.

Translated by Elio Gianturco.

¹*Of the Dignity and Advancement of Learning*. (See Bacon in Part Three.) [Ed.]

We, the men of the modern age, have discovered many things of which the Ancients were entirely ignorant; the Ancients, on the other hand, knew much still unknown to us. We enjoy many techniques which enable us to make progress in some branch of intellectual or practical activity; they likewise had talents for progress in other fields. They devoted all their activity to certain arts which we almost totally neglect; we pursue some others which they apparently scorned. Many disciplines conveniently unified by the Ancients have been partitioned by us; a certain number which they inconveniently kept separate, we treat as unified. Finally, not a few sectors of culture have changed both appearance and name.

The foregoing provides the theme of the present discourse: Which study method is finer and better, ours or the Ancients? In developing this topic I shall illustrate by examples the advantages and drawbacks of the respective methods. I shall specify which of the drawbacks of our procedures may be avoided, and how; and whether those which cannot be eliminated have their counterparts in particular shortcomings by which the Ancients were handicapped.

Unless I am mistaken, this theme is new; but the knowledge of it is so important, that I am amazed it has not been treated yet. In the hope of escaping censure, I ask you to give thought to the fact that my purpose is not to criticize the drawbacks of the study methods of our age or of those of antiquity, but rather to compare the advantages afforded by the study methods of the two epochs.

This matter is of direct concern to you: even if you know more than the Ancients in some fields, you should not accept knowing less in others. You should make use of a method by which you can acquire, on the whole, more knowledge

than the Ancients, and, being aware of the shortcomings of ancient methods of study, you may endure the unavoidable inconveniences of our own.

The better to grasp the subject I am proposing to you, you should distinctly realize that in the present discourse I do not intend to draw parallels between individual branches of knowledge, single fields of sciences or arts of ancient and modern times.

My goal, instead, is to indicate in what respect our study methods are superior to those of the Ancients; to discover in what they are inferior, and how we may remedy this inferiority.

For our purpose we must, if not separate, at least set up a distinction between new arts, sciences, and inventions on one hand, and new *instruments* and aids to knowledge on the other. The former are the constituent material of learning; the latter are the way and the means, precisely the subject of our discourse.

Every study method may be said to be made up of three things: instruments, complementary aids, and the aim envisaged. The instruments presuppose and include a systematic, orderly manner of proceeding; the apprentice who, after suitable training, undertakes the task of mastering a certain art or science, should approach it in an appropriate and well-ordered fashion. Instruments are antecedent to the task of learning; complementary aids and procedures are concomitant with that task. As for the aim envisaged, although its attainment is subsequent to the process of learning, it should never be lost sight of by the learner, neither at the beginning nor during the entire learning process.

We shall arrange our discourse in corresponding order, and discuss first the instruments, then the aids to our method of study. As for the aim, it should circulate, like a blood-stream, through the entire body of the learning process. Consequently, just as the blood's pulsation may best be studied at the spot where the arterial beat is most perceptible, so the aim of our study methods shall be treated at the point where it assumes the greatest prominence.

Some of the new instruments of science are, themselves, sciences; others are arts; still others, products of either art or nature. Modern philosophical "critique" is the common instrument of

all our sciences and arts.² The instrument of geometry is "analysis"; that of physics, geometry, plus the geometrical method (and, in a certain sense, modern mechanics). The instrument of medicine is chemistry and its offshoot, pharmacological chemistry. The instrument of anatomy is the microscope; that of astronomy, the telescope; that of geography, the mariner's needle.

As for "complementary aids," I include among them the orderly reduction of systematic rules, of a number of subjects which the Ancients were wont to entrust to practical common sense. Complementary aids are also works of literature and of the fine arts whose excellence designates them as patterns of perfection; the types used in the printing; and universities as institutions of learning.

In view of the easy accessibility, usefulness, and value of the complementary aids, our study methods seem, beyond any doubt, to be better and more correct than those of the Ancients, whether in regard to facility, or to utility, or to merit.

As for the aim of all kinds of intellectual pursuits: one only is kept in view, one is pursued, one is honored by all: Truth.

II

Modern philosophical critique supplies us with a fundamental verity of which we can be certain even when assailed by doubt. That critique could rout the skepticism even of the New Academy.³

In addition "analysis" (i.e., analytical geometry) empowers us to puzzle out with astonishing ease geometrical problems which the Ancients found impossible to solve.

Like us, the Ancients utilized geometry and mechanics as instrument of research in physics, but not as a constant practice. We apply them consistently, and in better form.

Let us leave aside the question whether geometry has undergone greater development by

²The critique is Descartes's method. (See the introduction to Part Four.) [Ed.]

³The New Academy is the Second Platonic Academy of the third and second centuries B.C.E., noted for radical skepticism. [Ed.]

means of “*analysis*,” and whether modern mechanics constitutes something new. What cannot be denied is the fact that leading investigators have available to them a science enriched by a number of new and extremely ingenious discoveries. Modern scientists, seeking for guidance in their exploration of the dark pathways of nature, have introduced the geometrical method into physics. Holding to this method as to Ariadne’s thread, they can reach the end of their appointed journey. Do not consider them as groping practitioners of physics: they are to be viewed, instead, as the grand architects of this limitless fabric of the world: able to give a detailed account of the ensemble of principles according to which God has built this admirable structure of the cosmos.

Chemistry, of which the Ancients were totally ignorant, has made outstanding contributions to medicine. Having observed the similarity which exists between the various phenomena of the human body and those of chemistry, the healing art has been able, not only to hazard guesses concerning many physiological functions and disorders, but to make these plainly discernible to the human eye.

Pharmacology, of course, a derivate of chemistry, was among the ancients merely a desideratum. Nowadays, we have converted that desideratum into a reality. Some of our researchers have applied chemistry to physics; others, mechanics to medicine. Our physical chemistry can faithfully, and, so to speak, *manually*, reproduce a number of meteors and other physical phenomena. Mechanical medicine can describe, by inferences drawn from the motions of machines, the diseases of the human body, and can treat them successfully. And anatomy clearly reveals not only the circulation of the blood, but the nerve-roots, countless humors, vessels, and ducts of the human body (notice that such descriptions already constitute notable advances over ancient medicine), and moreover—thanks to the microscope—the nature of miliary glands, of the most minute internal organs, of plants, of silkworms, and of insects. To modern anatomy, furthermore, we are indebted for an insight into the process of generation, as demonstrated by the growth of the incubated egg. All these things were entirely outside of the narrow range of sight of the science of

the Ancients; modern science throws a flood of light upon them.

As for astronomy, the modern telescope has brought within our ken a multitude of new stars, the variability of sun-spots, and phases of the planets. These discoveries have made us aware of several defects in the cosmological system of Ptolemy.

In the domain of geographical exploration, the Ancients guessed vaguely, in a prophetic sort of way, at the existence of transoceanic lands. By the use of the mariner’s compass, the modern age has actually discovered them. As a result, a wonderful luster has been bestowed upon geography.

It seems almost unbelievable that in our days men should not only be able to circumnavigate the globe along with the sun, but to outreach the sun’s march and to negotiate its full course in less time than it takes that planet to complete it.

From geometry and physics, taught by the present method, the science of mechanics has received major impulses and has rendered possible a great number of outstanding and marvelous inventions, which have vastly enriched human society. It may be said that it is from these three sciences that our technique of warfare derives. Our art of war is so immeasurably superior to that of the Ancients, that, compared with our technique of fortifying and attacking cities, Minerva would contemn her own Athenian citadel and Jupiter would scorn his three-pronged lightning as a blunt and cumbersome weapon.

Such are the “instruments” employed by our modern sciences; let us now turn to the complementary aids employed in the various sectors of our culture.

Systematic treatments (*artes*) have been set up of certain subjects which the Ancients left to unaided common sense. Among these subjects is the law, which the Ancients, balked by the difficulty of the task, gave up hope of organizing into a systematically arranged, methodical body of theory.

In the fields of poetry, oratory, painting, sculpture, and other fine arts, based on the imitation of nature, we possess a wealth of supremely accomplished productions, on which the admiration of posterity has conferred the prestige of the archetypal exemplarity. Thanks to the guidance

offered by these masterworks, we are able to imitate, correctly and easily, Nature at her best. The invention of printing places at our disposal an enormous number of books. Hence, our scholars are not compelled to restrict their competence to the knowledge of one or another author, but can master a multiple, diversified, almost boundless domain of culture.

Finally, we have great institutions of learning, i.e., universities, which are the repositories of all our sciences and arts, and where the intellectual, spiritual, and linguistic abilities of men may be brought to perfection. Almost all of these spheres of mental activity have as their single goal the inquiry after truth. Were I to set out to extol this inquiry, I would arouse wonder at my eulogizing something that no one ever thought of disparaging.

Let us now scrutinize these advantages of our study methods, and try to ascertain whether these methods lack some of the good qualities possessed by those of antiquity: or whether, instead, they are impaired by faults from which ancient methods were exempt. Let us examine whether we can avoid our deficiencies and appropriate the good points of the ancient methods, and by what means this may be done; and let us see whether those among our deficiencies which are unavoidable may be offset by the shortcomings of antiquity.

III

Let us begin with the *instruments* with which modern sciences operate.

Philosophical criticism is the subject which we compel our youths to take up first. Now, such speculative criticism, the main purpose of which is to cleanse its fundamental truths not only of all falsity, but also of the mere suspicion of error, places upon the same plane of falsity not only false thinking, but also those secondary verities and ideas which are based on probability alone, and commands us to clear our minds of them. Such an approach is distinctly harmful, since training in common sense is essential to the education of adolescents, so that that faculty should be developed as early as possible; else they break into odd or arrogant behavior when adulthood is

reached. It is a positive fact that, just as knowledge originates in truth and error in falsity, so common sense arises from perceptions based on verisimilitude. Probabilities stand, so to speak, midway between truth and falsity, since things which most of the time are true, are only very seldom false.

Consequently, since young people are to be educated in common sense, we should be careful to avoid that the growth of common sense be stifled in them by a habit of advanced speculative criticism. I may add that common sense, besides being the criterion of practical judgment, is also the guiding standard of eloquence. It frequently occurs, in fact, that orators in a law court have greater difficulty with a case which is based on truth, but does not seem so, than with a case that is false but plausible. There is a danger that instruction in advanced philosophical criticism may lead to an abnormal growth of abstract intellectualism, and render young people unfit for the practice of eloquence.

Our modern advocates of advanced criticism rank the unadulterated essence of "pure," primary truth before, outside, above the gross semblances of physical bodies. But this study of primal philosophical truths takes place at the same time when young minds are too immature, too unsure, to derive benefit from it.

Just as old age is powerful in reason, so is adolescence in imagination. Since imagination has always been esteemed a most favorable omen of future development, it should in no way be dulled. Furthermore, the teacher should give the greatest care to the cultivation of the pupil's memory, which, though not exactly the same as imagination, is almost identical with it. In adolescence, memory outstrips in vigor all other faculties, and should be intensely trained. Youth's natural inclination to the arts in which imagination or memory (or a combination of both) is prevalent (such as painting, poetry, oratory, jurisprudence) should by no means be blunted. Nor should advanced philosophical criticism, the common instrument today of all arts and sciences, be an impediment to any of them. The Ancients knew how to avoid this drawback. In almost all their schools for youths, the role of logic was fulfilled by geometry. Following the

example of medical practitioners, who concentrate their efforts on seconding the bent of Nature, the Ancients required their youths to learn the science of geometry which cannot be grasped without a vivid capacity to form images. Thus, without doing violence to nature, but gradually and gently and in step with the mental capacities of their age, the Ancients nurtured the reasoning powers of their young men.

In our days, instead, philosophical criticism alone is honored. The art of "topics," far from being given first place in the curriculum, is utterly disregarded. Again I say, this is harmful, since the invention of arguments is by nature prior to the judgment of their validity, so that, in teaching, that invention should be given priority over philosophical criticism. In our days, we keep away from the art of inventing arguments, and think that this skill is of no use. We hear people affirming that, if individuals are critically endowed, it is sufficient to teach them a certain subject, and they will have the capacity to discover whether there is any truth in that subject. It is claimed that, without any previous training in the *ars topica*, any person will be able to discern the probabilities which surround any ordinary topic, and to evaluate them by *the same standard employed in the sifting of truth*. But who can be sure that he has taken into consideration every feature of the subject on hand? The most eulogizing epithet that can be given to a speech is that it is "comprehensive": praise is due to the speaker who has left nothing untouched, and has omitted nothing from the argument, nothing which may be missed by his listeners.

Nature and life are full of incertitude; the foremost, indeed, the only aim of our "arts" is to assure us that we have acted rightly. Criticism is the art of true speech; "*ars topica*," of eloquence. Traditional "topics" is the art of finding "the *medium*," i.e., the middle term: in the conventional language of scholasticism, "medium" indicates what the Latins call *argumentum*. Those who know all the *loci*, i.e., the lines of argument to be used, are able (by an operation not unlike reading the printed characters on a page) to grasp extemporaneously the elements of persuasion inherent in any question or case. Individuals who have not achieved this ability hardly deserve the

name of orators. In pressing, urgent affairs, which do not admit of delay or postponement, as most frequently occurs in our law courts—especially when it is a question of criminal cases, which offer to the eloquent orator the greatest opportunity for the display of his powers—it is the orator's business to give *immediate* assistance to the accused, who is usually granted only a few hours in which to plead his defense. Our experts in philosophical criticism, instead, whenever they are confronted with some dubious point, are wont to say: "Give me some time to think it over!"

I may add that in the art of oratory the relationship between speaker and listeners is of the essence. It is in tune with the opinions of the audience that we have to arrange our speech. It often happens that people unmoved by forceful and compelling reasons can be jolted from their apathy, and made to change their minds by means of some trifling line of argument. Consequently, in order to be sure of having touched all the soul-strings of his listeners, the orator, then, should run through the complete set of the *loci* which schematize the evidence. It is quite unfair to blame Cicero for having insisted on many a point of little weight. It was exactly by those points of little weight that he was able to dominate the law courts, the Senate, and (most important of all) the Assemblies of the people. It was by that method that he became the speaker most worthy of being considered a representative of Rome's imperial greatness. Is it not significant that it is precisely the orator whose only concern is the bare truth who gets stranded in cases in which a different speaker succeeds in extricating himself, by paying attention to credibility as well as the facts? The contrast of opinion between Marcus Brutus and Cicero, regarding the manner in which each of them thought that the defense of Milo should be conducted, provides an instructive case for reflection.

Marcus Brutus, who had been trained in a kind of philosophical, rationalistic criticism closely akin to ours (for he was a Stoic), thought that Milo⁴ should be defended by throwing his case upon the judges' mercy, and that he should

⁴The tribune Milo was brought to trial for the murder of Clodius in 52 B.C.E. [Ed.]

seek acquittal on the ground of the distinguished services he had performed for the Republic, and on the ground of having rid Rome of Clodius, a noxious criminal.

Cicero, instead, an expert in the *ars topica*, deemed it unsafe to throw such a defendant upon the judges' indulgence, considering the conditions prevalent at that time. As a consequence, he based his defense speech entirely on conjectural reasons. Had he been given the chance of delivering that speech in court, he would certainly have brought about Milo's acquittal, as Milo himself declared.

Nevertheless, Antoine Arnauld,⁵ a man of commanding scholarship, scorns the *ars topica*, and considers it of absolutely no use.

Whom shall we believe? Arnauld, who rejects the *ars topica*, or Cicero, who asserts that his own eloquence is chiefly due to the art of skillfully arraying a set of effective lines of argument? Let others decide; as for me, I am unwilling to award to the one what I would have to take away from the other: I shall limit myself to stating that a severely intellectualistic criticism enables us to achieve truth, while *ars topica* makes us eloquent. In antiquity, the Stoics devoted themselves entirely to philosophical criticism, while the Academics cultivated topics. Similarly, today the jejune and aridly deductive reasoning in which the Stoics specialized is followed by the moderns, whereas the Aristotelians of the recent past are characterized by the varied and multi-form style of their utterance. . . .

It is significant that the representatives of the schools of ancient philosophy became the more eloquent in proportion as they were less inclined to a strictly philosophical criticism. The advocates of Stoicism (for whom, as for our *moderni*, pure reason is the regulative standard of truth), were the thinnest and leanest of all philosophers. The Epicureans, according to whom the regulative standard of truth resides in sense-perception, were simple in expression, and unfolded their doctrines in more detail. The ancient Academics instead, being disciples of Socrates who con-

tended that he knew nothing but his own ignorance, were masters of an overflowing and lavishly embellished expression. As for the neo-Academics, who admitted that they did not even know that they did not know anything, they overwhelmed their listeners with torrential outbursts and snowdrifts of oratory.

Both Stoics and Epicureans came out in support of only one side of the argument: Plato inclined towards one or the other side, depending on which appeared to him more probable; Carneades,⁶ instead, was wont to embrace both of the sides of any given controversy. He would, for instance, affirm one day that justice exists, another day, that it does not, bringing forth equally compelling arguments for both positions and displaying an unbelievable power of argumentation. This was due to the fact that whereas truth is *one*, probabilities are many, and falsehoods numberless.

Each procedure, then, has its defects. The specialists in topics fall in with falsehood; the philosophical critics disdain any traffic with probability.

To avoid both defects, I think, young men should be taught the totality of sciences and arts, and their intellectual powers should be developed to the full; thus they will become familiar with the art of argument, drawn from the *ars topica*. At the very outset, their common sense should be strengthened so that they can grow in prudence and eloquence. Let their imagination and memory be fortified so that they may be effective in those arts in which fantasy and the mnemonic faculty are predominant. At a later stage let them learn criticism, so that they can apply the fullness of their personal judgment to what they have been taught. And let them develop skill in debating on either side of any proposed argument.

Were this done, young students, I think, would become exact in science, clever in practical matters, fluent in eloquence, imaginative in understanding poetry or painting, and strong in memorizing what they have learned in their legal studies.

They would not feel the impulse to step rashly

⁵Coauthor (with Pierre Nicole) of the 1662 *Port-Royal Logic*. (See the introduction to Part Four.) [Ed.]

⁶A skeptical philosopher of the second century B.C.E. [Ed.]

into discussions while they are still in process of learning; nor would they, with pedestrian slavishness, refuse to accept any viewpoint unless it has been sanctioned by a teacher. In this sphere, the Ancients seem to me to be superior to us.

A five-year period of silence was enjoined upon all of Pythagoras' students. After that time, they were allowed to maintain what they had learned, but had to ground their reasons only upon the authority of their master. "He said it," was their motto. The chief duty of a student of philosophy was to listen. Most appropriately were they called "auditors."

Arnauld himself, although his words seem to spurn this procedure, actually confirms and professes what I am stating. His treatise on *Logic* is replete with far-fetched and involved illustrations, with difficult examples drawn from the deep storehouses of each discipline. Naturally, these illustrations and examples prove to be unintelligible to the young student, unless he is already more than proficient in those arts and sciences from which those supporting materials are taken, and unless his teacher devotes great efforts and a great deal of eloquent skill to the explanation of them. If logic is studied at the terminal stage of the school curriculum, these deficiencies, besides those I have mentioned before, are avoided. What Arnauld presents, though he provides useful examples, is hardly to be understood; the materials offered by the Aristotelians, instead, though perfectly intelligible, are of no use whatever. . . .

VII

But the greatest drawback of our educational methods is that we pay an excessive amount of attention to the natural sciences and not enough to ethics. Our chief fault is that we disregard that part of ethics which treats of human character, of its dispositions, its passions, and of the manner of adjusting these factors to public life and eloquence. We neglect that discipline which deals with the differential features of the virtues and vices, with good and bad behavior-patterns, with the typical characteristics of the various ages of man, of the two sexes, of social and economic class, race, and nation, and with the art of seemly

conduct in life, the most difficult of all arts. As a consequence of this neglect, a noble and important branch of studies, i.e., the science of politics, lies almost abandoned and untended.

Since, in our time, the only target of our intellectual endeavors is truth, we devote all our efforts to the investigation of physical phenomena, because their nature seems unambiguous; but we fail to inquire into human nature which, because of the freedom of man's will, is difficult to determine. A serious drawback arises from the uncontrasted preponderance of our interest in the natural sciences.

Our young men, because of their training, which is focused on these studies, are unable to engage in the life of the community, to conduct themselves with sufficient wisdom and prudence; nor can they infuse into their speech a familiarity with human psychology or permeate their utterances with passion. When it comes to the matter of prudential behavior in life, it is well for us to keep in mind that human events are dominated by Chance and Choice, which are extremely subject to change and which are strongly influenced by simulation and dissimulation (both preeminently deceptive things). As a consequence, those whose only concern is abstract truth experience great difficulty in achieving their means, and greater difficulty in attaining their ends. Frustrated in their own plans, deceived by the plans of others, they often throw up the game. Since, then, the course of action in life must consider the importance of the single events and their circumstances, it may happen that many of these circumstances are extraneous and trivial, some of them bad, some even contrary to one's goal. It is therefore impossible to assess human affairs by the inflexible standard of abstract right; we must rather gauge them by the pliant Lesbian rule, which does not conform bodies to itself, but adjusts itself to their contours.

The difference, therefore, between abstract knowledge and prudence is this: in science, the outstanding intellect is that which succeeds in reducing a large multitude of physical effects to a single cause; in the domain of prudence, excellence is accorded to those who ferret out the greatest possible number of causes which may have produced a single event, and who are able

to conjecture which of all these causes is the true one. Abstract knowledge—science—is concerned with the highest verity; common sense, instead, with the lowliest. On the basis of this, the distinguished features of the various types of men should be marked out: the fool, the astute ignoramus, the learned man destitute of prudence, and the sage. In the conduct of life the fool, for instance, pays no attention to the highest or the meanest truths; the astute ignoramus notices the meanest but is unable to perceive the highest; the man who is learned but destitute of prudence, deduces the lowest truths from the highest; the sage, instead, derives the highest truths from the unimportant ones. Abstract, or general truths are eternal; concrete or specific ones change momentarily from truths or untruths. Eternal truths stand above nature; in nature, instead, everything is unstable, mutable. But congruity exists between goodness and truth; they partake of the same essence, of the same qualities. Accordingly, the fool, who is ignorant of both general and particular truths, constantly suffers prompt penalties for his arrogance. The astute ignoramus, who is able to grasp particular truths but incapable of conceiving a general truth, finds that cleverness, which is useful to him today, may be harmful to him tomorrow. The learned but imprudent individual, traveling in a straight line from general truths to particular ones, bulls his way through the tortuous paths of life. But the sage who, through all the obliquities and uncertainties of human actions and events, keeps his eye steadily focused on eternal truth, manages to follow a roundabout way whenever he cannot travel in a straight line, and makes decisions, in the field of action, which, in the course of time, prove to be as profitable as the nature of things permits.

Therefore, it is an error to apply to the prudent conduct of life the abstract criterion of reasoning that obtains in the domain of science. A correct judgment deems that men—who are, for the most part, but fools—are ruled, not by forethought, but by whim or chance. The doctrinaires judge human actions as they *ought* to be, not as they actually are (i.e., performed more or less at random). Satisfied with abstract truth alone, and not being gifted with common sense, unused to following probability, those doctrinaires do not

bother to find out whether their opinion is held by the generality and whether the things that are truths to them are also such to other people.

This failure to concern themselves with the opinions of others has not only been a source of blame, but has proved to be extremely prejudicial, not only to private persons but to eminent leaders and great rulers as well. Let an example which is right to the point be quoted here: While the assembly of the French Estates was in session, Henry III, King of France, ordered Duke Henry de Guise, a very popular member of the French aristocracy, to be put to death, in spite of the fact that the Duke was under the protection of a safe conduct. Although just cause underlay that order of the king, such cause was not made manifest. The case having been brought up in Rome, Cardinal Ludovico Madrucci, a man of great judgment in public affairs, commented: "Rulers should see to it not only that their actions are true and in conformity with justice, but that they also *seem* to be so."

Madrucci's statement was proved true by the calamities which overtook France shortly after.

The Romans, who were great experts in political matters, paid particular attention to appearances. Both their judges and their senators, on giving out an opinion, were always wont to say: "It seems."

To summarize: It was because of their knowledge of the greatest affairs that philosophers were, by the Greeks, called "politici," i.e., experts in matters bearing on the total life of the body politic. Subsequently, philosophers were called Peripatetics and Academics, these names being derived from two small sections of the town of Athens, where their schools stood. Among the Ancients, the teaching of rational, physical, and ethical doctrines was entrusted to philosophers who took good care to adjust those doctrines to the practical common sense that should govern human behavior.

Today, on the contrary, we seem to have reverted to the type of physical research which was typical of pre-Socratic times.

There was an epoch when the "fourfold philosophy" (i.e., logic, physics, metaphysics, and ethics) was handed down by its teachers in a manner fitted to foster eloquence: i.e., the attempt

was made to fuse philosophy with eloquence. Demosthenes was a product of the Lyceum; Cicero, of the Academy: there is no doubt that they were the two foremost speakers of the two most splendid of languages. Today, those branches of philosophical theory are taught by such a method as to dry up every fount of convincing expression, of copious, penetrating, embellished, lucid, developed, psychologically effective, and impassionate utterance. The listeners' minds undergo a process of constriction, so as to assume the shape of those young virgins.

. . . whom their mothers compel to bend their shoulders, to stoop, to bind their bosom in order to achieve slimness; if one of the girls is fleshier, they call her "the boxer" and stint her on food; if by nature she is healthy, they reduce her, by a special cure, to the slenderness of a reed.

[Terence, *The Eunuch* II.iii.23-26]

Here some learned pundit might object that, in the conduct of life, I would have our young students become courtiers, and not philosophers; pay little attention to truth and follow not reality but appearances; and cast down morality and put on a deceitful "front" of virtue.

I have no such intention. Instead, I should like to have them act as philosophers, even at court; to care for truth that both is and has the appearance of truth, and to follow that which is morally good and which everybody approves.

As for eloquence, the same men assert that the modern study methods, far from being detrimental, are most useful to it. "How much preferable it is," they say, "to induce persuasion by solid arguments based on truth, to produce such an effect on the mind that, once that truth coalesces with reason, it can never again be separated from it, rather than to coerce the listener's soul by meretriciously eloquent allurements, but blazes of oratorical fire which, as soon as they are extinguished, cause him to revert to his original disposition!"

The answer is that eloquence does not address itself to the rational part of our nature, but almost entirely to our passions. The rational part in us

may be taken captive by a net woven of purely intellectual reasonings, but the passional side of our nature can never be swayed and overcome unless this is done by more sensuous and materialistic means. The role of eloquence is to persuade; an orator is persuasive when he calls forth in his hearers the mood which he desires. Wise men induce this condition in themselves by an act of volition. This volition, in perfect obedience, follows the dictates of their intellect; consequently, it is enough for the speaker to point their duty to such wise men, and they do it. But the multitude, the *vulgus*, are overpowered and carried along by their appetite, which is tumultuous and turbulent; their soul is tainted, having contracted a contagion from the body, so that it follows the nature of the body, and is not moved except by bodily things. Therefore, the soul must be enticed by corporeal images and impelled to love; for once it loves, it is easily taught to believe; once it believes and loves, the fire of passion must be infused into it so as to break its inertia and force it to *will*. Unless the speaker can compass these three things, he has not achieved the effect of persuasion; he has been powerless to convince.

Two things only are capable of turning to good use the agitations of the soul, those evils of the inward man which spring from a single source: desire. One is philosophy, which acts to mitigate passions in the soul of the sage, so that those passions are transformed into virtues; the other is eloquence, which kindles these passions in the common sort, so that they perform the duties of virtue.

It may be objected that the form of government under which we live at present no longer allows eloquence to exercise its control over free peoples. To which I answer that we ought to be thankful to our monarchs for governing us not by fist but by laws. However, even under the republican form of government, orators have gained distinction by their fluent, broad, impassioned style of delivery in the law courts, the assemblies, and the religious convocations, to the greatest advantage of the state, and to the signal enrichment of our language.

But let us approach what may be a basic point. The French language is abundantly endowed

with words designating abstract ideas. Now, abstraction is in itself but a dull and inert thing, and does not allow the comparative degree. This makes it impossible for the French to impart an ardently emotional tone to their ideas, inasmuch as such an effect can only be achieved by setting thought in motion, and a vehement motion at that; nor can they amplify or elevate their discourse. Nor can they invert the order of words: the conceptual abstraction being the most general category, it does not supply us with that "middle term" where the extreme points of a metaphor are able to meet and unite. It is therefore impossible in French for a single noun to be the vehicle of a metaphor; and metaphors composed of two nouns are, as a rule, somewhat stilted. Furthermore, when the French writers attempt the periodic style, they are unable to get very far, on account of the shortness of the sentence segments. Nor can French poets compose lines of greater breadth than those which are called "alexandrines"; and these alexandrines, besides consisting of two symmetrical portions, are more dragging and spindly than the Latin elegiac lines. (Each verse contains a simple thought, and they rhyme in pairs; the first feature reduces their scope, the second impairs their gravity.) French words have only two kinds of stress; they are accented on the ultima and on the penult, whereas Italian stresses the antepenult. In French the accent shifts to the penult, which results in a somewhat tenuous and thin sound. For these reasons, French is not fit for stately prose, nor for sublime verse. But though the French language cannot rise to any great sublimity or splendor, it is admirably suited to the subtle style. Rich in substantives, especially those denoting what the Scholastics call abstract essences, the French language can always condense into a small compass the essentials of things. Since arts and sciences are mostly concerned with general notions, French is therefore splendidly suited to the didactic genre. While we Italians praise our orators for fluency, lucidity, and eloquence, the French praise theirs for reasoning truly. Whenever the French wish to designate the mental faculty by which we rapidly, aptly, and felicitously couple things which stand apart, they call it *esprit*, and are inclined to view as a naive, simple trick what

we consider as forceful power of combination; their minds, characterized by exceeding penetration, do not excel in synthetic power, but in piercing subtlety of reasoning. Consequently, if there is any truth in this statement, which is the theme of a famous debate, "genius is a product of language, not language of genius," we must recognize that the French are the only people who, thanks to the subtlety of their language, were able to invent the new philosophical criticism which seems so thoroughly intellectualistic, and analytical geometry, by which the subject matter of mathematics is, as far as possible, stripped of all concrete, figural elements, and reduced to pure rationality. The French are in the habit of praising the kind of eloquence which characterizes their language, i.e., an eloquence characterized by great fidelity to truth and subtlety, as well as by its notable deductive order. We Italians, instead, are endowed with a language which constantly evokes images. We stand far above other nations by our achievements in the fields of painting, sculpture, architecture, and music. Our language, thanks to its perpetual dynamism, forces the attention of the listeners by means of metaphorical expressions, and prompts it to move back and forth between ideas which are far apart. In the keenness of their perception, the Italians are second only to the Spaniards. Theirs is a language which, in the rich and elevated style (i.e., that of Herodotus, Livy, and Cicero), possesses a Guicciardini; in the grand and vehement style of Thucydides, Demosthenes, and Sallust, it has others; in Attic elegance, it has Boccaccio; in the new lyric style, Petrarch. Ariosto, in the grandeur of his plots and the ease of his diction, puts one in mind of Homer; while a poet like Tasso, by the enchantingly musical sublimity of his rhyme, comes fully up to Virgil. Shall we then not cultivate a language possessing such felicitous qualities?

In conclusion: whosoever intends to devote his efforts, not to physics or mechanics, but to a political career, whether as a civil servant or as a member of the legal profession or of the judiciary, a political speaker or a pulpit orator, should not waste too much time, in his adolescence, on those subjects which are taught by abstract geometry. Let him, instead, cultivate his mind with an inge-

nious method; let him study topics, and defend both sides of a controversy, be it on nature, man, or politics, in a freer and brighter style of expression. Let him not spurn reasons that wear a semblance of probability and verisimilitude. Let our efforts not be directed towards achieving superiority over the Ancients merely in the field of science, while they surpass us in wisdom; let us not be merely more exact and more true than the Ancients, while allowing them to be more eloquent than we are; let us equal the Ancients in the fields of wisdom and eloquence as we excel them in the domain of science. . . .

XIV

As for universities, the amazing fact is that, whereas the Ancients possessed, so to speak, universities for the body, i.e., baths and athletic fields, where young men could develop their strength and agility by exercises such as racing, jumping, boxing, javelin- and discus-throwing, swimming and bathing, they never thought of establishing universities where young minds could be cultivated and strengthened.

In Greece, a single philosopher synthesized in himself a whole university. The Greek language, so fertile in potential developments that it was admirably fitted to express not only all the occurrences of common, everyday life, but the most recondite and abstruse ideas of all sciences and arts in apt terms, the beauty of which terms was commensurate with their appropriateness and felicity; the Greek genius for lawmaking, which was so exceptional that other nations came to borrow laws from Greece while Greece had no necessity to borrow from them—these fostered among the Hellenes the conviction of their immense superiority over other nations. They were wont to ask a question, acutely symptomatic of national conceit: “Art thou a Greek or a barbarian?” as if they esteemed themselves to be worth as much as half of the world, and to be the better part of it.

Things being so, since the Greeks devoted intense, undivided attention to the cultivation of philosophy, the mother, midwife, and nursling of all sciences and arts; since they did not, in the philosophical domain, rely on authority, but dis-

cussed all problems on no other merits but the intrinsic ones, each Greek philosopher was capable of achieving a mastery of all learning, both secular and religious, and it was from him alone that students learned thoroughly whatever it was necessary for them to know in the field of public affairs.

With the Romans, the case was different. Although their speech was not autochthonous but derived from other tongues, they proudly sprung all effort to prove that a Roman word derived from other languages. In the case of the words,

... which fall from Grecian well-spring, but slightly changed,

[Horace, *Ars Poetica* 53]

they preferred the frivolous, erroneous, foolish interpretation, rather than admit that one of their terms had non-native origins. Although their laws had largely been borrowed from Greece, they expended great ingenuity in grafting those enactments onto their own political system, so that they seemed to spring spontaneously from their soil. In respect to both language and law, the Romans equaled the Greeks. The need for universities was felt by the Romans even less than by the Greeks, since, as I have pointed out, they thought that wisdom consisted in the art and practice of law, and learned to master it in the everyday experience of political affairs. Since the patricians kept law-lore concealed, as if it were an *arcanum* of state, far from feeling any need for universities, the Romans had no interest whatever in establishing them.

But with the transformation of republic into principate, it being in the interest of the emperors that the science of law should be propagated as legal doctrine, this discipline gradually attained greater range and compass through the multitude of writers and their division into doctrinal schools. Regular institutions of teaching were recognized, and the “Academies” of Rome, Constantinople, and Beirut were founded.

Our need for universities is considerably greater. We must have a thorough knowledge of the Scriptures and, in addition, of Eastern languages and of the canons of the ecclesiastic Councils, some of which were held in Asia, some in Europe, some in Africa, in different countries

and cities, from apostolic to modern times. We must familiarize ourselves with the laws of Romans and Lombards, with feudal law, the theories of Greeks, Latins, and Arabs, which were introduced into our customary public law. We must guard against scribal garblings, plagiarisms, forgeries, interpolations of alien hands through which it is difficult for us to recognize the originals, and to grasp the author's true meaning. What we need to know is contained in so many books in languages that are extinct, composed by authors belonging to nations long since vanished. These books contain allusions to custom often unknown, in corrupted codices; therefore the attainment of any science or art has become so difficult for us, that at the present time no person can master even a single subject. This has made the establishment of universities necessary. In these universities, all branches of knowledge are taught by a number of scholars, each of whom is outstanding in his particular field. But this advantage is offset by a drawback. Arts and sciences, all of which in the past were embraced by philosophy and animated by it with a unitary spirit, are, in our day, unnaturally separated and disjointed. In antiquity, philosophers were remarkable for their coherence; their conduct was in full accord not only with the theories they professed but with their method of expounding them as well. Socrates, who maintained that "he knew nothing," never brought up any subject for discussion on his own initiative, but pretended to feel a desire to learn from the Sophists. His habit was to confine himself to advancing a series of minute questions, from the replies to which he drew his own inferences. The Stoics, instead, whose main principle was that the mind is the standard of all things, and that the sage should not entertain "mere opinions" about anything, established, in conformity with their requirements, a number of unquestionable truths, linking them, by continuous concatenation, through secondary propositions, to doubtful conclusions; and employed as their instrument of argumentation the figure of the *sorites*.⁷ Aristotle, who thought that in the at-

⁷A *sorites* is a chain of syllogisms in which the conclusion or implied conclusion of each one is the premise, major or minor, of another one. [Ed.]

tainment of truth the senses and the mind should co-operate, made use of the syllogism, by which he posited some universal propositions, so as to be able, in concrete cases, to eliminate dubiousness and to reach truth. Epicurus, for whom sense perception was the only avenue of approach to knowledge, neither granted any proposition to his opponents, nor allowed them to grant any to him, but explained phenomena in the simplest and most unadorned language.

Today, students who may be trained in the art of discourse by an Aristotelian, are taught physics by an Epicurean, metaphysics by a Cartesian. They may learn the theory of medicine from a Galenist, its practice from a chemist; they may receive instruction in the Institutes of Justinian from a disciple of Accursius, be trained in the Pandects by a follower of Antoine Favre, in the *Codex* by a pupil of Alciati.⁸ Students' education is so warped and perverted as a consequence, that, although they may become extremely learned in some respects, their culture on the whole (and the whole is really the flower of wisdom) is incoherent. To avoid this serious drawback, I would suggest that our professors should so co-ordinate all disciplines into a single system so as to harmonize them with our religion and with the spirit of the political form under which we live. In this way, a coherent body of learning having been established, it will be possible to teach it according to the genius of our public polity.

XV

I have now set forth the remarks suggested to me by the comparison of the study methods of our time with those of antiquity, and by a confrontation of their respective advantages and disadvantages, so that our methods may be more correct and finer in every respect.

If my ideas are true, I shall have reaped the supreme fruit of my existence. It has been my

⁸The Institutes of Justinian (sixth century C.E.) codify Roman law. The Pandects are a digest of that law. The *Codex* is the code of canon law of the Roman Catholic church. Vico's point is that related branches of a subject may be taught by adherents of conflicting theories or approaches. [Ed.]

constant effort, within the very limited range of my powers, to be useful to human society. But if my remarks should be considered false or lacking in practicality, my unquestionably honorable ambition and my earnest efforts towards a grand goal shall earn me a pardon.

It may be objected that, whereas facing danger when necessary is a sign of courage, undertaking a risk when there is no need of doing so is a sign of foolhardiness. "Why should you have undertaken to treat this subject which involves a knowledge of all sciences?"—some one will ask.

In answer, I will say: As G. B. Vico, I have no concern; but as a professor of eloquence, great concern in this undertaking. Our ancestors, the founders of this University, clearly showed, by assigning the professor of eloquence the task of delivering every year a speech exhorting our students to the study of the principles of various sciences and arts, that they felt he should be well versed in all fields of knowledge. Nor was it without reason that the great man, Bacon, when called upon to give advice to James, King of England, concerning the organization of a university, insisted that young scholars should not be admitted to the study of eloquence unless they had previously studied their way through the whole curriculum of learning.

What is eloquence, in effect, but wisdom, orately and copiously delivered in words appropriate to the common opinion of mankind? Shall the professor of eloquence, to whom no student may have access unless previously trained in all sciences and arts, be ignorant of those subjects which are required by his teaching duties? The man who is deputed to exhort young students to grapple with all kinds of disciplines, and to discourse about their advantages and disadvantages, so that they may attain those and escape these, should he not be competent to expound his opinions on such knowledge?

For these reasons, teachers willing to bear this burden (a burden, I fear, vastly surpassing the strength of my shoulders) deserve to be likened, I feel, to C. Cilnius Maecenas, Crispus Sallustius, and other *equites illustres*, who, though possessed of financial means superior to those which the law prescribed for admission to senatorial

rank, insisted on their wish to remain within the equestrian order.⁹ It was, therefore, not my duty alone as professor of eloquence, but my right as well to take up the subject of this discourse. What determined me was by no means the desire to diminish the prestige of a colleague or to place myself in the spotlight.

As you saw, whenever drawbacks had to be pointed out, I passed individual authors in silence; and whenever it was necessary to mention these authors, I did it with the utmost respect, since it was not for an unimportant man like me to censure persons so eminently great. As for the drawbacks, I sedulously set them forth as unobtrusively as possible.

From childhood, I have imposed on myself this rule (which the weakness of my fellow men has made a sacred one), to be as indulgent to the shortcomings of others as I would like others to be indulgent to my own, especially since others may have done many important things well, and failed only in a few cases, whereas I may have been guilty of countless errors in matters requiring but little ability.

In the present discourse, I have carefully refrained from any boasting; though my speech could have been pompously entitled "On the reconciliation of the study methods of antiquity with those of our time," I have preferred a more modest and usual designation. My purpose has been

not to draw smoke from the brightness of light, but to bring out light from smokey murk.

[Horace, *Ars Poetica* 143]

I chose not to clothe my thought in high-sounding words, lest I should offend the intelligence of this assembly of listeners, every member of which knows how to reason with his own head and is fully conscious of his right to judge any author as he thinks best.

But, someone will object, "You were certainly bragging when you said that your theme was new." Not in the least. The fact that a theme is new is not automatically a recommendation; monstrous and ridiculous things may also be

⁹These illustrious members of the wealthy (but not patrician) equestrian class chose public service without the honor of official rank and title. [Ed.]

novelties. But to bring forward new things and to treat them in the right manner is unquestionably worthy of praise. Whether I did so, or not, I shall leave to the judgment of my listeners and to the common judgment of scholars, from whom, I vow, I shall never depart. In my life I have always had the greatest apprehension of being alone in wisdom; this kind of solitude exposes one to the danger of becoming either a god or a fool.

But, it will be urged, you have shown yourself thoroughly presumptuous in choosing a subject where you had to show a mastery of all learned disciplines and where you had to pass peremptory and pretentious judgment on them, as if you had been fully and deeply familiar with every one of them. To fend off the objection, I beg whosoever wants to press it to reflect on the kinds of judgments I have passed. Let him observe that a certain doctrine may be either beneficial or prejudicial to some persons; let him ascertain how the harm that such doctrine is likely to cause may be avoided. He will find out that judgment cannot be passed except by a man who has studied all of these matters, but

of all these things, no one more deeply than all others,
yet all of them indeed, in moderation.

[Terence, *The Lady of Andros* 58–59]

It is a common experience to see an individual who has concentrated all of his efforts on a single branch of study, and who has spent all his life on it, think that this field is, by far, more important than all others, and to see him inclined to make application of its specialty to matters wholly foreign to it. This may be due to the weakness of our nature, which prompts us to take an inordinate delight in ourselves and in our own pursuits.

Though I am afraid of delivering false judgments on all subjects, I am particularly afraid of advancing erroneous views on eloquence, since I profess it.

After stating this in defense of my assignment and of the way I have discharged it, permit me to say that I shall be greatly indebted to any one who wishes to criticize with pertinence and with concrete reference to their intrinsic purport, the points that I have brought up, so as to free me from eventual errors. He will be certain to enlist my gratitude by his mere intent to do so.

Thomas Sheridan

1719–1788

Thomas Sheridan received a classical education from his father, the schoolmaster Dr. Thomas Sheridan, and in 1743 received an M.A. from Trinity College, Dublin. He began a career as a stage actor and became known as quite a good one, appearing in 1744 with the popular actor David Garrick, with whom he was favorably compared. Sheridan's son, Richard Brinsley Sheridan, became the now-famous playwright.

Thomas Sheridan was the godson of Jonathan Swift, to whose influence he attributed much of his passion for the English language, as well as his Augustan attitude toward the ancients. Like Swift, Sheridan endorsed the idea of “ascertaining” the language by establishing fixed rules for usage.

It was Sheridan's consuming interest in correcting the language that led him to forgo his acting career and become a proselytizer for elocution, although he continued to act on occasion and to manage theater companies for many years. His chief activity from 1756 to 1762 was giving his very successful lecture course, an endeavor repeated intermittently until as late as 1785. The *Lectures on Elocution* (excerpted here) were published in 1762; in later years, Sheridan published *A Plan of Education* (1769), *Lectures on the Art of Reading* (1775), and *A General Dictionary of the English Language* (1780). All these works reiterated in some form the argument that Sheridan had first made in 1756, in a work called *British Education: Or, The Source of the Disorders of Great Britain. Being an Essay towards proving, that the Immorality, Ignorance, and false Taste, which so generally prevail, are the natural and necessary Consequences of the present defective System of Education. With an attempt to shew, that a revival of the Art of Speaking, and the Study of Our Own Language, might contribute, in a great measure, to the Cure of those Evils*. The subtitle goes on to indicate that the revival of oratory and its elevation to the status it held in ancient Athens and Rome would improve religion, morality, and the fine arts and support the British constitution. The connection made here between “Immorality, Ignorance, and false Taste” is typically Augustan: From a knowledge and proper appreciation of classical culture (beginning, for Sheridan, with oratory), it follows as the night the day that one's moral values will rise to the corresponding level. Sheridan notes that the British, because of their superior religion and form of government, can rise even higher than the ancients. Oratory is the cornerstone of this enterprise precisely because it combines the arts with practical political use.

Sheridan thus found an ideal forum for his own talents and interests, and he was encouraged by the contemporary desire for linguistic self-improvement and educational reform (see the introduction to Part Four). He argues, too, that just as language is the medium of reason, so voice and gesture are “the natural language of the passions.” John Locke (p. 814) had demonstrated the former connection, but the latter, says Sheridan, needs further philosophical investigation. Sheridan's lectures appeal to science, reverence for the ancients, linguistic anxiety (the popular passion

for speaking correctly), and morality, bringing to bear every possible argument for the importance of elocution. The very excess of this insistent overvaluation of elocution led to criticism and undervaluation of Sheridan's project. But his arguments are not without substance, and his principles for public speaking are familiar and reasonable. His practical instruction consists primarily of advice to be natural, to treat public speaking as a form of conversation, to adhere to correct grammar and usage, and to practice, for reasons of social expediency, the refined dialect of the educated English. He cautions against reading-pronunciation (e.g., pronouncing "often" with the "t") and urges speakers to attend to the meaning of sentences to determine the placement of emphasis and pauses. Gestures should also be natural. But, he notes, the meaning of gestures is conventional; they are actions attached to ideas: *Natural* therefore means "not mechanical," rather than "springing from human nature."

The short extract included here contains Sheridan's argument about the relationship between verbal and nonverbal communication. It is a good example of both the sophistication and the peculiarity of Sheridan's approach. Though Sheridan's own fame diminished, his work spawned many imitators, and the substance of his lectures was abstracted into many textbooks, most notably Hugh Blair's popular and long-lived *Lectures on Rhetoric and Belles Lettres*. The elocution courses, often required, that appeared in colleges in Britain and the United States from Sheridan's time to ours show the power of the ideas that Thomas Sheridan so decisively formulated.

Selected Bibliography

Our excerpt is from the facsimile, reprinted without notes or introduction in 1968, of the first edition of 1762, entitled *A Course of Lectures on Elocution*. It is bound with several shorter works on language, a plan for a grammar, and an article on teaching English as a second language. The Augustan Reprint Society has published a facsimile of Sheridan's 1759 *A Discourse Being Introductory to His Course of Lectures on Elocution and the English Language* with a brief but helpful introduction by G. P. Mohrmann (1969).

Though often dismissed as a crank, Sheridan is treated positively in William Benzie's biography, *The Dublin Orator: Thomas Sheridan's Influence on Eighteenth-Century Rhetoric and Belles Lettres* (Leeds, 1972), and in Wallace Bacon's "The Elocutionary Career of Thomas Sheridan (1719–1788)" (*Speech Monographs* 31 [March 1964]: 1–53). In *Things, Thought, Words and Actions: The Problem of Language in Late Eighteenth-Century British Rhetorical Theory* (1994), H. Lewis Ulman places Sheridan in the context of eighteenth-century rhetoric, relating him especially to Campbell and Blair, and praises his conceptualization of words as actions and language as performance. W. S. Howell discusses Sheridan's work sympathetically in *Eighteenth-Century British Logic and Rhetoric* (1971).

G. P. Mohrmann discusses the elements of science, sentiment, and traditional rhetoric that went into the elocutionary movement in "The Language of Nature and Elocutionary Theory" (*Quarterly Journal of Speech* 52 [April 1966]: 116–24). Marie Hochmuth and Richard Murphy look at elocution in American schools in "Rhetorical and Elocutionary Training in Nineteenth-Century Colleges" and Frederick W. Haberman discusses "English Sources of American Elocution," both in *A History of Speech Education in America*, ed. Karl Wallace (New York, 1954).

A Course of Lectures on Elocution

Lecture VI

TONES

Thus far, I have considered the several points, that are fundamentally, and essentially necessary, to every public speaker; without which he will be so far from making any impression on his hearers, that he will not be able to command their attention, nor, in many cases, even make himself understood.

Yet so low is the state of elocution amongst us, that a man who is master even of these rudiments of rhetoric, is comparatively considered, as one of an excellent delivery. This very circumstance therefore, is a sufficient inducement, to apply closely, at least to the mastery of these points.

But when a man has got so far, as I can see no reason that he should stop there, or that he should not farther endeavour, to make himself master of every thing, which can add grace, or force to his delivery; I shall now attempt to lay open the principles, that may serve as guides to him, in the use of the two remaining articles, tones, and gesture: upon which, all that is pleasurable, or affecting in elocution, chiefly depend.

Before I enter upon the subject of tones, it will be necessary to fix, the precise meaning, of the term language; to know what it comprehends, and what are its bounds.

I dare say there are few, who would not think it an affront offered to their understandings, if they were asked, "what they mean by the term language?" as being a thing, which every rational creature, is supposed necessarily to know. And I fancy, upon such a question's being proposed, the first thought that would occur to every one, who had not properly considered the point, is, that language is composed of words. And yet, this is so far from being an adequate idea of language, that the point in which most men think its very essence to consist, is not even a necessary property of language. For language, in its full extent, means, any way or method whatsoever, by which all that passes in the mind of one man,

may be manifested to another. And as this is chiefly done by an agreement in the use of certain signs, it is no matter what those signs are; there being little or no natural connection, between any verbal signs and our ideas, which is sufficiently evinced, by the variety of languages that are spoken, in the different countries of the world.

It is true, the facility with which the communication is carried on, by means of the organs of speech, preferably to any other method; together with some other reasons, which need not here be enumerated, have made mankind in general agree, in making articulate sounds or words, the symbols of their ideas; but we have ample proof, that this did not arise from a principle of necessity, but conveniency. For they who are born deaf, can make themselves understood by visible signs; and we have it on the best authority, that the Mimes of the Ancients, were perfectly intelligible, without the use of words. But why need I mention these, when every one who can read knows, that our thoughts may be communicated by visible marks, as well as by articulate sounds?

I am aware it will be said, that written language is only a copy of that which is spoken, and has a constant reference to articulation; the characters upon paper, being only symbols of articulate sounds.

But tho' all who are blest with the gift of speech, by constantly associating the ideas of articulate sounds, to those characters which they see on paper, come to imagine that there is a necessary connection between them, and that the one, is merely a symbol of the other; yet, that it is in itself, a manner of communication entirely different, and utterly independent of the other, we have ample demonstration from this; that it can be perfectly understood by those, who never had, nor ever could have, the least idea of an articulate sound. This has been fully proved, in the case of many persons born deaf, who yet could read, and understand written language perfectly well, and write their thoughts with accuracy.

It may at first view be thought, that I am labouring a point, of little or no consequence,

farther than speculation; but as I think I shall be able to shew, that this fundamental error with regard to our general idea of language, in confining it to such narrow bounds, has had a remarkable effect upon our practice; and that some of its noblest uses have been lost to us, thro' the want of a just notion of its comprehension; it must be granted, that before I proceed, it will be necessary, in the fullest manner, to clear up that point. The allowed utility of any measure, must be the first inducement, to enter on the pursuit of it; and the reasonableness of it must be shewn, before its utility will be allowed.

In civilized countries, possessed of the collected wisdom of ages in books, the learned think they know, or have it in their power to know every thing that it is possible for the human mind to be acquainted with. In vain have several new and important discoveries, made in latter ages, as well as in our own times, shewn how ill founded this opinion is. Learned vanity, which exceeds that of every other kind, still takes up arms against any thing that is offered as new. And even amongst the most candid, on account of the many pretensions that have been made to new discoveries, which have ended in smoke, the understanding is exceedingly on its guard, on such occasions; doubts of every thing that is offered to it, which does not carry conviction; and will scarcely admit of any conclusion, that does not amount to demonstration. This is the case even in subjects that are in themselves new, and which therefore have no prejudices to encounter: But when the subject happens to be of that kind which is open to all the world; which has not only been an object of enquiry and examination, in theory, but is also to be viewed in universal practice; and therefore is of that sort, about which all mankind have formed certain opinions, or judgements; it is evident, that the prepossessions to be encountered in that case, must be much stronger; and that nothing is likely to remove them, but necessary conclusions, drawn from self-evident premises.

Of this nature, is the subject of language; which being used by all mankind is of all others, the subject which mankind in general, think themselves best acquainted with, and that, of which they have the clearest and fullest compre-

hension. And yet it is of all others, that of which the most erroneous opinions are entertained, and with whose true nature, mankind in general are least acquainted. The reason of this might be clearly shewn, were there time now for such an enquiry; but it ought to make the most knowing and learned of men, doubtful of their judgements in this article, when it is considered with what candour, the clear-sighted and judicious Locke, has acknowledged his error in that point; and his ignorance of the true state of language, till the precision, necessary to his subject, compelled him to strict scrutiny into its nature: in consequence of which, he was divested of the prejudices, that he had imbibed from custom and education. With what ingenuous modesty has he confessed, that consciousness of error, first gave rise to those new and important discoveries, laid open in the third book of his Essay, in which he treats of words! Where he says, "I must confess that when I first began this discourse of the understanding, and a good while after, I had not the least thought, that any consideration of words, was at all necessary to it." And yet this great man found, that he could not proceed himself with any certainty, or manifest his thoughts to others with any clearness, till he had first written an entire book upon that point, which he acknowledges he had before thought, utterly unnecessary; and till he had set himself right, as well as the rest of the world, in the mistaken notions entertained of language.

What a pity is it, that this penetrating writer, did not carry his enquiries farther into this important subject, as he seems in one place to promise. We might then have had, as accurate a knowledge, of the whole of language, as we now have, of that part of it which he had laid open to us. But he confined himself entirely to that branch of language, which related to his subject, as enquiry into the human understanding; his only object was, to examine the nature of words, as symbols of our ideas: whilst the nobler branch of language, which consists of the signs of internal emotions, was untouched by him as foreign to his purpose. And however we may be indebted to him, for the new lights which he has given us into the subject, so far as he has gone; yet it is to be feared, that by stopping there, he has not a

little contributed, to the confined view which we have of language, in considering it, as made up wholly of words.

Our pains with respect to language, are at present limited, to the narrow conception which we have of it; and therefore are wholly confined to the knowledge and use of words: and I think I may venture to appeal to my hearers, whether this is not the generally received opinion? and whether he, who perfectly understands the meaning of the words, and has the right use of them at command, is not thought to be a master of language? Yet, if it can be shewn that this is only a part of language; if it can be shewn that it has other parts, absolutely necessary to the communication of what passes in our minds, which can not possibly be done by mere words; and that too in order to answer some of the noblest, and most important ends, of such social communication; it must be allowed, that our pains ought not to be confined, to that part only; but should proportionally be extended to those other parts, which are equally necessary, and in their consequences of more importance.

I have already shewn, that words are in their own nature, no essential part of language, and are only considered so thro' custom. I shall now proceed to shew, that when by custom they are made a necessary part, they are still only a part; that they can not possibly effect all the purposes of social communication; and that there are other parts, essentially necessary, to answer its noblest and best ends.

Words are, by compact, the marks or symbols of our ideas; and this is the utmost extent of their power. Did nothing pass in the mind of man, but ideas; were he a different kind of being from what he is; were he like the Houyhnhms of Swift,¹ always directed by a cool, invariable, and as I may say instinctive reason; to make known the ideas of such a mind, and its internal operations, would not be beyond the power of words: and a language composed of words only, provided there were a sufficient number of them, so that each idea, and each operation, might have its dis-

¹The Houyhnhms (as Swift spelled the name) are the exquisitely rational and passionless horses that Gulliver meets in the fourth part of *Gulliver's Travels* (1726). [Ed.]

tinct mark, would sufficiently answer the end. For this we find effected amongst us, in all matters where simple reason, and mere speculation is concerned, as in the investigations of mathematical truths.

But as there are other things which pass in the mind of man, beside ideas; as he is not wholly made up of intellect, but on the contrary, the passions, and the fancy, compose great part of his complicated frame; as the operations of these are attended with an infinite variety of emotions in the mind, both in kind and degree; it is clear, that unless there be some means found, of manifesting those emotions, all that passes in the mind of one man can not be communicated to another. Now, as in order to know what another knows, and in the same manner that he knows it, an exact transcript of the ideas which pass in the mind of one man, must be made by sensible marks, in the mind of another; so in order to feel what another feels, the emotions which are in the mind of one man, must also be communicated to that of another, by sensible marks.

That the sensible marks necessary to answer this purpose, can not possibly be mere words, might fully be proved by a philosophical disquisition into their nature, were it proper at present to enter into such an enquiry: but this point may be made sufficiently clear to answer my present design, in a shorter way. It is certain that we have given names to many of these emotions, at least to such as are of the strongest, and most remarkable kind, tho' much the greater part of them, and the different degrees of all, remain without names. But the use of these names, is not to stand as types of the emotions themselves, but only as signs, of the simple or complex ideas, which are formed of those emotions; that we may be enabled, by the help of those names, to distinguish them in the understanding, and treat of their several natures, in the same cool manner as we do with regard to other ideas, that have no connection with any emotions of the mind.

Every one will at once acknowledge that the terms anger, fear, love, hatred, pity, grief, will not excite in him the sensations of those passions, and make him angry or afraid, compassionate or grieved; nor, should a man declare himself to be under the influence of any of those

passions, in the most explicit and strong words that the language can afford, would he in the least affect us, or gain any credit, if he used no other signs but words. If any one should say in the same tone of voice that he uses in delivering indifferent propositions from a cool understanding, "Sure never any mortal was so overwhelmed with grief as I am at this present." Or "My rage is roused to a pitch of frenzy, I can not command it: Avoid me, be gone this moment, or I shall tear you to pieces:" Sure no one would feel any pity for the distress of the former, or any fear from the threats of the latter. We should either believe that he jested, or if he would be thought serious, we should be moved to laughter at his absurdity. And why is this? But because he makes use of words only, as the signs of emotions, which it is impossible they can represent; and omits the use of the true signs of the passions, which are, tones, looks, and gestures.

This will serve to shew us that the language, or sensible marks, by which the emotions of the mind are discovered, and communicated from man to man, are entirely different from words, and independent of them. Nor was this kind of language left to the invention of man, or to the chance of such arbitrary marks, as he should think proper to affix to the passions, in order to characterize them: no, it was necessary to society, and to the state of human nature in general, that the language of the animal passions of man at least, should be fixed, self-evident, and universally intelligible; and it has accordingly been impressed, by the unerring hand of nature, on the human frame. The improvement and exercise of the intellectual faculties, to any eminent degree, could fall to the lot of but a small portion of mankind; as even the necessaries for the support of life, can not be acquired by much the greater part, but by such constant labour and industry as will afford no time for contemplative studies. But tho' it be not necessary to society, that all men should know much; it is necessary that they should feel much, and have a mutual sympathy, in whatsoever affects their fellow creatures. All our affections therefore and emotions, belonging to man in his animal state, are so distinctly characterized, by certain marks, that they can not be mistaken; and this language of

the passions, carries with it the stamp of its almighty Artificer; utterly unlike the poor workmanship of imperfect man, as it is not only understood by all the different nations of the world, without pains or study; but excites also similar emotions, or corresponding effects in all minds alike.

Thus, the tones expressive of sorrow, lamentation, mirth, joy, hatred, anger, love, pity &c. are the same in all nations, and consequently can excite emotions in us analogous to those passions, when accompanying words which we do not understand: nay the very tones themselves, independent of words, will produce the same effects, as has been amply proved by the power of musical imitations. And tho' these tones, are usually accompanied with words, in order that the understanding may at the same time perceive the cause of these emotions, by a communication of the particular ideas which excite them; yet that the whole energy, or power of exciting analogous emotions in others, lies in the tones themselves, may be known from this; that whenever the force of these passions is extreme, words give place to inarticulate sounds: sighs, murmurings, in love; sobs, groans, and cries in grief; half choaked sounds in rage; and shrieks in terour, are then the only language heard. And the experience of mankind may be appealed to, whether these have not more power in exciting sympathy, than any thing that can be done by mere words.

Nor has this language of the passions been confined to man only; for in that respect, he seems to be included in the general law, given to all animals that are not mute, or wholly incapable of uttering any sound; as they also express their passions by certain tones, which striking the auditory nerves of those of the same species, always produce correspondent effects; inasmuch as their kindred organs, are invariably tuned by the hand of nature, in unison to those sounds.

But it is to be observed, that each species of animals, seem to have a language of their own, not at all understood, or felt by the rest. The lowing of the cow affects not the lamb; nor does the calf regard the bleating of the sheep. The neighing of the steed, calls up all the attention of the horse-kind; they gaze towards the place from whence the sound comes, and answer it, or run

that way, if the steed be not in view; whilst the cows and sheep raise not their heads from the ground, but continue to feed, utterly unmoved. The organs of hearing in each species, are tuned only to the sounds of their own; and whilst the roaring of the lioness, makes the forest tremble, it is the sweetest music to the ears of her young. This shews us, that the auditory nerves of animals, are constructed in such a way, as to be affected only with such sounds, as immediately regard the two chief ends of their being; the propagation, and preservation of their species: all other sounds therefore, excepting such as excite sympathy or antipathy, are indifferent to them. Sympathy, with those of their own kind; antipathy, against such as are their natural enemies, or destructive of their species. Those which excite sympathy, may be supposed to be all in concord; those which rouse antipathy, to be discords; which by creating an uneasy sensation, immediately dispose them to flight, to avoid the enemy. Thus the cry of dogs, warns the hare of his danger: and the howlings of the wolf, alarm the flock. The different species of animals, may therefore be considered, as so many different nations speaking different languages, that have no commerce with each other; each of which consequently understands none but their own; excepting only those who are in a state of warfare; by whom the language of the enemy is sufficiently understood, for the purpose of self preservation.

As the passions and emotions of the several kinds of animals, are very different, according to their different natures, so is there an equal diversity of tones, by which these several passions and emotions are expressed: from the horrible roarings of the lion, to the gentle bleatings of the lamb: from the loud bellowings of the wild bull, to the low purring of the domestic cat. But as there is no passion or emotion whatsoever, in the whole animal world, which is not to be found in man, so equally comprehensive is the language of his passions, which are all manifested by suitable tones. The roaring of the lion, is not more terrible than the voice of his anger; nor the cooings of the pigeon, more soft, than the murmurs of his love. The crowing of the morning cock, is not so clear and sprightly as the notes of his joy; nor the melancholy mournings of the turtle, so

plaintive as those of his woe. The organs of hearing therefore in man, are so constructed, as not to be indifferent to any kind of tone, either in his own species, or in the animal world, that is expressive of emotion or passion: from all they receive either pleasure or pain, as they are affected with sympathy or antipathy. It is true that like the several tribes of animals, man is most affected, or has the strongest sympathy excited, by such tones as are uttered by those of his own species; and in proportion also by those which most nearly resemble them in others. We are moved most by the distressful cries of those animals, that have any similitude to the human voice, such as the fawn, and the hare, when seized in pursuit by dogs. But still we both feel and understand the nature of all others. Nor can any animal utter any sound which we cannot explain, or tell from what emotion, or passion it proceeds. This distinguishing faculty was necessary to man as master of the animal race, that by understanding their several languages, he might relieve their distresses, and supply their wants. And indeed we find, that the tones of all domestic animals, expressive of their wants or distresses, have a wonderful power over the human heart, and mechanically rouse us to their relief.

Thus extensive as are the powers of the human ear, those of the human voice, do not fall short of them; but are exactly suited to them in degree and comprehension; there is no tone which the ear can distinguish, that the voice, by pains and practice, is not capable of uttering. Hence it comes to pass, that as man understands the language of the different tribes of animals, so he can make himself understood by them. The horse rejoices in the applauding tones of his rider's voice, and trembles when he changes them to those of anger. What blandishments do we see in the dog when his master soothes him in kind notes; what fear, and even shame, when he changes them to those of chiding? By those the waggoner directs his team, and the herdsman his flock. Even animals of the most savage nature, are not proof against collective powers of the human voice; and shouts of multitudes will put wild beasts to flight, who can hear without emotion the roarings of the thunder.

But that man should be furnished with such an

extensive power in these points, even in his animal state, will appear reasonable, when we consider that his nature, is an abstract of all animal nature; and that in his tribe are to be found, all the emotions and passions, that belong to all the several tribes: consequently all the marks expressive of those emotions, or such as are similar to them, should belong to that tribe. If man is capable of being the most social, the most tender and affectionate to those of his own species, of any animal; he is at the same time, capable of becoming a greater enemy, and of having a stronger hatred and detestation of them, than is to be found, even amongst the different tribes of animals, that are born in a natural state of enmity. All the natural language therefore of sympathy, and antipathy, should be given to him in a higher degree, for the same reason that it is in a more limited state assigned to the several tribes of animals.

Thus far we find, that man, in his animal capacity, is furnished, like all other animals, by nature herself, with a language which requires neither study, art, nor imitation; which spontaneously breaks out in the exactest expressions, nicely proportioned to the degrees of his inward emotions; and which is not only universally understood, but felt by those of the same species, as also in certain degrees by the rest of the animal world. That animals should come perfect from the hand of nature, in this respect, as well as in every thing else, seems reasonable from this consideration; that they are utterly incapable of improving themselves; or of making any alteration in their frames by their own care or pains; their several faculties by an invariable law, growing to perfection, and decaying with their bodies, with as little assistance from themselves, as vegetation in herbs or trees if performed, in the insensitive world. As the first of animals, nature has not been less provident with regard to man; on the contrary this, as well as all his other animal faculties; is bestowed on him in a degree suitable to the superiority of his rank. But as man is something greater than the first of animals; as he is the link between animal and spiritual beings, and partakes of both their natures; other faculties, and other principles, belonging to his nobler, spiritual part, disclose themselves; of which there are no traces in the animal world.

The first great distinction between the human and animal species, and which seems to mark their boundaries, is this: that it is in the power of man, by his own pains and industry, to forward the perfection of his nature. And what the nobler part of his nature is, is clearly pointed out by that distinction; because it is that nobler part only, or such of his animal faculties, as are necessary to forward the perfection of that nobler part, which are capable of improvement by such pains. All the organs and faculties of his body necessary to his animal life, are so fashioned by the hand of nature, that they grow of course to perfection; but the organs (if I may be allowed the expression) and faculties of his mind, necessary to his rational life, are only in embryo; and it depends wholly upon the assistance of others, together with his own care, to give them birth, and bring them to maturity.

Hence arises the necessity of a social state to man both for the unfolding, and exerting of his nobler faculties. For this purpose, a power of opening a communication between mind and mind, was furnished in the most easy way, by bestowing on him the organs of speech. But still we are to observe, that nature did no more than furnish the power and means; she did not give the language, as in the case of the passions, but left it to the industry of men, to find out, and agree upon such articulate sounds, as they should chuse to make the symbols of their ideas. And she seems to have laid down the same general law, with respect to every thing which regarded the nobler part of man; to furnish nothing but what was absolutely necessary, and leave the rest to his own industry: from the exertion of which, his merit was to arise, and his pretensions to stand a candidate for his admission, into a higher, and happier order of beings. Accordingly as she did not furnish the words, which were to be the symbols of his ideas; neither did she furnish the tones, which were to manifest, and communicate by their own virtue, the internal exertions and emotions, of such of his nobler faculties, as chiefly distinguish him from the brute species; but left them also, like words, to the care and invention of man; contenting herself with supplying him with an instrument, of such a compass as would furnish a sufficient variety of tones, to an-

swer all the variety of emotions, exertions, and energies of all his faculties, if sought for, and settled by agreement, to be their marks. Nor has art found those which are of her invention to be of less efficacy, or less capable of exciting correspondent emotions, than those even of nature, when established by custom; in this case justly called second nature. The only difference between them lying in this, that the tones of the animal passions, of themselves excite analogous emotions, without the intervention of any thing else; they are understood, by being felt. But the tones resulting from the emotions and exertions of our nobler faculties, tho' they excite feeling, as it is in the nature of all tones to do so, yet it is only of a vague and indeterminate nature; not corresponding to the energies in the mind of the speaker, unless they are associated with words, or the symbols of the ideas, which give rise to those energies and emotions; their nature and degree then become fixed, and the hearer both feels and understands them. When any tones therefore are affixed to certain modes of expression, and adopted into general use; those tones, tho' they have no natural connection with the sentiment, no more than words have with ideas; yet by such association, become equally intelligible, and equally affecting with those that have, and are made part of the language; insomuch, that were those expressions to be uttered, without those tones, they would not convey their full meaning.

Thus far I have considered tones, chiefly in contradistinction to words, as the types and language of the passions, and all internal emotions, in the same way as articulate sounds, are the types and language of ideas, independent of any such emotions. But when we come to examine the powers of each in their full extent, we shall find, that tho' words are limited to their peculiar office, and never can supply the place of tones; yet tones, on the other hand, are not confined to their province, but often supply the place of words, as marks of ideas. And tho' the ease and distinctness with which our ideas are marked by articulate sounds, has made all mankind agree to use them in discourse, yet that tones are capable in a great measure of supplying their place, is clear from this; that the Chinese language is chiefly made up of tones, and the same individual

word shall have sixty different meanings, according to the different tones in which it is pronounced. Here then it is clear, that fifty-nine of the sixty ideas, are marked by tones; for the same individual word, pronounced exactly in the same manner, can not possibly by itself, be a clear and distinct mark, for more than one idea. This indeed has prodigiously increased the difficulty of their language, so that it is scarcely possible for strangers to acquire it; and it is the labour of a man's life, even among the natives, to make himself fully master of it. Such a use of the tones therefore, in equal extent, has not been adopted by any other nation. But there are none which have it not in some degree. It is true these tones amongst us, are not annexed to words in their separate state, but only when they are ranged in sentences; and he must be very ignorant of speech, who does not know, that the same individual words in a sentence, shall have several very different meanings according to the tones which accompany the emphasis. To the use of these tones is owing in a great measure conciseness of discourse; and the necessity of multiplying words in language, to a degree that might make them burthensome to the memory, is removed. Nor are these the only advantages arising to language from tones; for by thus setting off words by tones, and making them determine their meaning, an agreeable variety may be introduced, into the most abstracted and philosophical discourses, in which there is no room for the language of the passions and emotions; and which consequently must occasion disgust, and soon weary attention, if delivered by the use of mere words, in one dull uniform tone. On the same account it is fortunate also that tones have been made the marks of the several pauses; and the links which unite together, the several members of sentences and periods.

But beside the use of tones, in the exertion of his animal, and intellectual faculties; there is another part of man's nature which seems to be the link that joins that other two, a great part of whose exertions, have their very essence, so far as they are communicated by the voice, in tones; I mean the fancy. — To one branch of this part of his frame, Nature herself has furnished matter for a language, different in its kind from all other,

and peculiar to man; I mean, risibility; and this matter, according to the exertions of fancy, is to be modified into an infinity of shapes. There is a laugh of joy, and a laugh of ridicule; there is a laugh of anger, and a laugh of contempt. Nay there are few of our passions, to which fancy can not adapt, and associate this language. And should we trace it thro all its several modifications and degrees, from the loud burst of joy, to the tones belonging to the dry sneer of contempt; we should find, that an extensive, and expressive language, independent of words, belongs to this faculty alone. Let any one who has been present at a well-acted comedy, only reflect, how very different the sentiments, characters, and humour have appeared, in the representation, from what was conveyed to him by the mere perusal of the words in his closet, and he will need no other proof to shew him how necessary, and how extensive a part, the tones make, of the language of fancy.

From what has been said, it will sufficiently appear, how grossly they are mistaken, who think that nothing is essentially necessary to language, but words: and that it is no matter, in what tones their sentiments are uttered, or whether there be any used, so that the words are but distinctly pronounced, and with such force of voice as to be clearly heard. Since it must be allowed, that the use of language is not merely to communicate ideas, but also all the internal operations, emotions, and exertions, of the intellectual, sensitive, and imaginative faculties of man: since it must be allowed, that from the frame of our language, our

very ideas can not be communicated, nor consequently our meaning understood, without the right use of tones; as many of our ideas are marked and distinguished from each other by tones, and not words: and since it must be allowed that the connection or repugnance of our ideas, their relationship or disagreement, and various dependence on each other in sentences, are chiefly pointed out by tones belonging to the several pauses.

When therefore we reflect, that not only every thing which is pleasurable, every thing which is forcible and affecting in utterance, but also the most material points necessary to a full and distinct comprehension, even of the sense of what is uttered, depends upon tones; it may well astonish us to think, that so essential a part of language, should in a civilized country be wholly neglected. Nay worse, that our youth should not only be uninstructed in the true use of these, but in the little art that is used, they should be early perverted by false rules, utterly repugnant to those which nature has clearly pointed out to us. In consequence of which, all the noble ends which might be answered in a free state, by a clear, lively, and affecting public elocution, are in a great measure lost to us. And how can it be otherwise, when we have given up the vivifying, energetic language, stamped by God himself upon our natures, for that which is the cold, lifeless work of art, and invention of man? and bartered that which can penetrate the inmost recesses of the heart, for one which dies in the ear, or fades on the sight.

Gilbert Austin

1753–1837

Like Thomas Sheridan, Gilbert Austin was an Irishman and a graduate of Trinity College, and he also devoted himself to elocution. But unlike Sheridan, Austin distrusted the natural, conversational approach to public speaking. Though the vast bulk of *Chironomia* (1806; excerpted here), his treatise on elocution, presents the views of ancient and modern rhetoricians on the subject, the work is best known for the mechanical system of notation that Austin proposed for recording and choreographing speech performances. Austin was the headmaster of a school for upper-class boys in Dublin, and *Chironomia* was intended as a textbook both for them and for adult professionals, such as lawyers, ministers, and politicians, who needed to use eloquence in their work.

Austin had a number of admirers and imitators, and his book encouraged closer attention to the details of nonverbal communication. Austin is himself following the lead of John Bulwer, whose two treatises on gestures—*Chirologia: or the Natural Language of the Hand* and *Chironomia: or the Art of Manual Rhetoric*, both published in 1644—deal with natural gestures and histrionics in oratory. David Hume, too, had advocated the use of histrionic gesture in public speaking in his essay “On Eloquence” in 1742. But it was Austin’s work that gained public notice. Austin was a member of the Royal Irish Academy (similar to the British Royal Society), and as rhetoric scholar Philippa Spoel has shown, his categorization of gestures in *Chironomia* parallels the era’s other attempts to systematize knowledge scientifically. But Richard Whately articulated the reigning view in 1828, in *Elements of Rhetoric*: “Probably not a single instance could be found of any one who has attained, by the study of any system of instruction that has hitherto appeared, a really good Delivery; but there are many—probably nearly as many as have fully tried the experiment,—who have by this means been totally spoiled.”¹ Whately praises Sheridan and advocates the “natural” method.

Reprinted here are one of a number of examples in *Chironomia* showing how symbols can be used to indicate the delivery of a speech, four of eleven plates of illustrations, and a summary of Austin’s notation system.

Selected Bibliography

Our excerpt is from the facsimile of the first edition of Austin’s *Chironomia; or, A Treatise on Rhetorical Delivery*. First published in 1806, the facsimile is edited by Mary Margaret Robb and Lester Thonssen (Carbondale, 1966). The editors’ introduction provides useful information about Austin, the history of the elocution movement, and the development of the elocution curriculum in the eighteenth and nineteenth centuries.

John Bulwer’s *Chirologia: or the Natural Language of the Hand* and *Chironomia: or the Art of Manual Rhetoric* (1644) have been published together in a corrected edition in the Southern Illinois University Press Landmarks series, edited by James W. Cleary (1974).

¹Richard Whately, *Elements of Rhetoric* (1828: rpt., ed. Douglas Ehninger, Carbondale: Southern Illinois University Press, 1963), pp. 339–40.

Little scholarship is devoted specifically to Austin, though he figures prominently in discussions of the history of elocution. G. P. Mohrmann, one of the few exceptions, defends Austin against complaints that he is merely mechanical, in "The Real *Chironomia*" (*Southern Speech Journal* 34 [fall 1968]: 17-27). Philippa Spoel uses Michel Foucault's work on eighteenth-century science to interpret Austin's project in "The Science of Bodily Rhetoric in Gilbert Austin's *Chironomia*" (*Rhetoric Society Quarterly* 28 [fall 1998]: 5-27); she sees a tension in Austin's work between representing the body as a mechanism and emphasizing the importance of persuasion conveyed by emotionally laden gestures. For general studies of elocution, see the headnote on Thomas Sheridan.

Loud and quick -----	〰〰〰
Monotonous or whisper slow -----	---
Monotone or whisper quick -----	•••

Compare with page 24 of Steele's *Prosodia Rationalis*.

It is requested to be understood that the various passages, which are marked with the notation, are intended merely to illustrate the foregoing system: and that among the innumerable methods of possible delivery, that which is chosen and represented is to be considered as one method only, how far soever removed from the best. It is one property of this system of notation, that whilst it furnishes the means of recording each person's ideas of gesture, it does not presume to dictate. It is a language, which may be used to express every variety of opinion.

In the portion of Gay's fable of the Miser and Plutus, which is doubly illustrated both by engraved figures¹ and by notation, it has been found necessary to omit in the notation some circumstances, in order to express nothing more than what is seen in the figures, and in others for the same reason to be redundant. Thus the retired hand and also the feet are sometimes noted oftener than absolutely necessary, and some transitions are of necessity omitted. It is hoped, however, that the great pains and attention bestowed upon these illustrations will suffice for the purpose of conveying to the reader a tolerably accurate knowledge of the manner of using the notation.

¹Austin seems to have intended to illustrate some of the positions with drawings, but none accompany the text he refers to here. [Ed.]

For the greater convenience and precision each figure is numbered in the Plate, and referred to accordingly in the following notation.

The perpendicular line—divides the portions of writing which refer to each numeral and figure.

Observations on the Notation

No. I. The direction of motion expressed by the 4th small letter *r*, means that from the position in which both hands are presented *vhf*, they should move both towards the right and stop at the position *oblique* as noted by *q*, connected by a dash to the position mentioned.

No. II. The 4th small letter *n* signifies noting. See manner of motion in the synoptical table, and Chap. XIII. . . .

²John Gay (1685–1732), English poet. [Ed.]

No. XII. The position of the hands at first is, *both folded horizontal forwards* as expressed in the notation *Bfl. hf.* At the *a* connected by the dash, which signifies *ascending*, the hands are raised up, and at the next notation *Bfl. br.* they are forcibly withdrawn back on the breast.

No. XXI. This position begins *horizontal* as first noted *Bvhf*, and ends *elevated* as in the figure; *Bvhf*, but the *B* is omitted over the word *weak*, being understood by the connect-dash.

No. XXV. The *third small letter* relating to the transverse direction of the arm is often placed alone, but connected by a dash with a preceding set of letters, as already observed No. I. In such case it is to be understood that the position of the hands remains as before, and that the transverse direction only of the arm is changed. Here each arm passes through the whole semicircle from the position *across* to *extended*.

George Campbell

1719–1796

George Campbell was born in Aberdeen, Scotland, studied at Marischal College in Aberdeen, and later entered the Church of Scotland. In 1759, after serving for eleven years as a minister, he became the principal of Marischal; in 1771, he became a professor of divinity as well. He served in these positions until the year before his death.

In 1758, Campbell helped found the Philosophical Society of Aberdeen, a small study group that included Thomas Reid, originator of Scottish commonsense philosophy; Reid's colleague James Beattie; Alexander Gerard, who held the chair of logic; and as many as a dozen others. This group was mightily influenced by Scottish philosopher David Hume (p. 828); it chiefly criticized but also admired his work. Campbell's *Dissertation on Miracles* (1762) answers Hume's famous attack on religion (as does, indirectly, the discussion of testimony in *The Philosophy of Rhetoric*, 1776; excerpted here). Campbell's other works are a translation of the Gospels (1789) and three sets of lectures—on ecclesiastical history, theology, and pulpit eloquence—all published posthumously.

As noted in the introduction to Part Four, Campbell seeks to base his rhetorical theory on the psychology of John Locke (p. 814) and also to consider the contemporary concerns of rhetoric for elocution, grammar, pulpit oratory, and literary criticism, as well as the abiding connection of rhetoric with its classical roots. Campbell's argument, presented in Book I of *The Philosophy of Rhetoric*, is that rhetoric must address all the mind's faculties—the understanding, the imagination, the passions, and the will—to achieve persuasion. In other words, rhetoric must be able to inform and argue, to provide aesthetic delight, to affect the feelings, and to urge action. The following table summarizes Campbell's notion of the faculties, their purposes, and the forms appropriate for appealing to each of them:

FACULTY	END (PURPOSE)	FORM
Understanding	{ Inform Convince	Perspicuity Argument
Imagination	Please	Beauty
Passion	Move	<i>Pathos</i>
Will	Persuade	Vehemence

The path to persuasion, in Campbell's theory, passes through each of the faculties in turn. Therefore, rhetoric must appeal first to the understanding and produce conviction, without which persuasion cannot follow. Convincing arguments are based upon reasoning, of which, says Campbell, there are two kinds: scientific and moral. Scientific reasoning relies on general principles, such as mathematical axioms or inductive generalizations. From these principles, it demonstrates a conclusion by a chain of logical links. But in all human affairs that concern "pleasure and

pain, wisdom and folly, beauty and deformity” and in disputes where there is real evidence on both sides of the case, moral reasoning takes precedence over scientific reasoning.

A linear demonstration of axioms and propositions can serve to present a case in the realm of scientific reasoning, but rhetoric is the proper vehicle for moral reasoning. Rhetoric deals with experience, analogy, testimony, and probability, which are forms of moral evidence. This kind of evidence must be weighed and judged: It cannot simply be offered as axiomatic. Moral reasoning thus presents a bundle of evidence rather than a causal chain. For Campbell, the purpose of reasoning, whether scientific or moral, is to produce conviction. Truth itself is elusive, and not even the strictest reasoning can guarantee its capture. Reasoning thus becomes a natural part of rhetoric: Rhetoric begins with the search for truth and then proceeds to persuasion, the attempt to move the will to ethical action.

The topics, the syllogism, and the stages of composition (invention, arrangement, and so on) are unnecessary in Campbell’s rhetoric. The syllogism can help to ensure consistent expression, he says, but it does not adequately address any of the faculties. And instead of the stages of composition, Campbell describes the two stages of persuasion: The orator must “excite some desire or passion in the hearers” and then “satisfy their judgment that there is a connexion between the action to which he would persuade them, and the gratification of the desire or passion which he excites.”¹ This concept forms the basis for what twentieth-century speech communication textbooks call the motivated sequence. Campbell does use classical categories to examine the occasions for speaking and the character of audiences, developing the following scheme:

PLACE	SPEAKER	AUDIENCE	SUBJECT	END (PURPOSE)
Bar	Ethical	Judge/Jury	Law	Judgment
Senate	Ethical	Legislators	Utility	Vote
Pulpit	Sincere	Mixed	Religion	Salvation

All these issues are treated in the excerpts reprinted here.

In Book II, “The Foundations and Essential Properties of Elocution,” Campbell makes scientific linguistics the foundation of rhetoric. Here he discusses the conventionality of language and the principle of descriptive grammar:

Language is purely a species of fashion . . . in which, by the general but tacit consent of the people of a particular state or country, certain sounds come to be appropriated to certain things, as their signs, and certain ways of inflecting and combining those sounds come to be established, as denoting the relations which subsist among the things signified.

It is not the business of grammar, as some critics seem preposterously to imagine, to give law to the fashions which regulate our speech. On the contrary, from its conformity to these, and from that alone, it derives all its authority and value. For, what is the grammar of any language? It is no other than a collection of general observations methodically digested, and comprising all the modes previously and independently established, by

¹See p. 927 in this book.

which the significations, derivations, and combinations of words in that language are ascertained.²

Here, too, is Campbell's now-famous formulation of the principle of correct usage: Use, he explains, "is the sole mistress of language," and proper usage is "reputable, national, and present."³ By *reputable*, he means the generally accepted usage of educated people and particularly of well-regarded writers. *National* means usage and pronunciation that are most widely understood throughout a country—again, usually among the educated class. And *present* refers both to "not absent" (that is, not foreign or faddish) and to "not obsolete." The last principle modifies the first two, for customary use changes with the times.

In the remainder of Book II, Campbell discusses particular problems of usage and guidelines for making stylistic choices in diction and syntax. In Chapter 7, he discusses the semiotic theories of Locke, Berkeley, and Hume, finding them to be in essential agreement that "we really think by signs as well as speak by them." Although this notion suggests that perspicuity is desirable—the clarity of language conducing to clarity of thought—it also leads Campbell to recognize that purposeful obscurity has a place: for example, in "delicate" matters, where suggestion is better than precise description. But, he notes, "it is the thought more than the expression that serves for a veil to the sentiment suggested," observing that if the intended meaning is taken from an indirect or euphemistic statement, then the expression is not obscure at all.

Although Campbell does not reach a satisfactory conclusion about the psychological processes that would explain connotation, he is quite sensitive to the possible difference between sense and expression. In style as in grammar, he shuns prescriptivism. Early in Book III, "The Discriminating Properties of Elocution," he says:

I cannot help remarking, before I conclude this article of the origin of tropes, and of the changes they undergo, through the gradual operation of custom, that critics ought to show more reserve and modesty than they commonly do, in pronouncing either on the fitness or on the beauty of such as occur sometimes in ancient authors. [For] . . . it ought to be considered, that many words which appear as tropical to a learner of a distant age, who acquires the language by the help of grammars and dictionaries, may, through the imperceptible influence of use, have totally lost that appearance to the natives, who consider them purely as proper terms.⁴

The same caveat applies to works in other languages, particularly to translations. Campbell makes a similar point about the dangers of paraphrase: Since we must be in doubt about the precise meaning of the original, any paraphrase must be considered an interpretation.

Campbell's discussion is by no means purely theoretical. He attempts to provide guidelines for making real choices of language and style, and he gives many examples, chiefly from Scripture and English poetry. His illustrations show the same

²George Campbell, *Philosophy of Rhetoric*, ed. Lloyd Bitzer (Carbondale: Southern Illinois University Press, 1963), pp. 139–40.

³Campbell, p. 151.

⁴Campbell, p. 299.

attention to detail and sensitivity to nuance as his philosophical analyses. *The Philosophy of Rhetoric* has been justly praised as the turning point in the development of rhetoric in the eighteenth century, as the first modern rhetoric, and even as the first real advance in rhetorical theory since Aristotle.

Selected Bibliography

Campbell's *Philosophy of Rhetoric*, first published in 1776, is available in the Southern Illinois University Press Landmark edition (1963), a facsimile of the 1850 London edition. The Landmark version is edited by Lloyd Bitzer, who provides a good overview of Campbell's life, a summary of the text, and an analysis of the major issues it raises. He discusses human nature, the association of ideas, and the chief elements of Campbell's rhetorical theory. Bitzer has written other articles on Campbell, most notably "Hume's Philosophy in George Campbell's *Philosophy of Rhetoric*" (*Philosophy and Rhetoric* 2 [summer 1969]: 139–66).

Vincent Bevilacqua, in "Philosophical Origins of George Campbell's *Philosophy of Rhetoric*" (*Speech Monographs* 32 [March 1965]: 1–12), looks at the influence of Bacon, Descartes, Hume, and Adam Smith. "The Rhetorical Theory of George Campbell" is the subject of a symposium in the *Western Speech Journal* (spring 1968), with papers by Ernest Ettllich, Dominic La Russo, Herman Cohen, G. P. Mohrmann, and Phil Dolph. W. S. Howell gives substantial treatment to Campbell in *Eighteenth-Century British Logic and Rhetoric* (1971), exploring the links between Campbell's work and the classical tradition, on the one hand, and epistemological-psychological ideas, on the other. *Rhetoric Society Quarterly* 13 (winter 1983) focuses on Campbell, including a bibliography and several articles. Vincent Bevilacqua makes an interesting connection in "Campbell, Vico, and the Rhetorical Science of Human Nature" (*Philosophy and Rhetoric* 18 [1985]: 23–30). More recent treatments include H. Lewis Ulman's consideration of Campbell's efforts to define a consistent theory of thought and language in *Things, Thoughts, Words, and Actions: The Problem of Language in Late Eighteenth-Century British Rhetorical Theory*, 1994; and Arthur Walzer's admiring look at Campbell's analysis of the place of emotions in persuasion in "Campbell on the Passions: A Rereading of the *Philosophy of Rhetoric*" (*Quarterly Journal of Speech* 85 [February 1999]: 72–85). Campbell's influence on later rhetoricians and composition theorists has been noted frequently, but to date there have been no extensive studies of his work.

From *The Philosophy of Rhetoric*

Book I *The Nature and Foundations* *of Eloquence*

CHAPTER I

Eloquence in the largest acceptance defined, its more general forms exhibited, with their different objects, ends, and characters.

In speaking there is always some end proposed, or some effect which the speaker intends to produce on the hearer. The word *eloquence* in its greatest latitude denotes, "That art or talent by which the discourse is adapted to its end."¹

All the ends of speaking are reducible to four; every speech being intended to enlighten the understanding, to please the imagination, to move the passions, or to influence the will.

Any one discourse admits only one of these ends as the principle. Nevertheless, in discoursing on a subject, many things may be introduced, which are more immediately and apparently directed to some of the other ends of speaking, and not to that which is the chief intent of the whole. But then these other and immediate ends are in effect but means, and must be rendered conducive to that which is the primary intention. Accordingly, the propriety or the impropriety of the introduction of such secondary ends, will always be inferred from their subserviency or want of subserviency to that end, which is, in respect of them, the ultimate. For example, a discourse addressed to the understanding, and calculated to illustrate or evince some point purely speculative, may borrow aid from the imagination, and admit metaphor and comparison, but not the bolder and

more striking figures, as that called vision or fiction, *prosopopœia*, and the like, which are not so much intended to elucidate a subject, as to excite admiration. Still less will it admit an address to the passions, which, as it never fails to disturb the operation of the intellectual faculty, must be regarded by every intelligent hearer as foreign at least, if not insidious. It is obvious, that either of these, far from being subservient to the main design, would distract the attention from it.

There is indeed one kind of address to the understanding, and only one, which, it may not be improper to observe, disdains all assistance whatever from the fancy. The address I mean is mathematical demonstration. As this does not, like moral reasoning, admit degrees of evidence, its perfection, in point of eloquence, if so uncommon an application of the term may be allowed, consists in perspicuity. Perspicuity here results entirely from propriety and simplicity of diction, and from accuracy of method, where the mind is regularly, step by step, conducted forwards in the same track, the attention no way diverted, nothing left to be supplied, no one unnecessary word or idea introduced.² On the contrary, an harangue framed for affecting the hearts or influencing the resolves of an assembly, needs greatly the assistance both of intellect and of imagination.

In general it may be asserted, that each preceding species, in the order above exhibited, is preparatory to the subsequent; that each subsequent species is founded on the preceding; and that thus they ascend in a regular progression. Knowledge, the object of the intellect, furnisheth materials for the fancy; the fancy culls, compounds, and, by her mimic art, disposes these

¹"Dicere secundum virtutem orationis. Scientia bene dicendi." Quintilian. The word *eloquence*, in common conversation, is seldom used in such a comprehensive sense. I have, however, made choice of this definition on a double account: 1st. It exactly corresponds to Tully's idea of a perfect orator; "Optimus est orator qui dicendo animos audientium et docet, et delectat, et permovet." 2dly. It is best adapted to the subject of these papers. [Au.]

²Of this kind Euclid hath given us the most perfect models, which have not, I think, been sufficiently imitated by later mathematicians. In him you find the exactest arrangement invariably observed, the properest and simplest, and by consequence the plainest expressions constantly used, nothing deficient, nothing superfluous; in brief, nothing which in more, or fewer, or other words, or words otherwise disposed, could have been better expressed. [Au.]

materials so as to affect the passions; the passions are the natural spurs to volition or action, and so need only to be right directed. This connexion and dependency will better appear from the following observations.

When a speaker addresseth himself to the understanding, he proposes the *instruction* of his hearers, and that, either by explaining some doctrine unknown, or not distinctly comprehended by them, or by proving some position disbelieved or doubted by them.—In other words, he proposes either to dispel ignorance or to vanquish error. In the one, his aim is their *information*; in the other, their *conviction*. Accordingly the predominant quality of the former is *perspicuity*; of the latter, *argument*. By that we are made to know, by this to believe.

The imagination is addressed by exhibiting to it a lively and beautiful representation of a suitable object. As in this exhibition, the task of the orator may, in some sort, be said, like that of the painter, to consist in imitation, the merit of the work results entirely from these two sources; dignity, as well in the subject or thing imitated, as in the manner of imitation; and resemblance, in the portrait or performance. Now the principal scope for this class being in narration and description, poetry, which is one mode of oratory especially epic poetry, must be ranked under it. The effect of the dramatic, at least of tragedy, being upon the passions, the drama falls under another species, to be explained afterwards. But that kind of address of which I am now treating, attains the summit of perfection in the *sublime*, or those great and noble images, which, when in suitable colouring presented to the mind, do, as it were, distend the imagination with some vast conception, and quite ravish the soul.

The sublime, it may be urged, as it raiseth admiration, should be considered as one species of address to the passions. But this objection, when examined, will appear superficial. There are few words in any language (particularly such as relate to the operations and feelings of the mind) which are strictly univocal. Thus admiration, when persons are the object, is commonly used for a high degree of esteem; but when otherwise applied, it denotes solely an internal taste. It is that pleasurable sensation which instantly ariseth on the perception of magnitude, or of whatever is great and

stupendous in its kind. For there is a greatness in the degrees of quality in spiritual subjects, analogous to that which subsists in the degrees of quantity in material things. Accordingly, in all tongues, perhaps without exception, the ordinary terms, which are considered as literally expressive of the latter, are also used promiscuously to denote the former. Now admiration, when thus applied, doth not require to its production, as the passions generally do, any reflex view of motives or tendencies, or of any relation either to private interest, or to the good of others; and ought therefore to be numbered among those original feelings of the mind, which are denominated by some the reflex senses, being of the same class with a taste for beauty, an ear for music, or our moral sentiments. Now, the immediate view of whatever is directed to the imagination (whether the subject be things inanimate or animal forms, whether characters, actions, incidents, or manners) terminates in the gratification of some internal taste: as a taste for the wonderful, the fair, the good; for elegance, for novelty, or for grandeur.

But it is evident, that this creative faculty, the fancy, frequently lends her aid in promoting still nobler ends. From her exuberant stores most of those tropes and figures are extracted, which, when properly employed, have such a marvellous efficacy in rousing the passions, and by some secret, sudden, and inexplicable association, awakening all the tenderest emotions of the heart. In this case, the address of the orator is not ultimately intended to astonish by the loftiness of his images, or to delight by the beauteous resemblance which his painting bears to nature; nay, it will not permit the hearers even a moment's leisure for making the comparison, but as it were by some magical spell, hurries them, ere they are aware, into love, pity, grief, terror, desire, aversion, fury, or hatred. It therefore assumes the denomination of *pathetic*,³ which is the characteristic of the third species of discourse, that addressed to the passions.

Finally, as that kind, the most complex of all, which is calculated to influence the will, and persuade to a certain conduct, is in reality an artful

³I am sensible that this word is commonly used in a more limited sense, for that which only excites commiseration. Perhaps the word *impassioned* would answer better. [Au.]

mixture of that which proposes to convince the judgment, and that which interests the passions, its distinguishing excellency results from these two, the argumentative and the pathetic incorporated together. These acting with united force, and, if I may so express myself, in concert, constitute that passionate evicition, that *vehemence* of contention, which is admirably fitted for persuasion, and hath always been regarded as the supreme qualification in an orator.⁴ It is this which bears down every obstacle, and procures the speaker an irresistible power over the thoughts and purposes of his audience. It is this which hath been so justly celebrated as giving one man an ascendant over others, superior even to what despotism itself can bestow; since by the latter the more ignoble part only, the body and its members are enslaved; whereas from the dominion of the former, nothing is exempted, neither

⁴This animated reasoning the Greek rhetoricians termed *δεινότης*, which from signifying the principal excellency in an orator, came at length to denote oratory itself. And as *vehemence* and *eloquence* became synonymous, the latter, suitably to this way of thinking, was sometimes defined the *art of persuasion*. But that this definition is defective, appears even from their own writings, since in a consistency with it, their rhetorics could not have comprehended those orations called *demonstrative*, the design of which was not to persuade but to please. Yet it is easy to discover the origin of this defect, and that both from the nature of the thing, and from the customs which obtained among both Greeks and Romans. First, from the nature of the thing, for to persuade presupposes in some degree, and therefore may be understood to imply, all the other talents of an orator, to enlighten, to evince, to paint, to astonish, to inflame; but this doth not hold inversely; one may explain with clearness, and prove with energy, who is incapable of the sublime, the pathetic, and the vehement: besides, this power of persuasion, or, as Cicero calls it, "Posse voluntates hominum impellere quo velis, unde velis, deducere," as it makes a man master of his hearers, is the most considerable in respect of consequences. Secondly, from ancient customs. All their public orations were ranked under three classes, the demonstrative, the judiciary, and the deliberative. In the two last it was impossible to rise to eminence, without that important talent, the power of persuasion. These were in much more frequent use than the first, and withal the surest means of advancing both the fortune and the fame of the orator; for as on the judiciary the lives and estates of private persons depended, on the deliberative hung the resolves of senates, the fate of kingdoms, nay, of the most renowned republics the world ever knew. Consequently, to excel in these, must have been the direct road to riches, honours, and preferment. No wonder, then, that persuasion should almost wholly engross the rhetorician's notice. [Au.]

judgment nor affection, not even the inmost recesses, the most latent movements of the soul. What opposition is he not prepared to conquer, on whose arms reason hath conferred solidity and weight, and passion such a sharpness as enables them, in defiance of every obstruction, to open a speedy passage to the heart?

It is not, however, every kind of pathos, which will give the orator so great an ascendancy over the minds of his hearers. All passions are not alike capable of producing this effect. Some are naturally inert and torpid; they deject the mind, and indispose it for enterprise. Of this kind are sorrow, fear, shame, humility. Others, on the contrary, elevate the soul, and stimulate to action. Such are hope, patriotism, ambition, emulation, anger. These, with the greatest facility, are made to concur in direction with arguments exciting to resolution and activity: and are, consequently, the fittest for producing what, for want of a better term in our language, I shall henceforth denominate the *vehement*. There is, besides, an intermediate kind of passions, which do not so congenially and directly either restrain us from acting, or incite us to act; but, by the art of the speaker, can, in an oblique manner, be made conducive to either. Such are joy, love, esteem, compassion. Nevertheless, all these kinds may find a place in suatory discourses, or such as are intended to operate on the will. The first is properest for dissuading; the second, as hath been already hinted, for persuading; the third is equally accommodated to both.

Guided by the above reflections, we may easily trace the connexion in the various forms of eloquence, which was remarked on, distinguishing them by their several objects. The imagination is charmed by a finished picture, wherein even drapery and ornament are not neglected; for here the end is pleasure. Would we penetrate further, and agitate the soul, we must exhibit only some vivid strokes, some expressive features, not decorated as for show (all ostentation being both despicable and hurtful here), but such as appear the natural exposition of those bright and deep impressions, made by the subject upon the speaker's mind; for here the end is not pleasure, but emotion. Would we not only touch the heart, but win it entirely to co-operate with our views, those affecting lineaments must be so interwoven

with our argument, as that, from the passion excited our reasoning may derive importance, and so be fitted for commanding attention; and by the justness of the reasoning the passion may be more deeply rooted and enforced; and that thus both may be made to conspire in effectuating that persuasion which is the end proposed. For here, if I may adopt the schoolmen's language, we do not argue to gain barely the assent of the understanding, but, which is infinitely more important, the consent of the will.

To prevent mistakes, it will not be beside my purpose further to remark, that several of the terms above explained are sometimes used by rhetoricians and critics in a much larger and more vague signification, than has been given them here. Sublimity and vehemence, in particular, are often confounded, the latter being considered as a species of the former. In this manner has this subject been treated by that great master Longinus, whose acceptance of the term *sublime* is extremely indefinite, importing an eminent degree of almost any excellence of speech, of whatever kind. Doubtless, if things themselves be understood, it does not seem material what names are assigned them. Yet it is both more accurate, and proves no inconsiderable aid to the right understanding of things, to discriminate by different signs such as are truly different. And that the two qualities above mentioned are of this number is undeniable, since we can produce passages full of vehemence, wherein no image is presented, which, with any propriety, can be termed great or sublime. In matters of criticism, as in the abstract sciences, it is of the utmost consequence to ascertain, with precision, the meanings of words, and, as nearly as the genius of the language in which one writes will permit, to make them correspond to the boundaries assigned by Nature to the things signified. That the lofty and the vehement, though still distinguishable, are sometimes combined, and act with united force, is not to be denied. It is then only that the orator can be said to fight with weapons which are at once sharp, massive, and refulgent, which, like heaven's artillery, dazzle while they strike, which overpower the sight and the heart at the same instant. How admirably do the two forenamed qualities, when happily blended, correspond in the rational, to

the thunder and lightning in the natural world, which are not more awfully majestic in sound and aspect, than irresistible in power.

Thus much shall suffice for explaining the spirit, the intent, and the distinguishing qualities of each of the forementioned sorts of address; all of which agree in this, an accommodation to affairs of a serious and important nature. . . .

CHAPTER IV

Of the relation which eloquence bears to logic and to grammar.

In contemplating a human creature, the most natural division of the subject is the common division into soul and body, or into the living principle of perception and of action, and that system of material organs by which the other receives information from without, and is enabled to exert its powers, both for its own benefit and for that of the species. Analogous to this, there are two things in every discourse which principally claim our attention, the sense and the expression; or in other words, the thought and the symbol by which it is communicated. These may be said to constitute the soul and the body of an oration, or indeed of whatever is signified to another by language. For, as in man, each of these constituent parts hath its distinctive attributes, and as the perfection of the latter consisteth in its fitness for serving the purposes of the former, so it is precisely with those two essential parts of every speech, the sense and the expression. Now, it is by the sense that rhetoric holds of logic, and by the expression that she holds of grammar.

The sole and ultimate end of logic is the eviction of truth; one important end of eloquence, though, as appears from the first chapter, neither the sole, nor always the ultimate, is the conviction of the hearers. Pure logic regards only the subject, which is examined solely for the sake of information. Truth, as such, is the proper aim of the examiner. Eloquence not only considers the subject, but also the speaker and the hearers, and both the subject and the speaker for the sake of the hearers, or rather for the sake of the effect intended to be produced in them. Now, to convince the hearers is always either proposed by the

orator, as his end in addressing them, or supposed to accompany the accomplishment of his end. Of the five sorts of discourses above mentioned, there are only two wherein conviction is the avowed purpose. One is that addressed to the understanding, in which the speaker proposeth to prove some position disbelieved or doubted by the hearers; the other is that which is calculated to influence the will, and persuade to a certain conduct; for it is by convincing the judgment that he proposeth to interest the passions and fix the resolution. As to the three other kinds of discourses enumerated, which address the understanding, the imagination, and the passions, conviction, though not the end, ought ever to accompany the accomplishment of the end. It is never formally proposed as an end where there are not supposed to be previous doubts or errors to conquer. But when due attention is not paid to it, by a proper management of the subject, doubts, disbelief, and mistake will be raised by the discourse itself, where there were none before, and these will not fail to obstruct the speaker's end, whatever it be. In explanatory discourses, which are of all kinds the simplest, there is a certain precision of manner which ought to pervade the whole, and which, though not in the form of argument, is not the less satisfactory, since it carries internal evidence along with it. In harangues pathetic or panegyric, in order that the hearers may be moved or pleased, it is of great consequence to impress them with the belief of the reality of the subject. Nay, even in those performances where truth, in regard to the individual facts related, is neither sought nor expected, as in some sorts of poetry, and in romance, truth still is an object to the mind, the general truths regarding character, manners, and incidents. When these are preserved, the piece may justly be denominated true, considered as a picture of life; though false, considered as a narrative of particular events. And even these untrue events must be counterfeits of truth, and bear its image; for in cases wherein the proposed end can be rendered consistent with unbelief, it cannot be rendered compatible with incredibility. Thus, in order to satisfy the mind, in most cases, truth, and in every case, what bears

the semblance of truth, must be presented to it. This holds equally, whatever be the declared aim of the speaker. I need scarcely add, that to prove a particular point is often occasionally necessary in every sort of discourse, as a subordinate end conducive to the advancement of the principal. If then it is the business of logic to evince the truth, to convince an auditory, which is the province of eloquence, is but a particular application of the logician's art. As logic therefore forges the arms which eloquence teacheth us to wield, we must first have recourse to the former, that being made acquainted with the materials of which her weapons and armour are severally made, we may know their respective strength and temper, and when and how each is to be used.

Now, if it be by the sense or soul of the discourse that rhetoric holds of logic, or the art of thinking and reasoning, it is by the expression or body of the discourse that she holds of grammar, or the art of conveying our thoughts in the words of a particular language. The observation of one analogy naturally suggests another. As the soul is of heavenly extraction and the body of earthly, so the sense of the discourse ought to have its source in the invariable nature of truth and right, whereas the expression can derive its energy only from the arbitrary conventions of men, sources as unlike, or rather as widely different, as the breath of the Almighty and the dust of the earth. In every region of the globe we may soon discover, that people feel and argue in much the same manner, but the speech of one nation is quite unintelligible to another. The art of the logician is accordingly, in some sense, universal; the art of the grammarian is always particular and local. The rules of argumentation laid down by Aristotle, in his *Analytics*, are of as much use for the discovery of truth in Britain or China as they were in Greece; but Priscian's rules of inflection and construction can assist us in learning no language but Latin. In propriety there cannot be such a thing as an universal grammar, unless there were such a thing as an universal language. The term hath sometimes, indeed, been applied to a collection of observations on the similar analogies that have been discovered in all tongues, ancient and mod-

ern, known to the authors of such collections. I do not mention this liberty in the use of the term with a view to censure it. In the application of technical or learned words, an author hath greater scope than in the application of those which are in more frequent use, and is only then thought censurable when he exposeth himself to be misunderstood. But it is to my purpose to observe that, as such collections convey the knowledge of no tongue whatever, the name *grammar*, when applied to them, is used in a sense quite different from that which it has in the common acceptance; perhaps as different, though the subject be language, as when it is applied to a system of geography.

Now, the grammatical art hath its completion in syntax; the oratorical, as far as the body or expression is concerned, in style. Syntax regards only the composition of many words into one sentence; style, at the same time that it attends to this, regards further the composition of many sentences into one discourse. Nor is this the only difference; the grammarian, with respect to what the two arts have in common, the structure of sentences, requires only purity; that is, that the words employed belong to the language, and that they be construed in the manner, and used in the signification, which custom hath rendered necessary for conveying the sense. The orator requires also beauty and strength. The highest aim of the former is the lowest aim of the latter; where grammar ends eloquence begins.

Thus the grammarian's department bears much the same relation to the orator's which the art of the mason bears to that of the architect. There is, however, one difference that well deserves our notice. As in architecture it is not necessary that he who designs should execute his own plans, he may be an excellent artist in this way who would handle very awkwardly the hammer and the trowel. But it is alike incumbent on the orator to design and to execute. He must, therefore, be master of the language he speaks or writes, and must be capable of adding to grammatic purity those higher qualities of elocution which will render his discourse graceful and energetic.

So much for the connexion that subsists between rhetoric and these parent arts, logic and grammar.

CHAPTER V

Of the different sources of Evidence, and the different Subjects to which they are respectively adapted.

Logical truth consisteth in the conformity of our conceptions to their archetypes in the nature of things. This conformity is perceived by the mind, either immediately on a bare attention to the ideas under review, or mediately by a comparison of these with other related ideas. Evidence of the former kind is called intuitive; of the latter, deductive.

Section I. Of Intuitive Evidence

Part I. Mathematical Axioms

Of intuitive evidence there are different sorts, One is that which results purely from *intellection*.⁵ Of this kind is the evidence of these propositions: "One and four make five—Things equal to the same thing are equal to one another—The whole is greater than a part;" and, in brief, all axioms in arithmetic and geometry. These are, in effect, but so many different expositions of our own general notions, taken in different views. Some of them are no other than definitions, or equivalent to definitions. To say, "One and four make *five*," is precisely the same as to say, "We give the name of *five* to one added to four." In fact, they are all, in some respect, reducible to this axiom, "Whatever is, is." I do not say they are deduced from it, for they have in like manner that original and intrinsic evidence, which makes them, as soon as the terms are understood, to be perceived intuitively. And if they are not thus

⁵I have here adopted the term *intellection* rather than *perception*, because, though not so usual, it is both more apposite and less equivocal. *Perception* is employed alike to denote every immediate object of thought, or whatever is apprehended by the mind, our sensations themselves, and those qualities in body suggested by our sensations, the ideas of these upon reflection, whether remembered or imagined, together with those called general notions, or abstract ideas. It is only the last of these kinds which are considered as peculiarly the object of the understanding, and which, therefore, require to be distinguished by a peculiar name. Obscurity arising from an uncommon word is easily surmounted, whereas ambiguity, by misleading us, ere we are aware, confounds our notion of the subject altogether. [Au.]

perceived, no deduction of reason will ever confer on them any additional evidence. Nay, in point of time, the discovery of the less general truths has the priority, not from their superior evidence, but solely from this consideration, that the less general are sooner objects of perception to us, the natural progress of the mind, in the acquisition of its ideas, being from particular things to universal notions, and not inversely. But I affirm that, though not deduced from that axiom, they may be considered as particular exemplifications of it, and coincident with it, inasmuch as they are all implied in this, that the properties of our clear and adequate ideas can be no other than what the mind clearly perceives them to be.

But, in order to prevent mistakes, it will be necessary further to illustrate this subject. It might be thought that if axioms were propositions perfectly identical, it would be impossible to advance a step, by their means, beyond the simple ideas first perceived by the mind. And it must be owned, if the predicate of the proposition were nothing but a repetition of the subject, under the same aspect, and in the same or synonymous terms, no conceivable advantage could be made of it for the furtherance of knowledge. Of such propositions as these for instance, "Seven are seven," "eight are eight," and "ten added to eleven, are equal to ten added to eleven," it is manifest, that we could never avail ourselves of them for the improvement of science. Nor does the change of the name make any alteration in point of utility. The propositions, "Twelve are a dozen," "twenty are a score," unless considered as explications of the words *dozen* and *score*, are equally insignificant with the former. But when the thing, though in effect coinciding, is considered under a different aspect; when what is single in the subject is divided in the predicate, and conversely; or when what is a whole in the one is regarded as a part of something else in the other; such propositions lead to the discovery of innumerable and apparently remote relations. One added to four may be accounted no other than a definition of the word *five*, as was remarked above. But when I say, "Two added to three are equal to five," I advance a truth, which, though equally clear, is quite distinct from the preceding. Thus, if one should affirm, "Twice fifteen make

thirty," and again, "Thirteen added to seventeen make thirty," nobody would pretend that he had repeated the same proposition in other words. The cases are entirely similar. In both, the same thing is predicated of ideas which, taken severally, are different. From these again result other equations, as, "One added to four are equal to two added to three," and "twice fifteen are equal to thirteen added to seventeen."

Now, it is by the aid of such simple and elementary principles, that the arithmetician and the algebraist proceed to the most astonishing discoveries. Nor are the operations of the geometriician essentially different. By a very few steps you are made to perceive the equality, or rather the coincidence, of the sum of the two angles formed by one straight line falling on another, with two right angles. By a process equally plain you are brought to discover, first, that if one side of a triangle be produced, the external angle will be equal to both the internal and opposite angles, and then, that all the angles of a triangle are equal to two right angles. So much for the nature and use of the first kind of intuitive evidence, resulting from pure intellection.

Part II. Consciousness

The next kind is that which ariseth from *consciousness*. Hence every man derives the perfect assurance that he hath of his own existence. Nor is he only in this way assured that he exists, but that he thinks, that he feels, that he sees, that he hears, and the like. Hence his absolute certainty in regard to the reality of his sensations and passions, and of every thing whose essence consists in being perceived. Nor does this kind of intuition regard only the truth of the original feelings or impressions, but also many of the judgments that are formed by the mind, on comparing these one with another. Thus the judgments we daily and hourly form, concerning resemblances or disparities in visible objects, or size in things tangible, where the odds is considerable, darker or lighter tints in colours, stronger or weaker tastes or smells, are all self-evident, and discoverable at once. It is from the same principle that, in regard to ourselves, we judge infallibly concerning the feelings, whether pleasant or painful, which we derive from what are called the internal senses,

and pronounce concerning beauty or deformity, harmony or discord, the elegant or the ridiculous. The difference between this kind of intuition and the former will appear on the slightest reflection. The former concerns only abstract notions and ideas, particularly in regard to number and extension, the objects purely of the understanding; the latter concerns only the existence of the mind itself, and its actual feelings, impressions or affections, pleasures or pains, the immediate subjects of sense, taking that word in the largest acceptation. The former gives rise to those universal truths, first principles or axioms, which serve as the foundation of abstract science; whereas the latter, though absolutely essential to the individual, yet as it only regards particular perceptions, which represent no distinct genus or species of objects, the judgments resulting thence cannot form any general positions to which a chain of reasoning may be fastened, and consequently are not of the nature of axioms, though both similar and equal in respect of evidence.

Part III. Common Sense

The third sort is that which ariseth from what hath been termed properly enough, *common sense*,⁶ as being an original source of knowledge

⁶The first among the moderns who took notice of this principle, as one of the genuine springs of our knowledge, was Buffier, a French philosopher of the present century, in a book entitled *Traité des premières Vérités*; one who to an uncommon degree of acuteness in matters of abstraction added that solidity of judgment which hath prevented in him, what had proved the wreck of many great names in philosophy, his understanding becoming the dupe of his ingenuity. This doctrine hath lately, in our own country, been set in the clearest light, and supported by invincible force of argument, by two very able writers in the science of man, Dr. Reid, in his *Inquiry into the Human Mind*, and Dr. Beattie, in his *Essay on the Immutability of Truth*. I beg leave to remark in this place, that, though for distinction's sake, I use the term *common sense* in a more limited signification than either of the authors last mentioned, there appears to be no real difference in our sentiments of the thing itself. I am not ignorant that this doctrine has been lately attacked by Dr. Priestley in a most extraordinary manner, a manner which no man, who has any regard to the name either of Englishman or of philosopher, will ever desire to see imitated, in this or any other country. I have read the performance, but have not been able to discover the author's sentiments in relation to the principal point in dispute. He says expressly, [Examination of Dr. Reid's Inquiry. &c. p. 119,] "Had these writers," Messieurs Reid, Beattie,

common to all mankind. I own, indeed, that in different persons it prevails in different degrees of strength; but no human creature hath been found originally and totally destitute of it, who is not accounted a monster in his kind; for such, doubtless, are all idiots and changelings. By madness, a disease which makes terrible havoc on the faculties of the mind, it may be in a great measure, but is never entirely lost.

It is purely hence that we derive our assurance of such truths as these: "Whatever has a beginning has a cause"—"When there is in the effect a manifest adjustment of the several parts to a certain end, there is intelligence in the cause." "The course of nature will be the same tomorrow that it is today; or, the future will resemble the past"—"There is such a thing as body; or, there are material substances independent of the mind's conceptions"—"There are other intelligent beings in the universe besides me"—"The clear representations of my memory, in regard to past events, are indubitably true." These, and a great many more of the same kind, it is impossible for any man by reasoning to evince, as might easily be shown, were this a proper place for the discussion. And it is equally impossible, without a full conviction of them, to advance a single step in the acquisition

and Oswald, "assumed as the elements of their common sense certain truths which are so plain that no man could doubt of them, (without entering into the ground of our assent to them,) their conduct would have been liable to very little objection." And is not this the very thing which these writers have done? What he means to signify by the parenthesis, "(without entering into the ground of our assent to them,)" it is not easy to guess. By a ground of assent to any proposition is commonly understood a reason or argument in support of it. Now, by his own hypothesis, there are truths so plain, that no man can doubt of them. If so, what ground of assent beyond their own plainness ought we to seek; what beside this can we ever hope to find, or what better reason needs be given for denominating such truths the dictates of common sense? If something plainer could be found to serve as evidence of any of them, then this plainer truth would be admitted as the first principle, and the other would be considered as deduced by reasoning. But notwithstanding the mistake in the instance, the general doctrine of primary truths would remain unhurt. It seems, however, that though their conduct would have been liable to very little, it would have been liable to some objection. "All that could have been said would have been, that, without any necessity, they had made an innovation in the received use of the term." I have a better opinion

of knowledge, especially in all that regards mankind, life, and conduct.

I am sensible that some of these, to men not accustomed to inquiries of this kind, will appear at first not to be primary principles, but conclusions from other principles; and some of them will be thought to coincide with the other kinds of intuition above mentioned. Thus the first, "Whatever hath a beginning hath a cause," may be thought to stand on the same footing with mathematical axioms. I acknowledge that in point of evidence they are equal, and it is alike impossible, in either case, for a rational creature to withhold his assent. Nevertheless, there is a difference in kind. All the axioms in mathematics are but the enunciations of certain properties in our abstract notions, distinctly perceived by the mind, but have no relation to any thing without themselves, and can never be made the foundation of any conclusion concerning actual existence; whereas, in the axiom last specified, from

of these gentlemen than to imagine, that if the thing which they contend for be admitted, they will enter into a dispute with any person about the name: though, in my judgment, even as to this, it is not they, but he, who is the innovator. He proceeds, "For no person ever denied that there are self-evident truths, and that these must be assumed, as the foundation of all our reasoning. I never met with any person who did not acknowledge this, or heard of any argumentative treatise that did not go on the supposition of it." Now, if this be the case, I would gladly know what is the great point he controverts. Is it, whether such self-evident truths shall be denominated principles of Common Sense, or be distinguished by some other appellation? Was it worth any man's while to write an octavo of near 400 pages, for the discussion of such a question as this? And if, as he assures us, they have said more than is necessary, in proof of a truth which he himself thinks indisputable, was it no more than necessary in Dr. Priestley to compose so large a volume, in order to convince the world that too much had been said already on the subject? I do not enter into the examination of his objections to some of the particular principles produced as primary truths. An attempt of this kind would be foreign to my purpose; besides that the authors he has attacked are better qualified for defending their own doctrine, and no doubt will do it, if they think there is occasion. I shall only subjoin two remarks on this book. The first is, that the author, through the whole, confounds two things totally distinct, certain associations of ideas, and certain judgments implying belief, which, though in some, are not in all cases, and therefore not necessarily, connected with association. And if so, merely to account for the association is in no case to account for the belief with which it is attended. Nay, admitting his plea, [page 86,] that by the principle of association not only the ideas but the con-

the existence of one thing we intuitively conclude the existence of another. This proposition, however, so far differs, in my apprehension, from others of the same order, that I cannot avoid considering the opposite assertion as not only false but contradictory; but I do not pretend to explain the ground of this difference.

The faith we give to memory may be thought, on a superficial view, to be resolvable into consciousness, as well as that we give to the immediate impressions of sense. But on a little attention one may easily perceive the difference. To believe the report of our senses doth indeed commonly imply to believe the existence of certain external and corporeal objects, which give rise to our particular sensations. This, I acknowledge, is a principle which doth not spring from consciousness, (for consciousness cannot extend beyond sensation,) but from common sense, as well as the assurance we have in the report of memory. But this was not intended to be included

comitant belief may be accounted for, even this does not invalidate the doctrine he impugns. For, let it be observed that it is one thing to assign a cause which, from the mechanism of our nature, has given rise to a particular tenet or belief, and another thing to produce a reason by which the understanding has been convinced. Now, unless this be done as to the principles in question, they must be considered as primary truths, in respect of the understanding, which never deduced them from other truths, and which is under a necessity, in all moral reasonings, of founding upon them. In fact, to give any other account of our conviction of them is to confirm instead of confuting the doctrine, that in all argumentation they must be regarded as primary truths, or truths which reason never inferred, through any medium, from other truths previously perceived. My second remark is, that though this examiner has, from Dr. Reid, given us a catalogue of first principles, which he deems unworthy of the honourable place assigned them, he has no where thought proper to give us a list of those self-evident truths which, by his own account, and in his own express words, "must be assumed as the foundation of all our reasoning." How much light might have been thrown upon the subject by the contrast! Perhaps we should have been enabled, on the comparison, to discover some distinctive characters in his genuine axioms, which would have preserved us from the danger of confounding them with their spurious ones. Nothing is more evident than that, in whatever regards matter of fact, the mathematical axioms will not answer. These are purely fitted for evolving the abstract relations of quantity. This he in effect owns himself [page 39]. It would have been obliging, then, and would have greatly contributed to shorten the controversy, if he had given us at least a specimen of those self-evident principles, which, in his estimation, are the *ne plus ultra* of moral reasoning. [Au.]

under the second branch of intuitive evidence. By that firm belief in sense, which I there resolved into consciousness, I meant no more than to say, I am certain that I see, and feel, and think, what I actually see, and feel, and think. As in this I pronounce only concerning my own present feelings, whose essence consists in being felt, and of which I am at present conscious, my conviction is reducible to this axiom, or coincident with it, "It is impossible for a thing to be and not to be at the same time." Now when I say, I trust entirely to the clear report of my memory, I mean a good deal more than, "I am certain that my memory gives such a report, or represents things in such a manner," for this conviction I have indeed from consciousness; but I mean, "I am certain that things happened heretofore at such a time, in the precise manner in which I now remember that they then happened." Thus there is a reference in the ideas of memory to former sensible impressions, to which there is nothing analogous in sensation. At the same time it is evident, that remembrance is not always accompanied with this full conviction. To describe, in words, the difference between those lively signatures of memory, which command an unlimited assent, and those fainter traces which raise opinion only, or even doubt, is perhaps impracticable; but no man stands in need of such assistance to enable him in fact to distinguish them, for the direction of his own judgment and conduct. Some may imagine that it is from experience we come to know what faith in every case is due to memory. But it will appear more fully afterwards, that unless we had implicitly relied on the distinct and vivid informations of that faculty, we could not have moved a step towards the acquisition of experience. It must, however, be admitted, that experience is of use in assisting us to judge concerning the more languid and confused suggestions of memory; or, to speak more properly, concerning the reality of those things, of which we ourselves are doubtful whether we remember them or not.

In regard to the primary truths of this order, it may be urged that it cannot be affirmed of them all at least, as it may of the axioms in mathematics, or the assurances we have from consciousness, that the denial of them implies a manifest contradiction. It is, perhaps, physically possible that the course of nature will be inverted the very

next moment; that my memory is not other than a delirium, and my life a dream; that all is mere illusion; that I am the only being in the universe, and that there is no such thing as body. Nothing can be juster than the reply given by Buffier, "It must be owned," says he,⁷ "that to maintain propositions, the reverse of the primary truths of common sense, doth not imply a contradiction; it only implies insanity." But if any person, on account of this difference in the nature of these two classes of axioms, should not think the term intuitive so properly applied to the evidence of the last mentioned, let him denominate it, if he please, instinctive: I have no objection to the term; nor do I think it derogates in the least from the dignity, the certainty, or the importance of the truths themselves. Such instincts are no other than the oracles of eternal wisdom.

For, let it be observed further, that axioms of this last kind are as essential to moral reasoning, to all deductions concerning life and existence, as those of the first kind are to the sciences of arithmetic and geometry. Perhaps it will appear afterwards that, without the aid of some of them, these sciences themselves would be utterly inaccessible to us. Besides, the mathematical axioms can never extend their influence beyond the precincts of abstract knowledge, in regard to number and extension, or assist us in the discovery of any matter of fact: whereas, with knowledge of the latter kind, the whole conduct and business of human life is principally and intimately connected. All reasoning necessarily supposes that there are certain principles in which we must acquiesce, and beyond which we cannot go—principles clearly discernible by their own light, which can derive no additional evidence from any thing besides. On the contrary supposition, the investigation of truth would be an endless and a fruitless task; we should be eternally proving, whilst nothing could ever be proved; because, by the hypothesis, we could never ascend to premises which require no proof. "If there be no first truths," says the author lately quoted,⁸ "there can be no second truths, nor third, nor indeed any truth at all."

So much for intuitive evidence, in the extensive

⁷Premières Vérités, Part i. Chap. xi. [Au.]

⁸Ib. Dessein de l'Ouvrage. [Au.]

meaning which hath here been given to that term, as including every thing whose evidence results from the simple contemplation of the ideas or perceptions which form the proposition under consideration, and requires not the intervention of any third idea as a medium of proof. This, for order's sake, I have distributed into three classes, the truths of pure intellection, of consciousness, and of common sense. The first may be denominated metaphysical, the second physical, the third moral; all of them natural, original, and unaccountable.

Section II. Of deductive evidence

Part I. Division of the subject into scientific and moral, with the principal distinctions between them.

All rational or deductive evidence is derived from one or other of these two sources: from the invariable properties or relations of general ideas; or from the actual, though perhaps variable connexions subsisting among things. The former we call demonstrative, the latter moral. Demonstration is built on pure intellection, and consisteth in an uninterrupted series of axioms. That propositions formerly demonstrated are taken into the series, doth not in the least invalidate this account; inasmuch as these propositions are all resolvable into axioms, and are admitted as links in the chain; not because necessary, but merely to avoid the useless prolixity which frequent and tedious repetition of proofs formerly given would occasion. Moral evidence is founded on the principles we have from consciousness and common sense, improved by experience; and as it proceeds on this general presumption or moral axiom, that the course of nature in time to come will be similar to what it hath been hitherto, it decides, in regard to particulars, concerning the future from the past, and concerning things unknown from things familiar to us. The first is solely conversant about number and extension, and about those other qualities which are measurable by these. Such are duration, velocity, and weight. With regard to such qualities as pleasure and pain, virtue and vice, wisdom and folly, beauty and deformity, though they admit de-

grees, yet, as there is no standard or common measure, by which their differences and proportions can be ascertained and expressed in numbers, they can never become the subject of demonstrative reasoning. Here rhetoric, it must be acknowledged, hath little to do. Simplicity of diction, and precision in arrangement, whence results perspicuity, are, as was observed already,⁹ all the requisites. The proper province of rhetoric is the second, or moral evidence; for to the second belong all decisions concerning fact, and things without us.

But that the nature of moral evidence may be better understood, it will not be amiss to remark a few of the most eminent differences between this and the demonstrative.

The first difference that occurs is in their subjects. The subject of the one is, as hath been observed, abstract independent truth, or the unchangeable and necessary relations of ideas; that of the other, the real but often changeable and contingent connexions that subsist among things actually existing. Abstract truths, as the properties of quantity, have no respect to time or to place, no dependence on the volition of any being, or on any cause whatever, but are eternally and immutably the same. The very reverse of all this generally obtains with regard to fact. In consequence of what has been now advanced, assertions opposite to truths of the former kind, are not only false, but absurd. They are not only not true, but it is impossible they should be true, whilst the meanings of the words (and consequently the ideas compared) remain the same. This doth not hold commonly in any other kind of evidence. Take, for instance, of the first kind, the following affirmations, "The cube of two is the half of sixteen,"—"The square of the hypotenuse is equal to the sum of the squares of the sides,"—"If equal things be taken from equal things, the remainders will be equal." Contrary propositions, as, "The cube of two is more than the half of sixteen,"—"The square of the hypotenuse is less than the sum of the squares of the sides,"—"If equal things be taken from equal things, the remainders will be unequal," are changeable, not only with falsity, but with absur-

⁹Chap. i. [Au.]

dity, being inconceivable and contradictory. Whereas, to these truths which we acquire by moral evidence, "Cæsar overcame Pompey,"—"The sun will rise tomorrow,"—"All men will die,"—the opposite assertions, though untrue, are easily conceivable without changing, in the least, the import of the words, and therefore do not imply a contradiction.

The second difference I shall remark is, that moral evidence admits degrees, demonstration doth not. This is a plain consequence of the preceding difference. Essential or necessary truth, the sole object of the latter, is incompatible with degree. And though actual truth, or matter of fact, be the ultimate aim of the former, likelihood alone, which is susceptible of degree, is usually the utmost attainment. Whatever is exhibited as demonstration is either mere illusion, and so no evidence at all, or absolutely perfect. There is no medium. In moral reasoning we ascend from possibility, by an insensible gradation, to probability, and thence, in the same manner, to the summit of moral certainty. On this summit, or on any of the steps leading to it, the conclusion of the argument may rest. Hence the result of that is, by way of eminence, denominated science, and the evidence itself is termed scientific; the result of this is frequently (not always) entitled to no higher denomination than opinion. Now, in the mathematical sciences, no mention is ever made of opinions.

The third difference is, that in the one there never can be any contrariety of proofs; in the other, there not only may be, but almost always is. If one demonstration were ever capable of being refuted, it could be solely by another demonstration, this being the only sort of evidence adapted to the subject, and the only sort by which the former could be matched. But to suppose that contraries are demonstrable, is to suppose that the same proposition is both true and false, which is a manifest contradiction. Consequently, if there should ever be the appearance of demonstration on opposite sides, that on one side must be fallacious and sophistical. It is not so with moral evidence, for, unless in a few singular instances, there is always real, not apparent evidence on both sides. There are contrary experiences, contrary presumptions, contrary testi-

monies, to balance against one another. In this case, the probability, upon the whole, is in the proportion which the evidence on the side that preponderates bears to its opposite. We usually say, indeed, that the evidence lies on such a side of the question, and not on the reverse; but by this expression is only meant the overplus of evidence, on comparing both sides. In like manner, when we affirm of an event, that it is probable, we say the contrary is only possible, although, when they are severally considered, we do not scruple to say, This is more probable than that; or, The probabilities on one side outweigh those on the other.

The fourth and last difference I shall observe is, that scientific evidence is simple, consisting of only one coherent series, every part of which depends on the preceding, and, as it were, suspends the following: moral evidence is generally complicated, being in reality a bundle of independent proofs. The longest demonstration is but one uniform chain, the links whereof, taken severally, are not to be regarded as so many arguments, and consequently when thus taken, they conclude nothing; but taken together, and in their proper order, they form one argument, which is perfectly conclusive. It is true, the same theorem may be demonstrable in different ways, and by different mediums; but as a single demonstration, clearly understood, commands the fullest conviction, every other is superfluous. After one demonstrative proof, a man may try a second, purely as an exercise of ingenuity, or the better to assure himself that he hath not committed an oversight in the first. Thus it may serve to warrant the regular procedure of his faculties, but not to make an addition to the former proof, or supply any deficiency perceived in it. So far is it from answering this end, that he is no sooner sensible of a defect in an attempt of this nature, than the whole is rejected as good for nothing, and carrying with it no degree of evidence whatever. In moral reasoning, on the contrary, there is often a combination of many distinct topics of argument, no way dependent on one another. Each hath a certain portion of evidence belonging to itself, each bestows on the conclusion a particular degree of likelihood, of all which accumulated the credibility of the fact is compounded. The

former may be compared to an arch, no part of which can subsist independently of the rest. If you make any breach in it, you destroy the whole. The latter may be compared to a tower, the height whereof is but the aggregate of the heights of the several parts reared above one another, and so may be gradually diminished, as it was gradually raised.

So much for the respective natures of scientific and of moral evidence, and those characteristic qualities which discriminate them from each other. On a survey of the whole, it seems indubitable, that if the former is infinitely superior in point of authority, the latter no less excels in point of importance. Abstract truth, as far as it is the object of our faculties, is almost entirely confined to quantity, concrete or discrete. The sphere of Demonstration is narrow, but within her sphere she is a despotic sovereign, her sway is uncontrollable. Her rival, on the contrary, hath less power but wider empire. Her forces, indeed, are not always irresistible; but the whole world is comprised in her dominions. Reality or fact comprehends the laws and the works of nature, as well as the arts and the institutions of men; in brief, all the beings which fall under the cognizance of the human mind, with all their modifications, operations, and effects. By the first, we must acknowledge, when applied to things, and combined with the discoveries of the second, our researches into nature in a certain line are facilitated, the understanding is enlightened, and many of the arts, both elegant and useful, are improved and perfected. Without the aid of the second, society must not only suffer but perish. Human nature itself could not subsist. This organ of knowledge, which extends its influence to every precinct of philosophy, and governs in most, serves also to regulate all the ordinary but indispensable concerns of life. To these it is admirably adapted, notwithstanding its inferiority in respect of dignity, accuracy, and perspicuity. For it is principally to the acquisitions procured by experience that we owe the use of language, and the knowledge of almost every thing that makes the soul of a man differ from that of a newborn infant. On the other hand, there is no despot so absolute as not to be liable to a check on some side or other; and that the prerogatives

of demonstration are not so very considerable, as on a cursory view one is apt to imagine; that this, as well as every other operation of the intellect, must partake in the weakness incident to all our mental faculties, and inseparable from our nature, I shall afterwards take an opportunity particularly to evince.

Part II. The Nature and Origin of Experience

I should now consider the principal tribes comprehended under the general name of moral evidence; but, that every difficulty may be removed, which might retard our progress in the proposed discussion, it will be necessary, in the first place, to explore more accurately those sources in our nature which give being to experience, and consequently to all those attainments, moral and intellectual, that are derived from it. These sources are two, sense and memory. The senses, both external and internal, are the original inlets of perception. They inform the mind of the facts, which in the present instant are situated within the sphere of their activity, and no sooner discharge their office in any particular instance than the articles of information exhibited by them are devolved on the memory. Remembrance instantly succeeds sensation, insomuch that the memory becomes the sole repository of the knowledge received from sense; knowledge which, without this repository, would be as instantaneously lost as it is gotten, and could be of no service to the mind. Our sensations would be no better than the fleeting pictures of a moving object on a camera obscura, which leave not the least vestige behind them. Memory, therefore, is the only original voucher extant of those past realities for which we had once the evidence of sense. Her ideas are, as it were, the prints that have been left by sensible impressions. But from these two faculties, considered in themselves, there results to us the knowledge only of individual facts, and only of such facts as either heretofore have come, or at present do come, under the notice of our senses.

Now, in order to render this knowledge useful to us, in discovering the nature of things, and in regulating our conduct, a further process of the mind is necessary, which deserves to be carefully attended to, and may be thus illustrated. I have

observed a stone fall to the ground when nothing intervened to impede its motion. This single fact produces little or no effect on the mind beyond a bare remembrance. At another time, I observe the fall of a tile, at another of an apple, and so of almost every kind of body in the like situation. Thus my sense first, and then my memory, furnish me with numerous examples, which, though different in every other particular, are similar in this, that they present a body moving downwards, till obstructed either by the ground or by some intervenient object. Hence by first notion of gravitation. For, with regard to the similar circumstances of different facts, as by the repetition such circumstances are more deeply imprinted, the mind acquires a habit of retaining them, omitting those circumstances peculiar to each wherein their differences consist. Hence, if objects of any kind, in a particular manner circumstanced, are remembered to have been usually, and still more if uniformly, succeeded by certain particular consequences, the idea of the former, in the supposed circumstance introduced into the mind, immediately associates the idea of the latter; and if the object itself, so circumstanced, be presented to the senses, the mind instantly anticipates the appearance of the customary consequence. This holds also inversely. The retention and association above explained are called Experience. The anticipation is in effect no other than a particular conclusion from that experience. Here we may remark by the way, that though memory gives birth to experience, which results from the comparison of facts remembered, the experience or habitual association remains, when the individual facts on which it is founded are all forgotten. I know from an experience which excludes all doubt, the power of fire in melting silver, and yet may not be able at present to recollect a particular instance in which I have seen this effect produced, or even in which I have had the fact attested by a credible witness.

Some will perhaps object that the account now given makes our experimental reasoning look like a sort of mechanism, necessarily resulting from the very constitution of the mind. I acknowledge the justness of the remark, but do not think that it ought to be regarded as an objection. It is plain that our reasoning in this way, if you

please to call it so, is very early, and precedes all reflection on our faculties, and the manner of applying them. Those who attend to the progress of human nature through its different stages, and through childhood in particular, will observe that children make great acquisitions in knowledge from experience long before they attain the use of speech. The beasts also, in their sphere, improve by experience, which hath in them just the same foundations of sense and memory as in us, and hath, besides, a similar influence on their actions. It is precisely in the same manner, and with the same success, that you might train a dog, or accustom a child to expect food on your calling to him in one tone of voice, and to dread your resentment when you use another. The brutes have evidently the rudiments of this species of rationality, which extends as far in them as the immediate purposes of self-preservation require, and which, whether you call it reason or instinct, they both acquire and use in the same manner as we do. That it reaches no further in them, seems to arise from an original incapacity of classing, and (if I may use the expression) generalizing their perceptions; an exercise which to us very quickly becomes familiar, and is what chiefly fits us for the use of language. Indeed, in the extent of this capacity, as much, perhaps, as in any thing, lies also the principal natural superiority of one man over another.

But that we may be satisfied, that to this kind of reasoning, in its earliest or simplest form, little or no reflection is necessary, let it be observed, that it is now universally admitted by opticians, that it is not purely from sight, but from sight aided by experience, that we derive our notions of the distance of visible objects from the eye. The sensation, say they, is instantaneously followed by a conclusion or judgment founded on experience. The point is determined from the different phases of the object found, in former trials, to be connected with different distances, or from the effort that accompanies the different conformations we are obliged to give the organs of sight, in order to obtain a distinct vision of the object. Now, if this be the case, as I think hath been sufficiently evinced of late, it is manifest that this judgment is so truly instantaneous, and so perfectly the result of feeling and association, that the forming of it totally escapes our notice.

Perhaps in no period of life will you find a person, that, on the first mention of it, can be easily persuaded that he derives this knowledge from experience. Every man will be ready to tell you that he needs no other witnesses than his eyes, to satisfy him that objects are not in contact with his body, but are at different distances from him as well as from one another. So passive is the mind in this matter, and so rapid are the transitions which, by this ideal attraction, she is impelled to make, that she is, in a manner, unconscious of her own operations. There is some ground to think, from the exact analogy which their organs bear to ours, that the discovery of distance from the eye is attained by brutes in the same manner as by us. As to this, however, I will not be positive. But though, in this way, the mind acquires an early perception of the most obvious and necessary truths, without which the bodily organs would be of little use; in matters less important her procedure is much slower, and more the result of voluntary application; and as the exertion is more deliberate, she is more conscious of her own activity, or, at least, remembers it longer. It is then only that in common style we honour her operation with the name of *reasoning*; though there is no essential difference between the two cases. It is true, indeed, that the conclusions in the first way, by which also in infancy we learn language, are commonly more to be regarded as infallible, than those effected in the second.

Part III. The subdivisions of Moral Reasoning

But to return to the proposed distribution of moral evidence. Under it I include these three tribes, experience, analogy, and testimony. To these I shall subjoin the consideration of a fourth, totally distinct from them all, but which appears to be a mixture of the demonstrative and the moral; or rather a particular application of the former, for ascertaining the precise force of the latter. The evidence I mean is that resulting from calculations concerning chances.

i. Experience

The first of these I have named peculiarly the evidence of experience, not with philosophical

propriety, but in compliance with common language, and for distinction's sake. Analogical reasoning is surely reasoning from a more indirect experience. Now, as to this first kind, our experience is either uniform or various. In the one case, provided the facts on which it is founded be sufficiently numerous, the conclusion is said to be morally certain. In the other, the conclusion, built on the greater number of instances, is said to be probable, and more or less so, according to the proportion which the instances on that side bear to those on the opposite. Thus we are perfectly assured that iron thrown into the river will sink, that deal will float; because these conclusions are built on a full and uniform experience. That in the last week of December next, it will snow in any part of Britain specified, is perhaps probable; that is, if, on inquiry or recollection, we are satisfied that this hath more frequently happened than the contrary; that some time in that month it will snow, is more probable, but not certain, because, though this conclusion is founded on experience, that experience is not uniform; lastly, that it will snow some time during winter will, I believe, on the same principles, be pronounced certain.

It was affirmed that experience, or the tendency of the mind to associate ideas under the notion of causes, effects, or adjuncts, is never contracted by one example only. This assertion, it may be thought, is contradicted by the principle on which physiologists commonly proceed, who consider one accurate experiment in support of a particular doctrine as sufficient evidence. The better to explain this phenomenon, and the further to illustrate the nature of experience, I shall make the following observations. First, whereas sense and memory are conversant only about individuals, our earliest experiences imply, or perhaps generate, the notion of a species, including all those individuals which have the most obvious and universal resemblance. From Charles, Thomas, William, we ascend to the idea of man; from Britain, France, Spain, to the idea of kingdom. As our acquaintance with nature enlarges, we discover resemblances, of a striking and important nature, between one species and another, which naturally begets the notion of a genus. From comparing men with beasts, birds,

fishes, and reptiles, we perceive that they are all alike possessed of life, or a principle of sensation and action, and of an organized body, and hence acquire the idea of animal: in like manner, from comparing kingdoms with republics and aristocracies, we obtain the idea of nation, and thence again rise in the same track to ideas still more comprehensive. Further, let it be remembered, that by experience we not only decide concerning the future from the past, but concerning things uncommon from things familiar which resemble them.

Now, to apply this observation: a botanist, in traversing the fields, lights on a particular plant, which appears to be of a species he is not acquainted with. The flower, he observes, is monopetalous, and the number of flowers it carries is seven. Here are two facts that occur to his observation; let us consider in what way he will be disposed to argue from them. From the first he does not hesitate to conclude, not only as probable, but as certain, that this individual, and all of the same species, invariably produce monopetalous flowers. From the second, he by no means concludes, as either certain, or even probable, that the flowers which either this plant, or others of the same species, carry at once, will always be seven. This difference, to a superficial inquirer, might seem capricious, since there appears to be one example, and but one in either case, on which the conclusion can be founded. The truth is, that it is not from this example only that he deduces these inferences. Had he never heretofore taken the smallest notice of any plant, he could not have reasoned at all from these remarks. The mind recurs instantly from the unknown to all the other known species of the same genus, and thence to all the known genera of the same order of tribe; and having experienced in the one instance, a regularity in every species, genus, and tribe, which admits no exception; in the other a variety as boundless as that of season, soil, and culture, it learns hence to mark the difference.

Again, we may observe that, on a closer acquaintance with those objects wherewith we are surrounded, we come to discover that they are mostly of a compound nature, and that not only

as containing a complication of those qualities called accidents, as gravity, mobility, colour, extension, figure, solidity, which are common almost to all matter, not only as consisting of different members, but as comprehending a mixture of bodies, often very different in their nature and properties, as air, fire, water, earth, salt, oil, spirit, and the like. These, perhaps, on deeper researches, will be found to consist of materials still simpler. Moreover, as we advance in the study of nature, we daily find more reason to be convinced of her constancy in all her operations, that like causes, in like circumstances, always produce like effects, and inversely, like effects always flow from like causes. The inconstancy which appears at first in some of nature's works, a more improved experience teacheth us to account for in this manner. As most of the objects we know are of a complex nature, on a narrower scrutiny we find, that the effects ascribed to them ought often solely to be ascribed to one or more of the component parts; that the other [parts] noway contribute to the production; that, on the contrary, they sometimes tend to hinder it. If the parts in the composition of similar objects were always in equal quantity, their being compounded would make no odds; if the parts, though not equal, bore always the same proportion to the whole, this would make a difference: but such as in many cases might be computed. In both respects, however, there is an immense variety. Perhaps every individual differs from every other individual of the same species, both in the quantities and in the proportions of its constituent member and component parts. This diversity is also found in other things, which, though hardly reducible to species, are generally known by the same name. The atmosphere in the same place at different times, or at the same time in different places, differs in density, heat, humidity, and the number, quality, and proportion of the vapours or particles with which it is loaden. The more then we become acquainted with elementary natures, the more we are ascertained by a general experience of the uniformity of their operations. And though perhaps it be impossible for us to attain the knowledge of the simplest elements of any body, yet when any thing appears so simple, or

rather so exactly uniform, as that we have observed it invariably to produce similar effects; on discovering any new effects, though but by one experiment, we conclude, from the general experience of the efficient, a like constancy in this energy as in the rest. Fire consumes wood, melts copper, and hardens clay. In these instances it acts uniformly, but not in these only. I have always experienced hitherto, that whatever of any species is consumed by it once, all of the same species it will consume upon trial at any time. The like may be said of what is melted, or hardened, or otherwise altered by it. If then, for the first time, I try the influence of fire on any fossil, or other substance, whatever be the effect, I readily conclude that fire will always produce a similar effect on similar bodies. This conclusion is not founded on this single instance, but on this instance compared with a general experience of the regularity of this element in all its operations.

So much for the first tribe, the evidence of experience, on which I have enlarged the more, as it is, if not the foundation, at least the criterion of all moral reasoning whatever. It is, besides, the principal organ of truth in all the branches of physiology (I use the word in its largest acceptation), including natural history, astronomy, geography, mechanics, optics, hydrostatics, meteorology, medicine, chemistry. Under the general term I also comprehend natural theology and psychology, which, in my opinion, have been most unnaturally disjoined by philosophers. Spirit, which here comprises only the Supreme Being and the human soul, is surely as much included under the notion of natural object as body is, and is knowable to the philosopher purely in the same way, by observation and experience.

ii. Analogy

The evidence of analogy, as was hinted above, is but a more indirect experience, founded on some remote similitude. As things, however, are often more easily comprehended by the aid of example than by definition, I shall in that manner illustrate the difference between experimental evidence and analogical. The circulation of the blood in one human body is, I shall suppose, experimentally discovered. Nobody will doubt of

this being a sufficient proof from experience, that the blood circulates in every human body. Nay, further, when we consider the great similarity which other animal bodies bear to the human body, and that both in the structure and in the destination of the several organs and limbs; particularly when we consider the resemblance in the blood itself, and blood vessels, and in the fabric and pulsation of the heart and arteries, it will appear sufficient experimental evidence of the circulation of the blood in brutes, especially in quadrupeds. Yet, in this application, it is manifest, that the evidence is weaker than in the former. But should I from the same experiment infer the circulation of the sap in vegetables, this would be called an argument only from analogy. Now, all reasonings from experience are obviously weakened in proportion to the remoteness of the resemblance subsisting between that on which the argument is founded, and that concerning which we form the conclusion.

The same thing may be considered in a different way. I have learnt from experience, that like effects sometimes proceed from objects which faintly resemble, but not near so frequently as from objects which have been a more perfect likeness. By this experience I have been enabled to determine the degrees of probability from the degrees of similarity in the different cases. It is presumable that the former of these ways has the earliest influence, when the mind, unaccustomed to reflection, forms but a weak association, and consequently but a weak expectation of a similar event from a weak resemblance. The latter seems more the result of thought, and is better adapted to the ordinary forms of reasoning.

It is allowed that analogical evidence is at best but a feeble support, and is hardly ever honoured with the name of proof. Nevertheless, when the analogies are numerous, and the subject admits not evidence of another kind, it doth not want efficacy. It must be owned, however, that it is generally more successful in silencing objections than in evincing truth, and on this account may more properly be styled the defensive arms of the orator than the offensive. Though it rarely refutes, it frequently repels refutation, like those weapons which, though they cannot kill the enemy, will ward his blows.

iii. Testimony

The third tribe is the evidence of testimony, which is either oral or written. This also hath been thought by some, but unjustly, to be solely and originally derived from the same source, experience.¹⁰ The utmost in regard to this, that can be affirmed with truth, is that the evidence of testimony is to be considered as strictly logical, no further than human veracity in general, or the veracity of witnesses of such a character, and in such circumstances in particular, is supported, or perhaps more properly, hath not been refuted, by experience. But that testimony, antecedently to experience, hath a natural influence on belief, is undeniable. In this it resembles memory; for though the defects and misrepresentations of memory are corrected by experience, yet that this faculty hath an innate evidence of its own we know from this, that if we had not previously given an implicit faith to memory, we had never been able to acquire experience. This will appear from the revisal of its nature, as explained above. Nay, it must be owned, that in what regards single facts, testimony is more adequate evidence than any conclusions from experience. The immediate conclusions from experience are general, and run thus: "This is the ordinary course of nature;"—"Such an event may reasonably be expected, when all the attendant circumstances are similar." When we descend in particulars, the conclusion necessarily becomes weaker, being more indirect. For though all the *known* circumstances be similar, all the *actual* circumstances may not be similar; nor is it possible in any case to be assured, that all the actual circumstances are known to us. Accordingly, experience is the foundation of philosophy; which consists in a collection of general truths, systematically digested. On the contrary, the direct conclusion from testimony is particular, and runs thus: "This is the fact in the instance specified." Testimony, therefore, is the foundation of history, which is occupied about individuals. Hence we derive our acquaintance with past ages, as from experience

¹⁰I had occasion to make some reflections on this subject formerly. See *Dissertations on Miracles*, Part i. Sect. 1. There are several ingenious observations on the same subject in Reid's *Inquiry*, Ch. vi. Sect. 23. [Au.]

we derive all that we can discover of the future. But the former is dignified with the name of knowledge, whereas the latter is regarded as matter of conjecture only. When experience is applied to the discovery of the truth in a particular incident, we call the evidence presumptive; ample testimony is accounted a positive proof of the fact. Nay, the strongest conviction built merely on the former is sometimes overturned by the slightest attack of the latter. Testimony is capable of giving us absolute certainty (Mr. Hume himself being judge¹¹) even of the most miraculous fact, or of what is contrary to uniform experience. For, perhaps, in no other instance can experience be applied to individual events with so much certainty, as in what relates to the revolutions of the heavenly bodies. Yet, even this evidence, he admits, may not only be counterbalanced, but destroyed by testimony.

But to return. Testimony is a serious intimation from another, of any fact or observation, as being what he remembers to have seen or heard or experienced. To this, when we have no positive reasons of mistrust or doubt, we are, by an original principle of our nature (analogous to that which compels our faith in memory), led to give an unlimited assent. As on memory alone is founded the merely personal experience of the individual, so on testimony in concurrence with memory is founded the much more extensive experience which is not originally our own, but derived from others.¹² By the first, I question not, a man might acquire all the knowledge necessary for mere animal support, in that rudest state of human nature (if ever such a state existed) which was without speech and without society; to the last, in conjunction with the other, we are indebted for every thing which distinguishes the man from the brute, for language, arts, and civilization. It hath been observed, that from experience we learn to confine our belief in human testimony within the proper bounds. Hence we are taught to consider many attendant circumstances, which serve either to corroborate or to invalidate its evidence. The reputation of the attester, his manner of address, the nature of the fact attested,

¹¹Essay on Miracles, p. 2. [Au.]

¹²Dissertation on Miracles, Part i. Sect. 2. [Au.]

the occasion of giving the testimony, the possible or probable design in giving it, the disposition of the hearers to whom it was given, and several other circumstances, have all considerable influence in fixing the degree of credibility. But of these I shall have occasion to take notice afterwards. It deserves likewise to be attended to on this subject, that in a number of concurrent testimonies (in cases wherein there could have been no previous concert), there is a probability distinct from that which may be termed the sum of the probabilities resulting from the testimonies of the witnesses, a probability which would remain even though the witnesses were of such a character as to merit no faith at all. This probability arises purely from the concurrence itself. That such a concurrence should spring from chance is as one to infinite; that is, in other words, morally impossible. If therefore concert be excluded, there remains no other cause but the reality of the fact.

Now to this species of evidence, testimony, we are first immediately indebted for all the branches of philology, such as, history, civil, ecclesiastic, and literary; grammar, languages, jurisprudence, and criticism; to which I may add revealed religion, as far as it is to be considered as a subject of historical and critical inquiry, and so discoverable by natural means; and secondly, to the same source we owe, as was hinted above, a great part of that light which is commonly known under the name of experience, but which is, in fact, not founded on our own personal observations, or the notices originally given by our own senses, but on the attested experiences and observations of others. So that as hence we derive entirely our knowledge of the actions and productions of men, especially in other regions and in former ages, hence also we derive, in a much greater measure than is commonly imagined, our acquaintance with Nature and her works. — Logic, rhetoric, ethics, economics, and politics are properly branches of pneumatology,¹³ though very closely connected with the philological studies above enumerated.

¹³The study of spirits or spiritual phenomena. [Ed.]

iv. Calculations of Chances

The last kind of evidence I proposed to consider, was that resulting from calculations of chances. Chance is not commonly understood, either in philosophic or in vulgar language, to imply the exclusion of a cause, but our ignorance of the cause. It is often employed to denote a bare possibility of an event, when nothing is known either to produce or to hinder it. But in this meaning it can never be made the subject of calculation. It then only affords scope to the calculator, when a cause is known for the production of an effect, and when that effect must necessarily be attended with this or that or the other circumstance; but no cause is known to determine us to regard one particular circumstance in preference to the rest, as that which shall accompany the supposed effect. The effect is then considered as necessary, but the circumstance as only casual or contingent. When a die is thrown out of the hand, we know that its gravity will make it fall; we know also that this, together with its cubical figure, will make it lie so, when intercepted by the table, as to have one side facing upwards. Thus far we proceed on the certain principles of a uniform experience; but there is no principle which can lead me to conclude that one side rather than another will be turned up. I know that this circumstance is not without a cause; but is, on the contrary, as really effected by the previous tossing which it receives in the hand or in the box, as its fall and the manner of its lying are by its gravity and figure. But the various turns or motions given it, in this manner, do inevitably escape my notice; and so are held for nothing. I say, therefore, that the chance is equal for every one of the six sides. Now, if five of these were marked with the same figure, suppose a dagger [†], and only one with an asterisk [*], I should in that case say, there were five chances that the die would turn up the dagger, for one that it would turn up the asterisk. For the turning up each of the six sides being equally possible, there are five cases in which the dagger, and only one in which the asterisk would be uppermost.

This differs from experience, inasmuch as I reckon the probability here, not from numbering

and comparing the events after repeated trials, but without any trial, from balancing the possibilities on both sides. But though different from experience, it is so similar, that we cannot wonder that it should produce a similar effect upon the mind. These different positions being considered as equal, if any of five shall produce one effect, and but the sixth another, the mind, weighting the different events, resteth in an expectation of that in which the greater number of chances concur; but still accompanied with a degree of hesitancy, which appears proportioned to the number of chances on the opposite side. It is much after the same manner that the mind, on comparing its own experiences, when five instances favour one side to one that favours the contrary, determines the greater credibility of the former. Hence, in all complicated cases, the very degree of probability may be arithmetically ascertained. That two dice marked in the common way will turn up seven, is thrice as probable as that they will turn up eleven, and six times as probable as that they will turn up twelve.¹⁴ The degree of probability is here determined demonstratively. It is indeed true that such mathematical calculations may be founded on experience, as well as upon chances. Examples of this we have in the computations that have been made of the value of annuities, insurances, and several other commercial articles. In such cases a great number of instances is necessary, the greatest exactness in collecting them on each side, and due care that there be no discoverable peculiarity in any of them, which would render them unfit for supporting a general conclusion.

Part IV. The superiority of Scientific Evidence reexamined

After the enumeration made in the first part of this section, of the principal differences between

¹⁴Call one die A, the other B. The chances for 7 are

A 1.	B 6.	A 4.	B 3.
A 2.	B 5.	A 5.	B 2.
A 3.	B 4.	A 6.	B 1.

The chances for eleven are
 A 6. B 5.
 A 5. B 6.

The only chance for 12 is A 6. B 6. The 1st is to the 2nd as 6 to 2; to the 3rd, as 6 to 1 [Au.]

scientific evidence and moral, I signified my intention of resuming the subject afterwards, as far at least as might be necessary to show, that the prerogatives of demonstration are not so considerable, as on a cursory view one is apt to imagine. It will be proper now to execute this intention. I could not attempt it sooner, as the right apprehension of what is to be advanced will depend on a just conception of those things which have lately been explained. In the comparison referred to, I contrasted the two sorts of evidence, as they are in themselves, without considering the influence which the necessary application of our faculties in using both, has, and ought to have, on the effect. The observations then made in that abstracted view of the subject, appear to be well founded. But that view, I acknowledge, doth not comprehend the whole with which we are concerned.

It was observed of memory, that as it instantly succeeds sensation, it is the repository of all the stores from which our experience is collected, and that without an implicit faith in the clear representations of that faculty, we could not advance a step in the acquisition of experimental knowledge. Yet we know that memory is not infallible: nor can we pretend that in any case there is not a physical possibility of her making a false report. Here, it may be said, is an irremediable imbecility in the very foundation of moral reasoning. But is it less so in demonstrative reasoning? This point deserves a careful examination.

It was remarked concerning the latter, that it is a proof consisting of an uninterrupted series of axioms. The truth of each is intuitively perceived as we proceed. But this process is of necessity gradual, and these axioms are all brought in succession. It must then be solely by the aid of memory, that they are capable of producing conviction in the mind. Nor by this do I mean to affirm, that we can remember the preceding steps with their connexions, so as to have them all present to our view at one instant; for then we should, in that instant, perceive the whole intuitively. Our remembrance, on the contrary, amounts to no more than this, that the perception of the truth of the axiom to which we are advanced in the proof, is accompanied with a strong impression on the memory of the satisfaction that the mind received

from the justness and regularity of what preceded. And in this we are under a necessity of acquiescing; for the understanding is no more capable of contemplating and perceiving at once the truth of all the propositions in the series, than the tongue is capable of uttering them at once. Before we make progress in geometry, we come to demonstrations, wherein there is a reference to preceding demonstrations; and in these perhaps to others that preceded them. The bare reflection, that as to these we once were satisfied, is accounted by every learner, and teacher too, as sufficient. And if it were not so, no advancement at all could be made in this science. Yet, here again, the whole evidence is reduced to the testimony of memory. It may be said that, along with the remembrance now mentioned, there is often in the mind a conscious power of recollecting the several steps, whenever it pleases; but the power of recollecting them severally, and successively, and the actual instantaneous recollection of the whole, are widely different. Now, what is the consequence of this induction? It is plainly this, that, in spite of the pride of mathesis, no demonstration whatever can produce, or reasonably ought to produce, a higher degree of certainty than that which results from the vivid representations of memory, on which the other is obliged to lean. Such is here the natural subordination, however rational and purely intellectual the former may be accounted, however mysterious and inexplicable the latter. For it is manifest, that without a perfect acquiescence in such representations, the mathematician could not advance a single step beyond his definitions and axioms. Nothing therefore is more certain, however inconceivable it appeared to Dr. Priestley, than what was affirmed by Dr. Oswald, that *the possibility of error attends the most complete demonstration*.

If from theory we recur to fact, we shall quickly find, that those most deeply versed in this sort of reasoning are conscious of the justness of the remark now made. A geometrician, I shall suppose, discovers a new theorem, which, having made a diagram for the purpose, he attempts to demonstrate, and succeeds in the attempt. The figure he hath constructed is very complex, and the demonstration long. Allow me now to ask, Will he be so perfectly satisfied on the first trial

as not to think it of importance to make a second, perhaps a third, and a fourth? Whence arises this diffidence? Purely from the consciousness of the fallibility of his own faculties. But to what purpose, it may be said, the reiterations of the attempt, since it is impossible for him, by any efforts, to shake off his dependence on the accuracy of his attention and fidelity of his memory? Or, what can he have more than reiterated testimonies of his memory, in support of the truth of its former testimony? I acknowledge, that after a hundred attempts he can have no more. But even this is a great deal. We learn from experience, that the mistakes or oversights committed by the mind in one operation, are sometimes, on a review, corrected on the second, or perhaps on a third. Besides, the repetition, when no error is discovered, enlivens the remembrance, and so strengthens the conviction. But, for this conviction, it is plain that we are in a great measure indebted to memory, and in some measure even to experience.

Arithmetical operations, as well as geometrical, are in their nature scientific; yet the most accurate accountants are very sensible of the possibility of committing a blunder, and therefore rarely fail, for securing the matter, when it is of importance, to prove what they have done, by trying to effect the same thing another way. You have employed yourself, I suppose, in resolving some difficult problem by algebra, and are convinced that your solution is just. One whom you know to be an expert algebraist, carefully peruses the whole operation, and acquaints you that he hath discovered an error in your procedure. You are that instant sensible that your conviction was not of such an impregnable nature, but that his single testimony, in consequence of the confidence you repose in his experienced veracity and skill, makes a considerable abatement in it.

Many cases might be supposed, of belief founded only on moral evidence, which it would be impossible thus to shake. A man of known probity and good sense, and (if you think it makes an addition of any moment in this case) an astronomer and philosopher, bids you look at the sun as it goes down, and tells you, with a serious countenance, that the sun which sets today will never again rise upon the earth. What would be the effect of this declaration? Would it create in

you any doubts? I believe it might, as to the soundness of the man's intellects, but not as to the truth of what he said. Thus, if we regard only the effect, demonstration itself doth not always produce such immovable certainty, as is sometimes consequent on merely moral evidence. And if there are, on the other hand, some well-known demonstrations, of so great authority, that it would equally look like lunacy to impugn, it may deserve the attention of the curious to inquire how far, with respect to the bulk of mankind, these circumstances, their having stood the test of ages, their having obtained the universal suffrage of those who are qualified to examine them (things purely of the nature of moral evidence), have contributed to that unshaken faith with which they are received.

The principal difference then, in respect of the result of both kinds, is reduced to this narrow point. In mathematical reasoning, provided you are ascertained of the regular procedure of the mind, to affirm that the conclusion is false implies a contradiction; in moral reasoning, though the procedure of the mind were quite unexceptionable, there still remains a physical possibility of the falsity of the conclusion. But how small this difference is in reality, any judicious person who but attends a little may easily discover. The geometrician, for instance, can no more doubt whether the book called Euclid's Elements is a human composition, whether its contents were discovered and digested into the order in which they are there disposed, by human genius and art, than he can doubt the truth of the propositions therein demonstrated. Is he in the smallest degree surer of any of the properties of the circle, than that if he take away his hand from the compasses with which he is describing it on the wall, they will immediately fall to the ground? These things affect his mind, and influence his practice, precisely in the same manner.

So much for the various kinds of evidence, whether intuitive or deductive; intuitive evidence, as divided into that of pure intellection, of consciousness, and of common sense, under the last of which that of memory is included; deductive evidence, as divided into scientific and moral, with the subdivisions of the latter into experience, analogy, and testimony, to which hath

been added the consideration of a mixed species concerning chances. So much for the various subjects of discourse, and the sorts of eviction of which they are respectively, susceptible. This, though peculiarly the logician's province, is the foundation of all conviction, and consequently of persuasion too. To attain either of these ends, the speaker must always assume the character of the close and candid reasoner; for though he may be an acute logician who is no orator, he will never be a consummate orator who is no logician. . . .

CHAPTER VII

Of the Consideration which the Speaker ought to have of the Hearers, as men in general.

Rhetoric, as was observed already, not only considers the subject, but also the hearers and the speaker.¹⁵ The hearers must be considered in a twofold view, as men in general, and as such men in particular.

As men in general, it must be allowed there are certain principles in our nature, which, when properly addressed and managed, give no inconsiderable aid to reason in promoting belief. Nor is it just to conclude from this concession, as some have hastily done, that oratory may be defined, "The art of deception." The use of such helps will be found, on a stricter examination, to be in most cases quite legitimate, and even necessary, if we would give reason herself that influence which is certainly her due. In order to evince the truth considered by itself, conclusive arguments alone are requisite; but in order to convince me by these arguments, it is moreover requisite that they be understood, that they be attended to, that they be remembered by me; and in order to persuade me by them to any particular action or conduct, it is further requisite, that by interesting me in the subject, they may, as it were, be felt. It is not therefore the understanding alone that is here concerned. If the orator would prove successful, it is necessary that he engage in his service all these different powers of the mind, the imagination, the memory, and the passions. These are not the supplanters of reason, or even

¹⁵Chap. iv. [Au.]

rivals in her sway; they are her handmaids, by whose ministry she is enabled to usher truth into the heart, and procure it there a favourable reception. As handmaids they are liable to be seduced by sophistry in the garb of reason, and sometimes are made ignorantly to lend their aid in the introduction of falsehood. But their service is not on this account to be dispensed with; there is even a necessity of employing it, founded on our nature. Our eyes and hands and feet will give us the same assistance in doing mischief as in doing good; but it would not therefore be better for the world, that all mankind were blind and lame. Arms are not to be laid aside by honest men, because carried by assassins and ruffians; they are to be used the rather for this very reason. Nor are those mental powers, of which eloquence so much avails herself, like the art of war or other human arts, perfectly indifferent to good and evil, and only beneficial as they are rightly employed. On the contrary, they are by nature, as will perhaps appear afterwards, more friendly to truth than to falsehood, and more easily retained in the cause of virtue, than in that of vice.

Section I. Men considered as endowed with Understanding

But to descend to particulars; the first thing to be studied by the speaker is, that his arguments may be understood. If they be unintelligible, the cause must be either in the sense or in the expression. It lies in the sense if the mediums of proof be such as the hearers are unacquainted with; that is, if the ideas introduced be either without the sphere of their knowledge, or too abstract for their apprehension and habits of thinking. It lies in the sense likewise, if the train of reasoning (though no unusual ideas should be introduced) be longer, or more complex, or more intricate, than they are accustomed to. But as the fitness of the arguments, in these respects, depends on the capacity, education, and attainments of the hearers, which in different orders of men are different, this properly belongs to the consideration which the speaker ought to have of his audience, not as men in general, but as men in particular. The obscurity which ariseth from the expression will come in course to be considered in the sequel.

Section II. Men considered as endowed with Imagination

The second thing requisite is that his reasoning be attended to; for this purpose the imagination must be engaged. Attention is prerequisite to every effect of speaking, and without some gratification in hearing, there will be no attention, at least of any continuance. Those qualities in ideas which principally gratify the fancy, are vivacity, beauty, sublimity, novelty. Nothing contributes more to vivacity than striking resemblances in the imagery, which convey, besides, an additional pleasure of their own.

But there is still a further end to be served by pleasing the imagination, than that of awakening and preserving the attention, however important this purpose alone ought to be accounted. I will not say with a late subtle metaphysician,¹⁶ that "Belief consisteth in the liveliness of our ideas." That this doctrine is erroneous, it would be quite foreign to my purpose to attempt here to evince.¹⁷ Thus much however is indubitable, that belief commonly enlivens our ideas; and that lively ideas have a stronger influence than faint ideas to induce belief. But so far are these two from being coincident, that even this connexion between them, though common, is not necessary. Vivacity of ideas is not always accompanied with faith, nor is faith always able to produce vivacity. The ideas raised in my mind by the (*Ædipus Tyrannus* of Sophocles, or the *Lear* of Shakespeare, are incomparably more lively than those excited by a cold but faithful historiographer. Yet I may give full credit to the languid narrative of the latter, though I believe not a single sentence in those tragedies. If a proof were asked of the greater vivacity in the one case than in the other (which, by the way, must be finally determined by consciousness), let these effects serve for arguments. The ideas of the poet give greater pleasure, command closer attention, operate more strongly on the passions, and are longer remembered. If these be not sufficient evidences of greater vivacity, I own I have no apprehension of

¹⁶The author of a *Treatise of Human Nature*, in 3 vols. [Au.]

¹⁷If one is desirous to see a refutation of this principle, let him consult Reid's *Inquiry*, Chap. ii. Sect. 5. [Au.]

the meaning which that author affixes to the term. The connexion, however, that generally subsisteth between vivacity and belief will appear less marvellous, if we reflect that there is not so great a difference between argument and illustration as is usually imagined. The same ingenious writer says, concerning moral reasoning, that it is but a kind of comparison. The truth of this assertion any one will easily be convinced of, who considers the preceding observations on that subject.

Where then lies the difference between addressing the judgment and addressing the fancy? and what hath given rise to the distinction between ratiocination and imagery? The following observations will serve for an answer to this query. It is evident, that though the mind receives a considerable pleasure from the discovery of resemblance, no pleasure is received when the resemblance is of such a nature as is familiar to every body. Such are those resemblances which result from the specific and generic qualities of ordinary objects. What gives the principle delight to the imagination, is the exhibition of a strong likeness, which escapes the notice of the generality of people. The similitude of man to man, eagle to eagle, sea to sea, or in brief, of one individual to another individual of the same species, affects not the fancy in the least. What poet would ever think of comparing a combat between two of his heroes to a combat between other two? Yet no where else will he find so strong a resemblance. Indeed, to the faculty of imagination, this resemblance appears rather under the notion of identity; although it be the foundation of the strongest reasoning from experience. Again, the similarity of one species to another of the same genus, as of the lion to the tiger, of the alder to the oak, though this too be a considerable fund of argumentation, hardly strikes the fancy more than the preceding, inasmuch as the general properties, whereof every species participates, are also obvious. But if from the experimental reasoning we descend to the analogical, we may be said to come upon a common to which reason and fancy have an equal claim. "A comparison," says Quintilian, "hath almost the effect of an example." But what are rhetorical comparisons, when brought to illustrate any point inculcated

on the hearers, — what are they, I say, but arguments from analogy? In proof of this let us borrow an instance from the forementioned rhetorician, "Would you be convinced of the necessity of education for the mind, consider of what importance culture is to the ground: the field which, cultivated, produceth a plentiful crop of useful fruits, if neglected, will be overrun with briars and brambles, and other useless or noxious weeds." It would be no better than trifling to point out the argument couched in this passage. Now if comparison, which is the chief, hath so great an influence upon conviction, it is no wonder that all those other oratorical tropes and figures addressed to the imagination, which are more or less nearly related to comparison, should derive hence both life and efficacy. Even antithesis implies comparison. Simile is a comparison in epitome.¹⁸ Metaphor is an allegory in miniature. Allegory and prosopopeia are comparisons conveyed under a particular form.

Section III. Men considered as endowed with Memory

Further, vivid ideas are not only more powerful than languid ideas in commanding and preserving attention, they are not only more efficacious in producing conviction, but they are also more easily retained. Those several powers, understanding, imagination, memory, and passion, are mutually subservient. That it is necessary for the orator to engage the help of memory, will appear from many reasons, particularly from what was remarked above, on the fourth difference between moral reasoning and demonstrative.¹⁹ It was there observed, that in the former the credibility of the fact is the sum of the evidence of all the arguments, often independent of one another, brought to support it. And though it was shown that demonstration itself, without the assistance of this faculty, could never produce conviction;

¹⁸Simile and comparison are in common language frequently confounded. The difference is this: Simile is no more than a comparison suggested in a word or two; as, He fought like a lion: His face shone as the sun. Comparison is a simile circumstantiated and included in one or more separate sentences. [Au.]

¹⁹Chap. v. Sect. ii. [Au.]

yet here it must be owned, that the natural connexion of the several links in the chain renders the remembrance easier. Now, as nothing can operate on the mind which is not in some respect present to it, care must be taken by the orator that, in introducing new topics, the vestiges left by the former on the minds of the hearers may not be effaced. It is the sense of this necessity which hath given rise to the rules of composition.

Some will perhaps consider it as irregular, that I speak here of addressing the memory, of which no mention at all was made in the first chapter, wherein I considered the different forms of eloquence, classing them by the different faculties of the mind addressed. But this apparent irregularity will vanish, when it is observed, that, with regard to the faculties there mentioned, each of them may not only be the direct, but even the ultimate object of what is spoken. The whole scope may be at one time to inform or convince the understanding, at another to delight the imagination, at a third to agitate the passions, and at a fourth to determine the will. But it is never the ultimate end of speaking to be remembered, when what is spoken tends neither to instruct, to please, to move, nor to persuade. This therefore is of necessity no more on any occasion than a subordinate end; or, which is precisely the same thing, the means to some further end; and as such, it is more or less necessary on every occasion. The speaker's attention to this subserviency of memory is always so much the more requisite, the greater the difficulty of remembrance is, and the more important the being remembered is to the attainment of the ultimate end. On both accounts, it is of more consequence in those discourses whose aim is either instruction or persuasion, than in those whose design is solely to please the fancy, or to move the passions. And if there are any which answer none of those ends, it were better to learn to forget them than to teach the method of making them to be retained.

The author of the treatise above quoted hath divided the principles of association in ideas into resemblance, contiguity, and causation. I do not here inquire into all the defects of this enumeration, but only observe that, even on his own system, order both in space and time ought to have been included. It appears at least to have an equal title with causation, which, according to him, is

but a particular modification and combination of the other two. Causation, considered as an associating principle, is, in his theory, no more than the contiguous succession of two ideas, which is more deeply imprinted on the mind by its experience of a similar contiguity and succession of the impressions from which they are copied. This therefore is the result of resemblance and vicinity united. Order in place is likewise a mode of vicinity, where this last tie is strengthened by the regularity and simplicity of figure; which qualities arise solely from the resemblance of the corresponding parts of the figure; or the parts similarly situated. Regular figures, besides the advantages they derive from simplicity and uniformity, have this also, that they are more familiar to the mind than irregular figures, and are therefore more easily conceived. Hence the influence which order in place hath upon the memory. If any person question this influence, let him but reflect, how much easier it is to remember a considerable number of persons, whom one hath seen ranged on benches or chairs, round a hall, than the same number seen standing promiscuously in a crowd: and how natural it is, for assisting the memory in recollecting the persons, to recur to the order wherein they were placed.

As to order in time, which in composition is properly styled Method, it consisteth principally in connecting the parts in such a manner as to give vicinity to things in the discourse which have an affinity; that is, resemblance, causality, or other relation in nature; and thus making their customary association and resemblance, as in the former case, co-operate with their contiguity in duration, or immediate succession in the delivery. The utility of method for aiding the memory, all the world knows. But besides this, there are some parts of the discourse, as well as figures of speech, peculiarly adapted to this end. Such are the division of the subject, the rhetorical repetitions of every kind, the different modes of transition and recapitulation.

Section IV. Men considered as endowed with Passions

To conclude; when persuasion is the end, passion also must be engaged. If it is fancy which bestows brilliancy on our ideas, if it is memory

which gives them stability, passion doth more, it animates them. Hence they derive spirit and energy. To say that it is possible to persuade without speaking to the passions, is but at best a kind of specious nonsense. The coolest reasoner always in persuading addresseth himself to the passions some way or other. This he cannot avoid doing, if he speak to the purpose. To make me believe it is enough to show me that things are so; to make me act, it is necessary to show that the action will answer some end. That can never be an end to me which gratifies no passion or affection in my nature. You assure me, "It is for my honour." Now you solicit my pride, without which I had never been able to understand the word. You say, "It is for my interest." Now you bespeak my self-love. "It is for the public good." Now you rouse my patriotism. "It will relieve the miserable." Now you touch my pity. So far therefore it is from being an unfair method of persuasion to move the passions, that there is no persuasion without moving them.

But if so much depend on passion, where is the scope for argument? Before I answer this question, let it be observed that, in order to persuade, there are two things which must be carefully studied by the orator. The first is, to excite some desire or passion in the hearers; the second is to satisfy their judgment that there is a connexion between the action to which he would persuade them, and the gratification of the desire or passion which he excites. This is the analysis of persuasion. The former is effected by communicating lively and glowing ideas of the object; the latter, unless so evident of itself as to supersede the necessity, by presenting the best and most forcible arguments which the nature of the subject admits. In the one lies the pathetic, in the other the argumentative. These incorporated together (as was observed in the first chapter) constitute that vehemence of contention, to which the greatest exploits of eloquence ought doubtless to be ascribed. Here then is the principal scope for argument, but not the only scope, as will appear in the sequel. When the first end alone is attained, the pathetic without the rational, the passions are indeed roused from a disagreeable languor by the help of the imagination, and the mind is thrown into a state which, though accompanied with some painful emotions, rarely

fails, upon the whole, to affect it with pleasure. But, if the hearers are judicious, no practical effect is produced. They cannot by such declamation be influenced to a particular action, because not convinced that that action will conduce to the gratifying of the passion raised. Your eloquence hath fired my ambition, and makes me burn with public zeal. The consequence is, there is nothing which at present I would not attempt for the sake of fame, and the interest of my country. You advise me to such a conduct; but you have not shown me how that can contribute to gratify either passion. Satisfy me in this, and I am instantly at your command. Indeed, when the hearers are rude and ignorant, nothing more is necessary in the speaker than to inflame their passions. They will not require that the connexion between the conduct he urges and the end proposed be evinced to them. His word will satisfy. And therefore bold affirmations are made to supply the place of reasons. Hence it is that the rabble are ever the prey of quacks and impudent pretenders of every denomination.

On the contrary, when the other end alone is attained, the rational without the pathetic, the speaker is as far from his purpose as before. You have proved, beyond contradiction, that acting thus is the sure way to procure such an object. I perceive that your reasoning is conclusive: but I am not affected by it. Why? I have no passion for the object. I am indifferent whether I procure it or not. You have demonstrated that such a step will mortify my enemy. I believe it; but I have no resentment, and will not trouble myself to give pain to another. Your arguments evince that it would gratify my vanity. But I prefer my ease. Thus passion is the mover to action, reason is the guide. Good is the object of the will, truth is the object of the understanding.²⁰

²⁰Several causes have contributed to involve this subject in confusion. One is the ambiguity and imperfection of language. Motives are often called arguments, and both motives and arguments are promiscuously styled reasons. Another is, the idle disputes that have arisen among philosophers concerning the nature of good, both physical and moral. "Truth and good are one," says the author of the Pleasures of Imagination, an author whose poetical merit will not be questioned by persons of taste. The expression might have been passed in the poet, whose right to the use of *catathresis*, one of the many privileges comprehended under the name of *poetic*

It may be thought that when the motive is the equity, the generosity, or the intrinsic merit of the action recommended, argument may be employed to evince the reasonableness of the end, as well as the fitness of the means. But this way of speaking suits better the popular dialect than the philosophical. The term *reasonableness*, when used in this manner, means nothing but the goodness, the amiableness, or moral excellency. If therefore the hearer hath no love of justice, no benevolence, no regard to right, although he were endowed with the perspicacity of a cherub, your harangue could

license, prescription hath fully established. But by philosophizing on this passage in his notes, he warrants us to canvass his reasoning, for no such privilege hath as yet been conceded to philosophers. Indeed, in attempting to illustrate, he has, I think, confuted it, or, to speak more properly, shown it to have no meaning. He mentions two opinions concerning the connexion of truth and beauty, which is one species of good. "Some philosophers," says he, "assert an independent and invariable law in nature, in consequence of which *all rational beings must alike perceive beauty in some certain proportions, and deformity in the contrary.*" Now, though I do not conceive what is meant either by an *independent law*, or by *contrary proportions*, this, if it proves any thing, proves as clearly that deformity and truth are one, as that beauty and truth are one: for those *contrary propositions* are surely as much proportions, or, if you will, as true proportions, as *some certain proportions* are. Accordingly, if, in the conclusion deduced, you put the word *deformity* instead of *beauty*, and the word *beauty* instead of *deformity*, the sense will be equally complete. "Others," he adds, "there are, who believe beauty to be merely a relative and arbitrary thing; and that it is not impossible, in a physical sense, that two beings of equal capacities for truth, should perceive, one of them beauty, and the other deformity, in the same relations. And upon this supposition, by that truth which is always connected with beauty, nothing more can be meant than the conformity of any object to those proportions, upon which, after a careful examination, the beauty of that species is found to depend." This opinion, if I am able to comprehend it, differs only in one point from the preceding. It supposes the standard or law of beauty not invariable or universal. It is liable to the same objection, and that rather more glaringly; for if the same relations must be always equally *true relations*, deformity is as really one with truth as beauty is, since the very same relations can exhibit both appearances. In short, no hypothesis hitherto invented hath shown that by means of the discursive faculty, without the aid of any other mental power, we could ever obtain a notion of either the beautiful or the good; and till this be shown, nothing is shown to the purpose. The author aforesaid, far from attempting this, proceeds on the supposition, that we first perceive beauty, he says not how, and then having, by a careful examination, discovered the proportions which give rise to the perception, denominate them *true*; so that all those

never have any influence on his mind. The reason is, when you speak of the fitness of the means, you address yourself only to the head; when you speak of the goodness of the end, you address yourself to the heart, of which we supposed him destitute. Are we then to class the virtues among the passions? By no means. But without entering into a discussion of the difference, which would be foreign to our purpose, let it suffice to observe, that they have this in common with passion. They necessarily imply an habitual propensity to a certain species of conduct, an habitual aversion to

elaborate disquisitions with which we are amused, amount only to a few insignificant identical propositions very improperly expressed. For out of a vast profusion of learned phrase, this is all the information we can pick, that "Beauty is—*truly* beauty," and that "Good is—*truly* good." "Moral good," says a celebrated writer, "consisteth in *fitness.*" From this account any person would at first readily conclude, that morals, according to him, are not concerned in the ends which we pursue, but solely in the choice of means for attaining our ends; that if this choice be judicious the conduct is moral; if injudicious, the contrary. But this truly pious author is far from admitting such an interpretation of his words. *Fitness* in this sense hath no relation to a further end. It is an absolute fitness, a fitness in itself. We are obliged to ask, What then is that fitness, which you call absolute? for the application of the word in every other case invariably implying the proper direction of means to an end, far from affording light to the meaning it has here, tends directly to mislead us. The only answer, as far as I can learn, that hath ever been given to this question, is neither more nor less than this, "That alone is absolutely fit which is morally good:" so that in saying moral good consisteth in fitness, no more is meant than that it consisteth in moral good. Another moralist appears, who hath made a most wonderful discovery. It is, that there is not a vice in the world but lying, and that acting virtuously in any situation is but one way or other of telling truth. When this curious theory comes to be explained, we find the practical lie results solely from acting contrary to what those moral sentiments dictate, which, instead of deducing, he everywhere presupposeth to be known and acknowledged by us. Thus he reasons perpetually in a circle, and without advancing a single step beyond it, makes the same things both causes and effects reciprocally. Conduct appears to be false for no other reason than because it is immoral, and immoral for no other reason but because it is false. Such philosophy would not have been unworthy those profound ontologists, who have blest the world with the discovery that "One being is but *one* being," that "A being is *truly* a being," and that "Every being has all the *properties* that it has," and who, to the unspeakable increase of useful knowledge, have denominated these the general attributes of being, and distinguished them by the titles, *unity*, *truth*, and *goodness*. This, if it be any thing, is the very sublimate of science. [Au.]

the contrary: a veneration for such a character, an abhorrence of such another. They are, therefore, though not passions, so closely related to them, that they are properly considered as motives to action, being equally capable of giving an impulse to the will. The difference is akin to that, if not the same, which rhetoricians observe between *pathos* and *ethos*, passion and disposition. Accordingly, what is addressed solely to the moral powers of the mind, is not so properly denominated the pathetic, as the *sentimental*. The term, I own, is rather modern, but is nevertheless convenient, as it fills a vacant room, and doth not, like most of our newfangled words, jostle out older and worthier occupants, to the no small detriment of the language. It occupies, so to speak, the middle place between the pathetic and that which is addressed to the imagination, and partakes of both, adding to the warmth of the former the grace and attractions of the latter.

Now, the principal questions on this subject are these two:—How is a passion or disposition that is favourable to the design of the orator, to be excited in the hearers? How is an unfavourable passion or disposition to be calmed? As to the first it was said already in general, that passion must be awakened by communicating lively ideas of the object. The reason will be obvious from the following remarks: A passion is most strongly excited by sensation. The sight of danger, immediate or near, instantly rouseth fear; the feeling of an injury, and the presence of the injurer, in a moment kindle anger. Next to the influence of sense is that of memory, the effect of which upon passion, if the fact be recent, and remembered distinctly and circumstantially, is almost equal. Next to the influence of memory is that of imagination; by which is here solely meant the faculty or apprehending what is neither perceived by the senses, nor remembered. Now, as it is this power of which the orator must chiefly avail himself, it is proper to inquire what those circumstances are, which will make the ideas he summons up in the imaginations of his hearers, resemble, in lustre and steadiness, those of sensation and remembrance. For the same circumstances will infallibly make them resemble also in their effects; that is, in the influence they will have upon the passions and affections of the heart.

Section V. The circumstances that are chiefly instrumental in operating on the Passions

These are perhaps all reducible to the seven following, probability, plausibility, importance, proximity of time, connexion of place, relation of the actors or sufferers to the hearers or speaker, interest of the hearers or speaker in the consequences.²¹

Part I. Probability

The first is *probability*, which is now considered only as an expedient for enlivening passion. Here again there is commonly scope for argument.²² Probability results from evidence, and begets belief. Belief invigorates our ideas. Belief raised to the highest becomes certainty. Certainty flows either from the force of the evidence, real or apparent, that is produced: or without any evidence produced by the speaker, from the previous notoriety of the fact. If the fact be notorious, it will not only be superfluous in the speaker to attempt to prove it, but it will be pernicious to his design. The reason is plain. By proving he supposeth it questionable, and by supposing actually renders it so to his audience: he brings them from viewing it in the stronger light of certainty, to view it in the weaker light of probability: in lieu of sunshine he gives them twilight. Of the different means and kinds of probation I have spoken already.

Part II. Plausibility

The second circumstance is *plausibility*, a thing totally distinct from the former, as having an effect upon the mind quite independent of faith or probability. It ariseth chiefly from the

²¹I am not quite positive as to the accuracy of this enumeration, and shall therefore freely permit my learned and ingenious friend Dr. Reid, to annex the *et cetera* he proposes in such cases, in order to supply all defects. See Sketches of the History of Man, B. iii. Sk. i. Appendix, c. ii. sect. 2. [Au.]

²²In the judiciary orations of the ancients, this was the principal scope for argument. That to condemn the guilty, and to acquit the innocent, would gratify their indignation against the injurious, and their love of right, was too manifest to require a proof. The fact that there was guilt in the prisoner, or that there was innocence, did require it. It was otherwise in deliberative orations, as the conduct recommended was more remotely connected with the emotions raised. [Au.]

consistency of the narration, from its being what is commonly called natural and feasible. This the French critics have aptly enough denominated in their language *vraisemblance*, the English critics more improperly in theirs *probability*. In order to avoid the manifest ambiguity there is in this application of the word, it had been better to retain the word *verisimilitude*, now almost obsolete. That there is a relation between those two qualities must, notwithstanding, be admitted. This, however, is an additional reason for assigning them different names. An homonymous term, whose different significations have no affinity to one another, is very seldom liable to be misunderstood.

But as to the nature and extent of this relation, let it be observed, that the want of plausibility implies an internal improbability, which it will require the stronger external evidence to surmount. Nevertheless, the implausibility may be surmounted by such evidence, and we may be fully ascertained of what is in itself exceedingly implausible. Implausibility is, in a certain degree, positive evidence against a narrative; whereas plausibility implies no positive evidence for it. We know that fiction may be as plausible as truth. A narration may be possessed of this quality to the highest degree, which we not only regard as improbable, but know to be false. Probability is a light darted on the object, from the proofs, which for this reason are pertinently enough styled *evidence*. Plausibility is a native lustre issuing directly from the object. The former is the aim of the historian, the latter of the poet. That every one may be satisfied that the second is generally not inferior to the first, in its influence on the mind, we need but appeal to the effects of tragedy, of epic, and even of romance, which, in its principal character, participates of the nature of poesy, though written in prose.

It deserves, however, to be remarked, that though plausibility alone hath often greater efficacy in rousing the passions than probability, or even certainty; yet, in any species of composition wherein truth, or at least probability, is expected, the mind quickly nauseates the most plausible tale, which is unsupported by proper arguments. For this reason it is the business of the orator, as much as his subject will permit, to avail himself

of both qualities. There is one case, and but one, in which plausibility itself may be dispensed with; that is, when the fact is so incontestible that it is impossible to entertain a doubt of it; for when implausibility is incapable of impairing belief, it hath sometimes, especially in forensic causes, even a good effect. By presenting us with something monstrous in its kind, it raiseth astonishment, and thereby heightens every passion which the narrative is fitted to excite.

But to return to the explication of this quality. When I explained the nature of experience, I showed that it consisteth of all the general truth collected from particular facts remembered; the mind forming to itself, often insensibly, and as it were mechanically, certain maxims, from comparing, or rather associating the similar circumstances of different incidents.²³ Hence it is, that when a number of ideas relating to any fact or event are successively introduced into my mind by a speaker; if the train he deduceth coincide with the general current of my experience; if in nothing it thwart those conclusions and anticipations which are become habitual to me, my mind accompanies him with facility, glides along from one idea to another, and admits the whole with pleasure. If, on the contrary, the train he introduceth run counter to the current of my experience; if in many things it shock those conclusions and anticipations which are become habitual to me, my mind attends him with difficulty, suffers a sort of violence in passing from one idea to another, and rejects the whole with disdain:

For while upon such monstrous scenes we gaze,
They shock our faith, our indignation raise.²⁴

In the former case I pronounce the narrative natural and credible, in the latter I say it is unnatural and incredible, if not impossible; and, which is particularly expressive of the different appearances in respect of connexion made by the ideas in my mind, the one tale I call coherent, the other incoherent. When therefore the orator can obtain no direct aid from the memory of his hearers, which is rarely to be obtained, he must, for the sake of brightening, and strengthening, and if I

²³Chap. V. Sect. ii. Part 2. [Au.]

²⁴Horace, *The Art of Poetry*, trans. Francis. [Ed.]

may be permitted to use so bold a metaphor, cementing his ideas, bespeak the assistance of experience. This, if properly employed, will prove a potent ally, by adding the grace of *verisimilitude* to the whole. It is therefore first of all requisite, that the circumstances of the narration, and the order in which they are exhibited, be what is commonly called natural, that is, congruous to general experience.

Where passion is the end, it is not a sufficient reason for introducing any circumstance that it is natural; it must also be pertinent. It is pertinent, when either necessary for giving a distinct and consistent apprehension of the object, at least for obviating some objection that may be started, or doubt that may be entertained concerning it; or when such as, in its particular tendency, promotes the general aim. All circumstances, however plausible, which serve merely for decoration, never fail to divert the attention, and so become prejudicial to the proposed influence on passion.

But I am aware that, from the explication I have given of this quality, it will be said, that I have run into the error, if it be an error, which I intended to avoid, and have confounded it with probability, by deriving it solely from the same origin, experience. In answer to this, let it be observed, that in every plausible tale which is unsupported by external evidence, there will be found throughout the whole, when duly canvassed, a mixture of possibilities and probabilities, and that not in such a manner as to make one part or incident probable, another barely possible, but so blended as equally to affect the whole, and every member. Take the *Iliad* for an example. That a haughty, choleric, and vindictive hero, such as Achilles is represented to have been, should, upon the public affront and injury he received from Agamemnon, treat that general with indignity, and form a resolution of withdrawing his troops, remaining thenceforth an unconcerned spectator of the calamities of his countrymen, our experience of the baleful influences of pride and anger renders in some degree probable; again, that one of such a character as Agamemnon, rapacious, jealous of his pre-eminence as commander-in-chief, who envied the superior merit of Achilles, and harboured resent-

ment against him—that such a one, I say, on such an occurrence as is related by the poet, should have given the provocation, will be acknowledged also to have some probability. But that there were such personages, of such characters, in such circumstances, is merely possible. Here there is a total want of evidence. Experience is silent. Properly indeed the case comes not within the verge of its jurisdiction. Its general conclusions may serve in confutation, but can never serve in proof of particular or historical facts. Sufficient testimony, and that only, will answer here. The testimony of the poet in this case goes for nothing. His object we know is not truth but likelihood. Experience, however, advances nothing against those allegations of the poet, therefore we call them possible; it can say nothing for them, therefore we do not call them probable. The whole at most amounts to this—if such causes existed, such effects probably followed. But we have no evidence of the existence of the causes; therefore we have no evidence of the existence of the effects. Consequently, all the probability implied in this quality is a hypothetical probability, which is in effect none at all. It is an axiom among dialecticians, in relation to the syllogistic art, that the conclusion always follows the weaker of the premises. To apply this to the present purpose, an application not illicit, though unusual,—if one of the premises, suppose the major, contain an affirmation that is barely possible, the minor, one that is probable, possibility only can be deduced in the conclusion.

These two qualities, therefore, PROBABILITY and PLAUSIBILITY, (if I may be indulged a little in the allegoric style), I shall call sister-graces, daughters of the same father *Experience*, who is the progeny of *Memory*, the first-born and heir of *Sense*. These daughters *Experience* had by different mothers. The elder is the offspring of *Reason*, the younger is the child of *Fancy*. The elder, regular in her features, and majestic both in shape and mien, is admirably fitted for commanding esteem, and even a religious veneration: the younger, careless, blooming, sprightly, is entirely formed for captivating the heart, and engaging love. The conversation of each is entertaining and instructive, but in different ways. Sages seem to think that there is more instruction to be gotten

from the just observations of the elder; almost all are agreed that there is more entertainment in the lively sallies of the younger. The principal companion and favourite of the first is *Truth*, but whether *Truth* or *Fiction* share most in the favour of the second it were often difficult to say. Both are naturally well-disposed, and even friendly to *Virtue*, but the elder is by much the more steady of the two; the younger, though perhaps not less capable of doing good, is more easily corrupted, and hath sometimes basely turned procuress to *Vice*. Though rivals, they have a sisterly affection to each other, and love to be together. The elder, sensible that there are but few who can for any time relish her society alone, is generally anxious that her sister be of the party; the younger, conscious of her own superior talents in this respect, can more easily dispense with the other's company. Nevertheless, when she is discoursing on great and serious subjects, in order to add weight to her words, she often quotes her sister's testimony, which she knows is better credited than her own, a compliment that is but sparingly returned by the elder. Each sister hath her admirers. Those of the younger are more numerous, those of the elder more constant. In the retinue of the former you will find the young, the gay, the dissipated; but these are not her only attendants. The middle-aged, however, and the thoughtful, more commonly attach themselves to the latter. To conclude; as something may be learned of characters from the invectives of enemies, as well as from the encomiums of friends, those who have not judgment to discern the good qualities of the firstborn, accuse her of dulness, pedantry, and stiffness; those who have not taste to relish the charms of the second, charge her with folly, levity, and falseness. Meantime, it appears to be the universal opinion of the impartial, and such as have been best acquainted with both, that though the attractives of the younger be more irresistible at sight, the virtues of the elder will be longer remembered.

So much for the two qualities *probability* and *plausibility*, on which I have expatiated the more, as they are the principal, and in some respect, indispensable. The others are not compatible with every subject; but as they are of real moment, it is necessary to attend to them, that so they may

not be overlooked in cases wherein the subject requires that they be urged.

Part III. Importance

The third circumstance I took notice of was *importance*, the appearance of which always tends, by fixing attention more closely, to add brightness and strength to the ideas. The importance in moral subjects is analogous to the quantity of matter in physical subjects, as on quantity the moment of moving bodies in a great degree depends. An action may derive importance from its own nature, from those concerned in it as acting or suffering, or from its consequences. It derives importance from its own nature, if it be stupendous in its kind, if the result of what is uncommonly great, whether good or bad, passion or invention, virtue or vice, as what in respect of generosity is godlike, what in respect of atrocity is diabolical: it derives importance from those concerned in it, when the actors or the sufferers are considerable, on account either of their dignity or of their number, or of both: it derives importance from its consequences, when these are remarkable in regard to their greatness, their multitude, their extent, and that either as to the many and distant places affected by them, or as to the future and remote periods to which they may reach, or as to both.

All the four remaining circumstances derive their efficacy purely from one and the same cause, the connexion of the subject with those occupied, as speaker or hearers, in the discourse. *Self* is the centre here, which hath a similar power in the ideal world to that of the sun in the material world, in communicating both light and heat to whatever is within the sphere of its activity, and in a greater or less degree according to the nearness or remoteness.

Part IV. Proximity of Time

First, as to *proximity of time*, every one knows that any melancholy incident is the more affecting that it is recent. Hence it is become common with story-tellers, that they may make a deeper impression on the hearers, to introduce remarks like these; that the tale which they relate is not old, that it happened but lately, or in their own time, or that they are yet living who had a part in it, or were witnesses of it. Proximity of time re-

gards not only the past but the future. An event that will probably soon happen hath greater influence upon us than what will probably happen a long time hence. I have hitherto proceeded on the hypothesis, that the orator rouses the passions of his hearers by exhibiting some past transaction; but we must acknowledge that passion may be as strongly excited by his reasonings concerning an event yet to come. In the judiciary orations there is greater scope for the former, in the deliberative for the latter; though in each kind there may occasionally be scope for both. All the seven circumstances enumerated are applicable, and have equal weight, whether they relate to the future or to the past. The only exception that I know of is, that probability and plausibility are scarcely distinguishable, when used in reference to events in futurity. As in these there is no access for testimony, what constitutes the principal distinction is quite excluded. In comparing the influence of the past upon our minds, with that of the future, it appears in general, that if the evidence, the importance, and the distance of the objects be equal, the latter will be greater than the former. The reason, I imagine, is, we are conscious that at every moment, the future, which seems placed before us, is approaching; and the past, which lies, as it were, behind, is retiring, our nearness or relation to the one constantly increaseth as the other decreaseth. There is something like attraction in the first case, and repulsion in the second. This tends to interest us more in the future than in the past, and consequently to the present view aggrandizes the one and diminishes the other.

What, nevertheless, gives the past a very considerable advantage, is its being generally susceptible of much stronger evidence than the future. The lights of the mind are, if I may so express myself, in an opposite situation to the lights of the body. These discover clearly the prospect lying before us, but not the ground we have already passed. By the memory, on the contrary, that great luminary of the mind, things past are exhibited in retrospect: we have no correspondent faculty to irradiate the future: and even in matters which fall not within the reach of our memory, past events are often clearly discoverable by testimony, and by effects at present existing; whereas we have nothing equivalent to

found our arguments upon in reasoning about things to come. It is for this reason, that the future is considered as the province of conjecture and uncertainty.

Part V. Connexion of Place

Local *connexion*, the fifth in the above enumeration, hath a more powerful effect than proximity of time. Duration and space are two things, (call them entities or attributes, or what you please,) in some respects the most like, and in some respects the most unlike to one another. They resemble in continuity, divisibility, infinity, in their being deemed essential to the existence of other things, and in the doubts that have been raised as to their having a real or independent existence of their own. They differ, in that the latter is permanent, whereas the very essence of the former consisteth in transitoriness; the parts of the one are all successive, of the other all coexistent. The greater portions of time are all distinguished by the memorable things which have been transacted in them, the smaller portions by the revolutions of the heavenly bodies: the portions of place, great and small, (for we do not here consider the regions of the fixed stars and planets,) are distinguished by the various tracts of land and water, into which the earth is divided, and subdivided; the one distinction intelligible, the other sensible; the one chiefly known to the inquisitive, the other in a great measure obvious to all.

Hence perhaps it arises, that the latter is considered as a firmer ground of relation than the former. Who is not more curious to know the notable transactions which have happened in his own country from the earliest antiquity, than to be acquainted with those which have happened in the remotest regions of the globe, during the century wherein he lives? It must be owned, however, that the former circumstance is more frequently aided by that of personal relation than the latter. Connexion of place not only includes vicinage, but every other local relation, such as being in a province under the same government with us, in a state that is in alliance with us, in a country well known to us, and the like. Of the influence of this connexion in operating on our passions we have daily proofs. With how much

indifference, at least with how slight and transient emotion, do we read in newspapers the accounts of the most deplorable accidents in countries distant and unknown! How much, on the contrary, are we alarmed and agitated on being informed that any such accident hath happened in our neighborhood, and that even though we be totally unacquainted with the persons concerned!

Part VI. Relation to the Persons Concerned

Still greater is the power of *relation* to the persons concerned, which was the sixth circumstance mentioned, as this tie is more direct than that which attacheth us to the scene of action. It is the persons, not the place, that are the immediate objects of the passions love or hatred, pity or anger, envy or contempt. Relation to the actors commonly produces an effect contrary to that produced by relation to the sufferers, the first in extenuation, the second in aggravation of the crime alleged. The first makes for the apologist, the second for the accuser. This I say is commonly the case, not always. A remote relation to the actors, when the offense is heinous, especially if the sufferers be more nearly related, will sometimes rather aggravate than extenuate the guilt in our estimation. But it is impossible with any precision to reduce these effects to rules; so much depending on the different tempers and sentiments of different audiences. Personal relations are of various kinds. Some have generally greater influence than others; some again have greater influence with one person, others with another. They are consanguinity, affinity, friendship, acquaintance, being fellow-citizens, countrymen, of the same surname, language, religion, occupation, and innumerable others.

Part VII. Interest in the Consequences

But of all the connective circumstances, the most powerful is *interest*, which is the last. Of all relations, personal relation, by bringing the object very near, most enlivens that sympathy which attacheth us to the concerns of others; interest in the effects brings the object, if I may say so, into contact with us, and makes the mind cling to it as a concern of its own. Sympathy is but a reflected feeling, and therefore, in ordinary cases, must be weaker than the original. Though

the mirror be ever so true, a lover will not be obliged to it for presenting him with the figure of his mistress when he hath an opportunity of gazing on her person. Nor will the orator place his chief confidence in the assistance of the social and sympathetic affections, when he hath it in his power to arm the selfish.

Men universally, from a just conception of the difference, have, when self is concerned, given a different name to what seems originally the same passion in a higher degree. Injury, to whomsoever offered, is to every man that observes it, and whose sense of right is not debauched by vicious practice, the natural object of *indignation*. Indignation always implies *resentment*, or a desire of retaliating on the injurious person, so far at least as to make him repent the wrong he hath committed. This indignation in the person injured is, from our knowledge of mankind, supposed to be, not indeed universally, but generally so much stronger, that it ought to be distinguished by another appellation, and is, accordingly, denominated *revenge*. In like manner beneficence, on whomsoever exercised, is the natural object of our *love*, love always implies *benevolence*, or a desire of promoting the happiness of the beneficent person; but this passion in the person benefited is conceived to be so much greater, and to infer so strong an obligation to a return of good offices to his benefactor, that it merits to be distinguished by the title *gratitude*. Now by this circumstance of *interest* in the effects, the speaker, from engaging *pity* in his favour, can proceed to operate on a more powerful principle, *self-preservation*. The *benevolence* of his hearers he can work up into *gratitude*, their *indignation* into *revenge*.

The two last-mentioned circumstances, personal relation and interest, are not without influence, as was hinted in the enumeration, though they regard the speaker only, and not the hearers. The reason is, a person present with us, whom we see and hear, and who, by words, and looks, and gestures, gives the liveliest signs of his feelings, has the surest and most immediate claim upon our sympathy. We become infected with his passions. We are hurried along by them, and not allowed leisure to distinguish between his relation and our relation, his interest and our interest.

Section VI. Other Passions, as well as Moral Sentiments, useful auxiliaries

So much for those circumstances in the object presented by the speaker, which serve to awaken and inflame the passions of the hearers. But when a passion is once raised, there are also other means by which it may be kept alive, and even augmented. Other passions or dispositions may be called in as auxiliaries. Nothing is more efficacious in this respect than a sense of justice, a sense of public utility, a sense of glory; and nothing conduceth more to operate on these, than the sentiments of sages whose wisdom we venerate, the example of heroes whose exploits we admire. I shall conclude what relates to the exciting of passion when I have remarked, that pleading the importance and the other pathetic circumstances, or pleading the authority of opinions or precedents, is usually considered, and aptly enough, as being likewise a species of reasoning.

This concession, however, doth not imply, that by any reasoning we are ever taught that such an object ought to awaken such a passion. This we must learn originally from feeling, not from argument. No speaker attempts to prove it; though he sometimes introduceth moral considerations, in order to justify the passion when raised, and to prevent the hearers from attempting to suppress it. Even when he is enforcing their regard to the pathetic circumstances above mentioned, it is not so much his aim to show that these circumstances ought to augment the passion, as that these circumstances are in the object. The effect upon their minds he commonly leaves to nature; and is not afraid of the conclusion, if he can make every aggravating circumstance be, as it were, both perceived and felt by them. In the enthymeme, (the syllogism of orators, as Quintilian terms it,) employed in such cases, the sentiment that such a quality of circumstance ought to rouse such a passion, though the foundation of all, is generally assumed without proof, or even without mention. This forms the major proposition, which is suppressed as obvious. His whole art is exerted in evincing the minor, which is the antecedent in his argument, and which maintains the reality of those attendant circumstances in the case in hand. A careful attention to the examples

of vehemence in the first chapter, and the quotation in the foregoing note, will sufficiently illustrate this remark.

Section VII. How an Unfavourable Passion must be calmed

I come now to the second question on the subject of passion. How is an unfavourable passion, or disposition, to be calmed? The answer is, either, first, by annihilating, or at least diminishing the object which raised it; or secondly, by exciting some other passion which may counterwork it.

By proving the falsity of the narration, or the utter incredibility of the future event, on the supposed truth of which the passion was founded, the object is annihilated. It is diminished by all such circumstances as are contrary to those by which it is increased. These are, improbability, implausibility, insignificance, distance of time, remoteness of place, the persons concerned such as we have no connexion with, the consequences such as we have no interest in. The method recommended by Gorgias, and approved by Aristotle, though peculiar in its manner, is, in those cases wherein it may properly be attempted, coincident in effect with that now mentioned. "It was a just opinion of Gorgias, that the serious argument of an adversary should be confounded by ridicule, and his ridicule by serious argument." For this is only endeavouring, by the aid of laughter and contempt, to diminish, or even quite undo, the unfriendly emotions that have been raised in the minds of the hearers; or, on the contrary, by satisfying them of the seriousness of the subject, and of the importance of its consequences, to extinguish the contempt, and make the laughter, which the antagonist wanted to excite, appear when examined, no better than madness.

The second way of silencing an unfavourable passion or disposition, is by conjuring up some other passion or disposition, which may overcome it. With regard to conduct, whenever the mind deliberates, it is conscious of contrary motives impelling it in opposite directions; in other words, it finds that acting thus would gratify one passion; not acting, or acting otherwise, would gratify another. To take such a step, I perceive,

would promote my interest, but derogate from my honour. Such another will gratify my resentment, but hurt my interest. When this is the case, as the speaker can be at no loss to discover the conflicting passions, he must be sensible that whatever force he adds to the disposition that favours his design, is in fact so much subtracted from the disposition that opposeth it, and conversely; as in the two scales of a balance, it is equal in regard to the effect, whether you add so much weight to one scale, or take it from the other.

Thus we have seen in what manner passion to an absent object may be excited by eloquence, which, by enlivening and invigorating the ideas of imagination, makes them resemble the impressions of sense and the traces of memory; and in this respect hath an effect on the mind similar to that produced by a telescope on the sight; things remote are brought near, things obscure rendered conspicuous. We have seen also in what manner a passion already excited may be calmed; how, by the oratorical magic, as by inverting the telescope, the object may be again removed and diminished.

It were endless to enumerate all the rhetorical figures that are adapted to the pathetic. Let it suffice to say, that most of those already named may be successfully employed here. Of others the principal are these, correction, climax, vision, exclamation, apostrophe, and interrogation. The three first, correction, climax, and vision, tend greatly to enliven the ideas, by the implicit, but animated comparison and opposition conveyed in them. Implicit and indirect comparison is more suitable to the disturbed state of mind required by the pathetic, than that which is explicit and direct. The latter implies leisure and tranquillity, the former rapidity and fire. Exclamation and apostrophe operate chiefly by sympathy, as they are the most ardent expressions of perturbation in the speaker. It at first sight appears more difficult to account for the effect of interrogation, which, being an appeal to the hearers, though it might awaken a closer attention, yet could not, one would imagine, excite in their minds any emotion that was not there before. This, nevertheless, it doth excite, through an oblique operation of the same principle. Such an appeal implies in the or-

ator the strongest confidence in the rectitude of his sentiments, and in the concurrence of every reasonable being. The auditors, by sympathizing with this frame of spirit, find it impracticable to withhold an assent which is so confidently depended on. But there will be occasion afterwards for discussing more particularly the rhetorical tropes and figures, when we come to treat of elocution.

Thus I have finished the consideration which the speaker ought to have of his hearers as men in general; that is, as thinking beings endowed with understanding, imagination, memory, and passions, such as we are conscious of in ourselves, and learn from the experience of their effects to be in others. I have pointed out the arts to be employed by him in engaging all those faculties in his service, that what he advanceth may not only be understood, not only command attention, not only be remembered, but, which is the chief point of all, may interest the heart.

CHAPTER VIII

Of the Consideration which the Speaker ought to have of the Hearers, as such men in particular.

It was remarked in the beginning of the preceding chapter, that the hearers ought to be considered in a twofold view, as men in general, and as such men in particular. The first consideration I have despatched, I now enter on the second.

When it is affirmed that the hearers are to be considered as such men in particular, no more is meant, than that regard ought to be had by the speaker to the special character of the audience, as composed of such individuals; that he may suit himself to them, both in his style and in his arguments.²⁵ Now, the difference between one audience and another is very great, not only in intellectual but in moral attainments. That may be clearly intelligible to a House of Commons, which would appear as if spoken in an unknown tongue to a conventicle of enthusiasts. That may kindle fury in the latter, which would create no emotion in the former but laughter and contempt.

²⁵He must be "*Orpheus in sylvis, inter delphinas Arion.*" Virgil. ["As Orpheus in the woods, as Arion among the dolphins." Ed.]

The most obvious difference that appears in different auditories, results from the different cultivation of the understanding; and the influence which this, and their manner of life, have both upon the imagination and upon the memory.

But even in cases wherein the difference in education and moral culture hath not been considerable, different habits afterwards contracted, and different occupations in life, give different propensities, and make one incline more to one passion, another to another. They consequently afford the intelligent speaker an easier passage to the heart, through the channel of the favourite passion. Thus liberty and independence will ever be prevalent motives with republicans, pomp and splendour with those attached to monarchy. In mercantile states, such as Carthage among the ancients, or Holland among the moderns, interest will always prove the most cogent argument; in states solely or chiefly composed of soldiers, such as Sparta and Ancient Rome, no inducement will be found a counterpoise to glory. Similar differences are also to be made in addressing different classes of men. With men of genius the most successful topic will be fame; with men of industry, riches; with men of fortune, pleasure.

But as the characters of audiences may be infinitely diversified, and as the influence they ought to have respectively upon the speaker must be obvious to a person of discernment, it is sufficient here to have observed thus much in the general concerning them.

CHAPTER IX

Of the Consideration which the Speaker ought to have of Himself.

The last consideration I mentioned, is that which the speaker ought to have of himself. By this we are to understand, not that estimate of himself which is derived directly from consciousness or self-acquaintance, but that which is obtained reflexively from the opinion entertained of him by the hearers, or the character which he bears with them. Sympathy is one main engine by which the orator operates on the passions.

With them who laugh, our social joy appears;
With them who mourn, we sympathize in tears;

If you would have me weep, begin the strain,
Then I shall feel your sorrows, feel your pain.²⁶

Whatever, therefore, weakens that principle of sympathy, must do the speaker unutterable prejudice in respect of his power over the passions of his audience, but not in this respect only. One source, at least, of the primary influence of testimony on faith, is doubtless to be attributed to the same communicative principle. At the same time it is certain, as was remarked above, that every testimony doth not equally attach this principle; that in this particular the reputation of the attester hath a considerable power. Now, the speaker's apparent conviction of the truth of what he advanceth, adds to all his other arguments an evidence, though not precisely the same, yet near akin to that of his own testimony. This hath some weight even with the wisest hearers, but is every thing with the vulgar. Whatever therefore lessens sympathy, must also impair belief.

Sympathy in the hearers to the speaker may be lessened several ways, chiefly by these two; by a low opinion of his intellectual abilities, and by a bad opinion of his morals. The latter is the more prejudicial of the two. Men generally will think themselves in less danger of being seduced by a man of weak understanding, but of distinguished probity, than by a man of the best understanding who is of a profligate life. So much more powerfully do the qualities of the heart attach us, than those of the head. This preference, though it may be justly called untaught and instinctive, arising purely from the original frame of the mind, reason, or the knowledge of mankind acquired by experience, instead of weakening, seems afterwards to corroborate. Hence it hath become a common topic with rhetoricians, that, in order to be a successful orator, one must be a good man; for to be good is the only sure way of being long esteemed good, and to be esteemed good is previously necessary to one's being heard with due attention and regard. Consequently, the topic hath a foundation in human nature. There are indeed other things in the character of the speaker, which, in a less degree, will hurt his influence; youth, inexperience of affairs, former want of success, and the like.

²⁶Horace, *The Art of Poetry*, trans. Francis. [Ed.]

But of all the prepossessions in the minds of the hearers which tend to impede or counteract the design of the speaker, party spirit, where it happens to prevail, is the most pernicious, being at once that most inflexible and the most unjust. This prejudice I mention by itself, as those above recited may have place at any time, and in any national circumstances. This hath place only when a people is so unfortunate as to be torn by faction. In that case, if the speaker and the hearers, or the bulk of the hearers, be of contrary parties, their minds will be more prepossessed against him, though his life were ever so blameless, than if he were a man of the most flagitious manners, but of the same party. This holds but too much alike of all parties, religious and political. Violent party men not only lose all sympathy with those of the opposite side, but contract an antipathy to them. This, on some occasions, even the divinest eloquence will not surmount.

As to personal prejudices in general, I shall conclude with two remarks. The first is, the more gross the hearers are, so much the more susceptible they are of such prejudices. Nothing exposes the mind more to all their baneful influences than ignorance and rudeness; the rabble chiefly consider who speaks, men of sense and education what is spoken. Nor are the multitude, to do them justice, less excessive in their love than in their hatred, in their attachments than in their aversions. From a consciousness, it would seem, of their own incapacity to guide themselves, they are ever prone blindly to submit to the guidance of some popular orator, who hath had the address first, either to gain their approbation by his real or pretended virtues, or, which is the easier way, to recommend himself to their esteem by a flaming zeal for their favourite distinctions, and afterwards by his eloquence to work upon their passions. At the same time it must be acknowledged, on the other hand, that even men of the most improved intellects, and most refined sentiments, are not altogether beyond the reach of preconceived opinion, either in the speaker's favour or to his prejudice.

The second remark is, that when the opinion of the audience is unfavourable, the speaker hath need to be much more cautious in every step he takes, to show more modesty, and greater defer-

ence to the judgment of his hearers; perhaps in order to win them, he may find it necessary to make some concessions in relation to his former principles or conduct, and to entreat their attention from pure regard to the subject; that, like men of judgment and candour, they would impartially consider what is said, and give a welcome reception to truth, from what quarter soever it proceed. Thus he must attempt, if possible, to mollify them, gradually to insinuate himself into their favour, and thereby imperceptibly to transfuse his sentiments and passions into their minds.

The man who enjoys the advantage of popularity needs not this caution. The minds of his auditors are perfectly attuned to his. They are prepared for adopting implicitly his opinions, and accompanying him in all his most passionate excursions. When the people are willing to run with you, you may run as fast as you can, especially when the case requires impetuosity and despatch. But if you find in them no such ardour, if it is not even without reluctance that they are induced to walk with you, you must slacken your pace and keep them company, lest they either stand still or turn back. Different rules are given by rhetoricians as adapted to different circumstances. Differences in this respect are numberless. It is enough here to have observed those principles in the mind on which the rules are founded.

CHAPTER X

The different kinds of public speaking in use among the moderns compared, with a view to their different advantages in respect of eloquence.

The principal sorts of discourses which here demand our notice, and on which I intend to make some observations, are the three following: orations delivered at the bar, those pronounced in the senate, and those spoken from the pulpit. I do not make a separate article of the speeches delivered by judges to their colleagues on the bench; because, though there be something peculiar here, arising from the difference in character that subsists between the judge and the pleader, in all the other material circumstances, the persons addressed, the subject, the occasion, and the purpose in speaking, there is in these two sorts a per-

fect coincidence. In like manner, I forbear to mention the theatre, because so entirely dissimilar, both in form and in kind, as hardly to be capable of a place in the comparison. Besides, it is only a cursory view of the chief differences, and not a critical examination of them all, that is here proposed; my design being solely to assist the mind both in apprehending rightly, and in applying properly, the principles above laid down. In this respect, the present discussion will serve to exemplify and illustrate those principles. Under these five particulars, therefore, the speaker, the hearers or persons addressed, the subject, the occasion, and the end in view, or the effect intended to be produced by the discourse, I shall arrange, for order's sake, the remarks I intend to lay before the reader.

Section I. In regard to the Speaker

The first consideration is that of the character to be sustained by the speaker. It was remarked in general, in the preceding chapter, that for promoting the success of the orator, (whatever be the kind of public speaking in which he is concerned,) it is a matter of some consequence that, in the opinion of those whom he addresseth, he is both a wise and a good man. But though this in some measure holds universally, nothing is more certain than that the degree of consequence which lies in their opinion, is exceedingly different in the different kinds. In each it depends chiefly on two circumstances, the nature of his profession as a public speaker, and the character of those to whom his discourses are addressed.

As to the first, arising from the nature of the profession, it will not admit a question, that the preacher hath in this respect the most difficult task; inasmuch as he hath a character to support, which is much more easily injured than that either of the senator, or the speaker at the bar. No doubt the reputation of capacity, experience in affairs, and as much integrity as is thought attainable by those called men of the world, will add weight to the words of the senator; that of skill in his profession, and fidelity in his representation, will serve to recommend what is spoken by the lawyer at the bar; but if these characters in general remain unimpeached, the public will be suf-

ficiently indulgent to both in every other respect. On the contrary, there is little or no indulgence, in regard to his own failings, to be expected by the man who is professedly a sort of authorized censor, who hath it in charge to mark and reprehend the faults of others. And even in the execution of this so ticklish a part of his office, the least excess on either hand exposeth him to censure and dislike. Too much lenity is enough to stigmatize him as lukewarm in the cause of virtue, and too much severity as a stranger to the spirit of the gospel.

But let us consider more directly what is implied in the character, that we may better judge of the effect it will have on the expectations and demands of the people, and consequently on his public teaching. First, then, it is a character of some authority, as it is of one educated for a purpose so important as that of a teacher of religion. This authority, however, from the nature of the function, must be tempered with moderation, candour, and benevolence. The preacher of the gospel, as the very terms import, is the minister of grace, the herald of divine mercy to ignorant, sinful, and erring men. The magistrate, on the contrary, (under which term may be included secular judges and counsellors of every denomination,) is the minister of divine justice and of wrath. *He beareth not the sword in vain.*²⁷ He is on the part of heaven the avenger of the society with whose protection he is intrusted, against all who invade its rights. The first operates chiefly on our love, the second on our fear. *Minister of religion*, like angel of God, is a name that ought to convey the idea of something endearing and attractive; whereas the title *minister of justice* invariably suggests the notion of something awful and unrelenting. In the former, even his indignation against sin ought to be surmounted by his pity of the condition, and concern for the recovery, of the sinner. Though firm in declaring the will of God, though steady in maintaining the cause of truth, yet mild in his addresses to the people, condescending to the weak, using rather entreaty than command, beseeching them by the lowliness and gentleness of Christ, knowing that, "the servant of the Lord must not strive, but be

²⁷Romans xiii. 4. [Au.]

gentle to all men, apt to teach, patient, in meekness instructing those that oppose themselves.”²⁸ He must be grave without moroseness, cheerful without levity. And even in setting before his people the terrors of the Lord, affection ought manifestly to predominate in the warning which he is compelled to give. From these few hints it plainly appears, that there is a certain delicacy in the character of a preacher, which he is never at liberty totally to overlook, and to which, if there appear any thing incongruous, either in his conduct or in his public performances, it will never fail to injure their effect. On the contrary, it is well known, that as, in the other professions, the speaker’s private life is but very little minded, so there are many things which, though they would be accounted nowise unsuitable from the bar or in the senate, would be deemed altogether unfitting the pulpit.

It ought not to be overlooked, on the other hand, that there is one peculiarity in the lawyer’s professional character, which is unfavourable to conviction, and consequently gives him some disadvantage both of the senator and the preacher. We know that he must defend his client, and argue on the side on which he is retained. We know also that a trifling and accidental circumstance, which nowise affects the merit of the cause, such as a prior application from the adverse party, would probably have made him employ the same acuteness, and display the same fervour, on the opposite side of the question. This circumstance, though not considered as a fault in the character of the man, but a natural, because an ordinary, consequent of the office, cannot fail, when reflected on, to make us shyer of yielding our assent. It removes entirely what was observed in the preceding chapter to be of great moment, our belief of the speaker’s sincerity. This belief can hardly be rendered compatible with the knowledge that both truth and right are so commonly and avowedly sacrificed to interest. I acknowledge that an uncommon share of eloquence will carry off the minds of most people from attending to this circumstance, or at least from paying any regard to it. Yet Antony is represented by Cicero, as thinking the advocate’s reputation so

delicate, that the practice of amusing himself in philosophical disputations with his friends is sufficient to hurt it, and consequently to affect the credibility of his pleadings. Surely the barefaced prostitution of his talents, (and in spite of his commonness, what else can we call it?) in supporting indifferently, as pecuniary considerations determine him, truth or falsehood, justice or injustice, must have a still worse effect on the opinion of his hearers.

It was affirmed that the consequence of the speaker’s own character, in furthering or hindering his success, depends in some measure on the character of those whom he addresseth. Here indeed it will be found, on inquiry, that the preacher labours under a manifest disadvantage. Most congregations are of that kind, as will appear from the article immediately succeeding, which, agreeably to an observation made in the former chapter, very much considers who speaks; those addressed from the bar, or in the senate, consider more what is spoken.

Section II. In regard to the Persons addressed

The second particular mentioned as a ground of comparison, is the consideration of the character of the hearers, or more properly the persons addressed. The necessity which a speaker is under of suiting himself to his audience, both that he may be understood by them, and that his words may have influence upon them, is a maxim so evident as to need neither proof nor illustration.

Now, the first remark that claims our attention here is, that the more mixed the auditory is, the greater is the difficulty of speaking to them with effect. The reason is obvious—what will tend to favour your success with one, may tend to obstruct it with another. The more various therefore the individuals are, in respect of age, rank, fortune, education, prejudices, the more delicate must be the art of preserving propriety in an address to the whole. The pleader has, in this respect, the simplest and the easiest task of all; the judges, to whom his oration is addressed, being commonly men of the same rank, of similar education, and not differing greatly in respect of studies or attainments. The difference in these respects is much more considerable when he ad-

²⁸2 Tim. ii. 24, 25. [Au.]

dresses the jury. A speaker in the house of peers hath not so mixed an auditory as one who harangues in the house of commons. And even here, as all the members may be supposed to have been educated as gentlemen, the audience is not nearly so promiscuous as were the popular assemblies of Athens and of Rome, to which their demagogues declaimed with so much vehemence, and so wonderful success. Yet, even of these, women, minors, and servants made no part.

We may therefore justly reckon a christian congregation in a populous and flourishing city, where there is a great variety in rank and education, to be of all audiences the most promiscuous. And though it is impossible that, in so mixed a multitude, every thing that is advanced by the speaker should, both in sentiment and in expression, be adapted to the apprehension of every individual hearer, and fall in with his particular prepossessions, yet it may be expected, that whatever is advanced shall be within the reach of every class of hearers, and shall not unnecessarily shock the innocent prejudices of any. This is still, however, to be understood with the exception of mere children, fools, and a few others who, through the total neglect of parents or guardians in their education, are grossly ignorant. Such, though in the audience, are not to be considered as constituting a part of it. But how great is the attention requisite in the speaker in such an assembly, that, whilst on the one hand he avoids, either in style or in sentiment, soaring above the capacity of the lower class, he may not, on the other, sink below the regard of the higher. To attain simplicity without flatness, delicacy without refinement, perspicuity without recurring to low idioms and similitudes, will require his utmost care.

Another remark on this article that deserves our notice is, that the less improved in knowledge and discernment the hearers are, the easier it is for the speaker to work upon their passions, and by working on their passions, to obtain his end. This, it must be owned, appears, on the other hand, to give a considerable advantage to the preacher, as in no congregation can the bulk of the people be regarded as on a footing, in point of improvement, with either house of parliament, or

with the judges in a court of judicature. It is certain, that the more gross the hearers are, the more avowedly may you address yourself to their passions, and the less occasion there is for argument; whereas, the more intelligent they are, the more covertly must you operate on their passions, and the more attentive must you be in regard to the justness, or at least the speciousness of your reasoning. Hence some have strangely concluded, that the only scope for eloquence is in haranguing the multitude; that in gaining over to your purpose men of knowledge and breeding, the exertion of oratorical talents hath no influence. This is precisely as if one should argue, because a mob is much easier subdued than regular troops, there is no occasion for the art of war, nor is there a proper field for the exertion of military skill, unless when you are quelling an undisciplined rabble. Every body sees in this case, not only how absurd such a way of arguing would be, but that the very reverse ought to be the conclusion. The reason why people do not so quickly perceive the absurdity in the other case is, that they affix no distinct meaning to the word *eloquence*, often denoting no more by that term than simply the power of moving the passions. But even in this improper acceptance, their notion is far from being just; for wherever there are men, learned or ignorant, civilized or barbarous, there are passions; and the greater the difficulty is in affecting these, the more art is requisite. The truth is, eloquence, like every other art, proposeth the accomplishment of a certain end. Passion is for the most part but the means employed for effecting the end, and therefore, like all other means, will no further be regarded in any case, than it can be rendered conducive to the end.

Now the preacher's advantage even here, in point of facility, at least in several situations, will not appear, on reflection, to be so great as on a superficial view it may be thought. Let it be observed, that in such congregations as were supposed, there is a mixture of superior and inferior ranks. It is therefore the business of the speaker, so far only to accommodate himself to one class, as not wantonly to disgust another. Besides, it will scarcely be denied that those in the superior walks of life, however much by reading and conversation improved in all genteel

accomplishments, often have as much need of religious instruction and moral improvement, as those who in every other particular are acknowledged to be their inferiors. And doubtless the reformation of such will be allowed to be, in one respect, of greater importance, (and therefore never to be overlooked,) that in consequence of such an event, more good may redound to others, from the more extensive influence of their authority and example.

Section III. In regard to the Subject

The third particular mentioned was the subject of discourse. This may be considered in a twofold view; first, as implying the topics of argument, motives, and principles, which are suited to each of the different kinds, and must be employed in order to produce the intended effect on the hearers; secondly, as implying the persons or things in whose favour, or to whose prejudice, the speaker purposes to excite the passions of the audience, and thereby to influence their determinations.

On the first of these articles, I acknowledge the preacher hath incomparably the advantage of every other public orator. At the bar, critical explications of dark and ambiguous statutes, quotations of precedents sometimes contradictory, and comments on jarring decisions and reports, often necessarily consume the greater part of the speaker's time. Hence the mixture of a sort of metaphysics and verbal criticism, employed by lawyers in their pleadings, hath come to the distinguished by the name *chicane*, a species of reasoning too abstruse to command attention of any continuance even from the studious, and consequently not very favourable to the powers of rhetoric. When the argument doth not turn on the common law, or on nice and hypercritical explications of the statute, but on the great principles of natural right and justice, as sometimes happens, particularly in criminal cases, the speaker is much more advantageously situated for exhibiting his rhetorical talents than in the former case. When, in consequence of the imperfection of the evidence, the question happens to be more a question of fact than either of municipal law or of natural equity, the pleader hath more advantages than in the first case, and fewer than in the second.

Again, in the deliberations in the senate, the utility or the disadvantages that will probably follow on a measure proposed, if it should receive the sanction of the legislature, constitute the principle topics of debate. This, though it sometimes leads to a kind of reasoning rather too complex and involved for ordinary apprehension, is in the main more favourable to the display of pathos, vehemence, and sublimity than the much greater part of the forensic causes can be said to be. That these qualities have been sometimes found in a very high degree in the orations pronounced in a British senate, is a fact incontrovertible.

But beyond all question, the preacher's subject of argument, considered in itself, is infinitely more lofty and more affecting. The doctrines of religion are such as relate to God, the adorable Creator and Ruler of the world, his attributes, government, and law. What science to be compared with it in sublimity? It teaches also the origin of man, his primitive dignity, the source of his degeneracy, the means of his recovery, the eternal happiness that awaits the good, and the future misery of the impenitent. Is there any kind of knowledge in which human creatures are so deeply interested? In a word, whether we consider the doctrines of religion or its documents, the examples it holds forth to our imitation, or its motives, promises, and threatenings, we see on every hand a subject that gives a scope for the exertion of all the highest powers of rhetoric. What are the sanctions of any human laws, compared with the sanctions of the divine law, with which we are brought acquainted by the gospel? Or where shall we find instructions, similitudes, and examples, that speak so directly to the heart, as the parables and other divine lessons of our blessed Lord?

In regard to the second thing which I took notice of as included under the general term *subject*, namely the persons or things in whose favour, or to whose prejudice the speaker intends to excite the passions of the audience, and thereby to influence their determinations, the other two have commonly the advantage of the preacher. The reason is, that his subject is generally things; theirs, on the contrary, is persons. In what regards the painful passions, indignation, hatred, contempt, abhorrence, this difference in-

variably obtains. The preacher's business is solely to excite your detestation of the crime; the pleader's business is principally to make you detest the criminal. The former paints vice to you in all its odious colours; the latter paints the vicious. There is a degree of abstraction, and consequently a much greater degree of attention, requisite to enable us to form just conceptions of the ideas and sentiments of the former; whereas, those of the latter, referring to an actual, perhaps a living, present, and well-known subject, are much more level to common capacity, and therefore not only are more easily apprehended by the understanding, but take a stronger hold of the imagination. It would have been impossible even for Cicero to inflame the minds of the people to so high a pitch against *oppression*, considered in the abstract, as he actually did inflame them against Verres the *oppressor*; nor could he have incensed them so much against *treason* and *conspiracy*, as he did incense them against Catiline the *traitor* and *conspirator*. The like may be observed of the effects of these orations against Antony, and in a thousand other instances.

Though the occasions in this way are more frequent at the bar, yet, as the deliberations in the senate often proceed on the reputation and past conduct of individuals, there is commonly here also a much better handle for rousing the passions than that enjoyed by the preacher. How much advantage Demosthenes drew from the known character and insidious arts of Philip king of Macedon, for influencing the resolves of the Athenians, and other Grecian states, those who are acquainted with the Philippics of the orator, and the history of that period, will be very sensible. In what concerns the pleasing affections, the preacher may sometimes, not often, avail himself of real human characters, as in funeral sermons, and in discourses on the patterns of virtue given us by our Saviour, and by those saints of whom we have the history in the sacred code. But such examples are comparatively few.

Section IV. In regard to the Occasion

The fourth circumstance mentioned as a ground of comparison, is the particular occasion of speaking. And in this I think it evident, that both

the pleader and the senator have the advantage of the preacher. When any important cause comes to be tried before a civil judicatory, or when any important question comes to be agitated in either house of parliament, as the point to be discussed hath generally for some time before been a topic of conversation in most companies, perhaps throughout the kingdom, (which of itself is sufficient to gibe consequence to any thing,) people are apprized beforehand of the particular day fixed for the discussion. Accordingly, they come prepared with some knowledge of the case, a persuasion of its importance, and a curiosity which sharpens their attention, and assists both their understanding and their memory.

Men go to church without any of these advantages. The subject of the sermon is not known to the congregation, till the minister announce it just as he begins, by reading the text. Now, from our experience of human nature, we may be sensible that whatever be the comparative importance of the things themselves, the generality of men cannot here be wrought up, in an instant, to the like anxious curiosity about what is to be said, nor can be so well prepared for hearing it. It may indeed be urged, in regard to those subjects which come regularly to be discussed at stated times, as on public festivals, as well as in regard to assize sermons, charity sermons, and other occasional discourses, that these must be admitted as exceptions. Perhaps in some degree they are, but not altogether: for first, the precise point to be argued, or proposition to be evinced, is very rarely known. The most that we can say is, that the subject will have a relation (sometimes remote enough) to such an article of faith, or to the obligations we lie under to the practice of such a duty. But further, if the topic were ever so well known, the frequent recurrence of such occasions, once a year at least, hath long familiarized us to them, and, by destroying their novelty, hath abated exceedingly of that ardour which ariseth in the mind for hearing a discussion, conceived to be of importance, which one never had access to hear before, and probably never will have access to hear again.

I shall here take notice of another circumstance, which, without great stretch, may be classed under this article, and which likewise

gives some advantage to the counsellor and the senator. It is the opposition and contradiction which they expect to meet with. Opponents sharpen one another, as iron sharpeneth iron. There is not the same spur either to exertion in the speaker, or to attention in the hearer, where there is no conflict, where you have no adversary to encounter on equal terms. Mr. Bickerstaff would have made but small progress in the science of defence, by pushing at the human figure which he had chalked upon the wall, in comparison of what he might have made by the help of a fellow combatant of flesh and blood. I do not, however, pretend that these cases are entirely parallel. The whole of an adversary's plea may be perfectly known, and may, to the satisfaction of every reasonable person, be perfectly confuted, though he hath not been heard by the counsel at the bar.

Section V. In regard to the End in view

The fifth and last particular mentioned, and indeed that most important of them all, is the effect in each species intended to be produced. The primary intention of preaching is the reformation of mankind. "The grace of God, that bringeth salvation, hath appeared to all men, teaching us that, denying ungodliness and worldly lusts, we should live soberly, righteously, and godly in this present world."²⁹ Reformation of life and manners—of all things that which is the most difficult by any means whatever to effectuate; I may add, of all tasks ever attempted by persuasion, that which has the most frequently baffled its power.

What is the task of any other orator compared with this? It is really as nothing at all, and hardly deserves to be named. An unjust judge, gradually worked on by the resistless force of human eloquence, may be persuaded, against his inclination, perhaps against a previous resolution, to pronounce an equitable sentence. All the effect on him, intended by the pleader, was merely momentary. The orator hath had the address to employ the time allowed him in such a manner as to secure the happy moment. Notwithstanding this, there may be no real change wrought upon the

²⁹Tit. ii. 11, 12. [Au.]

judge. He may continue the same obdurate wretch he was before. Nay, if the sentence had been delayed but a single day after hearing the cause, he would perhaps have given a very different award.

Is it to be wondered at, that when the passions of the people were agitated by the persuasive powers of a Demosthenes, whilst the thunder of his eloquence was yet sounding in their ears, the orator should be absolute master of their resolves? But an apostle or evangelist (for there is no anachronism in a bare supposition) might have thus addressed the celebrated Athenian, "You do, indeed, succeed to admiration, and the address and genius which you display in speaking justly entitle you to our praise. But however great the consequences may be of the measures to which, by your eloquence, they are determined, the change produced in the people is nothing, or next to nothing. If you would be ascertained of the truth of this, allow the assembly to disperse immediately after hearing you; give them time to cool, and then collect their votes, and it is a thousand to one you shall find that the charm is dissolved."

But very different is the purpose of the Christian orator. It is not a momentary, but a permanent effect at which he aims. It is not an immediate and favourable suffrage, but a thorough change of heart and disposition, that will satisfy his view. That man would need to be possessed of oratory superior to human, who would effectually persuade him that stole to steal no more, the sensualist to forego his pleasures, and the miser his hoards, the insolent and haughty to become meek and humble, the vindictive forgiving, the cruel and unfeeling merciful and humane.

I may add to these considerations, that the difficulty lies not only in the permanency, but in the very nature of the change to be effected. It is wonderful, but it is too well vouched to admit of a doubt, that by the powers of rhetoric you may produce in mankind almost any change more easily than this. It is not unprecedented that one should persuade a multitude, from mistaken motives of religion, to act the part of ruffians, fools, or madmen; to perpetuate the most extravagant, nay, the most flagitious actions; to steel their hearts against humanity, and the loudest calls of

affection; but where is the eloquence that will gain such an ascendant over a multitude, as to persuade them, for the love of God, to be wise, and just, and good? Happy the preacher whose sermons, by the blessing of Heaven, have been instrumental in producing even a few such instances! Do but look into the annals of church history, and you will soon be convinced of the surprising difference there is in the two cases mentioned—the amazing facility of the one, and the almost impossibility of the other.

As to the foolish or mad extravagances, hurtful only to themselves, to which numbers may be excited by the powers of persuasion, the history of the flagellants, and even the history of monachism, afford many unquestionable examples. But what is much worse, at one time you see Europe nearly depopulated at the persuasion of a fanatical monk, its inhabitants rushing armed into Asia, in order to fight for Jesus Christ, as they termed it, but as it proved in fact, to disgrace, as far as lay in them, the name of Christ and of Christian amongst infidels; to butcher those who never injured them, and to whose lands they had at least no better title than those whom they intended, by all possible means, to dispossess; and to give the world a melancholy proof, that there is no pitch of brutality and rapacity to which the passions of avarice and ambition, consecrated and inflamed by religious enthusiasm, will not drive mankind. At another time you see multitudes, by the like methods, worked up into a fury against innocent countrymen, neighbours, friends, and kinsmen, glorying in being most active in cutting the throats of those who were formerly held dear to them.

Such were the crusades preached up but too effectually, first against the Mahometans in the East, and next against Christians whom they called heretics, in the heart of Europe. And even in our own time, have we not seen new factions raised by popular declaimers, whose only merit was impudence, whose only engine of influence was calumny and self-praise, whose only moral lesson was malevolence? As to the dogmas whereby such have at any time affected to discriminate themselves, these are commonly no other than the *shibboleth*, the watchword of the party, worn, for distinction's sake, as a badge, a

jargon unintelligible alike to the teacher and to the learner. Such apostles never fail to make proselytes. For who would not purchase heaven at so cheap a rate? There is nothing that people can more easily afford. It is only to think very well of their leader and of themselves, to think very ill of their neighbour, to calumniate him freely, and to hate him heartily.

I am sensible that some will imagine that this account itself throws an insuperable obstacle in our way, as from it one will naturally infer, that oratory must be one of the most dangerous things in the world, and much more capable of doing ill than good. It needs but some reflection to make this mighty obstacle entirely vanish. — Very little eloquence is necessary for persuading people to a conduct to which their own depravity hath previously given them a bias. How soothing is it to them not only to have their minds made easy under the indulged malignity of their disposition, but to have that very malignity sanctified with a good name! So little of the oratorical talent is required here, that those who court popular applause, and look upon it as the pinnacle of human glory to be blindly followed by the multitude, commonly recur to defamation, especially of superiors and brethren, not so much for a subject on which they may display their eloquence, as for a succedaneum to supply their want of eloquence, a succedaneum which never yet was found to fail. I knew a preacher who, from this expedient alone, from being long the aversion of the populace, on account of his dulness, awkwardness, and coldness, all of a sudden became their idol. Little force is necessary to push down heavy bodies placed on the verge of a declivity, but much force is requisite to stop them in their progress, and push them up.

If a man should say, that because the first is more frequently effected than the last, it is the best trial of strength, and the only suitable use to which it can be applied, we should at least not think him remarkable for distinctness in his ideas. Popularity alone, therefore, is no test at all of the eloquence of the speaker, no more than velocity alone would be of the force of the external impulse originally given to the body moving. As in this direction of the body, and other circumstances, must be taken into the account; so in

that, you must consider the tendency of the teaching, whether it favours or opposes the vices of the hearers. To head a sect, to infuse party-spirit, to make men arrogant, uncharitable, and malevolent, is the easiest task imaginable, and to which almost any blockhead is fully equal. But to produce the contrary effect, to subdue the spirit of faction, and that monster spiritual pride, with which it is invariably accompanied, to inspire equity, moderation, and charity into men's sentiments and conduct with regard to others, is the genuine test of eloquence. Here its triumph is truly glorious, and in its application to this end lies its great utility:

The gates of hell are open night and day;
Smooth the descent, and easy is the way:
But to return and view the cheerful skies,
In this the task and mighty labour lies.³⁰

Now in regard to the comparison, from which I fear I shall be thought to have digressed, between the forensic and senatorian eloquence, and that of the pulpit, I must not omit to observe, that in what I say of the difference of the effect to be produced by the last mentioned species, I am to be understood as speaking of the effect intended by preaching in general, and even of that which, in whole or in part, is, or ought to be, either more immediately or more remotely, the scope of all discourses proceeding from the pulpit. I am, at the same time, sensible that in some of these, beside the ultimate view, there is an immediate and outward effect which the sermon is intended to produce. This is the case particularly in charity-sermons, and perhaps some other occasional discourses. Now of these few, in respect of such immediate purpose, we must admit, that they bear a pretty close analogy to the pleadings of the advocate, and the orations of the senator.

Upon the whole of the comparison I have stated, it appears manifest that, in most of the particulars above enumerated, the preacher labours under a very great disadvantage. He hath himself a more delicate part to perform than ei-

ther the pleader or the senator, and a character to maintain which is much more easily injured. The auditors, though rarely so accomplished as to require the same accuracy of composition, or acuteness of reasoning, as may be expected in the other two, are more various in age, rank, taste, inclinations, sentiments, prejudices, to which he must accommodate himself. And if he derives some advantages from the richness, the variety, and the nobleness of the principles, motives, and arguments with which his subject furnishes him, he derives also some inconveniences from this circumstance, that almost the only engine by which he can operate on the passions of his hearers, is the exhibition of abstract qualities, virtues, and vices, whereas that chiefly employed by other orators is the exhibition of real persons, the virtuous and the vicious. Nor are the occasions of his addresses to the people equally fitted with those of the senator and of the pleader for exciting their curiosity and riveting their attention. And, finally, the task assigned him, the effect which he ought ever to have in view, is so great, so important, so durable, as seems to bid defiance to the strongest efforts of oratorical genius.

Nothing is more common than for people, I suppose without reflecting, to express their wonder that there is so little eloquence amongst our preachers, and that so little success attends their preaching. As to the last, their success, it is a matter not to be ascertained with so much precision as some appear fondly to imagine. The evil prevented, as well as the good promoted, ought here, in all justice, to come into the reckoning. And what that may be, it is impossible in any supposed circumstances to determine. As to the first, their eloquence, I acknowledge that for my own part, considering how rare the talent is among men in general, considering all the disadvantages preachers labour under, not only those above enumerated, but others, arising from their different situations, particularly considering the frequency of this exercise, together with the other duties of their office, to which the fixed pastors are obliged, I have been for a long time more disposed to wonder, that we hear so many instructive and even eloquent sermons, than that we hear so few.

³⁰Virgil, *Aeneid*, Bk. VI, trans. John Dryden. [Ed.]

Hugh Blair

1718–1800

In an 1873 edition of *Lectures on Rhetoric and Belles Lettres* (excerpted here) that was published in the United States, the noted teacher Abraham Mills provides, for nearly every chapter, a summary and list of questions for students. These questions call attention to every detail, every distinction, and every illustration in the text. There are, for example, 111 questions appended to Lecture 2, on taste (“How does it appear that delivery and correctness mutually imply each other? In what is the power of delicacy chiefly seen; and of correctness? Having viewed taste in its most improved state, what does our author next consider? Why does this bring us to the most difficult part of our task?”). This scriptural reverence for Hugh Blair’s work is not at all out of the ordinary. Blair is, at least with respect to his influence, the Quintilian of his time, combining in his rhetoric a theory that met with nearly universal approval and a pedagogy that won nearly universal application.

Born in Edinburgh, Blair entered the university in that city in 1730, earned an M.A. in 1739, and entered the ministry in 1742. By 1758, he had won appointment to the prestigious pulpit of St. Giles. The following year, he began lecturing on rhetoric and belles lettres, and in 1762 he was appointed the first Regius Professor of Rhetoric and Belles Lettres at his old university. A popular preacher, he published four volumes of sermons. He also edited Shakespeare’s works and supervised a forty-volume edition of the English poets. As a highly placed churchman, he was an important defender of David Hume (p. 828) and Lord Kames—his colleagues in the Scottish Select Society—against the charges of heresy leveled at them by conservative elements in the Church of Scotland. Much influenced by Hume’s philosophy, Blair came to embody the ideal critic and collector of literary touchstones envisioned in Hume’s essay on taste (p. 830).

The *Lectures on Rhetoric and Belles Lettres* were published in 1783, the year Blair retired from teaching. They are directed to those who are “studying to cultivate their taste, to form their style, or to prepare themselves for public speaking or composition.” In the first lecture, which is included here, Blair connects his rhetoric to the leading ideas of the period: to reason, human nature, the need to cultivate taste, and moral improvement. This scheme clearly links rhetoric and belles lettres. Rhetoric seeks to persuade through appeals to reason and the passions; criticism, in turn, evaluates aesthetic objects on the basis of their appeals to the same faculties. Good taste is thus at the root of both, and human nature is the foundation of taste. Finally, the cultivation of taste leads one to the higher intellectual pleasures, including the pleasure of virtuous behavior. Thus Blair’s rhetoric aims ultimately at a rather classical goal, to produce good men who will speak (and write) well in the service of the community, whether for the pulpit, the bar, or the halls of legislature.

In pursuing this model, Blair is at pains to reject received notions of eloquence and style and to build instead on modern psychology. In Lecture 34, for example, he discusses self-improvement in eloquence. The first requirement of the excellent

speaker is good character; thus one should practice the virtues. Second, one must have knowledge of the subject of the discourse and, as support for that knowledge, a general familiarity with polite literature. Third comes industriousness; fourth, good models; fifth, practice; and sixth, study of rhetorical theory. The study of “rhetorical writers” is “not to be neglected,” he says, “. . . yet I dare not say that much is to be expected from them.” Quintilian is the best rhetorician, but even he is too concerned with systematic rhetoric—topics, arrangement, and figures. Blair repeatedly emphasizes that although it is “polite” to know the ancients, one should not heed their advice. Their style does not suit modern taste and their theory does not conform to modern science.

In similar fashion, Blair addresses each of his subjects, finding psychological foundations, acknowledging cultural relativism, seeking a rational basis for judgments, providing illustrations from polite literature ancient and modern, and giving judicious advice. The main subjects of the lectures are as follows:

- Taste, the sublime, beauty (four lectures)
- The history and structure of language (seven lectures)
- Figures of speech and kinds of style (six lectures)
- Critical analysis of Addison (five lectures)
- The history of rhetoric (two lectures)
- Types of speech (three lectures)
- Organization (two lectures)
- Pronunciation (one lecture)
- Belletristic genres: history, philosophy, poetry, drama (thirteen lectures)

This list clearly shows that Blair gives most attention to “polite” literature, and modern scholars have charged that Blair shifted the attention of educators “away from deliberative, forensic, and epideictic discourse and toward poetic discourse,” as historians of rhetoric Gregory Clark and S. Michael Halloran allege.¹ Not only does such a shift of emphasis downgrade publicly useful forms of rhetoric, but it also may support excessively conservative aesthetic, moral, and political values, as historian of rhetoric H. Lewis Ulman implies when he notes that Blair’s approach “tends to reify written and even spoken language as fixed systems that embody equally stable truths and virtues.”² This may explain why English departments focus today on analyzing texts that are deemed aesthetically superior, and why they devalue more practical forms of language arts instruction. Nevertheless, historian of rhetoric Lois Agnew has argued that these effects of Blair’s influence, although they may indeed undermine rhetoric’s civic usefulness, result from Blair’s inability to foresee the extent to which the analysis and production of written texts would dominate English instruction in the nineteenth century.

In reality, Blair intended to craft an approach to rhetoric that would preserve classical goals amid changing social conditions and new developments in knowl-

¹Gregory Clark and S. Michael Halloran, “Transformations of Public Discourse in Nineteenth-Century America,” in *Oratorical Culture in Nineteenth-Century America: Transformations in the Theory and Practice of Rhetoric*, ed. Gregory Clark and S. Michael Halloran (Carbondale: Southern Illinois University Press, 1993), p. 15.

edge. He treated the subjects of his lectures from the standpoint of empirical observation and psychological evaluation. George Campbell had made the necessary link between philosophy and rhetoric, Adam Smith and others had brought rhetoric together with belles lettres, and now Blair brought these forces together in a persuasive and useful way. As Blair modestly acknowledges, there is little in the lectures that is original—but everything is thoroughly assimilated and elegantly presented.

Selected Bibliography

Blair's *Lectures on Rhetoric and Belles Lettres* were published in two volumes in 1783 and are available in the Southern Illinois University Press Landmark edition, also in two volumes, edited by Harold F. Harding (1965). Harding summarizes each lecture and examines Blair's sources.

Blair received more scholarly attention in the 1990s than previously in the twentieth century, both in his own right and for his place in the development of eighteenth- and nineteenth-century education in the United States and Great Britain. There are still no book-length studies, however, other than Robert M. Schmitz's *Hugh Blair* (1948), which recounts Blair's life, summarizes his major works, and provides some bibliography. A good shorter introduction is Linda Ferreira-Buckley's "Hugh Blair," in *Eighteenth-Century British and American Rhetorics and Rhetoricians: Critical Studies and Sources*, ed. Michael G. Moran (1994). W. S. Howell claims that Blair was a synthesizer of the rhetorical tradition and of current epistemological ideas, in *Eighteenth-Century British Logic and Rhetoric* (1971).

Winifred Bryan Horner provides substantial background on rhetorical education in Scottish universities in the eighteenth and nineteenth centuries in *Nineteenth-Century Scottish Rhetoric: The American Connection* (1993). For more on Blair's influence in the United States, see Nan Johnson, *Nineteenth-Century Rhetoric in North America* (1991), which includes information on Blair's adoption as a course text and the many references to his text in other rhetoric books in nineteenth-century American colleges; and Gregory Clark and S. Michael Halloran, "Transformations of Public Discourse in Nineteenth-Century America," in *Oratorical Culture in Nineteenth-Century America: Transformations in the Theory and Practice of Rhetoric*, ed. Clark and Halloran (1993).

Vincent Bevilacqua emphasizes the epistemological side of Blair's thought in "Philosophical Assumptions Underlying Hugh Blair's *Lectures on Rhetoric and Belles Lettres*" (*Western Speech* 31 [summer 1967]: 150–64). Herman Cohen offers a comparative analysis of "Hugh Blair's Theory of Taste" (*Quarterly Journal of Speech* 44 [October 1958]: 265–74; rpt. in *Readings in Rhetoric*, ed. L. Crocker and P. A. Carmack, 1965). Building on the work of Bevilacqua and others is the chapter on Blair in H. Lewis Ulman's *Things, Thoughts, Words and Actions: The Problem of Language in Late Eighteenth-Century British Rhetorical Theory* (1994). Lois Agnew helpfully surveys recent scholarship and defends Blair's classical motives in "The Civic Function of Taste: A Re-Assessment of Hugh Blair's Rhetorical Theory" (*Rhetoric Society Quarterly* 28 [spring 1998]: 25–36).

From *Lectures on Rhetoric and Belles Lettres*

Lecture I

INTRODUCTION

One of the most distinguished privileges which Providence has conferred upon mankind, is the power of communicating their thoughts to one another. Destitute of this power, reason would be a solitary, and, in some measure, an unavailable principle. Speech is the great instrument by which man becomes beneficial to man: and it is to the intercourse and transmission of thought, by means of speech, that we are chiefly indebted for the improvement of thought itself. Small are the advances which a single unassisted individual can make towards perfecting any of his powers. What we call human reason, is not the effort or ability of one, so much as it is the result of the reason of many, arising from lights mutually communicated, in consequence of discourse and writing.

It is obvious, then, that writing and discourse are objects entitled to the highest attention. Whether the influence of the speaker, or the entertainment of the hearer, be consulted; whether utility or pleasure be the principal aim in view, we are prompted, by the strongest motives, to study how we may communicate our thoughts to one another with most advantage. Accordingly we find, that in almost every nation, as soon as language had extended itself beyond that scanty communication which was requisite for the supply of men's necessities, the improvement of discourse began to attract regard. In the language even of rude uncultivated tribes, we can trace some attention to the grace and force of those expressions which they used, when they sought to persuade or to affect. They were early sensible of a beauty in discourse, and endeavoured to give it certain decorations, which experience had taught them it was capable of receiving, long before the study of those decorations was formed into a regular art.

But, among nations in a civilized state, no art has been cultivated with more care, than that of language, style, and composition. The attention paid to it may, indeed, be assumed as one mark of the progress of society towards its most improved period. For, according as society improves and flourishes, men acquire more influence over one another by means of reasoning and discourse; and in proportion as that influence is felt to enlarge; it must follow, as a natural consequence, that they will bestow more care upon the methods of expressing their conceptions with propriety and eloquence. Hence we find, that in all the polished nations of Europe, this study has been treated as highly important, and has possessed a considerable place in every plan of liberal education.

Indeed, when the arts of speech and writing are mentioned, I am sensible that prejudices against them are apt to rise in the minds of many. A sort of art is immediately thought of, that is ostentatious and deceitful; the minute and trifling study of words alone; the pomp of expression; the studied fallacies of rhetoric; ornament substituted in the room of use. We need not wonder, that, under such imputations, all study of discourse as an art, should have suffered in the opinion of men of understanding; and I am far from denying, that rhetoric and criticism have sometimes been so managed as to tend to the corruption, rather than to the improvement, of good taste and true eloquence. But sure it is equally possible to apply the principles of reason and good sense to this art, as to any other that is cultivated among men. If the following Lectures have any merit, it will consist in an endeavour to substitute the application of these principles in the place of artificial and scholastic rhetoric; in an endeavour to explode false ornament, to direct attention more towards substance than show, to recommend good sense as the foundation of all good composition, and simplicity as essential to all true ornament.

When entering on this subject, I may be allowed, on this occasion, to suggest a few thoughts concerning the importance and advantages of such studies, and the rank they are entitled to possess in academical education.¹ I am under no temptation, for this purpose, of extolling their importance at the expense of any other department of science. On the contrary, the study of Rhetoric and Belles Lettres supposes and requires a proper acquaintance with the rest of the liberal arts. It embraces them all within its circle, and recommends them to the highest regard. The first care of all such as wish either to write with reputation, or to speak in public so as to command attention, must be, to extend their knowledge; to lay in a rich store of ideas relating to those subjects of which the occasions of life may call them to discourse or to write. Hence, among the ancients, it was a fundamental principle, and frequently inculcated, “*Quod omnibus disciplinis et artibus debet esse instructus orator*”; that the orator ought to be an accomplished scholar, and conversant in every part of learning. It is indeed impossible to contrive an art, and very pernicious it were if it could be contrived, which should give the stamp of merit to any composition rich or splendid in expression, but barren or erroneous in thought. They are the wretched attempts towards an art of this kind, which have so often disgraced oratory, and debased it below its true standard. The graces of composition have been employed to disguise or to supply the want of matter; and the temporary applause of the ignorant has been courted, instead of the lasting approbation of the discerning. But such imposture can never maintain its ground long. Knowledge and science must furnish the materials that form the body and substance of any valuable composition. Rhetoric serves to add the polish; and we know that none but firm and solid bodies can be polished well.

¹The author was the first who read lectures on this subject in the university of Edinburgh. He began with reading them in a private character in the year 1759. In the following year he was chosen Professor of Rhetoric by the magistrates and town council of Edinburgh; and, in 1762, his Majesty was pleased to erect and endow a Profession of Rhetoric and Belles Lettres in that university, and the author was appointed the first Regius Professor. [Au.]

Of those who peruse the following Lectures, some by the profession to which they addict themselves, or in consequence of their prevailing inclination, may have the view of being employed in composition, or in public speaking. Others, without any prospect of this kind, may wish only to improve their taste with respect to writing and discourse, and to acquire principles which will enable them to judge for themselves in that part of literature called the Belles Lettres.

With respect to the former, such as may have occasion to communicate their sentiments to the public, it is abundantly clear that some preparation of study is requisite for the end which they have in view. To speak or to write perspicuously and agreeably with purity, with grace and strength, are attainments of the utmost consequence to all who purpose, either by speech or writing, to address the public. For without being master of those attainments, no man can do justice to his own conceptions; but how rich soever he may be in knowledge and in good sense, will be able to avail himself less of those treasures, than such as possess not half his store, but who can display what they possess with more propriety. Neither are these attainments of that kind for which we are indebted to nature merely. Nature has, indeed, conferred upon some a very favourable distinction in this respect, beyond others. But in these, as in most other talents she bestows, she has left much to be wrought out by every man's own industry. So conspicuous have been the effects of study and improvement in every part of eloquence; such remarkable examples have appeared of persons surmounting, by their diligence, the disadvantages of the most untoward nature; that among the learned it has long been a contested, and remains still an undecided point, whether nature or art confer most towards excelling in writing and discourse.

With respect to the manner in which art can most effectually furnish assistance for such a purpose, there may be diversity of opinions. I by no means pretend to say that mere rhetorical rules, how just soever, are sufficient to form an orator. Supposing natural genius to be favourable, more by a great deal will depend upon private application and study, than upon any system of instruction that is capable of being publicly

communicated. But at the same time, though rules and instructions cannot do all that is requisite, they may, however, do much that is of real use. They cannot, it is true, inspire genius; but they can direct and assist it. They cannot remedy barrenness; but they may correct redundancy. They point out proper models for imitation. They bring into view the chief beauties that ought to be studied, and the principle faults that ought to be avoided; and thereby tend to enlighten taste, and to lead genius from unnatural deviations, into its proper channel. What would not avail for the production of great excellencies, may at least serve to prevent the commission of considerable errors.

All that regards the study of eloquence and composition merits the higher attention upon this account, that it is intimately connected with the improvement of our intellectual powers. For I must be allowed to say, that when we are employed, after a proper manner, in the study of composition, we are cultivating reason itself. True rhetoric and sound logic are very nearly allied. The study of arranging and expressing our thoughts with propriety, teaches to think, as well as to speak, accurately. By putting our sentiments into words, we always conceive them more distinctly. Every one who has the slightest acquaintance with composition knows, that when he expresses himself ill on any subject, when his arrangement is loose, and his sentences become feeble, the defects of his style can, almost on every occasion, be traced back to his indistinct conception of the subject: so close is the connexion between thoughts, and the words in which they are clothed.

The study of composition, important in itself at all times, has acquired additional importance from the taste and manners of the present age. It is an age wherein improvements, in every part of science, have been prosecuted with ardour. To all the liberal arts much attention has been paid; and to none more than to the beauty of language, and the grace and elegance of every kind of writing. The public ear is become refined. It will not easily bear what is slovenly and incorrect. Every author must aspire to some merit in expression, as well as in sentiment, if he would not incur the danger of being neglected and despised.

I will not deny that the love of minute ele-

gance, and attention to inferior ornaments of composition, may at present have engrossed too great a degree of the public regard. It is indeed my opinion, that we lean to this extreme; often more careful of polished style, than of storing it with thought. Yet hence arises a new reason for the study of just and proper composition. If it be requisite not to be deficient in elegance or ornament in times when they are in such high estimation, it is still more requisite to attain the power of distinguishing false ornament from true, in order to prevent our being carried away by that torrent of false and frivolous taste, which never fails, when it is prevalent, to sweep along with it the raw and the ignorant. They who have never studied eloquence in its principles, nor have been trained to attend to the genuine and manly beauties of good writing, are always ready to be caught by the mere glare of language; and when they come to speak in public, or to compose, have no other standard on which to form themselves, except what chances to be fashionable and popular, how corrupted soever, and erroneous, that may be.

But, as there are many who have no such objects as either composition or public speaking in view, let us next consider what advantages may be derived by them from such studies as form the subject of these Lectures. To them, rhetoric is not so much a practical art as a speculative science; and the same instructions which assist others in composing, will assist them in discerning, and relishing, the beauties of composition. Whatever enables genius to execute well, will enable taste to criticise justly.

When we name criticising, prejudices may perhaps arise, of the same kind with those which I mentioned before with respect to rhetoric. As rhetoric has been sometimes thought to signify nothing more than the scholastic study of words, and phrases, and tropes, so criticism has been considered as merely the art of finding faults; as the frigid application of certain technical terms, by means of which persons are taught to cavil and censure in a learned manner. But this is the criticism of pedants only. True criticism is a liberal and humane art. It is the offspring of good sense and refined taste. It aims at acquiring a just discernment of the real merit of authors. It pro-

motes a lively relish of their beauties, while it preserves us from that blind and implicit veneration which would confound their beauties and faults in our esteem. It teaches us, in a word, to admire and to blame with judgment, and not to follow the crowd blindly.

In an age when works of genius and literature are so frequently the subjects of discourse, when every one erects himself into a judge, and when we can hardly mingle in polite society without bearing some share in such discussions; studies of this kind, it is not to be doubted, will appear to derive part of their importance from the use to which they may be applied in furnishing materials for those fashionable topics of discourse, and thereby enabling us to support a proper rank in social life.

But I should be sorry if we could not rest the merit of such studies on somewhat of solid and intrinsic use, independent of appearance and show. The exercise of taste and of sound criticism, is in truth one of the most improving employments of the understanding. To apply the principles of good sense to composition and discourse; to examine what is beautiful, and why it is so; to employ ourselves in distinguishing accurately between the specious and the solid, between affected and natural ornament, must certainly improve us not a little in the most valuable part of all philosophy, the philosophy of human nature. For such disquisitions are very intimately connected with the knowledge of ourselves. They necessarily lead us to reflect on the operations of the imagination, and the movements of the heart; and increase our acquaintance with some of the most refined feelings which belong to our frame.

Logical and ethical disquisitions move in a higher sphere, and are conversant with objects of a more severe kind; the progress of the understanding in its search after knowledge, and the direction of the will in the proper pursuit of good. They point out to man the improvement of his nature as an intelligent being; and his duties as the subject of moral obligation. Belles lettres and criticism chiefly consider him as a being endowed with those powers of taste and imagination, which were intended to embellish his mind, and to supply him with rational and useful entertainment. They open a field of investigation pec-

uliar to themselves. All that relates to beauty, harmony, grandeur, and elegance; all that can soothe the mind, gratify the fancy, or move the affections, belongs to their province. They present human nature under a different aspect from that which it assumes when viewed by other sciences. They bring to light various springs of action, which, without their aid, might have passed unobserved; and which, though of a delicate nature, frequently exert a powerful influence on several departments of human life.

Such studies have also this peculiar advantage, that they exercise our reason without fatiguing it. They lead to inquiries acute, but not painful; profound, but not dry nor abstruse. They strew flowers in the path of science; and while they keep the mind bent, in some degree, and active, they relieve it, at the same time, from that more toilsome labour to which it must submit in the acquisition of necessary erudition, or the investigation of abstract truth.

The cultivation of taste is further recommended by the happy effects which it naturally tends to produce on human life. The most busy man, in the most active sphere, cannot be always occupied by business. Men of serious professions cannot always be on the stretch of serious thought. Neither can the most gay and flourishing situations of fortune afford any man the power of filling all his hours with pleasure. Life must always languish in the hands of the idle. It will frequently languish even in the hands of the busy, if they have not some employment subsidiary to that which forms their main pursuit. How then shall these vacant spaces, those unemployed intervals, which, more or less, occur in the life of every one, be filled up? How can we contrive to dispose of them in any way that shall be more agreeable in itself, or more consonant to the dignity of the human mind, than in the entertainments of taste, and the study of polite literature? He who is so happy as to have acquired a relish for these, has always at hand an innocent and irreproachable amusement for his leisure hours, to save him from the danger of many a pernicious passion. He is not in hazard of being a burden to himself. He is not obliged to fly to low company, or to court the riot of loose pleasures, in order to cure the tediousness of existence.

Providence seems plainly to have pointed out this useful purpose to which the pleasures of taste may be applied, by interposing them in a middle station between the pleasures of sense and those of pure intellect. We were not designed to grovel always among objects so low as the former; nor are we capable of dwelling constantly in so high a region as the latter. The pleasures of taste refresh the mind after the toils of the intellect, and the labours of abstract study; and they gradually raise it above the attachments of sense, and prepare it for the enjoyments of virtue.

So consonant is this to experience, that, in the education of youth, no object has in every age appeared more important to wise men, than to tincture them early with a relish for the entertainments of taste. The transition is commonly made with ease from these to the discharge of the higher and more important duties of life. Good hopes may be entertained of those whose minds have this liberal and elegant turn. It is favourable to many virtues. Whereas, to be entirely devoid of relish for eloquence, poetry, or any of the fine arts, is justly construed to be an unpromising symptom of youth; and raises suspicions of their being prone to low gratifications, or destined to drudge in the more vulgar and illiberal pursuits of life.

There are indeed few good dispositions of any kind with which the improvement of taste is not more or less connected. A cultivated taste increases sensibility to all the tender and humane passions, by giving them frequent exercise; while it tends to weaken the more violent and fierce emotions.

— *Ingenuas didicisse fideliter artes,
Emollit mores, nec sinit esse ferus.*²

The elevated sentiments and high examples which poetry, eloquence, and history, are often bringing under our view, naturally tend to nourish in our minds public spirit, the love of glory, contempt of external fortune, and the admiration of what is truly illustrious and great.

I will not go so far as to say that the improvement of taste and of virtue is the same; or that they may always be expected to co-exist in an

²These polish'd arts have humaniz'd mankind,
Soften'd the rude, and calm'd the boist'rous mind. [Au.]

equal degree. More powerful correctives than taste can apply, are necessary for reforming the corrupt propensities which too frequently prevail among mankind. Elegant speculations are sometimes found to float on the surface of the mind, while bad passions possess the interior regions of the heart. At the same time, this cannot but be admitted, that the exercise of taste is, in its native tendency, moral and purifying. From reading the most admired productions of genius, whether in poetry or prose, almost every one rises with some good impressions left on his mind: and though these may not always be durable, they are at least to be ranked among the means of disposing the heart to virtue. One thing is certain, and I shall hereafter have occasion to illustrate it more fully, that, without possessing the virtuous affections in a strong degree, no man can attain eminence in the sublime parts of eloquence. He must feel what a good man feels, if he expects greatly to move or to interest mankind. They are the ardent sentiments of honour, virtue, magnanimity, and public spirit, that only can kindle that fire of genius, and call up into the mind those high ideas, which attract the admiration of ages; and if this spirit be necessary to produce the most distinguished efforts of eloquence, it must be necessary also to our relishing them with proper taste and feeling.

On these general topics I shall dwell no longer; but proceed directly to the consideration of the subjects which are to employ the following Lectures. They divide themselves into five parts. First, some introductory dissertations on the Nature of Taste, and upon the Sources of its Pleasures: secondly, the consideration of Language: thirdly, of Style: fourthly, of Eloquence properly so called, or Public Speaking in its different kinds: lastly, a critical examination of the most distinguished Species of Composition, both in prose and verse.

Lecture II

TASTE

The nature of the present undertaking leads me to begin with some inquiries concerning taste, as it is this faculty which is always appealed to in dis-

quisitions concerning the merit of discourse and writing.

There are few subjects on which men talk more loosely and indistinctly than on taste; few which it is more difficult to explain with precision; and none which in this course of Lectures will appear more dry or abstract. What I have to say on the subject shall be in the following order. I shall first explain the nature of taste as a power or faculty in the human mind. I shall next consider how far it is an improveable faculty. I shall show the sources of its improvement, and the characters of taste in its most perfect state. I shall then examine the various fluctuations to which it is liable, and inquire whether there be any standard to which we can bring the different tastes of men, in order to distinguish the corrupted from the true.

Taste may be defined, "The power of receiving pleasure from the beauties of nature and of art." The first question that occurs concerning it is, whether it is to be considered as an internal sense, or as an exertion of reason? Reason is a very general term; but if we understand by it that power of the mind which in speculative matters discovers truth, and in practical matters judges of the fitness of means to an end, I apprehend the question may be easily answered. For nothing can be more clear, than that taste is not resolvable into any such operation of reason. It is not merely through a discovery of the understanding, or a deduction of argument, that the mind receives pleasure from a beautiful prospect or a fine poem. Such objects often strike us intuitively, and make a strong impression, when we are unable to assign the reasons of our being pleased. They sometimes strike in the same manner the philosopher and the peasant; the boy and the man. Hence the faculty by which we relish such beauties, seems more nearly allied to a feeling of sense, than to a process of the understanding; and accordingly, from an external sense it has borrowed its name; that sense by which we receive and distinguish the pleasures of food having, in several languages, given rise to the word "taste" in the metaphorical meaning under which we now consider it. However, as, in all subjects which regard the operations of the mind, the inaccurate use of words is to be carefully avoided,

it must be inferred, from what I have said, that reason is entirely excluded from the exertions of taste. Though taste, beyond doubt, be ultimately founded on a certain natural and instinctive sensibility to beauty, yet reason, as I shall show hereafter, assists taste in many of its operations, and serves to enlarge its power³

Taste, in the sense in which I have explained it, is a faculty common in some degree to all men. Nothing that belongs to human nature is more general than the relish of beauty of one kind or other; of what is orderly, proportioned, grand, harmonious, new, or sprightly. In children, the rudiments of taste discover themselves very early in a thousand instances; in their fondness for regular bodies, their admiration of pictures and statues, and imitations of all kinds; and their strong attachment to whatever is new or marvellous. The most ignorant peasants are delighted with ballads and tales, and are struck with the beautiful appearance of nature in the earth and heavens. Even in the deserts of America, where human nature shows itself in its most uncultivated state, the savages have their ornaments of dress, their war and their death songs, their harangues and their orators. We must therefore conclude the principles of taste to be deeply founded in the human mind. It is no less essential to man to have some discernment of beauty, than it is to possess the attributes of reason and of speech.⁴

But although none be wholly devoid of this faculty, yet the degrees in which it is possessed are widely different. In some men only the feeble glimmerings of taste appear; the beauties which they relish are of the coarsest kind; and of these they have but a weak and confused impression: while, in others, taste rises to an acute discernment, and a lively enjoyment of the most refined beauties. In general, we may observe, that in the powers and pleasures of taste, there is a more re-

³See Dr. Gerrard's *Essay on Taste*.—D'Alembert's *Reflections on the Use and Abuse of Philosophy in Matters which relate to Taste*.—*Reflections Critiques sur la Poésie et sur la Peinture*, tome ii. ch. 22–31.—*Elements of Criticism*, ch. 25.—Mr. Hume's *Essay on the Standard of Taste*.—Introduction to the *Essay on the Sublime and Beautiful*. [Au.]

⁴On the subject of Taste, considered as a power or faculty of the mind, much less is to be found among the ancient, than among the modern rhetorical and critical writers. . . . [Au.]

markable inequality among men, than is usually found in point of common sense, reason, and judgment. The constitution of our nature in this, as in all other respects, discovers admirable wisdom. In the distribution of those talents which are necessary for man's well-being, Nature hath made less distinction among her children. But in the distribution of those which belong only to the ornamental part of life, she hath bestowed her favours with more frugality. She hath both sown the seeds more sparingly, and rendered a higher culture requisite for bringing them to perfection.

This inequality of taste among men is owing, without doubt, in part, to the different frame of their natures; to nicer organs, and finer internal powers, with which some are endowed beyond others. But, if it be owing in part to nature, it is owing to education and culture still more. The illustration of this leads to my next remark on this subject, that taste is a most improveable faculty, if there be any such in human nature; a remark which gives great encouragement to such a course of study as we are now proposing to pursue. Of the truth of this assertion we may easily be convinced, by only reflecting on that immense superiority which education and improvement give to civilized, above barbarous nations, in refinement of taste; and on the superiority which they give in the same nation to those who have studied the liberal arts, above the rude and untaught vulgar. The difference is so great, that there is perhaps no one particular in which these two classes of men are so far removed from each other, as in respect of the powers and the pleasures of taste; and assuredly for this difference no other general cause can be assigned, but culture and education.—I shall now proceed to show what the means are, by which taste becomes so remarkably susceptible of cultivation and progress.

Reflect first upon that great law of our nature, that exercise is the chief source of improvement in all our faculties. This holds both in our bodily and in our mental powers. It holds even in our external senses; although these be less the subject of cultivation than any of our other faculties. We see how acute the senses become in persons whose trade or business leads to nice exertions of them. Touch, for instance, becomes infinitely

more exquisite in men whose employment requires them to examine the polish of bodies, than it is in others. They who deal in microscopical observations, or are accustomed to engrave on precious stones, acquire surprising accuracy of sight in discerning the minutest objects; and practice in attending to different flavours and tastes of liquors, wonderfully improves the power of distinguishing them, and of tracing their composition. Placing internal taste therefore on the footing of a simple sense, it cannot be doubted that frequent exercise, and curious attention to its proper objects, must greatly heighten its power. Of this we have one clear proof in that part of taste, which is called an ear for music. Experience every day shows that nothing is more improveable. Only the simplest and plainest compositions are relished at first: use and practice extend our pleasure, teach us to relish finer melody, and by degrees enable us to enter into the intricate and compounded pleasures of harmony. So an eye for the beauties of painting is never all at once acquired. It is gradually formed by being conversant among pictures, and studying the works of the best masters.

Precisely in the same manner, with respect to the beauty of composition and discourse, attention to the most approved models, study of the best authors, comparisons of lower and higher degrees of the same beauties, operate towards the refinement of taste. When one is only beginning his acquaintance with works of genius, the sentiment which attends them is obscure and confused. He cannot point out the several excellencies or blemishes of a performance which he peruses; he is at a loss on what to rest his judgment; all that can be expected is, that he should tell in general whether he be pleased or not. But allow him more experience in works of this kind, and his taste becomes by degrees more exact and enlightened. He begins to perceive not only the character of the whole, but the beauties and defects of each part; and is able to describe the peculiar qualities which he praises or blames. The mist is dissipated which seemed formerly to hang over the object; and he can at length pronounce firmly, and without hesitation, concerning it. Thus, in taste, considered as mere sensibility, exercise opens a great source of improvement.

But although taste be ultimately founded on sensibility, it must not be considered as instinctive sensibility alone. Reason and good sense, as I before hinted, have so extensive an influence on all the operations and decisions of taste, that a thorough good taste may well be considered as a power compounded of natural sensibility to beauty, and of improved understanding. In order to be satisfied to this, let us observe, that the greater part of the productions of genius are no other than imitations of nature; representations of the characters, actions, or manners of men. The pleasure we receive from such imitations or representations is founded on mere taste; but to judge whether they be properly executed, belongs to the understanding, which compares the copy with the original.

In reading, for instance, such a poem as the *Æneid*, a great part of our pleasure arises from the plan or story being well conducted, and all the parts joined together with probability and due connexion; from the characters being taken from nature, the sentiments being suited to the characters, and the style to the sentiments. The pleasure which arises from a poem so conducted, is felt or enjoyed by taste as an internal sense: but the discovery of this conduct in the poem is owing to reason; and the more that reason enables us to discover such propriety in the conduct, the greater will be our pleasure. We are pleased, through our natural sense of beauty. Reason shows us why and upon what grounds we are pleased. Wherever, in works of taste, any resemblance to nature is aimed at; wherever there is any reference of parts to a whole, or of means to an end, as there is indeed in almost every writing and discourse; there the understanding must always have a great part to act.

Here then is a wide field for reason's exerting its powers in relation to the objects of taste, particularly with respect to composition, and works of genius; and hence arises a second and a very considerable source of the improvement of taste, from the application of reason and good sense to such productions of genius. Spurious beauties, such as unnatural characters, forced sentiments, affected style, may please for a little; but they please only because their opposition to nature and to good sense has not been examined or at-

tended to. Once, show how nature might have been more justly imitated or represented; how the writer might have managed his subject to greater advantage; the illusion will presently be dissipated, and these false beauties will please no more.

From these two sources then, first, the frequent exercise of taste, and next, the application of good sense and reason to the objects of taste, as a power of the mind, receives its improvement. In its perfect state it is undoubtedly the result both of nature and of art. It supposes our natural sense of beauty to be refined by frequent attention to the most beautiful objects, and at the same time to be guided and improved by the light of the understanding.

I must be allowed to add, that as a sound head, so likewise a good heart, is a very material requisite to just taste. The moral beauties are not only in themselves superior to all others, but they exert an influence, either more near or more remote, on a great variety of other objects of taste. Wherever the affections, characters, or actions of men, are concerned, (and these certainly afford the noblest subjects to genius,) there can be neither any just or affecting description of them, nor any thorough feeling of the beauty of that description, without our possessing the virtuous affections. He whose heart is indelicate or hard, he who has no admiration of what is truly noble or praiseworthy, nor the proper sympathetic sense of what is soft and tender, must have a very important relish of the highest beauties of eloquence and poetry.

The characters of taste, when brought to its most improved state, are all reducible to two—delicacy and correctness.

Delicacy of taste respects principally the perfection of that natural sensibility on which taste is founded. It implies those finer organs or powers which enable us to discover beauties that lie hid from a vulgar eye. One may have strong sensibility, and yet be deficient in delicate taste. He may be deeply impressed by such beauties as he perceives; but he perceives only what is in some degree coarse, what is bold and palpable; while chaster and simpler ornaments escape his notice. In this state taste generally exists among rude and unrefined nations. But a person of delicate taste

both feels strongly and feels accurately. He sees distinctions and differences where others see none; the most latent beauty does not escape him, and he is sensible of the smallest blemish. Delicacy of taste is judged of by the same marks that we use in judging of the delicacy of an external sense. As the goodness of the palate is not tried by strong flavours, but by a mixture of ingredients, where, notwithstanding the confusion, we remain sensible of each; in like manner delicacy of internal taste appears, by a quick and lively sensibility to its finest, most compounded, or most latent objects.

Correctness of taste respects chiefly the improvement which that faculty receives through its connexion with the understanding. A man of correct taste is one who is never imposed on by counterfeit beauties; who carries always in his mind that standard of good sense which he employs in judging of every thing. He estimates with propriety the comparative merit of the several beauties which he meets with in any work of genius; refers them to their proper classes; assigns the principles, as far as they can be traced, whence their power of pleasing flows; and is pleased himself precisely in that degree in which he ought, and no more.

It is true that these two qualities of taste, delicacy and correctness, mutually imply each other. No taste can be exquisitely delicate without being correct; nor can be thoroughly correct without being delicate. But still a predominancy of one or other quality in the mixture is often visible. The power of delicacy is chiefly seen in discerning the true merit of a work; the power of correctness, in rejecting false pretensions to merit. Delicacy leans more to feeling; correctness more to reason and judgment. The former is more the gift of nature; the latter, more the product of culture and art. Among the ancient critics, Longinus possessed most delicacy; Aristotle most correctness. Among the moderns, Mr. Addison is a high example of delicate taste; Dean Swift, had he written on the subject of criticism, would perhaps have afforded the example of a correct one.

Having viewed taste in its most improved and perfect state, I come next to consider its deviations from that state; the fluctuations and changes

to which it is liable, and to inquire whether, in the midst of these, there be any means of distinguishing a true from a corrupted taste. This brings us to the most difficult part of our task. For it must be acknowledged, that no principle of the human mind is, in its operations, more fluctuating and capricious than taste. Its variations have been so great and frequent, as to create a suspicion with some, of its being merely arbitrary; grounded on no foundation, ascertainable by no standard, but wholly dependent on changing fancy; the consequence of which would be, that all studies or regular inquiries concerning the objects of taste were vain. In architecture, the Grecian models were long esteemed the most perfect. In succeeding ages, the Gothic architecture alone prevailed, and afterwards the Grecian taste revived in all its vigour, and engrossed the public admiration. In eloquence and poetry, the Asiatics at no time relished any thing but what was full of ornament, and splendid in a degree that we should denominate gaudy: whilst the Greek's admired only chaste and simple beauties, and despised the Asiatic ostentation. In our own country, how many writings that were greatly extolled two or three centuries ago, are now fallen into entire disrepute and oblivion! Without going back to remote instances, how very different is the taste of poetry which prevails in Great Britain now, from what prevailed there no longer ago than the reign of King Charles II, which the authors too of that time deemed an Augustan age; when nothing was in vogue but an affected brilliancy of wit; when the simple majesty of Milton was overlooked, and *Paradise Lost* almost entirely unknown; when Cowley's laboured and unnatural conceits were admired as the very quintessence of genius; Waller's gay sprightliness was mistaken for the tender spirit of love poetry; and such writers as Suckling and Etheridge were held in esteem for dramatic composition.

The question is, what conclusion we are to form from such instances as these? Is there any thing that can be called a standard of taste, by appealing to which we may distinguish between a good and a bad taste? Or, is there in truth no such distinction; and are we to hold that, according to the proverb, there is no disputing of tastes: but

that whatever pleases is right, for that reason that it does please? This is the question, and a very nice and subtle one it is, which we are now to discuss.

I begin by observing, that if there be no such thing as any standard of taste, this consequence must immediately follow, that all tastes are equally good; a position which, though it may pass unnoticed in slight matters, and when we speak of the lesser differences among the tastes of men, yet when we apply it to the extremes, presently shows its absurdity. For is there any one who will seriously maintain that the taste of a Hottentot or a Laplander is as delicate and as correct as that of a Longinus or an Addison? or, that he can be charged with no defect or incapacity who thinks a common newswriter as excellent an historian as Tacitus? As it would be held downright extravagance to talk in this manner, we are led unavoidably to this conclusion, that there is some foundation for the preference of one man's taste to that of another, or that there is a good and a bad, a right and a wrong in taste, as in other things.

But, to prevent mistakes on this subject, it is necessary to observe next, that the diversity of tastes which prevails among mankind, does not in every case infer corruption of taste, or oblige us to seek for some standard in order to determine who are in the right. The tastes of men may differ very considerably as to their object, and yet none of them be wrong. One man relishes poetry most; another takes pleasure in nothing but history. One prefers comedy; another, tragedy. One admires the simple; another the ornamented style. The young are amused with gay and sprightly compositions. The elderly are more entertained with those of a graver cast. Some nations delight in bold pictures of manners, and strong representations of passion. Others incline to more correct and regular elegance both in description and sentiment. Though all differ, yet all pitch upon some one beauty which peculiarly suits their turn of mind; and therefore no one has a title to condemn the rest. It is not in matters of taste, as in question of mere reason, where there is but one conclusion that can be true, and all the rest are erroneous. Truth, which is the object of reason, is one; beauty, which is the object of

taste, is manifold. Taste therefore admits of latitude and diversity of objects, in sufficient consistency with goodness or justness of taste.

But then, to explain this matter thoroughly, I must observe further, that this admissible diversity of tastes can only have place where the objects of taste are different. Where it is with respect to the same object that men disagree, when one condemns that as ugly, which another admires as highly beautiful; then it is no longer diversity, but direct opposition of taste that takes place; and therefore one must be in the right and another in the wrong, unless that absurd paradox were allowed to hold, that all tastes are equally good and true. One man prefers Virgil to Homer. Suppose that I, on the other hand, admire Homer more than Virgil, I have as yet no reason to say that our tastes are contradictory. The other person is more struck with the elegance and tenderness which are the characteristics of Virgil: I, with the simplicity and fire of Homer. As long as neither of us deny that both Homer and Virgil have great beauties, our difference falls within the compass of that diversity of tastes, which I have shown to be natural and allowable. But if the other man shall assert that Homer has no beauties whatever; that he holds him to be a dull and spiritless writer, and that he would as soon peruse any old legend of knight errantry as the Iliad; then I exclaim, that my antagonist either is void of all taste, or that his taste is corrupted in a miserable degree; and I appeal to whatever I think the standard of taste, to show him that he is in the wrong.

What that standard is, to which, in such opposition of tastes, we are obliged to have recourse, remains to be traced. A standard properly signifies that which is of such undoubted authority as to be the test of other things of the same kind. Thus a standard weight, or measure, is that which is appointed by law to regulate all other measures and weights. Thus the court is said to be the standard of good breeding; and the Scripture of theological truth.

When we say that nature is the standard of taste, we lay down a principle very true and just, as far as it can be applied. There is no doubt, that in all cases where an imitation is intended of some object that exists in nature, as in representing human characters or actions, conformity to

nature affords a full and distinct criterion of what is truly beautiful. Reason hath in such cases full scope for exerting its authority, for approving or condemning, by comparing the copy with the original. But there are innumerable cases in which this rule cannot be at all applied; and conformity to nature is an expression frequently used, without any distinct or determinate meaning. We must therefore search for somewhat that can be rendered more clear and precise, to be the standard of taste.

Taste, as I before explained it, is ultimately founded on an internal sense of beauty, which is natural to men, and which, in its application to particular objects, is capable of being guided and enlightened by reason. Now, were there any one person who possessed in full perfection all the powers of human nature, whose internal senses were in every instance exquisite and just, and whose reason was unerring and sure, the determination of such a person concerning beauty would, beyond doubt, be a perfect standard for the taste of all others. Wherever their taste differed from his, it could be imputed only to some imperfection in their natural powers. But as there is no such living standard, no one person to whom all mankind will allow such submission to be due, what is there of sufficient authority to be the standard of the various and opposite tastes of men? Most certainly there is nothing but the taste, as far as it can be gathered, of human nature. That which men concur the most in admiring, must be held to be beautiful. His taste must be esteemed just and true, which coincides with the general sentiments of men. In this standard we must rest. To the sense of mankind the ultimate appeal must ever lie, in all works of taste. If any one should maintain that sugar was bitter and tobacco was sweet, no reasonings could avail to prove it. The taste of such a person would infallibly be held to be diseased, merely because it differed so widely from the taste of the species to which he belongs. In like manner, with regard to the objects of sentiment or internal taste, the common feelings of men carry the same authority, and have a title to regulate the taste of every individual.

But have we then, it will be said, no other criterion of what is beautiful, than the approbation

of the majority? Must we collect the voices of others, before we form any judgment for ourselves, of what deserves applause in eloquence or poetry? By no means; there are principles of reason and sound judgment which can be applied to matters of taste as well as to the subjects of science and philosophy. He who admires or censures any work of genius, is always ready, if his taste be in any degree improved, to assign some reasons for his decision. He appeals to principles, and points out the grounds on which he proceeds. Taste is a sort of compound power, in which the light of the understanding always mingles more or less, with the feelings of sentiment.

But, though reason can carry us a certain length in judging concerning works of taste, it is not to be forgotten that the ultimate conclusions to which our reasonings lead, refer at last to sense and perception. We may speculate and argue concerning propriety of conduct in a tragedy, or an epic poem. Just reasonings on the subject will correct the caprice of unenlightened taste, and establish principles for judging of what deserves praise. But, at the same time, these reasonings appeal always, in the last resort, to feeling. The foundation upon which they rest, is what has been found from experience to please mankind universally. Upon this ground we prefer a simple and natural, to an artificial and affected style; a regular and well-connected story, to loose and scattered narratives; a catastrophe which is tender and pathetic, to one which leaves us unmoved. It is from consulting our own imagination and heart, and from attending to the feelings of others, that any principles are formed which acquire authority in matters of taste.⁵

⁵The difference between the authors who found the standard of taste upon the common feelings of human nature ascertained by general approbation, and those who found it upon established principles which can be ascertained by reason, is more an apparent than a real difference. Like many other literary controversies, it turns chiefly on modes of expression. For they who lay the greatest stress on sentiment and feeling, make no scruple of applying argument and reason to matters of taste. They appeal, like other writers, to established principles, in judging of the excellencies of eloquence or poetry; and plainly show, that the general approbation to which they ultimately recur, is an approbation resulting from discussion as well as from sentiment. They, on the other hand, who, in order to vindicate taste from any sus-

When we refer to the concurring sentiments of men as the ultimate test of what is to be accounted beautiful in the arts, this is to be always understood of men placed in such situations as are favourable to the proper exertions of taste. Every one must perceive that among rude and uncivilized nations, and during the ages of ignorance and darkness, any loose notions that are entertained concerning such subjects carry no authority. In those states of society, taste has no materials on which to operate. It is either totally suppressed, or appears in its lowest and most imperfect form. We refer to the sentiments of mankind in polished and flourishing nations; when arts are cultivated and manners refined; when works of genius are subjected to free discussion, and taste is improved by science and philosophy.

Even among nations, at such a period of society, I admit, that accidental causes may occasionally warp the proper operations of taste: sometimes the state of religion, sometimes the form of government, may for a while pervert it; a licentious court may introduce a taste for false ornaments, and dissolute writings. The usage of one admired genius may procure approbation for his faults, and even render them fashionable. Sometimes envy may have power to bear down, for a little, productions of great merit; while popular humour, or party spirit, may, at other times, exalt to a high, though short-lived, reputation, what little deserved it. But though such casual circumstances give the appearance of caprice to the judgments of taste, that appearance is easily corrected. In the course of time, the genuine taste of human nature never fails to disclose itself, and to gain the ascendant over any fantastic and corrupted modes of taste which may chance to have been introduced. These may have currency for a while, and mislead superficial judges; but being subjected to examination, by degrees they pass away; while that alone remains which is founded on sound reason, and the native feelings of men.

picion of being arbitrary, maintain that it is ascertainable by the standard of reason, admit nevertheless, that what pleases universally, must on that account be held to be truly beautiful; and that no rules or conclusions concerning objects of taste, can have any just authority, if they be found to contradict the general sentiments of men. [Au.]

I by no means pretend, that there is any standard of taste, to which, in every particular instance, we can resort for clear and immediate determination. Where, indeed, is such a standard to be found for deciding any of those great controversies in reason and philosophy, which perpetually divide mankind? In the present case, there was plainly no occasion for any such strict and absolute provision to be made. In order to judge of what is morally good or evil, of what man ought, or ought not in duty to do, it was fit that the means of clear and precise determination should be afforded us. But to ascertain in every case with the utmost exactness what is beautiful or elegant, was not at all necessary to the happiness of man. And therefore some diversity in feeling was here allowed to take place; and room was left for discussion and debate, concerning the degree of approbation to which any work of genius is entitled.

The conclusion, which it is sufficient for us to rest upon, is, that taste is far from being an arbitrary principle, which is subject to the fancy of every individual, and which admits of no criterion for determining whether it be false or true. Its foundation is the same in all human minds. It is built upon sentiments and perceptions which belong to our nature; and which, in general, operate with the same uniformity as our other intellectual principles. When these sentiments are perverted by ignorance or prejudice, they are capable of being rectified by reason. Their sound and natural state is ultimately determined, by comparing them with the general taste of mankind. Let men declaim as much as they please concerning the caprice and the uncertainty of taste, it is found by experience, that there are beauties, which, if they be displayed in a proper light, have power to command lasting and general admiration. In every composition, what interests the imagination, and touches the heart, pleases all ages and all nations. There is a certain string to which, when properly struck, the human heart is so made as to answer.

Hence the universal testimony which the most improved nations of the earth have conspired, throughout a long tract of ages, to give to some few works of genius; such as the *Iliad* of Homer, and the *Æneid* of Virgil. Hence the authority

which such works have acquired as standards, in some degree, of poetical composition; since from them we are enabled to collect what the sense of mankind is, concerning those beauties which give them the highest pleasure, and which therefore poetry ought to exhibit. Authority or prejudice may, in one age or country, give a temporary reputation to an indifferent poet, or a bad artist: but when foreigners, or when posterity examine his works, his faults are discerned, and the genuine taste of human nature appears. "Opinionum commenta delet dies; naturæ judicia confirmat." Time overthrows the illusions of opinion, but establishes the decisions of nature. . . .

Lecture XIV

ORIGIN AND NATURE OF FIGURATIVE LANGUAGE

Having now finished what related to the construction of sentences, I proceed to other rules concerning style. My general division of the qualities of style, was into perspicuity and ornament. Perspicuity, both in single words and in sentences, I have considered. Ornament, as far as it arises from a graceful, strong, or melodious construction of words, has also been treated of. Another, and a great branch of the ornament of style, is, figurative language; which is now to be the subject of our consideration, and will require a full discussion.

Our first inquiry must be, What is meant by figures of speech?⁶

In general, they always imply some departure from simplicity of expression; the idea which we intend to convey, not only enunciated to others, but enunciated in a particular manner, and with some circumstance added, which is designed to render the impression more strong and vivid.

⁶On the subject of figures of speech, all the writers who treat of rhetoric or composition, have insisted largely. To make references, therefore, on this subject, were endless. On the foundation of figurative language, in general, one of the most sensible and instructive writers appears to me to be M. Marsais, in his *Traité des Tropes pour servir d'Introduction à la Rhétorique, et à la Logique*. For observations on particular figures, the *Elements of Criticism* may be consulted, where the subject is fully handled, and illustrated by a great variety of examples. [Au.]

When I say, for instance, "That a good man enjoys comfort in the midst of adversity"; I just express my thought in the simplest manner possible. But when I say, "To the upright there ariseth light in darkness"; the same sentiment is expressed in a figurative style; a new circumstance is introduced; light is put in the place of comfort, and darkness is used to suggest the idea of adversity. In the same manner, to say, "It is impossible, by any search we can make, to explore the divine nature fully," is to make a simple proposition. But when we say, "Canst thou, by searching, find out God? Canst thou find out the Almighty to perfection? It is high as heaven, what canst thou do? deeper than hell, what canst thou know?" This introduces a figure into style; the proposition being not only expressed, but admiration and astonishment being expressed together with it.

But, though figures imply a deviation from what may be reckoned the most simple form of speech, we are not thence to conclude, that they imply any thing uncommon, or unnatural. This is so far from being the case, that on very many occasions they are both the most natural, and the most common method of uttering our sentiments. It is impossible to compose any discourse without using them often; nay, there are few sentences of any length, in which some expression or other, that may be termed a figure, does not occur. From what causes this happens, shall be afterwards explained. The fact, in the mean time, shows that they are to be accounted part of that language which nature dictates to men. They are not the inventions of the schools, nor the mere product of study: on the contrary, the most illiterate speak in figures, as often as the most learned. Whenever the imaginations of the vulgar are much awakened, or their passions inflamed against one another, they will pour forth a torrent of figurative language, as forcible as could be employed by the most artificial declaimer.

What then is it, which has drawn the attention of critics and rhetoricians so much to these forms of speech? It is this: they remarked, that in them consists much of the beauty and the force of language; and found them always to bear some characters, of distinguishing marks, by the help of which they could reduce them under separate

classes and heads. To this, perhaps, they owe their name of figures. As the figure or shape of one body distinguishes it from another, so these forms of speech have, each of them, a cast or turn peculiar to itself, which both distinguishes it from the rest, and distinguishes it from simple expression. Simple expression just makes our idea known to others; but figurative language, over and above, bestows a particular dress upon that idea; a dress which both makes it to be remarked, and adorns it. Hence, this sort of language became early a capital object of attention to those who studied the powers of speech.

Figures, in general, may be described to be that language, which is prompted either by the imagination, or by the passions. The justness of this description will appear, from the more particular account I am afterwards to give of them. Rhetoricians commonly divide them into two great classes; figures of words, and figures of thought. The former, figures of words, are commonly called tropes, and consist in a word's being employed to signify something that is different from its original and primitive meaning; so that if you alter the word, you destroy the figure. Thus, in the instance I gave before; "Light ariseth to the upright in darkness." The trope consists in "light and darkness," being not meant literally, but substituted for comfort and adversity, on account of some resemblance or analogy which they are supposed to bear to these conditions of life. The other class, termed figures of thought, supposes the words to be used in their proper and literal meaning, and the figure to consist in the turn of the thought; as is the case in exclamations, interrogations, apostrophes, and comparisons; where, though you vary the words that are used, or translate them from one language into another, you may, nevertheless, still preserve the same figure in the thought. This distinction, however, is of no great use; as nothing can be built upon it in practice; neither is it always very clear. It is of little importance whether we give to some particular mode of expression the name of a trope, or of a figure; provided we remember, that figurative language always imports some colouring of the imagination, or some emotion of passion, expressed in our style: and, perhaps, figures of imagination, and figures of passion, might be a

more useful distribution of the subject. But, without insisting on any artificial divisions, it will be more useful, that I inquire into the origin and the nature of figures. Only, before I proceed to this, there are two general observations which it may be proper to premise.

The first is, concerning the use of rules with respect to figurative language. I admit, that persons may both speak and write with propriety who know not the names of any of the figures of speech, nor ever studied any rules relating to them. Nature, as was before observed, dictates the use of figures; and, like Mons. Jourdain, in Moliere, who had spoken for forty years in prose, without ever knowing it; many a one uses metaphorical expressions to good purpose, without any idea of what a metaphor is. It will not, however, follow thence, that rules are of no service. All science arises from observations on practice. Practice has always gone before method and rule; but method and rule have afterwards improved and perfected practice, in every art. We every day meet with persons who sing agreeably, without knowing one note of the gamut. Yet it has been found of importance to reduce these notes to a scale, and to form an art of music; and it would be ridiculous to pretend, that the art is of no advantage, because the practice is founded in nature. Propriety and beauty of speech are certainly as improveable as the ear or the voice; and to know the principles of this beauty, or the reasons which render one figure, or one manner of speech, preferable to another, cannot fail to assist and direct a proper choice.

But I must observe, in the next place, that, although this part of style merits attention, and is a very proper object of science and rule; although much of the beauty of composition depends on figurative language; yet we must beware of imagining that it depends solely, or even chiefly, upon such language. It is not so. The great place which the doctrine of tropes and figures has occupied in systems of rhetoric; the over-anxious care which has been shown in giving names to a vast variety of them, and in ranging them under different classes, has often led persons to imagine, that if their composition was well bespangled with a number of these ornaments of speech, it wanted no other beauty; whence has arisen much stiffness

and affectation. For it is, in truth, the sentiment or passion, which lies under the figured expression, that gives it any merit. The figure is only the dress: the sentiment is the body and the substance. No figures will render a cold or an empty composition interesting; whereas, if a sentiment be sublime or pathetic, it can support itself perfectly well, without any borrowed assistance. Hence, several of the most affecting and admired passages of the best authors, are expressed in the simplest language. The following sentiment from Virgil, for instance, makes its way at once to the heart, without the help of any figure whatever. He is describing an Argive, who falls in battle, in Italy, at a great distance from his native country.

Sternitur infelix alieno vulnere, cœlumque
Adspicit, et dulces moriens reminiscitur Argos.⁷
Æneid x. 781.

A single stroke of this kind, drawn as by the very pencil of nature, is worth a thousand figures. In the same manner, the simple style of Scripture: "He spoke, and it was done; he commanded, and it stood fast."—"God said, Let there be light, and there was light"; imparts a lofty conception to much greater advantage, than if it had been decorated by the most pompous metaphors. The fact is, that the strong pathetic, and the pure sublime, not only have little dependence on figures of speech, but, generally, reject them. The proper region of these ornaments is, where a moderate degree of elevation and passion is predominant; and there they contribute to the embellishment of discourse, only, when there is a basis of solid thought and natural sentiment; when they are inserted in their proper place; and when they rise, of themselves, from the subject, without being sought after.

⁷"Anthares had from Argos travell'd far.
Alcides' friend, and brother of the war;
Now falling, by another's wound, his eyes
He casts to heaven, on Argos thinks, and dies."

In this translation, much of the beauty of the original is lost. "On Argos thinks, and dies," is by no means equal to "dulces moriens reminiscitur Argos": "As he dies, he remembers his beloved Argos." It is indeed observable, that in most of those tender and pathetic passages, which do so much honour to Virgil, that great poet expresses himself with the utmost simplicity. . . . [Au.]

Having premised these observations, I proceed to give an account of the origin and nature of figures; principally of such as have their dependence on language; including that numerous tribe, which the rhetoricians call tropes.

At the first rise of language, men would begin with giving names to the different objects which they discerned or thought of. This nomenclature would, at the beginning, be very narrow. According as men's ideas multiplied, and their acquaintance with objects increased, their stock of names and words would increase also. But to the infinite variety of objects and ideas no language is adequate. No language is so copious, as to have a separate word for every separate idea. Men naturally sought to abridge this labour of multiplying words *in infinitum*; and, in order to lay less burden on their memories, made one word, which they had already appropriated to a certain idea or object, stand also for some other idea or object; between which and the primary one, they found, or fancied, some relation. Thus, the preposition, *in*, was originally invented to express the circumstance of place: "The man was killed *in* the wood." In progress of time, words were wanted to express men's being connected with certain conditions of fortune, or certain situations of mind; and some resemblance, or analogy, being fancied between these, and the place of bodies, the word, *in*, was employed to express men's being so circumstanced; as, one's being *in* health or *in* sickness, *in* prosperity or *in* adversity, *in* joy or *in* grief, *in* doubt, or *in* danger, or *in* safety. Here we see this preposition, *in*, plainly assuming a tropical signification, or carried off from its original meaning, to signify something else, which relates to, or resembles it.

Tropes of this kind abound in all languages; and are plainly owing to the want of proper words. The operations of the mind and affections, in particular, are, in most languages, described by words taken from sensible objects. The reason is plain. The names of sensible objects were, in all languages, the words most early introduced; and were, by degrees, extended to those mental objects, of which men had more obscure conceptions, and to which they found it more difficult to assign distinct names. They borrowed, therefore, the name of some sensible idea,

where their imagination found some affinity. Thus we speak of a *piercing* judgment, and a *clear* head; a *soft* or a *hard* heart; a *rough* or a *smooth* behaviour. We say, *inflamed* by anger, *warmed* by love, *swelled* with pride, *melted* into grief; and these are almost the only significant words which we have for such ideas.

But, although the barrenness of language, and the want of words, be doubtless one cause of the invention of tropes; yet it is not the only, nor, perhaps, even the principal source of this form of speech. Tropes have arisen more frequently, and spread themselves wider, from the influence which imagination possesses over language. The train on which this has proceeded among all nations, I shall endeavour to explain.

Every object which makes any impression on the human mind, is constantly accompanied with certain circumstances and relations, that strike us at the same time. It never presents itself to our view, *isolé*, as the French express it; that is, independent of, and separated from, every other thing; but always occurs as somehow related to other objects; going before them, or following them; their effect or their cause; resembling them, or opposed to them; distinguished by certain qualities, or surrounded with certain circumstances. By this means, every idea or object carries in its train some other ideas, which may be considered as its accessories. These accessories often strike the imagination more than the principal idea itself. They are, perhaps, more agreeable ideas; or they are more familiar to our conceptions; or they recall to our memory a greater variety of important circumstances. The imagination is more disposed to rest upon some of them; and therefore, instead of using the proper name of the principal idea which it means to express, it employs, in its place, the name of the accessory or correspondent idea; although the principal have a proper and well-known name of its own. Hence a vast variety of tropical or figurative words obtain currency in all languages, through choice, not necessity; and men of lively imaginations are every day adding to their number.

Thus, when we design to intimate the period at which a state enjoyed most reputation or glory, it were easy to employ the proper words for expressing this; but as this is readily connected, in

our imagination, with the flourishing period of a plant or a tree, we lay hold of this correspondent idea, and say, "The Roman empire flourished most under Augustus." The leader of a faction is plain language; but, because the head is the principal part of the human body, and is supposed to direct all the animal operations, resting upon this resemblance, we say, "Catiline was the head of the party." The word, *voice*, was originally invented to signify the articulate sound, formed by the organs of the mouth; but, as by means of it men signify their ideas and their intentions to each other, *voice* soon assumed a great many other meanings, all derived from this primary effect. "To give our voice" for any thing, signified, to give our sentiment in favour of it. Not only so; but *voice* was transferred to signify any intimation of will or judgment, though given without the least interposition of voice in its literal sense, or any sound uttered at all. Thus we speak of listening to the *voice* of conscience, the *voice* of nature, the *voice* of God. This usage takes place, not so much from barrenness of language, or want of a proper word, as from an allusion which we choose to make to *voice*, in its primary sense, in order to convey our idea, connected with a circumstance which appears to the fancy to give it more sprightliness and force.

The account which I have now given, and which seems to be a full and fair one, of the introduction of tropes into all languages, coincides with what Cicero briefly hints in his third book, *De Oratore*. "Modus transferendi verba late patet; quem necessitas primum genuit, coacta inopia et angustiis; post autem delectatio jucunditasque celebravit. Nam ut vestis, frigoris depellendi causa reperta primo, post adhiberi coepta est ad ornatum etiam corporis et dignitatem, sic verbi translatio instituta est inopiæ causa, frequentata, delectationis."⁸

From what has been said it clearly appears,

⁸"The figurative usage of words is very extensive; a usage to which necessity first gave rise, on account of the paucity of words, and barrenness of language; but which the pleasure that was found in it afterwards rendered frequent. For, as garments were first contrived to defend our bodies from the cold, and afterwards were employed for the purpose of ornament and dignity, so figures of speech, introduced by want, were cultivated for the sake of entertainment." [Au.]

how that must come to pass, which I had occasion to mention in a former lecture, that all languages are most figurative in their early state. Both the causes to which I ascribed the origin of figures, concur in producing this effect at the beginnings of society. Language is then most barren; the stock of proper names which have been invented for things, is small; and, at the same time, imagination exerts great influence over the conceptions of men, and their method of uttering them; so that, both from necessity and from choice, their speech will, at that period, abound in tropes. For the savage tribes of men are always much given to wonder and astonishment. Every new object surprises, terrifies, and makes a strong impression on their mind; they are governed by imagination and passion more than by reason; and, of course, their speech must be deeply tinged by their genius. In fact, we find, that this is the character of the American and Indian languages; bold, picturesque, and metaphorical; full of strong allusions to sensible qualities, and to such objects as struck them most in their wild and solitary life. An Indian chief makes a harangue to his tribe, in a style full of stronger metaphors than an European would use in an epic poem.

As language makes gradual progress towards refinement, almost every object comes to have a proper name given to it, and perspicuity and precision are more studied. But, still, for the reasons before given, borrowed words, or, as rhetoricians call them, tropes, must continue to occupy a considerable place. In every language, too, there are a multitude of words, which, though they were figurative in their first application to certain objects, yet, by long use, lose that figurative power wholly, and come to be considered as simple and literal expressions. In this case are the terms which I remarked before, as transferred from sensible qualities to the operations or qualities of the mind, a *piercing* judgment, a *clear* head, a *hard* heart, and the like. There are other words which remain in a sort of middle state; which have neither lost wholly their figurative application, nor yet retain so much of it, as to imprint any remarkable character of figured language on our style; such as these phrases, “apprehend one’s meaning”; “enter on a subject”; “follow out an argument”; “stir up strife”; and a great many more, of

which our language is full. In the use of such phrases, correct writers will always preserve a regard to the figure or allusion on which they are founded, and will be careful not to apply them in any way that is inconsistent with it. One may be “sheltered under the patronage of a great man”; but it were wrong to say, “sheltered under the mask of dissimulation”; as a mask conceals, but does not shelter. An object, in description, may be “clothed,” if you will, “with epithets”; but it is not so proper to speak of its being “clothed with circumstances”; as the word “circumstances” alludes to standing round, not to clothing. Such attentions as these, to the propriety of language, are requisite in every composition.

What has been said on this subject, tends to throw light on the nature of language in general; and will lead to the reasons, why tropes or figures contribute to the beauty and grace of style.

First, they enrich language, and render it more copious. By their means, words and phrases are multiplied for expressing all sorts of ideas; for describing even the minutest differences; the nicest shades and colours of thought; which no language could possibly do by proper words alone, without assistance from tropes.

Secondly, they bestow dignity upon style. The familiarity of common words, to which our ears are much accustomed, tends to degrade style. When we want to adapt our language to the tone of an elevated subject, we should be greatly at a loss, if we could not borrow assistance from figures; which, properly employed, have a similar effect on language, with what is produced by the rich and splendid dress of a person of rank; to create respect, and to give an air of magnificence to him who wears it. Assistance of this kind is often needed in prose compositions; but poetry could not subsist without it. Hence figures form the constant language of poetry. To say, that “the sun rises,” is trite and common; but it becomes a magnificent image when expressed, as Mr. Thomson has done:

But yonder comes the powerful king of day
Rejoicing in the east.——

To say, that “all men are subject alike to death,” presents only a vulgar idea; but it rises and fills the imagination, when painted thus by Horace.

Pallida mors æquo pulsat pede pauperum tabernas,
Regumque turres.

Or,

Omnes eodem cogimur: omnium
Versatur urna serius ocus
Sors exitura, et nos in eternum
Exsilium impositura cymbæ.

Bk. II, Ode 3⁹

In the third place, figures give us the pleasure of enjoying two objects presented together to our view, without confusion; the principal idea, which is the subject of the discourse, along with its accessory, which gives it the figurative dress. We see one thing in another, as Aristotle expresses it; which is always agreeable to the mind. For there is nothing with which the fancy is more delighted, than with comparisons, and resemblances of objects; and all tropes are founded upon some relation or analogy between one thing and another. When, for instance, in place of "youth," I say, the "morning of life"; the fancy is immediately entertained with all the resembling circumstances which presently occur between these two objects. At one moment, I have in my eye a certain period of human life, and a certain time of the day, so related to each other, that the imagination plays between them with pleasure, and contemplates two similar objects, in one view, without embarrassment or confusion. Not only so, but,¹⁰

In the fourth place, figures are attended with this further advantage, of giving us frequently a much clearer and more striking view of the principal object, than we could have if it were expressed in simple terms, and divested of its accessory idea. This is, indeed, their principal advantage, in virtue of which, they are very properly said to illustrate a subject, or to throw a light upon it. For they exhibit the object, on which they are employed, in a picturesque form; they

⁹With equal pace, impartial fate
Knocks at the palace, as the cottage gate.

Or

We all must tread the paths of fate;
And ever shakes the mortal urn;
Whose lot embarks us, soon or late,
On Charon's boat; ah! never to return.

—FRANCIS, [Au.]

¹⁰Blair's punctuation, used throughout this selection. [Ed.]

can render an abstract conception, in some degree, an object of sense; they surround it with such circumstances, as enable the mind to lay hold of it steadily, and to contemplate it fully. "Those persons," says one, "who gain the hearts of most people, who are chosen as the companions of their softer hours, and their reliefs from anxiety and care, are seldom persons of shining qualities, or strong virtues: it is rather the soft green of the soul, on which we rest our eyes, that are fatigued with beholding more glaring objects." Here, by a happy allusion to a colour, the whole conception is conveyed clear and strong to the mind in one word. By a well chosen figure, even conviction is assisted, and the impression of a truth upon the mind, made more lively and forcible than it would otherwise be. As in the following illustration of Dr. Young's: "When we dip too deep in pleasure, we always stir a sediment that renders it impure and noxious": or in this, "A heart boiling with violent passions, will always send up infatuating fumes to the head." An image that presents so much congruity between a moral and a sensible idea, serves, like an argument from analogy, to enforce what the author asserts, and to induce belief.

Besides, whether we are endeavouring to raise sentiments of pleasure or aversion, we can always heighten the emotion by the figures which we introduce; leading the imagination to a train, either of agreeable or disagreeable, of exalting or debasing ideas, correspondent to the impression which we seek to make. When we want to render an object beautiful or magnificent, we borrow images from all the most beautiful or splendid scenes of nature; we thereby naturally throw a lustre over our object; we enliven the reader's mind, and dispose him to go along with us, in the gay and pleasing impressions which we give him of the subject. This effect of figures is happily touched in the following lines of Dr. Akenside, and illustrated by a very sublime figure.

—Then the inexpressive strain
Diffuses its enchantment. Fancy dreams
Of sacred fountains and Elysian groves,
And vales of bliss. The intellectual power
Bends from his awful throne a wond'ring ear,
And smiles. —

Pleasures of Imagination. i. 124.

What I have now explained, concerning the use and effects of figures, naturally leads us to reflect on the wonderful power of language; and, indeed, we cannot reflect on it without the highest admiration. What a fine vehicle is it now become for all the conceptions of the human mind; even for the most subtle and delicate workings of the imagination! What a pliant and flexible instrument in the hand of one who can employ it skilfully; prepared to take every form which he chooses to give it! Not content with a simple communication of ideas and thought, it paints those ideas to the eye; it gives colouring and relief, even to the most abstract conceptions. In the figures which it uses, it sets mirrors before us, where we may behold objects, a second time, in their likeness. It entertains us, as with a succession of the most splendid pictures; disposes, in the most artificial manner, of the light and shade, for viewing every thing to the best advantage; in fine, from being a rude and imperfect interpreter of men's wants and necessities, it has now passed into an instrument of the most delicate and refined luxury.

To make these effects of figurative language sensible, there are few authors in the English language, whom I can refer to with more advantage than Mr. Addison, whose imagination is, at once, remarkably rich, and remarkably correct and chaste. When he is treating, for instance, of the effect which light and colours have to entertain the fancy, considered in Mr. Locke's view of them as secondary qualities, which have no real existence in matter, but are only ideas in the mind, with what beautiful painting has he adorned this philosophic speculation! "Things," says he, "would make but a poor appearance to the eye, if we saw them only in their proper figures and motions. Now, we are every where entertained with pleasing shows and apparitions; we discover imaginary glories in the heavens, and in the earth, and see some of this visionary beauty poured out upon the whole creation. But what a rough unsightly sketch of nature should we be entertained with, did all her colouring disappear, and the several distinctions of light and shade vanish? In short, our souls are, at present, delightfully lost, and bewildered in a pleasing delusion; and we walk about, like the enchanted

hero of a romance, who sees beautiful castles, woods and meadows; and at the same time, hears the warbling of birds, and the purling of streams; but, upon the finishing of some secret spell, the fantastic scene breaks up, and the disconsolate knight finds himself on a barren heath, or in a solitary desert. It is not improbable, that something like this may be the state of the soul after its first separation, in respect of the images it will receive from matter." [No. 413, Spectator]

Having thus explained, at sufficient length, the origin, the nature, and the effects of tropes, I should proceed next to the several kinds and divisions of them. But, in treating of these, were I to follow the common track of the scholastic writers on rhetoric, I should soon become tedious, and, I apprehend, useless, at the same time. Their great business has been, with a most patient and frivolous industry, to branch them out, under a vast number of divisions, according to all the several modes in which a word may be carried from its literal meaning, into one that is figurative, without doing any more; as if the mere knowledge of the names and classes of all the tropes that can be formed, could be of any advantage towards the proper or graceful use of language. All that I purpose is, to give, in a few words, before finishing this lecture, a general view of the several sources whence the tropical meaning of words is derived; after which I shall, in subsequent lectures, descend to a more particular consideration of some of the most considerable figures of speech, and such as are in most frequent use; by treating of which, I shall give all the instruction I can concerning the proper employment of figurative language, and point out the errors and abuses which are apt to be committed in this part of style.

All tropes, as I before observed, are founded on the relation which one object bears to another; in virtue of which, the name of the one can be substituted instead of the name of the other; and by such a substitution, the vivacity of the idea is commonly meant to be increased. These relations, some more, some less intimate, may all give rise to tropes. One of the first and most obvious relations is, that between a cause and its effect. Hence, in figurative language, the cause is, sometimes, put for the effect. Thus, Mr. Addison, writing of Italy:

Blossoms and fruits, and flowers, together rise,
And the whole year in gay confusion lies:

where the "whole year" is plainly intended to signify the effects or productions of all the seasons of the year. At other times, again, the effect is put for the cause; as, "grey hairs" frequently for old age, which causes grey hairs; and "shade" for trees that produce the shade. The relation between the container and the thing contained, is also so intimate and obvious, as naturally to give rise to tropes:

— Ille impiger hausit
Spumantem pateram, et pleno se proluit auro.
Æneid i. 738.¹¹

Where every one sees, that the cup and the gold are put for the liquor that was contained in the golden cup. In the same manner, the name of any country is often used to denote the inhabitants of that country; and heaven, very commonly employed to signify God, because he is conceived as dwelling in heaven. To implore the assistance of heaven is the same as to implore the assistance of God. The relation betwixt any established sign, and the thing signified, is a further source of tropes. Hence,

Cedant arma togæ; concedat laurea linguæ.¹²

The "toga," being the badge of the civil professions, and the "laurel," of military honours, the badge of each is put for the civil and military characters themselves. "To assume the sceptre," is a common phrase for entering on royal authority. To tropes, founded on these several relations, of cause and effect, container and contained, sign and thing signified, is given the name of metonymy.

When the trope is founded on the relation between an antecedent and a consequent, or what goes before, and immediately follows, it is then called a metalepsis; as in the Roman phrase of "fuit," or "vixit," to express that one was dead. "Fuit Ilium et ingens gloria Dardanidum," signifies, that the glory of Troy is now no more.

When the whole is put for a part, or a part for

¹¹"He drained the foaming cup and drowned himself in gold." [Ed.]

¹²"Let arms yield to the toga; let the laurel yield to language." [Ed.]

the whole; a genus for a species, or a species for a genus; the singular for the plural, or the plural for the singular number; in general, when any thing less, or any thing more, is put for the precise object meant; the figure is then called a synecdoche. It is very common, for instance, to describe a whole object by some remarkable part of it; as when we say, "A fleet of so many sail," in the place of "ships"; when we use the "head" for the "person," the "pole" for the "earth," the "waves" for the "sea." In like manner, an attribute may be put for a subject; as "youth and beauty," for the "young and beautiful"; and sometimes a subject for its attribute. But it is needless to insist longer on this enumeration, which serves little purpose. I have said enough to give an opening into that great variety of relations between objects, by means of which, the mind is assisted to pass easily from one to another; and by the name of the one, understands the other to be meant. It is always some accessory idea, which recalls the principal to the imagination; and commonly recalls it with more force, than if the principal idea had been expressed.

The relation which is far the most fruitful of tropes, I have not yet mentioned; that is, the relation of similitude and resemblance. On this is founded, what is called the metaphor: when, in place of using the proper name of any object, we employ, in its place, the name of some other which is like it, which is a sort of picture of it, and which thereby awakens the conception of it with more force or grace. This figure is more frequent than all the rest put together; and the language, of both prose and verse, owes to it much of its elegance and grace. . . .

Lecture XXV

ELOQUENCE, OR PUBLIC SPEAKING— HISTORY OF ELOQUENCE— GRECIAN ELOQUENCE— DEMOSTHENES

Having finished that part of the course which relates to language and style, we are now to ascend a step higher, and to examine the subjects upon which style is employed. I begin with what is properly called eloquence, or public speaking. In

treating of this, I am to consider the different kinds and subjects of public speaking; the manner suited to each; the proper distribution and management of all the parts of a discourse; and the proper pronunciation or delivery of it. But before I enter on any of these heads, it may be proper to take a view of the nature of eloquence in general, and of the state in which it has subsisted in different ages and countries. This will lead into some detail; but I hope a useful one; as in every art it is of great consequence to have a just idea of the perfection of that art, of the end at which it aims, and of the progress which it has made among mankind.

Of eloquence, in particular, it is the more necessary to ascertain the proper notion, because there is not any thing concerning which false notions have been more prevalent. Hence, it has been so often, and is still at this day in disrepute with many. When you speak to a plain man of eloquence, or in praise of it, he is apt to hear you with very little attention. He conceives eloquence to signify a certain trick of speech; the art of varnishing weak arguments plausibly; or of speaking so as to please and tickle the ear. "Give me good sense," says he, "and keep your eloquence for boys." He is in the right, if eloquence were what he conceives it to be. It would be then a very contemptible art indeed, below the study of any wise or good man. But nothing can be more remote from truth. To be truly eloquent, is to speak to the purpose. For the best definition which, I think, can be given of eloquence, is the art of speaking in such a manner as to attain the end for which we speak. Whenever a man speaks or writes, he is supposed, as a rational being, to have some end in view; either to inform, or to amuse, or to persuade, or, in some way or other, to act upon his fellow-creatures. He who speaks, or writes, in such a manner as to adapt all his words most effectually to that end, is the most eloquent man. Whatever then the subject be, there is room for eloquence; in history, or even in philosophy, as well as in orations. The definition which I have given of eloquence, comprehends all the different kinds of it; whether calculated to instruct, to persuade, or to please. But, as the most important subject of discourse is action, or conduct, the power of eloquence chiefly appears

when it is employed to influence conduct, and persuade to action. As it is principally with reference to this end, that it becomes the object of art, eloquence may, under this view of it, be defined, the Art of Persuasion.

This being once established, certain consequences immediately follow, which point out the fundamental maxims of the art. It follows clearly, that, in order to persuade, the most essential requisites are, solid argument, clear method, a character of probity appearing in the speaker, joined with such graces of style and utterance, as shall draw our attention to what he says. Good sense is the foundation of all. No man can be truly eloquent without it; for fools can persuade none but fools. In order to persuade a man of sense, you must first convince him; which is only to be done, by satisfying his understanding of the reasonableness of what you propose to him.

This leads me to observe, that convincing and persuading, though they are sometimes confounded, import, notwithstanding, different things, which it is necessary for us, at present, to distinguish from each other. Conviction affects the understanding only; persuasion, the will and the practice. It is the business of the philosopher to convince me of truth; it is the business of the orator to persuade me to act agreeably to it, by engaging my affections on its side. Conviction and persuasion do not always go together. They *ought*, indeed, to go together; and *would* do so, if our inclination regularly followed the dictates of our understanding. But as our nature is constituted, I may be convinced that virtue, justice, or public spirit, are laudable, while, at the same time, I am not persuaded to act according to them. The inclination may revolt, though the understanding be satisfied; the passions may prevail against the judgment. Conviction is, however, always one avenue to the inclination, or heart; and it is that which an orator must first bend his strength to gain: for no persuasion is likely to be stable, which is not founded on conviction. But, in order to persuade, the orator must go farther than merely producing conviction; he must consider man as a creature moved by many different springs, and must act upon them all. He must address himself to the passions; he must paint to the fancy, and touch the heart; and hence, besides

solid argument, and clear method, all the conciliating and interesting arts, both of composition and pronunciation, enter into the idea of eloquence.

An objection may, perhaps, hence be formed against eloquence; as an art which may be employed for persuading to ill, as well as to good. There is no doubt that it may; and so reasoning may also be, and too often is employed, for leading men into error. But who would think of forming an argument from this against the cultivation of our reasoning powers? Reason, eloquence, and every art which ever had been studied among mankind, may be abused, and may prove dangerous in the hands of bad men; but it were perfectly childish to contend, that, upon this account, they ought to be abolished. Give truth and virtue the same arms which you give vice and falsehood, and the former are likely to prevail. Eloquence is no invention of the schools. Nature teaches every man to be eloquent, when he is much in earnest. Place him in some critical situation; let him have some great interest at stake, and you will see him lay hold of the most effectual means of persuasion. The art of oratory proposes nothing more than to follow out that track which nature has first pointed out. And the more exactly that this track is pursued, the more that eloquence is properly studied, the more shall we be guarded against the abuse which bad men make of it, and enabled the better to distinguish between true eloquence and the tricks of sophistry.

We may distinguish three kinds, or degrees, of eloquence. The first, and lowest, is that which aims only at pleasing the hearers. Such, generally, is the eloquence of panegyrics, inaugural orations, addresses to great men, and other harangues of this sort. This ornamental sort of composition is not altogether to be rejected. It may innocently amuse and entertain the mind; and it may be mixed, at the same time, with very useful sentiments. But it must be confessed, that where the speaker has no further aim than merely to shine and to please, there is great danger of art being strained into ostentation, and of the composition becoming tiresome and languid.

A second and a higher degree of eloquence is when the speaker aims not merely to please, but also to inform, to instruct, to convince: when his

art is exerted in removing prejudices against himself and his cause, in choosing the most proper arguments, stating them with the greatest force, arranging them in the best order, expressing and delivering them with propriety and beauty; and thereby disposing us to pass that judgment, or embrace that side of the cause, to which he seeks to bring us. Within this compass, chiefly, is employed the eloquence of the bar.

But there is a third, and still higher degree of eloquence, wherein a greater power is exerted over the human mind; by which we are not only convinced, but are interested, agitated, and carried along with the speaker; our passions are made to rise together with his; we enter into all his emotions; we love, we detest, we resent, according as he inspires us; and are prompted to resolve, or to act, with vigour and warmth. Debate in popular assemblies opens the most illustrious field to this species of eloquence; and the pulpit, also, admits it.

I am here to observe, and the observation is of consequence, that the high eloquence which I have last mentioned, is always the offspring of passion. By passion, I mean that state of the mind in which it is agitated, and fired, by some object it has in view. A man may convince, and even persuade others to act, by mere reason and argument. But that degree of eloquence which gains the admiration of mankind, and properly denominates one an orator, is never found without warmth or passion. Passion, when in such a degree as to rouse and kindle the mind, without throwing it out of the possession of itself, is universally found to exalt all the human powers. It renders the mind infinitely more enlightened, more penetrating, more vigorous and masterly, than it is in its calm moments. A man, actuated by a strong passion, becomes much greater than he is at other times. He is conscious of more strength and force; he utters greater sentiments, conceives higher designs, and executes them with a boldness and a felicity of which, on other occasions, he could not think himself capable. But chiefly, with respect to persuasion, is the power of passion felt. Almost every man, in passion, is eloquent. Then, he is at no loss for words and arguments. He transmits to others, by a sort of contagious sympathy, the warm sentiments

which he feels; his looks and gestures are all persuasive; and nature here shows herself infinitely more powerful than art. This is the foundation of that just and noted rule: "Si vis me flere, dolendum est primum ipse tibi."¹³

This principle being once admitted, that all high eloquence flows from passion, several consequences follow, which deserve to be attended to; and the mention of which will serve to confirm the principle itself. For hence the universally acknowledged effect of enthusiasm, or warmth of any kind, in public speakers, for affecting their audience. Hence all laboured declamation, and affected ornaments of style, which show the mind to be cool and unmoved, are so inconsistent with persuasive eloquence. Hence all studied prettinesses, in gesture or pronunciation, detract so greatly from the weight of a speaker. Hence a discourse that is read, moves us less than one that is spoken, as having less the appearance of coming warm from the heart. Hence, to call a man cold, is the same thing as to say that he is not eloquent. Hence a sceptical man, who is always in suspense, and feels nothing strongly; or a cunning mercenary man, who is suspected rather to assume the appearance of passion than to feel it; have so little power over men in public speaking. Hence, in fine, the necessity of being, and being believed to be, disinterested, and in earnest, in order to persuade.

These are some of the capital ideas which have occurred to me, concerning eloquence in general; and with which I have thought proper to begin, as the foundation of much of what I am afterwards to suggest. From what I have already said, it is evident that eloquence is a high talent, and of great importance in society; and that it requires both natural genius, and much improvement from art. Viewed as the art of persuasion, it requires, in its lowest state, soundness of understanding, and considerable acquaintance with human nature; and, in its higher degree, it requires, moreover, strong sensibility of mind, a warm and lively imagination, joined with correctness of judgment, and an extensive command of the power of language; to which must also be added, the graces of

¹³"If you want me to weep, it has to be sorrowful for you first." [Ed.]

pronunciation and delivery.— Let us next proceed to consider in what state eloquence has subsisted in different ages and nations.

It is an observation made by several writers, that eloquence is to be looked for only in free states. Longinus, in particular, at the end of his treatise on the sublime, when assigning the reason why so little sublimity of genius appeared in the age wherein he lived, illustrates this observation with a great deal of beauty. Liberty, he remarks, is the nurse of true genius; it animates the spirit, and invigorates the hopes of men; excites honourable emulation, and a desire of excelling in every art. All other qualifications, he says, you may find among those who are deprived of liberty; but never did a slave become an orator; he can only be a pompous flatterer. Now, though this reasoning be, in the main, true; it must, however, be understood with some limitations. For, under arbitrary governments, if they be of the civilized kind, and give encouragement to the arts, ornamented eloquence may flourish remarkably. Witness France at this day, where ever since the reign of Louis XIV, more of what may justly be called eloquence, within a certain sphere, is to be found, than perhaps, in any other nation in Europe; though freedom be enjoyed by some nations in a much greater degree. The French sermons, and orations pronounced on public occasions, are not only polite and elegant harangues, but several of them are uncommonly spirited, are animated with bold figures, and rise to a degree of the sublime. Their eloquence, however, in general, must be confessed to be of the flowery, rather than the vigorous kind; calculated more to please and sooth, than to convince and persuade. High, manly, and forcible eloquence, is, indeed, to be looked for only, or chiefly, in the regions of freedom. Under arbitrary governments, besides the general turn of softness and effeminacy which such governments may be justly supposed to give to the spirit of a nation, the art of speaking cannot be such an instrument of ambition, business, and power, as it is in democratical states. It is confined within a narrower range; it can be employed only in the pulpit, or at the bar; but is excluded from those great scenes of public business, where the spirits of men have the freest exertion; where important affairs are

transacted, and persuasion, of course, is more seriously studied. Wherever man can acquire most power over man by means of reason and discourse, which certainly is under a free state of government, there we may naturally expect that true eloquence will be best understood, and carried to the greatest height.

Hence, in tracing the rise of oratory, we need not attempt to go far back into the early ages of the world, or search for it among the monuments of eastern or Egyptian antiquity. In those ages, there was, indeed, an eloquence of a certain kind; but it approached nearer to poetry, than to what we properly call oratory. There is reason to believe, as I formerly showed, that the language of the first ages was passionate and metaphorical; owing partly to the scanty stock of words, of which speech then consisted; and partly to the tincture which language naturally takes from the savage and uncultivated state of men, agitated by unrestrained passions, and struck by events, which to them are strange and surprising. In this state, rapture and enthusiasm, the parents of poetry, had an ample field. But while the intercourse of men was as yet unfrequent, and force and strength were the chief means employed in deciding controversies, the arts of oratory and persuasion, of reasoning and debate, could be but little known. The first empires that arose, the Assyrian and Egyptian, were of the despotic kind. The whole power was in the hands of one, or at most of a few. The multitude were accustomed to a blind reverence; they were led, not persuaded; and none of those refinements of society, which make public speaking an object of importance, were as yet introduced.

It is not till the rise of the Grecian republics, that we find any remarkable appearances of eloquence as the art of persuasion; and these gave it such a field as it never had before, and perhaps, has never had again since that time. And, therefore, as the Grecian eloquence has ever been the object of admiration to those who have studied the powers of speech, it is necessary that we fix our attention, for a little, on this period.

Greece was divided into a multitude of petty states. These were governed at first by kings, who were called tyrants; on whose expulsion from all these states, there sprung up a great

number of democratical governments, founded nearly on the same plan, animated by the same high spirit of freedom, mutually jealous, and rivals of one another. We may compute the flourishing period of those Grecian states to have lasted from the battle of Marathon, till the time of Alexander the Great, who subdued the liberties of Greece; a period which comprehends about 150 years, and within which are to be found most of their celebrated poets and philosophers, but chiefly their orators; for though poetry and philosophy were not extinct among them after that period, yet eloquence hardly made any figure.

Of these Grecian republics, the most noted by far, for eloquence, and, indeed, for arts of every kind, was that of Athens. The Athenians were an ingenious, quick, sprightly people; practised in business, and sharpened by frequent and sudden revolutions, which happened in their government. The genius of their government was altogether democratical; their legislature consisted of the whole body of the people. They had, indeed, a senate of five hundred; but in the general convention of the citizens was placed the last resort; and affairs were conducted there, entirely, by reasoning, speaking, and a skilful application to the passions and interests of a popular assembly. There laws were made, peace and war decreed, and thence the magistrates were chosen. For the highest honours of the state were alike open to all; nor was the meanest tradesman excluded from a seat in their supreme courts. In such a state, eloquence, it is obvious, would be much studied, as the surest means of rising to influence and power; and what sort of eloquence? Not that which was brilliant merely, and showy, but that which was found, upon trial, to be most effectual for convincing, interesting, and persuading the hearers. For there, public speaking was not a mere competition for empty applause, but a serious contention for that public leading, which was the great object both of the men of ambition, and the men of virtue.

In so enlightened and acute a nation, where the highest attention was paid to every thing elegant in the arts, we may naturally expect to find the public taste refined and judicious. Accordingly, it was improved to such a degree, that the Attic taste and Attic manner have passed into a proverb. It is true, that ambitious demagogues,

and corrupt orators, did sometimes dazzle and mislead the people, by a showy but false eloquence; for the Athenians, with all their acuteness, were factious and giddy, and great admirers of every novelty. But when some important interest drew their attention, when any great danger roused them, and put their judgment to a serious trial, they commonly distinguished, very justly, between genuine and spurious eloquence: and hence Demosthenes triumphed over all his opponents; because he spoke always to the purpose, affected no insignificant parade of words, used weighty arguments, and showed them clearly where their interest lay. In critical conjunctures of the state, when the public was alarmed with some pressing danger, when the people were assembled, and proclamation was made by the crier, for any one to rise and deliver his opinion upon the present situation of affairs, empty declamation and sophistical reasoning would not only have been hissed, but resented and punished by an assembly so intelligent and accustomed to business. Their greatest orators trembled on such occasions, when they rose to address the people, as they knew they were to be held answerable for the issue of the counsel which they gave. The most liberal endowments of the greatest princes never could found such a school for true oratory, as was formed by the nature of the Athenian republic. Eloquence there sprung, native and vigorous, from amidst the contentions of faction and freedom, of public business and of active life; and not from that retirement and speculation, which we are apt sometimes to fancy more favourable to eloquence than they are found to be. . . .

Lecture XXXII

CONDUCT OF A DISCOURSE — THE ARGUMENTATIVE PART — THE PATHETIC PART — THE PERORATION

In treating of the constituent parts of a regular discourse or oration, I have already considered the introduction, the division, and the narration or explication. I proceed next to treat of the argumentative or reasoning part of a discourse. In

whatever place, or on whatever subject one speaks, this, beyond doubt, is of the greatest consequence. For the great end for which men speak on any serious occasion, is to convince their hearers of something being either true, or right, or good: and, by means of this conviction, to influence their practice. Reason and argument make the foundation, as I have often inculcated, of all manly and persuasive eloquence.

Now, with respect to arguments, three things are requisite. First, the invention of them; secondly, the proper disposition and arrangement of them; and thirdly, the expressing of them in such a style and manner, as to give them their full force.

The first of these, invention, is, without doubt, the most material, and the groundwork of the rest. But, with respect to this, I am afraid it is beyond the power of art to give any real assistance. Art cannot go so far, as to supply a speaker with arguments on every cause, and every subject; though it may be of considerable use in assisting him to arrange and express those, which his knowledge of the subject has discovered. For it is one thing to discover the reasons that are most proper to convince men, and another, to manage these reasons with the most advantage. The latter is all that rhetoric can pretend to.

The ancient rhetoricians did indeed attempt to go much farther than this. They attempted to form rhetoric into a more complete system; and professed not only to assist public speakers in setting off their arguments to most advantage; but to supply the defect of their invention, and to teach them where to find arguments on every subject and cause. Hence their doctrine of topics, or “loci communes,” and “sedes argumentorum,” which makes so great a figure in the writings of Aristotle, Cicero, and Quintilian. These topics, or loci, were no other than general ideas applicable to a great many different subjects, which the orator was directed to consult, in order to find out materials for his speech. They had their intrinsic and extrinsic loci; some loci that were common to all the different kinds of public speaking, and some that were peculiar to each. The common or general loci, were such as genus and species, cause and effect, antecedents and consequents, likeness and contrariety, definition, circum-

stances of time and place; and a great many more of the same kinds. For each of the different kinds of public speaking, they had their “loci personarum,” and “loci rerum”: as in demonstrative orations, for instance, the heads from which any one could be decried or praised; his birth, his country, his education, his kindred, the qualities of his body, the qualities of his mind, the fortune he enjoyed, the stations he had filled, &c. and in deliberative orations, the topics that might be used in recommending any public measure, or dissuading from it; such as, honesty, justice, facility, profit, pleasure, glory, assistance from friends, mortification to enemies, and the like.

The Grecian sophists were the first inventors of this artificial system of oratory; and they shewed a prodigious subtilty and fertility in the contrivance of these loci. Succeeding rhetoricians, dazzled by the plan, wrought them up into so regular a system, that one would think they meant to teach how a person might mechanically become an orator, without any genius at all. They give him receipts for making speeches, on all manner of subjects. At the same time, it is evident, that though this study of common places might produce very showy academical declamations, it could never produce useful discourses on real business. The loci indeed supplied a most exuberant fecundity of matter. One who had no other aim but to talk copiously and plausibly, by consulting them on every subject, and laying hold of all that they suggested, might discourse without end; and that too, though he had none but the most superficial knowledge of his subject. But such discourse could be no other than trivial. What is truly solid and persuasive, must be drawn “*ex visceribus causæ*,” from a thorough knowledge of the subject, and profound meditation on it. They who would direct students of oratory to any other sources of argumentation, only delude them; and by attempting to render rhetoric too perfect an art, they render it, in truth, a trifling and childish study.

On this doctrine, therefore, of the rhetorical loci, or topics, I think it superfluous to insist. If any think that the knowledge of them may contribute to improve their invention, and extend their views, they may consult Aristotle and Quintilian, or what Cicero has written on this head, in

his Treatise *De Inventione*, his *Topica*, and second book *De Oratore*. But when they are to prepare a discourse, by which they propose to convince a judge, or to produce any considerable effect upon an assembly, I would advise them, to lay aside their common places, and to think closely of their subject. Demosthenes, I dare say, consulted none of the loci, when he was inciting the Athenians to take arms against Philip; and where Cicero has had recourse to them, his orations are so much the worse on that account.

I proceed to what is of more real use, to point out the assistance that can be given, not with respect to the invention, but with respect to the disposition and conduct of arguments. . . .

After due attention given to the proper arrangement of arguments, what is next requisite for their success is to express them in such a style, and to deliver them in such a manner, as shall give them full force. On these heads I must refer the reader to the directions I have given in treating of style, in former lectures; and to the directions I am afterwards to give concerning pronunciation and delivery.

I proceed, therefore, next, to another essential part of discourse which I mentioned as the fifth in order, that is, the Pathetic; in which, if any where, eloquence reigns, and exerts its power. I shall not, in beginning this head, take up time in combating the scruples of those who have moved a question, whether it be consistent with fairness and candour in a public speaker, to address the passions of his audience? This is a question about words alone, and which common sense easily determines. In inquiries after mere truth, in matters of simple information and instruction, there is no question that the passions have no concern, and that all attempts to move them are absurd. Wherever conviction is the object, it is the understanding alone that is to be applied to. It is by argument and reasoning, that one man attempts to satisfy another of what is true, or right, or just; but if persuasion be the object, the case is changed. In all that relates to practice, there is no man who seriously means to persuade another, but addresses himself to his passions more or less; for this plain reason, that passions are the great springs of human action. The most virtuous

man in treating of the most virtuous subject, seeks to touch the heart of him to whom he speaks; and makes no scruple to raise his indignation at injustice, or his pity to the distressed, though pity and indignation be passions.

In treating of this part of eloquence, the ancients made the same sort of attempt as they employed with respect to the argumentative part, in order to bring rhetoric into a more perfect system. They inquired metaphysically into the nature of every passion; they gave a definition and description of it; they treated of its causes, its effects, and its concomitants; and thence deduced rules for working upon it. Aristotle in particular has, in his *Treatise upon Rhetoric*, discussed the nature of the passions with much profoundness and subtilty; and what he has written on that head may be read with no small profit, as a valuable piece of moral philosophy; but whether it will have any effect in rendering an orator more pathetic, is to me doubtful. It is not, I am afraid, any philosophical knowledge of the passions, that can confer this talent. We must be indebted for it to nature, to a certain strong and happy sensibility of mind; and one may be a most thorough adept in all the speculative knowledge that can be acquired concerning the passions, and remain at the same time a cold and dry speaker. The use of rules and instructions on this or any other part of oratory, is not to supply the want of genius, but to direct it, where it is found, into its proper channel; to assist it in exerting itself with most advantage, and to prevent the errors and extravagancies into which it is sometimes apt to run. On the head of the pathetic, the following directions appear to me to be useful.

The first is, to consider carefully, whether the subject admit the pathetic, and render it proper; and if it does, what part of the discourse is the most proper for attempting it. To determine these points belongs to good sense; for it is evident that there are many subjects which admit not the pathetic at all, and that even in those that are susceptible of it, an attempt to excite the passions in the wrong place, may expose an orator to ridicule. All that can be said in general is, that if we expect any emotion which we raise to have a lasting effect, we must be careful to bring over to our side, in the first place, the understanding and

judgment. The hearers must be convinced that there are good and sufficient grounds for their entering with warmth into the cause. They must be able to justify to themselves the passion which they feel; and remain satisfied that they are not carried away by mere delusion. Unless their minds be brought into this state, although they may have been heated by the orator's discourse, yet as soon as he ceases to speak, they will resume their ordinary tone of thought, and the emotion which he has raised will die entirely away. Hence most writers assign the pathetic to the peroration or conclusion, as its natural place; and, no doubt, all other things being equal, this is the impression that one would choose to make last, leaving the minds of the hearers warmed with the subject, after argument and reasoning had produced their full effect: but wherever it is introduced, I must advise,

In the second place, never to set apart a head of a discourse, in form, for raising any passion; never give warning that you are about to be pathetic; and call upon your hearers, as is sometimes done to follow you in the attempt. This almost never fails to prove a refrigerant to passion. It puts the hearers immediately on their guard, and disposes them for criticising, much more than for being moved. The indirect method of making an impression is likely to be more successful; when you seize the critical moment that is favourable to emotion, in whatever part of the discourse it occurs, and then, after due preparation, throw in such circumstances, and present such glowing images, as may kindle their passions before they are aware. This can often be done more happily in a few sentences inspired by natural warmth, than in a long and studied address.

In the third place, it is necessary to observe that there is a great difference between showing the hearers that they ought to be moved, and actually moving them. This distinction is not sufficiently attended to, especially by preachers, who, if they have a head in their sermon to show how much we are bound to be grateful to God, or to be compassionate to the distressed, are apt to imagine this to be a pathetic part. Now, all the arguments you produce to show me, why it is my duty, why it is reasonable and fit that I should be

moved in a certain way, go no farther than to dispose or prepare me for entering into such an emotion; but they do not actually excite it. To every emotion or passion, Nature has adapted a set of corresponding objects; and without setting these before the mind, it is not in the power of any orator to raise that emotion. I am warmed with gratitude, I am touched with compassion, not when a speaker shows me that these are noble dispositions, and that it is my duty to feel them; of when he exclaims against me for my indifference and coldness. All this time, he is speaking only to my reason or conscience. He must describe the kindness and tenderness of my friend; he must set before me the distress suffered by the person for whom he would interest me; then, and not till then, my heart begins to be touched, my gratitude or my compassion begins to flow. The foundation, therefore, of all successful execution in the way of pathetic oratory is, to paint the object of that passion which we wish to raise, in the most natural and striking manner; to describe it with such circumstances as are likely to awaken it in the minds of others. Every passion is most strongly excited by sensation; as anger by the feeling of an injury, or the presence of the injurer. Next to the influence of sense, is that of memory; and next to memory, is the influence of the imagination. Of this power, therefore, the orator must avail himself, so as to strike the imagination of the hearers with circumstance which, in lustre and steadiness, resemble those of sensation and remembrance. In order to accomplish this,

In the fourth place, the only effectual method is, to be moved yourselves. There are a thousand interesting circumstances suggested by real passion, which no art can imitate, and no refinement can supply. There is obviously a contagion among the passions.

Ut ridentibus, arident, sic flentibus adflent,
Humani vultus.¹⁴

The internal emotion of the speaker adds a pathos to his words, his looks, his gestures, and his whole manner, which exerts a power almost irresistible over those who hear him. But on this

¹⁴“Laugh with those who laugh and weep with those who weep.” [Ed.]

point, though the most material of all, I shall not now insist, as I have often had occasion before to show, that all attempts towards becoming pathetic, when we are not moved ourselves, expose us to certain ridicule.

Quintilian, who discourses upon this subject with much good sense, takes pains to inform us of the method which he used, when he was a public speaker, for entering into those passions which he wanted to excite in others; setting before his own imagination what he calls “phantasiæ,” or “visiones,” strong pictures of the distress or indignities which they had suffered, whose cause he was to plead, and for whom he was to interest his hearers; dwelling upon these, and putting himself in their situation, till he was affected by a passion, similar to that which the persons themselves had felt. To this method he attributes all the success he had ever had in public speaking; and there can be no doubt, that whatever tends to increase an orator’s sensibility, will add greatly to his pathetic powers.

In the fifth place, it is necessary to attend to the proper language of the passions. We should observe in what manner any one expresses himself who is under the power of a real and a strong passion; and we shall always find his language unaffected and simple. It may be animated, indeed, with bold and strong figures, but it will have no ornament or finery. He is not at leisure to follow out the play of imagination. His mind being wholly seized by one object, which has heated it, he has no other aim, but to represent that in all its circumstances, as strongly as he feels it. This must be the style of the orator, when he would be pathetic; and this will be the style, if he speaks from real feeling; bold, ardent, simple. No sort of description will then succeed, but what is written *fervente calamo*.¹⁵ If he stay till he can work up his style, and polish and adorn it, he will infallibly cool his own ardour; and then he will touch the heart no more. His composition will become frigid; it will be the language of one who describes, but who does not feel. We must take notice, that there is a great difference between painting to the imagination, and painting to the heart. The one may be done coolly and at

¹⁵“With a fervent pen.” [Ed.]

leisure; the other must always be rapid and ardent. In the former, art and labour may be suffered to appear; in the latter, no effect can follow, unless it seem to be the work of nature only.

In the sixth place, avoid interweaving any thing of a foreign nature with the pathetic part of a discourse. Beware of all digressions, which may interrupt or turn aside the natural course of the passion, when once it begins to rise and swell. Sacrifice all beauties, however bright and showy, which would divert the mind from the principal object, and which would amuse the imagination, rather than touch the heart. Hence comparisons are always dangerous, and generally quite improper, in the midst of passion. Beware even of reasoning unseasonably; or, at least, of carrying on a long and subtile train of reasoning, on occasions when the principal aim is to excite warm emotions.

In the last place, never attempt prolonging the pathetic too much. Warm emotions are too violent to be lasting. Study the proper time of making a retreat; of making a transition from the passionate to the calm tone; in such a manner, however, as to descend without falling, by keeping up the same strain of sentiment that was carried on before, though now expressing it with more moderation. Above all things, beware of straining passion too far; of attempting to raise it to unnatural heights. Preserve always a due regard to what the hearers will bear; and remember, that he who stops not at the proper point; who attempts to carry them farther, in passion, than they will follow him, destroys his whole design. By endeavouring to warm them too much, he takes the most effectual method of freezing them completely.

Having given these rules concerning the pathetic, I shall give one example from Cicero, which will serve to illustrate several of them, particularly the last. It shall be taken from his last oration against Verres, wherein he describes the cruelty exercised by Verres, when governor of Sicily, against one Gavius, a Roman citizen. This Gavius had made his escape from prison, into which he had been thrown by the governor; and when just embarked at Messina, thinking himself now safe, had uttered some threats, that when he had once arrived at Rome, Verres should hear of

him, and be brought to account for having put a Roman citizen in chains. The chief magistrate of Messina, a creature of Verres's, instantly apprehends him, and gives information of his threatenings. The behaviour of Verres, on this occasion, is described in the most picturesque manner, and with all the colours which were proper, in order to excite against him the public indignation. He thanks the magistrate of Messina for his diligence. Filled with rage, he comes into the forum; orders Gavius to be brought forth, the executioners to attend, and against the laws, and contrary to the well-known privileges of a Roman citizen, commands him to be stripped naked, bound, and scourged publicly in a cruel manner. Cicero then proceeds thus; "Cædebatur virgis, in medio foro Messanæ, civis Romanus, Judices!" every word rises above another in describing this flagrant enormity; and "Judices," is brought out at the end with the greatest propriety; "Cædebatur virgis, in medio foro Messanæ, civis Romanus, Judices! cum interea, nullus gemitus, nulla vox alia istius miseri, inter dolorem crepitumque plagarum audiebatur, nisi hæc, civis Romanus sum. Hac se commemoratione civitatis, omnia verbera depulsum a corpore arbitrabatur. Eo non modo hoc non perfecit, ut virgarum vim deprecaretur, sed cum imploraret sæpius usurparetque nomen civis, crux, crux, inquam, infelici isto et ærumnoso, qui nunquam istam potestatem viderat, comparabatur. O nomen dulce libertatis! O jus eximium nostræ civitatis! O lex Porcia, legesque Sempronæ!—Huccine omnia tandem reciderunt, ut civis Romanus, in provincia populi Romani, in oppido fœderatorum, ab eo, qui beneficio populi Romani fasces et secures haberet, deligatus, in foro, virgis cæderetur!"¹⁶

¹⁶"In the midst of the marketplace of Messina, a Roman citizen, O judges! was cruelly scourged with rods; when in the meantime, amidst the noise of the blows which he suffered, no voice, no complaint of this unhappy man was heard, except this exclamation. Remember that I am a Roman citizen! By pleading this privilege of his birthright, he hoped to have stopped the strokes of the executioner. But his hopes were vain; for, so far was he from being able to obtain thereby any mitigation of his torture, that when he continued to repeat this exclamation, and to plead the rights of a citizen, a cross, a cross, I say, was preparing to be set up for the execution of this unfortunate person, who never before had beheld that instrument of cruel death. O sacred and honoured
