Nothing can be finer, nor better conducted than this passage. The circumstances are well chosen for exciting both the compassion of his hearers for Gavius, and their indignation against Verres. The style is simple; and the passionate exclamation, the address to liberty and the laws, is well timed, and in the proper style of passion. The orator goes on to exaggerate Verres's cruelty still farther, by another very striking circumstance. He ordered a gibbet to be erected for Gavius, not in a common place of execution, but just by the sea-shore, over against the coast of Italy. "Let him," said he, "who boasts so much of his being a Roman citizen, take a view from his gibbet of his own country. — This base insult over a dying man is the least part of his guilt. It was not Gavius alone that Verres meant to insult; but it was you, O Romans! it was every citizen who now hears me; in the person of Gavius, he scoffed at your rights and showed in what contempt he held the Roman name, and Roman liberties."

Hitherto all is beautiful, animated, pathetic;

name of liberty! O boasted and revered privilege of a Roman citizen! O ye Porcian and Sempronian laws! to this issue have ye all come, that a citizen of Rome, in a province of the Roman empire, within an allied city, should publicly, in a marketplace, be loaded with chains, and beaten with rods, at the command of one who, from the favour of the Roman people alone, derived all his authority and ensigns of power!" — c. 62–3. [Au.]

and the model would have been perfect, if Cicero had stopped at this point. But his redundant and florid genius carried him farther. He must needs interest not his hearers only, but the beasts, the mountains, and the stones, against Verres; "Si hæc non ad cives Romanos, non ad amicos nostræ civitatis, non ad eos qui populi Romani nomen audissent; denique si non ad homines, verum ad bestias, aut etiam, ut longius progrediar, si in aliqua desertissima solitudine, ad saxa et ad scopulos, hæc conqueri et deplorare vellem, tamen omnia muta atque inanima, tanta et tam indigna rerum atrocitate commoverentur."¹⁷ This, with all the deference due to so eloquent an orator, we must pronounce to be declamatory, not pathetic. This is straining the language of passion too far. Every hearer sees this immediately to be a studied figure of rhetoric; it may amuse him, but instead of inflaming him more, it, in truth, cools his passion. So dangerous it is to give scope to a flowery imagination, when one intends to make a strong and passionate impression.

¹⁷"Were I employed in lamenting those instances of an atrocious oppression and cruelty, not among an assembly of Roman citizens, not among the allies of our state, nor among those who had ever heard the name of the Roman people, not even among human creatures, but in the midst of the brute creation; and to go farther, were I pouring forth my lamentations to the stones, and to the rocks, in some remote and desert wilderness, even those mute and inanimate beings, would, at the recital of such shocking indignities, be thrown into commotion." — c. 67. [Au.]

Part Five

**NINETEENTH-CENTURY
RHETORIC**

Introduction

Before the end of the eighteenth century, the Industrial Revolution had begun to transform work, living conditions, population patterns, and economic standards in many parts of Europe and the United States. During the eighteenth century, calls to bring science into the curriculum went largely unheeded, but with the reforms of the nineteenth century, science and technology came into their own. The German university system made scientific research its top priority. Mathematics and science became standard subjects in the *gymnasien* (or “gymnasium,” a secondary school that prepares students for the university), along with composition in German and the study of polite literature, including some works in Latin and Greek. Composition in the vernacular replaced Latin composition throughout the Continent, and Latin disappeared almost completely from the public primary schools. In England, the aristocracy and bourgeoisie, abetted by the Church, remained reactionary about education for the working classes for a long time, fearing that such education would lead to social unrest. But even in England, reading, writing, and arithmetic became standard instructional fare for the lower classes, along with lessons in religion, citizenship, and the pleasures of sobriety. Secondary education was, by and large, for the commercial classes, whose members required solid literacy skills and the ability to do complex calculations. By the middle of the nineteenth century, Thomas Arnold, headmaster of Rugby School, had to defend the study of the classics against attacks by those favoring a more utilitarian curriculum. “Polite” classical education continued, needless to say, in schools for the upper classes and in the traditional universities.

Given all these events, rhetoric in the nineteenth century clearly had to respond to the changing nature of public education as much as to the internal economies of the discipline and related intellectual movements.

RICHARD WHATELY’S RHETORIC

The rhetorics of Sheridan, Blair, and Campbell were quite well suited to the curricular needs of most nineteenth-century schools in Europe and the United States, at least if they did not include many female or nonwhite students. From the modern

point of view, all these rhetorics play down the classical tradition. They retain enough references to the heroes of the classical tradition and enough illustrations translated from great Greek and Latin works to provide an overview for scholars not versed in the originals; they present an outline of classical rhetoric while loudly rejecting the *topoi* and syllogism as unscientific; and they defend what remains with arguments from psychology. All three are proudly modern in their inclusion of recent writers. Scotland, Ireland, and the United States in particular received two benefits from elocution and belles lettres: the high culture of imperial England, plus the satisfaction of rejecting the classical curriculum associated with English aristocratic education. Finally, the eighteenth-century rhetorics were easily adapted to the literacy needs of mass education in a commercial-industrial society. Apparently no new theory was needed; certainly none was forthcoming. The works of Blair and Campbell were often used together as course texts, and most new textbooks simply rang changes on their ideas and materials.

One significant new work was a rhetoric by Richard Whately (1787–1863), published in 1828. The full title is *Elements of Rhetoric, Comprising an Analysis of the Laws of Moral Evidence and of Persuasion, with Rules for Argumentative Composition and Elocution* (p. 1003). As the subtitle suggests, Whately picks up the dominant trends of the day—Campbell’s moral evidence, the epistemological focus on persuasion (as opposed to style), composition presumably written, and elocution clearly oral. But Whately’s contribution to rhetorical theory comes from the particular uses to which he puts these elements. Whately was an Anglican clergyman. He was educated at Oxford and remained there until 1831, when he became archbishop of Dublin. He published a considerable number of works on church-related subjects, and the *Elements of Rhetoric* is at least partly conceived as a textbook for divinity students. In it, Whately discusses the oral reading of the church service (harking back to seventeenth-century complaints); he focuses on argument to provide a defense for religion against the skepticism fired by science and rationalism; he returns to classical invention as a way to generate arguments about revealed truth—absolute truth—and is not concerned with the contingent and merely probable truths of the empiricists; and he emphasizes the need to consider the audience, namely, the generally uneducated congregation.

As scholar of rhetoric Douglas Ehninger points out in his introduction to *Elements of Rhetoric*, for these purposes Whately does not need belletrism, with its absorption in literary criticism and matters of taste and style. Instead, he begins with epistemological rhetoric, which leaves inquiry to science and looks chiefly at the psychology of audience response. Whately has no need of inquiry, either. He simply treats the revealed truth of religion as if it were analogous to the other kinds of knowledge that rhetoric deals with, knowledge discovered by the subject discipline of the discourse. Rhetoric must prove the truth thus discovered to people who have not themselves made the discovery. Truth does not convey itself, after all. Whately endorses Locke’s position that language is conventional, linked neither to external objects nor even to clear notions of complex ideas. Thus, Whately concludes, rhetoric requires a theory of argument, a form of invention concerned not with discovery but with ways of convincing. For this form of invention, he turns to Aristotle and Campbell.

Campbell (also a clergyman, as noted earlier) defends testimony as a form of moral evidence. By testimony, Campbell means not only the assertions of witnesses in the courtroom, but any assertion about experience—the assertions, for example, that constitute an historical record. Christianity, too, is dependent upon the truthfulness of testimony about the life and teachings of Jesus. Whately, following Campbell, analyzes testimony in great detail, seeking criteria for its truthfulness and examining the effects of different types of testimony on audiences. He bases this analysis on Aristotle's discussion of signs as a form of evidence and sets out in Aristotelian fashion some fourteen circumstances that determine the truthfulness or acceptability of testimony. In similar detail, he outlines the doctrines of Presumption—that is, the conditions that give one side in a dispute the *prima facie* look of correctness—and Burden of Proof—that is, the liabilities faced by the challenger of an accepted notion. Refutation receives the same kind of careful and detailed treatment. Whately thus provides the kind of treatise on practical psychological rhetoric for which Campbell and other eighteenth-century epistemological rhetoricians (like Priestley and Kames) laid the theoretical groundwork. Whately retains Campbell's distinction between conviction and persuasion, assigning reason to conviction and emotional appeals to persuasion. He always maintains that the way reasoning works to produce conviction is not necessarily logical or consistent. Thus it ought to be no embarrassment to recognize the legitimacy of appeals to the feelings, especially in a cause about which one can have no doubts.

Some of Whately's arguments are strained, marked more by apologetics than analysis. And in the effort to provide a complete rhetoric, he often resorts to sketchy, derivative comments. This is the case, for example, throughout his chapter on style. But Whately is by no means purely parochial. His contribution to rhetoric is not limited to ecclesiastical uses, and his book exerted a wide influence well into the twentieth century.

Whately influenced, among others, his student John Henry Newman. At Whately's urging, Newman wrote a long essay on Cicero in which he emphasizes the philosophical underpinnings of Cicero's rhetoric. Newman's argument in *A Grammar of Assent* (1870) relies on Whately's contention that religious belief is in fact a kind of knowledge quite similar in status to history, for both are based on faith, testimony, and probabilistic argument. Newman takes up the question of how people give credence to any proposition that is not subject to demonstration. He concludes that we assent quite justifiably to a great variety of propositions on the strength of accumulated probabilities, propositions for which we cannot adduce irrefutable proof or a clear logical argument. Newman extends Whately's theory by explaining, in more general terms, why rhetorical argument works.

THE DEVELOPMENT OF WOMEN'S RHETORICS

Secondary and university education for women was still a rarity. In 1851, Harriet Taylor Mill, ardent feminist and wife of John Stuart Mill, complained that women's education remained a matter of "superficial information" even when it was about serious subjects. The problem, says Mill, lies in the continued career restrictions women face: "High mental powers in women will be but an exceptional accident,

until every career is open to them and until they as well as men, are educated for themselves and for the world, not one sex for the other.”¹ In advocating women’s education in the early eighteenth century, however, Mary Astell had heralded a trend that was to gain momentum in the nineteenth century. After 1700, women’s access to literacy and further education began to improve quickly. In seventeenth-century England, according to social historian David Cressy, only 20 percent of women were sufficiently literate to sign their names, even though the Renaissance had improved opportunities for their education (see the introduction to Part Three). But, as historian Harvey Graff has shown, by the end of the eighteenth century at least 50 percent of women in Europe and North America were literate. Until the end of the nineteenth century, women were still almost completely excluded from university education and were barred from the professions of law, religion, and political office for which university training in rhetoric prepared men. But the question of how women should be educated continued to be debated, gaining political import from movements toward more democratic forms of government in Europe and the new United States, with the concomitant need for a literate citizenry.

In the eighteenth century, most people, male and female, who acquired literacy did so at home or in village schools that offered both informal instruction and what we would now call day care. People learned to read the Bible, newspapers, broadsides, popular literature, and business documents; to sign their names on legal forms; and to write personal letters. Formal schooling at the elementary and secondary levels, for both boys and girls, increased throughout the period, but this education did not include classical learning, literacy in Greek and Latin, or formal training in rhetoric, except in a few elite schools for boys destined for the university. The exceptional women who sought university education before the end of the nineteenth century often faced serious obstacles even to acquiring adequate preparation for postsecondary work, as many of their autobiographical accounts testify.

One such nineteenth-century aspirant, Anna Julia Cooper, was allowed to enroll in a secondary school where male students prepared for college training for the ministry. A male teacher sympathetic to Cooper’s ambitions invited her to join his class in Greek. Her thoughts upon “humbly” accepting this invitation eloquently underline the barriers faced by women seeking higher education:

A boy, however meager his equipment and shallow his pretensions, had only to declare a floating intention to study theology and he could get all the support, encouragement and stimulus he needed, be absolved from work and invested beforehand with all the dignity of his far away office. While a self-supporting girl had to struggle on by teaching in the summer and working after school hours to keep up with her board bills, and actually to fight her way against positive discouragements to the higher education; till one such girl one day flared out and told the principal “the only mission opening before a girl in his school was to marry one of those candidates.” He said he didn’t know but it was. And when at last that same girl announced her desire and intention to go to college it was received with about the same incredulity and dismay as if a brass button on one of those

¹Harriet Taylor Mill, “Enfranchisement of Women,” in *John Stuart Mill and Harriet Taylor Mill: Essays on Sex Equality* (1851; rpt., ed. A. S. Rossi, Chicago: University of Chicago Press, 1970), pp. 112–13.

candidate's coats had propounded a new method for squaring the circle or trisecting the arch.²

Anna Julia Cooper persevered. She earned a B.A. and an M.A. from Oberlin College and was one of the first African American women to earn a Ph.D. (from the Sorbonne, at the age of sixty-seven, in 1925).

By the end of the nineteenth century, American women did have some access to higher education, both in the few coeducational schools, such as Oberlin, Iowa, and Cornell, and in women's colleges such as Mount Holyoke, Vassar, Smith, and Wellesley. Women in these schools could study rhetoric devoted in the classical spirit to public address on issues of civic importance. Moreover, they could study with a growing number of gifted women teachers. For example, Gertrude Buck, who held a Ph.D. in English and taught at Vassar, published a textbook, *Argumentative Writing*, in 1899, in which she describes a course she offered with a professor of economics. The young women in the course researched and debated topics concerning "The Relation of the State to Monopolies," such as "The profits of the railroads are excessive" and "The public should own and control the telephone service." These would seem to be topics to engage future public leaders, not just those who hoped merely to marry the leaders.

Not surprisingly, as women's education improved, women increasingly began to speak in public and to reflect on their rhetorical practices. These practices were non-traditional by definition, since women were not supposed to speak in public. Hence, as speech communication scholar Karlyn Kohrs Campbell has suggested, women's rhetoric was based not on culturally dominant values and well-established occasions for oratory but on strategies "to subvert popular belief and to overcome unusually significant persuasive obstacles, such as prohibitions against speaking itself and stereotypes that reject [women] as credible or authoritative."³

The spread of Protestant Christianity in the eighteenth and nineteenth centuries aided women's efforts to become better educated and to achieve public voices. First, Protestantism encouraged women to be literate so that they could read the Bible. In addition, several Protestant denominations were spread through the efforts of itinerant preachers who exhorted crowds extemporaneously, using deliberately colloquial, earthy, moving language, and a number of these preachers were women. Some Protestant sects also encouraged social action on behalf of the poor, prostitutes, slaves, and other abused groups. Given this social action agenda, preaching sometimes shaded over into political oratory. Women who addressed political issues, however, often retained a religious orientation and relied heavily on religious justifications for their right to speak. The social evils they attacked were, they claimed, so offensive to God that pious Christian women must speak out, even at risk of social censure. This stance was needed because, as historian Barbara Welter has shown, the era's prevailing gender ideology, which she calls the "Cult of True Womanhood,"

²Anna Julia Cooper, *A Voice from the South* (1892; rpt. intro. Mary Helen Washington, New York: Oxford University Press, 1988), pp. 77–78.

³Karlyn Kohrs Campbell, "The Sound of Women's Voices," *Quarterly Journal of Speech* 75 (1989): p. 212.

delimited “respectable” women to the domestic sphere, from which they were supposedly too pure, pious, and submissive to male authority to venture.⁴ If they did so, their chastity was questionable—ever the traditional sanction against women who were perceived as crossing gender boundaries (see the introduction to Part Three).

Beginning with Margaret Fell in the late seventeenth century, Quaker women were among the first to speak in public on social issues, and the number of Quakers among women social-activist orators was, and is, high in proportion to the number of Quakers in the general population. The Quaker emphasis on each person’s right and duty to conduct his or her own life by an “inner light” of spirituality provides a philosophical as well as a theological justification for women’s rejection of social constraints in favor of social justice.

Methodism also produced many early women speakers. The sect spread by organizing its adherents into prayer groups that women might lead, offering prayers, guiding discussions of spiritual development, and even expounding God’s word. John Wesley, the founder of Methodism, first permitted this participation by women on the grounds that it was not actually “preaching” because the audiences were small—he distinguished this activity from what Quaker women did. But soon larger crowds gathered to hear the most successful Methodist women leaders, and Wesley decided to encourage their public ministry. Important early leaders included Mary Bosanquet, who defended women’s preaching in a long letter to Wesley; Margaret Davidson; Sarah Crosby; and Ann Tripp. Although male leaders after Wesley found ways to restrict Methodist women’s public speaking, an activist tradition had already been established that would continue to bear fruit, especially in the United States, where woman preacher Phoebe Palmer (p. 1085) became one of the century’s most important Methodist theologians.

In nineteenth-century America, the tendency for Protestant women to speak out on public issues gave rise to a sustained political movement conducted by women, a movement that began in public social action against slavery and expanded into a campaign for a broad agenda of civil rights. One of the first women to speak from the public platform on such issues was African American Maria W. Stewart (p. 1031). Sustained by her religious faith to brave the censure heaped on a woman who addressed mixed audiences of women and men—a scandalous violation of women’s “proper” sphere—Stewart denounced white racism and exhorted African Americans to fight against slavery and for civil rights for free African Americans. She articulated a specific role for black women in the liberation of the race, including a place for them as public speakers, and thus paved the way for several generations of powerful African American women orators. People of color, previously largely excluded from a rhetorical tradition defined as white as well as male, would not simply imitate white rhetoric but would develop their own ways of using language for public action, as can be seen not only in the oratory of African American women, but also in the work of such noted African American male orators as Frederick Douglass (p. 1061) and others (discussed below).

⁴Barbara Welter, “The Cult of True Womanhood: 1820–1860,” in *Dimity Convictions: The American Woman in the Nineteenth Century* (Athens: Ohio University Press, 1976).

Perhaps the first major American theorist on feminist issues, including women's rhetoric, was Quaker Sarah Grimké (p. 1045). She and her sister Angelina Grimké began to publicly denounce the evils of slavery that they had witnessed firsthand in their slave-owning family in South Carolina. But they found that, even among northern opponents of slavery, they were chastised for flouting the norms of "proper" women's behavior by addressing gender-mixed audiences for the abolition cause. Thus Sarah Grimké had to develop a feminist critique of the social and rhetorical limitations placed on women as a defense of her and her sister's abolitionist activism. She insisted on women's mental and moral equality to men, which placed on them the same responsibility to combat social evils, and she maintained that traditional strictures placed on women served male interests. Sarah and Angelina Grimké became role models for several generations of European American women activists.

Debate over the role of women in the abolition movement tore it apart, but not before a broader movement was created, led by women, who denounced slavery as well as advocating for the rights of free African Americans and of Native Americans, for temperance, and for women's rights, including suffrage. For example, Elizabeth Cady Stanton began her activist career as an abolitionist. But after being denied a seat at an abolitionist convention because of her sex, she decided to organize action on behalf of women's rights. She and fellow abolitionist and feminist Lucretia Mott convened the first American meeting devoted to women's rights, at Seneca Falls, New York, in 1848. Thus Stanton was launched on a public career that spanned the century. Before the Civil War, she combined abolition work with agitation for women's rights; after the war, she focused more on women's rights and, increasingly, on women's suffrage alone. She argued with lawyerly precision and dominated mixed audiences and the all-male audiences of state legislatures where she advocated legal redress for the inequalities visited on women.

Very different in style was Sojourner Truth, one of the best-known African American women orators of the nineteenth century. Born Isabella, a slave in upstate New York, she was freed in 1828 when slavery was abolished in the state and was self-supporting thereafter as a domestic servant. In 1843 she renamed herself Sojourner Truth and became an itinerant prophet who denounced slavery and the oppression of women. Truth never learned to read or write and never attempted to erase the broad dialect in which she spoke, which was influenced by her first language, Dutch. Her pithy sayings and platform aphorisms made a tremendous impact on the largely white audiences she addressed, and she did more perhaps than any other nineteenth-century speaker to convince white women, and even some white men, that rights for African American people of both sexes and rights for women of all races must be pursued simultaneously. As historian Nell Irvin Painter has shown, disentangling Truth as a "symbol" constructed by the white people who recorded her life (with highly variable accuracy) and Truth as she saw herself is a difficult task. Nevertheless, it is clear that Sojourner Truth brought African-inflected culture to the speaker's platform as never before in the United States, legitimating it through the widespread support she received.

In contrast, Frances Ellen Watkins Harper translated her African American heritage through the excellent education she received at the school of her uncle, William Watkins, a noted abolitionist. As her modern editor Frances Smith Foster points out, by the age of thirty Harper was already “the best known and best loved African American poet prior to Paul Laurence Dunbar.”⁵ Her antislavery verse appeared regularly in abolitionist publications. She also wrote short stories—“The Two Offers” is perhaps the first short story published by an African American writer—and novels, the best known being *Iola Leroy*. She experimented with a range of African American speech styles for her characters, from the dialects of former slaves to the elevated language of well-educated professionals such as Iola and her friends. Harper was also perhaps the most prolific public speaker among African American women in the nineteenth century. She traveled throughout the United States, north and south, speaking against slavery and for women’s rights and African American rights, and she continued after the Civil War, speaking to both white and black audiences. Her public persona was refined and “literary” yet ardent on behalf of African American rights. Harper remained firmly rooted in the black community while also being unusually adept at building bridges with white activists, working with Stanton and others to promote women’s suffrage and holding long-term office in the Woman’s Christian Temperance Union, a largely white organization that was the most powerful women’s group of the postwar years.

Temperance, it must be understood, was a women’s issue in the nineteenth century. Alcohol constituted the “drug problem” of the age, and it was largely a male problem, from which women suffered because it contributed to the physical abuse of women and children, diverted family finances from needed supplies, and encouraged prostitution and other social ills. The Woman’s Christian Temperance Union (WCTU) gave women a means to combat alcohol, and the WCTU’s effectiveness increased greatly when Frances Willard (p. 1114) became its president in 1879. Willard, a well-educated European American woman and devout Methodist, was a tireless promoter of the organization, speaking at an average of one meeting per day during the first ten years of her presidency. She developed a particularly powerful feminine rhetorical persona, emphasizing women’s spirituality and devotion to home as the very traits that made their public participation necessary as an uplifting force. She broadened the WCTU’s agenda to include a wide range of social issues and restructured the organization to train many women to speak in public. Historian of rhetoric Carol Mattingly argues that under Willard’s guidance the WCTU became “the largest and most effective organization for teaching women rhetorical skills in the nineteenth century.”⁶ By the time Willard died in 1898, women speaking in public no longer had to defend their right to appear on the platform—they were a widespread and widely accepted phenomenon. Willard, Stewart, Grimké, Stanton, Truth, and Harper, among others, established a range of public voices for women that is still being developed today.

THE RHETORICS OF MEN OF COLOR

Although rhetoric in Europe was typically practiced in culturally homogeneous settings, from the early seventeenth century North America became a diverse culture, with incomers from Europe, Africa, and Asia mingling with the Native American populations. As the nation called the United States took form, the group holding political power was more homogeneous, tending to be middle- and upper-class white, Anglophone men. Thus in the United States public rhetoric, at least at first, did not have to take into account the full range of cultures represented in the whole population.

That situation began to change, however, almost as soon as the new nation established its independence from Great Britain. Free, educated people of color had always lived here, and increasingly their voices were heard from pulpit and platform. For example, William Apess, an Indian of mixed Wampanoag and Pequot background who became a Methodist minister, spoke out for Indian civil rights in Massachusetts in the 1830s. He delivered his “Eulogy on King Philip,” or Metacomet, leader of a seventeenth-century war against the English colonists, in 1836, and led the Mashpee Indians in a successful battle to throw off their oppressive white overseers.

Apess called on all men of color to unite against white supremacist racism, which he saw as originating in the Puritan colonists’ genocidal attitudes and actions toward Native Americans. But the issue that most motivated such activism in the antebellum United States was the abolition of slavery. African American women (as noted above) and men took the speaker’s platform in unprecedented numbers to denounce this evil and to campaign for civil rights for all African Americans. In so doing, they had to develop rhetorical strategies for heterogeneous and hostile audiences, to claim a hearing that their very appearance would often seem to deny them, and thus to add entirely new elements to the Western rhetorical tradition.

Foremost among the African American men who blazed this trail was Frederick Douglass (p. 1061), who escaped slavery as a young adult in 1838 and became a powerful agitator against slavery and for black civil rights. He began his work as a paid agent for the Massachusetts Anti-Slavery Society under the tutelage of European American abolitionist William Lloyd Garrison, but after a wildly successful tour of Britain in 1845–46 he became independent of his mentor’s guidance. Douglass published his own abolitionist newspaper, first entitled *The North Star* and later, as his fame spread, simply *Frederick Douglass’ Paper*. His power on the speaker’s platform was legendary, since he combined an arresting appearance, a well-modulated voice, and extensive self-taught European American cultural learning with a deeply convincing passion for African American rights. Abandoning Garrison’s teaching that political attempts to foster social justice would not work, Douglass spoke eloquently for a number of reform causes, notably temperance and women’s rights, and campaigned for political candidates who promised to support his views. He also published three versions of his autobiography, which powerfully depicted the horrors of slavery and his own triumph over them, showing just what a talented black man could accomplish. During the Civil War, he advised Abraham Lincoln on freeing the slaves and admitting black men to the Union Army on equal terms with whites. After the war, Douglass accepted several

government appointments honoring his respected position and his staunch support of the Republican party, notably the post of minister to Haiti. He also continued to fight for African American rights, joining forces late in life with antilynching crusader Ida B. Wells. At his death in 1895, Douglass was the best-known African American in the United States.

Douglass was certainly not the only, or even the first, African American man to make an impact, however. Preceding him on the speaker's platform in New England was Charles Parker Remond, who became his close friend. Remond, born free, was the first black agent of the Massachusetts Anti-Slavery Society and an orator of such power that he was sent to England before Douglass as the Society's representative to attend a world antislavery convention and raise money for the cause. Although his health failed at a relatively early age and he died at sixty-three, Remond lived long enough to see the Civil War abolish slavery and to fight for the passage of the Fifteenth Amendment to the Constitution, which guaranteed the franchise to black men.

Another black Boston abolitionist who worked with Douglass was William C. Nell. Born free, Nell had trained as a lawyer, but true to his Garrisonian beliefs, refused to practice law in a corrupt, racist legal system. He was an effective local agitator, organizing protests, for example, against Boston's segregated schools, but he served African American causes primarily through writing. Nell assisted in the publication of *The North Star* and wrote the first history of African Americans, detailing their contributions during the Revolutionary period.

Martin R. Delany also worked for a time on *The North Star*. He had been born to a free mother and a slave father, and his mother took him from his native Virginia to Pennsylvania so that he could be educated without breaking the law (slave states such as Virginia forbade literacy to blacks). Although denied a degree from Harvard Medical School because of his race, Delany became one of the leading African American physicians in Pittsburgh and also a vigorous activist for black civil rights. He published his own newspaper before briefly joining Douglass's venture, and he also wrote several books on black causes. During the Civil War, like Douglass, he argued for black men's right to join the Union Army on equal terms with whites, and he became the Army's first black combat officer, at the rank of major. Unlike Douglass, Delany tended to be separatist in his views for the future of African Americans. He believed that they needed land for their own communities, whether in the western territories of the United States or abroad, although he denounced the racist resettlement schemes of the American Colonization Society, which included slaveholders among its founders. He worked for his own resettlement vision both through the Freedman's Bureau after the Civil War, where he held a prominent position, and through colonization plans that attempted to remove American blacks to Central America or Africa.

Sharing Delany's black nationalist views was Henry Highland Garnet. Like Douglass, he was born a slave in Maryland but escaped as a young boy with his family. He became a Presbyterian minister and a fiery advocate of black civil rights, rivaling Douglass in his power on the speaker's platform. He was also noted for his eloquent journalism. Garnet was more militant than many other black abolitionists,

advocating violent resistance to slavery, black separatist political agitation, and resettlement either in the western territories or outside the United States, although, like Delany, he opposed the American Colonization Society as essentially racist in motive. As a prominent black leader after the Civil War, Garnet was awarded the post of minister to Liberia, where he died.

These courageous African American speakers faced dangerously hostile audiences to forge their own unique rhetorical identities, adapting traditional rhetoric and also bringing important new elements to the repertoire of Western rhetoric.

THE RHETORIC OF COMPOSITION

By the middle of the nineteenth century, written composition had become a clearly defined branch of rhetoric. Here, as in education for oratory, the ideas of Blair, Campbell, and Whately dominated. In addition, a rather mechanistic approach to efficiency or economy in style was popularized by the work of the influential scientific writer Herbert Spencer (1820–1903). Spencer’s “Philosophy of Style” (p. 1154) proposes that successful communication is that which requires the least expenditure of mental energy to achieve successful reception. Spencer does not declare poetic language to be useless—quite the opposite, in fact. Nonetheless, his essay raised the old eighteenth-century idea of perspicuity to new heights. In a culture increasingly characterized by industry, the cult of efficiency easily spread to rhetoric.

These influences can be seen in *Elements of the Art of Rhetoric* (1850, revised as *The Art of Discourse*, 1867) by American academic Henry Day. Day treats oratory as the proper form of rhetoric, but he anticipates an approach that characterized the rhetoric of composition in the United States through the latter half of the nineteenth century. For Day, rhetoric is the art of discourse and discourse is the “faculty” of communicating thoughts. Rhetoric, in Day’s scheme, is connective rather than creative; it is grounded in the sciences of grammar, logic, ethics, and aesthetics, and so it has no content of its own. Rhetorical invention, then, consists of arranging the elements of the parent sciences into forms that will appeal to the faculties of thought. There are four of these forms: *explanation*, *confirmation*, *excitation*, and *persuasion*. Later compositionists retained the idea that rhetoric is derivative, and they sought to delimit forms of discourse that correspond to the mental faculties, but they dispensed with the idea that invention is a part of rhetoric. They also turned away from theoretical discussions of rhetoric such as Day’s and focused instead upon writing textbooks for the burgeoning composition market. In this, they followed the influential work of Alexander Bain.

Bain (1818–1903), a Scotsman from Aberdeen, used the rhetorical theory of his countryman Campbell to devise a psychological approach to written composition that still influences the field. Bain is a major figure in the development of psychology before Freud; his two psychology books were standard texts through the last half of the nineteenth century. In his rhetoric, Bain applies his versions of the theories of associationism and physiological psychology to composition. He identifies the chief mental operations as discrimination, retentiveness, and agreement. These operations are associative, bringing ideas together through contrast, contiguity, and

similarity. In *English Composition and Rhetoric: A Manual* (1866; p. 1145), Bain says that the most important figures of speech—metaphor, metonymy, and antithesis—are parallel to mental operations. The outline of Bain's rhetoric is Aristotelian, and it is the pathetic appeal, quite naturally, that most interests him.

Bain is also responsible for the decisively influential formulation of the modes of discourse—description, narration, exposition, and persuasion—and for the notion of paragraph unity as an important feature of written discourse. Bain's modes included poetry, but his successors dropped it. Whately had already disengaged the belles lettres from his rhetoric, and others were disengaging rhetoric from their belles lettres. Despite the continued use of Blair's textbook and the persistent connection between poetry and rhetoric that shows up in literary criticism (including Thomas De Quincey's essays and Walter Pater's reflections), a contrary notion was gathering strength. As Coleridge plainly put it, poetry is not rhetoric at all. Poetry, unlike rhetoric, is the expression of the poet's feelings. It is a mimetic art that mediates between people and nature. If poetry, like rhetoric, seeks to stimulate the emotions, it does so for quite different reasons—poetry for contemplation, rhetoric for action. Moreover, it is a mistake to reduce two such different forms of language use to the same theory, even if they seem to have similar ends. Coleridge emphasizes the critic's responsibility to distinguish poetry from rhetoric, philosophy, and other prose works and to allow to each its own forms, objects, and effects.

Under this pressure from both sides toward independent development, rhetoric and belles lettres split. In 1828, a chair of English literature was established at London University; in 1845, Edinburgh separated rhetoric and literature; in 1876, Johns Hopkins and Harvard did the same; and in 1904, laggard Cambridge followed. By the end of the century, a further split had occurred in the United States: Speech departments had formed, taking the elocution course and the study of rhetoric with them.

Adams Sherman Hill took the chair of rhetoric at Harvard following the creation of a separate chair of literature. Hill was content to teach style, usage, and editing. His book, *The Principles of Rhetoric* (1878; p. 1149), helped to spread this approach through the greatly expanded university system that arose as the United States entered the commercial-industrial era following the Civil War. Hill's method is congenial to the practical aims of the new system. He defines rhetoric as "the art of efficient communication." Efficiency requires, above all, getting it right. Grammar and usage, secondary concerns to the previous generation of rhetoricians, thus come at the beginning of Hill's book. He treats argument rather mechanically, as a patchwork of syllogism, signs, and testimony, and persuasion gets a perfunctory few pages near the end of the book. Exposition, not argument, is the ideal form in Hill's rhetoric. As scholar of rhetoric and composition James Berlin puts it, freshman English in Hill's day becomes a course in technical writing, one of the skills needed to earn a living.⁷

In the new middle-class colleges, composition was a required course taught by assistant professors and graduate assistants, and the emphasis was on expository

⁷James Berlin, *Writing Instruction in Nineteenth-Century American Colleges* (Carbondale: Southern Illinois University Press, 1984), p. 63.

writing. Persuasion, deemphasized in Hill's book and its successors, came to be associated with oral performance and was relegated to the elocution course. The "current-traditional" model of composition teaching that was thus created in the last years of the nineteenth century combines Bain's modes of discourse and paragraph unity with Hill's prescriptivism in grammar, usage, and style. This stripped-down rhetoric was a necessity because of the large number of students and the constant turnover of new instructors who needed clear guidelines on how to teach a subject that they generally hoped to leave behind as soon as possible. The efforts of teachers like Fred Newton Scott and a few others to criticize such methods and improve this gloomy situation produced no competing rhetorical theory or pedagogy. Only recently have scholars begun to examine Scott's insistence on the value of the rhetorical tradition in composition teaching, his use of linguistics and behavioral psychology, his emphasis on the composing process, and his sensitivity to the social uses of language.

ROMANTICISM AND RHETORIC

The exigencies of the academy may also account for the absence of any significant response from professional rhetoricians to two other lines of inquiry into language: romantic theories of literary composition and the continuing philosophical debates about semantics. The central themes of Romanticism are, as noted previously, fundamentally antirhetorical. Rhetoric was allied with literature and literary criticism of the seventeenth and eighteenth centuries because of the reigning didactic conception of literature. Rhetoric was compatible with the view that literature should instruct by pleasing and that literary criticism should judge works and define rules for production. Both rhetoric and criticism operated empirically in an empirical age, examining successful works and identifying the features that made them effective; both relied on classical works as models of enduring effectiveness; and both defined human nature as the general experience of humankind. But during the eighteenth century, poets and critics were developing a new model of literature that focused not on its ends but on its creation. The artist's mind, in this new view, is more relevant to an understanding of art than the mind of the audience is. The recurrent ideas of the Romantic revolution reflect this turn toward the creator of art. The key terms are *solitude*, *spontaneity*, *expression of feeling*, and *imagination*—all quite opposed to the rhetorician's concern for society, planned discourse, communication, and moving the will through reason and passion. The Romantic poet is engaged in a soliloquy, not an argument, and the poet's aim is reflection, not action. The ideal genre is the lyric, not the oration or the essay.

Blair's discussion of poetry is part of this development, for he combines definitions of literature and criticism drawn from both the old and the new models. He could say without apparent contradiction that poetry should move the reader by presenting the sincere feelings of the poet. To appeal to human nature, Blair says, the writer should be natural, boldly expressing strong emotions. William Wordsworth, too, used this mixed critical vocabulary, speaking of both poet and audience and appealing to common experience as the basis for poetry. Wordsworth took seriously

the doctrine of uniform human nature and concluded that human nature could best be seen not in classical literature but in unsophisticated characters—leech-gatherers and idiot boys, for instance. Thus, although his poetic practice was radically Romantic, much of his defense still followed well-established lines of thought. It was Samuel Taylor Coleridge who recognized the need for a thoroughly new theory of poetic composition. Grammar, logic, and psychology, he said, are, of course, the basic principles of writing and the foundation of rules of judgment. But *psychology* means the mind of the writer, in whom perception is not passive but creative. Coleridge accepted the theory of faculty psychology but distinguished the associative process, the fancy, from the creative process, the imagination. Where the fancy worked mechanically to combine the ready materials of the memory, the imagination synthesized, generated new and unexpected ideas, worked through dialectical processes, and made the mind change.

For all the Romantic emphasis on the artist, the actual artifacts—the poems, novels, and essays—are not, finally, private utterances directed to the artist himself, with the rest of us merely overhearing them. A soliloquy is, after all, a dramatic performance, a convention for externalizing an equally conventional internal monologue. Romanticism is, in part, the celebration of that convention, not the end of communication itself. Critics who examined the relationship between the artist and the audience could turn once again to rhetoric, as did Thomas De Quincey. De Quincey's distinction between the literature of knowledge and the literature of power renewed the useful categories of purpose and effect in criticism. Ralph Waldo Emerson, too, appealed to rhetoric in calling for a powerful Romantic form of oratory. He advocated a rhetoric of personal expression that would stir the audience to their own creative perception. Emerson suggested the fundamental question of Romantic expression: how to represent one's experience in language in a way that will duplicate or generate that experience in the audience.

LANGUAGE, RHETORIC, AND KNOWLEDGE

The prominent philosopher John Stuart Mill held that “eloquence, like poetry, is impassioned truth.” Yet he insisted that poetry was soliloquy: “Eloquence is *heard*, poetry is *overheard*.”⁸ Although Mill acknowledged that soliloquy is a convention, he maintained that the poem-soliloquy is an internal dialogue repeated later to an audience. For poetry, utterance is the end, not, as in rhetoric, the means to an end. Mill's distinction, repeated by many a critic and rhetorician well into our own time, seems to have been a response to an earlier argument by Jeremy Bentham, the philosopher of utilitarianism. Bentham takes poetry to be a persuasive art because ideas conveyed poetically are readily believed by virtue of the pleasure poems impart. Bentham does not approve of this situation: With Plato, he complains that both poetry and rhetoric too often subvert rational judgment by giving attention to style and effect, rather than substance.

Bentham's theory of utilitarianism, whose goal is the greatest happiness for the

⁸John Stuart Mill, “Thoughts on Poetry and Its Varieties,” in *Collected Works of John Stuart Mill*, vol. 1, ed. John M. Robson and Jack Stillinger (Toronto: University of Toronto Press, 1981), p. 348.

greatest number, is based on the principle (already noted by Campbell and Bain) that people seek pleasure and avoid pain. Bentham notes that individuals would always act selfishly were it not for the external constraints—physical, moral, religious, and political—that make societies possible. He also recognizes that individuals vary in their desires and their responses to social constraints. Reasoning itself, he concludes, is a process of persuasion: Reasons can be judged on their utility (that is, on the likelihood of producing pleasure), but their effects are uncertain. Furthermore, probability must also refer chiefly to persuasiveness rather than to facts. Bentham allows that in some sense all knowledge depends on persuasion and belief, on people's psychological reactions and society's bounds. It follows that language can be no mere vehicle of ideas but must be part of the process of persuasion that leads to knowing.

Bentham's contemporary, Wilhelm von Humboldt, dissatisfied by Lockean semantics and grammar-bound philology, argues that language can be understood only as a process, not as a system. He takes an anthropological approach, examining discourse as it is used and understood in a cultural context. Anticipating the formula of modern linguists, von Humboldt regards syntax and lexicon as products of analysis and seeks for language in the accumulated instances of actual speech: "Discourse is not composed of words that precede it . . . the words issue from the totality of discourse." Words don't begin, that is, as designations of objects; rather, man sees reality "exclusively as language presents it to him."⁹ Thus von Humboldt argues that language use reflects one's inner state, in two senses: the personal and the national or cultural. Language is a tool for studying both personality and culture.

The most radical formulation of the relation between language and knowledge comes from the German philosopher Friedrich Nietzsche (1844–1900), who says quite bluntly that all language is rhetorical (p. 1168). The very nature of language is unconsciously rhetorical, an effort "to discover and to make operative that which works and impresses." All words are tropes, signs that stand for some part of the thing they represent, like the synecdoche. For Nietzsche, the traditional philosophical search for truth that lies beyond language and convention is a hopeless delusion. We will understand our world better, he suggests, if we honestly accept that we must deal with it through the very metaphorical kind of knowledge that is all we can reasonably achieve.

The potential connections between rhetoric and philosophy suggested by these theories received little attention from philosophers or rhetoricians until the twentieth century. To some extent, the connections were obscured by the academic situation of rhetoric and by the development of scientific psychology, which dominated discussions of perception, belief, and personality. Psychology tended to counterbalance Romantic individualism by seeking empirically for universals of human thought and behavior. If all we know is our ideas, not external reality, then we are in some sense limited to the subjective reality of feelings. But if this point argued for the isolation of the individual, it also stimulated the intensive cataloging of external reality that characterized nineteenth-century science, including the search for

⁹Wilhelm von Humboldt, *On Language*, trans. Peter Heath (1836; trans. Cambridge: Cambridge University Press, 1988), p. 49.

psychological principles that allow us to share experience and deny isolation. This search focused on the structure of the mind and all but ignored language, let alone rhetoric.

The history of nineteenth-century rhetoric attracted vigorous and sustained attention at the end of the twentieth century as scholars gained sufficient distance to see its effects on present-day theory and pedagogical practice. It was only in the late twentieth century, too, that *rhetoric* became a respectable word again in some English departments, as composition specialists demonstrated the value of paying closer attention to rhetorical theory and practice. Literary theorists, too, began to acknowledge the arbitrariness of most definitions of literature and the wider scope afforded by a rhetorical approach to discourse. Departments of speech and of English (or at least their writing programs) began seeking greater contact, making tentative efforts to heal the century-old breach. As we shall see in Part Six, the story of twentieth-century rhetoric remains, at this juncture, highly speculative, highly theoretical. It is too soon to trace the influence of such theorists as Kenneth Burke (see Part Six); disconcerting though it may be to admit it, we are still reacting to the work of Whately and Bain.

Selected Bibliography

Bibliographic sources for primary and secondary works on the traditional rhetoricians include relevant chapters in *Historical Rhetoric: An Annotated Bibliography of Selected Sources in English*, ed. Winifred Bryan Horner (1980), and Horner's *The Present State of Scholarship in Historical and Contemporary Rhetoric* (1983). See also *The Selected Writings of John Witherspoon*, ed. Thomas Miller (1990), which has a helpful introduction. Bruce Kimball's *Orators and Philosophers: A History of the Idea of Liberal Education* (1986) links the development of rhetoric to curricular movements of the nineteenth century.

Warren Guthrie treats the early part of our period in "The Development of Rhetorical Theory in America, 1635–1850" (*Speech Monographs* 18, 1951). *History of Speech Education in America*, ed. Karl R. Wallace (1954), contains several essays on rhetorical theory in this period. Gregory Clark and Michael Halloran have edited an excellent collection, *Oratorical Culture in Nineteenth-Century America: Transformations in the Theory and Practice of Rhetoric* (1993). Thomas P. Miller's *The Formation of College English: Rhetoric and Belles Lettres in the British Cultural Provinces* (1997) traces the development of English as a discipline to our period. Mariolina Salvatori has collected useful primary documents in *Pedagogy: Disturbing History, 1819–1929* (1996). A related study of teaching is Lucille Schultz's *The Young Composers: Composition's Beginnings in Nineteenth-Century Schools* (1999). See the bibliography for Alexander Bain and A. S. Hill for works dealing with later nineteenth-century rhetoric, particularly regarding composition.

On literacy and women's education in the eighteenth and nineteenth centuries, see David Cressy, *Literacy and the Social Order* (1980); and Harvey J. Graff, *The Legacies of Literacy* (1987). Specifically addressing issues related to nineteenth-century American women's increased access to literacy and higher education are the essays in *Nineteenth-Century Women Learn to Write*, ed. Catherine Hobbs (1995). For more information on nineteenth- and early-twentieth-century American women's education, see *Toward a Feminist Rhetoric: The Writing of Gertrude Buck*, ed. Joann Campbell (1996), which collects essays and sample pedagogical materials by this influential teacher; and Jane Donawerth's "Bibliography of Women and the History of Rhetorical Theory to 1900" (*Rhetoric Society Quarterly* 20 [1990]: 403–21), which is particularly strong in this period.

Karlyn Kohrs Campbell's *Man Cannot Speak for Her, Volume I: A Critical Study of Early Feminist Rhetoric* and *Volume II: Key Texts of the Early Feminists* (1986) introduce a number of nineteenth-century women speakers, most of them European American, and collect representative speeches. Elizabeth Cady Stanton is well represented in this collection. For primary texts by African American women speakers, along with helpful introductory material, see Shirley Wilson Logan's *With Pen and Voice: A Critical Anthology of Nineteenth-Century African-American Women* (1995). Frances Smith Foster has collected poetry, fiction, letters, and speeches by Frances Ellen Watkins Harper in *A Brighter Coming Day* (1990). For three pamphlets by Ida B. Wells, see *Southern Horrors and Other Writings: The Anti-Lynching Campaign of Ida. B. Wells, 1892–1900*, ed. and intro. Jacqueline Jones Royster (1997). A complete collection of extant records of speeches by Sojourner Truth is *Sojourner Truth as Orator* (1997), ed. Suzanne Pullon Fitch and Roseann M. Mandziuk.

For general background on American women in the nineteenth century, see Barbara Welter, *Dimity Convictions: The American Woman in the Nineteenth Century* (1976). On religious influences empowering women to speak in public, see Margaret Hope Bacon's *Mothers of Feminism* (1986) and Vicki Tolar Collins, "Women's Voices and Women's Silence in the Tradition of Early Methodism," in *Listening to Their Voices: Rhetorical Activities of Historical Women*, ed. Molly Meijer Wertheimer (1997). A good account of the cultural context of American women's social activism, which also discusses Maria W. Stewart, Angelina Grimké, and Sojourner Truth, among others, is Jean Fagan Yellin's *Women and Sisters: The Antislavery Feminists in American Culture* (1989). On Frances Willard and the temperance movement, see Carol Mattingly, *Well-Tempered Women: Nineteenth-Century Temperance Rhetoric* (1998). A number of nineteenth-century women speakers, including Stewart, Sarah Grimké, Truth, and Willard, are discussed in *Women Public Speakers in the United States, 1800–1925: A Bio-Critical Sourcebook*, ed. Karlyn Kohrs Campbell, 1993.

Focusing specifically on the interactions among social activism, literacy, and rhetoric in the public discourse of African American women is Jacqueline Jones Royster's *Traces of a Stream: Literacy and Social Change among African American Women* (2000). Providing more information on the African American cultural context, and also discussing Stewart, Truth, and Frances Ellen Watkins Harper, are Carla Peterson's "*Doers of the Word*": *African-American Women Speakers and Writers in the North (1830–1880)* (1996) and Shirley Wilson Logan's "*We Are Coming*": *The Persuasive Discourse of Nineteenth-Century Black Women* (1999). Nell Irvin Painter's biography of Sojourner Truth, *Sojourner Truth: A Life, a Symbol* (1996), is especially helpful on the problems of transmitting the rhetoric of oral performance.

See the headnote on Sarah Grimké for additional bibliography on the nineteenth-century women's movement and its relationship to the abolition movement. For more on Methodism and women's rhetoric, see the headnote on Phoebe Palmer.

Robert S. Levine's *Martin Delany, Frederick Douglass, and the Politics of Representative Identity* (1997) compares these two leaders' writing, oratory, and political views. Brief biographies and bibliographies on Charles Parker Remond and Henry Highland Garnet can be found in *African-American Orators: A Bio-Critical Sourcebook* (1996), ed. Richard W. Leeman. On nineteenth-century African American rhetorical styles, especially the "black jeremiad," see Wilson Jeremiah Moses's *Black Messiahs and Uncle Toms: Social and Literary Manipulations of a Religious Myth* (1982); David Howard-Pitney's *The Afro-American Jeremiad: Appeals for Justice in America* (1990), building on Moses's work, begins with Frederick Douglass and takes the black jeremiad into the twentieth century. *Crafting Equality: America's Anglo-African Word* (1993), by Celeste Michelle Condit and John Louis Lucaites, chronicles African Americans' contributions to public discourse and political thought in the nineteenth century.

Richard Whately

1787–1863

Richard Whately took his B.A. in 1808, an M.A. in 1812, and a B.D. and D.D. in 1825, all at Oxford University. Though Aristotle was taught and revered at Oxford, philosophers since Bacon had scorned traditional syllogistic logic, just as leading rhetoricians of the previous century had scorned traditional topical invention. Whately sought to redress this neglect and partly succeeded. In his *Elements of Logic* (1826), he argues that the syllogism is a means of testing the validity of propositions, regardless of the field of knowledge to which they apply. In other words, the syllogism is a method of linguistic reasoning, not of scientific discovery, and should not be faulted for being inadequate to an activity for which it was never intended. In the *Elements of Rhetoric* (1828; excerpted here), Whately defines rhetoric in Aristotelian fashion as “an offshoot of Logic” whose function is to invent and arrange arguments. He revives a number of Aristotelian doctrines and tries to minimize the anticlassical influence of George Campbell (p. 898). But his chief success in rhetoric was perhaps to extend and refine Campbell’s contribution to rhetorical theory.

In the introduction to *Elements of Rhetoric*, Whately gives a brief history of rhetoric. He cites only Aristotle (p. 169), Cicero (p. 283), Quintilian (p. 359), Bacon (p. 736), Campbell, and Blair (p. 947). Aristotle, says Whately, is the best of the lot, and his well-developed theory has never been superseded. Cicero barely makes the list because his remarks, though helpful, are not “systematic.” Quintilian is systematic but adds little to Aristotle. Bacon is included because of his antitheses. Campbell is superior to Blair, but Whately doesn’t say why. He does say that Campbell doesn’t understand logic, as Whately had previously shown in his *Elements of Logic*. Campbell should have known logic better, because rhetoric, says Whately, is an offshoot of logic. Rhetorical theory, it appears, has advanced little since Aristotle, and we need to go back to his starting point and treat rhetoric as a branch of logic. Modern science has emphasized knowledge of facts and has neglected logic (a development, says Whately, that might surprise Bacon). To move confidently from fact to generalization, logic is necessary. The thesis of *Elements of Logic* is essentially that science and logic are separate because discovery and reasoning are different operations. Discovery is based on experience (observation, experiment, and testimony); reasoning, on argument and demonstration (using the syllogism). Rhetoric is in much the same state as its parent logic: Instead of requiring more attention to observed facts, such as details of style, rhetoric needs a theory of persuasion that describes the actual processes by which conviction is formed. Whately proposes to search out the bases of rhetoric in language and psychology. This effort, we may infer, will finally improve upon Aristotle and place Whately at the latter end of the history of rhetoric.

It may seem that Campbell proposed the identical project — and did a creditable job of it, too. Whately acknowledges Campbell’s work and uses his arguments about the probabilistic basis of both scientific demonstration and moral argument, about the nature of moral evidence, about the difference between conviction and

persuasion, and even about the value of perspicuity in style. But Whately goes further, making fine distinctions among the varieties of moral evidence, examining the preconceptions of the audience, taking into account the often irrational effects of apparently rational arguments, investigating the role of emotions in creating conviction, and setting up a system (reminiscent of Aristotle's) for turning out effective arguments. As noted in the introduction to Part Five, Whately focuses on argument from testimony and probability, since they are most likely to help clergymen who are refuting scoffers and presenting arguments for revealed truth.

As an apologist for religion in an age of skepticism inspired by science, Whately (like earlier apologists Joseph Butler and William Paley) cleverly appeals to science and logic as the foundation for his arguments. Speaking of probability as the basis of discovery, for example, he notes that people once dismissed reports of meteorites because they believed stones could not fall from the sky. But many such reports finally made the notion credible, even though no two reports concerned the same stone. Whately adds that the same reasoning applies to the many allusions in the New Testament to the calling of the gentiles. Although no single allusion warrants the broad interpretation that Jesus was always intended to go to the gentiles, when so many references concur, "the antecedent objection against each individual case is removed." It would not be surprising if scholars were to discover that Whately's students used this very example in their sermons; Whately probably intended to broadcast his sharp observations through that channel. But there is very little air here of smug satisfaction in using the weapons of science against science. Whately's use of logic as the basis for religious arguments is consistent and thoroughgoing. His eye is on the larger issue of demonstrating that there is a basis in logic for religious arguments of many kinds and, furthermore, that arguing is a perfectly reasonable activity. Like Campbell, he maintains that much scientific knowledge is based on the same kind of reasoning as moral knowledge and that linear demonstrations of causality do not constitute the whole of logic. Causal demonstration, moreover, is not appropriate to arguments about most of life's affairs. Rather, a "progressive approach" to the truth must be used. Rhetoric's proper province is therefore to argue for truths found by other means—by science or revelation.

The issue for rhetoric, then, is to determine what people will take to be true or persuasive, and this is Whately's topic in Part I of *Elements of Rhetoric*. Sometimes persuasion accords with logic, sometimes not. For example, an audience will find some kinds of testimony more convincing than others because of the character of the witnesses, the type of testimony, the concurrence of other testimony, the degree of detail, and so on. Similarly, the audience will almost inevitably make some *presumption* about which side of an argument is correct and will thus place the *burden of proof* on the other side. Whately does not feel that such presumptions are always inappropriate, and he defends them when they carry the authority of tradition, thus taking a position in an important debate in political philosophy of the period. Whereas liberals tended to support the value of the unaided individual judgment, Whately, more conservative, showed how persuasion might reasonably draw on custom and tradition. He thus put individual and communal standards of judgment into a productive tension that was further developed, as Karen Whedbee has shown,

in the work of liberal political philosophers John Stuart Mill and Alexis de Tocqueville.

So, too, in refuting an argument, logic alone may not avail. In Part II, Whately focuses on appeals to emotion, noting that it is foolish to abjure such appeals. Why should we suppose that stimulating the emotions is always overstimulating them? Are emotions not a part of human decisions? Do we not often seek to persuade ourselves to choose a course of action by representing to ourselves appropriate thoughts and feelings? It is legitimate and necessary, Whately says, to stimulate emotions such as hope, fear, and altruism because they lead to worthy aims. In Part III, he discusses style, providing standard textbook advice on perspicuity and correctness. And in Part IV, he offers advice on elocution, relying on Thomas Sheridan (p. 879) for his main points and stressing the need for naturalness, as opposed to the recent fad for mechanical systems of delivery typified by Gilbert Austin (p. 889).

Whately wrote widely on topical issues affecting Ireland, on political economy, and on religion (including a piece called *Historic Doubts Relative to Napoleon Bonaparte*, satirizing David Hume's essay on miracles). In addition, he edited the works of Bacon and of the philosopher and Christian apologist William Paley. In a peculiar way, Whately's influence may be measured by the remarks made about him by I. A. Richards (admittedly, a Cantabrigian) in 1936, who says that rhetoric begins, "of course, with Aristotle, and may perhaps be said to end with Archbishop Whately."¹ Richards means that rhetoric reached its nadir in Whately's dry rules for argument. Irrespective of the justness of this valuation, clearly Whately is the figure Richards feels he must supplant to take his own place at the end of the history of rhetoric.

Selected Bibliography

Elements of Rhetoric is available in the Southern Illinois University Press reprint of the standard 1846 edition, edited, with an excellent introduction, by Douglas Ehninger (1963). Our excerpts are from this edition.

"Twentieth-Century Publications on Richard Whately: A Bibliography" is in *Rhetoric Society Quarterly* 18 (spring 1988). It is quite short, even though it includes general studies, unpublished papers, and dissertations. There are no book-length studies of Whately's work. Nonetheless, there are several worthwhile articles and a biography. The biography is Donald Akenson's *A Protestant in Purgatory: Richard Whately, Archbishop of Dublin* (1981). Three helpful introductory articles are W. M. Parrish, "Whately and His Rhetoric," which examines sources and influences, and James A. Winans, "Whately on Elocution," both in *Historical Studies of Rhetoric and Rhetoricians*, ed. Raymond Howes (1961); and "Whately's Theory of Rhetoric," in *Explorations in Rhetoric*, ed. Ray McKerrow (1982). Summarizing the case against Whately's rhetoric, on grounds that his treatment of invention, audience, and the psychology of persuasion is faulty, is Lois Einhorn in "Richard Whately's Public Persuasion: The Relationship between His Rhetorical Theory and His Rhetorical Practice" (*Rhetorica* 4 [1986]: 47–65). Dealing with how Whately's theory accounts for the function of tradition and custom in persuasion are Michael Sproule's "The Psychological Burden of Proof: On the De-

¹I. A. Richards, *The Philosophy of Rhetoric* (1936; rpt. New York: Oxford University Press, 1965), p. 5.

velopment of Richard Whately's Theory of Presumption" (*Communication Monographs* 43 [June 1976]: 115–29), and Karen Whedbee's more positive, revisionist "Authority, Freedom and Liberal Judgment: The 'Presumptions' and 'Presumptuousness' of Whately, Mill and Tocqueville" (*Quarterly Journal of Speech* 84 [May 1998]: 171–89). W. S. Howell discusses Whately's *Logic* as well as the *Rhetoric* in *Eighteenth-Century British Logic and Rhetoric* (1971). Discussions of the *Logic* often bear on the *Rhetoric*, as Howell shows and as can be seen in McKerrow's "Richard Whately and the Revival of Logic in Nineteenth-Century England" (*Rhetorica* 5 [spring 1987]: 163–85).

From *Elements of Rhetoric*

Introduction

I.

Various definitions of Rhetoric.

Of Rhetoric various definitions have been given by different writers; who, however, seem not so much to have disagreed in their conceptions of the nature of the same thing, as to have had different things in view while they employed the same term. Not only the word Rhetoric itself, but also those used in defining it, have been taken in various senses; as may be observed with respect to the word "Art" in Cicero's *De Oratore*, where a discussion is introduced as to the applicability of that term to Rhetoric; manifestly turning on the different senses in which "Art" may be understood.

To enter into an examination of all the definitions that have been given, would lead to much uninteresting and uninformative verbal controversy. It is sufficient to put the reader on his guard against the common error of supposing that a general term has some real object, properly corresponding to it, independent of our conceptions;—that, consequently, some one definition in every case is to be found which will comprehend everything that is rightly designated by that term;—and that all others must be *erroneous*: whereas, in fact, it will often happen, as in the present instance, that both the wider, and the more restricted sense of a term, will be alike sanctioned by use (the only competent authority), and that the consequence will be a corresponding

variation in the definitions employed; none of which perhaps may be fairly chargeable with error, though none can be framed that will apply to every acceptation of the term.

It is evident that in its primary signification, Rhetoric had reference to public *Speaking* alone, as its etymology implies. But as most of the rules for *Speaking* are of course applicable equally to *Writing*, an extension of the term naturally took place; and we find even Aristotle, the earliest systematic writer on the subject whose works have come down to us, including in his *Treatise* rules for such compositions as were not intended to be publicly recited.¹ And even as far as relates to *Speeches*, properly so called, he takes, in the same *Treatise*, at one time, a wider, and at another, a more restricted view of the subject; including under the term Rhetoric, in the opening of his work, nothing beyond the finding of topics of Persuasion, as far as regards the *matter* of what is spoken; and afterwards embracing the consideration of *Style*, *Arrangement*, and *Delivery*.

The invention of *Printing*,² by extending the sphere of operation of the *Writer*, has of course

¹Aristot. *Rhet.* book iii. [Au.]

²Or rather of *Paper*; for the invention of printing is too obvious not to have speedily followed, in a literary nation, the introduction of a paper sufficiently cheap to make the art available. Indeed the seals of the ancients seem to have been a kind of stamps, with which they in fact printed their names. But the high price of books, caused by the dearness of paper, precluded the sale of copies except in so *small a number* that the *printing* of them would have been more costly than transcribing. [Au.]

contributed to the extension of those terms which, in their primary signification, had reference to Speaking alone. Many objects are now accomplished through the medium of the Press, which formerly came under the exclusive province of the Orator; and the qualifications requisite for success are so much the same in both cases, that we apply the term "Eloquent" as readily to a Writer as to a Speaker; though, etymologically considered, it could only belong to the latter. Indeed "Eloquence" is often attributed even to such compositions,—e.g., Historical works,—as have in view an object entirely different from any that could be proposed by an Orator; because *some part* of the rules to be observed in Oratory, or rules analogous to these, are applicable to such compositions. Conformably to this view, therefore, some writers have spoken of Rhetoric as the Art of Composition, universally; or, with the exclusion of Poetry alone, as embracing all Prose composition.

A still wider extension of the province of Rhetoric has been contended for by some of the ancient writers; who, thinking it necessary to include, as belonging to the Art, everything that could conduce to the attainment of the object proposed, introduced into their systems, Treatises on Law, Morals, Politics, &c., on the ground that a knowledge of these subjects was requisite to enable a man to speak well on them: and even insisted on Virtue³ as an essential qualification of a perfect Orator; because a good character, which can in no way be so surely established as by deserving it, has great weight with the audience.

Aristotle's censure of his predecessors.

These notions are combated by Aristotle; who attributes them either to the ill-cultivated understanding of those who maintained them, or to their arrogant and pretending disposition; i.e., a desire to extol and magnify the Art they professed. In the present day, the extravagance of such doctrines is so apparent to most readers, that it would not be worth while to take much pains in refuting them. It is worthy of remark, however, that the very same erroneous view is, even now,

³See Quintilian. [Au.]

often taken of Logic;⁴ which has been considered by some as a kind of system of universal knowledge, on the ground that Argument may be employed on all subjects, and that no one can argue well on a subject which he does not understand; and which has been complained of by others for not supplying any such universal instruction as its unskilful advocates have placed within its province; such as in fact no one Art or System can possibly afford.

The error is precisely the same in respect of Rhetoric and of Logic; both being *instrumental* arts; and, as such, *applicable* to various kind of subject matter, which do not properly *come under* them.

So judicious an author as Quintilian would not have failed to perceive, had he not been carried away by an inordinate veneration for his own Art, that as the possession of building materials is no part of the art of Architecture, though it is impossible to build without materials, so, the knowledge of the subjects on which the Orator is to speak, constitutes no part of the art of Rhetoric, though it be essential to its successful employment; and that though virtue, and the good reputation it procures, add materially to the Speaker's influence, they are no more to be, for that reason, considered as belonging to the Orator, as such, than wealth, rank, or a good person, which manifestly have a tendency to produce the same effect.

Extremes in the limitation and extension of the province of Rhetoric.

In the present day, however, the province of Rhetoric, in the widest acceptance that would be reckoned admissible, comprehends all "Composition in Prose"; in the narrowest sense, it would be limited to "Persuasive Speaking."

Object of the present Treatise.

I propose in the present work to adopt a middle course between these two extreme points; and to treat of "Argumentative Composition," *generally*, and *exclusively*; considering Rhetoric (in

⁴Whately, *Elements of Logic*, Introd. [Au.]

conformity with the very just and philosophical view of Aristotle) as an offshoot from Logic.

Philosophy and Rhetoric compared.

I remarked in treating of that Science, that Reasoning may be considered as applicable to two purposes, which I ventured to designate respectively by the terms "Inferring," and "Proving"; i.e., the *ascertainment* of the truth by investigation, and the *establishment* of it to the satisfaction of *another*: and I there remarked, that Bacon, in his *Organon*, has laid down rules for the conduct of the former of these processes, and that the latter belongs to the province of Rhetoric: and it was added, that to *infer* is to be regarded as the proper office of the Philosopher, or the Judge;—to *prove*, of the Advocate. It is not however to be understood that Philosophical works are to be excluded from the class to which Rhetorical rules are applicable; for the Philosopher who undertakes, by writing or speaking, to convey his notions to others, assumes, for the time being, the character of Advocate of the doctrines he maintains. The process of *investigation* must be supposed completed, and certain conclusions arrived at by that process, *before* he begins to impart his ideas to others in a treatise or lecture; the object of which must of course be to *prove* the justness of those conclusions. And in doing this, he will not always find it expedient to adhere to the same course of reasoning by which his own discoveries were originally made; other arguments may occur to him afterwards, more clear, or more concise, or better adapted to the understanding of those he addresses. In explaining therefore, and establishing the truth, he may often have occasion for rules of a different kind from those employed in its discovery. Accordingly, when I remarked, in the work above alluded to, that it is a common fault, for those engaged in Philosophical and Theological inquiries, to forget their own peculiar office, and assume that of the Advocate, improperly, this caution is to be understood as applicable to the process of *forming their own opinions*; not, as excluding them from advocating by all fair arguments, the conclusions at which they have arrived by candid investigation. But if this candid investigation do

not take place in the first instance, no pains that they may bestow in searching for arguments, will have any tendency to ensure their attainment of truth. If a man begins (as is too plainly a frequent mode of proceeding) by hastily adopting, or strongly leaning to, some opinion which suits his inclination, or which is sanctioned by some authority that he blindly venerates, and then studies with the utmost diligence, not as an Investigator of Truth, but as an Advocate labouring to prove his point, his talents and his researches, whatever effect they may produce in making converts to his notions, will avail nothing in enlightening his own judgment, and securing him from error.

Composition, however, of the Argumentative kind, may be considered (as has been above stated) as coming under the province of Rhetoric. And this view of the subject is the less open to objection, inasmuch as it is not likely to lead to discussions that can be deemed superfluous, even by those who may chuse to consider Rhetoric in the most restricted sense, as relating only to "Persuasive Speaking"; since it is evident that *Argument* must be, in most cases at least, the basis of Persuasion.

Plan of the present Treatise.

I propose then to treat, first and principally, of the Discovery of ARGUMENTS, and of their Arrangement; secondly, to lay down some Rules respecting the excitement and management of what are commonly called the *Passions* (including every kind of Feeling, Sentiment, or Emotion) with a view to the attainment of any object proposed,—principally, Persuasion, in the strict sense, i.e., the influencing of the WILL; thirdly, to offer some remarks on STYLE; and, fourthly, to treat of ELOCUTION.

2.

History of Rhetoric.

It may be expected that, before I proceed to treat of the Art in question, I should present the reader with a sketch of its history. Little however is required to be said on this head, because the present is not one of those branches of study in which we

can trace with interest a progressive improvement from age to age. It is one, on the contrary, to which more attention appears to have been paid, and in which greater proficiency is supposed to have been made, in the earliest days of Science and Literature, than at any subsequent period.

Aristotle.

Among the ancients, Aristotle, the earliest whose works are extant, may safely be pronounced to be also the best of the systematic writers on Rhetoric.

Cicero.

Cicero is hardly to be reckoned among the number; for he delighted so much more in the practice, than in the theory, of his art, that he is perpetually drawn off from the rigid philosophical analysis of its principles, into discursive declamations, always eloquent indeed, and often highly interesting, but adverse to regularity of system, and frequently as unsatisfactory to the practical student as to the Philosopher. He abounds indeed with excellent practical remarks; though the best of them are scattered up and down his works with much irregularity: but his precepts, though of great weight, as being the result of experience, are not often traced up by him to first principles; and we are frequently left to guess, not only on what basis his rules are grounded, but in what cases they are applicable. Of this latter defect a remarkable instance will be hereafter cited.

Quintilian.

Quintilian is indeed a systematic writer; but cannot be considered as having much extended the philosophical views of his predecessors in this department. He possessed much good sense, but this was tinged with pedantry;—with that *pretension* . . . which extends to an extravagant degree the province of the art which he professes. A great part of his work indeed is a Treatise on Education, generally; in the conduct of which he was no mean proficient; for such was the importance attached to public speaking, even long after

the downfall of the Republic had cut off the Orator from the hopes of attaining, through the means of this qualification, the highest political importance, that he who was nominally a Professor of Rhetoric, had in fact the most important branches of instruction entrusted to his care.

Many valuable maxims however are to be found in this author; but he wanted profundity of thought and power of analysis which Aristotle possessed.

The writers on Rhetoric among the ancients whose works are lost, seem to have been numerous; but most of them appear to have confined themselves to a very narrow view of the subject; and to have been occupied, as Aristotle complains, with the minor details of style and arrangement, and with the sophistical tricks and petty artifices of the Pleader, instead of giving a masterly and comprehensive sketch of the essentials.

Bacon.

Among the moderns, few writers of ability have turned their thoughts to the subject; and but little has been added, either in respect of matter, or of system, to what the ancients have left us. Bacon's "Antitheta" however,—the Rhetorical commonplaces,—are a wonderful specimen of acuteness of thought and pointed conciseness of expression. . . .

Campbell and Blair.

It were most unjust in this place to leave unnoticed Dr. Campbell's "*Philosophy of Rhetoric*": a work which has not obtained indeed so high a degree of popular favour as Dr. Blair's once enjoyed, but is incomparably superior to it, not only in depth of thought and ingenious original research, but also in practical utility to the student. The title of Dr. Campbell's work has perhaps deterred many readers, who have concluded it to be more abstruse and less popular in its character than it really is. Amidst much however that is readily understood by any moderately intelligent reader, there is much also that calls for some exertion of thought, which the indolence of most readers refuses to bestow. And it must be owned that he also in some instances perplexes his read-

ers by being perplexed himself, and bewildered in the discussion of questions through which he does not clearly see his way. His great defect, which not only leads him into occasional errors, but leaves many of his best ideas but imperfectly developed, is his ignorance and utter misconception of the nature and object of Logic; on which some remarks are made in my Treatise on that Science. Rhetoric being in truth an offshoot of Logic, that Rhetorician must labour under great disadvantages who is not only ill-acquainted with that system, but also utterly unconscious of his deficiency.

3.

From a general view of the history of Rhetoric, two questions naturally suggest themselves, which, on examination, will be found very closely connected together: first, what is the cause of the careful and extensive cultivation, among the ancients, of an Art which the moderns have comparatively neglected; and secondly, whether the former or the latter are to be regarded as the wiser in this respect;—in other words, whether Rhetoric be *worth* any diligent cultivation.

Assiduous cultivation of Rhetoric by the ancients.

With regard to the first of these questions, the answer generally given is, that the nature of the Government in the ancient democratical States caused a demand for public speakers, and for such speakers as should be able to gain influence not only with educated persons in dispassionate deliberation, but with a promiscuous multitude; and accordingly it is remarked that the extinction of liberty brought with it, or at least brought after it, the decline of Eloquence; as is justly remarked (though in a courtly form) by the author of the dialogue on Oratory, which passes under the name of Tacitus: “What need is there of long discourses in the Senate, when the best of its members speedily come to an agreement? or of numerous harangues to the people, when deliberations on public affairs are conducted, not by a multitude of unskilled persons, but by a single individual, and that, the wisest?”

The ancients hearers rather than readers.

This account of the matter is undoubtedly correct as far as it goes; but the importance of public speaking is so great, in our own, and all other countries that are not under a despotic Government, that the apparent neglect of the study of Rhetoric seems to require some further explanation. Part of this explanation may be supplied by the consideration that the difference in this respect between the ancients and ourselves is not so great in reality as in appearance. When the *only* way of addressing the Public was by orations, and when all political measures were debated in popular assemblies, the characters of Orator, Author, and Politician, almost entirely coincided; he who would communicate his ideas to the world, or would gain political power, and carry his legislative schemes into effect, was necessarily a Speaker; since, as Pericles is made to remark by Thucydides, “one who forms a judgment on any point, but cannot explain himself clearly to the people, might as well have never thought at all on the subject.”⁵ The consequence was, that almost all who sought, and all who professed to give, instruction, in the principles of Government, and the conduct of judicial proceedings, combined these, in their minds and in their practice, with the study of Rhetoric, which was necessary to give effect to all such attainments; and in time the Rhetorical writers (of whom Aristotle makes that complaint) came to consider the Science of Legislation and of Politics in general, as a part of their own Art.

Much therefore of what was formerly studied under the name of Rhetoric, is still, under other names, as generally and as diligently studied as ever. Much of what we now call Literature or “Belles Lettres,” was formerly included in what the ancients called Rhetorical studies.

Disavowal of rhetorical studies among the moderns.

It cannot be denied however that a great difference, though less, as I have said, than might at first sight appear, does exist between the ancients

⁵Thucydides, book ii. See the Motto. [Au.]

and the moderns in this point;—that what is strictly and properly called Rhetoric, is much less studied, at least less systematically studied, now, than formerly. Perhaps this also may be in some measure accounted for from the circumstances which have been just noticed. Such is the distrust excited by any suspicion of Rhetorical artifice, that every speaker or writer who is anxious to carry his point, endeavours to disown or to keep out of sight any superiority of skill; and wishes to be considered as relying rather on the strength of his cause, and the soundness of his views, than on his ingenuity and expertness as an advocate. Hence it is, that even those who have paid the greatest and the most successful attention to the study of Composition and of Elocution, are so far from encouraging others by example or recommendation to engage in the same pursuit, that they labour rather to conceal and disavow their own proficiency; and thus theoretical rules are decried, even by those who owe the most to them. Whereas among the ancients, the same cause did not, for the reasons lately mentioned, operate to the same extent; since, however careful any speaker might be to disown the artifices of Rhetoric, properly so called, he would not be ashamed to acknowledge himself, generally, a student, or a proficient, in an Art which was understood to include the elements of Political wisdom.

4.

Utility of Rhetoric.

With regard to the other question proposed, viz., concerning the utility of Rhetoric, it is to be observed that it divides itself into two; first, whether Oratorical skill be, on the whole, a public benefit, or evil; and secondly, whether any artificial system of Rules is conducive to the attainment of that skill.

The former of these questions was eagerly debated among the ancients; on the latter, but little doubt seems to have existed. With us, on the contrary, the state of these questions seems nearly reversed. It seems generally admitted that skill in Composition and in speaking, liable as it evidently is to abuse, is to be considered, on the whole, as advantageous to the Public; because

that liability to abuse is, neither in this, nor in any other case, to be considered as conclusive against the utility of any kind of art, faculty, or profession;—because the evil effects of misdirected power require that equal powers should be arrayed on the opposite side;—and because truth, having an intrinsic superiority over falsehood, may be expected to prevail when the skill of the contending parties is equal; which will be the more likely to take place, the more widely such skill is diffused.⁶

Eloquence supposed to be something that cannot be taught.

But many, perhaps most persons, are inclined to the opinion that Eloquence, either in writing or speaking, is either a natural gift, or, at least, is to be acquired by mere practice, and is not to be attained or improved by any system of rules. And this opinion is favoured not least by those (as has been just observed) whose own experience would enable them to decide very differently; and it certainly seems to be in a great degree practically adopted. Most persons, if not left entirely to the disposal of chance in respect of this branch of education, are at least left to acquire what they can by *practice*, such as school or college-exercises afford, without much care being taken to initiate them systematically into the principles of the Art; and that, frequently, not so much from negligence in the conductors of education, as from their doubts of the utility of any such regular system.

Erroneous systems of rules.

It certainly must be admitted, that rules not constructed on broad philosophical principles, are

⁶Arist. *Rhet.* ch 1.—He might have gone further; for it will very often happen that, before a popular audience, a *greater* degree of skill is requisite for maintaining the cause of truth than of falsehood. There are cases in which the arguments which lie most on the surface, and are, to superficial reasoners, the most easily set forth in a plausible form, are those on the wrong side. It is often difficult to a Writer, and still more, to a Speaker, to point out and exhibit, in their full strength, the delicate distinctions on which truth sometimes depends. [Au.]

more likely to cramp than to assist the operations of our faculties;—that a pedantic display of technical skill is more detrimental in this than in any other pursuit, since by exciting distrust, it counteracts the very purpose of it;—that a system of rules imperfectly comprehended, or not familiarized by practice, will (while that continues to be the case) prove rather an impediment than a help; as indeed will be found in all other arts likewise;—and that no system can be expected to equalize men whose natural powers are different. But none of these concessions at all invalidate the positions of Aristotle; that some succeed better than others in explaining their opinions, and bringing over others to them; and that, not merely by superiority of natural gifts, but by acquired habit; and that consequently if we can discover the causes of this superior success,—the means by which the desired end is attained by all who *do* attain it,—we shall be in possession of rules capable of general application; which is, says he, the proper office of an Art. Experience so plainly evinces, what indeed we might naturally be led antecedently to conjecture, that a right judgment on any subject is not necessarily accompanied by skill in effecting conviction,—nor the ability to discover truth, by a facility in explaining it,—that it might be matter of wonder how any doubt should ever have existed as to the possibility of devising, and the utility of employing, a System of Rules for “Argumentative Composition” generally; distinct from any system conversant about the subject matter of each composition.

Knowledge of facts no remedy for logical inaccuracy.

I have remarked in the Lectures on Political Economy (Lect. 9.), that “some persons complain, not altogether without reason, of the prevailing *ignorance* of facts, relative to this and to many other subjects; and yet it will often be found that the parties censured, though possessed of less knowledge than they ought to have, yet possess more than they know what to do with. Their deficiency in arranging and applying their knowledge,—in combining facts,—and correctly deducing and employing general principles, shall be greater than their ignorance of

facts. Now to attempt remedying this fault by imparting to them additional knowledge,—to confer the advantage of wider experience on those who have not the power of profiting by experience,—is to attempt enlarging the prospect of a short-sighted man by bringing him to the top of a hill.

“In the tale of Sandford and Merton, where the two boys are described as amusing themselves with building a hovel with their own hands, they lay poles horizontally on the top, and cover them with straw, so as to make a flat roof: of course the rain comes through; and Master Merton then advises to *lay on more straw*: but Sandford, the more intelligent boy, remarks that as long as the roof is flat, the rain must, sooner or later, soak through; and that the remedy is to make a new *arrangement*, and form the roof sloping. Now the idea of enlightening incorrect reasoners by additional knowledge, is an error similar to that of the flat roof; it is merely laying on *more straw*: they ought first to be taught the right way of raising the roof. Of course knowledge is necessary; so is straw to thatch the roof: but no quantity of materials will supply the want of knowing how to build.

“I believe it to be a prevailing fault of the present day, not indeed to seek too much for knowledge, but to trust to accumulation of facts as a *substitute* for accuracy in the logical processes. Had Bacon lived in the present day, I am inclined to think he would have made his chief complaint against unmethodized inquiry and illogical reasoning. Certainly he would *not* have complained of *Dialectics* as corrupting Philosophy. To guard *now* against the evils prevalent in *his* time, would be to fortify a town against battering-rams, instead of against cannon. But it is remarkable that even that abuse of *Dialectics* which he complains of, was rather an error connected with the reasoning process than one arising from a want of knowledge. Men were led to false conclusions, not through mere ignorance, but from hastily assuming the correctness of the data they reasoned from, without sufficient grounds. And it is remarkable that the revolution brought about in philosophy by Bacon, was not the *effect*, but the *cause*, of increased knowledge of physical facts: it was not that men were taught to think correctly

by having new phænomena brought to light; but on the contrary, they discovered new phænomena in *consequence* of a new system of philosophizing.”

It is probable that the existing prejudices on the present subject may be traced in great measure to the imperfect or incorrect notions of some writers, who have either confined their attention to trifling minutix of style, or at least have in some respect failed to take a sufficiently comprehensive view of the principles of the Art. One distinction especially is to be clearly laid down and carefully borne in mind by those who would form a correct idea of those principles; viz., the distinction already noticed in the “*Elements of Logic*,” between *an Art*, and *the Art*. “*An Art of Reasoning*” would imply, “a Method or System of Rules by the observance of which one may reason correctly”; “*the Art of Reasoning*” would imply a System of Rules to which every one *does* conform (whether knowingly, or not) who reasons correctly: and such is Logic, considered as an Art.

A rightly-formed system does not cramp the natural powers.

In like manner “*an Art of Composition*” would imply “a System of Rules by which a good Composition may be produced”; “*the Art of Composition*,”—“such rules as *every* good Composition must conform to,” whether the author of it had them in his mind or not. Of the former character appear to have been (among others) many of the Logical and Rhetorical Systems of Aristotle’s predecessors in those departments. He himself evidently takes the other and more philosophical view of both branches: as appears (in the case of Rhetoric) both from the plan he sets out with, that of investigating the causes of the success of *all* who do succeed in effecting conviction, and from several passages occurring in various parts of his treatise; which indicate how sedulously he was on his guard to conform to that plan. Those who have not attended to the important distinction just alluded to, are often disposed to feel wonder, if not weariness, at his reiterated remarks, that “*all* men effect persuasion either in this way or in that”; “it is *impossible* to attain such and such an

object in any other way,” &c.; which doubtless were intended to remind his readers of the nature of his design; viz. not to teach *an Art* of Rhetoric, but *the Art*; not to instruct them merely how conviction *might* be produced, but how it *must*.

If this distinction were carefully kept in view by the teacher and by the learner of Rhetoric, we should no longer hear complaints of the natural powers being fettered by the formalities of a System; since no such complaint can lie against a System whose rules are drawn from the invariable practice of all who succeed in attaining their proposed object.

No one would expect that the study of Sir Joshua Reynolds’s lectures would cramp the genius of the painter. No one complains of the rules of Grammar as fettering Language; because it is understood that correct use is not founded on Grammar, but Grammar on correct use. A just system of Logic or of Rhetoric is analogous, in this respect, to Grammar.

Popular objections.

One may still however sometimes hear—though less, now, than a few years back—the hackneyed objections against Logic and Rhetoric, and even Grammar also. Cicero has been gravely cited (as Aristotle might have been also, in the passage just above alluded to, in his very treatise on Rhetoric) to testify that rhetorical rules are derived from the practice of Oratory, and not *vice versa*; and that consequently there must have been—as there still is—such a thing as a speaker ignorant of those rules. A drayman, we are told, will taunt a comrade by saying, “you’re a pretty fellow,” without having learnt that he is employing the figure called Irony; and may employ “will” and “shall” correctly, without being able to explain the principle that guides him. And it might have been added, that perhaps he will go home whistling a tune, though he does not know the name of a Note; that he will stir his fire, without knowing that he is employing the first kind of Lever;⁷ and that he will set his kettle on it to boil,

⁷It is a curious circumstance, that no longer ago than the early part of the last century, *Mathematical Studies* were a common topic of contemptuous ridicule among those igno-

though ignorant of the theory of Caloric, and of all the technical vocabulary of Chemistry. In short, of the two premises requisite for the conclusion contended for, the one about which there can be no possible doubt, is dwelt on, and elaborately proved; and the other, which is very disputable, is tacitly assumed. That the systems of Logic, Rhetoric, Grammar, Music, Mechanics, &c. must have been preceded by the practice of speaking, singing, &c., which no one ever did or can doubt, is earnestly insisted on; but that every system of which this can be said must consequently be mere useless trifling, which is at least a paradox, is quietly taken for granted; or, at least, is supposed to be sufficiently established, by repeating, in substance, the poet's remark, that

. . . all a Rhetorician's rules
But teach him how to name his tools:

and by observing that, for the most difficult points of all, natural genius and experience must do everything, and Systems of Art nothing.

To this latter remark it might have been added, that in *no* department can Systems of Art equalize men of different degrees of original ability and of experience; or teach us to accomplish all that is aimed at. No system of Agricul-

rant of the subject; just as is the case, to a certain extent, even now, with Logic (including great part of the matter treated of in this volume), with Political Economy, and some others. Pope speaks of what he calls "mad Mathësis," as "running round the circle" and "finding it square!" One may find also among the fugitive poetry of his times, descriptions of a Mathematician as something between fool and madman. And Swift's Voyage to Laputa evinces his utter contempt for such studies, and likewise his utter ignorance of them. He ridicules the Laputans for having their bread cut into "Cycloids"; which he conceived to be the name of a *solid figure*: and he (Newton's contemporary) indicates his conviction that the Aristotelian System of Astronomy was on a level with all others, and that various systems would always be successively coming into fashion and going out again, like modes of dress.

Now, the case is altered, as far as regards mathematical pursuits; which are respected even by those not versed in them: but those other sciences above referred to, though studied by a very considerable and daily increasing number, are still sneered at,—as was formerly the case with Mathematics,—by many of those who have *not* studied them (including some mathematicians), and who know no more of the subject than Swift did of Cycloids. [Au.]

ture can create Land; nor can the Art Military teach us to produce, like Cadmus, armed soldiers out of the Earth; though Land, and Soldiers, are as essential to the practice of these Arts, as the well-known preliminary admonition in the Cookery book, "first take your carp," is to the culinary art. Nor can all the books that ever were written bring to a level with a man of military genius and experience, a person of ordinary ability who has never seen service.

As for the remark about "naming one's tools," which—with fair allowance for poetical exaggeration—may be admitted to be near the truth, it should be remembered, that if an inference be thence drawn of the uselessness of being thus provided with *names*, we must admit, by parity of reasoning, that it would be no inconvenience to a carpenter, or any other mechanic, to have no names for the several operations of *sawing, planing, boring, &c.* in which he is habitually engaged, or for the tools with which he performs them; and in like manner, that it would also be no loss to be without names—or without precise, appropriate, and brief names—for the various articles of dress and furniture that we use,—for the limbs and other bodily organs, and the plants, animals, and other objects around us;—in short, that it would be little or no evil to have a Language as imperfect as Chinese, or no Language at all.

Technical terms.

The simple truth is, TECHNICAL TERMS are a PART OF LANGUAGE. Now any portion of one's Language that relates to employments and situations foreign from our own, there is little need to be acquainted with. Nautical terms, e.g., it is little loss to a landman to be ignorant of; though, to a sailor, they are as needful as any part of Language is to any one. And again, a deficiency in the proper Language of some *one* department, even though one we are not wholly unconcerned in, is not felt as a very heavy inconvenience. But if it were absolutely no disadvantage at all, then, it is plain the same might be said of a still *further* deficiency of a like character; and ultimately we should arrive at the absurdity above noticed,—the uselessness of Language altogether.

Real use of Language.

But though this is an absurdity which all would perceive,—though none would deny the importance of Language,—the full extent and real character of that importance is far from being universally understood. There are still (as is remarked in the Logic, Introduction. § 5.) many,—though I believe not near so many as a few years back,—who, if questioned on the subject, would answer that the use of Language is to *communicate* our thoughts to each other; and that it is peculiar to Man: the truth being that *that* use of Language is *not* peculiar to Man, though enjoyed by him in a much higher degree than by the Brutes; while that which does distinguish Man from Brute, is another, and quite distinct, use of Language, viz., as an *instrument of thought*,—a system of General Signs, without which the Reasoning process could not be conducted. The full importance, consequently, of Language, and of precise technical Language,—of having accurate and well-defined “names for one’s tools,”—can never be duly appreciated by those who still cling to the theory of “Ideas”; those imaginary objects of thought in the mind, of which “Common terms” are merely the names, and by means of which we are supposed to be able to do what I am convinced is impossible; to carry on a train of Reasoning without the use of Language, or of any General Signs whatever.

But each, in proportion as he the more fully embraces the doctrine of *Nominalism*, and consequently understands the real character of Language, will become the better qualified to estimate the importance of an accurate system of nomenclature.

5.

Exercises in Composition.

The chief reason probably for the existing prejudice against technical systems of composition, is to be found in the cramped, meagre, and feeble character of most of such essays, &c. as are *avowedly* composed according to the rules of any such system. It should be remembered, however, in the first place, that these are almost invariably

the productions of *learners*; it being usual for those who have attained proficiency, either to write without thinking of any rules, or to be desirous (as has been said), and, by their increased expertness, able, to conceal their employment of art. Now it is not fair to judge of the value of any system of rules,—those of a drawing master for instance,—from the first awkward sketches of tyros in the art.

Still less would it be fair to judge of one system from the ill success of another, whose rules were framed (as is the case with those ordinarily laid down for the use of students in Composition) on narrow, unphilosophical, and erroneous principles.

Choice of subjects for the composition of exercises.

But the circumstance which has mainly tended to produce the complaint alluded to, is, that in this case, the reverse takes place of the plan pursued in the learning of other arts; in which it is usual to begin, for the sake of practice, with what is *easiest*: here, on the contrary, the tyro has usually a *harder* task assigned him, and one in which he is less likely to succeed, than he will meet with in the actual business of life. For it is undeniable that it is much the most difficult to find either propositions to maintain, or arguments to prove them—to know, in short, what to say, or how to say it—on any subject on which one has hardly any information, and no interest; about which he knows little, and cares still less.

Now the subjects usually proposed for School or College-exercises are (to the learners themselves) precisely of this description. And hence it commonly happens, that an exercise composed with diligent care by a young student, though it will have cost him far more pains than a *real* letter written by him to his friends, on subjects that interest him, will be very greatly inferior to it. On the *real occasions* of after life (I mean, when the object proposed is, not to fill up a sheet, a book, or an hour, but to communicate his thoughts, to convince, or persuade),—on these real occasions, for which such exercises were designed to prepare him, he will find that he writes both better, and with more facility, than on the *artificial* occasion, as it may be called, of composing a

Declamation;—that he has been attempting to learn the easier, by practising the harder.

Ill effects often resulting from exercises.

But what is worse, it will often happen that such exercises will have formed a habit of stringing together empty commonplaces, and vapid declamations,—of multiplying words and spreading out the matter thin,—of composing in a stiff, artificial, and frigid manner: and that this habit will more or less cling through life to one who has been thus trained, and will infect all his future compositions.

So strongly, it should seem, was Milton impressed with a sense of this danger, that he was led to condemn the use altogether of exercises in Composition. In this opinion he stands perhaps alone among all writers on education. I should perhaps agree with him, if there were absolutely no other remedy for the evil in question; for I am inclined to think that this part of education, if conducted as it often is, does in general more harm than good. But I am convinced, that practice in Composition, both for boys and young men, may be so conducted as to be productive of many and most essential advantages.

Selection of subjects.

The obvious and the only preventive of the evils which I have been speaking of is, a most scrupulous care in the selection of such *subjects* for exercises as are likely to be *interesting* to the student, and on which he has (or may, with pleasure, and without much toil, acquire) sufficient information. Such subjects will of course vary, according to the learner's age and intellectual advancement; but they had better be rather below, than much above him; that is, they should never be such as to induce him to string together vague general expressions, conveying no distinct ideas to his own mind, and second-hand sentiments which he does not feel. He may freely transplant indeed from other writers such thoughts as will take root in the soil of his own mind; but he must never be tempted to collect *dried specimens*. He must also be encouraged to express himself (in correct language indeed, but) in a free, natural,

and simple style; which of course implies (considering who and what the writer is supposed to be) such a style as, in itself, would be open to severe criticism, and certainly very unfit to appear in a book.

Compositions on such subjects, and in such a style, would probably be regarded with a disdainful eye, as puerile, by those accustomed to the opposite mode of teaching. But it should be remembered that the compositions of boys *must* be puerile, in one way or the other: and to a person of unsophisticated and sound taste, the truly contemptible kind of puerility would be found in the other kind of exercises. Look at the letter of an intelligent youth to one of his companions, communicating intelligence of such petty matters as are interesting to both—describing the scenes he has visited, and the recreations he has enjoyed during a vacation; and you will see a picture of the youth himself—boyish indeed in looks and in stature—in dress and in demeanour; but lively, unfettered, natural, giving a fair promise for manhood, and, in short, what a boy should be. Look at a theme composed by the same youth, on “*Virtus est medium vitiorum,*” or “*Natura beatis omnibus esse dedit,*”⁸ and you will see a picture of the same boy, dressed up in the garb, and absurdly aping the demeanour, of an elderly man. Our ancestors (and still more recently, I believe, the continental nations) were guilty of the absurdity of dressing up children in wigs, swords, huge buckles, hoops, ruffles, and all the elaborate full-dressed finery of grown-up people of that day.⁹ It is surely reasonable that the analogous absurdity in greater matters also,—among the rest in that part of education I am speaking of,—should be laid aside; and that we should in all points consider what is appropriate to each different period of life.

Classes of subjects for exercises.

The subjects for Composition to be selected on the principle I am recommending, will generally fall under one of three classes: first, subjects

⁸“Virtue is the middle way between vices”; “Nature gave it to all men to be happy.” [Ed.]

⁹See “Sandford and Merton,” *passim*. [Au.]

drawn from the studies the learner is engaged in; relating, for instance, to the characters or incidents of any history he may be reading; and sometimes, perhaps, leading him to forestall by conjecture, something which he will hereafter come to, in the book itself: secondly, subjects drawn from any conversation he may have listened to (*with interest*) from his seniors, whether addressed to himself, or between each other: or, thirdly, relating to the amusements, familiar occurrences, and everyday transactions, which are likely to have formed the topics of easy conversation among his familiar friends. The student should not be confined exclusively to any one of these three classes of subjects. They should be intermingled in as much variety as possible. And the teacher should frequently recall to his own mind these two considerations; first, that since the benefit proposed does not consist in the intrinsic value of the composition, but in the *exercise* to the pupil's mind, it matters not how insignificant the subject may be, if it will but interest him, and thereby afford him such exercise; secondly, that the younger and backwarder each student is, the more unfit he will be for *abstract* speculations; and the less remote must be the subjects proposed from those *individual* objects and occurrences which always form the first beginnings of the furniture of the youthful mind.¹⁰

Drawing up of outlines or skeletons.

It should be added, as a practical rule for all cases, whether it be an exercise that is written for practice' sake, or a composition on some real occasion, that an outline should be first drawn out,—a *skeleton* as it is sometimes called,—of the substance of what is to be said. The more *briefly* this is done, so that it does but exhibit

¹⁰For some observations relative to the learning of Elocution, see Part IV. chap. ii. § 5, and iv. § 2. See also some valuable remarks on the subject of exercises in composition in Mr. Hill's ingenious work on Public Education. It may be added, that if the teacher will, after pointing out any faults in the learner's exercise, and making him alter or rewrite it, if necessary, then put before him a composition on the same subject written by *himself*, or by some approved writer,—such a practice, if both learner and teacher have patience and industry enough to follow it up, will be likely to produce great improvement. [Au.]

clearly the several heads of the composition, the better: because it is important that the whole of it be placed before the eye and the mind in a small compass, and be taken in as it were at a glance: and it should be written therefore not in *sentences*, but like a table of contents. Such an outline should not be allowed to *fetter* the writer, if, in the course of the actual composition, he find any reason for deviating from his original plan. It should serve merely as a *track* to mark out a path for him, not as a *groove* to confine him. But the practice of drawing out such a skeleton will give a coherence to the Composition, a due *proportion* of its several parts, and a clear and easy arrangement of them; such as can rarely be attained if one begins by *completing* one portion before thinking of the rest. And it will also be found a most useful exercise for a beginner, to practise—if possible under the eye of a judicious lecturer—the drawing out of a great number of such skeletons, more than he subsequently fills up; and likewise to practise the analysing in the same way, the Compositions of another, whether read or heard.

If the system which I have been recommending be pursued, with the addition of sedulous care in correction—encouragement from the teacher—and inculcation of such general rules as each occasion calls for; then, *and not otherwise*, Exercises in Composition will be of the most important and lasting advantage; not only in respect of the object *immediately* proposed, but in producing clearness of thought, and in giving play to all the faculties. And if this branch of education be thus conducted, then, *and not otherwise*, the greater part of the present treatise will, it is hoped, be found not much less adapted to the use of those who are writing for practice' sake, than of those engaged in meeting the occasions of real life. . . .

Part I

CHAPTER II

4.

Of Signs then there are some which from a certain Effect or phenomenon, infer the "Cause" of it; and others which, in like manner, infer some "Condition" which is not the Cause.

Testimony a kind of sign.

Of these last, one species is the Argument from Testimony: the premiss being the existence of the Testimony; the Conclusion, the truth of what is attested; which is considered as a "Condition" of the Testimony having been given: since it is evident that so far only as this is allowed (i.e., so far only as it is allowed, that the Testimony would not have been given, had it not been true), can this Argument have any force. Testimony is of various kinds; and may possess various degrees of force,¹¹ not only in reference to its own intrinsic character, but in reference also to the kind of conclusion that it is brought to support. . . .

Testimony of Adversaries.

The Testimony of Adversaries, — including under this term all who would be unwilling to admit the conclusion to which their testimony tends, — has, of course, great weight derived from that circumstance. And as it will, oftener than not, fall under the head of "undesigned," much minute research will often be needful, in order to draw it out.

Cross-Examination.

In oral examination of witnesses, a skilful cross-examiner will often elicit from a reluctant witness most important truths, which the witness is desirous of concealing or disguising. There is another kind of skill, which consists in so alarming, misleading, or bewildering an honest witness as to throw discredit on his testimony, or pervert the effect of it. Of this kind of art, which may be characterised as the most, or one of the most, base and depraved of all possible employments of intellectual power, I shall only make one further observation. I am convinced that the most effectual mode of eliciting *truth*, is quite different from that by which an honest, simple-minded

¹¹Locke has touched on this subject, though slightly and scantily. He says, "In the testimony of others, is to be considered,—1. The number. 2. The integrity. 3. The skill of the witnesses. 4. The design of the author, where it is a testimony out of a book cited. 5. The consistency of the parts and circumstances of the relation. 6. Contrary testimonies." [Au.]

witness is most easily baffled and confused. I have seen the experiment tried, of subjecting a witness to such a kind of cross-examination by a practised lawyer, as would have been, I am convinced, the most likely to alarm and perplex many an honest witness; without any effect in shaking the testimony: and afterwards, by a totally opposite mode of examination, such as would not have at all perplexed one who was honestly telling the truth, that same witness was drawn on, step by step, to acknowledge the utter falsity of the whole.

Generally speaking, I believe that a quiet, gentle, and straightforward, though full and careful examination, will be the most adapted to elicit *truth*; and that the manœuvres, and the browbeating, which are the most adapted to confuse an honest witness, are just what the dishonest one is the best prepared for. The more the storm blusters, the more carefully he wraps round him the cloak, which a warm sunshine will often induce him to throw off.

Testimony of Adversaries usually incidental.

In any testimony (whether oral or written) that is unwillingly borne, it will more frequently consist in something *incidentally implied*, than in a distinct statement. For instance, the generality of men, who are accustomed to cry up Common sense as preferable to Systems of Art, have been brought to bear witness, collectively (see Preface of "Elements of Logic"), on the opposite side; inasmuch as each of them gives the preference to the latter, in the subject, — whatever it may be, — in which he is most conversant.

Sometimes, however, an adversary will be compelled distinctly to admit something that makes against him, in order to contest some other point. Thus, the testimony of the Evangelists, that the miracles of Jesus were acknowledged by the unbelievers, and attributed to magic, is confirmed by the Jews, in a Work called "Toldoth Jeschu"; (the "Generation of Jesus") which must have been compiled (at whatever period) from *traditions existing from the very first*; since it is incredible that if those *contemporaries* of Jesus who opposed Him, had denied the *fact* of the miracles having been wrought, their *descendants*

should have admitted the facts, and resorted to the hypothesis of magic.

Negative Testimony.

The *negative* testimony, either of adversaries, or of indifferent persons, is often of great weight. When statements or arguments, publicly put forth, and generally known, remain *uncontradicted*, an appeal may fairly be made to this circumstance, as a confirmatory testimony on the part of those acquainted with the matter, and interested in it; especially if they are likely to be unwilling to admit the conclusion.¹²

Concurrent Testimony.

It is manifest that the concurrent testimony, positive or negative, of several witnesses, when there can have been no concert, and especially when there is any rivalry or hostility between them, carries with it a weight independent of that which may belong to each of them considered separately. For though, in such a case, each of the witnesses should be even considered as wholly undeserving of credit, still the chances might be incalculable against their all agreeing in the *same* falsehood. It is in this kind of testimony that the generality of mankind believe in the motions of the earth, and of the heavenly bodies, &c. Their belief is not the result of their own observations and calculations; nor yet again of their implicit reliance on the skill and the good faith of any one or more astronomers; but it rests on the agreement of many independent and rival astronomers; who want neither the ability nor the will to detect and expose each other's errors. It is on similar grounds, as Dr. Hinds has justly observed,¹³ that all men, except about two or three in a million, believe in the existence and in the genuineness of manuscripts of ancient books, such as the Scriptures. It is not that they themselves examined these; or again (as some represent), that they rely implicitly on the good faith of those who profess to have done so; but they rely on the *concurrent* and *uncontra-*

dicted testimony of all who have made, or who *might make*, the examination; both unbelievers, and believers of various hostile sects; any one of whom would be sure to seize any opportunity to expose the forgeries or errors of his opponents.

This observation is the more important, because many persons are liable to be startled and dismayed on its being pointed out to them that they have been believing something—as they are led to suppose—on very insufficient reasons; when the truth is perhaps that they have been mis-stating their reasons.

A remarkable instance of the testimony of adversaries,—both positive and negative,—has been afforded in the questions respecting penal colonies. The pernicious character of the system was proved in various publications, and subsequently, before two committees of the House of Commons, from the testimony of persons who were *friendly* to that system: the report and evidence taken before those committees was published; and all this remained uncontradicted for years; till, on motions being made for the abolition of the system,¹⁴ persons had the effrontery to come forward at the eleventh hour and deny the truth of the representations given: thus pronouncing on themselves a heavy condemnation, for having either left that representation—supposing they thought it false,—so long unrefuted, or else, denying what they knew to be true.

Misrepresentation, again, of argument,—attempts to suppress evidence, or to silence a speaker by clamour,—reviling and personality, and false charges—all these are presumptions of the same kind; that the cause against which they are brought, is,—in the opinion of adversaries at least,—unassailable on the side of truth.

Character of things attested.

As for the character of the particular things that in any case may be attested, it is plain that we have to look to the probability or improbability, on the one hand, of their being real, and, on the

¹²See Hinds on the "Inspiration of Scripture." [Au.]

¹³Hinds on Inspiration. [Au.]

¹⁴See "Substance of a Speech on Transportation, delivered in the House of Lords, on the 19th of May, 1840," &c. [Au.]

other hand, of their having been either imagined or invented by the persons attesting them.

Things intrinsically improbable, the less likely to be feigned.

Anything unlikely to *occur*, is, so far, the less likely to have been feigned or fancied: so that its antecedent improbability may sometimes add to the credibility of those who bear witness to it. And again, anything which, however likely to *take place*, would not have been likely, *otherwise*, to enter the mind of *those particular* persons who attest to it, or would be at variance with their interest or prejudices, is thereby rendered the more credible. Thus, as has been above remarked, when the disciples of Jesus record occurrences and discourses, such as were both foreign to all the notions, and at variance with all the prejudices, of any man living in those days, and of Jews more especially, this is a strong confirmation of their testimony.

Things not understood, or not believed, by those who attest them.

It is also, in some cases, a strongly confirmatory circumstance that the witness should appear not to *believe*, himself, or not to *understand*, the thing he is reporting, when it is such as is, to *us*, not unintelligible nor incredible. E.g., When an ancient historian records a report of certain voyagers having sailed to a distant country in which they found the shadows falling on the opposite side to that which they had been accustomed to, and regards the account as incredible, from not being able to understand how such a phenomenon could occur, *we*—recognising at once what we know takes place in the Southern Hemisphere, and perceiving that *he* could not have *invented* the account—have the more reason for believing it. The report thus becomes analogous to the copy of an inscription in a language unknown to him who copied it.

The negative circumstance also, of a witness's *omitting* to mention such things as it is morally certain he *would* have mentioned had he

been inventing, adds great weight to what he does say.

Superior force of negative probabilities.

And it is to be observed that, in many cases, silence, omission, absence of certain statements, &c. will have even greater weight than much that we do find stated. E.g., Suppose we meet with something in a passage of one of Paul's Epistles, which indicates with a certain degree of probability the existence of such and such a custom, institution, &c., and suppose there is just the same degree of probability that such and such another custom, institution, or event, which he does *not* mention anywhere, *would* have been mentioned by him in the same place, supposing it to have really existed, or occurred; this omission, and the *negative* argument resulting, has incomparably the more weight than the other, *if we also find* that same omission in *all the other* epistles, and in every one of the Books of the New Testament.

E.g., The universal omission of all notice of the office of Hieres (a sacerdotal priest) among the Christian ministers¹⁵—of all reference to one supreme Church bearing rule over all the rest—of all mention of any transfer of the Sabbath from the seventh day to the first—are instances of decisive arguments of this kind.

So also, the omission of all allusion to a Future State, in those parts of the writings of Moses in which he is urging the Israelites to obedience by appeals to their hopes and fears; and again, in the whole of the early part of the Book of Job, in which that topic could not have failed to occur to persons believing in the doctrine,—this is a plain indication that no revelation of the doctrine was intended to be given in those Books; and that the passage, often cited, from the Book of Job, as having reference to the resurrection, must be understood as relating to that *temporal* deliverance which is narrated immediately after: since else it would (as Bishop Warburton has just remarked) make all the rest of the book unintelligible and absurd.

¹⁵See Discourse on the Christian Priesthood appended to the Bampton Lectures. Also, Bernard's translation of Vitringa on the "Synagogue and the Church." [Au.]

Again, "although we do not admit the *positive* authority of antiquity in favour of any doctrine or practice which we do not find sanctioned by Scripture, we may yet, without inconsistency, appeal to it *negatively*, in refutation of many errors. . . . It is no argument in favour of the Millennium, that it was a notion entertained by Justin Martyr, since we do not believe him to have been inspired, and he may therefore have drawn erroneous inferences from certain texts of Scripture: but it is an argument against the doctrine of Transubstantiation, that we find no traces of it for above six centuries; and against the adoration of the Virgin Mary, that in like manner it does not appear to have been inculcated till the sixth century. It is very credible that the first Christian writers, who were but men, should have made mistakes to which all men are liable, in their interpretation of Scripture: but it is not credible that such important doctrines as Transubstantiation and the adoration of the Virgin Mary should have been transmitted from the Apostles, if we find no trace of them for five or six centuries after the birth of our Saviour."¹⁶

Absence of all records of Savages having civilized themselves.

To take another instance: I have remarked in the Lectures on Political Economy (Lect.5.), that the descriptions some writers give of the Civilization of Mankind, by the spontaneous origin, among tribes of Savages, of the various arts of life, one by one, are to be regarded as wholly imaginary, and not agreeing with anything that ever did, or can, actually take place; inasmuch as there is no record or tradition of any race of savages having ever civilized themselves without external aid. Numerous as are the accounts we have, of Savages who have *not* received such aid, we do not hear, in any one instance, of their having ceased to be Savages. And again, abundant as are the traditions (though mostly mixed up with much that is fabulous) of the origin of civilization in various nations, all concur in tracing it up to some foreign, or some superhuman, instructor.

¹⁶Bishop Pepsy's Charge, 1845. [Au.]

It ever a nation did emerge, unassisted, from the savage state, all memory of such an event is totally lost.

Now the *absence* of all such records or traditions, in a case where there is every reason to expect that an instance could be produced if any had ever occurred,—this *negative* circumstance (in conjunction with the other indications there adduced) led me, many years ago, to the conclusion, that it is impossible for mere Savages to civilize themselves—that consequently Man must at some period have received the rudiments of civilization from a *superhuman* instructor,—and that Savages are probably the descendants of civilized men, whom wars and other afflictive visitations have degraded.

It might seem superfluous to remark that none but very general rules, such as the above, can be profitably laid down; and that to attempt to supersede the discretion to be exercised on each individual case, by *fixing precisely* what degree of weight is to be allowed to the testimony of such and such persons, would be, at least, useless trifling, and, if introduced in practice, a most mischievous hindrance of a right decision. But attempts of this kind have actually been made, in the systems of Jurisprudence of some countries; and with such results as might have been anticipated. The reader will find an instructive account of some of this unwise legislation in an article on "German Jurisprudence" in the Edinburgh Review. . . .

CHAPTER III

2.

Presumption and Burden of proof.

It is a point of great importance to decide in each case, at the outset, in your own mind, and clearly to point out to the hearer, as occasion may serve, on which side the *Presumption* lies, and to which belongs the [onus probandi] *Burden of Proof*. For though it may often be expedient to bring forward more proofs than can be fairly *demand*ed of you, it is always desirable, when this is the case,

that it should be *known*, and that the strength of the cause should be estimated accordingly.

According to the most correct use of the term, a “Presumption” in favour of any supposition, means, not (as has been sometimes erroneously imagined) a preponderance of probability in its favour, but, such a *preoccupation* of the ground, as implies that it must stand good till some sufficient reason is adduced against it; in short, that the *Burden of proof* lies on the side of him who would dispute it.

Thus, it is a well-known principle of the Law, that every man (including a prisoner brought up for trial) is to be *presumed* innocent till his guilt is established. This does not, of course, mean that we are to *take for granted* he is innocent; for if that were the case, he would be entitled to immediate liberation: nor does it mean that it is antecedently *more likely than not* that he is innocent; or, that the majority of these brought to trial are so. It evidently means only that the “burden of proof” lies with the accusers;—that he is not to be called on to prove his innocence, or to be dealt with as a criminal till he has done so; but that they are to bring their charges against him, which if he can repel, he stands acquitted.

Thus again, there is a “presumption” in favour of the right of any individuals or bodies—corporate to the property of which they are in *actual possession*. This does not mean that they are, or are not, *likely* to be the rightful owners: but merely, that no man is to be disturbed in his possessions till some claim against him shall be established. He is not to be called on to prove his right; but the claimant, to disprove it; on whom consequently the “burden of proof” lies.

Importance of deciding on which side lies the onus probandi.

A moderate portion of common sense will enable any one to perceive, and to show, on which side the Presumption lies, when once his attention is called to this question; though, for want of attention, it is often overlooked: and on the determination of this question the whole character of a discussion will often very much depend. A body of troops may be perfectly adequate to the defence

of a fortress against any attack that may be made on it; and yet, if, ignorant of the advantage they possess, they sally forth into the open field to encounter the enemy, they may suffer a repulse. At any rate, even if strong enough to act on the offensive, they ought still to keep possession of their fortress. In like manner, if you have the “Presumption” on your side, and can but *refute* all the arguments brought against you, you have, for the present at least, gained a victory: but if you abandon this position, by suffering this Presumption to be forgotten, which is in fact *leaving out one of, perhaps, your strongest arguments*, you may appear to be making a feeble attack, instead of a triumphant defense.

Such an obvious case as one of those just stated, will serve to illustrate this principle. Let any one imagine a perfectly unsupported accusation of some offence to be brought against himself; and then let him imagine himself—instead of replying (as of course he would do) by a simple denial, and a defiance of his accuser to prove the charge,—setting himself to establish a negative,—taking on himself the burden of proving his own innocence, by collecting all the circumstances indicative of it that he can muster: and the result would be, in many cases, that this evidence would fall far short of establishing a certainty, and might even have the effect of raising a suspicion against him;¹⁷ he having in fact kept out of sight the important circumstance, that these probabilities in one scale, though of no great weight perhaps in themselves, are to be weighed against absolutely nothing in the other scale.

The following are a few of the cases in which it is important, though very easy, to point out where the Presumption lies.

Presumption in favour of existing institutions.

There is a Presumption in favour of every *existing* institution. Many of these (we will suppose, the majority) may be susceptible of alteration for the better; but still the “Burden of proof” lies with him who proposes an alteration; simply, on

¹⁷Hence the French proverb, “Qui s’excuse, s’accuse.” [Au.]

the ground that since a change is not a good in itself, he who demands a change should show cause for it. No one is *called on* (though he may find it advisable) to defend an existing institution, till some argument is adduced against it; and that argument ought in fairness to prove, not merely an actual inconvenience, but the possibility of a change for the better.

Presumption of innocence.

Every book again, as well as person, ought to be presumed harmless (and consequently the copyright protected by our courts) till something is proved against it. It is a hardship to require a man to prove, either of his book, or of his private life, that there is no ground for any accusation; or else to be denied the protection of his Country. The Burden of proof, in each case, lies fairly on the accuser. I cannot but consider therefore as utterly unreasonable the decisions (which some years ago excited so much attention) to refuse the interference of the Court of Chancery in cases of piracy, whenever there was even any *doubt* whether the book pirated *might* not contain something of an immoral tendency.

Presumption against a Paradox.

There is a "Presumption" against any thing *paradoxical*, i.e., contrary to the prevailing opinion: it may be true; but the Burden of proof lies with him who maintains it; since men are not expected to abandon the prevailing belief till some reason is shown.

Hence it is, probably, that many are accustomed to apply "Paradox" as if it were a term of reproach, and implied absurdity or falsity. But correct use is in favour of the etymological sense. If a Paradox is unsupported, it can claim no attention; but if false, it should be censured on *that* ground; but not for being *new*. If true, it is the more important, for being a truth not generally admitted. "Interdum vulgus rectum videt; est ubi peccat."¹⁸ Yet one often hears a charge of "para-

¹⁸"Sometimes the mob sees clearly; that is where it sins."
[Ed.]

dox and nonsense" brought forward, as if there were some close connexion between the two. And indeed, in one sense this is the case; for to those who are too dull, or too prejudiced, to admit any notion at variance with those they have been used to entertain, *that* may appear nonsense, which to others is sound sense. Thus "Christ crucified" was "to the Jews, a stumbling block" (paradox), "and to the Greeks, foolishness"; because the one "required a sign" of a different kind from any that appeared; and the others "sought after wisdom" in their schools of philosophy.

Christianity, presumptions against and for.

Accordingly there was a Presumption against the Gospel in its first announcement. A Jewish peasant claimed to be the promised Deliverer, in whom all the nations of the Earth were to be blessed. The Burden of proof lay with Him. No one could be fairly called on to admit his pretensions till He showed cause for believing in Him. If He "had not done among them the *works* which none other man did, they had not had sin."

Now, the case is reversed. Christianity *exists*; and those who deny the divine origin attributed to it, are bound to show some reasons for assigning to it a human origin: not indeed to prove that it *did* originate in this or that way, without supernatural aid; but to point out some conceivable way in which it *might* have so arisen.

It is indeed highly expedient to bring forward evidences to establish the divine origin of Christianity: but it ought to be more carefully kept in mind than is done by most writers, that all this is an argument "ex abundantia," as the phrase is,—over and above what can fairly be called for, till some hypothesis should be framed, to account for the origin of Christianity by human means. The Burden of proof, *now*, lies plainly on him who rejects the Gospel: which, if it were not established by miracles, demands an explanation of the greater miracle,—its having been established, in defiance of all opposition, by human contrivance.

The Reformation.

The Burden of proof, again, lay on the authors of the Reformation: they were bound to show cause for every *change* they advocated; and they admitted the fairness of this requisition, and accepted the challenge. But they were *not* bound to show cause for *retaining* what they left unaltered. The Presumption was, in those points, on their side; and they had only to reply to objections. This important distinction is often lost sight of, by those who look at the “doctrines, &c. of the Church of England as constituted at the Reformation,” in the mass, without distinguishing the altered from the unaltered parts. The framers of the Articles kept this in mind in their expression respecting infant-baptism, that it “ought by all means to be *retained*.” They did not introduce the practice, but left it as they found it; considering the burden to lie on those who denied its existence in the primitive church, to show *when* it did arise.

The case of Episcopacy is exactly parallel: but Hooker seems to have overlooked this advantage: he sets himself to *prove* the apostolic origin of the institution, as if his task had been to *introduce* it.¹⁹ Whatever force there may be in arguments so adduced, it is plain they must have far *more* force if the important Presumption be kept in view, that the institution had notoriously existed many ages, and that consequently, even if there had been no direct evidence for its being coeval with Christianity, it might fairly be at least supposed to be so, till some other period should be pointed out at which it had been introduced as an innovation.

Tradition.

In the case of any *doctrines* again, professing to be essential parts of the Gospel revelation, the fair *presumption* is, that we shall find all such distinctly declared in Scripture. And again, in respect of commands or prohibitions as to

¹⁹On the ambiguous employment of the phrase “divine origin”—a great source of confused reasoning among theologians—I have offered some remarks in Essay II. “On the Kingdom of Christ,” § 17. 4th edit. [Au.]

any point, which our Lord or his Apostles did deliver, there is a presumption that Christians are bound to comply. If any one maintains, on the ground of Tradition, the necessity of some additional article of faith (as for instance that of Purgatory) or the propriety of a departure from the New Testament precepts (as for instance in the denial of the cup to the Laity in the Eucharist) the burden of proof lies with him. We are not called on to prove that there is no tradition to the purpose;—much less, that no tradition can have any weight at all in *any* case. It is for *him* to prove, not merely generally, that there is such a thing as Tradition, and that it is entitled to respect, but that there is a tradition relative to each of the points which he thus maintains; and that such tradition is, in each point, sufficient to establish that point. For want of observing this rule, the most vague and interminable disputes have often been carried on respecting Tradition, generally.

It should be also remarked under this head, that in any one question the Presumption will often be found to lie on different sides, in respect of different parties. E.g., In the question between a member of the Church of England, and a Presbyterian, or member of any other Church, on which side does the Presumption lie? Evidently, to each, in favour of the religious community to which he at present belongs. He is not to separate from the Church of which he is a member, without having some sufficient reason to allege. . . .

Grounds of deference.

Admiration, esteem, &c. are more the result of a judgment of the *understanding* (though often of an erroneous one); “Deference” is apt to depend on *feelings*;—often, on whimsical and unaccountable feelings. It is often yielded to a vigorous *claim*,—to an authoritative and overbearing demeanour. With others, of an opposite character, a soothing, insinuating, flattering, and seeming submissive demeanour will often gain great influence. They will yield to those who seem to yield to them; the others, to those who seem resolved to yield to no one. Those who seek to gain

adherents to their School or Party by putting forth the claim of *antiquity* in favour of their tenets, are likely to be peculiarly successful among those of an arrogant disposition. A book or a Tradition of a thousand years old, appears to be rather a *thing* than a *person*; and will thence often be regarded with blind deference by those who are prone to treat their contemporaries with insolent contempt, but who “will not go to compare with an old man.”²⁰ They will submit readily to the authority of men who flourished fifteen or sixteen centuries ago, and whom, if now living, they would not treat with decent respect.

With some persons, again, Authority seems to act according to the law of Gravitation; inversely as the squares of the *distances*. They are inclined to be of the opinion of the person who is *nearest*. Personal *Affection*, again, in many minds, generates Deference. They form a habit of first, *wishing*, secondly, *hoping*, and thirdly, *believing* a person to be in the right, whom they would be *sorry* to think mistaken. In a state of morbid depression of spirits, the same cause leads to the opposite effect. To a person in that state, whatever he would be “sorry to think” appears probable; and consequently there is a Presumption in his mind *against* the opinions, measures, &c. of those he is most attached to. That the degree of Deference felt for any one’s Authority ought to depend not on our feelings, but on our judgment, it is almost superfluous to remark; but it is important to remember that there is a danger on *both* sides; — of an unreasonable Presumption either on the side of our wishes, or *against* them.

Deference as to particular points.

It is obvious that Deference ought to be, and usually is, felt in reference to particular points. One has a deference for his physician, in questions of medicine; and for his bailiff, in questions of farming; but not *vice versâ*. And accordingly, Deference may be misplaced in respect of the *subject*, as well as of the person. It is conceivable that one may have a *due* degree of Deference, and an *excess* of it, and a *deficiency* of it, all towards the same person, but in respect of different points.

²⁰Shakespeare, *Twelfth Night*. [Au.]

Men often self-deceived as to their feelings of deference.

It is worth remarking, as a curious fact, that men are liable to deceive themselves as to the degree of Deference they feel towards various persons. But the case is the same (as I shall have occasion hereafter to point out) with many other feelings also, such as pity, contempt, love, joy, &c.; in respect of which we are apt to mistake the *conviction* that such and such an object *deserves* pity, contempt, &c. for the *feeling* itself; which often does not accompany that conviction. And so also, a person will perhaps describe himself (with sincere good faith) as feeling great Deference towards some one, on the ground of his *believing* him to be *entitled* to it; and perhaps being really indignant against *any one else* who does not manifest it. Sometimes again, one will mistake for a feeling of Deference his *concurrence* with another’s views, and admiration of what is said or done by him. But this, as has been observed above, does not imply Deference, if the same approbation would have been bestowed on the same views, supposing them stated and maintained in an anonymous paper. The converse mistake is equally natural. A man may fancy that, in each case, he acquiesces in such a one’s view or suggestions from the dictates of judgment, and for the reasons given (“What she does seems wisest, virtuous, discreet, best”²¹); when yet perhaps the very same reasons, coming from another, would have been rejected. . . .

Transferring the Burden of proof.

It is to be observed, that a Presumption may be *rebutted* by an opposite Presumption, so as to shift the Burden of proof to the other side. E.g., Suppose you had advised the removal of some *existing* restriction: you might be, in the first instance, called on to take the Burden of proof, and allege your reasons for the change, on the ground that there is a Presumption against every Change. But you might fairly reply, “True, but there is another Presumption which rebuts the former; every *Restriction* is in it-

²¹Milton. [Au.]

self an evil; and therefore there is a Presumption in favour of its removal, unless it can be shown necessary for prevention of some greater evil: I am not bound to allege any *specific* inconvenience; if the restriction is *unnecessary*, that is reason enough for its abolition: its defenders therefore are fairly called on to prove its necessity."

Again, in reference to the prevailing opinion, that the "*Nathanael*" of John's Gospel was the same person as the Apostle "*Bartholomew*" mentioned in the others, an intelligent friend once remarked to me that *two names* afford a "prima facie" Presumption of two persons. But the name of *Bartholomew*, being a "Patronymic," (like Simon Peter's designation *Bar-Jona*, and Joseph's Surname of *Barsabas*, mentioned in Acts;—he being probably the same with the Apostle "Joseph Barnabas," &c.,) affords a Counterpresumption that he must have had *another* name, to distinguish him from his own kindred. And thus we are left open to the arguments drawn from the omission, by the other Evangelists, of the name of *Nathanael*,—evidently a very eminent disciple,—the omission by John of the name of the Apostle *Bartholomew*,—and the recorded intimacy with the Apostle *Philip*. . . .

Presumptions for and against the learned.

Again, there is (according to the old maxim of "peritis credendum est in arte sua") a presumption (and a fair one), in respect of each question, in favour of the judgment of the most eminent men in the department it pertains to;—of eminent physicians, e.g., in respect of medical questions,—of theologians, in theological, &c. And by this presumption many of the Jews in our Lord's time seem to have been influenced, when they said, "have any of the Rulers, or of the Pharisees believed on Him?"

But there is a counterpresumption, arising from the circumstance that men eminent in any department are likely to regard with jealousy any one who professes to bring to light something unknown to themselves; especially if it promise to *supersede*, if established, much of what they have been accustomed to learn, and teach, and practise. And moreover, in respect of the medical profession, there is an obvious danger of a man's being regarded as a dangerous experimentalist

who adopts any novelty, and of his thus losing practice even among such as may regard him with admiration as a philosopher. In confirmation of this, it may be sufficient to advert to the cases of *Harvey* and *Jenner*. *Harvey's* discovery of the circulation of the blood is said to have lost him most of his practice, and to have been rejected by every physician in Europe above the age of forty. And *Jenner's* discovery of vaccination had, in a minor degree, similar results.

There is also this additional counterpresumption against the judgment of the proficient in any department; that they are prone to a bias in favour of everything that gives the most palpable *superiority* to themselves over the uninitiated [the *Idiotæ*], and affords the greatest scope for the employment and display of their own peculiar acquirements. Thus, e.g., if there be two possible interpretations of some Clause in an Act of Parliament, one of which appears obvious to every reader of plain good sense, and the other can be supported only by some ingenious and far-fetched legal subtlety, a practised lawyer will be liable to a bias in favour of the latter, as setting forth the more prominently his own peculiar qualifications. And on this principle in great measure seems founded *Bacon's* valuable remark; "*harum artium sæpe pravus fit usus, ne sit nullus.*" Rather than let their knowledge and skill lie idle, they will be tempted to misapply them; like a schoolboy, who, when possessed of a knife, is for trying its edge on everything that comes in his way. On the whole, accordingly, I think that of these two opposite presumptions, the counterpresumption has often as much weight as the other, and sometimes more. . . .

7.

Refutation.

Refutation of Objections should generally be placed in the midst of the Argument; but nearer the beginning than the end.

If indeed very strong objections have obtained much currency, or have been just stated by an opponent, so that what is asserted is likely to be regarded as paradoxical, it may be advisable to begin with a Refutation; but when this is not the

case, the mention of Objections in the opening will be likely to give a paradoxical air to our assertion, by implying a consciousness that much may be said against it. If again all mention of Objections be deferred till the last, the other arguments will often be listened to with prejudice by those who may suppose us to be overlooking what may be urged on the other side.

Sometimes indeed it will be difficult to give a satisfactory Refutation of the opposed opinions, till we have gone through the arguments in support of our own: even in that case however it will be better to take some brief notice of them early in the Composition, with a promise of afterwards considering them more fully, and refuting them. This is Aristotle's usual procedure.

Sophistical evasion.

A sophistical use is often made of this last rule, when the Objections are such as cannot really be satisfactorily answered. The skilful sophist will often, by the promise of a triumphant Refutation hereafter, gain attention to his own statement; which, if it be made plausible, will so draw off the hearer's attention from the Objections, that a very inadequate fulfilment of that promise will pass unnoticed, and due weight will not be allowed to the Objections.

It may be worth remarking, that Refutation will often occasion the introduction of fresh Propositions; i.e., we may have to disprove Propositions, which though incompatible with the principal one to be maintained, will not be directly contradictory to it: e.g., Burke, in order to the establishment of his theory of beauty, refutes the other theories which have been advanced by those who place it in "fitness" for a certain end—in "proportion"—in "perfection," &c.; and Dr. A. Smith, in his "Theory of Moral Sentiments," combats the opinion of those who make "expediency the test of virtue"—of the advocates of a "Moral sense," &c., which doctrines respectively are at variance with those of these authors, and *imply*, though they do not express, a contradiction of them.

Though I am at present treating principally of the proper *collocation* of Refutation, some remarks on the conduct of it will not be unsuitable

in this place. In the first place, it is to be observed that there is ²² no distinct class of refutatory Argument; since they become such merely by the circumstances under which they are employed.

Two modes of refuting.

There are two ways in which any Proposition may be refuted; first, by proving the contradictory of it; secondly, by overthrowing the Arguments by which it has been supported. The former of these is less strictly and properly called Refutation; being only *accidentally* such, since it might have been employed equally well had the opposite Argument never existed; and in fact it will often happen that a Proposition maintained by one author, may be in this way refuted by another, who had never heard of his Arguments. Thus Pericles is represented by Thucydides as proving, in a speech to the Athenians, the probability of their success against the Peloponnesians; and thus, virtually, refuting the speech of the Corinthian ambassador at Sparta, who had laboured to show the probability of their speedy downfall.²³ In fact, every one who argues in favour of any Conclusion is virtually refuting, in this way, the opposite Conclusion.

But the character of Refutation more strictly belongs to the other mode of proceeding; viz. in which a reference is made, and an answer given, to some specific arguments in favour of the opposite Conclusion. This Refutation may consist either in the denial of one of the *Premises*,²⁴ or an objection against the *conclusiveness* of the reasoning. And here it is to be observed that an ob-

²²As Aristotle remarks, *Rhet.* Book ii. apparently in opposition to some former writers. [Au.]

²³The speeches indeed appear to be in great part the composition of the historian; but he professes to give the substance of what was either actually said, or *likely* to be said, on each occasion: and the arguments urged in the speeches now in question are undoubtedly such as the respective speakers would be likely to employ. [Au.]

²⁴If the Premiss to be refuted be a "Universal," (see *Logic*, b. ii. ch. ii. § 3) it will be sufficient to establish its Contradictory, which will be a Particular; which will often be done by an argument that will naturally be exhibited in the third figure, whose conclusions are always Particulars. Hence, this may be called the *erstatic*, or *refutatory* Figure. (See *Logic*, b. ii. ch. iii. § 4.) [Au.]

jection is often supposed, from the mode in which it is expressed, to belong to this last class, when perhaps it does not, but consists in the contradiction of a Premiss; for it is very common to say, "I admit your principle, but deny that it leads to such a consequence"; "the assertion is true, but it has no force as an Argument to prove that Conclusion"; this sounds like an objection to the Reasoning itself; but it will not unfrequently be found to amount only to a denial of the *suppressed* Premiss of an Enthymeme; the assertion which is admitted being only the expressed Premiss, whose "force as an Argument" must of course depend on the other Premiss, which is understood.²⁵ Thus Warburton admits that in the Law of Moses the doctrine of a future state was not revealed; but contends that this, so far from disproving, as the Deists pretend, his divine mission, does, on the contrary, establish it. But the objection is not to the Deist's *Argument* properly so called, but to the other Premiss, which they so hastily took for granted, and which he disproves, viz. "that a divinely commissioned Lawgiver would have been sure to reveal that doctrine." The objection is then only properly said to lie against the Reasoning itself, when it is shown that, granting all that is assumed on the other side, whether expressed or understood, still the Conclusion contended for would not follow from the Premises; either on account of some ambiguity in the Middle Term, or some other fault of that class.

Fallacies.

This is the proper place for a treatise on Fallacies; but as this has been inserted in the "ELEMENTS OF LOGIC," I have only to refer the reader to it. (Book iii).

Direct and Indirect refutation.

It may be proper in this place to remark, that "Indirect Reasoning" is sometimes confounded with

²⁵It has been remarked to me by an intelligent friend, that in common discourse the word "Principle" is usually employed to designate the *major* premiss of an Argument, and "Reason," the *minor*. [Au.]

"Refutation," or supposed to be peculiarly connected with it; which is not the case; either Direct or Indirect Reasoning being employed indifferently for Refutation, as well as for any other purpose. The application of the term "elenctic" (from *elenchein* to refute or disprove) to Indirect Arguments, has probably contributed to this confusion; which, however, principally arises from the very circumstance that occasioned such a use of that term; viz., that in the Indirect method the absurdity or falsity of a Proposition (opposed to our own) is proved; and hence is suggested the idea of an *adversary* maintaining that Proposition, and of the Refutation of that adversary being necessarily accomplished in this way. But it should be remembered, that Euclid and other mathematicians, though they can have no opponent to refute, often employ the Indirect Demonstration; and that, on the other hand, if the Contradictory of an opponent's Premiss can be satisfactorily proved in the Direct method, the Refutation is sufficient.

The Indirect method sometimes preferred.

It is true, however, that while, in Science, the Direct method is considered preferable, in Controversy, the Indirect is often adopted by choice, as it affords an opportunity for holding up an opponent to scorn and ridicule, by deducing some very absurd conclusion from the principles he maintains, or according to the mode of arguing he employs. Nor indeed can a fallacy be so clearly exposed to the unlearned reader in any other way. For it is no easy matter to explain, to one ignorant of Logic, the grounds on which you object to an inconclusive argument; though he will be able to perceive its correspondence with another, brought forward to illustrate it, in which an absurd conclusion may be introduced, as drawn from true premises.

Proving too much.

It is evident that either the *Premiss* of an opponent, or his *Conclusion*, may be disproved, either in the Direct, or in the Indirect method; i.e., either by proving the truth of the Contradictory, or by showing that an absurd conclusion may fairly

be deduced from the proposition you are combating. When this latter mode of refutation is adopted with respect to the *Premiss*, the phrase by which this procedure is usually designated, is, that the "Argument proves too much"; i.e., that it proves, besides the conclusion drawn, another, which is manifestly inadmissible. E.g., The Argument by which Dr. Campbell labours to prove that every correct Syllogism must be nugatory, as involving a "*petitio principii*," proves, if admitted at all, more than he intended; since it may easily be shown to be equally applicable to *all* Reasoning whatever.

It is worth remarking, that an Indirect argument may easily be altered in form so as to be stated in the Direct mode. For, strictly speaking, that is Indirect reasoning in which we assume as true the Proposition whose Contradictory it is our object to prove; and deducing regularly from it an absurd Conclusion, infer thence that the *Premiss* in question is false; the alternative proposed in *all* correct reasoning being, either to admit the Conclusion, or to deny one of the *Premises*. But by adopting the form of a Destructive Conditional,²⁶ the same argument as this, in substance, may be stated *directly*. E.g., We may say, "let it be admitted, that no testimony can satisfactorily establish such a fact as is not agreeable to our experience; thence it will follow that the Eastern Prince judged wisely and rightly, in at once rejecting, as a manifest falsehood, the account given him of the phænomenon of ice; but he was evidently mistaken in so doing; therefore the Principle assumed is unsound." Now the substance of this Argument remaining the same, the form of it may be so altered as to make the Argument a direct one; viz., "*if* it be true that no testimony, &c. that Eastern Prince must have judged wisely, &c., but he did not; therefore that principle is not true."

Character of conditional propositions.

Universally indeed a Conditional Proposition may be regarded as an assertion of the validity of a certain Argument; the Antecedent correspond-

²⁶See *Logic*, b. ii, c. iv. § 6. [Au.]

ing to the *Premises*, and the Consequent to the Conclusion; and neither of them being asserted as true, only, the *dependence* of the one on the other; the alternative then is, to acknowledge as a conclusion, either the truth of the Consequent, as in the Constructive Syllogism, or (as in the destructive) the falsity of the Antecedent: and the former accordingly corresponds to Direct reasoning, the latter to Indirect; being, as has been said, a mode of stating it in the Direct form; as is evident from the examples adduced.

Ironical effect of indirect arguments.

The difference between these two modes of stating such an Argument is considerable, when there is a long chain of reasoning. For when we employ the Categorical form, and assume as true the *Premises* we design to disprove, it is evident we must be speaking *ironically*, and in the character, assumed for the moment, of an adversary; when, on the contrary, we use the hypothetical form, there is no irony. Butler's *Analogy* is an instance of the latter procedure; he contends that *if* such and such objections were admissible against Religion, they *would* be applicable equally to the constitution and course of Nature. Had he, on the other hand, assumed, for the argument's sake, that such objections against Religion *are* valid, and had thence proved the condition of the natural world to be totally different from what we see it to be, his arguments, which would have been the same in substance, would have assumed an ironical form. This form has been adopted by Burke in his celebrated "Defence of Natural Society, by a late noble Lord"; in which, assuming the person of Bolingbroke, he proves, according to the principles of that author, that the arguments he brought against ecclesiastical, would equally lie against civil, institutions. This is an Argument from *Analogy*, as well as Bishop Butler's, though not relating to the same point; Butler's being a defence of the *Doctrines* of Religion; Burke's, of its *Institutions* and practical effects. A defence of the *Evidences* of our religion, (the third point against which objections have been urged,) on a similar plan with the work of Burke just mentioned, and consequently, like

that, in an ironical form, I attempted some years ago, in a pamphlet (published anonymously, merely for the preservation of its ironical character), whose object was to show, that objections (“Historic Doubts”) similar to those against the Scripture-history, and much more plausible, might be urged against all the received accounts of Napoleon Buonaparte.²⁷

It is in some respects a recommendation of this latter method, and in others an objection to it, that the sophistry of an adversary will often be exposed by it in a *ludicrous* point of view; and this even where no such effect is designed; the very essence of jest being its *mimic sophistry*.²⁸ This will often give additional force to the Argument, by the vivid impression which ludicrous images produce; but again it will not unfrequently have this disadvantage, that weak men, perceiving the wit, are apt to conclude that nothing *but* wit is designed; and lose sight perhaps of a solid and convincing Argument, which they regard as no more than a good joke. Having been warned that “ridicule is not the test of truth,” and “that wisdom and wit” are not the same thing, they distrust every thing that can possibly be regarded as witty; not having judgment to perceive the combination, when it occurs, of Wit with sound Reasoning. The ivy wreath completely conceals from their view the point of the Thyrsus.

Danger of irony.

And moreover if such a mode of Argument be employed on serious subjects, the “weak brethren” are sometimes scandalized by what appears to them a profanation; not having discernment to perceive when it is that the ridicule does, and when it does not, affect the solemn subject itself. But for the respect paid to Holy Writ, the

²⁷To these examples may be added the “Pastoral Epistle to some Members of the University of Oxford,” (Fellowes) first published in 1835, and now reprinted in the “Remains of Bishop Dickinson.” It is the more valuable, now, from the *verification* of the predictions it contains, which, when it first appeared, many were disposed to regard as extravagant. [Au.]

²⁸See *Logic*, Chapter on *Fallacies*, at the conclusion. [Au.]

taunt of Elijah against the prophets of Baal, and Isaiah’s against those who “bow down to the stock of a tree,” would probably appear to such persons irreverent. And the caution now implied will appear the more important, when it is considered how large a majority they are, who, in this point, come under the description of “weak brethren.” He that can laugh at what is ludicrous, and at the same time preserve a clear discernment of sound and unsound Reasoning, is no ordinary man. And moreover the resentment and mortification felt by those whose unsound doctrines, or sophistry, are fully exposed and held up to contempt or ridicule,—this, they will often disguise from others, and sometimes from themselves, by representing the contempt or ridicule as directed against serious or sacred subjects, and not, against their own absurdities: just as if those idolators above alluded to had represented the Prophets as ridiculing *devotional feelings*, and not, merely the absurd misdirection of them to a log of wood. And such persons will often in this way exercise a powerful influence on those whose understanding is so cloudy that they do not clearly perceive against what the ridicule is directed, or who are too dull to understand it at all. For there are some persons so constituted as to be altogether incapable of even comprehending the plainest irony; though they have not in other points any corresponding weakness of intellect. The humorous satirical pamphlet, (attributed to an eminent literary character,) entitled “Advice to a Reviewer,” I have known persons read without perceiving that it was ironical. And the same, with the “Historic Doubts” lately referred to. Such persons, when assured that such and such a Work contains ridicule, and that it has some references to matters of grave importance, take for granted that it must be a work of profane levity.

There is also this danger in the use of irony; that sometimes when titles, in themselves favourable, are applied (or their application retained) to any set of men, in bitter scorn, they will then sometimes be enabled to appropriate such titles in a serious sense; the ironical force gradually evaporating. I mean, such titles as “Orthodox,” “Evangelical,” “Saints,” “Reformers,” “Liberals,” “Political-Economists,” “Rational,”

&c. The advantage thus given may be illustrated by the story of the cocoanuts in Sinbad the Sailor's fifth voyage.

It may be observed generally, that too much stress is often laid, especially by unpractised reasoners, on Refutation; (in the strictest and narrowest sense, i.e., of Objections to the Premises, or to the Reasoning;) I mean, that they are apt both to expect a Refutation where none can fairly be expected, and to attribute to it, when satisfactorily made out, more than it really accomplishes.

Unanswerable arguments may exist on both sides.

For first, not only specious, but real and solid arguments, such as it would be difficult, or impossible to refute, may be urged against a Proposition which is nevertheless true, and may be satisfactorily established by a *preponderance* of probability.²⁹ It is in strictly scientific Reasoning alone that all the arguments which lead to a false Conclusion must be fallacious. In what is called moral or probable Reasoning, there may be sound arguments, and valid objections, on both sides.³⁰ E.g., It may be shown that each of two contending parties has some reason to hope for success; and this, by irrefragable arguments on both sides; leading to conclusions which are not (strictly speaking) contradictory to each other; for though only one party can obtain the victory, it may be true that each has some reason to expect it. The real question in such cases is, which event is the *more* probable;—on which side the evidence preponderates. Now it often happens that the inexperienced reasoner, thinking it necessary that every objection should be satisfactorily answered, will have his attention drawn off from the arguments of the opposite side, and will be occupied perhaps in making a weak defence, while victory was in his hands. The objection perhaps may be unanswerable, and yet may safely be allowed, if it can be shown that more and weightier objections lie

²⁹See above, ch. ii. § 4, and also *Logic*, Part iii. § 17. [Au.]

³⁰Bacon, in his rhetorical commonplaces—heads of arguments *pro* and *contra*, on several questions—has some admirable illustrations of what has been here remarked. [Au.]

against every other supposition. This is a most important caution for those who are studying the Evidences of Religion. Let the opposer of them be called on, instead of confining himself to detached cavils, and saying, "how do you answer this?" and "how do you explain that?" to frame some consistent hypothesis to account for the introduction of Christianity by human means; and then to consider whether there are more or fewer difficulties in his hypothesis than in the other.

Sophistical Refutation.

On the other hand, one may often meet with a sophistical refutation of objections, consisting in counter-objections urged against something else which is taken for granted to be, though it is not, the *only alternative*. E.g., Objections against an unlimited Monarchy may be met by a glowing description of the horrors of the mob-government of the Athenian and Roman Republics. If an exclusive attention to mathematical pursuits be objected to, it may be answered by deprecating the *exclusion* of such studies. It is thus that a man commonly replies to the censure passed on any vice he is addicted to, by representing some other vice as worse; e.g., if he is blamed for being a sot, he dilates on the greater enormity of being a thief; as if there were any need he should be either. And it is in this way alone that the advocates of Transportation have usually defended it: describing some very ill-managed penitentiary system, and assuming, as self-evident and admitted, that this must be the *only possible substitute* for Penal Colonies.³¹ This fallacy may be stated logically, as a Disjunctive Hypothetical, with the Major, false.

Overestimate of the force of refutation.

Secondly, the force of a Refutation is often overrated: an argument which is satisfactorily answered ought merely to *go for nothing*: it is possible that the conclusion drawn may nevertheless be true: yet men are apt to take for granted that

³¹See Letters to Earl Grey on the subject,—Report of Committee, and "Substance of a Speech," &c. [Au.]

the Conclusion itself is disproved, when the Arguments brought forward to establish it have been satisfactorily refuted; assuming, when perhaps there is no ground for the assumption, that these are *all* the arguments that could be urged.³² This may be considered as the fallacy of denying the Consequent of a Conditional Proposition, from the Antecedent having been denied: “if such and such an Argument be admitted, the Assertion in question is true; but that Argument is inadmissible; *therefore the Assertion is not true.*” Hence the injury done to any cause by a weak advocate; the cause itself appearing to the vulgar to be overthrown, when the Arguments brought forward are answered.

“Hence the danger of ever advancing more than can be well maintained; since the refutation

³²“Another form of *ignoratio elenchi* (irrelevant conclusion), which is rather the more serviceable on the side of the respondent, is, to prove or disprove *some part* of that which is required, and dwell on *that*, suppressing all the rest.

“Thus, if a University is charged with cultivating *only* the mere elements of Mathematics, and in reply a list of the books studied there is produced, should even *any one* of those books be *not elementary*, the charge is in fairness refuted; but the Sophist may then earnestly contend that *some* of those books *are* elementary; and thus keep out of sight the real question, *viz.* whether they are *all* so. This is the great art of the *answerer* of a book: suppose the main positions in any work to be irrefragable, it will be strange if some illustration of them, or some subordinate part, in short, will not admit of a plausible objection; the opponent then joins issue on one of these incidental questions, and comes forward with ‘a Reply’ to such and such a work.”—*Logic*, b. iii. § 18. Another expedient which *answerers* sometimes resort to, and which is less likely to remain permanently undetected, is to garble a book; exhibiting statements without their explanations,—conclusions without their proofs,—and passages brought together out of their original order;—so as to produce an appearance of falsehood, confusion, or inconclusiveness. The last and boldest step is for the “answerer” to make some false statement or absurd remark, and then father it upon the author. And even this artifice will sometimes succeed for a time, because many persons do not suspect that any one would venture upon it. Again, it is no uncommon manœuvre of a dexterous sophist, when there is some argument, statement, scheme, &c. which he cannot directly defeat, to assent with seeming cordiality, but with some exception, addition, or qualification, (as e.g., an additional clause in an Act,) which though seemingly unimportant, shall entirely nullify all the rest. This has been humorously compared to the trick of the pilgrim in the well-known tale, who “took the liberty to boil his pease.” [Au.]

of *that* will often quash the whole. A guilty person may often escape by having too much laid to his charge; so he may also by having too much evidence against him, i.e., some that is not in itself satisfactory: thus a prisoner may sometimes obtain acquittal by showing that one of the witnesses against him is an infamous informer and spy; though perhaps if that part of the evidence had been omitted, the rest would have been sufficient for conviction.”³³

The maxim here laid down, however, applies only to those causes in which (waiving the consideration of honesty) first, it is wished to produce not merely a temporary, but a lasting impression, and that, on readers or hearers of some judgment; and secondly, where there really *are* some *weighty* arguments to be urged. When no charge e.g., can really be substantiated, and yet it is desired to produce some present effect on the unthinking, there may be room for the application of the proverb, “Slander stoutly, and something will stick”: the vulgar are apt to conclude, that where a great deal is said, *something* must be true; and many are fond of that lazy contrivance for saving the trouble of thinking,—“splitting the difference”; imagining that they show a laudable caution in believing *only a part* of what is said. And thus a malignant Sophist may gain such a temporary advantage by the multiplicity of his attacks, as the rabble of combatants described by Homer sometimes did by their showers of javelins, which encumbered and weighed down the shield of one of his heroes, though they could not penetrate it.

Objections should be stated in their full force.

On the above principle,—that a weak argument is positively hurtful, is founded a most important maxim, that it is not only the fairest, but also the wisest plan, to *state Objections in their full force*; at least, wherever there does exist a satisfactory answer to them; otherwise, those who hear them stated more strongly than by the uncandid advocate who had undertaken to repel them, will naturally enough conclude that they

³³See *Logic*, b. iii. § 18. [Au.]

are unanswerable. It is but a momentary and ineffective triumph that can be obtained by manœuvres like those of Turnus's charioteer, who furiously chased the feeble stragglers of the army, and evaded the main front of the battle.

And when the objections urged are not unanswerable, but (what is more) *decisive*,—when some argument that has been adduced, or some portion of a system, &c. is perceived to be really unsound, it is the wisest way fairly and fully to confess this, and abandon it altogether. There are many who seem to make it a point of honour never to yield a single point,—never to retract: or (if this be found unavoidable) “to back out”—as the phrase is—of an untenable position, so as to display their reluctance to make any concession; as if their credit was staked on preserving unbroken the talisman of professed infallibility. But there is little wisdom (the question of honesty is out of the province of this treatise) in such a procedure; which in fact is very liable to cast a suspicion on that which is really sound,

when it appears that the advocate is ashamed to abandon what is unsound. And such an honest avowal as I have been recommending, though it may raise at first a feeble and brief shout of exultation, will soon be followed by a general and increasing murmur of approbation. Uncandid as the world often is, it seldom fails to applaud the magnanimity of confessing a defect or a mistake, and to reward it with an increase of confidence. Indeed this increased confidence is often rashly bestowed, by a kind of over-generosity in the Public; which is apt too hastily to consider the confession of an error as a proof of universal sincerity. Some of the most skilful sophists accordingly avail themselves of this; and gain credence for much that is false, by acknowledging with an air of frankness some *one* mistake; which, like a tub thrown to the whale, they sacrifice for the sake of persuading us that they have committed *only one* error. I fear it can hardly be affirmed as yet, that “this trick has been so long used in controversy, as to be almost worn out.”

Maria W. Stewart

1803–1879

Born to free African American parents in Hartford, Connecticut, in 1803, Maria Miller was left an orphan at the age of five and was taken into the family of a Protestant clergyman as an indentured servant. She remained there until the age of fifteen, when she began to support herself as a domestic servant. Most of Maria's formal schooling was apparently acquired in Sabbath schools, which she attended until she was twenty, as she says in her pamphlet *Religion and the Pure Principles of Morality* (1831). Sabbath schools provided basic education in reading and writing so that the students could read the Bible and keep reflective journals. As historian of rhetoric Shirley Wilson Logan has suggested, Maria may also have had access to books, including books on preaching or on rhetoric more generally, because she grew up in the house of a clergyman.¹ In her published work, she expresses an avid desire for education, along with grim reflections on how hard it is to obtain when one is exhausted by manual labor. Scholars now disagree about her level of literacy as a young woman, but most discount the suggestion made in a letter attached to an 1879 edition of her works (see below) that she had to dictate her early publications to a young amanuensis.

Maria married James W. Stewart in Boston in 1826, when she was twenty-three years old and he was forty-seven. At his request, she adopted his middle initial as well as his surname, and became Maria W. Stewart. James Stewart had served in the War of 1812 on three American warships and had then developed a prosperous business as an outfitter for whaling and fishing vessels. He was a leader of Boston's African American community, which was ardently activist though numbering no more than 3 percent of the population of 60,000, and with this marriage Maria Stewart was brought in contact with other important leaders of the day. One of these was the clergyman who performed the Stewarts' wedding ceremony, the Reverend Thomas Paul, one of the first leaders to form an African American Protestant church to avoid the racism that permeated the white denominations. He had founded the African Baptist Church, where he was pastor, and had located the congregation in the African Meeting House on Beacon Hill, which also housed a school for African American children and which held the first meetings of the New England Abolitionist Society in the 1830s.

Even more important to the development of Maria Stewart's thinking was another community leader, David Walker. Born free in North Carolina, he had traveled widely before settling in Boston and building a successful used clothing business. James Stewart acquired clothing from him to provide to the ships he outfitted. Walker was a passionate abolitionist and advocate for African American rights, and he embodied his views in a fiery 1829 publication, *Walker's Appeal in Four*

¹Shirley Wilson Logan, "Maria W. Stewart (1803–1879)," in *With Pen and Voice: A Critical Anthology of Nineteenth-Century African-American Women* (Carbondale: Southern Illinois University Press, 1995), p. 1.

Articles; Together with a Preamble, to the Coloured Citizens of the World, but in Particular, and Very Expressly, to Those of the United States of America. In this extended essay, Walker attacks racist statements made by Thomas Jefferson and others, and he envisions the African American people in the United States as a distinct nation who should rise and throw off their oppressors by force just as the European American colonists did in the American Revolution. Maria Stewart cites this work several times in her own writings with deep respect. According to Maria Stewart's biographer Marilyn Richardson, her husband may have helped Walker to disseminate his work by slipping copies into the pockets of jackets Stewart provided to African American seamen, especially those who would touch at ports in slave states. The *Appeal* rapidly went through three editions and raised outrage among southern slaveholders, some of whom attempted to get the book suppressed legally. Others offered a bounty on Walker's head, and he died suddenly under mysterious circumstances in 1830, leading historians to speculate that he was murdered for this reward.

Walker's death was only one of the traumatic events that shaped Maria Stewart's future at this time. In 1829 her pastor, the Reverend Thomas Paul, died, and so did her husband James. She was left childless but with a substantial inheritance, which, however, was stripped from her by a group of unscrupulous white businessmen after two years of difficult litigation. These losses, and particularly the death of her husband, occasioned a religious crisis for Stewart, from which she emerged with a conviction that God intended her to dedicate herself to the service of her people.

Stewart's first step was to approach William Lloyd Garrison, a European American abolitionist activist, with her essay, *Religion and the Pure Principles of Morality*. In it she exhorts her people to improve themselves morally and educationally and to actively resist white oppression (though she does not recommend violence, since this would go against her religious principles). She also emphasizes that African American women must be active in the community as well as in their own families to achieve these improvements for the race. While diffident about her own verbal abilities, she confesses that her duty to God drives her to deliver these lessons to her people.

Garrison was about the same age as Stewart and was a fellow admirer of Walker. In 1831 he began to publish what would become the country's most famous abolitionist newspaper, *The Liberator*, and he encouraged Stewart by publishing excerpts from her essay in the newspaper and then by publishing the whole text separately as a pamphlet. In choosing Garrison as a publisher, Stewart focused her attention on the African American community, which made up about three-fourths of his subscribers. Ironically, however, given Stewart's feminism, he located her work in *The Liberator's* "Ladies' Department."

Stewart continued to publish occasional comments in *The Liberator* on the battle for African American rights. In 1832 Garrison published another of her works, a pamphlet of religious meditations entitled *Meditations from the Pen of Mrs. Maria W. Stewart*. Not content with these opportunities to address her community in print, unusual and somewhat undecorous as they were for an early-nineteenth-century woman, Stewart began, in 1832, to give public speeches on the issues that con-

cerned her. Her first speech, “An Address, Delivered before the Afric-American Female Intelligence Society, of Boston,” an African American women’s group organized for self-improvement and social action, was probably given in the spring of 1832, since it was published in *The Liberator* in April of that year.

American women were not supposed to call attention to themselves in this way. As historian Barbara Welter has shown, they were supposed to focus exclusively on domestic matters, the home being their natural “sphere,” and truly womanly women were expected to be too pious, pure, and submissive to male authority to want to venture outside this realm. To publish writings under one’s own name was to violate these conventions, even though female authorship was not unknown in this period. But to appear on the public speakers’ platform, a much more serious breach of convention, was virtually unknown—and heavily sanctioned. Initially, Stewart spoke before a presumably all-female audience, thus preserving some shreds of decorum. But in September 1832 with her second speech (included here), known as the “Lecture Delivered at the Franklin Hall,” a Boston antislavery meeting place, she addressed a gender-mixed audience. She may have been the first American woman of any race to do so. One may understand the uproar that such an unconventional action could cause from noting the response when European American upper-class ladies Sarah and Angelina Grimké spoke against slavery in Massachusetts only a few years later (see p. 1045). As historian Shirley A. Yee has shown, community pride in African American women’s accomplishments was later a counterforce to this social disapproval, but Stewart as a pioneer woman public speaker did not yet enjoy this supportive reaction.

Stewart persevered. In February 1833 she presented “An Address Delivered at the African Masonic Hall,” again to a mixed audience. All three speeches sounded the notes first struck in her pamphlet *Religion and the Pure Principles of Morality*. Although she denounced white racism and such racist schemes as sending African Americans to new colonies in Africa, she did not scruple to chastise African Americans, particularly black men, for running after trivial pursuits, for lacking in educational and professional ambition, and for avoiding the challenging task of speaking up for their people’s rights. Walker had made a similar indictment of the African American community; Stewart’s criticism was more religious, more feminist, and less violent. Apparently, however, hearing such trenchant words from the mouth of a woman was too much for her audience. In September 1833, exactly one year after she began her public speaking career, Stewart delivered “Mrs. Stewart’s Farewell Address to Her Friends in the City of Boston” (included here). Although vigorously defending her right as a woman to speak on issues of civic concern, she announced that she would leave the speaker’s platform because of the opposition she had aroused. Indeed, she would leave Boston.

Early in 1834, Stewart moved to New York City. Since she had stressed the need for better education for African Americans in all her works, it is not surprising that she sought employment as a teacher. She also collected texts of her four speeches and two pamphlets and had them published in 1835 by Garrison under the title *Productions of Mrs. Maria W. Stewart, Presented to the First African Baptist Church and Society, of the City of Boston*. Perhaps she felt that she would find sympathetic

readers and hearers among the congregants of her home church. Or perhaps the presentation was intended as an ironic corrective to a religious community that had been torn ever since Reverend Paul's death by dissension over how socially active it was to be, and that had driven away Maria Stewart's voice of social conscience.

Stewart never remarried and struggled with poverty for the rest of her life, after having briefly experienced middle-class life with her husband. Nevertheless, in New York she remained active on behalf of African American rights and women's rights. She joined women's organizations and attended the 1837 Women's Anti-Slavery Convention in the city. In 1850 she organized a fund raiser for *The North Star*, an abolitionist newspaper published by Frederick Douglass (p. 1061), who had escaped slavery to become one of the preeminent African American intellectuals of the nineteenth century. Although Stewart apparently lectured occasionally on the social causes important to her, she never again attempted a sustained career of public speaking.

In a later autobiographical sketch (see below), Stewart says that she left New York for Baltimore in 1852 to seek a better field for her educational efforts. She was largely unsuccessful, and she implies that controversies among the various African American religious denominations made it difficult for her to obtain pupils. When Civil War fighting approached the city in 1861, she fled to Washington, D.C., where, after again working as a teacher, she became the matron of the Freedman's Hospital (a position earlier held by noted African American activist Sojourner Truth). This institution was a sort of refugee camp for escaped and freed slaves, that provided them with food, clothing, and basic education and religious instruction in exchange for manual labor. As matron, Stewart's skills as a teacher were greatly appreciated.

In 1878 a new law enabled Stewart to claim a modest pension as the widow of a veteran of the War of 1812. She used the money in 1879 to publish *Meditations from the Pen of Mrs. Maria W. Stewart*, reusing an earlier title for this new edition of the four speeches and the two pamphlets she had published in Boston, along with a collection of letters from friends, including William Lloyd Garrison, who could testify to her good works from her activist days in Boston to the present. Also included was the autobiographical sketch noted above, of her "Sufferings During the War." Evidently Stewart had been able to return to Boston for a brief visit at this time, perhaps when she collected testimony to support her claim as James Stewart's widow, and, according to Garrison's letter, she and Garrison enjoyed their reunion.

This later republication of her works suggests that Stewart remained proud of her public speaking career to the end of her life and was anxious that it should stay in the written record. Shortly after the later collection was published, she died at the Freedman's Hospital, in December 1879. *The People's Advocate*, the principal newspaper of the Washington African American community, published a glowing eulogy and many letters praising her work (including some of those printed in the 1879 *Meditations*). Soon, however, Stewart's work dropped from sight—to be recovered and revalued by contemporary scholarship.

Stewart's contribution to rhetorical theory, as her biographer and editor Marilyn Richardson argues, lies in her "original synthesis of religious, abolitionist, and fem-

inist concerns,” which “places her squarely in the forefront of a black female activist and literary tradition only now beginning to be acknowledged as of integral significance to the understanding of the history of black thought and culture in America.”² Indeed, says Richardson, Stewart was a “clear forerunner” not only to such noted African American women rhetors as Sojourner Truth and Frances Ellen Watkins Harper (see the introduction to Part Five), but also to male African American activists such as Frederick Douglass, who began his speaking career almost ten years after Stewart’s, in 1841. Moreover, as literary scholar Jean Fagan Yellin has noted, Stewart should have been acknowledged by the European American women activists who soon followed in her footsteps in Massachusetts and elsewhere. They surely knew about her work from reading *The Liberator*. But, says Yellin, racism and perhaps also social class prejudice caused them to pass her over in favor of the white and upper-class Grimké sisters³ (see p. 1045).

Richardson characterizes Stewart’s rhetorical style as a form of “black jeremiad” drawing heavily on announced religious inspiration and on biblical echoes and references, especially to Jeremiah and the Book of Revelations. Literary scholar Carla Peterson explains that, as in later African American social protest, religious inspiration provides an important source of authority for speakers facing powerful opposition: “Religious belief, in particular belief in God’s divine protection, became a source of self-empowerment, an authorization to act in the world.”⁴ Furthermore, notes Peterson, “spirituality provided a gateway to political thought and often functioned as a springboard for discussions of secular history,”⁵ as can be seen in Stewart’s many references (noted also by Richardson) to the African past and African greatness, which clearly try to connect African Americans to a proud collective legacy. Stewart’s principal agenda in exhorting her African American audience to social change includes the need for education, women’s activism, and vigorous resistance to white oppression. Until, perhaps, the twentieth century, few women speakers have followed Stewart’s path in the complexity of their rhetorical personae.

Selected Bibliography

Marilyn Richardson’s *Maria W. Stewart, America’s First Black Woman Political Writer: Essays and Speeches* (1987) collects *Religion and the Pure Principles of Morality*, “Cause for Encouragement” (one of Stewart’s notes in *The Liberator*), the four Boston speeches, and the preface, letters, and autobiographical sketch from the 1879 edition of Stewart’s works. Richardson’s notes are very helpful. This edition is the source of our selections from Stewart. The complete text of the 1835 *Productions of Mrs. Maria W. Stewart*, including her 1832

Meditations from the Pen of Mrs. Maria W. Stewart (religious meditations), can be found in *Spiritual Narratives*, a 1988 volume in the Schomburg Library of Nineteenth-Century Black Women Writers. Stewart's Franklin Hall speech is reprinted with helpful notes in Karlyn Kohrs Campbell's *Man Cannot Speak for Her, Volume II: Key Texts of the Early Feminists* (1986). This speech and the "Address Delivered before the Afric-American Female Intelligence Society of Boston" can also be found, with a helpful introduction, in Shirley Wilson Logan's *With Pen and Voice: A Critical Anthology of Nineteenth-Century African-American Women* (1995).

The best account of Stewart's life remains Richardson's introduction to her collection of Stewart's works (see above). Jacqueline Jones Royster helpfully locates Stewart in the context of a literate and politically active African American community in *Traces of a Stream: Literacy and Social Change among African American Women* (2000). On the African American context, see also Shirley A. Yee's *Black Women Abolitionists: A Study in Activism, 1828–1860* (1992). Sue E. Houchins's introduction to the *Spiritual Narratives* volume (see above) places Stewart in the Western tradition of female mystics and groups her with Jarena Lee, Julia Foote, and Virginia Broughton, African American women who felt called by God to preach. Jean Fagan Yellin situates Stewart in the context of nineteenth-century white and black women's abolitionist activism in *Women and Sisters: The Antislavery Feminists in American Culture* (1989). Still helpful on the antifeminist ideologies against which activist women had to contend is Barbara Welter's "The Cult of True Womanhood: 1820–1860," in *Dimity Convictions: The American Woman in the Nineteenth Century* (1976). For more on how these ideologies affected the African American community, see James Oliver Horton's "Freedom's Yoke: Gender Conventions among Free Blacks," in *Free People of Color* (1993).

Marilyn Richardson describes Stewart's rhetorical style in the introduction to her collection of Stewart's works. Shirley Wilson Logan discusses the African cultural connections in her work in "We Are Coming": *The Persuasive Discourse of Nineteenth-Century Black Women* (1999). In "Doers of the Word": *African-American Women Speakers and Writers in the North (1830–1880)* (1995), Carla Peterson analyzes Stewart's rhetorical strategies in detail and clarifies the importance of spirituality in her thinking. Also analyzing Stewart's rhetoric with a special eye to her adaptation of domestic ideologies is Laura R. Sells, "Maria W. Miller Stewart," in *Women Public Speakers in the United States, 1800–1925: A Bio-Critical Sourcebook*, ed. Karlyn Kohrs Campbell, 1993. Problems with Stewart's mix of feminine and militant personae are discussed in detail by Lora Romero in *Home Fronts: Domesticity and Its Critics in the Antebellum United States* (1997).

Lecture Delivered at the Franklin Hall¹

Boston, September 21, 1832

Why sit ye here and die? If we say we will go to a foreign land, the famine and the pestilence are there, and there we shall die. If we sit here, we shall die. Come let us plead our cause before the whites: if they save us alive, we shall live—and if they kill us, we shall but die.²

Methinks I heard a spiritual interrogation—“Who shall go forward, and take off the reproach that is cast upon the people of color? Shall it be a woman?” And my heart made this reply—“If it is thy will, be it even so, Lord Jesus!”

I have heard much respecting the horrors of slavery; but may Heaven forbid that the generality of my color throughout these United States should experience any more of its horrors than to be a servant of servants, or hewers of wood and drawers of water [Joshua 9:23]! Tell us no more of southern slavery; for with few exceptions, although I may be very erroneous in my opinion, yet I consider our condition but little better than that. Yet, after all, methinks there are no chains so galling as those that bind the soul, and exclude it from the vast field of useful and scientific knowledge. O, had I received the advantages of an early education, my ideas would, ere now, have expanded far and wide; but, alas! I possess nothing but moral capability—no teachings but the teachings of the Holy Spirit.

I have asked several individuals of my sex, who transact business for themselves, if providing our girls were to give them the most satisfactory references, they would not be willing to grant them an equal opportunity with others? Their reply has been—for their own part, they had no objection; but as it was not the custom, were they to take them into their employ, they would be in danger of losing the public patronage.

Edited by Marilyn Richardson.

¹Franklin Hall, at No. 16 Franklin Street in Boston, was the site of regular monthly meetings of the New England Anti-Slavery Society. [M. R.]

²Stewart employs the rhetorical structure of 2 Kings 7:3, 4. [M.R.]

And such is the powerful force of prejudice. Let our girls possess whatever amiable qualities of soul they may; let their characters be fair and spotless as innocence itself; let their natural taste and ingenuity be what they may; it is impossible for scarce an individual of them to rise above the condition of servants. Ah! why is this cruel and unfeeling distinction? Is it merely because God has made our complexion to vary? If it be, O shame to soft, relenting humanity! “Tell it not in Gath! publish it not in the streets of Askelon!” [2 Samuel 1:20]. Yet, after all, methinks were the American free people of color to turn their attention more assiduously to moral worth and intellectual improvement, this would be the result: prejudice would gradually diminish, and the whites would be compelled to say, unloose those fetters!³

Though black their skins as shades of night
Their hearts are pure, their souls are white.

Few white persons of either sex, who are calculated for anything else, are willing to spend their lives and bury their talents in performing mean, servile labor. And such is the horrible idea that I entertain respecting a life of servitude, that if I conceived of their [sic] being no possibility of my rising above the condition of servant, I would gladly hail death as a welcome messenger. O, horrible idea, indeed! to possess noble souls aspiring after high and honorable acquirements, yet confined by the chains of ignorance and poverty to lives of continual drudgery and toil. Neither do I know of any who have enriched themselves by spending their lives as house-domestics, washing windows, shaking carpets, brushing boots, or tending upon gentlemen’s tables. I can but die for expressing my sentiments: and I am as willing to die by the

³The United States census of 1830 listed a black population of 2,328,642 or 18 percent of the total U.S. population; 319,599 were free. Fifty-seven percent of all free blacks lived in the Southern states and Washington, D.C. The free black population of Massachusetts was 7,048. Peter M. Bergman, ed., *The Chronological History of the Negro in America* (New York: New American Library, 1969), p. 136. [M.R.]

sword as the pestilence; for I am a true born American; your blood flows in my veins, and your spirit fires my breast.

I observed a piece in the *Liberator* a few months since, stating that the colonizationists had published a work respecting us, asserting that we were lazy and idle. I confute them on that point. Take us generally as a people, we are neither lazy nor idle; and considering how little we have to excite or stimulate us, I am almost astonished that there are so many industrious and ambitious ones to be found; although I acknowledge, with extreme sorrow, that there are some who never were and never will be serviceable to society. And have you not a similar class among yourselves?

Again. It was asserted that we were "a ragged set, crying for liberty." I reply to it, the whites have so long and so loudly proclaimed the theme of equal rights and privileges, that our souls have caught the flame also, ragged as we are. As far as our merit deserves, we feel a common desire to rise above the condition of servants and drudges. I have learnt, by bitter experience, that continual hard labor deadens the energies of the soul, and benumbs the faculties of the mind; the ideas become confined, the mind barren, and, like the scorching sands of Arabia, produces nothing; or like the uncultivated soil, brings forth thorns and thistles.

Again, continual and hard labor irritates our tempers and sours our dispositions; the whole system becomes worn out with toil and fatigue; nature herself becomes almost exhausted, and we care but little whether we live or die. It is true, that the free people of color throughout these United States are neither bought nor sold, nor under the lash of the cruel driver; many obtain a comfortable support; but few, if any, have an opportunity of becoming rich and independent; and the enjoyments we most pursue are as unprofitable to us as the spider's web or the floating bubbles that vanish into air. As servants, we are respected; but let us presume to aspire any higher, our employer regards us no longer. And were it not that the King eternal has declared that Ethiopia shall stretch forth her hands unto God, I should indeed despair.

I do not consider it derogatory, my friends, for persons to live out to service. There are many whose inclination leads them to aspire no higher;

and I would highly commend the performance of almost anything for an honest livelihood; but where constitutional strength is wanting, labor of this kind, in its mildest form, is painful. And doubtless many are the prayers that have ascended to Heaven from Africa's daughters for strength to perform their work. Oh, many are the tears that have been shed for the want of that strength! Most of our color have dragged out a miserable existence of servitude from the cradle to the grave. And what literary acquirement can be made, or useful knowledge derived, from either maps, books, or charts, by those who continually drudge from Monday morning until Sunday noon? O, ye fairer sisters, whose hands are never soiled, whose nerves and muscles are never strained, go learn by experience! Had we had the opportunity that you have had, to improve our moral and mental faculties, what would have hindered our intellects from being as bright, and our manners from being as dignified as yours? Had it been our lot to have been nursed in the lap of affluence and ease, and to have basked beneath the smiles and sunshine of fortune, should we not have naturally supposed that we were never made to toil? And why are not our forms as delicate, and our constitutions as slender, as yours? Is not the workmanship as curious and complete? Have pity upon us, have pity upon us, O ye who have hearts to feel for other's woes; for the hand of God has touched us. Owing to the disadvantages under which we labor, there are many flowers among us that are

... born to bloom unseen
And waste their fragrance on the desert air.⁴

My beloved brethren, as Christ has died in vain for those who will not accept his offered mercy, so will it be vain for the advocates of freedom to spend their breath in our behalf, unless with united hearts and souls you make some mighty efforts to raise your sons and daughters from the horrible state of servitude and degradation in which they are placed. It is upon you that woman depends; she can do but little besides using her influence; and it is for her sake and

⁴"Full many a flower is born to bloom unseen, / And waste its sweetness on the desert air" (Thomas Gray, "Elegy Written in a Country Churchyard," 1751). [M.R.]

yours that I have come forward and made myself a hissing and a reproach among the people [Jeremiah 29:18]; for I am also one of the wretched and miserable daughters of the descendants of fallen Africa. Do you ask, why are you wretched and miserable? I reply, look at many of the most worthy and most interesting of us doomed to spend our lives in gentlemen's kitchens. Look at our young men, smart, active and energetic, with souls filled with ambitious fire; if they look forward, alas! What are their prospects? They can be nothing but the humblest laborers, on account of their dark complexions; hence many of them lose their ambition, and become worthless.⁵ Look at our middle-aged men, clad in their rusty plaids and coats; in winter, every cent they earn goes to buy their wood and pay their rents; the poor wives also toil beyond their strength, to help support their families. Look at our aged sires, whose heads are whitened with the frosts of seventy winters, with their old wood-saws on their backs.

⁵At this period in Boston, "no colored boy could be apprenticed to any trade in any shop where white men worked." See James Oliver Horton, *Black Activism in Boston 1830-1860*, doctoral dissertation, Brandeis University, 1973, p. 58. [M.R.]

Alas, what keeps us so? Prejudice, ignorance and poverty. But ah! methinks our oppression is soon to come to an end; yea, before the Majesty of heaven, our groans and cries have reached the ears of the Lord of Sabaoth [James 5:4]. As the prayers and tears of Christians will avail the finally impenitent nothing; neither will the prayers and tears of the friends of humanity avail us anything, unless we possess a spirit of virtuous emulation within our breasts. Did the pilgrims, when they first landed on these shores, quietly compose themselves and say, "The Britons have all the money and all the power, and we must continue their servants forever?" Did they sluggishly sigh and say, "Our lot is hard, the Indians own the soil, and we cannot cultivate it?" No; they first made powerful efforts to raise themselves, and then God raised up those illustrious patriots, WASHINGTON and LAFAYETTE, to assist and defend them. And, my brethren, have you made a powerful effort? Have you prayed the legislature for mercy's sake to grant you all the rights and privileges of free citizens, that your daughters may rise to that degree of respectability which true merit deserves, and your sons above the servile situations which most of them fill?

Mrs. Stewart's Farewell Address to Her Friends in the City of Boston

Delivered September 21, 1833

Is this vile world a friend to grace,
To help me on to God?

Ah, no! For it is with great tribulation that any shall enter through the gates of the holy city [Acts 14:22].

My Respected Friends,

You have heard me observe that the shortness of time, the certainty of death, and the instability of all things here, induce me to turn my thoughts

from earth to heaven. Borne down with a heavy load of sin and shame, my conscience filled with remorse; considering the throne of God forever guiltless, and my own eternal condemnation as just, I was at last brought to accept of salvation as a free gift, in and through the merits of a crucified Redeemer.¹ Here I was brought to see,

'Tis not by works of righteousness
That our own hands have done,
But we are saved by grace alone,
Abounding through the Son.²

¹See Ephesians 2:8. [M.R.]

²Watts, Hymn 225, the third stanza. [M.R.]

After these convictions, in imagination I found myself sitting at the feet of Jesus, clothed in my right mind. For I had been like a ship tossed to and fro, in a storm at sea. Then was I glad when I realized the dangers I had escaped; and then I consecrated by soul and body, and all the powers of my mind to his service, and from that time henceforth; yea, even for evermore, amen.

I found that religion was full of benevolence; I found there was joy and peace in believing, and I felt as though I was commanded to come out from the world and be separate; to go forward and be baptized. Methought I heard a spiritual interrogation, are you able to drink of that cup that I have drank of? And to be baptized with the baptism that I have been baptized with [Matthew 20:22]? And my heart made this reply: Yea, Lord, I am able. Yet amid these bright hopes, I was filled with apprehensive fears, lest they were false. I found that sin still lurked within; it was hard for me to renounce all for Christ, when I saw my earthly prospects blasted. O, how bitter was that cup. Yet I drank it to its very dregs. It was hard for me to say, thy will be done; yet I was made to bend and kiss the rod. I was at last made willing to be anything or nothing, for my Redeemer's sake. Like many, I was anxious to retain the world in one hand, and religion in the other. "Ye cannot serve God and mammon [Matthew 6:24]," sounded in my ear, and with giant-strength, I cut off my right hand, as it were, and plucked out my right eye, and cast them from me, thinking it better to enter life halt and maimed, rather than having two hands or eyes to be cast into hell [Mark 9:43]. Thus ended these mighty conflicts, and I received this heart-cheering promise, "That neither death, nor life, nor principalities, nor powers, nor things present, nor things to come, should be able to separate me from the love of Christ Jesus, our Lord [Romans 8:38, 39]."

And truly, I can say with St. Paul that at my conversion I came to the people in the fulness of the gospel of grace [Romans 15:29]. Having spent a few months in the city of —, previous, I saw the flourishing condition of their churches, and the progress they were making in their Sabbath Schools. I visited their Bible classes, and

heard of the union that existed in their Female Associations. On my arrival here, not finding scarce an individual who felt interested in these subjects, and but few of the whites, except Mr. Garrison, and his friend, Mr. Knapp; and hearing that those gentlemen had observed that female influence was powerful, my soul became fired with a holy zeal for your cause; every nerve and muscle in me was engaged in your behalf. I felt that I had a great work to perform; and was in haste to make a profession of my faith in Christ, that I might be about my Father's business [Luke 2:49]. Soon after I made this profession, The Spirit of God came before me, and I spake before many. When going home, reflecting on what I had said, I felt ashamed, and knew not where I should hide myself. A something said within my breast, "Press forward, I will be with thee." And my heart made this reply, Lord, if thou wilt be with me, then I will speak for thee as long as I live. And thus far I have every reason to believe that it is the divine influence of the Holy Spirit operating upon my heart that could possibly induce me to make the feeble and unworthy efforts that I have.

But to begin my subject: "Ye have heard that it hath been said, whoso is angry with his brother without a cause, shall be in danger of the judgment; and whoso shall say to his brother, Raca, shall be in danger of the council. But whosoever shall say, thou fool, shall be in danger of hell-fire [Matthew 5:22]." For several years my heart was in continual sorrow. And I believe that the Almighty beheld from his holy habitation, the affliction wherewith I was afflicted, and heard the false misrepresentations wherewith I was misrepresented, and there was none to help. Then I cried unto the Lord in my troubles. And thus for wise and holy purposes, best known to himself, he has raised me in the midst of my enemies, to vindicate my wrongs before this people; and to reprove them for sin, as I have reasoned to them of righteousness and judgment to come. "For as the heavens are higher than the earth, so are his ways above our ways, and his thoughts above our thoughts [Isaiah 55:9]." I believe, that for wise and holy purposes, best known to himself, he hath unloosed my tongue, and put his word into my mouth, in order to confound and put all those

to shame that have rose up against me. For he hath clothed by face with steel, and lined my forehead with brass. He hath put his testimony within me, and engraven his seal on my forehead [Revelation 9:4]. And with these weapons I have indeed set the fiends of earth and hell at defiance.

What if I am a woman; is not the God of ancient times the God of these modern days? Did he not raise up Deborah, to be a mother, and a judge in Israel [Judges 4:4]? Did not queen Esther save the lives of the Jews? And Mary Magdalene first declare the resurrection of Christ from the dead? Come, said the woman of Samaria, and see a man that hath told me all things that ever I did, is not this the Christ? St. Paul declared that it was a shame for a woman to speak in public, yet our great High Priest and Advocate did not condemn the woman for a more notorious offence than this; neither will he condemn this worthless worm. The bruised reed he will not break, and the smoking flax he will not quench, till he send forth judgment unto victory. Did St. Paul but know of our wrongs and deprivations, I presume he would make no objections to our pleading in public for our rights. Again; holy women ministered unto Christ and the apostles; and women of refinement in all ages, more or less, have had a voice in moral, religious and political subjects. Again; why the Almighty hath imparted onto me the power of speaking thus, I cannot tell. "And Jesus lifted up his voice and said, I thank thee, O Father, Lord of Heaven and Earth, that thou hast hid these things from the wise and prudent, and has revealed them unto babes: even so, Father, for so it seemed good in thy sight [Luke 10:21]."

But to convince you of the high opinion that was formed of the capacity and ability of woman by the ancients, I would refer you to "Sketches of the Fair Sex." Read to the 51st page, and you will find that several of the Northern nations imagined that women could look into futurity, and that they had about them, an inconceivable something, approaching to divinity. Perhaps that idea was only the effect of the sagacity common to the sex, and the advantages which their natural address gave them over rough and simple warriors. Perhaps, also, those barbarians, surprised at the

influence which beauty has over force, were led to ascribe to the supernatural attraction, a charm which they could not comprehend. A belief, however, that the Deity more readily communicates himself to women, has at one time or other, prevailed in every quarter of the earth; not only among the Germans and the Britons, but all the people of Scandinavia were possessed of it. Among the Greeks, women delivered the Oracles; the respect the Romans paid to the Sibyls is well known. The Jews had their prophetesses. The prediction of the Egyptian women obtained much credit at Rome, even under the Emperors. And in the most barbarous nations, all things that have the appearance of being supernatural, the mysteries of religion, the secrets of physic, and the rites of magic, were in the possession of women.

If such women as are here described have once existed, be no longer astonished then, my brethren and friends, that God at this eventful period should raise up your own females to strive, by their example both in public and private, to assist those who are endeavoring stop the strong current of prejudice that flows so profusely against us at present. No longer ridicule their efforts, it will be counted for sin. For God makes use of feeble means sometimes, to bring about his most exalted purposes.

In the 15th century, the general spirit of this period is worthy of observation. We might then have seen women preaching and mixing themselves in controversies. Women occupying the chairs of Philosophy and Justice; women writing in Greek, and studying in Hebrew. Nuns were poetesses, and women of quality Divines; and young girls who had studied Eloquence, would with the sweetest countenances and the most plaintive voices, pathetically exhort the Pope and the Christian Princes to declare war against the Turks. Women in those days devoted their leisure hours to contemplation and study: The religious spirit which has animated women in all ages, showed itself at this time. It has made them by turns, martyrs, apostles, warriors, and concluded in making them divines and scholars.

Why cannot a religious spirit animate us now? Why cannot we become divines and scholars? Although learning is somewhat requisite, yet recollect that those great apostles, Peter and James,

were ignorant and unlearned. They were taken from the fishing boat, and made fishers of men.³

In the 13th century, a young lady of Bologne devoted herself to the study of the Latin language, and of the laws. At the age of twenty-three she pronounced a funeral oration in Latin, in the great church of Bologne. And to be admitted as an orator, she had neither need of indulgence on account of her youth or of her sex. At the age of twenty-six, she took the degree of Doctor of Laws, and began publicly to expound the Institutions of Justinian. At the age of thirty, her great reputation raised her to a chair, where she taught the law to a prodigious concourse of scholars from all nations. She joined the charms and accomplishments of a woman to all the knowledge of a man. And such was the power of her eloquence, that her beauty was only admired when her tongue was silent.

What if such women as are here described should rise among our sable race? And it is not impossible. For it is not the color of the skin that makes the man or the woman, but the principle formed in the soul. Brilliant wit will shine, come from whence it will; and genius and talent will not hide the brightness of its lustre.

But, to return to my subject; the mighty work of reformation has begun among this people. The dark clouds of ignorance are dispersing. The light of science is bursting forth. Knowledge is beginning to flow, nor will its moral influence by extinguished till its refulgent rays have spread over us from East to West, and from North to South. Thus far is this mighty work begun, but not as yet accomplished. Christians must awake from their slumbers. Religion must flourish among them before the church will be built up in its purity, or immorality be suppressed.

Yet, notwithstanding your prospects are thus fair and bright, I am about to leave you, perhaps never more to return. For I find it is no use for me as an individual to try to make myself useful among my color in this city. It was contempt for my moral and religious opinions in private that drove me thus before a public. Had experience more plainly shown me that it was the nature of man to crush his fellow, I should not have

³Matthew 4:15. [M.R.]

thought it so hard. Wherefore, my respected friends, let us no longer talk of prejudice, till prejudice becomes extinct at home. Let us no longer talk of opposition, till we cease to oppose our own. For while these evils exist, to talk is like giving breath to the air, and labor to the wind. Though wealth is far more highly prized than humble merit, yet none of these things move me. Having God for my friend and portion, what have I to fear? Promotion cometh neither from the East or West, and as long as it is the will of God, I rejoice that I am as I am; for man in his best estate is altogether vanity. Men of eminence have mostly risen from obscurity; nor will I, although a female of a darker hue, and far more obscure than they, bend my head or hang my harp upon willows [Psalm 137:2]; for though poor, I will virtuous prove. And if it is the will of my heavenly Father to reduce me to penury and want, I am ready to say, amen, even so be it. "The foxes have holes, and the birds of the air have nests, but the Son of man hath not where to lay his head [Matthew 8:20]."

During the short period of my Christian warfare, I have indeed had to contend against the fiery darts of the devil. And was it not that the righteous are kept by the mighty power of God through faith unto salvation, long before this I should have proved to be like the seed by the way-side. For it has actually appeared to me at different periods as though the powers of earth and hell had combined against me, to prove my overthrow. Yet amidst their dire attempts, I have found the Almighty to be "a friend that sticketh closer than a brother [Proverbs 18:24]." He never will forsake the soul that leans on him; though he chastens and corrects it, it is for the soul's best interest. "And as a Father pitieth his children, so the Lord pitieth them that fear him [Psalm 103:13]."

But some of you have said, "do not talk so much about religion, the people do not wish to hear you. We know these things, tell us something we do not know." If you know these things, my dear friends, and have performed them, far happier, and more prosperous would you now have been. "He that knoweth the Lord's will and obeyeth it not, shall be beaten with many stripes [Luke 12:42]." Sensible of this, I have, regardless

of the frowns and scoffs of a guilty world, plead [sic] up religion, and the pure principles of morality among you. Religion is the most glorious theme that mortals can converse upon. The older it grows, the more new beauties it displays. Earth, with its brilliant attractions, appears mean and sordid when compared to it. It is that fountain that has no end, and those that drink thereof shall never thirst; for it is, indeed, a well of water springing up in the soul unto everlasting life.

Again, those ideas of greatness which are held forth to us, are vain delusions, are airy visions which we shall never realize. All that man can say or do can never elevate us, it is a work that must be effected between God and ourselves. And how? By dropping all political discussions in our behalf, for these, in my opinion, sow the seed of discord, and strengthen the cord of prejudice.⁴ A spirit of animosity is already risen, and unless it is quenched, a fire will burst forth and devour us, and our young will be slain by the sword. It is the sovereign will of God that our condition should be thus and so. "For he hath formed one vessel for honor, and another for dishonor [Romans 9:21]." And shall the clay say to him that hath formed it, why hast thou formed me thus? It is high time to drop political discussions, and when our day of deliverance comes, God will provide a way for us to escape, and fight his own battles.

Finally, my brethren, let us follow after godliness, and the things which make for peace. Cultivate your own minds and morals; real merit will elevate you. Pure religion will burst your fetters. Turn your attention to industry. Strive to please your employers. Lay up what you can. And remember, that in the grave, distinction withers, and the high and low are alike renowned.

But I draw to a conclusion. Long will the kind sympathy of some much loved friend, be written on the tablet of my memory, especially those kind individuals who have stood by me like pity-

⁴Here Stewart espouses the Garrisonian view opposing a political solution to the question of slavery. Garrison vowed that he would never hold office or exercise the franchise in a government that included slave-holders. The Constitution, as he saw it, was a proslavery instrument and hence not to be supported by a true abolitionist. See Quarles, *Abolitionists*, p. 43. [M.R.]

ing angels, and befriended me when in the midst of difficulty; many blessings rest on them. Gratitude is all the tribute I can offer. A rich reward awaits them.

To my unconverted friends, one and all, I would say, shortly this frail tenement of mine will be dissolved and lie mouldering in ruins. O, solemn thought! Yet why should I revolt, for it is the glorious hope of a blessed immortality, beyond the grave, that has supported me thus far through this vale of tears. Who among you will strive to meet me at the right hand of Christ. For the great day of retribution is fast approaching, and who shall be able to abide his coming? You are forming characters for eternity. As you live so will you die; as death leaves you, so judgment will find you. Then shall we receive the glorious welcome, "Come ye blessed of my Father, inherit the kingdom prepared for you from before the foundation of the world [Matthew 25:34]." Or, hear the heart-rending sentence, "Depart ye cursed into everlasting fire prepared for the devil and his angels [Matthew 25:41]." When thrice ten thousand years have rolled away, eternity will be but just begun. Your ideas will but just begin to expand. O, eternity, who can unfathom thine end, or comprehend thy beginning.

Dearly beloved, I have made myself contemptible in the eyes of many, that I might win some. But it has been like labor in vain. "Paul may plant, and Apollos water, but God alone giveth the increase [1 Corinthians 3:6]."

To my brethren and sisters in the church, I would say, be ye clothed with the breast-plate of righteousness, having your loins girt about with truth [Ephesians 6:14], prepared to meet the Bridegroom at his coming [Matthew 25:1-13]; for blessed are those servants that are found watching.

Farewell. In a few short years from now, we shall meet in those upper regions where parting will be no more. There we shall sing and shout, and shout and sing, and make heaven's high arches ring. There we shall range in rich pastures, and partake of those living streams that never dry. O, blissful thought! Hatred and contention shall cease, and we shall join with redeemed millions in ascribing glory and honor, and riches, and power and blessing to the Lamb that was

slain, and to him that sitteth upon the throne. Nor eye hath seen, nor ear heard, neither hath it entered into the heart of man to conceive of the joys that are prepared for them that love God. Thus far has my life been almost a life of complete disappointment. God had tried me as by fire. Well was I aware that if I contended boldly for his cause, I must suffer, Yet, I chose rather to suffer affliction with his people, than to enjoy the pleasures of sin for a season. And I believe that the glorious declaration was about to be made applicable to me, that was made to God's ancient covenant people by the prophet, Comfort ye,

comfort ye, my people: say unto her that her warfare is accomplished, and that her iniquities are pardoned. I believe that a rich award awaits me, if not in this world, in the world to come. O, blessed reflection. The bitterness of my soul has departed from those who endeavored to discourage and hinder me in my Christian progress; and I can now forgive my enemies, bless those who have hated me, and cheerfully pray for those who have despitefully used and persecuted me.

Fare you well, farewell.

MARIA S. [sic] STEWART
New York, April 14, 1834

Sarah Grimké

1792–1873

Sarah Moore Grimké was the sixth of nine children born to wealthy parents in Charleston, South Carolina. Her father, John Grimké, was a Revolutionary War veteran, a judge, owner of numerous plantations and slaves, and one of the most important political leaders in the region. Grimké and her sisters were educated by tutors and at finishing schools for well-to-do girls in Charleston. Art, music, and needlework were emphasized, rather than mathematics, science, history, or languages. Grimké's brothers studied these latter subjects, with tutors or at schools for boys. However, Grimké was especially close to her older brother Thomas, and he taught her some of what he had learned. She wanted to be a lawyer, and her father is supposed to have said that if she had been male, she would have made a good one.¹ He allowed her to participate in the debates he staged for his sons to practice forensic oratory, but he refused permission for her to study Latin with Thomas. Thomas's departure in 1805 for Yale, where his sister could not go, was a sad time for her. Her parents' last child, Angelina Emily, was born the following year, and thirteen-year-old Sarah asked to be made her godmother. Devotion to Angelina became a major focal point of Sarah Grimké's life.

From a young age, Grimké appears to have questioned the slave system in which she was immersed. As a young woman, she became deeply religious, and was torn between the round of social events and decorative activities with which she was supposed to amuse herself, and the spiritual crises brought on by ardent preaching and by her growing revulsion toward slavery. Grimké became interested in the Society of Friends when she accompanied her dying father on a trip to Philadelphia to seek medical aid from a specialist who happened to be a Quaker. After Judge Grimké's death in 1819, Grimké returned to Charleston but became increasingly withdrawn from the leisurely life of upper-class white women there and oppressed in spirit by the pervasive cruelty of slavery. Soon she returned to Philadelphia, and in 1823 formally joined the Society of Friends. Grimké became very close to Israel Morris, a Quaker widower who had instructed her in the faith, but ultimately decided not to accept his offer of marriage. In 1829, Angelina Grimké joined her sister in Philadelphia, where they were able to live comfortably on their inherited income, and shortly thereafter Angelina too joined the Society of Friends. The Grimkés found racism among the Philadelphia Quakers; for example, there was a separate bench at the meetinghouse for black members—on which Sarah and Angelina sat in protest. But many Quakers also were working against slavery, including Lucretia Mott, whose home was a way station on the Underground Railroad that helped slaves escape to freedom.

The Grimké sisters were impressed by Mott's activism, and gradually they became involved in abolitionist work themselves, with Angelina, the more outspoken

¹Elizabeth Ann Bartlett, *Liberty, Equality, Sorority: The Origins and Interpretation of American Feminist Thought: Frances Wright, Sarah Grimké, Margaret Fuller* (Brooklyn: Carlson, 1994), p. 57.

of the two, taking the lead. In 1836, Angelina Grimké published *An Appeal to the Christian Women of the Southern States*, urging them to oppose slavery on moral grounds. This pamphlet created a sensation, and she was soon in great demand as an abolitionist speaker. The American Anti-Slavery Society (AASS) recruited the sisters to act as its agents—the first women to do so—who would speak around the country on behalf of the cause. They attended a training session for AASS agents in New York City led by Theodore Weld, and then, in 1837, accepted an invitation from the Boston Female Anti-Slavery Society to speak in Massachusetts, a tour that turned out to have historic consequences.

As feminist historian Gerda Lerner characterizes the sisters' relationship, Angelina was the doer, the activist, and Sarah was the thinker, the theorist. When the sisters addressed groups together, Sarah usually began by carefully laying out evidence of slavery's evils and biblical justifications for opposing it, and then Angelina would take the floor to passionately denounce the institution based on her eyewitness experience of its horrors, exhorting the audience to act before this moral evil brought Divine vengeance on the nation. It was still unusual and highly improper for women to speak in public, and initially the Grimké sisters accepted invitations to speak only before women's groups. The AASS intended them to address the separate female sections that most antislavery organizations maintained. Angelina Grimké, however, became an orator of such power that when the sisters toured in Massachusetts, men began to sit in on the women's meetings just to hear her.

The sisters were not the first women of established social position in America—the first “respectable” women—to address audiences of men and women together, what were then called “promiscuous gatherings.” Even in Massachusetts, they had been preceded by Maria W. Stewart (p. 1031), who addressed mixed audiences in the early 1830s. But Stewart, though middle-class, was African American, and her speeches had not attracted much attention outside the Boston African American community. In contrast, the Grimkés were respectable, refined “southern ladies,” and as speech communication scholar Kristin S. Vonnegut has pointed out, this very high social position made their public appearance all the more unseemly to conservatives.²

Opposition to the Grimké sisters' activities soon emerged. Their Massachusetts speaking engagements were increasingly attended by male hecklers who threatened violence, and the sisters encountered unexpected difficulties engaging halls in which to speak. Moreover, they were formally chastised in print by Catharine Beecher, a prominent educator who objected not only to their position for immediate abolition but also to their “unwomanliness” in defending it in public. Further, the General Association of Congregational Churches in Massachusetts issued a pastoral letter that stopped just short of naming names in condemning both radical abolitionism and women who took social-activist roles, especially when they alluded to the sexual exploitation of female slaves, an evil that the Grimké sisters had wit-

²Kristin S. Vonnegut, “Sarah M. Grimké,” in *Women Speakers in the United States, 1800–1925: A Bio-Critical Sourcebook*, ed. Karlyn Kohrs Campbell (Westport, Conn.: Greenwood Press, 1993), p. 220.

nessed in their own family and that they did not scruple to expose. The ministers suggested that women who took on such activist roles called their own chastity into question; one of them is said to have remarked that he expected the Grimké sisters soon to appear on the speaker's platform nude.³

While Angelina Grimké rebutted Beecher's attack on the sisters' abolitionist position, Sarah Grimké responded to the ministers' attack on their right to speak. Her *Letters on the Equality of the Sexes and the Condition of Woman*, three of which are included here, were published serially in 1837 in a Massachusetts newspaper, *The Spectator*, and immediately reprinted in *The Liberator*, the newspaper published by radical abolitionist leader William Lloyd Garrison, whom the sisters had met in Boston. The letters appeared in book form in 1838. They are addressed to Mary Parker, president of the Boston Female Anti-Slavery Society, which supported the sisters' Massachusetts speaking tour. At Parker's suggestion, Grimké raised a number of feminist issues—ironically, Parker ultimately rejected Grimké's feminism as too anticlerical and detrimental to the cause of abolition (the Boston society dissolved in conflict over these issues in 1840). The emergence of feminism in Sarah Grimké's work created an uproar elsewhere in the abolition movement as well, as political scientist Aileen Kraditor has shown. Also in 1840, the American Anti-Slavery Society split into two separate groups over this issue, one admitting women to full membership and the other remaining a male-dominated organization with a women's auxiliary. By 1848, women's growing awareness of their need for activism on their own behalf resulted in the first American women's rights convention, in Seneca Falls, New York.

In 1838, Angelina Grimké delivered two powerful addresses against slavery, one before the Massachusetts state legislature and one in Philadelphia at the dedication of Pennsylvania Hall, which was burned to the ground by an angry mob shortly after she spoke. At this time, she married fellow abolitionist Theodore Weld, who urged both sisters to abandon their public role because he felt it hurt the abolitionist cause, even though he believed in their right to speak. They took his advice. The Welds and Sarah Grimké moved to rural New Jersey, where Grimké helped her sister care for the three children born over the next five years. Always plagued by financial struggles, the Welds and Grimké opened a school in 1851 and thereafter supported themselves by teaching, first in New Jersey and subsequently in Massachusetts. Later in life they sought out and assisted their brother's children by one of his slaves, adopting the boys and helping to pay for their education.

Both Sarah and Angelina continued to write for progressive causes, and Angelina resumed some public speaking in the 1860s. The sisters also engaged in feminist demonstrations, such as leading a march to the ballot box in 1870, in a raging blizzard, when Sarah was seventy-eight years old. She died three years later and was eulogized at her funeral by her abolitionist comrade in arms, William Lloyd Garrison.

³Gerda Lerner, *The Grimké Sisters from South Carolina* (Boston: Houghton Mifflin, 1967), pp. 148–49.

Sarah Grimké was overshadowed, both in life and in later scholarship, by her sister Angelina, who was clearly the more popular speaker of the two. Recent work, however, has helped to establish Sarah Grimké's position as the first important American feminist theorist. She was strongly influenced by her Quaker faith, which taught that every individual, male or female, possessed a spiritual "inner light" to guide his or her actions. No social restrictions could be tolerated that prevented women from acting on the dictates of this moral compass: Women must be free to act as responsible moral agents. Lerner has argued that Grimké was among the first feminist thinkers to see that women were so restricted because men benefited from exploiting them in their inferior position, an insight gained from an analogy with slavery. Grimké was also a pioneer in her realization that this exploitation included physical abuse, marital rape, and forced pregnancy, which she denounces in her writings on marriage. Grimké projects a vision of women united as a group by the "bonds of womanhood" and needing to help each other break these fetters.

Like earlier Quaker leader Margaret Fell (see p. 748), whose work, *Vonnegut* believes, Grimké knew, Grimké contends that religious justifications for the subordination of women spring from male-biased interpretations of the Bible. She asserts her right to interpret key texts differently, guided by her faith and her innate rationality. Although Grimké advocates better education for women, equal education does not appear to be a major tenet of her thought, perhaps because she believed that the mental and spiritual powers needed to guide life are largely innate.

Also like Fell, Grimké justifies women's speaking on moral grounds: Women must act if they are following a moral imperative. Perhaps her most significant contribution to rhetorical theory is her insistence that women can speak to "promiscuous" or gender-mixed audiences. As speech communication scholar Susan Zaeske has shown, the traditional argument against women speaking in public was based on the assumption that they were irrational and, if so, could persuade only by seductively employing their sexuality; hence the connection between public speaking and unchastity. American women abolitionists were criticized more heavily than other women reformers for committing this sin because, argues Zaeske, abolition was the most radical political cause of the day and the area in which women's attempts to garner power for themselves by speaking had the most potential to affect, or even overturn, the social order. Grimké resolutely combats the idea that women persuade via sexuality. She denounces men's insistence on seeing women always as sexual beings and argues that women's eloquence arises not from sex but from spiritual and mental powers that they share equally with men and that they must be allowed to exercise.

Sarah and Angelina Grimké inspired the work of women activists later in the century; an example is Elizabeth Cady Stanton, who met and admired the sisters when she was a young woman. Moreover, feminists in the twentieth century have further developed an alternate women's rhetoric to which Sarah Grimké contributed. They have defended not only women's right to speak but also their right to use language in unique ways to express a perspective on social issues that has been muted by the male-dominated political hierarchy.

Selected Bibliography

Sarah Moore Grimké's *Letters on the Equality of the Sexes and the Condition of Woman* exists in a facsimile of the 1838 edition, published by Source Book Press (1970); the text printed here is taken from this edition. Elizabeth Ann Bartlett has edited a volume of these letters and other essays of Sarah Grimké (*Letters on the Equality of the Sexes and Other Essays*, 1988); her introduction sets Grimké's feminism in the intellectual context of her times. Gerda Lerner has edited a collection of letters and unpublished essays, *The Feminist Thought of Sarah Grimké* (1998), with two of her own earlier essays on the Grimké sisters and an introduction that evaluates her 1967 biography of them (see below), emphasizes Sarah Grimké's spirituality, and elevates her status as an important feminist thinker.

The standard biography of Sarah and Angelina Grimké is *The Grimké Sisters from South Carolina*, by Gerda Lerner (1967, 1998). Elizabeth Ann Bartlett discusses the intellectual influences on Sarah Grimké and the impact of her thought in *Liberty, Equality, Sorority: The Origins and Interpretation of American Feminist Thought: Frances Wright, Sarah Grimké, Margaret Fuller* (1994). Margaret Hope Bacon's *Mothers of Feminism* (1986) discusses the contributions of Quaker women to social activism from Margaret Fell to the Grimkés and on to the present day.

Among more rhetorically focused studies, Karlyn Kohrs Campbell discusses the Grimké sisters and places them in the context of nineteenth-century American women's rhetoric in *Man Cannot Speak for Her: Volume I: A Critical Study of Early Feminist Rhetoric* (1989); volume II, subtitled *Key Texts of the Early Feminists* (1989), includes an address by Angelina Grimké. In "Sarah M. Grimké" (in *Women Public Speakers in the United States, 1800–1920: A Bio-Critical Sourcebook*, ed. Karlyn Kohrs Campbell, 1993), Kristin S. Vonnegut analyzes Sarah Grimké's rhetorical strategies in detail. The issue of speaking before gender-mixed audiences is thoroughly explored in Susan Zaeske's "The 'Promiscuous Audience': Controversy and the Emergence of the Early Women's Rights Movement" (*Quarterly Journal of Speech* 81 [1995]: 191–207). Angelina Grimké's adoption of a prophetic stance in her rhetorical performance is discussed in Phyllis Japp, "Esther or Isaiah?: The Abolitionist Rhetoric of Angelina Grimké" (*Quarterly Journal of Speech* 71 [1985]: 335–48).

Aileen Kraditor's *Means and Ends in American Abolitionism* (1967) discusses the contributions of the Grimkés to abolitionism and the effect of feminism on the movement. In *Strained Sisterhood* (1993), Deborah Gold Hansen looks specifically at how the feminist issues raised by Sarah Grimké affected the Boston Female Anti-Slavery Society. On the contributions of abolition to nineteenth-century feminism, see Jean Fagan Yellin's *Women and Sisters* (1989), which discusses Angelina Grimké; Ellen Dubois's "Women's Rights and Abolition: The Nature of the Connection" (in *Antislavery Reconsidered*, ed. Lewis Perry and Michael Fellman, 1979), which emphasizes how women used political know-how garnered in the abolition movement to shape the women's movement; and Blanche G. Hersh's *The Slavery of Self* (1978), which treats the abolitionist movement as a crucible of feminism and traces the feminist movement to the end of the nineteenth century. Nancy A. Hardesty's *Women Called to Witness* (1984) discusses the relationship between feminism and evangelical Protestantism in nineteenth-century America. For general histories of American feminism, see Eleanor Flexner's *Century of Struggle* (1959, 1975) and William O'Neill's *Everyone Was Brave* (1969).

Letters on the Equality of the Sexes and the Condition of Woman

Addressed to Mary S. Parker,
President of the Boston
Female Anti-Slavery Society

LETTER III

*The Pastoral Letter of the General Association
of Congregational Ministers of Massachusetts.*

Haverhill, 7th Mo. 1837.

Dear Friend,—When I last addressed thee, I had not seen the Pastoral Letter of the General Association. It has since fallen into my hands, and I must digress from my intention of exhibiting the condition of women in different parts of the world, in order to make some remarks on this extraordinary document. I am persuaded that when the minds of men and women become emancipated from the thralldom of superstition and “traditions of men,” the sentiments contained in the Pastoral Letter will be recurred to with as much astonishment as the opinions of Cotton Mather and other distinguished men of his day, on the subject of witchcraft; nor will it be deemed less wonderful, that a body of divines should gravely assemble and endeavor to prove that woman has no right to “open her mouth for the dumb,” than it now is that judges should have sat on the trials of witches, and solemnly condemned nineteen persons and one dog to death for witchcraft.

But to the letter. It says, “We invite your attention to the dangers which at present seem to threaten the FEMALE CHARACTER with widespread and permanent injury.” I rejoice that they have called the attention of my sex to this subject, because I believe if woman investigates it, she will soon discover that danger is impending, though from a totally different source from that which the Association apprehends,—danger from those who, having long held the reins of *usurped* authority, are unwilling to permit us to fill that sphere which God created us to move in, and who have entered into league to crush the

immortal mind of woman. I rejoice, because I am persuaded that the rights of woman, like the rights of slaves, need only be examined to be understood and asserted, even by some of those, who are now endeavoring to smother the irrepressible desire for mental and spiritual freedom which glows in the breast of many, who hardly dare to speak their sentiments.

“The appropriate duties and influence of women are clearly stated in the New Testament. Those duties are unobtrusive and private, but the sources of *mighty power*. When the mild, *dependent*, softening influence of women upon the sternness of man’s opinions is fully exercised, society feels the effects of it in a thousand ways.” No one can desire more earnestly than I do, that woman may move exactly in the sphere which her Creator has assigned her; and I believe her having been displaced from that sphere has introduced confusion into the world. It is, therefore, of vast importance to herself and to all the rational creation, that she should ascertain what are her duties and her privileges as a responsible and immortal being. The New Testament has been referred to, and I am willing to abide by its decisions, but must enter my protest against the false translation of some passages by the MEN who did that work, and against the perverted interpretation by the MEN who undertook to write commentaries thereon. I am inclined to think, when we are admitted to the honor of studying Greek and Hebrew, we shall produce some various readings of the Bible a little different from those we now have.

The Lord Jesus defines the duties of his followers in his Sermon on the Mount. He lays down grand principles by which they should be governed, without any reference to sex or condition—“Ye are the light of the world. A city that is set on a hill cannot be hid. Neither do men light a candle and put it under a bushel, but on a candlestick, and it giveth light unto all that are in the house. Let your light so shine before men,

that they may see your good works, and glorify your Father which is in Heaven." I follow him through all his precepts, and find him giving the same directions to women as to men, never even referring to the distinction now so strenuously insisted upon between masculine and feminine virtues: this is one of the anti-christian "traditions of men" which are taught instead of the "commandments of God." Men and women were CREATED EQUAL; they are both moral and accountable beings, and whatever is *right* for man to do, is *right* for woman.

But the influence of woman, says the Association, so to be private and unobtrusive; her light is not to shine before man like that of her brethren; but she is passively to let the lords of the creation, as they call themselves, put the bushel over it, lest peradventure it might appear that the world has been benefitted by the rays of *her* candle. So that her quenched light, according to their judgment, will be of more use than if it were set on the candlestick. "Her influence is the source of mighty power." This has ever been the flattering language of man since he laid aside the whip as a means to keep woman in subjection. He spares her body; but the war he has waged against her mind, her heart, and her soul, has been no less destructive to her as a moral being. How monstrous, how anti-christian, is the doctrine that woman is to be dependent on man! Where, in all the sacred Scriptures, is this taught? Alas! she has too well learned the lesson which MAN had labored to teach her. She has surrendered her dearest RIGHTS, and been satisfied with the privileges which man has assumed to grant her; she has been amused with the show of power, whilst man has absorbed all the reality into himself. He has adorned the creature whom God gave him as a companion, with baubles and gewgaws, turned her attention to personal attractions, offered incense to her vanity, and made her the instrument of his selfish gratification, a plaything to please his eye and amuse his hours of leisure. "Rule by obedience and by submission sway," or in other words, study to be a hypocrite, pretend to submit, but gain your point, has been the code of household morality which woman has been taught. The poet has sung, in sickly strains, the loveliness of woman's dependence

upon man, and now we find it re-echoed by those who profess to teach the religion of the Bible. God says, "Cease ye from man whose breath is in his nostrils, for wherein is he to be accounted of?" Man says, depend upon me. God says. "HE will teach us of his ways." Man says, believe it not, I am to be your teacher. This doctrine of dependence upon man is utterly at variance with the doctrine of the Bible. In that book I find nothing like the softness of woman, nor the sternness of man: both are equally commanded to bring forth the fruits of the Spirit, love, meekness, gentleness, &c.

But we are told "the power of woman is in her dependence, flowing from a consciousness of that weakness which God has given her for her protection." If physical weakness is alluded to, I cheerfully concede the superiority; if brute force is what my brethren are claiming, I am willing to let them have all the honor they desire; but if they mean to intimate, that mental or moral weakness belongs to woman, more than to man, I utterly disclaim the charge. Our powers of mind have been crushed, as far as man could do it, our sense of morality has been impaired by his interpretation of our duties; but no where does God say that he made any distinction between us, as moral and intelligent beings.

"We appreciate," say the Association, "the *unostentatious* prayers and efforts of woman in advancing the cause of religion at home and abroad, in leading religious inquirers to THE PASTOR for instruction." Several points here demand attention. If public prayers and public efforts are necessarily ostentatious, then "Anna the prophetess, (or preacher,) who departed not from the temple, but served God with fastings and prayers night and day," "and spake of Christ to all them that looked for redemption in Israel," was ostentatious in her efforts. Then, the apostle Paul encourages women to be ostentatious in their efforts to spread the gospel, when he gives them directions how they should appear, when engaged in praying, or preaching in the public assemblies. Then, the whole association of Congregational ministers are ostentatious, in the efforts they are making in preaching and praying to convert souls.

But woman may be permitted to lead religious

inquirers to the PASTORS for instruction. Now this is assuming that all pastors are better qualified to give instruction than woman. This I utterly deny. I have suffered too keenly from the teaching of man, to lead any one to him for instruction. The Lord Jesus says,—“Come unto me and learn of me.” He points his followers to no man; and when woman is made the favored instrument of rousing a sinner to his lost and helpless condition, she has no right to substitute any teacher for Christ; all she has to do is, to turn the contrite inquirer to the “Lamb of God which taketh away the sins of the world.” More souls have probably been lost by going down to Egypt for help, and by trusting in man in the early stages of religious experience, than by any other error. Instead of the petition being offered to God,—“Lead me in thy truth, and TEACH me, for thou art the God of my salvation,”—instead of relying on the precious promises—“What man is he that feareth the Lord? him shall HE TEACH in the way that he shall choose”—“I will instruct thee and TEACH thee in the way which thou shalt go—I will guide thee with mine eye”—the young convert is directed to go to man as if he were in the place of God, and his instructions essential to an advancement in the path of righteousness. That woman can have but a poor conception of the privilege of being taught of God, what he alone can teach, who would turn the “religious inquirer aside” from the fountain of living waters, where he might slake his thirst for spiritual instruction, to those broken cisterns which can hold no water, and therefore cannot satisfy the panting spirit. The business of men and women, who are ORDAINED OF GOD to preach the “unsearchable riches of Christ” to a lost and perishing world is to lead souls to Christ, and not to Pastors for instruction.

The General Association say, that “when woman assumes the place and tone of man as a public reformer, our care and protection of her seem unnecessary; we put ourselves in self-defence against her, and her character becomes unnatural.” Here again the unscriptural notion is held up, that there is a distinction between the duties of men and women as moral beings; that what is virtue in man, is vice in woman; and

women who dare to obey the command of Jehovah, “Cry aloud, spare not, lift up thy voice like a trumpet, and show my people their transgression,” are threatened with having the protection of the brethren withdrawn. If this is all they do, we shall not even know the time when our chastisement is inflicted; our trust is in the Lord Jehovah, and in him is everlasting strength. The motto of woman, when she is engaged in the great work of public reformation should be,—“The Lord is my light and my salvation; whom shall I fear? The Lord is the strength of my life; of whom shall I be afraid?” She must feel, if she feels rightly, that she is fulfilling one of the important duties laid upon her as an accountable being, and that her character, instead of being “unnatural,” is in exact accordance with the will of Him to whom, and to no other, she is responsible for the talents and the gifts confided to her. As to the pretty simile, introduced into the “Pastoral Letter,” “If the vine whose strength and beauty is to lean upon the trellis work, and half conceal its clusters, thinks to assume the independence and the overshadowing nature of the elm,” &c. I shall only remark that it might well suit the poet’s fancy, who sings of sparkling eyes and coral lips, and knights in armor clad; but it seems to me utterly inconsistent with the dignity of a Christian body, to endeavor to draw such an anti-scriptural distinction between men and women. Ah! how many of my sex feel in the dominion, thus unrighteously exercised over them, under the gentle appellation of *protection*, that what they have leaned upon has proved a broken reed at best, and oft a spear.

Thine in the bonds of womanhood,
SARAH M. GRIMKÉ.

LETTER IV

Social Intercourse of the Sexes.

Andover, 7th Mo. 27th, 1837.
My Dear Friend,—Before I proceed with the account of that oppression which woman has suffered in every age and country from her *protector*, man, permit me to offer for your consideration, some views relative to the social intercourse of the sexes. Nearly the whole of this intercourse

is, in my apprehension, derogatory to man and woman, as moral and intellectual beings. We approach each other, and mingle with each other, under the constant pressure of a feeling that we are of different sexes; and, instead of regarding each other only in the light of immortal creatures, the mind is fettered by the idea which is early and industriously infused into it, that we must never forget the distinction between male and female. Hence our intercourse, instead of being elevated and refined, is generally calculated to excite and keep alive the lowest propensities of our nature. Nothing, I believe, has tended more to destroy the true dignity of woman, than the fact that she is approached by man in the character of a female. The idea that she is sought as an intelligent and heaven-born creature, whose society will cheer, refine, and elevate her companion, and that she will receive the same blessings she confers, is rarely held up to her view. On the contrary, man almost always addresses himself to the weakness of woman. By flattery, by an appeal to her passions, he seeks access to her heart; and when he has gained her affections, he uses her as the instrument of his pleasure—the minister of his temporal comfort. He furnishes himself with a housekeeper, whose chief business is in the kitchen, or the nursery. And whilst he goes abroad and enjoys the means of improvement afforded by collision of intellect with cultivated minds, his wife is condemned to draw nearly all her instruction from books, if she has time to peruse them; and if not, from her meditations, whilst engaged in those domestic duties, which are necessary for the comfort of her lord and master.

Surely no one who contemplates, with the eye of a Christian philosopher, the design of God in the creation of woman, can believe that she is now fulfilling that design. The literal translation of the word “help-meet” is a helper like unto himself; it is so rendered in the Septuagint, and manifestly signifies a companion. Now I believe it will be impossible for women to fill the station assigned her by God, until her brethren mingle with her as an equal, as a moral being; and lose, in the dignity of her immortal nature, and in the fact of her bearing like himself the image and superscription of her God, the idea of her being a

female. The apostle¹ beautifully remarks, “As many of you as have been baptized into Christ, have put on Christ. There is neither Jew nor Greek, there is neither bond nor free, there is neither *male* nor *female*; for ye are all one in Christ Jesus.” Until our intercourse is purified by the forgetfulness of sex,—until we rise above the present low and sordid views which entwine themselves around our social and domestic interchange of sentiment and feelings, we never can derive that benefit from each other’s society which it is the design of our Creator that we should. Man has inflicted an unspeakable injury upon woman, by holding up to her view her animal nature, and placing in the background her moral and intellectual being. Woman has inflicted an injury upon herself by submitting to be thus regarded; and she is now called upon to rise from the station where *man*, not God, has placed her, and claim those sacred and inalienable rights, as a moral and responsible being, with which her Creator has invested her.

What but these views, so derogatory to the character of woman, could have called forth the remark contained in the Pastoral Letter? “We especially deplore the intimate acquaintance and promiscuous conversation of *females* with regard to things “which ought not to be named,” by which that modesty and delicacy, which is the charm of domestic life, and which constitutes the true influence of woman, is consumed.” How wonderful that the conceptions of man relative to woman are so low, that he cannot perceive that she may converse on any subject connected with the improvement of her species, without swerving in the least from that modesty which is one of her greatest virtues! Is it designed to insinuate that woman should possess a greater degree of modesty than man? This idea I utterly reprobate. Or is it supposed that woman cannot go into scenes of misery, the necessary result of those very things, which the Pastoral Letter says ought not to be named, for the purpose of moral reform, without becoming contaminated by those with whom she thus mingles?

¹The apostle is Paul, the most frequently cited authority against women’s speaking, but here Grimké cites a line of his used frequently (e.g., by Margaret Fell) to justify women’s speaking. [Ed.]

This is a false position; and I presume has grown out of the never-forgotten distinction of male and female. The woman who goes forth, clad in the panoply of God, to stem the tide of iniquity and misery, which she beholds rolling through our land, goes not forth to her labor of love as a female. She goes as the dignified messenger of Jehovah, and all she does and says must be done and said irrespective of sex. She is in duty bound to communicate with all, who are able and willing to aid her in saving her fellow creatures, both men and women, from that destruction which awaits them.

So far from woman losing any thing of the purity of her mind, by visiting the wretched victims of vice in their miserable abodes, by talking with them, or of them, she becomes more and more elevated and refined in her feelings and views. While laboring to cleanse the minds of others from the malaria of moral pollution, her own heart becomes purified, and her soul rises to nearer communion with her God. Such a woman is infinitely better qualified to fulfil the duties of a wife and a mother, than the woman whose *false delicacy* leads her to shun her fallen sister and brother, and shrink from *naming those sins* which she knows exist, but which she is too fastidious to labor by deed and by word to exterminate. Such a woman feels, when she enters upon the marriage relation, that God designed that relation not to debase her to a level with the animal creation, but to increase the happiness and dignity of his creatures. Such a woman comes to the important task of training her children in the nurture and admonition of the Lord, with a soul filled with the greatness of the beings committed to her charge. She sees in her children, creatures bearing the images of God; and she approaches them with reverence, and treats them at all times as moral and accountable beings. Her own mind being purified and elevated, she instils into her children that genuine religion which induces them to keep the commandments of God. Instead of ministering with ceaseless care to their sensual appetites, she teaches them to be temperate in all things. She can converse with her children on any subject relating to their duty to God, can point their attention to those vices which degrade and brutify human nature, without in the least de-

filting her own mind or theirs. She views herself, and teaches her children to regard themselves as moral beings; and in all their intercourse with their fellow men, to lose the animal nature of man and woman, in the recognition of that immortal mind wherewith Jehovah has blessed and enriched them.

Thine in the bonds of womanhood,
SARAH M. GRIMKÉ.

LETTER XIV

Ministry of Women.

Brookline, 9th Mo. 1837.

My Dear Sister,—According to the principle which I have laid down, that man and woman were created equal, and endowed by their beneficent Creator with the same intellectual powers and the same moral responsibilities, and that consequently whatever is *morally* right for a man to do, is *morally* right for a woman to do, it follows as a necessary corollary, that if it is the duty of man to preach the unsearchable riches of Christ, it is the duty also of woman.

I am aware, that I have the prejudices of education and custom to combat, both in my own and the other sex, as well as “the traditions of men,” which are taught for the commandments of God. I feel that I have no sectarian views to advance; for although among the Quakers, Methodists, and Christians, women are permitted to preach the glad tidings of peace and salvation, yet I know of no religious body, who entertain the Scripture doctrine of the perfect equality of man and woman, which is the fundamental principle of my argument in favor of the ministry of women. I wish simply to throw my views before thee. If they are based on the immutable foundation of truth, they cannot be overthrown by unkind insinuations, bitter sarcasms, unchristian imputations, or contemptuous ridicule. These are weapons which are unworthy of a good cause. If I am mistaken, as truth only can prevail, my supposed errors will soon vanish before her beams; but I am persuaded that woman is not filling the high and holy station which God allotted to her, and that in consequence of her having been driven from her “appropriate sphere,” both herself

and her brethren have suffered an infinity of evils.

Before I proceed to prove, that woman is bound to preach the gospel, I will examine the ministry under the Old Testament dispensation. Those who were called to this office were known under various names. Enoch, who prophesied, is designated as walking with God. Noah is called a preacher of righteousness. They were denominated men of God, seers, prophets, but they all had the same great work to perform, viz. to turn sinners from the error of their ways. This ministry existed previous to the institution of the Jewish priesthood, and continued after its abolition. *It has nothing to do with the priesthood.* It was rarely, as far as the Bible informs us, exercised by those of the tribe of Levi, and was common to all the people, women as well as men. It differed essentially from the priesthood, because there was no compensation received for calling the people to repentance. Such a thing as paying a prophet for preaching the truth of God is not even mentioned. They were called of Jehovah to go forth in his name, one from his plough, another from gathering of sycamore fruit, &c. &c. Let us for a moment imagine Jeremiah, when God says to him, "Gird up thy loins, and arise and speak unto the people all that I command thee," replying to Jehovah, "I will preach repentance to the people, if they will give me gold, but if they will not pay me for the truth, then let them perish in their sins." Now, this is virtually the language of the ministers of the present day; and I believe the secret of the exclusion of women from the ministerial office is, that that office has been converted into one of emolument, of honor, and power. Any attentive observer cannot fail to perceive, that as far as possible, all such offices are reserved by men for themselves.

The common error that Christian ministers are the successors of the priests, is founded in mistake. In the particular directions given to Moses to consecrate Aaron and his sons to the office of the priesthood, their duties are clearly defined: see Ex. 28th, 29th, and 30th chap. There is no commission to Aaron to preach to the people; his business was to offer sacrifice. Now why were sacrifices instituted? They were types of that one great sacrifice, which in the fulness of time was

offered up through the eternal Spirit without spot to God. Christ assumed the office of priest; he "offered himself," and by so doing, abolished forever the order of the priesthood, as well as the sacrifices which the priests were ordained to offer.²

But it may be inquired, whether the priests were not to teach the people. As far as I can discover from the Bible, they were simply commanded to read the law to the people. There was no other copy that we know of, until the time of the kings, who were to write out a copy for their own use. As it was deposited in the ark, the priests were required, "When all Israel is come to appear before the Lord thy God in the place which he shall choose, thou shalt read this law before all Israel in their hearing. Gather the people together, men, women, and children, that they may hear," Deut. 31: 9-33. See also Lev. 10: 11, Deut. 33: 10, 2d Chr. 17: 7-9, and numerous other passages. When God is enumerating the means he has used to call his people to repentance, he never, as far as I can discover, speaks of sending his priests to warn them; but in various passages we find language similar to this: "Since the day that your fathers came forth out of the land of Egypt unto this day, I have even sent unto you all my servants, the PROPHETS, daily rising up early and sending them. Yet they hearkened not unto me, nor inclined their ear, but hardened their neck; they did worse than their fathers." Jer. 7: 25, 26. See also, 25: 4, 2 Chr. 36: 15, and parallel passages. God says, Is. 9: 15, 16. "The prophet that teacheth lies, he is the tail; for the leaders of this people cause them to err." The distinction between priests and prophets is evident from their being mentioned as two classes. "The prophets prophesy falsely, and the priests bear rule by their means," Jer. 5: 31. See also, Ch. 2: 8, 8: 1-10, and many others.

That women were called to the prophetic office, I believe is universally admitted. Miriam, Deborah, and Huldah were prophetesses. The

²I cannot enter fully into this part of my subject. It is, however, one of great importance and I recommend those who wish to examine it, to read "The Book of the Priesthood," by an English Dissenter, and Beverly's "View of the Present State of the Visible Church of Christ." They are both masterly productions. [Au.]

judgments of the Lord are denounced by Ezekiel on false prophetesses, as well as false prophets. And if Christian ministers are, as I apprehend, successors of the prophets, and not of the priests, then of course, women are now called to that office as well as men, because God has no where withdrawn from them the privilege of doing what is the great business of preachers, viz. to point the penitent sinner to the Redeemer. "Behold the Lamb of God, which taketh away the sins of the world."

It is often triumphantly inquired, why, if men and women are on an equality, are not women as conspicuous in the Bible as men? I do not intend to assign a reason, but I think one may readily be found in the fact, that from the days of Eve to the present time, the aim of man has been to crush her. He has accomplished this work in various ways; sometimes by brute force, sometimes by making her subservient to his worst passions, sometimes by treating her as a doll, and while he excluded from her mind the light of knowledge, decked her person with gewgaws and frippery which he scorned for himself, thus endeavoring to render her like unto a painted sepulchre.

It is truly marvellous that any woman can rise above the pressure of circumstances which combine to crush her. Nothing can strengthen her to do this in the character of a preacher of righteousness, but a call from Jehovah himself. And when the voice of God penetrates the deep recesses of her heart, and commands her to go and cry in the ears of the people, she is ready to exclaim, "Ah, Lord God, behold I cannot speak, for I am a woman." I have known women in different religious societies, who have felt like the prophet. "His word was in my heart as a burning fire shut up in my bones, and I was weary with forbearing." But they have not dared to open their lips, and have endured all the intensity of suffering, produced by disobedience to God, rather than encounter heartless ridicule and injurious suspicions. I rejoice that we have been the oppressed, rather than the oppressors. God thus prepared his people for deliverance from outward bondage; and I hope our sorrows have prepared us to fulfil our high and holy duties, whether public or private, with humility and meekness; and that suffering has imparted fortitude to endure

trials, which assuredly await us in the attempt to sunder those chains with which man has bound us, galling to the spirit, though unseen by the eye.

Surely there is nothing either astonishing or novel in the gifts of the Spirit being bestowed on woman: nothing astonishing, because there is no respect of persons with God; the soul of the woman in his sight is as the soul of the man, and both are alike capable of the influence of the Holy Spirit. Nothing novel, because, as has been already shown, in the sacred records there are found examples of women, as well as of men, exercising the gift of prophecy.

We attach to the word prophecy, the exclusive meaning of foretelling future events, but this is certainly a mistake; for the apostle Paul defines it to be "speaking to edification, exhortation, and comfort." And there appears no possible reason, why women should not do this as well as men. At the time that the Bible was translated into English, the meaning of the word prophecy, was delivering a message from God, whether it was to predict future events, or to warn the people of the consequences of sin. Governor Winthrop, of Massachusetts, mentions in a letter, that the minister being absent, he went to ——— to prophecy to the people.

Before I proceed to prove that women, under the Christian dispensation, were anointed of the Holy Ghost to preach, or prophecy, I will mention Anna, the (last) prophetess under the Jewish dispensation. "She departed not from the temple, but served God with fasting and prayers night and day." And coming into the temple, while Simeon was yet speaking to Mary, with the infant Savior in his arms, "spake of Christ to all them that looked for redemption in Jerusalem." Blackwall, a learned English critic, in his work entitled, "Sacred Classics," says, in reference to this passage, Luke 2: 37—"According to the *original* reading, the sense will be, that the devout Anna, who attended in the temple, both night and day, spoke of the Messiah to all the inhabitants of that city, who constantly worshipped there, and who prepared themselves for the worthy reception of that divine person, whom they expected at this time. And 'tis certain, that other devout Jews, not inhabitants of Jerusalem, frequently repaired to the temple-worship, and

might, at this remarkable time, and several others, hear this admirable woman discourse upon the blessed advent of the Redeemer. A various reading has Israel instead of Jerusalem, which expresses that religious Jews, from distant places, came thither to divine offices, and would with high pleasure hear the discourses of this great prophetess, so famed for her extraordinary piety and valuable talents, upon the most important and desired subject."

I shall now examine the testimony of the Bible on this point, after the ascension of our Lord, beginning with the glorious effusion of the Holy Spirit on the day of Pentecost. I presume it will not be denied, that women, as well as men, were at that time filled with the Holy Ghost, because it is expressly stated, that women were among those who continued in prayer and supplication, waiting for the fulfilment of the promise, that they should be endued with power from on high. "When the day of Pentecost was fully come, they were ALL with one accord in one place. And there appeared unto them cloven tongues like as of fire, and it sat upon each of them; and they were all filled with the Holy Ghost, and began to speak with other tongues as the Spirit gave them utterance." Peter says, in reference to this miracle, "This is that which was spoken by the prophet Joel. And it shall come to pass in the last days, said God, I will pour out my Spirit upon all flesh; and your sons and your daughters shall prophesy—and on my servants and on my hand-maidens, I will pour out in those days of my Spirit, and they shall prophesy." There is not the least intimation that this was a spasmodic influence which was soon to cease. The men and women are classed together; and if the power to preach the gospel was a supernatural and short-lived impulse in women, then it was equally so in men. But we are told, those were the days of miracles. I grant it; but the men, equally with the women, were the subjects of this marvellous fulfilment of prophecy, and of course, if women have lost the gift of prophesying, so have men. We are also gravely told, that if a woman pretends to inspiration, and thereupon grounds the right to plead the cause of a crucified Redeemer in public, she will be believed when she shows credentials from heaven, i.e., when

she works a miracle. I reply, if this be necessary to prove her right to preach the gospel, then I demand of my brethren to show me their credentials; else I cannot receive their ministry, by their own showing. John Newton has justly said, that no power but that which created a world, can make a minister of the gospel; and man may task his ingenuity to the utmost, to prove that this power is not exercised on women as well as men. He cannot do it until he has first disclaimed that simple, but all comprehensive truth, "in Christ Jesus there is neither male nor female."

Women then, according to the Bible, were, under the New Testament dispensation, as well as the Old, the recipients of the gift of prophecy. That this is no sectarian view may be proved by the following extracts. The first I shall offer is from Stratton's "Book of the Priesthood."

While they were assembled in the upper room to wait for the blessing, in number about one hundred and twenty, they received the miraculous gifts of the Holy Spirit's grace; they became the channels through which its more ordinary, but not less saving streams flowed to three thousand persons in one day. The whole company of assembled disciples, male and female, young and old, were all filled with the Holy Ghost, and began to speak with other tongues as the Spirit gave them utterance. They all contributed in producing that impression upon the assembled multitude, which Peter was instrumental in advancing to its decisive results.

Scott, in his commentary on this passage, says—

At the same time, there appeared the form of tongues divided at the tip and resembling fire; one of which rested on each of the whole company. . . . They sat on every one present, as the original determines. At the time of these extraordinary appearances, the whole company were abundantly replenished with the gifts and graces of the Holy Spirit, so that they began to speak with other tongues.

Henry in his notes confirms this:

It seems evident to me that not the twelve apostles only, but all the one hundred and twenty disciples were filled with the Holy Ghost alike at this time—all the seventy disciples, who were apostolical men and employed in the same work, and all the rest too that were to preach the gospel,

for it is said expressly, Eph. 4: 8-12: "When Christ ascended up on high, (which refers to this) he gave gifts unto men." The all here must refer to the all that were together.

I need hardly remark that man is a generic term, including both sexes.

Let us now examine whether women actually exercised the office of minister, under the gospel dispensation. Philip had four daughters, who prophesied or preached. Paul calls Priscilla, as well as Aquila, his helpers; or, as in the Greek, his fellow laborers³ in Christ Jesus. Divers other passages might be adduced to prove that women continued to be preachers, and that *many* of them filled this dignified station.

We learn also from ecclesiastical history, that female ministers suffered martyrdom in the early ages of the Christian church. In ancient councils, mention is made of deaconesses; and in an edition of the New Testament, printed in 1574, a woman is spoken of as minister of a church. The same word, which, in our common translation, is now rendered a servant of the church, in speaking of Phebe, Rom. 16: 1, is rendered minister, Eph. 6: 21, when applied to Tychicus. A minister, with whom I had lately the pleasure of conversing, remarked, "My rule is to expound scripture by scripture, and I cannot deny the ministry of women, because the apostle says, 'help those women who labored with me IN THE GOSPEL.' He certainly meant something more than pouring out tea for him."

In the 11th Ch. of 1 Cor., Paul gives directions to women and men how they should appear when they prophesy, or pray in public assemblies. It is evident that the design of the apostle, in this and the three succeeding chapters, is to rectify certain abuses which had crept into the Christian church. He therefore admonishes women to pray with their heads covered, because, according to the fashion of that day, it was considered immodest and immoral to do otherwise. He says, "that were all one as if she were shaven;" and shaving the head was a disgraceful punishment that was inflicted on women of bad character.

³Rom. 16:3, compare Gr. text of v. 21, 2. Cor. 8: 23; Phil. 2: 25; 1 Thes. 3:2. [Au.]

"These things," says Scott, "the apostle stated as decent and proper, but if any of the Corinthian teachers inclined to excite contention about them, he would only add, v. 16, that he and his brethren knew of no such custom as prevailed among them, nor was there any such in the churches of God which had been planted by the other apostles."

John Locke, whilst engaged in writing his notes on the Epistles of St. Paul, was at a meeting where two women preached. After hearing them, he became convinced of their commission to publish the gospel, and thereupon altered his notes on the 11th Ch. 1 Cor. in favor of women's preaching. He says—

This about women seeming as difficult a passage as most in St. Paul's Epistles, I crave leave to premise some few considerations. It is plain that this covering the head in women is restrained to some peculiar actions which they performed in the assembly, expressed by the words praying, prophesying, which, whatever they signify, must have the same meaning applied to women in the 5th verse, that they have when applied to men in the 4th, &c. The next thing to be considered is, what is here to be understood by praying and prophesying. And that seems to me the performing of some public action in the assembly, by some one person which was for that time peculiar to that person, and whilst it lasted, the rest of the assembly silently assisted. As to prophesying, the apostle in express words tells us, Ch. 14: 3, 12, that it was speaking to the assembly. The same is evident as to praying, that the apostle means by it publicly with an audible voice, ch. 14: 19.

In a letter to these two women, Rebecca Collier and Rachel Bracken, which accompanied a little testimony of his regard, he says,

I admire no converse like that of Christian freedom; and I fear no bondage like that of pride and prejudice. I now see that acquaintance by sight cannot reach the height of enjoyment, which acquaintance by knowledge arrives unto. Outward hearing may misguide us, but internal knowledge cannot err. Women, indeed, had the honor of first publishing the resurrection of the God of love—why not again the resurrection of the spirit of love? And let all the disciples of Christ rejoice therein, as doth your partner, John Locke.

See "The Friend," a periodical published in Philadelphia.

Adam Clarke's comment on 1 Cor. 11: 5, is similar to Locke's:

Whatever be the meaning of praying and prophesying in respect to the man, they have precisely the same meaning in respect to the woman. So that some women at least, as well as some men, might speak to others to edification and exhortation and comfort. And this kind of prophesying, or teaching, was predicted by Joel 2: 28, and referred to by Peter; and had there not been such gifts bestowed on women, the prophesy could not have had its fulfilment.

In the autobiography of Adam Clarke, there is an interesting account of his hearing Mary Sewall and another female minister preach, and he acknowledges that such was the power accompanying their ministry, that though he had been prejudiced against women's preaching, he could not but confess that these women were anointed for the office.

But there are certain passages in the Epistles of St. Paul, which seem to be of doubtful interpretation; at which we cannot much marvel, seeing that his brother Peter says, there are some things in them hard to be understood. Most commentators, having their minds preoccupied with the prejudices of education, afford little aid; they rather tend to darken the text by the multitude of words. One of these passages occurs in 1 Cor. 14. I have already remarked, that this chapter, with several of the preceding, was evidently designed to correct abuses which had crept into the assemblies of Christians in Corinth. Hence we find that the men were commanded to be silent, as well as the women, when they were guilty of any thing which deserved reprehension. The apostle says, "If there be no interpreter, let him keep silence in the church." The men were doubtless in the practice of speaking in unknown tongues, when there was no interpreter present; and Paul reproves them, because this kind of preaching conveyed no instruction to the people. Again he says, "If any thing be revealed to another that sitteth by, let the first hold his peace." We may infer from this, that two men sometimes attempted to speak at the same time, and the apostle rebukes them,

and adds, "Ye may ALL prophesy one by one, for God is not the author of confusion, but of peace." He then proceeds to notice the disorderly conduct of the women, who were guilty of other improprieties. They were probably in the habit of asking questions, on any points of doctrine which they wished more thoroughly explained. This custom was common among the men in the Jewish synagogues, after the pattern of which, the meetings of the early Christians were in all probability conducted. And the Christian women, presuming on the liberty which they enjoyed under the new religion, interrupted the assembly, by asking questions. The apostle disapproved of this, because it disturbed the solemnity of the meeting: he therefore admonishes the women to keep silence in the churches. That the apostle did not allude to preaching is manifest, because he tells them, "If they will *learn* any thing, let them ask their husbands at home." Now a person endowed with a gift in the ministry, does not ask questions in the public exercise of that gift, for the purpose of gaining information: she is instructing others. Moreover, the apostle, in closing his remarks on this subject, says, "Wherefore, brethren, (a generic term, applying equally to men and women,) covet to prophesy, and forbid not to speak with tongues. Let all things be done decently and in order."

Clarke, on the passage, "Let women keep silence in the churches," says:

This was a Jewish ordinance. Women were not permitted to teach in the assemblies, or even to ask questions. The rabbins taught that a woman should know nothing but the use of her distaff; and the saying of Rabbi Eliezer is worthy of remark and execration: "Let the words of the law be burned, rather than that they should be delivered by women."

Are there not many of our Christian brethren, whose hostility to the ministry of women is as bitter as was that of Rabbi Eliezer, and who would rather let souls perish, than that the truths of the gospel should be delivered by women?

"This," says Clarke, "was their condition till the time of the gospel, when, according to the

prediction of Joel, the Spirit of God was to be poured out on the women as well as the men, that they might prophesy, that is, teach. And that they did prophesy, or teach, is evident from what the apostle says, ch. 11: 5, where he lays down rules to regulate this part of their conduct while ministering in the church. But does not what the apostle says here, let your women keep silence in the churches, contradict that statement, and show that the words in ch. 11, should be understood in another sense? for here it is expressly said, that they should keep silence in the churches, for it was not permitted to a woman to speak. Both places seem perfectly consistent. It is evident from the context, that the apostle refers here to asking questions, and what we call dictating in the assemblies."

The other passage on which the opinion, that women are not called to the ministry, is founded, is 1 Tim. 2d ch. The apostle speaks of the duty of prayer and supplication, mentions his own ordination as a preacher, and then adds, "I will, therefore, that men pray everywhere, lifting up holy hands, without wrath and doubting. In like manner also, that women adorn themselves in modest apparel," &c. I shall here premise, that as the punctuation and division into chapters and verses is no part of the original arrangement, they cannot determine the sense of a passage. Indeed, every attentive reader of the Bible must observe, that the injudicious separation of sentences often destroys their meaning and their beauty. Joseph John Gurney, whose skill as a biblical critic is well known in England, commenting on this passage, says,

It is worded in a manner somewhat obscure; but appears to be best construed according to the opinion of various commentators [See Pool's Synopsis] as conveying an injunction, that women as well as men should pray everywhere, lifting up holy hands without wrath and doubting. 1 Tim. 2: 8, 9. "I will therefore that men pray everywhere, &c.; likewise also the women in a modest dress." (Compare 1 Cor. 11: 5.) "I would have them adorn themselves with shamefacedness and sobriety."

I have no doubt this is the true meaning of the text, and that the translators would never have thought of altering it had they not been under the influence of educational prejudice. The apostle proceeds to exhort the women, who thus publicly made intercession to God, not to adorn them-

selves with braided hair, or gold, or pearls, or costly array, but (which becometh women professing godliness) with good works. The word in this verse translated "professing," would be more properly rendered preaching godliness, or enjoining piety to the gods, or conducting public worship. After describing the duty of female ministers about their apparel, the apostle proceeds to correct some improprieties which probably prevailed in the Ephesian church, similar to those which he had reproved among the Corinthian converts. He says, "Let the women LEARN in silence with all subjection; but I suffer not a woman to teach, nor to usurp authority over the man, but to be in silence," or quietness. Here again it is evident that the women, of whom he was speaking, were admonished to learn in silence, which could not refer to their public ministrations to others. The verb to teach, verse 12, is one of very general import, and may in this place more properly be rendered dictate. It is highly probable that women who had long been in bondage, when set free by Christianity from the restraints imposed upon them by Jewish traditions and heathen customs, ran into an extreme in their public assemblies, and interrupted the religious services by frequent interrogations, which they could have had answered as satisfactorily at home.

On a candid examination and comparison of the passages which I have endeavored to explain, viz., 1 Cor. chaps 11 and 14, and 1 Tim. 2, 8-12. I think we must be compelled to adopt one of two conclusions; either that the apostle grossly contradicts himself on a subject of great practical importance, and that the fulfilment of the prophecy of Joel was a shameful infringement of decency and order; or that the directions given to women, not to speak, or to teach in the congregations, had reference to some local and peculiar customs, which were then common in religious assemblies, and which the apostle thought inconsistent with the purpose for which they were met together. No one, I suppose, will hesitate which of these two conclusions to adopt. The subject is one of vital importance. That it may claim the calm and prayerful attention of Christians, is the desire of

Thine in the bonds of womanhood,
SARAH M. GRIMKÉ.

Frederick Douglass

1818–1895

Frederick Douglass was born a slave in 1818 on a farm in Maryland. His mother, an enslaved black woman named Harriet Bailey, was sent back to the fields soon after his birth, and he spent his early childhood with his grandmother Betsey Bailey. His father was a white man whose identity Douglass never learned; possibly he was Aaron Anthony, the plantation overseer who owned his mother, or Edward Lloyd, the landowner Anthony worked for.

At the age of six Frederick was taken from his grandmother to serve as a companion, first, to one of Lloyd's young sons, and then, in Baltimore, to the young son of Anthony's daughter's brother-in-law, Hugh Auld. Auld's wife Sophia, unaccustomed to managing slaves, treated Frederick very well at first and began to teach him to read, until her husband put a stop to it (see our first set of excerpts, from Douglass's first autobiography). Eager to learn, however, Frederick found ways to continue his education surreptitiously. He pored over an old copy of *The Columbian Orator*, a collection of speeches used to teach rhetoric. The ideals expressed in some of these speeches, as well as what he was learning about the abolition movement from secretly reading newspapers, began to convince Frederick that slavery was wrong and that he should resist it.

In 1833 he was sent back from Baltimore to the Maryland Eastern Shore, to Thomas Auld, Hugh's brother. Frederick quickly got in trouble for organizing a Sunday school for fellow slaves, at which he taught reading and writing. Auld decided to hire him out for the year of 1834 to the farmer Edward Covey, known as a "breaker" of rebellious slaves. After months of brutal treatment, Frederick finally attacked Covey, and after this battle was never whipped again. In 1835 Auld took him away from Covey and hired him to a more kindly employer. Frederick again organized clandestine literacy schooling for his fellow slaves. He also made his first attempt to flee slavery, in 1836, but the plan was discovered and Frederick and his four companions were jailed.

Although both lynching and sale to a deep-south plantation death trap were threatened, Thomas Auld decided to send Frederick back to his brother in Baltimore. Hugh Auld placed Frederick in a shipyard and trained him as a caulker. Frederick reestablished his ties with the Baltimore black community, again teaching reading and writing; he joined a debate club whose other members were free black men and became engaged to Anna Murray, a free black woman. His resolve to escape was still firm, and in September 1838, after a quarrel with Hugh Auld made him again fear being sold south, Frederick fled Baltimore using borrowed seaman's papers that falsely identified him as a free man. Anna Murray joined him in New York, where they were married, and they then went on to New Bedford, Massachusetts, a seaport town where Frederick hoped to find work as a caulker.

During his escape, Frederick used the surname Johnson rather than Bailey to help divert pursuit. Once arrived in New Bedford, however, he learned that Johnson was an exceedingly common name among local blacks, and his host Nathan

Johnson, a black man active in abolition and assistance to fugitive slaves, suggested that he take the surname Douglas, after a heroic Scottish nobleman in Sir Walter Scott's poem "The Lady of the Lake." Douglass agreed, although spelling the name as a prominent Philadelphia black family spelled it.

The racist objections of white workers prevented Douglass from finding work as a caulker, so he supported his growing family (he and Anna had five children by 1849) with unskilled labor on the docks. Douglass lost no time in informing himself about the abolitionist movement and local activism for black rights. He subscribed to William Lloyd Garrison's *The Liberator*, the leading abolitionist newspaper, and began to speak on abolition and other black civil rights issues at gatherings in African American churches in New Bedford. White abolitionist William Coffin heard him speak and invited him to attend a Massachusetts Anti-Slavery Society convention held on Nantucket Island in August 1841. Here, at Coffin's urging, and with white abolitionists he much admired, preeminent among them William Lloyd Garrison, on the platform, Douglass gave his first speech against slavery that addressed a large, mixed audience: white and black men and women. His account of his own sufferings in slavery was so powerful that he was hired on the spot as a paid agent of the Society to speak against slavery around New England. He moved his family to Lynn, Massachusetts, and never worked on the docks again, making a living henceforth as an orator and later as a journalist.

Douglass's contact with the Boston-based abolition movement was intellectually formative for him. An especially strong influence was William Lloyd Garrison, whose thinking so dominated the group that they were all known as Garrisonian abolitionists. The chief tenets of Garrison's philosophy were that slavery was an un-Christian denial of the humanity of every person, that the United States Constitution and government were un-Christian and immoral for protecting slavery, and that slavery's opponents should have as little to do with this evil government as possible, instead attempting to abolish slavery by persuading its advocates that it was morally wrong. Garrison condemned not only violent resistance to slavery but also political approaches to containing it. Among Garrison's colleagues whom Douglass met in these years, and most of whom remained his lifelong friends, were free black leaders Charles Lenox Remond (Douglass would name a son after him) and William C. Nell, and white abolitionists Wendell Phillips, Parker Pillsbury, Abby Kelley (Foster), and Amy Post.

In the next several years, Douglass traveled all over the Northeast speaking against slavery, as far west as Indiana and as far south as New York City. He addressed over one hundred meetings a year, sometimes facing violent opposition (his right hand was broken in a brawl at a meeting in Indiana and never healed properly), and sometimes contending with internal quarrels in the abolition movement itself. Garrison, although a paternal mentor to Douglass, brooked no deviation from his own doctrines, and he and other white abolitionists apparently wanted little theorizing from Douglass. His role was to be the eloquent example, literally and figuratively displaying the scars of the lash to prepare audiences for white speakers who would lay out the abolition philosophy. But Douglass's brilliant and awakened in-

tellec could not remain satisfied with this subordinate role (see our second set of excerpts, from Douglass's second autobiography). He wished to analyze slavery as well as to describe it, and to make use of the full range of rhetorical resources that he was discovering at his command.

On the speaker's platform Douglass was apparently deeply impressive. Against the advice of his white friends, who felt he was destroying his credibility as a witness against slavery, Douglass made no attempt to retain a plantation accent in his speech or a trace of the slave's servility in his manner. On the contrary, he worked hard to improve his diction and his command of Standard English—while at the same time salting his speeches with expert mimicry of a variety of speech styles, from African-inflected slave dialects to the hypercorrect and hypocritical accents of white southern proslavery preachers. He learned to use his voice, naturally deep and resonant, as a flexible instrument that could range from rafter-shaking thunder to tenderly moving, quiet tones.

From very early in his career, it seems, Douglass understood that he was crafting a platform persona that had never before been seen in the Western world. He paid careful attention to clothing himself with as much refinement as his white colleagues; his face betrayed that his father was a white man, yet he identified deeply with people of African descent, like his mother, and he dressed his hair in a way that emphasized its African texture. He dramatized the complexities of his own background in virtually every speech. He had been a slave, and now he appeared conspicuously as a free man and a leader in the public fight against slavery. He had received no formal education whatsoever—"All that I know I have stolen,"¹ he told a British audience—and now he commanded the full range of Western cultural archives in the allusions, arguments, and strategies of his masterful performances. By his very presence at the podium, Douglass increased the possibilities for rhetoric, and his autobiographical reflections on his speaking career suggest that he was well aware of this fact.

Ironically, as Douglass's friends had predicted, his success as a speaker led audiences to doubt that he had ever been a slave, or, contrariwise, to doubt that he spoke his own words—instead they accused him of having some white ghost writer prepare his speeches. Douglass attempted to counter both kinds of criticism by publishing, in 1845, the *Narrative of the Life of Frederick Douglass, an American Slave, Written by Himself*. Slave narratives were already an established American genre, promoted by white abolitionists to demonstrate slavery's horrors and consumed by readers not always above prurient interest in these horrors. The narratives were produced by writers who could thus not only strike a blow against slavery, but also make known their own humanity, literacy, and philosophical views on that brutal institution. This first version of Douglass's autobiography fits well within the genre, concentrating on his life in slavery and concluding with a brief mention of his first appearance on the speaker's platform. He depicts himself as an essentially isolated

¹Frederick Douglass, "Message to the British," quoted in Benjamin Quarles, ed., *Frederick Douglass* (Englewood Cliffs, N.J.: Prentice-Hall, 1968), p. 34.

and heroic fighter for freedom, echoing his platform persona. A further irony of his frankness in discussing his early life was that he thus gave information to his former owners that might assist them in tracking him down.

The American Anti-Slavery Society, parent body of the Massachusetts group that employed him, had been planning to send Douglass on a speaking tour of the British Isles, from which came important financial and political support for abolition in the United States (Britain had abolished slavery everywhere in its empire in 1834). It seemed like an opportune time for him to leave the country, and accordingly, Douglass embarked in August of 1845, while his newly published *Narrative* was selling briskly. The speaking tour was a tremendous success. Douglass was met everywhere by enthusiastic crowds and suffered none of the racist heckling and discrimination that he had endured in the United States. Moreover, his new white British abolitionist friends clearly viewed him as an intellectual equal. While in Britain, Douglass truly came into his own intellectually and broke the Garrisonian leading strings that had already been frayed by his development as a speaker in the United States. Although he still opposed violent resistance to slavery, he now gave free rein to his own view that political action against slavery was desirable and that the Constitution, properly interpreted, did not defend the institution. He continued to support other social reform efforts that the Garrisonians favored, notably temperance and women's rights, but he gave more prominence to women's rights than many others did and attempted (without fully succeeding) to make common cause among enslaved black people, free but oppressed black people, and oppressed white working-class people.

By the time Douglass returned to the United States in 1847, he was determined to put his views before the American people independently of Garrisonian guidance. He was singularly free to do so, because British friends had purchased his freedom upon hearing that the Aulds had indeed identified him from the *Narrative* and were seeking to return him to slavery. British abolitionists also equipped him with funds to begin his own abolitionist newspaper. This he did, in spite of vigorous opposition from the Garrisonians, who feared the competition with *The Liberator*, the expression of heterodox abolition views, and, somewhat contradictorily, the potential loss of Douglass to the speakers' circuit. To escape Garrisonian surveillance and to lessen the appearance of competing with *The Liberator*, Douglass moved his family to Rochester, New York, where he had many abolitionist friends—notably Amy Post and her husband Isaac—and began to publish *The North Star*, assisted by William Nell and African American physician and journalist Martin Delany. Douglass was not lost to the podium, either; he could not be content with only one medium of activism, and he needed the money from speaking fees to supplement the meager income from his newspaper.

In the years leading up to the Civil War, Douglass became increasingly involved in political attempts to institute social reforms, through both speaking and writing. He attended the first women's rights convention in Seneca Falls, New York, in 1848, and was instrumental in persuading the group to pass Elizabeth Cady Stanton's resolution for women's suffrage, which even convention co-organizer Lucretia Coffin Mott found too radical. He led protests against the 1850 Fugitive

Slave Law requiring the citizens of free states to assist in the capture of runaway slaves. He came out publicly for an antislavery interpretation of the Constitution, a move so distressing to Garrison that he removed the American Anti-Slavery Society's imprimatur from *The North Star*. Undaunted, Douglass accepted an offer from wealthy white abolition activist Gerrit Smith to merge his paper with Smith's *Liberty Party Paper*, which advocated political resistance to slavery, and in 1851 replaced *The North Star* with the new combination under the title *Frederick Douglass' Paper*, funded generously by Smith. The new title gives some indication of how well known Douglass now was as a social reform activist. He supported candidates for political office who expressed some opposition to slavery, even if they did not embrace his call for immediate abolition, and he eventually became a staunch supporter of the Republican party. In 1855, he published *My Bondage and My Freedom*, a revised and enlarged version of his autobiography that devotes more space to his life after escaping slavery, telling much more about his career as an orator. It sold very well. He continued to lecture all over the northern United States, and added to his antislavery repertoire speeches that addressed other topics such as the ethnography of the African race and the qualities of the American self-made man. Now the principal speaker wherever he appeared, rather than merely an opener, Douglass often talked for more than two hours yet held audiences spellbound, according to contemporary accounts.

Douglass had clearly become an independent force in the arena of American social reform. He had broken with Garrison completely, to the point that he entertained the possibility of violent resistance to slavery. He had earlier met John Brown, a New England farmer whose fervid devotion to abolition drove him to travel to Kansas territory and there lead murderous raids against pro-slavery voters, in an attempt to prevent the territory from entering the Union as a slave state. In 1859 Douglass became involved in Brown's plot to raid the federal armory at Harpers Ferry, Virginia, to seize weapons that he would distribute to slaves in the surrounding area. Douglass almost accompanied Brown on the raid, but declined at the last minute. The raiders were all killed or captured, and Brown was hanged as a traitor. Douglass's part in the plot became known, and to avoid arrest he departed for a year of lecturing in Britain.

Douglass returned in 1860 to campaign for Abraham Lincoln's election as president. Once the Civil War began in 1861, Douglass staunchly supported the Union cause while emphasizing the war's significance for black people. He condemned Lincoln's suggestions that free and freed African Americans return to Africa and urged Lincoln to issue an emancipation proclamation, which he finally did early in 1863. Douglass also argued for the right of African American men to serve in the Union army, preferably at the same rate of pay and with the same opportunities for advancement as white soldiers. Even though these tokens of equality were not forthcoming, he recruited men for all-black, white-led units, including his three sons. In 1864 Lincoln consulted him about options for the freed slaves, and in 1865 Lincoln invited him to his second inaugural reception over white Republican opposition. Douglass eulogized the assassinated president in Rochester in April of that year.

After the Civil War, Douglass realized that his tasks had not ended with the abolition of slavery, as he explains in his third autobiography (see our third set of excerpts). Black civil rights were still in danger everywhere, and Douglass went to work, denouncing segregated schooling, labor unions that excluded blacks, and white-supremacist roll-backs of black civil rights in the former slave states. He tried unsuccessfully to keep the American Anti-Slavery Society in existence to fight for black rights, but Garrison, regarding its mission as completed, disbanded it. Douglass then expressed support for the new American Equal Rights Association, which initially intended to support civil rights for both white women and African American men and women. This new organization, however, and the long-standing alliance between workers for abolition and for women's rights, foundered amid post-Civil War political exigencies. A prime bone of contention was the Fifteenth Amendment to the Constitution, which guaranteed the franchise to black men while failing to mention women's suffrage. Douglass, although deploring the exclusion of all women from this amendment, nevertheless felt that it should be supported. But many white women feminists argued for a more inclusive amendment. Douglass campaigned for the Fifteenth Amendment, and once it was passed, called for a campaign for another amendment to give the vote to women, but the damage was already done, and unified reform efforts virtually ceased in the postbellum United States.

Douglass, while still supporting women's rights, devoted most of his energies to black rights. Reflecting his increasing focus on achieving reform through political action, he moved his family to Washington, D.C., in 1872 after their Rochester home was destroyed by an arsonist. Through the 1870s and 1880s, he remained a staunch supporter of the Republican party, in spite of its less-than-perfect record on black rights, and promoted his own vision for the future of America even though it conflicted with that of some younger black leaders. The keynote of his thinking was the concept of equality before the law. He argued for giving African Americans an equal chance at all the rights and privileges the United States had to offer—equal schooling, equal work opportunities, equal voting rights, and more. African Americans should work to achieve these equal rights through political activism, promising their votes to those who would do the most for them. To this extent, then, Douglass advocated African Americans making common cause, but otherwise he tended to oppose separatist organizations. He exhorted African Americans to rise socially, economically, and politically by their own individual efforts, and he argued that, as their achievements accumulated, white racism would diminish. His ultimate goal was complete integration and even assimilation; he defended intermarriage as a way to make color differences disappear. Eventually, Douglass hoped, race itself would disappear as a significant category in American culture, and every individual would be judged according to his or her merits alone.

Douglass hoped for political office as a result of his faithful labor for the Republican party. Nomination to elective office was not out of the question, given the emergence of black legislators in the former slave states, but Douglass never achieved this. Appointed office seemed to be closer to his grasp, but it also produced disappointments. After holding several minor bureaucratic appointments in

Washington, in 1889 Douglass accepted the post of minister to Haiti. Although not the Cabinet position he had wished for, this diplomatic appointment came close to conferring the dignity he desired because Haiti was especially significant in the African American community. It was one of only three independent black nations in the world and had won its freedom from French colonial rule almost a hundred years earlier under the leadership of former slave Toussaint L'Ouverture, a great hero to African Americans. Unfortunately, as minister, Douglass became entangled in a scheme to extort land from Haiti for an American naval base. He attempted to respect Haitian sovereignty while carrying out his directions to negotiate for the base, which was difficult to do while American naval ships postured in the harbor. Although Haiti resisted the pressure and the scheme came to nothing, Douglass was blamed for its failure. He resigned, but published a well-received article in which he defended his actions as minister, and in 1893 he was asked by Haiti to serve as its chief representative at the Columbian Exposition, a world's fair held in Chicago.

Family concerns also occupied Douglass in the last decades of his life. He finally felt able to return to Maryland, to scenes he had known as a slave child, and he renewed acquaintance with the descendants of his former owners and also with his own brothers and sisters, whom he had scarcely known in slavery. He provided generous financial support to some of them and to his own children, who—due as much to persistent racism as to overshadowing by their famous father—had perpetual difficulties in supporting themselves and their children. His wife Anna, still illiterate in spite of his efforts to tutor her and never a full participant in his activist life, though a faithful companion and mother to their children, died in 1882, and Douglass suffered a period of deep depression. Later, in 1884, he remarried to a white woman, Helen Pitts, who lived next door to the Douglasses. This union aroused a storm of protest from his own family and from many friends, both black and white; among his few supporters was Elizabeth Cady Stanton. Nevertheless, Douglass and his new wife appeared to be very happy together and took an extended tour of Europe in 1886–1887. She accompanied him to Haiti.

In 1881 Douglass published the third version of his autobiography, now entitled *The Life and Times of Frederick Douglass*, bringing its account up through the busy postwar years. Unlike the two earlier biographies, this one, and its enlarged 1892 edition, sold poorly, implying that the story of the slave who rose to public prominence was no longer of much interest to the public. Nevertheless, Douglass did not give up his activism. He supported the antilynching crusade of the young African American reformer Ida B. Wells, raising money for her, arranging speaking engagements, and coauthoring a protest pamphlet. He also continued to address women's rights meetings and African American conventions. He was escorted to the podium of the 1895 National Council of Women's meeting by long-time friend Susan B. Anthony. Returning home, he was telling his wife about the meeting when he collapsed and died of a heart attack.

If Douglass had been somewhat neglected by the public shortly before his death, people turned out by the thousands to view his body in Washington, and many dignitaries attended the memorial service there before he was taken to Rochester for burial. In 1908, African American sociologist Kelly Miller called him “the one

commanding historic character of the colored race in America.”² Although Douglass arguably no longer holds such a position alone, the assessment gives some idea of his impact on nineteenth-century American life, and contemporary African American historian Waldo E. Martin agrees: “Frederick Douglass remains the prototypical black American hero: a peerless self-made man and symbol of success; a fearless and tireless spokesman; a thoroughgoing humanist . . . not only did he succeed, but he did so in terms signifying mythic greatness.”³

Douglass had little explicit training in rhetoric, but no doubt he studied not only the model speeches by Cicero, William Pitt, George Washington, and others in *The Columbian Orator* (1797), but also the introductory essay, “General Directions for Speaking,” by the anthologist Caleb Bingham. John W. Blassingame, a modern editor of Douglass, points out that naturalness of gesture and expression, flexible use of the voice for emphasis, and imitation of different manners of speech for humorous or otherwise illustrative effect, all emphasized by Bingham, were all noted by contemporary observers as key features in the success of Douglass’s oratory. Blassingame detects direct quotes and paraphrases of *Columbian Orator* material in Douglass’s early speeches, as well as the influence of contemporary speakers he admired, among them Wendell Phillips, William Lloyd Garrison, and Daniel Webster, and of his favorite reading, which included the Bible, Shakespeare, Dickens, Longfellow, Whittier, and the Afro-French novelist Alexandre Dumas. Blassingame also surveys reviews of contemporary orators written by Douglass and finds that Douglass reserves his highest praise for speakers who are clear and direct, avoiding the ponderous allusions and flowery ornament favored by many nineteenth-century speakers, and who have the courage to push for needed social reforms: all traits that Douglass himself exhibited.

Learning to read, write, and orate almost simultaneously, as Douglass did, prepared him well for his future career as an abolitionist agitator. Not only did oratory play a major role in the movement, but as historian of rhetoric Ernest G. Borman has indicated, the line between written and spoken rhetoric was indistinct—speeches were often carefully composed before being delivered, and they were edited again before being published; antislavery tracts might furnish material for speeches. Douglass worked hard to master the written and spoken media and, as noted earlier, to develop a culturally syncretic persona. While employing Standard English and European cultural references, for the most part, he expressed an African American point of view and gave a uniquely African American twist to European American cultural elements.

African American Studies scholar Wilson Jeremiah Moses has coined the term *black jeremiad* to characterize how Douglass and other African American orators transformed a European American genre. The Puritan jeremiad focused on the moral and political destiny of Anglo-Americans; in African American hands, this genre took on a dual meaning. Instead of Anglo-Americans, African Americans be-

²Kelly Miller, “Frederick Douglass,” in *Radicals and Conservatives and Other Essays* (1908, 1968), quoted in Waldo E. Martin Jr., *The Mind of Frederick Douglass* (Chapel Hill: University of North Carolina Press, 1984), p. 253.

³Martin, p. 253.

came the preeminent “chosen people” whose future was scrutinized and whose moral reform was invoked to ensure divine salvation from slavery and racist oppression. However, the United States as a multiracial whole was also seen as “chosen” for the task of disseminating democracy throughout the world, a task the country could accomplish only after repenting of the sins of slavery and white supremacist racism.

The dual perspective of this genre made it inherently ironic, continually inviting an examination of its own idealistic terminology. It is this critically ironic view of American life, which added a new dimension to public rhetoric, that speech communication scholar John Louis Lucaites sees as Douglass’s unique contribution:

The ironic construction of equality that emerged from Douglass’s Fifth of July oration underscored the importance of adding the voice of African-Americans to what we have come to call the dialogue of American public address. The immediate impact of that construction was of course limited, but it was to be repeated over and over again [sic] by Douglass and others in the ensuing years leading to the Civil War and beyond, and eventually it contributed to the usages of “equality” that emerged in the wake of the reconstructed [post-slavery] Constitution. Those usages emphasized the *differences* between white and black Americans as a prelude to the cultural necessity for “equality under the law.” (emphasis in original)⁴

After a long period of neglect in the first half of the twentieth century, Frederick Douglass’s autobiographies have attracted considerable attention from literary critics. As Lucaites has noted, however, his contributions as a rhetorician have been little studied. Scholars are only now beginning to realize the extent to which Douglass’s complex rhetorical stance opened new possibilities for rhetoric in the Western cultural tradition.

Selected Bibliography

The *Narrative of the Life of Frederick Douglass, an American Slave, My Bondage and My Freedom*, and *The Life and Times of Frederick Douglass* (1892 edition) are available in a single volume, *Autobiographies*, with helpful notes by Henry Louis Gates Jr., and a detailed chronology of Douglass’s life (1994). This is the source of our excerpts. Douglass’s speeches and newspaper writings are collected in *Life and Writings of Frederick Douglass*, ed. Philip Foner (five volumes, 1950–1975), and *The Frederick Douglass Papers*, ed. John W. Blassingame (five volumes, 1979–1992); volume I of the latter collection includes a helpful note on editorial methods that highlights the difficulties inherent in studying oral texts.

A good biography is William S. McFeely’s *Frederick Douglass* (1991). A brief account that focuses on Douglass’s knowledge of rhetoric, his rhetorical theory, and assessments of his speaking by contemporary audiences is John W. Blassingame’s “Introduction to Series One” (in *The Frederick Douglass Papers, Series One: Speeches, Debates, and Interviews, Volume I: 1841–46*, 1979). Another brief biographical account that analyzes several of

⁴John Louis Lucaites, “The Irony of ‘Equality’ in Black Abolitionist Discourse: The Case of Frederick Douglass’s ‘What to the Slave Is the Fourth of July?’” in *Rhetoric and Political Culture in Nineteenth-Century America*, ed. Thomas W. Benson (East Lansing: Michigan State University Press, 1997), pp. 63–64.

Douglass's speeches in detail and surveys scholarship on him as a master ironist is Gerald Fulkerson's "Frederick Douglass" (in *African-American Orators: A Bio-Critical Sourcebook*, ed. Richard W. Leeman, 1996). For a more detailed exploration of Douglass's thinking on abolition, other social reform issues, and American national identity generally, see *The Mind of Frederick Douglass* by Waldo E. Martin Jr. (1984). Assessments of Douglass's oratory from his own time are collected in *Frederick Douglass*, ed. Benjamin Quarles (1968). Providing information on Douglass's context of contemporary abolitionists are both the collection of abolitionist speeches and the introductory essay in Ernest G. Borman's *Forerunners of Black Power: The Rhetoric of Abolition* (1971).

On the concept of black jeremiad that characterizes much of Douglass's oratory, see Wilson Jeremiah Moses, *Black Messiahs and Uncle Toms: Social and Literary Manipulations of a Religious Myth* (1982), and David Howard-Pitney, *The Afro-American Jeremiad: Appeals for Justice in America* (1990). John Louis Lucaites discusses Douglass's unique contribution toward the irony inherent in this genre in "The Irony of 'Equality' in Black Abolitionist Discourse: The Case of Frederick Douglass's 'What to the Slave Is the Fourth of July?'" (in *Rhetoric and Political Culture in Nineteenth-Century America*, ed. Thomas W. Benson, 1997). Jacqueline Bacon also discusses Douglass's uses of irony, comparing him with other African American abolitionists, in "'Do You Understand Your Own Language?' Revolutionary *Topoi* in the Rhetoric of African-American Abolitionists" (*Rhetoric Society Quarterly* 28 [spring 1998]: 55–75). On Douglass's transformations of traditional American discourse, see Shelley Fisher Fishkin and Carla L. Peterson, "'We Hold These Truths to Be Self-Evident': The Rhetoric of Frederick Douglass's Journalism" (in *Frederick Douglass: New Literary and Historical Essays*, ed. Eric Sundquist, 1990).

For a sampling of literary critical work on Douglass that concentrates on his autobiographies, see the Sundquist volume just cited, and *Critical Essays on Frederick Douglass*, ed. William Andrews (1991); the latter volume includes critical responses to Douglass from his own day to the present, and Andrews surveys Douglass's critical reception as a writer in his introductory essay.

From *Narrative of the Life of Frederick Douglass*

CHAPTER VI

My new mistress proved to be all she appeared when I first met her at the door,—a woman of the kindest heart and finest feelings. She had never had a slave under her control previously to myself, and prior to her marriage she had been dependent upon her own industry for a living. She was by trade a weaver; and by constant application to her business, she had been in a good degree preserved from the blighting and dehumanizing effects of slavery. I was utterly aston-

ished at her goodness. I scarcely knew how to behave towards her. She was entirely unlike any other white woman I had ever seen. I could not approach her as I was accustomed to approach other white ladies. My early instruction was all out of place. The crouching servility, usually so acceptable a quality in a slave, did not answer when manifested toward her. Her favor was not gained by it; she seemed to be disturbed by it. She did not deem it impudent or unmannerly for a slave to look her in the face. The meanest slave was put fully at ease in her presence, and none

left without feeling better for having seen her. Her face was made of heavenly smiles, and her voice of tranquil music.

But, alas! this kind heart had but a short time to remain such. The fatal poison of irresponsible power was already in her hands, and soon commenced its infernal work. That cheerful eye, under the influence of slavery, soon became red with rage; that voice, made all of sweet accord, changed to one of harsh and horrid discord; and that angelic face gave place to that of a demon.

Very soon after I went to live with Mr. and Mrs. Auld, she very kindly commenced to teach me the A, B, C. After I had learned this, she assisted me in learning to spell words of three or four letters. Just at this point of my progress, Mr. Auld found out what was going on, and at once forbade Mrs. Auld to instruct me further, telling her, among other things, that it was unlawful, as well as unsafe, to teach a slave to read. To use his own words, further, he said, "If you give a nigger an inch, he will take an ell. A nigger should know nothing but to obey his master—to do as he is told to do. Learning would *spoil* the best nigger in the world. Now," said he, "if you teach that nigger (speaking of myself) how to read, there would be no keeping him. It would forever unfit him to be a slave. He would at once become unmanageable, and of no value to his master. As to himself, it could do him no good, but a great deal of harm. It would make him discontented and unhappy." These words sank deep into my heart, stirred up sentiments within that lay slumbering, and called into existence an entirely new train of thought. It was a new and special revelation, explaining dark and mysterious things, with which my youthful understanding had struggled, but struggled in vain. I now understood what had been to me a most perplexing difficulty—to wit, the white man's power to enslave the black man. It was a grand achievement, and I prized it highly. From that moment, I understood the pathway from slavery to freedom. It was just what I wanted, and I got it at a time when I the least expected it. Whilst I was saddened by the thought of losing the aid of my kind mistress, I was gladdened by the invaluable instruction which, by the merest accident, I had gained from my master. Though conscious of the difficulty of learning

without a teacher, I set out with high hope, and a fixed purpose, at whatever cost of trouble, to learn how to read. The very decided manner with which he spoke, and strove to impress his wife with the evil consequences of giving me instruction, served to convince me that he was deeply sensible of the truths he was uttering. It gave me the best assurance that I might rely with the utmost confidence on the results which, he said, would flow from teaching me to read. What he most dreaded, that I most desired. What he most loved, that I most hated. That which to him was a great evil, to be carefully shunned, was to me a great good, to be diligently sought; and the argument which he so warmly urged, against my learning to read, only served to inspire me with a desire and determination to learn. In learning to read, I owe almost as much to the bitter opposition of my master, as to the kindly aid of my mistress. I acknowledge the benefit of both.

I had resided but a short time in Baltimore before I observed a marked difference, in the treatment of slaves, from that which I had witnessed in the country. A city slave is almost a freeman, compared with a slave on the plantation. He is much better fed and clothed, and enjoys privileges altogether unknown to the slave on the plantation. There is a vestige of decency, a sense of shame, that does much to curb and check those outbreaks of atrocious cruelty so commonly enacted upon the plantation. He is a desperate slaveholder, who will shock the humanity of his non-slaveholding neighbors with the cries of his lacerated slave. Few are willing to incur the odium attaching to the reputation of being a cruel master; and above all things, they would not be known as not giving a slave enough to eat. Every city slaveholder is anxious to have it known of him, that he feeds his slaves well; and it is due to them to say, that most of them do give their slaves enough to eat. There are, however, some painful exceptions to this rule. Directly opposite to us, on Philpot Street, lived Mr. Thomas Hamilton. He owned two slaves. Their names were Henrietta and Mary. Henrietta was about twenty-two years of age, Mary was about fourteen; and of all the mangled and emaciated creatures I ever looked upon, these two were the most so. His heart must be harder than stone, that

could look upon these unmoved. The head, neck, and shoulders of Mary were literally cut to pieces. I have frequently felt her head, and found it nearly covered with festering sores, caused by the lash of her cruel mistress. I do not know that her master ever whipped her, but I have been an eye-witness to the cruelty of Mrs. Hamilton. I used to be in Mr. Hamilton's house nearly every day. Mrs. Hamilton used to sit in a large chair in the middle of the room, with a heavy cowskin always by her side, and scarce an hour passed during the day but was marked by the blood of one of these slaves. The girls seldom passed her without her saying, "Move faster, you *black gip!*" at the same time giving them a blow with the cowskin over the head or shoulders, often drawing the blood. She would then say, "Take that, you *black gip!*"—continuing, "If you don't move faster, I'll move you!" Added to the cruel lashings to which these slaves were subjected, they were kept nearly half-starved. They seldom knew what it was to eat a full meal. I have seen Mary contending with the pigs for the offal thrown into the street. So much was Mary kicked and cut to pieces, that she was oftener called "*pecked*" than by her name.

CHAPTER VII

I lived in Master Hugh's family about seven years. During this time, I succeeded in learning to read and write. In accomplishing this, I was compelled to resort to various stratagems. I had no regular teacher. My mistress, who had kindly commenced to instruct me, had, in compliance with the advice and direction of her husband, not only ceased to instruct, but had set her face against my being instructed by any one else. It is due, however, to my mistress to say of her, that she did not adopt this course of treatment immediately. She at first lacked the depravity indispensable to shutting me up in mental darkness. It was at least necessary for her to have some training in the exercise of irresponsible power, to make her equal to the task of treating me as though I were a brute.

My mistress was, as I have said, a kind and tender-hearted woman; and in the simplicity of

her soul she commenced, when I first went to live with her, to treat me as she supposed one human being ought to treat another. In entering upon the duties of a slaveholder, she did not seem to perceive that I sustained to her the relation of a mere chattel, and that for her to treat me as a human being was not only wrong, but dangerously so. Slavery proved as injurious to her as it did to me. When I went there, she was a pious, warm, and tender-hearted woman. There was no sorrow or suffering for which she had not a tear. She had bread for the hungry, clothes for the naked, and comfort for every mourner that came within her reach. Slavery soon proved its ability to divest her of these heavenly qualities. Under its influence, the tender heart became stone, and the lamb-like disposition gave way to one of tiger-like fierceness. The first step in her downward course was in her ceasing to instruct me. She now commenced to practise her husband's precepts. She finally became even more violent in her opposition than her husband himself. She was not satisfied with simply doing as well as he had commanded; she seemed anxious to do better. Nothing seemed to make her more angry than to see me with a newspaper. She seemed to think that here lay the danger. I have had her rush at me with a face made all up of fury, and snatch from me a newspaper, in a manner that fully revealed her apprehension. She was an apt woman; and a little experience soon demonstrated, to her satisfaction, that education and slavery were incompatible with each other.

From this time I was most narrowly watched. If I was in a separate room any considerable length of time, I was sure to be suspected of having a book, and was at once called to give an account of myself. All this, however, was too late. The first step had been taken. Mistress, in teaching me the alphabet, had given me the *inch*, and no precaution could prevent me from taking the *ell*.

The plan which I adopted, and the one by which I was most successful, was that of making friends of all the little white boys whom I met in the street. As many of these as I could, I converted into teachers. With their kindly aid, obtained at different times and in different places, I finally succeeded in learning to read. When I was

sent of errands, I always took my book with me, and by going one part of my errand quickly, I found time to get a lesson before my return. I used also to carry bread with me, enough of which was always in the house, and to which I was always welcome; for I was much better off in this regard than many of the poor white children in our neighborhood. This bread I used to bestow upon the hungry little urchins, who, in return, would give me that more valuable bread of knowledge. I am strongly tempted to give the names of two or three of those little boys, as a testimonial of the gratitude and affection I bear them; but prudence forbids;—not that it would injure me, but it might embarrass them; for it is almost an unpardonable offence to teach slaves to read in this Christian country. It is enough to say of the dear little fellows, that they lived on Philpot Street, very near Durgin and Bailey's ship-yard. I used to talk this matter of slavery over with them. I would sometimes say to them, I wished I could be as free as they would be when they got to be men. "You will be free as soon as you are twenty-one, *but I am a slave for life!* Have not I as good a right to be free as you have?" These words used to trouble them; they would express for me the liveliest sympathy, and console me with the hope that something would occur by which I might be free.

I was now about twelve years old, and the thought of being *a slave for life* began to bear heavily upon my heart. Just about this time, I got hold of a book entitled "The Columbian Orator." Every opportunity I got, I used to read this book. Among much of other interesting matter, I found in it a dialogue between a master and his slave. The slave was represented as having run away from his master three times. The dialogue represented the conversation which took place between them, when the slave was retaken the third time. In this dialogue, the whole argument in behalf of slavery was brought forward by the master, all of which was disposed of by the slave. The slave was made to say some very smart as well as impressive things in reply to his master—things which had the desired though unexpected effect; for the conversation resulted in the voluntary emancipation of the slave on the part of the master.

In the same book, I met with one of Sheridan's mighty speeches on and in behalf of Catholic emancipation. These were choice documents to me. I read them over and over again with unabated interest. They gave tongue to interesting thoughts of my own soul, which had frequently flashed through my mind, and died away for want of utterance. The moral which I gained from the dialogue was the power of truth over the conscience of even a slaveholder. What I got from Sheridan was a bold denunciation of slavery, and a powerful vindication of human rights. The reading of these documents enabled me to utter my thoughts, and to meet the arguments brought forward to sustain slavery; but while they relieved me of one difficulty, they brought on another even more painful than the one of which I was relieved. The more I read, the more I was led to abhor and detest my enslavers. I could regard them in no other light than a band of successful robbers, who had left their homes, and gone to Africa, and stolen us from our homes, and in a strange land reduced us to slavery. I loathed them as being the meanest as well as the most wicked of men. As I read and contemplated the subject, behold! that very discontentment which Master Hugh had predicted would follow my learning to read had already come, to torment and sting my soul to unutterable anguish. As I writhed under it, I would at times feel that learning to read had been a curse rather than a blessing. It had given me a view of my wretched condition, without the remedy. It opened my eyes to the horrible pit, but to no ladder upon which to get out. In moments of agony, I envied my fellow-slaves for their stupidity. I have often wished myself a beast. I preferred the condition of the meanest reptile to my own. Any thing, no matter what, to get rid of thinking! It was this everlasting thinking of my condition that tormented me. There was no getting rid of it. It was pressed upon me by every object within sight or hearing, animate or inanimate. The silver trump of freedom had roused my soul to eternal wakefulness. Freedom now appeared, to disappear no more forever. It was heard in every sound, and seen in every thing. It was ever present to torment me with a sense of my wretched condition. I saw nothing without seeing it, I

heard nothing without hearing it, and felt nothing without feeling it. It looked from every star, it smiled in every calm, breathed in every wind, and moved in every storm.

I often found myself regretting my own existence, and wishing myself dead; and but for the hope of being free, I have no doubt but that I should have killed myself, or done something for which I should have been killed. While in this state of mind, I was eager to hear any one speak of slavery. I was a ready listener. Every little while, I could hear something about the abolitionists. It was some time before I found what the word meant. It was always used in such connections as to make it an interesting word to me. If a slave ran away and succeeded in getting clear, or if a slave killed his master, set fire to a barn, or did any thing very wrong in the mind of a slaveholder, it was spoken of as the fruit of *abolition*. Hearing the word in this connection very often, I set about learning what it meant. The dictionary afforded me little or no help. I found it was "the act of abolishing;" but then I did not know what was to be abolished. Here I was perplexed. I did not dare to ask any one about its meaning, for I was satisfied that it was something they wanted me to know very little about. After a patient waiting, I got one of our city papers, containing an account of the number of petitions from the north, praying for the abolition of slavery in the District of Columbia, and of the slave trade between the States. From this time I understood the words *abolition* and *abolitionist*, and always drew near when that word was spoken, expecting to hear something of importance to myself and fellow-slaves. The light broke in upon me by degrees. I went one day down on the wharf of Mr. Waters; and seeing two Irishmen unloading a scow of stone, I went, unasked, and helped them. When we had finished, one of them came to me and asked me if I were a slave. I told him I was. He asked, "Are ye a slave for life?" I told him that I was. The good Irishman seemed to be deeply affected by the statement. He said to the other that it was a pity so fine a little fellow as myself should be a slave for life. He said it was a shame to hold me. They both advised me to run away to the north; that I should find friends there, and that I should be free. I pretended not to be in-

terested in what they said, and treated them as if I did not understand them; for I feared they might be treacherous. White men have been known to encourage slaves to escape, and then, to get the reward, catch them and return them to their masters. I was afraid that these seemingly good men might use me so; but I nevertheless remembered their advice, and from that time I resolved to run away. I looked forward to a time at which it would be safe for me to escape. I was too young to think of doing so immediately; besides, I wished to learn how to write, as I might have occasion to write my own pass. I consoled myself with the hope that I should one day find a good chance. Meanwhile, I would learn to write.

The idea as to how I might learn to write was suggested to me by being in Durgin and Bailey's ship-yard, and frequently seeing the ship carpenters, after hewing, and getting a piece of timber ready for use, write on the timber the name of that part of the ship for which it was intended. When a piece of timber was intended for the larboard side, it would be marked thus—"L." When a piece was for the starboard side, it would be marked thus—"S." A piece for the larboard side forward, would be marked thus—"L. F." When a piece was for starboard side forward, it would be marked thus—"S. F." For larboard aft, it would be marked thus—"L. A." For starboard aft, it would be marked thus—"S. A." I soon learned the names of these letters, and for what they were intended when placed upon a piece of timber in the ship-yard. I immediately commenced copying them, and in a short time was able to make the four letters named. After that, when I met with any boy who I knew could write, I would tell him I could write as well as he. The next word would be, "I don't believe you. Let me see you try it." I would then make the letters which I had been so fortunate as to learn, and ask him to beat that. In this way I got a good many lessons in writing, which it is quite possible I should never have gotten in any other way. During this time, my copy-book was the board fence, brick wall, and pavement; my pen and ink was a lump of chalk. With these, I learned mainly how to write. I then commenced and continued copying the Italics in Webster's Spelling Book, until I could make them all without looking on the book. By this time, my

little Master Thomas had gone to school, and learned how to write, and had written over a number of copy-books. These had been brought home, and shown to some of our near neighbors, and then laid aside. My mistress used to go to class meeting at the Wilk Street meeting-house every Monday afternoon, and leave me to take care of

the house. When left thus, I used to spend the time in writing in the spaces left in Master Thomas's copy-book, copying what he had written. I continued to do this until I could write a hand very similar to that of Master Thomas. Thus, after a long, tedious effort for years, I finally succeeded in learning how to write.

From *My Bondage and My Freedom*

In four or five months after reaching New Bedford, there came a young man to me, with a copy of the "Liberator," the paper edited by WILLIAM LLOYD GARRISON, and published by ISAAC KNAPP, and asked me to subscribe for it. I told him I had but just escaped from slavery, and was of course very poor, and remarked further, that I was unable to pay for it then; the agent, however, very willingly took me as a subscriber, and appeared to be much pleased with securing my name to his list. From this time I was brought in contact with the mind of William Lloyd Garrison. His paper took its place with me next to the bible.

The Liberator was a paper after my own heart. It detested slavery—exposed hypocrisy and wickedness in high places—made no truce with the traffickers in the bodies and souls of men; it preached human brotherhood, denounced oppression, and, with all the solemnity of God's word, demanded the complete emancipation of my race. I not only liked—I *loved* this paper, and its editor. He seemed a match for all the opponents of emancipation, whether they spoke in the name of the law, or the gospel. His words were few, full of holy fire, and straight to the point. Learning to love him, through his paper I was prepared to be pleased with his presence. Something of a hero worshiper, by nature, here was one, on first sight, to excite my love and reverence.

Seventeen years ago, few men possessed a more heavenly countenance than William Lloyd Garrison, and few men evinced a more genuine or a more exalted piety. The bible was his text book—held sacred, as the word of the Eternal

Father—sinless perfection—complete submission to insults and injuries—literal obedience to the injunction, if smitten on one side to turn the other also. Not only was Sunday a Sabbath, but all days were Sabbaths, and to be kept holy. All sectarianism false and mischievous—the regenerated, throughout the world, members of one body, and the HEAD Christ Jesus. Prejudice against color was rebellion against God. Of all men beneath the sky, the slaves, because most neglected and despised, were nearest and dearest to his great heart. Those ministers who defended slavery from the bible, were of their "father the devil;" and those churches which fellowshipped slaveholders as christians, were synagogues of Satan, and our nation was a nation of liars. Never loud or noisy—calm and serene as a summer sky, and as pure. "You are the man, the Moses, raised up by God, to deliver his modern Israel from bondage," was the spontaneous feeling of my heart, as I sat away back in the hall and listened to his mighty words; mighty in truth—mighty in their simple earnestness.

I had not long been a reader of the Liberator, and listener to its editor, before I got a clear apprehension of the principles of the anti-slavery movement. I had already the spirit of the movement, and only needed to understand its principles and measures. These I got from the Liberator, and from those who believed in that paper. My acquaintance with the movement increased my hope for the ultimate freedom of my race, and I united with it from a sense of delight, as well as duty.

Every week the Liberator came, and every

week I made myself master of its contents. All the anti-slavery meetings held in New Bedford I promptly attended, my heart burning at every true utterance against the slave system, and every rebuke of its friends and supporters. Thus passed the first three years of my residence in New Bedford. I had not then dreamed of the possibility of my becoming a public advocate of the cause so deeply imbedded in my heart. It was enough for me to listen—to receive and applaud the great words of others, and only whisper in private, among the white laborers on the wharves, and elsewhere, the truths which burned in my breast.

CHAPTER XXIII

Introduced to the Abolitionists

First speech at Nantucket—much sensation—extraordinary speech of Mr. Garrison—author becomes a public lecturer—fourteen years' experience—youthful enthusiasm—a brand new fact—matter of the author's speech—he could not follow the programme—his fugitive slaveship doubted—to settle all doubt he writes his experience of slavery—danger of recapture increased.

In the summer of 1841, a grand anti-slavery convention was held in Nantucket, under the auspices of Mr. Garrison and his friends. Until now, I had taken no holiday since my escape from slavery. Having worked very hard that spring and summer, in Richmond's brass foundery—sometimes working all night as well as all day—and needing a day or two of rest, I attended this convention, never supposing that I should take part in the proceedings. Indeed, I was not aware that any one connected with the convention even so much as knew my name. I was, however, quite mistaken. Mr. William C. Coffin, a prominent abolitionist in those days of trial, had heard me speaking to my colored friends, in the little school-house on Second street, New Bedford, where we worshiped. He sought me out in the crowd, and invited me to say a few words to the convention. Thus sought out, and thus invited, I was induced to speak out the feelings inspired by the occasion, and the fresh recollection of the scenes through which I had passed as a slave. My speech on this occasion is about the only one I

ever made, of which I do not remember a single connected sentence. It was with the utmost difficulty that I could stand erect, or that I could command and articulate two words without hesitation and stammering. I trembled in every limb. I am not sure that my embarrassment was not the most effective part of my speech, if speech it could be called. At any rate, this is about the only part of my performance that I now distinctly remember. But excited and convulsed as I was, the audience, though remarkably quiet before, became as much excited as myself. Mr. Garrison followed me, taking me as his text; and now, whether I had made an eloquent speech in behalf of freedom or not, his was one never to be forgotten by those who heard it. Those who had heard Mr. Garrison oftenest, and had known him longest, were astonished. It was an effort of unequalled power, sweeping down, like a very tornado, every opposing barrier, whether of sentiment or opinion. For a moment, he possessed that almost fabulous inspiration, often referred to but seldom attained, in which a public meeting is transformed, as it were, into a single individuality—the orator wielding a thousand heads and hearts at once, and by the simple majesty of his all controlling thought, converting his hearers into the express image of his own soul. That night there were at least one thousand Garrisonians in Nantucket! At the close of this great meeting, I was duly waited on by Mr. John A. Collins—then the general agent of the Massachusetts anti-slavery society—and urgently solicited by him to become an agent of that society, and to publicly advocate to anti-slavery principles. I was reluctant to take the proffered position. I had not been quite three years from slavery—was honestly distrustful of my ability—wished to be excused; publicity exposed me to discovery and arrest by my master; and other objections came up, but Mr. Collins was not to be put off, and I finally consented to go out for three months, for I supposed that I should have got to the end of my story and my usefulness, in that length of time.

Here opened upon me a new life—a life for which I had had no preparation. I was a “graduate from the peculiar institution,” Mr. Collins used to say, when introducing me, “*with my diploma written on my back!*” The three years of

my freedom had been spent in the hard school of adversity. My hands had been furnished by nature with something like a sordid leather coating, and I had bravely marked out for myself a life of rough labor, suited to the hardness of my hands, as a means of supporting myself and rearing my children.

Now what shall I say of this fourteen years' experience as a public advocate of the cause of my enslaved brothers and sisters? The time is but as a speck, yet large enough to justify a pause for retrospection—and a pause it must only be.

Young, ardent, and hopeful, I entered upon this new life in the full gush of unsuspecting enthusiasm. The cause was good; the men engaged in it were good; the means to attain its triumph, good; Heaven's blessing must attend all, and freedom must soon be given to the pining millions under a ruthless bondage. My whole heart went with the holy cause, and my most fervent prayer to the Almighty Disposer of the hearts of men, were continually offered for its early triumph. "Who or what," thought I, "can withstand a cause so good, so holy, so indescribably glorious. The God of Israel is with us. The might of the Eternal is on our side. Now let but the truth be spoken, and a nation will start forth at the sound!" In this enthusiastic spirit, I dropped into the ranks of freedom's friends, and went forth to the battle. For a time I was made to forget that my skin was dark and my hair crisped. For a time I regretted that I could not have shared the hardships and dangers endured by the earlier workers for the slave's release. I soon, however, found that my enthusiasm had been extravagant; that hardships and dangers were not yet passed; and that the life now before me, had shadows as well as sunbeams.

Among the first duties assigned me, on entering the ranks, was to travel, in company with Mr. George Foster, to secure subscribers to the "Anti-slavery Standard" and the "Liberator." With him I traveled and lectured through the eastern counties of Massachusetts. Much interest was awakened—large meetings assembled. Many came, no doubt, from curiosity to hear what a negro could say in his own cause. I was generally introduced as a "*chattel*"—a "*thing*"—a piece of southern "*property*"—the chairman assuring the

audience that *it* could speak. Fugitive slaves, at that time, were not so plentiful as now; and as a fugitive slave lecturer, I had the advantage of being a "*brand new fact*"—the first one out. Up to that time, a colored man was deemed a fool who confessed himself a runaway slave, not only because of the danger to which he exposed himself of being retaken, but because it was a confession of a very *low* origin! Some of my colored friends in New Bedford thought very badly of my wisdom for thus exposing and degrading myself. The only precaution I took, at the beginning, to prevent Master Thomas from knowing where I was, and what I was about, was the withholding my former name, my master's name, and the name of the state and county from which I came. During the first three or four months, my speeches were almost exclusively made up of narrations of my own personal experience as a slave. "Let us have the facts," said the people. So also said Friend George Foster, who always wished to pin me down to my simple narrative. "Give us the facts," said Collins, "we will take care of the philosophy." Just here arose some embarrassment. It was impossible for me to repeat the same old story month after month, and to keep up my interest in it. It was new to the people, it is true, but it was an old story to me; and to go through with it night after night, was a task altogether too mechanical for my nature. "Tell your story, Frederick," would whisper my then revered friend, William Lloyd Garrison, as I stepped upon the platform. I could not always obey, for I was now reading and thinking. New views of the subject were presented to my mind. It did not entirely satisfy me to *narrate* wrongs; I felt like *denouncing* them. I could not always curb my moral indignation for the perpetrators of slaveholding villainy, long enough for a circumstantial statement of the facts which I felt almost everybody must know. Besides, I was growing, and needed room. "People won't believe you ever was a slave, Frederick, if you keep on this way," said Friend Foster. "Be yourself," said Collins, "and tell your story." It was said to me, "Better have a *little* of the plantation manner of speech than not; 'tis not best that you seem too learned." These excellent friends were actuated by the best of motives, and were not altogether wrong in their advice; and

still I must speak just the word that seemed to *me* the word to be spoken *by* me.

At last the apprehended trouble came. People doubted if I had ever been a slave. They said I did not talk like a slave, look like a slave, nor act like a slave, and that they believed I had never been south of Mason and Dixon's line. "He don't tell us where he came from—what his master's name was—how he got away—nor the story of his experience. Besides, he is educated, and is, in this, a contradiction of all the facts we have concerning the ignorance of the slaves." Thus, I was in a pretty fair way to be denounced as an impostor. The committee of the Massachusetts anti-slavery society knew all the facts in my case, and agreed with me in the prudence of keeping them private. They, therefore, never doubted my being a genuine fugitive; but going down the aisles of the churches in which I spoke, and hearing the free spoken Yankees saying, repeatedly, "*He's never been a slave, I'll warrant ye,*" I resolved to dispel all doubt, at no distant day, by such a revelation of facts as could not be made by an other than a genuine fugitive.

In a little less than four years, therefore, after becoming a public lecturer, I was induced to write out the leading facts connected with my experience in slavery, giving names of persons, places, and dates—thus putting it in the power of any who doubted, to ascertain the truth or falsehood of my story of being a fugitive slave. This statement soon became known in Maryland, and I had reason to believe that an effort would be made to recapture me.

It is not probable that any open attempt to secure me as a slave could have succeeded, further

than the obtainment, by my master, of the money value of my bones and sinews. Fortunately for me, in the four years of my labors in the abolition cause, I had gained many friends, who would have suffered themselves to be taxed to almost any extent to save me from slavery. It was felt that I had committed the double offense of running away, and exposing the secrets and crimes of slavery and slaveholders. There was a double motive for seeking my reenslavement—avarice and vengeance; and while, as I have said, there was little probability of successful recapture, if attempted openly, I was constantly in danger of being spirited away, at a moment when my friends could render me no assistance. In traveling about from place to place—often alone—I was much exposed to this sort of attack. Any one cherishing the design to betray me, could easily do so, by simply tracing my whereabouts through the anti-slavery journals, for my meetings and movements were promptly made known in advance. My true friends, Mr. Garrison and Mr. Phillips, had no faith in the power of Massachusetts to protect me in my right to liberty. Public sentiment and the law, in their opinion, would hand me over to the tormentors. Mr. Phillips, especially, considered me in danger, and said, when I showed him the manuscript of my story, if in my place, he would throw it into the fire. Thus the reader will observe, the settling of one difficulty only opened the way for another; and that though I had reached a free state, and had attained a position for public usefulness, I was still tormented with the liability of losing my liberty. How this liability was dispelled, will be related, with other incidents, in the next chapter.

From *The Life and Times of Frederick Douglass*

CHAPTER V

One Hundred Conventions

Anti-slavery conventions held in parts of New England and in some of the middle and western states—mobs—incidents, etc.

The year 1843 was one of remarkable anti-slavery activity. The New England Anti-Slavery Society, at its annual meeting held in the spring of that year, resolved, under the auspices of Mr. Garrison and his friends, to hold a series of one hundred conventions. The territory embraced in this plan for creating anti-slavery sentiment included New Hampshire, Vermont, New York, Ohio, Indiana, and Pennsylvania. I had the honor to be chosen one of the agents to assist in these proposed conventions, and I never entered upon any work with more heart and hope. All that the American people needed, I thought, was light. Could they know slavery as I knew it, they would hasten to the work of its extinction. The corps of speakers who were to be associated with me in carrying on these conventions was Messrs. George Bradburn, John A. Collins, James Monroe, William A. White, Charles L. Remond, and Sydney Howard Gay. They were all masters of the subject, and some of them able and eloquent orators. It was a piece of great good fortune to me, only a few years from slavery as I was, to be brought into contact with such men. It was a real campaign, and required nearly six months for its accomplishment.

Those who only know the State of Vermont as it is to-day can hardly understand, and must wonder that there was forty years ago need for anti-slavery effort within its borders. Our first convention was held in Middlebury, its chief seat of learning and the home of William Slade, who was for years the co-worker with John Quincy Adams in Congress; and yet in this town the opposition to our anti-slavery convention was intense bitter and violent. The only man of note in the town whom I now remember as giving us sympathy or welcome was Mr. Edward Barber, who was a man of

courage as well as ability, and did his best to make our convention a success. In advance of our arrival the college students had very industriously and mischievously placarded the town with violent aspersions of our characters and the grossest misrepresentations of our principles, measures, and objects. I was described as an escaped convict from the State prison, and the other speakers were assailed not less slanderously. Few people attended our meeting, and apparently little was accomplished by it. In the neighboring town of Ferrisburgh the case was different and more favorable. The way had been prepared for us by such stalwart anti-slavery workers as Orson S. Murray, Charles C. Burleigh, Rowland T. Robinson, and others. Upon the whole, however, the several towns visited showed that Vermont was surprisingly under the influence of the slave power. Her proud boast that within her borders no slave had ever been delivered up to his master, did not hinder her hatred to *anti-slavery*. What was in this respect true of the Green Mountain State was most discouragingly true of New York, the State next visited. All along the Erie canal, from Albany to Buffalo, there was evinced apathy, indifference, aversion, and sometimes a mobocratic spirit. Even Syracuse, afterward the home of the humane Samuel J. May and the scene of the "Jerry rescue;" where Gerrit Smith, Beriah Greene, William Goodell, Alvin Stewart, and other able men taught their noblest lessons, would not at that time furnish us with church, market, house, or hall in which to hold our meetings. Discovering this state of things, some of our number were disposed to turn our backs upon the town and to shake its dust from our feet, but of these, I am glad to say, I was not one. I had somewhere read of a command to go into the hedges and highways and compel men to come in. Mr. Stephen Smith, under whose hospitable roof we were made at home, thought as I did. It would be easy to silence anti-slavery agitation if refusing its agents the use of halls and churches could affect that result. The house of our friend Smith stood on the southwest corner of the park, which was well covered with young trees too small to furnish

shade or shelter, but better than none. Taking my stand under a small tree in the southeast corner of this park I began to speak in the morning to an audience of five persons, and before the close of my afternoon meeting I had before me not less than five hundred. In the evening I was waited upon by officers of the Congregational church and tendered the use of an old wooden building which they had deserted for a better, but still owned, and here our convention was continued during three days. I believe there has been no trouble to find places in Syracuse in which to hold anti-slavery meetings since. I never go there without endeavoring to see that tree, which, like the cause it sheltered, has grown large and strong and imposing.

I believe my first offense against our Anti-Slavery Israel was committed during these Syracuse meetings. It was on this wise: Our general agent, John A. Collins, had recently returned from England full of communistic ideas, which ideas would do away with individual property, and have all things in common. He had arranged a corps of speakers of his communistic persuasion, consisting of John O. Wattles, Nathaniel Whiting, and John Orvis, to follow our anti-slavery conventions, and, while our meeting was in progress in Syracuse, a meeting, as the reader will observe, obtained under much difficulty, Mr. Collins came in with his new friends and doctrines and proposed to adjourn our anti-slavery discussions and take up the subject of communism. To this I ventured to object. I held that it was imposing an additional burden of unpopularity on our cause, and an act of bad faith with the people, who paid the salary of Mr. Collins, and were responsible for these hundred conventions. Strange to say, my course in this matter did not meet the approval of Mrs. M. W. Chapman, an influential member of the board of managers of the Massachusetts Anti-Slavery Society, and called out a sharp reprimand from her, for insubordination to my superiors. This was a strange and distressing revelation to me, and one of which I was not soon relieved. I thought I had only done my duty, and I think so still. The chief reason for the reprimand was the use which the liberty party-papers would make of my seeming rebellion against the commanders of our anti-slavery army.

In the growing city of Rochester we had in every way a better reception. Abolitionists of all

shades of opinion were broad enough to give the Garrisonians (for such we were) a hearing. Samuel D. Porter and the Avery family, though they belonged to the Gerrit Smith, Myron Holly, and William Goodell school, were not so narrow as to refuse us the use of their church for the convention. They heard our moral suasion arguments, and in a manly way met us in debate. We were opposed to carrying the anti-slavery cause to the ballot-box, and they believed in carrying it there. They looked at slavery as a creature of *law*; we regarded it as a creature of public opinion. It is surprising how small the difference appears as I look back to it, over the space of forty years; yet at the time of it this difference was immense.

During our stay at Rochester we were hospitably entertained by Isaac and Amy Post, two people of all-abounding benevolence, the truest and best of Long Island and Elias Hicks Quakers. They were not more amiable than brave, for they never seemed to ask, What will the world say? but walked straight forward in what seemed to them the line of duty, please or offend whomsoever it might. Many a poor fugitive slave found shelter under their roof when such shelter was hard to find elsewhere, and I mention them here in the warmth and fullness of earnest gratitude.

Pleased with our success in Rochester, we—that is, Mr. Bradburn and myself—made our way to Buffalo, then a rising city of steamboats, bustle, and business. Buffalo was too busy to attend to such matters as we had in hand. Our friend, Mr. Marsh, had been able to secure for our convention only an old dilapidated and deserted room, formerly used as a post-office. We went at the time appointed, and found seated a few cabmen in their coarse, everyday clothes, whips in hand, while their teams were standing on the street waiting for a job. Friend Bradburn looked around upon this unpromising audience, and turned upon his heel, saying he would not speak to “such a set of ragamuffins,” and took the first steamer to Cleveland, the home of his brother Charles, and left me to “do” Buffalo alone. For nearly a week I spoke every day in this old post-office to audiences constantly increasing in numbers and respectability, till the Baptist church was thrown open to me; and when this became too small I went on Sunday into the open Park and addressed an assembly of four or five thousand persons. After this my colored friends, Charles L. Remond, Henry

Highland Garnett, Theodore S. Wright, Amos G. Beaman, Charles M. Ray, and other well-known colored men held a convention here, and then Remond and myself left for our next meeting in Clinton county, Ohio. This was held under a great shed, built for this special purpose by the abolitionists, of whom Dr. Abram Brook and Valentine Nicholson were the most noted. Thousands gathered here and were addressed by Bradburn, White, Monroe, Remond, Gay, and myself. The influence of this meeting was deep and wide-spread. It would be tedious to tell of all, or a small part of all that was interesting and illustrative of the difficulties encountered by the early advocates of anti-slavery in connection with this campaign, and hence I leave this part of it at once.

From Ohio we divided our forces and went into Indiana. At our first meeting we were mobbed, and some of us had our good clothes spoiled by evil-smelling eggs. This was at Richmond, where Henry Clay had been recently invited to the high seat of the Quaker meeting-house just after his gross abuse of Mr. Mendenhall, because of the latter presenting to him a respectful petition, asking him to emancipate his slaves. At Pendleton this mobocratic spirit was even more pronounced. It was found impossible to obtain a building in which to hold our convention, and our friends, Dr. Fussell and others, erected a platform in the woods, where quite a large audience assembled. Mr. Bradburn, Mr. White and myself were in attendance. As soon as we began to speak a mob of about sixty of the roughest characters I ever looked upon ordered us, through its leaders, to "be silent," threatening us, if we were not, with violence. We attempted to dissuade them, but they had not come to parley but to fight, and were well armed. They tore down the platform on which we stood, assaulted Mr. White and knocked out several of his teeth, dealt a heavy blow on William A. White, striking him on the back part of the head, badly cutting his scalp and felling him to the ground. Undertaking to fight my way through the crowd with a stick which I caught up in the mêlée, I attracted the fury of the mob, which laid me prostrate on the ground under a torrent of blows. Leaving me thus, with my right hand broken, and in a state of unconsciousness, the mobocrats hastily mounted their

horses and rode to Andersonville, where most of them resided. . . .

CHAPTER XIII

Vast Changes

Satisfaction and anxiety—new fields of labor opening—lyceums and colleges soliciting addresses—literary attractions—pecuniary gain—still pleading for human rights—President Andy Johnson—colored delegation—their reply to him—National Loyalist Convention, 1866, and its procession—not wanted—meeting with an old friend—joy and surprise—the old master's welcome, and Miss Amanda's friendship—enfranchisement discussed—its accomplishment—the negro a citizen.

When the war for the Union was substantially ended, and peace had dawned upon the land, as was the case almost immediately after the tragic death of President Lincoln; when the gigantic system of American slavery which had defied the march of time and resisted all the appeals and arguments of the abolitionists and the humane testimonies of good men of every generation during two hundred and fifty years, was finally abolished and forever prohibited by the organic law of the land, a strange and, perhaps, perverse feeling came over me. My great and exceeding joy over these stupendous achievements, especially over the abolition of slavery (which had been the deepest desire and the great labor of my life), was slightly tinged with a feeling of sadness.

I felt that I had reached the end of the noblest and best part of my life; my school was broken up, my church disbanded, and the beloved congregation dispersed, never to come together again. The anti-slavery platform had performed its work, and my voice was no longer needed. "Othello's occupation was gone." The great happiness of meeting with my fellow-workers was now to be among the things of memory. Then, too, some thought of my personal future came in. Like Daniel Webster, when asked by his friends to leave John Tyler's cabinet, I naturally inquired: "Where shall I go?" I was still in the midst of my years, and had something of life before me, and as the minister (urged to my old friend George Bradburn to preach anti-slavery, when to do so was unpopular) said, "It is necessary for ministers to live," I felt it was necessary

for me to live, and to live honestly. But where should I go, and what should I do? I could not now take hold of life as I did when I first landed in New Bedford, twenty-five years before; I could not go to the wharf of either Gideon or George Howland, to Richmond's brass foundry, or Richetson's candle and oil works, load and unload vessels, or even ask Governor Clifford for a place as a servant. Rolling oil-casks and shoveling coal were all well enough when I was younger, immediately after getting out of slavery. Doing this was a step up, rather than a step down; but all these avocations had had their day for me, and I had had my day for them. My public life and labors had unfitted me for the pursuits of my earlier years, and yet had not prepared me for more congenial and higher employment. Outside the question of slavery my thoughts had not been much directed, and I could hardly hope to make myself useful in any cause than that to which I had given the best twenty-five years of my life. A man in the situation in which I found myself has not only to divest himself of the old, which is never easily done, but to adjust himself to the new, which is still more difficult. Delivering lectures under various names, John B. Gough says, "Whatever may be the title, my lecture is always on Temperance"; and such is apt to be the case with any man who has devoted his time and thoughts to one subject for any considerable length of time. But what should I do, was the question. I had a few thousand dollars (a great convenience, and one not generally so highly prized by my people as it ought to be) saved from the sale of "My Bondage and My Freedom," and the proceeds of my lectures at home and abroad, and with this sum I thought of following the noble example of my old friends Stephen and Abby Kelley Foster, purchase a little farm and settle myself down to earn an honest living by tilling the soil. My children were grown and ought to be able to take care of themselves. This question, however, was soon decided for me. I had after all acquired (a very unusual thing) a little more knowledge and aptitude fitting me for the new condition of things than I knew, and had a deeper hold upon public attention than I had supposed. Invitations began to pour in upon me from colleges, lyceums, and literary societies, of-

fering me one hundred, and even two hundred dollars for a single lecture.

I had, some time before, prepared a lecture on "Self-made Men," and also one upon Ethnology, with special reference to Africa. The latter had cost me much labor, though, as I now look back upon it, it was a very defective production. I wrote it at the instance of my friend Doctor M. B. Anderson, President of Rochester University, himself a distinguished ethnologist, a deep thinker and scholar. I had been invited by one of the literary societies of Western Reserve College (then at Hudson, but recently removed to Cleveland, Ohio), to address it on Commencement day; and never having spoken on such an occasion, never, indeed, having been myself inside of a school-house for the purpose of an education, I hesitated about accepting the invitation, and finally called upon Prof. Henry Wayland, son of the great Doctor Wayland of Brown University, and on Doctor Anderson, and asked their advice whether I ought to accept. Both gentlemen advised me to do so. They knew me, and evidently thought well of my ability. But the puzzling question now was, what shall I say if I do go there? It won't do to give them an old-fashioned anti-slavery discourse. (I learned afterwards that such a discourse was precisely what they needed, though not what they wished; for the faculty, including the President, was in great distress because I, a colored man, had been invited, and because of the reproach this circumstance might bring upon the College.) But what shall I talk about? became the difficult question. I finally hit upon the one before mentioned. I had read, with great interest, when in England a few years before, parts of Doctor Pritchard's "Natural History of Man," a large volume marvelously calm and philosophical in its discussion of the science of the origin of the races, and was thus in the line of my then convictions. I at once sought in our bookstores for this valuable book, but could not obtain it anywhere in this country. I sent to England, where I paid the sum of seven and a half dollars for it. In addition to this valuable work President Anderson kindly gave me a little book entitled "Man and His Migrations," by Dr. R. G. Latham, and loaned me the large work of Dr. Morton, the famous archæologist, and that of

Messrs. Nott and Glidden, the latter written evidently to degrade the Negro and support the then-prevalent Calhoun doctrine of the rightfulness of slavery. With these books and occasional suggestions from Dr. Anderson and Prof. Wayland I set about preparing my commencement address. For many days and nights I toiled, and succeeded at last in getting something together in due form. Written orations had not been in my line. I had usually depended upon my unsystematized knowledge and the inspiration of the hour and the occasion, but I had now got the "scholar bee in my bonnet," and supposed that inasmuch as I was to speak to college professors and students I must at least make a show of some familiarity with letters. It proved, as to its immediate effect, a great mistake, for my carefully-studied and written address, full of learned quotations, fell dead at my feet, while a few remarks I made extemporaneously at collation were enthusiastically received. Nevertheless, the reading and labor expended were of much value to me. They were needed steps preparatory to the work upon which I was about to enter. If they failed at the beginning, they helped to success in the end. My lecture on "The Races of Men" was seldom called for, but that on "Self-made Men" was in great demand, especially through the West. I found that the success of a lecturer depends more upon the quality of his stock in store than the amount. My friend Wendell Phillips (for such I esteem him), who has said more cheering words to me and in vindication of my race than any man now living, has delivered his famous lecture on the "Lost Arts" during the last forty years; and I doubt if among all his lectures, and he has many, there is one in such requisition as this. When Daniel O'Connell was asked why he did not make a new speech he playfully replied that "it would take Ireland twenty years to learn his old ones." Upon some such consideration as this I adhered pretty closely to my old lecture on "Self-made Men," retouching and shading it a little from time to time as occasion seemed to require.

Here, then, was a new vocation before me, full of advantages mentally and pecuniarily. When in the employment of the American Anti-Slavery Society my salary was about four hundred and fifty dollars a year, and I felt I was well paid for

my services; but I could now make from fifty to a hundred dollars a night, and have the satisfaction, too, that I was in some small measure helping to lift my race into consideration, for no man who lives at all lives unto himself—he either helps or hinders all who are in any wise connected with him. I never rise to speak before an American audience without something of the feeling that my failure or success will bring blame or benefit to my whole race. But my activities were not now confined entirely to lectures before lyceums. Though slavery was abolished, the wrongs of my people were not ended. Though they were not slaves, they were not yet quite free. No man can be truly free whose liberty is dependent upon the thought, feeling, and action of others, and who has himself no means in his own hands for guarding, protecting, defending, and maintaining that liberty. Yet the Negro, after his emancipation, was precisely in this state of destitution. The law on the side of freedom is of great advantage only where there is power to make that law respected. I know no class of my fellow-men, however just, enlightened, and humane, which can be wisely and safely trusted absolutely with the liberties of any other class. Protestants are excellent people, but it would not be wise for Catholics to depend entirely upon them to look after their rights and interests. Catholics are a pretty good sort of people (though there is a soul-shuddering history behind them), yet no enlightened Protestants would commit their liberty to their care and keeping. And yet the government had left the freedmen in a worse condition than either of these. It felt that it had done enough for him. It had made him free, and henceforth he must make his own way in the world. Yet he had none of the conditions for self-preservation or self-protection. He was free from the individual master, but the slave of society. He had neither money, property, nor friends. He was free from the old plantation, but he had nothing but the dusty road under his feet. He was free from the old quarter that once gave him shelter, but a slave to the rains of summer and to the frosts of winter. He was, in a word, literally turned loose, naked, hungry, and destitute, to the open sky. The first feeling toward him by the old master classes was full of bitterness and wrath. They resented his emancipation as an act

of hostility toward them, and, since they could not punish the emancipator, they felt like punishing the object which that act had emancipated. Hence they drove him off the old plantation, and told him he was no longer wanted there. They not only hated him because he had been freed as a punishment to them, but because they felt that they had been robbed of his labor. An element of greater bitterness still came into their hearts; the freedman had been the friend of the government, and many of his class had borne arms against them during the war. The thought of paying cash for labor that they could formerly extort by the lash did not in any wise improve their disposition to the emancipated slave, or improve his own condition. Now, since poverty has, and can have, no chance against wealth, the landless against the landowner, the ignorant against the intelligent, the freedman was powerless. He had nothing left him with which to fight the battle of life, but a slavery-distorted and diseased body and lame and twisted limbs. I therefore soon found that the Negro had still a cause, and that he needed my voice and pen with others to plead for it. The American Anti-Slavery Society under the lead of Mr. Garrison had disbanded, its newspapers were discontinued, its agents were withdrawn from the field, and all systematic efforts by abolitionists were abandoned. Many of the society, Mr. Phillips and myself amongst the number, differed from Mr. Garrison as to the wisdom of this course. I felt that the work of the society was not done and that it had not fulfilled its mission, which was, not merely to emancipate, but to elevate the enslaved class. But against Mr. Garrison's leadership, and the surprise and joy occasioned by the emancipation, it was impossible to keep the association alive, and the cause of the freedmen was left mainly to individual effort and to hastily-extemporized societies of an ephemeral character; brought together under benevolent impulse, but having no history behind them, and, being new to the work, they were not as effective for good as the old society would have been had it followed up its work and kept its old instrumentalities in operation.

From the first I saw no chance of bettering the condition of the freedman until he should cease to

be merely a freedman and should become a citizen. I insisted that there was no safety for him or for anybody else in America outside the American government; that to guard, protect, and maintain his liberty the freedman should have the ballot; that the liberties of the American people were dependent upon the ballotbox, the jury-box, and the cartridge-box; that without these no class of people could live and flourish in this country; and this was now the word for the hour with me, and the word to which the people of the North willingly listened when I spoke. Hence, regarding as I did the elective franchise as the one great power by which all civil rights are obtained, enjoyed, and maintained under our form of government, and the one without which freedom to any class is delusive if not impossible, I set myself to work with whatever force and energy I possessed to secure this power for the recently-emancipated millions.

The demand for the ballot was such a vast advance upon the former objects proclaimed by the friends of the colored race, that it startled and struck men as preposterous and wholly inadmissible. Anti-slavery men themselves were not united as to the wisdom of such demand. Mr. Garrison himself, though foremost for the abolition of slavery, was not yet quite ready to join this advanced movement. In this respect he was in the rear of Mr. Phillips, who saw not only the justice, but the wisdom and necessity of the measure. To his credit it may be said, that he gave the full strength of his character and eloquence to its adoption. While Mr. Garrison thought it too much to ask, Mr. Phillips thought it too little. While the one thought it might be postponed to the future, the other thought it ought to be done at once. But Mr. Garrison was not a man to lag far in the rear of truth and right, and he soon came to see with the rest of us that the ballot was essential to the freedom of the freedman. A man's head will not long remain wrong, when his heart is right. The applause awarded to Mr. Garrison by the conservatives, for his moderation both in respect of his views on this question, and the disbandment of the American Anti-Slavery Society must have disturbed him. He was at any rate soon found on the right side of the suffrage question.

Phoebe Palmer

1807–1874

Phoebe Palmer was born in New York City and lived there all her life. Her father was Henry Worrall, a well-to-do English merchant who had settled in the United States and who had been converted to Methodism by John Wesley himself. Her mother was Dorothea Wade, also a devout Methodist. Little is known about Phoebe's early education, but references in her writing attest that from a very young age she was familiar with the Bible and with biographies of early Methodists, including John Wesley, his mother Susannah Wesley, and early Methodist preacher Mary Bosanquet. Prepared by both the religious approach and the organizational structure of Methodism as originated by Wesley, Phoebe Worrall Palmer would become an important figure in both religion and rhetoric in nineteenth-century America.

John Wesley was a priest of the Anglican Church. He never intended to separate from this church, and his theology was mostly orthodox. But he felt that the church needed a spiritual awakening and that he himself needed a deeper conviction of his personal relationship with a saving God. After an unusually intense religious experience in May of 1738, Wesley began to articulate a "method" for achieving a heightened spiritual state. The process begins with God's free gift of "grace" to humans, by which God enables people both to recognize their sinful state and to change it. The next step is for people to repent of their sins, a decisive emotional moment. This "conversion" is evidenced by prayer and good works. Though these activities do not earn salvation, after they have been pursued sincerely for a time, people can hope to achieve a conviction of "justification," that is, the feeling that God has indeed forgiven their sins and is ready to accept their entire devotion. With justification comes "assurance" of God's love to the soul that is painfully conscious of its sinfulness. Believers now begin the process of "going on to perfection" or "sanctification," in which they are better and better able to understand God's love and to act according to God's will. "Entire sanctification" describes a state of complete love of God and conformity to God's will in all of one's actions. Achievement of this state, signaled by a second decisive emotional experience, comes to only a few before the moment of death, but people must continually strive for it.

Wesley believed that the Holy Spirit gives people the strength to undertake this process of salvation. The gifts of the Holy Spirit are unconstrained and unpredictable, and awareness of their presence comes from the believer's own perceptions of his or her spiritual state. Thus, although Wesley believed that followers of his spiritual path should remain connected to the Anglican Church in order to receive the sacraments, this path requires minimal clerical mediation. Nevertheless, people can be helped along the path, first by listening to preaching that awakens them to their sinful state and directs them to prayer and good works, and also by participating in prayer groups in which the members help each other chart their progress toward justification and sanctification. Wesley designed an organization that acknowledged the action of the Holy Spirit in raising up lay leaders to assist

people's spiritual progress. He encouraged lay preachers as well as ordained ministers to call people to repentance, and he recognized a range of preaching styles that relied more on personal testimony and less on the academic analysis of texts than would be found among the traditional clergy. He grouped new converts into "classes," in which they could pray, discuss their spiritual development, and encourage each other under the guidance of more experienced laypeople. At the same time, the more experienced received support in their own "bands." Preachers traveled from town to town and might visit classes and bands, but normally these groups were under lay leadership.

The great majority of early converts to Methodism were women, and Wesley accorded them positions of importance in the new movement. Among his many close women counselors was his mother, Susannah Wesley, who had led large prayer meetings in their home when her Anglican priest husband was absent. Wesley permitted women to lead both mixed-sex classes and women's single-sex bands. These activities required some speaking ability, and soon Methodist women felt called to preach to large, mixed crowds as well. There seemed no logical reason why they might not be touched by the Holy Spirit just as men were—no one would want to say that such action was beyond God's power—and if the principal content of Methodist spiritual discourse comprised accounts of one's own spiritual progress, then training in biblical scholarship, theology, and rhetoric, all largely unavailable to women, was not required for such preaching. Wesley condoned this public religious activism by women, although it was controversial.

Mary Bosanquet (who later married Wesley's colleague John Fletcher) was instrumental in persuading Wesley to accept women's preaching. She had fled her upper-middle-class home in 1759 at the age of twenty to escape what she saw as its spiritual emptiness and worldly frivolity, and she soon found a religious home in Methodism. She was an active class and band leader, and also helped to found one of the first Methodist charity schools. Her prayer meetings attracted hundreds of hearers and many converts, but she also drew criticism from male preachers. In 1771 she wrote Wesley a long letter defending her practice. She couched it in the form of a debate between objections to women's preaching and her answers. The first objection is the familiar citation of Paul's prohibition against women speaking in church:

OB:—But the Apostle says, I suffer not a woman to speak in the Church—but learn at home. I answer—was not that spoke in reference to a time of dispute and contention, when many were striving to be heads and leaders, so that his saying, She is not to speak, here seems to me to imply no more than the other, she is not to meddle with Church Government.

OB:—Nay, but it meant literally, not to speak by way of Edification, while in the Church, or company of promiscuous [mixed-sex] worshippers.

AN:—Then why is it said, Let the woman prophesy with her head covered, or can she prophesy without speaking? Or ought she to speak but not to edification?

OB:—She may now and then, if under a peculiar impulse, but never else.

AN:—But how often is she to feel this impulse? Perhaps you will say, two or three times in her life; perhaps *God* will say, two or three times in a week, or a day—and

where shall we find the Rule for this? But the consequences (here I acknowledge is my own objection, that all I do is *lawful*, I have no doubt, but is it expedient? That, my dear Sir, I want your light in) but what are the consequences feared?¹

Bosanquet proceeds to deal with these fearful consequences, the first being that women preachers will draw hearers away from male preachers. If sinners are converted, she says, what matter who converts them? If it is feared that incompetent women will preach, simply censure those who are incompetent, not all women. To meet the objection that public preaching violates a woman's proper "Christian modesty,"² Bosanquet cites biblical examples of women who spoke out, beginning with Mary, who was asked by the risen Christ to deliver the news of his resurrection. She concludes: "I do not believe every woman is called to speak publicly, no more than every man to be a Methodist preacher, yet some have an extraordinary call to it, and woe be to them if they obey it not."³ In his reply to this letter, Wesley seized on her concept of the "extraordinary call" as a way of defending women's preaching while still not completely overthrowing Paul's prohibition (which, he felt, the Quakers did):

I think the strength of the cause rests there, in your having an *Extraordinary Call*. So, I am persuaded, has every one of our Lay-preachers: otherwise I could not countenance his preaching at all. It is plain to me that the whole Work of God termed Methodism is an extraordinary dispensation of His Providence. Therefore I do not wonder if several things occur therein which do not fall under ordinary rules of discipline. St. Paul's ordinary rule was, "I permit not a woman to speak in the congregation." Yet in extraordinary cases he made a few exceptions. . . .⁴

Other Methodist women, including Sarah Crosby and Sarah Mallet, also received Wesley's approval as preachers. They would be important models for American Methodist women such as Palmer.

This support for women's public ministry was not unequivocal, as rhetorician Vicki Tolar Collins has shown. Wesley instructed Crosby to tell the crowds who came to hear her that she would not preach, since Methodism did not permit women preachers, but to say that "I will just nakedly tell you what is in my heart."⁵ Sarah Mallet first preached while convulsed by a seizure. She was unable to remember any of her words upon awakening. Yet she was ultimately the first English Methodist woman to be explicitly recognized as a "preacher" by her male colleagues. These examples suggest that speaking by Methodist women still had to be firmly differentiated from the more learned and rationally conscious preaching of men. Yes, the women could speak—but only if it was obvious that the Holy Spirit was providing their words. After Wesley's death in 1791, the male Methodist leaders

consolidated Methodism as a denomination separate from Anglicanism that was separately empowered to administer the sacraments. They also worked to close off public opportunities for women, and in England they were largely successful, although women continued to preach in some Methodist sects until the mid-nineteenth century. But in the United States, Methodism's emphasis on the unconstrained and unpredictable function of the Holy Spirit to raise up lay leaders continued to provide opportunities for women, and most prominent among them was Phoebe Palmer.

By the mid-nineteenth century, Methodism, which had arrived in the United States in 1784, was the largest religious denomination in the country, with separate black and white congregations and northern and southern branches differentiated by their stands on slavery. By midcentury, too, a veritable tract war over the right of women to preach was in full swing. Black Methodist preacher Jarena Lee was among those who used the genre of spiritual autobiography to describe and defend her call to preach:

Between four and five years after my sanctification, on a certain time, an impressive silence fell upon me, and I stood as if some one was about to speak to me, yet I had no such thought in my heart.—But to my utter surprise there seemed to sound a voice which I thought I distinctly heard, and most certainly understood, which said to me, “Go preach the Gospel!” . . . O how careful ought we to be, lest through our by-laws of church government and discipline, we bring into disrepute even the word of life. For as unseemly as it may appear now-a-days for a woman to preach, it should be remembered that nothing is impossible with God. And why should it be thought impossible, heterodox, or improper for a woman to preach? Seeing the Saviour [sic] died for the woman as well as the man. If the man may preach, because the Saviour died for him, why not the woman? seeing he died for her also. Is he not a whole Saviour, instead of a half one? As those who hold it wrong for a woman to preach, would seem to make it appear.⁶

Catherine Booth, an English Methodist who later helped to found the Salvation Army, published a defense of women's preaching after hearing Palmer speak in her country, and she became a powerful preacher herself. Frances Willard (p. 1114), first president of the Woman's Christian Temperance Union (WCTU), confessed to an early longing to be a preacher, which she suppressed for fear of public censure; but she wrote an impassioned defense of *Woman in the Pulpit* (p. 1124), and arguably used her position as WCTU head to exercise spiritual influence through her public speaking. In 1864 American Methodists failed to pass a national resolution banning the preaching of women (British Methodists had enacted such a ban in 1803). Local conferences were allowed to make their own decisions—providing space for a number of “extraordinary calls”—and by the early twentieth century, according to historians Nancy Hardesty, Lucille Sider-Dayton, and Donald Dayton, female Methodist preachers were relatively common.

Palmer entered this tract war at the height of her influence as a leader of the Holiness Movement, which peaked in 1858, a year in which Palmer traveled all across

⁶Jarena Lee, “Autobiography,” rpt. in William L. Andrews, ed. and intro., *Sisters of the Spirit* (Bloomington: Indiana University Press, 1986), pp. 35, 36.

the United States and Canada speaking at large prayer meetings. In 1859, she published *The Promise of the Father* (excerpted here), over four hundred pages of argument in defense of women's public ministry (Palmer also summarized her argument in a much shorter pamphlet, the 1859 *Tongue of Fire on the Daughters of the Lord*, reprinted here). The "promise" of the title is expressed in the words of the prophet Joel, 2:28, "And thy sons and thy daughters shall prophesy," a prophecy applied specifically to Christians by Peter (Acts 2:17–18). A look at Palmer's biography will suggest how she achieved her position of prominence on this issue.

In 1827 she married Walter Palmer, a physician who shared her Methodist faith. They were apparently a happily united couple, although their early married life was marred by the loss of three babies between the years 1828 and 1833; three later children survived. Palmer wrote in her journal: "After my loved ones were snatched away, I saw that I had concentrated my time and attentions far too exclusively, to the neglect of the religious activities demanded."⁷ Historian Anne Loveland has argued that Palmer used such reasoning to justify her increasing departures from the nineteenth-century ideology that confined women's activities to the strictly domestic. Palmer's young family shared a house in New York City with her sister Sarah Lankford and Lankford's husband, and in February of 1836 the two women began to hold regular prayer meetings there. At first the gatherings were for women only, but their fame was such that by 1839 men, too, were attending. These "Tuesday Meetings for the Promotion of Holiness" continued for over sixty years and became a model for Methodist spiritual practice worldwide. At first Sarah Lankford led the meetings, which were characterized by "earnest prayer, study of scripture, [and] spontaneous testimony,"⁸ but Palmer soon took over, especially after she achieved entire sanctification in July of 1837. Her sister moved away from New York in 1840 and Palmer continued leading alone.

By 1839 Palmer had expanded her ministry in several ways. She began to speak frequently at religious revival meetings around the country. Although her husband would later join her in these efforts, initially he stayed home with their children. At the Tuesday meetings, Palmer had functioned primarily as a discussion leader, speaking at no greater length than any other participant. But at revival meetings, she addressed the congregation much as a minister would do, mounting the pulpit, expounding a biblical text, exhorting her hearers to repent or to seek further holiness, and praying with those who came forward for salvation. Contemporary descriptions suggest that she was not an emotional or histrionic speaker:

In addressing an audience her position is erect. . . . She is calm and free from vociferation, and is rarely vehement. Her style is clear, concise, and colloquial. In the structure of her sentences there is nothing elaborate or involved. . . . In her communications there is more of logic than of rhetoric. . . . Her spirit is intensely earnest. . . .⁹

⁹Quoted in Harold E. Raser, *Phoebe Palmer: Her Life and Thought* (Lewiston, Maine: Edwin Meller Press, 1987), pp. 117–18.

In addition, Palmer and Sarah Lankford encouraged publication of the first journal directed toward the American revivalist movement, the *Guide to Christian Perfection*, later the *Guide to Holiness*, edited by regular Tuesday Meeting participant Timothy Merritt. Palmer wrote frequently for this journal. She and her husband assumed the editorship in 1864, and its already large circulation then boomed; by 1870 it had become one of the most popular religious magazines in the country. Moreover, Palmer took the lead in encouraging social action by Methodists. In 1849, for example, she helped to found the first urban settlement house for the poor, in the Five Points, Bowery, New York City, notable for ministering to the physical as well as the spiritual needs of the neighborhood. She encouraged missionary work among American Jews, and she is credited with founding American Methodism's vigorous program of foreign missions. She abandoned a plan to go to China herself but raised funds to put other missionaries in foreign fields. Oddly, though Palmer deplored slavery, she never actively supported abolition, perhaps because she feared its schismatic effect on the Methodist Church. She was also influential in education: Attendees at the Tuesday Meetings and correspondents included the founders, presidents, and trustees of such institutions as Northwestern University, Boston University, Oberlin, Cornell, and Syracuse. Palmer also collaborated with Catherine Beecher to send young women to the American frontiers to teach school and Sunday school. Prominent reform leaders who knew Palmer as an evangelist included Susan B. Anthony and Frances Willard (p. 1114), who experienced religious conversion at one of her Tuesday Meetings. Palmer also began what would be a prolific career as a writer on religious matters, publishing *The Way of Holiness*, an account of her own progress to entire sanctification, in 1843; it became a best-seller.

Palmer became well known for her speaking in the 1840s and 1850s. In 1853 she undertook the first of her evangelizing trips to Canada. She became a leader of the "Holiness Movement," a religious revival movement that soon spread beyond its Methodist origins, and she was one of the leading Methodist theologians of the nineteenth century, according to Methodist theologian Thomas Oden. The Holiness Movement was the central current in the revivalism that dominated American Protestantism from Jonathan Edwards's Great Awakening in the early eighteenth century until the end of the nineteenth century. It had been launched by the preaching of Charles Grandison Finney in the 1820s. Finney was an ordained Presbyterian minister, but, much like the founder of Methodism, he found mainstream Protestantism lacking in spiritual power for the individual believer.

Finney's renewal movement, which soon connected with American Methodism, was especially important to women. From the beginning, he encouraged women to speak in mixed-sex public meetings, a scandalous position at that time (for more on prohibitions against women's public speaking, see the headnote on Sarah Grimké, p. 1045). He renewed the religious conviction of many prominent feminists, including Theodore Weld, Elizabeth Cady Stanton, and Paulina Wright Davis. Finney went on to teach theology at Oberlin College, the country's first coeducational institution, and among his early students were feminist leaders Lucy Stone and Antoinette Brown Blackwell, the latter being one of the first American women to be ordained as a Christian minister. Methodism's association with women's rights is

attested by the fact that the famous 1848 Seneca Falls women's rights convention took place in a Methodist church building.

Historians Hardesty, Sider-Dayton, and Dayton argue that the Holiness Movement was congenial to women for several reasons. For one thing, it offered a "theology centered in experience,"¹⁰ obviating the need for extensive education and allowing each individual to work actively for his or her own salvation. In contributing to Holiness theology, Palmer encouraged Methodists to believe that their earnest efforts at prayer and Bible study could lead them to entire sanctification much more quickly than John Wesley had anticipated, and the emphasis on personal experience expedited this process. Furthermore, the Holiness Movement required that people testify before the congregation about their religious experiences, and Palmer used this requirement to encourage women to overcome their fear of violating conventional prohibitions against women's public speaking. "HOLINESS IS POWER," wrote Palmer in this context.¹¹ The Bible, not the writings of human theologians, was the central Holiness text, and Palmer encouraged women to find their own interpretations of Scripture. The Holiness Movement stressed the action of the Holy Spirit in inspiring religious seeking, and Palmer emphasized that the Holy Spirit could touch women just as powerfully as men. It was necessary to experiment in religious practices—such as by allowing women to preach—to give the power of the Holy Spirit free play. Palmer also encouraged more spontaneous and heartfelt prayer as part of the worship service.

At the same time, Palmer deplored "emotive, subjective pietism"¹² and emphasized rationality in guiding the seeker to conviction. She taught that the achievement of entire sanctification relies much more on the believer's rational apprehension of scriptural promises and the resolve to act on them than on continual anxious monitoring of fluctuating emotional states. Hardesty, Sider-Dayton, and Dayton maintain that Palmer's doctrine that entire sanctification was within the immediate grasp of ordinary Methodists was an inherently revolutionary view that encouraged dissatisfaction with the status quo not only in one's personal spiritual life and church practices but also in one's social interactions. This dissatisfaction led to participation in reform movements, for example, on behalf of the poor and for women's rights.

Palmer continued and expanded the Methodist tradition of lay leadership and enhanced opportunities for women. Interestingly, she never pushed for the formal ordination of women, perhaps because ordination was not needed to provide the kind of authority on which she and other lay speakers depended—the inwardly felt direction of the Holy Spirit. At the same time that she advocated change, Palmer remained faithful to the Methodist Episcopal Church and deprecated break-away radical sects. Nevertheless, according to Oden, she is a pivotal figure not only in the

development of American Methodism but also in the formation of the Pentecostal, Holiness, and Charismatic churches that emerged from the Holiness Movement. These new denominations offered many leadership roles to women, and the ordination of women became commonplace in them well before it was accepted in other American Protestant denominations.

In 1859, already well known as a powerful preacher, Palmer published *The Promise of the Father*, a book-length defense of women's public ministry, and *Tongue of Fire on the Daughters of the Lord*, a pamphlet-length summary of the argument. Because of her fame and her leadership position in the most powerful Christian denomination in the United States at the time, Palmer's opinions had wide circulation and influence. In that same year, she departed with her husband on a four-year missionary trip to Britain, where they were very well received. Upon their return in 1864, they assumed the editorship of the *Guide to Holiness*, as noted above, and also continued a hectic schedule of preaching at religious meetings in the United States and Canada, until Palmer died in 1874. After her death, her widowed sister Sarah married Walter Palmer, and they continued to conduct the Tuesday Meetings and to edit the *Guide to Holiness*.

SUMMARY OF *THE PROMISE OF THE FATHER*

Chapter 1 (reprinted here) opens by reassuring readers that Palmer does not intend to overturn all nineteenth-century gender conventions. Nevertheless, drawing on Mary Bosanquet Fletcher's formulation of the "extraordinary call," Palmer justifies some kinds of public speaking by religious women. She also cites biblical precedents. She says that Paul's prohibition against women's speaking applies only to the particular circumstances of his day. In Chapter 2, Palmer indicts the Christian Church for neglecting God's gifts to women and contrasts this attitude with the praise given in the New Testament and by the early Church Fathers to women who followed Jesus and served the early Church. Chapter 3 contends that women were fitted for leadership in the early Church by their participation in the Pentecost experience, fulfilling Joel's prophecy that both men and women would be enabled to speak with power. Palmer contrasts the early Church's recognition of women's gifts with the cold reception of a contemporary woman who wished to testify for Christ.

Chapter 4 explores the question of what prophecy is, since Joel's promise was that both men and women would prophesy. Palmer contends that in primitive Christianity prophecy was hard to distinguish from preaching because both delivered divinely inspired messages. As denominations age and grow away from their early ardent connection to the Holy Spirit, says Palmer, such inspired speaking, especially by women, decreases or is positively discouraged, to be replaced by showier but spiritually empty pulpit oratory. Here she adds long quotes from male authorities supporting the claim that the early Church was distinguished by women's public ministry and reinterpreting Paul to allow it.

Chapter 5 shows that modern times have witnessed women's prophetic gifts as well, as is evidenced in the careers of Mary Bosanquet Fletcher, Susannah Wesley, and other British Methodists. It notes John Wesley's support for these women and gives examples of Quaker women speakers. Chapter 6 continues with the example

of Mrs. Mary Taft, a Methodist preacher of the early nineteenth century, and cites approval of her career by contemporary male ministers. Chapter 7 begins by citing male ministerial authority on women's moral and intellectual equality with men and goes on to discuss at length the career of Mary Bosanquet Fletcher.

Palmer begins Chapter 8 with an acknowledgment that her topic is unpopular, but says she is compelled to speak the truth anyway. She illustrates the strength of such compulsion with Wesley's account of the career of Sarah Mallett—who became a preacher in spite of herself—along with quotes from Mallett's journal. In Chapter 9, Palmer admonishes male ministers not to betray their responsibility to speak the truth by opposing women's preaching. She cites examples of many eighteenth- and early-nineteenth-century women who, though timid, persevered against such opposition and won many souls to Christ. Chapter 10 tells the story of a woman who stepped forward to lead her church when it was without a minister and was fast declining. A neighboring minister led a fight against her, driving her out of the community. He has much to answer for, says Palmer. When women are silenced, the spiritual quality of the congregation always declines, she contends in Chapter 11; such silencing of women resembles their cloistering by Roman Catholicism (Palmer assumes her readers will want to reject anything "Popish"). Yet even men coarsened by business are allowed to speak.

How do we know that women's current compulsion to preach is of divine origin? Palmer begins Chapter 12 with this question. One sign is the intense suffering of women speakers, who are fearful of attracting censure yet even more fearful of disobeying God's command. Of course, no easy way ever led to salvation. Such women offer themselves as "whole burnt offerings" upon God's altar when they obtain the courage to speak. Palmer asks her readers to consider whether they have surrendered as entirely to God's will as these women have done. Another sign of divine origin is the large number of converts these women—and men—bring to Christ. Palmer gives many examples of the Holy Spirit's wonderful power currently manifested in both women and men, and in many religious denominations. She discusses at length one example of such power: the Tuesday Meeting she and her sister originated. Palmer then describes her own ministry, the theology that underlies it, and its success as attested in her own records and in letters from friends, some of them male ministers.

Chapter 13 begins with another story of a woman stepping forward to speak in her home church and being denied by the minister and other male authorities. She moves to another church where she is allowed to preach, and this church soon experiences a remarkable "outpouring of the [Holy] Spirit." Palmer says, think how absurd it would be to gather your family together and yet forbid the female members of it to speak. Women are never silenced at a worldly social gathering. Yet, when godly women wish to speak in a religious gathering, they are not allowed to. Fortunately, some ministers do regard women's call to preach as equal to men's. Palmer cites these authorities. Chapter 14 continues the theme by describing a woman friend of Palmer's who preached powerfully. Do not reject the truth of women's call because it is unpopular, Palmer exhorts. Women are "crucified" by enforced silence.

Chapter 15 asks the question, What is preaching? In the Bible, says Palmer, it is simply telling the good news of Christ's message. This is what Paul does, what any

Christian may do, and what women must also do. It is not an oration such as we think of preaching today. Pastors who understand the message will not silence women preachers. Palmer begins Chapter 16 with the image of the church as a “potter’s field” where innumerable women’s gifts lie buried, when they could be serving the Church. She gives a man’s testimony on how he and his wife discovered that she needed to speak in church and he needed to allow her to do so. Then Palmer describes a cultivated, fascinating woman, much sought out by worldly company for her conversation, who becomes religious and brings her eloquence to the church—and who is silenced. Christian men who permit such waste must answer to Jesus!

In Chapter 17, Palmer directs her Holiness theology toward the topic of how to acquire the gifts of the Holy Spirit. You must demand these gifts now, she says—it is a matter of your will, and your willingness to make any sacrifice. Then the power will come, as she illustrates with some brief examples. In Chapter 18, she tells the story of a husband and wife who opposed women’s preaching until the woman was required by the Holy Spirit to open her mouth. Chapters 19, 20, and 21 conclude the book by discussing two women and a male minister who became convincing preachers once they followed Palmer’s path to entire sanctification.

Selected Bibliography

The Promise of the Father (1859) is available in a Garland reprint (1985), the source of our excerpt. Thomas Oden reprints the entire text of *Tongue of Fire on the Daughters of the Lord* (1859), our source for this work, along with a wide selection of Palmer’s other writings, including poems, diaries and journals, religious tracts, and more, in *Phoebe Palmer: Selected Writings* (1988). Oden’s introduction is especially helpful for understanding Palmer’s place in Protestant theology. The complete text of Mary Bosanquet’s letter to John Wesley regarding women’s preaching (1771) can be found in *A History of the Methodist Church in Great Britain*, volume IV (ed. Rupert Davies, A. Raymond George, and Gordon Rupp, 1988). Jarena Lee’s autobiography (1836) is reprinted in *Sisters of the Spirit* (ed. William L. Andrews, 1986).

On the origins of Methodism in England and women’s roles in the early days of the movement, see Earl K. Brown, *Women of Mr. Wesley’s Methodism* (1983); and Paul Chilcote, *John Wesley and the Women Preachers of Early Methodism* (1991). Vicki Tolar Collins provides a helpful overview that focuses on British Methodist women’s rhetoric in “Women’s Voices and Women’s Silences in the Tradition of Early Methodism” (in *Listening to Their Voices*, ed. Molly Meijer Wertheimer, 1997).

A good survey of evangelical religion in antebellum America and its influence on the women’s rights and abolition movements is Nancy Hardesty’s *Women Called to Witness: Evangelical Feminism in the Nineteenth Century* (1984), which frequently refers not only to Palmer but also to Sarah Grimké (p. 1045) and Frances Willard (p. 1114). Focused specifically on the battle over women’s public speaking is Barbara Brown Zikmund’s “The Struggle for the Right to Preach” (in *Women and Religion in America, Volume I: The Nineteenth Century: A Documentary History*, ed. Rosemary Reuther and Rosemary Skinner Keller, 1981); Zikmund reprints excerpts from a number of arguments both pro and con. Melvin E. Dieter’s history of the Holiness Movement, *The Holiness Revival of the Nineteenth Century* (1980; second ed., revised and expanded, 1996), focuses on Phoebe Palmer’s central contribution. The Holiness Movement as a training ground for Palmer and other women leaders and speak-

ers is analyzed by Nancy Hardesty, Lucille Sider-Dayton, and Donald W. Dayton in “Women in the Holiness Movement: Feminism in the Evangelical Tradition” (in *Women of Spirit: Female Leadership in the Jewish and Christian Traditions*, ed. Rosemary Reuther and Eleanor McLaughlin, 1979).

Harold E. Raser’s *Phoebe Palmer: Her Life and Thought* (1987) provides useful details on Palmer’s public speaking, as well as a sketch of her life and religious views. Charles Edward White’s biography of Palmer covers the major aspects of her career, as can be seen from its title: *The Beauty of Holiness: Phoebe Palmer as Theologian, Revivalist, Feminist, and Humanitarian* (1986). On Palmer’s adaptation of nineteenth-century ideologies of female domesticity to permit her public activism, see Anne Loveland, “Domesticity and Religion in the Antebellum Period: The Career of Phoebe Palmer” (*The Historian* 39 [1977]: 455–71). Lucy Lind Hogan discusses some of Palmer’s rhetorical strategies in “Negotiating Personhood, Womanhood, and Spiritual Equality: Phoebe Palmer’s Defense of the Preaching of Women” (*American Transcendental Quarterly* 14 [September 2000]: 211–26).

The Promise of the Father

Chapter I

*Stand up for Jesus! All who lead his host,
Crowned with the splendors of the Holy Ghost!
Shrink from no foe, to no temptations yield,
Urge on the triumphs of this glorious field—
Stand up for Jesus.*

Do not be startled, dear reader. We do not intend to discuss the question of “Women’s Rights” or of “Women’s Preaching,” technically so called. We leave this for those whose ability and tastes may better fit them for discussions of this sort. We believe woman has her legitimate sphere of action, which differs in most cases materially from that of man; and in this legitimate sphere she is both happy and useful. Yet we do not doubt that some reforms contemplated in recent movements may, in various respects, be decidedly advantageous. But we have never conceived that it would be subservient to the happiness, usefulness, or true dignity of woman, were she permitted to occupy a prominent part in legislative halls, or take a leading position in the orderings of church conventions. Ordinarily, these are not the circumstances where woman can best serve her generation according to the will of God. Yet facts show that it is in the order of God

that woman may occasionally be brought out of the ordinary sphere of action, and occupy in either church or state positions of high responsibility; and if, in the orderings of providence, it so occur, the God of providence will enable her to meet the emergency with becoming dignity, wisdom, and womanly grace.

Examples of modern and ancient days might be furnished of women who have been called to fill positions involving large responsibilities, both civil and ecclesiastical. It was thus that Deborah, a prophetess, the wife of Lapidoth, was called to judge Israel—not because there were no men in Israel who might fill the position, but because God, in his wisdom, had so ordained; and it was also by the direction of Providence she was compelled to take the lead in the orderings of the battle—not because there were not men in Israel to do this, for she sent and called Barak, who might, as captain of the host, have led forth the people to conquest, but his faith and courage were insufficient to lead out Israel. Her disinterested, womanly heart would have given Barak the honor of the conquest, but he was faint-hearted; and the holy zeal of this mother in Israel nerved her for the conflict, and, with a faith and courage outbraving every difficulty, she led forth the armies of God to glorious conquest. Yet who

talked of Deborah as overstepping the bounds of womanly propriety, in either judging Israel, or in leading forth the armies of the living God to victory? Whisperers might have said that, in using this gift of prophecy with which God had endued her, and in leading out Israel to conquest, she stepped beyond the sphere of woman, and weakened her influence; and thus, perhaps, the Merozites were hindered from coming up to the help of the Lord against the mighty, and brought down the curse of the God of battles on themselves. But whether there were such whisperers is not recorded; and if so, in fact, their names are written in the dust, while the name of this ancient prophetess, who led Israel forth to victory, stands recorded in the Book of eternal remembrance.

And when Josiah the King of Israel and his officers of state saw, from the reading of a book found in the house of the Lord, that great wrath was impending, they did not go to Huldah the prophetess for advice, because there was not a male prophet who might have been consulted; for it was in the days of Jeremiah the prophet, that this official deputation went from the king to Huldah. And when, in the order of God, woman has from time to time been called to sustain positions of momentous trust, involving the destinies of her country, facts show that she has not been wanting in ability to meet the demands of her station in such a manner, as to command the respect of her constituents or the homage of her subjects. Look at Her Most Gracious Majesty Queen Victoria, the reigning sovereign of the most mighty, intelligent people of this or any other age. Who questions her ability for her station, and talks of her as having transcended the bounds set by public opinion of the sphere of woman?

And is it in religion alone that woman is prone to overstep the bounds of propriety, when the impellings of her Heaven-baptized soul would lead her to come out from the cloister, and take positions of usefulness for God? Whence has the idea obtained that she may not even open her lips for God in the assembly of the pious, without being looked upon repulsively, as though she were unwomanly in her aims and predilections?

And where is the beloved female disciple of any denomination, truly baptized of the Holy Ghost, but feels the Spirit's urgings to open her

mouth for God? We do not now speak of that cold, worldly conformed professor, who has never, in obedience to the command of the Saviour, tarried at Jerusalem, as did Mary and the other women, on the day of Pentecost. We speak of that consistently pious, earnest, Christian woman, whose every-day life is an ever-speaking testimony of an indwelling Saviour, and on whose head the tongue of fire has descended. And it is of the power of an ever-present Jesus that the Spirit would have her testify; but the seal of silence has been placed on her lips. And who has placed the seal of silence on those Heaven-touched lips? Who would restrain the lips of those whom God has endued with the gift of utterance, when those lips would fain abundantly utter the memory of God's great goodness? Not worldly opinions or usages, for these reprove. Think of a refined social gathering of worldlings, to which invitations have been extended to ladies with the expectation that the seal of silence would be imposed! No, it is not the world that forbids; for due consideration will constrain us to acknowledge that in this regard "the children of this world are wiser in their generation than the children of light." Who is it then that forbids that woman should open her mouth is either prayer or speaking in the assemblies of the saints?

And here we come to the point, and are forced to an answer to which in the name of the Head of the church we claim a rejoinder. Our answer is this: The Christian churches of the present day, with but few exceptions, have imposed silence on Christian woman, so that her voice may but seldom be heard in Christian assemblies. And why do the churches impose it? The answer comes from a thousand lips, and from every point. The Head of the church forbids it, and the churches only join in the authoritative prohibition, "Let your women keep silence in the churches." And here we come fairly at the question. If the Head of the church forbids it, this settles the question beyond all controversy.

But if Paul's prohibition, "Let your women keep silence in the churches," is to be carried out to the letter in relation to the prophesying of women,—that is, her speaking "to edification, exhortation, and comfort,"—regardless of explanatory connections and contradictory passages,

why should it not be carried out to the letter in other respects? If the apostle intended to enjoin silence in an absolute sense, then our Episcopalian friends trespass against this prohibition at every church service, in calling out the responses of women in company with the men in their beautiful Church Liturgy, and when they repeat our Lord's Prayer in concert with their brethren. And thus also do they trespass against this prohibition every time they break silence and unite in holy song in the church of God of any or every denomination. And in fact, we doubt not but it were less displeasing to the Head of the church that his female disciples were forbidden to open their lips in singing, or in church responses, than that they should be forbidden to open their lips in fulfilment of the "Promise of the Father," when the spirit of prophecy has been poured out upon them, moving them to well nigh irrepressible utterances of God's great goodness.

Under what circumstances was this prohibition given? Was it not by way of reproofing some unseemly practices which had been introduced into the Corinthian church, and which, in fact, seem to have been peculiar to that church, for it is in connection with this and kindred disorders which had been introduced among the Corinthian believers, in connection with the exercise of the gift of prophecy, that Paul says, "We have no such custom, *neither the churches of God;*" that is, the other churches of God over which the Holy Ghost had made them overseers. Surely it is evident that the irregularities here complained of were peculiar to the church of Corinth, and in fact, we may presume, were not even applicable to other Christian churches of Paul's day, much less Christian churches of the present day, as no such disorders exist. The irregularity complained of was not the prophesying of women, for this the apostle admits, and directs how the women shall appear when engaged in the duty of praying or prophesying. But the prohibition was evidently in view of restraining women, from taking part in those disorderly debates, which were not unusual in the religious worship of those days. In the Jewish synagogues it was a matter of ordinary occurrence for persons to interrupt the speaker by introducing questionings, which frequently resulted in angry altercations. This prac-

tice had now, we have reason to infer, been introduced into the Corinthian Christian assemblies, and women—doubtless devoid of spirituality—were disposed to take part in these debates. This unseemly practice the apostle reproofs, and says, "Let your women keep silence," &c. Any one who will carefully look at this subject, with its connections, will observe that it was in reference to this reprehensible practice, which had obtained in the Corinthian church, that Paul enjoins silence, and not in reference to the exercise of the gift of prophecy, which, in connection with this subject, he so plainly admits. Otherwise the apostle's teachings were obviously contradictory. But a careful review of the subject in connection with the well-known usages of that day, will relieve it of all difficulty, and show that Paul had these questionings in view and not the ordinary speaking of women in prophesying; for says he, "If they will learn any thing, let them ask their husbands at home."

But Paul also says, "I suffer not a woman to teach, nor usurp authority over the man." It will be found by an examination of this text with its connections, that the sort of teaching here alluded to, stands in necessary connection with usurping authority. As though the apostle had said, The gospel does not alter the relation of woman in view of priority. For Adam was first formed, then Eve. And though the condition of woman is improved, and her privileges enlarged, yet she is not raised to a position of superiority, where she may usurp authority, and teach dictatorially, for the law still remains as at the beginning. It is an unalterable law of nature. Adam was first formed, then Eve, and all the daughters of Adam must acknowledge man first in creation, long as time endures.

But the sort of teaching to which the apostle here alludes, in connection with usurping authority, cannot be of the sort to which he refers, 1 Cor. xiv. Here Paul admits the prophesying of women in public assemblies, and of course could have had no intention, in his Epistle to Timothy, to forbid that sort of teaching, which stood in connection with the exercise of the gift of prophecy, which arose from the immediate impulses of the Holy Ghost, and which is rendered abundantly plain by another passage in his Epistle to the

Corinthians, in which he notices the public prophesying of females, and gives particular directions respecting their conduct and appearance, while engaged in that sacred duty. "Every man *praying* or *prophesying*, having his head covered, dishonoreth his head. But every woman that prayeth or prophesieth with her head uncovered, dishonoreth her head." That this passage, as well as the fourteenth chapter of the same Epistle, particularly relates to the conduct of the Corinthian Christians in their assemblies for worship, and can have no special bearing on the present day, is obvious, and is allowed by eminent commentators, and is indeed evident from the whole tenor of the advice which is here given. The apostle therefore recognizes the public prophesying of females.

With respect to the prophesying to which the apostle here alludes, as exercised by both men and women in the churches of the saints, he defines its nature. (See 1 Cor. xiv. 3.) The reader will see that it was directed to the "edification, exhortation, and comfort of believers," and the result anticipated was the conviction of unbelievers and unlearned persons. "Such," says the author of an excellent work, "were the public services of women which the apostle allowed, and such was the ministry of females predicted by the prophet Joel, and described as a *leading* feature under the gospel dispensation. Women who speak in assemblies for worship under the influence of the Holy Spirit assume thereby no *personal authority* over others. They are instruments through which divine instruction is communicated to the people."

It may be conceived by some that the devoted Christian female, who is willing thus to be led by the Spirit into paths of usefulness, may lose, in some degree, those lovely and becoming traits of character, which we admire in the female sex. As far as our observations have aided us, the effect has been diametrically opposite. Religion does not despoil woman of her refined sensibilities, but only turns them into a finer mould, and brings out to the charmed beholder every thing that is pure, lovely, and of good report. Says the late Mr. Gurney, a minister in the Society of Friends, "We well know that there are no women among us more generally distinguished for modesty,

gentleness, order, and a right submission to their brethren, than those who have been called by their divine Master into the exercise of the Christian ministry." And who finds fault with the ministry of woman as practised among the society of Friends? We imagine few are so fastidious.

But says one, Is the proclamation of the gospel, as dispensed by women among the people called Friends, of such manifest utility as to warrant the belief of a divine call to this work? Says a theological writer, in treating on this subject, "There is, however, in some sections of the Christian church, a recognition of the full and free agency and operation of the Holy Spirit which divideth to every man severally as he will, and a thankful acceptance of that great gospel truth, 'There is neither Jew nor Greek, there is neither male nor female,' but 'they are all one in Christ Jesus.' Among such the preaching of women has been acknowledged to be a special gift from Christ, who only has a right to appoint, and who alone can qualify his ministers effectually to publish the glad tidings through him. And so effectually have these glad tidings been proclaimed by females that many have been through their instrumentality converted from the error of their way, and brought from darkness to light; many hungry and thirsty souls have been refreshed and strengthened, and many living members of the church edified together. Can we believe that the Holy Spirit is *now* more limited in its manifestations and in its requirements than when by his inspirations Miriam prophesied and sang the praise of Jehovah?"

Says the devoted philanthropist, Miss Bosanquet, afterwards the wife of the distinguished Vicar of Madely, Rev. J. Fletcher, who felt herself called to proclaim the power of saving grace to others, "Some think it inconsistent with that modesty the Christian religion requires in women professing godliness. Now, I do not apprehend Mary could in the least be accused of immodesty when she carried the joyful news of her Lord's resurrection, and in that sense taught the teachers of mankind. Neither was the woman of Samaria to be accused of immodesty when she invited the whole city to come to Christ. Neither do I think the woman mentioned in 2 Sam. xx. could be said to sin against modesty, though she called to

the general of the opposing army to converse with her, and then went to all the people to give them her advice, and by it the city was saved. Neither do I suppose Deborah did wrong in publicly declaring the message of the Lord, and afterwards accompanying Barak to war because his hands hung down at going without her. But says the objector, All these were extraordinary calls; sure you will not say yours is an extraordinary call? If I did not believe so, I would not act in an extraordinary manner. I praise God, I feel him near, and prove his faithfulness every day."

That Christ was successfully preached to the Samaritans through the instrumentality of a woman is manifest, John iv. 39. "Many of the Samaritans believed on him for the saying of the woman." This woman was the first apostle for Christ in Samaria. She went and told her fellow-citizens that the Messiah was come, and gave for proof that he had told her the most secret things she had ever done.

But Providence, under ordinary circumstances, assigns woman a sphere of action both suited to her predilections and her physical and mental structure. Indeed, can we conceive of a work more important than that which in the general orderings of Providence falls to woman? "The future destiny of the child is always the work of the mother," said the sagacious Napoleon. The training of the human mind irrespective of sex, as it comes forth fresh from the hand of the Dispenser of life, is, for the most part, committed to woman. What a high and holy trust! It were difficult to give a just presentation of the magnitude of this work. Immortal minds are to be trained for immortality and eternal life; and all the minutiae of future life, whether for

good or evil, are to show the result of these early trainings. And to all eternity, as millions on millions of ages pass away, the result of those early motherly trainings will influence largely the destiny of that deathless spirit. Not only will the women of this age have to do with the women of the future age, but, as the men of the future age will have had their early training mostly from the women of the present age, how greatly have women to do with the destinies of the moral and religious world! Wonderful indeed is the work to which woman has been called in the social relation. Says Mrs. Hale, "But with the privileges we must take the position of women; leave the work of the world and its reward, the government thereof, to men; our task is to fit them for their office, and inspire them to perform it in righteousness."

It is not our aim in this work to suggest, in behalf of woman, a change in the social or domestic relation. We are not disposed to feel that she is burdened with wrong in this direction. But we feel that there is a wrong, a serious wrong, affectingly cruel in its influences, which has long been depressing the hearts of the most devotedly pious women. And this wrong is inflicted by pious men, many of whom, we presume, imagine that they are doing God service in putting a seal upon lips which God has commanded to speak.

It is not our intention to chide those who have thus kept the Christian female in bondage, as we believe in ignorance they have done it. But we feel that the time has now come when ignorance will involve guilt; and the Head of the church imperatively demands a consideration of the question proposed in the following pages.

Tongue of Fire on the Daughters of the Lord

I. FEMALE PROPHESYING; OR, DAUGHTERS OF THE LORD ALMIGHTY

When the founder of our holy Christianity was about leaving his disciples to ascend to his Father, he commanded them to tarry at Jerusalem until endued with power from on high.¹ And of whom was this company of disciples composed? Please turn to the first chapter of the Acts of the Apostles. We see the number assembled in that upper room was about one hundred and twenty.² Here were Peter, James, John, Andrew, Philip, Thomas, Bartholomew, Matthew, James the son of Alpheus, and Simon Zelotes, and Judas the brother of James.³ "These all continued with one accord in prayer and supplication, with the women, and Mary, the mother of Jesus, and with his brethren."⁴

Let us observe that here were both male and female disciples, continuing with one accord in prayer and supplication, in obedience to the command of their risen Lord: they are all here waiting for the promise of the Father.⁵

And did all these waiting disciples, who thus with one accord continued in prayer, receive the grace for which they supplicated? It was the gift of the Holy Ghost that had been promised. And was this promise of the Father as truly made to the daughters of the Lord Almighty as to his sons?—See Joel ii. 28,29. "And it shall come to pass afterward, that I will pour out my Spirit upon all flesh; and your sons and your daughters shall prophesy, your old men shall dream dreams, your young men shall see visions. And also upon the servants and upon the handmaids in those days will I pour out my Spirit."⁶ When the

Spirit was poured out in answer to the united prayers of God's sons and daughters, did the tongue of fire descend alike upon the women as upon the men? How emphatic is the answer to this question.

"And there appeared unto them cloven tongues, like as of fire, and it sat upon *each of them*."⁷ Was the effect similar upon God's daughters as upon his sons? Mark it: "And they were all filled with the Holy Ghost, and began to speak as the Spirit gave utterance."⁸ Doubtless it was a well-nigh impelling power which was thus poured out upon these sons and daughters of the Lord Almighty, moving their lips to most earnest, persuasive, convincing utterances. Not alone did Peter proclaim a crucified, risen Saviour, but each one, as the Spirit gave utterance, assisted in spreading the good news; and the result of these united ministrations of the Spirit, through human agency, was that three thousand were in one day pricked to the heart. Unquestionably, the whole of this newly baptized company of one hundred and twenty disciples, male and female, hastened in every direction, under the mighty constrainings of that perfect love that casteth out fear;⁹ and great was the company of them that believed.¹⁰

And now, in the name of the Head of the Church, let us ask, Was it designed that these demonstrations of power should cease with the day of Pentecost? If the Spirit of prophecy fell upon God's daughters alike as upon his sons in that day, and they spake in the midst of that assembled multitude as the Spirit gave utterance, on what authority do the angels of the churches¹¹ restrain the use of that gift now? Who can tell

how wonderful the achievements of the cross might have been, if this gift of prophecy in woman had continued in use as in apostolic days? Who can tell but long since the gospel might have been preached to every creature?¹²

Evidently this was a specialty of the last days, as set forth by the prophecy of Joel. Under the old dispensation,¹³ though there was a Miriam,¹⁴ a Deborah,¹⁵ a Huldah,¹⁶ and an Anna,¹⁷ who were prophetesses, the special outpouring of the Spirit upon God's daughters, as upon his sons, seems to have been reserved as a characteristic of the last days. "This," says Peter, as the wondering multitude beheld the extraordinary endowment of the Spirit falling alike on all the disciples,—“this is that which was spoken by the prophet Joel: ‘And also upon my servants and upon my handmaidens will I pour out my Spirit.’”¹⁸

And this gift of prophecy, bestowed upon all, was continued and recognized in all the early ages of Christianity. The ministry of the word was not confined to the apostles. When, by the cruel persecutions of Saul, all the infant church were driven away from Jerusalem, except the apostles, these scattered men and women of the laity “went everywhere preaching the word;¹⁹ “that is, proclaiming a crucified, risen Saviour.”²⁰ And the effect was that the enemies of the cross, by scattering these men and women who had been saved by its virtues, were made subservient to the yet more extensive proclamation of saving grace.

Impelled by the indwelling power within, these Spirit-baptized men and women, driven by the fury of the enemy in cruel haste from place to place, made all their scatterings the occasion of preaching the gospel everywhere;²¹ and believers

were everywhere multiplied; and daily were there added to the church such as should be saved.²²

Justin Martyr, who lived till about A.D. 150, says, in his dialogue with Trypho the Jew, “that both *women* and *men* were seen among them, who had the gifts of the Spirit of God,²³ according as Joel the prophet had foretold, by which he endeavored to convince the Jew that the *latter days* were come; for by that expression Mannasah Ben Israel tells us all their wise men understood the times of Messiah.”²⁴

Dodwell,²⁵ in his dissertations on Irenaeus, says, “that the extraordinary gift of the spirit of prophecy was given to others besides the apostles; and that not only in the *first* and *second*, but in the *third* century, even to the time of Constantine, men of all sorts and ranks had their gifts; yea, and *women* too.”²⁶ Therefore we may certainly conclude that the prophetic saying of the Psalmist, lxxviii.11, was verified: “The Lord gave the word, and great was the company of those that published it.” In the original Hebrew, it is, “Great was the company of women publishers, or women evangelists.” Grotius explains, Ps. lxxviii.11, “*Dominus dabat sermonem, id est, materiam loquendi uberem, nempe ut feminarum praedicantium (victorias) multum agmen diceret, scilicet, eaque sequuntur.*”—“The Lord gave the word, that is, plentiful matter of speaking, so that he would call those which follow the great army of preaching women, viz., victories, or female conquerors.”²⁷

The Hebrew scholar, Rev. J. Benson, in his voluminous and deeply spiritual commentary,

says the clause here given, "The Lord gave the word, great was the company of those that published it," literally translated, is, "*Large* was the number of women who published the glad tidings."²⁸ The eminent linguist, Dr. Adam Clark, quotes the original text, and follows it with the literal reading, "*of the female preachers there was a great host.*"²⁹ And then, as though he anticipated the incredulity with which this literal rendering would be received, and resolved on relieving himself of the responsibility of a non-reception of it, he affirms, "Such is the literal translation of the passage," and leaves it with the reader to make the application, with the exclamation, "The reader may make of it what he pleases."³⁰

But though this excellent commentator suggests that the reader make what use of it he please, it certainly ought to be assumed that all sincere Christians, whether male or female, will in their Scripture searchings, make it their highest pleasure to ascertain the mind of the Spirit, adopting the Bible mode of interpreting the Scriptures by comparing Scripture with Scripture,³¹ fearful that he may be compelled to the sustainment of some unpopular theory, is not in a state of mind to warrant the belief that he shall know of this or any other doctrine, whether it be of God.

Schaff's "History of Christ's Church"³² says, "Woman, among the early Christians, had the fullest freedom in the house of worship; and the consequence was, not only that she added vastly to the success of Christianity in those times, but her own character was wonderfully elevated, and her genius developed, by this equality of right. It is said that Libanius, on seeing the mother of St. Chrysostom, a most noble woman, exclaimed, 'What women these Christians have!'"³³

Eusebius speaks of Potominia Ammias, a

prophetess in Philadelphia, and others, who were equally distinguished by their zeal for the love which they bore to Jesus Christ.³⁴

Chrysostom and Theophylact take great notice of Junia, mentioned in the apostle's salutations. In our translation (Rom. xvi. 7), it is, "Salute Andronicus and Junia, my kinsmen and my fellow-prisoners, who are of note among the apostles." By the word *kinsmen*, one would take Junia not to have been a woman, but a man.³⁵ But Chrysostom and Theophylact were both Greeks; consequently, they knew their mother-tongue better than our translators, and they say it was a woman: it should therefore have been translated, "Salute Andronicus and Junia, my kinsfolk."³⁶ The apostle salutes other *women* who were of note among them, particularly Tryphena and Tryphosa, who labored in the Lord,³⁷ and Persis, who labored much in the Lord.³⁸

We could refer to many women who in the apostolic age used this gift to the edification of the Church, particularly Phebe,³⁹ the *servant of the Church*, or deaconess, as the Greek word signifies, of the *church at Cenchroea*.⁴⁰ Deaconesses were ordained to the office by the imposition of the hands of the bishop. Theodorus says, "The fame of Phebe was spread throughout the world, and she was known, not only to the Greeks

³⁴Eusebius, *Church History*, v. 17, *NPNF*, 2, 1, p. 234. [T. O.]

³⁵Modern advocates of gender equity in language may be amazed that such a point was being made in the middle of the nineteenth century. The implication is that the word *kinsman* is tilted in the direction of reference to males. Phoebe Palmer wished to see such language shift toward greater equity and accuracy, hence, *kinsfolk*. The point is not a petty one. For she is trying to demonstrate that women were named by Paul as "among the apostles." She was willing to use ancient Greek authorities to make her linguistic point. [T. O.]

and Romans, but also to the barbarians";⁴¹ which implies that she travelled much, and propagated the gospel in foreign countries.⁴² "It is reasonable to suppose, in view of her being a succor of many," says the Rev. Mr. Benson, "that this acknowledged servant of the Church was a person of considerable wealth and influence; or we may suppose the appellation, 'servant of the Church,' was given her on account of the offices she performed as a deaconess."⁴³ Says another able divine on this subject, "There were deaconesses in the primitive Church; and it is evident that they were ordained to this office by the imposition of the hands of the bishop; and the form of prayer used on the occasion is still extant in the apostolic constitution.[⁴⁴"]⁴⁴ And this order was continued for several centuries in the Church, *until the reign of the man of sin* commenced.

The Christian churches of the present day, with but few exceptions, have imposed silence on Christian woman, so that her voice may but sel-

⁴¹Should be Theodoret, *Interpretatio Epistolae ad Romanos*, in *Patrologiae Cursus Completus* (Series Graeca), ed. J. Migne (Paris: 1859), vols. 82, 218, 219. [T. O.]

⁴²Cf. Eric Berne, *What Do You Say After You Say Hello?* (New York: Grove, 1972), argues that person's names are crucial factors in "scripting." Could Phoebe's name have affected her sense of calling to diaconal service? She too "travelled much" and "propagated the gospel in foreign countries." [T. O.]

⁴³Joseph Benson, *HBN*, V., p. 359 (somewhat paraphrased by Mrs. Palmer). Cf. Benson, V, pp. 120-21: "We may suppose the name was given her on account of the office she performed to many as a deaconess." [T. O.]

⁴⁴The quote is from Adam Clarke, *The New Testament With a Commentary and Critical Notes*, (HBC) (New York: Carlton and Porter, 1851), vol. 6, 161, but it ends with "apostolic constitution" (quote not closed in text; cf. *Apostolic Constitutions* VIII. 19-20, *ANF*, VII, p. 492). Clarke goes on to say that the office of deaconess continued in the Latin church until the 10th or 11th century, and to the end of the 12th century in the Greek church. The following sentence, apparently, is Mrs. Palmer's own. It remains puzzling as to whether some historical figure such as Constantine was implied in her reference to the "man of sin," or whether simply the Devil. It would not be unusual for a Protestant reference of this period to refer in this way to Constantine or more generally of the period of papal hegemony, but that could not have been consistently asserted if Mrs. Palmer had fully accredited what followed in Clarke's commentary. Paul Bassett suggests that the "man of sin" might have reference to Gregory VII (Hildebrand, c. 1023-85). [T. O.]

dom be heard in Christian assemblies. And why do the churches impose it? The answer comes from a thousand lips, and from every point, "The Head of the Church forbids it, and the churches only join in the authoritative prohibition, 'Let your women keep silence in the churches.'"⁴⁵ And here we come fairly at the question: If the Head of the Church forbids it, this settles the question beyond all controversy.

But under what circumstances was this prohibition given? Was it not by way of reproof some unseemly practices which had been introduced into the Corinthian Church, and which in fact seem to have been peculiar to *that* church? for it is in connection with this and kindred disorders which had been introduced among the Corinthian believers, in connection with the exercise of the gift of prophecy, that Paul says, "We have no such custom, *neither the churches of God*"; that is, the other churches of God over which the Holy Ghost had made him overseer. It is evident that the irregularities here complained of were peculiar to the church of Corinth; and, in fact, not even applicable to other Christian churches of Paul's day, much less Christian churches of the present day, as no such disorders exist. The irregularity complained of was not the prophesying of women; for this the apostle admits, and directs how the women shall appear when engaged in the duty of praying or prophesying. The prohibition was evidently in view of restraining women from taking part in those disorderly debates which were not unusual in the religious worship of those days. In the Jewish synagogue, it was a matter of ordinary occurrence for persons to interrupt the speaker by introducing questionings which frequently resulted in angry altercations.⁴⁶ It was in reference to this

⁴⁵1 Cor. 14:34. [T. O.]

⁴⁶Paul's argument reconstructed: In urging women to "remain silent in the churches," (1 Cor. 1:34), Paul is reproofing a particular unseemly practice found at Corinth: that of interrupting the speaker, and of disorderly debates. Mrs. Palmer argues that this practice was peculiar to the Church of Corinth, and not found elsewhere, hence inapplicable elsewhere, unless that abuse should appear. It is in relation to the usurpation of authority that Paul enjoins silence, not generally of women who are not usurping authority. It could not apply to the prophesying of women, which he elsewhere commends. [T. O.]

reprehensible practice that Paul enjoins silence, and not in reference to the exercise of the gift of prophecy, which, in connection with this subject, he so plainly admits. Otherwise the apostle's teachings were obviously contradictory.

But if Paul's prohibition, "Let your women keep silence in the churches," is to be carried out to the letter in relation to the prophesying of women,—that is, her speaking "to edification, exhortation, and comfort,"⁴⁷—regardless of explanatory connections and contradictory passages, why should it not be carried out to the letter in other respects? If the apostle intended to enjoin silence in an absolute sense, then our Episcopalian friends trespass against this prohibition at every church service, in calling out the responses of women in company with the men, in the Liturgy, and when they repeat our Lord's Prayer in concert with their brethren. And thus also do they trespass against this prohibition every time they break silence and unite in holy song in the church of God of any or every denomination. And in fact we doubt not but it were less displeasing to the Head of the Church that his female disciples were forbidden to open their lips in singing, or in church responses, than that they should be forbidden to open their lips when the spirit of prophecy has been poured out upon them, moving them to well-nigh irrepressible utterances.

But Paul also says, "I suffer not a woman to teach, nor usurp authority over the man."⁴⁸ It will be found by an examination of this text, with its connections, that the sort of teaching here alluded to stands in connection with usurping authority. As though the apostle had said, "The gospel does not alter the relation of women in view of priority. For Adam was first formed, then Eve. And though the condition of woman is improved, and her privileges enlarged, yet she is not raised to a position of superiority, where she may usurp authority, and teach dictatorially, for the law still remains as at the beginning."

But the sort of teaching to which the apostle here alludes, in connection with usurping authority, cannot be the same to which he refers, I Cor.

⁴⁷Cf. I Cor. 14:3. [T. O.]

⁴⁸I Tim. 2:12. [T. O.]

xiv. Here Paul admits the prophesying of women in public assemblies,⁴⁹ and, of course, could have had no intention in his Epistle to Timothy to forbid that sort of teaching which stood in connection with the exercise of the gift of prophecy, which arose from the immediate impulses of the Holy Ghost, and which is rendered abundantly plain by another passage in his Epistle to the Corinthians, in which he notices the public prophesying of females, and gives particular directions respecting their conduct and appearance while engaged in that sacred duty. "Every man *praying* or *prophesying*, having his head covered, dishonoreth his head. But every woman that prayeth or prophesieth with her head uncovered, dishonoreth her head."⁵⁰

With respect to the prophesying to which the apostle here alludes, as exercised by both men and women in the churches of the saints, he defines its nature (see I Cor. xiv. 3). The reader will see that it was directed to the "edification, exhortation, and comfort of believers"; and the result anticipated was the conviction of unbelievers and unlearned persons. "Such," says the author of an excellent work, "were the public services of women which the apostle allowed; and such was the ministry of females predicted by the prophet Joel, and described as a *leading* feature under the gospel dispensation. Women who speak in assemblies for worship, under the influence of the Holy Spirit, assume thereby no *personal authority* over others. They are instruments through which divine instruction is communicated to the people."⁵¹

But by whom has the exercise of the gift of prophesy in woman been most seriously resisted? Has not the use of this endowment of power been withstood mainly by those⁵² whose lips should keep knowledge? Have not the people who have sought to know the law on this important topic been met with the dissuasive teachings, as though

⁴⁹The distinction between exercising the gift of prophecy and usurpation of authority is the critical one for Paul, as viewed by Mrs. Palmer. The former he approves, the latter he rejects. [T. O.]

⁵⁰I Cor. 11:4-5. [T. O.]

⁵¹Cf. Clarke, *NT Commentary*, vol. VI, p. 250, on I Cor. 11:5. [T. O.]

⁵²Clergy. [T. O.]

God's ancient promise had not been fulfilled? We cannot resist the conviction that the restraining of the gift of prophecy as given to woman in fulfillment of the promise of the Father involves far greater responsibilities than has been apprehended. The subject of which we treat stands in vital connection with the salvation of thousands; and if so, may we not anticipate that he, whose ceaseless aim is to withstand the work of human salvation in every variety of form, will, as an angel of light, withstand the reception of truth on this subject?

Again we repeat that it is our most solemn conviction that the use of a gift of power delegated to the Church as a specialty of the last days has been neglected,⁵³—a gift which, if properly recognized, would have hastened the latter-day glory. We believe that tens of thousands more of the redeemed family would have been won over to the world's Redeemer if it had not been for the tardiness of the Church in acknowledging this gift. We believe it is through the workings of the Man of Sin, whose aim it is to withstand the upbuilding of Christ's kingdom on earth, that this deception has been accomplished. We believe that he who quoted Scripture to our Saviour has in all deceivableness quoted Scripture to pious men,—men who would not wickedly wrest the Scriptures to their own destruction,⁵⁴ but who, from a failure in not regarding the Scriptural mode of interpretation, by comparing Scripture with Scripture, have unwittingly followed the traditions of men, and have thereby been guilty of the egregious error of making the inspired teachings appear contradictory, and of withstanding the workings of the Holy Spirit in accordance with those teachings, in the hearts of thousands of the daughters of the Lord Almighty.

We believe that the attitude of the Church in relation to this matter is most grievous in the

⁵³Recapitulating this crucial turn of argument: The gift of prophecy is commended by scripture to both males and females. This gift, when given to women, has been resisted by male clergy, whom one would expect most to welcome it. This is evidence of the power of sin. Those who, by quoting scripture, resist the prophesying of women are deceived by demonic reasoning. But in these last days amid a renewal of the reception of Pentecostal gifts, Mrs. Palmer thought, this gift too is being recovered. [T. O.]

⁵⁴Cf. 2 Pet. 3:16. [T. O.]

sight of her Lord, who has purchased the whole human family unto himself, and would fain have every possible agency employed in preaching the gospel to every creature. He whose name is Faithful and True⁵⁵ has fulfilled his ancient promise, and poured out his Spirit as truly upon his daughters as upon his sons.

God has, in all ages of the Church, called some of his handmaids to eminent publicity and usefulness; and when the residue of the Spirit is poured out, and the millennium glory ushered in, the prophecy of Joel being fully accomplished in all its glory, then, probably, there will be such a sweet blending into one spirit,—the spirit of faith, of love, and of a sound mind;⁵⁶ such a willingness to receive profit by any instrument; such a spirit of humility, in honor preferring one another,⁵⁷—that the wonder will then be, that the exertions of pious females to bring souls to Christ should ever have been opposed or obstructed.

The earnestly pious of all denominations seem now disposed to recognize Wesley as having been greatly instrumental, under God, in the revival of primitive Christianity. To those acquainted with the history of the Church at the time this great reformer was raised up, we need not say that the reception of the full baptism of the Holy Ghost was but faintly, if at all, recognized as the privilege of the believer. But as soon as this primitive flame again revived, just so soon was this gift of power, anciently promised as a specialty of the last days, newly recognized. What a host of "laborers together in the gospel"⁵⁸ were quickly raised up! And who that has read the correspondence and journal of Wesley but has marked his special recognition and appreciation of this endowment of power?⁵⁹ No more appreciatively did an ancient apostle regard "those

⁵⁷Cf. Rom. 12:10. [T. O.]

⁵⁸1 Cor. 3:9 with 2 Thess. 3:2. [T. O.]

⁵⁹There is indeed a significant body of literature on the special place of women in the Wesleyan tradition. For bibliography, see Kenneth E. Rowe, *Methodist Women: A Guide to the Literature* (Lake Junaluska, N.C.: United Methodist Commission on Archives and History, 1980); see Taft, *HW*; George Coles, *Heroines of Methodism* (New York: Carlton & Porter, 1857); Jesse T. Peck, *True Woman* (New York: Carlton & Porter, 1857); Abel Stevens, *The Women of Methodism*

women that labored with him in the gospel”⁶⁰ than did this modern apostle and his coadjutors.

A recognition of the full baptism of the Holy Ghost as a grace to be experienced and enjoyed in the present life was the distinguishing doctrine of Methodism.⁶¹ And who can doubt but it was this specialty that again brought out a host of Spirit-baptized laborers, as in the apostolic days? And the satisfaction with which this apostolic man recognized and encouraged the use of this endowment of power is everywhere observable throughout his writings.⁶² Says one, “Mr. Wesley pressed into the service of religion all the useful gifts he could influence.” He well knew that in the ratio in which the devoted female, or any other instrumentalities, were calculated to be useful, to just that degree would the grand adversary raise up opposing agencies to withstand.

To his friend Miss Briggs, he writes, “*undoubtedly* both you and Philothea, and my dear Miss Perronet, are now more particularly called to speak for God. In so doing, you must expect to meet with many things which are not pleasing to flesh and blood; but all is well: so much more

will you be conformed to the death of Christ.⁶³ Go in his name and in the power of his might.⁶⁴ Suffer and conquer all things.⁶⁵ Over a century has rolled away, and still we may thankfully record that this ancient flame, though not cherished as it might have been, has not died out.”⁶⁶

Mr. Wesley, in his journal thus introduces the name of one of his female helpers, Miss Sarah Mallett, afterwards Mrs. Boyce: “I was strongly importuned by our friends at Long Stratton to give them a sermon. I had heard of a young woman there who had uncommon fits, and of one that lately preached; but I did not know that it was one and the same person. I found her in the house to which I went, and talked with her at large. I was surprised. Of the following relation which she gave me, there are numberless witnessess.

“Some years since it was strongly impressed upon her mind that she ought to call sinners to repentance. This impression she vehemently resisted, believing herself quite unqualified, both by her sin and ignorance, till it was suggested, ‘If you do it not willingly, you shall do it, whether you will or no.’ She fell into a fit, and, while utterly senseless, thought she was in the preaching-house of Lowestoft, where she prayed and preached for nearly an hour to a numerous congregation. She then cried out, ‘Lord, I will obey thee; I will call sinners to repentance!’ She has done so occasionally from that time, and her fits returned no more.”⁶⁷

[“]”⁶⁸Perhaps this was intended to satisfy her own mind that God had called her to publish salvation, in the name of Jesus, to perishing sinners, and to incline her to take up that cross which appears to have been more painful to her than death itself; and also to convince others that *even now*

(New York: Carlton and Porter, 1866); Gabriel P. Disosway, *Our Excellent Women of the Methodist Church in England and America* (New York: James Miller, 1873); Warren C. Black, *Christian Womanhood* (Nashville: Methodist Publishing House, 1888); Alice Cook, *Women of the Warm Heart* (London: Epworth, 1952); Earl Kent Brown, “Standing in the Shadow: Women in Early Methodism,” *Nexus* 17/2 (1974): 22–31, and “Women of Mr. Wesley’s Methodism,” *Studies in Women and Religion*, vol. 11 (New York: New York University, 1956); cf. biographies in *CBTEL, EWM, CM*. [T. O.]

⁶⁰Cf. Phil. 4.3. [T. O.]

⁶¹By “full baptism of the Holy Ghost,” she means sanctification as preached by the Wesleys. It would be inappropriate to read into this phrase post-Palmerian nuances, such as glossolalia, which she did not associate with it. [T. O.]

⁶²It should be remembered that Wesley never made wide use of the phrase “baptism of the Holy Ghost,” (nor did he identify that phrase with entire sanctification), or of the “endowment of power,” and he never publically claimed to have attained what he called “entire sanctification” (preface to “A Collection of Forms of Prayer for Every Day of the Week” 1775, *WJW, XIV*, p. 272). Yet there is testimony in his works to his interest in those who had attained it, especially where he speaks of examining others who claimed to have received it. His preaching, a model for Mrs. Palmer’s, strongly commended the gifts of the Spirit, to be received now, and by all. [T. O.]

⁶³Cf. Phil. 3.10. [T. O.]

⁶⁴Cf. Eph. 6.10. [T. O.]

⁶⁵The quotation ending “conquer all things” is in a letter to Elizabeth Briggs, from Athlone, April 14, 1771 (*Letters*, vol. V, p. 237, Telford edition). The rest of the quotation does not appear in Telford. Endquotes misplaced. [T. O.]

⁶⁶Endquotes misplaced (see above note). [T. O.]

⁶⁷*Journal*, Mon., Dec. 4, 1786, ed. N. Curnock (London: Epworth Press, vol. VII, pp. 226–27). The quotation ends here. [T. O.]

⁶⁸This paragraph was erroneously included within quotation marks. It is written by Mrs. Palmer, not Wesley. [T. O.]

God hath poured out his Spirit upon his handmaids and upon his daughters,⁶⁹ that they may prophesy or preach in his name the unsearchable riches of Christ.

The author of “The Heroines of Methodism,” says, “Probably the experience of this young woman, and the wonderful dealings of the Lord with her, greatly helped to enlarge the views of John Wesley upon the subject of female preaching. It is very evident, from his letters and conduct towards her, that he believed her, as a preacher, to be doing what the Lord required at her hands.”⁷⁰

Says Miss Mallett, “At thirteen, I became member of the Methodist Society, and the Lord made known to me what he would have me do. But oh, how unfit did I see myself to be! From that time, the word of God was an unsealed book: it was my companion day and night. My love to God and souls increased. I have been often led to cry out, in the bitterness of my soul, ‘O Lord! I am but a child, I cannot preach thy word’;⁷¹ but the more deeply was it impressed on my mind, ‘Woe is me if I preach not the gospel,’⁷² till my distress of soul destroyed my body.

“In my twentieth year, the Lord answered my prayer in a great affliction and made known to others, as well as to myself, the work he would have me do; and fitted me in the furnace for his use. From that time, I began my public work. Mr. Wesley was to me a father, and a faithful friend. I have not, nor do I seek, either ease or wealth or honor, but the glory of God and the good of souls; and, thank God, I have not run in vain,⁷³ nor labored in vain.⁷⁴ There are some witnesses in heaven, and some on earth. When I first began to travel, I followed Mr. Wesley’s counsel, which was to let the voice of the people be to me the voice of God, and where I was sent for to go.⁷⁵ To this counsel I have attended to this day. But

the voice of the people was not the voice of some of the preachers. Mr. Wesley, however, soon made this easy, by sending me a note from the conference held at Manchester, 1787, by Mr. Joseph Harper, who was that year appointed for Norwich. The note was as follows: ‘We give the right hand of fellowship to Sarah Mallett, and have no objection to her being a preacher in our connection, so long as she preaches the Methodist doctrine, and attends to our discipline.’”⁷⁶

We believe that hundreds of conscientious, sensitive Christian women have actually suffered more under the slowly crucifying process to which they have been subjected by men who bear the Christian name than many a martyr has endured in passing through the flames. We are aware that we are using strong language; but we do not use it in bitterness, but with feelings of deep humiliation before God that the cause of truth demands the utterance of such sentiments. We conscientiously believe, and therefore must speak.

Thousands are in this day enduring this crucifying process, perhaps as never before. God has given the word; and in this wonderful season of the outpouring of the Spirit, great might be the company who would publish it.⁷⁷ This, in a most emphatic sense, is the day of which the prophet spake,—when God would pour out his Spirit on his sons and daughters.⁷⁸ Though many men have in these last days received the baptism of fire, still greater, as in all revivals, has been the number of females.⁷⁹ These constitute a great

⁷⁶More about Sarah Mallett is in Zachariah Taft’s *Holy Women* (London: Kershaw, 1825), vol. 1, 79–90. Cf. Sarah Crosby, “The Grace of God Manifested in the Account of Mrs. Crosby of Leeds,” ed. company, who would fain, as witnesses for Christ, publish the glad tidings of their own heart-experiences of his saving power, at least in the social assembly.⁸⁰

And when the reception of the gift of prophecy is thus recognized in all the disciples of the Saviour, whether male or female, the last act in the drama of man's redemption will have opened.⁸¹ Says the distinguished Dr. Wayland, "private believers will feel their obligation to carry the gospel to the destitute as strongly as ministers."⁸² Oh! if the word of the Lord, unrestrained by human hinderances, might only have free course, how great would be the company who, with burning hearts and flaming lips, would publish it!⁸³

A large proportion of the most intelligent, courageous, and self-sacrificing disciples of Christ are females. "Many women followed the Saviour"⁸⁴ when on earth; and, compared with the fewness of male disciples, many women follow him still. Were the women who followed the incarnate Saviour earnest, intelligently pious, and intrepid, willing to sacrifice that which cost them something in ministering to him of their substance?⁸⁵ In like manner, there are many women in the present day, earnest, intelligent, intrepid, and self-sacrificing, who, were they permitted or encouraged to open their lips in the assemblies of the pious in prayer, or speaking as the Spirit gives utterance,⁸⁶ might be instrumental in winning many an erring one to Christ. We say, were they permitted and encouraged; yes, encouragement may now be needful. So long has this en-

dowment of power been withheld from use by the dissuasive sentiments of the pulpit, press, and church officials, that it will now need the combined aid of these to give the public mind a proper direction, and undo a wrong introduced by the "man of sin"⁸⁷ centuries ago.

But more especially do we look to the ministry for the correction of this wrong.⁸⁸ Few, perhaps, have really intended to do wrong; but little do they know the embarrassment to which they have subjected a large portion of the Church of Christ by their unscriptural position in relation to this matter. The Lord our God is one Lord.⁸⁹ The same indwelling spirit of might which fell upon Mary and the other women on the glorious day that ushered in the present dispensation⁹⁰ still falls upon God's daughters. Not a few of the daughters of the Lord Almighty have, in obedience to the command of the Saviour, tarried at Jerusalem; and, the endowment from on high having fallen upon them, the same impelling power which constrained Mary and the other women to speak as the Spirit gave utterance impels them to testify of Christ.

"The testimony of Jesus is the spirit of prophecy."⁹¹ And how do these divinely-baptized disciples stand ready to obey these impelling influences? Answer, ye thousands of heaven-touched lips, whose testimonies have so long been repressed in the assemblies of the pious! Yes, answer, ye thousands of female disciples of every Christian land, whose pent-up voices have so long, under the pressure of these man-made restraints, been uttered in groanings before God!⁹²

But let us conceive what would have been the effect, had either of the male disciples interfered with the utterances of the Spirit through Mary, or any of those many women who received the bap-

⁸⁷Cf. 2 Thess. 2:3. [T. O.]

⁸⁸Mrs. Palmer invested great energy in a ministry to ministers, and felt that their role was crucial in this instance—tragically so. [T. O.]

⁸⁹Deut. 6:4. [T. O.]

⁹⁰The reference is to the resurrection appearances of Jesus to women, which initiated the Christian dispensation. [T. O.]

⁹¹Rev. 19:10. [T. O.]

tism of fire on the day of Pentecost. Suppose Peter, James, or John had questioned their right to speak as the Spirit gave utterance before the assembly, asserting that it were unseemly, and out of the sphere of woman, to proclaim a risen Jesus, in view of the fact that there were men commingling in that multitude.⁹³ How do you think that He who gave woman her commission on the morning of the resurrection, saying "Go, tell my brethren," would have been pleased with an interference of this sort?

But are not doings singularly similar to these being transacted now? We know that it is even so. However unseemly on the part of brethren, and revolting to our finer sensibilities, such occurrences may appear, we have occasion to know that they are not at all unusual in religious circles. We will refer to a Christian lady of more than ordinary intellectual endowments, of refined sensibilities, and whose literary culture and tastes were calculated to constitute her a star in the galaxy of this world.⁹⁴

2. A LIFE-PICTURE

I have seen a lovely female turn her eye away from the things of time, and fix it on the world to come. Jesus the altogether lovely, had revealed himself to her; and the vision of her mind was absorbingly entranced with his infinite loveliness, and she longed to reveal him to others. She went to the assembly of the pious. Out of the abundance of her heart, she would fain have spoken,⁹⁵ so greatly did her heart desire to win others over to love the object of her adoration. Had she been in a worldly assembly, and wished to attract others with an object of admiration, she would not have hesitated to have brought out the theme in conversation; and attracted listeners would have taken her more closely to their hearts, and been won with the object of her love.

But she is now in the assembly of the pious. It

⁹³The humor is wry and biting: The risen Lord gives commands to women; the disciples question and prevent their fulfillment. [T. O.]

⁹⁴It is likely that this lady was among Mrs. Palmer's circle of friends, but insufficient clues are given for positive identification. [T. O.]

⁹⁵Cf. Matt. 12:34. [T. O.]

is true many of them are her brothers and sisters, but cruel custom sealed her lips. Again and again she goes to the assembly for social prayer and the conference meeting, feeling the presence and power of an indwelling Saviour enthroned uppermost in her heart, and assured that he would have her testify of him. At last, she ventures to obey God rather than man.⁹⁶ And what is the result? A committee is appointed to wait on her, and assure her that she must do so no more. Whisperings are heard in every direction, that she has lost her senses; and, instead of sympathizing looks of love, she meets averted glances and heart-repulses.⁹⁷ This is not a fancy sketch; no, it is a life-picture. Ye who have aided in bringing about this state of things, how does this life-picture strike you?

3. WHO WAS REJECTED?

Think of the feelings of the Christian lady, who has thrown herself in the bosom of your church community in order that she may enjoy the sympathies of Christian love and fellowship. Has grace divested her of refined sensibilities? No: grace has only turned those refined sensibilities into a sanctified channel, and given her a yet more refined perception of every thing pure and lovely and of good report.⁹⁸ What must be the sufferings of that richly-endowed, gentle, loving heart? But was it not her loving, gentle, indwelling Saviour, that fain would had her testify for him? and in rejecting her testimony for Jesus, did not Jesus, the Head of the Church, take it as done unto himself?

Just as we were about closing the preceding paragraph, the activities of our pen were interrupted by the call of a valued minister of the gospel, whose early religious training was in the bosom of a sect where the testimony of Jesus from the lips of women was not permitted in the church.

⁹⁶Cf. Acts 5:29. [T. O.]

⁹⁷The dynamics of polite rejection, so familiar to those bereft of power who have sought reformation in religious traditions, are deftly described here by Mrs. Palmer with a subtlety that is hardly exceeded among nineteenth century writers. These dynamics are circumspectly described and courageously confronted. [T. O.]

⁹⁸Cf. Phil 4:8. [T. O.]

We will introduce him to our readers. He tells us of an experience, in connection with the theme of our work, with which some husbands may sympathize. But we will let him speak for himself.⁹⁹

4. THE SEAL BROKEN¹⁰⁰

Never shall I forget the conflicting emotions of my poor heart, when, for the first time, the voice of my wife was heard in a religious meeting. She had been trained from childhood in the Congregational Church, her father having been a deacon in the same for fifty years. I had been born and raised, and educated for the ministry, in the Episcopal Church. All know the oppressive silence imposed on woman's lips, by both these denominations, in their social meetings for prayer and Christian conference. But the voice of my wife, now for the first time, breaks upon my ear. We had only joined the Methodist Church the evening previous. I had anticipated some things in the new church not altogether in harmony with my views and tastes. But never had it entered my heart that my wife should so far forget custom of silence among females in the house of God.

My mortification for a few moments was indescribably keen. I would have dissolved our union with the church instantly, and retraced our steps, had it been possible. Such license, such disobedience to custom, I felt for the moment to be intolerable. My mortification arose, not from a conviction that God was dishonored, Christ displeased, or the Holy Ghost grieved, but that the community, our former friends in the church we had just left, would be grieved, and some point the finger of scorn. It was not a care for God's pleasure so much as a dread of violating long-established customs, wounding the hearts of old friends, that troubled me.

It was suggested to my mind that I had not religion enough to allow my wife to do what she deemed to be a duty to her Saviour; that my prejudices must be her standard of activity. I at once saw the injustice, both to my wife and to my Saviour, of

⁹⁹Here begins the testimony of a formerly Episcopalian, later Methodist, clergy husband of a woman who bore testimony in religious meetings. [T. O.]

¹⁰⁰At least the following five paragraphs are a quotation, source unidentified. [T. O.]

thus thrusting my feelings and preferences between her and the cross.¹⁰¹ I was deeply humbled; and, lifting up my heart to God in prayer, forgiveness was at once bestowed. I was made happy, and blessed to enjoy woman's voice, in spite of former prejudices, in prayer and prophesying.

"I would have consulted you, my dear husband, had I imagined, before going to church, such a duty would have been impressed upon me," said my wife.

"It is well you did not, for my consent could not have been obtained. It is done now. It nearly killed me for the moment; but I have the victory, and your testimony both rebuked and encouraged me. Henceforth, please Christ, and not your husband."

I have often thought, since then, how cruel to woman it is to compel her to stifle her convictions, to grieve the Holy Spirit,¹⁰² to deny the Saviour the service of her noble gifts, because the pleasure of the Church (not surely the world, for it favors woman's liberty) must be regarded above that of God.

The Church a Potter's Field,¹⁰³ where the gifts of women are buried! And how serious will be the responsibilities of that church which does not hasten to roll away the stone,¹⁰⁴ and bring out these long-buried gifts! Every church community needs aid that this endowment of power would speedily bring. And what might we not anticipate as the result of this speedy resurrection of buried power! Not, perhaps, that our churches would be suddenly filled with women who might aspire to occupy the sacred desk.¹⁰⁵ But what a change would soon be witnessed in the social meetings of all church communities! God has eminently endowed woman with gifts for the social circle. He has given her the power of persuasion, and the ability to captivate. Who may *win* souls to Christ, if she may not?¹⁰⁶

¹⁰¹A nineteenth-century example of "consciousness-raising"? [T. O.]

¹⁰²Cf. Eph. 4:30. [T. O.]

¹⁰³Cf. Matt. 27:7; a powerful image of lost gifts, buried competencies in the church—the burial metaphor requires resurrection. [T. O.]

¹⁰⁴Mark 16:3. [T. O.]

¹⁰⁵I.e., pulpit. [T. O.]

¹⁰⁶Mrs. Palmer thought that women were naturally more gifted for some acts of ministry than men—in persuasive gifts, where grace transmutes nature. [T. O.]

And how well-nigh endless her capabilities for usefulness, if there might only be a persevering effort on the part of the ministry to bring out her neglected gifts, added to a resolve, on the part of woman, to be answerable through grace to the requisition. Our friend speaks too truly of the Church as the only place where woman's gifts are unrecognized;¹⁰⁷ that is, the church estranges herself from woman's gifts. To doubt whether woman brings her gifts into the Church would be a libel on the Christian religion.

Let us contemplate that lovely, fascinating lady, whose cultivated tastes, richly-endowed mind, and unrivalled conversational powers, made her the soul and star of every worldly circle in which she moved.¹⁰⁸ Did she move in the festive-hall, or the refined social circle, charmed worldlings, irrespective of sex, gathered around her, and, as they greeted her gifts by unrestrained manifestations of approval, acknowledged themselves won by her endowment of power over mind.

Surely there has been no tardiness of the children of this world in acquainting themselves with her gifts. But the Holy Spirit comes to the heart of this interesting worldling, bringing to her remembrance that she is not her own, but bought with the price of her Redeemer's blood.¹⁰⁹ She now apprehends, through the enlightening influences of the Holy Spirit, that all her various gifts have been purchased at an infinite price, and must all be brought into the Lord's storehouse,¹¹⁰ in order that they may be used for his glory.

Sin has its short-lived pleasures, and she has enjoyed the pleasure of securing the smiles of an appreciative world. But the Holy Spirit assures her that she must come out from the world, and be separate;¹¹¹ and she sees that she must renounce the world and sin, and through Christ give herself up to God and his church, if she would become a member of the household of faith,¹¹² and secure

life everlasting. How crucifying to flesh¹¹³ is the struggle! but she has resolved rather to endure the death of nature than to perish everlastingly. The struggle is severe. Nature, unreprieved by God, will often suffer intensely in passing through the struggle which ensues in emerging from the death of sin to a life of holiness. God will not reprove, because he knows that nature clings to earth. But the struggle past, the emancipated soul, with all its redeemed powers, is at once taken to the heart of infinite love. This point gained, it is the divine order that all the issues of future life should flow out upon a redeemed world in unison with the Head of the Church. The church militant is Christ's visible body.

And now these gifts, so often in requisition, and so prized in the social assembly of the children of this world, have been brought into the Church. We said it were a libel on the religion of Jesus to assert that natural gifts of a high order, bestowed by the God of Nature, are recalled or buried when the possessor becomes a recipient of grace, and a child of the kingdom. The God of Nature is also the God of all grace:¹¹⁴ and whatsoever was lovely becomes now more lovely; and that which was of good report becomes of far better report¹¹⁵ through the refinings of grace, and far more effectual for good.

And now that these natural endowments of power, which were so captivating and commanding, and so appreciatively recognized in worldly assemblies, are laid as a sacrifice on the altar of the service of the Church, what becomes of them? Does the church acquaint herself with these gifts? No! she is both a stranger to them, and estranges herself from them.¹¹⁶ In most church organizations, she authorizes no church assemblies, where she brings her sons and daughters together to call out these gifts for mutual

¹¹³Cf. Gal. 5:24. [T. O.]

¹¹⁴The nature-grace relation is intuitively grounded in the Thomistic tradition, probably received through Anglican sources, see Thomas Aquinas, *ST*, I-IIae, Q109. [T. O.]

¹¹⁵Cf. Phil. 4:8. [T. O.]

¹¹⁶The dialectic of estrangement is intuited by Mrs. Palmer as both self-chosen and in a sense objective. This is a powerful indictment of the failure of the Church as an institution to recognize, develop, and utilize the gifts of women. [T. O.]

¹⁰⁷Mrs. Palmer apparently viewed the Church as more repressive than the society in this instance. [T. O.]

¹⁰⁸Here begins a rich description of the redeemed powers of a natively gifted woman. [T. O.]

¹⁰⁹I Cor. 6:19-20. [T. O.]

¹¹⁰Cf. Mal. 3:10. [T. O.]

¹¹¹Cf. 2 Cor. 6:17. [T. O.]

¹¹²Gal. 6:10. [T. O.]

edification and comfort. What means of grace does she acknowledge where her female members, in common with her male members, may use the gift of utterance with which God has endowed her?¹¹⁷ And, if the Church authorizes no means by which she may acquaint herself with the gift which God has bestowed on women, what becomes of them? Why, of course they are buried. And where are the sepulchres in which they are entombed?¹¹⁸ Why, the Church.

And when the Head of the Church comes to receive his own with usury,¹¹⁹ and demands that these buried gifts be brought forth, who will be required to meet the demand? Church communities are made up of individuals. Will it be some one individual member of that church session? or will it be that minister who has failed to acquaint himself and his church session, and other members of his flock, of their responsibility before God in thus entombing an endowment of power which might have been instrumental in the spiritual life of thousands? What wonder, then, that our devoted friend said, that the Church is as a Potter's Field to bury strangers in; for the Church estranges herself from woman's gifts, and buries them within her pale.¹²⁰

But the spirit of inspiration within us and around us, from every point, seems to say, that the time is coming, and now is,¹²¹ when woman's gifts, so long entombed in the Church, shall be resurrected.¹²² The command, "Come forth!"¹²³ is already penetrating the sepulchre where these gifts have been buried. Faith sees the stone being rolled away.¹²⁴ And what a resurrection of power shall we witness in the Church, when, in a sense answerable to the original design to God, women

shall come forth, a very great army,¹²⁵ engaging in all holy activities; when, in the true scriptural sense, and answerable to the design of the God of the Bible, woman shall have become the "helpmeet"¹²⁶ to man's spiritual nature! The idea that woman, with all her noble gifts and qualities, was formed mainly to minister to the sensuous nature of man, is wholly unworthy [of] a place in the heart of a Christian.¹²⁷

And here, in the presence of the God of the Bible, we are free to declare that a consistent Christian man—we mean one who has been baptized into the spirit of his divine Master—will not cherish such an idea. Nominal or meagre Christianity may tolerate it; and we think we see reasons most palpable, and such as should alarm all professing Christians, why the ancient Tempter, in his enmity towards woman, should have thrust this repulsive particle of old leaven¹²⁸ into the Church, and have taken so much pains to keep it there. We sincerely believe, before God, that it is this repulsive doctrine that has so much to do towards keeping Christianity meagre; ay, so repulsively meagre, that men of the world, who believe in the doctrines of Christianity, fail to see in many so-called Churches any thing answerable to a social want of man's spiritual nature,—a want which the God of Nature hath himself implanted in the human heart, and which would be abundantly met in the precious bosom of the Church, if it were not for this ingredient of wrong which has been thrown in by the Arch-Enemy. We speak with confidence and with carefulness, in the presence of Christ, the glorious Head of the Church, who would have her stand forth before the world in symmetrical proportions of unrivalled beauty, and in inviting attitude.

¹¹⁷The Pentecostal traditions of preaching would later form powerfully around particular interpretations of this phrase not yet envisioned by Mrs. Palmer. [T. O.]

¹¹⁸Cf. Matt. 23:27–29; Luke 11:47, 48. [T. O.]

¹¹⁹Luke 19:23; Matt. 25:27. The tomb image of the religious institution used by Jesus is employed powerfully to speak of the deadly entombment of women's gifts. [T. O.]

¹²⁰This damning critique of the lost possibilities of the Churches runs counter to those who tend to associate holiness revivalism with ecclesiastical conservatism. [T. O.]

¹²¹Cf. John 4:23. [T. O.]

¹²²Cf. John 5:25. [T. O.]

¹²³Cf. John 11:43. [T. O.]

¹²⁴Cf. Mark 16:4; Luke 24:2. [T. O.]

¹²⁵Joel 2:25. [T. O.]

¹²⁶Cf. Gen. 2:18. [T. O.]

¹²⁷The modern feminist critique that woman is demeaned by being viewed only or primarily in relation to man's sensual needs is clearly anticipated here by Mrs. Palmer. [T. O.]

¹²⁸The "repulsive particle of old leaven" (cf. 1 Cor. 5:6–8) is the assumption that woman exists only to serve man's physical needs—a device of the enemy, and a morally unworthy assumption to be made by both males and females in the Christian community. Mrs. Palmer was convinced that it was the work of nothing less than supernatural demonic power (eventuating in social sin) that so rigorously kept women bound to submissive roles in the church. [T. O.]

In the name of the Lord Jesus, who hath purchased the Church with his blood,¹²⁹ and hath made abundant provision, not only for her purification, but for her beauty and strength, we implore those who minister at the altar of Christian churches to look at this subject. Christ would not have the Church unseemly in the eyes of his enemies. How grievous in his sight that repelling influences should emanate from her whom he would call his beloved,¹³⁰ and whom he would fain have stand forth without spot, wrinkle, or any such thing;¹³¹ so attractive in beauty and strength as to draw all men to her holy shrine!

Surely the Church should present a model of all the blessed proprieties of grace. He by whose forming hand she should be modelled would have her inward construction and exterior surroundings all so truly in the *beauty* of holiness¹³² as to invite investigation and admiration. Why should she not be an embodiment of every thing pure, lovely, and of good report?¹³³ And such she must, in fact, be through Christ, or her Lord can never receive her approvingly, and say to her,

¹²⁹Acts 20:28. [T. O.]

¹³⁰Rom. 1:7. [T. O.]

¹³¹Cf. Eph. 5:27. [T. O.]

¹³²Cf. Ps. 29:2. [T. O.]

¹³³Phil. 4:8. [T. O.]

“Thou art all fair, my love: there is no spot in thee.”¹³⁴ Yet such she cannot be, while she entombs in her midst the gift of prophecy intrusted to her daughters.¹³⁵

Oh the endless weight of responsibility with which the Church is pressing herself earthward through the depressing influences of this error! How can she rise while the gifts of three-fourths of her membership are sepulchred in her midst? Would that we might speedily see her clothed in strength, and coming up out of “the wilderness leaning on her Beloved,¹³⁶ fair as the moon, clear as the sun, and terrible as an army with banners”!¹³⁷

Daughter of Zion, from the dust
Exalt thy fallen head;
Again in thy Redeemer trust:
He calls thee from the dead.¹³⁸

¹³⁴Song 4:7. [T. O.]

Frances Willard

1839–1898

Frances Willard was born in Churchville, New York, as one of three children of Josiah and Mary Willard. She had an older brother, Oliver, and a younger sister, Mary. Her father, a successful businessman and farmer and also a devout Methodist, sold his assets in Churchville in 1841 and moved the family to Oberlin, Ohio, so that he could prepare for the ministry at Oberlin College. His wife, who had been a schoolteacher before her marriage, also attended classes (Oberlin was the only co-educational college in the United States at that time). But in 1846 Josiah Willard contracted tuberculosis, and on doctor's orders the family moved to an isolated farm near Janesville, Wisconsin, where it was hoped the fresh air would help him.

Frances and her siblings were home-schooled by their mother and occasional tutors until 1854, when Oliver went to Beloit College to prepare for the ministry and the girls attended a school in Janesville organized by their father. In 1857 Frances and Mary enrolled in the Milwaukee Female College, a teacher-training institute established by Catharine Beecher. Their father found the school insufficiently religious, however, and transferred them in 1858 to Northwestern Female College in Evanston, Illinois, a town near Chicago. The whole family moved to Evanston, and Frances and her sister lived at home while attending school.

Willard graduated from college in 1859, and in 1860 she took a teaching position in a rural school. For the next eight years she taught at various schools around the Midwest. A Methodist minister who was a friend of her brother's, the Reverend Charles Fowler, proposed to her in 1861 and she accepted, but she broke the engagement a year later. Her letters suggest that although she esteemed Fowler highly, she did not love him, and she could not bring herself to marry just because it was the expected thing to do. At any rate, she was preoccupied in 1862 with the illness and death of her beloved sister Mary. Willard left her teaching position to nurse Mary, and then to write a memoir of Mary's life.

In 1868 Kate Jackson, a fellow teacher from a wealthy family, invited Willard to accompany her as her guest on a tour of Europe and the Middle East. Josiah Willard was reluctant to consent to the trip, but he died in this year, and Willard decided to go. She and her friend were abroad for two years. While they were traveling, Willard came to some decisions about her future. She felt that marriage was not for her and that she wanted to dedicate herself to work that would improve the position of women in the world. It seemed logical for the work to be that of education, a field for which she was already trained and in which she had some experience. Willard resolved to make a career for herself as a women's educator when she returned to the United States.

Almost immediately, the ideal opportunity presented itself. In 1871, although she was only thirty-two years old, Willard was invited to become the first woman president of a U.S. women's college. The new institution, the Evanston College for Ladies, would replace the financially ailing Northwestern Female College from which she had graduated and would be affiliated with nearby Northwestern Univer-

sity, at that time an all-male institution. Willard lived in the family home in Evanston with her mother and took up her new work with enthusiasm, teaching classes on rhetoric and composition in addition to her administrative duties. Financial problems forced the school to merge with Northwestern University in 1872, a step to which Willard assented on condition that she and the female faculty remain in charge of the women students, many of whom were young teenagers.

Unfortunately, just at this time, the Northwestern University president who had supported Willard's efforts, and with whom she had negotiated the merger agreement, resigned and was replaced by the Reverend Charles Fowler, her former fiancé. Although the two had parted on friendly terms, as far as Willard was aware, Fowler immediately opposed her plans for women's education. He reduced her authority through administrative changes, acquiesced in her harassment by some of the male Northwestern students she was now teaching, and generally made her position at the school untenable, finally forcing her resignation in 1874.

Willard now found herself in an awkward situation. Other academic posts were offered to her, but they would have required leaving Evanston. She did not want to move her elderly mother, for whom she was responsible, nor to leave the neighborhood of her many friends and her brother Oliver, his wife, and their four children. Money was a consideration, for upon his death her father had left a very small estate, having loaned large sums to Oliver, first to launch him in the ministry and then to help him find other work when his pastoral career faltered because of a drinking problem.

Willard decided that her main commitment was to improving the position of women. If she could not do so through education in a school setting, there were other ways of affecting public opinion. Public lectures and evangelical meetings were very popular, and speakers could earn money both from collections taken at the event and from salaries, should they win positions as paid agents of the era's various reform societies. At this time, the reform issue of temperance was flourishing in the Midwest. The winter of 1873–74 brought a crusade by women seeking to curb the liquor trade, the largest public demonstration by women the United States had ever seen. Willard, who had already done some public speaking for Methodist causes, was attracted to temperance. She was elected president of the Chicago Woman's Christian Temperance Union (WCTU) in the fall of 1874 and was sent as a delegate later that year to the first national meeting of women's temperance groups, which resulted in the formation of the national Woman's Christian Temperance Union, of which she was elected corresponding secretary.

When temperance activism in America began in the eighteenth century, it was not primarily a women's issue, but it was an important reform cause. Willard's own church, the Methodist, formally endorsed temperance in 1832. By 1833, a national union of temperance groups, led by men but with women's participation, numbered more than a million members. They were successful in curbing alcohol consumption in the United States by the time of the Civil War. After the war, however, some of the legal restrictions these groups had won were repealed, and liquor consumption skyrocketed. Alcohol became big business. There was one saloon for every fifty adult men in some urban areas, and an 1895 survey in Chicago showed that the number of daily saloon patrons equaled one half of the city's total population. By the turn

of the century Americans were spending over one billion dollars on alcohol, much more than they spent on public education (\$200 million). Moreover, the liquor trade protected itself politically; political meetings were often held in saloons, and brewers, saloon keepers, and others in the liquor business were elected to local offices.

Alcohol constituted the great “drug problem” of the nineteenth century. Then as now, the use of intoxicants was deplored in part because it was felt to be morally debilitating, and in part because it was known to have grave social costs. Women increasingly spoke up about how they and their children bore the brunt of these costs. The alcohol problem was becoming a women’s problem. Drinking was a more exclusively masculine activity than it is today, and alcohol abuse by men contributed to the physical abuse and financial deprivation of women and children, and to many other social ills. Furthermore, women who suffered from their husbands’ abuse of alcohol had little legal recourse, given that married women’s property laws often still gave everything, even a wife’s wages, to the husband, and divorce laws awarded custody of children to the husband. Women could not vote and so could not work directly for legislative remedies.

Instead, they adapted techniques developed in antebellum reform movements, notably abolition—by using petitions, public demonstrations, lectures, and printed appeals. Twentieth-century perceptions of temperance activism are clouded, perhaps, by the movement’s narrow focus on prohibition alone in the early twentieth century. But during Willard’s leadership the movement engaged a broad spectrum of social issues. When prohibition eventually became the law of the land, it was a dismal failure, so much so that temperance workers are now often remembered with ridicule, when they are remembered at all. In the late nineteenth century, however, the temperance movement constituted the largest mass movement of women ever in the United States. Willard’s biographer Ruth Bordin notes that although Willard believed in the goals of the temperance movement, at first it had not appeared to be very high on her list of social reform priorities. As a young woman, at least, Willard did not require total abstinence of herself, and she enjoyed the occasional glass of wine when she was in Europe. Bordin believes that the temperance movement attracted Willard in 1874 primarily because she saw it as a movement that empowered women.

As corresponding secretary of the fledgling WCTU, Willard was so successful at increasing membership that the national convention grew from 80 delegates in 1874 to 200 in 1875, representing 21 states and 7,500 members. Willard was a dynamic platform speaker, not flamboyant but utterly sincere and able to convince her hearers that she cared deeply about them even when the audience was large. She projected powerful moral authority, a reflection, perhaps, of her desire to be a pulpit minister. She confessed to this desire in *Woman in the Pulpit* (excerpted here), but she suppressed it because of the prejudices of the time. To improve her performance and strengthen her voice, she took elocution lessons from the director of the School of Oratory at Northwestern. Willard also showed great talent at organizing new WCTU chapters and helping other women find their own public voices, as shown in the excerpt here from *Woman and Temperance* on how to organize a temperance meeting and how to conduct oneself as the lead speaker.

Thus Willard helped to create a network of women's organizations in which women helped each other come to public voice, as chronicled by historian of rhetoric Carol Mattingly. At first, women needed all-female audiences in order to find the courage to speak. Within several years, however, women's speaking abilities had progressed to the point that one delegate to the annual WCTU meeting, Mrs. S. A. McClees, could testify as follows:

Women who had but lately found no wider sphere than the domestic or social circle for their *special pleadings* in favor of all things good and true . . . suddenly found themselves facing vast audiences, standing in sacred places, altars and pulpits, side by side with fathers and brethren of the ministry, to give the same solemn admonitions to which they had lent reverent ears since childhood days.¹

Willard's growing popularity must be attributed at least in part to the grateful excitement women felt as they found their voices under the guidance of the organization she directed. Mattingly argues that the WCTU was "the largest and most effective organization for teaching women rhetorical skills in the nineteenth century."²

Contrary to the wishes of other WCTU leaders, Willard, the organization's most powerful speaker, began to push for a broader agenda for the organization. On women's suffrage, she was advised and encouraged by her friend Susan B. Anthony, who was also pro-temperance (as were many other women's suffrage leaders), and who had founded the first women's temperance organization in 1852 after being refused the right to speak at a temperance conference run by men. After some struggle within the organization, Willard's views finally prevailed, and she was elected president of the national WCTU in 1879, at the age of forty. She would hold this position until her death in 1898.

Willard placed the WCTU on a firmer financial footing and reorganized its various concerns, such as promoting temperance to children, into "departments," each of which was headed by a "superintendent" who had considerable autonomy. Having thus delegated many administrative aspects of the organization, Willard was free to travel and proselytize for temperance and other social reform causes. In the first ten years of her presidency, she spoke at an average of one meeting per day—at political party conventions, conferences of many religious denominations, and temperance meetings in every U.S. state and territory.

Willard advocated what she called "Do-Everything Reform." She attached temperance work to a range of social issues, including stronger laws against rape, laws raising the legal age of consent (which was age ten in twenty states), improved conditions for women factory workers and women prison inmates, improved enforcement of anti-child-labor laws, free kindergartens and what we would call day-care programs for working mothers, and more. The two issues that were closest to Willard's heart, and that she was most influential in promoting, were women's suffrage and labor unionism. To promote women's suffrage, Willard took the phrase "Home Protection," which had referred to tariffs protecting American industry, and

¹Quoted in Carol Mattingly, *Well-Tempered Women: Nineteenth-Century Temperance Rhetoric* (Carbondale: Southern Illinois University Press, 1998), p. 50, emphasis in original.

²Mattingly, p. 58.

adapted it to refer to the vote for women, arguing that if women could vote, they would vote for measures that would protect women, children, and the American home, including, among other things, regulation of the alcohol trade.

Willard was also convinced that the American economic system was unjust and un-Christian. From the late 1880s she referred to her own political beliefs as “Christian Socialism.” She advocated a social order in which everyone took responsibility for everyone else, as required by proper respect for God’s laws, and she saw the organization of labor as a necessary step toward more equitable arrangements. On behalf of the WCTU, she made overtures to Terence Powderly and the Knights of Labor, an early union organization. The Knights already supported temperance and admitted women as equal members, working for equal pay for equal work and other women’s issues. Willard persuaded them to adopt women’s suffrage as well, and she added the eight-hour day and other labor issues to the WCTU agenda.

Historians have argued that the temperance movement as a whole was tinged with ethnic and racial prejudice, that it was primarily a rural, Protestant, native-born movement that tried to fend off perceived threats from urban Catholic immigrants. Willard attempted to guide the WCTU away from such prejudices, although she was not entirely free from them herself. People of color were admitted to the WCTU on an equal footing with whites—indeed, noted African American activist Frances Ellen Watkins Harper was a WCTU leader throughout the latter part of the nineteenth century. Also, Willard made it national policy that Catholics and Jews were welcome as members of the WCTU, and she extended overtures to Catholic temperance groups. Yet Willard allowed most Southern chapters of the organization to remain segregated. Although she urged the WCTU to oppose lynching and other violent features of southern resistance to Reconstruction, she also suggested that the charges for which black men were lynched were sometimes true. African American reformer Ida B. Wells attacked Willard repeatedly, even from the podium at the national WCTU convention, for not taking a stronger stand against lynching, and although Willard tried to respond to these criticisms and finally persuaded the WCTU to pass an antilynching resolution in 1895, over southern members’ protests, her public statements never repudiated the false charges against lynch victims.

Willard obviously believed that women should take stands on public issues, in spite of complaints from WCTU conservatives that she was inappropriately politicizing the organization. Further, Willard saw that the various social reforms she espoused, which were linked theoretically in the concept of Christian Socialism, needed to be linked politically into a single reform party if they were to influence the American government. A Prohibition party had been active in the United States since the Civil War, and Willard was one of its leaders. After its defeat in the 1888 elections, Willard thought that the time was right to promote fusion with other reform efforts, notably the farmers’ groups seeking national fiscal reform, which became the Populist party. She urged the Populists to adopt platform planks supporting temperance and women’s suffrage and promised the support of the Prohibition party and her very large women’s organization—about 200,000 members by 1890—if they would do so. But after several years of maneuvering, in 1892 this fusion effort was finally defeated.

1892 was also the year in which Willard's mother died, and it became a watershed year in her temperance work. No longer tied to Evanston by care for her mother, she became more active on the international scene and less active on the national. In 1891 Willard had been instrumental in organizing the first international women's temperance conference, where she became the president of the World WCTU formed at the conference, and there she had met Lady Henry Somerset, president of the British Women's Christian Temperance Union. Isabel Somerset became Willard's close friend, and upon Willard's mother's death, Willard accepted her invitation to visit her in England. From 1892 until Willard's death in 1898, Lady Henry made it possible for Willard to spend more than half her time in England. She thus became less politically active in the United States and less of a presence on the national reform scene, although she retained her presidency of the U.S. national WCTU and continued to appear as a speaker for temperance and other reforms.

During this period, too, Willard's effectiveness at home and abroad was diminished by her rapidly failing health. Worn down by a whirlwind speaking schedule, she died in New York City early in 1898, at the age of fifty-eight, while waiting to sail for England. Her death occasioned a tremendous outpouring of national grief. As her body was transported back to Evanston for burial, it was greeted by crowds of mourners at stops along the way. Obituaries compared her status to that of Queen Victoria. She was undoubtedly the most famous woman in America at the time of her death, and her eminent position was later cemented by the passage of Constitutional amendments prohibiting the sale of alcoholic beverages (1918) and granting the vote to women (1920), reforms that she was instrumental in bringing about.

Frances Willard was the best-known female public speaker that the United States had ever seen, and arguably no American woman to date has surpassed her in national and international renown. The roots of her success lie in her approach to public rhetoric. On the one hand, the keynote of Willard's oratory was always conciliation. She presented herself as a "womanly" woman, with the special spirituality, purity, and love of home and children that nineteenth-century ideologies of "woman's sphere" deemed appropriate for the sex (ironically enough, since she never married and had no children of her own). Thus women who feared to depart from accepted norms of female behavior did not feel threatened as they entertained her ideas. As Mattingly has shown, Willard and the temperance women who followed her lead also made heavy use of traditional cultural references, especially to the Bible and American history, to identify their reforms with accepted values. Willard also approached audiences gently, emphasizing that they could choose whether or not to embrace her positions, just as the WCTU allowed local chapters to decide which aspects of the national agenda, in addition to temperance, they wished to support.

On the other hand, Willard had a breadth of social vision equaled by very few American reformers. She connected temperance to a broad range of issues, in marked contrast, for example, to supporters of women's suffrage, who became more and more focused on a single issue over time. If temperance was a socially safe issue, bearing religious endorsement and an obvious connection with "home protection," Willard also passionately supported more radical causes, such as better treatment of prostitutes and women criminals, whose very existence "respectable"

women were supposed to ignore, and also women's suffrage and labor unionism, which had politically revolutionary implications. Thus listeners drawn in by Willard's conventionally feminine self-presentation might find themselves confronting surprisingly sweeping vistas of radical social change. Sociologist Janet Zollinger Giele states: "Particularly in the smaller towns, the WCTU was the thinking woman's organization, allied with a number of progressive causes."³

After Willard's death, the WCTU retreated to a position of supporting prohibition only, and younger women seeking reform outlets tended to look elsewhere. Speech communication scholar Karlyn Kohrs Campbell has speculated that the WCTU did not sustain Willard's reform agenda after her death because her rhetoric was too conciliatory and did not make strong converts of women once they were removed from her charismatic personal influence. But one social change that Willard advocated did endure. Above all, she not only spoke out herself on reform issues, but encouraged other women to do so. Willard continually defended women's right to speak in public, most coherently in her defense of women's preaching, *Woman in the Pulpit*. On the personal level, she promoted the speaking careers of her associates and gave them sincere encouragement and support. On the organizational level, she may have done more than any other nineteenth-century reformer to empower large groups of women to conduct political business and to make their voices heard.

Practical advice on how women can become effective speakers is given in a chapter in *Woman and Temperance* titled "How to Organize a WCTU" (excerpted here). Willard focuses on how to conduct the initial meeting of a group of women who will form a new WCTU chapter. She offers specific hints on how to structure a successful meeting and even provides an outline of a model opening speech (possibly echoing her earlier work as a rhetoric and composition teacher). She gives much attention to gauging the audience and avoiding any appearance of superior knowledge, along with canny advice on how to deal with obtuse or hostile questioners. Following this section in the chapter is one that gives similar advice on how to conduct a public rally for temperance at which both men and women will be present.

Willard's book *Woman in the Pulpit*, also excerpted here, is her most complete statement on women and rhetoric. Her argument centers on a defense of ministerial careers for women, still a radical idea opposed by most Christian denominations at the time, even though some ordained women were already serving. Perhaps she was influenced by her experience with well-known Methodist preacher Phoebe Palmer (p. 1085). Willard first attacks bans on female ministry based on Pauline injunctions concerning women's silence in church, as had many defenders of women's speaking before her, such as Margaret Fell and Sarah Grimké (pp. 748, 1045), although Willard appears to be unaware of their work. Willard then argues for the benefits women will bring to the ministry, and finally disposes of the objection that women ministers will not be fit mothers.

Typical of her conciliatory approach, Willard cushions this radical argument, presented in Chapters I–III, with an introduction comprising three letters from male

³Janet Zollinger Giele, *Two Paths to Women's Equality: Temperance, Suffrage, and the Origins of Modern Feminism* (New York: Twayne, 1995), p. 89.

ministers praising the project and four concluding chapters that present, respectively, many lengthy excerpts from the writings of male ministers supporting women's ministry, many lengthy excerpts from the writings of women ministers describing and defending their vocation, a critique of her argument by a male doctor of divinity, and a rebuttal of this critique by another male professor of religion. She thus surrounds herself with testimony on her behalf, implying that she would not be so arrogant as to defend a radical position alone, and also that she does not wish to diminish the authority of male ministers (since she calls on them for support, and even for criticism). Of the book's seven chapters, then, only three are entirely her words. What follows is a synopsis of Willard's three main chapters.

SUMMARY OF *WOMAN IN THE PULPIT*, CHAPTERS I-III

Our first excerpt begins with Chapter I: "The Letter Killeth." A literal reading of biblical texts enjoining women's silence in church might mean that they could not even sing in the choir. Willard implies that this view is as absurd as supposing that revolutionaries Martin Luther and George Washington violated texts against resisting earthly powers, or that slavery is defended by certain texts. Moreover, traditional male biblical exegesis is contradictory in that, whereas it insists on reading some texts very literally, it interprets others quite loosely. Willard gives examples, one of which has special value to her as a temperance leader: Literal exegesis ignores the text indicating that unleavened bread was served at the Last Supper, while attending rigorously to the text indicating that wine was served. Such contradictions can be corrected by encouraging women, too, to write interpretations of the Bible.

Male interpreters read texts literally where the texts appear to argue for female silence and subjection only because such a view of women is culturally current and also profitable to men. Readings informed by the various prejudices of the male exegetes have produced all kinds of harmful discords in the Christian Church. Willard sees a trend, however, toward more liberal readings. This is to be expected, since we see that literal readings made by the early Church leaders, even the most respected, are now exploded.

Willard next discusses various correctives to biblical interpretations that appear to contravene common sense. One is to compare texts from different biblical passages. Willard provides a table comparing texts on women, placing those that appear to limit women's participation in a context that makes them read more liberally. Another corrective is to read texts in light of the social customs that prevailed at the time they were written. Another remedy is to look carefully at the exact meanings of words used to describe women's activities in the early Christian Church. Willard gives further examples of readings in which literal and loose interpretations are irrationally mixed.

Women's rational and spiritual powers are clearly equal to those of men. Clerical opposition to women's ordination, then, may be due to fear of competition. (Our first excerpt ends here.)

Chapter II is titled "The Spirit Giveth Life." Although Christ called no woman to be an apostle, he owed his earthly existence only to God and a woman; he associated

with women throughout his ministry (Willard gives examples), and he gave to a woman the honor of announcing his resurrection. Also, women were present among the earliest Christian gatherings and received the Pentecostal fire of prophecy along with men. Clearly, then, Christ intended women, as well as men, to be his ministers on earth. To oppose women's ministry risks opposing the divine will.

Men have controlled the earth since ancient times (our second excerpt begins here), and when we see how white men behave toward all the other peoples of the earth, we see that they desperately need the corrective of a loving woman's vision. Even if no women were apostles, Protestants do not believe that today's ministers are the heirs of the apostles, so women's early absence from that role should be no bar to their ministry now. Male prejudice has deformed the Christian Church with celibacy, hierarchy, and oppression. Women's influence is needed to restore compassion. Men have warped the Church with empty ritual; women are needed to show how to live the faith. They are especially needed now that so many people have turned away from religion and dedicated themselves only to making money. People come more readily to hear a woman speaker.

Since both sexes must be saved, both sexes must preach. Male preachers have had much more success converting women than men; women preachers are needed to draw in the men. Most Christian denominations recognize this need, if not by ordaining women ministers, at least by increasing their scope of service in almost every other church office. (Our second excerpt ends here.) The women of today are more intelligent and pious than the Corinthians against whom Paul opined, and thus do not deserve similar silencing. Churches will be full again and both church and home prayer revitalized if women take an equal part in worship with men.

The oppression of women throughout society, which Elizabeth Cady Stanton and others are fighting, derives from mistaken clerical oppression of women within Christianity, which clearly violates the spirit of Christ's gospel. (Our third excerpt begins here.) Women's capacity for the ministry is suggested by their present success in other professions, by their effectiveness in speaking before large audiences on a variety of social issues, and by their academic triumphs (Willard gives examples). At the same time, women never have and never will neglect their beloved home duties. The Church loses a tremendous force for good by driving pious women into other areas of ministerial work, such as proselytizing for the WCTU. (Our third excerpt ends here.)

If male Church authorities continue to refuse to ordain women, women will ordain themselves (Willard wanted women to be formally ordained by established churches, and she was aware that some women threatened to form their own church if this did not happen, a move she resisted). WCTU evangelists now serve all over the world, expounding God's word to all walks of life, including downtrodden people whom the Church largely ignores. The Church should officially recognize such women, give them the benefit of its supervision, and enjoy the benefit of their spiritual power.

The women who can do this work are not exceptions. Many have such talents, and those who are not talented can easily be kept out, as the incompetent are

weeded out of all professions. Modern transportation makes ministry all over the world well within the physical capabilities of women.

Indeed, a change is coming, and men who oppose it are increasingly in the minority. Willard notes that she has no wish to offend the many men who support her position. She thanks men for educating women for the many learned professions they now practice, and she specifically praises coeducational Oberlin College, Northwestern University, and Garrett Biblical Institute (Northwestern's school of theology). She confesses that had it been possible when she was young, she would have liked to train for the ministry herself, and she urges young women who feel such a call to answer it now.

Chapter III is titled "The Earth-Born Argument." But can a woman minister be a good mother? Willard cites many examples of good mothers who have excelled in other professions. Moreover, the ministry is a particularly easy profession for a woman to reconcile with motherhood. She can easily find a substitute in the pulpit for the brief periods when she is incapacitated by pregnancy and childbirth. Women are healthier and stronger than people think, even when incommoded by today's absurd female fashions—which, it is to be hoped, will be sensibly modified now that more women are entering professions.

A wife and mother who is also a minister will be ideally suited to nurture her household. Her children will be poets and philosophers. At the same time, the trials and sacrifices of motherhood will open the mysteries of Christian love to her in ways few male ministers can ever experience. Hardened, materialistic male congregants will listen to the mother-minister because of their memories of their own loving mothers. Willard here inserts a lengthy quote from a woman minister confirming her points about the positive mutual influence between the roles of mother and minister but also pointing out that the mother-minister will need help with domestic chores if she is to give of her best to both family and congregation. Willard follows with another long quote from a temperance book by Senator Henry Blair, in which he argues for giving women the vote precisely because their role as mothers helps them see what the state needs. Willard suggests applying Blair's argument by making an analogy between voting and preaching.

(Our fourth excerpt begins here.) Male ministers appear to talk only to men. For the entire human family to be included in the pulpit address, women must preach. (Our fourth excerpt ends here.)

Selected Bibliography

Willard's autobiography, *Glimpses of Fifty Years, 1839–1889* (1889), provides interesting information on her development as a speaker and writer. *Woman and Temperance* was first published in Hartford in 1888; our excerpt is taken from this edition. No modern reprints of these works exist. *Woman in the Pulpit* was first published in Boston in 1888; our excerpt is taken from this edition. There is also a modern reprint (ed. Zenger, 1978). Many of Willard's speeches and other writings are available in the microfilm collection *Temperance and Prohibition Papers*, compiled by the WCTU, the Michigan Historical Society, and the

Ohio Historical Society; see *Guide to the Microfilm Edition of the Temperance and Prohibition Papers*, ed. Randall C. Jimerson, Francis X. Blouin, and Charles A. Isetts (1977). Six of Willard's speeches are collected in Richard W. Leeman's "*Do Everything*" *Reform: The Oration of Frances E. Willard* (1992), which also contains a helpful biographical introduction and analysis and notes on the speeches. Willard's speech "A White Life for Two" can be found in Karlyn Kohrs Campbell's collection, *Man Cannot Speak for Her, Volume II: Key Texts of the Early Feminists* (1989).

The standard biography of Frances Willard is Ruth Bordin's *Frances Willard: A Biography* (1986). Also helpful is Bordin's history of women's temperance efforts, which focuses on Willard and the WCTU, *Woman and Temperance: The Quest for Power and Liberty, 1873-1900* (1981, 1990). In *Two Paths to Women's Equality: Temperance, Suffrage, and the Origins of Modern Feminism* (1995), Janet Zollinger Giele helpfully compares the temperance and suffrage movements and their different, though effective, versions of feminism. Lori Ginzberg places the temperance movement in the larger context of women's benevolent activities before and after the Civil War in *Women and the Work of Benevolence* (1990). On the evangelical Christian religious background of the women's temperance movement, see Barbara Epstein's *The Politics of Domesticity* (1981) and Nancy Hardesty's *Women Called to Witness* (1984). For a history of the entire temperance movement from 1784 to 1980, see Jack Blocker, *American Temperance Movements* (1989).

Carol Mattingly's *Well-Tempered Women: Nineteenth-Century Temperance Rhetoric* (1998) analyzes the rhetorical strategies of Willard and other temperance speakers, provides a detailed account of the controversy with Ida B. Wells, and includes chapters on temperance fiction and on press coverage of the temperance movement; her bibliography on women and social reform is also helpful. For further analysis of Willard's rhetorical strategies, see also Bonnie Dow, "Frances E. Willard" (in *Women Public Speakers in the United States 1800-1925: A Bio-Critical Sourcebook*, ed. Karlyn Kohrs Campbell, 1993), and the chapter on Willard in Karlyn Kohrs Campbell's *Man Cannot Speak for Her, Volume I: A Critical Study of Early Feminist Rhetoric* (1989).

From *Woman in the Pulpit*

I. THE LETTER KILLETH

The First Congregational Church organized in New Jersey ordered its chorister "not to allow any females to sing in the choir, because Paul had commanded women to keep silence in the churches." This is the most illustrious instance, so far as I know, of absolute fidelity to a literal exegesis concerning woman's relation to public worship. By the same rule of interpretation, Luther and Washington must have treasured up unto themselves wrath against the day of wrath when, in church and state, they severally proceeded to "resist the power," for it is declared

(Rom. xiii.) that "whosoever resisteth the power resisteth the ordinance of God; and they that resist shall receive to themselves damnation." This anathema is based upon the statement that "there is no power but of God; the powers that be are ordained of God," and hence follows the command, marvellously sweeping and conclusive, "Let every soul be subject unto the higher powers." A similar degree of reverence for the letter furnished the argument upon which excellent ecclesiastical authority claimed the divine origin of African slavery, for does not Paul say, in Ephesians vi. 5, "Servants, be obedient to them that are your masters according to the flesh, with fear

and trembling, in singleness of your heart as unto Christ;" (and "bond-servants" is clearly the meaning as stated in the eighth verse).

Side by side with the method of exegesis which would enforce this literal view, and promulgated by the same class of exegetes, is another, which may be called the method of playing fast and loose, and which is thus illustrated:—

In the Sermon on the Mount (Matt. v.) there is a specific command not to strike back when one is struck; not to go to law; to give to him that asketh; not to turn away from him that would borrow; and to suffer people to be divorced for one cause only; yet every one of these precepts coming from Christ himself is specifically and constantly violated by pastors and people, and without penalty. In the Gospel of John (xiii.) Christ explicitly states one of the duties of his disciples in the following language: "Ye call me Master, and Lord, and ye say well: for so I am. If I then, your Lord and Master, have washed your feet, ye ought also to wash one another's feet. For I have given you an example, that ye should do as I have done to you." But I know of only one small sect that is loyal to this command.

In 1 Cor. vii., Paul sets forth a doctrine that, literally interpreted, certainly elevates celibacy above marriage and widowhood above remarriage, but exegetical opinion does not coincide with the great Apostle, neither does the practice of the church, else not one of its adherents would be alive to state the fact; nor have Protestant clergymen been known to manifest the least reluctance of conscience in performing the marriage ceremony in general, or in taking marriage vows upon themselves, nor has such reluctance become apparent when a widow was thereby involved in taking a second marriage vow.

In establishing the sacrament of the Lord's Supper, we know, beyond a peradventure, that Christ used unleavened bread. But while hundreds of disquisitions have been written to prove that he did *not* use unfermented wine, I have yet to learn of a Protestant exegete who prescribes it as our duty to furnish unleavened bread, or a pastor who provides it, and yet none dispute its presence at the table where the ordinance was instituted. Nevertheless, many of the same clergymen insist on fermented wine, "lest we should disre-

gard our Saviour's plain example and command, and put him to an open shame."

In 1 Tim. ii. 9, Paul says: "I desire . . . that women adorn themselves in modest apparel, with shamefastness and sobriety; not with braided hair, and gold or pearls or costly raiment;" and adds, "Let a woman learn in quietness with all subjection. But I permit not a woman to teach, nor to have dominion over a man, but to be in quietness. For Adam was first formed, then Eve." But our exegetes and pulpit expounders, while laying the most solemn emphasis upon the last part of this command as an unchangeable rule of faith and practice for womankind in all ages and in all places, pass over the specific commands relative to braided hair, gold, pearls, and expensive attire, and have a thousand times preached to women who were violating every one of them, without uttering the slightest warning or reproof.

In Genesis, the Lord says to Cain, the elder brother, speaking to him of Abel, "Unto thee shall be his desire, and thou shalt rule over him," but our exegetes do not find here divine authorization of an elder brother's supremacy, and yet they construe the same expression when the Lord speaks to Eve, as the assertion, for all time, of a woman's subjection to her husband; moreover, they do this in face of the explicit declaration that God said, "Let *us* make man in *our* image, after our likeness: and let *them* have dominion . . . so God created man in his own image, in the image of God created he him; *male* and *female* created he *them*."

Take the sixth chapter of 1 Cor. and note its explicit and reiterated commands to Christians never to go to law, beginning with Pauline vigor: "Dare any of you?" Where is the "sweet reasonableness" of gliding softly over these inspired mandates, and urging those of the eleventh chapter in the same epistle as though they formed part of a creed for the subjection of women? My brethren, these things ought not so to be.

In presence of these multiplied instances, and many others that might be named, what must a plain Bible-reading member of the laity conclude? For my own part, I long ago found in these two conflicting methods of exegesis, one of which strenuously insisted on a literal view, and the other played fast and loose with God's word

according to personal predilection, a pointed illustration of the divine declaration that "it is not good for man to be alone." We need women commentators to bring out the women's side of the book; we need the stereoscopic view of truth in general, which can only be had when woman's eye and man's together shall discern the perspective of the Bible's full-orbed revelation.

I do not at all impugn the good intention of the good men who have been our exegetes, and I bow humbly in presence of their scholarship; but, while they turn their linguistic telescopes on truth, I may be allowed to make a correction for the "personal equation" in the results which they espy.

Study the foregoing illustrations, and find in them one more proof of that "humanness of the saints," which is a factor in all human results. Given, in heredity and environment, an established theory of the subjection of woman, and how easily one finds the same in Paul's epistles; given an appreciation of the pleasantness of wine, and how naturally one dwells upon the duty of its use at the communion, to the exclusion of special thought about the duty of retaining anything so tasteless as unleavened bread; given the charm that men find in "stylish" dress, carefully arranged hair, and beautiful jewelry, as shown in the attire of women, and it becomes perfectly natural that they should not censure these manifestations, but expatiate, instead, upon the more pleasing theory of woman's silence and subjection. Given the custom of being waited on, and slavery is readily seen to be of divine authority; given the unpleasantness of washing people's feet, and that hallowed ordinance speedily passes into innocuous desuetude; given the fathomless quantity of unconscious selfishness still regnant in good men, and the heavenly precepts of the Sermon on the Mount become "largely tintured with oriental imagery, and not to be taken in their severely literal sense;" given in the dominant sex the quenchless love of individual liberty, and Luther finds a way of interpreting in harmony with his purpose texts which he cannot ignore, and Washington, in face of these same texts, is conscious that he does God's service; given the resistless force of attraction between man and woman, and Paul's special precepts about

celibacy are powerless as the proverbial straw in presence of the imperious Niagara.

From all of which considerations the plain wayfaring woman cannot help concluding that exegesis, thus conducted, is one of the most time-serving and man-made of all sciences, and one of the most misleading of all arts. It has broken Christendom into sects that confuse and astound the heathen world, and to-day imposes the heaviest yoke now worn by woman upon that most faithful follower of Him who is her emancipator no less than humanity's Saviour. But as the world becomes more deeply permeated by the principles of Christ's Gospel, methods of exegesis are revised. The old texts stand there, just as before, but we interpret them less narrowly. Universal liberty of person and of opinion are now conceded to be Bible-precept principles; Onesimus and Canaan are no longer quoted as the slave-holder's main-stay; the theory of unfermented wine as well as bread is accepted by our temperance people generally; the great Russian writer, Count Tolstoï, stands as the representative of a school that accepts the precepts of Christ's Sermon on the Mount with perfect literalness, and theologians, not a few, find in the Bible no warrant whatever for the subjection of woman in anything.

Exegesis is defined as being "especially the scientific interpretation of the Holy Scriptures." It is in no sense an inspired work, but grows in breadth and accuracy with the general growth of humanity. For instance, it seems to us almost incredible that St. Augustine "thought it his duty to guard especially the whole theory of the waters above the heavens," or that St. Ambrose declared that "the firmament is a solid vault, and the thunder is caused by the winds breaking through it," and taught that if the vault revolved this "water is just what is needed to lubricate and cool its axis." In like manner Tertullian and his disciples contended that lightning is identical with hell-fire, and adduced, in proof thereof, the sulphurous smell attending it. Scripture texts were made the basis of all this, and St. Augustine declared that "nothing is to be accepted save on the authority of Scripture, since greater is that authority than all the powers of the human mind."

Even in our own enlightened days, so great a

scholar as Dean Alford, in his commentary on the New Testament, has the following addition to the "Curiosities of Literature" (1 Cor. xi. 5), which is here given to show the straits to which a learned exegete is reduced when prejudice and literalism meet in his mind to produce a cyclone of absurdities:—

Woman, if she uncovers herself (that is, unveils) in such an assembly, dishonors her head, that is, *the man*, . . . by apparently casting off his headship, and if this be so, the Apostle proceeds, why not go farther and cut off her hair, which of itself is a token of this subjection? But if this be acknowledged to be shameful (it was a punishment of adulteresses), let the further decency of the additional covering be conceded likewise. Man is God's glory; He has put in him His Majesty, and he represents God on earth; woman is *man's* glory; taken from the *man*, shining not with light direct from God, but with light derived from man. . . . "For this cause," on account of what has just been said (in preceding verses), by which the subordination of woman has been proved, the woman ought to have power on her head (that is, *the sign of power or subjection*; shown by the context to mean a veil). . . . The token of power indicates being *under* power, and such token is the covering. Because of the angels, that is, because in Christian assemblies the holy angels of God are present and delighting in the due order and subordination of the ranks of God's servants, and by a violation of that order we should be giving offence to them.

Now, let any reasonable human being read this exegesis, and remember that two-thirds of the graduates from our great system of public education are women; that two-thirds of the teachers in these schools are women; that nearly three-fourths of our church members are women; that

through the modern Sunday-school women have already become the theological teachers of the future church; and that, *per contra*, out of about sixty thousand persons in our penitentiaries fifty-five thousand are men; that whiskey, beer, and tobacco to the amount of fifteen millions of dollars worth per year are consumed almost wholly by men; and then see if the said reasonable human being will find much mental or spiritual pabulum in the said learned exegesis. A pinch of common-sense forms an excellent ingredient in that complicated dish called Biblical interpretation, wherever it is set forth at the feast of reason, especially if it is expected at all to stimulate the flow of soul!

A reasonable exegesis could never so have stumbled. The modern impulse toward "real facts," which has already reconstructed the science of medicine, is already doing the same for the science of theology. In olden time the "quintessence of toads" was prescribed for the cure of cancer, a serpent's skin steeped in vinegar for toothache, and wrapping the patient in scarlet was the professional remedy for small-pox. Analogies not less grotesque prove that in the realm of exegesis the wildest fancies have in many instances usurped the throne of reason.

The devil's first argument with the Lord was based on a Scripture quotation, and in the meshes of a quotation he entangled Eve. But when a greater than Solomon was here, he answered Satan's "it is written" by his divine "Again it is written," thus teaching us to compare Scripture with Scripture.

Perhaps the difficulties in the way of literalism may be best set forth in tabulated form, showing the Bible's "it is written again":—

PAUL	OTHER SCRIPTURES	PAUL
<p><i>1 Tim. ii. 11.</i> "But I permit not a woman to teach, nor to have dominion over a man, but to be in quietness."¹</p>	<p><i>Judg. iv. 4, 5.</i> "Now Deborah, a prophetess, the wife of Lappidoth, she judged Israel at that time. . . . And the children of Israel came up to her for judgment."</p>	<p><i>Gal. iii. 28.</i> "There can be no male and female; for ye are all one <i>man</i> in Christ Jesus."</p>

¹"I permit not a woman to teach" is a plain declaration. But women constitute more than half the Sunday-school workers of our day. The literalist proves too much by his argument. Perhaps he solaces himself by keeping all the offices in his own hands,

PAUL	OTHER SCRIPTURES	PAUL
<p><i>1 Cor. xiv. 34.</i> “Let the women keep silence in the churches; for it is not permitted unto them to speak.”</p>	<p><i>Joel ii. 28, 29.</i> “And it shall come to pass afterward . . . that your . . . daughters shall prophesy, . . . and upon the handmaids will I pour out my spirit.”</p>	<p><i>1 Cor. xi. 5.</i> “But every woman praying or prophesying with her head unveiled dishonoreth her head.”</p>
<p><i>1 Cor. xiv. 35.</i> “It is shameful for a woman to speak in the church.”</p>	<p><i>Luke ii. 36–38.</i> “And there was one Anna, a prophetess, . . . which departed not from the temple, worshipping with fastings and supplications night and day. And coming up at that very hour she gave thanks unto God, and spake of him to all them that were looking for the redemption of Jerusalem.”</p>	<p><i>Phil. iv. 3.</i> “I beseech thee also . . . help these women, for they labored with me also in the Gospel.”</p>
<p><i>1 Tim. ii. 11.</i> “Let a woman learn in quietness with all subjection.”</p>	<p><i>Acts xviii. 26.</i> “Apollos . . . began to speak boldly in the synagogue. But when Priscilla and Aquila heard him they took him unto them, and expounded unto him the way of God more carefully.” [This seems to have been the first theological school.]</p>	<p><i>Rom. xvi. 3, 4.</i> “Salute Prisca and Aquila, my fellow-workers in Christ Jesus, . . . unto whom not only I give thanks, but also all the churches of the Gentiles.”</p>
<p><i>1 Cor. xiv. 34, 35.</i> Let them be in subjection, as also saith the law. And if they would learn anything let them ask their own husbands at home.”</p>	<p><i>Acts xxi. 9, 10.</i> “Now this man [Philip the Evangelist] had four daughters, virgins, which did prophesy. And as we tarried there many days” [<i>i.e.</i>, Paul and his company].</p>	<p><i>1 Cor. xi. 11.</i> “Howbeit neither is the woman without the man, nor the man without the woman in the Lord. For as the woman is of the man, so is the man also by the woman; but all things are of God.”</p>

for eye-witnesses can testify that not in Sunday-school conventions only, but in the great national conventions of public school teachers, where nine thousand women assemble, and less than one thousand men, the latter, under the subjection theory, into which they were drilled from the beginning, proceed to distribute the positions of “honor and profit” almost wholly among themselves. These things would be grotesque to look upon if they were not so sad, and laughable if they did not, in the minds of thoughtful women, fatigue indignation and exhaust pity. [Au.]

1 Cor. xi. 3.

“The head of every man is Christ; and the head of the woman is the man; and the head of Christ is God.”

Eph. v. 23.

“For the husband is the head of the wife, as Christ also is head of the church.”

John i. 1, 3.

“In the beginning was the Word, and the Word was with God, and the Word was God. All things were made by Him, and without Him was not anything made that hath been made.”

John xiv. 9.

“He that hath seen me hath seen the Father.”

Col. ii. 9.

“In Him dwelleth all the fullness of the Godhead bodily.”

John x. 30.

“I and the Father are one.”

Rom. xvi. 1.

“I commend unto you Phœbe our sister, who is a servant² of the church that is at Cenchreæ.” [The Epistle to the Romans was written from Corinth, and sent by Phœbe. The greatest of Epistles was carried from Corinth to Rome by a woman, a journey involving a sea-voyage, and a visit to a foreign country.]

²The word “servant” is more justly translated deaconess, or *ministra*. We find that Pliny writes (A.D. 104) that he selected two females, “who were called ministræ, mistresses,” for torture, to extract information against Christians. Prophetesses is equivalent to preacheresses. [Au.]

And yet, be it noted, the same theologians who would outlaw as unorthodox any one who did not believe Christ an equal member of that Trinity of which the Supreme Creator of the world is one (declaring Him to be “very God of very God,” etc.) do not only preach but practise the heresy that woman is in subjection to man,³ when Paul distinctly declares that her relation to man is the same as that of Christ to God.

Take the description of men’s babbling, tumult, and confusion, as given in the fourteenth chapter of 1 Cor., and imagine that a woman’s meeting had been therein described; would not the ages have rung with an exegesis harrowing to the soul of woman? But whoever heard this unseemly behavior of men referred to as the basis of the doctrine for man’s subjection to woman, or

³Mosheim, in his *History of Christianity*, makes this statement: “Every church was composed of three constituent parts: First, teachers, who were also intrusted with the government of the community, according to the laws; second, ministers of *each sex*; and third, the multitude of the people.” He also says: “The church had ever belonging to it, even from its very first rise, a class of ministers composed of persons of either sex, and who were termed deacons and deaconesses.” The eminent commentator Lange says: “It is clear that the early church was formed quite as much upon the *household model* as upon that of the synagogue.” [Au.]

as the basis of a binding rule of church discipline in reference to the conduct of the men in public worship?

How great a difference here we see,
’TwiXt Tweedle-dum and Tweedle-dee!

Reasoning from the present customs of oriental countries, we must conclude that places of worship, in the age of the Apostles, were not built as they are with us, but that the women had a corner of their own, railed off by a close fence reaching above their heads. It was thus made difficult for them to hear, and in their eager, untutored state, wholly unaccustomed to public audiences, they “chattered” and asked questions. Upon this light foundation behold a doctrine built that would subject and silence two-thirds of Christ’s disciples in the free and intelligent English-speaking world!

As woman’s prophesying (literally, “speaking forth”) is plainly authorized, let us inquire what this word means. Alford, who certainly does not lean to our side of the question, says: “The foretelling of future events was not the usual form which their inspiration took, but that of an exalted and superhuman teaching . . . the utterance of their own conscious intelligence informed by the

Holy Spirit." "The prophets give utterance in glowing and exalted but intelligible language to those things which the Holy Spirit teaches them, and which have the power to *instruct, comfort, encourage, rebuke, correct, stimulate their hearers.*"⁴ But more convincing still are Paul's own definitions of the word, 1 Cor. xiv. 3: "He that prophesieth speaketh unto men to edification and exhortation and comfort;" verse 4: "He that prophesieth edifieth the church." And in view of the foregoing statements, and the careful directions of the Apostle as to the manner of dress of women when they prophesied, or preached, 1 Cor. xi. 5, there can be no doubt that they *did* preach in the early church. But these points will hardly be emphasized as we could wish until women share equally in translating the sacred text. That they should do this is most desirable, and young women of linguistic talent ought to make a specialty of Hebrew and New Testament Greek in the interest of their sex.⁵ A returned missionary from China assures me that of four separate translations of the New Testament into Chinese, all change Paul's words, Phil. iv. 3, "I intreat thee, also, true yoke-fellow, help those women which labored with me in the Gospel," into "help those true yoke-fellows," etc., leaving out the idea of women altogether. A leading (male) missionary was asked the reason of this, and he naïvely replied, "Oh, it would not do, with the ideas of the Chinese, to mention women in this connection."

Who can tell what weight a similar motive may have had with transcribers of the New Testament in the uncultivated ages of the early church? Indeed, in translating the word elsewhere called "deaconess," and indicating a high office in the church, as "*servant*," when it applies to Phebe, evidence of this tendency is given.

⁴Grimm's *Lexicon*. [Au.]

⁵Instruction is now given to women in the theological seminaries named below: Oberlin College, Oberlin, Ohio; Boston University, Boston, Mass.; Garrett Biblical Institute, Evanston, Ill.; the Chautauqua School of Theology, Dean Wright, 38 Bromfield Street, Boston. Most Unitarian and Universalist schools of theology admit them also. The Society of Friends has no such institutions, but reports three hundred and fifty women ministers, who have all the privileges enjoyed by Quaker preachers who are men. [Au.]

Why not insist upon the deliverance "which seemed good unto the *Holy Ghost* and to us to lay upon you (the Gentiles) no greater burden than these necessary things—to abstain from meats offered to idols and from things strangled and from blood?" We are Gentiles, but surely our consciences would not be wounded by eating meat set before an East India idol, partaking of a chicken that had had its neck twisted, or of a steak so "rare" that blood was palpably present therein. Indeed, ministers are famous for doing some of these very things!

The same writers who exhaust the resources of language to deride the dogma of apostolic succession rigidly enforce that of the male priesthood, for which the Bible gives them just as little warrant. Their hierarchy is man-made from first to last. When Luther disavowed it, the deed was done forever; but the tendency of man's mind, unchecked by woman's, to run riot in the realm of force, is seen in the rank ecclesiasticism of the very church which to-day bears Luther's name. The call of the Apostles (whose supreme authorization, "whose soever sins ye remit they are remitted unto them, and whose soever sins ye retain they are retained," no Protestant minister claims to have received) was no clearer than that which came to the one hundred and twenty in the Pentecostal chamber, and in that number women were clearly and indisputably included.

The man who argues that, "Adam being first formed," woman should be in perpetual subjection to the one who, before she was created, was warned against eating of the tree of knowledge, who sinned by her side, and was dismissed with her from Eden, should remember that this literalness of rendering makes it his personal duty, day by day, actually to "eat his bread in the sweat of his face." The argument is a two-edged sword, and cuts both ways.

Time would fail me to tell of Miriam, the first prophetess, and Deborah, the first judge; of Hannah, whose answered prayer brought Samuel to be the hope and stay of a dejected nation; of Esther, the deliverer of her people; of Judith, their avenger; of the gracious group of Marys that clustered around her who was blessed among women; of Elizabeth, and Anna; of Martha, and those "daughters of Jerusalem" who lamented

while men crucified the world's Redeemer; of Lois and Eunice, who trained Timothy for the ministerial office; of "Tryphena and Tryphosa and the beloved Persis." Suffice it to say that these all stand forth the equal stewards with their brethren of God's manifold grace.

There are thirty or forty passages in favor of woman's public work for Christ, and only two against it, and these not really so when rightly understood. But, in the face of all these embodied arguments, it is objected that Paul specifies (in 2 Tim. ii. 2) men only as his successors: "And the things that thou hast heard of me, the same commit thou to faithful *men*, who shall be able to teach others also." But the word translated "men" is the same as that in the text, "God now commandeth *men* everywhere to repent," and even the literalists will admit that women are, of all people, "commanded to repent"! But here comes in again the "fast and loose" method of interpretation; for preachers almost never refer to the women of their audiences, but tell about "men," and what "a man" was and is and is to be. A most amusing instance of this one-eyed way of looking at an audience occurred in Georgia, where I once attended a meeting in the "week of prayer," and the good (young) Presbyterian pastor, in an audience of perhaps half a dozen men and seventy or more women, kept saying "brethren." When rallied upon this afterward, by a white-ribbon lady of his parish, he very seriously answered, "Certainly, I said 'brethren;' and if there had been no one present but women, I should have said 'brethren' still. I was so instructed in the theological seminary, and so I do." But it never occurred to this excellent young man, nor to his theological professors, that by parity of reasoning women should be included in every prerogative accorded to the "brethren" by the New Testament! Christ called no Gentile and no colored man, but this lack of a precedent has never been urged against either. In woman's case alone is it made to do duty, and we shall find later on that if he called anybody whatever, he called those belonging to the same class represented by his only earthly parent.

Much is made of the word "subjection" (in 1 Tim. ii. 11 and 1 Pet. iii. 1). But it occurs in another place where all members of the church are

meant, "Yea, all of you be subject one to another." That is, strive all to serve each other. The same word is in Eph. v. 21, and is applied to *men*: "Submitting yourselves one to another in the fear of God."

The New Testament has no record of a woman's meeting. That dreary institution is a witty invention of modern hierarchs. "They were *all* with one accord in one place" when Christ sent the promised Pentecost. A "female prayer-meeting" in those days was a species as unknown as "female religion" itself. Regenerate hearts are of the common gender, and, under the original dispensation of the Master, so are the ministers of the regeneration. It is left for Fulton Street prayer-meeting, with its modern Sanhedrin, to quench the spirit and to despise prophesyings unless uttered in a bass voice. A learned pastor wrote as follows in a scholarly exegetical treatise, "We do sometimes find a man's head on a woman's shoulders, but it is a great misfortune to her." Such an utterance from a man of intelligence and kindness would be a distinct form of blasphemy were he not too much the victim of denaturalizing theories to intend it otherwise than as a friendly warning to women of intellectual power. For such a view reverses nature's order. Life sleeps in minerals, dreams in vegetables, wakes in animals, and speaks in man. If it be a misfortune to a woman to have unusual reasoning powers, then it is better to dream than wake; then a tadpole is better off than a thinker, and a trilobite outranks both in the scale of being and of blessedness. All such utterances are bowlders in the rushing stream of thought; relics of that reign of force which hastens to be gone; fossils that will be pointed at with incredulity by the manhood of the Gospel Age now at our doors.

If they would be consistent, all ministers who accept the evolution theory—and a majority of them seem to have done so—must admit that not only was woman made out of better material than man (which they doubtless will cheerfully grant!), but that, coming last in the order of creation, she stands highest of all.

In life's prime and pride men like to quote "Adam was first formed, then Eve," but at the grave they are ready to declare that "man, born of woman, is of few days and full of trouble."

The whole subjection theory grows out of the one-sided interpretation of the Bible by men. God declares a fact that man in his lapsed estate will rule over woman; but God does not speak with approbation of this act, and the whole tenor of the Scriptures is to show that in Christ the world is to be restored to the original intent of its creation when "there shall be no more curse." Pushed to its logical conclusion, this literal theory of subjection proves too much, as it is illustrated by the passage, 1 Pet. v. 5: "Yea, all of you be subject one to another, and be clothed with humility." Eph. v. 21: "Submitting yourselves one to another in the fear of God."

A stream cannot rise higher than its source, and it is rank disloyalty to the race when any man asserts that the possession of unusual reasoning powers is a misfortune to a woman. As late as 1874, in the Sarah Smiley case, the Brooklyn Presbytery reaffirmed in the following language a decision of the General Assembly dating back to 1837: "This Presbytery having been informed that a woman has preached in one of our churches,⁶ on Sabbath, at a regular service, therefore, resolved: that the Presbytery feel constrained to enjoin upon our churches strict regard to the following deliverance of the General Assembly: 'meeting of pious women by themselves, for conversation and prayer,' we entirely approve. But let not the inspired prohibition of the great Apostle, as found in his Epistles to the Corinthians and to Timothy, be violated. To teach and to exhort, or to lead in prayer in public and promiscuous assemblies is clearly forbidden to women in the holy oracles."

A general and deep-seated peculiarity of human nature is illustrated in the foregoing "deliverance." The position, in fact (never formulated, of course, by any ministerial association, and probably not realized by our honored brethren), is just this: Christian women are at liberty to work in any way that does not interfere with ecclesiastical prerogative, and does help to build up the interests of the church, financially or spiritually. It is a whimsical fact that men seem comparatively willing that women should enter any profession except their own. The lawyer is

⁶Rev. Dr. T. L. Cuyler's. [Au.]

willing that they should be doctors, and the doctor thinks they may plead at the bar if they desire to do so, but each prefers to keep them out of his own professional garden-plot. This is true of ministers with added emphasis, for here we have the pride of sex plus the pride of sacerdotalism. "Does a woman think to rank with *me*?" That is the first question, and the second is like unto it as to its animus: "Does a woman think she has a right to stand with *me* in the most sacred of all callings?" But if the purest should be called to purest ministries, then women, by men's own showing, outrank them in actual fitness for the pulpit, and the fact is that woman's holiness and wholesomeness of life, her clean hands and pure heart, specially authorize her to be a minister of God. So much for the negative side. Now for the positive. . . .

II. THE SPIRIT GIVETH LIFE

. . . "We want the earth," is the world-old motto of men. They have had their desire, and we behold the white male dynasty reigning undisputed until our own day; lording it over every heritage, and constituting the only unquestioned "apostolic succession." Only one thing can end the dire enchantment we are under, and that is to know the truth, for truth alone makes free. And the truth of God, a thousand times repeated by the voice of history, science, and every-day experience, resounds louder to-day than in all preceding ages: "It is not good for man to be alone!" Suppose it be admitted that the dual-natured founder of Christianity, in whose character the force that smote the money-changers of the temple was commingled with the love that yearned to gather Jerusalem as a hen gathers "her chickens under her wings," chose as his apostles the only ones who in that barbarous age would be tolerated in preaching it. Be it remembered that Protestantism recognizes the apostles as having had no successors. Hence, any argument built on man's primacy as related to them and the manner of their choosing falls to the ground. It is curious, considering certain exegetical literalism, that their method of choosing by lot should not have been insisted upon as a part of the divine order!

In the revolt from Roman license, the clergy

early declared woman a delusion and a snare, banished her from the company of men who aspired to holiness, and, by introducing the denaturalizing heresy of a celibate clergy, made it impossible for the doctrine of God's eternal fatherhood to be so understood by the preacher that it should become vital in the hearer's heart. It is *men* who have defrauded manhood and womanhood, in the persons of priest and monk and nun, of the right to the sanctities of home; men who have invented hierarchies, enthroned a fisherman as God's vice-regent, lighted inquisitorial fires, and made the Prince of peace a mighty man of war. It is men who have taken the simple, loving, tender Gospel of the New Testament, so suited to be the proclamation of a woman's lips, and translated it in terms of sacerdotalism, dogma, and martyrdom. It is men who have given us the dead letter rather than the living Gospel. The mother-heart of God will never be known to the world until translated into terms of speech by mother-hearted women. Law and love will never balance in the realm of grace until a woman's hand shall hold the scales.

Men preach a creed; women will declare a life. Men deal in formulas, women in facts. Men have always tithed mint and rue and cummin in their exegesis and their ecclesiasticism, while the world's heart has cried out for compassion, forgiveness, and sympathy. Men's preaching has left heads committed to a catechism, and left hearts hard as nether millstones. The Greek bishop who said, "My creed is faultless, with my life you have nothing to do," condensed into a sentence two thousand years of priestly dogma. Men reason in the abstract, women in the concrete. A syllogism symbolizes one, a rule of life the other. In saying this I wish distinctly to disclaim any attack upon the clergy, any slighting allusion to the highest and holiest of callings; I am speaking only of the intolerant sacerdotal element that has handicapped the church from the earliest ages even until now, and which has been more severely criticised by the best element in the church than by any words that I have penned.

Religion is an affair of the heart. The world is hungry for the comfort of Christ's Gospel, and thirsty for its every-day beatitudes of that holiness which alone constitutes happiness. Men

have lost faith in themselves and each other. Boodlerism and "corners" on the market, greed of gain, passion for power, desire for drink, impurity of life, the complicity of the church, Protestant as well as Papal, with the liquor traffic, the preference of a partisan to a conscientious ballot, have combined to make the men of this generation faithless toward one another. The masses of the people have forsaken God's house, and solace themselves in the saloons or with the Sunday newspaper. But the masses will go to hear women when they speak, and every woman who leads a life of week-day holiness, and has the Gospel in her looks, however plain her face and dress may be, has round her head the sweet Madonna's halo, in the eyes of every man who sees her, and she speaks to him with the sacred cadence of his own mother's voice. The devil knew what he was doing when he exhausted sophistry to keep woman down and silent. He knew that "the only consecrated place on earth is where God's Spirit is," and that a Christian woman's heart enshrines that holy Guest more surely than many a "consecrated" pulpit.

Men have been preaching well-nigh two thousand years, and the large majority of the converts have been women. Suppose now that women should share the preaching power, might it not be reasonably expected that a majority of the converts under their administration would be men? Indeed, how else are the latter to have a fair chance at the Gospel? The question is asked in all seriousness, and if its practical answer shall be the equipping of women for the pulpit, it may be reasonably claimed that men's hopes of heaven will be immeasurably increased. Hence, one who urges the taking-off of the arbitrary ruling which now excludes woman from a choice portion of her kingdom may well claim to have manifested especial considerateness toward the interests of men.

The entrance of woman upon the ministerial vocation will give to humanity just twice the probability of strengthening and comforting speech, for women have at least as much sympathy, reverence, and spirituality as men, and they have at least equal felicity of manner and of utterance. Why, then, should the pulpit be shorn of half its power?

To the exegesis of the cloister we oppose that

of common life. To the Orientalism that is passing off the stage, we oppose modern Christianity. In our day, the ministers of a great church⁷ have struck the word "obey" out of the marriage service, have made women eligible to nearly every rank except the ecclesiastic, and are withheld from raising her to the ministerial office only by the influence of a few leaders, who are insecurely seated on the safety-valve of that mighty engine, Progress. In our day, all churches, except the hierarchical Presbyterian, Episcopal, and Roman Catholic, have made women eligible as members of their councils, leaders in their Sunday-school systems, in several cases have set them apart to the ministry, and in almost all have opened their pulpits to them; even the slow-moving Presbyterian having done this quite generally in later years, and the Episcopal, in several instances, granting women "where to stand" in its chapels, outside the charmed arc of its chancel-rail. . . .

"Behold, I make all things new;" "the letter killeth, the spirit giveth life." These are his words, who spake not as man speaketh; and how the letter killeth to-day, let the sectarianism, the sacerdotalism, and the woman-silencing of the church bear witness. The time has come when those men in high places, "dressed in a little brief authority" within the church of Christ, who seek to shut women out of the pastorate, cannot do so with impunity. To-day they are taking on themselves a responsibility in the presence of which they ought to tremble. To an earnest, intelligent, and devout element among their brethren they seem to be absolutely frustrating the grace of God. They cannot fail to see how many ministers neither draw men to the Gospel feast, nor go out into the highways and hedges seeking them. They cannot fail to see that, although the novelty of women's speaking has worn off, the people rally to hear them as to hear no others, save the most celebrated men of the pulpit and platform; and that especially is it true that "the common people hear them gladly." The plea, urged by some theologians with all the cogency of physiological illustration, that woman is born to one vocation, and one alone, is negated by her mag-

⁷The Methodist Episcopal, with two millions of members. [Au.]

nificent success as a teacher, a philanthropist, and a physician, by which means she takes the part of foster-mother to myriads of children orphaned or worse than motherless. Their fear that incompetent women may become pastors and preachers should be put to flight by the survival of the church, in spite of centuries of the grossest incompetency in mind and profligacy in life, of men set apart by the laying-on of hands. Their anxiety lest too many women should crowd in is met by the method of choosing a pastor, in which both clergy and people must unite to attest the fitness and acceptability of every candidate.

Formerly the voices of women were held to render them incapable of public speech, but it has been discovered that what these voices lack in sonorosity they supply in clearness, and when women singers outrank all others, and women lecturers are speaking daily to assemblies numbering from one to ten thousand, this objection vanishes.⁸ Lack of special preparation is but a temporary barrier. When we see Agnata Ramsay, an English lady but twenty years old, carrying off the Greek prize from the students of Cambridge University, Pundita Ramabai mastering Sanskrit and four other languages, and Toru Dutt, another high-caste Hindu, writing choice verses in French and English before she was twenty-one; when we study the consensus of opinion from presidents of universities as to the equality and even the precedence of the girls in scholarship, we see how flimsy is this argument.

But some men say it will disrupt the home. As well might they talk of driving back the tides of the sea. The mother-heart will never change. Woman enters the arena of literature, art, business, what you will, becomes a teacher, a physi-

⁸It is probably no more "natural" to women to have feeble voices than it is for them to have long hair. The Greek priests of the East, not being allowed to cut their hair, wear it braided in long cues, even as our forefathers wore theirs. "Nature" has been saddled with the disabilities of women to an extent that must make the thoughtful ones among them smile. The truth is clearly enough proved from the analogies of Creation's lower orders that this gracious and impartial dame has given woman but a single disability, viz: she can never be a father; and this she has offset by man's single disability, he can never be a mother. Ignorance, prejudice, and tyranny have put upon her all the rest, and these are wearing off with encouraging rapidity. [Au.]

cian, a philanthropist, but she is a woman first of all, and cannot deny herself. In all these great vocations she has still been "true to the kindred points of heaven and home;" and everybody knows that, beyond almost any other, the minister is one who lives at home. The firesides of the people are his week-day sanctuary, the pulpit is near his own door, and its publicity is so guarded by the people's reverence and sympathy as to make it of all others the place least inharmonious with woman's character and work.

When will blind eyes be opened to see the immeasurable losses that the church sustains by not claiming for her altars these loyal, earnest-hearted daughters, who, rather than stand in an equivocal relation to her polity, are going into other lines of work or taking their commission from the evangelistic department of the Woman's Christian Temperance Union? Or are they willing that woman should go to the lowly and forgotten, but not to the affluent and powerful? Are they willing that women should baptize and administer the sacrament in the zenanas of India, but not at the elegant altars of Christendom? Are they aware that thousands of services are held each Sabbath by white-ribbon women, to whom reformed men and their wives have said: "We will come if you will speak. We don't go to

church, because they have rented pews, and because we cannot dress well enough; but we'll come to hear you"? Have they observed that W.C.T.U. halls, reading-rooms, and tabernacles for the people are being daily multiplied, in which the poor have the Gospel preached to them? Do they know that the World's W.C.T.U., with Margaret Bright Lucas, of England, at its head, is steadily wending its way around the globe, and helping women to their rightful recognition as participants in public worship and as heralds of the Gospel? . . .

III. THE EARTH-BORN ARGUMENT

. . . The average preacher almost never mentions women. "A man must do so and so;" "when a young man starts out in life his aim must be thus and thus;" "a youth should trust his father's God"—this method of discourse is familiar to women's ears as the Doxology or Benediction. But when women themselves speak, they represent not world-force so much as home-force; the home includes both man and woman, youth and maiden, boy and girl; hence it is natural to women to make all feel themselves included in the motherly utterance that not only remembers but recognizes all.

From *Woman and Temperance*

Chapter XXXV

How to Organize a W.C.T.U. How Ought a Local W.C.T.U. to Conduct a Public Meeting?

I. THE PRELIMINARIES

These are of two kinds: First, Notices to the public. Second, Opening exercises.

Your notices should be printed in all the local papers at least one week beforehand, and sent to each pulpit on the Sabbath previous. The following form is recommended:

To the ladies of ——— :

The National W.C.T.U. has twenty-five auxiliaries, and is the largest and most influential society ever composed and conducted exclusively by women. It has nearly three thousand local auxiliaries and hundreds of juvenile organizations. It is a lineal descendant of the great temperance crusade of 1873-4, and is a union of women from all denominations, for the purpose of educating the young, forming a better public sentiment, reforming the drinking classes, transforming by the power of Divine grace those who are enslaved by alcohol, and removing the dram-shop from our streets by law.

Mrs. _____ of _____, duly authorized by _____ W.C.T.U. to undertake this work, will speak in _____ on _____ at _____ o'clock on the history, aims, and methods of this society. All ladies are earnestly requested to attend. The presence of pastors is respectfully invited.

On the same slip put the following:

ATTENTION, BOYS AND GIRLS!

You have a friend who would like very much to meet and talk with you at _____ on _____ at _____ o'clock. She will show you some interesting experiments, blackboard exercises and charts. Please come, and we will try to organize a Band of Hope. Yours for clear heads and true hearts.

Mrs. _____

This should be sent to Sunday-schools and public schools as well as to pulpit and press. It is a false—let us rather say an ignorant—delicacy which hesitates to give full information through all legitimate channels, of the time, place, and object of any attempt to build up Christ's kingdom by benefiting the race for which he died.

But our workers have gone hundreds of miles to form a local union only to find a single stray line in the corner of one newspaper as the only notice given, or a brief mention at a rainy Sunday morning service their only herald. Not thus does the enemy permit his opportunities to go by default.

Second, The opening exercises. Let these be informal, but full of earnestness. Many a time have I seen the devotional spirit frozen out by the mechanical air of the leader, added to the slow process of hunting up and distributing hymn books, waiting for the organ key to be sent for; persuading some reluctant musician to come forward, and so on to the doleful climax of failure. Suppose you just omit all that—come forward at once with some pleasant allusion to a familiar hymn as "one of the special favorites in our work," strike up yourself, or have some one ready to do so without loss of time. As to Scriptural selections, I could spend a whole day exhibiting the choice cabinet of jewels in delightful variety and marvelous adaptation to our needs, which the past years of study have disclosed. As I listen to our women, East and West, in local meetings and conventions, I am impressed by

none of their beautiful gifts so much as that they are indeed workmen who need not be ashamed, rightly dividing the Word of God. From Mrs. Leavitt of Cincinnati, with her "Saloon Keeper's" Psalm (the tenth), to Mrs. Carhart of Iowa, reading Miriam's Song at the jubilee in June; whether it be Sanballat, Gideon's Band, Deborah and Barak, Queen Esther, Joel (second chapter), or the Prodigal Son, and Good Samaritan, our workers have proved themselves mighty in the Scriptures ever since those wondrous school days when they learned to read their Bibles in the grog-shops of the land. Their "Crusade Psalm" (the 146th) is unrivaled for expository use. It is capable of being wrought into a delightful evening's "Bible Reading," but this must be greatly abridged in your opening exercises. Suppose you study its ten verses for the purpose of finding our bugle call, our key word, exhortation, basis, complete plan of work, prophecy, and philosophy, and song of jubilee—for all of these and vastly more are there!

If a pastor is present ask him to offer prayer.

II. THE ORGANIZATION

And now, with preliminaries arranged, the spirit of praise and prayer evoked, a secretary *pro tem.* appointed to keep the important record of "first things," and a group of women gathered around you in home or church parlor, what are you to say and do that they shall love our cause and work with us?

First, Don't take too much for granted. Don't think because these are women of general intelligence and Christian experience they are also clear in their respective minds as to the history, mystery, and methods of the W.C.T.U. On that subject you had better take it for granted they are outside barbarians. At least I was of this description when the crusade of 1874 struck the classic suburb of Evanston. Fancy the ignorance of one who had never, that she knew of, seen a saloon and yet had lived for nearly twenty years within a few miles of Chicago. Imagine the illiteracy that had never once laid eyes upon a temperance paper nor heard the name of J. N. Stearns. Conceive of the crudity that led me in my sober senses to make a bee line to Boston, that I might

learn of Dr. Dio Lewis the whole duty of a W.C.T.U. woman, and for the same reason to Portland that I might sit at the feet of Neal Dow.

But all this is hardly more absurd than the revelation of failure (after I thought myself a veteran in our ranks) made to me the most unwittingly by a dear old lady down in Delaware, who, after I had talked an hour by the clock on the "Aims and Methods of the W.C.T.U." said in a droll soliloquy, as she scrawled her name upon my membership card: "I'm sure I don't know what she wants us to do, but I reckon it's a good deal in temperance work as it is in goin' to prayer meetin' of a dark night—I can't see but a step to a time, but when I've taken one step, why I'm there and the lantern's there too, and we just go along to the next. So if the Lord has got temperance work for me to do he'll give me light to do it by." Learn then, dear temperance workers, that in this day of specialists you are safe in assuming that your group of good women have minds as vacant as a thimble, and about as much expanded on the scope and working and laws of the W.C.T.U. Their interest is general, not specific; they have come on purpose to find out what it is your business (not theirs) to know. Therefore, take nothing for granted save that each of them is fitted out with brain and heart and conscience on which you are to act by knowledge, sympathy, conviction.

Second, Don't assume the role of Sir Oracle. Teach without seeming to do so. Carefully skip around all such "hard words" as "Take notice," "I call your attention," "Do you understand?" and on no account conclude a sentence with that irritating grammatical nondescript "See?" Put yourself in the attitude of a learner along with the rest. Thus your style will be suggestive and winsome rather than authoritative and disagreeable. I shall never forget Bishop Warren's opening words to a room full of young people in a southern school. He stood before them with a face wise, kindly, and benignant, and gently called them "Fellow students."

Third, Don't despise the day of small things. You have no reason to be discouraged because your audience is small. I have organized seventy women into a weak society and seven into a strong one. Well do I recall a winter afternoon in 1870, when, complying with an invitation previ-

ously given by my first Bible class teacher (of auld lang syne), Mrs. Governor Beveridge, as we call her now, half a score women of Evanston went to a missionary meeting in that lady's parlor. Its object was to organize a Woman's Foreign Missionary Society, and though I had traveled in several Oriental countries, and as a tourist seen something of evangelistic work there, I found myself rudimentary in knowledge beside one who had made the subject a specialty and brought Mrs. Willing's thoroughness of grasp to the theme of woman's martyrology in lands unsunned by Christ. Less than a dozen names were that day enrolled to form our local auxiliary. A dozen years have passed, and through the influence—direct and indirect—of this society, nearly forty young people have gone out from Evanston to the foreign field, to say nothing of thousands of dollars gathered and dispensed through its treasury.

Fourth, Don't fail thoroughly to premeditate your "impromptus." The Holy Spirit seems better pleased to inspire the process of reflection and composition than to atone for what Miss Ophelia called "shiftlessness," by an eleventh hour inspiration. We want no scattering fire in our public utterances, but the sober second thought of your brightest and most studious hours. As a general outline speech I would offer the following:

1. Very brief allusion to the origin and progress of temperance movements, with earnest acknowledgment of what has been done by the Church, the Washingtonian movement, Good Templars, Catholic Total Abstinence Society, etc.
2. Brief and pictorial (not abstract) account of the Woman's Crusade.
3. Organization as its sequel—origin of National W.C.T.U., at Chautauqua in 1874.
4. Growth of the Society in the United States, in Canada, England, and elsewhere, evolution of its work, number and variety of its departments; notwithstanding this general uniformity, the National like a photograph of imperial size; the State a cabinet, the local a *carte de visite*.
5. Why we have superintendents instead of committees to insure individual responsi-

bility. Illustrate by blackboard with our departments written out.

6. Reasons why women should join us. I have often given these in anecdotal form, telling just what women, old and young, grave and gay, had said to me about the convictions resulting from their own observation and experience which had led them into temperance work.
7. Appeal from considerations embodied in our motto 1. For God; 2. For home; 3. For native land.

This address, mixed with the Word of God and prayer, both in its preparation and recital, should be followed by a humble petition for His blessing.

Fifth, Don't fail to suit the action to the word. Ask for a motion to organize, stating it in due form and requesting any lady who has the matter at heart to make it. Get a second to the motion and make a few incidental remarks about the importance of that etiquette of assemblies which we call parliamentary usage. Recommend them to buy Roberts' Rules of Order, and learn a little of it at each meeting. When it comes to a vote after the parliamentary interval for remarks, mention that you are tired of your own voice and anxious to hear theirs, adding in your clearest tones, "All in favor of that motion will please to say aye," and let your final word be in the most decided sense a rising circumflex. You will be surprised to see the readiness with which you can thus call out the voices of the timid, partly out of good nature and partly because their musical perceptions lead them to put a climax to your incomplete inflection by their own. Do not go through the dumb show of "the lifted hand," nor the imbecility of "manifest it by the usual sign" (when there are several signs), but call out that most inspiring response, the human voice divine. Remember too, that thus you educate women out of the silence which has stifled their beautiful gifts so long. Next follows the form of constitution for local auxiliaries, which should be gone over rapidly, reading only the important points, and remarking that this is the form usually adopted and subject to revision at their regular meetings. (Mrs. Buell, our National Corresponding Secre-

tary, at 53 Bible House, New York, furnishes the best.) After a *viva voce* vote on this, read with emphasis our pledge. It includes total abstinence from wine, beer, and cider as a beverage. Explain about the annual membership fee of fifty cents; exhibit *Our Union-Signal*, stating price, and send out ladies previously appointed to solicit memberships and subscribers.

This moment is the crucial test. To it everything has pointed—failing to secure its objects you will fail indeed. But just at this point we are too often unpardonably heedless. What would be said of the angler whose awkwardness at the critical moment should frighten away the fish he was about to impale? Or the farmer who should forget his scythe when going to the hay-field? But how often have we seen such a stale, flat, and unprofitable half hour succeed the aforementioned address, that it seemed as though a premium was put upon a general stampede of the auditors. "Has any one a pencil to take names?" is a question equally pregnant and imbecile, while vandal hands have made a raid upon stray hymn-books, and their fly-leaves have been ruthlessly confiscated to take the place of the enrolling tablets, conspicuous for their absence. The best way is for the leader of the meeting to keep up a running fire of pleasant explanation or of reply to questions invited by her from the pews. Among the questions which her clear-cut preliminary statements should anticipate are: "Must we pay the membership fee when we give our names?" (No, not unless it is convenient.) "Can young ladies join?" (Most gladly.) "Does this mean all kinds of cider?" (It does.) "Then I cannot join." Well, you can at least attend the regular meetings of the union to follow this, in which the cider leaflets will be discussed, and become an associate if not a regular member (only the latter are eligible to office). It should be explicitly stated that by our new basis of organization, adopted at Washington, we are entitled in the National Convention (beside our State officers) to one delegate for each five hundred members, and as we desire for a large representation, we are anxious to enroll the names of all women who are sufficiently intelligent and devoted friends of temperance to take the pledge and pay the fee, even though they are unable to do any work or to meet with us reg-

ularly. The use to be made of the fee should be distinctly stated. Draw a fifty-cent coin on the blackboard—or make a drawing of the same—and have it hung up. Divide it into equal parts, representing that one of these remains to be used in the local work, the other going to the State treasury to extend the organization, save that one-fifth of it is taken out and sent to the National W.C.T.U. to carry on its work. Explain that the National has never had a salaried officer until within three years, and now but pays the current expenses of its Corresponding Secretary at the headquarters, 53 Bible House. Bring forward *Our Union-Signal* and solicit subscribers to the national organ; speak of the Hayes memorial portrait and exhibit the ten cent a share cards by which children so readily raise the five dollars requisite to secure a copy of the same. Give references to the National Temperance Publishing House, 58 Reade Street, New York, and D. C. Cook, Chicago, by no means forgetting our own literature department, conducted by Miss Colman, at 76 Bible House, New York. Distribute the Annual Leaflet of the National W.C.T.U., which has all needed information as to who and where are our superintendents of departments. If there is a piece of fine music prepared, or if you have an interesting speaker present besides yourself, it will be well to mention that attraction as a counter-inducement to those inclined to go.

But all these exercises, from your first bow to your closing *Benedicite*, must be marked *staccato*, and must be made brief and crisp, or your group of guests (for such, do not forget, they are) will file out and hie itself away. The change from one exercise to another, if effected with sufficient ingenuity to avoid jumbling, will help to hold your audience, but most will depend upon your compliance with the suggestion—

Sixth, Don't fail to keep your wit, wisdom, and patience well to the front. Somebody will come to you then and there will be *sotto voce* gossip, with legends and histories of societies previously organized and now fossiliferous, or the prayer-meeting killer of the neighborhood will stray in and begin his sanguinary work upon your feeble banking of a society; or Miss Con-tretemps, of the contrary part, will state her objections to the pledge, or Madame Pharisee

feel called upon to explain that she never was cursed with this demon in her own home and therefore can not, etc., etc., drowsily oblivious of the statement you—should—have made, that ninety per cent. of our members share the exemption which she, with small good taste, parades. Now is the time to prove what manner of spirit you are of. Does your courage rise with danger? Are you fertile in resource? You are being tested now as they test steam engine boilers. The force is applied—the tension noted—and the strong, well wrought metal holds its own, but the thin, flaw-eaten, gives way in its weakest part. Are you master of the situation? “He that ruleth his spirit is better than he who taketh a city.” Now is your chance for *mastery*. Many of these annoyances may be prevented by circulating the question papers before the meeting opens and asking that any query, comment, or criticism be written and placed in the question-box, to be circulated before the meeting is closed. This gathering up of questions, as well as the circulation of the various documents I have mentioned, should be attended to by the Secretary *pro tem.*—to be appointed at the opening of the meeting.

Seventh, Don't be precipitate in choice of standard bearers. In this choice will be involved the success or failure of your entire movement. You are trying to launch a life-boat, but if the captain be near-sighted and the mate a blunderer, your craft will swamp before it gets beyond the breakers. The worst of it is that you are at the mercy of the raw hands who must select these officers from their own newly-enlisted crew. In this choice the element of deliberation is important, for while you will be often urged to select the officers then and there, “for fear we cannot get the women together again,” my experience is that in the long run we get better results by a careful canvass of the pros and cons. Too often when we try to finish up the business of electing at first meeting, we discover, later on, that the finish was an extinguisher. From a recent confidential letter I make this extract:

A W.C.T.U. was recently organized in our village and there isn't a quarrel in the neighborhood that was not represented on our board of officers.

As you will naturally conclude, I do not expect the liquor traffic in that locality need stand in special fear of said society. This was away down east, but a remark made to me on the frontier has in it equal food for reflection. It was from a new worker, and was so simply said, and with so much of large-eyed wonder "for the cause," that if not so tragic I would have deemed it vastly comical: "Why, do you know, that until our new President was elected I did not know that anybody could be an officer at all and yet be such a poor one!"

Alas for the applications of this utterance, which all of us have seen! Now, while we cannot hope to avoid these calamities in the present partially developed condition of woman's work; while it is doubtless true that girls now acquiring the systematic training of our public schools and colleges will make the more efficient officers of our future work, it is nevertheless possible for us to secure, in a majority of instances, excellent services from the good women of the present. But here, as always, the preliminary part of the recipe is: "First catch your hare," and I am confident a choice specimen will be caught by appointing (by previous consultation) such a committee on nomination as will represent the different churches and social circles, and adjourning to a day not distant when said committee shall report. It should also include, among its

duties, the preparation of a plan of work for the society, and the organizer should furnish it with a model from our State or National minutes, with a leaflet of the National containing our list of superintendents of departments. In appointing the list of Vice-Presidents, insist on one from each denomination, including Catholics, Jews, etc., and appoint one "at large" to represent the great and kindly outside fraternity which has this cause at heart. Insist on a Superintendent of Temperance Literature, who shall also be Librarian of your Loan Library and agent for our journalistic organ. Make these Superintendents members of your Executive Committee—which should meet weekly, while the W.C.T.U. meets monthly and has a religious, literary, and business programme. Fix the government of both meetings at five—so that the exceeding deference which causes our good women to lose so much time rather than "act without the prescribed number," may not endanger their results of work. Wear the white ribbon yourself, and urge all to do the same. Close your meeting by singing "Blest be the Tie that Binds."

I have suggested that you follow this meeting at once by another for the children. This is of paramount importance for its own sake; also to conciliate public sentiment and give your new society that *sine qua non* of its existence, to say nothing of its success—something to do.

Alexander Bain

1818–1903

Adams Sherman Hill

1833–1910

Changing the emphasis of instruction in rhetoric from speaking to writing was a curricular reform of some moment in the nineteenth century. By the time James R. Boyd urged “this Radical Change” in his 1846 textbook on rhetorical criticism, the change was already under way. A few composition textbooks had already been published, but even without them, teachers were using the established texts by Campbell, Blair, and Whately for instruction in writing. By midcentury, elocution and composition were taught together in the rhetoric courses of the established colleges in the United States and at the universities in Scotland. Throughout Europe (with the exception of England) and the United States, the function and distribution of schooling were changing, along with the college curriculum.

Why was the development of instruction in composition so pressing? Mass education meant instruction in technical subjects and in the vernacular. Study in the vernacular meant a shift in language instruction toward grammar and modern literature and away from Latin and rhetoric. Then, too, the inclusion of technical studies reduced the curricular space for such traditional subjects as rhetoric. For the newer departments of learning (most of them departments of science), writing was more important than speaking, both as a pedagogical tool and as the practical expression of knowledge.

Rhetoric instruction thus split in two. Toward the end of the nineteenth century, several colleges were offering elocution as a separate course concerned with oratorical persuasion. Early in the twentieth century, many opened separate departments of speech and communication. Composition teachers, meanwhile, sought a rhetoric that focused on writing, that treated the modes of written discourse as extensively as the old rhetoric had treated the types and occasions for speech, and that acknowledged the new scenes of an educated person’s activity—the office and the laboratory—which, unlike the court and the pulpit, required writing more than speech.

The composition textbooks that emerged in the later nineteenth century attempt to apply the available elements of rhetoric—classical and contemporary (that is, belletristic and epistemological)—to writing. Most include a handbook of grammar as the basis for correct and clear composition. All included an analysis of style and usage, emphasizing perspicuity (or economy) and recommending judicious use of images for additional effect. There is some disagreement about the place of invention in rhetoric, though most writers believe that it doesn’t have one. The mental faculties are used to divide, if not to explain, the uses of logic (for reason) and imagery (for imagination). And the modes of discourse are divided into narration, description, exposition, and argumentation, with belletristic versions including poetry.

Genres of written discourse are rarely mentioned. The textbooks do not analyze, for example, the letter, scientific treatise, business report, political diatribe, or journalistic essay. These kinds of writing are presumably subsumed under the category of exposition, at least with respect to their forms. The exclusion of invention from most textbooks may also account for the absence of the genres. Whatever the reasons, the rhetoric of composition deals not with the actual uses and effects of written discourse but only with its most general categories and abstract features, illustrated most frequently by literary selections. Similarly, as historian of rhetoric Michael Halloran has impressively complained, the shift to writing also tended to be a shift from public to private discourse, though it need not have been, given the opportunities, at least in the United States, for public written expression.

The two brief textbook excerpts printed here give a sample of the ways that rhetoric was presented in composition classrooms. Both of these texts were quite popular, and their authors were recognized as leading authorities. Many similar examples could be adduced.

ALEXANDER BAIN

Alexander Bain, a founder of the modern scientific study of psychology, was born in 1818 and educated in Aberdeen, Scotland. He graduated from Marischal College in 1840. From 1841 to 1843, he held the chair of moral philosophy at Marischal. Bain was a close friend of John Stuart Mill and helped Mill with the revision of the latter's *System of Logic* (1843). In 1855, Bain published *The Senses and the Intellect* and in 1859, its companion volume, *The Emotions and the Will*. These books, which treat psychology in relation to physiology, became the chief textbooks in the field for the rest of the nineteenth century. In 1860, Bain was the first occupant of the newly formed chair of English and logic at the University of Aberdeen.

Influenced by the rhetorical theory of fellow Scotsman George Campbell, Bain developed a psychological theory of written composition. He adapts the theories of associationism and physiological psychology to composition in a rigorous and inventive way, identifying the chief mental operations as discrimination, retentiveness, and agreement. These operations are associative—they bring ideas together through contrast, contiguity, and similarity. In *English Composition and Rhetoric* (1866; excerpted here), Bain says that the key figures of speech may be classed in the same categories, suggesting that they are parallel to mental operations. It is a natural function of the mind, that is, to generate metaphor, metonymy, and antithesis. Moreover, the response to such figures is stimulation of the corresponding mental function. The reader, according to Bain, will be more easily instructed or moved when these basic operations are stirred up by the right kinds of images.

All behavior, Bain says in his psychology texts, is based on the desire to gain pleasure or avoid pain. The will seeks out actions that will lead to the desired end. Applied to rhetoric, this idea follows Campbell's similar observation that the speaker or writer should create an image of a future state and set forth a course of action that will, depending on the argument, lead to or away from that future state.

The “motivated sequence” based on Bain’s formulation is a standard feature of speech courses to this day.

Bain’s textbook offers a brief and practical means of applying the latest theory of faculty psychology to effective discourse. The excerpt printed here contains Bain’s succinct remarks on this topic; the rest of his text consists of examples and practical advice. Brief though it is, Bain’s book settles the definitions of the modes of discourse (description, narration, exposition, and persuasion) for future textbooks. Bain is also responsible for the idea that paragraph unity and topic sentences are important elements of writing. Through Bain’s followers in the United States—Adams Sherman Hill, Barrett Wendell, John Genung, and others—these ideas became standard parts of the English composition course.

ADAMS SHERMAN HILL

Adams Sherman Hill earned a B.A. (in 1853) and an LL.B. (in 1855) at Harvard University and pursued a career as a law reporter in New York, Washington, and Chicago before returning to Harvard in 1872 as assistant professor of rhetoric. In 1870, he became Boylston Professor of Rhetoric, a post he held until 1904. He wrote several books on rhetoric, including *The Principles of Rhetoric* (1878, revised extensively in 1895; excerpted here), *Foundations of Rhetoric* (1892), and *Beginnings of Rhetoric and Composition* (1903).

Hill insists, in *The Principles of Rhetoric*, that rhetoric is not a science but an art. It is a means of achieving effectiveness, not investigating effectiveness. Hill, like most other compositionists, rejects invention, arguing that the content of discourse comes from the subject matter and not from rhetoric itself. Rhetoric conveys the results of thought, but it is not itself a form of thought. Hill relies on the modes of discourse—narration, description, and argumentation—and he wishes to focus rhetoric on its proper subject, excluding all that is peripheral. Thus he limits rhetoric to style alone, to the clear and, if possible, forceful communication of ideas. His textbook has two topics only: grammar (which comes first in his pedagogy) and style.

Following Campbell, Hill defines proper usage as that which is reputable, national, and present. In so doing, he rejects grammatical and stylistic prescriptions that rely on logic, etymology, or “classical” standards of propriety and taste. He does not, however, reject prescription itself. Indeed, he presents a conventional prescriptive grammar and usage handbook, but he bases his rules on what he takes to be well-accepted current usage, citing contemporary writers like Benjamin Disraeli, Thomas Macaulay, George Eliot, and Ralph Waldo Emerson. As is often the case with such self-proclaimed descriptivists, most of the citations he takes from these exemplars are “errors”; that is, the arbiters of the reputable and the present are often not national, and they are generally wrong. To his credit, Hill does reject many fallacious arguments about the history and nature of language. He understands the principles of linguistic change—for example, the tendency for slang terms to become part of the reputable vocabulary—and he addresses a practical problem that teachers of rhetoric have yet to solve, namely, the conflict between descriptive linguistics and the need to teach usage.

Hill seems to agree with Bain, who remarks in the preface to his book that the composition teacher must limit his aspirations, because gaining a command of language is the work of a lifetime, only a tiny bit of which overlaps with the composition course. All composition textbooks, then, are accommodations to curricular and pedagogical exigencies, compromises between a rich tradition and the pressing needs of education. Even teachers who objected to the pedagogical form of this compromise were (and still are) constrained by the limits of the composition course. Fred Newton Scott, the insightful and progressive head of the University of Michigan's Department of Rhetoric in the first decades of the twentieth century, complains (in a 1922 essay) about the deadening effects of theme writing and error correcting in courses that use the textbooks discussed here.¹ But aside from encouraging teachers to exercise greater sympathy, Scott offers no new rhetoric that will point another way. The modes of discourse, the principle of paragraph unity, the standards of clarity and force, and the models drawn from literature all persist to our own time as the core elements of the composition textbook.

Selected Bibliography

Alexander Bain's *English Composition and Rhetoric* was originally published in Aberdeen in 1866. Our excerpt is from the second edition, London, 1869. Bain revised the book extensively for an 1888 edition in two volumes. Adams Sherman Hill's *Principles of Rhetoric* was first published in 1878. Our excerpt is from the New York edition of 1891.

James A. Berlin, in *Writing Instruction in Nineteenth-Century American Colleges* (1984), discusses most of the popular textbooks as contributions to rhetorical theory. He examines the influence of classical rhetoric and the recent British rhetorics on composition theories, reviews Emerson's "Romantic" rhetoric, and touches on the incipient theories of Fred Newton Scott. John Michael Wozniak's *English Composition in Eastern Colleges, 1850-1940* (1978) traces the history of college composition, listing and discussing courses, textbooks, and professors, and is an indispensable work for this period. Also indispensable is John Brereton's *The Origins of Composition Studies in the American College, 1875-1925: A Documentary History* (1995), which contains original documents such as curriculum reports, program descriptions, and essays by Hill and many others.

Robert J. Connors's "The Rise and Fall of the Modes of Discourse" (*College Composition and Communication* [1981]: 444-63) provides an especially clear picture of the genesis of a central idea. Connors covers this history more broadly in his excellent *Composition-Rhetoric: Backgrounds, Theory, and Pedagogy* (1997). Sharon Crowley focuses on the psychological genesis of composition's rhetoric in *The Methodical Memory: Invention in Current-Traditional Rhetoric* (1990). See also Nan Johnson, *Nineteenth-Century Rhetoric in North America* (1991).

The reference to Michael Halloran in the headnote is to "Rhetoric in the American College Curriculum: The Decline of Public Discourse," *Pre/Text* 3 (1982): 245-69. Halloran and Gregory Clark are the editors of the fine collection *Oratorical Culture in Nineteenth-Century America: Transformations in the Theory and Practice of Rhetoric* (1993). Halloran's essay "From Rhetoric

¹Fred Newton Scott, "English Composition as a Mode of Behavior," *English Journal* 11 (1922): 463-73.

to Composition: The Teaching of Writing in America to 1900” is in *A Short History of Writing Instruction from Ancient Greece to Twentieth Century America*, ed. J. J. Murphy (1990).

For more on Bain, see Paul C. Rodgers Jr., “Alexander Bain and the Rise of the Organic Paragraph” (*Quarterly Journal of Speech* 51 [1965]: 399–408); Ned Shearer, “Psychology as Foundation to Rhetoric: Alexander Bain and Association Psychology’s Relation to Rhetorical Theory” (*Western Speech Journal* 35 [1971]: 162–68); Andrea Lunsford, “Alexander Bain’s Contributions to Discourse Theory” (*College English* 44 [1982]: 290–300); and Gerald P. Mulderig, “Nineteenth-Century Psychology and the Shaping of Alexander Bain’s *English Composition and Rhetoric*” in *The Rhetorical Tradition and Modern Writing*, ed. J. J. Murphy (1982). In the Murphy collection, see also the chapters by Winifred Bryan Homer (on nineteenth-century Scottish universities), Nan Johnson (on Henry Day and two other compositionists), and Donald Stewart (on Francis Child and Fred Newton Scott).

For more on Hill, see Charles Paine, “The Composition Course and Public Discourse: The Case of Adams Sherman Hill, Popular Culture, and Cultural Inoculation” (*Rhetoric Review* 15 [1997]: 282–98); and Paul Reid, “The First and Fifth Boylston Professors: A View of Two Worlds” (*Quarterly Journal of Speech* 74 [1988]: 229–40).

Alexander Bain

From English Composition and Rhetoric

Preface

Numerous attempts have been made, and are still making, to methodize instruction in English Composition. In these attempts, two distinct efforts are made for the benefit of the pupils; to cultivate in them a copious fund of expression, and to render more delicate their discrimination of good and ill effects.

As regards increasing the pupils’ fund of expression, the English teacher can do comparatively little. The reason is obvious. The command of language is a grand total, resulting from the practice of a life; a small fraction of that total is all that can grow up within the limits of a Course of English Composition.

With respect to the other aim—the discrimination between good and bad in expression, the case is different. Much of the necessary instruction can be condensed into principles, and may be impressed by carefully chosen examples. The teacher is here a trainer, and can impart in a short compass, what, without him, would be acquired

slowly, if at all. It is this, accordingly, that I account his principal vocation.

All the principles and rules of composition that seem to me capable of affording aid or direction in the art, I have endeavoured to bring together, omitting the notice of such technical terms as are of little practical use. The fulfilment of this design has ended in a treatise more closely allied to Campbell’s *Philosophy of Rhetoric*, Blair’s *Lectures*, and Whately’s *Rhetoric*, than to the majority of recent works on English Composition.

I have divided the work into two parts.

Part First is what pertains to Composition in General. Under it the Figures of Speech are discussed. The leading Qualities of Style are next explained, and the conditions that they depend on stated. Under the same part, I have laid down the principles governing the structure of the Sentence and the Paragraph. I attach great importance to these principles.

Part Second comprises what is special to the Five leading Kinds of Composition, namely,

Description, Narration, Exposition, Oratory, and Poetry.

The subject of Description is perhaps the one that most signally attests the utility of Rhetorical precepts. In delineating any complicated object, there is a well defined method; which being attended to, the most ordinary mind may attain success, and being neglected, the greatest genius will fail.

Narrative includes the laws of Historical Composition, and these are dwelt upon with some degree of minuteness.

Exposition belongs to Science, and to all information in the guise of general principles. The methods to be observed in rendering expository style as easy as the subjects will allow, are worthy of a full consideration.

Oratory, or Persuasion, is the original subject of the Rhetorical art, and its rules were highly elaborated in ancient times. It presents great difficulties to the teacher. Besides the wide range of the matters involved in persuasive address, there is a complication with the Art of Proof, or Logic, that could not be relieved, until Logic itself was put on the more comprehensive basis given to it in the system of John Stuart Mill.

Poetry demands a full share of attention, both on its own account, and also as supplementary to the other departments, all which cherish, as a secondary aim, matters of interest to human feeling, while these are a primary aim in poetry.

In conclusion, I may state what I consider the best mode of employing such a work as the present in tuition.

The rules and principles are accompanied with examples; the number of these is still farther increased by the Analyzed Extracts in the Appendix. It is recommended, besides, that, in the course of the pupil's reading, the principles should be applied to point out the merits and demerits of select passages. A reading book may be used for the purpose.

To obtain suitable exercises for practice in writing English, is a prime consideration with the teacher. Many kinds of exercises have been suggested; and there must always be a difference of opinion as to the most suitable, if only on the consideration that what the teacher can do best is

for his pupils best. The composition of Themes involves the burden of finding matter as well as language; and belongs rather to classes of scientific or other instruction, than to a class of English. For an English exercise, the matter should in some way or other be supplied, and the pupil disciplined in giving it expression. I know of no better method than to prescribe passages containing good matter, but in some respects imperfectly worded, to be amended according to the laws and the proprieties of style. Our older writers might be extensively, although not exclusively, drawn upon for this purpose. Another exercise is the conversion of Poetry into Prose. Much value is also attached to Abridging or Summarizing; and this might be coupled with the opposite practice of filling up and expanding brief sketches.

The sustained practice of Rhetorical *parsing*, or the applying of the designations, principles, and rules of Rhetoric, to authors studied, whether in English or in the languages, would eventually form, in the mind of the pupil, an abiding ideal of good composition.

ABERDEEN, March 1866

Rhetoric

Rhetoric discusses the means whereby language, spoken or written, may be rendered effective.

In speaking there are three principal ends,—to inform, to persuade, to please. They correspond to the three departments of the human mind, the Understanding, the Will, and the Feelings. The means being to some extent different for each, they are considered under separate heads.

But as there are various matters pertaining to all modes of address, it is convenient to divide the entire subject into the two following parts.

Part First, which relates to Style generally, embraces the following topics:—I. The *Figures of Speech*, and the consideration of the *Number* and the *Order of Words*. II. The explanation of the various *Attributes* or *Qualities of Style*. III. The *Sentence* and the *Paragraph*.

Part Second treats of the different kinds of Composition.

Those that have for their object to inform the

UNDERSTANDING, fall under three heads—*Description*, *Narration*, and *Exposition*. The means of influencing the WILL are given under one head, *Persuasion*. The employing of language to excite pleasurable FEELINGS, coincides with the most characteristic function of *Poetry*.

The Will can be moved only through the Understanding or through the Feelings. Hence, there are at bottom but two Rhetorical ends.

Style in General

THE FIGURES OF SPEECH

1. *A Figure of Speech is a deviation from the plain and ordinary mode of speaking, with a view to greater effect. When, instead of saying, "that is very strange," we exclaim "how strange!" we use a figure. "Now is the winter of our discontent," is figurative; the word "winter" is diverted from signifying a season of the year, to express a condition of the human feelings.*

The ancient Rhetoricians distinguished between Figures and Tropes. A Figure, says Quintilian, is a *form* of speech differing from the common and ordinary mode of expression; as in the first example given above. A Trope is the conversion of a *word* from its proper signification to another, in order to give force, as in the second example. The distinction is more in appearance than in substance, and has no practical value.

The Figures are classed under a variety of names. The most common are Simile, Metaphor, Allegory, Antithesis or Contrast, Metonymy, Synecdoche, Epigram, Hyperbole, Interrogation, Exclamation, Apostrophe, Climax, Irony.

2. *A classification of the more important Figures may be based on the operations of Intellect, or Understanding, that they have reference to. Now, our intellectual powers are reducible to three simple modes of working.*

The first is spoken of under the names, DISCRIMINATION, or Feeling of Difference, Contrast, Relativity. It means that the mind is affected by change, as in passing from rest to motion, from cold to heat, from light to dark; and that, the greater and the more sudden the change, the

stronger is the effect. The figure, denominated *Antithesis* or *Contrast*, derives its force from this fact.

The second power is called SIMILARITY, or the Feeling of Agreement. This signifies that when *like* objects come under our notice, we are impressed by the circumstance, as when we see the resemblance of a child to its parent. The Figures named *Simile*, *Metaphor*, *Allegory*, are modes of increasing the force of style in this way.

The third power of the Intellect, is RETENTIVENESS, or Acquisition. The ability to retain successive impressions without confusion, and to bring them up afterwards, distinguishes mind; it is a power familiarly known by the name Memory. Now, the chief way that retentiveness or memory works is this:—impressions *occurring together*, become associated together, as sunrise with daylight; and when we are made to think of one, we are reminded of the accompaniments. We cannot think of the sun's rising, without remembering daylight, and the other circumstances that go along with it. Hence, the mental association of things *contiguously* placed, is a prominent fact of the mind; and one of its many consequences is that we often name a thing by some one of its adjuncts; as "the throne" for the sovereign, "gold" for wealth. Such is the nature of the *Metonymy*. . . .

THE PARAGRAPH

1. *The division of discourse next higher than the sentence is the Paragraph; which is a collection of sentences with unity of purpose.*

Like every division of discourse, a paragraph handles and exhausts a distinct topic; between the paragraphs, there is a greater break than between the sentences.

2. *There are certain principles that govern the structure of the paragraph, for all kinds of composition.*

Although each kind of composition has its own special laws, there are conditions essential to the effect of any succession of statements directed to a given purpose.

3. I. *The first requisite of the Paragraph is, that the bearing of each sentence upon what precedes shall be explicit and unmistakeable.*

Ambiguity of reference may arise within the sentence, but is still more likely to occur in a succession of sentences.

(a). *One condition of explicit reference is the employment of the proper Conjunctions.*

Conjunctions connect sentences as well as clauses. Those employed for the purpose are of the *coordinating class*. The others (*subordinating*) are used to relate a subordinate clause to a principal in the same sentence. . . .

19. III. *The opening sentence, unless so constructed as to be obviously preparatory, is expected to indicate with prominence the subject of the Paragraph.*

A paragraph describing the constituents of the British Government may begin thus:—“*The Government of Britain, called a mixed government, and sometimes a limited monarchy, is formed by a combination of the three regular species of government.*”

The two following sentences are the opening of Graham’s celebrated paper on Dialysis. “*The property of volatility, possessed in various degrees by so many substances, affords invaluable means of separation, as is seen in the ever-recurring process of evaporation and distillation. So similar in character to volatility is the Diffusive power possessed by all liquid substances, that we may fairly reckon upon a class of analogous analytical resources arising from it.*” Now the first sentence is preparatory to the introduction of the main subject (Diffusion) in the second; but as it stands it seems to propound *volatility* as the subject of the paragraph. The author might have said:—“It has been found with regard to the property of volatility, possessed, &c.” This would have given to the sentence its true character of a preparatory illustration. Then the next

sentence would have been:—“Now, so similar in character to volatility is the Diffusive power possessed by all liquid substances,” &c., thus propounding the main subject of the paragraph and of the paper.

20. IV. *A Paragraph should be consecutive, or free from Dislocation.*

Each paragraph has a plan dictated by the nature of the composition. According to such plan, every pertinent statement has a suitable place; in that place, it contributes to the general effect; and, out of that place, it makes confusion.

21. V. *The Paragraph is understood to possess Unity: which implies a definite purpose, and forbids digressions and irrelevant matter.*

This rule belongs to compositions that address the understanding, and is not strictly enforced in Poetry. Thus in Milton:

He scarce had ceas’d, when the superior fiend
Was moving towards the shore; his pond’rous
shield,
Ethereal temper, massy, large and round.
Behind him cast; the broad circumference
Hung on his shoulders like the moon, *whose orb*
Through optic glass the Tuscan artist views
At ev’ning from the top of Fesole,
Or in Valdarno, to descry new lands,
Rivers, or mountains, in her spotty globe.

The lines beginning “*whose orb*” are a pure digression, but as they give an interesting picture, they serve the object of the poet. See also the *Odyssey*, VIII. 521–30.

Adapting an old homely maxim, we may say, Look to the Paragraphs and the Discourse will look to itself; for although a discourse as a whole has a method or plan suited to its nature, yet the confining of each paragraph to a distinct topic avoids some of the worst faults of composition; besides which, he that fully comprehends the method of a paragraph, will also comprehend the method of an entire work.

Adams Sherman Hill

From *The Principles of Rhetoric*

Introduction

For the purposes of this treatise, Rhetoric may be defined as the art of efficient communication by language. It is not one of several arts out of which a choice may be made; it is *the* art to the principles of which, consciously or unconsciously, a good writer or speaker must conform.

It is an *art*, not a science: for it neither observes, nor discovers, nor classifies; but it shows how to convey from one mind to another the results of observation, discovery, or classification; it uses knowledge, not as knowledge, but as power.

Logic simply teaches the right use of reason, and may be practised by the solitary inhabitant of a desert island; but Rhetoric, being the art of *communication* by language, implies the presence, in fact or in imagination, of at least two persons,—the speaker or the writer, and the person spoken to or written to. Aristotle makes the very essence of Rhetoric to lie in the distinct recognition of a hearer. Hence, its rules are not absolute, like those of logic, but relative to the character and circumstances of those addressed; for though truth is one, and correct reasoning must always be correct, the ways of communicating truth are many.

Being the art of communication by *language*, Rhetoric applies to any subject matter that can be treated in words, but has no subject matter peculiar to itself. It does not undertake to furnish a person with something to say; but it does undertake to tell him how best to say that with which he has provided himself. "Style," says Coleridge, "is the art of conveying the meaning appropriately and with perspicuity, whatever that meaning may be"; but some meaning there must be: for, "in order to form a good style, the primary rule and condition is, not to attempt to express ourselves in language before we thoroughly know our own meaning."

Part I of this treatise discusses and illustrates

the general principles which apply to written or spoken discourse of every kind. Part II deals with those principles which apply, exclusively or especially, to Narrative or to Argumentative Composition,—the two kinds of prose writing which seem to require separate treatment.

BOOK II. CHAPTER IV FUNDAMENTAL PRINCIPLES

The four requisites of good composition.

Thus we have seen that to the efficiency of communication by language four things are necessary: Grammatical Purity (or Correctness),—the use of those expressions, and those only, which are accepted by the consentient practice of the speakers or writers of the present time who enjoy the best national reputation; Clearness (or Perspicuity),—the quality in style by which the meaning is conveyed to the person addressed, in appropriate words, as few as are compatible with completeness of statement, and arranged as nearly in the order of the thought as the language permits; Force,—the quality that selects the most effective expressions and arranges them in the most effective manner; and Elegance (or Beauty),—conformity to good taste.

While engaged in the act of composition, a writer should think little about Force, and not at all about positive Elegance; but he should constantly aim to make himself intelligible, sure that if he does not succeed in doing this, other merits will be of little avail, and that if he does succeed, other merits will be likely to come unsought. To this end, he should obtain as extensive a command of language as possible.

When discoursing in public, let your choice of words be neither tainted with indelicacy, nor tarnished with affectation. Let your word bear the express image of your thought, and transmit it complete to your hearer's mind. You need then give

yourself very little concern to inquire for the parish register of its nativity. Whether new or old, whether of Saxon or of Grecian parentage, it will perform its duties to your satisfaction, without at all impairing your reputation for purity of speech.¹

He should seek to conform to Swift's definition of a good style: "Proper words in proper places"; and to the rules by which "any one," as Locke says, "may preserve himself from the confines and suspicion of jargon":

My lord, the new way of ideas, and the old way of speaking intelligibly, was always, and ever will be, the same. And if I may take the liberty to declare my sense of it, herein it consists: (1) That a man use no words but such as he makes the signs of certain determined objects of his mind in thinking, which he can make known to another. (2) Next that he use the same word steadily for the sign of the same immediate object of his mind in thinking. (3) That he join those words together in propositions, according to the grammatical rules of that language he speaks in. (4) That he unite those sentences in a coherent discourse.²

The question remains whether, under the general considerations that have been suggested and the rules that have been laid down, any fundamental principle exists.

Spencer's Theory.

Herbert Spencer maintains that such a principle is to be found in what he calls "economy of attention." He thinks that the sufficient reason for choosing the best words for the purpose in hand and arranging them in the best order is, that the reader's attention, being thus subjected to the least possible strain from the machinery of language, can be more closely given to the thought; that, therefore, the best writer is he who, other things being equal, draws least upon a reader's mental powers and sensibilities.

Its insufficiency.

This theory is very well as far as it goes; but it does not lay sufficient stress upon the fact that a reader's

¹J. Q. Adams: Lectures on Rhetoric and Oratory, lect. xxv. p. 159. [Au.]

²Locke: Works, vol. iv. p. 430; Second Reply to the Bishop of Worcester. [Au.]

mental power is not a constant quantity; that, therefore, a writer who increases this power by stimulating mental action arrives, by a different road, at the same destination which is reached by another writer who by a wise economy prevents unnecessary waste. The superiority of the metaphor to the simile, and of a suggestive to an "exhaustive" style, lies, as has been shown, in each case—partly, at least—in the stimulating power of the former; and the same may be said of the superiority of "words that burn" over those of the cold understanding, and of an orderly over a loose arrangement.

The greatest genius of all is, of course, he who economizes a reader's attention at the same time that he stimulates his energies: Dante, for instance, "whose verse holds itself erect by the mere force of the substantive and verb, without the help of a single epithet,"³ but who "knew how to spend as well as to spare. . . . His simile of the doves (*Inferno*, v. 82 *et seq.*), perhaps the most exquisite in all poetry, quite oversteps Rivarol's narrow limit of substantive and verb."⁴

Unity with Variety.

Another principle which underlies all rhetorical rules is (as has been hinted more than once in the foregoing pages) the principle of all art,—the principle of Unity in design conjoined with manifold Variety in methods.

A great author is not one who merely has a *copia verborum*, whether in prose or verse, and can, as it were, turn on at his will any number of splendid phrases and swelling sentences; but he is one who has something to say and knows how to say it. . . . He writes passionately, because he feels keenly; forcibly, because he conceives vividly; he sees too clearly to be vague; he is too serious to be otiose; he can analyze his subject, and therefore he is rich; he embraces it as a whole and in its parts, and therefore he is consistent; he has a firm hold of it, and therefore he is luminous. When his imagination wells up, it overflows in ornament; when his heart is touched, it thrills along his verse. He always has the right word for the right idea, and never a word too much. If he is brief, it is because few words suffice; if he is lavish

³Rivarol, quoted by J. R. Lowell: Among my Books (Second Series), p. 38. [Au.]

⁴Lowell: *Ibid.*, p. 40. [Au.]

of them, still each word has its mark, and aids, not embarrasses, the vigorous march of his elocution.⁵

Not that a writer should aim to be the “perfectly endowed man” of whom Herbert Spencer⁶ dreams. “To be specific in style,” says Spencer, “is to be poor in speech”; but to be in no sense and in no degree “specific in style” is to be “faultily faultless,” to be devoid of that individuality which is at once the spring and the charm of genius. Emerson teaches a sounder doctrine in giving the “essential caution to young writers that they shall not in their discourse leave out the one thing which the discourse was written to say,” but shall each “obey” his “native bias.” “To each his own method, style, wit, eloquence.”⁷

In each rank of fruits, as in each rank of masters, one is endowed with one virtue, and another with another; their glory is their dissimilarity, and they who propose to themselves in the training of an artist that he should unite the coloring of Tintoret, the finish of Albert Durer, and the tenderness of Correggio, are no wiser than a horticulturist would be, who made it the object of his labor to produce a

[Au.]

⁶Philosophy of Style. [Au.]

⁷Letters and Social Aims, pp. 274–77; Greatness. [Au.]

fruit which should unite in itself the lusciousness of the grape, the crispness of the nut, and the fragrance of the pine.⁸

Shakespeare most nearly approaches Spencer’s ideal, because he speaks through many voices; but even in him, when he ceases to be Iago or Juliet, “a specific style” can be traced. The fact, however, that his individuality so often eludes discovery renders him to many persons a book rather than a man.

The Unity which every writer should seek is not the unity of perfection, but is that which comes from the conception of a discourse as a whole, and from the harmonious arrangement of the parts in conformity with that conception: the only Variety which can be of avail is that which naturally presents itself. A composition should be “a body, not a mere collection of members,”⁹ but it should be a *living* body. Its life must come, partly from the natural qualities of the writer, and partly from his acquired resources, whether of matter or of language—resources which it is not the province of Rhetoric to supply.

Herbert Spencer

1820–1903

Herbert Spencer was born in Derby, England. Educated at home by his father, a schoolteacher of liberal ideas and a scientific bent, and later briefly by his uncle, Spencer was mainly self-educated, focusing his study on engineering and mathematics. Abandoning plans to attend a university, he worked on and off for ten years as a railroad surveyor and engineer while pursuing his own reading and scientific experimentation. Spencer, a prolific writer, produced technical articles on mathematics and engineering and soon branched out to essays on government and public life. As an editorial writer for the *Economist* from 1848 to 1852, he became friendly with such luminaries as G. H. Lewes, Thomas Huxley, and George Eliot (to whom for a time he considered marriage). During this period, Spencer wrote his first book, the well-received *Social Statics* (1851) and the essay excerpted here, “The Philosophy of Style” (1852). A legacy from his uncle in 1853 freed him from the need to work, and he adopted the life of a private scholar and writer. Despite a collapse in 1855 that left him enervated and able to work only a few hours a day, Spencer produced an enormous number of articles and books on government, economics, education, psychology (*The Principles of Psychology* of 1855, used by William James as a textbook at Harvard), music, biology and other sciences, and, most of all, sociology. *The Study of Sociology* (1873) was a great popular success and was published serially in Britain and the United States. Spencer’s mastery of science, his philosophical orientation to evolution and its implications, and his ability to find those implications in a wide array of current issues made him well known and influential in many spheres. Indeed, during the last twenty-five years of his life, Spencer’s popular reputation as a scientist nearly rivaled Darwin’s. In the United States, Spencer’s influence on science education was quite strong, but he was also invoked in the schools as a champion of poetry and taste.

Spencer’s study of Jean-Baptiste Lamarck’s theory of evolution in 1839 was a turning point: He quickly came to see evolution as the key to all natural and human systems. Regarded as a founder of the discipline of sociology, Spencer believed that the scientific study of society depended upon developing an understanding of nature and society in evolutionary terms. It is Spencer (not Darwin) who coined the phrase *survival of the fittest*, and it is Spencer, too, who was probably the greatest promoter of social Darwinism, the idea that societies as well as species evolve toward greater organization and complexity. The main principle of evolution, for Spencer, is the change over time from homogeneity to heterogeneity—that is, to greater differentiation and individualization—in biology particularly, but in all other systems as well, from physics to art. As systems evolve toward greater complexity, they also gain greater coherence. For example, as organisms evolve, their parts (limbs and organs) become more specialized. The whole organism is less able to survive losing such a part, and of course the part cannot survive on its own. Evolution in society, in Spencer’s analogy, means greater specialization or individualization for each person. But here, too, the specialized individual contributes to and is dependent upon the larger—and now more complex—system. Thus, for Spencer, the developing function of an element in a system coexists with its increasing difference from the system.

In “The Philosophy of Style,” Spencer applies these ideas to literature and composition. His main theoretical tool is the principle of economy. This is not an entirely new idea, of course; it is a linear descendent of the idea of perspicuity so much emphasized by the critics and rhetoricians of the early eighteenth century. Spencer’s analysis of efficiency, however, is indeed new. The words and sentences that convey information require the reader to expend energy, Spencer explains. But just like any vehicle of transmission, language can work efficiently or inefficiently. To the extent that it works inefficiently, language requires additional energy from the reader, energy that would otherwise be used to process the message. Thus inefficient language “fatigues” the reader or otherwise saps the force of the message. As Fred Newton Scott puts it in his introduction to Spencer’s essay, “The value of style is determined by a kind of ledger account in which so much mental energy is credited to idea, so much debited to the bearer of the idea.”¹ Scott argues, however, that this explanation of Spencer oversimplifies his ideas. After all, says Scott, what seems like economy may be mere miserliness and not really effective. To judge style as economical, according to Spencer’s principles, requires an understanding of the organic whole to which it contributes.

Scott’s caution is well taken: The first part of Spencer’s essay adheres to the simplistic view of efficiency, and even Scott condemns some of Spencer’s points as ill-founded or even silly. For example, Spencer argues that the English phrase *a black horse* is more efficient than the French equivalent, *un cheval noir*, because the placement of the noun *cheval* raises in the mind images of horses of many colors or possibly one of the wrong color. This then requires mental energy to repair when the *noir* appears. In English, *black* raises only a generalized idea that is easily applied to *horse* thereafter. Scott points out that habitual use of one or another sequence obviates any such mistakes as Spencer imagines and, besides, that generalized concepts like “horse” don’t have such particulars attached to them. In the latter sections of the essay, however, Spencer shows a sensitive attention to audience and context—precisely what seems to be missing in the earlier chapters—as he deals with efficiency in poetry and examines the functions of art.

Spencer is not at all opposed to artful writing, to rhetorical flourish, or to poetry. He is at pains to claim that *good* poetry is good precisely because it follows the rules of economy in style. He is also modest about the usefulness of his rules. The great writer spontaneously knows how to use language well, says Spencer. Others less great may find the rules helpful for revising their efforts, but not for creating them. Despite Spencer’s own Romantic individualism and love of poetry, his principle of economy in style gave renewed impetus to the form-content split and influenced the growing mechanistic view of composition, particularly in the United States. The period of Spencer’s fame as a scientific sociologist and psychologist coincides with the growth of the rhetorics of professional writing (and what would eventually be technical writing) in the industrial era. And, toward the end of the nineteenth century, the principle of efficiency would be applied to composition teaching in general, emphasizing appeals to the psychological faculties, clarity and correctness, and the plain style.

¹Herbert Spencer, *Philosophy of Style*, ed. Fred N. Scott (1892), p. xix.

Selected Bibliography

Our excerpt of “The Philosophy of Style” is from the 1892 edition, bound as a book, with introduction and notes by Fred Newton Scott. The essay itself was first published in *Westminster Review*, October 1852. Spencer’s major works (none of which concern rhetoric or language, except peripherally) include *Social Statics* (1851), which applies his ideas about evolution to the development of individualism and independence. *Principles of Psychology* (1855) develops further Spencer’s analogy between biological, social, and psychological evolution. Spencer projected a systematic philosophy of evolution that extended to all branches of science. From this project came *First Principles* (1862), *Principles of Biology* (2 vols., 1864–67), *Principles of Sociology* (3 vols., 1876–96), and *Principles of Ethics* (2 vols., 1892–93). *Essays: Scientific, Political, and Speculative* (3 vols., 1891) provides a good sample of Spencer’s views on evolutionary theory in science, politics, and philosophy. See also *An Autobiography* (1904).

A brief introduction to Spencer’s work and its significance is the Twayne series’ *Herbert Spencer* by James G. Kennedy (1978). Thoemmes Press has issued facsimile editions of Spencer’s major works as well as *Herbert Spencer: Contemporary Assessments*, ed. M. W. Taylor (1996), with essays by John Dewey, William James, T. H. Huxley, and others. Marie Secor, in “The Legacy of Nineteenth Century Style Theory” (*Rhetoric Society Quarterly* 12 [1982]; 76–94), traces perspicuity from Campbell to Whately to Spencer and G. H. Lewes (who also attempted a scientific theory of style). Secor criticizes Spencer’s mechanistic language theory and contrasts the scientific view with the more literary one of De Quincey, J. H. Newman, and Walter Pater. A dry but helpful essay contextualizing Spencer is James Zappen’s “Scientific Rhetoric in the Nineteenth and Early Twentieth Centuries: Herbert Spencer, Thomas H. Huxley, and John Dewey,” in *Textual Dynamics of the Professions*, ed. Charles Bazerman and James Paradis (1991). E. D. Hirsch adopts and applies Spencer’s theories almost uncritically to his own theory of readability in *The Philosophy of Composition* (1977).

From *The Philosophy of Style*

PART I CAUSES OF FORCE IN LANGUAGE WHICH DEPEND UPON ECONOMY OF THE MENTAL ENERGIES

i. The Principle of Economy

1. Commenting on the seeming incongruity between his father’s argumentative powers and his ignorance of formal logic, Tristram Shandy says: —“It was a matter of just wonder with my worthy tutor, and two or three fellows of that learned society, that a man who knew not so much as the names of his tools, should be able to work after that fashion with them.” Sterne’s in-

tended implication that a knowledge of the principles of reasoning neither makes, nor is essential to, a good reasoner, is doubtless true. Thus, too, is it with grammar. As Dr. Latham, condemning the usual school-drill in Lindley Murray, rightly remarks: —“Gross vulgarity is a fault to be prevented; but the proper prevention is to be got from habit—not rules.” Similarly, there can be little question that good composition is far less dependent upon acquaintance with its laws, than upon practice and natural aptitude. A clear head, a quick imagination, and a sensitive ear, will go far towards making all rhetorical precepts needless. He who daily hears and reads well-framed sentences, will naturally more or less tend to use similar ones. And where there exists any mental

Edited by Fred Newton Scott.

idiosyncrasy—where there is a deficient verbal memory, or an inadequate sense of logical dependence, or but little perception of order, or a lack of constructive ingenuity; no amount of instruction will remedy the defect. Nevertheless, *some* practical result may be expected from a familiarity with the principles of style. The endeavour to conform to laws may tell, though slowly. And if in no other way, yet, as facilitating revision, a knowledge of the thing to be achieved—a clear idea of what constitutes a beauty, and what a blemish—cannot fail to be of service.

2. No general theory of expression seems yet to have been enunciated.¹ The maxims contained in works on composition and rhetoric, are presented in an unorganized form. Standing as isolated dogmas—as empirical generalizations, they are neither so clearly apprehended, nor so much respected, as they would be were they deduced from some simple first principle. We are told that “brevity is the soul of wit.” We hear styles condemned as verbose or involved. Blair says that every needless part of a sentence “interrupts the description and clogs the image;” and again, that “long sentences fatigue the reader’s attention.”² It is remarked by Lord Kaimes, that “to give the utmost force to a period, it ought, if possible, to be closed with that word which makes the greatest figure.”³ That parentheses should be avoided and that Saxon words should be used in preference to those of Latin origin, are established precepts. But, however influential the truths thus dogmatically embodied, they would be much more influential if reduced to something like scientific ordination. In this, as in other cases, conviction will be greatly strengthened when we understand the *why*. And we may be sure that a comprehension of the general principle from which the rules of composition result, will not only bring them home to us with greater force, but will discover to us other rules of like origin.

¹That is, in works purporting to be rhetorics. General theories of literary expression had been put forth by Goethe, Schiller, Schlegel, Schopenhauer, Hegel, Vischer, and many other writers on æsthetics. [F.N.S.]

²“Lectures on Rhetoric and Belles Lettres,” Lect. xi. [F.N.S.]

³“Elements of Criticism,” Chap. 18, § 2. [F.N.S.]

3. On seeking for some clue to the law underlying these current maxims, we may see shad-owed forth in many of them, the importance of economizing the reader’s or hearer’s attention. To so present ideas that they may be apprehended with the least possible mental effort, is the desideratum towards which most of the rules above quoted point. When we condemn writing that is wordy, or confused, or intricate—when we praise this style as easy, and blame that as fatiguing, we consciously or unconsciously assume this desideratum as our standard of judgment. Regarding language as an apparatus of symbols for the conveyance of thought,⁴ we may say that, as in a mechanical apparatus, the more simple and the better arranged its parts, the greater will be the effect produced. In either case, whatever force is absorbed by the machine is deducted from the result. A reader or listener has at each moment but a limited amount of mental power available. To recognize and interpret the symbols presented to him, requires part of this power; to arrange and combine the images suggested requires a further part; and only that part which remains can be used for realizing the thought conveyed. Hence, the more time and attention it takes to receive and understand each sentence, the less time and attention can be given to the contained idea; and the less vividly will that idea be conceived.

4. How truly language must be regarded as a hindrance to thought, though the necessary instrument of it, we shall clearly perceive on remembering the comparative force with which simple ideas are communicated by signs.⁵ To

⁴See the comment made by Mr. Wright, *infra*, § 13: “The definite product language is more or less isolated from the agency using it, and viewed more in relation to the reader’s than the writer’s mind.” A brief criticism of the general principle will be found in A. S. Hill’s “Rhetoric,” pp. 163, 164. [F.N.S.]

⁵This ingenious paradox rests upon an artificial distinction between language and other modes of expression. Language itself is but a system of verbal signs. What Spencer says is therefore virtually this: “Language is an inferior form of expression for ideas which are more easily expressed by other kinds of signs.” Language in one sense is indeed a “hindrance to the expression of thought,” and properly so; it forces vague and ill-defined thought back upon itself, compelling it to assume the organized form requisite to ordered verbal expression. [F.N.S.]

say, "Leave the room," is less expressive than to point to the door. Placing a finger on the lips is more forcible than whispering, "Do not speak." A beck of the hand is better than, "Come here." No phrase can convey the idea of surprise so vividly as opening the eyes and raising the eyebrows. A shrug of the shoulders would lose much by translation into words. Again, it may be remarked that when oral language is employed, the strongest effects⁶ are produced by interjections, which condense entire sentences into syllables. And in other cases, where custom allows us to express thoughts by single words, as in *Beware*, *Heigho*, *Fudge*, much force would be lost by expanding them into specific propositions. Hence, carrying out the metaphor that language is the vehicle of thought, there seems reason to think that in all cases the friction and inertia of the vehicle deduct from its efficiency; and that in composition, the chief, if not the sole thing to be done, is, to reduce this friction and inertia to the smallest possible amount. Let us then inquire whether economy of the recipient's attention is not the secret of effect, alike in the right choice and collocation of words, in the best arrangement of clauses in a sentence, in the proper order of its principal and subordinate propositions, in the judicious use of simile, metaphor, and other figures of speech, and even in the rhythmical sequence of syllables.

ii. Economy in the Use of Words

5. The greater forcibleness of Saxon English, or rather non-Latin English, first claims our attention. The several special reasons assignable for this may all be reduced to the general reason—economy. The most important of them is early association. A child's vocabulary is almost wholly Saxon. He says, *I have*, not *I possess*—*I wish*, not *I desire*; he does not *reflect*, he *thinks*; he does not beg for *amusement*, but for *play*; he calls things *nice* or *nasty*, not *pleasant* or *disagreeable*. The synonyms which he learns in

⁶"Strongest effects" is vague to the last degree. There may be hundreds of strong effects of all shades of complexity; very obviously not all of them can be produced by interjections. [F.N.S.]

after years, never become so closely, so organically connected with the ideas signified, as do these original words used in childhood; and hence the association remains less strong. But in what does a strong association between a word and an idea differ from a weak one? Simply in the greater ease and rapidity of the suggestive action. It can be in nothing else. Both of two words, if they be strictly synonymous, eventually call up the same image. The expression—It is *acid*, must in the end give rise to the same thought as—It is *sour*; but because the term *acid* was learnt later in life, and has not been so often followed by the thought symbolized, it does not so readily arouse that thought as the term *sour*. If we remember how slowly and with what labour the appropriate ideas follow unfamiliar words in another language, and how increasing familiarity with such words brings greater rapidity and ease of comprehension; and if we consider that the same process must have gone on with the words of our mother tongue from childhood upwards, we shall clearly see that the earliest learnt and oftenest used words, will, other things equal, call up images with less loss of time and energy than their later learnt synonyms.

6. The further superiority possessed by Saxon English in its comparative brevity, obviously comes under the same generalization. If it be an advantage to express an idea in the smallest number of words, then will it be an advantage to express it in the smallest number of syllables. If circuitous phrases and needless expletives distract the attention and diminish the strength of the impression produced, then do surplus articulations do so. A certain effort, though commonly an inappreciable one, must be required to recognize every vowel and consonant. If, as all know, it is tiresome to listen to an indistinct speaker, or read a badly-written manuscript; and if, as we cannot doubt, the fatigue is a cumulative result of the attention needed to catch successive syllables; it follows that attention is in such cases absorbed by each syllable. And if this be true when the syllables are difficult of recognition, it will also be true, though in a less degree, when the recognition of them is easy. Hence, the shortness of Saxon words becomes a reason for their greater force. One qualification, however, must not be

overlooked. A word which in itself embodies the most important part of the idea to be conveyed, especially when that idea is an emotional one, may often with advantage be a polysyllabic word. Thus it seems more forcible to say, "It is *magnificent*," than "It is *grand*." The word *vast* is not so powerful a one as *stupendous*. Calling a thing *nasty* is not so effective as calling it *disgusting*.

7. There seem to be several causes for this exceptional superiority of certain long words. We may ascribe it partly to the fact that a voluminous, mouth-filling epithet is, by its very size, suggestive of largeness or strength; witness the immense pomposity of sesquipedalian verbiage: and when great power or intensity has to be suggested, this association of ideas aids the effect. A further cause may be that a word of several syllables admits of more emphatic articulation; and as emphatic articulation is a sign of emotion, the unusual impressiveness of the thing named is implied by it. Yet another cause is that a long word (of which the latter syllables are generally inferred as soon as the first are spoken) allows the hearer's consciousness a longer time to dwell upon the quality predicated; and where, as in the above cases, it is to this predicated quality that the entire attention is called, an advantage results from keeping it before the mind for an appreciable time. The reasons which we have given for preferring short words evidently do not hold here. So that to make our generalization quite correct we must say, that while in certain sentences expressing strong feeling, the word which more especially implies that feeling may often with advantage be a many-syllabled or Latin one; in the immense majority of cases, each word serving but as a step to the idea embodied by the whole sentence, should, if possible, be a one-syllabled or Saxon one.

8. Once more, that frequent cause of strength in Saxon and other primitive words — their imitative character, may be similarly resolved into the more general cause. Both those directly imitative, as *splash*, *bang*, *whiz*, *roar*, &c., and those analogically imitative, as *rough*, *smooth*, *keen*, *blunt*, *thin*, *hard*, *crag*, &c., have a greater or less likeness to the things symbolized; and by making on the senses impressions allied to the ideas to be

called up, they save part of the effort needed to call up such ideas, and leave more attention for the ideas themselves.

9. The economy of the recipient's mental energy, into which are thus resolvable the several causes of the strength of Saxon English, may equally be traced in the superiority of specific over generic words. That concrete terms produce more vivid impressions than abstract ones, and should, when possible, be used instead, is a thorough maxim of composition.⁷ As Dr. Campbell says,⁸ "The more general the terms are, the picture is the fainter; the more special they are, 'tis the brighter." We should avoid such a sentence as:—"In proportion as the manners, customs, and amusements of a nation are cruel and barbarous, the regulations of their penal code will be severe." And in place of it we should write:—"In proportion as men delight in battles, bull-fights, and combats of gladiators, will they punish by hanging, burning, and the rack."⁹

10. This superiority of specific expressions is clearly due to a saving of the effort required to

⁷The purpose of the writer and the needs of the reader must, however, always be taken into account. If the author's idea is such as to call for abstract terms, concrete expressions are obviously out of place. Of the two examples that follow in the text, it may be questioned whether to the legal or scientific mind the first will not convey by far the greater satisfaction. [F.N.S.]

⁸"Philosophy of Rhetoric," Bk. III., Chap. I., § 1. [F.N.S.]

⁹Dr. Campbell's illustration is more to the point: "Consider," says our Lord, "the lilies how they grow: they toil not, they spin not; and yet I say unto you, that Solomon in all his glory was not arrayed like one of these. If, then, God so clothe the grass which to-day is in the field and to-morrow is cast into the oven, how much more will he clothe you?" Let us here adopt a little of the tasteless manner of modern paraphrasts, by the substitution of more general terms, one of their many expedients of infrigidating, and let us observe the effect produced by this change. "Consider the flowers how they gradually increase in their size; they do no manner of work, and yet I declare to you that no king whatever, in his most splendid habit is dressed up like them. If, then, God in his providence doth so adorn the vegetable productions which continue but a little time on the land, and are afterwards put into the fire, how much more will he provide clothing for you?" How spiritless is the same sentiment rendered by these small variations! The very particularizing of to-day and to-morrow is infinitely more expressive of transitoriness than any description wherein the terms are general that can be substituted in its room."—"Philosophy of Rhetoric," Bk. III., Chap. I., § 1. [F.N.S.]

translate words into thoughts. As we do not think in generals but in particulars—as, whenever any class of things is referred to, we represent it to ourselves by calling to mind individual members of it; it follows that when an abstract word is used, the hearer or reader has to choose from his stock of images, one or more, by which he may figure to himself the genus mentioned. In doing this, some delay must arise—some force be expended; and if, by employing a specific term, an appropriate image can be at once suggested, an economy is achieved, and a more vivid impression produced.¹⁰

iii. *The Principle of Economy Applied to Sentences*

11. Turning now from the choice of words to their sequence, we shall find the same general principle hold good.¹¹ We have *a priori* reasons for believing that in every sentence there is some one order of words more effective than any other; and that this order is the one which presents the elements of the proposition in the succession in which they may be most readily put together. As in a narrative, the events should be stated in such sequence that the mind may not have to go backwards and forwards in order to rightly connect them; as in a group of sentences, the arrangement should be such, that each of them may be under-

¹⁰The psychology of this passage is not above suspicion. The operation of the mind in thinking a class is different from its operation in thinking a particular of that class. In the latter case the mental procedure consists in bringing up a particular image of the thing; in the former the mind grasps the function of the image, leaving the particular features wholly out of account. The trained thinker in thinking the class "horse" does not "choose from his stock" of mental horses. He thinks the concept horse, and in so doing he may attain to a perfectly definite notion of the class without having in consciousness any particular horse whatsoever. The particular image is of course present, but such features as height, color, etc., are simply disregarded. See, on this point, Dewey's "Psychology," pp. 204-13; James's "Psychology," I., Chap. 12; "How do Concepts arise from Percepts?" by J. Dewey, in *Public School Journal* for November, 1891; James's address in *Psychol. Rev.* [F.N.S.]

¹¹On the general question of the order of words in sentences, see the admirable little treatise by H. Weil, "The Order of Words in the Ancient Languages compared with that of the Modern Languages" (Trans. by C. W. Super, Boston: 1887).

stood as it comes, without waiting for subsequent ones; so in every sentence, the sequence of words should be that which suggests the constituents of the thought in the order most convenient for the building up that thought. Duly to enforce this truth, and to prepare the way for applications of it, we must briefly inquire into the mental act by which the meaning of a series of words is apprehended.¹²

12. We cannot more simply do this than by considering the proper collocation of the substantive and adjective. Is it better to place the adjective before the substantive, or the substantive before the adjective? Ought we to say with the French—*un cheval noir*; or to say as we do—a black horse? Probably, most persons of culture would decide that one order is as good as the other. Alive to the bias produced by habit, they would ascribe to that the preference they feel for our own form of expression. They would expect those educated in the use of the opposite form to have an equal preference for that. And thus they would conclude that neither of these instinctive judgments is of any worth. There is, however, a philosophical ground for deciding in favour of the English custom. If "a horse black" be the arrangement, immediately on the utterance of the word "horse," there arises, or tends to arise, in the mind, a picture answering to that word; and as there has been nothing to indicate what *kind* of horse, any image of a horse suggests itself. Very likely, however, the image will be that of a brown horse, brown horses being the most familiar. The result is that when the word "black" is

¹²"But there is another element we have to take into account, and that is the rhythmical effect of Style. Mr. Herbert Spencer in his essay very clearly states the law of Sequence, but I infer that he would include it entirely under the law of Economy; at any rate he treats of it solely in reference to intelligibility, and not at all in its scarcely less important relation to harmony. . . . But Style appeals to the emotions as well as to the intellect, and the arrangement of words and sentences which will be the most economical may not be the most musical, and the most musical may not be the most pleasurable effective. For Climax and Variety it may be necessary to sacrifice something of rapid intelligibility: hence involutions, antitheses, and suspensions, which disturb the most orderly arrangement, may yet, in virtue of their own subtle influences, be counted as improvements on that arrangement."—Lewes's "Principles of Success in Literature," p. 143. [F.N.S.]

added, a check is given to the process of thought. Either the picture of a brown horse already present to the imagination has to be suppressed, and the picture of a black one summoned in its place; or else, if the picture of a brown horse be yet unformed, the tendency to form it has to be stopped. Whichever is the case, a certain amount of hindrance results. But if, on the other hand, "a black horse" be the expression used, no such mistake can be made. The word "black," indicating an abstract quality, arouses no definite idea. It simply prepares the mind for conceiving some object of that colour; and the attention is kept suspended until that object is known. If, then, by the precedence of the adjective, the idea is conveyed without liability to error, whereas the precedence of the substantive is apt to produce a misconception, it follows that the one gives the mind less trouble than the other, and is therefore more forcible.¹³

13. Possibly it will be objected that the adjective and substantive come so close together, that practically they may be considered as uttered at the same moment; and that on hearing the phrase, "a horse black," there is not time to imagine a wrongly-coloured horse before the word "black" follows to prevent it. It must be owned that it is not easy to decide by introspection whether this is so or not.¹⁴ But there are facts collaterally implying that it is not. Our ability to anticipate the words yet unspoken is one of them. If the ideas of the hearer kept considerably behind the ex-

¹³Two fallacies lurk in this argument: (1) That the "bias produced by habit" is a factor that may be disregarded, for obviously if the substantive-adjective order were the one habitually employed and expected, economy would dictate that the opposite order be avoided; (2) that the particulars of a concrete visual image necessarily arise in the mind upon hearing the term "horse." The "image" may be a sound or a moving line. "Take the following report from one of my students: 'I am unable to form in my mind's eye any visual likeness of the table whatever. After many trials I can only get a hazy surface, with nothing on or about it. I can see no variety in color, and no positive limitations in extent, while I cannot see what I see well enough to determine its position in respect to my eye, or to endow it with any quality of size. I am in the same position as to the word *dog*. I cannot see it in my mind's eye at all; and so cannot tell whether I should have to run my eye along it, if I did see it.'"—James's "Psychology," II., p. 57, note. The whole chapter should be read. [F.N.S.]

¹⁴See, for a discussion of this point, Victor Egger's "La Parole intérieure," Chaps. 6, 7; James's "Psychology," I., pp. 280, 281, note. [F.N.S.]

pressions of the speaker, as the objection assumes, he could hardly foresee the end of a sentence by the time it was half delivered: yet this constantly happens.¹⁵ Were the supposition true, the mind, instead of anticipating, would be continually falling more and more in arrear. If the meanings of words are not realized as fast as the words are uttered, then the loss of time over each word must entail such an accumulation of delays as to leave a hearer entirely behind. But whether the force of these replies be or be not admitted, it will scarcely be denied that the right formation of a picture will be facilitated by presenting its elements in the order in which they are wanted;¹⁶ even though the mind should do nothing until it has received them all.

14. What is here said respecting the succession of the adjective and substantive is obviously applicable, by change of terms, to the adverb and verb. And without further explanation, it will be manifest, that in the use of prepositions and other particles, most languages spontaneously conform with more or less completeness to this law.

15. On applying a like analysis to the larger divisions of a sentence, we find not only that the same principle holds good, but that the advantage of respecting it becomes marked. In the arrangement of predicate and subject, for example, we are at once shown that as the predicate determines the aspect under which the subject is to be conceived, it should be placed first; and the

¹⁵Spencer fails to see how this fact tells against his theory. (1) The Frenchman, accustomed to the substantive-adjective order, will anticipate the coming *noir*, or some other adjective, as soon as he hears the word *cheval*. Hence in his case the nascent image of a wrongly-colored horse will not tend to arise. The peculiar intonation of the substantive will probably give him a hint as to whether the adjective is or is not to follow. (2) In the case of the Englishman, the word "black" may lead the hearer to anticipate some other substantive than "horse"; he may expect "sheep," or "man," or "eye," to follow, since all these things may possess the quality blackness. [F.N.S.]

¹⁶In the original article as it appeared in the *Westminster Review*, the following words are inserted at this point: "and that, as in forming the image answering to a red flower, the notion of redness is one of the components that must be used in the construction of the image, the mind, if put in possession of this notion before the specific image to be formed out of it is suggested, will more easily form it than if the order be reversed." [F.N.S.]

striking effect produced by so placing it becomes comprehensible. Take the often-quoted contrast between "Great is Diana of the Ephesians," and "Diana of the Ephesians is great." When the first arrangement is used, the utterance of the word "great" arouses those vague associations of an impressive nature with which it has been habitually connected; the imagination is prepared to clothe with high attributes whatever follows; and when the words, "Diana of the Ephesians," are heard, all the appropriate imagery which can, on the instant, be summoned, is used in the formation of the picture: the mind being thus led directly, and without error, to the intended impression. When, on the contrary, the reverse order is followed, the idea, "Diana of the Ephesians," is conceived with no special reference to greatness; and when the words "is great" are added, the conception had to be remodelled: whence arises a loss of mental energy and a corresponding diminution of effect. The following verse from Coleridge's "Ancient Mariner," though somewhat irregular in structure, well illustrates the same truth:

*Alone, alone, all, all alone,
Alone on a wide, wide sea!
And never a saint took pity on
My soul in agony.*

16. Of course the principle equally applies when the predicate is a verb or a participle. And as effect is gained by placing first all words indicating the quality, conduct or condition of the subject, it follows that the copula also should have precedence. It is true that the general habit of our language resists this arrangement of predicate, copula and subject; but we may readily find instances of the additional force gained by conforming to it. Thus, in the line from "Julius Cæsar" —

Then *burst* his mighty heart,

priority is given to a word embodying both predicate and copula. In a passage contained in "The Battle of Flodden Field," the like order is systematically employed with great effect:

The Border slogan rent the sky!
A *Home! a Gordon!* was the cry;
Loud were the clanging blows:

*Advanced—forced back—now low, now high,
The pennon sunk and rose;
As bends the bark's mast in the gale
When rent are rigging, shrouds and sail,
It wavered 'mid the foes.*

17. Pursuing the principle yet further, it is obvious that for producing the greatest effect, not only should the main divisions of a sentence observe this sequence, but the subdivisions of these should be similarly arranged. In nearly all cases, the predicate is accompanied by some limit or qualification, called its complement. Commonly, also, the circumstances of the subject, which form its complement, have to be specified. And as these qualifications and circumstances must determine the mode in which the acts and things they belong to are conceived, precedence should be given to them. Lord Kaimes¹⁷ notices the fact that this order is preferable; though without giving the reason. He says:—"When a circumstance is placed at the beginning of the period, or near the beginning, the transition from it to the principal subject is agreeable: it is like ascending or going upward." A sentence arranged in illustration of this will be desirable. Here is one:—"Whatever it may be in theory, it is clear that in practice the French idea of liberty is—the right of every man to be master of the rest."

18. In this case, were the first two clauses, up to the word "practice" inclusive, which qualify the subject, to be placed at the end instead of the beginning, much of the force would be lost; as thus:—"The French idea of liberty is—the right of every man to be master of the rest; in practice at least, if not in theory."

19. Similarly with respect to the conditions under which any fact is predicated. Observe in the following example the effect of putting them last:—"How immense would be the stimulus to progress, were the honour now given to wealth and title given exclusively to high achievements and intrinsic worth!"

20. And then observe the superior effect of putting them first:—"Were the honour now given to wealth and title given exclusively to high achievements and intrinsic worth, how immense would be the stimulus to progress!"

¹⁷"Elements of Criticism," Chap. 18, § 2. [F.N.S.]

21. The effect of giving priority to the complement of the predicate, as well as the predicate itself, is finely displayed in the opening of "Hyperion":

*Deep in the shady sadness of a vale
Far sunken from the healthy breath of morn,
Far from the fiery noon and eve's one star
Sat gray-haired Saturn, quiet as a stone.*

Here it will be observed, not only that the predicate "sat" precedes the subject "Saturn," and that the three lines in italics, constituting the complement of the predicate, come before it; but that in the structure of that complement also, the same order is followed: each line being so arranged that the qualifying words are placed before the words suggesting concrete images.

22. The right succession of the principal and subordinate propositions in a sentence manifestly depends on the same law. Regard for economy of the recipient's attention, which, as we find, determines the best order for the subject, copula, predicate and their complements, dictates that the subordinate proposition shall precede the principal one when the sentence includes two. Containing, as the subordinate proposition does, some qualifying or explanatory idea, its priority prevents misconception of the principal one; and therefore saves the mental effort needed to correct such misconception. This will be seen in the annexed example:¹⁸ "The secrecy once maintained in respect to the parliamentary debates, is still thought needful in diplomacy; and in virtue of this secret diplomacy, England may any day be unawares betrayed by its ministers into a war costing a hundred thousand lives, and hundreds of millions of treasure: yet the English pique themselves on being a self-governed people." The two subordinate propositions, ending with the semicolon and colon respectively, almost wholly determine the meaning of the principal proposition with which it concludes; and the effect would be lost were they placed last instead of first.

¹⁸The following is the example given in the *Westminster Review*: "Those who weekly go to church, and there have doled out to them a quantum of belief which they have not energy to work out for themselves, are simply spiritual paupers." [F.N.S.]

23. The general principle of right arrangement in sentences, which we have traced in its application to the leading divisions of them, equally determines the proper order of their minor divisions. In every sentence of any complexity the complement to the subject contains several clauses, and that to the predicates several others; and these may be arranged in greater or less conformity to the law of easy apprehension. Of course with these, as with the larger members, the succession should be from the less specific to the more specific—from the abstract to the concrete.

24. Now, however, we must notice a further condition to be fulfilled in the proper construction of a sentence; but still a condition dictated by the same general principle with the other: the condition, namely, that the words and expressions most nearly related in thought shall be brought the closest together. Evidently the single words, the minor clauses, and the leading divisions of every proposition, severally qualify each other. The longer the time that elapses between the mention of any qualifying member and the member qualified; the longer must the mind be exerted in carrying forward the qualifying member ready for use. And the more numerous the qualifications to be simultaneously remembered and rightly applied, the greater will be the mental power expended, and the smaller the effect produced. Hence, other things equal, force will be gained by so arranging the members of a sentence that these suspensions shall at any moment be the fewest in number; and shall also be of the shortest duration. The following is an instance of defective combination:—"A modern newspaper-statement, though probably true, would be laughed at if quoted in a book as testimony; but the letter of a court gossip is thought good historical evidence, if written some centuries ago," A rearrangement of this, in accordance with the principle indicated above, will be found to increase the effect. Thus:—"Though probably true, a modern newspaper-statement quoted in a book as testimony, would be laughed at; but the letter of a court gossip, if written some centuries ago, is thought good historical evidence."

25. By making this change, some of the suspensions are avoided and others shortened; while

there is less liability to produce premature conceptions. The passage quoted below from "Paradise Lost" affords a fine instance of a sentence well arranged; alike in the priority of the subordinate members, in the avoidance of long and numerous suspensions, and in the correspondence between the order of the clauses and the sequence of the phenomena described, which, by the way, is a further prerequisite to easy comprehension, and therefore to effect.

As when a prowling wolf,
Whom hunger drives to seek new haunt for prey,
Watching where shepherds pen their flocks at eve,
In hurdled cotes amid the field secure,
Leaps o'er the fence with ease into the fold;
Or as a thief, bent to unhoard the cash
Of some rich burgher, whose substantial doors,
Cross-barr'd, and bolted fast, fear no assault,
In at the window climbs, or o'er the tiles;
So clomb this first grand thief into God's fold;
So since into his church lewd hirelings climb.¹⁹

26. The habitual use of sentences in which all or most of the descriptive and limiting elements precede those described and limited, gives rise to what is called the inverted style: a title which is, however, by no means confined to this structure, but is often used where the order of the words is simply unusual. A more appropriate title would be the *direct style*, as contrasted with the other, or *indirect style*: the peculiarity of the one being, that it conveys each thought into the mind step by step with little liability to error; and of the other, that it gets the right thought conceived by a series of approximations.

27. The superiority of the direct over the indirect form of sentence, implied by the several conclusions that have been drawn, must not, however, be affirmed without reservation. Though, up to a certain point, it is well for the qualifying clauses of a period to precede those qualified; yet, as carrying forward each qualifying clause costs some mental effort, it follows that when the number of them and the time they are carried become great, we reach a limit beyond which more is lost than is gained. Other things equal, the arrangement should be such that no concrete image shall be suggested until the materials out

of which it is to be made have been presented. And yet, as lately pointed out, other things equal, the fewer the materials to be held at once, and the shorter the distance they have to be borne, the better. Hence in some cases it becomes a question whether most mental effort will be entailed by the many and long suspensions, or by the correction of successive misconceptions.

28. This question may sometimes be decided by considering the capacity of the persons addressed. A greater grasp of mind is required for the ready comprehension of thoughts expressed in the direct manner, where the sentences are anywise intricate. To recollect a number of preliminaries stated in elucidation of a coming idea, and to apply them all to the formation of it when suggested, demands a good memory and considerable power of concentration. To one possessing these, the direct method will mostly seem the best; while to one deficient in them it will seem the worst. Just as it may cost a strong man less effort to carry a hundred-weight from place to place at once, than by a stone at a time; so, to an active mind it may be easier to bear along all the qualifications of an idea and at once rightly form it when named, than to first imperfectly conceive such idea and then carry back to it, one by one, the details and limitations afterwards mentioned. While conversely, as for a boy, the only possible mode of transferring a hundred-weight, is that of taking it in portions; so, for a weak mind, the only possible mode of forming a compound conception may be that of building it up by carrying separately its several parts.

29. That the indirect method—the method of conveying the meaning by a series of approximations—is best fitted for the uncultivated, may indeed be inferred from their habitual use of it. The form of expression adopted by the savage, as in—"Water, give me," is the simplest type of the approximate arrangement. In pleonasm, which are comparatively prevalent among the uneducated, the same essential structure is seen; as, for instance, in—"The men, they were there." Again, the old possessive case—"The king, his crown," conforms to the like order of thought. Moreover, the fact that the indirect mode is called the natural one, implies that it is the one spontaneously employed by the common

¹⁹Bk. IV., lines 183-93. [F.N.S.]

people: that is—the one easiest for undisciplined minds. . . .

iv. *The Principle of Economy Applied to Figures*

33. Turning now to consider figures of speech, we may equally discern the same general law of effect.²⁰ Underlying all the rules given for the choice and right use of them, we shall find the same fundamental requirement—economy of attention. It is indeed chiefly because they so well sub-serve this requirement, that figures of speech are employed. To bring the mind more easily to the desired conception, is in many cases solely, and in all cases mainly, their object.

34. Let us begin with the figures called Synecdoche. The advantage sometimes gained by putting a part for the whole, is due to the more convenient, or more accurate, presentation of the idea. If, instead of saying “a fleet of ten ships,” we say “a fleet of ten *sail*,” the picture of a group of vessels at sea is more readily suggested; and is so because the sails constitute the most conspicuous parts of vessels so circumstanced: whereas the word *ships* would very likely remind us of vessels in dock. Again, to say, “All *hands* to the pumps,” is better than to say, “All *men* to the pumps,” as it suggests the men in the special attitude intended, and so saves effort. Bringing “*gray hairs* with sorrow to the grave,” is another expression, the effect of which has the same cause.

35. The occasional increase of force produced by Metonymy may be similarly accounted for. “The low morality of *the bar*,” is a phrase both more brief and significant than the literal one it stands for. A belief in the ultimate supremacy of intelligence over brute force, is conveyed in a more concrete, and therefore more realizable form, if we substitute *the pen* and *the sword* for the two abstract terms. To say, “Beware of drinking!” is less effective than to say, “Beware of *the*

²⁰On the general subject of figures, see Max Müller’s essay in *Fortnightly*, Vol. 46, p. 617, on “Metaphor as a Mode of Abstraction”; Earle’s “English Prose,” pp. 234–53; Gummere’s “Poetics,” pp. 83–132; *Modern Language Notes*, Vol. 1, p. 140, “The Classification of Rhetorical Figures,” by C. B. Bradley. [F.N.S.]

bottle!” and is so, clearly because it calls up a less specific image.

36. The Simile is in many cases used chiefly with a view to ornament, but whenever it increases the *force* of a passage, it does so by being an economy. Here in an instance: “The illusion that great men and great events came oftener in early times than now, is partly due to historical perspective. As in a range of equidistant columns, the furthest off look the closest; so, the conspicuous objects of the past seem more thickly clustered the more remote they are.”

37. To construct by a process of literal explanation, the thought thus conveyed would take many sentences, and the first elements of the picture would become faint while the imagination was busy in adding the others. But by the help of a comparison all effort is saved; the picture is instantly realized, and its full effect produced.

38. Of the position of the Simile,²¹ it needs only to remark, that what has been said respecting the order of the adjective and substantive, predicate and subject, principal and subordinate propositions, &c., is applicable here. As whatever qualifies should precede whatever is qualified, force will generally be gained by placing the simile before the object to which it is applied. That this arrangement is the best, may be seen in the following passage from the “Lady of the Lake”:

As wreath of snow, on mountain breast,
Slides from the rock that gave it rest,
Poor Ellen glided from her stay,
And at the monarch’s feet she lay.²²

Inverting these couplets will be found to diminish the effect considerably. There are cases, however,

²¹Properly the term “simile” is applicable only to the entire figure, inclusive of the two things compared and the comparison drawn between them. But as there exists no name for the illustrative member of the figure, there seems no alternative but to employ “simile” to express this also. This context will in each case show in which sense the word is used.—H. S.

²²But compare the arrangement in the following from “Othello”:

Of one whose subdued eyes,
Albeit unused to the melting mood
Drop tears as fast as the Arabian trees
Their medicinal gum.

even where the simile is a simple one, in which it may with advantage be placed last, as in these lines from Alexander Smith's "Life Drama":

I see the future stretch
All dark and barren as a rainy sea.

The reason for this seems to be, that so abstract an idea as that attaching to the word "future," does not present itself to the mind in any definite form, and hence the subsequent arrival at the simile entails no reconstruction of the thought.

39. Such, however, are not the only cases in which this order is the most forcible. As the advantage of putting the simile before the object depends on its being carried forward in the mind to assist in forming an image of the object, it must happen that if, from length or complexity, it cannot be so carried forward, the advantage is not gained. The annexed sonnet, by Coleridge, is defective from this cause:

As when a child, on some long winter's night,
Affrighted, clinging to its grandam's knees,
With eager wond'ring and perturb'd delight
Listens strange tales of fearful dark decrees,
Mutter'd to wretch by necromantic spell;
Or of those hags who at the witching time
Of murky midnight, ride the air sublime,
And mingle foul embrace with fiends of hell;
Cold horror drinks its blood! Anon the tear
More gentle starts, to hear the beldame tell
Of pretty babes, that lov'd each other dear,
Murder'd by cruel uncle's mandate fell:
Ev'n such the shiv'ring joys thy tones impart,
Ev'n so, thou, Siddons, meltest my sad heart.

40. Here, from the lapse of time and accumulation of circumstances, the first part of the comparison is forgotten before its application is reached, and requires re-reading. Had the main idea been first mentioned, less effort would have been required to retain it, and to modify the conception of it into harmony with the comparison, than to remember the comparison, and refer back to its successive features for help in forming the final image.

41. The superiority of the Metaphor to the Simile is ascribed by Dr. Whately²³ to the fact that "all men are more gratified at catching the

²³"Rhetoric," Pt. III., Chap. 2, § 3. [F.N.S.]

resemblance for themselves, than in having it pointed out to them." But after what has been said, the great economy it achieves will seem the more probable cause. Lear's exclamation—

Ingratitude! thou marble-hearted fiend,

would lose part of its effect were it changed into—

Ingratitude! thou fiend with heart like marble;

and the loss would result partly from the position of the simile and partly from the extra number of words required. When the comparison is an involved one, the greater force of the metaphor, consequent on its greater brevity, becomes much more conspicuous. If, drawing an analogy between mental and physical phenomena, we say, "As, in passing through the crystal, beams of white light are decomposed into the colours of the rainbow; so, in traversing the soul of the poet, the colourless rays of truth are transformed into brightly tinted poetry"; it is clear that in receiving the double set of words expressing the two halves of the comparison, and in carrying the one half to the other, considerable attention is absorbed. Most of this is saved, however, by putting the comparison in a metaphorical form, thus: "The white light of truth, in traversing the many sided transparent soul of the poet, is refracted into irised poetry."

42. How much is conveyed in a few words by the help of the Metaphor, and how vivid the effect consequently produced, may be abundantly exemplified. From "A Life Drama" may be quoted the phrase,—

I spear'd him with a jest,

as a fine instance among the many which that poem contains. A passage in the "Prometheus Unbound," of Shelley, displays the power of the metaphor to great advantage:

Methought among the lawns together
We wandered, underneath the young gray dawn,
And multitudes of dense white fleecy clouds
Were wandering, in thick flocks along the mountains
Shepherded by the slow unwilling wind.

This last expression is remarkable for the distinctness with which it realizes the features of the

scene: bringing the mind, as it were, by a bound to the desired conception.

43. But a limit is put to the advantageous use of the Metaphor, by the condition that it must be sufficiently simple to be understood from a hint. Evidently, if there be any obscurity in the meaning or application of it, no economy of attention will be gained; but rather the reverse. Hence, when the comparison is complex, it is usual to have recourse to the Simile. There is, however, a species of figure, sometimes classed under Allegory, but which might, perhaps, be better called Compound Metaphor, that enables us to retain the brevity of the metaphorical form even where the analogy is intricate. This is done by indicating the application of the figure at the outset, and then leaving the mind to continue the parallel.²⁴ Emerson has employed it with great effect in the first of his "Lectures on the Times":—"The main interest which any aspects of the Times can have for us, is the great spirit which gazes through them, the light which they can shed on the wonderful questions, What are we, and Whither we tend? We do not wish to be deceived. Here we drift, like white sail across the wild ocean, now bright on the wave, now darkling in the trough of the sea; but from what port did we sail? Who knows? Or to what port are we bound? Who knows? There is no one to tell us but such poor weather-tossed mariners as ourselves, whom we speak as we pass, or who have hoisted some signal, or floated to us some letter in a bottle from far. But what know they more than we? They also found themselves on this wondrous sea. No; from the older sailors nothing. Over all their speaking trumpets the gray sea and the loud winds answer, Not in us; not in Time." . . .

vi. *The Effect of Poetry Explained*

52. . . . Poetry, we shall find, habitually adopts those symbols of thought, and those methods of using them, which instinct and analysis agree in choosing as most effective, and becomes poetry

²⁴Not uncommon in Shakespeare, as, for example, the following from "Hamlet," IV., 2:—"But such officers do the king best service in the end: he keeps them, as an ape doth nuts, in the corner of his jaw; first mouth'd to be last swallowed." [F.N.S.]

by virtue of doing this. On turning back to the various specimens that have been quoted, it will be seen that the direct or inverted form of sentence predominates in them; and that to a degree quite inadmissible in prose. And not only in the frequency, but in what is termed the violence of the inversions, will this distinction be remarked. In the abundant use of figures, again, we may recognize the same truth. Metaphors, similes, hyperboles, and personifications, are the poet's colours, which he has liberty to employ almost without limit. We characterize as "poetical" the prose which uses these appliances of language with any frequency, and condemn it as "over florid" or "affected" long before they occur with the profusion allowed in verse. Further, let it be remarked that in brevity—the other requisite of forcible expression which theory points out, and emotion spontaneously fulfils—poetical phraseology similarly differs from ordinary phraseology. Imperfect periods are frequent; elisions are perpetual; and many of the minor words, which would be deemed essential in prose, are dispensed with.

53. Thus poetry, regarded as a vehicle of thought, is especially impressive partly because it obeys all the laws of effective speech, and partly because in so doing it imitates the natural utterances of excitement. While the matter embodied is idealized emotion, the vehicle is the idealized language of emotion. As the musical composer catches the cadences in which our feelings of joy and sympathy, grief and despair, vent themselves, and out of these germs evolves melodies suggesting higher phases of these feelings;²⁵ so, the poet develops from the typical expressions in which men utter passion and sentiment, those choice forms of verbal combination in which concentrated passion and sentiment may be fitly presented.

54. There is one peculiarity of poetry conducting much to its effect—the peculiarity which is

²⁵For Spencer's views on the relation of music to speech-tunes, see his essay on the "Origin and Function of Music" in "Essays, Scientific, Political, and Speculative"; his recent paper on the "Origin of Music" in *Mind* for October, 1890; the discussion by R. Wallaschek and J. McK. Cattell in *Mind* for July, 1891; and Chap. 21 of Gurney's "Power of Sound." [F.N.S.]

indeed usually thought its characteristic one—still remaining to be considered: we mean its rhythmical structure. This, improbable though it seems, will be found to come under the same generalization with the others. Like each of them, it is an idealization of the natural language of strong emotion, which is known to be more or less metrical if the emotion be not too violent; and like each of them it is an economy of the reader's or hearer's attention. In the peculiar tone and manner we adopt in uttering versified language, may be discerned its relationship to the feelings; and the pleasure which its measured movement gives us, is ascribable to the comparative ease with which words metrically arranged can be recognized.

55. This last position will scarcely be at once admitted; but a little explanation will show its reasonableness. For if, as we have seen, there is an expenditure of mental energy in the mere act of listening to verbal articulations, or in that silent repetition of them which goes on in reading²⁶—if the perceptive faculties must be in active exercise to identify every syllable—then, any mode of so combining words as to present a regular recurrence of certain traits which the mind can anticipate, will diminish that strain upon the attention required by the total irregularity of prose.²⁷ Just as the body, in receiving a series of varying concussions, must keep the muscles ready to meet the most violent of them, as not knowing when such may come; so, the mind in receiving unarranged articulations, must keep its perceptive active enough to recognize the least easily caught sounds. And as, if the concussions recur

²⁶There has been much discussion over this point. See Bain, "Senses and Intellect," pp. 345, 353; Stricker, "Studien über die Sprachvorstellungen"; *Revue Philosophique*, Vol. 16, p. 405; Vol. 18, p. 685; and Vol. 19, p. 118. [F.N.S.]

²⁷Good prose is far from being totally irregular. It has a large rhythm peculiar to itself which is difficult to define, but even with an untrained ear, easy to perceive. The day-laborer making his way through a newspaper article will often complain that "the writing doesn't run smooth." He means that the prose-rhythm is defective. Consult on this point, Saintsbury's "Specimens of English Prose Style," Introduction; Stevenson's essay on "Style in Literature," *Contemporary Review*, Vol. 47, p. 548; Ellis's "On the Physical Constituents of Accent and Emphasis" in *Transactions of the English Philological Society for 1873-4*, pp. 113-64. [F.N.S.]

in a definite order, the body may husband its forces by adjusting the resistance needful for each concussion; so, if the syllables be rhythmically arranged, the mind may economize its energies by anticipating the attention required for each syllable.

56. Far-fetched though this idea will perhaps be thought, a little introspection will countenance it. That we *do* take advantage of metrical language to adjust our perceptive faculties to the force of the expected articulations, is clear from the fact that we are balked by halting versification. Much as at the bottom of a flight of stairs, a step more or less than we counted upon gives us a shock; so, too, does a misplaced accent or a supernumerary syllable. In the one case, we *know* that there is an erroneous preadjustment; and we can scarcely doubt that there is one in the other. But if we habitually preadjust our perceptions to the measured movement of verse, the physical analogy above given renders it probable that by so doing we economize attention; and hence that metrical language is more effective than prose, because it enables us to do this.²⁸

57. Were there space, it might be worth while to inquire whether the pleasure we take in rhyme, and also that which we take in euphony, are not partly ascribable to the same general cause.

²⁸"What the rhythm of the dance is to our muscular energies, the rhythm of poetry and music is to the ear. Its main constituent as a pleasure is the regularity of its occurrence and the consequent possibility of relaxing our attention to the accentuation or the arrangement of chords. While syllables irregularly thrown together require a certain amount of jumping from point to point in the auditory perception, syllables placed in a regular order of short and long allow us to withdraw the attention from their accent and to expect a continuance of the same harmonious and easily followed succession. Many familiar facts concur to justify this explanation. In attempting for the first time to read a perfectly new metre, it is sometimes a few minutes before *we fall into the swing of it*, as we phrase it; that is, before our auditory apparatus accommodates itself to the new mode of recurrence,"—Grant Allen, "Physiological Æsthetics," p. 115.

"The members or clauses and the periods themselves should be neither truncated nor too long. If they are too short, they often make a hearer stumble; for if, while he is hurrying on to the completion of the measure or rhythm, of which he has a definite notion in his mind, he is suddenly pulled up by a pause on the part of the speaker, there will necessarily follow a sort of stumble in consequence of the sudden check."—Aristotle, "Rhetoric," III. 9, Welldon's Trans. [F.N.S.]

PART II
CAUSES OF FORCE IN LANGUAGE
WHICH DEPEND UPON ECONOMY
OF THE MENTAL SENSIBILITIES

iv. The Ideal Writer

67. This species of composition which the law of effect points out as the perfect one, is the one which high genius tends naturally to produce. As we found that the kinds of sentences which are theoretically best, are those generally employed by superior minds, and by inferior minds when excitement has raised them; so, we shall find that the ideal form for a poem, essay, or fiction, is that which the ideal writer would evolve spontaneously. One in whom the powers of expression fully responded to the state of feeling, would unconsciously use that variety in the mode of presenting his thoughts, which Art demands. This constant employment of one species of phraseology, which all have now to strive against, implies an undeveloped faculty of language. To have a specific style is to be poor in speech. If we remember that, in the far past, men had only nouns and verbs to convey their ideas with, and that from then to now the growth has been towards a greater number of implements of thought, and consequently towards a greater complexity and variety in their combinations; we may infer that we are now, in our use of sentences, much what the primitive man was in his use of words; and that a continuance of the process that has hitherto gone on, must produce increasing heterogeneity in our modes of expression. As now, in a fine nature, the play of the features, the tones of the voice and its cadences, vary in harmony with every thought uttered; so, in one possessed of a fully-developed power of speech, the mould in which each combination of words is cast will similarly vary with, and be appropriate to the sentiment.

68. That a perfectly-endowed man must unconsciously write in all styles, we may infer from

considering how styles originate. Why is Johnson pompous, Goldsmith simple? Why is one author abrupt, another rhythmical, another concise? Evidently in each case the habitual mode of utterance must depend upon the habitual balance of the nature. The predominant feelings have by use trained the intellect to represent them. But while long, though unconscious, discipline has made it do this efficiently, it remains from lack of practice, incapable of doing the same for the less active feelings; and when these are excited, the usual verbal forms undergo but slight modifications. Let the powers of speech be fully developed, however—let the ability of the intellect to utter the emotions be complete; and this fixity of style will disappear. The perfect writer will express himself as Junius, when in the Junius frame of mind; when he feels as Lamb felt, will use a like familiar speech; and will fall into the ruggedness of Carlyle when in a Carlylean mood. Now he will be rhythmical and now irregular; here his language will be plain and there ornate; sometimes his sentences will be balanced and at other times unsymmetrical; for a while there will be considerable sameness, and then again great variety. His mode of expression naturally responding to his state of feeling, there will flow from his pen a composition changing to the same degree that the aspects of his subject change. He will thus without effort conform to what we have seen to be the laws of effect. And while his work presents to the reader that variety needful to prevent continuous exertion of the same faculties, it will also answer to the description of all highly-organized products, both of man and of nature: it will be not a series of like parts simply placed in juxtaposition, but one whole made up of unlike parts that are mutually dependent.²⁹

²⁹This is the fundamental principle with which, in the opinion of the editor, Mr. Spencer would have done well to open his essay. He would thus have brought his various exceptions, opposing rules, supplementary principles, and so forth, under one universal all-pervading law. [F.N.S.]

Friedrich Nietzsche

1844–1900

Friedrich Nietzsche studied classical philology at the universities of Bonn and Leipzig. He was so brilliant a student that in 1868 he won a professorship at the University of Basel without writing a dissertation or earning a doctorate. Soon afterward, he enlisted in the Swiss army and served briefly in the Franco-Prussian War. Injured in a riding accident from which he never fully recovered, he returned to Basel and his teaching duties and in 1872 published his first book, *The Birth of Tragedy from the Spirit of Music*.

In this and later works, Nietzsche made no effort to appeal to the traditional interests of the academic philologists, and his books were not well received. Not only were his subjects idiosyncratic, but his style was poetic, aphoristic, dramatic, and colorful. Following four *Untimely Meditations* (1873–1876), on such topics as cultural philistinism, history, and Richard Wagner, Nietzsche wrote *Human, All-Too-Human* (1878), a series of aphorisms addressed to the question of whether human beings are motivated by the desire for power and by fear of the power of others. Here, too, he began to formulate a philosophy of self-confidence that does not require taking advantage of others. In *Thus Spoke Zarathustra* (Parts 1–3, 1883; Part 4, 1892), Nietzsche works through many of his themes—the will to power, the meaning of style, the need to affirm life, and so on—but does so by means of epigram, satire, and aphorism, rather than systematic argument. Of his last seven books, the best known are *Beyond Good and Evil* (1886), *Toward a Genealogy of Morals* (1887), *The Twilight of the Idols* (1889), and *Ecce Homo* (written in 1888 and published posthumously).

Nietzsche delivered a series of lectures on classical rhetoric at Basel in 1872–1873. The notes for these lectures, as well as for an additional seminar in 1874 on the history of Greek eloquence, were published after his death. Although Nietzsche's general approach to classical rhetoric is not particularly original—he follows a standard scholarly outline—he does offer some striking observations about rhetoric and language. A rhetorical style is one regarded as deliberately artistic and not natural, says Nietzsche. He suggests that if the work of the classical authors strikes us as especially rhetorical in this sense, it may be because of their orientation to oral discourse and ours to written discourse, a difference that shows up in the highly developed rhythms of the classical authors' prose, compared with the relative flatness of ours. But the verbal artistry ascribed to rhetoric is not confined to rhetoric, which should properly be understood as the conscious application of an essential quality of language itself:

There is obviously no unrhetorical “naturalness” of language to which one could appeal; language itself is the result of purely rhetorical arts. The power to discover and to make operative that which works and impresses, with respect to each thing, a power which

Aristotle calls rhetoric, is at the same time, the essence of language; the latter is based just as little as rhetoric is upon that which is true, upon the essence of things.¹

Language, Nietzsche goes on to say, conveys not sensations but “copies of sensations,” not things but images of our perception of things. Words are signs of our impulses and do not represent “a many-sided, respectable knowledge of things.” In short, emphasizes Nietzsche, “*language is rhetoric*, because it desires to convey only a *doxa* [opinion], not an *episteme* [knowledge].”

Pursuing this idea further, Nietzsche says that tropes “are considered to be the most artistic means of rhetoric. But with respect to their meanings, all words are tropes in themselves.” *Trope* means “turn,” a turning aside from literal meaning, but every word turns aside from the thing itself, offering a sound image instead. “The tropes are not just occasionally added to words but constitute their most proper nature,” he says. “It makes no sense to talk of a ‘proper meaning’ which is carried over to something else only in special cases. . . . What is usually called language is actually all figuration.”²

Nietzsche’s ideas about language inform his critique of philosophy and of common views about truth and knowledge. In his essay “On Truth and Lies in a Non-moral Sense” (included here), written in 1873 just after he gave his course on rhetoric, Nietzsche argues that “truth” is a social arrangement necessitated by the powerful tendency to tell lies. Lying is clearly an act of discourse, a misrepresentation of actual circumstances. Truth must be seen similarly as a convention of discourse, for there is no way to convert things directly into language. We put our subjective impressions of things into our words and therefore must negotiate their meanings. Language “designates the relations of things to men,” and these relations are expressed in “the boldest metaphors.” But having evolved this means of communicating about things, we forget that it is a conventional arrangement and come to “believe that we know something about the things themselves . . . yet we possess nothing but metaphors for things.” Social pressures reinforce the conventional ways of speaking of things and also encourage us to regard those ways as truth. Metaphor formation is, according to Nietzsche, the fundamental quality of the human intellect. Thus “truth” is a rhetorical construction arising from the creative use of language to make an effective social arrangement.

Nietzsche persistently rejects the traditional notion that philosophy and science search for and find truth. In his early work (published in the 1870s), he tends to attack rationalism for promoting a mistaken belief in positive knowledge; he does this by confronting the rational with the irrational impulses that it must suppress. Later, he argues for a balance between reason and passion, seeing either one alone as incomplete and not fully human. In seeking to understand the irrational, Nietzsche focused, as had earlier Enlightenment philosophers, on psychology. He posits the “will to power” as a basic human motive and finds it in a wide array of actions.

¹Friedrich Nietzsche, “Ancient Rhetoric,” in *Friedrich Nietzsche on Rhetoric and Language*, ed. and trans. S. L. Gilman, C. Blair, and D. J. Parent (New York: Oxford University Press, 1989), p. 21.

²Nietzsche, pp. 23, 25.

Gross displays of power, the recurrent attempts of individuals and groups to subjugate others, are only the most obvious manifestations. Art is an expression of the will to power as well: the desire to gain control over chaotic experience. The Greeks invented rhetoric to gain power over their audiences. And philosophy, too, comes from the human need to be in control of the world. The will to power is a motivating force, not good or bad in itself. Indeed, it is the stimulus for self-control, a quality Nietzsche admired and found necessary for creative and ethical action. The *overman* (*übermensch*) imagined by Nietzsche is one who has successfully organized the chaos of existence, one who strives for perfection and refuses to compromise with the forces of partial rationalism (represented by science and philosophy) and partial irrationalism (represented by religion).

Nietzsche's style is highly metaphorical. As rhetoric scholar Samuel IJsseling clearly points out, he does not hope to make possible a nonrhetorical philosophy by revealing some hitherto unnoticed error. To show that philosophy is rhetorical is certainly "to unmask the pretensions of philosophy," says IJsseling, but Nietzsche emphasizes the rhetorical quality of his own writing by using "the boldest of metaphors," as well as poetry, drama, and aphorisms.³ Philosophy is inseparable from language, and no self-consciousness will alter or transcend that circumstance. For Nietzsche, the goal is not to discover the unvarnished truth, for there is no such thing. Rather, the aim is to understand the forces—such as the need to communicate and the will to power—that have produced those ideas about truth that have driven philosophy through its long history. Nietzsche thus comes to see philosophy as a text. Philosophy is a form of interpretation, an attempt to see the world in a way that will allow human beings to gain some control over it. To examine a set of interpretations requires rhetorical analysis, and so it can be argued that Nietzsche's method is rhetorical as well.

Until quite recently, rhetoricians gave Nietzsche's ideas little attention even though he anticipates the most important themes developed by twentieth-century rhetorical theorists (see Part Six): I. A. Richards's fallacy of proper meaning, Richard Weaver's idea that language is sermonic, Chaim Perelman's analysis of naturalness as a rhetorical quality, and the wider movement that sees rhetoric as epistemic. Indeed, in seeing rhetoric as the basis of philosophy, Nietzsche is far bolder than most modern theorists. Nietzsche's work has deeply influenced twentieth-century philosophers Michel Foucault and Jacques Derrida, who are not afraid to continue along the path he blazed, and who have been the means by which Nietzsche's ideas have penetrated many fields.

Selected Bibliography

Our text of "On Truth and Lies in a Nonmoral Sense" is from *Philosophy and Truth: Selections from Nietzsche's Notebooks of the Early 1870s*, ed. and trans. Daniel Breazeale (1979).

The quotations from the lectures on rhetoric are from *Friedrich Nietzsche on Rhetoric and Language*, ed. and trans. Sander L. Gilman, Carole Blair, and David J. Parent (1989), which contains translations of the rhetoric lecture notes and related fragments, including "On Truth

³Samuel IJsseling, *Rhetoric and Philosophy in Conflict* (The Hague: Martinus Nijhoff, 1976), p. 108.

and Lies.” The introduction relates Nietzsche’s ideas to modern rhetorical issues and includes a helpful bibliography.

Walter Kaufmann’s translation of the major works, published in the 1950s and 1960s, is far superior to earlier efforts. Kaufmann’s life has been the standard: *Nietzsche: Philosopher, Psychologist, Antichrist* (4th ed., 1974). A newer biography is Richard Schacht’s *Nietzsche* (London, 1983).

Samuel IJsseling, in *Rhetoric and Philosophy in Conflict* (1976), refers to Nietzsche frequently, but the last four chapters in particular develop Nietzsche’s ideas and their implications for rhetoric.

Paul de Man has written frequently about Nietzsche and language. See, in particular, “Nietzsche’s Theory of Rhetoric,” *Symposium: A Quarterly Journal in Modern Foreign Languages* (1974): 33–51; “Action and Identity in Nietzsche,” *Yale French Studies* 52 (1975): 16–30 (rpt. in *Untying the Text: A Post-Structuralist Reader*, trans. Robert Young, 1981); and *Allegories of Reading: Figural Language in Rousseau, Nietzsche, Rilke, and Proust* (1979). An interesting anthology of criticism is *The New Nietzsche: Contemporary Styles of Interpretation*, ed. David B. Allison (1977).

Jacques Derrida frequently cites Nietzsche; see especially *Of Grammatology*, trans. G. Spivak (1974); *Writing and Difference*, trans. Alan Bass (1978); and *Spurs: Nietzsche’s Styles*, trans. Barbara Harlow (1979). For Michel Foucault’s references to Nietzsche see the rather dense, “Nietzsche, Genealogy, History,” in *Language, Counter-Memory, Practice* (1977). For the Foucault-Nietzsche connection, see Hubert L. Dreyfus and Paul Rabinow, *Michel Foucault: Beyond Structuralism and Hermeneutics* (2nd ed., 1983).

J. Hillis Miller reflects on Nietzsche’s relationship to contemporary views of rhetoric in “Nietzsche in Basel” (*JAC* 13 [1993]: 311–28). Steve Whitson and John Poulakos argue that Nietzsche provides an answer to those who oppose the idea of rhetoric as epistemic in “Nietzsche and the Aesthetics of Rhetoric” (*Quarterly Journal of Speech* 79 [1993]: 131–45). Opposing both of these views in “The Seductive Waltz: Rhetoric and Contemporary Interpretations of Nietzsche” (*Quarterly Journal of Speech* 85 [1999]: 380–99), James Hikins reviews the Nietzschean turn in rhetoric and argues that in his later works Nietzsche retracts the view of truth upon which this turn is based. Douglas Thomas reads all of Nietzsche’s works through the lens of the ascendancy of rhetoric in *Reading Nietzsche Rhetorically* (1999).

On Truth and Lies in a Nonmoral Sense¹

I

Once upon a time, in some out of the way corner of that universe which is dispersed into numberless twinkling solar systems, there was a star upon which clever beasts invented knowing. That was the most arrogant and mendacious minute of

“world history,” but nevertheless, it was only a minute. After nature had drawn a few breaths, the star cooled and congealed, and the clever beasts had to die.—One might invent such a fable, and yet he still would not have adequately illustrated how miserable, how shadowy and transient, how aimless and arbitrary the human intellect looks within nature. There were eternities during which it did not exist. And when it is all over with the human intellect, nothing will have happened. For this intellect has no additional mission which

Edited and translated by Daniel Breazeale.

¹A more literal, though less English, translation of *Über Wahrheit und Lüge im aussermoralischen Sinne* might be “On Truth and Lie in the Extramoral Sense.” . . . [Tr.]

would lead it beyond human life. Rather, it is human, and only its possessor and begetter takes it so solemnly—as though the world's axis turned within it. But if we could communicate with the gnat, we would learn that he likewise flies through the air with the same solemnity,² that he feels the flying center of the universe within himself. There is nothing so reprehensible and unimportant in nature that it would not immediately swell up like a balloon at the slightest puff of this power of knowing. And just as every porter wants to have an admirer, so even the proudest of men, the philosopher, supposes that he sees on all sides the eyes of the universe telescopically focused upon his action and thought.

It is remarkable that this was brought about by the intellect, which was certainly allotted to these most unfortunate, delicate, and ephemeral beings merely as a device for detaining them a minute within existence. For without this addition they would have every reason to flee this existence as quickly as Lessing's son.³ The pride connected with knowing and sensing lies like a blinding fog over the eyes and senses of men, thus deceiving them concerning the value of existence. For this pride contains within itself the most flattering estimation of the value of knowing. Deception is the most general effect of such pride, but even its most particular effects contain within themselves something of the same deceitful character.

As a means for the preserving of the individual, the intellect unfolds its principle powers in dissimulation, which is the means by which weaker, less robust individuals preserve themselves—since they have been denied the chance to wage the battle for existence with horns or with the sharp teeth of beasts of prey. This art of dissimulation reaches its peak in man. Deception, flattering, lying, deluding, talking behind the back, putting up a false front, living in borrowed splendor, wearing a mask, hiding behind convention, playing a role for others and for oneself—in short, a continuous fluttering around the *solitary* flame of vanity—is so much the rule and the law among men that there is almost nothing

²*Pathos*. [Tr.]

³A reference to the offspring of Lessing and Eva König, who died on the day of his birth. [Tr.]

which is less comprehensible than how an honest and pure drive for truth could have arisen among them. They are deeply immersed in illusions and in dream images; their eyes merely glide over the surface of things and see “forms.” Their senses nowhere lead to truth; on the contrary, they are content to receive stimuli and, as it were, to engage in a groping game on the backs of things. Moreover, man permits himself to be deceived in his dreams every night of his life. His moral sentiment does not even make an attempt to prevent this, whereas there are supposed to be men who have stopped snoring through sheer will power. What does man actually know about himself? Is he, indeed, ever able to perceive himself completely, as if laid out in a lighted display case? Does nature not conceal most things from him—even concerning his own body—in order to confine and lock him within a proud, deceptive consciousness, aloof from the coils of the bowels, the rapid flow of the blood stream, and the intricate quivering of the fibers! She threw away the key. And woe to that fatal curiosity which might one day have the power to peer out and down through a crack in the chamber of consciousness and then suspect that man is sustained in the indifference of his ignorance by that which is pitiless, greedy, insatiable, and murderous—as if hanging in dreams on the back of a tiger. Given this situation, where in the world could the drive for truth have come from?

Insofar as the individual wants to maintain himself against other individuals, he will under natural circumstances employ the intellect mainly for dissimulation. But at the same time, from boredom and necessity, man wishes to exist socially and with the herd; therefore, he needs to make peace and strives accordingly to banish from his world at least the most flagrant *bellum omni contra omnes*.⁴ This peace treaty brings in its wake something which appears to be the first step toward acquiring that puzzling truth drive: to wit, *that* which shall count as “truth” from now on is established. That is to say, a uniformly valid and binding designation is invented for things, and this legislation of language likewise establishes the first laws of truth. For the contrast

⁴“War of each against all.” [Tr.]

between truth and lie arises here for the first time. The liar is a person who uses the valid designations, the words, in order to make something which is unreal appear to be real. He says, for example, "I am rich," when the proper designation for his condition would be "poor." He misuses fixed conventions by means of arbitrary substitutions or even reversals of names. If he does this in a selfish and moreover harmful manner, society will cease to trust him and will thereby exclude him. What men avoid by excluding the liar is not so much being defrauded as it is being harmed by means of fraud. Thus, even at this stage, what they hate is basically not deception itself, but rather the unpleasant, hated consequences of certain sorts of deception. It is in a similarly restricted sense that man now wants nothing but truth: he desires the pleasant, life-preserving consequences of truth. He is indifferent toward pure knowledge which has no consequences; toward those truths which are possibly harmful and destructive he is even hostilely inclined. And besides, what about these linguistic conventions themselves? Are they perhaps products of knowledge, that is, of the sense of truth? Are designations congruent with things? Is language the adequate expression of all realities?

It is only by means of forgetfulness that man can ever reach the point of fancying himself to possess a "truth" of the grade just indicated. If he will not be satisfied with truth in the form of tautology, that is to say, if he will not be content with empty husks, then he will always exchange truths for illusions. What is a word? It is the copy in sound of a nerve stimulus. But the further inference from the nerve stimulus to a cause outside of us is already the result of a false and unjustifiable application of the principle of sufficient reason.⁵ If truth alone had been the deciding factor in the genesis of language, and if the standpoint of certainty had been decisive for des-

⁵Note that Nietzsche is here engaged in an implicit critique of Schopenhauer, who had been guilty of precisely this misapplication of the principle of sufficient reason in his first book, *The Fourfold Root of the Principle of Sufficient Reason*. It is quite wrong to think that Nietzsche was ever wholly uncritical of Schopenhauer's philosophy (see, for example, the little essay, *Kritik der Schopenhauerischen Philosophie* from 1867, in *MA*, I, pp. 392-401). [Tr.]

ignations, then how could we still dare to say "the stone is hard," as if "hard" were something otherwise familiar to us, and not merely a totally subjective stimulation! We separate things according to gender, designating the tree as masculine and the plant as feminine. What arbitrary assignments!⁶ How far this oversteps the canons of certainty! We speak of a "snake": this designation touches only upon its ability to twist itself and could therefore also fit a worm.⁷ What arbitrary differentiations! What one-sided preferences, first for this, then for that property of a thing! The various languages placed side by side show that with words it is never a question of truth, never a question of adequate expression; otherwise, there would not be so many languages.⁸ The "thing in itself" (which is precisely what the pure truth, apart from any of its consequences, would be) is likewise something quite incomprehensible to the creator of language and something not in the least worth striving for. This creator only designates the relations of things to men, and for expressing these relations he lays hold of the boldest metaphors. To begin with, a nerve stimulus is transferred into an image:⁹ first metaphor. The image, in turn, is imitated in a sound: second metaphor. And each time there is a complete overleaping of one sphere, right into the middle of an entirely new and different one. One can imagine a man who is totally deaf and has never had a sensation of sound and music. Perhaps such a person will gaze with astonishment at Chladni's sound figures; perhaps he will discover their causes in the vibrations of the

⁶*welche willkürlichen Übertragungen*. The specific sense of this passage depends upon the fact that all ordinary nouns in the German language are assigned a gender: the tree is *der Baum*; the plant is *die Pflanze*. This assignment of an original sexual property to all things is the "transference" in question. On the translation of the key term *Übertragung*, see the "Introduction" and *P*, n. 83. [Tr.]

⁷This passage depends upon the etymological relation between the German words *Schlange* (snake) and *schlingen* (to wind or twist), both of which are related to the old High German *slango*. [Tr.]

⁸What Nietzsche is rejecting here is the theory that there is a sort of "naturally appropriate" connection between certain words (or sounds) and things. Such a theory is defended by Socrates in Plato's *Cratylus*. [Tr.]

⁹*Ein Nervenreiz, zuerst übertragen in ein Bild*. The "image" in this case is the visual image, what we "see." [Tr.]

string and will now swear that he must know what men mean by "sound." It is this way with all of us concerning language: we believe that we know something about the things themselves when we speak of trees, colors, snow, and flowers; and yet we possess nothing but metaphors for things—metaphors which correspond in no way to the original entities.¹⁰ In the same way that the sound appears as a sand figure, so the mysterious X of the thing in itself first appears as a nerve stimulus, then as an image, and finally as a sound. Thus the genesis of language does not proceed logically in any case, and all the material within and with which the man of truth, the scientist, and the philosopher later work and build, if not derived from never-never land,¹¹ is at least not derived from the essence of things.

In particular, let us further consider the formation of concepts. Every word instantly becomes a concept precisely insofar as it is not supposed to serve as a reminder of the unique and entirely individual original experience to which it owes its origin; but rather, a word becomes a concept insofar as it simultaneously has to fit countless more or less similar cases—which means, purely and simply, cases which are never equal and thus altogether unequal. Every concept arises from the equation of unequal things. Just as it is certain that one leaf is never totally the same as another, so it is certain that the concept "leaf" is formed by arbitrarily discarding these individual differences and by forgetting the distinguishing aspects. This awakens the idea that, in addition to the leaves, there exists in nature the "leaf": the original model according to which all the leaves were perhaps woven, sketched, measured, colored, curled, and painted—but by incompetent hands, so that no specimen has turned out to be a correct, trustworthy, and faithful likeness of the original model. We call a person "honest," and then we ask "why has he behaved so honestly today?" Our usual answer is, "on account of his honesty." Honesty! This in turn means that the leaf is the cause of the leaves. We know nothing whatsoever about an essential quality called

¹⁰*Wesenheiten*. [Tr.]

¹¹*Wolkenkuckuksheim*: literally, "cloud-cuckoo-land." [Tr.]

"honesty"; but we do know of countless individualized and consequently unequal actions which we equate by omitting the aspects in which they are unequal and which we now designate as "honest" actions. Finally we formulate from them a *qualitas occulta*¹² which has the name "honesty." We obtain the concept, as we do the form, by overlooking what is individual and actual; whereas nature is acquainted with no forms and no concepts, and likewise with no species, but only with an X which remains inaccessible and undefinable for us. For even our contrast between individual and species is something anthropomorphic and does not originate in the essence of things; although we should not presume to claim that this contrast does not correspond to the essence of things: that would of course be a dogmatic assertion and, as such, would be just as indemonstrable as its opposite.

What then is truth? A movable host of metaphors, metonymies, and anthropomorphisms: in short, a sum of human relations which have been poetically and rhetorically intensified, transferred, and embellished, and which, after long usage, seem to a people to be fixed, canonical, and binding. Truths are illusions which we have forgotten are illusions; they are metaphors that have become worn out and have been drained of sensuous force, coins which have lost their embossing and are now considered as metal and no longer as coins.

We still do not yet know where the drive for truth comes from. For so far we have heard only of the duty which society imposes in order to exist: to be truthful means to employ the usual metaphors. Thus, to express it morally, this is the duty to lie according to a fixed convention, to lie with the herd and in a manner binding upon everyone. Now man of course forgets that this is the way things stand for him. Thus he lies in the manner indicated, unconsciously and in accordance with habits which are centuries old; and precisely *by means of this unconsciousness* and forgetfulness he arrives at his sense of truth. From the sense that one is obliged to designate one thing as "red," another as "cold," and a third as "mute," there arises a moral impulse in regard

¹²"Occult quality." [Tr.]

to truth. The venerability, reliability, and utility of truth is something which a person demonstrates for himself from the contrast with the liar, whom no one trusts and everyone excludes. As a “rational” being, he now places his behavior under the control of abstractions. He will no longer tolerate being carried away by sudden impressions, by intuitions. First he universalizes all these impressions into less colorful, cooler concepts, so that he can entrust the guidance of his life and conduct to them. Everything which distinguishes man from the animals depends upon this ability to volatilize perceptual metaphors¹³ in a schema, and thus to dissolve an image into a concept. For something is possible in the realm of these schemata which could never be achieved with the vivid first impressions: the construction of a pyramidal order according to castes and degrees, the creation of a new world of laws, privileges, subordinations, and clearly marked boundaries—a new world, one which now confronts that other vivid world of first impressions as more solid, more universal, better known, and more human than the immediately perceived world, and thus as the regulative and imperative world. Whereas each perceptual metaphor is individual and without equals and is therefore able to elude all classification, the great edifice of concepts displays the rigid regularity of a Roman columbarium¹⁴ and exhales in logic that strength and coolness which is characteristic of mathematics. Anyone who has felt this cool breath [of logic] will hardly believe that even the concept—which is as bony, foursquare, and transposable as a die—is nevertheless merely the *residue of a metaphor*, and that the illusion which is involved in the artistic transference of a nerve stimulus into images is, if not the mother, then the grandmother of every single concept.¹⁵ But in this conceptual crap game “truth” means using every die in the designated manner, counting its spots accurately, fashioning the right cate-

gories, and never violating the order of caste and class rank. Just as the Romans and Etruscans cut up the heavens with rigid mathematical lines and confined a god within each of the spaces thereby delimited, as within a *templum*,¹⁶ so every people has a similarly mathematically divided conceptual heaven above themselves and henceforth thinks that truth demands that each conceptual god be sought only within *his own* sphere. Here one may certainly admire man as a mighty genius of construction, who succeeds in piling up an infinitely complicated dome of concepts upon an unstable foundation, and, as it were, on running water. Of course, in order to be supported by such a foundation, his construction must be like one constructed of spiders’ webs: delicate enough to be carried along by the waves, strong enough not to be blown apart by every wind. As a genius of construction man raises himself far above the bee in the following way: whereas the bee builds with wax that he gathers from nature, man builds with the far more delicate conceptual material which he first has to manufacture from himself. In this he is greatly to be admired, but not on account of his drive for truth or for pure knowledge of things. When someone hides something behind a bush and looks for it again in the same place and finds it there as well, there is not much to praise in such seeking and finding. Yet this is how matters stand regarding seeking and finding “truth” within the realm of reason. If I make up the definition of a mammal, and then, after inspecting a camel, declare “look, a mammal,” I have indeed brought a truth to light in this way, but it is a truth of limited value. That is to say, it is a thoroughly anthropomorphic truth which contains not a single point which would be “true in itself” or really and universally valid apart from man. At bottom, what the investigator of such truths is seeking is only the metamorphosis of the world into man. He strives to understand the world as something analogous to man, and at best he achieves by his struggles the feeling of assimilation. Similar to the way in which astrologers considered the stars to be in man’s service and connected with his happiness and

¹³*die anschaulichen Metaphern*. . . . The adjective *anschaulich* has the additional sense of “vivid”—as in the next sentence (“vivid first impressions”). [Tr.]

¹⁴A columbarium is a vault with niches for funeral urns containing the ashes of cremated bodies. [Tr.]

¹⁵I.e., concepts are derived from images, which are, in turn, derived from nerve stimuli. [Tr.]

¹⁶A delimited space restricted to a particular purpose, especially a religiously sanctified area. [Tr.]

sorrow, such an investigator considers the entire universe in connection with man: the entire universe as the infinitely fractured echo of one original sound—man; the entire universe as the infinitely multiplied copy of one original picture—man. His method is to treat man as the measure of all things, but in doing so he again proceeds from the error of believing that he has these things [which he intends to measure] immediately before him as mere objects. He forgets that the original perceptual metaphors are metaphors and takes them to be the things themselves.

Only by forgetting this primitive world of metaphor can one live with any repose, security, and consistency: only by means of the petrification and coagulation of a mass of images which originally streamed from the primal faculty of human imagination like a fiery liquid, only in the invincible faith that *this sun, this window, this table* is a truth in itself, in short, only by forgetting that he himself is an *artistically creating* subject, does man live with any repose, security, and consistency. If but for an instant he could escape from the prison walls of this faith, his “self consciousness” would be immediately destroyed. It is even a difficult thing for him to admit to himself that the insect or the bird perceives an entirely different world from the one that man does, and that the question of which of these perceptions of the world is the more correct one is quite meaningless, for this would have to have been decided previously in accordance with the criterion of the *correct perception*, which means, in accordance with a criterion which is *not available*. But in any case it seems to me that “the correct perception”—which would mean “the adequate expression of an object in the subject”—is a contradictory impossibility.¹⁷ For between two absolutely different spheres, as between subject and object, there is no causality, no correctness, and no expression; there is, at most, an *aesthetic* relation:¹⁸ I mean, a suggestive transference, a stammering translation into a completely foreign

tongue—for which there is required, in any case, a freely inventive intermediate sphere and mediating force. “Appearance” is a word that contains many temptations, which is why I avoid it as much as possible. For it is not true that the essence of things “appears” in the empirical world. A painter without hands who wished to express in song the picture before his mind would, by means of this substitution of spheres, still reveal more about the essence of things than does the empirical world. Even the relationship of a nerve stimulus to the generated image is not a necessary one. But when the same image has been generated millions of times and has been handed down for many generations and finally appears on the same occasion every time for all mankind, then it acquires at last the same meaning for men it would have if it were the sole necessary image and if the relationship of the original nerve stimulus to the generated image were a strictly causal one. In the same manner, an eternally repeated dream would certainly be felt and judged to be reality. But the hardening and congealing of a metaphor guarantees absolutely nothing concerning its necessity and exclusive justification.

Every person who is familiar with such considerations has no doubt felt a deep mistrust of all idealism of this sort: just as often as he has quite clearly convinced himself of the eternal consistency, omnipresence, and infallibility of the laws of nature. He has concluded that so far as we can penetrate here—from the telescopic heights to the microscopic depths—everything is secure, complete, infinite, regular, and without any gaps. Science will be able to dig successfully in this shaft forever, and all the things that are discovered will harmonize with and not contradict each other. How little does this resemble a product of the imagination, for if it were such, there should be some place where the illusion and unreality can be divined. Against this, the following must be said: if each of us had a different kind of sense perception—if we could only perceive things now as a bird, now as a worm, now as a plant, or if one of us saw a stimulus as red, another as blue, while a third even heard the same stimulus as a sound—then no one would speak of such a regularity of nature, rather, nature would be

¹⁷*ein widerspruchsvolles Unding.* [Tr.]

¹⁸*ein ästhetisches Verhalten.* A more literal translation of *Verhalten* is “behavior,” “attitude,” or perhaps “disposition.” [Tr.]

grasped only as a creation which is subjective in the highest degree. After all, what is a law of nature as such for us? We are not acquainted with it in itself, but only with its effects, which means in its relation to other laws of nature—which, in turn, are known to us only as sums of relations. Therefore all these relations always refer again to others and are thoroughly incomprehensible to us in their essence. All that we actually know about these laws of nature is what we ourselves bring to them—time and space, and therefore relationships of succession and number. But everything marvelous about the laws of nature, everything that quite astonishes us therein and seems to demand our explanation, everything that might lead us to distrust idealism: all this is completely and solely contained within the mathematical strictness and inviolability of our representations of time and space. But we produce these representations in and from ourselves with the same necessity with which the spider spins. If we are forced to comprehend all things only under these forms, then it ceases to be amazing that in all things we actually comprehend nothing but these forms. For they must all bear within themselves the laws of number, and it is precisely number which is most astonishing in things. All that conformity to law, which impresses us so much in the movement of the stars and in chemical processes, coincides at bottom with those properties which we bring to things. Thus it is we who impress ourselves in this way. In conjunction with this it of course follows that the artistic process of metaphor formation with which every sensation begins in us already presupposes these forms and thus occurs within them. The only way in which the possibility of subsequently constructing a new conceptual edifice from metaphors themselves can be explained is by the firm persistence of these original forms. That is to say, this conceptual edifice is an imitation of temporal, spatial, and numerical relationships in the domain of metaphor.¹⁹

¹⁹This is where section I of the fair copy made by von Gersdorff ends. But according to Schlechta (in Schlechta/Anders, pp. 14–5) Nietzsche's preliminary version continued as follows:

Empty space and empty time are ideas which are possible at any time. Every concept, thus an empty metaphor, is only

2

We have seen how it is originally *language* which works on the construction of concepts, a labor taken over in later ages by *science*. Just as the bee simultaneously constructs cells and fills them with honey, so science works unceasingly on this great columbarium of concepts, the graveyard of perceptions. It is always building new, higher stories and shoring up, cleaning, and renovating the old cells; above all, it takes pains to fill up this monstrously towering framework and to arrange therein the entire empirical world, which is to say, the anthropomorphic world. Whereas the man of action binds his life to reason and its concepts so that he will not be swept away and lost, the scientific investigator builds his hut right next to the tower of science so that he will be able to work on it and to find shelter for himself beneath those bulwarks which presently exist. And he requires shelter, for there are frightful powers which continuously break in upon him, powers which oppose scientific "truth" with completely different kinds of "truths" which bear on their shields the most varied sorts of emblems.

The drive toward the formation of metaphors is the fundamental human drive, which one cannot for a single instant dispense with in thought, for one would thereby dispense with man himself. This drive is not truly vanquished and scarcely subdued by the fact that a regular and rigid new world is constructed as its prison from its own ephemeral products, the concepts. It seeks a new realm and another channel for its activity, and it finds this in *myth* and in *art* generally. This drive continually confuses the conceptual categories and cells by bringing forward new transferences, metaphors, and metonymies. It continually manifests an ardent desire to refashion the world which presents itself to waking man, so that it will be as colorful, irregular, lacking in results and coherence, charming, and eternally new as the world of dreams. Indeed, it is

an imitation of these first ideas: space, time, and causality. Afterwards, the original imaginative act of transference into images: the first provides the matter, the second the qualities which we believe in. Comparison to music. How can one speak of it? [Tr.]

only by means of the rigid and regular web of concepts that the waking man clearly sees that he is awake; and it is precisely because of this that he sometimes thinks that he must be dreaming when this web of concepts is torn by art. Pascal is right in maintaining that if the same dream came to us every night we would be just as occupied with it as we are with the things that we see every day. "If a workman were sure to dream for twelve straight hours every night that he was king," said Pascal, "I believe that he would be just as happy as a king who dreamt for twelve hours every night that he was a workman."²⁰ In fact, because of the way that myth takes it for granted that miracles are always happening, the waking life of a mythically inspired people—the ancient Greeks, for instance—more closely resembles a dream than it does the waking world of a scientifically disenchanted thinker. When every tree can suddenly speak as a nymph, when a god in the shape of a bull can drag away maidens, when even the goddess Athena herself is suddenly seen in the company of Peisistratus driving through the market place of Athens with a beautiful team of horses²¹—and this is what the honest Athenian believed—then, as in a dream, anything is possible at each moment, and all of nature swarms around man as if it were nothing but a masquerade of the gods, who were merely amusing themselves by deceiving men in all these shapes.

But man has an invincible inclination to allow himself to be deceived and is, as it were, enchanted with happiness when the rhapsodist tells him epic fables as if they were true, or when the actor in the theater acts more royally than any real king. So long as it is able to deceive without *injuring*, that master of deception, the intellect, is free; it is released from its former slavery and

²⁰*Pensées*, number 386. Actually, Pascal says that the workman would be "almost as happy" as the king in this case! [Tr.]

²¹According to the story told by Herodotus (*Histories* I, 60) the tyrant Peisistratus adopted the following ruse to secure his popular acceptance upon his return from exile: he entered Athens in a chariot accompanied by a woman named Phye who was dressed in the costume of Athena. Thus the people were supposed to have been convinced that it was the goddess herself who was conducting the tyrant back to the Acropolis. [Tr.]

celebrates its Saturnalia. It is never more luxuriant, richer, prouder, more clever, and more daring. With creative pleasure it throws metaphors into confusion and displaces the boundary stones of abstractions, so that, for example, it designates the stream as "the moving path which carries man where he would otherwise walk." The intellect has now thrown the token of bondage from itself. At other times it endeavors, with gloomy officiousness, to show the way and to demonstrate the tools to a poor individual who covets existence; it is like a servant who goes in search of booty and prey for his master. But now it has become the master and it dares to wipe from its face the expression of indigence. In comparison with its previous conduct, everything that it now does bears the mark of dissimulation,²² just as that previous conduct did of distortion.²³ The free intellect copies human life, but it considers this life to be something good and seems to be quite satisfied with it. That immense framework and planking of concepts to which the needy man clings his whole life long in order to preserve himself is nothing but a scaffolding and toy for the most audacious feats of the liberated intellect. And when it smashes this framework to pieces, throws it into confusion, and puts it back together in an ironic fashion, pairing the most alien things and separating the closest, it is demonstrating that it has no need of these makeshifts of indigence and that it will now be guided by intuitions rather than by concepts. There is no regular path which leads from these intuitions into the land of ghostly schemata, the land of abstractions. There exists no word for these intuitions; when man sees them he grows dumb, or else he speaks only in forbidden metaphors and in unheard-of combinations of concepts. He does this so that by shattering and mocking the old conceptual barriers he may at least correspond creatively to the impression of the powerful present intuition.

There are ages in which the rational man and the intuitive man stand side by side, the one in fear of intuition, the other with scorn for abstraction. The latter is just as irrational as the former is inartistic. They both desire to rule over life: the

²²*Verstellung*. [Tr.]

²³*Verzerrung*. [Tr.]

former, by knowing how to meet his principal needs by means of foresight, prudence, and regularity; the latter, by disregarding these needs and, as an "overjoyed hero," counting as real only that life which has been disguised as illusion and beauty. Whenever, as was perhaps the case in ancient Greece, the intuitive man handles his weapons more authoritatively and victoriously than his opponent, then, under favorable circumstances, a culture can take shape and art's mastery over life can be established. All the manifestations of such a life will be accompanied by this dissimulation, this disavowal of indigence, this glitter of metaphorical intuitions, and, in general, this immediacy of deception: neither the house, nor the gait, nor the clothes, nor the clay jugs give evidence of having been invented because of a pressing need. It seems as if they were all intended to express an exalted happiness, an Olympian cloudlessness, and, as it were, a playing with seriousness. The man who is guided by concepts and abstractions only succeeds by such means in warding off misfortune, without ever gaining any happiness for himself from these abstractions. And while he aims for the greatest possible freedom from pain, the intuitive man,

standing in the midst of a culture, already reaps from his intuition a harvest of continually inflowing illumination, cheer, and redemption—in addition to obtaining a defense against misfortune. To be sure, he suffers more intensely, *when* he suffers; he even suffers more frequently, since he does not understand how to learn from experience and keeps falling over and over again into the same ditch. He is then just as irrational in sorrow as he is in happiness: he cries aloud and will not be consoled. How differently the stoical man who learns from experience and governs himself by concepts is affected by the same misfortunes! This man, who at other times seeks nothing but sincerity, truth, freedom from deception, and protection against ensnaring surprise attacks, now executes a masterpiece of deception: he executes his masterpiece of deception in misfortune, as the other type of man executes his in times of happiness. He wears no quivering and changeable human face, but, as it were, a mask with dignified, symmetrical features. He does not cry; he does not even alter his voice. When a real storm cloud thunders above him, he wraps himself in his cloak, and with slow steps he walks from beneath it.

Part Six

**MODERN AND
POSTMODERN RHETORIC**

Introduction

At the beginning of the twentieth century, rhetoric appeared to be in decline. As an academic discipline, it no longer occupied a prominent place in the university. In Europe, some universities discarded it altogether as a relic of the outmoded classical curriculum, and in others it was absorbed into the study of classics. In England, where debate developed into a competitive sport, rhetoric nonetheless progressively lost its academic presence. In the United States, it was reduced to a few courses in writing and speaking that served the needs of a new curriculum dominated by modern languages and science. Specialization and departmentalization in the modern university dispersed the many traditional intellectual concerns of rhetoric to other disciplines such as psychology, linguistics, philosophy, and literary studies.

But in the course of the twentieth century rhetoric became, once again, a valuable interdisciplinary theory of language and meaning. Philosophers and literary critics rediscovered rhetoric—or reinvented it under some other rubric, such as “discourse” or “dialogism”—as a solution to problems raised by traditional theories of language and meaning. Rhetoric has been enriched by their efforts. It has grown to encompass a theory of language as a form of social behavior, of intention and interpretation as the determinants of meaning, of the way that knowledge is created by argument, and of the way that ideology and power are extended through language. In this same period, the history of rhetoric has been rediscovered and reimagined. Enlarged as a theoretical resource, rhetoric has also expanded its grasp of the ways that women, people of color, and cultural or ethnic minorities use language to gain a hearing for themselves. In short, rhetoric has become a comprehensive theory of language as effective discourse.

The themes of language and meaning, ethics and ideology, and argument and knowledge recur and overlap at each stage in the formulation of rhetorical theories during the twentieth century. The chronological stages outlined below are arbitrary conveniences that locate groups of ideas around the dates of major texts. But it is the interconnection of these ideas—not just their chronological succession—that best characterizes twentieth-century rhetoric.

RHETORIC AND COMPOSITION

By the end of the nineteenth century, college rhetoric in the United States had become freshman English, a one- or two-semester writing course focusing on technical skill in grammar and usage, paragraph coherence, and exercises in the modes of discourse—description, narration, exposition, and argumentation (as described in the introduction to Part Five). Invention, in the classical sense of discovering probabilistic arguments, was rarely studied, for it was believed that knowledge came from the sciences and from careful observation. The job of rhetoric was therefore to record and transmit this knowledge with a minimum of distortion.

Professors in the newly established English departments advanced their professional interests through the study of modern literature, far from the outdated tradition of rhetoric and what they regarded as the philistinism of technically oriented composition. Composition instructors—graduate students and junior faculty members of the English department, most of whom were eager to gain higher status and leave composition behind as soon as possible—were content to rely on the nineteenth-century approach now known as “current-traditional,” which emphasized expository writing, the modes of discourse, and prescriptive grammar, usage, and style. Although some professors who urged a focus on public discourse and argumentation expressed opposition to the current-traditional approach, that method prevailed and, indeed, continued to be the predominant approach to composition through the first two-thirds of the twentieth century—and on some campuses much longer.

In the first decades of the twentieth century, composition courses in some of the more elite colleges used creative writing, reflective essays, and autobiography as an alternative to the dominant model of expository writing. Students were to express their own meanings, to regard themselves as artists, and to be original in thought and style. Personal writing advocates drew some support from the new field of psychoanalysis—self-expression seemed to be therapeutic, not merely self-indulgent—and, later, from the student-centered pedagogy associated with the Progressive movement in education during the 1920s and 1930s. The concerns of the Progressives merged with the modern (perhaps now we would say *modernist*) development of the social sciences in the communication movement of the succeeding decades. *Communication* was a way of thinking about language and rhetoric as a means or a “technology” for sharing experiences in a social setting. Thus communication theory drew on psychology, sociology, and even anthropology, while incorporating insights from information theory and semantics. This movement, although short-lived in most colleges and schools, was an important precursor of an interdisciplinary approach to the study of language that would become prominent later in the century.

For the most part, however, the technical concerns that dominated the undergraduate curriculum during the first part of the twentieth century meant that expository writing and grammar suited the generally practical goals of most colleges and their students. The expressive writing course never seriously challenged the current-traditional model for dominance and soon became identified as a separate course in creative writing. A more lasting effect of the creative writing approach was the in-

roduction of literary study into the composition course, which was appropriate, argued English professors, because literature provided teachable content, something to write about other than oneself or arbitrarily chosen subjects in which the teacher was not an expert.

Interest in rhetoric as a historical and theoretical discipline revived in some English departments (most notably in the University of Chicago, home of the neo-Aristotelian movement) in the fifties and sixties. In addition to studies of medieval and Renaissance literature that acknowledged the importance of rhetoric in those periods, there appeared scholarly analyses of rhetorical history and theory by English professors such as Richard Weaver and Richard McKeon. Weaver and other scholars who took part in the rhetorical revival—for example, Edward P. J. Corbett (*Classical Rhetoric for the Modern Student*, 1965), Wayne Booth (“The Revival of Rhetoric,” 1965), and James Kinneavy (*A Theory of Discourse*, 1971)—applied the lessons of the rhetorical tradition to composition, arguing that rhetoric was the true basis of the discipline for both pedagogy and research.

But in the 1960s and 1970s, self-expression rather than rhetoric once again appeared to be the chief alternative to the current-traditional model. Expressivism returned to the composition course as a response to political events, chiefly the civil rights movement and the Vietnam War, and to the increase in college admissions that required new approaches to “basic” writing. Personal writing, the individual’s search for an “authentic voice,” was regarded as a form of opposition to the impersonal and oppressive Establishment: It was an assertion of personal freedom in the face of the corporate and political forces that urged conformity. For all the popularity of expressivism, the current-traditional approach continued to be the most widely used method of composition instruction during the sixties and seventies. Nonetheless, expressivism had the salutary effect of sparking renewed interest in composition theory by questioning the prevailing approach and by turning attention to the experience of the writer in the process of writing.

The process model of composing that emerged during the 1970s uses a psychological approach reminiscent of the communication theory movement—it observes writers at work and attempts to identify those activities that produce good writing. The process model has clear affinities with the traditional rhetorical model of invention, arrangement, and style. For example, the “heuristics” that operate in the “prewriting” stage of the writing process can be regarded as versions of invention and arrangement. But many advocates of the process theory emphasized “cognitive” processes and “scientific” methods of research, so that for most composition teachers, the relationship between their work and the rhetorical tradition remained rather tenuous.

As the discipline of composition became more vigorous and more independent of literary study, the links between composition and traditional rhetoric became stronger. The “academic discourse” theory of composition, for example, favors rhetorical analysis of the genres of academic writing. In doing so, this theory looks at conventions of address as well as at the persuasive intent of all forms of writing. Moreover, the difficult relationship between the English department and its writing program was extensively examined and its history analyzed as composition programs

sought greater respect. Another positive sign is that literary criticism has come to take a brighter view of rhetoric. Most important for the growing connection between composition and rhetoric, however, is the professionalization of composition: the development of graduate programs in the field and the increasing number of scholars who study rhetoric from the point of view of composition.

SPEECH COMMUNICATION

Departments of speech formed in the United States at the turn of the twentieth century, breaking away from English departments, whose primary focus was literature. The curriculum of the new speech department was based on the public speaking course, which had been oddly neglected by most universities at a time when public lectures were eagerly attended and when popular political oratory was a powerful force. The speech course was, and continues to be, quite popular with students for whom the ability to speak confidently, both on the job and in community life, may be as important as the ability to write well.

In speech as in composition, the prevailing view of rhetoric since the beginning of the twentieth century has been instrumental or managerial: The purpose of rhetoric, in other words, is to convey knowledge clearly and efficiently. For this purpose, an Aristotelian approach proved entirely satisfactory. The basic course in public speaking continues to be dominated by the traditional categories of invention (or research), arrangement, style, memory (or practice), and delivery, and by the traditional forms of appeal to reason, emotion, and authority.

The basic speech course (like the composition course) focuses on a practice rather than an abstract body of knowledge, and so rhetorical theory is rarely a course topic. Instructors are more likely to be interested in pedagogical theory, focusing, for example, on the comparison between the so-called skill-oriented and function-oriented models of teaching speech communication. As long as departments of speech were devoted entirely to these basic undergraduate courses, as they were for the first quarter of the twentieth century, there was little cause to look into large theoretical questions.

In the twenties, however, speech departments sought to develop a graduate curriculum and a research agenda, and so they turned to the psychological and sociological study of speech (in the so-called Midwestern school) and to the history of rhetoric (in the so-called Cornell school). The Midwesterners sought to base the new discipline in science, discovering through behavioral psychology the springs of oral persuasion. Their speech curriculum included oral interpretation, drama, speech and diction, and speech pathology, to which they later added interpersonal, group, organizational and mass communication, public relations, and journalism. The Cornell group focused on rhetorical theory and oratory, including speech criticism (based, as the public speaking course was, on classical principles), and soon generated a plethora of historical studies of rhetoricians and orators.

For both composition and speech communication, however, the disciplinary gestation period that extended through much of the twentieth century delayed the de-

velopment of new theoretical perspectives or even the active assimilation of avant-garde positions in the philosophy of language that influenced scholars in more established fields. But in the fifties and thereafter, academic rhetoricians took more interest in theory, especially by converting the work of I. A. Richards, Kenneth Burke, Chaim Perelman, and Stephen Toulmin into analytical methods. The social protest movements of the sixties affected speech and composition similarly, sparking internal criticism and an investigation of traditional assumptions. In both disciplines, the result has been a turn toward an ideological and epistemological analysis of rhetoric, alongside a more rigorously scientific approach to psychological and statistical studies of language behavior.

ACADEMIC RHETORIC IN EUROPE AND THE UNITED STATES

At the beginning of the twentieth century, a vestigial course requirement at the secondary level was all that remained of the study of rhetoric in French and other western European schools. Philosopher Chaim Perelman (p. 1372), educated in Belgium, recalls cramming for an exam on the names of tropes and then forgetting about rhetoric until years later, when he learned that rhetoric had once been considered the counterpart of dialectic. He felt then that he had “rediscovered a part of Aristotelian logic that had long been forgotten, or at any rate, ignored and despised.”¹ His discovery is detailed in *The New Rhetoric*, which was largely responsible for a resurgence of interest in rhetoric on the Continent.

For most European language theorists, including Stephen Toulmin, Michel Foucault, and Jacques Derrida, rhetoric is a limited and moribund subject. Those who speak of it positively, like Perelman or I. A. Richards, speak in terms of its re-discovery and rehabilitation.

So, too, in the United States. In his 1950 book, *A Rhetoric of Motives*, Kenneth Burke (p. 1295) announces his aim to “rediscover rhetorical elements that had become obscured when rhetoric as a term fell into disuse, and other specialized disciplines such as esthetics, anthropology, psychoanalysis, and sociology came to the fore (so that esthetics sought to outlaw rhetoric, while the other sciences we have mentioned took over, each in its own terms, the rich rhetorical elements that esthetics would ban).”² Burke sees rhetoric as the loser in a conflict with literature (or “esthetics”), with social science available for additional depredations. Burke’s perception follows the history of rhetoric in American universities. But whereas literature was the chief opponent of rhetoric in America, linguistics and semantics opposed rhetoric in European intellectual life at the beginning of the century. Linguistics and semantics sought the “true” relationship between language and reality, a relationship that was not illuminated, or so it then seemed, by rhetoric. The story of rhetorical theory in the twentieth century is, to a considerable extent, the story of how the philosophy of language on the one hand and literary criticism on

¹See p. 1390 in this book.

the other moved to consolidate once again the richness of rhetoric as a theory of language in use.

PHILOSOPHY OF LANGUAGE VERSUS RHETORIC

In his excellent introduction to Jacques Derrida's *Speech and Phenomena*, Newton Garver notes that "the mediaeval trivium [grammar, logic, and rhetoric] is a much sounder approach to the study of language and gives a much more adequate framework for understanding the philosophy of language than its all too fashionable neglect might lead one to suppose."³ Grammar, as Garver explains, concerns linguistic competence; logic is a matter of knowing what expressions are sensible or not; and rhetoric, released from bondage to tropes and figures, is "not a matter of pure form but has to do with the relation of language to the world (to life) through the relation of linguistic expressions to the specific circumstances in which their use makes sense."⁴ Garver goes on to say, "In these traditional terms, the central issue of philosophy of language, the issue around which all other issues revolve and to which they all return and in terms of which we can surely see the relation of Derrida to other philosophers, is the issue about the relation of logic and rhetoric."⁵ Derrida's project, Garver says, is to attack "the whole tradition in which language is conceived as founded on logic rather than on rhetoric."⁶ Such an attack is necessary partly because, "unlike grammar and logic, rhetoric has not been refurbished by new ideas and new vigor but remains a weak and ancillary discipline about which few students of language have strong or clear ideas."⁷

Traditional language philosophy treats language as an imperfect expression of logic. Since philosophy is conducted in language and dependent on it, many branches of philosophy reflect on language, quite often in the effort to render it, or at least its philosophical manifestations, more nearly perfect. Thus in metaphysics a persistent concern has been to determine the relationship between real things and the linguistic expressions that (presumably) name them. Epistemology faces the same problem with respect to the relationship between our ability to know something and the way we express or describe it. Logic itself has a similar concern with language and its perfectibility, for logic seeks to analyze the truth values of statements based on inferential reasoning. In its more recent history, too, philosophy has been shifting to a more language-oriented analysis of concepts. Instead of seeking phenomena that correspond to concepts (morality, justice, and causality, for example) or of positing the ideal existence of concepts, philosophers are now more likely to ask what it means to speak of a concept, to define the terms that identify concepts, and to be self-conscious about semantic problems that arise in dealing with concepts.

SEMANTICS AND SEMIOTICS

Semantics is the branch of philosophy that focuses on language itself, examining such issues as *meaning*, *synonymy*, *polysemy* (multiple meanings of single words), *ambiguity*, *literal* versus *figurative* expression, distinctions between types of meaning (such as *expressive* and *emotive*), and the relationship between the structure of language and the structure of reality. In the twentieth century, the most significant semantic theory is semiology or semiotics—the theory of signs and signification.

American philosopher Charles Sanders Peirce, who produced an influential theory of semiotics in the first years of the twentieth century, describes semiotics as heir to the trivium: Grammar, in semiotics, becomes the study of the conditions of meaning; logic becomes the study of the conditions of truth; and rhetoric becomes the study of the relations among signs. A sign (a word, for example) operates, Peirce says, by calling up an “interpretant” in the interpreter’s mind. The interpretant is also a sign, but it is a mental one. Thus the operation of what Peirce called “semiosis” leads from one sign to another: The mental sign, not the communicative one, has a referent in the world. Meaning, in Peirce’s scheme, is not identified with the interpretant nor even with the interpretant’s reference, but rather with the effect of the proposition upon the interpreter. Thus defined, he called the study of meaning “pragmatism.” Later philosophers referred to the elements of Peirce’s trivium as “syntactics,” “semantics,” and “pragmatics,” names given them by Peirce’s chief interpreter, philosopher C. W. Morris. Later discussions of Peirce’s theory generally ignore its connections to rhetoric and the medieval trivium.

The Swiss linguist Ferdinand de Saussure developed, independently of Peirce, a similar theory of signs that he called semiology. For Saussure, the system of language (*langue*) makes possible and gives meaning to utterances (*parole*). *Langue* is a kind of social contract, the general grammar and lexicon that particular speakers must use to communicate successfully. Linguists study *langue*, which has two aspects, the diachronic (its history) and the synchronic (the system at a given moment). Saussure stresses that signs are arbitrary and without inherent meaning. Meaning, for Saussure, is a psychological phenomenon, a matter of the way that linguistic signs call up mental images. Meaning is not, therefore, the concern of the science of semiology: “To determine the exact place of semiology is the task of the psychologist.”⁸

Peirce influenced mainly American philosophers, and Saussure Continental ones. The decisive influence on Anglo-American philosophy of language in this period, however, comes from Bertrand Russell and Ludwig Wittgenstein. Russell, at the beginning of the century, promoted “logical atomism,” a method of reducing language to a form that would allow philosophers to determine how reality was constituted by making a linguistic analysis of propositional statements (assertions about reality). And Wittgenstein says, in the *Tractatus Logicophilosophicus* of 1922, that propositions are pictures or models of reality. The school of analytic philosophy that follows the work of Russell and Wittgenstein holds that much of philosophy is

⁸Ferdinand de Saussure, *Course in General Linguistics* (1916), ed. C. Bally and A. Sechehaye, trans. Wade Baskin (New York: Philosophical Library, 1959), p. 16.

meaningless because philosophers have misused ordinary language. From this premise, two conclusions have emerged. One conclusion, preferred by the so-called neopositivists, is that language is inherently confusing and illogical and should be purified, at least for philosophical purposes. The other conclusion, adopted by the “ordinary language” philosophers, is that use determines meaning. Wittgenstein in his later work takes this position, and speech-act theorist J. L. Austin is one of its most important defenders.

The recent history of language philosophy thus shows some tolerance for theories of meaning based on context and use, but its main tendency is a continued reluctance to move away from the search for a universal basis for language in universal grammar or in psychology if not in logic itself. Rhetoric has been, at best, a marginal concern for both Continental and Anglo-American philosophy.

It is against the background of these developments in the philosophy of language that I. A. Richards and Mikhail Bakhtin call for a reexamination of the meaning of meaning.

THE MEANING OF MEANING IN PHILOSOPHY AND LITERATURE

I. A. Richards (1893–1979; p. 1270) and his collaborator, Cambridge philosopher C. K. Ogden, discuss the work of Peirce, Saussure, Russell, and Wittgenstein in their influential book, *The Meaning of Meaning* (1923). Richards and Ogden illustrate Peirce’s theory of signs with a communication triangle, in which the linguistic sign directly calls up the mental sign or reference and only indirectly stands for the extramental and extralinguistic “referent” out in the world of things or ideas. They also endorse Saussure’s principle of the arbitrariness of signs. But Saussure sidesteps the problem of meaning, which is precisely the issue that concerns them. Signs, to be meaningful, require interpretation, and Richards and Ogden conclude that sign interpretation is conditioned by the situations in which the sign has been experienced. Meaning therefore inheres not in words themselves but in the remembered contexts in which they have appeared to the interpreter. Richards carried this analysis of meaning into literary criticism and eventually identified it with the essence of rhetoric.

In the twenties and thirties, the aesthetically oriented New Criticism arose in the United States, and Formalism, based on structural linguistics, developed in eastern Europe. Both of these approaches eschewed the previously popular historical and biographical approaches to literary scholarship, focusing instead on the aesthetic experience of the text and the attempt to describe the text’s meaning, from which the reader’s aesthetic experience was inseparable. The artful quality of literature was taken to be evidence that literary language was more emotive, suggestive, and powerful than ordinary language. This distinction was not new: Drawing on Wordsworth’s idea that poetry is the expression of feeling, nineteenth-century philosopher John Stuart Mill had posited a scale in which expressive language (in the form of lyric poetry) was placed at the top and mere exposition at the bottom. The most expressive genres were the most literary, followed by the lesser, mixed genres, and finally the nonexpressive, purely descriptive genres. Literary language was complex and metaphoric, whereas ordinary language sought clarity in simplicity.

I. A. Richards, in his role as founder of an influential variety of formalist criticism, also observes the literary-ordinary language distinction, but he argues that the ground of meaning for both literary language and ordinary language is the same: They are both sign systems. In his early literary-critical work, *Principles of Literary Criticism* (1924), Richards says that poems must be treated like other sign systems that readers experience, as he had explained in *The Meaning of Meaning*: Previous experiences of language use—in this case, of reading poetry—determine how poems are understood.

But, like other formalists who claimed that the reader's psychological response was the basis of meaning, Richards did not intend to examine the actual experience of readers and then claim that those experiences constituted literary criticism. To the contrary, Richards analyzes the failure of readers to understand poems correctly. In *Practical Criticism* (1929), he uses psychology to explain how readers bring inappropriate associations to poems, thus distorting their meaning. Successful readings see the metaphoric resonances, the modulation of images, the tonal quality of word sounds, and so on. In other words, correct readings focus on the poem itself, not on the reader's feelings. In attending to the reader's experience as the basis of literary meaning, Richards shifts the role of psychology in criticism from the author to the reader. But for all his attention to psychological ideas and vocabulary, the result of his work is to cancel psychology and bring the text to the fore.

As for the rift between literary and ordinary language, Richards characterizes literary language as emotive rather than expressive (again shifting the focus from author to reader). In *The Philosophy of Rhetoric* (1936; p. 1281), Richards sets up a scale just like Mill's: At the lower end, meaning tends to "stay put," whereas at the upper end meaning shifts about and requires more careful interpretation. In moving from literary criticism to rhetoric, Richards hopes to expand his theory that meaning depends on the experienced contexts in which language has been used. Words do not have literal meanings that travel with them wherever they go, he says. A word (or any sign) takes its meaning from the context of remembered use in the past and of other words in whose company it appears at a given time. All language is subject to some degree of contextual meaning, but literature is the exemplary case, as his scale shows. Richards uses metaphor as the model for the "interanimation of words" that determines meaning: The tenor and vehicle mutually limit and expand each other's range of meanings. Richards thus explains semiotic meaning by a literary principle that was there all along. Metaphor links literature, rhetoric, and semantics; it reveals the need for interpretation in context and allows Richards to limit "context" to the immediate verbal setting; and it retains the basic elements of the distinction between literary and ordinary language.

MEANING AND DIALOGISM

Like Richards and most students of language philosophy at the time, Mikhail Bakhtin (1895–1975; p. 1206) was also powerfully influenced by Peirce and Saussure. Bakhtin, too, comes out of a formalist system of literary criticism that he finds faulty. He accepts the fundamental principle of semiotics: that language is a sign system, that the signs themselves are arbitrary, and that signs refer to other

signs, not to extralinguistic entities. But Bakhtin rejects the conclusion, drawn by both Peirce and Saussure, that the meaning of discourse is to be found in the psychological processing of signs. In *Marxism and the Philosophy of Language*, he maintains that language can be understood only as dialogue. Systems such as structural linguistics or literary stylistics fail to account for the parts that intention, interpretation, social context, and historical circumstance play in the creation of meaning. Bakhtin takes the view that “the logic of consciousness is the logic of ideological communication, of the semiotic interaction of a social group.”⁹ He applies this theory of language to literary criticism as well as to discourse in general.

Before *Marxism and the Philosophy of Language*, Bakhtin had in fact already written a book on literary theory, *The Formal Method in Literary Scholarship* (1928). Here, Bakhtin rejects the distinction between literary and ordinary language and attacks the contemporary Russian Formalist school for maintaining that distinction. Russian Formalism drew upon Saussure’s linguistics as a way to turn attention to the close analysis of literary texts. The Formalists, like the New Critics, rejected the source criticism, influence hunting, and biographical criticism that seemed to look everywhere but at the text. Instead, they sought to isolate the text by declaring literary language a “dialect” of ordinary language, and finally, as Fredric Jameson says, “a total linguistic system in its own right.”¹⁰ Poetic language is “heightened” and draws attention to itself, the theory goes, whereas practical language tries to be transparent. Thus poetic language changes the usual, rather automatic process by which ordinary language is understood, thereby shifting the reader’s focus from the message to the medium.

Bakhtin opposes both of the Formalists’ assumptions about meaning: first, that meaning in poetry is a function of the structure of poetic language and, second, that meaning is ultimately a matter of psychological effects. Moreover, in isolating the text from any context (at least in principle) and insulating it from practical speech, the Formalists make dialogue impossible, and dialogue is the real location of meaning for Bakhtin. In the literary criticism of his later books, he treats literature as one set of genres among a great many genres of discourse, all of which are to be studied as forms of social interaction. Not unlike Kenneth Burke, Bakhtin sees all forms of discourse as strategies for producing effects in particular situations. Literature is no exception.

Bakhtin does not draw explicitly on the rhetorical tradition, but he notes, in his essay “The Problem of Speech Genres” (1953; p. 1227), that genres are a useful category in both literature and rhetoric: “Rhetorical genres have been studied since antiquity (and not much has been added in subsequent epochs to classical theory).”¹¹ He suggests extending rhetorical analysis to every kind of speech, recognizing that genres are the means of adapting an utterance to a complex situation, a situation that includes a history of previous speech acts as well as an immediate context involving socially situated speakers.

LITERATURE, LOGIC, RHETORIC, AND ETHICS

Aristotle's division between rhetoric and poetic usefully reveals the different purposes, effects, and methods of the two realms of discourse. Nonetheless, from Aristotle's time to our own, rhetoric and poetic have been closely linked. Both are concerned with ways of moving audiences by means of language. And even if, as many critics have argued, there is a distinction between the "contemplative" goal of literature and the "active" goal of rhetoric, literature frequently uses persuasion and argumentation. In terms of theory and criticism, rhetoric names the tropes used in poetry, and poetry provides the exemplary forms of the tropes for instruction in rhetoric. Narration is essential to both rhetoric and poetic. Rhetoric, in short, has often been identified with literature.

But for all these connections (and more that might be added to the list), the independence of rhetoric and poetic has been asserted and defended just as frequently as their interrelatedness. Literary critics have resisted (and many still resist) crossing the Aristotelian divide between rhetoric and poetic. At the end of the nineteenth century, after a long period when rhetoric and belles lettres (including literary criticism) were always identified with each other, critics once again asserted the contemplative-active distinction, arguing that poetry concerned only feelings, rhetoric only action (see the introduction to Part Five). Recall Mill's scale, in which expressive language is at the top and exposition at the bottom. When departments of English formed at the end of the nineteenth century, these kinds of distinctions contributed to the desire to dissociate rhetoric and literary studies. Rhetoric, as Burke reminds us, was thus supplanted by aesthetics and the social sciences.

Burke takes a rather different and more radical approach to the relationship between rhetoric and literature when he declares in his first book, *Counter-Statement* (1919), that literature is unequivocally a form of persuasive discourse and is therefore governed by rhetoric. Though he occasionally distinguishes between art and use in discourse, hinting at the literary-ordinary language distinction, Burke consistently applies his rhetorical methods to an enormous range of written and oral examples, from philosophy to advertising to chats with the dentist. As he explains in *A Grammar of Motives* and *A Rhetoric of Motives*, no form of discourse is exempt from motivation. Scientific and philosophical discourses attempt to describe systems of human motivation, and social discourses attempt to motivate. Thus it is the business of rhetoric to categorize and analyze these discourses. Motives, he says, are "distinctly linguistic products." Burke gives literature and philosophy special attention because of the long-standing presumption about their independence from motivation. Literature is "the adopting of various strategies for encompassing situations" by naming them—that is, an attempt to understand motives.¹²

Unlike Richards's instantly popular method of close reading, Burke's rhetorical approach to criticism was not widely adopted. Still, his approach rattled many who wished to maintain the sharp division between rhetoric and poetic and stimulated

¹²Kenneth Burke, *The Philosophy of Literary Form*, 3rd ed. (Berkeley: University of California Press, 1973), p. 1.

those who saw the value of treating literature as a form of rhetoric. Wayne C. Booth (p. 1491) argues in *The Rhetoric of Fiction*, for example, that all literature is discourse addressed to a reader. Critics should therefore examine the techniques by which the author persuades the reader to accept the fictional world and the author's ever-present judgments about it.¹³ Following Booth's analysis, a great many critical works appeared that used the term *rhetoric* to describe techniques of all kinds in literature. A few works appeared, too, that explored the theoretical connection that Burke and Booth had put forward. For example, critic and rhetorician Walter J. Ong argues in his 1975 essay, "The Writer's Audience Is Always a Fiction," that writers cannot address an actual audience, but rather project the kind of audience that will be receptive to their work. Reading thus involves a kind of negotiation between the actual reader and the role that the author projects for the ideal reader. For this reason, the reader has an active role in producing the meaning of the work.¹⁴

Some of the reader-response critics of the seventies, such as Stanley Fish and Wolfgang Iser, took a similar position but emphasized that readers must be "informed" or "educated" for their interpretations to be correct. Others, like Norman Holland, eschewed such judgments and sought to describe the many ways in which meaning emerges during the act of reading. This approach follows the road not taken by I. A. Richards, for it attempts to describe what happens to the reader psychologically without making a judgment about the correctness of the reader's interpretation. Reader-response critics generally regard their method as context-sensitive, though not as rhetorical. Still, this method and others that oppose strictly formalistic methods (notably Marxist criticism, which seeks to describe the historical and ideological context of literature) operate on the principle that literature is a form of rhetorical discourse whose interpretation depends on context and response as well as on the structure of the text.

Beginning from rhetoric rather than philosophy or criticism, Richard M. Weaver (1910–1963; p. 1348) develops a theory of meaning similar to those advanced by Richards and Burke. When Weaver argues that language is sermonistic (the title of his influential 1963 essay), he means that all instances of language use are persuasive, rhetorical, and therefore imbued with ethical values. For Weaver, human utterances reflect a set of values and aim to move others to accept the image of the world in which those values apply (as in Burke's notion of identification). To speak or write is to perform a positive ethical action, and the value of rhetoric as a discipline, Weaver argues, comes from its goal of revealing the ethical bases of a given discourse. Weaver, a conscious Platonist, does not go so far as other theorists in linking rhetoric with logic or knowledge. He retains in his writing the category of *dialectic* as discourse that leads to knowledge of nature (though he warns that dialectic is not necessarily trustworthy for conveying knowledge in an ethical way). Nonetheless, Weaver shares the tendency of Burke and Richards to include all forms of discourse within the discipline of rhetoric.

RHETORIC VERSUS LOGIC

It was in the context of Bertrand Russell's analytic philosophy, its distrust of language, and its reliance on logic that Stephen Toulmin (p. 1410) developed his theory of argument. When, in *The Uses of Argument* (1958), Toulmin asserted that formal logic should not be regarded as superior to probabilistic argument in establishing truth, his Cambridge friends felt that he had abandoned philosophy altogether. His graduate advisor, he says, "was deeply pained by the book, and barely spoke to me for twenty years."¹⁵ Toulmin's goal is to extend the rigor of formal logic to arguments in realms of greater uncertainty, like law and morality, and even science. Though the standard methods of logic cannot be applied in these areas, he says, there is nonetheless a structure to their arguments that can be shown to apply across fields. An argument consists of a claim that is based on data, modified by certain qualifications and conditions. But the nature of the claims, data, and qualifications is a function of the context or field in which the argument is advanced, and the force of the argument is a question of its persuasiveness, not the perfection of the argument structure.

Apparently, Toulmin did not set out to critique the tradition of analytic philosophy or even to switch allegiances to the "ordinary language" school associated with Oxford University. Moreover, he scrupulously avoids mentioning rhetoric, the field in which his ideas have been most fruitfully applied. But in an important sense, his Cambridge colleagues are correct in their criticism: Toulmin shows that "truth" is a social phenomenon, dependent on the criteria developed by a community for determining what it will believe. In this he is closer than he might himself admit to forthright critics of traditional philosophy, such as Chaim Perelman and even Michel Foucault.

The philosophical project of Chaim Perelman is similar in many ways to Toulmin's. Perelman, a student of law and philosophy, wished to know how reasonable judgments can be reached in values and morals. Finding no account of this sort of reasoning in logic or any other area of philosophy, he and Lucie Olbrechts-Tyteca undertook, in *The New Rhetoric* (1958), to examine recorded examples of such judgments. While reviewing innumerable arguments from different fields, they made several discoveries. One was that there already was a discipline that studied and classified arguments—namely, rhetoric and its counterpart dialectic. Another was that because argumentation dealt with the probable, the plausible, and the uncertain, post-Cartesian philosophy had no interest in it. Where there was no proof, reason and rationality were presumably absent. Science, Perelman allows, may be within the realm of certainty, where arguments must be based on clear proof. But the vast field of human affairs depends on judgments that are not reducible to self-evident propositions, however much some systems of politics or religion may claim such a basis. Perelman's attack on the premise that there may be self-evident truths and his proposal of an informal logic based on argumentation constitute, as he notes, "a break with a concept of reason and reasoning . . . which has set its mark on

¹⁵Stephen Toulmin, "Logic and the Criticism of Arguments," in *The Rhetoric of Western Thought*, ed. J. Golden, G. Berquist, and W. Coleman, 4th ed. (Dubuque, Iowa: Kendall/Hunt, 1989), p. 375.

Western philosophy for the last three centuries.”¹⁶ Finally, he concludes that knowledge itself is based upon argument, and that there is considerable ethical and ideological danger in the tendency of most arguments to claim that they rest on immutable truth. The goal of rhetoric, then, is to reveal that all discourse is rhetorical and that no claims are self-evident. Perelman felt that he was reviving rhetoric, recovering the notions of argument, persuasion, audience, and dialectic for the analysis of practical reasoning in human affairs. Indeed, his work stimulated a revival of the discipline in Europe and contributed to its growing respectability in the United States.

DISCOURSE, KNOWLEDGE, AND IDEOLOGY

In philosophy and the sciences, both social and natural, questions about knowledge and meaning have come to be bound inextricably to questions about language. Such questions are disturbing and by no means easily contemplated, let alone answered. Take, for example, the announcement by philosopher of science Thomas Kuhn that scientific knowledge advances through communal argument rather than by the discovery of new facts. Indeed, says Kuhn, the proponents of competing paradigms are like native speakers of different languages. Moving from one paradigm and one language to another is not, as naive histories of science suggest, merely accepting a new bit of data or acknowledging the correctness of a new theory; it is, rather, a strenuous process of cultural conversion. Language is not a clear medium for the exchange of information, but opaque, resistant, and imbued with cultural bias, even in the enlightened realm of science. Scientists cannot simply present new information or demonstrate new findings but must argue for new meanings and create a new community that shares them.¹⁷ Far from being among the first to reveal the place of rhetoric in the construction of knowledge, Kuhn is among the latest. Yet Kuhn’s thesis produced, in the words of the philosophers of science, a “crisis of rationality” in the scientific community.

Even this crisis of rationality is not so new, according to Michel Foucault (p. 1432), who traces it back to the beginning of the nineteenth century. It was then, he says, that words “rediscovered their ancient, enigmatic density,” lost since the demise of the Sophists. First the “human sciences,” as Foucault calls linguistics, economics, and psychology, and later the natural sciences, too, have had to deal with the complex relationship between language and knowledge, recognizing that language does not simply represent a preexisting reality or even one’s thoughts. Foucault revives Nietzsche (see p. 1168) in arguing that truth, or what counts as truth, is determined by the discursive practices of a community.

Foucault, conversant in philosophy, psychology, psychiatry, and the history of science, is, along with Jacques Derrida, the champion of postmodern opposition to philosophy’s quest for universals and absolutes. Foucault argues that knowledge is

¹⁶Chaim Perelman and Lucie Olbrechts-Tyteca, *The New Rhetoric: A Treatise on Argumentation*, trans. John Wilkinson and Purcell Weaver (Notre Dame, Ind.: University of Notre Dame Press, 1969), p. 1.

¹⁷Thomas Kuhn, *The Structure of Scientific Revolutions*, 2nd ed. (Chicago: University of Chicago Press, 1970).

constituted by discourse. Particular statements are taken as true, he maintains, because of the elaborate relationships of communication and power among social institutions that use and control knowledge. Foucault examines disciplinary techniques for interpreting or expounding knowledge, the certification of certain speakers as authorities, and the ways in which certified methods and authorities mediate the needs and desires of communities. Discourse, in this view, is not the transparent conveyor of knowledge, not a free system of expression, and not at all independent of the interactions embodied in it.

Like Foucault, Jacques Derrida (p. 1471) takes up Nietzsche's critique of the prevailing philosophical assumption that external reality is accessible to perception and that knowledge of the external world can be recorded and communicated in language. Derrida asserts that there is no extralinguistic knowledge at all. In this, he is close to Foucault. But he differs from Foucault in taking as his own philosophical project the critique of philosophy's attempt to accomplish the impossible task of making language transcend itself and be referential. Although Derrida takes language as the basis of his analysis of philosophy, he is not nearly as rhetorically minded as Newton Garver seems to suggest in the remarks quoted earlier. Derrida has no interest in communication, persuasion, or even the structure of discourse. He focuses on writing, as opposed to speech, as the exemplary form of language use, exemplary because it exists apart from the context of utterance or reception and thereby reveals, under the form of scrutiny Derrida calls "deconstruction," its distance from its apparent reference. Derrida's analysis supports the theory that rhetoric is epistemic, for it argues that knowledge is not a function of logic and that language is not a medium for knowledge; rather, knowledge is made by language, though for Derrida, the chief characteristic of knowledge may be that it is an elaborate self-deception.

Derrida's deconstructive method breaks down the traditional distinction between philosophy and literature by drawing on Nietzsche's observation that all language is metaphoric in operation. As deconstructionist critic Paul de Man puts it, "All philosophy is condemned, to the extent that it is dependent upon figuration, to be literary and, as the depository of this very problem, all literature is to some extent philosophical."¹⁸ De Man raises "the very difficult question whether the entire semantic, semiological, and performative field of language can be said to be covered by topological models, a question which can only be raised after the proliferating and disruptive power of figural language has been fully recognized."¹⁹ In more general terms, de Man's question concerns the boundaries between traditionally distinct realms of discourse, between rhetoric and poetic or between literary and ordinary language.

In a 1973 essay, "How Ordinary Is Ordinary Language?" literary critic Stanley Fish (p. 1605) documents the persistence of the idea that literary language is different from ordinary language. He argues that there is no such thing as ordinary language at all, if that means language that is transparent and in no need of contextual

¹⁹de Man, p. 28.

interpretation.²⁰ In his later work, Fish comes to rhetoric as the discipline that best addresses the issues of meaning and interpretation. In his essay “Rhetoric” (p. 1609), Fish situates his own understanding of epistemic language in relation to the same kind of history of twentieth-century thought that we have been examining here. Barbara Herrnstein Smith takes a position similar to Fish’s in her excellent discussion—in *On the Margins of Discourse* (1978)—of the mostly false distinction between natural and poetic discourse.²¹ Deconstructive criticism, inspired by the work of Derrida, also assumes that literary language is not different from ordinary language, for all language is fundamentally figurative and no language is referential. Deconstructive critics use this insight to collapse the distinction between philosophy and literature, and several (most notably Paul de Man, another devotee of Nietzsche) have identified rhetoric as the discipline responsible for analyzing the figurative nature and hence the epistemological function of language. But Derrida and the critics who follow him focus on the way that texts undermine their own apparent meaning. Rhetoric, in the work of these critics, thus tends to refer to tropes as symbols of an epistemological dilemma but not to the larger questions of discourse and its construction of knowledge.

In *Literary Theory: An Introduction* (1983), Marxist literary critic Terry Eagleton argues that there is no such thing as literature, if by literature we mean a text that is linguistically different from “ordinary” texts. He concludes his clear and helpful survey of modern critical theories by calling for a new rhetorical criticism, for rhetoric, he says, takes the most comprehensive view of the operations of discourse: It is by definition opposed to critical formalism, for it seeks meaning in human interactions, in history and culture, and in ideology; it also regards discourse as a form of human action, as the construction of history and culture, and as ethical and ideological. Eagleton puts it this way:

Rhetoric, which was the received form of critical analysis all the way from ancient society to the eighteenth century, examined the way discourses are constructed in order to achieve certain effects. It was not worried about whether its objects of enquiry were speaking or writing, poetry or philosophy, fiction or historiography: its horizon was nothing less than the field of discursive practices in society as a whole, and its particular interest lay in grasping such practices as forms of power and performance. . . . It saw speaking and writing not merely as textual objects, to be aesthetically contemplated or endlessly deconstructed but as forms of activity inseparable from the wider social relations between writers and readers, orators and audiences, and as largely unintelligible outside the social purposes and conditions in which they were embedded.²²

Eagleton speaks of rhetoric in the past tense while hoping that it will be the future of criticism, but the notes he strikes sound through the theories of rhetorical criti-

cism offered by Stanley Fish and Wayne C. Booth, and by those who look back to the prescient work of Kenneth Burke.

The forms of rhetorical analysis we have been examining seem to conclude that all forms of communication are rhetorical. Burke would certainly agree. He argues, for example, that Thomas Carlyle was quite right to analyze clothing as a symbol system. Clothes symbolize social distinctions. Clothing has meaning, and meaning is subject to interpretation. Mikhail Bakhtin, arguing that even natural phenomena take on ideological meaning, uses hunger as an example: Hunger is not simply a physiological fact, the same in all cases, but is interpreted by the hungry person in the context of a system of social meanings. French critic Roland Barthes, Canadian critic Marshall McLuhan, and others have pursued the rhetoric of nonlinguistic symbol systems, though chiefly under the rubric of semiotics. Historian of rhetoric George A. Kennedy contemplates animal communication as rhetorical.

For all its new-found theoretical reach, rhetoric still means the practice of effective speaking and effective writing; it still means teaching the strategies for effective discourse; and it still resides in the “public sphere,” as German sociologist Jürgen Habermas and others put it. In the twentieth century, the public sphere has become dramatically more open to the rhetoric of women and minorities, whose practices, coming from struggles to get a hearing, have materially marked contemporary rhetoric.

RHETORICS OF GENDER, RACE, AND CULTURE IN THE TWENTIETH CENTURY

In sharp contrast to women in other periods of Western culture, many more twentieth-century women, both white and of color, are literate, and many more are educated beyond the elementary level. Women practice rhetoric in a wider variety of forms than ever before. In addition to the many private genres in which they have always participated, more and more women are speaking and writing for public forums. Women are lawyers, ministers, college professors, and politicians. Moreover, far more women are studying and teaching rhetorical practices than ever have in the past. Women scholars in the social sciences, speech communication, literature, and composition studies are analyzing written and spoken discourse of many kinds.

Women’s theorizing about language in use is also taking new forms. As speech communication scholar Karlyn Kohrs Campbell has pointed out, women have always had to be particularly inventive in their uses of rhetoric—inventing not only the matter of their texts, but appropriate personae to deliver them.²³ In the past, women could be found reflecting on forms of rhetoric that might be used by both sexes, even if those forms were considered especially appropriate for women. For example, Aspasia (p. 56) discusses dialogue and Madeleine de Scudéry (p. 761) conversation as rhetorical genres. But perhaps the most frequent kind of reflection

²³See Karlyn Kohrs Campbell, “Inventing Women: From Amaterasu to Virginia Woolf,” *Women’s Studies in Communication* 21.2 (fall 1998): 111–26.

on rhetoric that women produced before the modern period comprised arguments for allowing women to express themselves at all in speech or writing, or especially to practice rhetoric in public forums. Examples of such claims for a public voice can be found in the work of Margaret Fell (p. 748), Sor Juana Inés de la Cruz (p. 780), Maria W. Stewart (p. 1031), and Sarah Grimké (p. 1045), among others. In general, these arguments claimed for women the use of the same rhetorical practices as were available to men. By the nineteenth century, however, a new kind of theorizing about women and rhetoric began to emerge. This was work that attempted to identify something uniquely female in language use, a sort of “women’s rhetoric” that was clearly distinct from the mainstream rhetoric for men. Early attempts at such theorizing can be found, for example, in the defense of women’s public Christian ministry mounted by Phoebe Palmer (p. 1085) and Frances Willard (p. 1114).

Work on women’s rhetoric broadened and deepened in the twentieth century, so that it might now be possible to speak for the first time of a women’s tradition in rhetoric. Discussing texts in which women argue for their right to speak, feminist historian Gerda Lerner has wryly noted the tendency of successive authors to construct arguments very similar to one another—for example, in criticizing pronouncements on women’s public speaking by the Apostle Paul.²⁴ This has happened, Lerner says, because the women’s texts did not stay in print; transmission was further attenuated because of women’s uneven and uncertain access to education. But in the twentieth century, these conditions changed for the better. One of the first important theorists of women’s rhetoric in the twentieth century, Virginia Woolf (p. 1246), emphasizes the importance for women to connect with the work of earlier women writers. Moreover, Woolf mounts a critique of the social conditions, oppressive to women, that have resulted in previous suppressions of women’s writing. Appropriately enough, Woolf herself has come to be regarded as an important foremother of work on women’s rhetoric later in the century. Subsequent writers have cited her and have also emulated her feminist stance against the social, political, and economic forces that discouraged women’s writing.

Woolf’s own writing style has also been taken as paradigmatic of women’s ways of using language. For example, her essays do not proceed linearly to drive home points supporting a thesis, but rather accumulate support for her position gradually and indirectly. Her evidence may be taken from published authorities but is more likely to come from her own experience and reflections. Later women writers, including Adrienne Rich, who openly acknowledges her debt to Woolf, and Hélène Cixous (p. 1520), whose affinities with Woolf’s work have been noted by a number of scholars, have worked to develop theories of women’s language use that follow along these lines and clearly differentiate it from men’s. Cixous calls her concept of women’s writing, rooted in the ways women experience their bodies sexually, “écriture féminine.” Rich has devoted her long career as a poet and essayist entirely to working out ways to use language to express the wide range of women’s experience.

²⁴Gerda Lerner, “Introduction,” in *The Feminist Thought of Sarah Grimké*, ed. Gerda Lerner (New York: Oxford University Press, 1998), pp. 21–22.

As a lesbian and a Jew, Rich has also been alert to the implications of sexual preference and ethnicity for language use. As Rich has noted, Gloria Anzaldúa (p. 1582) has become an important theorist of the intersections between women's rhetoric, gay rhetoric, and rhetorics of color.²⁵ Composition scholar Andrea Lunsford has called this conjunction in Anzaldúa's work "mestiza rhetoric."²⁶ Anzaldúa's writing mixes not only her experiences as woman, lesbian, and Chicana, but also her varied linguistic resources; she boldly uses Spanish and Nahuatl along with English even when writing for primarily English-speaking audiences. Women of color have always labored under a double burden of racial and sexual oppression in their attempts to claim a public voice, as can be seen from the experience of early-nineteenth-century African American orator Maria W. Stewart. But women's increasing educational and professional opportunities in the twentieth century have allowed more varied voices to emerge. Their work raises powerful questions that challenge the Western rhetorical tradition's assumptions of cultural homogeneity among speakers or writers and audiences. Can communication and persuasion take place when such homogeneity does not exist? The theoretical work and the popular success of twentieth-century women rhetoricians suggest that it can.

The increasing numbers of men of color entering the professions of law, medicine, politics, and the academy provide further confirmation. Some of the most influential political leaders of the twentieth century have been African American men: Martin Luther King Jr., Malcolm X, and Jesse Jackson. Following in the footsteps of important nineteenth-century African American intellectual and political leader Frederick Douglass (p. 1061), these men have adapted forms of rhetoric preferred by the dominant culture to pursue successful political activism for social justice. At the same time, they have felt more free than Douglass did to bring the great rhetorical resources of the African American community to bear in rhetorical forums that address the general public. As literary scholar Henry Louis Gates Jr. (p. 1543) has shown, Black English and African American rhetoric have their own powerful tradition, and African American leaders have used it effectively even when communicating with people who are unfamiliar with it. Largely an oral tradition, at least before the twentieth century, African American rhetoric has not suffered from the transmission problems, noted above, that have hampered the development of women's rhetoric. It has been a vital force in the African American community for centuries and now enriches the broader American rhetorical scene.

Black English has long been recognized, at least by linguists, as a dialect, a grammatically coherent language that is a form of English and not simply English rendered incorrectly (though the persistence of that prejudicial view was evident in the battles over teaching Ebonics). The linguistic description of Black English cites the African languages that combined with English to produce distinctive grammatical, syntactic, and lexical features. In addition, sociolinguists and folklorists have looked at the rhetorical character of black discourse to discover how it functions in

²⁵See Adrienne Rich, *What Is Found There: Notebooks on Poetry and Politics* (New York: W. W. Norton, 1993), p. 140 et passim.

²⁶Andrea Lunsford, "Toward a Mestiza Rhetoric: Gloria Anzaldúa on Composition and Postcoloniality," *Journal of Advanced Composition* 18.1 (1998): 2.

behavior, social organization, and ideological relations with the dominant white culture. Rhetoric, in most such studies, has not been called upon as a comprehensive theory of discourse. Where rhetoric appears at all, it refers to tropes, which in turn refer to a number of distinctive black speech patterns and genres, such as “playing the dozens” and “signifying.” Henry Louis Gates Jr., in *The Signifying Monkey* (p. 1551), analyzes the tropes of black discourse in terms of the epistemic notion of tropes developed by deconstructionist critics. Gates thus brings the analysis of a part of black discourse into line with a significant element of the language theory shared by literary criticism and rhetoric.

THE REACH OF RHETORIC

Twentieth-century theories of rhetoric, in formulating the relationships between language and knowledge and in reexamining the powers of discourse, have extended the concerns of rhetoric to include each and every instance of language use. Although some earlier rhetoricians, such as Isocrates, Vico, and Nietzsche, believed that rhetoric must be comprehensive and address all language acts, for centuries the scope of rhetoric was limited to overtly persuasive and deliberately stylized forms of discourse and to the speech and writing of those in power. Twentieth-century theories of rhetoric, in contrast, take the concerns of rhetoric to be nothing less than the foundations of knowledge and ideology in discourse.

The movement of philosophy toward the problems of language and epistemology, of literary analysis toward a concern for the nature of textual and contextual interpretation, of the social sciences and even the natural sciences toward the realization that knowledge is a linguistically constructed and consensual arrangement—all point to the need for a comprehensive theory of language and knowledge, a theory of practical reasoning, of speech acts, of discursive formations, of persuasion and identification—in short, a theory that encompasses all the rich elements of rhetoric. Rhetoric at the beginning of the twenty-first century is not only a field of historical investigation, systematic analysis, pedagogical practice, political change, and theoretical speculation, but an intellectual project that extends beyond disciplinary boundaries.

Selected Bibliography

Some of the key twentieth-century developments in rhetorical theory are discussed in Michael Leff’s “In Search of Ariadne’s Thread: A Review of Recent Literature on Rhetorical Theory” (*Central States Speech Journal* 29 [summer 1978]: 73–91), which focuses on the rhetoric-as-epistemic approach, and C. H. Knoblauch’s “Modern Rhetorical Theory and Its Future Directions,” in *Perspectives on Research and Scholarship in Composition*, ed. Ben W. McClelland and Timothy R. Donovan (New York, 1985). *Contemporary Perspectives on Rhetoric*, 2nd ed., by S. Foss, K. Foss, and R. Trapp (Prospect Heights, Ill., 1991), is a summary of the work of Richards, Weaver, Burke, Toulmin, Perelman, and Foucault, as well as Italian philosopher Ernesto Grassi and German sociologist Jürgen Habermas. This book con-

tains good bibliographies of both primary and secondary works on these figures. A very useful and well-organized source addressing the connections between rhetorical theory and philosophers of the “linguistic turn” is *Rhetoric in an Antifoundational World: Language, Culture, and Pedagogy*, ed. Michael Bernard-Donals and Richard R. Glejzer (New Haven, 1998), which includes Fish’s “Rhetoric,” Eagleton’s “A Short History of Rhetoric,” and a number of other essays, including one by Richard Rorty. Yet another excellent collection of this type is *Contending with Words: Composition and Rhetoric in a Postmodern Age*, ed. Patricia Harkin and John Schilb (New York, 1991).

A discussion of the relationship between rhetoric and philosophy through the ages, oriented toward modern issues of epistemology, is found in Samuel IJsseling’s *Rhetoric and Philosophy in Conflict* (1975; trans. Paul Dunphy, The Hague, 1976). See also Bruce Kimball’s *Orators and Philosophers* (New York, 1986), which treats the rhetoric-philosophy dispute as the central issue in the history of education.

James Kinneavy’s chapter on “Contemporary Rhetoric” in *The Present State of Scholarship in Historical and Contemporary Rhetoric*, 2nd ed., ed. Winifred Bryan Horner (Columbia, Mo., 1990) takes a broad view of the province of rhetoric, including discussion and bibliography in the areas of theory, reference works, informal logic, epistemology, advertising, political and religious oratory, criticism, feminism, and writing instruction.

An excellent selection of the work of Richard McKeon, responsible (with R. S. Crane) for the Chicago revival of rhetoric, is available in *Rhetoric: Essays in Invention and Discovery*, ed. Mark Backman (Woodbridge, Conn., 1987). McKeon treats rhetoric as a method of active philosophical analysis, a means of historical and social analysis; his work deserves serious attention by students of rhetoric.

Edwin Black’s *Rhetorical Criticism: A Study in Method* (New York, 1965) called attention to the limits of the Aristotelian model and the need to develop new theories. Black also described rhetoric as a critical approach that did not have to rely on classical references, thus making rhetoric more competitive with other contemporary critical approaches. Daniel Fogarty, S.J., discusses the rhetorical tradition and modern theories in *Roots for a New Rhetoric* (1959, rpt. New York, 1968). A number of other excellent essays from the sixties revival are collected in *Contemporary Theories of Rhetoric*, ed. Richard Johannesen (New York, 1971).

The modern history of writing instruction can be found in James Berlin’s *Rhetoric and Reality: Writing Instruction in American Colleges, 1900–1985* (Carbondale, 1987) and in John Michael Wozniak’s comprehensive *English Composition in Eastern Colleges, 1850–1940* (Washington, D.C., 1978). See also Robin Varnum’s *Fencing with Words: A History of Writing Instruction at Amherst College, 1938–1966* (Urbana, Ill., 1996), which describes an influential program in considerable detail. The renewed connection between writing instruction and the rhetorical tradition is taken up in “The Revival of Rhetoric in America,” by Robert Connors, Lisa Ede, and Andrea Lunsford, in *Essays on Classical Rhetoric and Modern Discourse*, ed. Connors, Ede, and Lunsford (Carbondale, 1984). This volume contains a number of essays on related topics, as well as a bibliography of the works of E. P. J. Corbett. Connors treats the period from 1760 to 1960 in *Composition-Rhetoric: Backgrounds, Theory, and Pedagogy* (Pittsburgh, 1997). An excellent collection of essays is *The Rhetorical Tradition and Modern Writing*, ed. James J. Murphy (New York, 1982). *The Bedford Bibliography for Teachers of Writing*, 5th ed., by Patricia Bizzell, Bruce Herzberg, and Nedra Reynolds (Boston, 2000), summarizes many works on the history and theory of rhetoric and composition.

The modern history of the discipline of speech communication is explored in great detail in several essays in *Speech Communication in the 20th Century*, ed. Thomas Benson

(Carbondale, 1985). See especially "Rhetorical Theory in Speech Communication," by Michael Leff and Margaret Procaro; "The History of Rhetoric: The Reconstruction of Progress," by Richard Leo Enos; "Speech Communication Education in American Colleges and Universities," by Gustav Friedrich; and "The Development of Research in Speech Communication," by Herman Cohen. The "reference lists" for the essays in this book overlap somewhat, but together they make an extensive bibliography of the significant work in the field. See also the earlier collection *History of Speech Education in America*, ed. Karl Wallace (New York, 1954), and Herman Cohen's *History of Speech Communication: The Emergence of a Discipline, 1914–1945* (Annandale, Va., 1994).

Susanne Langer's *Philosophy in a New Key* (Cambridge, Mass., 1942) gives a strong sense of the power and range of the new symbolic view of philosophy quite early in the twentieth century. On modern semantics, see Saussure, *Course in General Linguistics* (1916, trans. Wade Baskin, New York, 1959), and *Philosophical Writings of C. S. Peirce*, ed. J. Buchler (New York, 1955). C. W. Morris takes up Peirce's ideas in *Foundations of the Theory of Signs* (Chicago, 1938).

Bertrand Russell's 1924 essay "Logical Atomism" is in a good collection of his early essays, *Logic and Knowledge* (1956; rpt. New York, 1971). Ludwig Wittgenstein's early and late positions on language can be compared in *Tractatus Logico-philosophicus* (1922; rpt. London, 1961) and *Philosophical Investigations* (Oxford, 1953). The philosophy of speech acts is presented with clarity and wit by J. L. Austin in his invaluable *How to Do Things with Words* (Cambridge, Mass., 1962). Another essential text is John R. Searle, *Speech Acts: An Essay in the Philosophy of Language* (Cambridge, 1969).

Thomas Kuhn's discussion of language and epistemology in science is in his important book *The Structure of Scientific Revolutions*, 2nd ed. (Chicago, 1970).

An excellent introduction to the theoretical orientations of literary criticism is M. H. Abrams's *The Mirror and the Lamp: Romantic Theory and the Critical Tradition* (London, 1953). A good overview is provided by René Wellek's *A History of Modern Criticism. Volume 5: English Criticism 1900–1950* and *Volume 6: American Criticism 1900–1950* (New Haven, 1986). For current approaches to critical theory, ending in a call for a return to rhetorical criticism, see Terry Eagleton's invaluable *Literary Theory: An Introduction* (Minneapolis, 1983).

The Russian Formalists are discussed by Victor Ehrlich in *Russian Formalism: History-Doctrine* (New York, 1949) and by Fredric Jameson in *The Prison-House of Language: A Critical Account of Structuralism and Russian Formalism* (Princeton, 1972). Jameson also compares Formalism with American New Criticism. For reader-response criticism, the best source is Jane Tompkins, *Reader Response Criticism: From Formalism to Post-Structuralism* (Baltimore, 1980). On the ordinary-literary language controversy, see Stanley Fish, "How Ordinary Is Ordinary Language?" (1973; rpt. in *Is There a Text in This Class?* Cambridge, 1980), and Barbara Herrnstein Smith, *On the Margins of Discourse: The Relation of Literature and Language* (Baltimore, 1978).

Studies of twentieth-century women's rhetoric that focus on a few figures in depth include Krista Ratcliffe's *Anglo-American Feminist Challenges to the Rhetorical Traditions: Virginia Woolf, Mary Daly, Adrienne Rich* (Carbondale, 1996); AnaLouise Keating's *Women Reading Women Writing* (Philadelphia, 1996), which deals with Gloria Anzaldúa, Paula Gunn Allen, and Audre Lorde; and the collection *Reclaiming Rhetorica: Women in the Rhetorical Tradition* (Pittsburgh, 1995), ed. Andrea Lunsford, which contains chapters on Laura (Riding) Jackson (by James Oldham), Susanne K. Langer (by Arabella Lyon), Louise Rosenblatt (by Annika Hallin), and Julia Kristeva (by Suzanne Clark). Karlyn Kohrs

Campbell gives an overview of issues in women's rhetoric in "Inventing Women: From Amaterasu to Virginia Woolf" (*Women's Studies in Communication* 21 [fall 1998]: 111–26). Information on women rhetors can be gained from Campbell's edited volume *Women Public Speakers in the United States 1925–1993: A Bio-Critical Sourcebook* (Westport, Conn.; 1994), and from *The Rhetoric of Struggle: Public Address by African-American Women* (New York, 1992), ed. Robbie Jean Walker. Other sources on women's rhetoric can be found in the bibliographies accompanying the headnotes to Virginia Woolf, Hélène Cixous, and Gloria Anzaldúa.

Geneva Smitherman's *Talkin' and Testifyin'* (Boston, 1977) remains an excellent place to begin study of Black English; see also the recent collection of her essays, *Talkin That Talk: Language, Culture and Education in African America* (London and New York, 2000). General studies of African American oratory include Wilson Jeremiah Moses's *Black Messiahs and Uncle Toms* (University Park, Penn.; 1982) and David Howard-Pitney's *The Afro-American Jeremiad* (Philadelphia, 1990), both of which move from the nineteenth century to the twentieth century, and Bradford Stull's *After the Fall, Dreaming of Eden* (Carbondale, 1999), which concentrates on W. E. B. Du Bois, Martin Luther King Jr., and Malcolm X. Although focusing primarily on nineteenth-century rhetors, Jacqueline Jones Royster's *Traces of a Stream: Literacy and Social Change among African American Women* (Pittsburgh, 2000) contains a helpful discussion of cultural, social, and political factors that continue to impact African American women's rhetoric today. For more information on Black English, see the bibliography accompanying the headnote to Henry Louis Gates Jr.; additional sources on rhetorics of color can be found there and in the bibliography with the headnote to Gloria Anzaldúa.

Mikhail Bakhtin

1895–1975

Mikhail Bakhtin's work is fired by his conviction that language and the forms it takes can be properly understood only as dialogue, as utterances that take place within social situations and that at least partly constitute them. He attacks every approach to the study of language or literature that is based on abstract structures or independent systems of meaning or that focuses on isolated speakers or texts. He rejects the position that utterances simply "reflect" something else, such as the psychology of the individual or the conditions of society. He proposes instead that dialogue is the model for understanding not only literature, but also ideology, psychology, and linguistics. Dialogue, for Bakhtin, occurs both in the literal exchange of utterances between speakers and in the intentional negotiation of meaning and interpretation between author and reader. He emphasizes the "polyphony" of language seen this way, the "heteroglossia" of speech and texts that are subject to multiple interpretations.

Born into the untitled nobility in 1895 in a town not far from Moscow, Bakhtin was educated in European culture and studied classics at Petersburg University, where he remained through the First World War and the Russian Revolution. Through the revolutionary period, Bakhtin taught school in a provincial town, gave public lectures on art and literature (he was considered a dynamic public speaker), cultivated his circle of artists and academics, and worked on his writing. Committed to the Russian Orthodox Church, he also lectured on theology. When Stalin came to power late in the twenties, religion was repressed and Bakhtin was arrested—charged, as Socrates had been, with corrupting youth. In 1930, he was exiled to Kazakhstan for six years.

During the twenties, Bakhtin had no official standing in the state intellectual-academic community and was even somewhat suspect because of his religious leanings. For this reason, he apparently felt that he could not find publishers for works on sensitive subjects, such as Marxism, Freud, and literary Formalism. So Bakhtin published three books and several articles under the names of other, better-established members of his circle. The books are *The Formal Method in Literary Scholarship* (1928), attributed to P. N. Medvedev; *Freudianism: A Critical Sketch* (1927), attributed to V. N. Voloshinov; and *Marxism and the Philosophy of Language* (1929), also attributed to Voloshinov. During this period, Bakhtin published *Problems of Dostoevsky's Creative Works* (1929) under his own name, this topic being, presumably, a less sensitive one.

According to Bakhtin's biographers, Katerina Clark and Michael Holquist, Bakhtin's willingness to publish under his friends' names is typical of his lack of personal ambition, his generosity, and his love of practical jokes—the "carnival" quality he admires in the sixteenth-century French writer François Rabelais.¹ In-

¹Katerina Clark and Michael Holquist, *Mikhail Bakhtin* (Cambridge: Harvard University Press, 1984), p. 151. See pages 146–70 for a full discussion of the authorship dispute.

deed, he kept the authorship dispute alive even after he was officially rehabilitated in the sixties, admitting that he wrote the disputed works but refusing to sign official statements to that effect. Although most scholars seem to have accepted Bakhtin's authorship, some questions about it still remain.

On his return from exile, Bakhtin wrote a dissertation on Rabelais for the Gorky Institute but, because of the Second World War, was unable to defend it. Even after the defense, which occurred in 1947, the faculty at first rejected the dissertation and then hotly debated it, until finally, in 1951, they accepted it. In the meantime, Bakhtin taught literature at a provincial university, where he was a popular lecturer. He remained on the fringes of intellectual life until the sixties, when he was discovered by younger scholars, under whose influence the Dostoevsky book was republished and the dissertation on Rabelais revised and published as *Rabelais and His World* (1965). Bakhtin was permitted to return to Moscow in 1972, and he died there in 1975.

The early works of disputed authorship, particularly *The Formal Method in Literary Scholarship* and *Marxism and the Philosophy of Language*, represent the manifesto of the dialogic theory that Bakhtin applies to literary criticism, literary theory, and language theory. *The Formal Method in Literary Scholarship* discusses the important but short-lived critical school that we know as Russian Formalism. Much like the New Criticism in its close reading of the style and structure of individual works, Formalism began after the First World War in the discussions of literature students who were interested in the new ideas about structural linguistics advanced by Ferdinand de Saussure. The Formalists were drawn to Saussure's descriptive linguistics because it represented a scientific approach to language that might help to put literary criticism, too, on a scientific footing. The Formalists maintained that one should describe the literary work as a linguistic object before or even in preference to any discussion of a work's context or message. Only such close attention to the literary object could reveal, they believed, the work's essential literariness.

In *The Formal Method*, Bakhtin acknowledges the virtues of Formalism in attending to the linguistic features of the text (in contrast to older methods of historical and biographical criticism) and in combating "vulgar" materialist readings that viewed literature simplistically, as a reflection of class and economic conditions. But Formalism pursued a programmatic separation of literature from history and social conditions on the principle that literary language is different from practical language. This position Bakhtin attacks. The advances of Formalism must be maintained, he argues, but criticism must also recognize that the meaning of literary works depends on the historical situation of the text, the social situation of the reader, and the complex interaction thus generated by the act of reading. Literary language is not different from practical language: Literary meaning, unstable and polysemous, depends on dialogue—that is, on the negotiation of meaning between text and interpreting reader—and not on the literariness of the text and its pure perception by the reader.

If *The Formal Method* is the poetic of dialogism, *Marxism and the Philosophy of Language* (excerpted here) is its rhetoric. In the latter volume, Bakhtin argues

that the true basis of linguistics is the study of utterances, of speech acts. Bakhtin accepts Saussure's semiotic assumption that communication takes place through arbitrary signs: There is, in other words, no inherent meaning in the sounds or symbols of language. But Bakhtin objects to Saussure's assumption that the sole purpose of linguistics is to analyze how these signs fit together into a system. Bakhtin charges (rather unfairly) that the chief virtue of structural linguistics is to provide an object of scientific study for linguists. Structural descriptions, he complains, do not explain the way language is actually used. The individual utterance, in structural linguistics, is an isolated event rather than a social act.

Structural linguistics regards the utterance (*parole*) as an individual's selection of elements (lexical, grammatical, and syntactic) from the larger system of language (*langue*). Bakhtin argues for a method of analysis that recognizes the primacy of the utterance-in-context and shows the dynamic relationship between system and utterance, a method that he elaborates most effectively in "The Problem of Speech Genres" (1953; excerpted here). He also rejects Saussure's assertion that signs are psychological in nature. Signs are part of material reality, Bakhtin maintains, imbued with ideological meaning by their use in social situations. They are not, therefore, simply mental phenomena. The psychologism of Saussure and other linguists reflects, for Bakhtin, the unacceptable subjectivism that treats language as the expression of the individual's thought. Instead, argues Bakhtin, consciousness should be seen as a social phenomenon that "takes shape and being in the material of signs created by an organized group in the process of its social intercourse."² He defends this position through a discussion of inner speech, borrowing the concept advanced by his contemporary, the great psychologist Lev Vygotsky.

Bakhtin remarks in *Marxism and the Philosophy of Language* that "the structure of a whole utterance is something linguistics leaves to the competence of other disciplines—to rhetoric and poetics."³ In "The Problem of Speech Genres," he attempts to analyze the "whole utterance" and, in effect, to merge rhetoric and linguistics. The genres of speech are, he says, the "relatively stable types" of utterance that occur in "each sphere in which language is used." They include, for example, the conventions of casual conversation, the formulas of business documents, and the well-known literary genres. He wants the idea of speech genres to honor both convention and individual choice, to see both constraints and openness in communication.

It would not be wrong to think of the speech genres, then, as rhetorical situations and to see Bakhtin's argument as a way of extending rhetoric's gaze to every act of speaking or writing. To be sure, Bakhtin takes his approach not from rhetoric but from linguistics and semantics. Indeed, Bakhtin slights rhetoric for its traditional limitation to a few genres and mechanical taxonomies of tropes, just as he criticizes structural linguistics for its mechanistic approach. Rhetoric scholar Kay Halasek has suggested, too, that Bakhtin sees rhetoric as too confrontational and monologic

²See p. 1213 in this book.

³Mikhail Bakhtin, *Marxism and the Philosophy of Language* (1929; rpt., trans. Ladislav Matejka and I. R. Titunik, Cambridge: Harvard University Press, 1973), p. 78.

in comparison with the approach to the audience implied in literary texts.⁴ Bakhtin defines his own dialogic method as a way of recognizing (a) the speaker's or writer's (rhetorical) intention to move the audience to action and (b) the audience's active role in interpreting utterances in order to reply or react, a role that the speaker or writer is well aware of: "The [literary or technical] work, like the rejoinder in dialogue, is oriented toward the response of the other."⁵ Bakhtin then distinguishes the boundaries of the utterance, both spoken and written, and argues that all mechanical or subjective theories of meaning should be abandoned in favor of a contextual one. His focus on context aligns well with the social turn in rhetoric and composition studies, accounting for the great surge of interest in his work in these fields since 1985. His emphasis on the dialogic, too, has increased interest in his work among feminist scholars looking for ways to theorize the plurality of views in their own field.

Selected Bibliography

Marxism and the Philosophy of Language, trans. Ladislav Matejka and I. R. Titunik (New York, 1973), gives V. N. Voloshinov as the author. "The Problem of Speech Genres" is published in *Speech Genres and Other Late Essays*, trans. Vern W. McGee (Austin, Texas, 1986).

Other works by Bakhtin include "Discourse Typology in Prose," in *Readings in Russian Poetics (Formalist and Structuralist Views)*, ed. L. Matejka and K. Pomorska (Cambridge, Mass., 1971); *Freudianism: A Critical Sketch* (by "V. N. Voloshinov"), translated as *Freudianism: A Marxist Critique* by I. R. Titunik (New York, 1973); *The Formal Method in Literary Scholarship: A Critical Introduction to Sociological Poetics* (by "P. N. Medvedev"), trans. Albert J. Wehrle (Baltimore, 1978); *Problems in Dostoevsky's Poetics*, trans. Caryl Emerson (Minneapolis, 1984); *Rabelais and His World*, trans. Helene Iswolsky (Cambridge, Mass., 1968); and *The Dialogic Imagination*, ed. Michael Holquist, trans. Caryl Emerson and Michael Holquist (Austin, Tex., 1981).

Katerina Clark and Michael Holquist have written a scholarly, readable biography in *Mikhail Bakhtin* (Cambridge, Mass., 1984). Two essays printed in *Marxism and the Philosophy of Language* provide an excellent introduction to the issues in Bakhtin's intellectual environment: Ladislav Matejka's "On the First Russian Prolegomena to Semiotics" and I. R. Titunik's "The Formal Method and the Sociological Method (M. M. Bakhtin, P. N. Medvedev, V. N. Voloshinov) in Russian Theory and Study of Literature." Titunik has also published a summary of contemporary issues in "M. M. Bakhtin (The Bakhtin School) and Soviet Semiotics" (*Dispositio* 1 [1976]: 327–38).

Bakhtin: Essays and Dialogues on His Work, ed. Gary Saul Morson (Chicago, 1986), is a collection of essays that appeared originally in *Critical Inquiry* 7 (summer 1981), 9 (September 1982), 10 (December 1983), and 11 (June 1985). The essays cover a wide range of Bakhtin's linguistic and literary ideas. Tzvetan Todorov's book-length study, *Mikhail Bakhtin: The Dialogical Principle* (1981; trans. Wlad Godzich, Minneapolis, 1984), also contains several shorter works by Bakhtin. Michael Holquist's *Dialogism: Bakhtin and His World* (London, 1990) organizes Bakhtin's work around his concept of "dialogism" and

⁴Kay Halasek, *A Pedagogy of Possibility: Bakhtinian Perspectives on Composition Studies* (Carbondale: Southern Illinois University Press, 1999), pp. x–xi.

⁵See p. 1237 in this book.

focuses on his usefulness for literary analysis. Dominick LaCapra devotes a chapter of *Re-thinking Intellectual History: Texts, Contexts, Language* (Ithaca, N.Y., 1983) to “Bakhtin, Marxism, and the Carnavalesque,” providing a lucid summary of Bakhtin’s major ideas, both literary and linguistic. Feminist work on Bakhtin by literary scholars is collected in *Feminism, Bakhtin, and the Dialogic* (Albany, N.Y., 1991), ed. Dale M. Bauer and S. Jaret McKinstry. A collection edited by Amy Mandelker, *Bakhtin in Contexts: Across the Disciplines* (Evanston, Ill., 1995), presents essays that apply Bakhtin’s ideas in Slavic studies, classics, American literature, African American studies, sociology, anthropology, linguistics, and semiotics.

Landmark Essays on Bakhtin, Rhetoric, and Writing, ed. Frank Farmer (Mahwah, N.J., 1998), collects important essays by Charles Schuster, Michael Bernard-Donals, Kay Halasek, Don H. Bialostosky, Marilyn Middendorf, Helen Rothschild Ewald, and other scholars in rhetoric and composition studies. Kay Halasek helpfully surveys this scholarship in *A Pedagogy of Possibility: Bakhtinian Perspectives on Composition Studies* (Carbondale, Ill., 1999), where she articulates Bakhtin’s ideas in relation to key composition concepts of the student writer, the audience, the topic, and critical reading and writing.

From *Marxism and the Philosophy of Language*

From Part I

CHAPTER I THE STUDY OF IDEOLOGIES AND PHILOSOPHY OF LANGUAGE

The problem of the ideological sign. The ideological sign and consciousness. The word as an ideological sign par excellence. The ideological neutrality of the word. The capacity of the word to be an inner sign. Summary.

Problems of the philosophy of language have in recent times acquired exceptional pertinence and importance for Marxism. Over a wide range of the most vital sectors in its scientific advance, the Marxist method bears directly upon these problems and cannot continue to move ahead productively without special provision for their investigation and solution.

First and foremost, the very foundations of a Marxist theory of ideologies—the bases for the studies of scientific knowledge, literature, religion, ethics, and so forth—are closely bound up with problems of the philosophy of language.

Any ideological product is not only itself a

part of a reality (natural or social), just as is any physical body, any instrument of production, or any product for consumption, it also, in contradistinction to these other phenomena, reflects and refracts another reality outside itself. Everything ideological possesses *meaning*: it represents, depicts, or stands for something lying outside itself. In other words, it is a *sign*. *Without signs, there is no ideology*. A physical body equals itself, so to speak; it does not signify anything but wholly coincides with its particular, given nature. In this case there is no question of ideology.

However, any physical body may be perceived as an image; for instance, the image of natural inertia and necessity embodied in that particular thing. Any such artistic-symbolic image to which a particular physical object gives rise is already an ideological product. The physical object is converted into a sign. Without ceasing to be a part of material reality, such an object, to some degree, reflects and refracts another reality.

The same is true of any instrument of production. A tool by itself is devoid of any special meaning; it commands only some designated function—to serve this or that purpose in production. The tool serves that purpose as the par-

Translated by Ladislav Matejka and I. R. Titunik.

ticular, given thing that it is, without reflecting or standing for anything else. However, a tool also may be converted into an ideological sign. Such, for instance, is the hammer and sickle insignia of the Soviet Union. In this case, hammer and sickle possess a purely ideological meaning. Additionally, any instrument of production may be ideologically decorated. Tools used by prehistoric man are covered with pictures or designs—that is, with signs. So treated, a tool still does not, of course, itself become a sign.

It is further possible to enhance a tool artistically, and in such a way that its artistic shapeliness harmonizes with the purpose it is meant to serve in production. In this case, something like maximal approximation, almost a coalescence, of sign and tool comes about. But even here we still detect a distinct conceptual dividing line: the tool, as such, does not become a sign; the sign, as such, does not become an instrument of production.

Any consumer good can likewise be made an ideological sign. For instance, bread and wine become religious symbols in the Christian sacrament of communion. But the consumer good, as such, is not at all a sign. Consumer goods, just as tools, may be combined with ideological signs, but the distinct conceptual dividing line between them is not erased by the combination. Bread is made in some particular shape; this shape is not warranted solely by the bread's function as a consumer good; it also has a certain, if primitive, value as an ideological sign (e.g., bread in the shape of a figure eight [*krendel*] or a rosette).

Thus, side by side with the natural phenomena, with the equipment of technology, and with articles for consumption, there exists a special world—the *world of signs*.

Signs also are particular, material things; and, as we have seen, any item of nature, technology, or consumption can become a sign, acquiring in the process a meaning that goes beyond its given particularity. A sign does not simply exist as a part of a reality—it reflects and refracts another reality. Therefore, it may distort that reality or be true to it, or may perceive it from a special point of view, and so forth. Every sign is subject to the criteria of ideological evaluation (i.e., whether it is true, false, correct, fair, good, etc.). The domain of ideology coincides with the domain of signs. They equate with one another. Wherever a

sign is present, ideology is present, too. *Everything ideological possesses semiotic value.*

Within the domain of signs—i.e., within the ideological sphere—profound differences exist: it is, after all, the domain of the artistic image, the religious symbol, the scientific formula, and the judicial ruling, etc. Each field of ideological creativity has its own kind of orientation toward reality and each refracts reality in its own way. Each field commands its own special function within the unity of social life. *But it is their semiotic character that places all ideological phenomena under the same general definition.*

Every ideological sign is not only a reflection, a shadow, of reality, but is also itself a material segment of that very reality. Every phenomenon functioning as an ideological sign has some kind of material embodiment, whether in sound, physical mass, color, movements of the body, or the like. In this sense, the reality of the sign is fully objective and lends itself to a unitary, monistic, objective method of study. A sign is a phenomenon of the external world. Both the sign itself and all the effects it produces (all those actions, reactions, and new signs it elicits in the surrounding social milieu) occur in outer experience.

This is a point of extreme importance. Yet, elementary and self-evident as it may seem, the study of ideologies has still not drawn all the conclusions that follow from it.

The idealistic philosophy of culture and psychologicistic cultural studies locate ideology in the consciousness.¹ Ideology, they assert, is a fact of consciousness; the external body of the sign is merely a coating, merely a technical means for the realization of the inner effect, which is understanding.

Idealism and psychologism alike overlook the fact that understanding itself can come about

¹It should be noted that a change of outlook in this regard can be detected in modern neo-Kantianism. We have in mind the latest book by Ernst Cassirer, *Philosophie der symbolischen Formen*, Vol. 1, 1923. While remaining on the grounds of consciousness, Cassirer considers its dominant trait to be representation. Each element of consciousness represents something, bears a symbolic function. The whole exists in its parts, but a part is comprehensible only in the whole. According to Cassirer, an idea is just as sensory as matter; the sensoriness involved, however, is that of the symbolic sign, it is representative sensoriness. [Au.]

only within some kind of semiotic material (e.g., inner speech), that sign bears upon sign, that *consciousness itself can arise and become a viable fact only in the material embodiment of signs*. The understanding of a sign is, after all, an act of reference between the sign apprehended and other, already known signs; in other words, understanding is a response to a sign with signs. And this chain of ideological creativity and understanding, moving from sign to sign and then to a new sign, is perfectly consistent and continuous: from one link of a semiotic nature (hence, also of a material nature) we proceed uninterruptedly to another link of exactly the same nature. And nowhere is there a break in the chain, nowhere does the chain plunge into inner being, nonmaterial in nature and unembodied in signs.

This ideological chain stretches from individual consciousness to individual consciousness, connecting them together. Signs emerge, after all, only in the process of interaction between one individual consciousness and another. And the individual consciousness itself is filled with signs. Consciousness becomes consciousness only once it has been filled with ideological (semiotic) content, consequently, only in the process of social interaction.

Despite the deep methodological differences between them, the idealistic philosophy of culture and psychologistic cultural studies both commit the same fundamental error. By localizing ideology in the consciousness, they transform the study of ideologies into a study of consciousness and its laws; it makes no difference whether this is done in transcendental or in empirical-psychological terms. This error is responsible not only for methodological confusion regarding the interrelation of disparate fields of knowledge, but for a radical distortion of the very reality under study as well. Ideological creativity—a material and social fact—is forced into the framework of the individual consciousness. The individual consciousness, for its part, is deprived of any support in reality. It becomes either all or nothing.

For idealism it has become all: its locus is somewhere above existence and it determines the latter. In actual fact, however, this sovereign of the universe is merely the hypostatization in idealism of an abstract bond among the most general forms and categories of ideological creativity.

For psychological positivism, on the contrary, consciousness amounts to nothing: It is just a conglomeration of fortuitous, psychophysiological reactions which, by some miracle, results in meaningful and unified ideological creativity.

The objective social regulatedness of ideological creativity, once misconstrued as a conformity with laws of the individual consciousness, must inevitably forfeit its real place in existence and depart either up into the superexistential empyrean of transcendentalism or down into the presocial recesses of the psychophysical, biological organism.

However, the ideological, as such, cannot possibly be explained in terms of either of these superhuman or subhuman, animalian, roots. Its real place in existence is in the special, social material of signs created by man. Its specificity consists precisely in its being located between organized individuals, in its being the medium of their communication.

Signs can arise only on *interindividual territory*. It is territory that cannot be called “natural” in the direct sense of the word:² signs do not arise between any two members of the species *Homo sapiens*. It is essential that the two individuals be *organized socially*, that they compose a group (a social unit); only then can the medium of signs take shape between them. The individual consciousness not only cannot be used to explain anything, but, on the contrary, is itself in need of explanation from the vantage point of the social, ideological medium.

The individual consciousness is a social-ideological fact. Not until this point is recognized with due provision for all the consequences that follow from it will it be possible to construct either an objective psychology or an objective study of ideologies.

It is precisely the problem of consciousness that has created the major difficulties and generated the formidable confusion encountered in all issues associated with psychology and the study of ideologies alike. By and large, consciousness has become the *asylum ignorantiae* for all philosophical constructs. It has been made the place

²Society, of course, is also a *part of nature*, but a part that is qualitatively separate and distinct and possesses its own *specific* systems of laws. [Au.]

where all unresolved problems, all objectively irreducible residues are stored away. Instead of trying to find an objective definition of consciousness, thinkers have begun using it as a means for rendering all hard and fast objective definitions subjective and fluid.

The only possible objective definition of consciousness is a sociological one. Consciousness cannot be derived directly from nature, as has been and still is being attempted by naive mechanistic materialism and contemporary objective psychology (of the biological, behavioristic, and reflexological varieties). Ideology cannot be derived from consciousness, as is the practice of idealism and psychologistic positivism. Consciousness takes shape and being in the material of signs created by an organized group in the process of its social intercourse. The individual consciousness is nurtured on signs; it derives its growth from them; it reflects their logic and laws. The logic of consciousness is the logic of ideological communication, of the semiotic interaction of a social group. If we deprive consciousness of its semiotic, ideological content, it would have absolutely nothing left. Consciousness can harbor only in the image, the word, the meaningful gesture, and so forth. Outside such material, there remains the sheer physiological act unilluminated by consciousness, i.e., without having light shed on it, without having meaning given to it, by signs.

All that has been said above leads to the following methodological conclusion: *the study of ideologies does not depend on psychology to any extent and need not be grounded in it.* As we shall see in greater detail in a later chapter, it is rather the reverse: *objective psychology must be grounded in the study of ideologies.* The reality of ideological phenomena is the objective reality of social signs. The laws of this reality are the laws of semiotic communication and are directly determined by the total aggregate of social and economic laws. Ideological reality is the immediate superstructure over the economic basis. Individual consciousness is not the architect of the ideological superstructure, but only a tenant lodging in the social edifice of ideological signs.

With our preliminary argument, disengaging ideological phenomena and their regulatedness from individual consciousness, we tie them in all

the more firmly with conditions and forms of social communication. The reality of the sign is wholly a matter determined by that communication. After all, the existence of the sign is nothing but the materialization of that communication. Such is the nature of all ideological signs.

But nowhere does this semiotic quality and the continuous, comprehensive role of social communication as conditioning factor appear so clearly and fully expressed as in language. *The word is the ideological phenomenon par excellence.*

The entire reality of the word is wholly absorbed in its function of being a sign. A word contains nothing that is indifferent to this function, nothing that would not have been engendered by it. A word is the purest and most sensitive medium of social intercourse.

This indicatory, representative power of the word as an ideological phenomenon and the exceptional distinctiveness of its semiotic structure would already furnish reason enough for advancing the word to a prime position in the study of ideologies. It is precisely in the material of the word that the basic, general-ideological forms of semiotic communication could best be revealed.

But that is by no means all. The word is not only the purest, most indicatory sign but is, in addition, *a neutral sign.* Every other kind of semiotic material is specialized for some particular field of ideological creativity. Each field possesses its own ideological material and formulates signs and symbols specific to itself and not applicable in other fields. In these instances, a sign is created by some specific ideological function and remains inseparable from it. A word, in contrast, is neutral with respect to any specific ideological function. It can carry out ideological functions of *any* kind—scientific, aesthetic, ethical, religious.

Moreover, there is that immense area of ideological communication that cannot be pinned down to any one ideological sphere: the area of *communication in human life, human behavior.* This kind of communication is extraordinarily rich and important. On one side, it links up directly with the processes of production; on the other, it is tangent to the spheres of the various specialized and fully fledged ideologies. In the

following chapter, we shall speak in greater detail of this special area of behavioral, or life ideology. For the time being, we shall take note of the fact that the material of behavioral communication is preeminently the *word*. The locale of so-called conversational language and its forms is precisely here, in the area of behavioral ideology.

One other property belongs to the word that is of the highest order of importance and is what makes the word the primary medium of the individual consciousness. Although the reality of the word, as is true of any sign, resides between individuals, a word, at the same time, is produced by the individual organism's own means without recourse to any equipment or any other kind of extracorporeal material. This has determined the role of word as *the semiotic material of inner life—of consciousness* (inner speech). Indeed, the consciousness could have developed only by having at its disposal material that was pliable and expressible by bodily means. And the word was exactly that kind of material. The word is available as the sign for, so to speak, inner employment: it can function as a sign in a state short of outward expression. For this reason, the problem of individual consciousness as the *inner word* (as an *inner sign* in general) becomes one of the most vital problems in philosophy of language.

It is clear, from the very start, that this problem cannot be properly approached by resorting to the usual concept of word and language as worked out in nonsociological linguistics and philosophy of language. What is needed is profound and acute analysis of the word as social sign before its function as the medium of consciousness can be understood.

It is owing to this exclusive role of the word as the medium of consciousness that *the word functions as an essential ingredient accompanying all ideological creativity whatsoever*. The word accompanies and comments on each and every ideological act. The processes of understanding any ideological phenomenon at all (be it a picture, a piece of music, a ritual, or an act of human conduct) cannot operate without the participation of inner speech. All manifestations of ideological creativity—all other nonverbal signs—are bathed by, suspended in, and cannot be entirely

segregated or divorced from the element of speech.

This does not mean, of course, that the word may supplant any other ideological sign. None of the fundamental, specific ideological signs is replaceable wholly by words. It is ultimately impossible to convey a musical composition or pictorial image adequately in words. Words cannot wholly substitute for a religious ritual; nor is there any really adequate verbal substitute for even the simplest gesture in human behavior. To deny this would lead to the most banal rationalism and simplification. Nonetheless, at the very same time, every single one of these ideological signs, though not supplantable by words, has support in and is accompanied by words, just as is the case with singing and its musical accompaniment.

No cultural sign, once taken in and given meaning, remains in isolation: it becomes part of the *unity of the verbally constituted consciousness*. It is in the capacity of the consciousness to find verbal access to it. Thus, as it were, spreading ripples of verbal responses and resonances form around each and every ideological sign. Every *ideological refraction of existence in process of generation*, no matter what the nature of its significant material, *is accompanied by ideological refraction in word* as an obligatory concomitant phenomenon. Word is present in each and every act of understanding and in each and every act of interpretation.

All of the properties of word we have examined—*its semiotic purity, its ideological neutrality, its involvement in behavioral communication, its ability to become an inner word and, finally, its obligatory presence, as an accompanying phenomenon, in any conscious act*—all these properties make the word the fundamental object of the study of ideologies. The laws of the ideological refraction of existence in signs and in consciousness, its forms and mechanics, must be studied in the material of the word, first of all. The only possible way of bringing the Marxist sociological method to bear on all the profundities and subtleties of “immanent” ideological structures is to operate from the basis of the philosophy of language as the *philosophy of the ideological sign*. And that basis must be devised and elaborated by Marxism itself.

From Part II

CHAPTER 3 VERBAL INTERACTION

Utterance, as we know, is constructed between two socially organized persons, and in the absence of a real addressee, an addressee is presupposed in the person, so to speak, of a normal representative of the social group to which the speaker belongs. The *word is oriented toward an addressee*, toward *who* that addressee might be: a fellow-member or not of the same social group, of higher or lower standing (the addressee's hierarchical status), someone connected with the speaker by close social ties (father, brother, husband, and so on) or not. There can be no such thing as an abstract addressee, a man unto himself, so to speak. With such a person, we would indeed have no language in common, literally and figuratively. Even though we sometimes have pretensions to experiencing and saying things *urbi et orbi*, actually, of course, we envision this "world at large" through the prism of the concrete social milieu surrounding us. In the majority of cases, we presuppose a certain typical and stabilized *social purview* toward which the ideological creativity of our own social group and time is oriented, i.e., we assume as our addressee a contemporary of our literature, our science, our moral and legal codes.

Each person's inner world and thought has its stabilized *social audience* that comprises the environment in which reasons, motives, values, and so on are fashioned. The more cultured a person, the more closely his inner audience will approximate the normal audience of ideological creativity; but, in any case, specific class and specific era are limits that the ideal of addressee cannot go beyond.

Orientation of the word toward the addressee has an extremely high significance. In point of fact, *word is a two-sided act*. It is determined equally by *whose* word it is and *for whom* it is meant. As word, it is precisely *the product of the reciprocal relationship between speaker and listener, addresser and addressee*. Each and every word expresses the "one" in relation to the "other." I give myself verbal shape from an-

other's point of view, ultimately, from the point of view of the community to which I belong. A word is a bridge thrown between myself and another. If one end of the bridge depends on me, then the other depends on my addressee. A word is territory shared by both addresser and addressee, by the speaker and his interlocutor.

But what does being the speaker mean? Even if a word is not entirely his, constituting, as it were, the border zone between himself and his addressee—still, it does in part belong to him.

There is one instance of the situation wherein the speaker is the undoubted possessor of the word and to which, in this instance, he has full rights. This instance is the physiological act of implementing the word. But insofar as the act is taken in purely physiological terms, the category of possession does not apply.

If, instead of the physiological act of implementing sound, we take implementation of word as sign, then the question of proprietorship becomes extremely complicated. Aside from the fact that word as sign is a borrowing on the speaker's part from the social stock of available signs, the very individual manipulation of this social sign in a concrete utterance is wholly determined by social relations. The stylistic individualization of an utterance that the Vosslerites speak about represents a reflection of social interrelationships that constitute the atmosphere in which an utterance is formed. *The immediate social situation and the broader social milieu wholly determine—and determine from within, so to speak—the structure of an utterance.*

Indeed, take whatever kind of utterance we will, even the kind of utterance that is not a referential message (communication in the narrow sense) but the verbal expression of some need—for instance, hunger—we may be certain that it is socially oriented in its entirety. Above all, it is determined immediately and directly by the participants of the speech event, both explicit and implicit participants, in connection with a specific situation. That situation shapes the utterance, dictating that it sound one way and not another—like a demand or request, insistence on one's rights or a plea for mercy, in a style flowery or plain, in a confident or hesitant manner, and so on.

The immediate social situation and its immediate social participants determine the “occasional” form and style of an utterance. The deeper layers of its structure are determined by more sustained and more basic social connections with which the speaker is in contact.

Even if we were to take an utterance still in process of generation “in the soul,” it would not change the essence of the matter, since the structure of experience is just as social as is the structure of its outward objectification. The degree to which an experience is perceptible, distinct, and formulated is directly proportional to the degree to which it is socially oriented.

In fact, not even the simplest, dimmest apprehension of a feeling—say, the feeling of hunger not outwardly expressed—can dispense with some kind of ideological form. Any apprehension, after all, must have inner speech, inner intonation and the rudiments of inner style: one can apprehend one’s hunger apologetically, irritably, angrily, indignantly, etc. We have indicated, of course, only the grosser, more egregious directions that inner intonation may take; actually, there is an extremely subtle and complex set of possibilities for intoning an experience. Outward expression in most cases only continues and makes more distinct the direction already taken by inner speech and the intonation already embedded in it.

Which way the intoning of the inner sensation of hunger will go depends upon the hungry person’s general social standing as well as upon the immediate circumstances of the experience. These are, after all, the circumstances that determine in what evaluative context, within what social purview, the experience of hunger will be apprehended. The immediate social context will determine possible addresses, friends or foes, toward whom the consciousness and the experience of hunger will be oriented: whether it will involve dissatisfaction with cruel Nature, with oneself, with society, with a specific group within society, with a specific person, and so on. Of course, various degrees of perceptibility, distinctiveness, and differentiation in the social orientation of an experience are possible; but without some kind of evaluative social orientation there is no experience. Even the cry of a nursing

infant is “oriented” toward its mother. There is the possibility that the experience of hunger may take on political coloring, in which case its structure will be determined along the lines of a potential political appeal or a reason for political agitation. It may be apprehended as a form of protest, and so on.

With regard to the potential (and sometimes even distinctly sensed) addressee, a distinction can be made between two poles, two extremes between which an experience can be apprehended and ideologically structured, tending now toward the one, now toward the other. Let us label these two extremes the “*I-experience*” and the “*we-experience*.”

The “*I-experience*” actually tends toward extermination: the nearer it approaches its extreme limit, the more it loses its ideological structuredness and, hence, its apprehensible quality, reverting to the physiological reaction of the animal. In its course toward this extreme, the experience relinquishes all its potentialities, all outcroppings of social orientation, and, therefore, also loses its verbal delineation. Single experiences or whole groups of experiences can approach this extreme, relinquishing, in doing so, their ideological clarity and structuredness and testifying to the inability of the consciousness to strike social roots.³

The “*we-experience*” is not by any means a nebulous herd experience; it is differentiated. Moreover, ideological differentiation, the growth of consciousness, is in direct proportion to the firmness and reliability of the social orientation. The stronger, the more organized, the more differentiated the collective in which an individual orients himself, the more vivid and complex his inner world will be.

The “*we-experience*” allows of different degrees and different types of ideological structuring.

Let us suppose a case where hunger is apprehended by one of a disparate set of hungry persons whose hunger is a matter of chance (the man down on his luck, the beggar, or the like). The

³On the possibility of a set of human sexual experiences falling out of social context with concomitant loss of verbal cognizance, see our book, *Frejdzizm* {Freudianism} (1927), pp. 135–36. [Au.]

experience of such a declassé loner will be colored in some specific way and will gravitate toward certain particular ideological forms with a range potentially quite broad: humility, shame, enviousness, and other evaluative tones will color his experience. The ideological forms along the lines of which the experience would develop would be either the individualistic protest of a vagabond or repentant, mystical resignation.

Let us now suppose a case in which the hungry person belongs to a collective where hunger is not haphazard and does bear a collective character—but the collective of these hungry people is not itself tightly bound together by material ties, each of its members experiencing hunger on his own. This is the situation most peasants are in. Hunger is experienced “at large,” but under conditions of material disparateness, in the absence of a unifying economic coalition, each person suffers hunger in the small, enclosed world of his own individual economy. Such a collective lacks the unitary material frame necessary for united action. A resigned but unashamed and undemeaning apprehension of one’s hunger will be the rule under such conditions — “everyone bears it, you must bear it, too.” Here grounds are furnished for the development of the philosophical and religious systems of the nonresistor or fatalist type (early Christianity, Tolstoyanism).

A completely different experience of hunger applies to a member of an objectively and materially aligned and united collective (a regiment of soldiers; workers in their association within the walls of a factory; hired hands on a large-scale, capitalist farm; finally, a whole class once it has matured to the point of “class unto itself”). The experience of hunger this time will be marked predominantly by overtones of active and self-confident protest with no basis for humble and submissive intonation. These are the most favorable grounds for an experience to achieve ideological clarity and structuredness.⁴

⁴Interesting material about expressions of hunger can be found in Leo Spitzer’s books, *Italienische Kriegsgefangenenbriefe* [*Italian Prisoner-of-War Letters*—not translated into English.—Ed.], and *Die Umschreibungen des Begriffes Hunger* [*Expressions of the Idea of Hunger*—not translated into English.—Ed.]. The basic concern in these studies is the adaptability of word and image to the conditions of an excep-

All these types of expression, each with its basic intonations, come rife with corresponding terms and corresponding forms of possible utterances. The social situation in all cases determines which term, which metaphor, and which form may develop in an utterance expressing hunger out of the particular intonational bearings of the experience.

A special kind of character marks the individualistic *self-experience*. It does not belong to the “I-experience” in the strict sense of the term as defined above. The individualistic experience is fully differentiated and structured. Individualism is a special ideological form of the “we-experience” of the bourgeois class (there is also an analogous type of individualistic self-experience for the feudal aristocratic class). The individualistic type of experience derives from a steadfast and confident social orientation. Individualistic confidence in oneself, one’s sense of personal value, is drawn not from within, not from the depths of one’s personality, but from the outside world. It is the ideological interpretation of one’s social recognizance and tenability by rights, and of the objective security and tenability provided by the whole social order, of one’s individual livelihood. The structure of the conscious, individual personality is just as social a structure as is the collective type of experience. It is a particular kind of interpretation, projected into the individual soul, of a complex and sustained socioeconomic situation. But there resides in this type of individualistic “we-experience,” and also in the very order to which it corresponds, an inner contradiction that sooner or later will demolish its ideological structuredness.

An analogous structure is presented in solitary self-experience (“the ability and strength to stand alone in one’s rectitude”), a type cultivated by Romain Rolland and, to some extent, by Tolstoj.⁵ The pride involved in this solitude also depends upon “we.” It is a variant of the “we-experience” characteristic of the modern-day West European

tional situation. The author does not, however, operate with a genuine sociological approach. [Au.]

⁵Romain Rolland (1866–1944), French novelist, winner of the Nobel Prize for literature in 1917. “Tolstoj” is Lev Tolstoy (1828–1910), the Russian novelist. [Ed.]

intelligentsia. Tolstoj's remarks about there being different kinds of thinking—"for oneself" and "for the public"—merely juxtapose two different conceptions of "public." Tolstoj's "for oneself" actually signifies only another social conception of addressee peculiar to himself. There is no such thing as thinking outside orientation toward possible expression and, hence, outside the social orientation of that expression and of the thinking involved.

Thus the personality of the speaker, taken from within, so to speak, turns out to be wholly a product of social interrelations. Not only its outward expression but also its inner experience are social territory. Consequently, the whole route between inner experience (the "expressible") and its outward objectification (the "utterance") lies entirely across social territory. When an experience reaches the stage of actualization in a full-fledged utterance, its social orientation acquires added complexity by focusing on the immediate social circumstances of discourse and, above all, upon actual addressees.

Our analysis casts a new light upon the problem of consciousness and ideology that we examined earlier.

Outside objectification, outside embodiment in some particular material (the material of gesture, inner word, outcry), *consciousness is a fiction*. It is an improper ideological construct created by way of abstraction from the concrete facts of social expression. But consciousness as organized, material expression (in the ideological material of word, a sign, drawing, colors, musical sound, etc.)—consciousness, so conceived, is an objective fact and a tremendous social force. To be sure, this kind of consciousness is not a supraexistential phenomenon and cannot determine the constitution of existence. It itself is part of existence and one of its forces, and for that reason it possesses efficacy and plays a role in the arena of existence. Consciousness, while still inside a conscious person's head as innerword embryo of expression, is as yet too tiny a piece of existence, and the scope of its activity is also as yet too small. But once it passes through all the stages of social objectification and enters into the power system of science, art, ethics, or law, it becomes a real force, capable even of exerting in turn an

influence on the economic bases of social life. To be sure, this force of consciousness is incarnated in specific social organizations, geared into steadfast ideological modes of expression (science, art, and so on), but even in the original, vague form of glimmering thought and experience, it had already constituted a social event on a small scale and was not an inner act on the part of the individual.

From the very start experience is set toward fully actualized outward expression and, from the very start, tends in that direction. The expression of an experience may be realized or it may be held back, inhibited. In the latter case, the experience is inhibited expression (we shall not go into the extremely complex problem of the causes and conditions of inhibition). Realized expression, in its turn, exerts a powerful, reverse influence on experience: it begins to tie inner life together, giving it more definite and lasting expression.

This reverse influence by structured and stabilized expression on experience (i.e., inner expression) has tremendous importance and must always be taken into account. The claim can be made that it is a matter *not so much of expression accommodating itself to our inner world but rather of our inner world accommodating itself to the potentialities of our expression, its possible routes and directions*.

To distinguish it from the established systems of ideology—the systems of art, ethics, law, etc.—we shall use the term *behavioral ideology* for the whole aggregate of life experiences and the outward expressions directly connected with it. Behavioral ideology is that atmosphere of unsystematized and unfixed inner and outer speech which endows our every instance of behavior and action and our every "conscious" state with meaning. Considering the sociological nature of the structure of expression and experience, we may say that behavioral ideology in our conception corresponds basically to what is termed "social psychology" in Marxist literature. In the present context, we should prefer to avoid the word "psychology," since we are concerned exclusively with the content of the psyche and the consciousness. That content is ideological through and through, determined not by individual, organismic (biological or physiological) factors,

but by factors of a purely sociological character. The individual, organismic factor is completely irrelevant to an understanding of the basic creative and living lineaments of the content of consciousness.

The established ideological systems of social ethics, science, art, and religion are crystallizations of behavioral ideology, and these crystallizations, in turn, exert a powerful influence back upon behavioral ideology, normally setting its tone. At the same time, however, these already formalized ideological products constantly maintain the most vital organic contact with behavioral ideology and draw sustenance from it; otherwise, without that contact, they would be dead, just as any literary work or cognitive idea is dead without living, evaluative perception of it. Now, this ideological perception, for which alone any ideological piece of work can and does exist, is carried out in the language of behavioral ideology. Behavioral ideology draws the work into some particular social situation. The work combines with the whole content of the consciousness of those who perceive it and derives its apperceptive values only in the context of that consciousness. It is interpreted in the spirit of the particular content of consciousness (the consciousness of the perceiver) and is illuminated by it anew. This is what constitutes the vitality of an ideological production. In each period of its historical existence, a work must enter into close association with the changing behavioral ideology, become permeated with it, and draw new sustenance from it. Only to the degree that a work can enter into that kind of integral, organic association with the behavioral ideology of a given period is it viable for that period (and of course, for a given social group). Outside its connection with behavioral ideology it ceases to exist, since it ceases to be experienced as something ideologically meaningful.

We must distinguish several different strata in behavioral ideology. These strata are defined by the social scale on which experience and expression are measured, or by the social forces with respect to which they must directly orient themselves.

The purview in which an experience or expression comes into being may, as we know, vary

in scope. The world of an experience may be narrow and dim; its social orientation may be haphazard and ephemeral and characteristic only for some adventitious and loose coalition of a small number of persons. Of course, even these erratic experiences are ideological and sociological, but their position lies on the borders of the normal and the pathological. Such an experience will remain an isolated fact in the psychological life of the person exposed to it. It will not take firm root and will not receive differentiated and full-fledged expression; indeed, if it lacks a socially grounded and stable audience, where could it possibly find bases for its differentiation and finalization? Even less likely would such an adventitious experience be set down, in writing or even more so in print. Experiences of that kind, experiences born of a momentary and accidental state of affairs, have, of course, no chance of further social impact of efficacy.

The lowest, most fluid, and quickly changing stratum of behavioral ideology consists of experiences of that kind. To this stratum, consequently, belong all those vague and undeveloped experiences, thoughts, and idle, accidental words that flash across our minds. They are all of them cases of miscarriages of social orientations, novels without heroes, performances without audiences. They lack any sort of logic or unity. The sociological regulatedness in these ideological scraps is extremely difficult to detect. In this lowest stratum of behavioral ideology only statistical regularity is detectable; given a huge quantity of products of this sort, the outlines of socioeconomic regulatedness could be revealed. Needless to say, it would be a practical impossibility to descry in any one such accidental experience or expression its socioeconomic premises.

The upper strata of behavioral ideology, the ones directly linked with ideological systems, are more vital, more serious, and bear a creative character. Compared to an established ideology, they are a great deal more mobile and sensitive: they convey changes in the socioeconomic basis more quickly and more vividly. Here, precisely, is where those creative energies build up through whose agency partial or radical restructuring of ideological systems comes about. Newly emerging social forces find ideological expression and

take shape first in these upper strata of behavioral ideology before they can succeed in dominating the arena of some organized, official ideology. Of course, in the process of this struggle, in the process of their gradual infiltration into ideological organizations (the press, literature, and science), these new currents in behavioral ideology, no matter how revolutionary they may be, undergo the influence of the established ideological systems and, to some extent, incorporate forms, ideological practices, and approaches already in stock.

What usually is called “creative individuality” is nothing but the expression of a particular person’s basic, firmly grounded, and consistent line of social orientation. This concerns primarily the uppermost, fully structured strata of inner speech (behavioral ideology), each of whose terms and intonations have gone through the stage of expression and have, so to speak, passed the test of expression. Thus what is involved here are words, intonations, and inner-word gestures that have undergone the experience of outward expression on a more or less ample social scale and have acquired, as it were, a high social polish and lustre by the effect of reactions and responses, resistance or support, on the part of the social audience.

In the lower strata of behavioral ideology, the biological-biographical factor does, of course, play a crucial role, but its importance constantly diminishes as the utterance penetrates more deeply into an ideological system. Consequently, while bio-biographical explanations are of some value in the lower strata of experience and expression (utterance), their role in the upper strata is extremely modest. Here the objective sociological method takes full command.

So, then, the theory of expression underlying individualistic subjectivism must be rejected. *The organizing center of any utterance, of any experience, is not within but outside—in the social milieu surrounding the individual being.* Only the inarticulate cry of an animal is really organized from inside the physiological apparatus of an individual creature. Such a cry lacks any positive ideological factor vis-à-vis the physiological reaction. Yet, even the most primitive human utterance produced by the individual organism is,

from the point of view of its content, import, and meaning, organized outside the organism, in the extraorganismic conditions of the social milieu. Utterance as such is wholly a product of social interaction, both of the immediate sort as determined by the circumstances of the discourse, and of the more general kind, as determined by the whole aggregate of conditions under which any given community of speakers operates.

The individual utterance (*parole*), despite the contentions of abstract objectivism, is by no means an individual fact not susceptible to sociological analysis by virtue of its individuality. Indeed, if this were so, neither the sum total of these individual acts nor any abstract features common to all such individual acts (the “normatively identical forms”) could possibly engender a social product.

Individualistic subjectivism is *correct* in that individual utterances *are* what constitute the actual, concrete reality of language, and in that they *do have* creative value in language.

But individualistic subjectivism is *wrong* in ignoring and failing to understand the social nature of the utterance and in attempting to derive the utterance from the speaker’s inner world as an expression of that inner world. The structure of the utterance and of the very experience being expressed is a *social structure*. The stylistic shaping of an utterance is shaping of a social kind, and the very verbal stream of utterances, which is what the reality of language actually amounts to, is a social stream. Each drop of that stream is social and the entire dynamics of its generation are social.

Individualistic subjectivism is also completely *correct* in that linguistic form and its ideological impletion are *not* severable. Each and every word is ideological and each and every application of language involves ideological change. But individualistic subjectivism is *wrong* insofar as it also derives this ideological impletion of the word from the conditions of the individual psyche.

Individualistic subjectivism is *wrong* in taking the monologic utterance, just as abstract objectivism does, as its basic point of departure. Certain Vosslerites, it is true, have begun to consider the problem of dialogue and so to approach a

more correct understanding of verbal interaction.⁶ Highly symptomatic in this regard is one of Leo Spitzer's books we have already cited—his *Italienische Umgangssprache*, [*Italian Conversational Language*] a book that attempts to analyze the forms of Italian conversational language in close connection with the conditions of discourse and above all with the issue of the addressee.⁷ However, Leo Spitzer utilizes a *descriptive psychological* method. He does not draw from his analysis the fundamentally sociological conclusions it suggests. For the Vosslerites, therefore, the monologic utterance still remains the basic reality.

The problem of verbal interaction has been posed clearly and distinctly by Otto Dietrich.⁸ He proceeds by way of subjecting to criticism the theory of utterance as expression. For him, the basic function of language is not expression but *communication* (in the strict sense), and this leads him to consider the role of the addressee. The minimal condition for a linguistic manifestation is, according to Dietrich, *twofold* (speaker and listener). However, Dietrich shares assumptions of a general psychological type with individualistic subjectivism. Dietrich's investigations likewise lack any determinate sociological basis.

Now we are in a position to answer the question we posed at the end of the first chapter of this section of our study. *The actual reality of language-speech is not the abstract system of linguistic forms, not the isolated monologic utterance, and not the psychophysiological act of its*

⁶See "The Problem of Speech Genres," note 2 on p. 1228. [Ed.]

⁷In this respect, the very organization of the book is symptomatic. The book divides into four main chapters. Their titles are as follows: I. *Eröffnungsformen des Gesprächs*. II. *Sprecher und Hörer*; A. *Höflichkeit (Rücksicht auf den Partner)*. B. *Sparsamkeit und Verschwendung im Ausdruck*; C. *In einandergreifen von Rede und Gegenrede*. III. *Sprecher und Situation*. IV. *Der Abschluss des Gesprächs*. [I. *Conversational Openings*. II. *Speaker and Listener*; A. *Courtesy (Consideration of the Partner)*. B. *Economy and Extravagance in Expression*. C. *The Intertwining of Statement and Response*. III. *Speaker and Situation*. IV. *The Conclusion of Conversation*.—Ed.] Spitzer's predecessor in the study of conversational language under conditions of real-life discourse was Hermann Wunderlich. See his book, *Unsere Umgangssprache* (1894). [Au.]

⁸See *Die Probleme der Sprachpsychologie* (1914). [Au.]

implementation, but the social event of verbal interaction implemented in an utterance or utterances.

Thus, verbal interaction is the basic reality of language.

Dialogue, in the narrow sense of the word, is, of course, only one of the forms—a very important form, to be sure—of verbal interaction. But dialogue can also be understood in a broader sense, meaning not only direct, face-to-face, vocalized verbal communication between persons, but also verbal communication of any type whatsoever. A book, i.e., a *verbal performance in print*, is also an element of verbal communication. It is something discussable in actual, real-life dialogue, but aside from that, it is calculated for active perception, involving attentive reading and inner responsiveness, and for organized, *printed* reaction in the various forms devised by the particular sphere of verbal communication in question (book reviews, critical surveys, defining influence on subsequent works, and so on). Moreover, a verbal performance of this kind also inevitably orients itself with respect to previous performances in the same sphere, both those by the same author and those by other authors. It inevitably takes its point of departure from some particular state of affairs involving a scientific problem or a literary style. Thus the printed verbal performance engages, as it were, in ideological colloquy of large scale: it responds to something, objects to something, affirms something, anticipates possible responses and objections, seeks support, and so on.

Any utterance, no matter how weighty and complete in and of itself, *is only a moment in the continuous process of verbal communication*. But that continuous verbal communication is, in turn, itself only a moment in the continuous, all-inclusive, generative process of a given social collective. An important problem arises in this regard: the study of the connection between concrete verbal interaction and the extraverbal situation—both the immediate situation and, through it, the broader situation. The forms this connection takes are different, and different factors in a situation may, in association with this or that form, take on different meanings (for instance, these connections differ with the different factors

of situation in literary or in scientific communication). *Verbal communication can never be understood and explained outside of this connection with a concrete situation.* Verbal intercourse is inextricably interwoven with communication of other types, all stemming from the common ground of production communication. It goes without saying that word cannot be divorced from this eternally generative, unified process of communication. In its concrete connection with a situation, verbal communication is always accompanied by social acts of a nonverbal character (the performance of labor, the symbolic acts of a ritual, a ceremony, etc.), and is often only an accessory to these acts, merely carrying out an auxiliary role. *Language acquires life and historically evolves precisely here, in concrete verbal communication, and not in the abstract linguistic system of language forms, nor in the individual psyche of speakers.*

From what has been established, it follows that the methodologically based order of study of language ought to be: (1) the forms and types of verbal interaction in connection with their concrete conditions; (2) forms of particular utterances, of particular speech performances, as elements of a closely linked interaction—i.e., the genres of speech performance in human behavior and ideological creativity as determined by verbal interaction; (3) a reexamination, on this new basis, of language forms in their usual linguistic presentation.

This is the order that the actual generative process of language follows: *social intercourse is generated (stemming from the basis); in it verbal communication and interaction are generated; and in the latter, forms of speech performances are generated; finally, this generative process is reflected in the change of language forms.*

One thing that emerges from all that has been said is the extreme importance of the problem of the forms of an utterance *as a whole*. We have already pointed out that contemporary linguistics lacks any approach to the utterance itself. Its analysis goes no further than the elements that constitute an utterance. Meanwhile, utterances are the real units that make up the stream of language-speech. What is necessary in order to study the forms of this real unit is precisely that it

not be isolated from the historical stream of utterances. As a whole entity, the utterance is implemented only in the stream of verbal intercourse. The whole is, after all, defined by its boundaries, and these boundaries run along the line of contact between a given utterance and the extraverbal and verbal (i.e., made up of other utterances) milieu.

The first and last words, the beginning and end points of real-life utterance—that is what already constitutes the problem of the whole. The process of speech, broadly understood as the process of inner and outer verbal life, goes on continuously. It knows neither beginning nor end. The outwardly actualized utterance is an island rising from the boundless sea of inner speech; the dimensions and forms of this island are determined by the particular *situation* of the utterance and its *audience*. Situation and audience make inner speech undergo actualization into some kind of specific outer expression that is directly included into an un verbalized behavioral context and in that context is amplified by actions, behavior, or verbal responses of other participants of the utterance. The full-fledged question, exclamation, command, request—these are the most typical forms of wholes in behavioral utterances. All of them (especially the command and request) require an extraverbal complement and, indeed, an extraverbal commencement. The very type of structure these little behavioral *genres* will achieve is determined by the effect, upon a word, of its coming up against the extraverbal milieu and against another word (i.e., the words of other people). Thus, the form a command will take is determined by the obstacles it may encounter, the degree of submissiveness expected, and so on. The structure of the genre in these instances will be in accord with the accidental and unique features of behavioral situations. Only when social custom and circumstances have fixed and stabilized certain forms in behavioral interchange to some appreciable degree, can one speak of specific types of structure in genres of behavioral speech. So, for instance, an entirely special type of structure has been worked out for the genre of the light and casual causerie of the drawing room where everyone “feels at home” and where the basic differentiation within the

gathering (the audience) is that between men and women. Here we find devised special forms of insinuation, half-sayings, allusions to little tales of an intentionally nonserious character, and so on. A different type of structure is worked out in the case of conversation between husband and wife, brother and sister, etc. In the case where a random assortment of people gathers—while waiting in a line or conducting some business—statements and exchanges of words will start and finish and be constructed in another, completely different way. Village sewing circles, urban carouses, workers' lunchtime chats, etc., will all have their own types. Each situation, fixed and sustained by social custom, commands a particular kind of organization of audience and, hence, a particular repertoire of little behavioral genres. The behavioral genre fits everywhere into the channel of social intercourse assigned to it and functions as an ideological reflection of its type, structure, goal, and social composition. The behavioral genre is a fact of the social milieu: of holiday, leisure time, and of social contact in the parlor, the workshop, etc. It meshes with that milieu and is delimited and defined by it in all its internal aspects.

The production process of labor and the processes of commerce know different forms of constructing utterances.

As for the forms of ideological intercourse in the strict sense of the term—forms for political speeches, political acts, laws, regulations, manifestos, and so forth; and forms for poetic utterances, scientific treatises, etc.—these have been the object of special investigation in rhetoric and poetics, but, as we have seen, these investigations have been completely divorced from the problem of language on the one hand, and from the problem of social intercourse on the other.⁹ Productive analysis of the forms of the whole of utterances as the real units in the stream of speech is possible only on a basis that regards the individual utterance as a purely sociological phenomenon. Marxist philosophy of language should and

⁹On the topic of disjuncture of a literary work of art with conditions of artistic communication and the resulting inertness of the work, see our study, "Slovo v žizni i slovo v poezii" [Word in Life and Word in Poetry], *Zvezda*, 6 (1926). [Au.]

must stand squarely on the utterance as the real phenomenon of language-speech and as a socio-ideological structure.

Now that we have outlined the sociological structure of the utterance, let us return to the two trends in philosophical linguistic thought and make a final summing up.

R. Shor, a Moscow linguist and an adherent of the second trend of thought in philosophy of language, ends a brief sketch of the contemporary state of linguistics with the following words:

"Language is not an artifact (*ergon*) but a natural and congenital activity of mankind"—so claimed the romanticist linguistics of the 19th century. Theoretical linguistics of modern times claims otherwise: "Language is not individual activity (*energeia*) but a cultural-historical legacy of mankind (*ergon*)."¹⁰

This conclusion is amazing in its bias and one-sidedness. On the factual side, it is completely untrue. Modern theoretical linguistics includes, after all, the Vossler school, one of Germany's most powerful movements in contemporary linguistic thought. It is impermissible to identify modern linguistics with only one of its trends.

From the theoretical point of view, both the thesis and the antithesis made up by Shor must equally be rejected, since they are equally inadequate to the real nature of language.

Let us conclude the argument with an attempt to formulate our own point of view in the following set of propositions:

1. *Language as a stable system of normatively identical forms is merely a scientific abstraction, productive only in connection with certain particular practical and theoretical goals. This abstraction is not adequate to the concrete reality of language.*
2. *Language is a continuous generative process implemented in the social-verbal interaction of speakers.*
3. *The laws of the generative process of language are not at all the laws of individual*

¹⁰R. Shor, "Krizis sovremennoj linvistiki" [The Crisis in Contemporary Linguistics], *Jafetičeskij sbornik*, V (1927), p. 71. [Au.]

psychology, but neither can they be divorced from the activity of speakers. The laws of language generation are *sociological* laws.

4. *Linguistic creativity does not coincide with artistic creativity nor with any other type of specialized ideological creativity. But, at the same time, linguistic creativity cannot be understood apart from the ideological meanings and values that fill it.* The generative process of language, as is true of any historical generative process, can be perceived as blind mechanical necessity, but it can also become “free necessity” once it has reached the position of a conscious and desired necessity.
5. *The structure of the utterance is a purely sociological structure.* The utterance, as such, obtains between speakers. The individual speech act (in the strict sense of the word “individual”) is *contradictio in adjecto*.

CHAPTER 4 THEME AND MEANING IN LANGUAGE

Theme and meaning. The problem of active perception. Evaluation and meaning. The dialectics of meaning.

The problem of meaning is one of the most difficult problems of linguistics. Efforts toward solving this problem have revealed the one-sided monologism of linguistic science in particularly strong relief. The theory of passive understanding precludes any possibility of engaging the most fundamental and crucial features of meaning in language.

The scope of the present study compels us to limit ourselves to a very brief and perfunctory examination of this issue. We shall attempt only to map out the main lines of its productive treatment.

A definite and unitary meaning, a unitary significance, is a property belonging to any utterance *as a whole*. Let us call the significance of a whole utterance its *theme*.¹¹ The theme must be

¹¹The term is, of course, a provisional one. *Theme* in our sense embraces its implementation as well; therefore, our concept must not be confused with that of a theme in a liter-

unitary, otherwise we would have no basis for talking about any one utterance. The theme of an utterance itself is individual and unreproducible, just as the utterance itself is individual and unreproducible. The theme is the expression of the concrete, historical situation that engendered the utterance. The utterance “What time is it?” has a different meaning each time it is used, and hence, in accordance with our terminology, has a different theme, depending on the concrete historical situation (“historical” here in microscopic dimensions) during which it is enunciated and of which, in essence, it is a part.

It follows, then, that the theme of an utterance is determined not only by the linguistic forms that comprise it—words, morphological and syntactic structures, sounds, and intonation—but also by extraverbal factors of the situation. Should we miss these situational factors, we would be as little able to understand an utterance as if we were to miss its most important words. The theme of an utterance is concrete—as concrete as the historical instant to which the utterance belongs. *Only an utterance taken in its full, concrete scope as an historical phenomenon possesses a theme.* That is what is meant by the theme of an utterance.

However, if we were to restrict ourselves to the historical unreproducibility and unitariness of each concrete utterance and its theme, we would be poor dialecticians. Together with theme or, rather, within the theme, there is also the *meaning* that belongs to an utterance. By meaning, as distinguished from theme, we understand all those aspects of the utterance that are *reproducible* and *self-identical* in all instances of repetition. Of course, these aspects are abstract: they have no concrete, autonomous existence in an artificially isolated form, but, at the same time, they do constitute an essential and inseparable part of the utterance. The theme of an utterance is, in essence, indivisible. The meaning of an utterance, on the contrary, does break down into a set of meanings belonging to each of the various linguistic elements of which the

ary work. The concept of “thematic unity” would be closer to what we mean. [Au.]

utterance consists. The unreproducible theme of the utterance “What time is it?” taken in its indissoluble connection with the concrete historical situation, cannot be divided into elements. The meaning of the utterance “What time is it?”—a meaning that, of course, remains the same in all historical instances of its enunciation—is made up of the meanings of the words, forms of morphological and syntactic union, interrogative intonations, etc., that form the construction of the utterance.

Theme is a complex, dynamic system of signs that attempts to be adequate to a given instant of generative process. Theme is reaction by the consciousness in its generative process to the generative process of existence. Meaning is the technical apparatus for the implementation of theme. Of course, no absolute, mechanistic boundary can be drawn between theme and meaning. There is no theme without meaning and no meaning without theme. Moreover, it is even impossible to convey the meaning of a particular word (say, in the course of teaching another person a foreign language) without having made it an element of theme, i.e., without having constructed an “example” utterance. On the other hand, a theme must base itself on some kind of fixity of meaning; otherwise it loses its connection with what came before and what comes after—i.e., it altogether loses its significance.

The study of the languages of prehistoric peoples and modern semantic paleontology have reached a conclusion about the so-called “complex-ness” of prehistoric thinking. Prehistoric man used one word to denote a wide variety of phenomena that, from our modern point of view, are in no way related to one another. What is more, the same word could be used to denote diametrically opposite notions—top and bottom, earth and sky, good and bad, and so on. Declares Marr:

Suffice it to say that contemporary paleontological study of language has given us the possibility of reaching, through its investigations, back to an age when a tribe had only one word at its disposal for usage in all the meanings of which mankind was aware.¹²

¹²N. Ja. Marr, *Japhetic Theory*, (1926), p. 278. [Au.]

“But was such an all-meaning word in fact a word?” we might be asked. Yes, precisely a word. If, on the contrary, a certain sound complex had only one single, inert, and invariable meaning, then such a complex would not be a word, not a sign, but only a signal.¹³ *Multiplicity of meanings is the constitutive feature of word.* As regards the all-meaning word of which Marr speaks, we can say the following: *such a word, in essence, has virtually no meaning; it is all theme.* Its meaning is *inseparable from the concrete situation of its implementation.* This meaning is different each time, just as the situation is different each time. Thus the theme, in this case, subsumed meaning under itself and dissolved it before meaning had any chance to consolidate and congeal. But as language developed further, as its stock of sound complexes expanded, meaning began to congeal along lines that were basic and most frequent in the life of the community for the thematic application of this or that word.

Theme, as we have said, is an attribute of a whole utterance only; it can belong to a separate word only inasmuch as that word operates in the capacity of a whole utterance. So, for instance, Marr’s all-meaning word always operates in the capacity of a whole (and has no fixed meanings precisely for that reason). Meaning, on the other hand, belongs to an element or aggregate of elements in their relation to the whole. Of course, if we entirely disregard this relation to the whole (i.e., to the utterance), we shall entirely forfeit meaning. That is the reason why a sharp boundary between theme and meaning cannot be drawn.

The most accurate way of formulating the interrelationship between theme and meaning is in the following terms. Theme is the *upper, actual limit of linguistic significance*; in essence, only theme means something definite. Meaning is the *lower limit of linguistic significance*. Meaning, in

¹³It is clear that even that earliest of all words, about which Marr speaks, is not in any way like a signal (to which a number of investigators endeavor to reduce language). After all, a signal that meant everything would be minimally capable of carrying out the function of a signal. The capacity of a signal to adapt to the changing conditions of a situation is very low. By and large, change in a signal means replacement of one signal by another. [Au.]

essence, means nothing; it only possesses potentiality—the possibility of having a meaning within a concrete theme. Investigation of the meaning of one or another linguistic element can proceed, in terms of our definition, in one of two directions: either in the direction of the upper limit, toward theme, in which case it would be investigation of the contextual meaning of a given word within the conditions of a concrete utterance; or investigation can aim toward the lower limit, the limit of meaning, in which case it would be investigation of the meaning of a word in the system of language or, in other words, investigation of a dictionary word.

A distinction between theme and meaning and a proper understanding of their interrelationship are vital steps in constructing a genuine science of meanings. Total failure to comprehend their importance has persisted to the present day. Such discriminations as those between a word's *usual* and *occasional* meanings, between its central and lateral meanings, between its denotation and connotation, etc., are fundamentally unsatisfactory. The basic tendency underlying all such discriminations—the tendency to ascribe greater value to the central, usual aspect of meaning, presupposing that that aspect really does exist and is stable—is completely fallacious. Moreover, it would leave theme unaccounted for, since theme, of course, can by no means be reduced to the status of the occasional or lateral meaning of words.

The distinction between theme and meaning acquires particular clarity in connection with the *problem of understanding*, which we shall now briefly touch upon.

We have already had occasion to speak of the philological type of passive understanding, which excludes response in advance. Any genuine kind of understanding will be active and will constitute the germ of a response. Only active understanding can grasp theme—a generative process

can be grasped only with the aid of another generative process.

To understand another person's utterance means to orient oneself with respect to it, to find the proper place for it in the corresponding context. For each word of the utterance that we are in process of understanding, we, as it were, lay down a set of our own answering words. The greater their number and weight, the deeper and more substantial our understanding will be.

Thus each of the distinguishable significative elements of an utterance and the entire utterance as a whole entity are translated in our minds into another, active and responsive, context. *Any true understanding is dialogic in nature.* Understanding is to utterance as one line of a dialogue is to the next. Understanding strives to match the speaker's word with a *counter word*. Only in understanding a word in a foreign tongue is the attempt made to match it with the "same" word in one's own language.

Therefore, there is no reason for saying that meaning belongs to a word as such. In essence, meaning belongs to a word in its position between speakers; that is, meaning is realized only in the process of active, responsive understanding. Meaning does not reside in the word or in the soul of the speaker or in the soul of the listener. Meaning is the *effect of interaction between speaker and listener produced via the material of a particular sound complex*. It is like an electric spark that occurs only when two different terminals are hooked together. Those who ignore theme (which is accessible only to active, responsive understanding) and who, in attempting to define the meaning of a word, approach its lower, stable, self-identical limit, want, in effect, to turn on a light bulb after having switched off the current. Only the current of verbal intercourse endows a word with the light of meaning.

From *The Problem of Speech Genres*

I. STATEMENT OF THE PROBLEM AND DEFINITION OF SPEECH GENRES

All the diverse areas of human activity involve the use of language. Quite understandably, the nature and forms of this use are just as diverse as are the areas of human activity. This, of course, in no way disaffirms the national unity of language.¹ Language is realized in the form of individual concrete utterances (oral and written) by participants in the various areas of human activity. These utterances reflect the specific conditions and goals of each such area not only through their content (thematic) and linguistic style, that is, the selection of the lexical, phraseological, and grammatical resources of the language, but above all through their compositional structure. All three of these aspects—thematic content, style, and compositional structure—are inseparably linked to the *whole* of the utterance and are equally determined by the specific nature of the particular sphere of communication. Each separate utterance is individual, of course, but each sphere in which language is used develops its own *relatively stable types* of these utterances. These we may call *speech genres*.

The wealth and diversity of speech genres are boundless because the various possibilities of human activity are inexhaustible, and because each sphere of activity contains an entire repertoire of speech genres that differentiate and grow as the particular sphere develops and becomes more complex. Special emphasis should be placed on the extreme *heterogeneity* of speech genres (oral and written). In fact, the category of speech genres should include short rejoinders of daily dialogue (and these are extremely varied depending on the subject matter, situation, and participants),

Translated by Vern W. McGee.

¹“National unity of language” is a shorthand way of referring to the assemblage of linguistic and translinguistic practices common to a given region. It is, then, a good example of what Bakhtin means by an open unity. See also Otto Jespersen, *Mankind, Nation, and Individual* (Bloomington: Indiana University Press, 1964). [Tr.]

everyday narration, writing (in all its various forms), the brief standard military command, the elaborate and detailed order, the fairly variegated repertoire of business documents (for the most part standard), and the diverse world of commentary (in the broad sense of the word: social, political). And we must also include here the diverse forms of scientific statements and all literary genres (from the proverb to the multivolume novel). It might seem that speech genres are so heterogeneous that they do not have and cannot have a single common level at which they can be studied. For here, on one level of inquiry, appear such heterogeneous phenomena as the single-word everyday rejoinder and the multivolume novel, the military command that is standardized even in its intonation and the profoundly individual lyrical work, and so on. One might think that such functional heterogeneity makes the common features of speech genres excessively abstract and empty. This probably explains why the general problem of speech genres has never really been raised. Literary genres have been studied more than anything else. But from antiquity to the present, they have been studied in terms of their specific literary and artistic features, in terms of the differences that distinguish one from the other (within the realm of literature), and not as specific types of utterances distinct from other types, but sharing with them a common *verbal* (language) nature. The general linguistic problem of the utterance and its types has hardly been considered at all. Rhetorical genres have been studied since antiquity (and not much has been added in subsequent epochs to classical theory). At that time, more attention was already being devoted to the verbal nature of these genres as utterances: for example, to such aspects as the relation to the listener and his influence on the utterance, the specific verbal finalization of the utterance (as distinct from its completeness of thought), and so forth. But here, too, the specific features of rhetorical genres (judicial, political) still overshadowed their general linguistic nature. Finally, everyday speech genres have been studied (mainly rejoinders in everyday dialogue), and

from a general linguistic standpoint (in the school of Saussure and among his later followers—the Structuralists, the American behaviorists, and, on a completely different linguistic basis, the Vosslerians).² But this line of inquiry could not lead to a correct determination of the general linguistic na-

²Saussure's teaching is based on a distinction between language (*la langue*)—a system of interconnected signs and forms that normatively determine each individual speech act and are the special object of linguistics—and speech (*la parole*)—individual instances of language use. Bakhtin discusses Saussure's teachings in *Marxism and the Philosophy of Language* as one of the two main trends in linguistic thought (the trend of "abstract objectivism") that he uses to shape his own theory of the utterance. See V. N. Voloshinov, *Marxism and the Philosophy of Language*, tr. Ladislav Matejka and I. R. Titunik (New York: Seminar Press, 1973), esp. pp. 58–61.

"Behaviorists" here refers to the school of psychology introduced by the Harvard physiologist J. B. Watson in 1913. It seeks to explain animal and human behavior entirely in terms of observable and measurable responses to external stimuli. Watson, in his insistence that behavior is a physiological reaction to environmental stimuli, denied the value of introspection and of the concept of consciousness. He saw mental processes as bodily movements, even when unperceived, so that thinking in his view is subvocal speech. There is a strong connection as well between the behaviorist school of psychology and the school of American descriptive linguistics, which is what Bakhtin is referring to here. The so-called descriptivist school was founded by the eminent anthropologist Franz Boas (1858–1942). Its closeness to behaviorism consists in its insistence on careful observation unconditioned by presuppositions or categories taken from traditional language structure. Leonard Bloomfield (1887–1949) was the chief spokesman for the school and was explicit about his commitment to a "mechanist approach" (his term for the behaviorist school of psychology): "Mechanists demand that the facts be presented without any assumption of such auxiliary factors [as a version of the mind]. I have tried to meet this demand. . . ." (*Language* [New York: Holt, Rinehart, and Winston, 1933], p. vii). Two prominent linguists sometimes associated with the descriptivists, Edward Sapir (1884–1939) and his pupil Benjamin Lee Whorf (1897–1941), differ from Bloomfield insofar as behaviorism plays a relatively minor role in their work.

"Vosslerians" refers to the movement named after the German philologist Karl Vossler (1872–1949), whose adherents included Leo Spitzer (1887–1960). For Vosslerians, the reality of language is the continuously creative, constructive activity that is prosecuted through speech acts; the creativity of language is likened to artistic creativity, and stylistics becomes the leading discipline. Style takes precedence over grammar, and the standpoint of the speaker takes precedence over that of the listener. In a number of aspects, Bakhtin is close to the Vosslerians, but differs in his understanding of the utterance as the concrete reality of language life. Bakhtin

ture of the utterance either, since it was limited to the specific features of everyday oral speech, sometimes being directly and deliberately oriented toward primitive utterances (American behaviorists).

The extreme heterogeneity of speech genres and the attendant difficulty of determining the general nature of the utterance should in no way be underestimated. It is especially important here to draw attention to the very significant difference between primary (simple) and secondary (complex) speech genres (understood not as a functional difference). Secondary (complex) speech genres—novels, dramas, all kinds of scientific research, major genres of commentary, and so forth—arise in more complex and comparatively highly developed and organized cultural communication (primarily written) that is artistic, scientific, sociopolitical, and so on. During the process of their formation, they absorb and digest various primary (simple) genres that have taken form in unmediated speech communion. These primary genres are altered and assume a special character when they enter into complex ones. They lose their immediate relation to actual reality and to the real utterances of others. For example, rejoinders of everyday dialogue or letters found in a novel retain their form and their everyday significance only on the plane of the novel's content. They enter into actual reality only via the novel as a whole, that is, as a literary-artistic event and not as everyday life. The novel as a whole is an utterance just as rejoinders in everyday dialogue or private letters are (they do have a common nature), but unlike these, the novel is a secondary (complex) utterance.

The difference between primary and secondary (ideological) genres is very great and fundamental,³ but this is precisely why the nature of

does not, like the Vosslerians, conceive the utterance to be an individual speech act; rather, he emphasizes the "inner sociality" in speech communication—an aspect that is objectively reinforced in speech genres. The concept of speech genres is central to Bakhtin, then, in that it separates his translinguistics from both Saussureans and Vosslerians in the philosophy of language. [Tr.]

³"Ideology" should not be confused with the politically oriented English word. Ideology as it is used here is essen-

the utterance should be revealed and defined through analysis of both types. Only then can the definition be adequate to the complex and profound nature of the utterance (and encompass its most important facets). A one-sided orientation toward primary genres inevitably leads to a vulgarization of the entire problem (behaviorist linguistics is an extreme example). The very interrelations between primary and secondary genres and the process of the historical formation of the latter shed light on the nature of the utterance (and above all on the complex problem of the interrelations among language, ideology, and world view).

A study of the nature of the utterance and of the diversity of generic forms of utterances in various spheres of human activity is immensely important to almost all areas of linguistics and philology. This is because any research whose material is concrete language—the history of a language, normative grammar, the compilation of any kind of dictionary, the stylistics of language, and so forth—inevitably deals with concrete utterances (written and oral) belonging to various spheres of human activity and communication: chronicles, contracts, texts of laws, clerical and other documents, various literary, scientific, and commentarial genres, official and personal letters, rejoinders in everyday dialogue (in all of their diverse subcategories), and so on. And it is here that scholars find the language data they need. A clear idea of the nature of the utterance in general and of the peculiarities of the various types of utterances (primary and secondary), that is, of various speech genres, is necessary, we think, for research in any special area. To ignore the nature of the utterance or to fail to consider the peculiarities of generic subcategories of speech in any area of linguistic study leads to perfunctoriness and excessive abstractness, distorts the historicity of the research, and weakens the link between language and life. After all, language enters life through concrete utterances

tially any system of ideas. But ideology is semiotic in the sense that it involves the concrete exchange of signs in society and history. Every word/discourse betrays the ideology of its speaker; every speaker is thus an ideologue and every utterance an ideologue. [Tr.]

(which manifest language) and life enters language through concrete utterances as well. The utterance is an exceptionally important node of problems. We shall approach certain areas and problems of the science of language in this context.

First of all, stylistics. Any style is inseparably related to the utterance and to typical forms of utterances, that is, speech genres. Any utterance—oral or written, primary or secondary, and in any sphere of communication—is individual and therefore can reflect the individuality of the speaker (or writer); that is, it possesses individual style. But not all genres are equally conducive to reflecting the individuality of the speaker in the language of the utterance, that is, to an individual style. The most conducive genres are those of artistic literature: here the individual style enters directly into the very task of the utterance, and this is one of its main goals (but even within artistic literature various genres offer different possibilities for expressing individuality in language and various aspects of individuality). The least favorable conditions for reflecting individuality in language obtain in speech genres that require a standard form, for example, many kinds of business documents, military commands, verbal signals in industry, and so on. Here one can reflect only the most superficial, almost biological aspects of individuality (mainly in the oral manifestation of these standard types of utterances). In the vast majority of speech genres (except for literary-artistic ones), the individual style does not enter into the intent of the utterance, does not serve as its only goal, but is, as it were, an epiphenomenon of the utterance, one of its by-products. Various genres can reveal various layers and facets of the individual personality, and individual style can be found in various interrelations with the national language. The very problem of the national and the individual in language is basically the problem of the utterance (after all, only here, in the utterance, is the national language embodied in individual form). The very determination of style in general, and individual style in particular, requires deeper study of both the nature of the utterance and the diversity of speech genres.

The organic, inseparable link between style

and genre is clearly revealed also in the problem of language styles, or functional styles. In essence, language, or functional, styles are nothing other than generic styles for certain spheres of human activity and communication. Each sphere has and applies its own genres that correspond to its own specific conditions. There are also particular styles that correspond to these genres. A particular function (scientific, technical, commentarial, business, everyday) and the particular conditions of speech communication specific for each sphere give rise to particular genres, that is, certain relatively stable thematic, compositional, and stylistic types of utterances. Style is inseparably linked to particular thematic unities and—what is especially important—to particular compositional unities: to particular types of construction of the whole, types of its completion, and types of relations between the speaker and other participants in speech communication (listeners or readers, partners, the other's speech, and so forth). Style enters as one element into the generic unity of the utterance. Of course, this does not mean that language style cannot be the subject of its own independent study. Such a study, that is, of language stylistics as an independent discipline, is both feasible and necessary. But this study will be correct and productive only if based on a constant awareness of the generic nature of language styles, and on a preliminary study of the subcategories of speech genres. Up to this point the stylistics of language has not had such a basis. Hence its weakness. There is no generally recognized classification of language styles. Those who attempt to create them frequently fail to meet the fundamental logical requirement of the classification: a unified basis.⁴

⁴A unified basis for classifying the enormous diversity of utterances is an obsession of Bakhtin's, one that relates him directly to Wilhelm von Humboldt (1767–1835), the first in the modern period to argue systematically that language is the vehicle of thought. He calls language the "labor of the mind" (*Arbeit des Geistes*) in his famous formulation "[language] itself is not [mere] work (*ergon*), but an activity (*energeia*) . . . it is in fact the labor of the mind that otherwise would eternally repeat itself to make articulated sound capable of the expression of thought" (*Über die Verschiedenheit des menschlichen Sprachbaues*, in *Werke*, vol. 7 [Berlin: De Gruyter, 1968], p. 46). What is important here is that for Bakhtin, as for von Humboldt, the diversity of languages is itself of philo-

sophical significance, for if thought and speech are one, does not each language embody a unique way of thinking? It is here that Bakhtin also comes very close to the work of Sapir and, especially, of Whorf. See Benjamin Lee Whorf, *Language, Thought, and Reality*, ed. John B. Carroll (Cambridge, Mass.: MIT Press, 1956), esp. pp. 212–19 and 239–45. [Tr.]

Existing taxonomies are extremely poor and undifferentiated.⁵ For example, a recently published academy grammar of the Russian language gives the following stylistic subcategories of language: bookish speech, popular speech, abstract-scientific, scientific-technical, journalistic-commentarial, official-business, and familiar everyday speech, as well as vulgar common parlance. In addition to these linguistic styles, there are the stylistic subcategories of dialectical words, archaic words, and occupational expressions. Such a classification of styles is completely random, and at its base lies a variety of principles (or bases) for division into styles. Moreover, this classification is both inexhaustive and inadequately differentiated. All this is a direct result of an inadequate understanding of the generic nature of linguistic styles, and the absence of a well-thought-out classification of speech genres in terms of spheres of human activity (and also ignorance of the distinction between primary and secondary genres, which is very important for stylistics).

It is especially harmful to separate style from genre when elaborating historical problems. Historical changes in language styles are inseparably linked to changes in speech genres. Literary language is a complex, dynamic system of linguistic styles. The proportions and interrelations of these styles in the system of literary language are constantly changing. Literary language, which also includes nonliterary styles, is an even more complex system, and it is organized on different bases. In order to puzzle out the complex historical dynamics of these systems and move from a simple (and, in the majority of cases, superficial)

⁵The same kinds of classifications of language styles, impoverished and lacking clarity, with a fabricated foundation, are given by A. N. Gvozdev in his book *Ocherki po stilistike russkogo jazyka* (Essays on the stylistics of the Russian language) (Moscow, 1952, pp. 13–15). All of these classifications are based on an uncritical assimilation of traditional ideas about language styles. [Au.]

description of styles, which are always in evidence and alternating with one another, to a historical explanation of these changes, one must develop a special history of speech genres (and not only secondary, but also primary ones) that reflects more directly, clearly, and flexibly all the changes taking place in social life. Utterances and their types, that is, speech genres, are the drive belts from the history of society to the history of language. There is not a single new phenomenon (phonetic, lexical, or grammatical) that can enter the system of language without having traversed the long and complicated path of generic-stylistic testing and modification.⁶

In each epoch certain speech genres set the tone for the development of literary language. And these speech genres are not only secondary (literary, commentarial, and scientific), but also primary (certain types of oral dialogue—of the salon, of one's own circle, and other types as well, such as familiar, family-everyday, sociopolitical, philosophical, and so on). Any expansion of the literary language that results from drawing on various extraliterary strata of the national language inevitably entails some degree of penetration into all genres of written language (literary, scientific, commentarial, conversational, and so forth) to a greater or lesser degree, and entails new generic devices for the construction of the speech whole, its finalization, the accommodation of the listener or partner, and so forth. This leads to a more or less fundamental restructuring and renewal of speech genres. When dealing with the corresponding extraliterary strata of the national language, one inevitably also deals with the speech genres through which these strata are manifested. In the majority of cases, these are various types of conversational-dialogical genres. Hence the more or less distinct dialogization of secondary genres, the weakening of their monological composition, the new sense of the listener as a partner-interlocutor, new forms of finalization of the whole, and so forth. When there is style there is genre. The transfer of style from

⁶This thesis of ours has nothing in common with the Vosslerian idea of the primacy of the stylistic over the grammatical. Our subsequent exposition will make this completely clear. [Au.]

one genre to another not only alters the way a style sounds, under conditions of a genre unnatural to it, but also violates or renews the given genre.

Thus, both individual and general language styles govern speech genres. A deeper and broader study of the latter is absolutely imperative for a productive study of any stylistic problem.

However, both the fundamental and the general methodological question of the interrelations between lexicon and grammar (on the one hand) and stylistics (on the other) rests on the same problem of the utterance and of speech genres.

Grammar (and lexicon) is essentially different from stylistics (some even oppose it to stylistics), but at the same time there is not a single grammatical study that can do without stylistic observation and excursus. In a large number of cases the distinction between grammar and stylistics appears to be completely erased. There are phenomena that some scholars include in the area of grammar while others include them in the area of stylistics. The syntagma is an example.

One might say that grammar and stylistics converge and diverge in any concrete language phenomenon. If considered only in the language system, it is a grammatical phenomenon, but if considered in the whole of the individual utterance or in a speech genre, it is a stylistic phenomenon. And this is because the speaker's very selection of a particular grammatical form is a stylistic act. But these two viewpoints of one and the same specific linguistic phenomenon should not be impervious to one another and should not simply replace one another mechanically. They should be organically combined (with, however, the most clear-cut methodological distinction between them) on the basis of the real unity of the language phenomenon. Only a profound understanding of the nature of the utterance and the particular features of speech genres can provide a correct solution to this complex methodological problem.

It seems to us that a study of the nature of the utterance and of speech genres is of fundamental importance for overcoming those simplistic notions about speech life, about the so-called speech flow, about communication and so forth—ideas which are still current in our language studies.

Moreover, a study of the utterance as a *real unit of speech communion* will also make it possible to understand more correctly the *nature of language units* (as a system): words and sentences.

We shall now turn to this more general problem.

II. THE UTTERANCE AS A UNIT OF SPEECH COMMUNION: THE DIFFERENCE BETWEEN THIS UNIT AND UNITS OF LANGUAGE (WORDS AND SENTENCES)

Nineteenth-century linguistics, beginning with Wilhelm von Humboldt, while not denying the communicative function of language, tried to place it in the background as something secondary.⁷ What it foregrounded was the function of thought emerging *independently of communication*. The famous Humboldtian formula goes like this: "Apart from the communication between one human and another, speech is a necessary condition for reflection *even in solitude*." Others, Vosslerians for example, emphasize the so-called expressive function. With all the various ways individual theoreticians understand this function, it essentially amounts to the expression of the speaker's individual discourse. Language arises from man's need to express himself, to objectify himself. The essence of any form of language is somehow reduced to the spiritual creativity of the individuum. Several other versions of the function of language have been and are now being suggested, but it is still typical to underestimate, if not altogether ignore, the communicative function of language. Language is regarded from the speaker's standpoint as if there were only *one* speaker who does not have any *necessary* relation to *other* participants in speech communication. If the role of the other is taken into account at all, it is the role of a listener, who understands the speaker only passively. The utterance is adequate to its object (i.e., the content of the uttered thought) and to the person who is pronouncing the utterance. Language essentially

needs only a speaker — one speaker — and an object for his speech. And if language also serves as a means of communication, this is a secondary function that has nothing to do with its essence. Of course, the language collective, the plurality of speakers, cannot be ignored when speaking of language, but when defining the essence of language this aspect is not a necessary one that determines the nature of language. Sometimes the language collective is regarded as a kind of collective personality, "the spirit of the people," and so forth, and immense significance is attached to it (by representatives of the "psychology of nations"),⁸ but even in this case the plurality of speakers, and others with respect to each given speaker, is denied any real essential significance.

Still current in linguistics are such *fictions* as the "listener" and "understander" (partners of the "speaker"), the "unified speech flow," and so on. These fictions produce a completely distorted idea of the complex and multifaceted process of active speech communication. Courses in general linguistics (even serious ones like Saussure's) frequently present graphic-schematic depictions of the two partners in speech communication — the speaker and the listener (who perceives the speech) — and provide diagrams of the active speech processes of the speaker and the corresponding passive processes of the listener's perception and understanding of the speech. One cannot say that these diagrams are false or that they do not correspond to certain aspects of reality. But when they are put forth as the actual whole of speech communication, they become a scientific fiction. The fact is that when the listener perceives and understands the meaning (the language meaning) of speech, he simultaneously takes an active, responsive attitude toward it. He either agrees or disagrees with it (completely or partially), augments it, applies it, prepares for its

⁷See Wilhelm von Humboldt, *Linguistic Variability and Intellectual Development* (Coral Gables: University of Miami Press, 1971). [Tr.]

⁸The phrase "psychology of nations" refers to a school organized around the nineteenth-century journal *Zeitschrift für Völkerpsychologie und Sprachwissenschaft*, whose leading spokesman, Kermann Steinthal, was among the first to introduce psychology (especially that of the Kantian biologist Herbart) into language (and vice versa). Steinthal was attracted to von Humboldt's idea of "innere Sprachform" and was important in Potebnya's attempts to wrestle with inner speech. [Tr.]

execution, and so on. And the listener adopts this responsive attitude for the entire duration of the process of listening and understanding, from the very beginning—sometimes literally from the speaker's first word. Any understanding of live speech, a live utterance, is inherently responsive, although the degree of this activity varies extremely. Any understanding is imbued with response and necessarily elicits it in one form or another: the listener becomes the speaker. A passive understanding of the meaning of perceived speech is only an abstract aspect of the actual whole of actively responsive understanding, which is then actualized in a subsequent response that is actually articulated. Of course, an utterance is not always followed immediately by an articulated response. An actively responsive understanding of what is heard (a command, for example) can be directly realized in action (the execution of an order or command that has been understood and accepted for execution), or it can remain, for the time being, a silent responsive understanding (certain speech genres are intended exclusively for this kind of responsive understanding, for example, lyrical genres), but this is, so to speak, responsive understanding with a delayed reaction. Sooner or later what is heard and actively understood will find its response in the subsequent speech or behavior of the listener. In most cases, genres of complex cultural communication are intended precisely for this kind of actively responsive understanding with delayed action. Everything we have said here also pertains to written and read speech, with the appropriate adjustments and additions.

Thus, all real and integral understanding is actively responsive, and constitutes nothing other than the initial preparatory stage of a response (in whatever form it may be actualized). And the speaker himself is oriented precisely toward such an actively responsive understanding. He does not expect passive understanding that, so to speak, only duplicates his own idea in someone else's mind. Rather, he expects response, agreement, sympathy, objection, execution, and so forth (various speech genres presuppose various integral orientations and speech plans on the part of the speakers or writers). The desire to make one's speech understood is only an abstract as-

pect of the speaker's concrete and total speech plan. Moreover, any speaker is himself a respondent to a greater or lesser degree. He is not, after all, the first speaker, the one who disturbs the eternal silence of the universe. And he presupposes not only the existence of the language system he is using, but also the existence of preceding utterances—his own and others'—with which his given utterance enters into one kind of relation or another (builds on them, polemicizes with them, or simply presumes that they are already known to the listener). Any utterance is a link in a very complexly organized chain of other utterances.

Thus, the listener who understands passively, who is depicted as the speaker's partner in the schematic diagrams of general linguistics, does not correspond to the real participant in speech communication. What is represented by the diagram is only an abstract aspect of the real total act of actively responsive understanding, the sort of understanding that evokes a response, and one that the speaker anticipates. Such scientific abstraction is quite justified in itself, but under one condition: that it is clearly recognized as merely an abstraction and is not represented as the real concrete whole of the phenomenon. Otherwise it becomes a fiction. This is precisely the case in linguistics, since such abstract schemata, while perhaps not claiming to reflect real speech communication, are not accompanied by any indication of the great complexity of the actual phenomenon. As a result, the schema distorts the actual picture of speech communication, removing precisely its most essential aspects. The active role of the *other* in the process of speech communication is thus reduced to a minimum.

This disregard for the active role of the other in the process of speech communication, and the desire generally to bypass this process, are manifested in the imprecise and ambiguous use of such terms as "speech" or "speech flow." These deliberately indefinite terms are usually intended to designate something that can be divided into language units, which are then interpreted as segments of language: phonetic (phoneme, syllable, speech rhythm [*takt*]) and lexical (sentence and word). "The speech flow can be broken down . . ."; "Our speech is divided . . ." This is the way those

sections of grammars devoted to the study of such language units are usually introduced into general courses in linguistics and grammar, and also into special research on phonetics and lexicology. Unfortunately, even our recently published academy grammar uses the same indefinite and ambiguous term “our speech.” Here is how the section on phonetics is introduced: “*Our speech* is basically divided into sentences, which in turn can be broken down into phrases and words. The word is clearly divided into small sound units—*syllables* . . . syllables are divided into individual speech sounds or phonemes . . .”⁹

But what sort of thing is this “speech flow” and what is meant by “our speech”? What is the nature of their duration? Do they have a beginning and an end? If their length is indefinite, which of their segments do we use when we break them down into units? These questions have not been raised or defined at all. Linguists have not yet transformed the imprecise *word* “speech”—which can designate language, the speech process (i.e., speaking), the individual utterance, an entire long indefinite series of such utterances, or a particular speech genre (“he gave a speech”)—into a definite (defined) *term* with clear-cut semantic boundaries (similar situations also exist in other languages). This can be explained by the almost complete lack of research into the problem of the utterance and speech genres (and, consequently, of speech communion as well). What we almost always find is a confused play with all these meanings (except for the last). Most frequently the expression “our speech” simply means any utterances of any person. But this meaning is never consistently sustained throughout.¹⁰

⁹*Grammatika russkogoazyka* (Grammar of the Russian language) (Moscow, 1952), vol. 1, p. 51. [Tr.]

¹⁰And it cannot be sustained. For example, such an utterance as “Ah!” (a rejoinder in dialogue) cannot be broken down into sentences, phrases, or syllables. Consequently, not just *any* utterance will do. Further, they divide up the utterance (speech) and obtain units of language. Frequently the sentence is then defined as the simplest utterance and, consequently, it cannot be a *unit* of the utterance. It is tacitly assumed that there is only one speaker, and dialogical overtones are thus ignored.

As compared to the boundaries of the utterance, all other boundaries (between sentences, phrases, syntagmic units, and words) are relative and arbitrary. [Au.]

And if it is indefinite and unclear just what it is that is divided and broken down into units of language, this lack of definition and confusion also spread to these units themselves.

The terminological imprecision and confusion in this methodologically central point of linguistic thinking result from ignoring the *real unit* of speech communication: the utterance. For speech can exist in reality only in the form of concrete utterances of individual speaking people, speech subjects. Speech is always cast in the form of an utterance belonging to a particular speaking subject, and outside this form it cannot exist. Regardless of how varied utterances may be in terms of their length, their content, and their compositional structure, they have common structural features as units of speech communication and, above all, quite clear-cut boundaries. Since these boundaries are so essential and fundamental they must be discussed in detail.

The boundaries of each concrete utterance as a unit of speech communication are determined by a *change of speaking subjects*, that is, a change of speakers. Any utterance—from a short (single-word) rejoinder in everyday dialogue to the large novel or scientific treatise—has, so to speak, an absolute beginning and an absolute end: its beginning is preceded by the utterances of others, and its end is followed by the responsive utterances of others (or, although it may be silent, others’ active responsive understanding, or, finally, a responsive action based on this understanding). The speaker ends his utterance in order to relinquish the floor to the other or to make room for the other’s active responsive understanding. The utterance is not a conventional unit, but a real unit, clearly delimited by the change of speaking subjects, which ends by relinquishing the floor to the other, as if with a silent *dixi*, perceived by the listeners (as a sign) that the speaker has finished.

This change of speaking subjects, which creates clear-cut boundaries of the utterance, varies in nature and acquires different forms in the heterogeneous spheres of human activity and life, depending on the functions of language and on the conditions and situations of communication. One observes this change of speaking subjects most simply and clearly in actual dialogue where the utterances of the interlocutors or partners in

dialogue (which we shall call rejoinders) alternate. Because of its simplicity and clarity, dialogue is a classic form of speech communication. Each rejoinder, regardless of how brief and abrupt, has a specific quality of completion that expresses a particular position of the speaker, to which one may respond or may assume, with respect to it, a responsive position. We shall discuss further this specific quality of completion of the utterance, one of its main markers. But at the same time rejoinders are all linked to one another. And the sort of relations that exist among rejoinders of dialogue—relations between question and answer, assertion and objection, assertion and agreement, suggestion and acceptance, order and execution, and so forth—are impossible among units of language (words and sentences), either in the system of language (in the vertical cross section) or within the utterance (on the horizontal plane). These specific relations among rejoinders in a dialogue are only subcategories of specific relations among whole utterances in the process of speech communication. These relations are possible only among utterances of different speech subjects; they presuppose *other* (with respect to the speaker) participants in speech communication. The relations among whole utterances cannot be treated grammatically since, we repeat, such relations are impossible among units of language, and not only in the system of language, but within the utterance as well.

In secondary speech genres, especially rhetorical ones, we encounter phenomena that apparently contradict this tenet. Quite frequently within the boundaries of his own utterance the speaker (or writer) raises questions, answers them himself, raises objections to his own ideas, responds to his own objections, and so on. But these phenomena are nothing other than a conventional playing out of speech communication and primary speech genres.¹¹ This kind of playing out is typical of rhetorical genres (in the broad sense, which would include certain kinds of scientific popularization), but other secondary genres (artistic and scholarly) also use various forms such as this to introduce primary speech genres

and relations among them into the construction of the utterance (and here they are altered to a greater or lesser degree, for the speaking subject does not really change). Such is the nature of secondary genres. But the relations among the reproduced primary genres cannot be treated grammatically in any of these phenomena, even though they appear within a single utterance. Within the utterance they retain their own specific nature, which is essentially different from the nature of relations among words and sentences (and other language units, i.e., phrases and so forth).

Here, drawing on material from dialogue and the rejoinders that comprise it, we must provisionally pose the problem of the *sentence* as a *unit of language*, as distinct from the *utterance* as a unit of speech communication.

(The question of the nature of the sentence is one of the most complicated and difficult in linguistics. The clash of opinions regarding this question continues in our scholarship to this day. Of course, the task we set for ourselves here does not include an investigation of this problem in all its complexity; we intend to mention only one of its aspects. But it seems to us that this aspect is essential to the entire problem. It is important for us to define precisely the relationship between the sentence and the utterance. This will give us a clearer picture of both the utterance and the sentence.)

But this will come later. Here we shall simply note that the boundaries of the sentence as a unit of language are never determined by a change of speaking subjects. Such a change, framing the sentence on both sides, transforms the sentence into an entire utterance. Such a sentence assumes new qualities and is perceived quite differently from the way it would be if it were framed by other sentences within the single utterance of one and the same speaker. The sentence is a relatively complete thought, directly correlated with the other thoughts of a single speaker within his utterance as a whole. The speaker pauses at the end of a sentence in order then to move on to his own next thought, continuing, supplementing, and substantiating the preceding one. The context of the sentence is the speech of one speaking subject (speaker). The sentence itself is not correlated directly or personally with the extraverbal

¹¹The seam of boundaries in secondary genres. [Au.]

context of reality (situation, setting, prehistory) or with the utterances of other speakers; this takes place only indirectly, through its entire surrounding context, that is, through the utterance as a whole. And if the sentence is not surrounded by a context of speech of the same speaker, that is, if it constitutes an entire completed utterance (a rejoinder in dialogue), then it (itself) directly confronts reality (the extraverbal context of the speech) and the different utterances of *others*. It is not followed by a pause that the speaker himself designates and interprets. (Any pause that is grammatical, calculated, or interpreted is possible only within the speech of a single speaker, i.e., within a single utterance. Pauses between utterances are, of course, not grammatical but real. Such real pauses—psychological, or prompted by some external circumstances—can also interrupt a single utterance. In secondary artistic genres such pauses are calculated by the artist, director, or actor. But these pauses differ essentially from both grammatical and stylistic pauses—for example, among syntagmas—within the utterance.) One expects them to be followed by a response or a responsive understanding on the part of another speaker. Such a sentence, having become an entire utterance, acquires a special semantic fullness of value. One can assume a responsive position with respect to it; one can agree or disagree with it, execute it, evaluate it, and so on. But a sentence in context cannot elicit a response. It acquires this capability (or, rather, assimilates to it) only in the entirety of the whole utterance.

All these completely new qualities and peculiarities belong not to the sentence that has become a whole utterance, but precisely to the utterance itself. They reflect the nature of the utterance, not the nature of the sentence. They attach themselves to the sentence, augmenting it until it is a complete utterance. The sentence as a language unit lacks all of these properties; it is not demarcated on either side by a change of speaking subjects; it has neither direct contact with reality (with an extraverbal situation) nor a direct relation to others' utterances; it does not have semantic fullness of value; and it has no capacity to determine directly the responsive position of the *other* speaker, that is, it cannot evoke

a response. The sentence as a language unit is grammatical in nature. It has grammatical boundaries and grammatical completedness and unity. (Regarded in the whole of the utterance and from the standpoint of this whole, it acquires stylistic properties.) When the sentence figures as a whole utterance, it is as though it has been placed in a frame made of quite a different material. When one forgets this in analyzing a sentence, one distorts the nature of the sentence (and simultaneously the nature of the utterance as well, by treating it grammatically). A great many linguists and linguistic schools (in the area of syntax) are held captive by this confusion, and what they study as a sentence is in essence a kind of *hybrid* of the sentence (unit of language) and the utterance (unit of speech communication). One does not exchange sentences any more than one exchanges words (in the strict linguistic sense) or phrases. One exchanges utterances that are constructed from language units: words, phrases, and sentences. And an utterance can be constructed both from one sentence and from one word, so to speak, from one speech unit (mainly a rejoinder in dialogue), but this does not transform a language unit into a unit of speech communication.

The lack of a well-developed theory of the utterance as a unit of speech communication leads to an imprecise distinction between the sentence and the utterance, and frequently to a complete confusion of the two.

Let us return to real-life dialogue. As we have said, this is the simplest and the most classic form of speech communication. The change of speaking subjects (speakers) that determines the boundaries of the utterance is especially clear here. But in other spheres of speech communication as well, including areas of complexly organized cultural communication (scientific and artistic), the nature of the boundaries of the utterance remains the same.

Complexly structured and specialized works of various scientific and artistic genres, in spite of all the ways in which they differ from rejoinders in dialogue, are by nature the same kind of units of speech communication. They, too, are clearly demarcated by a change of speaking subjects, and these boundaries, while retaining their *external* clarity, acquire here a special internal

aspect because the speaking subject—in this case, the *author* of the work—manifests his own individuality in his style, his world view, and in all aspects of the design of his work. This imprint of individuality marking the work also creates special internal boundaries that distinguish this work from other works connected with it in the overall processes of speech communication in that particular cultural sphere: from the works of predecessors on whom the author relies, from other works of the same school, from the works of opposing schools with which the author is contending, and so on.

The work, like the rejoinder in dialogue, is oriented toward the response of the other (others), toward his active responsive understanding, which can assume various forms: educational influence on the readers, persuasion of them, critical responses, influence on followers and successors, and so on. It can determine others' responsive positions under the complex conditions of speech communication in a particular cultural sphere. The work is a link in the chain of speech communion. Like the rejoinder in a dialogue, it is related to other work-utterances: both those to which it responds and those that respond to it. At the same time, like the rejoinder in a dialogue, it is separated from them by the absolute boundaries created by a change of speaking subjects.

Thus, the change of speaking subjects, by framing the utterance and creating for it a stable mass that is sharply delimited from other related utterances, is the first constitutive feature of the utterance as a unit of speech communication, a feature distinguishing it from units of language. Let us turn to this second feature, which is inseparably linked to the first. This second feature is the specific *finalization* of the utterance.

The finalization of the utterance is, if you will, the inner side of the change of speech subjects. This change can only take place because the speaker has said (or written) *everything* he wishes to say at a particular moment or under particular circumstances. When hearing or reading, we clearly sense the end of the utterance, as if we hear the speaker's concluding *dixi*. This finalization is specific and is determined by special criteria. The first and foremost criterion for the fi-

nalization of the utterance is *the possibility of responding to it* or, more precisely and broadly, of assuming a responsive attitude toward it (for example, executing an order). This criterion is met by a short everyday question, for example, "What time is it?" (one may respond to it), an everyday request that one may or may not fulfill, a scientific statement with which one may agree or disagree (partially or completely), or a novel, which can be evaluated as a whole. Some kind of finalization is necessary to be able to react to an utterance. It is not enough for the utterance to be understood in terms of *language*. An absolutely understood and completed sentence, if it is a sentence and not an utterance comprised of one sentence, cannot evoke a responsive reaction: it is comprehensible, but it is still not *all*. This *all*—the indicator of the *wholeness* of the utterance—is subject neither to grammatical nor to abstract semantic definition.

This finalized wholeness of the utterance, guaranteeing the possibility of a response (or of responsive understanding), is determined by three aspects (or factors) that are inseparably linked in the organic whole of the utterance: (1) semantic exhaustiveness of the theme; (2) the speaker's plan or speech will; (3) typical compositional and generic forms of finalization.

The first aspect—the referential and semantic exhaustiveness of the theme of the utterance—differs profoundly in various spheres of communication. This exhaustiveness can be almost complete in certain spheres of everyday life (questions that are purely factual and similarly factual responses to them, requests, orders, and so forth), in certain business circles, in the sphere of military and industrial commands and orders, that is, in those spheres where speech genres are maximally standard by nature and where the creative aspect is almost completely lacking. Conversely, in creative spheres (especially, of course, in scientific ones), the semantic exhaustiveness of the theme may be only relative. Here one can speak only of a certain minimum of finalization making it possible to occupy a responsive position. We do not objectively exhaust the subject, but, by becoming the *theme* of the utterance (i.e., of a scientific work) the subject achieves a relative finalization under certain conditions, when

the problem is posed in a particular way, on the basis of particular material, with particular aims set by the author, that is, already within the boundaries of a *specific authorial intent*. Thus, we inevitably come to the second aspect, which is inseparably linked to the first.

In each utterance—from the single-word, everyday rejoinder to large, complex works of science or literature—we embrace, understand, and sense the speaker's *speech plan* or *speech will*, which determines the entire utterance, its length and boundaries. We imagine to ourselves what the speaker *wishes* to say. And we also use this speech plan, this speech will (as we understand it), to measure the finalization of the utterance. This plan determines both the choice of the subject itself (under certain conditions of speech communication, in necessary connection with preceding utterances), as well as its boundaries and its semantic exhaustiveness. It also determines, of course, the choice of a generic form in which the utterance will be constructed (this is already the third aspect, to which we shall turn next). This plan—the subjective aspect of the utterance—combines in an inseparable unity with the objective referentially semantic aspect, limiting the latter by relating it to a concrete (individual) situation of speech communication with all its individual circumstances, its personal participants, and the statement-utterances that preceded it. Therefore, the immediate participants in communication, orienting themselves with respect to the situation and the preceding utterances, easily and quickly grasp the speaker's speech plan, his speech will. And from the very beginning of his words they sense the developing whole of the utterance.

Let us turn to the third and, for us, most important aspect: the stable *generic* forms of the utterance. The speaker's speech will is manifested primarily in the *choice of a particular speech genre*. This choice is determined by the specific nature of the given sphere of speech communication, semantic (thematic) considerations, the concrete situation of the speech communication, the personal composition of its participants, and so on. And when the speaker's speech plan with all its individuality and subjectivity is applied and adapted to a chosen genre, it is shaped and devel-

oped within a certain generic form. Such genres exist above all in the great and multifarious sphere of everyday oral communication, including the most familiar and the most intimate.

We speak only in definite speech genres, that is, all our utterances have definite and relatively stable typical *forms of construction of the whole*. Our repertoire of oral (and written) speech genres is rich. We use them confidently and skillfully *in practice*, and it is quite possible for us not even to suspect their existence *in theory*. Like Molière's Monsieur Jourdain who, when speaking in prose, had no idea that was what he was doing, we speak in diverse genres without suspecting that they exist. Even in the most free, the most unconstrained conversation, we cast our speech in definite generic forms, sometimes rigid and trite ones, sometimes more flexible, plastic, and creative ones (everyday communication also has creative genres at its disposal). We are given these speech genres in almost the same way that we are given our native language, which we master fluently long before we begin to study grammar. We know our native language—its lexical composition and grammatical structure—not from dictionaries and grammars but from concrete utterances that we hear and that we ourselves reproduce in live speech communication with people around us. We assimilate forms of language only in forms of utterances and in conjunction with these forms. The forms of language and the typical forms of utterances, that is, speech genres, enter our experience and our consciousness together, and in close connection with one another. To learn to speak means to learn to construct utterances (because we speak in utterances and not in individual sentences, and, of course, not in individual words). Speech genres organize our speech in almost the same way as grammatical (syntactical) forms do. We learn to cast our speech in generic forms and, when hearing others' speech, we guess its genre from the very first words; we predict a certain length (that is, the approximate length of the speech whole) and a certain compositional structure; we foresee the end; that is, from the very beginning we have a sense of the speech whole, which is only later differentiated during the speech process. If speech genres did not exist and we had not mastered them, if we

had to originate them during the speech process and construct each utterance at will for the first time, speech communication would be almost impossible.

The generic forms in which we cast our speech, of course, differ essentially from language forms. The latter are stable and compulsory (normative) for the speaker, while generic forms are much more flexible, plastic, and free. Speech genres are very diverse in this respect. A large number of genres that are widespread in everyday life are so standard that the speaker's individual speech will is manifested only in its choice of a particular genre, and, perhaps, in its expressive intonation. Such, for example, are the various everyday genres of greetings, farewells, congratulations, all kinds of wishes, information about health, business, and so forth. These genres are so diverse because they differ depending on the situation, social position, and personal interrelations of the participants in the communication. These genres have high, strictly official, respectful forms as well as familiar ones.¹² And there are forms with varying degrees of familiarity, as well as intimate forms (which differ from familiar ones). These genres also require a certain tone; their structure includes a certain expressive intonation. These genres, particularly the high and official ones, are compulsory and extremely stable. The speech will is usually limited here to a choice of a particular genre. And only slight nuances of expressive intonation (one can take a drier or more respectful tone, a colder or warmer one; one can introduce the intonation of joy, and so forth) can express the speaker's individuality (his emotional speech intent). But even here it is generally possible to reaccentuate genres. This is typical of speech communication: thus, for example, the generic form of greeting can move from the official sphere into the sphere of familiar communication, that is, it can be used with parodic-ironic reaccentuation. To a similar

¹²These and other phenomena have interested linguists (mainly language historians) in the purely stylistic level as a reflection in language of historically changed forms of etiquette, courtesy, and hospitality. See, for example, F. Brunot, *Histoire de la langue française des origines à 1900*, 10 vols. (Paris: A. Colin, 1905). [Au.]

end, one can deliberately mix genres from various spheres.

In addition to these standard genres, of course, freer and more creative genres of oral speech communication have existed and still exist: genres of salon conversations about everyday, social, aesthetic, and other subjects, genres of table conversation, intimate conversations among friends, intimate conversations within the family, and so on. (No list of oral speech genres yet exists, or even a principle on which such a list might be based.) The majority of these genres are subject to free creative reformulation (like artistic genres, and some, perhaps, to a greater degree). But to use a genre freely and creatively is not the same as to create a genre from the beginning; genres must be fully mastered in order to be manipulated freely.

Many people who have an excellent command of a language often feel quite helpless in certain spheres of communication precisely because they do not have a practical command of the generic forms used in the given spheres. Frequently a person who has an excellent command of speech in some areas of cultural communication, who is able to read a scholarly paper or engage in a scholarly discussion, who speaks very well on social questions, is silent or very awkward in social conversation. Here it is not a matter of an impoverished vocabulary or of style, taken abstractly: this is entirely a matter of the inability to command a repertoire of genres of social conversation, the lack of a sufficient supply of those ideas about the whole of the utterance that help to cast one's speech quickly and naturally in certain compositional and stylistic forms, the inability to grasp a word promptly, to begin and end correctly (composition is very uncomplicated in these genres).

The better our command of genres, the more freely we employ them, the more fully and clearly we reveal our own individuality in them (where this is possible and necessary), the more flexibly and precisely we reflect the unrepeatable situation of communication—in a word, the more perfectly we implement our free speech plan.

Thus, a speaker is given not only mandatory forms of the national language (lexical composi-

tion and grammatical structure), but also forms of utterances that are mandatory, that is, speech genres. The latter are just as necessary for mutual understanding as are forms of language. Speech genres are much more changeable, flexible, and plastic than language forms are, but they have a normative significance for the speaking individual, and they are not created by him but are given to him. Therefore, the single utterance, with all its individuality and creativity, can in no way be regarded as a *completely free combination* of forms of language, as is supposed, for example, by Saussure (and by many other linguists after him), who juxtaposed the utterance (*la parole*), as a purely individual act, to the system of language as a phenomenon that is purely social and mandatory for the individual.¹³ The vast majority of linguists hold the same position, in theory if not in practice. They see in the utterance only an individual combination of purely linguistic (lexical and grammatical) forms and they neither uncover nor study any of the other normative forms the utterance acquires in practice.

Ignoring speech genres as relatively stable and normative forms of the utterance inevitably led to the confusion we have already pointed out between the utterance and the sentence, and it had to lead them to the position (which, to be sure, was never consistently defended) that our speech is cast solely in stable sentence forms that are given to us; and the number of these interrelated sentences we speak in a row and when we stop (end)—this is completely subject to the individual speech will of the speaker or to the caprice of the mythical “speech flow.”

When we select a particular type of sentence, we do so not for the sentence itself; but out of consideration for what we wish to express with this one given sentence. We select the type of

¹³Saussure defines the utterance (*la parole*) as an “individual act. It is willful and intellectual. Within the act, we should distinguish between (1) the combinations by which the speaker uses the language code for expressing his own thought; and (2) the psychological mechanism that allows him to exteriorize those combinations” (*Course in General Linguistics* [New York: McGraw-Hill, 1966], p. 14). Thus, Saussure ignores the fact that in addition to forms of language there are also *forms of combinations* of these forms, that is, he ignores speech genres. [Au.]

sentence from the standpoint of the *whole* utterance, which is transmitted in advance to our speech imagination and which determines our choice. The idea of the form of the whole utterance, that is, of a particular speech genre, guides us in the process of our speaking. The plan of the utterance as a whole may require only one sentence for its implementation, but it may also require a large number of them. The chosen genre predetermines for us their type and their compositional links.

One reason why forms of utterances are ignored in linguistics is that these forms are extremely diverse in compositional structure, particularly in size (speech length)—from the single-word rejoinder to a large novel. There is also a great range of sizes in oral speech genres. Thus, speech genres appear incommensurable and unacceptable as units of speech.

This is why many linguists (mainly those investigating syntax) try to find special forms that lie somewhere between the sentence and the utterance, forms with the completeness of the utterance and at the same time the commensurability of the sentence. Such are the “phrase” (i.e., in Kartsevsky) and “communication” (in Shakhmatov and others).¹⁴ There is no common under-

¹⁴S. D. Kartsevsky, Russian linguist of the Geneva School who also participated in the Prague Linguistic Circle. He argued that the “phrase” should be used as a different kind of language unit from that of the sentence. Unlike the sentence, the phrase “does not have its own grammatical structure. But it has its own phonetic structure, which consists in its intonation. It is intonation that forms the phrase” (S. Karcewski, “Sur la phonologie de la phrase,” in *Travaux du Cercle linguistique de Prague* 4 [1931], 190). “The sentence, in order to be realized, must be given the intonation of the phrase. . . . The phrase is a function of dialogue. It is a unit of exchange among conversing parties. . . .” (S. Karcewski, “Sur la parataxe et la syntaxe en russe,” in *Cahiers Ferdinand de Saussure*, no. 7 [1948], 34).

Aleksey Shakhmatov (1864–1920), linguist and academician whose most important works were devoted to the history of the Russian language, modern Russian, and comparative studies of the grammars of different Slavic languages. “Communication” has a rather distinctive meaning for Shakhmatov: it refers to the act of thinking, this being the psychological basis of the sentence, the mediating link “between the psyche of the speaker and its manifestation in the discourse toward which it strives” (A. Shakhmatov, *Sintaksis russkogo jazyka* [Syntax of the Russian language] [Leningrad, 1941], pp. 19–20). [Tr.]

standing of these units among researchers who use them because no definite and clearly delimited reality corresponds to them in the life of language. All these artificial and conventional units neglect the change of speech subjects that takes place in any real live speech communication, and therefore the most essential boundaries are erased in all spheres of language activity: boundaries between utterances. Hence (in consequence of this) one also forfeits the main criterion for the finalization of the utterance as a true unit of speech communication: the capability of determining the active responsive position of the other participants in the communication.

We shall conclude this section with a few more remarks about the sentence (and return to discuss this issue in detail in the summary of our essay).

The sentence as a unit of language lacks the capability of determining the directly active responsive position of the speaker. Only after becoming a complete utterance does the individual sentence acquire this capability. Any sentence can act as a complete utterance, but then, as we know, it is augmented by a number of very essential nongrammatical aspects that change it radically. And this circumstance also causes a special syntactic aberration. When the individual sentence is analyzed separately from its context, it is interpreted to the point of becoming a whole utterance. As a result, it acquires that degree of finalization that makes a response possible.

The sentence, like the word, is a signifying unit of language. Therefore, each individual sentence, for example, "The sun has risen," is completely comprehensible, that is, we understand its language *meaning*, its *possible* role in an utterance. But in no way can we assume a responsive position with respect to this individual sentence unless we know that with this sentence the speaker has said *everything* he wishes to say, that this sentence is neither preceded nor followed by other sentences of the same speaker. But then this is no longer a sentence, but a full-fledged utterance consisting of one sentence. It is framed and delimited by a change of speech subjects and it directly reflects an extraverbal reality (situation). It is possible to respond to such an utterance.

But if this sentence were surrounded by context, then it would acquire a fullness of its own *sense* only in this context, that is, only in the whole of the utterance, and one could respond only to this entire utterance whose signifying element is the given sentence. The utterance, for example, can be thus: "The sun has risen. It's time to get up." The responsive understanding (or articulated response): "Yes, it really is time." But it can also be thus: "The sun has risen. But it's still very early. Let's get some more sleep." Here the *sense* of the utterance and the responsive reaction to it will be different. Such a sentence can also enter into the composition of an artistic work as an element of landscape. Here the responsive reaction—the artistic-ideological impression and evaluation—can pertain only to the entire landscape. In the context of another work this sentence can acquire symbolic significance. In all such cases the sentence is a signifying element of the whole utterance, which acquires its final meaning only in this whole.

If our sentence figures as a completed utterance, then it acquires its own integral sense under the particular concrete circumstances of speech communication. Thus, it can be a response to another's question: "Has the sun risen?" (of course, under the particular circumstances that justify this question). Here this utterance is an assertion of a particular fact, an assertion that can be true or false, with which one can agree or disagree. A sentence that is assertive in its *form* becomes a *real* assertion in the context of a particular utterance.

When this individual sentence is analyzed, it is usually perceived as a completed utterance in some extremely simplified situation: the sun really has risen and the speaker states: "The sun has risen." The speaker sees that the grass is green and announces: "The grass is green." Such senseless "communications" are often directly regarded as classic examples of the sentence. But in reality any communication like that, addressed to someone or evoking something, has a particular purpose, that is, it is a real link in the chain of speech communion in a particular sphere of human activity or everyday life.

The sentence, like the word, has a finality of meaning and a finality of *grammatical* form, but

this finality of meaning is abstract by nature and this is precisely why it is so clear-cut: this is the finality of an element, but not of the whole. The sentence as a unit of language, like the word, has no author. Like the word, it belongs to *nobody*, and only by functioning as a whole utterance does it become an expression of the position of someone speaking individually in a concrete situation of speech communication. This leads us to a new, third feature of the utterance—the relation of the utterance to the *speaker himself* (the author of the utterance) and to the *other* participants in speech communication.

Any utterance is a link in the chain of speech communion. It is the active position of the speaker in one referentially semantic sphere or another. Therefore, each utterance is characterized primarily by a particular referentially semantic content. The choice of linguistic means and speech genre is determined primarily by the referentially semantic assignments (plan) of the speech subject (or author). This is the first aspect of the utterance that determines its compositional and stylistic features.

The second aspect of the utterance that determines its composition and style is the *expressive* aspect, that is, the speaker's subjective emotional evaluation of the referentially semantic content of his utterance. The expressive aspect has varying significance and varying degrees of force in various spheres of speech communication, but it exists everywhere. There can be no such thing as an absolutely neutral utterance. The speaker's evaluative attitude toward the subject of his speech (regardless of what his subject may be) also determines the choice of lexical, grammatical, and compositional means of the utterance. The individual style of the utterance is determined primarily by its expressive aspect. This is generally recognized in the area of stylistics. Certain investigators even reduce style directly to the emotionally evaluative aspect of speech.

Can the expressive aspect of speech be regarded as a phenomenon of *language* as a system? Can one speak of the expressive aspect of language units, that is, words and sentences? The answer to these questions must be a categorical "no." Language as a system has, of course, a rich arsenal of language tools—lexical, morphologi-

cal, and syntactic—for expressing the speaker's emotionally evaluative position, but all these tools as language tools are absolutely neutral with respect to any particular real evaluation. The word "darling"—which is affectionate in both the meaning of its root and its suffix—is in itself, as a language unit, just as neutral as the word "distance."¹⁵ It is only a language tool for the possible expression of an emotionally evaluative attitude toward reality, but it is not applied to any particular reality, and this application, that is, the actual evaluation, can be accomplished only by the speaker in his concrete utterance. Words belong to nobody, and in themselves they evaluate nothing. But they can serve any speaker and be used for the most varied and directly contradictory evaluations on the part of the speakers.

The sentence as a unit of language is also neutral and in itself has no expressive aspect. It acquires this expressive aspect (more precisely, joins itself to it) only in a concrete utterance. The same aberration is possible here. A sentence like "He died" obviously embodies a certain expressiveness, and a sentence like "What joy!" does so to an even greater degree. But in fact we perceive sentences of this kind as entire utterances, and in a typical situation, that is, as kinds of speech genres that embody typical expression. As sentences they lack this expressiveness and are neutral. Depending on the context of the utterance, the sentence "He died" can also reflect a positive, joyful, even a rejoicing expression. And the sentence "What joy!" in the context of the particular utterance can assume an ironic or bitterly sarcastic tone.

One of the means of expressing the speaker's emotionally evaluative attitude toward the subject of his speech is expressive intonation, which resounds clearly in oral speech.¹⁶ Expressive intonation is a constitutive marker of the utterance. It does not exist in the system of language as such, that is, outside the utterance. Both the word and the sentence as *language units* are devoid of

¹⁵The Russian word Bakhtin uses here (*milenkij*) is a diminutive of *milyj*, itself a term of endearment meaning "nice" or "sweet." [Tr.]

¹⁶Of course, intonation is recognized by us and exists as a stylistic factor even with silent reading of written speech. [Au.]

expressive intonation. If an individual word is pronounced with expressive intonation it is no longer a word, but a completed utterance expressed by one word (there is no need to develop it into a sentence). Fairly standard types of evaluative utterances are very widespread in speech communication, that is, evaluative speech genres that express praise, approval, rapture, reproof, or abuse: “Excellent!” “Good for you!” “Charming!” “Shame!” “Revolting!” “Blockhead!” and so forth. Words that acquire special weight under particular conditions of sociopolitical life become expressive exclamatory utterances: “Peace!” “Freedom!” and so forth. (These constitute a special sociopolitical speech genre.) In a particular situation a word can acquire a profoundly expressive meaning in the form of an exclamatory utterance: “Thalassa, Thalassa!” [The sea! The sea!] (exclaimed 10,000 Greeks in Xenophon).

In each of these cases we are dealing not with the individual word as a unit of language and not with the *meaning* of this word but with a complete utterance and with a *specific sense*—the content of a given utterance.¹⁷ Here the meaning of the word pertains to a particular actual reality and particular real conditions of speech communication. Therefore here we do not understand the meaning of a given word simply as a word of a language; rather, we assume an active responsive position with respect to it (sympathy, agreement or disagreement, stimulus to action). Thus, expressive intonation belongs to the utterance and not to the word. But still it is very difficult to abandon the notion that each word of a language itself has or can have an “emotional tone,” “emotional coloring,” an “evaluative aspect,” a “stylistic aura,” and so forth, and, consequently, also an expressive intonation that is inherent in the word as such. After all, one might think that when selecting a word for an utterance we are guided by an emotional tone inherent in the individual

¹⁷In *Marxism and the Philosophy of Language*, the specific sense of an utterance is defined as its *theme (tema)*: “The theme of an utterance is essentially individual and unrepeatable, like the utterance itself. . . . The theme of the utterance is essentially indivisible. The significance of the utterance, on the contrary, breaks down into a number of significances that are included in its linguistic elements” (pp. 101–2). [Tr.]

word: we select those that in their tone correspond to the expression of our utterance and we reject others. Poets themselves describe their work on the word in precisely this way, and this is precisely the way this process is interpreted in stylistics (see Peshkovsky’s “stylistic experiment”).¹⁸

But still this is not what really happens. It is that same, already familiar aberration. When selecting words we proceed from the planned whole of our utterance,¹⁹ and this whole that we have planned and created is always expressive. The utterance is what radiates its expression (rather, our expression) to the word we have selected, which is to say, invests the word with the expression of the whole. And we select the word because of its meaning, which is not in itself expressive but which can accommodate or not accommodate our expressive goals in combination with other words, that is, in combination with the whole of our utterance. The neutral meaning of the word applied to a particular actual reality under particular real conditions of speech communication creates a spark of expression. And, after all, this is precisely what takes place in the process of creating an utterance. We repeat, only the contact between the language meaning and the concrete reality that takes place in the utterance can create the spark of expression. It exists neither in the system of language nor in the objective reality surrounding us.

Thus, emotion, evaluation, and expression are foreign to the word of language and are born only in the process of its live usage in a concrete utterance. The meaning of a word in itself

¹⁸Aleksandr Peshkovsky (1878–1933), Soviet linguist specializing in grammar and stylistics in the schools. His “stylistic experiment” consisted in artificially devising stylistic variants of the text, a device he used for analyzing artistic speech. See A. M. Peshkovsky, *Voprosy metodiki rodnogo jazyka, lingvistiki i stilistiki* (Problems in the methodology of folk language, linguistics, and stylistics) (Moscow-Leningrad, 1930), p. 133. [Tr.]

¹⁹When we construct our speech, we are always aware of the whole of our utterance: both in the form of a particular generic plan and in the form of an individual speech plan. We do not string words together smoothly and we do not proceed from word to word; rather, it is as though we fill in the whole with the necessary words. Words are strung together only in the first stage of the study of a foreign language, and then only when the methodological guidance is poor. [Au.]

(unrelated to actual reality) is, as we have already said, out of the range of emotion. There are words that specifically designate emotions and evaluations: “joy,” “sorrow,” “wonderful,” “cheerful,” “sad,” and so forth. But these meanings are just as neutral as are all the others. They acquire their expressive coloring only in the utterance, and this coloring is independent of their meaning taken individually and abstractly. For example: “Any joy is now only bitterness to me.” Here the word “joy” is given an expressive intonation that resists its own meaning, as it were.

But the above far from exhausts the question. The matter is considerably more complicated. When we select words in the process of constructing an utterance, we by no means always take them from the system of language in their neutral, *dictionary* form. We usually take them from *other utterances*, and mainly from utterances that are kindred to ours in genre, that is, in theme, composition, or style. Consequently, we choose words according to their generic specifications. A speech genre is not a form of language, but a typical form of utterance; as such the genre also includes a certain typical kind of expression that inheres in it. In the genre the word acquires a particular typical expression. Genres correspond to typical situations of speech communication, typical themes, and, consequently, also to particular contacts between the *meanings* of words and actual concrete reality under certain typical circumstances. Hence also the possibility of typical expressions that seem to adhere to words. This typical expression (and the typical intonation that corresponds to it) does not have that force of compulsoriness that language forms have. The generic normative quality is freer. In our example, “Any joy is now bitterness to me,” the expressive tone of the word “joy” as determined by the context is, of course, not typical of this word. Speech genres in general submit fairly easily to reaccentuation, the sad can be made jocular and gay, but as a result something new is achieved (for example, the genre of comical epitaphs).

This typical (generic) expression can be regarded as the word’s “stylistic aura,” but this aura belongs not to the word of language as such but to that genre in which the given word usually

functions. It is an echo of the generic whole that resounds in the word.

The word’s generic expression—and its generic expressive intonation—are impersonal, as speech genres themselves are impersonal (for they are typical forms of individual utterances, but not the utterances themselves). But words can enter our speech from others’ individual utterances, thereby retaining to a greater or lesser degree the tones and echoes of individual utterances.

The words of a language belong to nobody, but still we hear those words only in particular individual utterances, we read them in particular individual works, and in such cases the words already have not only a typical, but also (depending on the genre) a more or less clearly reflected individual context of the utterance.

Neutral dictionary meanings of the words of a language ensure their common features and guarantee that all speakers of a given language will understand one another, but the use of words in live speech communication is always individual and contextual in nature. Therefore, one can say that any word exists for the speaker in three aspects: as a neutral word of a language, belonging to nobody; as an *other’s* word, which belongs to another person and is filled with echoes of the other’s utterance; and, finally, as *my* word, for, since I am dealing with it in a particular situation, with a particular speech plan, it is already imbued with my expression. In both of the latter aspects, the word is expressive, but, we repeat, this expression does not inhere in the word itself. It originates at the point of contact between the word and actual reality, under the conditions of that real situation articulated by the individual utterance. In this case the word appears as an expression of some evaluative position of an individual person (authority, writer, scientist, father, mother, friend, teacher, and so forth), as an abbreviation of the utterance.

In each epoch, in each social circle, in each small world of family, friends, acquaintances, and comrades in which a human being grows and lives, there are always authoritative utterances that set the tone—artistic, scientific, and journalistic works on which one relies, to which one refers, which are cited, imitated, and followed. In

each epoch, in all areas of life and activity, there are particular traditions that are expressed and retained in verbal vestments: in written works, in utterances, in sayings, and so forth. There are always some verbally expressed leading ideas of the “masters of thought” of a given epoch, some basic tasks, slogans, and so forth. I am not even speaking about those examples from school readers with which children study their native language and which, of course, are always expressive.

This is why the unique speech experience of each individual is shaped and developed in con-

tinuous and constant interaction with others' individual utterances. This experience can be characterized to some degree as the process of *assimilation*—more or less creative—of others' words (and not the words of a language). Our speech, that is, all our utterances (including creative works), is filled with others' words, varying degrees of otherness or varying degrees of “our-own-ness,” varying degrees of awareness and detachment. These words of others carry with them their own expression, their own evaluative tone, which we assimilate, rework, and reaccentuate. . . .

Virginia Woolf

1882–1941

Virginia Woolf was born Adeline Virginia Stephen to well-educated upper-middle-class English parents. Her mother, née Julia Jackson, had participated as a young girl in a cultured social circle that included Pre-Raphaelite painters Holman Hunt and Edward Burne-Jones, actress Ellen Terry, and poet Alfred, Lord Tennyson. At the age of nineteen, Julia had married lawyer Herbert Duckworth, who died and left her with three children, Stella, George, and Gerald. Julia then devoted herself to nursing and published a book about it. Woolf's father, Leslie Stephen, was a well-known man of letters, author of numerous literary-critical, biographical, and philosophical works and editor of *The Cornhill Magazine*, an influential literary journal, and the *Dictionary of National Biography*. His first wife, a daughter of novelist William Makepeace Thackeray, had died, leaving him with a daughter, Laura, who was mentally retarded. Julia and Leslie married and had four more children: Vanessa, who became a painter; Thoby, who was a brilliant university student before his early death; Virginia; and Adrian, who became a psychiatrist.

The Stephen household, located in Kensington, a well-to-do section of London, was a lively place to grow up, full of children and literary visitors, including English novelist and poet George Meredith, American poet James Russell Lowell, and American novelist Henry James. Virginia and her sisters were educated at home by their mother and by tutors, while her brothers were sent away to school; she would later resent their superior education. Yet she appreciated being able to take part in literary discussions among her father's friends and to read freely in his excellent library. A homebound education may in fact have suited Virginia best, because her physical and mental health was frail. The women's colleges Newnham and Girton, on a par with the men's universities, did exist, but there is no evidence that Virginia pushed to attend them. Perhaps anticipation of her father's disapproval prevented her from trying.

This relatively happy childhood ended in 1895 when Julia Stephen died, precipitating Woolf's first mental breakdown. Woolf's older half-sister Stella filled the maternal role for a time, but within two years of Julia's death she had married and died in childbirth. Woolf's father, elderly, deaf, and ill, increasingly left the direction of the household to his stepson George Duckworth. George was apparently a caricature of the Victorian gentleman, demanding silence and obedience from his sisters in public to facilitate his social climbing, and sexually molesting them in their beds at night.

When Leslie Stephen died in 1904, his and Julia's four children moved out of the family home into their own establishment in Bloomsbury, a London neighborhood frequented by artists and literary people. Woolf's brother Thoby brought his university friends to the house, and they were a brilliant group, including biographer Lytton Strachey, economist John Maynard Keynes, art critic Clive Bell (whom Vanessa would later marry), novelist E. M. Forster, and literary critic Leonard Woolf. Virginia found their conversation stimulating, as well as their openness to

her own literary and intellectual ambitions, which had been sternly censured by her father and her stepbrother George. The Bloomsbury Group, as they came to be called, encouraged frank discussion of sexuality, artistic experimentation, and left-oriented analysis of social inequalities. Initially, too, male members of the group did not discourage Woolf's growing feminism, although they would later disapprove some of her more public feminist stands.

In this congenial environment, Woolf recovered from another period of mental instability that occurred after her father's death, and she began to write a novel. But in 1906, when the four siblings toured Greece together, Thoby contracted typhoid fever, from which he died after they returned to England. Woolf took a long time to adjust to this loss, delaying completion of her book until after her marriage to Leonard Woolf in 1912. By all accounts her marriage was a happy one to the end, although apparently without a sexual dimension. Leonard Woolf encouraged his wife's literary ambitions and gave her practical support, nursing her through illness and helping with publishing. *The Voyage Out*, her first novel, was printed in 1915.

When *The Voyage Out* appeared, Virginia Woolf was already widely known and respected as a literary reviewer for the prestigious *Times Literary Supplement* and other journals. Her first novel was well received, and over the next ten years she published a series of works of fiction that made her one of the most important writers in Britain: *Night and Day* (1919), *Jacob's Room* (1922), *Mrs. Dalloway* (1925), *To the Lighthouse* (1927), and *Orlando* (1928). In these works Woolf experimented with multiple viewpoints, fragmented narrative form, and allusive, poetic language that attempts to capture the quality of moment-by-moment conscious experience. She continued to write literary reviews and other nonfiction pieces as well, which also were often stylistically experimental—such as *A Room of One's Own* (1929; excerpted here), now a classic exposition of what women's education, economic liberation, and literary development would require. Woolf and her husband also founded the Hogarth Press, which was notable for publishing avant-garde literature such as the poems of T. S. Eliot and the short stories of Katherine Mansfield, controversial texts such as English translations of Freud, and more. During this same decade, Woolf fell in love with a younger writer, Victoria Sackville-West, known as Vita. Both Leonard Woolf and Vita's husband, Harold Nicolson, acquiesced in this passionate relationship, the great love of Woolf's life.

The 1920s was a decade of triumph for Woolf. She received high praise as a fiction writer, and with her literary criticism and other social commentary, became a leader of the Bloomsbury Group and a dominant force on the Anglo-American literary scene. Both her marriage and her affair with Vita were sustaining. But things began to change for Woolf in the 1930s. Her production of fiction, though still well regarded, slowed considerably: *The Waves* (1931), perhaps her greatest work, was not followed until 1937, by *The Years*, and her last novel, *Between the Acts*, was published posthumously in 1941. Although she continued to write reviews and essays, her dominant position as literary and social arbiter eroded, and her essay *Three Guineas* (1938), her most passionate defense of her feminist, socialist, and pacifist views, drew heavy fire. She and Vita drifted apart, and Woolf was increasingly troubled by bouts of the mental illness that had plagued her since adolescence.

Finally, World War II was imminent, horrifying Woolf not only with the general destruction it promised but also with the specific threat a potential German invasion of England posed to her Jewish husband. She and Leonard procured a drug from her brother Adrian with which to take their lives if the invasion happened. Tormented by inner voices that presaged a permanent descent into madness, Woolf did not wait, but filled her pockets with stones and walked into a river near the Woolfs' country cottage in 1941.

Virginia Woolf now holds an undisputed position as one of the most important novelists writing in English in the twentieth century. Her fiction has drawn exhaustive critical attention, but until very recently, scholarship virtually ignored her non-fiction writing and its relevance to women and rhetoric, even though Woolf published over five hundred literary reviews and essays. This neglect may have been caused in part by the experimental style in which Woolf wrote much of her nonfiction, which disguised the cogency of her arguments. Rhetorician Thomas J. Farrell has characterized it as a "female mode of rhetoric" with the following traits: Woolf pursues arguments indirectly, usually not stating her thesis until the end of a piece and even then presenting it tentatively and leaving the discussion open-ended; her structure is generally associative, appearing to imitate the way ideas occur to the mind, although at times she may use what Farrell calls a "male mode" that is more overtly logical and linear or hierarchical; her tone is usually not aggressive or agonistic, but rather light and charming; at the same time, she carefully builds up a position to support her point of view; and she often relies on personal experience (sometimes thinly disguised as fiction) for evidence, without drawing explicit generalizations from it.¹ Literary scholar Catherine Sandbach-Dahlström has suggested that these stylistic traits reinforce a method of essay writing that Woolf deliberately sets against the essay tradition dominated by men: She resists this tradition, critiques male chauvinism generally, and enacts a "skeptical feminism" through carnivalesque attacks on pompous and oppressive male-maintained social structures.² Literary critic Jane Marcus has noted that Woolf's stylistic experiments anticipate French theorist Hélène Cixous's (p. 1520) call for "writing the body."³ Marcus describes Woolf's rhetoric as "sapphistry," which subverts male-oriented classical rhetorical techniques to speak for and to attract an audience of women, and perhaps especially gay women.⁴ In Marcus's view, then, Woolf pioneered not only women's rhetoric generally, but also lesbian rhetoric.

Woolf chose her style and her intellectual agenda to match her analysis of the situation of writers, especially women writers. As rhetorician Krista Ratcliffe has explained, especially in *A Room of One's Own* Woolf focuses on the material and historical conditions that foster or hinder literary production. She sees how these conditions have always hindered women, who have not had the education, leisure,

or economic independence for writing. They have been forcibly confined to the domestic sphere and taught to value their restricted role through such ideological constructs as the selfless “Angel in the House,” whom Woolf identifies and vows to kill in “Professions for Women” (included here). Moreover, Woolf believes that the principal language available for literary and intellectual expression has been “the language of men,”⁵ so long used to express only men’s concerns that women have difficulty adapting it to their needs. Woolf calls on women writers to select from the language of men what they can use and recombine its elements to create a discourse more congenial and useful to women, as she tried to do in her own fiction and non-fiction work. A “woman’s sentence” is needed, and Woolf applauds any signs of its development, for example, in the work of novelist Dorothy Richardson, her contemporary and a great influence on her (see review included here). As Ratcliffe notes, Woolf argues that many literary genres have been so male-dominated that women should begin with the novel, which, as a younger form with fewer male examples in the canon, might provide them with more creative space. Women should feel free to blur genres to devise forms that fit what they want to say. Implicitly, Woolf treats literary tradition as tremendously influential on new writers: hence the importance of recovering, and creating, women’s literary traditions. Women writers must not listen to those who would censure their experiments, whether male or female, but find new audiences—especially young women—who will encourage their new work. Woolf’s analysis amounts to the first twentieth-century manifesto for women’s rhetoric.

Woolf’s view of herself as a rhetor was complex. As literary scholars Beth Carole Rosenberg and Jeanne Dubino argue, Woolf believed that “essays are not written to *prove* anything.”⁶ Although she was well aware of the political implications of both the production and the reception of art, she still believed that the best art transcended history and addressed “the meaning of life.”⁷ The personality of the artist should disappear; as literary critic Lisa Low has argued, above all else Woolf abhorred egotism, which she saw as the male besetting sin.⁸ In addition, art was damaged by any emergence of political grievances, even feminist critique. In *Three Guineas*, Woolf develops a metaphor in which literary art is a horse and “propaganda” is a donkey—attempting to mingle the two can produce only sterile offspring.

Yet the lines between art and “propaganda” are not so easily established in Woolf’s writing. Many critics have felt that her novels speak to a feminist agenda. Furthermore, Woolf also wrote much nonfiction prose, addressing social and political issues of the day not only in her literary reviews but, more important, in longer

essays such as *A Room of One's Own* and *Three Guineas*. Her analysis in this work is prescient. She was among the first to link women's literary creativity with their education and economic position, and not simply to claim a public forum for women but to name and attack the patriarchy that blocked their access. She also was among the first to link social class oppression and gender oppression, identifying with working-class people without romanticizing them and calling on the middle and upper classes to give up the privileges that cemented economic inequalities, and to link patriarchy and fascism. This last view may have had much to do with the long occulting of her rhetorical accomplishments. She had the courage, and the misfortune, to advocate resistance to war among women just at the time that Hitler and Mussolini were coming to dominate Europe. Her pacifism thus came to seem like acquiescence in fascist conquest and even, for later critics, in the Holocaust. At best, she was made to seem politically naive. But both the arguments and the stylistic experiments in her essays are now central to feminist understanding.

SYNOPSIS OF *A ROOM OF ONE'S OWN*

"Women and Fiction" (included here) is a summary of the main points of *A Room of One's Own*, which is based on two papers Woolf read to the students at the women's colleges Newnham and Girton in 1928. What follows is a more detailed précis of *Room*.

Woolf begins by imagining that her audience, women at Newnham and Girton who invited her to speak on "women and fiction," is puzzled by her attention to "a room of one's own." She explains this focus by saying that she can offer no great generalizations on her announced subject, but can only tell them that "a woman must have money and a room of her own if she is to write fiction." She will try to explain to them why this is so. To accomplish this task, she invents a persona for herself and imagines that this "I" is visiting the great men's university of "Oxbridge." Strolling around the campus, she is warned off the grass by an officious beadle and barred entry to the library because she is a woman. She contemplates the beautiful old buildings and imagines how much money, over how many centuries, has been contributed to build and maintain them. She is then taken as a guest to a sumptuous luncheon at a men's college, and finally ushered out of the grounds as the gates are locked behind her. She walks down the road to a nearby women's college, to which she gives the name "Fernham." Here she eats a dinner very much inferior in quality to the luncheon she enjoyed at the men's college. She reflects that the women's college is poor because women have never been able to make the large sums of money needed to endow institutions of higher learning. They have usually been fully occupied with raising children.

In Chapter Two, Woolf's "I" goes to the British Museum to research the questions of why women are so much poorer than men and whether their poverty affects their ability to write fiction. She finds that whereas women have written few books about men, men have written many, many books about women, and most of them are devoted to analyzing women's inferiority. Angrily she concludes that "England is under the rule of a patriarchy" and that men denigrate women only to build them-

selves up. Furthermore, men also expect the women in their lives to flatter them. She mentions here how grateful she is for the legacy from an aunt that enables her to be independent of male support and of the menial and degrading jobs that are open to women who must support themselves by working. She imagines how England will be improved when every profession is open to women.

Woolf begins Chapter Three with the question of why “no woman wrote a word” of the great literature produced in the Elizabethan period. Exploring the books in her own library for answers to this question, she discovers that little is said about women in histories of the period, except to note their illiteracy, legal inability to own property, and brutal control by fathers and husbands. She now narrates the life of an imaginary sister of William Shakespeare’s, whom she calls Judith. Though uneducated compared to her brother, Judith too runs away to London to act and write plays, only to be ridiculed and rejected at every turn, and finally, when she becomes pregnant, to kill herself. Next Woolf briefly considers the careers of some women writers and speculates on the effects of the strangling discouragement with which women writers have always been met—“not indifference but hostility.” She cites several examples of such hostility in the form of scathing judgments of female ability pronounced by male authorities, past and present.

In Chapter Four, Woolf looks in more detail at the careers of women writers from the Renaissance to the mid-nineteenth century. She sees that a few aristocratic women were sometimes able to find the time and space to write, though often against gender-based opposition, lack of helpful criticism, and debilitating attacks on their capacity. Aphra Behn then is cited as an important figure because she showed that a woman could make money writing; this opened avenues for many middle-class women to write. This development is important because, Woolf believes, the more women who are writing or who have written, the more likely it is that works of genius will be produced by a woman. Such works cannot occur in a vacuum, but only in the context of rich traditions. Women’s best genre, to date, has been the novel, she says, because that form is less dominated by male examples. But, in addition to the debilitating effects of opposition to women’s writing, women’s accomplishments as novelists have been hampered by social barriers to their gaining broad life experience and by the temptations to alter their writing either to please male critics or to push too vigorously for righting wrongs done to women.

Woolf begins Chapter Five (included here) by noting that in her own day women are writing all kinds of texts—not only fiction, but many kinds of nonfiction, a development she celebrates. She explores the implications of this development for women’s fiction by analyzing a hypothetical contemporary novel by a woman novelist. Woolf notes how the woman writing now must find new structures for her plot and her sentences. Women’s writing can depict a much wider range of women’s experiences and emotions, especially their relationships with each other, whereas men’s writing about women neglects these relationships and virtually every experience in women’s lives except their love for men. It is entirely fitting that women’s writing should differ from men’s. The differences should be praised and developed so that more of life can be treated faithfully in fiction. Women should not be required

to write like men, even though this will create difficulties in evaluating women's writing, because their own tradition is still relatively scanty. Things are moving in the right direction, Woolf concludes, and if no great women writers have yet emerged, she feels sure that they soon will.

Chapter Six begins with a gaze away from shelves of books, out the window to the London street, where Woolf sees a man and a woman get into a taxi together. The sight reminds her that, although she has just been insisting on the important differences between male and female artistic visions, the greatest creativity happens in the mind that incorporates both male and female points of view, a mind that is, whether in a biologically male or female body, androgynous. She shows the weakness of the mind that ignores one-half of this creative duality by analyzing men's writing, which, Woolf suggests, is deformed by egotism. She hints that such writing is congenial to, or even contributes to, fascism. The greatest male writers have been androgynous. Now, stepping out of her constructed persona, Woolf the speaker summarizes her argument and anticipates objections, such as that she has been too materialistic. But she is convinced that "intellectual freedom depends upon material things." She notes that most of the greatest male writers have been at least middle class. She stresses again the importance of recognizing and fostering a tradition of women's writing. Finally, she heralds the advent of the truly great woman writer, who will come as times change.

Selected Bibliography

Andrew McNeillie's multivolume edition of Woolf's essays (1986–) has, so far, published only her work up to 1924. Michèle Barrett has collected many of Woolf's shorter essays and literary reviews on women and writing in *Virginia Woolf: Women and Writing* (1979); Barrett's introduction also provides a helpful overview of Woolf's feminist literary theory. This is the source of "Women and Fiction," "Professions for Women," and the review of Dorothy Richardson included here. Our excerpt from *A Room of One's Own* is taken from a 1981 edition with a foreword by Mary Gordon.

Woolf's life has invited the efforts of many biographers. *Virginia Woolf: A Biography* (1972), in two volumes, by Woolf's nephew Quentin Bell, is still a major source, although Bell has been faulted for perpetuating the view of Woolf as a snobbish, hypochondriacal esthete that developed among the younger generation of English writers in the 1930s as they defined their work in contrast to hers. A shorter biography that counters Bell's bias and attends to the central role of feminism in Woolf's thought is Phyllis Rose's *Woman of Letters: A Life of Virginia Woolf* (1978). A well-regarded recent treatment is Hermione Lee's *Virginia Woolf* (1996; American edition 1997).

The major study of Woolf as feminist rhetorician is Krista Ratcliffe's treatment in *Anglo-American Feminist Challenges to the Rhetorical Traditions* (1996). *Virginia Woolf: Emerging Perspectives* (ed. Mark Hussey and Vara Neverow, 1994) contains three essays that link Woolf with rhetoric and composition studies: Vara Neverow's "A Room of One's Own as a Model of Composition Theory" suggests that the relationship Woolf describes between the woman writer and her male critic resembles that between any undergraduate student and his or her professor, requiring the writer in both cases to overcome the blocking caused by anxiety and to resist debilitating negative criticism; in "The Chameleon Voice and Classical Structure in *Three Guineas* and *A Room of One's Own*," Nancy Hynes analyzes these essays

as classical orations with exordium, narrative, partition, and so on; and in “Doodling Her Way to Insight: From Incompetent Student to Empowered Rhetor in *A Room of One’s Own*,” Lillian M. Bisson demonstrates that the composing process described in Woolf’s essay resembles that advocated by process-writing composition pedagogues such as Donald Murray and Ann Berthoff.

Thomas J. Farrell uses Woolf as a prime example of the “female mode of rhetoric” in “Female and Male Modes of Rhetoric” (*College English* 40 [1979]: 909–21). Other interesting analyses of the feminist import of Woolf’s style can be found in the chapter on Woolf in Shari Benstock’s *Textualizing the Feminine* (1991) and in Pamela L. Caughie’s *Virginia Woolf and Postmodernism* (1991). For more on connections between Woolf and *écriture féminine*, see Françoise Defromont, “Metaphorical Thinking and Poetic Writing in Virginia Woolf and Hélène Cixous,” in *The Body and the Text: Hélène Cixous, Reading and Teaching* (ed. Helen Wilcox, Keith McWatters, Ann Thompson, and Linda R. Williams, 1990). Michèle Barrett’s introduction to her collection of Woolf’s essays on women and writing, noted above, surveys Woolf’s feminist literary theory. Aiming primarily to restore Woolf’s reputation as a literary critic, but also with helpful information for rhetorical analysis, are the editors’ introduction and articles by Lisa Low (“Refusing to Hit Back: Virginia Woolf and the Impersonality Question”), Catherine Sandbach-Dahlström (“‘Que scais-je?’: Virginia Woolf and the Essay as Feminist Critique”), and others in *Virginia Woolf and the Essay* (ed. Beth Carole Rosenberg and Jeanne Dubino, 1997). Woolf’s thoughts on art and “propaganda” in *Three Guineas*, as analyzed by Jane Marcus in “‘No More Horses’: Virginia Woolf on Art and Propaganda” (*Women’s Studies* 4 [1977]: 265–90), are relevant to rhetoric. Marcus’s essays on Woolf, including “Sapphistry: Narration as Lesbian Seduction in *A Room of One’s Own*,” are collected in *Virginia Woolf and the Languages of Patriarchy* (1987).

Professions for Women

When your secretary invited me to come here, she told me that your Society is concerned with the employment of women and she suggested that I might tell you something about my own professional experiences. It is true I am a woman; it is true I am employed; but what professional experiences have I had? It is difficult to say. My profession is literature; and in that profession there are fewer experiences for women than in any other, with the exception of the stage—fewer, I mean, that are peculiar to women. For the road was cut many years ago—by Fanny Burney, by Aphra Behn, by Harriet Martineau, by Jane Austen, by George Eliot—many famous women, and many more unknown and forgotten, have been before me, making the path smooth, and regulating my steps. Thus, when I came to write, there were very few material obstacles in my way.

Writing was a reputable and harmless occupation. The family peace was not broken by the scratching of a pen. No demand was made upon the family purse. For ten and sixpence one can buy paper enough to write all the plays of Shakespeare—if one has a mind that way. Pianos and models, Paris, Vienna and Berlin, masters and mistresses, are not needed by a writer. The cheapness of writing paper is, of course, the reason why women have succeeded as writers before they have succeeded in the other professions.

But to tell you my story—it is a simple one. You have only got to figure to yourselves a girl in a bedroom with a pen in her hand. She had only to move that pen from left to right—from ten o’clock to one. Then it occurred to her to do what is simple and cheap enough after all—to slip a few of those pages into an envelope, fix a

penny stamp in the corner, and drop the envelope into the red box at the corner. It was thus that I became a journalist; and my effort was rewarded on the first day of the following month—a very glorious day it was for me—by a letter from an editor containing a cheque for one pound ten shillings and sixpence. But to show you how little I deserve to be called a professional woman, how little I know of the struggles and difficulties of such lives, I have to admit that instead of spending that sum upon bread and butter, rent, shoes and stockings, or butcher's bills, I went out and bought a cat—a beautiful cat, a Persian cat, which very soon involved me in bitter disputes with my neighbours.

What could be easier than to write articles and to buy Persian cats with the profits? But wait a moment. Articles have to be about something. Mine, I seem to remember, was about a novel by a famous man. And while I was writing this review, I discovered that if I were going to review books I should need to do battle with a certain phantom. And the phantom was a woman, and when I came to know her better I called her after the heroine of a famous poem, *The Angel in the House*. It was she who used to come between me and my paper when I was writing reviews. It was she who bothered me and wasted my time and so tormented me that at last I killed her. You who come of a younger and happier generation may not have heard of her—you may not know what I mean by the *Angel in the House*. I will describe her as shortly as I can. She was intensely sympathetic. She was immensely charming. She was utterly unselfish. She excelled in the difficult arts of family life. She sacrificed herself daily. If there was chicken, she took the leg; if there was draught she sat in it—in short she was so constituted that she never had a mind or a wish of her own, but preferred to sympathize always with the minds and wishes of others. Above all—I need not say it—she was pure. Her purity was supposed to be her chief beauty—her blushes, her great grace. In those days—the last of Queen Victoria—every house had its *Angel*. And when I came to write I encountered her with the very first words. The shadow of her wings fell on my page; I heard the rustling of her skirts in the room. Directly, that is to say, I took my pen in

my hand to review that novel by a famous man, she slipped behind me and whispered: "My dear, you are a young woman. You are writing about a book that has been written by a man. Be sympathetic; be tender; flatter; deceive; use all the arts and wiles of our sex. Never let anybody guess that you have a mind of your own. Above all, be pure." And she made as if to guide my pen. I now record the one act for which I take some credit to myself, though the credit rightly belongs to some excellent ancestors of mine who left me a certain sum of money—shall we say five hundred pounds a year?—so that it was not necessary for me to depend solely on charm for my living. I turned upon her and caught her by the throat. I did my best to kill her. My excuse, if I were to be had up in a court of law, would be that I acted in self-defence. Had I not killed her she would have killed me. She would have plucked the heart out of my writing. For, as I found, directly I put pen to paper, you cannot review even a novel without having a mind of your own, without expressing what you think to be the truth about human relations, morality, sex. And all these questions, according to the *Angel of the House*, cannot be dealt with freely and openly by women; they must charm, they must conciliate, they must—to put it bluntly—tell lies if they are to succeed. Thus, whenever I felt the shadow of her wing or the radiance of her halo upon my page, I took up the inkpot and flung it at her. She died hard. Her fictitious nature was of great assistance to her. It is far harder to kill a phantom than a reality. She was always creeping back when I thought I had despatched her. Though I flatter myself that I killed her in the end, the struggle was severe; it took much time that had better have been spent upon learning Greek grammar; or in roaming the world in search of adventures. But it was a real experience; it was an experience that was found to befall all women writers at that time. Killing the *Angel in the House* was part of the occupation of a woman writer.

But to continue my story. The *Angel* was dead; what then remained? You may say that what remained was a simple and common object—a young woman in a bedroom with an inkpot. In other words, now that she had rid herself of falsehood, that young woman had only to

be herself. Ah, but what is "herself"? I mean, what is a woman? I assure you, I do not know. I do not believe that you know. I do not believe that anybody can know until she has expressed herself in all the arts and professions open to human skill. That indeed is one of the reasons why I have come here—out of respect for you, who are in process of showing us by your experiments what a woman is, who are in process of providing us, by your failures and successes, with that extremely important piece of information.

But to continue the story of my professional experiences. I made one pound ten and six by my first review; and I bought a Persian cat with the proceeds. Then I grew ambitious. A Persian cat is all very well, I said; but a Persian cat is not enough. I must have a motor car. And it was thus that I became a novelist—for it is a very strange thing that people will give you a motor car if you will tell them a story. It is a still stranger thing that there is nothing so delightful in the world as telling stories. It is far pleasanter than writing reviews of famous novels. And yet, if I am to obey your secretary and tell you my professional experiences as a novelist, I must tell you about a very strange experience that befell me as a novelist. And to understand it you must try first to imagine a novelist's state of mind. I hope I am not giving away professional secrets if I say that a novelist's chief desire is to be as unconscious as possible. He has to induce in himself a state of perpetual lethargy. He wants life to proceed with the utmost quiet and regularity. He wants to see the same faces, to read the same books, to do the same things day after day, month after month, while he is writing, so that nothing may break the illusion in which he is living—so that nothing may disturb or disquiet the mysterious nosings about, feelings round, darts, dashes and sudden discoveries of that very shy and illusive spirit, the imagination. I suspect that this state is the same both for men and women. Be that as it may, I want you to imagine me writing a novel in a state of trance. I want you to figure to yourselves a girl sitting with a pen in her hand, which for minutes, and indeed for hours, she never dips into the inkpot. The image that comes to my mind when I think of this girl is the image of a fisherman lying sunk in dreams on the verge of a

deep lake with a rod held out over the water. She was letting her imagination sweep unchecked round every rock and cranny of the world that lies submerged in the depths of our unconscious being. Now came the experience, the experience that I believe to be far commoner with women writers than with men. The line raced through the girl's fingers. Her imagination had rushed away. It had sought the pools, the depths, the dark places where the largest fish slumber. And then there was a smash. There was an explosion. There was foam and confusion. The imagination had dashed itself against something hard. The girl was roused from her dream. She was indeed in a state of the most acute and difficult distress. To speak without figure she had thought of something, something about the body, about the passions which it was unfitting for her as a woman to say. Men, her reason told her, would be shocked. The consciousness of what men will say of a woman who speaks the truth about her passions had roused her from her artist's state of unconsciousness. She could write no more. The trance was over. Her imagination could work no longer. This I believe to be a very common experience with women writers—they are impeded by the extreme conventionality of the other sex. For though men sensibly allow themselves great freedom in these respects, I doubt that they realize or can control the extreme severity with which they condemn such freedom in women.

These then were two very genuine experiences of my own. These were two of the adventures of my professional life. The first—killing the Angel in the House—I think I solved. She died. But the second, telling the truth about my own experiences as a body, I do not think I solved. I doubt that any woman has solved it yet. The obstacles against her are still immensely powerful—and yet they are very difficult to define. Outwardly, what is simpler than to write books? Outwardly, what obstacles are there for a woman rather than for a man? Inwardly, I think, the case is very different; she has still many ghosts to fight, many prejudices to overcome. Indeed it will be a long time still, I think, before a woman can sit down to write a book without finding a phantom to be slain, a rock to be dashed against. And if this is so in literature, the freest of

all professions for women, how is it in the new professions which you are now for the first time entering?

Those are the questions that I should like, had I time, to ask you. And indeed, if I have laid stress upon these professional experiences of mine, it is because I believe that they are, though in different forms, yours also. Even when the path is nominally open—when there is nothing to prevent a woman from being a doctor, a lawyer, a civil servant—there are many phantoms and obstacles, as I believe, looming in her way. To discuss and define them is I think of great value and importance; for thus only can the labour be shared, the difficulties be solved. But besides this, it is necessary also to discuss the ends and the aims for which we are fighting, for which we are doing battle with these formidable obstacles. Those aims cannot be taken for granted; they must be perpetually questioned and examined. The whole position, as I see it—here

in this hall surrounded by women practising for the first time in history I know not how many different professions—is one of extraordinary interest and importance. You have won rooms of your own in the house hitherto exclusively owned by men. You are able, though not without great labour and effort, to pay the rent. You are earning your five hundred pounds a year. But this freedom is only a beginning; the room is your own, but it is still bare. It has to be furnished; it has to be decorated; it has to be shared. How are you going to furnish it, how are you going to decorate it? With whom are you going to share it, and upon what terms? These, I think are questions of the utmost importance and interest. For the first time in history you are able to ask them; for the first time you are able to decide for yourselves what the answers should be. Willingly would I stay and discuss those questions and answers—but not tonight. My time is up; and I must cease.

Women and Fiction

The title of this article can be read in two ways: it may allude to women and the fiction that they write, or to women and the fiction that is written about them. The ambiguity is intentional, for in dealing with women as writers, as much elasticity as possible is desirable; it is necessary to leave oneself room to deal with other things besides their work, so much has that work been influenced by conditions that have nothing whatever to do with art.

The most superficial inquiry into women's writing instantly raises a host of questions. Why, we ask at once, was there no continuous writing done by women before the eighteenth century? Why did they then write almost as habitually as men, and in the course of that writing produce, one after another, some of the classics of English fiction? And why did their art then, and why to some extent does their art still, take the form of fiction?

A little thought will show us that we are ask-

ing questions to which we shall get, as answer, only further fiction. The answer lies at present locked in old diaries, stuffed away in old drawers, half-obliterated in the memories of the aged. It is to be found in the lives of the obscure—in those almost unlit corridors of history where the figures of generations of women are so dimly, so fitfully perceived. For very little is known about women. The history of England is the history of the male line, not of the female. Of our fathers we know always some fact, some distinction. They were soldiers or they were sailors; they filled that office or they made that law. But of our mothers, our grandmothers, our great-grandmothers, what remains? Nothing but a tradition. One was beautiful; one was red-haired; one was kissed by a Queen. We know nothing of them except their names and the dates of their marriages and the number of children they bore.

Thus, if we wish to know why at any particular time women did this or that, why they wrote

nothing, why on the other hand they wrote masterpieces, it is extremely difficult to tell. Anyone who should seek among those old papers, who should turn history wrong side out and so construct a faithful picture of the daily life of the ordinary women in Shakespeare's time, in Milton's time, in Johnson's time, would not only write a book of astonishing interest, but would furnish the critic with a weapon which he now lacks. The extraordinary woman depends on the ordinary woman. It is only when we know what were the conditions of the average woman's life—the number of her children, whether she had money of her own, if she had a room to herself, whether she had help in bringing up her family, if she had servants, whether part of the housework was her task—it is only when we can measure the way of life and the experience of life made possible to the ordinary woman that we can account for the success or failure of the extraordinary woman as a writer.

Strange spaces of silence seem to separate one period of activity from another. There was Sappho and a little group of women all writing poetry on a Greek island six hundred years before the birth of Christ. They fall silent. Then about the year 1000 we find a certain court lady, the Lady Murasaki, writing a very long and beautiful novel in Japan. But in England in the sixteenth century, when the dramatists and poets were most active, the women were dumb. Elizabethan literature is exclusively masculine. Then, at the end of the eighteenth century and in the beginning of the nineteenth, we find women again writing—this time in England—with extraordinary frequency and success.

Law and custom were of course largely responsible for these strange intermissions of silence and speech. When a woman was liable, as she was in the fifteenth century, to be beaten and flung about the room if she did not marry the man of her parents' choice, the spiritual atmosphere was not favourable to the production of works of art. When she was married without her own consent to a man who thereupon became her lord and master, "so far at least as law and custom could make him," as she was in the time of the Stuarts, it is likely she had little time for writing, and less encouragement. The immense effect

of environment and suggestion upon the mind, we in our psychoanalytical age are beginning to realize. Again, with memoirs and letters to help us, we are beginning to understand how abnormal is the effort needed to produce a work of art, and what shelter and what support the mind of the artist requires. Of those facts the lives and letters of men like Keats and Carlyle and Flaubert assure us.

Thus it is clear that the extraordinary outburst of fiction in the beginning of the nineteenth century in England was heralded by innumerable slight changes in law and customs and manners. And women of the nineteenth century had some leisure; they had some education. It was no longer the exception for women of the middle and upper classes to choose their own husbands. And it is significant that of the four great women novelists—Jane Austen, Emily Brontë, Charlotte Brontë, and George Eliot—not one had a child, and two were unmarried.

Yet, though it is clear that the ban upon writing had been removed, there was still, it would seem, considerable pressure upon women to write novels. No four women can have been more unlike in genius and character than these four. Jane Austen can have had nothing in common with George Eliot; George Eliot was the direct opposite of Emily Brontë. Yet all were trained for the same profession; all, when they wrote, wrote novels.

Fiction was, as fiction still is, the easiest thing for a woman to write. Nor is it difficult to find the reason. A novel is the least concentrated form of art. A novel can be taken up or put down more easily than a play or a poem. George Eliot left her work to nurse her father. Charlotte Brontë put down her pen to pick the eyes out of the potatoes. And living as she did in the common sitting-room, surrounded by people, a woman was trained to use her mind in observation and upon the analysis of character. She was trained to be a novelist and not to be a poet.

Even in the nineteenth century, a woman lived almost solely in her home and her emotions. And those nineteenth-century novels, remarkable as they were, were profoundly influenced by the fact that the women who wrote them were excluded by their sex from certain kinds of experience.

That experience has a great influence upon fiction is indisputable. The best part of Conrad's novels, for instance, would be destroyed if it had been impossible for him to be a sailor. Take away all that Tolstoi knew of war as a soldier, of life and society as a rich young man whose education admitted him to all sorts of experience, and *War and Peace* would be incredibly impoverished.

Yet *Pride and Prejudice*, *Wuthering Heights*, *Villette*, and *Middlemarch* were written by women from whom was forcibly withheld all experience save that which could be met with in a middle-class drawing-room. No first-hand experience of war or seafaring or politics or business was possible for them. Even their emotional life was strictly regulated by law and custom. When George Eliot ventured to live with Mr Lewes without being his wife, public opinion was scandalized. Under its pressure she withdrew into a suburban seclusion which, inevitably, had the worst possible effects upon her work. She wrote that unless people asked of their own accord to come and see her, she never invited them. At the same time, on the other side of Europe, Tolstoi was living a free life as a soldier, with men and women of all classes, for which nobody censured him and from which his novels drew much of their astonishing breadth and vigour.

But the novels of women were not affected only by the necessarily narrow range of the writer's experience. They showed, at least in the nineteenth century, another characteristic which may be traced to the writer's sex. In *Middlemarch* and in *Jane Eyre* we are conscious not merely of the writer's character, as we are conscious of the character of Charles Dickens, but we are conscious of a woman's presence—of someone resenting the treatment of her sex and pleading for its rights. This brings into women's writing an element which is entirely absent from a man's, unless, indeed, he happens to be a working-man, a Negro, or one who for some other reason is conscious of disability. It introduces a distortion and is frequently the cause of weakness. The desire to plead some personal cause or to make a character the mouthpiece of some personal discontent or grievance always has a distressing effect, as if the spot at which the reader's

attention is directed were suddenly twofold instead of single.

The genius of Jane Austen and Emily Brontë is never more convincing than in their power to ignore such claims and solicitations and to hold on their way unperturbed by scorn or censure. But it needed a very serene or a very powerful mind to resist the temptation to anger. The ridicule, the censure, the assurance of inferiority in one form or another which were lavished upon women who practised an art, provoked such reactions naturally enough. One sees the effect in Charlotte Brontë's indignation, in George Eliot's resignation. Again and again one finds it in the work of the lesser women writers—in their choice of a subject, in their unnatural self-assertiveness, in their unnatural docility. Moreover, insincerity leaks in almost unconsciously. They adopt a view in deference to authority. The vision becomes too masculine or it becomes too feminine; it loses its perfect integrity and, with that, its most essential quality as a work of art.

The great change that has crept into women's writing is, it would seem, a change of attitude. The woman writer is no longer bitter. She is no longer angry. She is no longer pleading and protesting as she writes. We are approaching, if we have not yet reached, the time when her writing will have little or no foreign influence to disturb it. She will be able to concentrate upon her vision without distraction from outside. The aloofness that was once within the reach of genius and originality is only now coming within reach of ordinary women. Therefore the average novel by a woman is far more genuine and far more interesting today than it was a hundred or even fifty years ago.

But it is still true that before a woman can write exactly as she wishes to write, she has many difficulties to face. To begin with, there is the technical difficulty—so simple, apparently; in reality, so baffling—that the very form of the sentence does not fit her. It is a sentence made by men; it is too loose, too heavy, too pompous for a woman's use. Yet in a novel, which covers so wide a stretch of ground, an ordinary and usual type of sentence has to be found to carry the reader on easily and naturally from one end of the book to the other. And this a woman must

make for herself, altering and adapting the current sentence until she writes one that takes the natural shape of her thought without crushing or distorting it.

But that, after all, is only a means to an end, and the end is still to be reached only when a woman has the courage to surmount opposition and the determination to be true to herself. For a novel, after all, is a statement about a thousand different objects—human, natural, divine; it is an attempt to relate them to each other. In every novel of merit these different elements are held in place by the force of the writer's vision. But they have another order also, which is the order imposed upon them by convention. And as men are the arbiters of that convention, as they have established an order of values in life, so too, since fiction is largely based on life, these values prevail there also to a very great extent.

It is probable, however, that both in life and in art the values of a woman are not the values of a man. Thus, when a woman comes to write a novel, she will find that she is perpetually wishing to alter the established values—to make serious what appears insignificant to a man, and trivial what is to him important. And for that, of course, she will be criticized; for the critic of the opposite sex will be genuinely puzzled and surprised by an attempt to alter the current scale of values, and will see in it not merely a difference of view, but a view that is weak, or trivial, or sentimental, because it differs from his own.

But here, too, women are coming to be more independent of opinion. They are beginning to respect their own sense of values. And for this reason the subject matter of their novels begins to show certain changes. They are less interested, it would seem, in themselves; on the other hand, they are more interested in other women. In the early nineteenth century, women's novels were largely autobiographical. One of the motives that led them to write was the desire to expose their own suffering, to plead their own cause. Now that this desire is no longer so urgent, women are beginning to explore their own sex, to write of women as women have never been written of before; for of course, until very lately, women in literature were the creation of men.

Here again there are difficulties to overcome,

for, if one may generalize, not only do women submit less readily to observation than men, but their lives are far less tested and examined by the ordinary processes of life. Often nothing tangible remains of a woman's day. The food that has been cooked is eaten; the children that have been nursed have gone out into the world. Where does the accent fall? What is the salient point for the novelist to seize upon? It is difficult to say. Her life has an anonymous character which is baffling and puzzling in the extreme. For the first time, this dark country is beginning to be explored in fiction; and at the same moment a woman has also to record the changes in women's minds and habits which the opening of the professions has introduced. She has to observe how their lives are ceasing to run underground; she has to discover what new colours and shadows are showing in them now that they are exposed to the outer world.

If, then, one should try to sum up the character of women's fiction at the present moment, one would say that it is courageous; it is sincere; it keeps closely to what women feel. It is not bitter. It does not insist upon its femininity. But at the same time, a woman's book is not written as a man would write it. These qualities are much commoner than they were, and they give even to second- and third-rate work the value of truth and the interest of sincerity.

But in addition to these good qualities, there are two that call for a word more of discussion. The change which has turned the English woman from a nondescript influence, fluctuating and vague, to a voter, a wage-earner, a responsible citizen, has given her both in her life and in her art a turn towards the impersonal. Her relations now are not only emotional; they are intellectual, they are political. The old system which condemned her to squint askance at things through the eyes or through the interests of husband or brother, has given place to the direct and practical interests of one who must act for herself, and not merely influence the acts of others. Hence her attention is being directed away from the personal centre which engaged it exclusively in the past to the impersonal, and her novels naturally become more critical of society, and less analytical of individual lives.

We may expect that the office of gadfly to the state, which has been so far a male prerogative,

will now be discharged by women also. Their novels will deal with social evils and remedies. Their men and women will not be observed wholly in relation to each other emotionally, but as they cohere and clash in groups and classes and races. That is one change of some importance. But there is another more interesting to those who prefer the butterfly to the gadfly—that is to say, the artist to the reformer. The greater impersonality of women's lives will encourage the poetic spirit, and it is in poetry that women's fiction is still weakest. It will lead them to be less absorbed in facts and no longer content to record with astonishing acuteness the minute details which fall under their own observation. They will look beyond the personal and political relationships to the wider questions which the poet tries to solve—of our destiny and the meaning of life.

The basis of the poetic attitude is of course largely founded upon material things. It depends upon leisure, and a little money, and the chance which money and leisure give to observe impersonally and dispassionately. With money and leisure at their service, women will naturally occupy themselves more than has hitherto been possible with the craft of letters. They will make a fuller and a more subtle use of the instrument of writing. Their technique will become bolder and richer.

In the past, the virtue of women's writing often lay in its divine spontaneity, like that of the

blackbird's song or the thrush's. It was untaught; it was from the heart. But it was also, and much more often, chattering and garrulous—mere talk spilt over paper and left to dry in pools and blots. In future, granted time and books and a little space in the house for herself, literature will become for women, as for men, an art to be studied. Women's gift will be trained and strengthened. The novel will cease to be the dumping-ground for the personal emotions. It will become, more than at present, a work of art like any other, and its resources and its limitations will be explored.

From this it is a short step to the practice of the sophisticated arts, hitherto so little practised by women—to the writing of essays and criticism, of history and biography. And that, too, if we are considering the novel, will be of advantage; for besides improving the quality of the novel itself, it will draw off the aliens who have been attracted to fiction by its accessibility while their hearts lay elsewhere. Thus will the novel be rid of those excrescences of history and fact which, in our time, have made it so shapeless.

So, if we may prophesy, women in time to come will write fewer novels, but better novels; and not novels only, but poetry and criticism and history. But in this, to be sure, one is looking ahead to that golden, that perhaps fabulous, age when women will have what has so long been denied them—leisure, and money, and a room to themselves.

Dorothy Richardson

THE TUNNEL

Although *The Tunnel* is the fourth book that Miss Richardson has written, she must still expect to find her reviewers paying a great deal of attention to her method. It is a method that demands attention, as a door whose handle we wrench ineffectively calls our attention to the fact that it is locked. There is no slipping smoothly down the accustomed channels; the first chapters provide an amusing spectacle of hasty critics seeking

them in vain. If this were the result of perversity, we should think Miss Richardson more courageous than wise; but being, as we believe, not wilful but natural, it represents a genuine conviction of the discrepancy between what she has to say and the form provided by tradition for her to say it in. She is one of the rare novelists who believe that the novel is so much alive that it actually grows. As she makes her advanced critic, Mr Wilson, remark: "There will be books with all that cut out—him and her—all that sort of

thing. The book of the future will be clear of all that." And Miriam Henderson herself reflects: "but if books were written like that, sitting down and doing it cleverly and knowing just what you were doing and just how somebody else had done it, there was something wrong, some mannish cleverness that was only half right. To write books knowing all about style would be to become like a man." So "him and her" are cut out, and with them goes the odd deliberate business: the chapters that lead up and the chapters that lead down; the characters who are always characteristic; the scenes that are passionate and the scenes that are humorous; the elaborate construction of reality; the conception that shapes and surrounds the whole. All these things are cast away, and there is left, denuded, unsheltered, unbegun and unfinished, the consciousness of Miriam Henderson, the small sensitive lump of matter, half transparent and half opaque, which endlessly reflects and distorts the variegated procession, and is, we are bidden to believe, the source beneath the surface, the very oyster within the shell.

The critic is thus absolved from the necessity of picking out the themes of the story. The reader is not provided with a story; he is invited to embed himself in Miriam Henderson's consciousness, to register one after another, and one on top of another, words, cries, shouts, notes of a violin, fragments of lectures, to follow these impressions as they flicker through Miriam's mind, waking incongruously other thoughts, and plaiting incessantly the many-coloured and innumerable threads of life. But a quotation is better than description.

She was surprised now at her familiarity with the details of the room . . . that idea of visiting places in dreams. It was something more than that . . . all the real part of your life has a real dream in it; some of the real dream part of you coming true. You know in advance when you are really following your life. These things are familiar because reality is here. Coming events cast *light*. It is like dropping everything and walking backward to something you know is there. However far you go out you come back. . . . I am back now where I was before I began trying to do things like other people. I left home to get here. None of those things can touch me here. They are mine.

Here we are thinking, word by word, as Miriam thinks. The method, if triumphant, should make us feel ourselves seated at the centre of another mind, and, according to the artistic gift of the writer, we should perceive in the helter-skelter of flying fragments some unity, significance, or design. That Miss Richardson gets so far as to achieve a sense of reality far greater than that produced by the ordinary means is undoubted. But, then, which reality is it, the superficial or the profound? We have to consider the quality of Miriam Henderson's consciousness, and the extent to which Miss Richardson is able to reveal it. We have to decide whether the flying helter-skelter resolves itself by degrees into a perceptible whole. When we are in a position to make up our minds we cannot deny a slight sense of disappointment. Having sacrificed not merely "hims and hers," but so many seductive graces of wit and style for the prospect of some new revelation or greater intensity, we still find ourselves distressingly near the surface. Things look much the same as ever. It is certainly a very vivid surface. The consciousness of Miriam takes the reflection of a dentist's room to perfection. Her senses of touch, sight and hearing are all excessively acute. But sensations, impressions, ideas and emotions glance off her, unrelated and unquestioned, without shedding quite as much light as we had hoped into the hidden depths. We find ourselves in the dentist's room, in the street, in the lodging-house bedroom frequently and convincingly; but never, or only for a tantalizing second, in the reality which underlies these appearances. In particular, the figures of other people on whom Miriam casts her capricious light are vivid enough, but their sayings and doings never reach that degree of significance which we, perhaps unreasonably, expect. The old method seems sometimes the more profound and economical of the two. But it must be admitted that we are exacting. We want to be rid of realism, to penetrate without its help into the regions beneath it, and further require that Miss Richardson shall fashion this new material into something which has the shapeliness of the old accepted forms. We are asking too much; but the extent of our asking proves that *The Tunnel* is better in its failure than most books in their success.

REVOLVING LIGHTS

There is no one word, such as romance or realism, to cover, even roughly, the works of Miss Dorothy Richardson. Their chief characteristic, if an intermittent student be qualified to speak, is one for which we still seek a name. She has invented, or, if she has not invented, developed and applied to her own uses, a sentence which we might call the psychological sentence of the feminine gender. It is of a more elastic fibre than the old, capable of stretching to the extreme, of suspending the frailest particles, of enveloping the vaguest shapes. Other writers of the opposite sex have used sentences of this description and stretched them to the extreme. But there is a difference. Miss Richardson has fashioned her sentence consciously, in order that it may descend to the depths and investigate the crannies of Miriam Henderson's consciousness. It is a woman's sentence, but only in the sense that it is used to describe a woman's mind by a writer who is neither proud nor afraid of anything that she may discover in the psychology of her sex. And therefore we feel that the trophies that Miss Richardson brings to the surface, however we may dispute their size, are undoubtedly genuine. Her discoveries are concerned with states of being and not with states of doing. Miriam is aware of "life itself"; of the atmosphere of the table rather than of the table; of the silence rather than of the sound. Therefore she adds an element

to her perception of things which has not been noticed before, or, if noticed, has been guiltily suppressed. A man might fall dead at her feet (it is not likely), and Miriam might feel that a violent-coloured ray of light was an important element in her consciousness of the tragedy. If she felt it, she would say it. Therefore, in reading *Revolving Lights* we are often made uncomfortable by feeling that the accent upon the emotions has shifted. What was emphatic is smoothed away. What was important to Maggie Tulliver no longer matters to Miriam Henderson. At first, we are ready to say that nothing is important to Miriam Henderson. That is the way we generally retaliate when an artist tells us that the heart is not, as we should like it to be, a stationary body, but a body which moves perpetually, and is thus always standing in a new relation to the emotions which are the same. Chaucer, Donne, Dickens—each if you read him, shows this change of the heart. That is what Miss Richardson is doing on an infinitely smaller scale. Miriam Henderson is pointing to her heart and saying she feels a pain on her right, and not on her left. She points too didactically. Her pain, compared with Maggie Tulliver's, is a very little pain. But, be that as it may, here we have both Miss Wilson and Miss Richardson proving that the novel is not hung upon a nail and festooned with glory, but on the contrary, walks the high road, alive and alert, and brushes shoulders with real men and women.

A Room of One's Own

Chapter Five

I had come at last, in the course of this rambling, to the shelves which hold books by the living; by women and by men; for there are almost as many books written by women now as by men. Or if that is not yet quite true, if the male is still the voluble sex, it is certainly true that women no longer write novels solely. There are Jane Harrison's books on Greek archaeology; Vernon Lee's books on aesthetics; Gertrude Bell's books on

Persia. There are books on all sorts of subjects which a generation ago no woman could have touched. There are poems and plays and criticism; there are histories and biographies, books of travel and books of scholarship and research; there are even a few philosophies and books about science and economics. And though novels predominate, novels themselves may very well have changed from association with books of a different feather. The natural simplicity, the epic age of women's writing, may have gone. Read-

ing and criticism may have given her a wider range, a greater subtlety. The impulse towards autobiography may be spent. She may be beginning to use writing as an art, not as a method of self-expression. Among these new novels one might find an answer to several such questions.

I took down one of them at random. It stood at the very end of the shelf, was called *Life's Adventure*, or some such title, by Mary Carmichael, and was published in this very month of October. It seems to be her first book, I said to myself, but one must read it as if it were the last volume in a fairly long series, continuing all those other books that I have been glancing at—Lady Winchilsea's poems and Aphra Behn's plays and the novels of the four great novelists. For books continue each other, in spite of our habit of judging them separately. And I must also consider her—this unknown woman—as the descendant of all those other women whose circumstances I have been glancing at and see what she inherits of their characteristics and restrictions. So, with a sigh, because novels so often provide an anodyne and not an antidote, glide one into torpid slumbers instead of rousing one with a burning brand, I settled down with a notebook and a pencil to make what I could of Mary Carmichael's first novel, *Life's Adventure*.

To begin with, I ran my eye up and down the page. I am going to get the hang of her sentences first, I said, before I load my memory with blue eyes and brown and the relationship that there may be between Chloe and Roger. There will be time for that when I have decided whether she has a pen in her hand or a pickaxe. So I tried a sentence or two on my tongue. Soon it was obvious that something was not quite in order. The smooth gliding of sentence after sentence was interrupted. Something tore, something scratched; a single word here and there flashed its torch in my eyes. She was "unhanding" herself as they say in the old plays. She is like a person striking a match that will not light, I thought. But why, I asked her as if she were present, are Jane Austen's sentences not of the right shape for you? Must they all be scrapped because Emma and Mr. Woodhouse are dead? Alas, I sighed, that it should be so. For while Jane Austen breaks from melody to melody as Mozart from song to

song, to read this writing was like being out at sea in an open boat. Up one went, down one sank. This terseness, this short-windedness, might mean that she was afraid of something; afraid of being called "sentimental" perhaps; or she remembers that women's writing has been called flowery and so provides a superfluity of thorns; but until I have read a scene with some care, I cannot be sure whether she is being herself or some one else. At any rate, she does not lower one's vitality, I thought, reading more carefully. But she is heaping up too many facts. She will not be able to use half of them in a book of this size. (It was about half the length of *Jane Eyre*.) However, by some means or other she succeeded in getting us all—Roger, Chloe, Olivia, Tony and Mr. Bigham—in a canoe up the river. Wait a moment, I said, leaning back in my chair, I must consider the whole thing more carefully before I go any further.

I am almost sure, I said to myself, that Mary Carmichael is playing a trick on us. For I feel as one feels on a switchback railway when the car, instead of sinking, as one has been led to expect, swerves up again. Mary is tampering with the expected sequence. First she broke the sentence; now she has broken the sequence. Very well, she has every right to do both these things if she does them not for the sake of breaking, but for the sake of creating. Which of the two it is I cannot be sure until she has faced herself with a situation. I will give her every liberty, I said, to choose what that situation shall be; she shall make it of tin cans and old kettles if she likes; but she must convince me that she believes it to be a situation; and then when she has made it she must face it. She must jump. And, determined to do my duty by her as reader if she would do her duty by me as writer, I turned the page and read . . . I am sorry to break off so abruptly. Are there no men present? Do you promise me that behind that red curtain over there the figure of Sir Chartres Biron is not concealed? We are all women, you assure me? Then I may tell you that the very next words I read were these—"Chloe liked Olivia . . ." Do not start. Do not blush. Let us admit in the privacy of our own society that these things sometimes happen. Sometimes women do like women.

"Chloe liked Olivia," I read. And then it struck me how immense a change was there. Chloe liked Olivia perhaps for the first time in literature. Cleopatra did not like Octavia. And how completely *Antony and Cleopatra* would have been altered had she done so! As it is, I thought, letting my mind, I am afraid, wander a little from *Life's Adventure*, the whole thing is simplified, conventionalised, if one dared say it, absurdly. Cleopatra's only feeling about Octavia is one of jealousy. Is she taller than I am? How does she do her hair? The play, perhaps, required no more. But how interesting it would have been if the relationship between the two women had been more complicated. All these relationships between women, I thought, rapidly recalling the splendid gallery of fictitious women, are too simple. So much has been left out, unattempted. And I tried to remember any case in the course of my reading where two women are represented as friends. There is an attempt at it in *Diana of the Crossways*. They are confidantes, of course, in Racine and the Greek tragedies. They are now and then mothers and daughters. But almost without exception they are shown in their relation to men. It was strange to think that all the great women of fiction were, until Jane Austen's day, not only seen by the other sex, but seen only in relation to the other sex. And how small a part of a woman's life is that: and how little can a man know even of that when he observes it through the black or rosy spectacles which sex puts upon his nose. Hence, perhaps, the peculiar nature of woman in fiction; the astonishing extremes of her beauty and horror; her alternations between heavenly goodness and hellish depravity—for so a lover would see her as his love rose or sank, was prosperous or unhappy. This is not so true of the nineteenth-century novelists, of course. Woman becomes much more various and complicated there. Indeed it was the desire to write about women perhaps that led men by degrees to abandon the poetic drama which, with its violence, could make so little use of them, and to devise the novel as a more fitting receptacle. Even so it remains obvious, even in the writing of Proust, that a man is terribly hampered and partial in his knowledge of women, as a woman in her knowledge of men.

Also, I continued, looking down at the page again, it is becoming evident that women, like men, have other interests besides the perennial interests of domesticity. "Chloe liked Olivia. They shared a laboratory together. . . ." I read on and discovered that these two young women were engaged in mincing liver, which is, it seems, a cure for pernicious anaemia: although one of them was married and had—I think I am right in stating—two small children. Now all that, of course, has had to be left out, and thus the splendid portrait of the fictitious woman is much too simple and much too monotonous. Suppose, for instance, that men were only represented in literature as the lovers of women, and were never the friends of men, soldiers, thinkers, dreamers; how few parts in the plays of Shakespeare could be allotted to them; how literature would suffer! We might perhaps have most of Othello; and a good deal of Antony; but no Caesar, no Brutus, no Hamlet, no Lear, no Jaques—literature would be incredibly impoverished, as indeed literature is impoverished beyond our counting by the doors that have been shut upon women. Married against their will, kept in one room, and to one occupation, how could a dramatist give a full or interesting or truthful account of them? Love was the only possible interpreter. The poet was forced to be passionate or bitter, unless indeed he chose to "hate women," which meant more often than not that he was unattractive to them.

Now if Chloe likes Olivia and they share a laboratory, which of itself will make their friendship more varied and lasting because it will be less personal; if Mary Carmichael knows how to write, and I was beginning to enjoy some quality in her style; if she has a room to herself, of which I am not quite sure; if she has five hundred a year of her own—but that remains to be proved—then I think that something of great importance has happened.

For if Chloe likes Olivia and Mary Carmichael knows how to express it she will light a torch in that vast chamber where nobody has yet been. It is all half lights and profound shadows like those serpentine caves where one goes with a candle peering up and down, not knowing where one is stepping. And I began to read the book again, and read how Chloe watched Olivia put a

jar on a shelf and say how it was time to go home to her children. That is a sight that has never been seen since the world began, I exclaimed. And I watched too, very curiously. For I wanted to see how Mary Carmichael set to work to catch those unrecorded gestures, those unsaid or half-said words, which form themselves, no more palpably than the shadows of moths on the ceiling, when women are alone, unlit by the capricious and coloured light of the other sex. She will need to hold her breath, I said, reading on, if she is to do it; for women are so suspicious of any interest that has not some obvious motive behind it, so terribly accustomed to concealment and suppression, that they are off at the flicker of an eye turned observingly in their direction. The only way for you to do it, I thought, addressing Mary Carmichael as if she were there, would be to talk of something else, looking steadily out of the window, and thus note, not with a pencil in a notebook, but in the shortest of shorthand, in words that are hardly syllabled yet, what happens when Olivia—this organism that has been under the shadow of the rock these million years—feels the light fall on it, and sees coming her way a piece of strange food—knowledge, adventure, art. And she reaches out for it, I thought, again raising my eyes from the page, and has to devise some entirely new combination of her resources, so highly developed for other purposes, so as to absorb the new into the old without disturbing the infinitely intricate and elaborate balance of the whole.

But, alas, I had done what I had determined not to do; I had slipped unthinkingly into praise of my own sex. “Highly developed”—“infinitely intricate”—such are undeniably terms of praise, and to praise one’s own sex is always suspect, often silly; moreover, in this case, how could one justify it? One could not go to the map and say Columbus discovered America and Columbus was a woman; or take an apple and remark, Newton discovered the laws of gravitation and Newton was a woman; or look into the sky and say aeroplanes are flying overhead and aeroplanes were invented by women. There is no mark on the wall to measure the precise height of women. There are no yard measures, neatly divided into the fractions of an inch, that one can lay against the qualities of a good mother or the devotion of

a daughter, or the fidelity of a sister, or the capacity of a housekeeper. Few women even now have been graded at the universities; the great trials of the professions, army and navy, trade, politics and diplomacy have hardly tested them. They remain even at this moment almost unclassified. But if I want to know all that a human being can tell me about Sir Hawley Butts, for instance, I have only to open Burke or Debrett and I shall find that he took such and such a degree; owns a hall; has an heir; was Secretary to a Board; represented Great Britain in Canada; and has received a certain number of degrees, offices, medals and other distinctions by which his merits are stamped upon him indelibly. Only Providence can know more about Sir Hawley Butts than that.

When, therefore, I say “highly developed,” “infinitely intricate,” of women, I am unable to verify my words either in Whitaker, Debrett or the University Calendar. In this predicament what can I do? And I looked at the bookcase again. There were the biographies: Johnson and Goethe and Carlyle and Sterne and Cowper and Shelley and Voltaire and Browning and many others. And I began thinking of all those great men who have for one reason or another admired, sought out, lived with, confided in, made love to, written of, trusted in, and shown what can only be described as some need of and dependence upon certain persons of the opposite sex. That all these relationships were absolutely Platonic I would not affirm, and Sir William Joynson Hicks would probably deny. But we should wrong these illustrious men very greatly if we insisted that they got nothing from these alliances but comfort, flattery and the pleasures of the body. What they got, it is obvious, was something that their own sex was unable to supply; and it would not be rash, perhaps, to define it further, without quoting the doubtless rhapsodical words of the poets, as some stimulus, some renewal of creative power which is in the gift only of the opposite sex to bestow. He would open the door of drawing-room or nursery, I thought, and find her among her children perhaps, or with a piece of embroidery on her knee—at any rate, the centre of some different order and system of life, and the contrast between this world and his own, which might be the law courts or the House

of Commons, would at once refresh and invigorate; and there would follow, even in the simplest talk, such a natural difference of opinion that the dried ideas in him would be fertilised anew; and the sight of her creating in a different medium from his own would so quicken his creative power that insensibly his sterile mind would begin to plot again, and he would find the phrase or the scene which was lacking when he put on his hat to visit her. Every Johnson has his Thrale, and holds fast to her for some such reasons as these, and when the Thrale marries her Italian music master Johnson goes half mad with rage and disgust, not merely that he will miss his pleasant evening at Streatham, but that the light of his life will be "as if gone out."

And without being Dr. Johnson or Goethe or Carlyle or Voltaire, one may feel, though very differently from these great men, the nature of this intricacy and the power of this highly developed creative faculty among women. One goes into the room—but the resources of the English language would be much put to the stretch, and whole flights of words would need to wing their way illegitimately into existence before a woman could say what happens when she goes into a room. The rooms differ so completely; they are calm or thunderous; open on to the sea, or, on the contrary, give on to a prison yard; are hung with washing; or alive with opals and silks; are hard as horsehair or soft as feathers—one has only to go into any room in any street for the whole of that extremely complex force of femininity to fly in one's face. How should it be otherwise? For women have sat indoors all these millions of years, so that by this time the very walls are permeated by their creative force, which has, indeed, so overcharged the capacity of bricks and mortar that it must needs harness itself to pens and brushes and business and politics. But this creative power differs greatly from the creative power of men. And one must conclude that it would be a thousand pities if it were hindered or wasted, for it was won by centuries of the most drastic discipline, and there is nothing to take its place. It would be a thousand pities if women wrote like men, or lived like men, or looked like men, for if two sexes are quite inadequate, considering the vastness and variety of the world,

how should we manage with one only? Ought not education to bring out and fortify the differences rather than the similarities? For we have too much likeness as it is, and if an explorer should come back and bring word of other sexes looking through the branches of other trees at other skies, nothing would be of greater service to humanity; and we should have the immense pleasure into the bargain of watching Professor X rush for his measuring-rods to prove himself "superior."

Mary Carmichael, I thought, still hovering at a little distance above the page, will have her work cut out for her merely as an observer. I am afraid indeed that she will be tempted to become, what I think the less interesting branch of the species—the naturalist-novelist, and not the contemplative. There are so many new facts for her to observe. She will not need to limit herself any longer to the respectable houses of the upper middle classes. She will go without kindness or condescension, but in the spirit of fellowship into those small, scented rooms where sit the courtesan, the harlot and the lady with the pug dog. There they still sit in the rough and ready-made clothes that the male writer has had perforce to clap upon their shoulders. But Mary Carmichael will have out her scissors and fit them close to every hollow and angle. It will be a curious sight, when it comes, to see these women as they are, but we must wait a little, for Mary Carmichael will still be encumbered with that self-consciousness in the presence of "sin" which is the legacy of our sexual barbarity. She will still wear the shoddy old fetters of class on her feet.

However, the majority of women are neither harlots nor courtesans; nor do they sit clasping pug dogs to dusty velvet all through the summer afternoon. But what do they do then? and there came to my mind's eye one of those long streets somewhere south of the river whose infinite rows are innumerable populated. With the eye of the imagination I saw a very ancient lady crossing the street on the arm of a middle-aged woman, her daughter, perhaps, both so respectably booted and furred that their dressing in the afternoon must be a ritual, and the clothes themselves put away in cupboards with camphor, year after year, throughout the summer months. They cross the road when the lamps are being lit (for the dusk is

their favourite hour), as they must have done year after year. The elder is close on eighty; but if one asked her what her life has meant to her, she would say that she remembered the streets lit for the battle of Balaclava, or had heard the guns fire in Hyde Park for the birth of King Edward the Seventh. And if one asked her, longing to pin down the moment with date and season, but what were you doing on the fifth of April 1868, or the second of November 1875, she would look vague and say that she could remember nothing. For all the dinners are cooked; the plates and cups washed; the children set to school and gone out into the world. Nothing remains of it all. All has vanished. No biography or history has a word to say about it. And the novels, without meaning to, inevitably lie.

All these infinitely obscure lives remain to be recorded, I said, addressing Mary Carmichael as if she were present; and went on in thought through the streets of London feeling in imagination the pressure of dumbness, the accumulation of unrecorded life, whether from the women at the street corners with their arms akimbo, and the rings embedded in their fat swollen fingers, talking with a gesticulation like the swing of Shakespeare's words; or from the violet-sellers and match-sellers and old crones stationed under doorways; or from drifting girls whose faces, like waves in sun and cloud, signal the coming of men and women and the flickering lights of shop windows. All that you will have to explore, I said to Mary Carmichael, holding your torch firm in your hand. Above all, you must illumine your own soul with its profundities and its shallows, and its vanities and its generousities, and say what your beauty means to you or your plainness, and what is your relation to the everchanging and turning world of gloves and shoes and stuffs swaying up and down among the faint scents that come through chemists' bottles down arcades of dress material over a floor of pseudomarle. For in imagination I had gone into a shop; it was laid with black and white paving; it was hung, astonishingly beautifully, with coloured ribbons. Mary Carmichael might well have a look at that in passing, I thought, for it is a sight that would lend itself to the pen as fittingly as any snowy peak or rocky gorge in the Andes. And there is the girl

behind the counter too—I would as soon have her true history as the hundred and fiftieth life of Napoleon or seventieth study of Keats and his use of Miltonic inversion which old Professor Z and his like are now inditing. And then I went on very warily, on the very tips of my toes (so cowardly am I, so afraid of the lash that was once almost laid on my own shoulders), to murmur that she should also learn to laugh, without bitterness, at the vanities—say rather at the peculiarities, for it is a less offensive word—of the other sex. For there is a spot the size of a shilling at the back of the head which one can never see for oneself. It is one of the good offices that sex can discharge for sex—to describe that spot the size of a shilling at the back of the head. Think how much women have profited by the comments of Juvenal; by the criticism of Strindberg. Think with what humanity and brilliancy men, from the earliest ages, have pointed out to women that dark place at the back of the head! And if Mary were very brave and very honest, she would go behind the other sex and tell us what she found there. A true picture of man as a whole can never be painted until a woman has described that spot the size of a shilling. Mr. Woodhouse and Mr. Casaubon are spots of that size and nature. Not of course that any one in their senses would counsel her to hold up to scorn and ridicule of set purpose—literature shows the futility of what is written in that spirit. Be truthful, one would say, and the result is bound to be amazingly interesting. Comedy is bound to be enriched. New facts are bound to be discovered.

However, it was high time to lower my eyes to the page again. It would be better, instead of speculating what Mary Carmichael might write and should write, to see what in fact Mary Carmichael did write. So I began to read again. I remembered that I had certain grievances against her. She had broken up Jane Austen's sentence, and thus given me no chance of pluming myself upon my impeccable taste, my fastidious ear. For it was useless to say, "Yes, yes, this is very nice; but Jane Austen wrote much better than you do," when I had to admit that there was no point of likeness between them. Then she had gone further and broken the sequence—the expected order. Perhaps she had done this unconsciously,

merely giving things their natural order, as a woman would, if she wrote like a woman. But the effect was somehow baffling; one could not see a wave heaping itself, a crisis coming round the next corner. Therefore I could not plume myself either upon the depths of my feelings and my profound knowledge of the human heart. For whenever I was about to feel the usual things in the usual places, about love, about death, the annoying creature twitched me away, as if the important point were just a little further on. And thus she made it impossible for me to roll out my sonorous phrases about "elemental feelings," the "common stuff of humanity," "depths of the human heart," and all those other phrases which support us in our belief that, however clever we may be on top, we are very serious, very profound and very humane underneath. She made me feel, on the contrary, that instead of being serious and profound and humane, one might be—and the thought was far less seductive—merely lazy minded and conventional into the bargain.

But I read on, and noted certain other facts. She was no "genius"—that was evident. She had nothing like the love of Nature, the fiery imagination, the wild poetry, the brilliant wit, the brooding wisdom of her great predecessors, Lady Winchilsea, Charlotte Brontë, Emily Brontë, Jane Austen and George Eliot; she could not write with the melody and the dignity of Dorothy Osborne—indeed she was no more than a clever girl whose books will no doubt be pulped by the publishers in ten years' time. But, nevertheless, she had certain advantages which women of far greater gift lacked even half a century ago. Men were no longer to her "the opposing faction"; she need not waste her time railing against them; she need not climb on to the roof and ruin her peace of mind longing for travel, experience and a knowledge of the world and character that were denied her. Fear and hatred were almost gone, or traces of them showed only in a slight exaggeration of the joy of freedom, a tendency to the caustic and satirical, rather than to the romantic, in her treatment of the other sex. Then there could be no doubt that as a novelist she enjoyed some natural advantages of a high order. She had a sensibility that was very wide, eager and free. It responded to an almost imperceptible touch on it.

It feasted like a plant newly stood in the air on every sight and sound that came its way. It ranged, too, very subtly and curiously, among almost unknown or unrecorded things; it lighted on small things and showed that perhaps they were not small after all. It brought buried things to light and made one wonder what need there had been to bury them. Awkward though she was and without the unconscious bearing of long descent which makes the least turn of the pen of a Thackeray or a Lamb delightful to the ear, she had—I began to think—mastered the first great lesson; she wrote as a woman, but as a woman who has forgotten that she is a woman, so that her pages were full of that curious sexual quality which comes only when sex is unconscious of itself.

All this was to the good. But no abundance of sensation or fineness of perception would avail unless she could build up out of the fleeting and the personal the lasting edifice which remains unthrown. I had said that I would wait until she faced herself with "a situation." And I meant by that until she proved by summoning, beckoning and getting together that she was not a skimmer of surfaces merely, but had looked beneath into the depths. Now is the time, she would say to herself at a certain moment, when without doing anything violent I can show the meaning of all this. And she would begin—how unmistakable that quickening is!—beckoning and summoning, and there would rise up in memory, half forgotten, perhaps quite trivial things in other chapters dropped by the way. And she would make their presence felt while some one sewed or smoked a pipe as naturally as possible, and one would feel, as she went on writing, as if one had gone to the top of the world and seen it laid out, very majestically, beneath.

At any rate, she was making the attempt. And as I watched her lengthening out for the test, I saw, but hoped that she did not see, the bishops and the deans, the doctors and the professors, the patriarchs and the pedagogues all at her shouting warning and advice. You can't do this and you shau't do that! Fellows and scholars only allowed on the grass! Ladies not admitted without a letter of introduction! Aspiring and graceful female novelists this way! So they kept at her like the crowd at a fence on the race-course, and it was

her trial to take her fence without looking to right or left. If you stop to curse you are lost, I said to her; equally, if you stop to laugh. Hesitate or fumble and you are done for. Think only of the jump, I implored her, as if I had put the whole of my money on her back; and she went over it like a bird. But there was a fence beyond that and a fence beyond that. Whether she had the staying power I was doubtful, for the clapping and the crying were fraying to the nerves. But she did her best. Considering that Mary Carmichael was no genius, but an unknown girl writing her first novel in a bed-sitting-room, without enough of

those desirable things, time, money and idleness, she did not do so badly, I thought.

Give her another hundred years, I concluded, reading the last chapter—people's noses and bare shoulders showed naked against a starry sky, for some one had twitched the curtain in the drawing-room—give her a room of her own and five hundred a year, let her speak her mind and leave out half that she now puts in, and she will write a better book one of these days. She will be a poet, I said, putting *Life's Adventure*, by Mary Carmichael, at the end of the shelf, in another hundred years' time.

I. A. Richards

1893–1979

Ivor Armstrong Richards was born in England and educated at Magdalen College, Cambridge. He studied philosophy under G. E. Moore, whose powerful influence extended as well to Bertrand Russell and many of the analytic philosophers of Russell's generation. At Magdalen, Richards met fellow student C. K. Ogden, with whom he would coauthor two books and, in later years, develop the "Basic English" project, through which Richards hoped to improve international understanding. After completing his undergraduate degree in 1915, Richards pursued medical studies with the intention of becoming a psychoanalyst. Tuberculosis kept him out of the First World War, although it did not prevent him from becoming an avid mountain climber. After the war, Richards dropped his medical studies and passed up an opportunity to become a professional mountaineer in order to become a lecturer in English and moral philosophy at Magdalen, his old college. He soon became a leading figure in the development of modern literary criticism. No field of study seemed foreign to him, and his many books and articles are marked by his continuing enthusiasm for psychology, linguistics, anthropology, information theory, and philosophy.

In *The Philosophy of Rhetoric* (1936), Richards defines rhetoric in two ways: as "how words work in discourse" and as "the study of misunderstanding and its remedies." These definitions summarize two distinctive features of Richards's work: first, his theory that the meaning of words is a function of their interpretation in context and, second, his mission to promote better understanding by criticizing impediments to understanding and by creating tools for effective communication.

Richards's idea that meaning is a function of interpretation takes shape in *The Meaning of Meaning* (1923; excerpted here). In this wide-ranging and much-admired book, Richards and coauthor C. K. Ogden explain that words are symbols or signs, and signs require interpretation: "Throughout almost all our life we are treating things as signs. All experience, using the word in its widest possible sense, is either enjoyed or interpreted (i.e., treated as a sign) or both, and very little of it escapes some degree of interpretation."¹ Meaning does not reside in the words or signs themselves; to believe that it does is to fall victim to the "proper meaning superstition," the belief that words have inherent meaning. Following a model derived from pioneering semiotician C. S. Peirce, Ogden and Richards propose that signs refer to a mental image (the *reference*) that itself stands for something in the world (the *referent*). The "reference" of a sign is by no means a unique thing. The interpreter understands the sign in *context*, which may be the surrounding verbal context, in the case of words; the experiences associated with the sign; or both. That these concepts are so familiar to us today may well owe something to Richards's boldness in combining ideas from psychology, philosophy, linguistics, anthropology, and literary criticism in this early work.

¹I. A. Richards and C. K. Ogden, *The Meaning of Meaning* (1923; 8th ed., New York: Harcourt, Brace and Co., 1946), p. 50.

Ogden and Richards go on to discuss the relationships among signs, thoughts, and things (some of this discussion is included in our excerpt). They review the state of research in what we now call semiotics, summarizing and comparing the ideas of Peirce, Ferdinand de Saussure, Edmund Husserl, and others. They set forth a behavioristic theory of interpretation-in-context—an extension of association psychology—in which a cluster of ideas rather than a single image serves as the “reference” of a word (an idea Richards repeats in Lecture II of *The Philosophy of Rhetoric*; excerpted here). In addition, they compare the many different meanings of meaning in popular, literary, and philosophical usage, and they print a striking essay by anthropologist Bronislaw Malinowsky, “The Problem of Meaning in Primitive Languages,” that illustrates the usefulness of the theory put forward by Ogden and Richards. Meaning is rhetorical, they conclude, because language is “an instrument for the *promotion of purposes*” and not simply “a means of *symbolizing references*.”²

For Richards, as for Kenneth Burke (p. 1295), literature is a privileged form of language in that it provides cases of compressed meanings clearly in need of interpretation. The methods developed in the laboratory of criticism can then (so the argument goes) be applied to life. In applying his theories to literature, Richards creates a new kind of criticism. Poetry, Richards says in *The Principles of Literary Criticism* (1924), is like other experiences and, like them, should be analyzed as a kind of sign. Poems are complex verbal environments in which words are highly dependent on context for meaning and effect. Criticism, then, is a description of this environment, its structure, and its effects.

In *Practical Criticism* (1929), Richards reports on an experiment in which he asked students to interpret poems stripped of all “external” information, such as the author’s name and the date of composition. Richards analyzes the students’ responses, searching for impediments to the understanding of the poems. He then classifies these impediments and proffers possible remedies. His approach soon became the dominant critical method in England and the United States, challenging historicism and influence mongering with a rigorous method of close reading. By limiting context to the immediate verbal structure, Richards can focus on a reader’s experience of the poem itself and diminish the importance of historical and biographical knowledge.

But there is a difficulty here. It is clear from Richards’s own analyses of the poems that he knows perfectly well the name of the author and the historical circumstances of composition and, moreover, that he (unlike most of the students) has access to another kind of context as well: the expert’s special knowledge about what may and may not be said about a poem. The context of Richards’s experience is the “correct” context—namely, the experience of reading and studying many poems. Richards classifies as impediments to understanding those associations which come from experiences in other realms (“mnemonic irrelevances” or “doctrinal adhesions”) or from misapprehensions about what poetry is (“critical preconceptions” or “stock responses”). Thus, his psychology is like Bacon’s in that it searches for the

²See p. 1277 in this book.

idols that turn our thoughts into the “wrong” channels. Meaning may thus be dependent on context, but some contexts, it seems, are more appropriate than others.

The problem of defining context appears again in *The Philosophy of Rhetoric*. Richards lucidly explains the need for a contextual theory of meaning to combat the “proper meaning superstition”—the belief that words have inherent meaning. The notion of context, which he equates with rhetoric’s attention to the effects of discourse on the audience, will become the foundation of a new rhetoric. Richards then repeats the definition of context as the set of associations clinging to a word through experience. Finally, he moves on to the “literary” sense of context, which he calls “the interanimation of words.” Of the several definitions of context he has offered, this last is the one he seems to prefer. In communication generally, as in literature, meaning depends on the immediate verbal environment, not on dictionary definitions of words. The paradigmatic case of the interanimation of words, for Richards, is metaphor. Richards, though less insistent than Nietzsche, offers “the principle of metaphor” as a model of all language. The “tenor” and the “vehicle”—the two things compared in a metaphor—mutually limit the range of interpretation. In understanding a metaphor, we do not simply apply the characteristics of the vehicle to the tenor, as might be supposed. Rather, we understand the one by the other: For example, with “My love is like a red, red rose,” we take only certain characteristics of the vehicle (the beauty of the rose, not its thorns) because of the nature of the tenor (my love). All discourse, Richards argues, works this way. We understand the meaning and connotations of a word or phrase by what surrounds it, while the surroundings are modified by the word or phrase.

In his later work, Richards continues to refine the definition of context. In *Interpretation in Teaching* (1938), he separates literary context from experiential context and observes that both are essential to understanding. And in a 1953 essay, “Toward a Theory of Comprehending” (in *Speculative Instruments*), he proposes a seven-part analysis of context based on the Shannon-Weaver model of communication. “A comprehending,” says Richards, “is an instance of a nexus established through past occurrences of partially similar utterances in partially similar situations—utterances and situations partially co-varying.”³ Richards continued to work on this model of context for many years, never satisfied that it identified all the necessary elements or their interactions in producing meaning.

The essay on comprehending was inspired, Richards says, by thoughts about translating Chinese into English. Translating and teaching languages are expressions of his attempts to apply his theories practically, to reduce misunderstanding in the world. This mission led him to create “Basic English,” a vocabulary of 850 words (later supplemented by audiovisual aids) that could be used to teach English as a second language and to make difficult texts more accessible. Richards spent three years at Harvard in the thirties working on this project, studied cartooning at the Disney studios as part of his search for effective visual aids, and traveled to China twice to study translation. He translated the *Iliad* into Basic English and pro-

³I. A. Richards, *Speculative Instruments* (Chicago: University of Chicago Press, 1955), pp. 23–24.

duced, with Christine Gibson, a series of texts and workbooks designed to teach not only Basic English but also Basic French, Spanish, Italian, Russian, and Hebrew. These projects, which dominated the last decades of Richards's life, met with little acceptance; indeed, they were viewed with dismay by those literary critics who looked for his return to the field in which he had had such tremendous influence.

Selected Bibliography

Our source for *The Meaning of Meaning* (1923) is the 1946 New York edition. The excerpt from *The Philosophy of Rhetoric* (1936) is from the 1965 reprint. Richards's other works include *Principles of Literary Criticism* (1924), *Practical Criticism: A Study of Literary Judgment* (1924), *Interpretation in Teaching* (1938), and *Speculative Instruments* (1955).

The only full-scale biography is John Paul Russo's *I. A. Richards: His Life and Work* (1989). Russo traces the development of Richards's theories and places them in historical and biographical context. Russo's annotated bibliography of Richards's works appears in *I. A. Richards: Essays in His Honor*, ed. Reuben Brower, John Hollander, and Helen Vendler (1973), which includes reminiscences by Richards's students and an interesting interview with Richards himself. A good bibliography of criticism of Richards is in Jerome P. Schiller's *I. A. Richards' Theory of Literature* (1969).

Ann E. Berthoff discusses Richards's ideas with teachers of rhetoric in mind, in her essay "I. A. Richards," in *Traditions of Inquiry*, ed. John Brereton (1985). Sonja Foss, Karen Foss, and Robert Trapp summarize Richards's work in their *Contemporary Perspectives on Rhetoric* (1985). Several earlier articles assess Richards's influence at the height of his career and his impact on rhetorical theory: Manuel Bilsky's "I. A. Richards' Theory of Metaphor" (*Modern Philology* 50 [November 1952]: 130–37) and Marie Hochmuth Nichols's "I. A. Richards and the 'New Rhetoric'" (*Quarterly Journal of Speech* 44 [February 1958]: 1–16), both reprinted in *Contemporary Theories of Rhetoric*, ed. R. L. Johannesen (1971), and Daniel Fogarty's "I. A. Richards' Theory" in *Roots for a New Rhetoric* (1959). Stanley Edgar Hyman gives a lucid account of Richards's critical method in *The Armed Vision: A Study in the Methods of Modern Literary Criticism* (1948).

I. A. Richards and C. K. Ogden

From *The Meaning of Meaning*

Throughout the Western world it is agreed that people must meet frequently, and that it is not only agreeable to talk, but that it is a matter of common courtesy to say something even when there is hardly anything to say. "Every civilized man," continues the late Professor Mahaffy, to whose *Principles of the Art of Conversation* we

owe this observation, "feels, or ought to feel, this duty; it is the universal accomplishment which all must practise"; those who fail are punished by the dislike or neglect of society.

There is no doubt an Art in saying something when there is nothing to be said, but it is equally certain that there is an Art no less important of

saying clearly what one wishes to say when there is an abundance of material; and conversation will seldom attain even the level of an intellectual pastime if adequate methods of Interpretation are not also available.

Symbolism is the study of the part played in human affairs by language and symbols of all kinds, and especially of their influence on Thought. It singles out for special inquiry the ways in which symbols help us and hinder us in reflecting on things.

Symbols direct and organize, record and communicate. In stating what they direct and organize, record and communicate we have to distinguish as always between Thoughts and Things.¹ It is Thought (or, as we shall usually say, *reference*) which is directed and organized, and it is also Thought which is recorded and communicated. But just as we say that the gardener mows the lawn when we know that it is the lawnmower which actually does the cutting, so, though we know that the direct relation of symbols is with thought, we also say that symbols record events and communicate facts.

By leaving out essential elements in the language situation we easily raise problems and difficulties which vanish when the whole transaction is considered in greater detail. Words, as every one now knows, “mean” nothing by themselves, although the belief that they did, as we shall see in the next chapter, was once equally universal. It is only when a thinker makes use of them that they stand for anything, or, in one sense, have “meaning.” They are instruments. But besides this referential use which for all re-

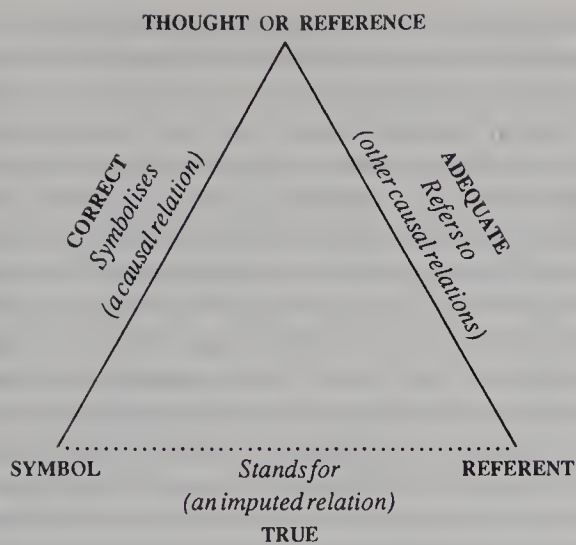

¹The word “thing” is unsuitable for the analysis here undertaken, because in popular usage it is restricted to material substances—a fact which has led philosophers to favour the terms “entity,” “ens” or “object” as the general name for whatever is. It has seemed desirable, therefore, to introduce a technical term to stand for whatever we may be thinking of or referring to. “Object,” though this is its original use, has had an unfortunate history. The word “referent,” therefore, has been adopted, though its etymological form is open to question when considered in relation to other participial derivatives, such as agent or reagent. But even in Latin the present participle occasionally (e.g., *vehens* in equo) admitted of variation in use; and in English an analogy with substantives, such as “reagent,” “extent,” and “incident” may be urged. Thus the fact that “referent” in what follows stands for a thing and not an active person, should cause no confusion. [Au.]

flective, intellectual use of language should be paramount, words have other functions which may be grouped together as emotive. These can best be examined when the framework of the problem of strict statement and intellectual communication has been set up. The importance of the emotive aspects of language is not thereby minimized, and anyone chiefly concerned with popular or primitive speech might well be led to reverse this order of approach. Many difficulties, indeed, arising through the behaviour of words in discussion, even amongst scientists, force us at an early stage to take into account these “non-symbolic” influences. But for the analysis of the senses of “meaning” with which we are here chiefly concerned, it is desirable to begin with the relations of thoughts, words, and things as they are found in cases of reflective speech uncomplicated by emotional, diplomatic, or other disturbances; and with regard to these, the indirectness of the relations between words and things is the feature which first deserves attention.

This may be simply illustrated by a diagram, in which the three factors involved whenever any statement is made, or understood, are placed at the corners of the triangle, the relations which hold between them being represented by the sides. The point just made can be restated by saying that in this respect the base of the triangle is quite different in composition from either of the other sides.

Between a thought and a symbol causal relations hold. When we speak, the symbolism we employ is caused partly by the reference we are making and partly by social and psychological factors—the purpose for which we are making the reference, the proposed effect of our symbols on other persons, and our own attitude. When we hear what is said, the symbols both cause us to perform an act of reference and to assume an attitude which will, according to circumstances, be more or less similar to the act and the attitude of the speaker.

Between the Thought and the Referent there is also a relation; more or less direct (as when we think about or attend to a coloured surface we see), or indirect (as when we “think of” or “refer to” Napoleon), in which case there may be a very long

chain of sign situations intervening between the act and its referent: word—historian—contemporary record—eyewitness—referent (Napoleon).

Between the symbol and the referent there is no relevant relation other than the indirect one, which consists in its being used by someone to stand for a referent. Symbol and Referent, that is to say, are not connected directly (and when, for grammatical reasons, we imply such a relation, it will merely be an imputed, as opposed to a real, relation) but only indirectly round the two sides of the triangle.²

²An exceptional case occurs when the symbol used is more or less directly like the referent for which it is used, as for instance, it may be when it is an onomatopœic word, or an image, or a gesture, or a drawing. In this case the triangle is completed; its base is supplied, and a great simplification of the problem involved appears to result. For this reason many attempts have been made to reduce the normal language situation to this possibly more primitive form. Its greater completeness does no doubt account for the immense superiority in efficiency of gesture languages, within their appropriate field, to other languages not supportable by gesture within their fields. Hence we know far more perfectly what has occurred if a scene is well reenacted than if it be merely described. But in the normal situation we have to recognize that our triangle is without its base, that between Symbol and Referent no direct relation holds; and, further, that it is through this lack that most of the problems of language arise. Simulative and nonsimulative languages are entirely distinct in principle. Standing for and representing are different relations. It is, however, convenient to speak at times as though there were some direct relation holding between Symbol and Referent. We then say, on the analogy of the lawnmower, that a Symbol refers to a Referent. Provided that the telescopic na-

It may appear unnecessary to insist that there is no direct connection between say “dog,” the word, and certain common objects in our streets, and that the only connection which holds is that which consists in our using the word when we refer to the animal. We shall find, however, that the kind of simplification typified by this once universal theory of direct meaning relations between words and things is the source of almost all the difficulties which thought encounters. As will appear at a later stage, the power to confuse and obstruct, which such simplifications possess, is largely due to the conditions of communication. Language if it is to be used must be a *ready* instrument. The handiness and ease of a phrase is always more important in deciding whether it will be extensively used than its accuracy. Thus such shorthand as the word “means” is constantly used so as to imply a direct simple relation between words and things, phrases and situations. If such relations could be admitted then there would of course be no problem as to the nature of Meaning, and the vast majority of those who have been concerned with it would have been right in their refusal to discuss it. But too many interesting developments have been occurring in the sciences, through the rejection of everyday symbolizations and the endeavour to replace them by more accurate accounts, for any naive theory that “meaning” is just “meaning” to be popular at the moment. As a rule new facts in startling disagreement with accepted explanations of other facts are required before such critical analyses of what are generally regarded as simple satisfactory notions are undertaken. This has been the case with the recent revolutions in physics. But in addition great reluctance to postulate anything *sui generis* and of necessity undetectable³ was needed before the simple natural notion of simultaneity, for instance, as a two-termed relation came to be questioned. Yet to such questionings the theory of Relativity was

ture of the phrase is not forgotten, confusion need not arise. In Supplement I., Part V. *infra*, Dr. Malinowski gives a valuable account of the development of the speech situation in relation to the above diagram. [Au.]

³Places and instants are very typical entities of verbal origin. [Au.]

due. The same two motives, new discrepant facts, and distaste for the use of obscure kinds of entities in eking out explanations, have led to disturbances in psychology, though here the required restatements have not yet been provided. No Copernican revolution has yet occurred, although several are due if psychology is to be brought into line with its fellow sciences.

It is noteworthy, however, that recent stirrings in psychology have been mainly if not altogether concerned with feeling and volition. The popular success of Psychoanalysis has tended to divert attention from the older problem of thinking. Yet in so far as progress here has consequences for all the other sciences and for the whole technique of investigation in psychology itself, this central problem of knowing or of "meaning" is perhaps better worth scrutiny and more likely to promote fresh orientations than any other that can be suggested. As the Behaviorists have also very properly pointed out, this question is closely connected with the use of words.

But the approach to Meaning, far more than the approach to such problems as those of physics, requires a thorough-going investigation of language. Every great advance in physics has been at the expense of some generally accepted piece of metaphysical explanation which had enshrined itself in a convenient, universally practised, symbolic shorthand. But the confusion and obstruction due to such shorthand expressions and to the naive theories they protect and keep alive, is greater in psychology, and especially in the theory of knowledge, than elsewhere; because no problem is so infected with so-called metaphysical difficulties—due here, as always, to an approach to a question through symbols without an initial investigation of their functions.

We have now to consider more closely what the causes and effects of symbols are.⁴ Whatever

⁴Whether symbols in some form or other are necessary to thought itself is a difficult problem, and is discussed in *The Meaning of Psychology* (Chapter XIII.) as well as in Chapter X. of the present work. But certainly the recording and the communication of thought (telepathy apart) require symbols. It seems that thought, so far as it is transitive and not in the form of an internal dialogue, can dispense with symbols, and that they only appear when thought takes on this monologue form. In the normal case the actual development of thought is

may be the services, other than conservative and retentive, of symbolization, all experience shows that there are also disservices. The grosser forms of verbal confusion have long been recognized; but less attention has been paid to those that are more subtle and more frequent. In the following chapters many examples of these will be given, chosen in great part from philosophical fields, for it is here that such confusions become, with the passage of time, most apparent. The root of the trouble will be traced to the superstition that words are in some way parts of things or always imply things corresponding to them, historical instances of this still potent instinctive belief being given from many sources. The fundamental and most prolific fallacy is, in other words, that the base of the triangle given above is filled in.

The completeness of any reference varies; it is more or less close and clear, it "grasps" its object in greater or less degree. Such symbolization as accompanies it—images of all sorts, words, sentences whole and in pieces—is in no very close observable connection with the variation in the perfection of the reference. Since, then, in any discussion we cannot immediately settle from the nature of a person's remarks what his opinion is, we need some technique to keep the parties to an argument in contact and to clear up misunderstandings—or, in other words, a Theory of Definition. Such a technique can only be provided by a theory of knowing, or of reference, which will avoid, as current theories do not, the attribution to the knower of powers which it may be pleasant for him to suppose himself to possess, but which are not open to the only kind of investigation hitherto profitably pursued, the kind generally known as scientific investigation.

Normally, whenever we hear anything said we spring spontaneously to an immediate conclusion, namely, that the speaker is referring to what we should be referring to were we speaking the words ourselves. In some cases this interpretation may be correct; this will prove to be what he has referred to. But in most discussions which attempt greater subtleties than could be handled in

very closely bound up with the symbolization which accompanies it. [Au.]

a gesture language this will not be so. To suppose otherwise is to neglect our subsidiary gesture languages, whose accuracy within their own limited provinces is far higher than that yet reached by any system of spoken or written symbols, with the exception of the quite special and peculiar case of mathematical, scientific, and musical notations. Words, whenever they cannot directly ally themselves with and support themselves upon gestures, are at present a very imperfect means of communication. Even for private thinking thought is often ready to advance, and only held back by the treachery of its natural symbolism; and for conversational purposes the latitude acquired constantly shows itself to all those who make any serious attempts to compare opinions.

We have not here in view the more familiar ways in which words may be used to deceive. In a later chapter, when the function of language as an instrument for the *promotion of purposes* rather than as a means of *symbolizing references* is fully discussed, we shall see how the intention of the speaker may complicate the situation. But the *honnête homme* may be unprepared for the lengths to which verbal ingenuity can be carried. At all times these possibilities have been exploited to the full by interpreters of Holy Writ who desire to enjoy the best of both worlds. Here, for example, is a specimen of the exegetic of the late Dr. Lyman Abbott, pastor, publicist, and editor, which, through the efforts of Mr. Upton Sinclair, has now become classic. Does Christianity condemn the methods of twentieth-century finance? Doubtless there are some awkward words in the Gospels, but a little "interpretation" is all that is necessary.

Jesus did not say "Lay not up for yourselves treasures upon earth." He said "Lay not up for yourselves treasures upon earth *where moth and rust doth corrupt and where thieves break through and steal.*" And no sensible American does. Moth and rust do not get at Mr. Rockefeller's oil wells, and thieves do not often break through and steal a railway. What Jesus condemned was hoarding wealth.

Each investment, therefore, every worldly acquisition, according to one of the leading divines of the New World, may be judged on its merits. There is no hard and fast rule. When moth and

rust have been eliminated by science the Christian investor will presumably have no problem, but in the meantime it would seem that Camphorated Oil fulfils most nearly the synoptic requirements. Burglars are not partial to it; it is anathema to moth; and the risk of rust is completely obviated.

Another variety of verbal ingenuity closely allied to this, is the deliberate use of symbols to misdirect the listener. Apologies for such a practice in the case of the madman from whom we desire to conceal the whereabouts of his razor are well known, but a wider justification has also been attempted. In the Christian era we hear of "falsifications of documents, inventions of legends, and forgeries of every description which made the Catholic Church a veritable seat of lying."⁵ A play upon words in which one sense is taken by the speaker and another sense intended by him for the hearer was permitted.⁶ Indeed, three sorts of equivocations were distinguished by Alfonso de Liguori, who was beatified in the nineteenth century, which might be used with good reason;⁷ a good reason being "any honest object, such as keeping our goods, spiritual or temporal."⁸ In the twentieth century the intensification of militant nationalism has added further "good reason"; for the military code includes all transactions with hostile nations or individuals as part of the process of keeping spiritual and temporal goods. In wartime words become a normal part of the mechanism of deceit, and the ethics of the situation have been aptly summed up by Lord Wolseley: "We will keep hammering along with the conviction that 'honesty is the best policy,' and that truth always wins in the long run. These pretty sentences do well for a child's copybook, but the man who acts upon them in war had better sheathe his sword for ever."⁹

The Greeks, as we shall see, were in many ways not far from the attitude of primitive man towards words. And it is not surprising to read that after the Peloponnesian war the verbal machinery of peace had got completely out of gear, and, says Thucydides, could not be brought back into use—"The meaning of words had no longer the same relation to things, but was changed by men as they thought proper." The Greeks were powerless to cope with such a situation. We in our wisdom seem to have created institutions which render us more powerless still.¹⁰

On a less gigantic scale the technique of deliberate misdirection can profitably be studied with a view to corrective measures. In accounting for Newman's *Grammar of Assent* Dr. E. A. Abbott had occasion to describe the process of "lubrication," the art of greasing the descent from the premises to the conclusion, which his namesake cited above so aptly employs. In order to lubricate well, various qualifications are necessary:

First a nice discrimination of words, enabling you to form, easily and naturally, a great number of finely graduated propositions, shading away, as it were, from the assertion "X is white" to the assertion "X is black." Secondly an inward and absolute contempt for logic and for words. . . . And what are words but toys and sweetmeats for grown-up babies who call themselves men?¹¹

But even where the actual referents are not in doubt, it is perhaps hardly realized how widespread is the habit of using the power of words not only for *bona fide* communications, but also as a method of misdirection; and in the world as

¹⁰As the late C. E. Montague (*Disenchantment*, p. 101) well put it, "the only new thing about deception in war is modern man's more perfect means for its practice. The thing has become, in his hand, a trumpet more efficacious than Gideon's own. . . . To match the Lewis gun with which he now fires his solids, he has to his hand the newspaper Press, to let fly at the enemy's head the thing which is not." But this was a temporary use of the modern technique of misdirection, and with the return of peace the habit is lost? Not so, says Mr. Montague. "Any weapon you use in a war leaves some bill to be settled in peace, and the Propaganda arm has its cost like another." The return of the exploiters of the verbal machine to their civil posts is a return in triumph, and its effects will be felt for many years in all countries where the power of the word amongst the masses remains paramount. [Au.]

¹¹*Philomythus*, p. 214. [Au.]

it is today the naive interpreter is likely on many occasions to be seriously misled if the existence of this unpleasing trait—equally prevalent amongst the classes and the masses without distinction of race, creed, sex, or colour—is overlooked.

Throughout this work, however, we are treating of *bona fide* communication only, except in so far as we shall find it necessary in Chapter IX. to discuss that derivate use of Meaning to which misdirection gives rise. For the rest, the verbal treachery with which we are concerned is only that involved by the use of symbols as such. As we proceed to examine the conditions of communication we shall see why any symbolic apparatus which is in general use is liable to incompleteness and defect.

But if our linguistic outfit is treacherous, it nevertheless is indispensable, nor would another complete outfit necessarily improve matters, even if it were ten times as complete. It is not always new words that are needed, but a means of controlling them as symbols, a means of readily discovering to what in the world on any occasion they are used to refer, and this is what an adequate theory of definition should provide.

But a theory of Definition must follow, not precede, a theory of Signs, and it is little realized how large a place is taken both in abstract thought and in practical affairs by sign-situations. But if an account of sign-situations is to be scientific it must take its observations from the most suitable instances, and must not derive its general principles from an exceptional case. The person actually interpreting a sign is not well placed for observing what is happening. We should develop our theory of signs from observations of other people, and only admit evidence drawn from introspection when we know how to appraise it. The adoption of the other method, on the ground that all our knowledge of others is inferred from knowledge of our own states, can only lead to the *impasse* of solipsism from which modern speculation has yet to recoil. Those who allow beyond question that there are people like themselves also interpreting signs and open to study should not find it difficult to admit that their observation of the behaviour of others may provide at least a framework within which their own introspection,

that special and deceptive case, may be fitted. That this is the practice of all the sciences need hardly be pointed out. Any sensible doctor when stricken by disease distrusts his own introspective diagnosis and calls in a colleague.

There are, indeed, good reasons why what is happening in ourselves should be partially hidden from us, and we are generally better judges of what other people are doing than of what we are doing ourselves. Before we looked carefully into other people's heads it was commonly believed that an entity called the soul resided therein, just as children commonly believe that there is a little man inside the skull who looks out at the eyes, the windows of the soul, and listens at the ears. The child has the strongest introspective evidence for this belief, which, but for scalpels and microscopes, it would be difficult to disturb. The tacitly solipsistic presumption that this naive approach is in some way a necessity of method disqualifies the majority of philosophical and psychological discussions of Interpretation. If we restrict the subject-matter of the inquiry to "ideas" and words, i.e., to the left side of our triangle, and omit all frank recognition of the world outside us, we inevitably introduce confusion on such subjects as knowledge in perception, verification, and Meaning itself.¹²

If we stand in the neighbourhood of a cross road and observe a pedestrian confronted by a notice *To Grantchester* displayed on a post, we commonly distinguish three important factors in the situation. There is, we are sure, (1) a Sign which (2) refers to a Place and (3) is being interpreted by a person. All situations in which Signs are considered are similar to this. A doctor noting that his patient has a temperature and so forth is said to diagnose his disease as influenza. If we talk like this we do not make it clear that signs are here also involved. Even when we speak of symptoms we often do not think of these as closely related to other groups of signs. But if we

¹²This tendency is particularly noticeable in such works as Baldwin's elaborate treatise on *Thoughts and Things*, where a psychological apparatus of "controls" and "contents" is hard to reconcile with the subsequent claim to discuss communication. The twist given to grammatical analysis by Aristotle's similar neglect of Reference is dealt with in Appendix A. [Au.]

say that the doctor interprets the temperature, etc., as a Sign of influenza, we are at any rate on the way to an inquiry as to whether there is anything in common between the manner in which the pedestrian treated the object at the cross road and that in which the doctor treated his thermometer and the flushed countenance.

On close examination it will be found that very many situations which we do not ordinarily regard as Sign situations are essentially of the same nature. The chemist dips litmus paper in his test-tube, and interprets the sign red or the sign blue as meaning acid or base. A Hebrew prophet notes a small black cloud, and remarks "We shall have rain." Lessing scrutinizes the Laocoön, and concludes that the features of Laocoön *père* are in repose. A New Zealand schoolgirl looks at certain letters on a page in her *Historical Manual for the use of Lower Grades* and knows that Queen Anne is dead.

The method which recognizes the common feature of sign interpretation¹³ has its dangers, but opens the way to a fresh treatment of many widely different topics.

As an instance of an occasion in which the theory of signs is of special use, the subject dealt

¹³In all these cases a sign has been interpreted rightly or wrongly, i.e., something has been not only experienced or enjoyed, but understood as referring to something else. Anything which can be experienced can also be thus understood, i.e., can also be a sign; and it is important to remember that interpretation, or what happens to (or in the mind of) an Interpreter is quite distinct both from the sign and from that for which the sign stands or to which it refers. If then we speak of the meaning of a sign we must not, as philosophers, psychologists and logicians are wont to do, confuse the (imputed) relation between a sign and that to which it refers, either with the referent (what is referred to) or with the process of interpretation (the "goings on" in the mind of the interpreter). It is this sort of confusion which has made so much previous work on the subject of signs and their meaning unfruitful. In particular, by using the same term "meaning" both for the "Goings on" inside their heads (the images, associations, etc., which enabled them to interpret signs) and for the Referents (the things to which the signs refer) philosophers have been forced to locate Grantchester, Influenza, Queen Anne, and indeed the whole Universe equally inside their heads—or, if alarmed by the prospect of cerebral congestion, at least "in their minds" in such wise that all these objects become conveniently "mental." Great care, therefore, is required in the use of the term "meaning," since its associations are dangerous. [Au.]

with in our fourth chapter may be cited. If we realize that in *all* perception, as distinguished from mere awareness, sign-situations are involved, we shall have a new method of approaching problems where a verbal deadlock seems to have arisen. Whenever we “perceive” what we name “a chair,” we are interpreting a certain group of data (modifications of the sense organs), and treating them as signs of a referent. Similarly, even before the interpretation of a word, there is the almost automatic interpretation of a group of successive noises or letters as a word. And in addition to the external world we can also explore with a new technique the sign situations involved by mental events, the “goings on” or processes of interpretation themselves. We need neither confine ourselves to arbitrary generalizations from introspection after the manner of classical psychology, nor deny the existence of images and other “mental” occurrences to their signs with the extreme Behaviorists.¹⁴ The double language hypothesis, which is suggested by the theory of signs and supported by linguistic analysis, would absolve Dr. Watson and his followers from the logical necessity of affecting general anæsthesia. Images, etc., are often most useful signs of our present and future behaviour—notably in the modern interpretation of dreams.¹⁵ An improved

¹⁴That the mind-body problem is due to a duplication of symbolic machinery is maintained in Chapter IV. Cf. also *The Meaning of Psychology*, by C. K. Ogden (1926), Chapter II., where this view is supported with reference to contemporary authorities who hold it. [Au.]

¹⁵In the terminology of the present work, many of the analyst’s “symbols” are, of course, signs only; they are not used

Behaviorism will have much to say concerning the chaotic attempts at symbolic interpretation and construction by which Psychoanalysts discredit their valuable labours.

The problems which arise in connection with any “sign situation” are of the same general form. The relations between the elements concerned are no doubt different, but they are of the same sort. A thorough classification of these problems in one field, such as the field of symbols, may be expected, therefore, to throw light upon analogous problems in fields at first sight of a very different order.

When we consider the various kinds of Sign situations instanced above, we find that those signs which men use to communicate one with another and as instruments of thought, occupy a peculiar place. It is convenient to group these under a distinctive name; and for words, arrangements of words, images, gestures, and such representations as drawings or mimetic sounds we use the term *symbols*. The influence of Symbols upon human life and thought in numberless unexpected ways has never been fully recognized, and to this chapter of history we now proceed.

for purposes of communication. But in the literature of psychoanalysis there is much valuable insistence on the need of wider forms of interpretation, especially in relation to emotional overcharge. Cf., e.g., the late Dr. Jelliffe’s “The Symbol as an Energy Condenser” (*Journal of Nervous and Mental Diseases*, December 1919), though the metaphor, like many other psychoanalytic locutions, must not be stretched too far in view of what has been said above and of what is to follow. [Au.]

I. A. Richards

From *The Philosophy of Rhetoric*

LECTURE II THE AIMS OF DISCOURSE AND TYPES OF CONTEXT

In my introductory lecture I urged that there is room for a persistent, systematic, detailed inquiry into how words work that will take the place of the discredited subject which goes by the name of Rhetoric. I went on to argue that this inquiry must be philosophic, or—if you hesitate with that word, I do myself—that it must take charge of the criticism of its own assumptions and not accept them, more than it can help, ready-made from other studies. How words mean, is not a question to which we can safely accept an answer either as an inheritance from common sense, that curious growth, or as something vouched for by another science, by psychology, say—since other sciences use words themselves and not least delusively when they address themselves to these questions. The result is that a revived Rhetoric, or study of verbal understanding and misunderstanding, must itself undertake its own inquiry into the modes of meaning—not only, as with the old Rhetoric, on a macroscopic scale, discussing the effects of different disposals of large parts of a discourse—but also on a microscopic scale by using theorems about the structure of the fundamental conjectural units of meaning and the conditions through which they, and their interconnections, arise.

In the old Rhetoric, of course, there is much that a new Rhetoric finds useful—and much besides which may be advantageous until man changes his nature, debates and disputes, incites, tricks, bullies, and cajoles his fellows less. Aristotle's notes on the forensic treatment of evidence elicited under torture are unhappily not without their utility still in some very up-to-date parts of the world.

Among the general themes of the old Rhetoric there is one which is especially pertinent to our

inquiry. The old Rhetoric was an offspring of dispute; it developed as the rationale of pleadings and persuadings; it was the theory of the battle of words and has always been itself dominated by the combative impulse. Perhaps what it has most to teach us is the narrowing and blinding influence of that preoccupation, that debaters' interest.

Persuasion is only one among the aims of discourse. It poaches on the others—especially on that of *exposition*, which is concerned to state a view, not to persuade people to agree or to do anything more than examine it. The review and correspondence columns of the learned and scientific journals are the places in which to watch this poaching at its liveliest. It is no bad preparation for any attempt at exposition—above all of such debatable and contentious matters as those to which I am soon to turn—to realize how easily the combative impulse can put us in mental blinkers and make us take another man's words in the ways in which we can down him with least trouble.

I can point this moral—call it defensive if you will—with a small specimen from one of the many little books which in the Nineteenth Century attempted a reform of Rhetoric. It is from Benjamin Humphrey Smart's *Practical Logic*, a little book written for and used for a few decades in the best young ladies' seminaries through the middle of the Nineteenth Century and now as dead as any book well can be. Smart is discussing the conduct of exposition. He has listed a number of faults commonly committed and comes to the

TENTH FAULT TO BE AVOIDED, namely: *Forgetting the Proposition*.

“Of this error,” he writes, “the following instance may suffice:

Anger has been called a short madness; and people of the weakest understanding are the most subject to it. It is remarkable that when a disputant is in the

wrong, he tries to make up in violence what he wants in argument. This arises from his pride. He will not own his error, and because he is determined not to be convicted of it, he falls into a passion.

Here (Smart comments), instead of going on to show why Anger has been called a short madness, the writer wanders into reflections which have no necessary connection with the particular proposition. He should have reasoned thus:

Anger has been called a short madness. To be convinced that the appellation is just, let us look to the effects of anger. It disturbs a man's judgment, so that he inflicts an injury on his dearest friend, who, the next moment, he loads with caresses. It makes him run headlong into dangers, which, if his mind were clear, he would be the first to see and avoid. It is true that anger does not always disturb the mind to this degree, but that it always disturbs the mind in a degree proportional to its violence, is certain; and therefore it may be justly characterised as a madness.

What necessary connection with the proposition, may we ask, has this sketch of some scenes from an early Victorian Novel? And whence comes this certainty that anger *always* disturbs the mind in a degree proportional to its violence? However, it is better perhaps to take its lesson to heart and remember that anger is not the only warping passion. Risibility and tedium, too, I think Smart would have said, can disturb the judgment.

Warned now of the dangers both of forgetting the proposition and of the "short madness" that the combative and other passions induce, let me sketch, to use Hobbes's words, a theorem about meanings which may be useful in constructing the most general problems of a new Rhetoric.

I had better put in another warning, though, here. What follows is unavoidably abstract and general in the extreme. It may therefore rather illustrate the difficulties of communicating with such highly abstract language than achieve as much communication as we would wish. If so the fault will not lie, I hope and believe, either in my stupidity or in our joint stupidity. It will lie in the abstractness of the language. It has to be abstract here. What it is trying to say cannot, I think, be

put safely in more concrete terms, for it is not talking about this or that mode of meaning but about all meanings. And I cannot here start with illustrations, because all things equally illustrate what I am saying; and how they are to be taken is just the problem. But, after this bout of abstractions, the applications I shall be making in the later Lectures will, I believe, clear up this dark patch. In brief, how we use this theorem best shows us what the theorem is.

If, then, you seem in the next half hour at times merely to be hearing words as sounds that come and go, I must beg your indulgence, or buy it with the promise that we *shall* come out again to practical problems in the everyday conduct of words. Meanwhile this very difficulty is an illustration of a chief practical problem.

What I am now going to try to say is something which, if it is right, we all in a sense know extremely well already. "It is not sufficiently considered," said Dr. Johnson, "that men more frequently require to be reminded than informed." I shall be trying to remind you of something so simple that it is hard to think of. Something as simple as possible, and, to quote Hobbes again, "clear and perspicuous to all men—save only to those who studying the hard writings of the metaphysicians, which they believe to be some egregious learning, think they understand not when they do." And it may be comforting to recall that Lotze¹ began a course of lectures on an allied subject by saying that "The simplest of the conceptions here employed, that of a thing and that of its being, however lucid they appear at first, on closer consideration grow always more and more obscure." For "always" I would say "for a time." We return to lucidity. But now to work.

I have two sets of problems in view: one set I have just been talking about—the division of the various aims of discourse, the purposes for which we speak or write; in brief, the functions of language. The other set of problems goes deeper, and, if we can set it rightly, the problems about the language functions are best approached from it. I can indicate these deeper problems in many

¹Rudolf Herman Lotze (1817–1881), German idealist philosopher. [Ed.]

ways: What is the connection between the mind and the world by which events in the mind mean other events in the world? Or “How does a thought come to be ‘of’ whatever it is that it is a thought of?” or “What is the relation between a thing and its name?” The last indication may not seem to carry as far as the others; but they are all the same problem and I put the “name” formulation in because an over-simple view of naming, or rather a treatment of words in general as though they were names (usually of ideas) has been a main defect in the traditional study. These are, you will see, really deep problems. As such we shall not expect any answers which will be satisfactory. We must be content if the answers we get are to some degree useful—useful among other things in improving themselves.

I can start the theorem safely by remarking that we are things peculiarly responsive to other things. To develop this we have to consider the peculiarities of our responsiveness. We are responsive in all sorts of ways. Some of these ways are relatively simple, if cut short enough; as when we jump at a loud noise or respond to changes of temperature. But even here, if we compare ourselves to thermometers, we see that our responses are of a different order of complexity. A thermometer responds, the length of its thread of mercury varies with the temperature, but only with the present temperature—unless the thermometer is a bad one. What has happened to it in the past, what temperatures it formerly recorded, and the order in which it recorded them, all that has no bearing upon and does not interfere with its present response to changes of temperature. We can imagine, though, a thermometer that, whenever the temperature went up and down like this, *M*, did something that could only be explained by bringing in other things that happened to it in the past when the temperature went up and down so, *M*. And correspondingly did something else whenever the temperature went down and up, *W*. Such an imaginary thermometer would be on the way to showing characteristics of the behavior of living systems, of the systems which, we say, have a mind.

Now consider our own minds’ simplest operations. Do we ever respond to a stimulus in a way

which is not influenced by the other things that happened to us when more or less similar stimuli struck us in the past? Probably never. A new kind of stimulus might perhaps give rise to a new kind of sensation, a new kind of pain, say. But even so we should probably recognize it as a pain of some sort. Effects from more or less similar happenings in the past would come in to give our response its character and this as far as it went would be meaning. Meaning of a lowly kind, no doubt, the kind of meaning that the least developed animals live by. It is important—and that is why I have started so far back with these elementaries—to realize how far back into the past all our meanings go, how they grow out of one another much as an organism grows, and how inseparable they are from one another.

I can make the same point by denying that we have any sensations. That sounds drastic but is almost certainly true if rightly understood. A sensation would be something that just was *so*, on its own, a datum; as such we have none. Instead we have perceptions, responses whose character comes to them from the past as well as the present occasion. A perception is never just of an *it*; perception takes whatever it perceives as a thing of a certain sort. All thinking from the lowest to the highest—whatever else it may be—is sorting.

That is an important part of the theorem because it removes, if it is accepted, one of the worst troubles which have distorted traditional accounts of the meanings of words—the troubles that gave rise to the Nominalist, Realist, Conceptual controversies best known to us through the great British philosophical battle of the Eighteenth Century about whether we have and how we come by abstract ideas and what they are.² This theorem alleges that meanings, from the very beginning, have a primordial generality and abstractness; and it follows William James in saying that the lowliest organism—a polyp or an amoeba—if it learns at all from its past, if it exclaims in its acts, “Hallo! Thingembob again!” thereby shows itself to be a conceptual thinker. It

²Realism holds that general qualities do exist; Conceptualism holds that generalizations are mental concepts; Nominalism holds that only words are general. [Ed.]

is behaving or thinking with a concept—not, of course, *of* one. Its act is abstractive and general; disregards in some respects the former situations and so is abstractive, and applies in some respects not to one single thing but to any of a sort and so is general.

The theorem settles the Eighteenth-Century problem by standing it on its head. That problem was, How do we manage, from this particular concrete thing and that particular concrete thing and the other particular concrete thing, to arrive at the general abstract anything? The theorem holds that we *begin* with the general abstract anything, split it, as the world makes us, into sorts and then arrive at concrete particulars by the overlapping or common membership of these sorts. This bit of paper here now in my hand is a concrete particular to us so far as we think of it as paperish, hereish, nowish, and in my hand; it is the more concrete as we take it as of more sorts, and the more specific as the sorts are narrower and more exclusive.

The next step in the theorem takes us on to words and their meanings. If we sum up thus far by saying that meaning is *delegated efficacy*, that description applies above all to the meaning of words, whose virtue is to be substitutes exerting the powers of what is not there. They do this as other signs do it, though in more complex fashions, through their contexts.

I must explain now the rather special and technical sense I am giving to this word “context.” This is the pivotal point of the whole theorem. The word has a familiar sense in “a literary context,” as the other words before and after a given word which determine how it is to be interpreted. This is easily extended to cover the rest of the book. I recall the painful shock I suffered when I first came across, in a book by Dr. Bosanquet, what he called the Golden Rule of Scholarship, “Never to quote or comment on anything in a book which you have not read from cover to cover.” As with other Golden Rules a strange peace would fall upon the world if that were observed. I cannot honestly say I either practice the Rule or recommend it. There is a middle way wiser for the Children of this World. However, as I neither am nor hope to be a scholar, I have no occasion to practise it.

The familiar sense of “context” can be extended further to include the circumstances under which anything was written or said; wider still to include, for a word in Shakespeare, say, the other known uses of the word about that time, wider still finally to include anything whatever about the period, or about anything else which is relevant to our interpretation of it. The technical use I am going to make of this term “context” is none of these—though it has something in common with them as having to do with the governing conditions of an interpretation. We can get to it best, perhaps, by considering those recurrences in nature which statements of causal laws are about.

Put very simply, a causal law may be taken as saying that, under certain conditions, of two events if one happens the other does. We usually call the first the cause and the second the effect, but the two may happen together, as when I clap my hands and both palms tingle. If we are talking about final causes we reverse them, and the lecture you are going to hear was the cause of your coming hither. There is a good deal of arbitrariness at several points here which comes from the different purposes for which we need causal laws. We decide, to suit these purposes, how we shall divide up events; we make the existence of the earth one event and the tick of a clock another, and so on. And we distribute the titles of “cause” and “effect” as we please. Thus we do not please to say that night causes day or day night. We prefer to say that given the conditions the rotation of the earth is the cause of their succession. We are especially arbitrary in picking out the cause from among the whole group, or context, of conditions—of prior and subsequent events which hang together. Thus the coroner decides that the cause of a man’s death was the act of a murderer and not the man’s meeting with the murderer, or the stopping of his heart, or the fact that he was not wearing a bullet-proof waistcoat. That is because the coroner is interested in certain kinds of causal laws but not in others. So here, in sketching this causal theorem of meaning, I am interested only in certain kinds of law and am not necessarily saying anything about others.

Now for the sense of “context.” Most gener-

ally it is a name for a whole cluster of events that recur together—including the required conditions as well as whatever we may pick out as cause or effect. But the modes of causal recurrence on which meaning depends are peculiar through that delegated efficacy I have been talking about. In these contexts one item—typically a word—takes over the duties of parts which can then be omitted from the recurrence. There is thus an abridgement of the context only shown in the behavior of living things, and most extensively and drastically shown by man. When this abridgement happens, what the sign or word—the item with these delegated powers—means is the missing parts of the context.

If we ask how this abridgement happens, how a sign comes to stand for an absent cause and conditions, we come up against the limits of knowledge at once. No one knows. Physiological speculation has made very little progress towards explaining *that*, though enormous strides have been made this century in analysing the complexities of the conditioned reflex. The shift, the handing over, is left still as inexplicable. Probably this “learning problem” goes down as deep as the nature of life itself. We can suppose, if we like, that some sorts of residual effects are left behind from former occurrences which later cooperate with the sign in determining the response. To do so is to use a metaphor drawn from the gross behavior, taken macroscopically, of systems that are not living—printed things, gramophone records and such. We can be fairly ingenious with these metaphors, invent neural archives storing up impressions, or neural telephone exchanges with fantastic properties. But how the archives get consulted or how in the telephone system *A* gets on to the *B* it needs, instead of to the whole alphabet at once in a jumble, remain utterly mysterious matters.

Fortunately linguistics and the theory of meaning need not wait until this is remedied. They can probably go much further than we have yet imagined without any answer to this question. It is enough for our purposes to say that what a word means is the missing parts of the contexts from which it draws its delegated efficacy.

At this point I must remind you of what I said a few minutes ago about the primordial general-

ity and abstractness of meaning and about how, when we mean the simplest-seeming concrete object, its concreteness comes to it from the way in which we are bringing it simultaneously into a number of sorts. The sorts grow together in it to form that meaning. Theory here, as so often, can merely exploit the etymological hint given in the word “concrete.”

If we forget this and suppose that we start with discrete impressions of particulars (“fixities and definites” as Coleridge called them) and then build these up into congeries, the theorem I am recommending collapses at once into contradictions and absurdities. That was the fault of the old Hartleian Associationism I complained of last time.³ It did not go back far enough, it took particular impressions as its initial terms. But the initial terms for this theorem are not impressions; they are sortings, recognitions, laws of response, recurrences of like behaviors.

A particular impression is already a product of concrescence. Behind, or in it, there has been a coming together of *sortings*. When we take a number of particular impressions—of a number of different white things, say—and abstract from them an idea of whiteness, we are explicitly reversing a process which has already been implicitly at work in our perception of them as all white. Our risk is to confuse the abstractness we thus arrive at intellectually with the primordial abstractness out of which these impressions have already grown—before ever any conscious explicit reflection took place.

Things, in brief, are instances of laws. As Bradley⁴ said, association marries only universals, and out of these laws, these recurrent likenesses of behavior, in our minds and in the world—not out of revived duplicates of individual past impressions—the fabric of our meanings, which is the world, is composed.

So much for the theorem. What are the problems we must use it to construct?

³David Hartley (1705–1757) synthesized the precepts of association psychology, which holds that repeated sensations leave images in the mind, after which the sensation immediately excites the associated image. The same linkage extends from images to words. [Ed.]

⁴F. H. Bradley (1846–1924), English idealist philosopher. [Ed.]

Since the whole business of Rhetoric comes down to comparisons between the meanings of words, the first problem, I think, should be this. How, if the meaning of a word is, in this sense, the missing parts of its contexts, how then should we compare the meanings of two words? There is opportunity for a grand misunderstanding here. It is not proposed that we should try to make these comparisons by a process of discovering, detailing, and then comparing these missing parts. We could not do it and, if we could, it would be waste of time. The theorem does not pretend to give us quite new ways of distinguishing between meanings. It only bars out certain practices and assumptions which are common and misleading.

The office of the theorem is much more negative than positive; but is not the less useful for that. It will not perhaps tell us how to do much that we cannot do without it already; but it will prevent us from doing stupid things which we are fond of doing. So a theory of evolution at least makes it more difficult to believe that The Dog Fritz in the German account really did the children's sums for them, or reminded them to salute their "dear German flag." So even an elementary physics puts in its place among superstitions Mr. Gladstone's firm belief that snow has "a peculiar power of penetrating leather," a power not possessed by water! For lack of that knowledge of physics in Mr. Gladstone, Lord Rayleigh found it quite impossible to persuade him it was not so.

The context theorem of meaning would prevent our making hundreds of baseless and disabling assumptions that we commonly make about meanings, over-simplifications that create false problems interfering with closer comparisons—and that is its main service. In this, it belongs with a number of other theorems which may be called policeman doctrines—because they are designed on the model of an ideal police-force, not to make any of us do anything but to prevent other people from interfering unduly with our lawful activities. The organization of impulses doctrine of values for literary criticism is in the same position. These policeman doctrines keep assumptions that are out of place from frustrating and misleading sagacity. I shall be illustrating the restraint of these bullying as-

sumptions in most parts of Rhetoric later. We had one simple instance with Lord Kames's peacock's feather, last time, where what was discouraged was a naive view of imagery as the stuff of meaning.

We shall have others in discussing the claims of usage next week. Preëminently what the theorem would discourage, is our habit of behaving as though, if a passage means one thing it cannot at the same time mean another and an incompatible thing. Freud taught us that a dream may mean a dozen different things; he has persuaded us that some symbols are, as he says, "overdetermined" and mean many different selections from among their causes. This theorem goes further, and regards all discourse—outside the technicalities of science—as overdetermined, as having multiplicity of meaning. It can illustrate this view from almost any of the great controversies. And it offers us—by restraining the One and Only One True Meaning Superstition—a better hope, I believe, of profiting from the controversies. A controversy is normally an exploitation of a systematic set of misunderstandings for war-like purposes. This theorem suggests that the swords of dispute might be turned into plough shares; and a way found by which we may (to revert to Hobbes) "make use to our benefit of effects formerly seen—for the commodity of human life."

The next problem concerns what happens when we put words together in sentences. At least that is a common way of stating it. The theorem recommends us rather to turn the problem round and ask what happens when, out of the integral utterance which is the sentence, we try to isolate the discrete meanings of the words of which it is composed. That problem, the analysis of sentences and the interaction between words in the sentence, is my subject for next week. It is there that the most deep-rooted, systematic, and persistent misunderstandings arise.

A third set of problems concerns rivalries between different types of context which supply the meaning for a single utterance. These start with the plain equivocation—as when the word "reason" may mean either a cause or an argument. I am simplifying this here to make it a type of a really simple ambiguity. Actually in most occurrences it would be much more complex and not

so easily cleared up, as the shifting meanings of “cause” and “argument” themselves show. The context theorem of meaning will make us expect ambiguity to the widest extent and of the subtlest kinds nearly everywhere, and of course we find it. But where the old Rhetoric treated ambiguity as a fault in language, and hoped to confine or eliminate it, the new Rhetoric sees it as an inevitable consequence of the powers of language and as the indispensable means of most of our most important utterances—especially in Poetry and Religion. And that too I shall be illustrating later.

Of course ambiguities are a nuisance in exposition as, in spite of my efforts, you have certainly been feeling. But neutral exposition is a very special limited use of language, comparatively a late development to which we have not (outside some parts of the sciences) yet adapted it. This brings me to those large-scale rivalries between contexts which shift the very aims of discourse. When the passions—the combative passion and others—intervene, either in the formation of an utterance or in its interpretation, we have examples of context action just as much as when the word “paper,” say, takes its meaning from its contexts. The extra meaning that comes in when a sentence, in addition to making a statement, is meant to be insulting, or flattering, or is interpreted so—we may call it emotive meaning—is not so different from plain statement as we are apt to suppose. As the word means the missing part of its contexts and is a substitute for them, so the insulting intention may be the substitute for a kick,—the missing part of its context. The same general theorem covers all the modes of meaning.

I began tonight by speaking of the poaching of the other language functions on the preserve of pure exposition. Pure exposition has its guardian passions no doubt—though I do not know their names. But they are not often as strong as the poachers and are easily beguiled by them. It has been so necessary to us, especially since the physical basis of civilization became technical, to care at least sometimes for the truth only and keep the poachers sometimes out, that we have exaggerated enormously the extent of pure exposition. It is a relatively rare occurrence outside

the routine of train services and the tamer, more settled parts of the sciences. We have exaggerated our success for strategic reasons—some of them good, because encouraging, if we do not too much hoodwink ourselves. I have aimed at points tonight to be merely expository in my remarks, but I know better than to suppose I have succeeded. We shall find, preëminently in the subject of rhetoric, that interpretations and opinions about interpretations that are not primarily steps of partisan policy are excessively hard to arrive at. And thereby we rediscover that the world—so far from being a solid matter of fact—is rather a fabric of conventions, which for obscure reasons it has suited us in the past to manufacture and support. And that sometimes is a dismaying rediscovery which seems to unsettle our foundations.

Anyone who publishes a book with the word “Meaning” in its title becomes the recipient of a fan mail of peculiar character. In comes a dribble of letters ever after from people who are quite unmistakably lunatics. Indeed, it seems that the subject is a dangerous one. Intense preoccupation with the sources of our meanings is disturbing, increasing our sense that our beliefs are a veil and an artificial veil between ourselves and something that otherwise than through a veil we cannot know. Something of the same sort can happen in travel. Anyone who has visited a sufficiently strange country and come into close contact with its life knows how unsettling and disorienting is the recognition of the place of conventions in our mental world. And the effect is deeper as the contact is closer. Few men have come into closer and more active contact with an alien world than Colonel Lawrence and when, at the end of the Introduction to *The Seven Pillars of Wisdom*, he writes of the selves which converse in the void, he says, “Then madness was very near, as I believe it would be near the man who could see things through the veils at once of two customs, two educations, two environments.” He is writing of fatigue, and the page reeks of the extremities of war and of the desert—the desert which pushes man down to the limits of his endurance. The meditation of a single code of meanings is not so devastating, and I have seen already enough of Bryn Mawr to

realize that it bears no least resemblance to a desert.⁵ We may then continue undeterred by the implications of my fan mail.

The subject of the next lecture will be the Doctrine of Usage and the Interanimation of Words and, as the rest of the course will be literary rather than philosophical and will attempt rather to practise than to theorize, I may close here with some lines from George Chapman about the theoretic principles of Rhetoric, the conduct of interpretation and “impartial contention” and their proper relation to action. It comes in a poem entitled

To Young Imaginaries in Knowledge

This rather were the way, if thou wouldst be
A true proficient in philosophy
Dissemble what thou studiest until
By thy impartial contention
Thou provest thee fit to do as to profess
And if thou still profess it not, what less
Is thy philosophy if in thy deeds
Rather than signs and shadows, it proceeds.

I must apologize if in this Lecture I have departed from the spirit of his recommendation.

LECTURE III THE INTERANIMATION OF WORDS

I turn now to that other sense of “context”—the literary context—which I distinguished last time from the technical sense of “context,” as a recurrent group of events, that is convenient for the theorem of meaning. Let us consider some of the effects on words of their combination in sentences, and how their meaning depends upon the other words before and after them in the sentence. What happens when we try with a sentence to decide what single words in it mean?

The sentence, of course, as Aristotle taught, is the unit of discourse. We can hardly give too much importance here to the influence of our modern way of separating words in writing. In conversation we do not ordinarily separate them so—unless we are asking questions about words. With languages which have not been used in writing and thus subjected to a special kind of

⁵Bryn Mawr College, where these lectures were given in 1936. [Ed.]

grammatical analysis—it is worth recalling that grammar takes its name from writing—there is often very great uncertainty as to where one word ends and another begins. The written form gives words far more independence than they possess as units of sound in speech and we derive thence a habit of supposing that they have far more independence as regards their meanings than they usually have in either written or spoken discourse.

The mutual dependence of words varies evidently with the type of discourse. At one end of the scale, in the strict exposition of some highly criticized and settled science through technicalized and rigid speech, a large proportion of them are independent. They mean the same whatever other words they are put with; or if a word fluctuates, it moves only into a small number of stable positions, which can be recorded and are anchored to definitions. That is the ideal limit towards which we aim in exposition. Unfortunately we tend—increasingly since the Seventeenth Century—to take rigid discourse as the norm, and impose its standards upon the rest of speech. This is much as if we thought that water, for all its virtues, in canals, baths, and turbines, were really a weak form of ice. The other end of the scale is in poetry—in some forms of poetry rather. We know very much less about the behavior of words in these cases—when their virtue is to have no fixed and settled meaning separable from those of the other words they occur with. There are many more possibilities here than the theory of language has yet tried to think out. Often the whole utterance in which the co-operating meanings of the component words hang on one another is not itself stable in meaning. It utters not one meaning but a *movement* among meanings. Of course, even in the strictest prose we always have one thing that may be described as a movement of meaning. We have change as the sentence develops. In “The cat is on the mat” we begin with the cat and end with the mat. There is a progression of some sort in every explicit sentence. But in the strictest prose the meanings of the separate words theoretically stay put and thought passes from one to another of them. At the other end of the scale the whole meaning of the sentence shifts, and with it any

meanings we may try to ascribe to the individual words. In the extreme case it will go on moving as long as we bring fresh wits to study it. When Octavius Cæsar is gazing down at Cleopatra dead, he says,

She looks like sleep,
As she would catch another Antony
In her strong toil of grace.

“Her strong toil of grace.” Where, in terms of what entries in what possible dictionary, do the meanings here of *toil* and *grace* come to rest?

But my subject is Rhetoric rather than Poetics and I want to keep to prose which is not too far from the strict scientific or “rigid” end of this scale of dependent variabilities. In the kind of prose I am talking now, you have usually to wait till I have gone on a bit before you can decide how you will understand the opening parts of the sentences. If, instead, I were reading you the first few theorems of Euclid, that would not be so. You would understand, as soon as I said “a triangle,” what the word meant, and though what I went on to say might qualify the meaning (“having two sides equal”), it would not destroy or completely change the meaning that you had so far given to the word. But in most prose, and more than we ordinarily suppose, the opening words have to wait for those that follow to settle what they shall mean—if indeed that ever gets settled.

All this holds good not only as to the *sense* of the waiting words but as regards all the other functions of language which we can distinguish and set over against the mere sense. It holds for the *feeling* if any towards what I am talking about, for the *relation towards my audience* I want to establish or maintain with the remark, and for the *confidence* I have in the soundness of the remark—to mention three main sorts of these other language functions. In speech, of course, I have the aid of intonation for these purposes. But, as with the meanings of words, so with the intonation structure. The intonation of the opening words is likely to be ambiguous; it waits till the utterance is completed for its full interpretation.

In writing we have to replace intonation as far as we can. Most of the more recondite virtues of

prose style come from the skill with which the rival claims of these various language functions are reconciled and combined. And many of the rather mysterious terms that are usually employed in discussing these matters, *harmony*, *rhythm*, *grace*, *texture*, *smoothness*, *suppleness*, *impressiveness*, and so on are best taken up for analysis from this point of view. Or rather the passages which seem to exemplify these qualities (or fail to) are best examined with the multiplicity of the language functions in mind. For we can obviously do nothing with such words as these by themselves, in the blue. They may mean all sorts of different things in different literary contexts.

I have been leading up—or down, if you like—to an extremely simple and obvious but fundamental remark: that no word can be judged as to whether it is good or bad, correct or incorrect, beautiful or ugly, or anything else that matters to a writer, in isolation. That seems so evident that I am almost ashamed to say it, and yet it flies straight in the face of the only doctrine that for two hundred years has been officially inculcated—when any doctrine is inculcated in these matters. I mean the doctrine of Usage. The doctrine that there is a right or a good use for every word and that literary virtue consists in making that good use of it.

There are several bones that can be picked with that doctrine—as it has been expounded in many epochs and, in particular for us, from the middle of the Eighteenth Century onwards. It is the worst legacy we have from that, in other ways, happy Century. At its best it can be found in George Campbell’s *Philosophy of Rhetoric*—otherwise an excellent book in many respects. At its worst, or nearly its worst, the doctrine can be found in most of the Manuals of Rhetoric and Composition which have afflicted the schools—American schools especially. It asserts that “Good use is the general, present-day practice of the best writers.” One bone we could pick would be with that “best.” How are they the best writers except by using the words in the best ways? We settle that they *are* the best writers because we find them using their words successfully. We do not settle that theirs is the right, the “good usage” of the words because *they* use them so. Never

was there a crazier case of putting the cart before the horse. It is as though we were to maintain that apples are healthy because⁶ wise people eat them, instead of recognizing that it is the other way about—that it is what the food will do for us which makes us eat it, not the fact that we eat it which makes it good food.

But that is not the main bone I have to pick with the doctrine, which is that it blanks out and hides the interanimation between words. I had better cite you a sentence or two in evidence, or you may think I am inventing a ghost to exorcize. I will take them from a *Manual of Rhetoric* which carries the names of three authors: Messrs. Gardiner, Kittredge, and Arnold. And I choose this book because the regard which I have for Mr. Kittredge's name makes a doctrine which has that sanction seem the better worth refuting. The authors write: "Usage governs language. There is no other standard. By usage, however, is meant the practice of the best writers and speakers." (I have already asked what standard is supposed to settle which are the best.) They go on to consider "four great general principles of choice: *correctness*, *precision*, *appropriateness*, and *expressiveness*," which, they say, "within the limits of good usage and in every case controlled by it . . . should guide us in the choice of words." And this is what they say of correctness: "Correctness is the most elementary of all requirements. The meanings of words are settled by usage. If we use a word incorrectly—that is in a sense which does not customarily belong to it—our readers will miss our thought, or, at best, they must arrive at it by inference and guesswork."

Inference and guesswork! What else is interpretation? How, apart from inference and skilled guesswork, can we be supposed ever to understand a writer or speaker's thought? This is, I think, a fine case of poking the fire from the top. But I have still my main bit of evidence to give you. My authors say: "In studying the four great principles of choice, we observe that only the first (correctness) involves the question of right and wrong. The others deal with questions of dis-

⁶"Because" is offering to play one of its most troublesome tricks here, of course, in the shift from "cause" to "reason." [Au.]

crimination between better and worse—that is with the closer adaptation of words to the thoughts and feelings which we undertake to express. Further, it is only in dealing with the first principle (correctness) that we can keep our attention entirely on the single word."

There! that is the view I wished to illustrate. Let us not boggle about the oddities of its expression: "right and wrong," "better and worse"; or worry as to how by keeping "our attention entirely on a single word" we could settle anything at all about it—except perhaps about its spelling! The important point is that words are here supposed just sheerly to possess their sense, as men have their names in the reverse case, and to carry this meaning with them into sentences regardless of the neighbour words. That is the assumption I am attacking, because, if we follow up its practical consequences in writing and reading and trace its effects upon interpretation, we shall find among them no small proportion of the total of our verbal misunderstandings.

I am anxious not to seem to be illustrating this sort of misunderstanding myself here, unwittingly, in my interpretation of this passage. I know well enough that the authors probably had in mind such incorrectness as occurs when people say "ingenious" when they mean "ingenuous"; and I know that the Usage Doctrine can be interpreted in several ways which make it true and innocuous.

It can say and truly, for example, that we learn how to use words from responding to them and noting how other people use them. Just how we do so learn is a deep but explorable question. It can say equally truly, that a general conformity between users is a condition of communication. *That* no one would dream of disputing. But if we consider conformity we see that there are two kinds of conformity. Conformity in the general process of interpretation, and conformity in the specific products. We all know how the duller critics of the Eighteenth Century (the century that gave us the current Doctrine of Usage) the people Wordsworth was thinking of when he wrote his Preface, confused the poetic product with the poetic process and thought a poem good because it used poetic diction—the words that former good poets had used—and used them in the same

ways. The Usage Doctrine, in the noxious interpretation of it, is just that blunder in a more pervasive and more dangerous incidence. The noxious interpretation is the common one. Its evil is that it takes the senses of an author's words to be things we know before we read him, fixed factors with which he has to build up the meaning of his sentences as a mosaic is put together of discrete independent tesserae. Instead, they are resultants which we arrive at only through the interplay of the interpretative possibilities of the whole utterance. In brief, we have to guess them and we guess much better when we realize we are guessing, and watch out for indications, than when we think we know.⁷

There are as many morals for the writer as for the reader in all this, but I will keep to interpretation. A word or phrase when isolated momentarily from its controlling neighbours is free to develop irrelevant senses which may then beguile half the other words to follow it. And this is at least equally true with the language functions *other than sense*, with *feeling*, say. I will give you one example of an erratic interpretation of feeling, and if I take it from the same *Manual of Rhetoric* that is because it illustrates one of the things to which the mosaic view or habit of interpretation, as opposed to the organic, often leads.

The Authors give the following from Bacon's *Advancement of Learning*. And in re-reading it I will ask you to note how cunningly Bacon, in describing some misuses of learning, takes back with one hand what he seems to be offering with the other, indicating both why men do prefer misuses and why they should not do so.

But the greatest error of all the rest is the mistaking or misplacing of the last or furthest end of knowledge. For men have entered into a desire of learning and knowledge, sometimes upon a natural curiosity and inquisitive appetite; sometimes to entertain their minds with variety and delight; sometimes for ornament and reputation; and sometimes to enable them to victory of wit and contradiction; and most times for lucre and profession; and seldom sincerely to give a true account of their gift of reason, to the benefit and use of men: as if there were sought in knowledge a couch, whereupon to

rest a searching or restless spirit; or a terrace, for a wandering and variable mind to walk up and down with a fair prospect; or a tower of state, for a proud mind to raise itself upon; or a fort or commanding ground, for strife and contention; or a shop, for profit or sale; and not a rich storehouse, for the glory of the Creator and the relief of man's estate.

There is much to take to heart here—especially as to the couch aspect of the Usage Doctrine, and, I must admit, the tower and fort—but what the authors say about it is this:

Here the splendor of the imagery is no mere embellishment. Without it, Bacon could not have given adequate expression to his enthusiastic appreciation of learning and his fine scorn for the unworthy uses to which it is sometimes put. At the same time, the figures elevate the passage from the ordinary levels of prose to a noble eloquence. (p. 372)

What splendor is there in the imagery? These images have no splendor as Bacon uses them, but are severely efficient, a compact means for saying what he has to say. His "enthusiastic appreciation" (a poor phrase, I suggest, to smudge over him!) of the use of knowledge and his "fine scorn" of unworthy uses are given only if we refuse to be beguiled by the possibilities of splendor in the isolated images. Loose them even a little from their service, let their "splendor" act independently, and they begin at once to fight against his intention. For the terrace, the tower and the fort, if they were allowed to "elevate," would make the misplacings of the last and furthest end of knowledge seem much grander than "a true account of their gift of reason, to the benefit and use of men"—as a terrace or tower of state or a fort will seem grander than a mere rich storehouse.

Let me go on to some further types of the mutual control and interanimation between words. So far I have considered only the influence of words actually present in the passage, but we have to include words which are not actually being uttered and are only in the background. Take the case of what are variously called expressive, symbolic, or simulative words—words

⁷See the Note at the end of this Lecture. [Au.]

which “somehow illustrate the meaning more immediately than do ordinary speech forms,” to quote Leonard Bloomfield. Examples are *flip*, *flap*, *flop*, *flitter*, *flimmer*, *flicker*, *flutter*, *flash*, *flush*, *flare*, *glare*, *glitter*, *glow*, *gloat*, *glimmer*, *bang*, *bump*, *lump*, *thump*, *thwack*, *whack*, *sniff*, *sniffle*, *snuff*. . . Why should these seem so peculiarly appropriate, or fitting, to the meanings we use them for? The popular view is that these words just simply imitate, are copies of, what they mean. But that is a short-cut theory which often does not work, and we can, I think, go further and do better. As Bloomfield, in his excellent book, *Language*, says, “the explanation is a matter of grammatical structure, to the speaker it seems as if the sounds were especially suited to the meaning.” The speaker usually thinks moreover that the word seems suited because in some way it resembles the meaning, or, if this seems unplausible, that there must be *some* direct connection between them. If it is not the sound of the word which resembles the meaning then perhaps the tongue and lip movements instead imitate something to do with the meaning and so on. Sir Richard Paget’s theories of imitative gestures are likely to be appealed to nowadays.

The most that the modern linguist—who compares the very different words which are used in different languages for their meanings—is prepared to allow towards this resemblance of sound and sense is that “we can distinguish, with various degrees of clearness and with doubtful cases on the border line, a system of initial and final root-forming morphemes of vague signification.” Note how guarded Bloomfield is over such a point.

I must explain what a morpheme is. Two or more words are said to share a morpheme when they have, at the same time, something in common in their meaning and something in common in their sound. The joint semantic-phonetic unit which distinguishes them is what is called a morpheme. It is the togetherness of a peculiar sound and a peculiar meaning for the number of words.

Thus *flash*, *flare*, *flame*, *flicker*, *flimmer* have in common the sound (fl-) and a suggestion of a “moving light”—and this joint possession is the morpheme. Similarly *blare*, *flare*, *glare*, *stare* have the sound (-εə) in common and also the

meaning “big light or noise” shall we say, and this couple—sound and meaning is the morpheme. So with “smoothly wet” and (sl-) in *slime*, *slip*, *slush*, *slobber*, *slide*, *slither*. But *pare*, *pear*, *pair*, though they have a sound in common, have no meaning in common, so have no common morpheme.

Of course, the existence of a group of words with a common morpheme has an influence on the formation of other words, and on the pronunciation of other words—assimilating them to the group. Thus, given *skid* and *skate*, that is a strong additional reason, against an English convention, for saying *skee* rather than *shee*.

This pedantic looking term, *morpheme*, is useful because with its help we manage to avoid saying that the sound (sl-) somehow itself means something like “smoothly wet or slippery” and gain a way of saying no more than that a group of words which share that sound also share a peculiar meaning. And that is all we are entitled to say. To go further and say that the words share the meaning *because* they contain this sound and because this sound has that meaning is to bring in more than we know—an explanation or theory to account for what we do know. And actually it is a bad explanation. For this sound, by itself, means nothing. It is not the shared sound but each of the words which has the meaning. The sound by itself either means nothing at all—as with (fl) in *flame*, *flare*, *flash*, *flicker*—or as with (εə) in *blare*, *flare*, *glare*, *stare* it has by itself only an irrelevant meaning, namely, that of *air*, “what we breathe.”

The theoretical position here is worth close study because it is typical of a very large group of positions in which we tend, too boldly and too innocently, to go beyond our evidence and to assume, as the obvious explanation, as almost a datum, what is really the conclusion of a vague and quick and unchecked inductive argument, often a bad and unwarrantable argument. Why should a group of words with a sound in common have similar meanings unless there was a correspondence of some kind between the sound and the meaning? That seems plausible. But state the argument more explicitly, look over the evidence carefully, and it becomes unplausible, for then we have to notice the other words which share

the sound but do not share the meaning and the other words which share the meaning without the sound. Then we see that we have been applying to words the sort of argument which would represent a fashion as a spontaneous expression of original taste on the part of all who follow it. We find in fact that we have been looking at the problem upside down. That so far from a perceived correspondence between sound and meaning being the explanation of the sharing, the existence of a group of words with a common sound and meaning is the explanation of our belief in a correspondence.

This situation, I said a moment ago, is typical. We can hardly, I think, exaggerate in an estimate of the number of literary and rhetorical problems which, as usually formulated, are upside down in this fashion. For example, our common assumption that when a word such as *beautiful* or *art* or *religion* or *good*, is used in a great variety of ways, there will be found something in common to all the uses, something which is the fundamental or essential meaning of the word and the explanation of its use. So we spend our wits trying to discover this common essential meaning, without considering that we are looking for it, most often, only as a result of a weak and hasty inductive argument. This assumption that the same word ought to have or must have the same meaning, in an important respect, is one of those bullying assumptions that the context theorem of meanings would defend us from—in the way I discussed in my lecture last week.

But to come back to this parallel assumption that some words, apart from other words, and in their own right in virtue of their sound must mean certain things. It was Aristotle who said that there can be no natural connection between the sound of any language and the things signified, and, if we set the problem right side up and remember the other words before examining it, we shall have to agree with him. Indeed, if we ask the question fairly it becomes—when we get it clear—nearly senseless. What resemblance or natural connection can there be between the semantic and phonetic elements in the morpheme? One is a sound, the other a reference. “Is (fl-) really like ‘moving light’ in any way in which (sl-) or (gl-) is not?” Is that not like asking whether

the taste of turkey is like growing in some way that the taste of mint is not?

I conclude then that these expressive or symbolic words get their feeling of being peculiarly fitting from the other words sharing the morpheme which support them in the background of the mind. If that is so, all sorts of consequences are at once evident. In translation, for example, the expressive word in another language will not necessarily sound at all like the original word. It will be a word that is backed up by other words in a somewhat analogous fashion. Evidently again, a proper appreciation of the expressiveness of a word in a foreign language will be no matter of merely knowing its meaning and relishing its sound. It is a matter of having, in the background of the mind, the other words in the language which share morphemes with it. Thus no one can appreciate these expressive features of foreign words justly without a really wide familiarity with the language. Without that our estimates are merely whimsical.

We can, and I think should, extend this notion of a word as being backed up by other words that are not uttered or thought of. A first extension is to words that sound alike but do not share a morpheme, do not have a common meaning but only some relevant meaning. Thus *blare*, *scare*, and *dare* do not share a morpheme, but on occasion the peculiar force of *blare* may well come to it in part from the others. This, of course, is only recognizing on a larger, wider scale the principle that Lewis Carroll was using in *Jabberwocky*. Its relevance to the theory of rhymes and assonances is obvious.

Another and a wider extension would include not only influences from words which in part sound alike, but from other words which in part overlap in meaning. Words, for example, which we might have used instead, and, together with these, the reasons why we did not use them. Another such extension looks to the other uses, in other contexts, of what we, too simply, call “the same word.” The meaning of a word on some occasions is quite as much in what it keeps out, or at a distance, as in what it brings in. And, on other occasions, the meaning comes from other partly parallel uses whose relevance we can feel, without necessarily being able to state it

explicitly. But with these last leaps I may seem in danger of making the force of a word, the feeling that no other word could possibly do so well or take its place, a matter whose explanation will drag in the whole of the rest of the language. I am not sure, though, that we need be shy of something very like this as a conclusion. A really masterly use of a language—in free or fluid, not technical discourse—Shakespeare’s use of English for example, goes a long way towards using the language as a whole.

Cleopatra, taking up the asp, says to it:

Come, thou mortal wretch,
With thy sharp teeth this knot intrinsicate
Of life at once untie; poor venomous fool,
Be angry, and despatch!

Consider how many senses of *mortal*, besides “death-dealing” come in; compare: “I have immortal longings in me.” Consider *knot*: “This knot intrinsicate of life”: “Something to be undone,” “Something that troubles us until it is undone,” “Something by which all holding-together hangs,” “The nexus of all meaning.” Whether the homophone *not* enters in here may be thought a doubtful matter. I feel it does. But consider *intrinsicate* along with *knot*. Edward Dowden, following the fashion of his time in making Shakespeare as simple as possible, gives “intricate” as the meaning here of *intrinsicate*. And the Oxford Dictionary, sad to say, does likewise. But Shakespeare is bringing together half a dozen meanings from *intrinsic* and *intrinsic*: “Familiar,” “intimate,” “secret,” “private,” “innermost,” “essential,” “that which constitutes the very nature and being of a thing”—all the medical and philosophic meanings of his time as well as “intricate” and “involved.” What the word does is exhausted by no one of these meanings and its force comes from all of them and more. As the movement of my hand uses nearly the whole skeletal system of the muscles and is supported by them, so a phrase may take its powers from an immense system of supporting uses of other words in other contexts.

Note

The word *usage* itself well illustrates some of the more troublesome shifts of meaning. An improved Rhetoric has among its aims an improved control over these. Here perhaps a list of some of the senses of *usage* may help us in avoiding misunderstanding.

1. The most inclusive sense is “the entire range of the powers which the word can exert as an instrument of communication in all situations and in co-operation with any other words.” (In this sense “Usage, and usage alone, undoubtedly controls language.”)
2. “Some specific power which, in a limited range of situations and with a limited type of verbal context the word normally exerts.” (This is often called a *use* or *sense* and is what the Dictionary attempts to record in its definitions, by giving other words, phrases, and sentences with the same specific power.)
3. An instance of 2, at a certain place in Shakespeare, say, which may be appealed to to show that the word can have that power.
4. A supposed fixed “proper” meaning that the word must be kept to (has in its own right, etc.). This notion is derived from 1, 2, and 3 by oversimplification and a misconception of the working of language which, typically, takes the meaning of a sentence to be something built up from separate meanings of its words—instead of recognizing that it is the other way about and that the meanings of words are derived from the meanings of sentences in which they occur. This misconception assimilates the process by which words have their meanings determined with that by which they have their spelling determined and is the origin of a large part of misinterpretation.

Kenneth Burke

1897–1993

Much of Kenneth Burke's voluminous work over more than fifty years has been an attempt to redefine and expand the scope of rhetorical analysis and to apply it to all forms of language use. His chief contributions have been in developing rhetorical literary criticism and in analyzing the ways in which language systems—philosophical, political, literary, and religious—describe and influence human motives. His early works, *Counter-Statement* (1931) and *The Philosophy of Literary Form* (1941), develop the theory that literature is a form of symbolic action. In *A Grammar of Motives* (1945), Burke presents the dramatisitic pentad (act, scene, agent, agency, and purpose) as a method of analyzing ways of talking about motives. In *A Rhetoric of Motives* (1950), he defines rhetoric as the use of language to form attitudes and influence action. In later work, such as *The Rhetoric of Religion* (1961), he presents elements of a proposed “symbolic” of motives, in which he examines the psychological effects produced by systems of rhetorical motivation.

Burke was born in Pittsburgh in 1897, attended Ohio State and Columbia Universities very briefly, and joined the Bohemian group of writers in Greenwich Village that included Hart Crane, e. e. cummings, Allen Tate, Edna St. Vincent Millay, and his childhood friend Malcolm Cowley. In the twenties, Burke worked for the avant-garde magazine *The Dial* as music critic, book reviewer, and editor while publishing poetry, short stories, essays, and reviews in a number of journals. During the Great Depression, he became attached to but did not join the Communist party, delivering papers at the Writers' Congresses of 1935, 1937, and 1939. He taught briefly at the New School for Social Research in the thirties and longer (from 1943 until 1961) at Bennington College and was visiting professor at a great many colleges. In his long career, Burke was studied and lionized by scholars in many fields. As one writer, Gregory S. Jay, put it, “He has lived to see his work repeatedly celebrated, forgotten, and revived as each new generation and movement in criticism belatedly stumbles upon the traces of Burke in territories it thought were undiscovered.”¹

In *Counter-Statement*, Burke announced that “effective literature could be nothing else but rhetoric.” In so saying, he opposed the aesthetic view of literature as poetic and contemplative, divorced from the world of action. Burke's critical theory—which anticipates elements of reader-response criticism, American Formalism, and deconstruction—is that literary forms are best understood by their effects on readers and that the study of rhetoric, much maligned by literary critics of the day, is precisely what is needed to understand the effects not only of literature but of all forms of discourse. The last section of *Counter-Statement*, the “Lexicon Rhetoricae,” is an annotated list of literary-rhetorical terms intended as tools for applying Burke's method. In rehabilitating rhetoric for use in literary criticism, Burke classifies literature as a kind of persuasive discourse, and though he tinkers with definitions that

¹Gregory S. Jay, “Burke Re-Marx,” *Pre/Text* 6 (fall/winter 1985), p. 169.

continue to distinguish “art” and “use” (that is, poetic and rhetoric), he concludes that rhetorical analysis is appropriately applied to every kind of writing and speaking and may even be applied directly to the study of human relations.

Burke was vigorously attacked by both literary critics and rhetoricians for muddling literature and nonliterature, poetic and rhetoric, language and life. He responded by propounding the theory that literature is a form of symbolic action, with purposes and effects in the field of human relations. In *The Philosophy of Literary Form: Studies in Symbolic Action*, Burke argues that poetics is a subset of rhetoric. Literature and art, he says, have a hortatory or forensic function, especially in a capitalistic society, in which they often serve as propaganda.

In *A Grammar of Motives* (excerpted here), Burke presents the dramatistic system, which unifies rhetoric and poetic in a single analytical framework. In this system, one can study and compare statements about motives by examining how they treat the dramatic elements of human relations: act, scene, agent, agency, and purpose. Burke asserts that this pentad of terms is intended as a way of analyzing not actual human behavior but only descriptions of behavior. His concern is “primarily with the analysis of language rather than with the analysis of reality.” The terms of the pentad are not “forms of experience” but “forms of talk about experience.” Nonetheless, he often applies the dramatistic method as a form of sociological analysis and, in later works, such as *Language as Symbolic Action* (1966, excerpted here), treats experience and language as completely interdependent. The bulk of *A Grammar of Motives* is taken up with analyses of common terms that are typically used to attribute motives, analyses of philosophical systems that describe motives, and a long study of the meanings of *dialectic*.

Burke’s own method is dialectical, although *deconstructive* may be a better term today for characterizing his practice of revealing contrary meanings in supposedly positive terms and his emphasis on the way language “defeats” reality. For Burke, every epistemology has a key term, a “God-term,” that names the fundamental ground of human action, as the name God does for religious epistemologies. These terms and the language systems that surround them are the resources for rhetorical action.

In *A Rhetoric of Motives* (excerpted here), Burke looks at how these resources are used to create “identification” with a group and its worldview. *Identification* means to suggest more powerfully than *persuasion* the workings of rhetorical discourse in everyday language. Burke examines the ways in which the terms used to create identification work to include the members of a group in a common ideology, while at the same time excluding alternate terms, other groups, and competing ideologies. (His general observations on the nature of inclusion and exclusion are included in our excerpt.) He then reviews the definitions of *rhetoric* given or implied by a number of philosophers, including Jeremy Bentham’s critique of metaphoric deception, Blaise Pascal’s analysis of Jesuit casuistry, and Karl Marx’s demystification of Hegelian idealism.

The whole enterprise of making a grammar, a rhetoric, and a symbolic of motives is a way of analyzing systems of knowledge—primarily philosophy and poetry but also science, psychology, and popular culture—from the point of view of

rhetoric. Burke's rhetoric, bound up in communities, communal ideas, social relations, religion, magic, and psychological effects, in both verbal and nonverbal communication, seems to encompass almost everything. Although it is often frustrating to read Burke, his theories are undeniably powerful and his analyses full of remarkable insights. The selections reprinted here provide only a hint of what Burke has to offer.

Selected Bibliography

Our texts of *A Grammar of Motives* (New York, 1945) and *A Rhetoric of Motives* (New York, 1950) are the 1969 editions by the University of California Press. The excerpt from *Language as Symbolic Action* (1966) comes from the first edition, also published by the University of California Press.

Other works by Burke include *Counter-Statement* (New York, 1931), *Permanence and Change: An Anatomy of Purpose* (New York, 1935), *The Philosophy of Literary Form: Studies in Symbolic Action* (Baton Rouge, 1941), *The Rhetoric of Religion: Studies in Logology* (Boston, 1961), and *Dramatism and Development* (Worcester, Mass., 1972). Paul Jay has edited *The Selected Correspondence of Kenneth Burke and Malcolm Cowley, 1915–1981* (New York, 1988).

William H. Rueckert provides an extensive bibliography of Burke's work and an excellent annotated bibliography of works about Burke in *Kenneth Burke and the Drama of Human Relations*, 2nd ed. (Berkeley, 1982). Rueckert's *Critical Responses to Kenneth Burke, 1924–1966* (Minneapolis, 1969) also contains valuable bibliographic notes.

Among the books that have been written about Burke, several combine biography and a general review of his works: George Knox, *Critical Moments: Kenneth Burke's Categories and Critiques* (Seattle, 1957); Hugh Duncan, *Communication and Social Order* (New York, 1962); Merle Brown, *Kenneth Burke* (Minneapolis, 1969); and Armin Frank, *Kenneth Burke* (New York, 1969).

More specifically focused on rhetoric are Daniel Fogarty's introductory essay, "Kenneth Burke's Theory," in *Roots for a New Rhetoric* (New York, 1959); Virginia Holland's *Counterpoint: Kenneth Burke and Aristotle's Theories of Rhetoric* (New York, 1959); and Marie Hochmuth Nichols's "Kenneth Burke and the 'New Rhetoric'" (*Quarterly Journal of Speech* 38 [April 1952]: 133–44, rpt. in Schwartz and Rycenga, *The Province of Rhetoric*, and in R. Johannesen, *Contemporary Theories of Rhetoric*). Among the many more recent articles, see Ross Winterowd's "Kenneth Burke: An Annotated Glossary of His Terministic Screen" (*Rhetoric Society Quarterly* 15 [summer/fall 1985]: 145–77); and Michael Feehan's "Kenneth Burke's Discovery of Dramatism" (*Quarterly Journal of Speech* 65 [1979]: 405–11). An ambitious study tracking the development of Burke's rhetorical theories throughout his career and touching on a vast number of works is Robert Wess, *Kenneth Burke: Rhetoric, Subjectivity, Postmodernism* (New York, 1996). An excellent summary of Burke's major works relating to rhetoric is Bernard L. Brock, "Evolution of Kenneth Burke's Criticism and Philosophy of Language," in *Kenneth Burke and Contemporary European Thought* (Tuscaloosa, Ala., 1995), a volume edited by Brock that contains five other chapters comparing Burke to Jürgen Habermas, Ernesto Grassi, Michel Foucault, and Jacques Derrida.

Stanley Edgar Hyman's discussion of Burke's critical method in *The Armed Vision: A Study in the Methods of Modern Literary Criticism* (New York, 1948) gives a sense of the confusion and dismay caused by Burke's theories at their first appearance. Frank Lentricchia focuses on Burke's Marxism in *Criticism and Social Change* (Chicago, 1983).

Burke engaged in a three-way debate in the journal *Critical Inquiry*: Wayne Booth, "Kenneth Burke's Way of Knowing," and Burke, "In Response to Booth; Dancing with Tears in My Eyes" (both September 1974); Fredric Jameson, "The Symbolic Inference: or, Kenneth Burke and Ideological Analysis" (spring 1978); Burke, "Methodological Repression and/or Strategies of Containment" (winter 1978); and Jameson, "Critical Response: Ideology and Symbolic Action" (winter 1978).

The quote from Gregory Jay is in a special edition of *Pre/Text* (fall/winter 1985) devoted to Burke.

From *A Grammar of Motives*

INTRODUCTION: THE FIVE KEY TERMS OF DRAMATISM

What is involved, when we say what people are doing and why they are doing it? An answer to that question is the subject of this book. The book is concerned with the basic forms of thought which, in accordance with the nature of the world as all men necessarily experience it, are exemplified in the attributing of motives. These forms of thought can be embodied profoundly or trivially, truthfully or falsely. They are equally present in systematically elaborated metaphysical structures, in legal judgments, in poetry and fiction, in political and scientific works, in news and in bits of gossip offered at random.

We shall use five terms as generating principles of our investigation. They are: Act, Scene, Agent, Agency, Purpose. In a rounded statement about motives, you must have some word that names the *act* (names what took place, in thought or deed), and another that names the *scene* (the background of the act, the situation in which it occurred); also, you must indicate what person or kind of person (*agent*) performed the act, what means or instruments he used (*agency*), and the *purpose*. Men may violently disagree about the purposes behind a given act, or about the character of the person who did it, or how he did it, or in what kind of situation he acted; or they may even insist upon totally different words to name the act itself. But be that as it may, any complete statement about motives will offer *some kind of*

answers to these five questions: what was done (act), when or where it was done (scene), who did it (agent), how he did it (agency), and why (purpose).

If you ask why, with a whole world of terms to choose from, we select these rather than some others as basic, our book itself is offered as the answer. For, to explain our position, we shall show how it can be applied.

Act, Scene, Agent, Agency, Purpose. Although, over the centuries, men have shown great enterprise and inventiveness in pondering matters of human motivation, one can simplify the subject by this pentad of key terms, which are understandable almost at a glance. They need never to be abandoned, since all statements that assign motives can be shown to arise out of them and to terminate in them. By examining them quizzically, we can range far; yet the terms are always there for us to reclaim, in their everyday simplicity, their almost miraculous easiness, thus enabling us constantly to begin afresh. When they might become difficult, when we can hardly see them, through having stared at them too intensely, we can of a sudden relax, to look at them as we always have, lightly, glancingly. And having reassured ourselves, we can start out again, once more daring to let them look strange and difficult for a time.

In an exhibit of photographic murals (*Road to Victory*) at the Museum of Modern Art, there was an aerial photograph of two launches, proceeding side by side on a tranquil sea. Their wakes crossed and recrossed each other in almost an in-

finity of lines. Yet despite the intricateness of this tracery, the picture gave an impression of great simplicity, because one could quickly perceive the generating principle of its design. Such, ideally, is the case with our pentad of terms, used as generating principle. It should provide us with a kind of simplicity that can be developed into considerable complexity, and yet can be discovered beneath its elaborations.

We want to inquire into the purely internal relationships which the five terms bear to one another, considering their possibilities of transformation, their range of permutations and combinations—and then to see how these various resources figure in actual statements about human motives. Strictly speaking, we mean by a Grammar of motives a concern with the terms alone, without reference to the ways in which their potentialities have been or can be utilized in actual statements about motives. Speaking broadly we could designate as “philosophies” any statements in which these grammatical resources are specifically utilized. Random or unsystematic statements about motives could be considered as fragments of a philosophy.

One could think of the Grammatical resources as *principles*, and of the various philosophies as *casuistries* which apply these principles to temporal situations. For instance, we may examine the term Scene simply as a blanket term for the concept of background or setting *in general*, a name for *any* situation in which acts or agents are placed. In our usage, this concern would be “grammatical.” And we move into matters of “philosophy” when we note that one thinker uses “God” as his term for the ultimate ground or scene of human action, another uses “nature,” a third uses “environment,” or “history,” or “means of production,” etc. And whereas a statement about the grammatical principles of motivation might lay claim to a universal validity, or complete certainty, the choice of any one philosophic idiom embodying these principles is much more open to question. Even before we know what act is to be discussed, we can say with confidence that a rounded discussion of its motives must contain a reference to *some kind of* background. But since each philosophic idiom will characterize this background differently, there will remain

the question as to which characterization is “right” or “more nearly right.”

It is even likely that, whereas one philosophic idiom offers the best calculus for one case, another case answers best to a totally different calculus. However, we should not think of “cases” in too restricted a sense. Although, from the standpoint of the grammatical principles inherent in the internal relationships prevailing among our five terms, any given philosophy is to be considered as a casuistry, even a cultural situation extending over centuries is a “case,” and would probably require a much different philosophic idiom as its temporizing calculus of motives than would be required in the case of other cultural situations.

In our original plans for this project, we had no notion of writing a “Grammar” at all. We began with a theory of comedy, applied to a treatise on human relations. Feeling that competitive ambition is a drastically overdeveloped motive in the modern world, we thought this motive might be transcended if men devoted themselves not so much to “excoriating” it as to “appreciating” it. Accordingly, we began taking notes on the foibles and antics of what we tended to think of as “the Human Barnyard.”

We sought to formulate the basic stratagems which people employ, in endless variations, and consciously or unconsciously, for the outwitting or cajoling of one another. Since all these devices had a “you and me” quality about them, being “addressed” to some person or to some advantage, we classed them broadly under the heading of a Rhetoric. There were other notes, concerned with modes of expression and appeal in the fine arts, and with purely psychological or psychoanalytic matters. These we classed under the heading of Symbolic.

We had made still further observations, which we at first strove uneasily to class under one or the other of these heads, but which we were eventually able to distinguish as the makings of a Grammar. For we found in the course of writing that our project needed a grounding in formal considerations logically prior to both the rhetorical and the psychological. And as we proceeded with this introductory groundwork, it kept extending its claims until it had spun itself from an

intended few hundred words into nearly 200,000, of which the present book is revision and abridgment.

Theological, metaphysical, and juridical doctrines offer the best illustration of the concerns we place under the heading of Grammar; the forms and methods of art best illustrate the concerns of Symbolic; and the ideal material to reveal the nature of Rhetoric comprises observations on parliamentary and diplomatic devices, editorial bias, sales methods, and incidents of social sparring. However, the three fields overlap considerably. And we shall note, in passing, how the Rhetoric and the Symbolic hover about the edges of our central theme, the Grammar.

A perfectionist might seek to evolve terms free of ambiguity and inconsistency (as with the terministic ideals of symbolic logic and logical positivism). But we have a different purpose in view, one that probably retains traces of its "comic" origin. We take it for granted that, insofar as men cannot themselves create the universe, there must remain something essentially enigmatic about the problem of motives, and that this underlying enigma will manifest itself in inevitable ambiguities and inconsistencies among the terms for motives. Accordingly, what we want is *not terms that avoid ambiguity*, but *terms that clearly reveal the strategic spots at which ambiguities necessarily arise*.

Occasionally, you will encounter a writer who seems to get great exaltation out of proving, with an air of much relentlessness, that some philosophic term or other has been used to cover a variety of meanings, and who would smash and abolish this idol. As a general rule, when a term is singled out for such harsh treatment, if you look closer you will find that it happens to be associated with some cultural or political trend from which the writer would dissociate himself; hence there is a certain notable ambiguity in this very charge of ambiguity, since he presumably feels purged and strengthened by bringing to bear upon this particular term a kind of attack that could, with as much justice, be brought to bear upon any other term (or "title") in philosophy, including of course the alternative term, or "title," that the writer would swear by. Since no two things or acts or situations are exactly alike, you

cannot apply the same term to both of them without thereby introducing a certain margin of ambiguity, an ambiguity as great as the difference between the two subjects that are given the identical title. And all the more may you expect to find ambiguity in terms so "titular" as to become the marks of a philosophic school, or even several philosophic schools. Hence, instead of considering it our task to "dispose of" any ambiguity by merely disclosing the fact that it is an ambiguity, we rather consider it our task to study and clarify the *resources* of ambiguity. For in the course of this work, we shall deal with many kinds of *transformation*—and it is in the areas of ambiguity that transformations take place; in fact, without such areas, transformation would be impossible. Distinctions, we might say, arise out of a great central moltenness, where all is merged. They have been thrown from a liquid center to the surface, where they have congealed. Let one of these crusted distinctions return to its source, and in this alchemic center it may be remade, again becoming molten liquid, and may enter into new combinations, whereat it may be again thrown forth as a new crust, a different distinction. So that A may become non-A. But not merely by a leap from one state to the other. Rather, we must take A back into the ground of its existence, the logical substance that is its causal ancestor, and on to a point where it is con-substantial with non-A; then we may return, this time emerging with non-A instead.

And so with our five terms: certain formal interrelationships prevail among these terms, by reason of their role as attributes of a common ground or substance. Their participation in a common ground makes for transformability. At every point where the field covered by any one of these terms overlaps upon the field covered by any other, there is an alchemic opportunity, whereby we can put one philosophy or doctrine of motivation into the alembic, make the appropriate passes, and take out another. From the central moltenness, where all the elements are fused into one togetherness, there are thrown forth, in separate crusts, such distinctions as those between freedom and necessity, activity and passiveness, cooperation and competition, cause and effect, mechanism and teleology.

Our term, "Agent," for instance, is a general heading that might, in a given case, require further subdivision, as an agent might have his act modified (hence partly motivated) by friends (co-agents) or enemies (counteragents). Again, under "Agent" one could place any personal properties that are assigned a motivational value, such as "ideas," "the will," "fear," "malice," "intuition," "the creative imagination." A portrait painter may treat the body as a property of the agent (an expression of personality), whereas materialistic medicine would treat it as "scenic," a purely "objective material"; and from another point of view it could be classed as an agency, a means by which one gets reports of the world at large. Machines are obviously instruments (that is, Agencies); yet in their vast accumulation they constitute the industrial scene, with its own peculiar set of motivational properties. War may be treated as an Agency, insofar as it is a means to an end; as a collective Act, subdivisible into many individual acts; as a Purpose, in schemes proclaiming a cult of war. For the man inducted into the army, war is a Scene, a situation that motivates the nature of his training; and in mythologies war is an Agent, or perhaps better a super-agent, in the figure of the war god. We may think of voting as an act, and of the voter as an agent; yet votes and voters both are hardly other than a politician's medium or agency; or from another point of view, they are a part of his scene. And insofar as a vote is cast without adequate knowledge of its consequences, one might even question whether it should be classed as an activity at all; one might rather call it passive, or perhaps sheer motion (what the behaviorists would call a Response to a Stimulus).

Or imagine that one were to manipulate the terms, for the imputing of motives, in such a case as this: The hero (agent) with the help of a friend (coagent) outwits the villain (counteragent) by using a file (agency) that enables him to break his bonds (act) in order to escape (purpose) from the room where he has been confined (scene). In selecting a casuistry here, we might locate the motive in the agent, as were we to credit his escape to some trait integral to his personality, such as "love of freedom." Or we might stress the motivational force of the scene, since nothing is surer

to awaken thoughts of escape in a man than a condition of imprisonment. Or we might note the essential part played by the *coagent*, in assisting our hero to escape—and, with such thoughts as our point of departure, we might conclude that the motivations of this act should be reduced to social origins.

Or if one were given to the brand of speculative enterprise exemplified by certain Christian heretics (for instance, those who worshipped Judas as a saint, on the grounds that his betrayal of Christ, in leading to the Crucifixion, so brought about the opportunity for mankind's redemption) one might locate the necessary motivational origin of the act in the *counteragent*. For the hero would not have been prodded to escape if there had been no villain to imprison him. Inasmuch as the escape could be called a "good" act, we might find in such motivational reduction to the counteragent a compensatory transformation whereby a bitter fountain may give forth sweet waters. In his *Anti-Dühring* Engels gives us a secular variant which no one could reasonably call outlandish or excessive:

It was slavery that first made possible the division of labour between agriculture and industry on a considerable scale, and along with this, the flower of the ancient world, Hellenism. Without slavery, no Greek state, no Greek art and science; without slavery, no Roman Empire. But without Hellenism and the Roman Empire as a basis, also no modern Europe.

We should never forget that our whole economic, political, and intellectual development has as its presupposition a state of things in which slavery was as necessary as it was universally recognized. In this sense we are entitled to say: Without the slavery of antiquity, no modern socialism.

Pragmatists would probably have referred the motivation back to a source in *agency*. They would have noted that our hero escaped by using an *instrument*, the file by which he severed his bonds; then in this same line of thought, they would have observed that the hand holding the file was also an instrument; and by the same token the brain that guided the hand would be an instrument, and so likewise the educational system that taught the methods and shaped the values involved in the incident.

True, if you reduce the terms to any one of them, you will find them branching out again; for no one of them is enough. Thus, Mead called his pragmatism a philosophy of the *act*. And though Dewey stresses the value of "intelligence" as an instrument (agency, embodied in "scientific method"), the other key terms in his casuistry, "experience" and "nature," would be the equivalents of act and scene respectively. We must add, however, that Dewey is given to stressing the *overlap* of these two terms, rather than the respects in which they are distinct, as he proposes to "replace the traditional separation of nature and experience with the idea of continuity." (The quotation is from *Intelligence and the Modern World*.)

As we shall see later, it is by reason of the pliancy among our terms that philosophic systems can pull one way and another. The margins of overlap provide opportunities whereby a thinker can go without a leap from any one of the terms to any of its fellows. (We have also likened the terms to the fingers, which in their extremities are distinct from one another, but merge in the palm of the hand. If you would go from one finger to another without a leap, you need but trace the tendon down into the palm of the hand, and then trace a new course along another tendon.) Hence, no great dialectical enterprise is necessary if you would merge the terms, reducing them even to as few as one; and then, treating this as the "essential" term, the "causal ancestor" of the lot, you can proceed in the reverse direction across the margins of overlap, "deducing" the other terms from it as its logical descendants.

This is the method, explicitly and in the grand style, of metaphysics which brings its doctrines to a head in some overall title, a word for being in general, or action in general, or motion in general, or development in general, or experience in general, etc., with all its other terms distributed about this titular term in positions leading up to it and away from it. There is also an implicit kind of metaphysics, that often goes by the name of No Metaphysics, and aims at reduction not to an overall title but to some presumably underlying atomic constituent. Its vulgar variant is to be found in techniques of "unmasking," which would make for progress and emancipation by

applying materialistic terms to immaterial subjects (the pattern here being, "X is nothing but Y," where X designates a higher value and Y a lower one, the higher value being thereby reduced to the lower one).

The titular word for our own method is "dramatism," since it invites one to consider the matter of motives in a perspective that, being developed from the analysis of drama, treats language and thought primarily as modes of action. The method is synoptic, though not in the historical sense. A purely historical survey would require no less than a universal history of human culture; for every judgment, exhortation, or admonition, every view of natural or supernatural reality, every intention or expectation involves assumptions about motive, or cause. Our work must be synoptic in a different sense: in the sense that it offers a system of placement, and should enable us, by the systematic manipulation of the terms, to "generate," or "anticipate" the various classes of motivational theory. And a treatment in these terms, we hope to show, reduces the subject synoptically while still permitting us to appreciate its scope and complexity.

It is not our purpose to import dialectical and metaphysical concerns into a subject that might otherwise be free of them. On the contrary, we hope to make clear the ways in which dialectical and metaphysical issues *necessarily* figure in the subject of motivation. Our speculations, as we interpret them, should show that the subject of motivation is a philosophic one, not ultimately to be solved in terms of empirical science.

CONTAINER AND THING CONTAINED

The Scene-Act Ratio

Using "scene" in the sense of setting, or background, and "act" in the sense of action, one could say that "the scene contains the act." And using "agents" in the sense of actors, or acters, one could say that "the scene contains the agents."

It is a principle of drama that the nature of acts and agents should be consistent with the nature of the scene. And whereas comic and grotesque works may deliberately set these elements at

odds with one another, audiences make allowances for such liberty, which reaffirms the same principle of consistency in its very violation.

The nature of the scene may be conveyed primarily by suggestions built into the lines of the verbal action itself, as with the imagery in the dialogue of Elizabethan drama and with the descriptive passages of novels; or it may be conveyed by non-linguistic properties, as with the materials of naturalistic stage sets. In any case, examining first the relation between scene and act, all we need note here is the principle whereby the scene is a fit “container” for the act, expressing in fixed properties the same quality that the action expresses in terms of development.

Ibsen’s *An Enemy of the People* is a good instance of the scene-act ratio, since the correlations between scene and act are readily observable, beginning with the fact that this representative middle-class drama is enacted against a typical middle-class setting. Indeed, in this work written at the very height of Ibsen’s realistic period, we can see how readily realism leads into symbolism. For the succession of scenes both *realistically reflects* the course of the action and *symbolizes* it.

The first act (we are now using the word “act” in the purely technical sense, to designate the major division of a play, a sense in which we could even reverse our formula and say that “the act contains its scenes”)—the first act takes place in Dr. Stockmann’s sitting room, a background perfectly suited to the thoroughly bourgeois story that is to unfold from these beginnings. In the course of this act, we learn of a scene, or situation, prior to the opening of the play, but central to its motivation. Dr. Stockmann refers to an earlier period of withdrawal, spent alone in the far North. During his isolation, he had conceived of his plan for the public Baths. This plan may be considered either realistically or symbolically; it is the dramatist’s device for materializing, or objectifying, a purely spiritual process, since the plot has to do with pollution and purification on a moral level, which has its scenic counterpart in the topic of the Baths.

Act II. Still in Dr. Stockmann’s sitting room.

Dr. Stockmann has learned that the Baths, the vessels of purification, are themselves polluted, and that prominent business and professional men would suppress this fact for financial reasons. This opposition is epitomized in the figure of Peter Stockmann, the Doctor’s brother. The intimate, familial quality of the setting thus has its counterpart in the quality of the action, which involves the struggle of two social principles, the conservative and the progressive, as objectified and personalized in the struggle of the two brothers.

Act III takes place in the editorial office of the *People’s Messenger*, a local newspaper in which Dr. Stockmann had hoped to publish his evidence that the water supply was contaminated. The action takes on a more forensic reference, in keeping with the nature of the place. In this Act we have the peripety of the drama, as Dr. Stockmann’s expectations are reversed. For he learns that the personal and financial influence of his enemies prevents the publication of the article. This turn of the plot has its scenic replica in mimicry involving Peter Stockmann’s hat and stick, properties that symbolize his identity as mayor. In false hope of victory, Dr. Stockmann had taken them up, and strutted about burlesquing his brother. But when Dr. Stockmann learns that the editor, in response to the pressure of the conservatives, will not publish the article, it is Peter Stockmann’s turn to exult. This reversal of the action is materialized (made scenic) thus:

PETER STOCKMANN: My hat and stick, if you please. (Dr. Stockmann *takes off the hat and lays it on the table with the stick*. Peter Stockmann *takes them up*.) Your authority as mayor has come to an untimely end.

In the next Act Dr. Stockmann does contrive to lay his case before a public tribunal of a sort: a gathering of fellow townsmen, assembled in “a big old-fashioned room,” in the house of a friend. His appeal is unsuccessful; his neighbors vote overwhelmingly against him, and the scene ends in turbulence. As regards the scene-act ratio, note that the semi-public, semi-intimate setting reflects perfectly the quality of Dr. Stockmann’s appeal.

In Act V, the stage directions tell us that the hero's clothes are torn, and the room is in disorder, with broken windows. You may consider these details either as properties of the scene or as a reflection of the hero's condition after his recent struggle with the forces of reaction. The scene is laid in Dr. Stockmann's *study*, a setting so symbolic of the direction taken by the plot that the play ends with Dr. Stockmann announcing his plan to enroll twelve young *disciples* and with them to found a *school* in which he will work for the *education* of society.

The whole plot is that of an internality directed outwards. We progress by stages from a scene (reported) wherein the plan of social purification was conceived in loneliness, to the scene in his study where the hero announces in the exaltation of a dramatic finale: "The strongest man in the world is he who stands most alone." The pronouncement is modified by the situation in which it is uttered: as Dr. Stockmann speaks, he is surrounded by a loyal and admiring family circle, and his educational plan calls not for complete independence, but for cooperation. He is not setting himself up as the strongest man in the world, but merely as one headed in the same direction. And, with the exception of his brother Peter, we may consider his family circle as aspects of his own identity, being under the aegis of "loneliness" since it began so and retains the quality of its ancestry.

The end of the third play in O'Neill's trilogy, *Mourning Becomes Electra*, presents a contrasting instance of the scene-act ratio:

LAVINIA: (*turns to him sharply*) You go now and close the shutters and nail them tight.

SETH: Ayeh.

LAVINIA: And tell Hannah to throw out all the flowers.

SETH: Ayeh. (*He goes past her up the steps and into the house. She ascends to the portico—and then turns and stands for a while, stiff and square-shouldered, staring into the sunlight with frozen eyes. Seth leans out of the window at the right of the door and pulls the shutters closed with a decisive bang. As if this were a word of command, Lavinia pivots sharply on her heel and marches woodenly into the house, closing the door behind her.*)

CURTAIN

We end here on the motif of the shut-in personality, quite literally objectified. And the closing, novelistic stage directions are beautifully suited to our purpose; for note how, once the shutters have been closed, thereby placing before our eyes the scenic replica of Lavinia's mental state, this scene in turn becomes the motivation of her next act. For we are told that she walks like an automaton in response to the closing of the shutter, "as if this were a word of command."

Hamlet contains a direct reference to the motivational aspect of the scene-act ratio. In an early scene, when Hamlet is about to follow the Ghost, Horatio warns:

What if it tempt you toward the flood, my lord,
Or to the dreadful summit of the cliff
That beetles o'er his base into the sea.
And there assume some other horrible form,
Which might deprive your sovereignty of reason
And draw you into madness? Think of it;
The very place puts toys of desperation,
Without more motive, into every brain
That looks so many fathoms to the sea
And hears it roar beneath.

In the last four lines of this speech, Horatio is saying that the sheer natural surroundings might be enough to provide a man with a motive for an act as desperate and absolute as suicide. This notion (of the natural scene as sufficient motivation for an act) was to reappear, in many transformations, during the subsequent centuries. We find a variant of it in the novels of Thomas Hardy, and in other regionalists who derive motivations for their characters from what Virgil would have called the *genius loci*. There are unmistakable vestiges of it in scientific theories (of Darwinian cast) according to which men's behavior and development are explained in terms of environment. Geopolitics is a contemporary variant.

From the motivational point of view, there is implicit in the quality of a scene the quality of the action that is to take place within it. This would be another way of saying that the act will be consistent with the scene. Thus, when the curtain rises to disclose a given stage set, this stage set contains, simultaneously, implicitly, all that the narrative is to draw out as a sequence, explicitly. Or, if you will, the stage set contains the ac-

tion *ambiguously* (as regards the norms of action)—and in the course of the play’s development this ambiguity is converted into a corresponding *articulacy*. The proportion would be: scene is to act as implicit is to explicit. One could not deduce the details of the action from the details of the setting, but one could deduce the quality of the action from the quality of the setting. An extreme illustration would be an Expressionistic drama, having for its scenic reflex such abstract properties as lines askew, grotesque lighting, sinister color, and odd objects.

We have, of course, chosen examples particularly suited to reveal the distinction between act and scene as well as their interdependence. The matter is obscured when we are dealing with scene in the sense of the relationships prevailing among the various *dramatis personae*. For the characters, by being in interaction, could be treated as scenic conditions or “environment,” of one another; and any act could be treated as part of the context that modifies (hence, to a degree motivates) the subsequent acts. The principles of dramatic consistency would lead one to expect such cases of overlap among the terms; but while being aware of them we should firmly fix in our minds such cases as afford a clear differentiation. Our terms leaning themselves to both merger and division, we are here trying to divide two of them while recognizing their possibilities of merger.

The Scene-Agent Ratio

The scene-agent ratio, where the synecdochic relation is between person and place, is partly exemplified in this citation from Carlyle’s *Heroes and Hero-Worship*:

These Arabs Mohammed was born among are certainly a notable people. Their country itself is notable; the fit habitation for such a race. Savage inaccessible rock-mountains, great grim deserts, alternating with beautiful strips of verdure; wherever water is, there is greenness, beauty; odoriferous balm-shrubs, date-trees, frankincense-trees. Consider that wide waste horizon of sand, empty, silent, like a sand-sea, dividing habitable place from habitable place. You are all alone there, left alone with the universe; by day a fierce sun blazing

down on it with intolerable radiance; by night the great deep heaven with its stars. Such a country is fit for a swift-handed, deep-hearted race of men.

The correlation between the quality of the country and the quality of its inhabitants is here presented in quite secular terms. There is a sonnet by Wordsworth that is a perfect instance of the scene-agent ratio treated theologically:

It is a beauteous evening, calm and free,
The holy time is quiet as a Nun
Breathless with adoration; the broad sun
Is sinking down in its tranquillity;
The gentleness of heaven broods o’er the Sea;
Listen! the mighty Being is awake,
And doth with his eternal motion make
A sound like thunder—everlastingly.

Dear Child! Dear Girl! that walkest with me here,
If thou appear untouched by solemn thought,
Thy nature is not therefore less divine:
Thou liest in Abraham’s bosom all the year;
And worship’st at the Temple’s inner shrine,
God being with thee when we know it not.

By selecting a religious image in which to convey the purely naturalistic sense of hush, the octave infuses the natural scene with hints of a wider circumference, supernatural in scope. The sestet turns from scene to agent; indeed, the octave is all scene, the sestet all agent. But by the logic of the scene-agent ratio, if the scene is supernatural in quality, the agent contained by this scene will partake of the same supernatural quality. And so, spontaneously, purely by being the kind of agent that is at one with this kind of scene, the child is “divine.” The contents of a divine container will synecdochically share in its divinity.

Swift’s satire on philosophers and mathematicians, the Laputans in the third book of *Gulliver’s Travels*, offers a good instance of the way in which the scene-agent ratio can be used for the depiction of character. To suggest that the Laputans are, we might say, “up in the air,” he portrays them as living on an island that floats in space. Here the nature of the inhabitants is translated into terms of their habitation.

Variants of the scene-agent ratio abound in typical nineteenth-century thought, so strongly given to the study of motives by the dialectic

pairing of people and things (man and nature, agent and scene). The ratio figures characteristically in the idealist's concern with the *Einklang zwischen Innen- und Aussenwelt*.¹ The paintings of the pointillist Seurat carry the sense of consistency between scene and agent to such lengths that his human figures seem on the point of dissolving into their background. However, we here move beyond strictly scene-agent matters into the area better covered by our term, agency, since the extreme impression of consistency between scene and agent is here conveyed by stressing the distinctive terms of the method, or medium (that is, agency), which serves as an element common to both scene and agents.

The logic of the scene-agent ratio has often served as an embarrassment to the naturalistic novelist. He may choose to "indict" some scene (such as bad working conditions under capitalism) by showing that it has a "brutalizing" effect upon the people who are indigenous to this scene. But the scene-agent ratio, if strictly observed here, would require that the "brutalizing" situation contain "brutalized" characters as its dialectical counterpart. And thereby, in his humanitarian zeal to save mankind, the novelist portrays characters which, in being as brutal as their scene, are not worth saving. We could phrase this dilemma in another way: our novelist points up his thesis by too narrow a conception of scene as the motive-force behind his characters; and this restricting of the scene calls in turn for a corresponding restriction upon personality, or role.

Further Instances of These Ratios

The principles of consistency binding scene, act, and agent also lead to reverse applications. That is, the scene-act ratio either calls for acts in keeping with scenes or scenes in keeping with acts—and similarly with the scene-agent ratio. When Lavinia instructs Seth to nail fast the shutters and throw out the flowers, by her command (an act) she brings it about that the scene corresponds to her state of mind. But as soon as these scenic changes have taken place, they in turn become

¹"Harmony between the inner life and the external world." [Ed.]

the motivating principle of her subsequent conduct. For the complete embodiment of her purposes functions as a "command" to her; and she obeys it as a response to a stimulus, like a pure automaton moved by the sheer disposition of material factors.

In behavioristic metaphysics (behaviorists would call it No Metaphysics) you radically truncate the possibilities of drama by eliminating action, reducing action to sheer motion. The close of the O'Neill play follows this same development from action to motion, a kind of inverted transcendence. Because of this change, Lavinia's last moments must be relegated to stage directions alone. She does not *act*, she is automatically *moved*. The trilogy did not end a moment too soon; for its close represented not only the end of Lavinia, but the end of the motivating principle of drama itself. The playwright had here obviously come to the end of a line. In his next plays he would have to "turn back." For he could have "gone on" only by abandoning drama for some more "scientific" form. (He might have transcended drama scientifically, for instance, by a collating of sociological observations designed to classify different types of motorist and to correlate them with different types of response to traffic signals.)

We noted how, in Ibsen's drama, the hero's state of mind after his conflict with the townspeople was objectified in such scenic properties as his torn clothing, and the broken windows and general disorder of his study. It is obvious that one might have carried this consistency further in either direction (for instance, spreading it more environmentally, as were we to enlist turbulent weather as an aspect of the scene, or more personally, as were we to enlist facial expressions and postures of the body, which of course the actor does, in interpreting his role, regardless of the playwright's omissions). If you took the hero's state of mind as your point of departure here, you could say that the whole scene becomes a mere aspect of the role, or person ("agent")—or that the physical body of the agent is itself but "scenic," to be listed among the person's "properties," as with a dwelling that a man had ordered built in strict accordance with his own private specifications, or as theologians see in "body" the dwelling place of "soul." We ob-

serve the same ratio in Swift's account of his Laputans when, to suggest that in their thinking they could be transcendental, or introvert, or extremely biased, but never well balanced, he writes: "Their heads were all inclined, either to the right or to the left; one of their eyes turned inward, and the other directly up to the zenith." But lest our speculations seem too arbitrary, let us cite one more anecdote, this time from a tiny drama enacted in real life, and here reported to illustrate how, when a state of mind is pronounced in quality, the agent may be observed arranging a corresponding pattern in the very properties of the scene.

The occasion: a committee meeting. The setting: a group of committee members bunched about a desk in an office, after hours. Not far from the desk was a railing; but despite the crowding, all the members were bunched about the chairman at the desk, inside the railing. However, they had piled their hats and coats on chairs and tables outside the pale. General engrossment in the discussion. But as the discussion continued, one member quietly arose, and opened the gate in the railing. As unnoticeably as possible, she stepped outside and closed the gate. She picked up her coat, laid it across her arm, and stood waiting. A few moments later, when there was a pause in the discussion, she asked for the floor. After being recognized by the chairman, she very haltingly, in embarrassment, announced with regret that she would have to resign from the committee.

Consider with what fidelity she had set the scene for this pattern of severance as she stepped beyond the railing to make her announcement. Design: chairman and fellow members within the pale, sitting, without hats and overcoats—she outside the pale, standing, with coat over her arm preparatory to departure. She had strategically modified the arrangement of the scene in such a way that it implicitly (ambiguously) contained the quality of her act.

Ubiquity of the Ratios

If we but look about us, we find examples of the two ratios everywhere; for they are at the very centre of motivational assumptions. But to dis-

cern them in their ubiquity, we must remain aware of the many guises which the five terms may assume in the various casuistries. In the introduction to his *Discourses*, for instance, Machiavelli complains that people read history without applying its lessons, "as though heaven, the sun, the elements, and men had changed the order of their motions and power, and were different from what they were in ancient times." For our purposes, the quotation could be translated, "as though human agents and both the supernatural and the natural scenes had changed, with a corresponding change in the nature of motives."

Besides general synonyms for scene that are obviously of a background character, such as "society," or "environment," we often encounter quite specific localizations, words for particular places, situations, or eras. "It is 12:20 P.M." is a "scenic" statement. Milton's *L'Allegro* and *Il Penseroso* are formed about a scenic contrast between morning and night, with a corresponding contrast of actions. Terms for historical epochs, cultural movements, social institutions (such as "Elizabethan period," "romanticism," "capitalism") are scenic, though often with an admixture of properties overlapping upon the areas covered by the term, agent. If we recall that "ideas" are a property of agents, we can detect this strategic overlap in Locke's expression, "the scene of ideas," the form of which Carl Becker exactly reproduces when referring to "climates of opinion," in *The Heavenly City of the Eighteenth-Century Philosophers*.

The word "ground," much used in both formal philosophy and everyday speech when discussing motives, is likewise scenic, though readily encroaching upon the areas more directly covered by "agent" and "purpose." We can discern the scenic reference if the question, "On what grounds did he do this?" is translated: "What kind of scene did he say it was, that called for such an act?" Hegelian idealism exploits the double usage (ground as "background" and ground as "reason") by positing "Reason" as the ultimate ground, the *Grundprinzip*, of all history. Thus, whereas historicism regularly treats historical scenes as the background, or motive, of individual developments, Hegel would treat Reason as the background, or motive, of historical sequence

in general. Let us not worry, at this point, what it may “mean” to say that “Reason” is at once the mover of history and the substance of which history is made. It is sufficient here to note that such terministic resources were utilized, and to detect the logic of the pentad behind them.

The maxim, “terrain determines tactics,” is a strict localization of the scene-act ratio, with “terrain” as the casuistic equivalent for “scene” in a military calculus of motives, and “tactics” as the corresponding “act.”

Political commentators now generally use the word “situation” as their synonym for scene, though often without any clear concept of its function as a statement about motives. Many social psychologists consciously use the term for its motivational bearing (it has a range extending from the broadest concepts of historical setting down to the simplified, controlled conditions which the animal experimenter imposes upon his rats in a maze). The Marxist reference to “the objective situation” is explicitly motivational, and the theorists who use this formula discuss “policies” as political acts enacted in conformity with the nature of scenes. However, the scene-act ratio can be applied in two ways. It can be applied deterministically in statements that a certain policy *had* to be adopted in a certain situation, or it may be applied in hortatory statements to the effect that a certain policy *should be* adopted in conformity with the situation. The deterministic usage (in scene-agent form) was exemplified in the statement of a traveller who, on arriving from France under German domination, characterized the politicians as “prisoners of the situation.” And the hortatory usage was exemplified when a speaker said that President Roosevelt should be granted “unusual powers” because our country was in an “unusual international situation.” In a judgment written by Justice Hugo L. Black, the Supreme Court ruled that it was not “beyond the war powers of Congress and the Executive to exclude those of Japanese ancestry from the West Coast area at the time they did.” And by implication, the scene-act ratio was invoked to substantiate this judgment:

When under conditions of modern warfare our shores are threatened by hostile forces, the power

to protect must be commensurate with the threatened danger.

Among the most succinct instances of the scene-act ratio in dialectical materialism is Marx’s assertion (cited also by Lenin in *The State and Revolution*), that “Justice can never rise superior to the economic conditions of society and the cultural development conditioned by them.” That is, in contrast with those who would place justice as a property of personality (an attribute purely of the *agent*), the dialectical materialist would place it as a property of the *material situation* (“economic conditions”), the scene in which justice is to be enacted. He would say that no higher quality of justice can be enacted than the nature of the scenic properties permits. Trotsky gave the same form an ironic turn when he treated Stalinist policies as the inevitable result of the attempt to establish socialism under the given conditions. That is, you can’t get a fully socialist *act* unless you have a fully socialist *scene*, and for the dialectical materialist such a scene requires a high stage of industrial development.

And there is a variant of the usage in Coleridge (in his early libertarian and “necessitarian” period, when he was exalted with thoughts of “aspheterism”). Concerning “Pantisocracy” (the plan of Coleridge, Southey, and their associates to found a communistic colony on the banks of the Susquehanna), he wrote that it would “make virtue inevitable.” That is, the colonists were to arrange a social situation of such a sort that virtuous acts would be the logical and spontaneous result of conditions.

As for “act,” any verb, no matter how specific or how general, that has connotations of consciousness or purpose falls under this category. If one happened to stumble over an obstruction, that would be not an act, but a mere motion. However, one could convert even this sheer accident into something of an act if, in the course of falling, one suddenly *willed* his fall (as a rebuke, for instance, to the negligence of the person who had left the obstruction in the way). “Dramatistically,” the basic unit of action would be defined as “the human body in conscious or purposive motion.” Hence we are admonished that people often speak of action in a purely figurative sense

when they have only motion in mind, as with reference to the action of a motor, or the interaction of forces. Terms like “adjustment” and “adaptation” are ambiguously suited to cover both action and sheer motion, so that it is usually difficult to decide in just which sense a thinker is using them, when he applies them to social motives. This ambiguity may put them in good favor with those who would deal with the human realm in a calculus patterned after the vocabularies of the physical sciences, and yet would not wholly abandon vestiges of “animism.” Profession, vocation, policy, strategy, tactics are all concepts of action, as are any words for specific vocations. Our words “position,” “occupation,” and “office” indicate the scenic overtones in action. Our words for particular “jobs” under capitalist industrialism refer to acts, but often the element of action is reduced to a minimum and the element of sheer motion raised to a maximum. (We here have in mind not only certain near-automatic tasks performed to the timing of the conveyor belt, but also many of the purely clerical operations, filing, bookkeeping, recording, accounting, and the like, necessary to the present state of technology.)

When Christ said, “I am the way” (*hodos*), we could translate, “I am the act,” or more fully, “I represent a system, or synthesis, of the right acts.” *Tao* and *yoga* are similar words for act. And we see how readily act in this sense can overlap upon agency when we consider our ordinary attitude towards scientific method (*methodos*), which we think of pragmatically, not as a way of life, or *act of being*, but as a *means of doing*.

The Greek word for justice (*diké*) was in its beginnings as thoroughly an “act” word as *tao*, *yoga*, and *hodos*. Originally it meant *custom*, *usage*, *manner*, *fashion*. It also meant *right*. The connection between these two orders of meaning is revealed in our expression, “That sort of thing just isn’t done,” and in the fact that our word “morality” comes from a Latin word for “custom,” Liddell and Scott’s lexicon notes that in the *Odyssey* the word is used of mortals, gods, kings, and suitors, referring to their *custom*, *way of acting*, *law of being*. After the homogeneous tribal pattern of Greek life (with its one “way” or

“justice” shared by all) had dissolved into a political state, with its typical conflicts of property interests, *diké* became a word of the law courts. Hence, in post-Homeric usage, it refers to *legal justice*, the *right* which is presumed to be the object of law. In this form, it could represent a Platonic ideal, that might prevail over and above the real ways of the different social classes. This is the kind of justice that Marx was refuting by a sophisticated reversion to a more “Homeric” usage.

Range of All the Ratios

Though we have inspected two ratios, the five terms would allow for ten (scene-act, scene-agent, scene-agency, scene-purpose, act-purpose, act-agent, act-agency, agent-purpose, agent-agency, and agency-purpose). The ratios are principles of determination. Elsewhere in the Grammar we shall examine two of these (scene-purpose and agency-purpose) in other connections; and the rest will figure in passing. But the consideration of words for “ways” calls for special attention to the *act-agent* ratio.

Both act and agent require scenes that “contain” them. Hence the scene-act and scene-agent ratios are in the fullest sense positive (or “positional”). But the relation between act and agent is not quite the same. The agent does not “contain” the act, though its results might be said to “pre-exist virtually” within him. And the act does not “synecdochically share” in the agent, though certain ways of acting may be said to induce corresponding moods or traits of character. To this writer, at least, the act-agent ratio more strongly suggests a temporal or sequential relationship than a purely positional or geometric one. The agent is an author of his acts, which are descended from him, being good progeny if he is good, or bad progeny if he is bad, wise progeny if he is wise, silly progeny if he is silly. And, conversely, his acts can make him or remake him in accordance with their nature. They would be his product and/or he would be theirs. Similarly, when we use the scene-act and scene-agent ratios in reverse (as with the sequence from act or agent to corresponding scene) the image of derivation is stronger than the image of position.

One discerns the workings of the act-agent ratio in the statement of a former cabinet member to the effect that "you can safely lodge responsibility with the President of the United States," owing to "the tremendously sobering influence of the Presidency on any man, especially in foreign affairs." Here, the sheer nature of an office, or position, is said to produce important modifications in a man's character. Even a purely symbolic act, such as the donning of priestly vestments, is often credited with such a result. And I have elsewhere quoted a remark by a political commentator: "There seems to be something about the judicial robes that not only hypnotizes the beholder but transforms the wearer."

Ordinarily, the scene-act and scene-agent ratios can be extended to cover such cases. Thus, the office of the Presidency may be treated as a "situation" affecting the agent who occupies it. And the donning of vestments brings about a symbolic situation that can likewise be treated in terms of the scene-agent ratio. But there are cases where a finer discrimination is needed. For instance, the resistance of the Russian armies to the Nazi invasion could be explained "scenically" in terms of the Soviet political and economic structure; or one could use the act-agent ratio, attributing the power and tenacity to "Russian" traits of character. However, in deriving the act from the scene, one would have to credit socialism as a major scenic factor, whereas a derivation of the act from the agents would allow for a much more felicitous explanation from the standpoint of capitalist apologetics.

Thus, one of our leading newspapers asked itself whether Hitler failed "to evaluate a force older than communism, more instinctive than the mumbling cult of Stalin—the attachment of the peasant masses to 'Mother Russia,' the incoherent but cohesive force of Russian patriotism." And it concluded that "the Russian soldier has proved the depth of his devotion to the Russian soil." Patriotism, attachment to the "mother," devotion to the soil—these are essentially motives located in the agent, hence requiring no acknowledgment of socialist motives.

There is, or course, scenic reference in the offering; but the stress upon the term, agent, encourages one to be content with a very vague treat-

ment of scene, with no mention of the political and economic factors that form a major aspect of national scenes. Indeed, though our concern here is with the Grammar of Motives, we may note a related resource of Rhetoric: one may deflect attention from scenic matters by situating the motives of an act in the agent (as were one to account for wars purely on the basis of a "warlike instinct" in people): or conversely, one may deflect attention from the criticism of personal motives by deriving an act or attitude not from traits of the agent but from the nature of the situation.

The difference between the use of the scene-act and act-agent ratios can also be seen in the motivations of "democracy." Many people in Great Britain and the United States think of these nations as "vessels" of democracy. And democracy is felt to reside in us, intrinsically, because we are "a democratic people." Democratic acts are, in this mode of thought, derived from democratic agents, agents who would remain democratic in character even though conditions required the temporary curtailment or abrogation of basic democratic rights. But if one employed, instead, the scene-act ratio, one might hold that there are certain "democratic situations" and certain "situations favorable to dictatorship, or requiring dictatorship." The technological scene itself, which requires the planning of a world order, might be thought such as to favor a large measure of "dictatorship" in our political ways (at least as contrasted with the past norms of democracy). By the act-agent ratio, a "democratic people" would continue to perform "democratic acts"; and to do so they would even, if necessary, go to the extent of restoring former conditions most favorable to democracy. By the scene-act ratio, if the "situation" itself is no longer a "democratic" one, even an "essentially democratic" people will abandon democratic ways.

A picturesque effect can be got in imaginative writings by the conflicting use of the scene-act and act-agent ratios. One may place "fools" in "wise situations," so that in their acts they are "wiser than they know." Children are often "wise" in this sense. It is a principle of incongruity that Chaplin has built upon. Empson would call it an aspect of "pastoral."

Here is an interesting shift of ratios in a cita-

tion from an address by Francis Biddle when he was Attorney General:

The change of the world in terms of time and space in the past hundred years—railroad, telegraph, telephone, automobile, movie, airplane, radio—had hardly found an echo in our political growth, except in the necessary patches and arrangements which have made it so extraordinarily complex without making it more responsive to our needs.

Note first that all the changes listed here refer to *agencies* of communication (the pragmatist emphasis). Then, having in their accumulation become scenic, they are said to have had a motivating effect upon our political acts (“growth”). But though the complexity of the scene has called forth “the necessary patches and arrangements” (another expression for “acts”), we are told that there are still unsatisfied “needs.” Now, “needs” are a property of agents; hence an act designed to produce a situation “more responsive to our needs” would have its most direct locus of motivation under the heading of agent, particularly if these were said to be “primal needs” rather than “new needs,” since “new needs” might best be treated as “a function of the situation.” I borrow the expression from a prominent educator, Edward C. Lindeman, who shortly after the Japanese attack at Pearl Harbor complained of a tendency “to believe that morale will now become a function of the situation and that hence it is less important to plan for education.”

The ratios may often be interpreted as principles of selectivity rather than as thoroughly causal relationships. That is, in any given historical situation, there are persons of many sorts, with a corresponding variety in the kinds of acts that would be most representative of them. Thus, a given political situation may be said not to change people in their essential character, but rather to favor, or bring to the fore (to “vote for”), certain kinds of agents (with their appropriate actions) rather than others. Quick shifts in political exigencies do not of a sudden make all men “fundamentally” daring, or all men “fundamentally” cautious, in keeping with the nature of the scene; but rather, one situation calls for cautious men as its appropriate “voice,” another for daring men, one for traditionalists, another for in-

novators. And the inappropriate acts and temperaments simply do not “count for” so much as they would in situations for which they are a better fit. One set of scenic conditions will “implement” and “amplify” given ways and temperaments which, in other situations would remain mere potentialities, unplanted seeds, “mute inglorious Miltons.” Indeed, there are times when out-and-out materialistic philosophies, which are usually thought of as “tough,” can be of great solace to us precisely because they encourage us to believe in the ratios as a selective principle. For we may tell ourselves that the very nature of the materials with which men deal will not permit men to fall below a certain level of sloth, error, greed, and dishonesty in their relations with one another, as the cooperative necessities of the situation implement and amplify only those traits of character and action that serve the ends of progress.

There is, of course, a circular possibility in the terms. If an agent acts in keeping with his nature as an agent (act-agent ratio), he may change the nature of the scene accordingly (scene-act ratio), and thereby establish a state of unity between himself and his world (scene-agent ratio). Or the scene may call for a certain kind of act, which makes for a corresponding kind of agent, thereby likening agent to scene. Or our act may change us and our scene, producing a mutual conformity. Such would be the Edenic paradigm, applicable if we were capable of total acts that produce total transformations. In reality, we are capable of but partial acts, acts that but partially represent us and that produce but partial transformations. Indeed, if all the ratios were adjusted to one another with perfect Edenic symmetry, they would be immutable in one unending “moment.”

Theological notions of creation and recreation bring us nearest to the concept of total acts. Among the controversies that centered around Lutheranism, for instance, there was a doctrine, put forward by the theologian Striegel, who held that Christ’s work on the Cross had the effect of changing God’s attitude towards mankind, and that men born after the historical Christ can take advantage of this change. Here we have something like the conversion of God himself, brought about by Christ’s sacrifice (a total action, a total

passion). From the godlike nature came a godlike act that acted upon God himself. And as regards mankind, it amounts to a radical change in the very structure of the Universe, since it changed God's attitude towards men, and in God's attitude towards men resides the ultimate ground of human action.

A similar pattern is implicated in the close of Aeschylus's trilogy, the *Oresteia*, where the sufferings of Orestes terminate in the changed identity of the Furies, signalized by their change of name from Erinyes to Eumenides. Under the influence of the "new gods," their nature as motives takes on a totally different accent; for whereas it was their previous concern to avenge evil, it will henceforth be their concern to reward the good. An *inner* goad has thus been cast forth, externalized; whereby, as Athena says, men may be at peace within, their "dread passion for renown" thereafter being motivated solely by "war from without."

Only the scene-act and scene-agent ratios fit with complete comfort in this chapter on the relation between container and contained. The act-agent ratio tugs at its edges; and we shall close noting concerns that move us still farther afield. In the last example, we referred to God's *attitude*. Where would attitude fall within our pattern? Often it is the *preparation* for an act, which would make it a kind of symbolic act, or incipient act. But in its character as a state of *mind* that may or may not lead to an act, it is quite clearly to be classed under the head of *agent*. We also spoke of Christ's sacrifice as "a total action, a total passion." This suggests other "grammatical" possibilities that involve a dialectic pairing of "active" and "passive." And in the reference to a *state* of mind, we casually invite a dialectic pairing of "actus" and "status."²

This group of concerns will be examined in due course. Meanwhile, we should be reminded that the term *agent* embraces not only all words general or specific for person, actor, character, individual, hero, villain, father, doctor, engineer, but also any words, moral or functional, for *patient*, and words for the motivational properties or agents, such as "drives," "instincts," "states of mind." We may

²"Action" and "condition." [Ed.]

also have collective words for agent, such as nation, group, the Freudian "super ego," Rousseau's "*volonté générale*,"³ the Fichtean "generalized I."

ANTINOMIES OF DEFINITION

Paradox of Substance

There is a set of words comprising what we might call the Stance family, for they all derive from a concept of place, or placement. In the Indo-Germanic languages the root for this family is *stā*, to stand (Sanskrit, *sthā*). And out of it there has developed this essential family, comprising such members as: consist, constancy, constitution, contrast, destiny, ecstasy, existence, hypostatize, obstacle, stage, state, status, statute, stead, subsist, and system. In German, an important member of the Stance family is *stellen*, to place, a root that figures in *Vorstellung*, a philosopher's and psychologist's word for representation, conception, idea, image.

Surely, one could build a whole philosophic universe by tracking down the ramifications of this one root. It would be "implemented" too, for it would have stables, staffs, staves, stalls, stamens, stamina, stanchions, stanzas, steeds, stools, and studs. It would be a quite regional world, in which our Southern Agrarians might take their stand.⁴

Unquestionably, the most prominent philosophic member of this family is "substance." Or at least it used to be, before John Locke greatly impaired its prestige, so that many thinkers today explicitly banish the term from their vocabularies. But there is cause to believe that, in banishing the *term*, far from banishing its *functions* one merely conceals them. Hence, from the dramatic point of view, we are admonished to dwell upon the word, considering its embarrassments and its potentialities of transformation, so that we may detect its covert influence even in cases where it is overtly absent. Its relation to our five terms will become apparent as we proceed.

³"General will" (i.e., the will of society). [Ed.]

⁴*I'll Take My Stand: The South and the Agrarian Tradition* (1930) is the manifesto of the Southern Agrarian movement headed by, among others, John Crowe Ransom, Robert Penn Warren, and Allen Tate. [Ed.]

First we should note that there is, etymologically, a pun lurking behind the Latin roots. The word is often used to designate what some thing or agent intrinsically is, as *per* these meanings in Webster's: "the most important element in any existence; the characteristic and essential components of anything; the main part; essential import; purport." Yet etymologically "substance" is a scenic word. Literally, a person's or a thing's substance would be something that stands beneath or supports the person or thing.

Let us cite a relevant passage in *An Essay Concerning Human Understanding* (Chapter XXIII, "Of Our Complex Ideas of Substances"):

1. *Ideas of particular substances, how made.*

The mind being, as I have declared, furnished with a great number of the simple ideas conveyed in by the senses, as they are found in exterior things, or by reflection on its own operations, takes notice, also, that a certain number of these simple ideas go constantly together; which being presumed to belong to one thing, and words being suited to common apprehensions, and made use of for quick despatch, are called, so united in one subject, by one name; which, by inadvertency, we are apt afterward to talk of and consider as one simple idea, which indeed is a complication of many ideas together; because, as I have said, not imagining how these simple ideas can subsist by themselves, we accustom ourselves to suppose some *substratum*, wherein they do subsist, and from which they do result; which therefore we call *substance*.

2. *Our obscure idea of substance in general.* —

So that if anyone will examine himself concerning his notion of pure substance in general, he will find he has no other idea of it at all, but only a supposition of he knows not what support of such qualities which are capable of producing simple ideas in us; which qualities are commonly called accidents. If anyone should be asked, what is the subject wherein color or weight inheres, he would have nothing to say but, the solid extended parts. And if he were demanded, what is it that solidity and extension inhere in, he would not be in a much better case than the Indian before mentioned, who, saying that the world was supported by a great elephant, was asked, what the elephant rested on; to which his answer was, a great tortoise; but being again pressed to know what gave support to the broad-backed tortoise, replied—something, he knew not

what. And thus here, as in all other cases where we use words without having clear and distinct ideas, we talk like children: who, being questioned what such a thing is which they know not, readily give this satisfactory answer, that it is *something*; which in truth signifies no more, when so used, either by children or men, but that they know not what; and that the thing they pretend to know and talk of, is what they have no distinct idea of at all, and so are perfectly ignorant of it, and in the dark. The idea, then, we have, to which we give the *general* name substance, being nothing but the supposed, but unknown support of those qualities we find existing, which we imagine cannot subsist *sine re substante*, "without something to support them," we call that support *substantia*; which according to the true import of the word, is, in plain English, standing under, or upholding.

The same structure is present in the corresponding Greek word, *hypostasis*, literally, a standing under: hence anything set under, such as stand, base, bottom, prop, support, stay; hence metaphorically, that which lies at the bottom of a thing, as the groundwork, subject matter, argument of a narrative, speech, poem; a starting point, a beginning. And then come the metaphysical meanings (we are consulting Liddell and Scott): subsistence, reality, real being (as applied to mere appearance), nature, essence. In ecclesiastical Greek, the word corresponds to the Latin *Persona*, a Person of the Trinity (which leads us back into the old argument between the homoousians and the homoiousians, as to whether the three persons were of the same or similar substance). Medically, the word can designate a suppression, as of humours that ought to come to the surface; also matter deposited in the urine; and of liquids generally, the sediment, lees, dregs, grounds. When we are examining, from the standpoint of the Symbolic, metaphysical tracts that would deal with "fundamentals" and get to the "bottom" of things, this last set of meanings can admonish us to be on the lookout for what Freud might call "cloacal" motives, furtively interwoven with speculations that may on the surface seem wholly abstract. An "acceptance" of the universe on this plane may also be a roundabout way of "making peace with the faeces."

But returning to the pun as it figures in the citation from Locke, we might point up the pattern

as sharply as possible by observing that the word "substance," used to designate what a thing *is*, derives from a word designating something that a thing *is not*. That is, though used to designate something *within* the thing, *intrinsic* to it, the word etymologically refers to something *outside* the thing, *extrinsic* to it. Or otherwise put: the word in its etymological origins would refer to an attribute of the thing's *context*, since that which supports or underlies a thing would be a part of the thing's context. And a thing's context, being outside or beyond the thing, would be something that the thing *is not*. . . .

Intrinsic and Extrinsic

The treatment of material properties as a "state" brings the actus-status pair in line with the distinction between intrinsic and extrinsic substance, or between motivations within the agent and motivations derived from scenic sources that "support" (or "substand") the agent. In the introduction to his *Philosophy of History*, where Hegel places Matter in dialectical opposition to Spirit, he clearly begins by equating Matter with the extrinsic aspect of substance and Spirit with its intrinsic aspect:

As the essence of Matter is Gravity, so, on the other hand, we may affirm that the substance, the essence of Spirit is Freedom. . . . Matter possesses gravity in virtue of its tendency toward a central point. It is essentially composite; consisting of parts that *exclude* each other. It seeks its Unity; and therefore exhibits itself as self-destructive, as verging toward its opposite (an indivisible point). If it could attain this, it would be Matter no longer, it would have perished. It strives after the realization of its Idea; for in Unity it exists *ideally*. Spirit, on the contrary, may be defined as that which has its centre in itself. It has not a unity outside itself, but has already found it; it exists *in and with itself*. Matter has its essence out of itself; Spirit is *self-contained existence* (Bei-sich-selbst-sein). Now this is freedom, exactly. For if I am dependent, my being is referred to something else which I am not; I cannot exist independently of something external. I am free, on the contrary, when my existence depends upon myself.

However, before he has proceeded very far, remarks on the relation between the potential and

the actual lead into the peculiarly Hegelian theory of the State as the vessel of freedom. For the Spirit is free, we are told, and the State is "the perfect embodiment of Spirit." But by the time we arrive at this point, the intrinsic and the extrinsic have begun subtly to change places. One can discern the ambiguity by experimentally shifting the accent in Hegel's formula for the nature of the State. We may say either "embodiment of *Spirit*" or "*embodiment* of Spirit." Or, since "embodiment" is here a synonym for "materialization," we could make the ambiguity still more apparent by rephrasing it as a choice between "materialization of *Spirit*" and "*materialization* of Spirit." For the expression itself is got by the merging of antithetical terms. Hence, when you have put them together, by shifting the stress you can proclaim one or the other as the essence of the pair. Accepting Hegel's definition of Matter, only a State that is the "materialization of *Spirit*" would be "essentially" free. But a State that is the "*materialization* of Spirit" would be the very *antithesis* of freedom (and this was precisely the interpretation given by the Marxist reversal of the Hegelian dialectic).

Indeed, we can take it as a reliable rule of thumb that, whenever we find a distinction between the internal and the external, the intrinsic and the extrinsic, the within and the without, (as with Korzybski's distinction between happenings "inside the skin" and happenings "outside the skin") we can expect to encounter the paradoxes of substance.

Recently, for instance, a "gerontologist," whose specialty is the study of "aging as a physiological process," is reported to have said in an address to a body of chemists:

Aging, like life in general, is a chemical process, and just as chemistry has been able to improve on nature in many respects, virtually creating a new world by reshuffling nature's molecules, so it may be expected that eventually chemistry will learn to stimulate artificially those powers of "intrinsic resistance" to disease with which man is born.

"Intrinsic resistance," you will note, is a concept that situates a motivational source within the body as agent. But the use of chemical means to stimulate this internal motive would involve the

transformation of this "intrinsic" motive into an "extrinsic" motive, since it would become but the channel or vessel through which the chemical materials ("scenic," administered "from without") would affect the chemistry of the body. Indeed, since the body is but chemistry, and all outside the body is but chemistry, the very mode of thought that forms a concept of the "intrinsic" in these terms must also by the same terms dissolve it. Everything being chemical, the physiological center of "intrinsic resistance" is but a function of the chemical scene. In fact, insofar as chemical stimulants of the required sort were found, a dependence upon them would be a dependence upon purely *external* agencies. And far from "stimulating" intrinsic resistance, the chemicals should be expected to cause a *weakening* of it, to the extent that the economy of the body grew to require these chemicals. The only place where an intrinsic motive, as a genuinely internal activation, could be said to figure in materialistic medicine is on the occasions when physicians come upon illnesses in which the chances of recovery are felt to depend upon the *mental attitude* of the patient (whether he "wants" to recover). Here one has an intrinsic motive (involving an action) in contrast with such a motive as is supplied by the administering of chemicals (involving sheer motion).

One of the most common fallacies in the attempt to determine the intrinsic is the equating of the intrinsic with the unique. We recall an instance of this nominalist extreme in an essay by a literary critic who exhorted his fellows to discern the quality of a given poet's lines by finding in exactly what way they were distinct from the lines of every other poet (somewhat as advertisements recommending rival brands of the same product play up some one "talking point" that is said to distinguish this brand from all its competitors). Yet the intrinsic value of a poet's lines must also reside, to a very great degree, in attributes that his work shares with many other poets. We cannot define by differentia alone; the differentiated also has significant attributes as members of its class. The heresy that would define human nature solely in terms of some more inclusive category, such as chemistry, or protoplasm, or colloids, has as its over-compensatory

counterpart the heresy that would define solely in terms of distinctive traits, actual or imputed. Thus, an article in one of our best magazines is recommended on the grounds that it "applies anthropological method to the diagnosis of our distinctive cultural traits." This is, to be sure, a legitimate limitation of subject matter for treatment within the scope of one article; but we should be admonished against the assumption that even a wholly accurate description of our culture in terms of its distinctive traits alone could possibly give us a just interpretation of its motives. Indeed, we can discern a variant of the same error in nationalist and regionalist concepts of motivation as we get in the oversimplifications of literature: the treatment of motivational parts as though they were the motivational whole.

The search for the intrinsic frequently leads to the selection of calculi postulating various assortments of "instincts," "drives," "urges," etc. as the motivational springs of biologic organisms in general and of human organisms in particular. Materialistic science prefers this style of vocabulary because it assigns *scenic* terms to motives situated in the *agent*; and scenic words generally seem so much more "real" than other words, even though such lists can be expanded or contracted *ad lib.*, quite as suits one's dialectical preferences. Though the treatment of intrinsic motivation in such terms is usually made in good faith, it can also well serve as a rhetorical deflection of social criticism. For instance, if a reformer would advocate important political or social changes on the ground that the present state of affairs stimulates wars, he can be "scientifically refuted" by a calculus which postulates a "combative instinct," or "drive towards aggression," or "natural urge to kill" in all people or certain types of people. For if such motives are intrinsic to human agents, they may be expected to demand expression whatever the social and political structure may be.

When a person has his mind set upon the interpreting of human motivation in a calculus that features an innate "combative instinct" or "natural urge to kill," one may as well accept his decision as a stubborn fact of nature; instead of trying to dispel it, one should try to get around it. Recalling the paradox of substance, for instance,

we are reminded that such “drives” or “urges” are like “tendencies” or “trends,” which we discussed when on the subject of “directional” substance. And the man who would postulate an “instinct to kill” can be asked to round out his dialectic by postulating a contrary “instinct not to kill.” For there is certainly as much empirical evidence that men let one another live as there is evidence that they kill one another. Hence, whenever such words designate motives that may or may not prevail, we can at least insist that they be balanced with their dialectical counterpart. And once the pattern is thus completed, we are able to see beyond these peculiarly “intrinsic” motives to “extrinsic” or “scenic” motives, in the sense of situations which stimulate one rather than the other of the paired motives, as some situations call forth a greater amount of combativeness and destructiveness, whereas other situations call forth a greater amount of cooperation and construction. (There are, of course, complications here that require much more discriminatory calculation than could be got by confinement to such pairings. A certain kind of cooperation is stimulated by war, for instance, both at the time and as the result of new methods which, originally designed for military aggression, can later be adapted for peaceful commercial exchange.)

Spinoza defines substance as “the cause of itself” (*causa sui*). And we can see how this formulation applies to the search for the intrinsic when we contrast supernaturalist and humanist strategies of motivation. Supernaturalist strategies derive the attributes of human substance and motive from God as their ancestral source, whereas humanistic strategies situate the motivational principles within human agents themselves. In brief, humanists assign to man an *inherent* or *intrinsic* dignity, whereas supernaturalists assign to man a *derived* dignity. Any motive humanistically postulated in the agent would be a *causa sui* insofar as it is not deduced from any cause outside itself.

Since agents require placement in scenes, humanism gets its scenic counterpart in naturalism. There is also, of course, a “supernaturalist humanism,” but it would be exactly the same as the kind of doctrine we here call simply supernaturalism. And similarly what we here call human-

ism could be characterized more fully as “naturalistic humanism,” or simply “naturalism,” as in the following citation from an essay by John Dewey, assigning an intrinsic motive to human nature:

Naturalism finds the values in question, the worth and dignity of men and women, founded in human nature itself, in the connections, actual and potential, of human beings with one another in their natural social relationships. Not only that, but it is ready at any time to maintain the thesis that a foundation within man and nature is a much sounder one than is one alleged to exist outside the constitution of man and nature.

By placing man and nature together, in dialectical opposition to the supernatural, Dr. Dewey’s remarks here somewhat conceal from us the fact that we are shifting between a scenic location for motives and a location within the agent. Only the second kind would be “intrinsic” to people; the other kind would be “derivative” from nature as scene instead of from super-nature as scene. (Both “foundation” and “constitution” are “stance” words, hence capable of merging intrinsic and extrinsic reference.)

It is possible that the reverse perspective so characteristic of Russian ikons may have originated in a theory of the intrinsic, as is indicated in this citation from *The Burlington Magazine* for October 1929 (“Greco: the Epilogue to Byzantine Culture,” by Robert Byron):

It has been suggested that the habit of inverted perspective which the Greeks perpetuated in Duccio and Giotto, derived from the artist’s imagining himself within the object portrayed; so that as it progressed in the direction of the beholder it necessarily diminished. Such indeed was the Byzantine vision of form as expressed in terms of light and dark. The head, the arm, was conceived primarily as a dark mass, instead of as a given space to be invested with form by the application of shadow. This principle is explicitly stated in Denys of Fourn’s “Guide to Painting” in relation to flesh depiction; and the interest of this instruction lies in the fact that it exhibits the exact converse of the rules for the same process prescribed in mediæval western manuals such as that of Cennino Cennini.

The notion of “the artist’s imagining himself within the object portrayed” would seem to carry

the cult of the intrinsic to the point where it exemplifies the paradox of purity, as with the wag who said that only the homosexual man can be the true admirer of women, since he carries his admiration to such an extent that, identifying himself with them, he adopts their very point of view, and thus falls in love with men. For an “intrinsic” observation of women would look, not towards women, but towards men.

The Rhetoric of Substance

The ambiguity of substance affords, as one might expect, a major resource of rhetoric. We can appreciate this by referring again to the citation from Locke, when he says that in speaking of substance “we talk like children: who, being questioned what such a thing is which they know not, readily gives this satisfactory answer, that it is *something*; which in truth signifies no more, when so used, either by children or men, but that they know not what; and that the thing they pretend to know and talk of, is what they have no distinct idea of at all, and so are perfectly ignorant of it, and in the dark.” For “the *general* name substance” is “nothing but the supposed, but unknown, support of those qualities we find existing.” The most clear-sounding of words can thus be used for the vaguest of reference, quite as we speak of “a certain thing” when we have no particular thing in mind. And so rock-bottom a study as a treatise on the nature of substance might, from this point of view, more accurately be entitled, “A Treatise on the Nature of I-don’t-know-what.” One might thus express a state of considerable vagueness in the imposing accents of a juridic solidity.

We may even go a step further and note that one may say “it is *substantially* true” precisely at a time when on the basis of the evidence, it would be much more accurate to say, “it is not true.” And even a human slave could be defined in Christian doctrine as “substantially” free, by reason of qualities which he had inherited “substantially” from his creator. Even in cases where the nature of the case does not justify the usage grammatically, it can be used without strain for rhetorical purposes. What handier linguistic resource could a rhetorician want than an ambigui-

ty whereby he can say “The state of affairs is substantially such-and-such,” instead of having to say “The state of affairs *is* and/or *is not* such-and-such”?

There is a similar usage in the expression, “in principle” (a word furthermore that is literally a “first,” as we realize when we recall its etymological descent from a word meaning: beginning, commencement, origin). So diplomats can skirt some commendable but embarrassing proposal by accepting it “in principle,” a stylistic nicety that was once very popular with the League of Nations. Positivists who would discard the category of substance assert that the only meaningful propositions are those which are capable of scientific proof; and having thus outlawed the conveniences of a substantive rhetoric, they next blandly concede that the scientific proof is not always possible *actually*, but must be possible “in principle”—which would leave them pretty much where they began, except that their doctrine won’t allow them to admit it. By this device, we can even characterize as “universally valid” a proposition that may in fact be denied by whole classes of people. As one controversialist has phrased it: “To say that a proposition is valid is to say that *in principle* it can secure the universal agreement of all who abide by scientific method.”

Often, of course, this function of language is preserved when there are no such telltale expressions (such as “substantially,” “essentially,” “in principle,” or “in the long run”) to make it quickly apparent. For instance, a list of citizens’ signatures had been collected for a petition asking that a certain politician’s name be placed on the ballot. In court it was shown that some of these signatures were genuine, but that a great many others were false. Thereupon the judge invalidated the lot on the grounds that, the whole list being a mixture of the false and the genuine, it was “saturated” with fraud. He here ruled in effect that the list was substantially or essentially fraudulent. The judgment was reversed by a higher court which ruled that, since the required number of genuine signatures had been obtained, the false signatures should be simply ignored. That is, the genuine signatures should be considered in themselves, not contextually.

Two Kinds of Departure

Since the five key terms can be considered as “principles,” and since the margins of overlap among them permit a thinker to consider the genius of one term as “substantially” participant in the genius of another, the ambiguity of the substantial makes it possible to use terms as points of departure in two senses. Thus we may speak in the name of God because this expression is the summation of our thinking. Or precisely because we speak in the name of God, we may be freed to develop modes of thought that lead away from supernaturalism, since absolute conviction about religion might serve as ground for a study of nature. And whereas “naturalism” in its beginnings was a consistent title, referring to man in *nature*, it gradually became transformed into a surreptitiously compensatory title, referring to technological methods and ideals that are almost the antithesis of nature, with nature itself seen in terms of technology and the monetary. Thus, ironically, though much of the resonance in the term “nature” derives from the supernaturalist attitude, which thought of natural law as derivative from the divine, in time the *distinction* between the natural and the divine become transformed into a *contrast* between the natural and the divine. Or, if we think of “God” as the whole and “nature” as a part, we could say that the supernaturalist treated nature as a part *synecdochically* related to the whole, whereas in time naturalism treated this as a *divisive* relation. Or, to adopt a very suggestive usage in Charles M. Perry’s *Toward a Dimensional Realism*, the notion of nature as a *part of God* could be converted into the notion of nature as *apart from God*.

But insofar as this divisive emphasis developed, and the secular appeal of “nature” relied less and less upon connotations of the supernatural, “nature” gained resonance from a new source, the romantic reaction against the “unnatural” world progressively created by the technological “conquest” of nature. In this way the selection of “naturalism” as the name for a philosophy of applied science may be *compensatory* rather than *consistent* (somewhat as though one were to call a philosophy “humanistic” because it aimed at the systematic elimina-

tion of traits that were formerly considered characteristically human, or as religious doctrines of “personalism” may be formulated, not because the individual person really is in a position of paramount importance, but precisely because he is *not*).

Such tactics of entitling are as legitimate as any other, once the irony has been made explicit. Indeed, philosophies are never quite “consistent” in this sense. All thought tends to name things not because they are precisely as named, but because they are not quite as named, and the name is designated as a somewhat hortatory device, to take up the slack. As others have pointed out, for instance, if the philosophy of “utilitarianism” were wholly correct, there would be no need for the philosophy. For men would spontaneously and inevitably follow the dictates of utility; whereas in actuality the doctrine proclaiming the ubiquity of the utilitarian motive was formulated to serve as a *plea* for the deliberate consulting of the utilitarian motive.

From such ambiguity is derived that irony of historical development whereby the very strength in the affirming of a given term may the better enable men to make a world that departs from it. For the affirming of the term as their god-term enables men to go far afield without sensing a loss of orientation. And by the time the extent of their departure is enough to become generally obvious, the stability of the new order they have built in the name of the old order gives them the strength to abandon their old god-term and adopt another. Hence, noting that something so highly unnatural as technology developed under the name of naturalism, we might ironically expect that, were “technologism” to become the name for “naturalism,” the philosophy would be the first step towards a development *away from* technology. And as indication that this is no mere improvising, the philosophy of “operationalism,” modeled after technological procedures, embodies a totally different concept of meaning than the one which, we know as a historical fact, figured as an incentive in the *invention* of technological devices and their corresponding mathematical formulae. Hence, if carried out rigorously, it would lead to the *stabilization* of technological operations rather than to the development of new

ones. As “naturalism” would lead us, via technology, away from nature, so perhaps “operationalism” might be a way of leading us, in the name of technological operations, away from technology.

It has been said by one of Descartes’s editors, John Veitch, that when Descartes questioned an old dogma, rather than attacking it head on, he aimed at “sapping its foundations.” And he got rid of traditional principles “not so much by direct attack as by substituting for them new proofs and grounds of reasoning.” Veitch also quotes a defender of Descartes who says ironically that his enemies called him an atheist “apparently because he had given new proofs of the existence of God.” But these new proofs were in effect new qualifications of God. And in this capacity they subtly changed the nature of “God” as a term for motives, so that those who understood by a God only the character possessing the attributes of the old proofs were justified in calling Descartes an “atheist.” Here, subtly, the ambiguous resources in the point of departure were being utilized.

As regards the principles of humanism, we may note that a supernatural grounding of humanism is “consistent” in the sense that a personal principle is ascribed to the ultimate ground of human action. And having thus been put in, it is there for the philosopher to take out, when deriving the principles of specifically human action by deduction from the nature of the universal ground. A naturalistic grounding of humanism, on the other hand, is “compensatory,” in that personal agents are placed in a non-personal scene. The first strategy reasons by a “therefore,” the second by a “however.”

The Centrality of Substance

Contemporary scientific theory, in proposing to abandon the categories of substance and causality, has done speculation a good turn. For it has made clear wherein the difference between philosophic and scientific terminologies of motivation resides. Philosophy, like common sense, must think of human motivation dramatically, in terms of actions and its ends. But a science is freed of philosophic taints only insofar as it confines itself to terms of motion and arrested mo-

tion (figure, structure). This convention, almost Puritanical in its severity (surely we should not be far wrong in calling it a secularized variant of Puritanism) has brought about such magnification of human powers that any “objection” to it would have about as much force as an attempt to “refute” Niagara Falls. But such results, however spectacular, do not justify an attempt to abide by the same terminological conventions when treating of human motives. For one could confine the study of action within the terms of motion only by resigning oneself to gross misrepresentations of life as we normally experience it.

Though we here lay great stress upon the puns and other word play in men’s ideas of motivation, we do not thereby conclude that such linguistic tactics are “nothing but” puns and word play. Rather, we take it that men’s linguistic behavior here reflects real paradoxes in the nature of the world itself—antinomies that could be resolved only if men were able, not in thought, as with the program of Hegelian idealism, but in actual concrete operations, to create an entire universe.

However, strictly for the purposes of our Grammar, we need not defend as much. One might hypothetically grant that the treatment of motives in terms of “action” and “substance” is wholly fallacious, yet defend it as central to the placement of statements about motives. Relinquishing all claims for it as a “philosopher’s stone,” we might then make claims for it secondarily, as “a philosopher’s stone for the synopsis of writings that have sought the philosopher’s stone.” Men have talked about things in many ways, but the pentad offers a synoptic way to talk about their talk-about. For the resources of the five terms figure in the utterances about motives, throughout all human history. And even the most modern of scientific tracts can be adequately placed only as a development in this long line. From this point of view, terminologies of motion and “conditioning” are to be treated as *dialectical* enterprises designed to *transcend* terminologies of action and substance.

At the very best, we admit, each time you scrutinize a concept of substance, it dissolves into thin air. But conversely, the moment you relax your gaze a bit, it reforms again. For things

do have intrinsic natures, whatever may be the quandaries that crowd upon us as soon as we attempt to decide definitively what these intrinsic natures are. And only by systematically dwelling upon the paradoxes of substance could we possibly equip ourselves to guard against the concealment of "substantialist" thought in schemes overtly designed to avoid it. Yet these schemes are usually constructed by men who condemn dialectical operations so thoroughly that, in their aversion, they cannot adequately observe them, and are accordingly prompt to persuade themselves that *their* terminology is not dialectical, whereas every terminology is dialectical by sheer reason of the fact that it is a terminology. If you will, call the category of substance sheer error. Yet it is so fertile a source of error, that only by learning to recognize its nature *from within* could we hope to detect its many disguises from without. Such thoughts apply particularly to Alfred Korzybski's admonitions against Aristotelian "elementalism"; for his aversion leads to so evasive a treatment of the subject that in a very long book he contrives to convey little more than a *negative attitude* towards it.

So, in sum: The transformations which we here study as a Grammar are not "illusions," but citable realities. The structural relations involved are observable realities. Nothing is more imperiously there for observation and study than the tactics people employ when they would injure or gratify one another—and one can readily demonstrate the role of substantiation in such tactics. To call a man a friend or brother is to proclaim him consubstantial with oneself, one's values or purposes. To call a man a bastard is to attack him by attacking his whole line, his "authorship," his "principle" or "motive" (as expressed in terms of the familial). An epithet assigns substance doubly, for in stating the character of the object it at the same time contains an implicit program of action with regard to the object, thus serving as motive.

So, one could, if he wished, maintain that all theology, metaphysics, philosophy, criticism, poetry, drama, fiction, political exhortation, historical interpretation, and personal statements about the lovable and the hateful—one could if he wanted to be as drastically thorough as some of our positivists now seem to want to be—main-

tain that every bit of this is nonsense. Yet these words of nonsense would themselves be real words, involving real tactics, having real demonstrable relationships, and demonstrably affecting relationships. And as such, a study of their opportunities, necessities, and embarrassments would be central to the study of human motives.

The design on a piece of primitive pottery would be wholly symbolic or allegorical. But a drawing that accurately reproduces this design in a scientific treatise would be not symbolic or allegorical, but realistic. And similarly, even when statements about the *nature of the world* are abstractly metaphysical, statements about the *nature of these statements* can be as empirical as the statement, "This is Mr. Smith," made when introducing Mr. Smith in the accepted manner. . . .

Grammatical Steps to Naturalism

There are two primary generalizations that characterize the quality of motives: freedom and necessity. And whenever they appear, we may know that we are in the presence of "God-terms," or names for the ultimates of motivation. Doctrines wherein Creator and Creation are not ontologically collapsed into a unity give us a kind of double genesis for motives. Consideration in terms of the *Creation* leads to "necessity" when, in accordance with the logic of geometric substance, all the parts of nature are treated as necessarily related to one another in their necessary relationship to the whole. For "necessity" names the extrinsic conditions that determine a motion and must be taken into account when one is planning an action. And consideration in terms of the *Creator* leads to "freedom" when, in accordance with the logic of tribal substance, men "substantially" derive freedom (or self-movement) from God as its ancestral source. This double genesis allows for free will *and* determinism simultaneously, rather than requiring a flat choice between them. Also, owing to the ambiguity of substance, it permits men to be "substantially" free even when, as regards their natural conditions, they are actually enslaved or imprisoned.

An ancestral source of freedom is in one sense extrinsic to the individual, inasmuch as progenitor is distinct from offspring. Yet origin is intrinsic

sic to the individual in the sense that this genetic or generic fact about his nature is also possessed *within* him (just as members of a given biological species each possess within them, genitively, the substance or motives proper to the species generally). And as regards the geometric logic, when a thing's intrinsic nature is defined as part of a universal whole, the reference here is to a context, hence extrinsic. Formally, the issue figures in metaphysical speculations as to whether relations are internal or external, an ambiguity which, from the dramatist point of view, is implicit in the fact that one can shift between familial and geometric definition, stressing either person (agent) or ground (scene) as a locus of motives.

In pantheistic schemes, the principles of personal (intrinsic) freedom and scenic (extrinsic) determination must collapse into a unity that corresponds to the ontological merging of Creator and Creation. That is, "freedom" and "necessity" become identical, with each definable in terms of the other. Spinoza's pantheism meets this requirement in defining substance as *causa sui*,⁵ whereby the concepts of freedom and necessity are merged grammatically in the *reflexive*. The reflexive form satisfies the requirement, putting active and passive together, since one can be simultaneously free and constrained if the constraints are those of one's own choosing, an identification of scene and philosopher-agent that is possible inasmuch as both nature and the philosophy are rational.

Spinoza likewise adopts the expressions, *natura naturans* and *natura naturata* (or "naturing nature" and "natured nature"). Grammatically, we could thus treat the ground term, "nature," (which equals "God") as reflexive in form (though one usually reserves the designation for verbs) having active and passive (the *-ans* and the *-ata*) as its dual attributes. And we note a corresponding grammar in his Cartesian expressions, *res cogitans* and *res extensa*, where "thing" (*res*) would be the reflexive ground, with "thinking" (*cogitans*) as its active voice and "extended" (*extensa*) as its passive voice. So we could speak of nature, or thing, naturing, or thinking—and of nature, or thing, natured or ex-

tended. One can discern here the beginnings of the alignment that was to prevail in modern idealism, as the active participle becomes the "subjective" and the passive participle the "objective" (a grammar that is precisely reversed in materialism, where nature in *extension* is treated as the motivational source, while subjective motives are treated as either illusions or reflections).

Or, consider the passages in Aristotle's *Physics* where he is seeking to establish the number of principles required to account for the changes that take place in the natural world. Here we find a paradigm of grammar in his concern with the reduction of such principles to a pair of opposites, with a possible third term that would be their common ground. Grammatically, these principles are reducible to active, passive, and middle, the concept of self-movement containing active and passive ambiguously in one. Nature, Aristotle says at one point, is like a doctor doctoring himself (a figure that could, if we wanted to translate the universal into medical terms, then give us: doctor doctoring and doctor doctored).

The pantheistic moment in philosophy, by producing a merger of personal and impersonal principles (a merger of personal agent and impersonal scene), can serve well as a bridge leading from theology to naturalism. For theologies are "dramatistic" in their stress upon the personalistic, whereas the terminologies typical of natural science would eliminate the concept of the person, in reducing it to purely scenic terms. Hence, a pantheistic merging of person and scene can add up to the dissolution of the personal into the impersonal along naturalistic lines.

We might sum up the matter thus: *Theologically*, nature has attributes derived from its origin in an act of God (the Creation), but God is more than nature. *Dramatistically*, motion involves action, but action is more than motion. Hence, *theologically* and/or *dramatistically*, nature (in the sense of God's Creation) is to nature (in the sense of naturalistic science) as action is to motion, since God's Creation is an *enactment*, whereas nature as conceived in terms of naturalistic science is a sheer concatenation of motions. But inasmuch as the theological ratio between God (Creator) and Nature (Creation) is the same as the dramatistic ratio between action and motion, the *pantheistic*

⁵"Self-caused." [Ed.]

equating of God and Nature would be paralleled by the equating of action and motion. And since action is a personal principle while motion is an impersonal principle, the pantheistic equation leads into the *naturalistic* position which reduces personalistic concepts to depersonalized terms.

If these steps seem to have been too quickly arrived at, let us try approaching the matter from another angle. Indeed, we need not even hang on, but can almost begin anew. . . .

SCENE

The Featuring of the Terms

Our program in this section is to consider seven primary philosophic languages in terms of the pentad, used as a generating principle that should enable us to "anticipate" these different idioms. In treating the various schools as languages, we may define their substantial relationship to one another by deriving them from a common terminological ancestor. This ancestor would be a kind of *lingua Adamica*, an Edenic "prelanguage," in which the seeds of all philosophic languages would be implicit, as in the *panspermia* (or confusion of all future possibilities) that, according to some mystics, prevailed at the beginnings of the world.

In our introduction we noted that the areas covered by our five terms overlap upon one another. And because of this overlap, it is possible for a thinker to make his way continuously from any one of them to any of the others. Or he may use terms in which several of the areas are merged. For any of the terms may be seen in terms of any of the others. And we may even treat all five in terms of one, by "reducing" them all to the one or (what amounts to the same thing) "deducing" them all from the one as their common terminal ancestor. This relation we could express in temporal terms by saying that the term selected as ancestor "came first"; and in timeless or logical terms we could say that the term selected is the "essential," "basic," "logically prior" or "ultimate" term, or the "term of terms," etc.

Dramatically, the different philosophic schools are to be distinguished by the fact that each school features a different one of the five

terms, in developing a vocabulary designed to allow this one term full expression (as regards its resources and its temptations) with the other terms being comparatively slighted or being placed in the perspective of the featured term. Think, for instance, of a philosophy that had been established "in the sign of the agent." It must develop coordinates particularly suited to treat of substance and motive in "subjective," or "psychological" terms (since such terms deal most directly with the attributes of agents). Then think of that stage where the philosopher, proud in the full possession of his coordinates for featuring the realm of the *agent*, turned to consider the areas that fall most directly under the heading of *scene*. Instead of beginning over again, and seeking to analyze the realm of scene in terms that had no relation to the terms he had developed when considering the realm of agent, he might proceed to derive the nature of his terms for the discussion of scene from the nature of his terms for agent. This might well, in fact, be the procedure of a thinker who, instead of using a terminology that was merely slung together, felt the logical and aesthetic (and moral!) desire for an internal consistency among his terms. And it would amount to an "agentification" of scene even though the terms for scene were placed in dialectical opposition to the terms for agent. For a scene conceived antithetically to *agent* would differ from a scene conceived, let us say, antithetically to *act* or *purpose*, the genius of the ancestral term surviving even in its negation.

A rival philosophic terminology might propose to abandon this particular system of terms derived from agent, and to feature instead the area of motives covered by our term, scene. Its propounder would maintain that the terms imported from the area of agent were irrelevant or unwieldy as scenic references. However, principles of internal consistency might lead him to undertake imperialist expansions of his own, as were he to treat in scenic terms the areas directly covered by our terms agent or purpose.

These general examples should be enough, for the time being, to indicate what we mean by the featuring of a term. In this section we shall deal with the subject in some detail. But first survey-

ing the entire field at a glance, let us state simply as propositions:

For the featuring of *scene*, the corresponding philosophic terminology is *materialism*.

For the featuring of *agent*, the corresponding terminology is *idealism*.

For the featuring of *agency*, the corresponding terminology is *pragmatism*.

For the featuring of *purpose*, the corresponding terminology is *mysticism*.

For the featuring of *act*, the corresponding terminology is *realism*.

Nominalism and *rationalism* increase the kinds of terminology to seven. But since we have used up all our terms, we must account for them indirectly.

Historically, nominalism stood in opposition to mediæval realism. It was the individualistic counterpart of realism's "tribal" or "generic" emphasis. We would here widen the concept so as to include a corresponding "atomistic" movement in any of the other philosophies.

Rationalism is, in one sense, intrinsic to philosophy as a medium, since every philosophy attempts to propound a rationale of its position, even if it is a philosophy of the irrational. But more restrictedly, the term can be applied only to philosophies that treat reason as the very ground and substance of reality, somewhat as though, instead of saying, "a philosophy is a universe," one were to say, "the universe is a philosophy." The fact that rationalism, as a special philosophic strain, converts a *method* (i.e., agency) into a substance might well be the "grammatical reason" why our pragmatists descend from Hegel, who treated reason and world substance as so thoroughly identical that he proposed to recreate all history "in principle" by the sheer exercise of his philosophic method.

The addition of *nominalism* and *rationalism* to our list spoils the symmetry somewhat, for the first (as we extend its meaning) applies to all the other six schools insofar as each of them can have either a collectivistic or an individualistic ("nominalist") emphasis; and the second applies to all in the sense that it is the perfection, or logical conclusion, or *reductio ad absurdum* of the

philosophic *métier*. One should also note that a philosophy may be "nominalist" or "rationalist" in one realm without necessarily being so in another—as materialism is usually atomistic in the physical realm, but may be quite collectivistic in the ethical or political realm. Similarly the mystic's merging of the One with the All would often make it difficult to say whether we should call his doctrine collectivistic or atomistic, if we stopped at this point; but there is clearly a great distinction between mystics whose doctrines lead to permanent isolation from other men, and those whose doctrines lead to the founding of religious orders.

The symmetry is also impaired by the fact that there has been much borrowing of terms among the various philosophic schools, so that one cannot always take even key terms at their face value. For instance, we have previously observed that "situation" is a synonym for "scene." Hence one might take it as a rule that philosophies which account for motivations in terms of "the situation" are "materialistic." But the current prestige of the "situational" approach has led to the term's adoption by other schools. A literary critic who spoke of "the literary situation," for instance, meant not the "objective conditions" under which a writer writes, but the motives peculiar to a writer's medium. What looked "scenic" was here actually "pragmatic," since the writer's medium is an *agency*. And similarly, essayists now often speak of "the human situation" when they seem to have in mind the *motives peculiar to men as men*, a usage that would call for the classifying of the expression under the heading of *agent*, hence giving the *apparently* materialistic usage an *essentially* idealistic application (since, as we have said, idealism features the term agent).

Besides the concealments of misnomer and those due to mutual borrowings among the philosophic schools, there is an internal development that causes the nature of philosophy as an assertion to be lost in the problems of demonstration. That is, as soon as a philosopher has begun to investigate the possibilities in whatever term he has selected as his *Ausgangspunkt*,⁶ he finds that the

⁶"Starting point." [Ed.]

term does not merely create other terms in its image. Also, it generates a particular set of *problems*—and the attempt to solve these problems may lead the philosopher far from his beginnings. It is somewhat, alas! as with the design for a perpetual motion machine. Such a design may have been quite simple in its original conception, but it becomes fantastically complex as the inventor finds that each new wheel or trip or pin or cam which he added to solve his problem gave rise to a new problem, and this in turn suggested the need of some other contrivance, which relieves his former embarrassments only by introducing a new embarrassment of its own.

Indeed, since all the terms of the pentad continually press for consideration, and since it is not possible for us, without contradiction, to recreate in words a world which is itself not verbal at all, we can safely accept it as an axiom that the mere attempt to contemplate persistently the

resources of any one term will lead to the discovery of many problems the answers to which will *transcend* the genius of this term. And if a reader comes upon a philosophy after it has been thus sophisticated, he may find himself so caught up in its problems-atop-problems-atop-problems and problems-within-problems-within-problems that he cannot sense the principle of generation behind them. For usually the thinker himself has become similarly intricated.

But with the pentad as a generating principle, we may extricate ourselves from these intricacies, by discovering the kinds of *assertion* which the different schools would exemplify in a hypothetical state of purity. Once this approach is established, problems are much less likely to conceal the underlying design of assertion, or may even serve to assist in the characterizing of a given philosophic work.

From *A Rhetoric of Motives*

INTRODUCTION

The only difficult portion of this book happens, unfortunately, to be at the start. There, selecting texts that are usually treated as pure poetry, we try to show why rhetorical and dialectical considerations are also called for. Since these texts involve an imagery of killing (as a typical text for today should) we note how, behind the surface, lies a quite different realm that has little to do with such motives. An imagery of killing is but one of many terminologies by which writers can represent the process of change. And while recognizing the sinister implications of a preference for homicidal and suicidal terms, we indicate that the principles of development or transformation (“rebirth”) which they stand for are not strictly of such a nature at all.

We emerge from the analysis with the key term, “Identification.” Hence, readers who would prefer to begin with it, rather than to worry a text

until it is gradually extricated, might go lightly through the opening pages, with the intention of not taking hold in earnest until they come to the general topic of *Identification*.

Thereafter, with this term as instrument, we seek to mark off the areas of rhetoric, by showing how a rhetorical motive is often present where it is not usually recognized, or thought to belong. In part, we would but rediscover rhetorical elements that had become obscured when rhetoric as a term fell into disuse, and other specialized disciplines such as esthetics, anthropology, psychoanalysis, and sociology came to the fore (so that esthetics sought to outlaw rhetoric, while the other sciences we have mentioned took over, each in its own terms, the rich rhetorical elements that esthetics would ban).

But besides this job of reclamation, we also seek to develop our subject beyond the traditional bounds of rhetoric. There is an intermediate area of expression that is not wholly deliber-

ate, yet not wholly unconscious. It lies midway between aimless utterance and speech directly purposive. For instance, a man who identifies his private ambitions with the good of the community may be partly justified, partly unjustified. He may be using a mere pretext to gain individual advantage at the public expense; yet he may be quite sincere, or even may willingly make sacrifices in behalf of such identification. Here is a rhetorical area not analyzable either as sheer design or as sheer simplicity. And we would treat of it here.

Traditionally, the key term for rhetoric is not "identification," but "persuasion." Hence, to make sure that we do not maneuver ourselves unnecessarily into a weak position, we review several classic texts which track down all the major implications of that term. Our treatment, in terms of identification, is decidedly not meant as a substitute for the sound traditional approach. Rather, as we try to show, it is but an accessory to the standard lore. And our book aims to make itself at home in both emphases.

Particularly when we come upon such aspects of persuasion as are found in "mystification," courtship, and the "magic" of class relationships, the reader will see why the classical notion of clear persuasive intent is not an accurate fit, for describing the ways in which the members of a group promote social cohesion by acting rhetorically upon themselves and one another. As W. C. Blum has stated the case deftly, "In identification lies the source of dedications and enslavements, in fact of cooperation."

All told, persuasion ranges from the bluntest quest of advantage, as in sales promotion or propaganda, through courtship, social etiquette, education, and the sermon, to a "pure" form that delights in the process of appeal for itself alone, without ulterior purpose. And identification ranges from the politician who, addressing an audience of farmers, says, "I was a farm boy myself," through the mysteries of social status, to the mystic's devout identification with the source of all being.

That the reader might find it gratifying to observe the many variations on our two interrelated themes, at every step we have sought to proceed

by examples. Since we did not aim to write a compendium, we have not tried to cover the field in the way that a comprehensive historical survey might do—and another volume will be needed to deal adequately with the polemic kinds of rhetoric (such as the verbal tactics now called "cold war").

But we have tried to show what portions of other works should be selected as parts of a "course in rhetoric," and how they should be considered for our particular purposes. We have tried to show how rhetorical analysis throws light on literary texts and human relations generally. And while interested always in rhetorical devices, we have sought above all else to write a "philosophy of rhetoric."

We do not flatter ourselves that any one book can contribute much to counteract the torrents of ill will into which so many of our contemporaries have so avidly and sanctimoniously plunged. But the more strident our journalists, politicians, and alas! even many of our churchmen become, the more convinced we are that books should be written for tolerance and contemplation. . . .

PART I

Identification and "Consubstantiality"

A is not identical with his colleague, *B*. But insofar as their interests are joined, *A* is *identified* with *B*. Or he may *identify himself* with *B* even when their interests are not joined, if he assumes that they are, or is persuaded to believe so.

Here are ambiguities of substance. In being identified with *B*, *A* is "substantially one" with a person other than himself. Yet at the same time he remains unique, an individual locus of motives. Thus he is both joined and separate, at once a distinct substance and consubstantial with another.

While consubstantial with its parents, with the "firsts" from which it is derived, the offspring is nonetheless apart from them. In this sense, there is nothing abstruse in the statement that the offspring both is and is not one with its parentage. Similarly, two persons may be identified in terms of some principle they share in common,

an "identification" that does not deny their distinctness.

To identify *A* with *B* is to make *A* "consubstantial" with *B*. Accordingly, since our *Grammar of Motives* was constructed about "substance" as key term, the related rhetoric selects its nearest equivalent in the areas of persuasion and dissuasion, communication and polemic. And our third volume, *Symbolic of Motives*, should be built about *identity* as titular or ancestral term, the "first" to which all other terms could be reduced and from which they could then be derived or generated, as from a common spirit. The thing's *identity* would here be its uniqueness as an entity in itself and by itself, a demarcated unit having its own particular structure.

However, "substance" is an abstruse philosophic term, beset by a long history of quandaries and puzzlements. It names so paradoxical a function in men's systematic terminologies, that thinkers finally tried to abolish it altogether—and in recent years they have often persuaded themselves that they really did abolish it from their terminologies of motives. They abolished the *term*, but it is doubtful whether they can ever abolish the *function* of that term, or even whether they should *want* to. A doctrine of *consubstantiality*, either explicit or implicit, may be necessary to any way of life. For substance, in the old philosophies, was an *act*; and a way of life is an *acting-together*; and in acting together, men have common sensations, concepts, images, ideas, attitudes that make them *consubstantial*.

The *Grammar* dealt with the universal paradoxes of substance. It considered resources of placement and definition common to all thought. The *Symbolic* should deal with unique individuals, each its own peculiarly constructed act, or form. These unique "constitutions" being capable of treatment in isolation, the *Symbolic* should consider them primarily in their capacity as singulars, each a separate universe of discourse (though there are also respects in which they are consubstantial with others of their kind, since they can be classed with other unique individuals as joint participants in common principles, possessors of the same or similar properties).

The *Rhetoric* deals with the possibilities of

classification in its *partisan* aspects; it considers the ways in which individuals are at odds with one another, or become identified with groups more or less at odds with one another.

Why "at odds," you may ask, when the titular term is "identification"? Because, to begin with "identification" is, by the same token, though roundabout, to confront the implications of *division*. And so, in the end, men are brought to that most tragically ironic of all divisions, or conflicts, wherein millions of cooperative acts go into the preparation for one single destructive act. We refer to that ultimate *disease* of cooperation: *war*. (You will understand war much better if you think of it, not simply as strife come to a head, but rather as a disease, or perversion of communion. Modern war characteristically requires a myriad of constructive acts for each destructive one; before each culminating blast there must be a vast network of interlocking operations, directed communally.)

Identification is affirmed with earnestness precisely because there is division. Identification is compensatory to division. If men were not apart from one another, there would be no need for the rhetorician to proclaim their unity. If men were wholly and truly of one substance, absolute communication would be of man's very essence. It would not be an ideal, as it now is, partly embodied in material conditions and partly frustrated by these same conditions; rather, it would be as natural, spontaneous, and total as with those ideal prototypes of communication, the theologian's angels, or "messengers."

The *Grammar* was at peace insofar as it contemplated the paradoxes common to all men, the universal resources of verbal placement. The *Symbolic* should be at peace, in that the individual substances, or entities, or constituted acts are there considered in their uniqueness, hence outside the realm of conflict. For individual universes, as such, do not compete. Each merely *is*, being its own self-sufficient realm of discourse. And the *Symbolic* thus considers each thing as a set of interrelated terms all conspiring to round out their identity as participants in a common substance of meaning. An individual does in actuality compete with other individuals. But within the rules of *Symbolic*, the individual is

treated merely as a self-subsistent unit proclaiming its peculiar nature. It is “at peace,” in that its terms *cooperate* in modifying one another. But insofar as the individual is involved in conflict with other individuals or groups, the study of this same individual would fall under the head of *Rhetoric*. Or considered rhetorically, the victim of a neurotic conflict is torn by parliamentary wrangling; he is heckled like Hitler within. (Hitler is said to have confronted a constant wrangle in his private deliberations, after having imposed upon his people a flat choice between conformity and silence.) Rhetorically, the neurotic’s every attempt to legislate for his own conduct is disorganized by rival factions within his own dissociated self. Yet, considered Symbolically, the same victim is technically “at peace,” in the sense that his identity is like a unified, mutually adjusted set of terms. For even antagonistic terms, confronting each other as parry and thrust, can be said to “cooperate” in the building of an overall form.

The *Rhetoric* must lead us through the Scramble, the Wrangle of the Market Place, the flurries and flare-ups of the Human Barnyard, the Give and Take, the wavering line of pressure and counterpressure, the Logomachy, the onus of ownership, the Wars of Nerves, the War. It too has its peaceful moments: at times its endless competition can add up to the transcending of itself. In ways of its own, it can move from the factional to the universal. But its ideal culminations are more often beset by strife as the condition of their organized expression, or material embodiment. Their very universality becomes transformed into a partisan weapon. For one need not scrutinize the concept of “identification” very sharply to see, implied in it at every turn, its ironic counterpart: division. Rhetoric is concerned with the state of Babel after the Fall. Its contribution to a “sociology of knowledge” must often carry us far into the lugubrious regions of malice and the lie.

The Identifying Nature of Property

Metaphysically, a thing is identified by its *properties*. In the realm of Rhetoric, such identification is frequently by property in the most materi-

alistic sense of the term, economic property, such property as Coleridge, in his “Religious Musings,” calls a

twy-streaming fount,
Whence Vice and Virtue flow, honey and gall.

And later:

From Avarice thus, from Luxury and War
Sprang heavenly Science; and from Science,
Freedom.

Coleridge, typically the literary idealist, goes one step further back, deriving “property” from the workings of “Imagination.” But meditations upon the dual aspects of property as such are enough for our present purposes. In the surrounding of himself with properties that name his number or establish his identity, man is ethical. (“Avarice” is but the scenic word “property” translated into terms of an agent’s attitude, or incipient act.) Man’s moral growth is organized through properties, properties in goods, in services, in position or status, in citizenship, in reputation, in acquaintanceship and love. But however ethical such an array of identifications may be when considered in itself, its relation to other entities that are likewise forming their identity in terms of property can lead to turmoil and discord. Here is *par excellence* a topic to be considered in a rhetoric having “identification” as its key term. And we see why one should expect to get much insight from Marxism, as a study of capitalistic rhetoric. Veblen is also, from this point of view, to be considered a theorist of rhetoric. (And we know of no better way to quickly glimpse the range of rhetoric than to read, in succession, the articles on “Property” and “Propaganda” in *The Encyclopaedia of the Social Sciences*.)

Bentham’s utilitarian analysis of language, treating of the ways in which men find “eulogistic coverings” for their “material interests,” is thus seen to be essentially rhetorical, and to bear directly upon the motives of property as a rhetorical factor. Indeed, since it is so clearly a matter of rhetoric to persuade a man by identifying your cause with his interests, we note the ingredient of rhetoric in the animal experimenter’s ways of conditioning, as animals that respond avidly at a food signal suggest, underlying even human

motives, the inclination, like a house dog, to seek salvation in the Sign of the Scraped Plate. But the lessons of this "animal rhetoric" can mislead, as we learn from the United States' attempts to use food as an instrument of policy in Europe after the war. These efforts met with enough ill will to suggest that the careful "screening" of our representatives, to eliminate reformist tendencies as far as possible and to identify American aid only with conservative or even reactionary interests, practically *guaranteed* us a dismal rhetoric in our dealings with other nations. And when Henry Wallace, during a trip abroad, began earning for our country the genuine good will of Europe's common people and intellectual classes, the Genius of the Screening came into its own: our free press, as at one signal, began stoutly assuring the citizens of both the United States and Europe that Wallace did not truly represent us. What did represent us, presumably, was the policy of the Scraped Plate, which our officialdom now and then bestirred themselves to present publicly in terms of a dispirited "idealism," as heavy as a dead elephant. You see, we were not to be identified with very resonant things; our press assured our people that the outcome of the last election had been a "popular mandate" to this effect. (We leave this statement unrevised. For the conditions of Truman's reelection, after a campaign in which he out-Wallaced Wallace, corroborated it "in principle.")

In pure identification there would be no strife. Likewise, there would be no strife in absolute separateness, since opponents can join battle only through a mediatory ground that makes this communication possible, thus providing the first condition necessary for their interchange of blows. But put identification and division ambiguously together, so that you cannot know for certain just where one ends and the other begins, and you have the characteristic invitation to rhetoric. Here is a major reason why rhetoric, according to Aristotle, "proves opposites." When two men collaborate in an enterprise to which they contribute different kinds of services and from which they derive different amounts and kinds of profit, who is to say, once and for all, just where "cooperation" ends and one partner's "exploitation"

of the other begins? The wavering line between the two cannot be "scientifically" identified; rival rhetoricians can draw it at different places, and their persuasiveness varies with the resources each has at his command. (Where public issues are concerned, such resources are not confined to the intrinsic powers of the speaker and the speech, but depend also for their effectiveness upon the purely technical means of communication, which can either aid the utterance or hamper it. For a "good" rhetoric neglected by the press obviously cannot be so "communicative" as a poor rhetoric backed nation-wide by headlines. And often we must think of rhetoric not in terms of some one particular address, but as a general *body of identifications* that owe their convincingness much more to trivial repetition and dull daily reënforcement than to exceptional rhetorical skill.)

If you would praise God, and in terms that happen also to sanction one system of material property rather than another, you have forced Rhetorical considerations upon us. If you would praise science, however exaltedly, when that same science is at the service of imperialist-militarist expansion, here again you bring things within the orbit of Rhetoric. For just as God has been identified with a certain worldly structure of ownership, so science may be identified with the interests of certain groups or classes quite *unscientific* in their purposes. Hence, however "pure" one's motives may be actually, the impurities of identification lurking about the edges of such situations introduce a typical Rhetorical wrangle of the sort that can never be settled once and for all, but belongs in the field of moral controversy where men properly seek to "prove opposites."

Thus, when his friend, Preen, wrote of a meeting where like-minded colleagues would be present and would all be proclaiming their praise of science, Prone answered: "You fail to mention another colleague who is sure to be there too, unless you take care to rule him out. I mean John Q. Militarist-Imperialist." Whereat, Preen: "This John Q. Militarist-Imperialist must be quite venerable by now. I seem to have heard of him back in Biblical times, before Roger B. Science was

born. Doesn't he get in everywhere, unless he is explicitly ruled out?" He does, thanks to the ways of identification, which are in accordance with the nature of property. And the rhetorician and the moralist become one at that point where the attempt is made to reveal the undetected presence of such an identification. Thus in the United States after the Second World War, the temptations of such an identification became particularly strong because so much scientific research had fallen under the direction of the military. To speak merely in praise of science, without explicitly dissociating oneself from its reactionary implications, is to identify oneself with these reactionary implications by default. Many reputable educators could thus, in this roundabout way, *function* as "conspirators." In their zeal to get federal subsidies for the science department of their college or university, they could help to shape educational policies with the ideals of war as guiding principle.

Identification and the "Autonomous"

As regards "autonomous" activities, the principle of Rhetorical identification may be summed up thus: The fact that an activity is capable of reduction to intrinsic, autonomous principles does not argue that it is free from identification with other orders of motivation extrinsic to it. Such other orders are extrinsic to it, as considered from the standpoint of the specialized activity alone. But they are not extrinsic to the field of moral action as such, considered from the standpoint of human activity in general. The human agent, *qua* human agent, is not motivated solely by the principles of a specialized activity, however strongly this specialized power, in its suggestive role as imagery, may affect his character. Any specialized activity participates in a larger unit of action. "Identification" is a word for the autonomous activity's place in this wider context, a place with which the agent may be unconcerned. The shepherd, *qua* shepherd, acts for the good of the sheep, to protect them from discomfiture and harm. But he may be "identified" with a project that is raising the sheep for market.

Of course, the principles of the autonomous

activity can be considered irrespective of such identifications. Indeed, two students, sitting side by side in a classroom where the principles of a specialized subject are being taught, can be expected to "identify" the subject differently, so far as its place in a total context is concerned. Many of the most important identifications for the specialty will not be established at all, until later in life, when the specialty has become integrally interwoven with the particulars of one's livelihood. The specialized activity itself becomes a different thing for one person, with whom it is a means of surrounding himself with family and amenities, than it would be for another who, unmarried, childless, loveless, might find in the specialty not so much a means to gratification as a substitute for lack of gratification.

Carried into unique cases, such concern with identifications leads to the sheer "identities" of Symbolic. That is, we are in pure Symbolic when we concentrate upon one particular integrated structure of motives. But we are clearly in the region of rhetoric when considering the identifications whereby a specialized activity makes one a participant in some social or economic class. "Belonging" in this sense is rhetorical. And, ironically, with much college education today in literature and the fine arts, the very stress upon the pure autonomy of such activities is a round-about way of identification with a privileged class, as the doctrine may enroll the student stylistically under the banner of a privileged class, serving as a kind of social insignia promising preferment. (We are here obviously thinking along Veblenian lines.)

The stress upon the importance of autonomous principles does have its good aspects. In particular, as regards the teaching of literature, the insistence upon "autonomy" reflects a vigorous concern with the all-importance of the text that happens to be under scrutiny. This cult of patient textual analysis (though it has excesses of its own) is helpful as a reaction against the excesses of extreme historicism (a leftover of the nineteenth century) whereby a work became so subordinated to its background that the student's appreciation of first-rate texts was lost behind his involvement with the collateral documents of

fifth-rate literary historians. Also, the stress upon the autonomy of fields is valuable methodologically; it has been justly praised because it gives clear insight into some particular set of principles; and such a way of thinking is particularly needed now, when pseudoscientific thinking has become "unprincipled" in its uncritical cult of "facts." But along with these sound reasons for a primary concern with the intrinsic, there are furtive temptations that can figure here too. For so much progressive and radical criticism in recent years has been concerned with the social implications of art, that affirmations of art's autonomy can often become, by antithesis, a roundabout way of identifying oneself with the interests of political conservatism. In accordance with the rhetorical principle of identification, whenever you find a doctrine of "nonpolitical" esthetics affirmed with fervor, look for its politics.

But the principle of autonomy does allow for historical shifts whereby the nature of an identification can change greatly. Thus in his book, *The Genesis of Plato's Thought*, David Winspear gives relevant insight into the aristocratic and conservative political trends with which Plato's philosophy was identified at the time of its inception. The Sophists, on the other hand, are shown to have been more closely allied with the rising business class, then relatively "progressive" from the Marxist point of view, though their position was fundamentally weakened by the fact that their enterprise was based on the acceptance of slavery. Yet at other periods in history the Platonist concern with an ideal state could itself be identified with wholly progressive trends.

During the Second World War many good writers who had previously complained of the Marxist concern with propaganda in art, themselves wrote books in which they identified their esthetic with an anti-Fascist politics. At the very least such literature attributed to Hitlerite Germans and their collaborators the brutal and neurotic motives which in former years had been attributed to "Everyman." (Glenway Wescott's *Apartment in Athens*, for instance.) So the overgeneralized attempt to discredit *Marxist* Rhetoric by discrediting *all* Rhetoric was abandoned, at least by representative reviewers whose criticism

was itself a rhetorical act designed to identify the public with anti-Fascist attitudes and help sell anti-Fascist books (as it later contributed to the forming of anti-Soviet attitudes and the sale of anti-Soviet books). In the light of such developments, many critics have become only too accommodating in their search for covert and overt identifications that link the "autonomous" field of the arts with political and economic orders of motivation. Head-on resistance to the questioning of "purity" in specialized activities usually comes now from another quarter: the liberal apologists of science.

The "Autonomy" of Science

Science, as mere instrument (agency), might be expected to take on the nature of the scenes, acts, agents, and purposes with which it is identified. And insofar as a faulty political structure perverts human relations, we might reasonably expect to find a correspondingly perverted science. Thus, even the apologists of the Church will grant that, in corrupt times, there is a corresponding corruption among churchmen; and it is relevant to recall those specialists whose technical training fitted them to become identified with mass killings and experimentally induced sufferings in the concentration camps of National Socialist Germany. Hence, insofar as there are similar temptations in our own society (as attested by the sinister imagery of its art), might we not expect similar motives to lurk about the edges of our sciences (though tempered in proportion as the sinister political motives themselves are tempered in our society, under our less exacting social and economic conditions)? But liberal apologetics indignantly resists any suggestion that sadistic motives may lurk behind unnecessary animal experiments that cause suffering. The same people who, with reference to the scientific horrors of Hitlerism, admonish against the ingredients of Hitlerite thinking in our own society, will be outraged if you follow out the implications of their own premises, and look for similar temptations among our specialists.

One can sympathize with this anxiety. The liberal is usually disinclined to consider such

possibilities because applied science is for him not a mere set of instruments and methods, whatever he may assert; it is a *good* and *absolute*, and is thus circuitously endowed with the philosophic function of *God* as the grounding of values. His thinking thus vacillates indeterminately between his overt claims for science as sheer method, as sheer coefficient of power, and his covert claims for science as a substance which, like *God*, would be an intrinsically *good* power. Obviously, any purely secular power, such as the applications of technology, would not be simply “good,” but could become identified with motives good, bad, or indifferent, depending upon the uses to which it was put, and upon the ethical attitudes that, as part of the context surrounding it, contributed to its meaning in the realm of motives and action.

The unavowed identification, whereby a theological *function* is smuggled into a term on its face wholly secular, can secretly reenforce the characteristically liberal principle of occupational autonomy, itself reenforced by the naively pragmatist notion that practical specialized work is a sufficient grounding of morality. If the technical expert, as such, is assigned the task of perfecting new powers of chemical, bacteriological, or atomic destruction, his morality *as technical expert* requires only that he apply himself to his task as effectively as possible. The question of what the new force might mean, as released into a social texture emotionally and intellectually unfit to control it, or as surrendered to men whose *specialty is professional killing*—well, that is simply “none of his business,” as specialist, however great may be his misgivings as father of a family, or as citizen of his nation and of the world. The extreme division of labor under late capitalist liberalism having made dispersion the norm and having transformed the state of Babel into an ideal, the true liberal must view almost as an affront the Rhetorical concern with identifications whereby the principles of a specialty cannot be taken on their face, simply as the motives proper to that specialty. They *are* the motives proper to the specialty *as such*, but not to the specialty *as participant in a wider context of motives*.

In sum, as regards tests of “autonomy,” the specialist need only consider, as a disciplinary

factor, the objective resistances supplied by the materials with which he works. The liberal criterion was that propounded by Rousseau in *Émile*: The principle of constraint was to come from the nature of *things*, not from authorities and their precepts. Yet, willy nilly, a science takes on the moral qualities of the political or social movements with which it becomes identified. Hence, a new anguish, a crisis in the liberal theory of science. In his *Genealogy of Morals*, Nietzsche met the same problem keenly, but perversely, by praising “autonomy” as the *opposite* of the moral. Modern political authoritarianism, like the earlier theocratic kinds, would subordinate the autonomous specialty to overall doctrinal considerations. The rhetorical concept of “identification” does not justify the excesses to which such doctrinaire tendencies can be carried. But it does make clear the fact that one’s morality as a specialist cannot be allowed to do duty for one’s morality as a citizen. Insofar as the two roles are at odds, a specialty at the service of sinister interests will itself become sinister.

“Redemption” in Post-Christian Science

With a culture formed about the idea of redemption by the sacrifice of a Crucified Christ, just what does happen in an era of post-Christian science, when the ways of socialization have been secularized? Does the need for the vicarage of this Sacrificial King merely dwindle away? Or must some other person or persons, individual or corporate, real or fictive, take over the redemptive role? Not all people, perhaps, seek out a Vessel to which will be ritualistically delegated a purgative function, in being symbolically laden with the burdens of individual and collective guilt. But we know, as a lesson of recent history, how anti-Semitism provided the secularized replica of the Divine Scapegoat in the post-Christian rationale of Hitler’s National Socialist militarism; and we know how Jews and other minority groups are thus magically identified by many members of our society. And since we also know that there are at large in the modern world many militaristic and economic trends quite like those of Germany under the Hitlerite “science”

of genocide, we should at least be admonished to expect, in some degree, similar cultural temptations. For the history of the Nazis has clearly shown that there are cultural situations in which scientists, whatever may be their claims to professional austerity, will contrive somehow to identify their specialty with modes of justification, or socialization, not discernible in the sheer motions of the material operations themselves. In its transcendence of natural living, its technical scruples, its special tests of purity, a clinic or laboratory can be a kind of secular temple, in which ritualistic devotions are taking place, however concealed by the terminology of the surface. Unless properly scrutinized for traces of witchcraft, these could furtively become devotions to a satanic order of motives. At least such was the case with the technological experts of Hitlerite Germany. The very scientific ideals of an "impersonal" terminology can contribute ironically to such disaster: for it is but a step from treating inanimate nature as mere "things" to treating animals, and then enemy peoples, as mere things. But they are not mere things, they are persons — and in the systematic denial of what one knows in his heart to be the truth, there is a perverse principle that can generate much anguish.

Dual Possibilities of Science

But one cannot be too careful here. Religion, politics, and economics are notoriously touchy subjects, and with many persons today, the cult of applied science has the animus of all three rolled into one. We should take pains to make this clear: we are most decidedly *not* saying that science *must* take on such malign identifications as it presumably has, for some scientists, when fitted into the motives of a Fascist state. In the United States, for instance, the Federation of American Scientists has been urgently seeking to dissociate the idea of atomic war power from the idea of national security. Thus, the Federation proclaimed, in a statement issued September 1, 1947, on the second anniversary of V-J Day:

Many persons have justified the support of science for its war potential, implying that national security

will result. We hear this justification in Congress. We hear it even from the atomic mission. We assert that national security cannot result from military preparedness or the support of science for its war potential.

When men are of good will, we can always expect many such efforts to break such sinister identifications, which their knowledge of their special field enables them to recognize as false.

Unfortunately, good will as thus circumscribed is not enough. The same statement goes on to say: "Our Government has advocated a sound policy in the United Nations concerning atomic energy." Yet there seems much justice in the complaint of the Soviet delegates that the measures we propose would guarantee the United States perpetual superiority in this field, unless other nations deliberately violated the proposed treaty by finding ways to continue their experiments in secret.

In a speech made before the United Nations Atomic Energy Commission (September 10, 1947), the Soviet representative, Gromyko, came upon some paradoxes in this connection. He was attacking United States' proposals for giving "the right of ownership" to an *international* organ of control. He contended that this arrangement would contradict the principle of state sovereignty. Thus the *socialist* delegate was arguing for the *restriction* of ownership to national boundaries, while the world's greatest *capitalist* country argued for ownership by a *universal* body. *On its face*, the capitalist proposal seems much nearer to the ideal socialist solution than the position of the Soviet Union is.

However, the history of corporate management in the United States, and of political parties everywhere, gives ample evidence of all the devices whereby *actual control* of a property differs from *nominal ownership* of it. And obviously the interests in *actual control* of the agency that allocated the rights and resources of atomic development could have all the advantages of *real* ownership, however international might be the *fictions* of ownership. Where the *control* resides, there resides the *function* of ownership, whatever the *fictions* of ownership may be. It would certainly be no new thing to rhetoric if

highly *discriminatory* claims were here being protected in the name of *universal* rights. And the Soviet delegate was at least justified in calling for measures that *unmistakably* avoid such a possibility, which was not considered in the scientists' statement as published in the press. There was a hint of "maneuvering" in our proposals, maneuvering to put the Russians in the position of seeming to delay an adequate international control over the atomic bomb, when there were strong doubts whether our own Congress would itself have agreed to any such control.

Lying outside the orbit of the scientists' specialty, there are psychological considerations which are nearly always slighted, since they involve identifications manifestly extrinsic to atomic physics in itself. Possibilities of deception arise particularly with those ironies whereby the scientists' truly splendid terminology for the expert smashing of lifeless things can so catch a man's fancy that he would transfer it to the realm of human relations likewise. It is not a great step from the purely professional poisoning of harmful insects to the purely professional blasting and poisoning of human beings, as viewed in similarly "impersonal" terms. And such inducements are particularly there, so long as factional division (of class, race, nationality, and the like) make for the ironic mixture of identification and dissociation that marks the function of the scapegoat. Indeed, the very "global" conditions which call for the greater identification of all men with one another have at the same time increased the range of human conflict, the incentives to division. It would require sustained rhetorical effort, backed by the imagery of a richly humane and spontaneous poetry, to make us fully sympathize with people in circumstances greatly different from our own. Add now the international rivalries that goad to the opposite kind of effort, and that make it easy for some vocalizers to make their style "forceful" by simply playing up these divisive trends, and you see how perverted the austere scientific ideal may become, as released into a social texture unprepared for it.

The good will of scientists is not enough, however genuine it may be. There is the joke of the father who put his little son on the table and,

holding out his arms protectively, said, "Jump." The trusting child jumped; but instead of catching him, the father drew back, and let him fall to the floor. The child was hurt, both physically and in this violation of its confidence. Whereupon the father drove home the moral: "Let that be a lesson to you. Never trust anyone, not even your own father." Now, when the apologists of science teach their subject thus, instead of merely exalting it, we can salute them for truly admonishing us, in being as "scientific" about the criticism of science as in the past they have been about the criticism of religion.

To sum up:

(1) We know, as a matter of record, that science under Fascism became sinister. (2) We are repeatedly being admonished that there is a high percentage of Fascist motivation in our own society. (3) Why, then, should there not be, in our society, a correspondingly high incentive to sinister science? Particularly inasmuch as sinister motives already show in much of our art, both popular and recondite, while the conditions of secrecy imposed upon many experimental scientists today add a "conspiratorial" motive to such "autonomous" activity. In the past, the great *frankness* of science has been its noblest attribute, as judged from the purely humanistic point of view. But any tendency to place scientific development primarily under the heading of "war potential" must endanger this essential moralistic element in science, replacing the norms of *universal clarity* with the divisive demands for *conspiracy*. Insofar as such conditions prevail, science loses the one ingredient that can keep it wholesome: its enrollment under the forces of *light*. To this extent, the scientist must reject and resist in ways that mean the end of "autonomy," or if he accepts, he risks becoming the friend of fiends. Scientific discoveries have always, of course, been used for the purposes of war. But the demand that scientific advance *per se* be guided by military considerations *changes the proportions* of such motivation tremendously. Scientists of good will must then become uneasy, in that the morality of their specialty is no longer enough. The liberal ideal of autonomy is denied them, except insofar as they can contrive to conceal from themselves the true implications of their role.

Ingenuous and Cunning Identifications

The thought of self-deception brings up another range of possibilities here. For there is a wide range of ways whereby the rhetorical motive, through the resources of identification, can operate without conscious direction by any particular agent. Classical rhetoric stresses the element of explicit design in rhetorical enterprise. But one can systematically extend the range of rhetoric, if one studies the persuasiveness of false or inadequate terms which may not be directly imposed upon us from without by some skillful speaker, but which we impose upon ourselves, in varying degrees of deliberateness and unawareness, through motives indeterminately self-protective and/or suicidal.

We shall consider these matters more fully later, when we study the rhetoric of *hierarchy* (or as it is less revealingly named, *bureaucracy*). And our later pages on Marx and Veblen would apply here. But for the present we might merely recall the psychologist's concept of "malingering," to designate the ways of neurotic persons who, though not actually ill, persuade themselves that they are, and so can claim the attentions and privileges of the ill (their feigned illness itself becoming, at one remove, genuine). Similarly, if a social or occupational class is not too exacting in the scrutiny of identifications that flatter its interests, its very philosophy of life is a profitable malingering (profitable at least until its inaccuracies catch up with it)—and as such, it is open to either attack or analysis, Rhetoric comprising both the *use* of persuasive resources (*rhetorica utens*, as with the philippics of Demosthenes) and the *study* of them (*rhetoric docens*, as with Aristotle's treatise on the "art" of Rhetoric).

This aspect of identification, whereby one can protect an interest merely by using terms not incisive enough to criticize it properly, often brings rhetoric to the edge of cunning. A misanthropic politician who dealt in mankind-loving imagery could still think of himself as rhetorically honest, if he meant to do well by his constituents yet thought that he could get their votes only by such display. Whatever the falsity in overplaying a role, there may be honesty in the assuming of that role itself; and the overplaying may be but a

translation into a different medium of communication, a way of amplifying a statement so that it carries better to a large or distant audience. Hence, the persuasive identifications of Rhetoric, in being so directly designed for *use*, involve us in a special problem of *consciousness*, as exemplified in the Rhetorician's particular *purpose* for a given statement.

The thought gives a glimpse into rhetorical motives behind many characters in drama and fiction. Shakespeare's Iago and Molière's Tartuffe are demons of Rhetoric. Every word and act is addressed, being designed to build up false identifications in the minds of their victims. Similarly, there is a notable ingredient of Rhetoric in Stendhal's Julien Sorel, who combines "heightened consciousness" with "freedom" by a perversely frank decision to perfect his own kind of hypocrisy as a means of triumphing over the hypocrisy of others. All his actions thus become rhetorical, framed for their effect; his life is a spellbinding and spellbound address to an audience.

Did you ever do a friend an injury by accident, in all poetic simplicity? Then conceive of this same injury as done by sly design, and you are forthwith within the orbit of Rhetoric. If you, like the Stendhals and Gides, conceive a character by such sophistication, Rhetoric as the speaker's attempt to identify himself favorably with his audience then becomes so transformed that the work may seem to have been written under an esthetic of pure "expression," without regard for communicative appeal. Or it may appeal perversely, to warped motives within the audience. Or it may be but an internalizing of the rhetorical motive, as the very actions of such a representative figure take on a rhetorical cast. Hence, having woven a rhetorical motive so integrally into the very essence of his conception, the writer can seem to have ignored rhetorical considerations; yet, in the sheer effrontery of his protagonist there is embedded, however disguised or transformed, an *anguish* of communication (communication being, as we have said, a generalized form of love).

As regards the rhetorical ways of Stendhal's hero, moving in the perverse freedom of duplicity: After the disclosure of his cunning, Julien

abandons his complex rhetorical morality of hypocrisy-to-outhypocritize-the-hypocrites, and regains a new, suicidally poetic level of simplicity. “*Jamais cette tête n’avait été aussi poétique qu’au moment où elle allait tomber.*”¹ The whole structure of the book could be explained as the account of a hero who, by the disclosure of his Rhetoric, was jolted into a tragically direct poetic. Within the terms of the novel, “hypocrisy” was the word for “rhetoric,” such being the quality of the rhetoric that marked the public life of France under the reign of *Napoléon le Petit*.

Rhetoric of “Address” (to the Individual Soul)

By our arrangement, the individual in his uniqueness falls under the head of Symbolic. But one should not thereby assume that what is known as “individual psychology” wholly meets the same test. Particularly in the Freudian concern with the neuroses of individual patients, there is a strongly rhetorical ingredient. Indeed, what could be more profoundly rhetorical than Freud’s notion of a dream that attains expression by stylistic subterfuges designed to evade the inhibitions of a moralistic censor? What is this but the exact analogue of the rhetorical devices of literature under political or theocratic censorship? The *ego* with its *id* confronts the *superego* much as an orator would confront a somewhat alien audience, whose susceptibilities he must flatter as a necessary step towards persuasion. The Freudian psyche is quite a parliament, with conflicting interests expressed in ways variously designed to take the claims of rival factions into account.

The best evidence of a strongly rhetorical ingredient in Freud’s view of the psyche is in his analysis of *Wit and Its Relation to the Unconscious*. In particular, we think of Freud’s concern with the role of an audience, or “third person,” with whom the speaker establishes rapport, in their common enterprise directed against the butt of tendentious witticisms. Here is the purest rhetorical pattern: speaker and hearer as partners in partisan jokes made at the expense of another. If you “internalize” such a variety of motives, so

¹“Never was that head so poetic as at the moment when it was about to fall.” [Ed.]

that the same person can participate somewhat in all three positions, you get a complex individual of many voices. And though these may be treated, under the heading of Symbolic, as a concerto of principles mutually modifying one another, they may likewise be seen, from the standpoint of Rhetoric, as a parliamentary wrangle which the individual has put together somewhat as he puts together his fears and hopes, friendships and enmities, health and disease, or those tiny rebirths whereby, in being born to some new condition, he may be dying to a past condition, his development being dialectical, a series of terms in perpetual transformation.

Thus by a roundabout route we come upon another aspect of Rhetoric: its nature as *addressed*, since persuasion implies an audience. A man can be his own audience, insofar as he, even in his secret thoughts, cultivates certain ideas or images for the effect he hopes they may have upon him; he is here what Mead would call “an ‘I’ addressing its ‘me’”; and in this respect he is being rhetorical quite as though he were using pleasant imagery to influence an outside audience rather than one within. In traditional Rhetoric, the relation to an external audience is stressed. Aristotle’s *Art of Rhetoric*, for instance, deals with the appeal to audiences in this primary sense: It lists typical beliefs, so that the speaker may choose among them the ones with which he would favorably identify his cause or unfavorably identify the cause of an opponent; and it lists the traits of character with which the speaker should seek to identify himself, as a way of disposing an audience favorably towards him. But a modern “post-Christian” rhetoric must also concern itself with the thought that, under the heading of appeal to audiences, would also be included any ideas or images privately addressed to the individual self for moralistic or incantatory purposes. For you become your own audience, in some respects a very lax one, in some respects very exacting, when you become involved in psychologically stylistic subterfuges for presenting your own case to yourself in sympathetic terms (and even terms that seem harsh can often be found on closer scrutiny to be flattering, as with neurotics who visit sufferings upon themselves in the name of very high-powered motives which, whatever their discomfiture, feed pride).

Such considerations make us alert to the ingredient of rhetoric in all *socialization*, considered as a *moralizing* process. The individual person, striving to form himself in accordance with the communicative norms that match the cooperative ways of his society, is by the same token concerned with the rhetoric of identification. To act upon himself persuasively, he must variously resort to images and ideas that are formative. Education ("indoctrination") exerts such pressure upon him from without; he completes the process from within. If he does not somehow act to tell himself (as his own audience) what the various brands of rhetorician have told him, his persuasion is not complete. Only those voices from without are effective which can speak in the language of a voice within.

Among the Tanala of Madagascar, it is said, most of those tribesmen susceptible to *tromba* ("neurotic seizure indicated by an extreme desire to dance") were found to be among the least favored members of the tribe. Such seizures are said to be a device that makes the possessed person "the center of all the attention." And afterwards, the richest and most powerful members of the sufferer's family foot the bill, so that "the individual's ego is well satisfied and he can get along quite well until the next *tromba* seizure occurs." In sum, "like most hysterical seizures, *tromba* requires an audience."

The citations are from A. Kardiner, *The Individual and His Society* (New York: Columbia University Press). They would suggest that, when asking what all would fall within the scope of our topic, we could also include a "rhetoric of hysteria." For here too are expressions which are *addressed*—and we confront an ultimate irony, in glimpsing how even a catatonic lapse into sheer automatism, beyond the reach of all normally linguistic communication, is in its origins communicative, addressed, though it be a paralogical appeal-that-ends-all-appeals.

Rhetoric and Primitive Magic

The Kardiner citations are taken from a paper by C. Kluckhohn on "Navaho Witchcraft," containing observations that would also bring witchcraft within the range of rhetoric. Indeed, where

witchcraft is imputed as a motive behind the individual search for wealth, power, or vengeance, can we not view it as a primitive vocabulary of *individualism* emerging in a culture where *tribal* thinking had been uppermost, so that the individualist motive would be admitted and suspect? And any breach of identification with the tribal norms being sinister, do we not glimpse rhetorical motives behind the fact that Macbeth's private ambitions were figured in terms of witches?

At first glance we may seem to be straining the conception of rhetoric to the breaking point, when including even a treatise on primitive witchcraft within its range. But look again. Precisely at a time when the term "rhetoric" had fallen into greatest neglect and disrepute, writers in the "social sciences" were, under many guises, making good contributions to the New Rhetoric. As usual with modern thought, the insights gained from *comparative culture* could throw light upon the classic approach to this subject; and again, as usual with modern thought, this light was interpreted in terms that concealed its true relation to earlier work. And though the present writer was strongly influenced by anthropological inquiries into primitive magic, he did not clearly discern the exact relation between the anthropologist's concern with magic and the literary critic's concern with communication until he had systematically worked on this *Rhetoric* for some years. Prior to this discovery, though he persisted in anthropological hankerings, he did so with a bad conscience; and he was half willing to agree with literary opponents who considered such concerns alien to the study of literature proper.

Now, in noting methodically how the anthropologist's account of magic can belong in a rhetoric, we are better equipped to see exactly wherein the two fields of inquiry diverge. Anthropology is a gain to literary criticism only if one knows how to "discount" it from the standpoint of rhetoric. And, ironically, anthropology can be a source of disturbance, not only to literary criticism in particular, but to the study of human relations in general, if one does not so discount it, but allows *its* terms to creep into one's thinking at points where issues *should* be studied explicitly in terms of rhetoric.

We saw both the respects in which the anthropologists' study of magic overlaps upon rhetoric and the respects in which they are distinct when we were working on a review of Ernst Cassirer's *Myth of the State*. The general proposition that exercised us can be stated as follows:

We must begin by confronting the typically scientist view of the relation between science and magic. Since so many apologists of modern science, following a dialectic of simple antithesis, have looked upon magic merely as an early form of bad science, one seems to be left only with a distinction between bad and good science. Scientific knowledge is thus presented as a terminology that gives an accurate and critically tested description of reality; and magic is presented as antithetical to such science. Hence magic is treated as an early uncritical attempt to do what science does, but under conditions where judgment and perception were impaired by the naïvely anthropomorphic belief that the impersonal forces of nature were motivated by personal designs. One thus confronts a flat choice between a civilized vocabulary of scientific description and a savage vocabulary of magical incantation.

In this scheme, "rhetoric" has no systematic location. We recall noting the word but once in Cassirer's *Myth of the State*, and then it is used only in a random way; yet the book is really about nothing more nor less than a most characteristic concern of rhetoric: the manipulation of men's beliefs for political ends.

Now, the basic function of rhetoric, the use of words by human agents to form attitudes or to induce actions in other human agents, is certainly not "magical." If you are in trouble, and call for help, you are no practitioner of primitive magic. You are using the primary resource of human speech in a thoroughly realistic way. Nor, on the other hand, is your utterance "science," in the strict meaning of science today, as a "semantic" or "descriptive" terminology for charting the conditions of nature from an "impersonal" point of view, regardless of one's wishes or preferences. A call for help is quite "prejudiced"; it is the most arrant kind of "wishful thinking"; it is not merely descriptive, it is *hortatory*. It is not just trying to tell how things are, in strictly

"scenic" terms; it is trying to *move people*. A call for help might, of course, include purely scientific statements, or preparations for action, as a person in need might give information about particular dangers to guard against or advantages to exploit in bringing help. But the call, in itself, as such, is not scientific; it is *rhetorical*. Whereas poetic language is a kind of symbolic action, for itself and in itself, and whereas scientific action is a preparation for action, rhetorical language is inducement to action (or to attitude, attitude being an incipient act).

If you have only a choice between magic and science, you simply have no bin in which to accurately place such a form of expression. Hence, since "the future" is not the sort of thing one can put under a microscope, or even test by a knowledge of *exactly equivalent conditions* in the past, when you turn to political exhortation, you are involved in decisions that necessarily lie beyond the strictly scientific vocabularies of description. And since the effective politician is a "spell-binder," it seems to follow by elimination that the hortatory use of speech for political ends can be called "magic," in the discredited sense of that term.

As a result, much analysis of political exhortation comes to look simply like a survival of primitive magic, whereas it should be handled in its own terms, as an aspect of what it really is: rhetoric. The approach to rhetoric in terms of "word magic" gets the whole subject turned backwards. Originally, the magical use of symbolism to affect natural processes by rituals and incantations was a mistaken transference of a proper linguistic function to an area for which it was not fit. The realistic use of addressed language to *induce action in people* became the magical use of addressed language to *induce motion in things* (things by nature alien to purely linguistic orders of motivation). If we then begin by treating this *erroneous* and *derived* magical use as *primary*, we are invited to treat a *proper* use of language (for instance, political persuasion) simply as a vestige of benightedly pre-scientific magic.

To be sure, the rhetorician has the tricks of his trade. But they are not mere "bad science"; they are an "art." And any overly scientist approach to

them (treating them in terms of flat dialectical opposition to modern technology) must make our world look much more “neoprimitive” than is really the case. At the very least, we should note that primitive magic prevailed most strongly under social conditions where the rationalization of social effort in terms of money was negligible; but the rhetoric of modern politics would establish social identifications atop a way of life highly diversified by money, with the extreme division of labor and status which money served to rationalize.

Realistic Functions of Rhetoric

Gaining courage as we proceed, we might even contend that we are not so much proposing to import anthropology into rhetoric as proposing that anthropologists recognize the factor of rhetoric in their own field. That is, if you look at recent studies of primitive magic from the standpoint of this discussion, you might rather want to distinguish between magic as “bad science” and magic as “primitive rhetoric.” You then discover that anthropology does clearly recognize the rhetorical *function* in magic; and far from dismissing the rhetorical aspect of magic merely as bad science, anthropology recognizes in it a pragmatic device that greatly assisted the survival of cultures by promoting social cohesion. (Malinowski did much work along these lines, and the Kluckhohn essay makes similar observations about witchcraft.) But now that we have confronted the term “magic” with the term “rhetoric,” we’d say that one comes closer to the true state of affairs if one treats the socializing aspects of magic as a “primitive rhetoric” than if one sees modern rhetoric simply as a “survival of primitive magic.”

For rhetoric as such is not rooted in any past condition of human society. It is rooted in an essential function of language itself, a function that is wholly realistic, and is continually born anew; the use of language as a symbolic means of inducing cooperation in beings that by nature respond to symbols. Though rhetorical considerations may carry us far afield, leading us to violate the principle of autonomy separating the various disciplines, there is an intrinsically rhetorical motive, situated in the persuasive use of language.

And this persuasive use of language is not derived from “bad science,” or “magic.” On the contrary, “magic” was a faulty derivation from it, “word magic” being an attempt to produce linguistic responses in kinds of beings not accessible to the linguistic motive. However, once you introduce this emendation, you can see beyond the accidents of language. You can recognize how much of value has been contributed to the New Rhetoric by these investigators, though their observations are made in terms that never explicitly confront the rhetorical ingredient in their field of study. We can place in terms of rhetoric all those statements by anthropologists, ethnologists, individual and social psychologists, and the like, that bear upon the *persuasive* aspects of language, the function of language as *addressed*, as direct or roundabout appeal to real or ideal audiences, without or within.

Are we but haggling over a term? In one sense, yes. We are offering a rationale intended to show how far one might systematically extend the term “rhetoric.” In this respect, we are haggling over a term; for we must persist in tracking down the *function* of that term. But to note the ingredient of rhetoric lurking in such anthropologist’s terms as “magic” and “witchcraft” is not to ask that the anthropologist replace his words with ours. We are certainly not haggling over terms in that sense. The term “rhetoric” is no substitute for “magic,” “witchcraft,” “socialization,” “communication,” and so on. But the term rhetoric designates a *function* which is present in the areas variously covered by those other terms. And we are asking only that this *function* be recognized for what it is: a linguistic function by nature as *realistic* as a proverb, though it may be quite far from the kind of realism found in strictly “scientific realism.” For it is essentially a realism of the *act*: moral, persuasive—and acts are not “true” and “false” in the sense that the propositions of “scientific realism” are. And however “false” the “propositions” of primitive magic may be, considered from the standpoint of scientific realism, it is different with the peculiarly *rhetorical* ingredient in magic, involving ways of identification that contribute variously to social cohesion (either for the advantage of the community as a whole, or for the advantage of

special groups whose interests are a burden on the community, or the advantages of special groups whose rights and duties are indeterminately both a benefit and a tax on the community, as with some business enterprise in our society).

The “pragmatic sanction” for this function of magic lies outside the realm of strictly true-or-false propositions; it falls in an area of deliberation that itself draws upon the resources of rhetoric; it is itself a subject matter belonging to an art that can “prove opposites.”

To illustrate what we mean by “proving opposites” here: we read an article, let us say, obviously designed to dispose the reading public favorably towards the “aggressive and expanding” development of American commercial interests in Saudi Arabia. It speaks admiringly of the tremendous changes which our policies of commerce and investment will introduce into a vestigially feudal culture, and of the great speed at which the rationale of finance and technology will accomplish these changes. When considering the obvious rhetorical intent of these “facts,” we suddenly, in a perverse *non sequitur*, remember a passage in the Kluckhohn essay, involving what we would now venture to call “the rhetoric of witchcraft”:

In a society like the Navaho which is competitive and capitalistic, on the one hand, and still familistic on the other, any ideology which has the effect of slowing down economic mobility is decidedly adaptive. One of the most basic strains in Navaho society arises out of the incompatibility between the demands of familism and the emulation of European patterns in the accumulating of capital.

And in conclusion we are told that the “survival of the society” is assisted by “any pattern, such as witchcraft, which tends to discourage the rapid accumulation of wealth” (witchcraft, as an “ideology,” contributing to this end by identifying new wealth with malign witchery). Now, when you begin talking about the optimum rate of speed at which cultural changes should take place, or the optimum proportion between tribal and individualistic motives that should prevail under a particular set of economic conditions, you are talking about something very important indeed, but you will find yourself deep in matters

of rhetoric: for nothing is more rhetorical in nature than a deliberation as to what is too much or too little, too early or too late; in such controversies, rhetoricians are forever “proving opposites.”

Where are we now? We have considered two main aspects of rhetoric: its use of *identification* and its nature as *addressed*. Since identification implies division, we found rhetoric involving us in matters of socialization and faction. Here was a wavering line between peace and conflict, since identification is got by property, which is ambivalently a motive of both morality and strife. And inasmuch as the ultimate of conflict is war or murder, we considered how such imagery can figure as a terminology of reidentification (“transformation” or “rebirth”). For in considering the wavering line between identification and division, we shall always be coming upon manifestations of the logomachy, avowed as in invective, unavowed as in stylistic subterfuges for presenting real divisions in terms that deny division.

We found that this wavering line between identification and division was forever bringing rhetoric against the possibility of malice and the lie; for if an identification favorable to the speaker or his cause is made to seem favorable to the audience, there enters the possibility of such “heightened consciousness” as goes with deliberate cunning. Thus, roundabout, we confronted the nature of rhetoric as *addressed* to audiences of the first, second, or third person. Socialization itself was, in the widest sense, found to be addressed. And by reason of such simultaneous identification-with and division-from as mark the choice of a scapegoat, we found that rhetoric involves us in problems related to witchcraft, magic, spellbinding, ethical promptings, and the like. And in the course of discussing these subjects, we found ourselves running into another term: persuasion. Rhetoric is the art of persuasion, or a study of the means of persuasion available for any given situation. We have thus, deviously, come to the point at which Aristotle begins his treatise on rhetoric.

So we shall change our purpose somewhat. Up to now, we have been trying to indicate what kinds of subject matter not traditionally labeled “rhetoric” should, in our opinion, also fall under this head. We would now consider varying views

of rhetoric that have already prevailed; and we would try to “generate” them from the same basic terms of our discussion.

As for the relation between “identification” and “persuasion”: we might well keep it in mind that a speaker persuades an audience by the use of stylistic identifications; his act of persuasion may be for the purpose of causing the audience to identify itself with the speaker’s interests; and the speaker draws on identification of interests to establish rapport between himself and his audience. So, there is no chance of our keeping apart the meanings of persuasion, identification (“consubstantiality”) and communication (the nature of rhetoric as “addressed”). But, in given in-

stances, one or another of these elements may serve best for extending a line of analysis in some particular direction.

And finally: The use of symbols, by one symbol-using entity to induce action in another (persuasion properly addressed) is in essence not magical but *realistic*. However, the resources of identification whereby a sense of consubstantiality is symbolically established between beings of unequal status may extend far into the realm of the *idealistic*. And as we shall see later, when on the subject of order, out of this idealistic element there may arise a kind of magic or mystery that sets its mark upon all human relations.

From *Language as Symbolic Action*

Terministic Screens

I DIRECTING THE ATTENTION

We might begin by stressing the distinction between a “scientific” and a “dramatistic” approach to the nature of language. A “scientific” approach begins with questions of *naming*, or *definition*. Or the power of language to define and describe may be viewed as derivative; and its essential function may be treated as attitudinal or hortatory: attitudinal as with expressions of complaint, fear, gratitude, and such; hortatory as with commands or requests, or, in general, an instrument developed through its use in the social processes of cooperation and competition. I say “developed”; I do *not* say “originating.” The ultimate *origins* of language seem to me as mysterious as the origins of the universe itself. One must view it, I feel, simply as the “given.” But once an animal comes into being that does happen to have this particular aptitude, the various tribal idioms are unquestionably *developed* by their use as instruments in the tribe’s way of living (the practical role of symbolism in what the anthropologist, Malinowski, has called “context of situ-

ation”). Such considerations are involved in what I mean by the “dramatistic,” stressing language as an aspect of “action,” that is, as “symbolic action.”

The two approaches, the “scientific” and the “dramatistic” (language as definition, and language as act) are by no means mutually exclusive. Since both approaches have their proper uses, the distinction is not being introduced invidiously. Definition itself is a symbolic act, just as my proposing of this very distinction is a symbolic act. But though at this moment of beginning, the overlap is considerable, later the two roads diverge considerably, and direct our attention to quite different kinds of observation. The quickest way to indicate the differences of direction might be by this formula: The “scientific” approach builds the edifice of language with primary stress upon a proposition such as “It *is*, or it *is not*.” The “dramatistic” approach puts the primary stress upon such hortatory expressions as “thou *shalt*, or thou *shalt not*.” And at the other extreme the distinction becomes quite obvious, since the scientific approach culminates in the kinds of speculation we associate with symbolic logic, while the dramatistic culminates in the kinds of speculation that find their handiest material in stories, plays, poems, the rhetoric of ora-

tory and advertising, mythologies, theologies, and philosophies after the classic model.

The dramatic view of language, in terms of “symbolic action,” is exercised about the necessarily *suasive* nature of even the most unemotional scientific nomenclatures. And we shall proceed along those lines; thus:

Even if any given terminology is a *reflection* of reality, by its very nature as a terminology it must be a *selection* of reality; and to this extent it must function also as a *deflection* of reality.

In his seventh *Provincial Letter*, Pascal satirizes a device which the Jesuits of his day called “directing the intention.” For instance, to illustrate satirically how one should “direct the intention,” he used a burlesque example of this sort: Dueling was forbidden by the Church. Yet it was still a prevalent practice. Pascal satirically demonstrated how, by “directing the intention,” one could both take part in a duel and not violate the Church injunctions against it. Thus, instead of intentionally going to take part in a duel, the duelists would merely go for a walk to a place where the duel was to be held. And they would carry guns merely as a precautionary means of self-protection in case they happened to meet an armed enemy. By so “directing the intention,” they could have their duel without having transgressed the Church’s thou-shall-not’s against dueling. For it was perfectly proper to go for a walk; and in case one encountered an enemy bent on murder, it was perfectly proper to protect oneself by shooting in self-defense.

I bring up this satirically excessive account of directing the *intention*, in the hopes that I can thereby settle for less when discussing the ways in which “terministic screens” direct the *attention*. Here the kind of deflection I have in mind concerns simply the fact that any nomenclature necessarily directs the attention into some channels rather than others. In one sense, this likelihood is painfully obvious. A textbook on physics, for instance, turns the *attention* in a different direction from the textbook on law or psychology. But some implications of this terministic incentive are not so obvious.

When I speak of “terministic screens,” I have particularly in mind some photographs I once saw. They were *different* photographs of the

same objects, the difference being that they were made with different color filters. Here something so “factual” as a photograph revealed notable distinctions in texture, and even in form, depending upon which color filter was used for the documentary description of the event being recorded.

Similarly, a man has a dream. He reports his dream to a Freudian analyst, or a Jungian, or an Adlerian, or to a practitioner of some other school. In each case, we might say, the “same” dream will be subjected to a different color filter, with corresponding differences in the nature of the event as perceived, recorded, and interpreted. (It is a commonplace that patients soon learn to have the kind of dreams best suited to the terms favored by their analysts.)

II OBSERVATIONS IMPLICIT IN TERMS

We have now moved things one step further along. Not only does the nature of our terms affect the nature of our observations, in the sense that the terms direct the *attention* to one field rather than to another. Also, *many of the “observations” are but implications of the particular terminology in terms of which the observations are made.* In brief, much that we take as observations about “reality” may be but the spinning out of possibilities implicit in our particular choice of terms.

Perhaps the simplest illustration of this point is to be got by contrasting secular and theological terminologies of motives. If you want to operate, like a theologian, with a terminology that includes “God” as its key term, the only sure way to do so is to put in the term, and that’s that. The Bible solves the problem by putting “God” into the first sentence—and from this initial move, many implications “necessarily” follow. A naturalistic, Darwinian terminology flatly omits the term, with a corresponding set of implications—and that’s that. I have called metaphysics “coy theology” because the metaphysician often introduces the term “God” not outright, as with the Bible, but by beginning with a term that *ambiguously* contains such implications; then he gradually makes these implications explicit. If the term is not introduced thus ambiguously, it

can be introduced only by fiat, either outright at the beginning (like the Bible) or as a *non sequitur* (a break in the argument somewhere along the way). In Platonic dialogues, myth sometimes serves this purpose of a leap en route, a step prepared for by the fact that, in the Platonic dialectic, the methodic progress towards *higher levels of generalization* was in itself thought of as progress towards *the divine*.

But such a terministic situation is not by any means confined to matters of theology or metaphysics. As Jeremy Bentham aptly pointed out, all terms for mental states, sociopolitical relationships, and the like are necessarily "fictions," in the sense that we must express such concepts by the use of terms borrowed from the realm of the physical. Thus, what Emerson said in the accents of transcendental enthusiasm, Bentham said in the accents of "tough-mindedness." In Emerson's "tender-minded" scheme, "nature" exists to provide us with terms for the physical realm that are transferable to the moral realm, as the sight of a straight line gives us our word for "right," and of a crooked or twisted line our word for "wrong"; or as we derived our word for "spirit" from a word for "breath," or as "superciliousness" means literally a raising of the eyebrow. But Bentham would state the same relationship "tough-mindedly" by noting that our words for "right," "wrong," "spirit," etc. are "fictions" carried over from their strictly literal use in the realm of physical sensation. Bentham does not hope that such "fictions" can be avoided. He but asks that we recognize their nature as fictions. So he worked out a technique for helping to disclose the imagery in such ideas, and to discount accordingly. (See C. K. Ogden's book, *Bentham's Theory of Fictions*.)

But though this situation is by no means confined to the terminologies of theology or metaphysics, or even to such sciences as psychology (with terms for the out-going as vs. the in-turning, for dispositions, tendencies, drives, for the workings of the "it" in the Unconscious, and so on), by its very thoroughness theology does have a formula that we can adapt, for purely secular purposes of analysis. I have in mind the injunction, at once pious and methodological, "Believe, that you may understand (*crede, ut intelligas*)." In its theological application, this formula served

to define the relation between faith and reason. That is, if one begins with "faith," which must be taken on authority, one can work out a rationale based on this faith. But the faith must "precede" the rationale. . . .

In my book, *The Rhetoric of Religion*, I have proposed that the word "logology" might be applied in a special way to this issue. By "logology," as so conceived, I would mean the systematic study of theological terms, not from the standpoint of their truth or falsity as statements about the supernatural, but purely for the light they might throw upon the *forms* of language. That is, the tactics involved in the theologian's "words about God" might be studied as "words about words" (by using as a methodological bridge the opening sentence in the Gospel of John: "In the beginning was the Word, and the Word was with God, and the Word was God").

"Logology" would be a purely empirical study of symbolic action. Not being a theologian, I would have no grounds to discuss the truth or falsity of theological doctrines as such. But I do feel entitled to discuss them with regard to their nature merely as language. And it is my claim that the injunction, "Believe, that you may understand," has a fundamental application to the purely secular problem of "terministic screens."

The "logological," or "terministic" counterpart of "Believe" in the formula would be: *Pick some particular nomenclature, some one terministic screen*. And for "That you may understand," the counterpart would be: *That you may proceed to track down the kinds of observation implicit in the terminology you have chosen, whether your choice of terms was deliberate or spontaneous.*"

III EXAMPLES

I can best state the case by giving some illustrations. But first let me ask you to reconsider a passage from Chapter One which presents the matter in the most general sense:

. . . can we bring ourselves to realize just how overwhelmingly much of what we mean by "reality" has been built up for us through nothing but our

symbol systems? Take away our books, and what little do we know about history, biography, even something so “down to earth” as the relative position of seas and continents? What is our “reality” for today (beyond the paper-thin line of our own particular lives) but all this clutter of symbols about the past, combined with whatever things we know mainly through maps, magazines, newspapers, and the like about the present? In school, as they go from class to class, students turn from one idiom to another. The various courses in the curriculum are in effect but so many different terminologies. And however important to us is the tiny sliver of reality each of us has experienced firsthand, the whole overall “picture” is but a construct of our symbol systems. To meditate on this fact until one sees its full implications is much like peering over the edge of things into an ultimate abyss. And doubtless that’s one reason why, though man is typically the symbol-using animal, he clings to a kind of naïve verbal realism that refuses to let him realize the full extent of the role played by symbolicity in his notions of reality.

I hope the passage can serve at least somewhat to suggest how fantastically much of our “Reality” could not exist for us, were it not for our profound and inveterate involvement in symbol systems. Our presence in a room is immediate, but the room’s relation to our country as a nation, and beyond that, to international relations and cosmic relations, dissolves into a web of ideas and images that reach through our senses only insofar as the symbol systems that report on them are heard or seen. To mistake this vast tangle of ideas for immediate experience is much more fallacious than to accept a dream as an immediate experience. For a dream really is an immediate experience, but the information that we receive about today’s events throughout the world most decidedly is *not*.

But let us consider some examples of terministic screens, in a more specific sense. The child psychologist, John Bowlby, writes a subtle and perceptive paper on “The Nature of the Child’s Ties to Its Mother.” He observes what he calls “five instinctual responses” of infants, which he lists as: crying, smiling, sucking, clinging, following. Surely no one would deny that such responses are there to see. But at the same time, we might recall the observations of the behaviorist,

John B. Watson. He, too, found things that were there to see. For instance, by careful scientific study, he discovered sure ways to make babies cry in fright or shriek with rage.

In contrast with Watson’s terminology of observation regarding the nature of infantile reflexes, note that Bowlby adopted a much more *social* point of view. His terms were explicitly designed to study infantile responses that involved the mother in a reciprocal relationship to the child.

At the time I read Bowlby’s paper, I happened to be doing a monograph on “Verbal Action in St. Augustine’s *Confessions*.” I was struck by the fact that Augustine’s terms for the behavior of infants closely paralleled Bowlby’s. Three were definitely the same: crying, smiling, sucking. Although he doesn’t mention clinging as a particularly notable term with regard to infancy, as the result of Bowlby’s list I noticed, as I might otherwise not have, that he frequently uses the corresponding Latin term (*inhaerere*) regarding his attachment to the Lord. “Following” was not explicitly worked out, as an infantile response, though Augustine does refer to God as his leader. And I began wondering what might be done with Spinoza’s *Ethics* in this connection, whether his persistent concern with what necessarily “follows” what in Nature could have been in part a metaphysician’s transformation of a personal motive strong in childhood. Be that as it may, I was struck by the fact that Augustine made one strategically important addition to Bowlby’s list: rest. Once you mention it, you realize that it is very definitely an instinctual response of the sort that Bowlby was concerned with, since it involves a social relation between mother and child. In Augustine’s scheme, of course, it also allowed for a transformation from resting as an infant to hopes of ultimately “resting in God.”

Our point is: All three terminologies (Watson’s, Bowlby’s, Augustine’s) directed the attention differently, and thus led to a correspondingly different quality of observations. In brief, “behavior” isn’t something that you need but observe; even something so “objectively there” as behavior must be observed through one or another kind of *terministic screen*, that directs the attention in keeping with its nature.

Basically, there are two kinds of terms: terms that put things together, and terms that take things apart. Otherwise put, *A* can feel himself identified with *B*, or he can think of himself as disassociated from *B*. Carried into mathematics, some systems stress the principle of continuity, some the principle of discontinuity, or particles. And since all laboratory instruments of measurement and observation are devices invented by the symbol-using animal, they too necessarily give interpretations in terms of either continuity or discontinuity. Hence, physicists forever keep finding that some sub-sub-sub-subaspect of nature can be again subdivided; whereupon it's only a question of time until they discover that some new cut merges moments previously considered distinct—and so on. Knowing nothing much about physics except the terministic fact that any observation of a physicist must necessarily be stated within the resources and embarrassments of man-made terminologies, I would still dare risk the proposition that Socrates' basic point about dialectic will continue to prevail; namely, there is composition, and there is division.

Often this shows up as a distinction between terministic screens positing differences of *degree* and those based on differences of *kind*. For instance, Darwin sees only a difference of degree between man and other animals. But the theologian sees a difference in kind. That is, where Darwin views man as *continuous* with other animals, the theologian would stress the principle of *discontinuity* in this regard. But the theologian's screen also posits a certain kind of *continuity* between man and God that is not ascribed to the relation between God and other animals.

The logological screen finds itself in a peculiar position here. It holds that, even on the purely secular level, Darwin overstated his case. And as a consequence, in his stress upon the principle of *continuity* between man and the other animals, he unduly slighted the evidence for *discontinuity* here. For he assumed that the principle of discontinuity between man and other animals was necessarily identical with a theological view of man.

Such need not be the case at all. Darwin says astonishingly little about man's special aptitudes as a symbol user. His terministic screen so

stressed the principle of continuity here that he could view the principle of discontinuity only as a case of human self-flattery. Yet, logology would point out: We can distinguish man from other animals without necessarily being over-haughty. For what other animals have yellow journalism, corrupt politics, pornography, stock market manipulators, plans for waging thermonuclear, chemical, and bacteriological war? I think we can consider ourselves different in kind from other animals, without necessarily being overproud of our distinction. We don't need theology, but merely the evidence of our characteristic sociopolitical disorders, to make it apparent that man, the typically symbol-using animal is alas! something special.

IV FURTHER EXAMPLES

Where are we, then?

We *must* use terministic screens, since we can't say anything without the use of terms; whatever terms we use, they necessarily constitute a corresponding kind of screen; and any such screen necessarily directs the attention to one field rather than another. Within that field there can be different screens, each with its ways of directing the attention and shaping the range of observations implicit in the given terminology. All terminologies must implicitly embody choices between the principle of continuity and the principle of discontinuity.

Two other variants of this point about continuity and discontinuity should be mentioned. First, note how it operates in political affairs: During a national election, the situation places great stress upon a *division* between the citizens. But often such divisiveness (or discontinuity) can be healed when the warring factions join in a common cause against an alien enemy (the division elsewhere thus serving to reestablish the principle of continuity at home). It should be apparent how either situation sets up the conditions for its particular kind of scapegoat, as a device that unifies all those who share the same enemy.

For a subtler variant (and here I am somewhat anticipating the specific subject matter of the next chapter) we might cite an observation by D. W. Harding, printed in *Metaphor and Symbol*,

a collection of essays by various writers on literary and psychological symbolism. The author concedes that the Freudian terminology is highly serviceable in calling attention to ideas that are not given full conscious recognition because they are *repressed*. But he asks: Why can there not also be ideas that are unclear simply because we have not yet become familiar enough with a situation to take them adequately into account? Thus, when we see an object at a distance, we do not ordinarily “repress” the knowledge of its identity. We don’t recognize it simply because we must come closer, or use an instrument, before we can see it clearly enough to know precisely what it is. Would not a terminology that features the unconscious *repression* of ideas automatically deflect our attention from symbols that are not *repressed* but merely *remote*? (At this point, of course, a Jungian terministic screen would ascribe the remoteness of many dream-symbols to their misty survival from an earlier stage in man’s development—a terministic device that I have called the “temporizing of essence,” since the nature of conditions *now* is stated quasi-narratively in terms of *temporal priority*, a vestigial derivation from “prehistory.”)

One more point will end this part of our discussion. Recently I read a paper in which one sociologist accused other sociologists of “oversocializing” their terms for the discussion of human motives. (The article, “The Oversocialized Conception of Man in Modern Sociology,” by Dennis H. Wrong, appears in the April 1961 issue of the *American Sociological Review*.)

This controversy brings us to a variant of the terministic situation I discussed in distinguishing between terms for Poetics in particular and terms for Language in General. But the author’s thesis really has a much wider application than he claims for it. To the extent that all scientific terminologies, by their very role in specialized disciplines, are designed to focus attention upon one or another particular field of observation, would it not be technically impossible for any such specialized terminology to supply an adequate definition for the discussion of *man in general*? Each might serve to throw light upon one or another aspect of human motives. But the definition of man in general would be formally possible only

to a *philosophic* terminology of motives (insofar as philosophy is the proper field for thoughts on man in general). Any definition of man in terms of specialized scientific nomenclatures would necessarily be “over-socialized,” or “over-biologized,” or “over-psychologized,” or “over-physicized,” or “over-poetized,” and so on, depending upon which specialized terministic screen was being stretched to cover not just its own special field but a more comprehensive area. Or, if we try to correct the excesses of *one terminology*, by borrowing from several, what strictly *scientific* canon (in the modern sense of scientific specialization) could we adduce as sanction? Would not such an eclectic recipe itself involve a generalized philosophy of some sort?

V

OUR ATTEMPT TO AVOID MERE RELATIVISM

And now where are we? Must we merely resign ourselves to an endless catalogue of terministic screens, each of which can be valued for the light it throws upon the human animal, yet none of which can be considered central? In one sense, yes. For, strictly speaking, there will be as many different world views in human history as there are people. (*Tot homines, tot sententiae.*) We can safely take it for granted that no one’s “personal equations” are quite identical with anyone else’s. In the unwritten cosmic constitution that lies behind all man-made Constitutions, it is decreed by the nature of things that each man is “necessarily free” to be his own tyrant, inexorably imposing upon himself the peculiar combination of insights associated with his peculiar combination of experiences.

At the other extreme, each of us shares with all other members of our kind (the often-inhuman human species) the fatal fact that, however the situation came to be, all members of our species conceive of reality somewhat roundabout, through various *media* of symbolism. Any such medium will be, as you prefer, either a way of “dividing” us from the “immediate” (thereby setting up a kind of “alienation” at the very start of our emergence from infancy into that state of articulacy somewhat misleadingly called the “age of reason”); or it can be viewed as a paradoxical

way of “uniting” us with things on a “higher level of awareness,” or some such. (Here again, we encounter our principles of continuity and discontinuity.)

Whether such proneness to symbolic activity be viewed as a privilege or a calamity (or as something of both), it is a distinguishing characteristic of the human animal in general. Hence it can properly serve as the basis of a general, or philosophic definition of this animal. From this terministic beginning, this intuitive grounding of a position, many observations “necessarily follow.” But are we not here “necessarily” caught in our own net? Must we not concede that a screen built on this basis is just one more screen; and that it can at best be permitted to take its place along with all the others? Can we claim for it special favors?

If I, or any one person, or even one particular philosophic school, had invented it, such doubts would be quite justified. But if we pause to look at it quizzically, I think we shall see that it is grounded in a kind of “collective revelation,” from away back. This “collective revelation” involves the pragmatic recognition of a distinction between persons and things. I say “pragmatic” recognition, because often the distinction has not been *formally* recognized. And all the more so because, if an object is closely associated with some person whom we know intimately, it can readily become infused with the identity of that person.

Reverting now to our original term, “dramatistic,” I would offer this basic proposition for your consideration: Despite the evidences of primitive animism (that endows many sheer things with “souls”) and the opposite modes of contemporary behaviorism (designed to study people as mere things), we do make a pragmatic distinction between the “actions” of “persons” and the sheer “motions” of “things.” The slashing of the waves against the beach, or the endless cycle of births and deaths in biologic organisms would be examples of sheer motion. Yet we, the typically symbol-using animal, cannot relate to one another sheerly as things in motion. Even the behaviorist, who studies man in terms of his laboratory experiments, must treat his colleagues as *persons*, rather than purely and simply as automata responding to stimuli.

I should make it clear: I am not pronouncing on the metaphysics of this controversy. Maybe we are but things in motion. I don’t have to haggle about that possibility. I need but point out that, whether or not we are just things in motion, we think of one another (and especially of those with whom we are intimate) as *persons*. And the difference between a thing and a person is that the one merely *moves* whereas the other *acts*. For the sake of the argument, I’m even willing to grant that the distinction between *things moving* and *persons acting* is but an illusion. All I would claim is that, illusion or not, the human race cannot possibly get along with itself on the basis of any other intuition. The human animal, as we know it, *emerges into personality* by first mastering whatever tribal speech happens to be its particular symbolic environment.

We could not here list even summarily the main aspects of the Dramatistic screen without launching into a whole new project. For present purposes, I must only say enough to indicate my grounds for contending that a Dramatistic screen does possess the philosophic character adapted to the discussion of man in general, as distinct from the kinds of insight afforded by the application of special scientific terminologies.

In behalf of my claim that the “dramatistic screen” is sanctioned by a “collective revelation” of long standing, suffice it to recall such key terms as *tao*, *karma*, *dike*, *energeia*, *hodos*, *actus*—all of them words for *action* (to which we might well add *Islam*, as the name for a submissive *attitude* with its obviously active possibilities). The Bible starts with God’s act, by creative fiat. Contemporary sociological theories of “role-taking” fit into the same general scheme. Terms like “transactions,” “exchange,” “competition,” “cooperation,” are but more specific terms for “action.” And there are countless words for specific acts: give, take, run, think, etc. The contemporary concern with “game theories” is obviously a subdivision of the same term. Add the gloomy thought that such speculative playfulness now is usually concerned with “war games.” But in any case, the concept of such games must involve, in however fragmentary a fashion, the picture of persons acting under stress. And even when the “game” hypothetically reduces most of

the players to terms of mere pawns, we can feel sure in advance that, if the “game” does not make proper allowance for the “human equation,” the conclusions when tested will prove wrong.

But the thought should admonish us. Often it is true that people can be feasibly reduced to terms of sheer motion. About fifty years ago, I was suddenly *startled* into thinking when (encountering experience purely “symbolwise,” purely via the news) I read of the first German attacks against a Belgian fortress in World War I. The point was simply this: The approach to the fortress was known to be mined. And the mines had to be exploded. So wave after wave of human flesh was sent forward, as conditioned cattle, to get blown up, until all the mines had been touched off. Then the next wave, or the next two or three waves thereafter, could take the fort. Granted, that comes pretty close to sheer motion, doubtless conceived in the best war-game tradition.

Basically, the Dramatistic screen involves a methodic tracking down of the implications in

the idea of symbolic action, and of man as the kind of being that is particularly distinguished by an aptitude for such action. To quote from Webster’s *Third New International Dictionary*, which has officially recognized “Dramatism” in my sense of the term, as treated schematically in my *Grammar of Motives*, it is “A technique of analysis of language and thought as basically modes of action rather than as means of conveying information.” I would but note that such an “Ism” can also function as a philosophy of human relations. The main consideration to keep in mind, for present purposes, is that two quite different but equally justifiable positions are implicit in this approach to specifically human motivation.

There is a gloomy route, of this sort: If *action* is to be our key term, then *drama*; for drama is the culminative form of action. . . . But if *drama*, then *conflict*. And if *conflict*, then *victimage*. Dramatism is always on the edge of this vexing problem, that comes to a culmination in tragedy, the song of the scapegoat.

Richard Weaver

1910–1963

“Rhetoric,” says Richard Weaver, “is cognate with language.” This terse formulation neatly characterizes the insight and dilemma of modern rhetorical theory. It is, Weaver remarks, “impossible and even ridiculous that the utterances of men could be neutral.” Rhetoric, hence language, is not neutral; it is a positive act with consequences in the world. Attempts to purify language, to raise it above rhetoric to a scientific standard of objectivity, are misguided. To the contrary, “every use of speech, oral and written, exhibits attitude, and an attitude implies an act.”¹ Even statements of simple fact or logic “can be seen as enclosed in a rhetorical intention.”² Every utterance is an attempt to make others see the world in a particular way and to accept the values implicit in that point of view. For Weaver, language is always rhetorical, always sermonic. Ethics, therefore, is the central concern of his study of rhetoric. Weaver’s elegant presentation of the scope and significance of rhetoric in his 1963 essay “Language Is Sermonic” (included here) comes at the end of his life and summarizes his long and persistent attempt to show the link between values and rhetoric. Weaver made no secret of his own values; indeed, he supported them with his considerable rhetorical powers.

Weaver was born in Asheville, North Carolina. Until his father’s death in 1916, he lived in Weaverville, North Carolina, named after his family, who had first settled there shortly after the Revolutionary War. After his father’s death, his mother moved with her four children to Lexington, Kentucky, where her family ran a prosperous millinery business. Weaver grew up in Lexington but spent the summers in Weaverville. After graduating from the University of Kentucky in 1932, he joined the Socialist party, impressed by its meliorative spirit. In 1933, however, he came under the influence of the extremely conservative Southern Agrarian movement while studying for his master’s degree at Vanderbilt University with John Crowe Ransom. This experience, reinforced by a strong negative reaction to what Weaver saw as the philistine culture of modern technocrats, moved him to become a committed conservative. He became an ardent supporter of the new conservative journals *The National Review* and *Modern Age* and of the Intercollegiate Society of Individualists. After taking his M.A. in 1936, Weaver taught at the college level for a few years before entering the Ph.D. program at Louisiana State University, where he studied with Cleanth Brooks and Robert Penn Warren. He received his degree in 1943. In 1944 he took a position at the University of Chicago, where he taught for the rest of his career, living in rented rooms in the city during the school year and returning to a family farm in Weaverville in the summer.

Weaver’s conservatism and ethical orientation to rhetoric are reflected in his firm commitment to Platonic idealism. In *Ideas Have Consequences* (1948), he articulates the notion that there are three levels of knowledge: On the first level, we have

¹For the previous three quotations, see p. 1359 in this book.

²See p. 1359 in this book.

simple awareness of brute facts; on the second level, we make generalizations and theories; and on the third, we find universals and first principles. This third level is the source of value judgments, which are necessarily based on a vision of reality: the metaphysical dream. In essays published posthumously in *Visions of Order* (1964) and *Life without Prejudice* (1965), Weaver laments the decline of Western culture and attributes that decline to a general loss of faith in a proper hierarchy of values. Instead of a belief in true ideals, modern culture fosters scientism and relativism, proclaiming “fact,” “progress,” “science,” and “efficiency” as cultural ideals.

Because rhetoric tries to orient the audience toward a worldview, it is imperative for the study of rhetoric to identify and evaluate the controlling ideas (or “god-terms”) on which the ethics of any discourse is based. In this, Weaver agrees with Kenneth Burke, whose influence on him was considerable, despite their opposing politics. Weaver maintains that the form of an argument represents an ethical orientation: Argument from definition is the most ethical form because it reflects a belief in the existence of ideal orders of being. Argument by analogy is high on his scale because it uses the standard of comparison in much the same way as a class or genre is used in definition. Cause-and-effect arguments, however, are lower on Weaver’s scale because they focus on becoming rather than on being. Such arguments tend to be pragmatic, “devoid of reference to principle or defined ideas.” Finally, arguments from circumstance are lowest, because they have little or no regard for higher orders of argument and higher ideals. Weaver treats these “ethical” argument forms as *topoi* in his textbook *Rhetoric and Composition: A Course in Reading and Writing* (1957). Notably, Weaver was committed to freshman composition, which he taught throughout his long tenure at the University of Chicago.

Weaver, like Aristotle, distinguishes dialectic from rhetoric, defining dialectic as abstract reasoning about doubtful propositions with the goal of establishing the truth. Dialectic thus leads to knowledge of essences and principles, such as “justice” and “goodness.” Dialectic does not, however, produce commitment; rhetoric does. For rhetoric to be ethical, it must be based on dialectically secured principles. Ethical rhetoric has the capacity to “perfect men by showing them better versions of themselves, links in that chain extending up toward the ideal which only the intellect can apprehend and only the soul have affection for.”

Two complete essays are reprinted here. “Language Is Sermonic” is, as noted, Weaver’s own summary of his theory of rhetoric. And in “The *Phaedrus* and the Nature of Rhetoric” (1953), Weaver not only gives an insightful reading of the *Phaedrus* but also establishes the terms of his own Platonic rhetoric.

Selected Bibliography

“Language Is Sermonic” was delivered as a lecture at the University of Oklahoma in 1963 and was published in *Dimensions of Rhetorical Scholarship*, ed. Roger E. Nebergall (1963). “The *Phaedrus* and the Nature of Rhetoric” is from *The Ethics of Rhetoric* (1953). Both have been reprinted in *Language Is Sermonic: Richard M. Weaver on the Nature of Rhetoric*, ed. Richard L. Johannesen, Rennard Strickland, and Ralph T. Eubanks (1970), and in several anthologies of rhetorical theory.

Weaver's doctoral dissertation was published posthumously as *The Southern Tradition at Bay: A History of Postbellum Thought*, ed. George Core and M. E. Bradford (1968). Other works include *Ideas Have Consequences* (1948), *Rhetoric and Composition: A Course in Reading and Writing* (1957; rev. as *A Rhetoric and Handbook*, with Richard S. Beal, 1967), *Visions of Order: The Cultural Crisis of Our Time* (1964), and *Life without Prejudice and Other Essays* (1965).

Among Weaver's uncollected essays are "To Write the Truth" (*College English* 10 [October 1948]: 25–30), "Concealed Rhetoric in Scientistic Sociology" (*Georgia Review* 13 [spring 1959]: 19–32), and "Relativism and the Use of Language," in *Relativism and the Study of Man*, ed. H. Schoeck and J. W. Wiggins (1961).

A good short biography of Weaver is Fred Douglas Young's *Richard Weaver, 1910–1963: A Life of the Mind* (1995). The chapter on Weaver in S. Foss, K. Foss, and R. Trapp's *Contemporary Perspectives on Rhetoric* (1985) summarizes his life and ideas, both political and rhetorical. It includes a discussion of critical responses and an excellent bibliography. A collection of mostly earlier assessments of Weaver both as rhetor and as Southern conservative, *The Vision of Richard Weaver*, ed. Joseph Scotchie (1995), also includes a chronology of Weaver's life and his essay "Up from Liberalism," which summarizes his political views.

Johannesen, Strickland, and Eubanks give an admiring account of Weaver's contribution to rhetoric in "Richard M. Weaver on the Nature of Rhetoric: An Interpretation," in their anthology of Weaver's work, *Language Is Sermonic* (rpt. in *Contemporary Theories of Rhetoric*, ed. Richard L. Johannesen, 1971; also rpt. in *The Vision of Richard Weaver*). Johannesen discusses aspects of Weaver's theory in "Richard Weaver's View of Rhetoric and Criticism" (*Southern Speech Journal* 3 [winter 1966]: 133–45), "Richard M. Weaver on Standards for Ethical Rhetoric" (*Central States Speech Journal* 29 [summer 1978]: 127–37), "Some Pedagogical Implications of Richard M. Weaver's Views on Rhetoric" (*College Composition and Communication* 29 [October 1978]: 272–79), and "Richard M. Weaver's Uses of Kenneth Burke" (*Southern Speech Communication Journal* [spring 1987]: 312–30).

Other helpful introductory essays include Donald Cushman and Gerard Hauser, "Weaver's Rhetorical Theory: Axiology and the Adjustment of Belief, Invention, and Judgment" (*Quarterly Journal of Speech* 59 [October 1973]: 319–29); Robert Haskell and Gerard Hauser, "Rhetorical Structure: Truth and Method in Weaver's Epistemology" (*Quarterly Journal of Speech* 64 [October 1978]: 233–45); and Maurice Natanson, "The Limits of Rhetoric" (*Quarterly Journal of Speech* 41 [April 1955]: 133–39; rpt. in *Philosophy, Rhetoric, and Argumentation*, ed. M. Natanson and H. W. Johnstone Jr., 1965; also rpt. in *The Province of Rhetoric*, ed. J. Schwartz and J. Rycenga, 1965). Walter H. Beale puts Weaver's work in the context of the mid-twentieth-century revival of interest in classical rhetoric in "Richard M. Weaver: Philosophical Rhetoric, Cultural Criticism, and the First Rhetorical Awakening" (*College English* 52 [October 1990]: 626–40). A detailed account of Weaver's political, cultural, and rhetorical theories that relates his work to late-twentieth-century developments in composition studies and epistemic rhetoric is *The Politics of Rhetoric: Richard Weaver and the Conservative Tradition*, by Bernard K. Duffy and Martin Jacobi (1993).

Language Is Sermonic

Our age has witnessed the decline of a number of subjects that once enjoyed prestige and general esteem, but no subject, I believe, has suffered more amazingly in this respect than rhetoric. When one recalls that a century ago rhetoric was regarded as the most important humanistic discipline taught in our colleges—when one recalls this fact and contrasts it with the very different situation prevailing today—he is forced to see that a great shift of valuation has taken place. In those days, in the not-so-distant Nineteenth Century, to be a professor of rhetoric, one had to be *somebody*. This was a teaching task that was thought to call for ample and varied resources, and it was recognized as addressing itself to the most important of all ends, the persuading of human beings to adopt right attitudes and act in response to them. That was no assignment for the plodding sort of professor. That sort of teacher might do a middling job with subject matter courses, where the main object is to impart information, but the teacher of rhetoric had to be a person of gifts and imagination who could illustrate, as the need arose, how to make words even in prose take on wings. I remind you of the chairs of rhetoric that still survive in title in some of our older universities. And I should add, to develop the full picture, that literature was then viewed as a subject which practically anyone could teach. No special gift, other than perhaps industry, was needed to relate facts about authors and periods. That was held to be rather pedestrian work. But the instructor in rhetoric was expected to be a man of stature. Today, I scarcely need point out, the situation has been exactly reversed. Today it is the teacher of literature who passes through a long period of training, who is supposed to possess the mysteries of a learned craft, and who is placed by his very speciality on a height of eminence. His knowledge of the intricacies of Shakespeare or Keats or Joyce and his sophistication in the critical doctrines that have been developed bring him the esteem of the academy. We must recognize in all fairness that the elaboration of critical techniques and special ap-

proaches has made the teaching of literature a somewhat more demanding profession, although some think that it has gone in that direction beyond the point of diminishing returns. Still, this is not enough to account for the relegation of rhetoric. The change has gone so far that now it is discouraging to survey the handling of this study in our colleges and universities. With a few honorable exceptions it is given to just about anybody who will take it. The “inferior, unlearned, mechanical, merely instrumental members of the profession”—to recall a phrase of a great master of rhetoric, Edmund Burke—have in their keeping what was once assigned to the leaders. Beginners, part-time teachers, graduate students, faculty wives, and various fringe people, are now the instructional staff of an art which was once supposed to require outstanding gifts and mature experience. (We must note that at the same time the course itself has been allowed to decline from one dealing philosophically with the problems of expression to one which tries to bring below-par students up to the level of accepted usage.) Indeed, the wheel of fortune would seem to have turned for rhetoric; what was once at the top is now at the bottom, and because of its low estate, people begin to wonder on what terms it can survive at all.

We are not faced here, however, with the wheel of fortune; we are faced with something that has come over the minds of men. Changes that come over the minds of men are not inscrutable, but have at some point their identifiable causes. In this case we have to deal with the most potent of cultural causes, an alteration of man's image of man. Something has happened in the recent past to our concept of what man is; a decision was made to look upon him in a new light, and from this decision new bases of evaluation have proceeded, which affect the public reputation of rhetoric. This changed concept of man is best described by the word “scientific,” a term which denotes the application of scientific assumptions to subjects which are not wholly comprised of naturalistic phenomena. Much of this is

a familiar tale, but to understand the effect of the change, we need to recall that the great success of scientific or positivistic thinking in the Nineteenth Century induced a belief that nothing was beyond the scope of its method. Science, and its off-spring applied science, were doing so much to alter and, it was thought, to improve the material conditions of the world, that a next step with the same process seemed in order. Why should not science turn its apparatus upon man, whom all the revelations of religion and the speculations of philosophy seemed still to have left an enigma, with the promise of much better result? It came to be believed increasingly that to think validly was to think scientifically, and that subject matters made no difference.

Now the method of scientific investigation is, as T. H. Huxley reminded us in a lecture which does great credit to him as a rhetorician, merely the method of logic. Induction and deduction and causal inference applied to the phenomena of nature yielded the results with which science was changing the landscape and revolutionizing the modes of industry. From this datum it was an easy inference that men ought increasingly to become scientists, and again, it was a simple derivative from this notion that man at his best is a logic machine, or at any rate an austere unemotional thinker. Furthermore, carried in the train of this conception was the thought, not often expressed of course, that things would be better if men did not give in so far to being human in the humanistic sense. In the shadow of the victories of science, his humanism fell into progressive disparagement. Just what comprises humanism is not a simple matter for analysis. Rationality is an indispensable part to be sure, yet humanity includes emotionality, or the capacity to feel and suffer, to know pleasure, and it includes the capacity for aesthetic satisfaction, and, what can be only suggested, a yearning to be in relation with something infinite. This last is his religious passion, or his aspiration to feel significant and to have a sense of belonging in a world that is productive of much frustration. These at least are the properties of humanity. Well, man had been human for some thousands of years, and where had it gotten him? Those who looked forward to a scientific Utopia were inclined to think that his

humanness had been a drag on his progress; human qualities were weaknesses, except for that special quality of rationality, which might be expected to redeem him.

However curious it may appear, this notion gained that man should live down his humanity and make himself a more efficient source of those logical inferences upon which a scientifically accurate understanding of the world depends. As the impulse spread, it was the emotional and subjective components of his being that chiefly came under criticism, for reasons that have just been indicated. Emotion and logic or science do not consort; the latter must be objective, faithful to what is out there in the public domain and conformable to the processes of reason. Whenever emotion is allowed to put in an oar, it gets the boat off true course. Therefore emotion is a liability.

Under the force of this narrow reasoning, it was natural that rhetoric should pass from a status in which it was regarded as of questionable worth to a still lower one in which it was positively condemned. For the most obvious truth about rhetoric is that its object is the whole man. It presents its arguments first to the rational part of man, because rhetorical discourses, if they are honestly conceived, always have a basis in reasoning. Logical argument is the plot, as it were, of any speech or composition that is designed to persuade. Yet it is the very characterizing feature of rhetoric that it goes beyond this and appeals to other parts of man's constitution, especially to his nature as a pathetic being, that is, a being feeling and suffering. A speech intended to persuade achieves little unless it takes into account how men are reacting subjectively to their hopes and fears and their special circumstances. The fact that Aristotle devotes a large proportion of his *Rhetoric* to how men feel about different situations and actions is an evidence of how prominently these considerations bulked even in the eyes of a master theorist.

Yet there is one further fact, more decisive than any of these, to prove that rhetoric is addressed to man in his humanity. Every speech which is designed to move is directed to a special audience in its unique situation. (We could not except even those radio appeals to "the world.")

Their audience has a unique place in time.) Here is but a way of pointing out that rhetoric is intended for historical man, or for man as conditioned by history. It is part of the *conditio humana* that we live at particular times and in particular places. These are productive of special or unique urgencies, which the speaker has got to recognize and to estimate. Hence, just as man from the point of view of rhetoric is not purely a thinking machine, or a mere seat of rationality, so he is not a creature abstracted from time and place. If science deals with the abstract and the universal, rhetoric is near the other end, dealing in significant part with the particular and the concrete. It would be the height of wishful thinking to say that this ought not be so. As long as man is born into history, he will be feeling and responding to historical pressures. All of these reasons combine to show why rhetoric should be considered the most humanistic of the humanities. It is directed to that part of our being which is not merely rational, for it supplements the rational approach. And it is directed to individual men in their individual situations, so that by the very definitions of the terms here involved, it takes into account what science deliberately, to satisfy its own purposes, leaves out. There is consequently no need for wonder that, in an age that has been influenced to distrust and disregard what is characteristically human, rhetoric should be a prime target of attack. If it is a weakness to harbor feelings, and if furthermore it is a weakness to be caught up in historical situations, then rhetoric is construable as a dealer in weaknesses. That man is in this condition religion, philosophy, and literature have been teaching for thousands of years. Criticism of it from the standpoint of a scientific Utopia is the new departure.

The incompleteness of the image of man as a creature who should make use of reason only can be demonstrated in another way. It is a truism that logic is a subject without a subject matter. That is to say, logic is a set of rules and devices which are equally applicable whatever the data. As the science of the forms of reasoning, it is a means of interpreting and utilizing the subject matters of the various fields which do have their proper contents. Facts from science or history or literature, for example, may serve in the estab-

lishment of an inductive generalization. Similar facts may be fed into a syllogism. Logic is merely the mechanism for organizing the data of other provinces of knowledge. Now it follows from this truth that if a man could convert himself into a pure logic machine or thinking machine, he would have no special relation to any body of knowledge. All would be grist for his mill, as the phrase goes. He would have no inclination, no partiality, no particular affection. His mind would work upon one thing as indifferently as upon another. He would be an eviscerated creature or a depassioned one, standing in the same relationship to the realities of the world as the thinking technique stands to the data on which it is employed. He would be a thinking robot, a concept which horrifies us precisely because the robot has nothing to think about.

A confirmation of this truth lies in the fact that rhetoric can never be reduced to symbology. Logic is increasingly becoming "symbolic logic"; that is its tendency. But rhetoric always comes to us in well-fleshed words, and that is because it must deal with the world, the thickness, stubbornness, and power of it.¹

Everybody recognizes that there is thus a formal logic. A number of eminent authorities have written of rhetoric as if it were formal in the same sense and degree. Formal rhetoric would be a set of rules and devices for persuading anybody about anything. If one desires a certain response, one uses a certain device, or "trick" as the enemies of the art would put it. The set of appeals that rhetoric provides is analogized with the forms of thought that logic prescribes. Rhetoric conceived in this fashion has an adaptability and virtuosity equal to those of logic.

But the comparison overlooks something, for at one point we encounter a significant difference. Rhetoric has a relationship to the world which logic does not have and which forces the rhetorician to keep an eye upon reality as well as upon the character and situation of his audience.

¹I might add that a number of years ago the Mathematics Staff of the College at the University of Chicago made a wager with the English Staff that they could write the Declaration of Independence in mathematical language. They must have had later and better thoughts about this, for we never saw the mathematical rendition. [Au.]

The truth of this is seen when we begin to examine the nature of the traditional “topics.” The topics were first formulated by Aristotle and were later treated also by Cicero and Quintilian and by many subsequent writers on the subject of persuasion. They are a set of “places” or “regions” where one can go to find the substance for persuasive argument. Cicero defines a topic as “the seat of an argument.” In function they are sources of content for speeches that are designed to influence. Aristotle listed a considerable number of them, but for our purposes they can be categorized very broadly. In reading or interpreting the world of reality, we make use of four very general ideas. The first three are usually expressed, in the language of philosophy, as being, cause, and relationship. The fourth, which stands apart from these because it is an external source, is testimony and authority.

One way to interpret a subject is to define its nature—to describe the fixed features of its being. Definition is an attempt to capture essence. When we speak of the nature of a thing, we speak of something we expect to persist. Definitions accordingly deal with fundamental and unchanging properties.

Another way to interpret a subject is to place it in a cause-and-effect relationship. The process of interpretation is then to affirm it as the cause of some effect or as the effect of some cause. And the attitudes of those who are listening will be affected according to whether or not they agree with our cause-and-effect analysis.

A third way to interpret a subject is in terms of relationships of similarity and dissimilarity. We say that it is like something which we know in fuller detail, or that it is unlike that thing in important respects. From such a comparison conclusions regarding the subject itself can be drawn. This is a very common form of argument, by which probabilities can be established. And since probabilities are all we have to go on in many questions of this life, it must be accounted a usable means of persuasion.

The fourth category, the one removed from the others by the fact of its being an external source, deals not with the evidence directly but accepts it on the credit of testimony or authority. If we are not in position to see or examine, but

can procure the deposition of some one who is, the deposition may become the substance of our argument. We can slip it into a syllogism just as we would a defined term. The same is true of general statements which come from quarters of great authority or prestige. If a proposition is backed by some weighty authority, like the Bible, or can be associated with a great name, people may be expected to respond to it in accordance with the veneration they have for these sources. In this way evidence coming from the outside is used to influence attitudes or conduct.

Now we see that in all these cases the listener is being asked not simply to follow a valid reasoning form but to respond to some presentation of reality. He is being asked to agree with the speaker’s interpretation of the world that is. If the definition being offered is a true one, he is expected to recognize this and to say, at least inwardly, “Yes, that is the way the thing is.” If the exposition of cause-and-effect relationship is true, he may be expected to concur that *X* is the cause of such a consequence or that such a consequence has its cause in *X*. And according to whether this is a good or a bad cause or a good or a bad consequence, he is disposed to preserve or remove the cause, and so on. If he is impressed with the similarity drawn between two things, he is as a result more likely to accept a policy which involves treating something in the same way in which its analogue is treated. He has been influenced by a relationship of comparability. And finally, if he has been confronted with testimony or authority from sources he respects, he will receive this as a reliable, if secondary, kind of information about reality. In these four ways he has been persuaded to read the world as the speaker reads it.

At this point, however, I must anticipate an objection. The retort might be made: “These are extremely formal categories you are enumerating. I fail to see how they are any less general or less indifferently applicable than the formal categories of logic. After all, definitions and so on can be offered of anything. You still have not succeeded in making rhetoric a substantive study.”

In replying, I must turn here to what should be called the office of rhetoric. Rhetoric seen in the

whole conspectus of its function is an art of emphasis embodying an order of desire. Rhetoric is advisory; it has the office of advising men with reference to an independent order of goods and with reference to their particular situation as it relates to these. The honest rhetorician therefore has two things in mind: a vision of how matters should go ideally and ethically and a consideration of the special circumstances of his auditors. Toward both of these he has a responsibility.

I shall take up first how his responsibility to the order of the goods or to the hierarchy of realities may determine his use of the topics.

When we think of rhetoric as one of the arts of civil society (and it must be a free society, since the scope for rhetoric is limited and the employment of it constrained under a despotism) we see that the rhetorician is faced with a choice of means in appealing to those whom he can prevail upon to listen to him. If he is at all philosophical, it must occur to him to ask whether there is a standard by which the sources of persuasion can be ranked. In a phrase, is there a preferred order of them, so that, in a scale of ethics, it is nobler to make use of one sort of appeal than another? This is of course a question independent of circumstantial matters, yet a fundamental one. We all react to some rhetoric as “untruthful” or “unfair” or “cheap,” and this very feeling is evidence of the truth that it is possible to use a better or a worse style of appeal. What is the measure of the better style? Obviously this question cannot be answered at all in the absence of some conviction about the nature and destiny of man. Rhetoric inevitably impinges upon morality and politics; and if it is one of the means by which we endeavor to improve the character and the lot of men, we have to think of its methods and sources in relation to a scheme of values.

To focus the problem a little more sharply, when one is asking men to cooperate with him in thinking this or doing that, when is he asking in the name of the highest reality, which is the same as saying, when is he asking in the name of their highest good?

Naturally, when the speaker replies to this question, he is going to express his philosophy, or more precisely, his metaphysics. My personal reply would be that he is making the highest

order of appeal when he is basing his case on definition or the nature of the thing. I confess that this goes back to a very primitive metaphysics, which holds that the highest reality is being, not becoming. It is a quasi-religious metaphysics, if you will, because it ascribes to the highest reality qualities of stasis, immutability, eternal perdurance—qualities that in Western civilization are usually expressed in the language of theism. That which is perfect does not change; that which has to change is less perfect. Therefore, if it is possible to determine unchanging essences or qualities and to speak in terms of these, one is appealing to what is most real in so doing. From another point of view, this is but getting people to see what is most permanent in existence, or what transcends the world of change and accident. The realm of essence is the realm above the flux of phenomena, and definitions are of essences and genera.

I may have expressed this view in somewhat abstruse language in order to place it philosophically, yet the practice I am referring to is everyday enough, as a simple illustration will make plain. If a speaker should define man as a creature with an indefeasible right to freedom and should upon this base an argument that a certain man or group of men are entitled to freedom, he would be arguing from definition. Freedom is an unchanging attribute of his subject; it can accordingly be predicated of whatever falls within the genus man. Stipulative definitions are of the ideal, and in this fact lies the reason for placing them at the top of the hierarchy. If the real progress of man is toward knowledge of ideal truth, it follows that this is an appeal to his highest capacity—his capacity to apprehend what exists absolutely.

The next ranking I offer tentatively, but it seems to me to be relationship or similitude and its subvarieties. I have a consistent impression that the broad resource of analogy, metaphor, and figuration is favored by those of a poetic and imaginative cast of mind. We make use of analogy or comparison when the available knowledge of the subject permits only probable proof. Analogy is reasoning from something we know to something we do not know in one step; hence there is no universal ground for predication. Yet behind every analogy lurks the possibility of a

general term. The general term is never established as such, for that would change the argument to one of deductive reasoning with a universal or distributed middle. The user of analogy is hinting at an essence which cannot at the moment be produced. Or, he may be using an indirect approach for reason of tact; analogies not infrequently do lead to generalizations; and he may be employing this approach because he is respectful of his audience and desires them to use their insight.

I mentioned a moment earlier that this type of argument seems to be preferred by those of a poetic or non-literal sort of mind. That fact suggests yet another possibility, which I offer still more diffidently, asking your indulgence if it seems to border on the whimsical. The explanation would be that the cosmos *is* one vast system of analogy, so that our profoundest intuitions of it are made in the form of comparisons. To affirm that something is like something else is to begin to talk about the unitariness of creation. Everything is like everything else somehow, so that we have a ladder of similitude mounting up to the final oneness—to something like a unity in godhead. Furthermore, there is about this source of argument a kind of decent reticence, a recognition of the unknown along with the known. There is a recognition that the unknown may be continuous with the known, so that man is moving about in a world only partly realized, yet real in all its parts. This is the mood of poetry and mystery, but further adumbration of it I leave to those more gifted than I.

Cause and effect appears in this scale to be a less exalted source of argument, though we all have to use it because we are historical men. Here I must recall the metaphysical ground of this organization and point out that it operates in the realm of becoming. Causes are causes having effect and effects are resulting from causes. To associate this source of argument with its habitual users, I must note that it is heard most commonly from those who are characteristically pragmatic in their way of thinking. It is not unusual today to find a lengthy piece of journalism or an entire political speech which is nothing but a series of arguments from consequence—completely devoid of reference to principle or defined

ideas. We rightly recognize these as sensational types of appeal. Those who are partial to arguments based on effect are under a temptation to play too much upon the fears of their audience by stressing the awful nature of some consequence or by exaggerating the power of some cause. Modern advertising is prolific in this kind of abuse. There is likewise a temptation to appeal to prudential considerations only in a passage where things are featured as happening or threatening to happen.

An even less admirable subvariety of this source is the appeal to circumstance, which is the least philosophical of all the topics of argument. Circumstance is an allowable source when we don't know anything else to plead, in which cases we say, "There is nothing else to be done about it." Of all the arguments, it admits of the least perspicaciousness. An example of this which we hear nowadays with great regularity is: "We must adapt ourselves to a fast-changing world." This is pure argument from circumstance. It does not pretend, even, to offer a cause-and-effect explanation. If it did, the first part would tell us why we must adapt ourselves to a fast-changing world; and the second would tell us the result of our doing so. The usually heard formulation does neither. Such argument is preeminently lacking in understanding, or what the Greeks called *dianoia*. It simply cites a brute circumstance and says, "Step lively." Actually, this argument amounts to a surrender of reason. Maybe it expresses an instinctive feeling that in this situation reason is powerless. Either you change fast or you get crushed. But surely it would be a counsel of desperation to try only this argument in a world suffering from aimlessness and threatened with destruction.

Generally speaking, cause and effect is a lower-order source of argument because it deals in the realm of the phenomenal, and the phenomenal is easily converted into the sensational. Sensational excitements always run the risk of arousing those excesses which we deplore as sentimentality or brutality.

Arguments based on testimony and authority, utilizing external sources, have to be judged in a different way. Actually, they are the other sources seen through other eyes. The question of

their ranking involves the more general question of the status of authority. Today there is a widespread notion that all authority is presumptuous. ("Authority is authoritarian" seems to be the root idea); consequently it is held improper to try to influence anyone by the prestige of great names or of sanctioned pronouncements. This is a presumption itself, by which every man is presumed to be his own competent judge in all matters. But since that is a manifest impossibility, and is becoming a greater impossibility all the time, as the world piles up bodies of specialized knowledge which no one person can hope to command, arguments based on authority are certainly not going to disappear. The sound maxim is that an argument based on authority is as good as the authority. What we should hope for is a new and discriminating attitude toward what is authoritative, and I would like to see some source recognized as having moral authority. This hope will have to wait upon the recovery of a more stable order of values and the re-recognition of qualities in persons. Speaking most generally, arguments from authority are ethically good when they are deferential toward real hierarchy.

With that we may sum up the rhetorical speaker's obligation toward the ideal, apart from particular determinations. If one accepts the possibility of this or any other ranking, one has to concede that rhetoric is not merely formal; it is realistic. It is not playing with counters; its impulses come from insights into actuality. Its topic matter is existential, not hypothetical. It involves more than mere demonstration because it involves choice. Its assertions have ontological claims.

Now I return to the second responsibility, which is imposed by the fact that the rhetorician is concerned with definite questions. These are questions having histories, and history is always concrete. This means that the speaker or writer has got to have a rhetorical perception of what his audience needs or will receive or respond to. He takes into account the reality of man's composite being and his tendency to be swayed by sentiment. He estimates the pressures of the particular situation in which his auditors are found. In the eyes of those who look sourly upon the art, he is a man probing for weaknesses which he means to exploit.

But here we must recur to the principle that rhetoric comprehensively considered is an art of emphasis. The definite situation confronts him with a second standard of choice. In view of the receptivity of his audience, which of the topics shall he choose to stress, and how? If he concludes that definition should be the appeal, he tries to express the nature of the thing in a compelling way. If he feels that a cause-and-effect demonstration would stand the greatest chance to impress, he tries to make this linkage so manifest that his hearers will see an inevitability in it. And so on with the other topics, which will be so emphasized or magnified as to produce the response of assent.

Along with this process of amplification, the ancients recognized two qualities of rhetorical discourse which have the effect of impressing an audience with the reality or urgency of a topic. In Greek these appear as *energia* and *enargia*, both of which may be translated "actuality," though the first has to do with liveliness or animation of action and the second with vividness of scene. The speaker now indulges in actualization to make what he is narrating or describing present to the minds' eyes of his hearers.

The practice itself has given rise to a good deal of misunderstanding, which it would be well to remove. We know that one of the conventional criticisms of rhetoric is that the practitioner of it takes advantage of his hearers by playing upon their feelings and imaginations. He overstates the importance of his topics by puffing them up, dwelling on them in great detail, using an excess of imagery or of modifiers evoking the senses, and so on. He goes beyond what is fair, the critics often allege, by this actualization of a scene about which the audience ought to be thinking rationally. Since this criticism has a serious basis, I am going to offer an illustration before making the reply. Here is a passage from Daniel Webster's famous speech for the prosecution in the trial of John Francis Knapp. Webster is actualizing for the jury the scene of the murder as he has constructed it from circumstantial evidence.

The deed was executed with a degree of steadiness and self-possession equal to the wickedness with which it was planned. The circumstances now

clearly in evidence spread out the scene before us. Deep sleep had fallen upon the destined victim and all beneath his roof. A healthful old man, to whom sleep was sweet, the first sound slumbers of the night held him in their soft but strong embrace. The assassin enters, through a window already prepared, into an unoccupied apartment. With noiseless foot he paces the lonely hall, half-lighted by the moon; he winds up the ascent of the stairs, and reaches the door of the chamber. Of this, he moves the lock by soft and continued pressure, till it turns on its hinges without noise; and he enters, and beholds the victim before him. The room is uncommonly open to the admission of light. The face of the innocent sleeper is turned from the murderer, and the beams of the moon, resting on the gray locks of the aged temple, show him where to strike. The fatal blow is given! and the victim passes, without a struggle or a motion, from the repose of sleep to the repose of death! It is the assassin's purpose to make sure work; and he plies the dagger, though it is obvious that life has been destroyed by the blow of the bludgeon. He even raises the aged arm, that he may not fail in his aim at the heart, and replaces it again over the wound of the poniard! To finish the picture, he explores the wrist for the pulse! He feels for it, and ascertains that it beats no longer! It is accomplished. The deed is done. He retreats, retraces his steps to the window, passes out through it as he came in, and escapes. He has done the murder. No eye has seen him, no ear has heard him. The secret is his own, and it is safe!

By depicting the scene in this fulness of detail, Webster is making it vivid, and "vivid" means "living." There are those who object on general grounds to this sort of dramatization; it is too affecting to the emotions. Beyond a doubt, whenever the rhetorician actualizes an event in this manner, he is making it mean something to the emotional part of us, but that part is involved whenever we are deliberating about goodness and badness. On this subject there is a very wise reminder in Bishop Whately's *Elements of Rhetoric*: "When feelings are strongly excited, they are not necessarily over-excited; it may be that they are only brought to the state which the occasion fully justifies, or even that they fall short of this." Let us think of the situation in which Webster was acting. After all, there is the possibility, or even the likelihood that the murder was committed in this fashion, and that the in-

dicted Knapp deserved the conviction he got. Suppose the audience had remained cold and unmoved. There is the victim's side to consider and the interest of society in protecting life. We should not forget that Webster's "actualization" is in the service of these. Our attitude toward what is just or right or noble and their opposites is not a bloodless calculation, but a feeling for and against. As Whately indicates, the speaker who arouses feeling may only be arousing it to the right pitch and channeling it in the right direction.

To reaffirm the general contention: the rhetorician who practices "amplification" is not thereby misleading his audience, because we are all men of limited capacity and sensitivity and imagination. We all need to have things pointed out to us, things stressed in our interest. The very task of the rhetorician is to determine what feature of a question is most exigent and to use the power of language to make it appear so. A speaker who dwells insistently upon some aspect of a case may no more be hoodwinking me than a policeman or a doctor when he advises against a certain course of action by pointing out its nature or its consequences. He *should* be in a position to know somewhat better than I do.

It is strongly to be suspected that this charge against rhetoric comes not only from the distorted image that makes man a merely rationalistic being, but also from that dogma of an uncritical equalitarianism. The notion of equality has insinuated itself so far that it appears sometimes as a feeling, to which I would apply the name "sentimental plebeianism," that no man is better or wiser than another, and hence that it is usurpation for one person to undertake or instruct or admonish another. This preposterous (and we could add, wholly unscientific judgment, since our differences are manifold and provable) is propagated in subtle ways by our institutions of publicity and the perverse art of demagogic politics. Common sense replies that any individual who advises a friend or speaks up in meeting is exercising a kind of leadership, which may be justified by superior virtue, knowledge, or personal insight.

The fact that leadership is a human necessity is proof that rhetoric as the attempt through lan-

guage to make one's point of view prevail grows out of the nature of man. It is not a reflection of any past phase of social development, or any social institution, or any fashion, or any passing vice. When all factors have been considered, it will be seen that men are born rhetoricians, though some are born small ones and others greater, and some cultivate the native gift by study and training, whereas some neglect it. Men are such because they are born into history, with an endowment of passion and a sense of the *ought*. There is ever some discrepancy, however slight, between the situation man is in and the situation he would like to realize. His life is therefore characterized by movement toward goals. It is largely the power of rhetoric which influences and governs that movement.

For the same set of reasons, rhetoric is cognate with language. Ever since I first heard the idea mentioned seriously it impressed me as impossible and even ridiculous that the utterances of men could be neutral. Such study as I have been able to give the subject over the years has confirmed that feeling and has led me to believe that what is sometimes held up as a desideratum—expression purged of all tendency—rests upon an initial misconception of the nature of language.

The condition essential to see is that every use of speech, oral and written, exhibits an attitude, and an attitude implies an act. "Thy speech bewrayeth thee" is aphoristically true if we take it as saying, "Your speech reveals your disposition," first by what you choose to say, then by the amount you decide to say, and so on down through the resources of linguistic elaboration and intonation. All rhetoric is a rhetoric of motives, as Kenneth Burke saw fit to indicate in the title of his book. At the low end of the scale, one may be doing nothing more than making sounds to express exuberance. But if at the other end one sits down to compose a *Critique of the Pure Reason*, one has the motive of refuting other philosophers' account of the constitution of being and of substituting one's own, for an interest which may be universal, but which nonetheless proceeds from the will to alter something.

Does this mean that it is impossible to be objective about anything? Does it mean that one is

"rhetorical" in declaring that a straight line is the shortest distance between two points? Not in the sense in which the objection is usually raised. There are degrees of objectivity, and there are various disciplines which have their own rules for expressing their laws or their content in the most effective manner for their purpose. But even this expression can be seen as enclosed in a rhetorical intention. Put in another way, an utterance is capable of rhetorical function and aspect. If one looks widely enough, one can discover its rhetorical dimension, to put it in still another way. The scientist has some interest in setting forth the formulation of some recurrent feature of the physical world, although his own sense of motive may be lost in a general feeling that science is a good thing because it helps progress along.²

In short, as long as man is a creature responding to purpose, his linguistic expression will be a carrier of tendency. Where the modern semanticists got off on the wrong foot in their effort to refurbish language lay in the curious supposition that language could and should be outwardly determined. They were positivists operating in the linguistic field. Yet if there is anything that is going to keep on defying positivistic correlation, it is this subjectively born, intimate, and value-laden vehicle which we call language. Language is a system of imputation, by which values and precepts are first framed in the mind and are then imputed to things. This is not an irresponsible imputation; it does not imply, say, that no two people can look at the same clock face and report the same time. The qualities or properties have to be in the things, but they are not in the things in the form in which they are framed by the mind. This much I think we can

²If I have risked confusion by referring to "rhetoricians" and "rhetorical speakers," and to other men as if they were all nonrhetoricians, while insisting that all language has its rhetorical aspect, let me clarify the terms. By "rhetorician" I mean the deliberate rhetor: the man who understands the nature and aim and requirements of persuasive expression and who uses them more or less consciously according to the approved rules of the art. The other, who by his membership in the family of language users, must be a rhetorician of sorts, is an empirical and adventitious one; he does not know enough to keep invention, arrangement, and style working for him. The rhetorician of my reference is thus the educated speaker; the other is an untaught amateur. [Au.]

learn from the great realist-nominalist controversy of the Middle Ages and from the little that contemporary semantics has been able to add to our knowledge.³ Language was created by the imagination for the purposes of man, but it may have objective reference—just how we cannot say until we are in possession of a more complete metaphysics and epistemology.

Now a system of imputation involves the use of predicates, as when we say, “Sugar is sweet” or “Business is good.” Modern positivism and relativism, however, have gone virtually to the point of denying the validity of all conceptual predication. Occasionally at Chicago I purposely needle a class by expressing a general concept in a casual way, whereupon usually I am sternly reminded by some member brought up in the best relativist tradition that “You can’t generalize that way.” The same view can be encountered in eminent quarters. Justice Oliver Wendell Holmes was fond of saying that the chief end of man is to frame general propositions and that no general proposition is worth a damn. In the first of these general propositions the Justice was right, in the sense that men cannot get along without categorizing their apprehensions of reality. In the second he was wrong because, although a great jurist, he was not philosopher enough to think the matter through. Positivism and relativism may have rendered a certain service as devil’s advocates if they have caused us to be more careful about our concepts and our predicates, yet their position in net form is untenable. The battle against general propositions was lost from the beginning, for just as surely as man is a symbol-using animal (and a symbol transcends the thing symbolized), he is a classifying animal. The morality lies in the application of the predicate.

Language, which is thus predicative, is for the same cause sermonic. We are all of us preachers in private or public capacities. We have no sooner uttered words than we have given impulse to other people to look at the world, or some small part of it, in our way. Thus caught up in a great web of inter-communication and inter-

influence, we speak as rhetoricians affecting one another for good or ill. That is why I must agree with Quintilian that the true orator is the good man, skilled in speaking—good in his formed character and right in his ethical philosophy. When to this he adds fertility in invention and skill in the arts of language, he is entitled to that leadership which tradition accords him.

If rhetoric is to be saved from the neglect and even the disrepute which I was deploring at the beginning of this lecture, these primary truths will have to be recovered until they are a part of our active consciousness. They are, in summation, that man is not nor ever can be nor ever should be a depersonalized thinking machine. His feeling is the activity in him most closely related to what used to be called his soul. To appeal to his feeling therefore is not necessarily an insult; it can be a way to honor him, by recognizing him in the fulness of his being. Even in those situations where the appeal is a kind of strategy, it but recognizes that men—all men—are historically conditioned.

Rhetoric must be viewed formally as operating at that point where literature and politics meet, or where literary values and political urgencies can be brought together. The rhetorician makes use of the moving power of literary presentation to induce in his hearers an attitude or decision which is political in the very broadest sense. Perhaps this explains why the successful user of rhetoric is sometimes in bad grace with both camps. For the literary people he is too “practical”; and for the more practical political people he is too “flowery.” But there is nothing illegitimate about what he undertakes to do, any more than it would be illegitimate to make use of the timeless principles of aesthetics in the constructing of a public building. Finally, we must never lose sight of the order of values as the ultimate sanction of rhetoric. No one can live a life of direction and purpose without some scheme of values. As rhetoric confronts us with choices involving values, the rhetorician is a preacher to us, noble if he tries to direct our passion toward noble ends and base if he uses our passion to confuse and degrade us. Since all utterance influences us in one or the other of these directions, it is important that the direction be the right one, and it is better if this lay preacher is a master of his art.

³Realism holds that general properties really exist, while nominalism holds that generalizations are linguistic categories only. [Ed.]

The Phaedrus and the Nature of Rhetoric

Our subject begins with the threshold difficulty of defining the question which Plato's *Phaedrus* was meant to answer.¹ Students of this justly celebrated dialogue have felt uncertain of its unity of theme, and the tendency has been to designate it broadly as a discussion of the ethical and the beautiful. The explicit topics of the dialogue are, in order: love, the soul, speechmaking, and the spoken and written word, or what is generally termed by us "composition." The development looks random, and some of the most interesting passages appear *jeux d'esprit*. The richness of the literary art diverts attention from the substance of the argument.

But a work of art which touches on many profound problems justifies more than one kind of reading. Our difficulty with the *Phaedrus* may be that our interpretation has been too literal and too topical. If we will bring to the reading of it even a portion of that imagination which Plato habitually exercised, we should perceive surely enough that it is consistently, and from beginning to end, about one thing, which is the nature of rhetoric.² Again, that point may have been missed because most readers conceive rhetoric to be a system of artifice rather than an idea,³ and the *Phaedrus*, for all its apparent divagation, keeps very close to a single idea. A study of its rhetorical structure, especially, may give us the insight which has been withheld, while making us feel anew that Plato possessed the deepest divining rod among the ancients.

For the imaginative interpretation which we shall now undertake, we have both general and specific warrant. First, it scarcely needs pointing out that a Socratic dialogue is in itself an example of transcendence. Beginning with something simple and topical, it passes to more general levels of application; and not infrequently, it

must make the leap into allegory for the final utterance. This means, of course, that a Socratic dialogue may be about its subject implicitly as well as explicitly. The implicit rendering is usually through some kind of figuration because it is the nature of this meaning to be ineffable in any other way. It is necessary, therefore, to be alert for what takes place through the analogical mode.

Second, it is a matter of curious interest that a warning against literal reading occurs at an early stage of the *Phaedrus*. Here in the opening pages, appearing as if to set the key of the theme, comes an allusion to the myth of Boreas and Oreithyia. On the very spot where the dialogue begins, Boreas is said to have carried off the maiden. Does Socrates believe that this tale is really true? Or is he in favor of a scientific explanation of what the myth alleges? Athens had scientific experts, and the scientific explanation was that the north wind had pushed her off some rocks where she was playing with a companion. In this way the poetical story is provided with a factual basis. The answer of Socrates is that many tales are open to this kind of rationalization, but that the result is tedious and actually irrelevant. It is irrelevant because our chief concern is with the nature of the man, and it is beside the point to probe into such matters while we are yet ignorant of ourselves. The scientific criticism of Greek mythology, which may be likened to the scientific criticism of the myths of the Bible in our own day, produces at best "a boorish sort of wisdom (*ἀγροίχων τὴν σοφίαν*)." It is a limitation to suppose that the truth of the story lies in its historicity. The "boorish sort of wisdom" seeks to supplant poetic allegation with fact, just as an archaeologist might look for the foundations of the Garden of Eden. But while this sort of search goes on the truth flies off, on wings of imagination, and is not recoverable until the searcher attains a higher level of pursuit. Socrates is satisfied with the parable, and we infer from numerous other passages that he believed that some things are best told by parable and some

perhaps discoverable only by parable. Real investigation goes forward with the help of analogy. "Freud without Sophocles is unthinkable," a modern writer has said.⁴

With these precepts in mind, we turn to that part of the *Phaedrus* which has proved most puzzling: why is so much said about the absurd relationship of the lover and the nonlover? Socrates encounters Phaedrus outside the city wall. The latter has just come from hearing a discourse by Lysias which enchanted him with its eloquence. He is prevailed upon to repeat this discourse, and the two seek out a shady spot on the banks of the Illissus. Now the discourse is remarkable because although it was "in a way, a love speech," its argument was that people should grant favors to nonlovers rather than to lovers. "This is just the clever thing about it," Phaedrus remarks. People are in the habit of preferring their lovers, but it is much more intelligent, as the argument of Lysias runs, to prefer a nonlover. Accordingly, the first major topic of the dialogue is a eulogy of the nonlover. The speech provides good subject matter for jesting on the part of Socrates, and looks like another exhibition of the childlike ingenuity which gives the Greeks their charm. Is it merely a piece of literary trifling? Rather, it is Plato's dramatic presentation of a major thesis. Beneath the surface of repartee and mock seriousness, he is asking whether we ought to prefer a neuter form of speech to the kind which is ever getting us aroused over things and provoking an expense of spirit.

Sophistications of theory cannot obscure the truth that there are but three ways for language to affect us. It can move us toward what is good; it can move us toward what is evil; or it can, in hypothetical third place, fail to move us at all.⁵ Of course there are numberless degrees of effect under the first two heads, and the third, as will be shown, is an approximate rather than an absolute zero of effect. But any utterance is a major assumption of responsibility, and the assumption that one can avoid that responsibility by doing

⁴James Blish, "Rituals on Ezra Pound," *Sewanee Review*, LVIII (spring, 1950), 223. [Au.]

⁵The various aesthetic approaches to language offer refinements of perception, but all of them can be finally subsumed under the first head above. [Au.]

something to language itself is one of the chief considerations of the *Phaedrus*, just as it is of contemporary semantic theory. What Plato has succeeded in doing in this dialogue, whether by a remarkably effaced design, or unconsciously through the formal pressure of his conception, is to give us embodiments of the three types of discourse. These are respectively the nonlover, the evil lover, and the noble lover. We shall take up these figures in their sequence and show their relevance to the problem of language.

The eulogy of the nonlover in the speech of Lysias, as we hear it repeated to Socrates, stresses the fact that the nonlover follows a policy of enlightened self-interest. First of all, the nonlover does not neglect his affairs or commit extreme acts under the influence of passion. Since he acts from calculation, he never has occasion for remorse. No one ever says of him that he is not in his right mind, because all of his acts are within prudential bounds. The first point is, in sum, that the nonlover never sacrifices himself and therefore never feels the vexation which overtakes lovers when they recover from their passion and try to balance their pains with their profit. And the nonlover is constant whereas the lover is inconstant. The first argument then is that the nonlover demonstrates his superiority through prudence and objectivity. The second point of superiority found in nonlovers is that there are many more of them. If one is limited in one's choice to one's lovers, the range is small; but as there are always more nonlovers than lovers, one has a better chance in choosing among many of finding something worthy of one's affection. A third point of superiority is that association with the nonlover does not excite public comment. If one is seen going about with the object of one's love, one is likely to provoke gossip; but when one is seen conversing with the nonlover, people merely realize that "everybody must converse with somebody." Therefore this kind of relationship does not affect one's public standing, and one is not disturbed by what the neighbors are saying. Finally, nonlovers are not jealous of one's associates. Accordingly they do not try to keep one from companions of intellect or wealth for fear that they may be outshone themselves. The lover, by contrast, tries to draw

his beloved away from such companionship and so deprives him of improving associations. The argument is concluded with a generalization that one ought to grant favors not to the needy or the importunate, but to those who are able to repay. Such is the favorable account of the nonlover given by Lysias.

We must now observe how these points of superiority correspond to those of “semantically purified” speech. By “semantically purified speech” we mean the kind of speech approaching pure notation in the respect that it communicates abstract intelligence without impulsion. It is a simple instrumentality, showing no affection for the object of its symbolizing and incapable of inducing bias in the hearer. In its ideal conception, it would have less power to move than $2 + 2 = 4$, since it is generally admitted that mathematical equations may have the beauty of elegance, and hence are not above suspicion where beauty is suspect. But this neuter language will be an unqualified medium of transmission of meanings from mind to mind, and by virtue of it minds can remain in an unprejudiced relationship to the world and also to other minds.

Since the characteristic of this language is absence of anything like affection, it exhibits toward the thing being represented merely a sober fidelity, like that of the nonlover toward his companion. Instead of passion, it offers the serviceability of objectivity. Its “enlightened self-interest” takes the form of an unvarying accuracy and regularity in its symbolic references, most, if not all of which will be to verifiable data in the extramental world. Like a thrifty burgher, it has no romanticism about it; and it distrusts any departure from the literal and prosaic. The burgher has his feet on the ground; and similarly the language of pure notation has its point-by-point contact with objective reality. As Stuart Chase, one of its modern proponents, says in *The Tyranny of Words*: “If we wish to understand the world and ourselves, it follows that we should use a language whose structure corresponds to physical structure”⁶ (italics his). So this language is mar-

⁶*The Tyranny of Words* (New York, 1938), 80. T. H. Huxley in *Lay Sermons* (New York, 1883), 112, outlined a noticeably similar ideal of scientific communication: “Therefore,

ried to the world, and its marital fidelity contrasts with the extravagances of other languages.

In second place, this language is far more “available.” Whereas rhetorical language, or language which would persuade, must always be particularized to suit the occasion, drawing its effectiveness from many small nuances, a “utility” language is very general and one has no difficulty putting his meaning into it if he is satisfied with a paraphrase of that meaning. The 850 words recommended for Basic English, for example, are highly available in the sense that all native users of English have them instantly ready and learners of English can quickly acquire them.⁷ It soon becomes apparent, however, that the availability is a heavy tax upon all other qualities. Most of what we admire as energy and fullness tends to disappear when mere verbal counters are used. The conventional or public aspect of language can encroach upon the suggestive or symbolical aspect, until the naming is vague or blurred. In proportion as the medium is conventional in the widest sense and avoids all individualizing, personalizing, and heightening terms, it is common, and the commonness constitutes the negative virtue ascribed to the nonlover.

Finally, with reference to the third qualification of the nonlover, it is true that neuter language does not excite public opinion. This fact follows from its character outlined above. Rhetorical language on the other hand, for whatever purpose used, excites interest and with it either pleasure or alarm. People listen instinctively to the man whose speech betrays inclination. It does not matter what the inclination is toward, but we may say that the greater the degree of inclination, the greater the curiosity or response. Hence a “style” in speech always causes one to be a marked man, and the public may not be so

the great business of the scientific teacher is, to imprint the fundamental, irrefragable facts of his science, not only by words upon the mind, but by sensible impressions upon the eye, and ear, and touch of the student in so complete a manner, that every term used, or law enunciated should afterwards call up vivid images of the particular structural, or other, facts which furnished the demonstration of the law, or illustration of the term.” [Au.]

⁷See the headnote on I. A. Richards, p. 1270. [Ed.]

much impressed—at least initially—by what the man is for or against as by the fact that he has a style. The way therefore to avoid public comment is to avoid the speech of affection and to use that of business, since, to echo the original proposition of Lysias, everybody knows that one must do business with others. From another standpoint, then, this is the language of prudence. These are the features which give neuter discourse an appeal to those who expect a scientific solution of human problems.

In summing up the trend of meaning, we note that Lysias has been praising a disinterested kind of relationship which avoids all excesses and irrationalities, all the dementia of love. It is a circumspect kind of relationship, which is preferred by all men who wish to do well in the world and avoid tempestuous courses. We have compared its detachment with the kind of abstraction to be found in scientific notation. But as an earnest of what is to come let us note, in taking leave of this part, that Phaedrus expresses admiration for the eloquence, especially of diction, with which the suit of the nonlover has been urged. This is our warning of the dilemma of the nonlover.

Now we turn to the second major speech of the dialogue, which is made by Socrates. Notwithstanding Phaedrus' enthusiastic praise, Socrates is dissatisfied with the speech of the nonlover. He remembers having heard wiser things on the subject and feels that he can make a speech on the same theme "different from this and quite as good." After some playful exchange, Socrates launches upon his own abuse of love, which centers on the point that the lover is an exploiter. Love (*ἔρως*) is defined as the kind of desire which overcomes rational opinion and moves toward the enjoyment of personal or bodily beauty. The lover wishes to make the object of his passion as pleasing to himself as possible; but to those possessed by this frenzy, only that which is subject to their will is pleasant. Accordingly, everything which is opposed, or is equal or better, the lover views with hostility. He naturally therefore tries to make the beloved inferior to himself in every respect. He is pleased if the beloved has intellectual limitations because they have the effect of making him manageable. For a similar reason he tries to keep him away from all

influences which might "make a man of him," and of course the greatest of these is divine philosophy. While he is working to keep him intellectually immature, he works also to keep him weak and effeminate, with such harmful result that the beloved is unable to play a man's part in crises. The lover is, moreover, jealous of the possession of property because this gives the beloved an independence which he does not wish him to have. Thus the lover in exercising an unremitting compulsion over the beloved deprives him of all praiseworthy qualities, and this is the price the beloved pays for accepting a lover who is "necessarily without reason." In brief, the lover is not motivated by benevolence toward the beloved, but by selfish appetite; and Socrates can aptly close with the quotation: "As wolves love lambs, so lovers love their loves." The speech is on the single theme of exploitation. It is important for us to keep in mind the object of love as here described, because another kind of love with a different object is later introduced into the dialogue, and we shall discuss the counterpart of each.

As we look now for the parallel in language, we find ourselves confronting the second of the three alternatives: speech which influences us in the direction of what is evil. This we shall call base rhetoric because its end is the exploitation which Socrates has been condemning. We find that base rhetoric hates that which is opposed, or is equal or better because all such things are impediments to its will, and in the last analysis it knows only its will. Truth is the stubborn, objective restraint which this will endeavors to overcome. Base rhetoric is therefore always trying to keep its objects from the support which personal courage, noble associations, and divine philosophy provide a man.

The base rhetorician, we may say, is a man who has yielded to the wrong aspects of existence. He has allowed himself to succumb to the sights and shows, to the physical pleasures which conspire against noble life. He knows that the only way he can get a following in his pursuits (and a following seems necessary to maximum enjoyment of the pursuits) is to work against the true understanding of his followers. Consequently the things which would elevate he keeps

out of sight, and the things with which he surrounds his “beloved” are those which minister immediately to desire. The beloved is thus emasculated in understanding in order that the lover may have his way. Or as Socrates expresses it, the selfish lover contrives things so that the beloved will be “most agreeable to him and most harmful to himself.”

Examples of this kind of contrivance occur on every hand in the impassioned language of journalism and political pleading. In the world of affairs which these seek to influence, the many are kept in a state of pupillage so that they will be most docile to their “lovers.” The techniques of the base lover, especially as exemplified in modern journalism, would make a long catalogue, but in general it is accurate to say that he seeks to keep the understanding in a passive state by never permitting an honest examination of alternatives. Nothing is more feared by him than a true dialectic, for this not only endangers his favored alternative, but also gives the “beloved”—how clearly here are these the “lambs” of Socrates’ figure—some training in intellectual independence. What he does therefore is dress up one alternative in all the cheap finery of immediate hopes and fears, knowing that if he can thus prevent a masculine exercise of imagination and will, he can have his way. By discussing only one side of an issue, by mentioning cause without consequence or consequence without cause, acts without agents or agents without agency,⁸ he often successfully blocks definition and cause-and-effect reasoning. In this way his choices are arrayed in such meretricious images that one can quickly infer the juvenile mind which they would attract. Of course the base rhetorician today, with his vastly augmented power of propagation, has means of deluding which no ancient rhetoric in forum or market place could have imagined.

Because Socrates has now made a speech against love, representing it as an evil, the nonlover seems to survive in estimation. We observe, however, that the nonlover, instead of being celebrated, is disposed of dialectically. “So, in a word, I say that the nonlover possesses

⁸That is, by mentioning only parts of the total situation. [Au.]

all the advantages that are opposed to the disadvantages we found in the lover.” This is not without bearing upon the subject matter of the important third speech, to which we now turn.

At this point in the dialogue, Socrates is warned by his monitory spirit that he has been engaging in a defamation of love despite the fact that love is a divinity. “If love is, as indeed he is, a god or something divine, he can be nothing evil; but the two speeches just now said that he was evil.” These discourses were then an impiety—one representing nonlove as admirable and the other attacking love as base. Socrates resolves to make amends, and the recantation which follows is one of the most elaborate developments in the Platonic system. The account of love which emerges from this new position may be summarized as follows.

Love is often censured as a form of madness, yet not all madness is evil. There is a madness which is simple degeneracy, but on the other hand there are kinds of madness which are really forms of inspiration, from which come the greatest gifts conferred on man. Prophecy is a kind of madness, and so too is poetry. “The poetry of the sane man vanishes into nothingness before that of the inspired madman.” Mere sanity, which is of human origin, is inferior to that madness which is inspired by the gods and which is a condition for the highest kind of achievement. In this category goes the madness of the true lover. His is a generous state which confers blessings to the ignoring of self, whereas the conduct of the nonlover displays all the selfishness of business: “the affection of the nonlover, which is alloyed with mortal prudence and follows mortal and parsimonious rules of conduct will beget in the beloved soul the narrowness which common folk praise as virtue; it will cause the soul to be a wanderer upon the earth for nine thousand years and a fool below the earth at last.” It is the vulgar who do not realize that the madness of the noble lover is an inspired madness because he has his thoughts turned toward a beauty of divine origin.

Now the attitude of the noble lover toward the beloved is in direct contrast with that of the evil lover, who, as we have seen, strives to possess and victimize the object of his affections. For once the noble lover has mastered the conflict

within his own soul by conquering appetite and fixing his attention upon the intelligible and the divine, he conceives an exalted attitude toward the beloved. The noble lover now “follows the beloved in reverence and awe.” So those who are filled with this kind of love “exhibit no jealousy or meanness toward the loved one, but endeavor by every means in their power to lead him to the likeness of the god whom they honor.” Such is the conversion by which love turns from the exploitative to the creative.

Here it becomes necessary to bring our concepts together and to think of all speech having persuasive power as a kind of “love.”⁹ Thus, rhetorical speech is madness to the extent that it departs from the line which mere sanity lays down. There is always in its statement a kind of excess or deficiency which is immediately discernible when the test of simple realism is applied. Simple realism operates on a principle of equation or correspondence; one thing must match another, or, representation must tally with thing represented, like items in a tradesman’s account. Any excess or deficiency on the part of the representation invokes the existence of the world of symbolism, which simple realism must deny. This explains why there is an immortal feud between men of business and the users of metaphor and metonymy, the poets and the rhetoricians.¹⁰ The man of business, the narrow and parsimonious soul in the allusion of Socrates, desires a world which is a reliable materiality. But this the poet and rhetorician will never let him have, for each, with his own purpose, is trying to advance the borders of the imaginative world. A primrose by the river’s brim will not remain that in the poet’s account, but is promptly turned into something very much larger and something highly implicative. He who is accustomed to record the world with an abacus cannot follow these transfigurations; and indeed the very occurrence of them subtly undermines the premise of his business. It is the historic tendency of the tradesman,

⁹It is worth recalling that in the Christian New Testament, with its heavy Platonic influence, God is identified both with *logos*, “word, speech” (John 1:1); and with *agape*, “love” (2 John 4:8). [Au.]

¹⁰The users of metaphor and metonymy who are in the hire of businessmen of course constitute a special case. [Au.]

therefore, to confine passion to quite narrow channels so that it will not upset the decent business arrangements of the world. But if the poet, as the chief transformer of our picture of the world, is the peculiar enemy of this mentality, the rhetorician is also hostile when practicing the kind of love proper to him. The “passion” in his speech is revolutionary, and it has a practical end.

We have now indicated the significance of the three types of lovers; but the remainder of the *Phaedrus* has much more to say about the nature of rhetoric, and we must return to one or more points to place our subject in a wider context. The problem of rhetoric which occupied Plato persistently, not only in the *Phaedrus* but also in other dialogues where this art is reviewed, may be best stated as a question: if truth alone is not sufficient to persuade men, what else remains that can be legitimately added? In one of the exchanges with Phaedrus, Socrates puts the question in the mouth of a personified Rhetoric: “I do not compel anyone to learn to speak without knowing the truth, but if my advice is of any value, he learns that first and then acquires me. So what I claim is this, that without my help the knowledge of the truth does not give the art of persuasion.”

Now rhetoric as we have discussed it in relation to the lovers consists of truth plus its artful presentation, and for this reason it becomes necessary to say something more about the natural order of dialectic and rhetoric. In any general characterization rhetoric will include dialectic,¹¹ but for the study of method it is necessary to separate the two. Dialectic is a method of investigation whose object is the establishment of truth about doubtful propositions. Aristotle in the *Topics* gives a concise statement of its nature. “A dialectical problem is a subject of inquiry that contributes either to choice or avoidance, or to truth

¹¹Cf. [*Phaedrus*] 227b: “A man must know the truth about all the particular things of which he speaks or writes, and must be able to define everything separately; then when he has defined them, he must know how to divide them by classes until further division is impossible; and in the same way he must understand the nature of the soul, must find out the class of speech adapted to each nature, and must arrange and adorn his discourse accordingly, offering to the complex soul elaborate and harmonious discourses, and simple talks to the simple soul.” [Au.]

and knowledge, and that either by itself, or as a help to the solution of some other such problem. It must, moreover, be something on which either people hold no opinion either way, or the masses hold a contrary opinion to the philosophers, or the philosophers to the masses, or each of them among themselves.”¹² Plato is not perfectly clear about the distinction between positive and dialectical terms. In one passage¹³ he contrasts the “positive” terms “iron” and “silver” with the “dialectical” terms “justice” and “goodness”; yet in other passages his “dialectical” terms seem to include categorizations of the external world. Thus Socrates indicates that distinguishing the horse from the ass is a dialectical operation,¹⁴ and he tells us later that a good dialectician is able to divide things by classes “where the natural joints are” and will avoid breaking any part “after the manner of a bad carver.”¹⁵ Such, perhaps, is Aristotle’s dialectic which contributes to truth and knowledge.

But there is a branch of dialectic which contributes to “choice or avoidance,” and it is with this that rhetoric is regularly found joined. Generally speaking, this is a rhetoric involving questions of policy, and the dialectic which precedes it will determine not the application of positive terms but that of terms which are subject to the contingency of evaluation. Here dialectical inquiry will concern itself not with what is “iron” but with what is “good.” It seeks to establish what belongs in the category of the “just” rather than what belongs in the genus *Canis*. As a general rule, simple object words such as “iron” and “house” have no connotations of policy, although it is frequently possible to give them these through speech situations in which there is added to their referential function a kind of impulse. We should have to interpret in this way “Fire!” or “Gold!” because these terms acquire something through intonation and relationship which places them in the class of evaluative expressions.

Any piece of persuasion, therefore, will contain as its first process a dialectic establishing

terms which have to do with policy. Now a term of policy is essentially a term of motion, and here begins the congruence of rhetoric with the soul which underlies the speculation of the *Phaedrus*. In his myth of the charioteer, Socrates declares that every soul is immortal because “that which is ever moving is immortal.” Motion, it would appear from this definition, is part of the soul’s essence. And just because the soul is ever tending, positive or indifferent terms cannot partake of this congruence. But terms of tendency—goodness, justice, divinity, and the like—are terms of motion and therefore may be said to comport with the soul’s essence. The soul’s perception of goodness, justice, and divinity will depend upon its proper tendency, while at the same time contacts with these in discourse confirm and direct that tendency. The education of the soul is not a process of bringing it into correspondence with a physical structure like the external world, but rather a process of rightly affecting its motion. By this conception, a soul which is rightly affected calls that good which is good; but a soul which is wrongly turned calls that good which is evil. What Plato has prepared us to see is that the virtuous rhetorician, who is a lover of truth, has a soul of each movement that its dialectical perceptions are consonant with those of a divine mind. Or, in the language of more technical philosophy, this soul is aware of axiological systems which have ontic status. The good soul, consequently, will not urge a perversion of justice as justice in order to impose upon the commonwealth. Insofar as the soul has its impulse in the right direction, its definitions will agree with the true nature of intelligible things.

There is, then, no true rhetoric without dialectic, for the dialectic provides that basis of “high speculation about nature” without which rhetoric in the narrower sense has nothing to work upon. Yet, when the disputed terms have been established, we are at the limit of dialectic. How does the noble rhetorician proceed from this point on? That the clearest demonstration in terms of logical inclusion and exclusion often fails to win assent we hardly need state; therefore, to what does the rhetorician resort at this critical passage? It is the stage at which he passes from the logical to the analogical, or it is where figuration comes into rhetoric.

¹²[Aristotle, *Topics*] 104b. [Au.]

¹³[*Phaedrus*] 263a. [Au.]

¹⁴[*Phaedrus*] 260b. [Au.]

¹⁵[*Phaedrus*] 265a. [Au.]

To look at this for a moment through a practical illustration, let us suppose that a speaker has convinced his listeners that his position is "true" as far as dialectical inquiry may be pushed. Now he sets about moving the listeners toward that position, but there is no way to move them except through the operation of analogy. The analogy proceeds by showing that the position being urged resembles or partakes of something greater and finer. It will be represented, in sum, as one of the steps leading toward ultimate good. Let us further suppose our speaker to be arguing for the payment of a just debt. The payment of the just debt is not itself justice, but the payment of this particular debt is one of the many things which would have to be done before this could be a completely just world. It is just, then, because it partakes of the ideal justice, or it is a small analogue of all justice (in practice it will be found that the rhetorician makes extensive use of synecdoche, whereby the small part is used as a vivid suggestion of the grandeur of the whole). It is by bringing out these resemblances that the good rhetorician leads those who listen in the direction of what is good. In effect, he performs a cure of souls by giving impulse, chiefly through figuration, toward an ideal good.

We now see the true rhetorician as a noble lover of the good, who works through dialectic and through poetic or analogical association. However he is compelled to modulate by the peculiar features of an occasion, this is his method.

It may not be superfluous to draw attention to the fact that what we have here outlined is the method of the *Phaedrus* itself. The dialectic appears in the dispute about love. The current thesis that love is praiseworthy is countered by the antithesis that love is blameworthy. This position is fully developed in the speech of Lysias and in the first speech of Socrates. But this position is countered by a new thesis that after all love is praiseworthy because it is a divine thing. Of course, this is love on a higher level, or love redefined. This is the regular process of transcendence which we have noted before. Now, having rescued love from the imputation of evil by excluding certain things from its definition, what does Socrates do? Quite in accordance with our analysis, he turns rhetorician. He tries to make this

love as attractive as possible by bringing in the splendid figure of the charioteer.¹⁶ In the narrower conception of this art, the allegory is the rhetoric, for it excites and fills us with desire for this kind of love, depicted with many terms having tendency toward the good. But in the broader conception the art must include also the dialectic, which succeeded in placing love in the category of divine things before filling our imaginations with attributes of divinity.¹⁷ It is so regularly the method of Plato to follow a subtle analysis with a striking myth that it is not unreasonable to call him the master rhetorician. This goes far to explain why those who reject his philosophy sometimes remark his literary art with mingled admiration and annoyance.

The objection sometimes made that rhetoric cannot be used by a lover of truth because it indulges in "exaggerations" can be answered as follows. There is an exaggeration which is mere wantonness, and with this the true rhetorician has nothing to do. Such exaggeration is purely impressionistic in aim. Like caricature, whose only object is to amuse, it seizes upon any trait or aspect which could produce titillation and exploits this without conscience. If all rhetoric were like this, we should have to grant that rhetoricians are persons of very low responsibility and their art a disreputable one. But the rhetorician we have now defined is not interested in sensationalism.

The exaggeration which this rhetorician employs is not caricature but prophecy; and it would be a fair formulation to say that true rhetoric is concerned with the potency of things. The literalist, like the anti-poet described earlier, is troubled by its failure to conform to a present reality. What he fails to appreciate is that potentiality is a mode of existence, and that all prophecy is about the tendency of things. The discourse of the noble rhetorician, accordingly, will be about real potentiality or possible actuality, whereas that of the mere exaggerator is about unreal potentiality. Naturally this distinction rests upon a supposal that the rhetorician has insight, and we could not

¹⁶In the passage extending from [*Phaedrus*] 264a to 256d. [Au.]

¹⁷Cf. [*Phaedrus*] 263d ff. [Au.]

defend him in the absence of that condition. But given insight, he has the duty to represent to us the as yet unactualized future. It would be, for example, a misrepresentation of current facts but not of potential ones to talk about the joys of peace in a time of war. During the Second World War, at the depth of Britain's political and military disaster, Winston Churchill likened the future of Europe to "broad sunlit uplands." Now if one had regard only for the hour, this was a piece of mendacity such as the worst charlatans are found committing; but if one took Churchill's premises and then considered the potentiality, the picture was within bounds of actualization. His "exaggeration" was that the defeat of the enemy would place Europe in a position for long and peaceful progress. At the time the surface trends ran the other way; the actuality was a valley of humiliation. Yet the hope which transfigured this to "broad sunlit uplands" was not irresponsible, and we conclude by saying that the rhetorician talks about both what exists simply and what exists by favor of human imagination and effort.¹⁸

This interest in actualization is a further distinction between pure dialectic and rhetoric. With its forecast of the actual possibility, rhetoric passes from mere scientific demonstration of an idea to its relation to prudential conduct. A dialectic must take place *in vacuo*, and the fact alone that it contains contraries leaves it an intellectual thing. Rhetoric, on the other hand, always espouses one of the contraries. This espousal is followed by some attempt at impingement upon actuality. That is why rhetoric, with its passion

¹⁸Indeed, in this particular rhetorical duel we see the two types of lovers opposed as clearly as illustration could desire. More than this, we see the third type, the nonlover, committing his ignominious failure. Britain and France had come to prefer as leaders the rhetoricless businessman type. And while they had thus emasculated themselves, there appeared an evil lover to whom Europe all but succumbed before the mistake was seen and rectified. For while the world must move, evil rhetoric is of more force than no rhetoric at all; and Herr Hitler, employing images which rested on no true dialectic, had persuaded multitudes that his order was the "new order," i.e., the true potentiality. Britain was losing and could only lose until, reaching back in her traditional past, she found a voice which could match his accents with a truer grasp of the potentiality of things. Thus two men conspicuous for passion fought a contest for souls, which the nobler won. But the contest could have been lost by default. [Au.]

for the actual, is more complete than mere dialectic with its dry understanding. It is more complete on the premise that man is a creature of passion who must live out that passion in the world. Pure contemplation does not suffice for this end. As Jacques Maritain has expressed it: "love . . . is not directed at possibilities or pure essences; it is directed at what exists; one does not love possibilities, one loves that which exists or is destined to exist."¹⁹ The complete man, then, is the "lover" added to the scientist; the rhetorician to the dialectician. Understanding followed by actualization seems to be the order of creation, and there is no need for the role of rhetoric to be misconceived.

The pure dialectician is left in the theoretical position of the nonlover, who can attain understanding but who cannot add impulse to truth. We are compelled to say "theoretical position" because it is by no means certain that in the world of actual speech the nonlover has more than a putative existence. We have seen previously that his speech would consist of strictly referential words which would serve only as designata. Now the question arises at what point is motive to come into such language? Kenneth Burke in *A Grammar of Motives* has pointed to "the pattern of embarrassment behind the contemporary ideal of a language that will best promote good action by entirely eliminating the element of exhortation or command. Insofar as such a project succeeded, its terms would involve a narrowing of circumference to a point where the principle of personal action is eliminated from language, so that an act would follow from it only as a non sequitur, a kind of humanitarian afterthought."²⁰

The fault of this conception of language is that scientific intention turns out to be enclosed in artistic intention and not *vice versa*. Let us test this by taking as an example one of those "fact-finding committees" so favored by modern representative governments. A language in which all else is suppressed in favor of nuclear meanings would be an ideal instrumentality for the report

¹⁹"Action: The Perfection of Human Life," *Sewanee Review*, LVI (winter, 1948), 3. [Au.]

²⁰*A Grammar of Motives* (New York, 1945), 90. [Au.]

of such a committee. But this committee, if it lived up to the ideal of its conception, would have to be followed by an "attitude-finding committee" to tell us what its explorations really mean. In real practice the fact-finding committee understands well enough that it is also an attitude-finding committee, and where it cannot show inclination through language of tendency, it usually manages to do so through selection and arrangement of the otherwise inarticulate facts. To recur here to the original situation in the dialogue, we recall that the eloquent Lysias, posing as a nonlover, had concealed designs upon Phaedrus, so that his fine speech was really a sheep's clothing. Socrates discerned in him a "peculiar craftiness." One must suspect the same today of many who ask us to place our faith in the neutrality of their discourse. We cannot deny that there are degrees of objectivity in the reference of speech. But this is not the same as an assurance that a vocabulary of reduced meanings will solve the problems of mankind. Many of those problems will have to be handled, as Socrates well knew, by the student of souls, who must principally make use of the language of tendency. The soul is impulse, not simply cognition; and finally one's interest in rhetoric depends on how much poignancy one senses in existence.²¹

Rhetoric moves the soul with a movement which cannot finally be justified logically. It can only be valued analogically with reference to some supreme image. Therefore when the rhetorician encounters some soul "sinking beneath the double load of forgetfulness and vice" he seeks to re-animate it by holding up to its sight the order of presumptive goods. This order is necessarily a hierarchy leading up to the ulti-

²¹Without rhetoric there seems no possibility of tragedy, and in turn, without the sense of tragedy, no possibility of taking an elevated view of life. The role of tragedy is to keep the human lot from being rendered as history. The cultivation of tragedy and a deep interest in the value-conferring power of language always occur together. The *Phaedrus*, the *Gorgias*, and the *Cratylus*, not to mention the works of many teachers of rhetoric, appear at the close of the great age of Greek tragedy. The Elizabethan age teemed with treatises on the use of language. The essentially tragic Christian view of life begins the long tradition of homiletics. Tragedy and the practice of rhetoric seem to find common sustenance in preoccupation with value, and then rhetoric follows as an analyzed art. [Au.]

mate good. All of the terms in a rhetorical vocabulary are like links in a chain stretching up to some master link which transmits its influence down through the linkages. It is impossible to talk about rhetoric as effective expression without having as a term giving intelligibility to the whole discourse, the Good. Of course, inferior concepts of the Good may be and often are placed in this ultimate position; and there is nothing to keep a base lover from inverting the proper order and saying, "Evil, be thou my good." Yet the fact remains that in any piece of rhetorical discourse, one rhetorical term overcomes another rhetorical term only by being nearer to the term which stands ultimate. There is some ground for calling a rhetorical education necessarily an aristocratic education in that the rhetorician has to deal with an aristocracy of notions, to say nothing of supplementing his logical and pathetic proofs with an ethical proof.

All things considered, rhetoric, noble or base, is a great power in the world; and we note accordingly that at the center of the public life of every people there is a fierce struggle over who shall control the means of rhetorical propagation. Today we set up "offices of information," which like the sly lover in the dialogue, pose as nonlovers while pushing their suits. But there is no reason to despair over the fact that men will never give up seeking to influence one another. We would not desire it to be otherwise; neuter discourse is a false idol, to worship which is to commit the very offense for which Socrates made expiation in his second speech.

Since we want not emancipation from impulse but clarification of impulse, the duty of rhetoric is to bring together action and understanding into a whole that is greater than scientific perception.²² The realization that just as no action is really indifferent, so no utterance is without its re-

²²Cf. Maritain, *op. cit.*, 3-4: "The truth of practical intellect is understood not as conformity to an extramental being but as conformity to a right desire; the end is no longer to know what is, but to bring into existence that which is not yet; further, the act of moral choice is so individualized, both by the singularity of the person from which it proceeds and the context of the contingent circumstances in which it takes place, that the practical judgment in which it is expressed and by which I declare to myself: this is what I must do, can be

sponsibility introduces, it is true, a certain strenuosity into life, produced by a consciousness that “nothing is lost.” Yet this is preferable to that desolation which proceeds from an infinite dispersion or feeling of unaccountability. Even so, the choice between them is hardly ours to make; we did not create the order of things, but being accountable for our impulses, we wish these to be just.

Thus when we finally divest rhetoric of all the notions of artifice which have grown up around it, we are left with something very much like Spinoza’s “intellectual love of God.” This is its essence and the *fons et origo* of its power. It is “intellectual” because, as we have previously seen, there is no honest rhetoric without a preceding dialectic. The kind of rhetoric which is justly condemned is utterance in support of a position before that position has been adjudicated with reference to the whole universe of discourse²³—and of such the world always produces more than enough. It is “love” because it is something in addition to bare theoretical truth. That element in addition is a desire to bring truth into a kind of existence, or to give it an actuality to which theory is indifferent. Now what is to be said about our last expression, “of God”? Echoes

of theological warfare will cause many to desire a substitute for this, and we should not object. As long as we have in ultimate place the highest good man can intuit, the relationship is made perfect. We shall be content with “intellectual love of the Good.” It is still the intellectual love of good which causes the noble lover to desire not to devour his beloved but to shape him according to the gods as far as mortal power allows. So rhetoric at its truest seeks to perfect men by showing them better versions of themselves, links in that chain extending up toward the ideal, which only the intellect can apprehend and only the soul have affection for. This is the justified affection of which no one can be ashamed, and he who feels no influence of it is truly outside the communion of minds. Rhetoric appears, finally, as a means by which the impulse of the soul to be ever moving is redeemed.

It may be granted that in this essay we have gone some distance from the banks of the Ilissus. What began as a simple account of passion becomes by transcendence an allegory of all speech. No one would think of suggesting that Plato had in mind every application which has here been made, but that need not arise as an issue. The structure of the dialogue, the way in which the judgments about speech concentrate, and especially the close association of the true, the beautiful, and the good, constitute a unity of implication. The central idea is that all speech, which is the means the gods have given man to express his soul, is a form of eros, in the proper interpretation of the word. With that truth the rhetorician will always be brought face to face as soon as he ventures beyond the consideration of mere artifice and device.

right only if, *hic et nunc*, the dynamism of my will is right, and tends towards the true goods of human life.

“That is why practical wisdom, *prudentia*, is a virtue indivisibly moral and intellectual at the same time, and why, like the judgment of the conscience itself, it cannot be replaced by any sort of theoretical knowledge or science.” [Au.]

²³Socrates’ criticism of the speech of Lysias (263d ff) is that the latter defended a position without having submitted it to the discipline of dialectic. [Au.]

Chaim Perelman

1912–1984

Chaim Perelman was born in Warsaw and was educated in Belgium, where he took a law degree in 1934 and a doctorate in philosophy in 1938, both from the Free University of Brussels. He was active in the Resistance during the war and afterward became a member of the faculty at Brussels.

Perelman came to the study of rhetoric as a result of his search for “a logic of value judgments” that could serve as the basis of legal philosophy.¹ Extant systems of philosophy, he found, were devoted to formal logic as the foundation of rationality, which relegated any discussion of values to the irrational and subjective. Yet judgments about justice, morality, politics, and religion are of supreme importance in human affairs. It is a fundamental principle of justice, Perelman notes in an early essay, that “beings of one and the same essential category must be treated the same way.”² But what are the essential categories, and what constitutes “the same” treatment? These questions are answered by argument, and, Perelman notes, argument has no standing in philosophy. He was forced to conclude that, in the terms available in mainstream philosophy, “logical value judgments do not exist.”³

To pursue the question of how people reason about values, Perelman and his collaborator, Lucie Olbrechts-Tyteca, undertook a study of actual arguments made by judges, philosophers, politicians, and others seeking to make value decisions. Olbrechts-Tyteca, who received a “licenciée” in social sciences and economics from the Free University of Brussels in 1925 (a lesser degree than the doctorate), was well read in the social sciences and European literatures. As rhetoric scholar Barbara Warnick has explained, while Perelman provided the theoretical framework for their research, Olbrechts-Tyteca supplied the extensive examples that fleshed out the theory; these examples constituted a good two-thirds of their major treatise, *The New Rhetoric* (discussed below). Warnick describes Olbrechts-Tyteca’s primary scholarly interest as the analysis of the “argumentative function of stylistic devices and discursive structures,” which she also pursued in several works published alone, notably *Le Comique du discours* (1974), which studies how comic structures rely for their effects on what their audiences already believe to be true or good.⁴

The types of argument that Perelman and Olbrechts-Tyteca found among those seeking to make value judgments were, they realized, strikingly similar to the classical topics. Moreover, Aristotle’s description of the connection between dialectic

¹Chaim Perelman, “Philosophy, Rhetoric, Commonplaces,” in *The New Rhetoric and the Humanities* (Dordrecht: D. Reidel, 1979), p. 56 (trans. of “Philosophie, rhétorique, lieux commune,” *Bulletin de l’Académie Royale de Belgique* [1972]: pp. 144–56).

⁴Barbara Warnick, “Lucie Olbrechts-Tyteca’s Contribution to *The New Rhetoric*,” in *Listening to Their Voices: The Rhetorical Activities of Historical Women*, ed. Molly Meijer Wertheimer (Columbia: University of South Carolina Press, 1997), p. 71.

and rhetoric spoke to their concerns. Thus they turned to rhetoric, the study of good reasons — of persuasion, of *logos*, of the reasonable and the preferable — and set out to “revive” rhetoric and link it once again to philosophy. It must have seemed to them that they were single-handedly reviving the study of rhetoric as a substantive discipline, with functions beyond mere ornamentation. Only in 1962, when he was invited to teach at Pennsylvania State University, did Perelman discover that there was an active community of rhetoric scholars in departments of speech and communication in the United States.

In Perelman’s view, formal logic is applicable only to well-defined, closed formal systems, like mathematics; in all other matters, reasoning is “informal” or dialectical. In this, Perelman follows Aristotle’s distinction between analytical philosophy on the one hand and dialectic and rhetoric on the other. In *The Realm of Rhetoric* (1977; excerpted here), Perelman traces the problems of philosophy and rhetoric to Peter Ramus and René Descartes. By moving dialectic to the realm of logic and reducing rhetoric to verbal ornamentation, Ramus set for later philosophers the impossible task of applying the truth criteria of logic to questions of value and behavior. And Descartes exacerbated the problem by declaring the “merely plausible” to be effectively false. To correct these mistakes, Perelman rejoins dialectic and rhetoric as methods of using argument to gain adherence to propositions that cannot be demonstrated in the sense of being self-evident or universal.

Perelman and Olbrechts-Tyteca draw a number of conclusions from their study of practical reasoning, set forth in *The New Rhetoric: A Treatise on Argumentation* (1958; excerpted here). Argument, they point out, does not and cannot follow the rules of formal logic, but practical reasoning is a kind of informal logic, akin to Aristotelian dialectic. Moreover, arguments are always addressed to an audience, because the purpose of argument is to win the adherence of the audience, not to demonstrate the truth of propositions. The audience can be defined as the group effectively addressed by the writer or speaker, the community whose adherence the speaker wishes to gain.

Perelman and Olbrechts-Tyteca imagine two types of audience that may be addressed, as rhetoric scholar Alan Gross has explained. “Particular” audiences represent a group of people united by shared values, such as members of a political party. They must be persuaded by appeals to their values. On the other hand, discourse that seeks the status of purely rational argument, such as philosophy, addresses the “universal audience,” an imaginary construct comprising all rational, competent people, who are to be persuaded only by reference to empirically demonstrable facts or absolute truths. The idea of the universal audience has frequently been misunderstood: Perelman and Olbrechts-Tyteca emphasize that there is no actual universal audience, nor any unimpeachable facts or truths that could be presented to it, but rather, only an idea in the speaker’s mind about what such an audience would be were it to exist. An argument may gain persuasive power by appearing to appeal to this universal audience.

The speaker gains the adherence of any audience by attempting to transfer existing adherence from premises that the audience presumably already accepts to conclusions drawn from those premises. Furthermore, the speaker wins adherence by

creating “presence” for the main premise of the proposition. Presence, or foregrounding, is created by using the topics. The different types of argument create “liaisons” — not necessarily logical connections — between premises and conclusions.

Perelman and Olbrechts-Tyteca also identify the various categories of argument. The “quasi-logical” category is perhaps most important, because the appearance of formal logic in an argument has a profound ideological effect. Perelman summarizes and refines these conclusions in several of his later works, including “The New Rhetoric: A Theory of Practical Reasoning” (included here).

As suggested in the formulation of the universal audience, Perelman’s strongest and most persistent claim is that philosophy itself is a form of rhetoric—a system of argument that tries to win universal adherence, rather than being a pure search for truth. Indeed, he says, there is no such thing as absolute truth, nor is there even any kind of knowledge that is “identical in all normally constituted minds, independently of social and historical contingencies.”⁵ In the powerful conclusion of *The New Rhetoric*, Perelman and Olbrechts-Tyteca insist on this point, arguing that there are no self-evident propositions and no “previously given natural order.”⁶ Ideas about what is self-evident or natural are created by argument, but appeals to self-evidence and nature are dangerous attempts to obscure their basis in argument. To acquiesce to such appeals, they warn, devalues argument itself and thereby threatens our very freedom to argue.

Selected Bibliography

Our text for *The New Rhetoric: A Treatise on Argumentation* is the translation by John Wilkinson and Purcell Weaver (1969). “The Realm of Rhetoric” is the final chapter of *The Realm of Rhetoric* (1977), trans. William Kluback (1982). Perelman offers an interesting perspective on the history of rhetoric as well as a summary of his own theory in “The New Rhetoric: A Theory of Practical Reasoning,” trans. E. Griffin-Collart and O. Bird, originally published in *The Great Ideas Today, 1970* (1970) and reprinted in *The New Rhetoric and the Humanities* (1979).

Other works by Perelman include *The Idea of Justice and the Problem of Argument*, trans. John Petrie (1963), and *Justice, Law, and Argument: Essays on Moral and Legal Reasoning*, trans. John Petrie, Susan Rubin, Graham Bird, Melvin T. Dalgarno, Heather Relihan, and William Kluback (1980). Perelman has also written many articles on rhetoric, practical reasoning, and justice. Six of these, including two coauthored with Olbrechts-Tyteca, are reprinted, along with a reflection by Perelman on his work’s influence, in *The New Rhetoric of Chaim Perelman: Statement and Response*, ed. Ray D. Dearin (1989). An excellent bibliography of works by and about Perelman, including works on which he collaborated with Olbrechts-Tyteca, and a useful summary of his theory, is in *Contemporary Perspectives on Rhetoric*, by S. Foss, K. Foss, and R. Trapp (1985).

Helpful critical works are collected in James Golden and Joseph J. Pilotta’s *Practical Reasoning in Human Affairs: Studies in Honor of Chaim Perelman* (1986) and Dearin’s edited volume (cited above). *Philosophy, Rhetoric, and Argumentation*, ed. Maurice Natanson and Henry W. Johnstone Jr. (1965), includes the following relevant essays: Perelman and

From *The New Rhetoric*

A Treatise on Argumentation

CONCLUSION

It is not without difficulty that we have kept our treatise on argumentation to its present dimensions. Far from exhausting the subject we have barely scratched its surface and, at times, have done no more than point to its richness. Schematic treatments, some of them old and almost forgotten, others quite recent, have illuminated each other and have been integrated into an ancient discipline that has, however, been distorted for centuries and is neglected today. Problems generally approached from a purely literary viewpoint, together with others that are the concern of the most abstract speculation (derived either from the existentialist wave or from English analytical philosophy), are set in a dynamic context which brings out their significance and permits the vivid apprehension of the dialectical relationship between thought and action.

Each one of the points, which we have done no more than sketch, deserves more thorough study. The various kinds of discourse, their varia-

tion in the different disciplines and with different audiences, the way in which ideas undergo modification and organization, the history of these transformations, the methods and systems that have originated from the adaptation of notional complexes to problems of knowledge—these and many other questions just touched on here provide the study of argumentation with a field of research of incomparable wealth.

Up to now all these questions have either been entirely neglected or have been studied by a method and in a spirit that are foreign to the rhetorical point of view. The effect of restricting logic to the examination of the proofs termed "analytical" by Aristotle, together with the reduction of dialectical proofs—when anyone felt they were worth analyzing—to analytical proofs, was to remove from the study of reasoning all reference to argumentation. We hope that our treatise may provoke a salutary reaction and that the mere fact of its being written may for the future prevent the reduction of all the techniques of proof to formal logic and the habit of seeing nothing in reason except the faculty to calculate.

If a narrow conception of proof and logic has led to a constricted view of reason, the

Translated by John Wilkinson and Purcell Weaver.

broadening of the concept of proof and the resulting enrichment of logic must likewise react on the way in which our reasoning faculty is conceived. For this reason we wish to conclude with some considerations that are too general to fall within a theory of argumentation, but provide it with a framework that emphasizes its philosophical significance. Just as the *Discourse on the Method*, though not a work on mathematics, secures to the “geometrical” method its widest sphere of application (though there is nothing to prevent one from being a geometrician without being a follower of Descartes), so the views we shall advance—though the theory and practice of argumentation are not necessarily bound up with them—accord argumentation a place and importance they in no wise possess in a more dogmatic vision of the universe.

We combat uncompromising and irreducible philosophical oppositions presented by all kinds of absolutism: dualisms of reason and imagination, of knowledge and opinion, of irrefutable self-evidence and deceptive will, of a universally accepted objectivity and an incommunicable subjectivity, of a reality binding on everybody and values that are purely individual.

We do not believe in definitive, unalterable revelations, whatever their nature or their origin. And we exclude from our philosophical arsenal all immediate, absolute data, be they termed sensations, rational self-evidence, or mystical intuitions. This rejection does not, of course, imply that we deny the effect of experience or reasoning on our opinions, but we will stay clear of that exorbitant pretension which would enthrone certain elements of knowledge as definitively clear and solid data, and would hold these elements to be identical in all normally constituted minds, independently of social and historical contingencies, the foundation of necessary and eternal truths.

The purpose of this dissociation of certain irrefutable elements from the sum total of our opinions (the imperfect and perfectible character of which nobody has yet contested), and of making them independent of the conditions of perception and linguistic expression, is to withdraw them beyond the realm of discussion and argu-

mentation. To conceive of all progress in knowledge exclusively as an extension of the sphere occupied by these clear, distinct elements, to the point even of imagining that ultimately, with a perfect thought imitating divine thought, one could eliminate from knowledge everything that does not conform to this ideal of clarity and distinction—this means progressively reducing resort to argumentation up until the moment when its use becomes entirely superfluous. Pending the arrival of this moment, making use of it would stigmatize the branches of knowledge resorting to it as imperfectly constituted fields still in search of their method, and unworthy of the name of *science*. It is not surprising that such an attitude has turned logicians and philosophers away from the study of argumentation as something unworthy of their attention, leaving it in the hands of public-relations and propaganda experts who are generally suspected of lack of scruple and of constant opposition to any sincere search for the truth.

Our own position is quite different. Instead of basing our philosophy on definitive, unquestionable truths, our starting point is that men and groups of men adhere to opinions of all sorts with a variable intensity, which we can only know by putting it to the test. These beliefs are not always self-evident, and they rarely deal with clear and distinct ideas. The most generally accepted beliefs remain implicit and unformulated for a long time, for more often than not it is only on the occasion of a disagreement as to the consequences resulting from them that the problem of their formulation or more precise definition arises.

Common sense regularly opposes facts to theories, truths to opinions, and that which is objective to that which is not. By this opposition it indicates what opinions are to be preferred to others, whether or not the preference be based on generally accepted criteria. John Stuart Mill and André Lalande¹ are hardly saying anything new when they ask that we bring our beliefs face to face with the facts or with true statements, and though it may not be difficult to follow their ad-

¹André Lalande, French philosopher (1867–1964). Lalande, a rationalist, argued that people feel differently but reason in the same way. This was the basis for his belief in rational knowledge and his hope for universal understanding. [Ed.]

vice when the facts and truths are not subjected to challenge, this is unfortunately not always the case. Everyone is disposed to recognize that facts and truths play a normative role in relation to opinion, but the person who challenges a fact or doubts a truth will be reluctant to accord it this favored status, and will qualify the statement he declines to accept quite differently. Similarly, most people are normally disposed to act in accordance with what seems to them logical or reasonable, but will refuse to apply these epithets to solutions they do not recognize as well founded.

Those who hold facts and truths to be the sole norms for guiding opinions will endeavor to attach their convictions to some form of evidence that is indubitable and beyond discussion. There can be no question, with this outlook, of providing in turn a foundation for these self-evident things, for in their absence the very notion of foundation would appear incomprehensible. With these self-evident things as starting point, proof will take the form of a calculation or of resort to experiment.

The increased confidence thus brought about in the procedures and results of the mathematical and natural sciences went hand in hand with the casting aside of all the other means of proof, which were considered devoid of scientific value. Now this attitude was quite justifiable as long as there was the hope of finding a scientifically defensible solution to all actual human problems through an increasingly wide application of the calculus of probabilities. But if essential problems involving questions of a moral, social, political, philosophical, or religious order by their very nature elude the methods of the mathematical and natural sciences, it does not seem reasonable to scorn and reject all the techniques of reasoning characteristic of deliberation and discussion—in a word, of argumentation. It is too easy to disqualify all reasoning that does not conform to the requirements of the proof which Pareto called “logico-experimental” as being “sophistical.”² If all argumentation of this kind must be considered a misleading form of reasoning,

²Vilfredo Pareto (1848–1923), Italian economist, sociologist, and philosopher, sought a scientific basis for sociology in the logico-experimental method and studied the reasons for nonlogical behavior. [Ed.]

then the lack of “logico-experimental” proofs would leave the field wide open, in all the essential spheres of life, to suggestion and violence. The assertion that whatever is not objectively and indisputably valid belongs in the realm of the arbitrary and subjective creates an unbridgeable gulf between theoretical knowledge, which alone is rational, and action, for which motivations would be wholly irrational. Practice ceases to be reasonable in such a perspective, for critical argumentation becomes entirely incomprehensible, and it is no longer even possible to take seriously philosophical reflection itself. For it is only those fields from which all controversy has been eliminated that can thenceforth lay claim to a certain rationality. As soon as a controversy arises, and the agreement of minds cannot be reestablished by “logico-experimental” methods, one would be in the sphere of the irrational—which would be the sphere of deliberation, discussion, and argumentation.

The distinction, so common in twentieth-century philosophy, between judgments of reality and value judgments characterizes an effort—though in this form we feel it is a hopeless one—by those who recognize that scientific investigation enjoys a special, preeminent status, but wish to save the norms of human action from arbitrariness and irrationality. But this distinction, stemming from an absolutist epistemology which tends to sharply separate two sides of human activity, has not given the results for which one hoped. There are two reasons for this. One is the lack of success in developing a logic of value judgments, the other is the difficulty of satisfactorily defining value judgments and judgments of reality.

If it is possible to discern in argumentative practice, as we have done, some statements that relate to facts, and others that relate to values, the distinction between these two forms of statement can never be clear cut: it is the consequence of precarious agreements of varying intensity, agreements which may not be explicitly stated. In order to be able to distinguish clearly between two kinds of judgments criteria enabling them to be identified would have to be put forward and these criteria would themselves have to be beyond discussion. And, more particularly, there

would have to be an agreement about the linguistic elements without which no judgment can be formulated.

If judgments of reality are to provide an indisputable object of common understanding, the terms they contain must be free of all ambiguity, either because it is possible to know their true meaning, or because a unanimously accepted convention does away with all controversy on this subject. These two possibilities, which are respectively the approaches of realism and nominalism in the linguistic field, are both untenable, as they regard language either as a reflection of reality or as an arbitrary creation of an individual, and forget an essential element, the social aspect of language, which is an instrument of communication and influence on others.

All language is the language of a community, be this a community bound by biological ties, or by the practice of a common discipline or technique. The terms used, their meaning, their definition, can only be understood in the context of the habits, ways of thought, methods, external circumstances, and traditions known to the users of those terms. A deviation from usage requires justification, and, in this connection, realism and nominalism are simply two diametrically opposed attempts at justification, both linked to philosophies of language that are equally inadequate.

Adherence to particular linguistic usages normally expresses the explicit or implicit adoption of certain definite positions which are neither the reflection of an objective reality nor the manifestation of individual arbitrariness. Language is part of the traditions of a community, and, like the others, it only undergoes revolutionary modification where there is a radical failure to adapt to a new situation; otherwise its transformation is slow and imperceptible. But an agreement on the use of terms, no less than an agreement about the conception of reality and the vision of the world, even though it may not be disputed, is not indisputable; it is linked to a social and historical situation which fundamentally conditions any dis-

tinction that one might wish to draw between judgments of reality and value judgments.

The transcendence of these social and historical conditions of knowledge, with the transformation of certain *de facto* agreements into agreements *de jure*, is only possible through the adoption of a philosophical position which, if it is rational, is only conceivable as the consequence of a preceding argumentation. The theory and practice of argumentation are, in our view, correlative with a critical rationalism that transcends the duality "judgments of reality [versus] value judgments," and makes both judgments of reality and value judgments dependent on the personality of the scientist or philosopher, who is responsible for his decisions in the field of knowledge as well as in the field of action.

Only the existence of an argumentation that is neither compelling nor arbitrary can give meaning to human freedom, a state in which a reasonable choice can be exercised. If freedom was no more than necessary adherence to a previously given natural order, it would exclude all possibility of choice; and if the exercise of freedom were not based on reasons, every choice would be irrational and would be reduced to an arbitrary decision operating in an intellectual void. It is because of the possibility of argumentation which provides reasons, but not compelling reasons, that it is possible to escape the dilemma: adherence to an objectively and universally valid truth, or recourse to suggestion and violence to secure acceptance for our opinions and decisions. The theory of argumentation will help to develop what a logic of value judgments has tried in vain to provide, namely the justification of the possibility of a human community in the sphere of action when this justification cannot be based on a reality or objective truth. And its starting point, in making this contribution, is an analysis of those forms of reasoning which, though they are indispensable in practice, have from the time of Descartes been neglected by logicians and theoreticians of knowledge.

Chaim Perelman

From *The Realm of Rhetoric*

The relations between philosophy and rhetoric have been essential to the destiny of rhetoric. Whereas rhetoric seeks to have certain opinions prevail over other competing opinions, philosophy, which originally included the individual sciences, is seeking impersonal truths. Parmenides began the competition between philosophers and teachers of rhetoric when, in his famous poem, he opposed the way of truth, as guaranteed by divinity, to that of opinion, which is the way of man. Gorgias' reply was not long in coming; he showed, by a three-part argumentation, that Being is not, that if it existed it would be unknowable, and that if it were known this knowledge would be incommunicable. Hence the importance of rhetoric, of the psychological technique which acts upon the hearer's will in order to obtain his adherence. Similarly, by showing that for any subject there are two opposing discourses (*dissoi logoi*), Protagoras denied the existence of one single truth. In this view, every assertion is subject to controversy, since a person can always argue either for or against it. Consequently, preeminence must be granted to the rhetorician, the controller of opinion.

Plato, on the other hand, to the extent that he believed in the existence in every subject area of a truth which the philosopher must seek above all else, recognized a cleansing role in dialectic—the technique Socrates used to refute his opponent's opinions insofar as he was able to bring out their internal inconsistencies. As soon as they contradict themselves, opinions cannot be simultaneously admitted, and at least one of them has to be abandoned for the sake of truth. In this way Socrates prepares the way for the intuition of truth. When he has perceived the truth, the philosopher can use rhetorical technique to communicate it and to make his audience accept it. The rhetoric that is worthy of the philosopher can

persuade the gods themselves because it seeks acceptance of true theses and not of mere opinions.¹ A rhetoric which neglects truth and is content to get and keep the adherence of the audience through the effects of language, the charm of the word, and a resort to flattery is merely a technique of appearance. Such a rhetoric can be compared to men who, instead of maintaining their bodies by gymnastics and proper medical care, indulge themselves with pleasant food, without concern for the disastrous effects which will result from such gluttony.² Rhetoric, seeking to please, concerned only with appearance, and applying "colors," like makeup, to reality, is the demagogic technique *par excellence* which must be combated by all who are concerned with the triumph of truth. The rhetorician, like the Sophist, is the controller of opinion and hence of appearance, while what matters to the philosopher and the sage is the knowledge of truth and the practice of the good, in conformity to that truth. If dialectic is useful to the philosopher, by allowing him to unsettle erroneous opinions, the perception of truth will come through intuitions; rhetoric will serve to communicate these truths and to gain their acceptance. In this sense, rhetoric is clearly subordinated to philosophy.

Aristotle's conceptions are more nuanced. In separating practical disciplines from theoretical sciences, he stresses the point that the same methods and the same means of proof are not usable in all fields of knowledge. We have already cited the passage from the *Nicomachean Ethics*³ in which Aristotle shows that what is suitable in a mathematical demonstration would be out of place in a speech, and vice versa.

If it is intuition that guarantees the truth of principles in the theoretical sciences, it is recourse

¹Plato *Phaedrus* 273. [Au.]

²Plato *Gorgias* 518. [Au.]

³Aristotle *Nicomachean Ethics* 1094b, 23–25. [Au.]

to deliberation and discussion that gives rationality to practical activities, where one is to decide and choose, after reflection, among possibilities and contingencies. Through dialectical reasoning and rhetoric, one can influence people's judgment and direct them toward taking reasonable positions. In Aristotle's view, every audience is a judge which in the end must decide the superiority of one disputed thesis over the other when neither is obviously compelling.⁴ Since the realm of action is the realm of the contingent, which cannot be governed by scientific truths, the role of dialectical reasoning and rhetorical discourse is essential in order to introduce some rationality into the exercise of the individual and the collective will.

We showed in chapter one how Ramus attributed to dialectic the study of every kind of reasoning, analytical as well as dialectical, and thus reduced rhetoric to elocution, the search for forms of expression that were out of the ordinary, for ornamentation, for figures of style. But Descartes went even further in his desire to eliminate all rhetoric from his philosophy.⁵ His idea of a philosophy *more geometrico* (which was not realized until Spinoza) was to build a system which, moving from one self-evidence to another, would leave no room for any disputable opinion. As Descartes puts it at the beginning of his *First Meditation*:

Since reason already convinces me that I should abstain from the belief in things which are not entirely certain and indubitable no less carefully than from the belief in those which appear to me to be manifestly false, it will be enough to make me reject them all if I can find in each some ground for doubt.⁶

The attempt to elaborate a philosophy wherein all these would be either self-evident or compellingly demonstrated leads to the elimination of all forms of argumentation and to the rejection of rhetoric as an instrument of philosophy.

⁴Aristotle *Rhetoric* 1391b. 7–21. [Au.]

⁵H. Gouhier, "La résistance au vrai et le problème cartésien d'une philosophie sans rhétorique," *Retorico e Barocco*, ed. E. Castelli (Rome: Fratelli Bocca, 1955), pp. 85–97. [Au.]

⁶*Meditations*, p. 17. [Au.]

What are the presuppositions of such a philosophy? In the first place there is the idea that God is not only the source but also the guarantor of all knowledge, because "I must examine whether there is a God, and . . . whether he can be a deceiver; for as long as this is unknown, I do not see that I can ever be certain of anything."⁷ Descartes' method is to discover "a path that will lead us from this contemplation of the true God, in whom all the treasures of science and wisdom are contained, to the knowledge of all other beings."⁸

Scientific knowledge is wholly complete; all we have to do is recover it.

It is necessary to be suspicious of all human initiative, which can only lead to error, since it arises from imagination and prejudice. Human creativity, in scientific work, is completely neglected.

Divine ideas, being completely rational, can only be mathematical. They alone are characterized by self-evidence, which compels every rational being to submit to it. Because of Descartes' philosophic imagination, he generalized the results of the analysis of mathematical reasoning; he required (contrary to Aristotle's advice) that the same demands for rigor which had succeeded so well in mathematics be applied to all other realms. This led him to a methodological doubt concerning opinion:

As far as the opinions which I had been receiving since my birth were concerned, I could not do better than to reject them completely for once in my lifetime, and to resume them afterwards, or perhaps accept better ones in their place, when I had determined how they fitted in a rational scheme.⁹

Many years previously, Lord Bacon, theoretician of the empirical sciences, had also preached Christian humility to the learned, asking them to read carefully the book of nature, by which God revealed himself to man. The inductive method should guard man from formulating any thesis which could not be found in the book of nature, as if all experience had been clearly described in a divine language.

⁹*Discourse on Method*, p. 14. [Au.]

Having noted the theological background of the conception of science, both with Bacon and with Descartes, and having underscored the paradoxical and hardly admissible aspect of the Cartesian imagination, which would subject all opinions to the same criterion of self-evidence as mathematical theses, we should point out that even Descartes had to trust opinions for his provisional morality. Before reconstructing a rational science, he had to accept a provisional morality and its maxims. The first of these was "to obey the laws and customs of my country, constantly retaining the religion in which, by God's grace, I had been brought up since childhood, and in all other matters to follow the most moderate and least excessive opinions to be found in the practices of the more judicious part of the community in which I would live."¹⁰

We know that in the course of his life Descartes had to be satisfied with his provisional morality. His concern for generalized self-evidence did not result in the replacement of traditional morality—the expression of the common opinion of his milieu—by a rational, universally valid morality. Rather, it caused him to respect the ruling opinions and regulations scrupulously, and he refused to modify them for any nonself-evident reason. Paradoxically, mathematical rationalism, which went with a rejection of all opinion, of every exchange of opinions, of every recourse to dialectic and rhetoric, led finally to immobility and conformism in law, morality, politics, and religion.

Even today the teaching of the sciences is inspired by the Cartesian approach. In the areas which are free from controversy, it is not customary to refer to the opinion of one or another scholar. The theses which are taught are considered true, or are accepted as hypotheses; but there is hardly any need to justify them.

Thus, although axioms in the mathematical sciences, considered at first self-evident, were subsequently shown to be conventions of language, this change of perspective, however fundamental, has not affected the way in which such formal systems are laid out. In fact, if it is not a question of self-evidence, but of hypotheses or

conventions, why choose this hypothesis or that convention rather than another? Most mathematicians consider such questions foreign to their discipline.

When, under the influence of mathematicians, logic was presented in the form of several formalized systems, logicians with philosophical concerns asked if it were necessary to admit several different kinds of logic, or if a single, natural logic, prior to all formalized systems, existed. If there is a natural logic, how is it to be disengaged from other systems? Would it be drawn from the very structure of natural language?¹¹ Would it be justified by the needs of a methodological discussion?¹² As soon as we pose the problem of a choice of logic and its justification, an impersonal science leads us back to its philosophical and properly human foundations.

Likewise, the natural sciences were for centuries able to do without reference to a human language, situated in a historical and cultural context, by referring to God, to his ideas, and to the manner by which he revealed them to man. Belief in the existence of eternal truths, contained in the divine mind and guaranteed by it, justified the elimination of all personal elements from scientific thought, error alone being attributable to human intervention.

Take away the guarantee which God gives to self-evidence and, suddenly, all thought becomes human and fallible, and no longer sheltered from controversy. The idea that any scientific theory is only a human hypothesis, necessarily surpassing, if it would be fruitful, the data given by experience, and being neither self-evident nor infallible, is a modern conception which Karl Popper has effectively defended.¹³ But, lacking the self-evidence that can be imposed on everyone, a hypothesis, to be accepted, must be supported by good reasons, reorganized as such by other people,

¹⁰*Ibid.*, p. 15. [Au.]

members of the same scientific community. The status of knowledge thus ceases to be impersonal because every scientific thought becomes a human one, i.e., fallible, situated in and subjected to controversy. Every new idea must be supported by arguments which are relevant to its discipline's proper methodology and which are evaluated in terms of it.

The Cartesian ideal of universally applicable self-evident knowledge leaves no room for rhetoric and dialectic. Their importance increases, however, each time a field of knowledge is no longer dominated by the criterion of self-evidence. A critique of the idea is self-evidence,¹⁴ showing that it vanishes as soon as it is necessary to go beyond subjective intuition—as soon as one wishes to communicate it through a language which is never compelling—tends to show that the choice of a mode of expression, if it is not arbitrary—and it rarely is—is influenced by reasons which come from dialectic and rhetoric. All intellectual activity which is placed between the necessary and the arbitrary is reasonable only to the degree that it is maintained by arguments and eventually clarified by controversies which normally do not lead to unanimity.

Indeed, it happens that, coming to an agreement on a methodology, people can obtain in certain periods and in certain disciplines a unanimity which they may not find again elsewhere; but nothing guarantees its indefinite continuation. Even the Newtonian formula of universal attraction, which was believed to be unshakable, was breached when people were given sufficient reasons to modify it.

Contrary to Descartes, who wanted to build all knowledge on unshakable self-evidence, we must show that the consensus of scientists, based on specific lines of reasoning, is the exception.

In all other fields, whether religion or philosophy, ethics or law, pluralism is the rule. These fields draw their rationality only from the argumentative apparatus, from good reasons which can be offered for or against each presented thesis.

¹⁴Ch. Perelman, "Self-Evidence and Proof," *The Idea of Justice and the Problem of Argument*, pp. 109–25. Also, "De l'évidence en métaphysique," *Le Champ de l'argumentation*, pp. 236–48. [Au.]

Since Hegel, it is hard to deny that any philosophy is both historically situated and subject to controversy. And this affirmation applies to the Hegelian system itself as soon as it is detached from its theological underpinnings. This implies putting classical epistemology and metaphysics into question. Instead of searching for a necessary and self-evident first truth from which all our knowledge would be suspended, let us recast our philosophy in terms of a vision in which people and human societies are in interaction and are solely responsible for their cultures, their institutions, and their future—a vision in which people try hard to elaborate reasonable systems, imperfect but perfectible.

The preeminent realm of argumentation, dialectic, and rhetoric is that in which values come into play. Plato, in his dialogue on piety (the *Euthyphro*) had shown that the privileged realm of dialectic is the one which transcends calculation, weight, and measure, the one in which we deal with the just and the unjust, the beautiful and the ugly, the good and the bad, and in general, with the preferable.¹⁵

The modern conception of philosophy, which distinguishes it from the sciences, considers argumentation in all its forms as the method proper to philosophy.

Indeed, philosophy cannot be limited to what is perceived, for its proper task is to separate the important from the secondary, the essential from the accidental, the construct from the given, all from a perspective whose pertinence and superiority does not compel everyone. Hence the obligation to support the chosen perspective through argumentation, using analogies and metaphors, by which the adequacy and superiority of the one perspective over rival perspectives can be shown.

It is clear that the philosopher's forms of reasoning cannot be limited to deduction and induction. To the extent that philosophers appeal to reason and use, to win over an audience, a whole arsenal of arguments which ought to be accepted by everyone, just so must they broaden their conception of reason so as to demonstrate the rationality of argumentative techniques and rhetoric, as a theory of persuasive discourse.

¹⁵Plato *Euthyphro* 7. [Au.]

We will be helped in this enterprise, inescapable in our time, by the secular experience of the jurists, who, having made human institutions depend upon a natural law of divine inspiration—be it the providence of the Stoics, the living God of the revealed religions, or the rational God of the philosophers—later came to elaborate a theory of “a reasonable law,” an object of the consensus of an organized community.¹⁶

Understandably, treatises on rhetoric in antiquity were essentially works for the use of jurists. But we must not forget in this regard that law, unlike philosophy for example, aims at settling disputes which cannot be prolonged indefinitely. In law a decision must be reached which takes advantage of the authority of legal precedent.¹⁷

Philosophical, like juridical, argumentation constitutes the application to particular fields of a general theory of argumentation which we understand as a new rhetoric. In identifying this rhetoric with the general theory of persuasive discourse, which seeks to gain both the intellectual and the emotional adherence of any sort of audience, we affirm that every discourse which does not claim an impersonal validity belongs to rhetoric. As soon as a communication tries to in-

fluence one or more persons, to orient their thinking, to excite or calm their emotions, to guide their actions, it belongs to the realm of rhetoric. Dialectic, the technique of controversy, is included as one part of this larger realm.

Thus rhetoric covers the vast field of nonformalized thought: we can thus speak of “the realm of rhetoric.”¹⁸ It is in this spirit that Professor Jens of the University of Tübingen described rhetoric as “the once and future queen of the human sciences” [*alte und neue Königin der Wissenschaften*].¹⁹

Rhetoric, conceived as the theory of persuasive communication, has aroused growing interest among scholars and philosophers. Things have changed in the last thirty years. Not so long ago, rhetoric was disdained in Europe. In the United States, where speech departments were numerous,²⁰ they were hardly held in esteem by the academic community. Today rhetoric is rehabilitated, contrary to the opinion of the well-known historian Jacob Burckhart, who had called it “a monstrous aberration” of Greco-Roman antiquity.

The New Rhetoric: A Theory of Practical Reasoning

THE LOSS OF A HUMANISTIC TRADITION

The last two years of secondary education in Belgium used to be called traditionally "Poetry" and "Rhetoric." I still remember that, over forty years ago. I had to study the "Elements of Rhetoric" for a final high-school examination, and I learned more or less by heart the contents of a small manual, the first part of which concerned the syllogism and the second the figures of style. Later, at university, I took a course of logic which covered, among other things, the analysis of the syllogism. I then learned that logic is a formal discipline that studies the structure of hypothetico-deductive reasoning. Since then I have often wondered what link a professor of rhetoric could possibly discover between the syllogism and the figures of style with their exotic names that are so difficult to remember.

Lack of clarity concerning the idea of rhetoric is also apparent in the article on the subject in the Encyclopaedia Britannica (1969 ed.), where rhetoric is defined as "the use of language as an art based on a body of organized knowledge." But what does this mean? The technique or art of language in general, or only that of literary prose as distinct from poetry? Must rhetoric be conceived of as the art of oratory—that is, as the art of public speaking? The author of the article notes that for Aristotle rhetoric is the art of persuasion. We are further told that the orator's purpose, according to Cicero's definition, is to instruct, to move, and to please. Quintilian sums up this view in his lapidary style as *ars bene dicendi*, the art of speaking well. This phrase can refer either to the efficacy, or the morality, or the beauty of a speech, this ambiguity being both an advantage and a drawback.

Translated by E. Griffin-Collart and Otto Bird.

For those of us who have been educated at a time when rhetoric has ceased to play an essential part in education, the idea of rhetoric has been definitely associated with the "flowers of rhetoric"—the name used for the figures of style with their learned and incomprehensible names. This tradition is represented by two French authors, César Chesneau, sieur Dumarsais, and Pierre Fontanier, who provided the basic texts for teaching what was taken for rhetoric in the eighteenth and nineteenth centuries. The work of Dumarsais, which first appeared in 1730 and enjoyed an enormous success, is entitled *Concerning Tropes or the Different Ways in Which One Word Can be Taken in a Language*.¹ Fontanier's book, published in 1968 under the title *The Figures of Discourse*, unites in one volume two works, which appeared respectively in 1821 and 1827, under the titles *A Classical Manual for the Study of Tropes* and *Figures Other Than Tropes*.²

These works are the outcome of what might be called the stylistic tradition of rhetoric, which was started by Omer Talon, the friend of Petrus Ramus, in his two books on rhetoric published in 1572. The extraordinary influence of Ramus hindered, and to a large extent actually destroyed, the tradition of ancient rhetoric that had been developed over the course of twenty centuries and with which are associated the names of such writers as Aristotle, Cicero, Quintilian, and St. Augustine.

For the ancients, rhetoric was the theory of persuasive discourse and included five parts: *in-*

¹Dumarsais, *Des tropes ou des différents sens dans lesquels on peut prendre un même mot dans une même langue* (1818; reprint ed., Geneva: Slatkine Reprints, 1967). [Au.]

²Pierre Fontanier, *Les Figures du discours*, ed. Gérard Genette (Paris: Flammarion, 1968). [Au.]

ventio, dispositio, elocutio, memoria, and actio. The first part dealt with the art of finding the materials of discourse, especially arguments, by using common or specific *loci*—the *topoi* studied in works which, following Aristotle's example, were called Topics. The second part gave advice on the purposive arrangement or order of discourse, the *method*, as the Renaissance humanists called it. The third part dealt mainly with style, the choice of terms and phrases; the fourth with the art of memorizing the speech; while the fifth concerned the art of delivering it.

Ramus worked for the reform of logic and dialectic along the lines laid down by Rodolphus Agricola in his *De Inventione Dialectica* (1479), and by the humanists who followed him, in seeking to break away from scholastic formalism by restoring the union of eloquence and philosophy advocated by Cicero. This reform consisted essentially in rejecting the classical opposition between science and opinion that had led Aristotle to draw a distinction between analytical and dialectical reasoning—the former dealing with necessary reasonings, the latter with probable ones. Analytical reasoning is the concern of Aristotle's *Analytics*, dialectical reasoning that of the *Topics*, *On Sophistical Refutations*, and the *Rhetoric*.

Against this distinction, this is what Ramus has to say in his *Dialectic*:

Aristotle, or more precisely the exponents of Aristotle's theories, thought that there are two arts of discussion and reasoning, one applying to science and called Logic, the other dealing with opinion and called Dialectic. In this—with all due respect to such great masters—they were greatly mistaken. Indeed these two names, Dialectic and Logic, generally mean the very same thing, like the words *dialegethai* and *logizesthai* from which they are derived and descended, that is, dispute or reason. . . . Furthermore, although things known are either necessary and scientific, or contingent and a matter of opinion, just as our sight can perceive all colors, both unchanging and changeable, in the same way the art of knowing, that is Dialectic or Logic, is one and the same doctrine of reasoning well about anything whatsoever . . .³

³Petrus Ramus, *Dialectic*, 1576 edition, pp. 3–4; also in the critical edition of *Dialectique*, 1555, ed. Michel Das-

sonville (Geneva: Librairie Droz, 1964), p. 62. Cf. Walter J. Ong, *Ramus: Method, and the Decay of Dialogue* (Cambridge, Mass.: Harvard University Press, 1958). [Au.]

As a result of this rejection, Ramus unites in his *Dialectic* what Aristotle had separated. He divides his work into two parts, one concerning invention, the other judgment. Further, he includes in dialectic parts that were formerly regarded as belonging to rhetoric: the theory of invention or *loci* and that of disposition, called *method*. Memory is considered as merely a reflection of these first two parts, and rhetoric—the “art of speaking well,” of “eloquent and ornate language”—includes the study of tropes, of figures of style, and of oratorical delivery, all of which are considered as of lesser importance.

Thus was born the tradition of modern rhetoric, better called stylistic, as the study of techniques of unusual expression. For Fontanier, as we have seen, rhetoric is reduced to the study of figures of style, which he defines as “the more or less remarkable traits and forms, the phrases with a more or less happy turn, by which the expression of ideas, thoughts, and feelings removes the discourse more or less far away from what would have been its simple, common expression.”⁴

Rhetoric, on this conception, is essentially an art of expression and, more especially, of literary conventionalized expression; it is an art of style. So is it still regarded by Jean Paulhan in his book *Les Fleurs de Tarbes ou la terreur dans les lettres* (1941, but published first as articles in 1936).

The same view of rhetoric was taken in Italy during the Renaissance, despite the success of humanism. Inspired by the Ciceronian ideal of the union of philosophy with eloquence, humanists such as Lorenzo Valla sought to unite dialectic and rhetoric. But they gave definite primacy to rhetoric, thus expressing their revolt against scholastic formalism.

This humanistic tradition continued for over a century and finally produced in the *De principiis* by Mario Nizolio (1533) its most significant

⁴Fontanier, *Les Figures du discours*, p. 64. See also J. Dubois, F. Edeline, J. M. Klinkenberg, P. Minguet, F. Pire, and H. Trinson, *Rhétorique générale* (Paris: Larousse, 1970). [Au.]

work from a philosophical point of view. Less than ten years later, however, in 1562, Francesco Patrizi published in his *Rhetoric* the most violent attack upon this discipline, to which he denied any philosophical interest whatsoever. Giambattista Vico's reaction came late and produced no immediate result. Rhetoric became a wholly formal discipline—any living ideas that it contained being included in Aesthetics.

Germany is one country where classical rhetoric has continued to be carefully studied, especially by scholars such as Friedrich Blass, Wilhelm Kroll, and Friedrich Solmsen, who devoted most of their lives to this study. Yet, even so, rhetoric has been regarded only as the theory of literary prose. Heinrich Lausberg has produced a most remarkable work, which is the best tool in existence for the study of rhetorical terminology and the structure of discourse, and yet in the author's own eyes it is only a contribution to the study of literary language and tradition.⁵

The old tradition of rhetoric has been kept longest in Great Britain—it is still very much alive among Scots jurists—thanks to the importance of psychology in the empiricism of Bacon, Locke, and Hume, and to the influence of the Scottish philosophy of common sense. This tradition, in which the theory of invention is reduced to a minimum and interest is focused on the persuasive aspect of discourse, is represented by such original works as George Campbell's *The Philosophy of Rhetoric* (1776) and Richard Whately's *Elements of Rhetoric* (1828). In this work, Whately, who was a logician, deals with argumentative composition in general and the art of establishing the truth of a proposition so as to convince others, rhetoric being reduced to "a purely managerial or supervisory science."⁶ His disciple, the future Cardinal John Henry Newman, applied Whately's ideas to the problems of faith in his *Grammar of Assent* (1870). This outlook still consists in seeing in rhetoric only a theory of expression. It was the view adopted by Ivor Armstrong Richards in his *Principles of Lit-*

⁵Heinrich Lausberg, *Handbuch der literarischen Rhetorik*, 2 vols. (Munich: M. Hueber, 1960). [Au.]

erary Criticism (published in 1924) and in his *Philosophy of Rhetoric* (1936).

While in Europe rhetoric has been reduced to stylistics and literary criticism, becoming merely a part of the study of literature insofar as it was taught at all, in the United States the appearance of a speech profession brought about a unique development.

Samuel Silas Curry, in a book entitled *The Province of Expression* (1891), was the first to emphasize spoken discourse and its delivery, rather than the composition of literary prose, and to claim autonomy for speech as opposed to written composition. "Expression," as he understood it, did not mean the way in which ideas and feelings are expressed in a literary form, but instead the manner in which they are communicated by means of an art of "delivery." Concern for this element, apparently one of lesser importance, clearly reveals a renewed interest in the audience, and this interest helped to promote the creation of a new "speech profession," separate from the teaching of English and of English literature. Under the influence of William James, James Albert Winans published a volume entitled *Public Speaking* (1915) that firmly established a union between professors of speech and those of psychology. With the cooperation of specialists in ancient and medieval rhetoric, such as Charles S. Baldwin, Harry Caplan, Lane Cooper, Everett Lee Hunt, and Richard McKeon, the whole tradition of classical rhetoric has been retraced. This study has been continued and further developed in the works of Wilbur Samuel Howell, Donald C. Bryant, Karl R. Wallace, Walter J. Ong, Lloyd F. Bitzer, Douglas Ehninger, and Marie K. Hochmuth. The work of these scholars—the titles of which can be found in the Bibliography that has been regularly published by the Quarterly Journal of Speech since 1915—constitutes a unique achievement which is as yet too little known outside the United States.⁷

⁷Robert T. Oliver and Marvin G. Bauer, eds., *Re-establishing the Speech Profession: The First Fifty Years* (New York: Speech Association of the Eastern States, 1959). See also Frederick W. Haberman and James W. Cleary, eds., *Rhetoric and Public Address: A Bibliography, 1947-1961* (Madison: University of Wisconsin Press, 1964). Prof. Carroll C. Arnold of Pennsylvania State University has gra-

AN ORNAMENTAL OR A PRACTICAL ART?

There is nothing of philosophical interest in a rhetoric that has turned into an art of expression, whether literary or verbal.⁸ Hence it is not surprising that the term is missing entirely from both André Lalande's *Vocabulaire technique et critique de la philosophie* and the recent American *Encyclopedia of Philosophy* (1967). In the Western tradition, "Rhetoric" has frequently been identified with verbalism and an empty, unnatural, stilted mode of expression. Rhetoric then becomes the symbol of the most outdated elements in the education of the old regime, the elements that were the most formal, most useless, and most opposed to the needs of an equalitarian, progressive democracy.

This view of rhetoric as declamation—ostentatious and artificial discourse—is not a new one. The same view was taken of the rhetoric of the Roman Empire. Once serious matters, both political and judiciary, had been withdrawn from its influence, rhetoric became perforce limited to school exercises, to set speeches treating either a theme of the past or an imaginary situation, but, in any case, one without any real bearing. Serious people, especially the Stoics, made fun of it. Thus Epictetus declares: "But this faculty of speaking and of ornamenting words, if there is indeed any such peculiar faculty, what else does it do, when there happens to be discourse about a

ciously supplied me the following information: "The statement about the bibliography in *Quarterly Journal of Speech* is not quite correct. The 'Bibliography of Rhetoric and Public Address' first appeared in the *Quarterly Journal of Speech* in 1947 and was published there annually to 1951. From 1952 through 1969, the bibliography was annually published in *Speech Monographs*. As it happens, the bibliography will cease to be published in *Monographs* and, beginning with this year, 1970, will be published in a *Bibliographical Annual*, published by the Speech Association of America. As far as I know, this bibliography remains the only multilingual listing of works (admittedly incomplete) on rhetoric published in the United States." [Au.]

⁸See Vasile Florescu, "Retorica si reabilitarea ei in filozofia contemporana" (Rhetoric and its rehabilitation in contemporary philosophy) in *Studi de istorie a filozofiei universale*, published by the Institute of Philosophy of this Academy of the Socialist Republic of Rumania (Bucharest, 1969), pp. 9–82. [Au.]

thing, than to ornament the words and arrange them as hairdressers do the hair?"⁹

Aristotle would have disagreed with this conception of rhetoric as an ornamental art bearing the same relation to prose as poetics does to verse. For Aristotle, rhetoric is a practical discipline that aims, not at producing a work of art, but at exerting through speech a persuasive action on an audience. Unfortunately, however, those responsible for the confusion between the two have been able to appeal to Aristotle's own authority because of the misleading analysis he gave of the epideictic or ceremonial form of oratory.

In his *Rhetoric* Aristotle distinguishes three genres of oratory: deliberative, forensic, and ceremonial. "Political speaking," he writes, "urges us either to do or not to do something: one of these two courses is always taken by private counsellors, as well as by men who address public assemblies. Forensic speaking either attacks or defends somebody: one or the other of these two things must always be done by the parties in a case. The ceremonial oratory of display either praises or censures somebody." But whereas the audience is supposed to act as a judge and make a decision concerning either the future (deliberative genre) or the past (forensic genre), in the case of an epideictic discourse the task of the audience consists in judging, not about the matter of discourse, but about the orator's skill. In political and forensic discourse the subject of the discourse is itself under discussion, and the orator aims at persuading the audience to take part in deciding the matter, but in epideictic discourse the subject—such as, for example, the praise of soldiers who have died for their country—is not at all a matter of debate. Such set speeches were often delivered before large assemblies, as at the Olympic Games, where competition between orators provided a welcome complement to the athletic contests. On such occasions, the only decision that the audience was called upon to make concerned the talent of the orator, by awarding the crown to the victor.

One might well ask how an oratorical genre

⁹*Discourses* II. 23; *GBWW* [Great Books of the Western World], Vol. 12, pp. 170–71. [Au.]

can be defined by its literary imitation. We know that Cicero, after having lost the suit, rewrote his *Pro Milone* and published it as a literary work. He hoped that by artistically improving the speech, which had failed to convince Milo's judges, he might gain the approbation of lovers of literature. Are those who read this speech long after its practical bearing has disappeared any more than spectators? In that case, all discourses automatically become literature once they cease to exert a persuasive effect, and there is no particular reason to distinguish different genres of oratory. Yet it can be maintained, on the contrary, that the epideictic genre is not only important but essential from an educational point of view, since it too has an effective and distinctive part to play—that, namely, of bringing about a consensus in the minds of the audience regarding the values that are celebrated in the speech.

The moralists rightly satirize the view of epideictic oratory as spectacle. La Bruyère writes derisively of those who “are so deeply moved and touched by Theodorus's sermon that they resolve in their hearts that it is even more beautiful than the last one he preached.” And Bossuet, fearful lest the real point of a sermon be missed, exclaims: “You should now be convinced that preachers of the Gospel do not ascend into pulpits to utter empty speeches to be listened to for amusement.”¹⁰

Bossuet here is following St. Augustine's precepts concerning sacred discourse as set forth in the fourth book of his work *On Christian Doctrine*. The Orator is not content if his listener merely accepts the truth of his words and praises his eloquence, because he wants his full assent:

If the truths taught are such that to believe or to know them is enough, to give one's assent implies nothing more than to confess that they are true. When, however, the truth taught in one that must be carried into practice, and that is taught for the very purpose of being practised, it is useless to be persuaded of the truth of what is said, it is useless

¹⁰Ch. Perelman and L. Olbrechts-Tyteca, *The New Rhetoric, A Treatise on Argumentation*, trans. John Wilkinson and Purcell Weaver (Notre Dame, Ind.: University of Notre Dame Press, 1969), p. 50. French edition: *La Nouvelle Rhétorique; traité de l'argumentation*. (Paris: Presses Universitaires de France, 1958). [Au.]

to be pleased with the manner in which it is said, if it be not so learnt as to be practised. The eloquent divine, then, when he is urging a practical truth, must not only teach so as to give instruction, and please so as to keep up the attention, but he must also sway the mind so as to subdue the will.

The listener will be persuaded, Augustine also claims,

if he be drawn by your premises, and awed by your threats; if he reject what you condemn, and embrace what you commend; if he grieve when you heap up objects for grief, and rejoice when you point out an object for joy; if he pity those whom you present to him as objects of pity, and shrink from those whom you set before him as men to be feared and shunned.¹¹

The orator's aim in the epideictic genre is not just to gain a passive adherence from his audience but to provoke the action wished for or, at least, to awaken a disposition so to act. This is achieved by forming a community of minds, which Kenneth Burke, who is well aware of the importance of this genre, calls *identification*. As he writes, rhetoric “is rooted in an essential function of language itself, a function that is wholly realistic and is continually born anew; the use of language as a symbolic means of inducing cooperation in beings that by nature respond to symbols.”¹² In fact, any persuasive discourse seeks to have an effect on an audience, although the audience may consist of only one person and the discourse be an inward deliberation.

The distinction of the different genres of oratory is highly artificial, as the study of a speech shows. Mark Antony's famous speech in Shakespeare's *Julius Caesar*¹³ opens with a funeral eulogy, a typical case of epideictic discourse, and ends by provoking a riot that is clearly political. Its goal is to intensify an adherence to values, to create a disposition to act, and finally to bring people to act. Seen in such a perspective, rhetoric becomes a subject of great philosophical interest.

THINKING ABOUT VALUES

In 1945, when I published my first study of justice,¹⁴ I was completely ignorant of the importance of rhetoric. This study, undertaken in the spirit of logical empiricism, succeeded in showing that formal justice is a principle of action, according to which beings of one and the same essential category must be treated in the same way.¹⁵ The application of this principle to actual situations, however, requires criteria to indicate which categories are relevant and how their members should be treated, and such decisions involve a recourse to judgments of value. But, using only positivistic methods, I could not see how such judgments could have any foundation or justification. Indeed, as I entirely accepted the principle that one cannot draw an "ought" from an "is"—a judgment of value from a judgment of fact—I was led inevitably to the conclusion that if justice consists in the systematic implementation of certain value judgments, it does not rest on any rational foundation: "As for the value that is the foundation of the normative system, we cannot subject it to any rational criterion: it is utterly arbitrary and logically indeterminate. . . . The idea of value is, in effect, incompatible both with formal necessity and with experiential universality. There is no value which is not logically arbitrary."¹⁶

I was deeply dissatisfied with this conclusion, however interesting the analysis, since the philosophical inquiry, carried on within the limits of logical empiricism, could not provide an ideal of practical reason, that is, the establishment of rules and models for reasonable action. By admitting the soundness of Hume's analysis, I found myself in a situation similar to Kant's. If Hume is right in maintaining that empiricism cannot provide a basis for either science or morals, must we not then look to other than empirical methods to justify them? Similarly, if experience and calculation, combined according to the precepts of logical empiricism, leave no place

for practical reason and do not enable us to justify our decisions and choices, must we not seek other techniques of reasoning for that purpose? In other words, is there a logic of value judgments that makes it possible for us to reason about values instead of making them depend solely on irrational choices, based on interest, passion, prejudice, and myth? Recent history has shown abundantly the sad excesses to which such an attitude can lead.

Critical investigation of the philosophical literature yielded no satisfactory results. The French logician Edmond Goblots, in his work *La Logique des jugements de valeur*,¹⁷ restricted his analysis to derived or instrumental value judgments, that is, to those judgments that use values as a means to already accepted ends, or as obstacles to their attainment. The ends themselves, however, could not be subjected to deliberation unless they were transformed into instrumental values, but such a transformation only pushes back the problem of ultimate ends. We thus seem to be faced with two extreme attitudes, neither of which is acceptable: subjectivism, which, as far as values are concerned, leads to skepticism for lack of an intersubjective criterion; or an absolutism founded on intuitionism. In the latter case, judgments of value are assimilated to judgments of a reality that is *sui generis*. In other words, must we choose between A. J. Ayer's view in *Language, Truth, and Logic* and G. E. Moore's view in *Principia Ethica*? Both seem to give a distorted notion of the actual process of deliberation that leads to decision making in practical fields such as politics, law, and morals.

Then, too, I agreed with the criticisms made by various types of existentialists against both positivist empiricism and rationalistic idealism, but I could find no satisfaction in their justification of action by purely subjective projects or commitments.

I could see but one way to solve the dilemma to which most currents of contemporary philosophy had led. Instead of working out a priori possible structures for a logic of value judgments, might we not do better to follow the method

adopted by the German logician Gottlob Frege, who, to cast new light on logic, decided to analyze the reasoning used by mathematicians? Could we not undertake, in the same way, an extensive inquiry into the manner in which the most diverse authors in all fields do in fact reason about values? By analyzing political discourse, the reasons given by judges, the reasoning of moralists, the daily discussions carried on in deliberating about making a choice or reaching a decision or nominating a person, we might be able to trace the actual logic of value judgments which seems continually to elude the grasp of specialists in the theory of knowledge.

For almost ten years Mme L. Olbrechts-Tyteca and I conducted such an inquiry and analysis. We obtained results that neither of us had ever expected. Without either knowing or wishing it, we had rediscovered a part of Aristotelian logic that had been long forgotten or, at any rate, ignored and despised. It was the part dealing with dialectical reasoning, as distinguished from demonstrative reasoning—called by Aristotle analytics—which is analyzed at length in the *Rhetoric*, *Topics*, and *On Sophistical Refutations*. We called this new, or revived, branch of study, devoted to the analysis of informal reasoning, *The New Rhetoric*.¹⁸

ARGUMENTATION AND DEMONSTRATION

The new rhetoric is a theory of argumentation. But the specific part that is played by argumentation could not be fully understood until the modern theory of demonstration—to which it is complementary—had been developed. In its contemporary form, demonstration is a calculation made in accordance with rules that have been laid down beforehand. No recourse is allowed to evidence or to any intuition other than that of the senses. The only requirement is the ability to distinguish signs and to perform opera-

¹⁸Perelman and Olbrechts-Tyteca, *The New Rhetoric*. See also Olbrechts-Tyteca, "Rencontre avec la rhétorique," in *La Théorie de l'argumentation*, Centre National de Recherches de Logique (Louvain: Editions Nauwelaerts, 1963), 1, pp. 3–18 (reproduces nos. 21–24 of *Logique et Analyse*). [Au.]

tions according to rules. A demonstration is regarded as correct or incorrect according as it conforms, or fails to conform, to the rules. A conclusion is held to be demonstrated if it can be reached by means of a series of correct operations starting from premises accepted as axioms. Whether these axioms be considered as evident, necessary, true or hypothetical, the relation between them and the demonstrated theorems remains unchanged. To pass from a correct inference to the truth or to the computable probability of the conclusion, one must admit both the truth of the premises and the coherence of the axiomatic system.

The acceptance of these assumptions compels us to abandon pure formalism and to accept certain conventions and to admit the reality of certain models or structures. According to the classical theory of demonstration, which is rejected by formalism, the validity of the deductive method was guaranteed by intuition or evidence—by the natural light of reason. But if we reject such a foundation, we are not compelled to accept formalism. It is still insufficient, since we need good reasons to accept the premises from which we start and these reasons can be good only for a mind capable of judging them. However, once we have accepted the framework of a formal system and know that it is free from ambiguity, then the demonstrations that can be made within it are compelling and impersonal; in fact, their validity is capable of being controlled mechanically. It is this specific character of formal demonstration that distinguishes it from dialectical reasoning founded on opinion and concerned with contingent realities. Ramus failed to see this distinction and confused the two by using a faulty analogy with the sight of moving and unmoving colors.¹⁹ It is sometimes possible, by resorting to prior arrangements and conventions, to transform an argument into a demonstration of a more or less probabilistic character. It remains true, nonetheless, that we must distinguish carefully between

¹⁹This identification is faulty, as dialectical reasoning can be reduced to formal calculation no more than commonplaces (topoi). Cf. Otto Bird, "The tradition of the Logical Topics: Aristotle to Ockham," *Journal of the History of Ideas* 23 (1962): 307–23. [Au.]

the two types of reasoning if we want to understand properly how they are related.

An argumentation is always addressed by a person called the orator—whether by speech or in writing—to an audience of listeners or readers. It aims at obtaining or reinforcing the adherence of the audience to some thesis, assent to which is hoped for. The new rhetoric, like the old, seeks to persuade or convince, to obtain an adherence which may be *theoretical* to start with, although it may eventually be manifested through a disposition to act, or *practical*, as provoking either immediate action, the making of a decision, or a commitment to act.

Thus argumentation, unlike demonstration, presupposes a meeting of minds: the will on the part of the orator to persuade and not to compel or command, and a disposition on the part of the audience to listen. Such mutual goodwill must not only be general but must also apply to the particular question at issue; it must not be forgotten that all argumentation aims somehow at modifying an existing state of affairs. This is why every society possesses institutions to further discussion between competent persons and to prevent others. Not everybody can start debating about anything whatever, no matter where. To be a man people listen to is a precious quality and is still more necessary as a preliminary condition for an efficacious argumentation.

In some cases there are detailed rules drawn up for establishing this contact before a question can be debated. The main purpose of procedure in civil and criminal law is to ensure a balanced unfolding of the judicial debate. Even the matters where there are no explicit rules for discussion, there are still customs and habits that cannot be disregarded without sufficient reason.

Argumentation also presupposes a means of communicating, a common language. The use of it in a given situation, however, may admit of variation according to the position of the interlocutors. Sometimes only certain persons are entitled to ask questions or to conduct the debate.

From these specifications it is apparent that the new rhetoric cannot tolerate the more or less conventional, and even arbitrary, limitations traditionally imposed upon ancient rhetoric. For

Aristotle, the similarity between rhetoric and dialectic was all-important.²⁰ According to him, they differ only in that dialectic provides us with techniques of discussion for a common search for truth, while rhetoric teaches how to conduct a debate in which various points of view are expressed and the decision is left up to the audience. This distinction shows why dialectic has been traditionally considered as a serious matter by philosophers, whereas rhetoric has been regarded with contempt. Truth, it was held, presided over a dialectical discussion, and the interlocutors had to reach agreement about it by themselves, whereas rhetoric taught only how to present a point of view—that is to say, a partial aspect of the question—and the decision of the issue was left up to a third person.²¹

It should be noted, however, that for Plato dialectic alone does not attain to metaphysical truth. The latter requires an intuition for which dialectic can only pave the way by eliminating untenable hypotheses.²² However, truth is the keynote for dialectic, which seeks to get as close to the truth as possible through the discursive method. The rhetorician, on the other hand, is described as trying to outdo his rivals in debate, and, if his judges are gross and ignorant, the triumph of the orator who shows the greatest skill in flattery will by no means always be the victory of the best cause. Plato emphasizes this point strongly in the *Gorgias*, where he shows that the demagogue, to achieve victory, will not hesitate to use techniques unworthy of a philosopher. This criticism gains justification from Aristotle's observation, based evidently on Athenian practice, that it belongs to rhetoric "to deal with such matters as we deliberate upon without arts or systems to guide us, in the bearing of persons who cannot take in at a glance a complicated argument, or follow a long chain of reasoning."²³

²⁰See *Rhetoric* I, 1354a 1–6, 1355a 35–36, 1355b 8–10, 1356a 30–35, 1356b 35, 1356b 37–38; *GBWW*, Vol. 9, pp. 593–96. [Au.]

²¹Plato, *Republic* I, 348a–b; *GBWW*, Vol. 7, p. 306. [Au.]

²³Aristotle, *Rhetoric* I 1357a 1–4; *GBWW*, Vol. 9, p. 596. [Au.]

For the new rhetoric, however, argumentation has a wider scope as nonformal reasoning that aims at obtaining or reinforcing the adherence of an audience. It is manifest in discussion as well as in debate, and it matters not whether the aim be the search for truth or the triumph of a cause, and the audience may have any degree of competence. The reason that rhetoric has been deemed unworthy of the philosopher's efforts is not because dialectic employs a technique of questions and answers while rhetoric proceeds by speeches from opposing sides.²⁴ It is not this but rather the idea of the unicity of truth that has disqualified rhetoric in the Western philosophical tradition. Thus Descartes declares: "Whenever two men come to opposite decisions about the same matter one of them at least must certainly be in the wrong, and apparently there is not even one of them who knows; for if the reasoning of the second was sound and clear he would be able so to lay it before the other as finally to succeed in convincing his understanding also."²⁵ Both Descartes and Plato hold this idea because of their rejection of opinion, which is variable, and their adoption of an ideal of science based on the model of geometry and mathematical reasoning—the very model according to which the world was supposed to have been created. *Dum Deus calculat, fit mundus* (While God calculates, the world is created) is the conviction not only of Leibniz but of all rationalists.

Things are very different within a tradition that follows a juridical, rather than a mathematical, model. Thus in the tradition of the Talmud, for example, it is accepted that opposed positions can be equally reasonable; one of them does not have to be right. Indeed, "in the Talmud two schools of biblical interpretation are in constant opposition, the school of Hillel and that of Shammai. Rabbi Abba relates that, bothered by these contradictory interpretations of the sacred text, Rabbi Samuel addresses himself to heaven in order to know who speaks the truth. A voice from

²⁵*Rules for the Direction of the Mind*; *GBWW*, Vol. 31, p. 2. [Au.]

above answers him that these two theses both expressed the word of the Living God."²⁶

So too, for Plato, the subject of discussion is always one for which men possess no techniques for reaching agreement immediately:

Suppose for example that you and I, my good friend (Socrates remarks to Euthyphro), differ about a number; do differences of this sort make us enemies and set us at variance with one another? Do we not go at once to arithmetic, and put an end to them by a sum? . . . Or suppose that we differ about magnitudes, do we not quickly end the differences by measuring? . . . And we end a controversy about heavy and light by resorting to a weighing machine? . . . But what differences are there which cannot be thus decided and which therefore make us angry and set us at enmity with one another? I dare say the answer does not occur to you at the moment, and therefore I will suggest that these enmities arise when the matters of difference are the just and unjust, good and evil, honorable and dishonorable.²⁷

When agreement can easily be reached by means of calculation, measuring, or weighing, when a result can be either demonstrated or verified, nobody would think of resorting to dialectical discussion. The latter concerns only what cannot be so decided and, especially, disagreements about values. In fact, in matters of opinion, it is often the case that neither rhetoric nor dialectic can reconcile all the positions that are taken.

Such is exactly how matters stand in philosophy. The philosopher's appeal to reason gives no guarantee whatever that everyone will agree with his point of view. Different philosophies present different points of view, and it is significant that a historian of pre-Socratic philosophy has been able to show that the different points of view can be regarded as antilogies or discourses on opposite sides, in that an antithesis is opposed in each case to a thesis.²⁸ One might even wonder with

Alexandre Kojève, the late expert in Hegelian philosophy, whether Hegelian dialectic did not have its origin, not in Platonic dialectic, but rather in the development of philosophical systems that can be opposed as thesis to antithesis, followed by a synthesis of the two. The process is similar to a lawsuit in which the judge identifies the elements he regards as valid in the claims of the opposed parties. For Kant as well as for Hegel, opinions are supposed to be excluded from philosophy, which aims at rationality. But to explain the divergencies that are systemically encountered in the history of philosophy, we need only call these opinions the natural illusions of reason as submitted to the tribunal of critical reason (as in Kant) or successive moments in the progress of reason toward Absolute Spirit (as in Hegel).

To reconcile philosophic claims to rationality with the plurality of philosophic systems, we must recognize that the appeal to reason must be identified not as an appeal to a single truth but instead as an appeal for the adherence of an audience, which can be thought of, after the manner of Kant's categorical imperative, as encompassing all reasonable and competent men. The characteristic aspect of philosophical controversy and of the history of philosophy can only be understood if the appeal to reason is conceived as an appeal to an ideal audience—which I call the universal audience—whether embodied in God,²⁹ in all reasonable and competent men, in the man deliberating or in an elite.³⁰ Instead of identifying philosophy with a science, which, on the positivist ideal, could make only analytical judgments, both indisputable and empty, we would do better to abandon the ideal of an apodictic philosophy. We would then have to admit that in the discharge of his specific task, the philosopher has at his disposal only an argumentation that he can endeavor to make as reasonable and systematic as possible without ever being able to make it absolutely compelling or a demonstrative proof.

³⁰Perelman and Olbrechts-Tyteca, *The New Rhetoric*, Sections 6–9. [Au.]

Besides, it is highly unlikely that any reasoning from which we could draw reasons for acting could be conducted under the sign of truth, for these reasons must enable us to justify our actions and decisions. Thus, indirectly, the analysis of philosophical reasoning brings us back to views that are familiar in existentialism.

Audiences display an infinite variety in both extension and competence: in extent, from the audience consisting of a single subject engaged in inward deliberation up to the universal audience; and in competence, from those who know only *loci* up to the specialists who have acquired their knowledge only through a long and painstaking preparation. By thus generalizing the idea of the audience, we can ward off Plato's attack against the rhetoricians for showing greater concern for success than for the truth. To this criticism we can reply that the techniques suited for persuading a crowd in a public place would not be convincing to a better educated and more critical audience, and that the worth of an argumentation is not measured solely by its efficacy but also by the quality of the audience at which it is aimed. Consequently, the idea of a rational argumentation cannot be defined *in abstracto*, since it depends on the historically grounded conception of the universal audience.

The part played by the audience in rhetoric is crucially important, because all argumentation, in aiming to persuade, must be adapted to the audience and, hence based on beliefs accepted by the audience with such conviction that the rest of the discourse can be securely based upon it. Where this is not the case, one must reinforce adherence to these starting points by means of all available rhetorical techniques before attempting to join the controverted points to them. Indeed, the orator who builds his discourse on premises not accepted by the audience commits a classical fallacy in argumentation—a *petitio principii*. This is not a mistake in formal logic, since formally any proposition implies itself, but it is a mistake in argumentation, because the orator begs the question by presupposing the existence of an adherence that does not exist and to the obtaining of which his efforts should be directed.

THE BASIS OF AGREEMENT

The objects of agreement on which the orator can build his argument are various. On the one hand, there are facts, truths, and presumptions; on the other, values, hierarchies, and *loci* of the preferable.³¹

Facts and truths can be characterized as objects that are already agreed to by the universal audience, and, hence, there is no need to increase the intensity of adherence to them. If we presuppose the coherence of reality and of our truths taken as a whole, there cannot be any conflict between facts and truths on which we would be called to make a decision. What happens when such a conflict seems to occur is that the incompatible element loses its status and becomes either an illusory fact or an apparent truth, unless we can eliminate the incompatibility by showing that the two apparently incompatible truths apply to different fields. We shall return to this argumentative method later when dealing with the dissociation of ideas.

Presumptions are opinions which need not be proved, although adherence to them can be either reinforced, if necessary, or suppressed by proving the opposite. Legal procedure makes abundant use of presumptions, for which it has worked out refined definitions and elaborate rules for their use.

Values are appealed to in order to influence our choices of action. They supply reasons for preferring one type of behavior to another, although not all would necessarily accept them as good reasons. Indeed, most values are particular in that they are accepted only by a particular group. The values that are called universal can be regarded in so many different ways that their universality is better considered as only an aspiration for agreement, since it disappears as soon as one tries to apply one such value to a concrete situation. For argumentation, it is useful to distinguish concrete values, such as one's country, from abstract values, such as justice and truth. It is characteristic of values that they can become the center of conflict without thereby ceasing to be values. This fact explains how real sacrifice is possible, the object renounced being by no means

³¹Ibid., Sections 15–27. [Au.]

a mere appearance. For this reason, the effort to reinforce adherence to values is never superfluous. Such an effort is undertaken in epideictic discourse, and, in general, all education also endeavors to make certain values preferred to others.

After values, we find that accepted hierarchies play a part in argumentation. Such, for example, are the superiority of men over animals and of adults over children. We also find double hierarchies as in the case in which we rank behavior in accordance with an accepted ranking of the agents. For this reason, such a statement as “You are behaving like a beast” is pejorative, whereas an exhortation to “act like a man” calls for more laudable behavior.

Among all the *loci* studied by Aristotle in his *Topics*, we shall consider only those examined in the third book, which we shall call *loci of the preferable*. They are very general propositions, which can serve, at need, to justify values or hierarchies, but which also have as a special characteristic the ability to evaluate complementary aspects of reality. To *loci of quantity*, such as “That which is more lasting is worth more than that which is less so” or “A thing useful for a large number of persons is worth more than one useful for a smaller number,” we can oppose *loci of quality*, which set value upon the unique, the irremediable, the opportune, the rare—that is, to what is exceptional instead of to what is normal. By the use of these *loci*, it is possible to describe the difference between the classical and the romantic spirit.³²

While it establishes a framework for all non-formal reasoning, whatever its nature, its subject, or audience, the new rhetoric does not pretend to supply a list of all the *loci* and common opinions which can serve as starting points for argumentation. It is sufficient to stress that, in all cases, the orator must know the opinion of his audience on all the questions he intends to deal with, the type of arguments and reasons which seem relevant with regard to both subject and audience, what they are likely to consider as a strong or weak ar-

³²Ch. Perelman and L. Olbrechts-Tyteca, “Classicisme et Romantisme dans l'argumentation.” *Revue Internationale de Philosophie*, 1958, pp. 47–57. [Au.]

gument, and what might arouse them, as well as what would leave them indifferent.

Quintilian, in his *Institutes of Oratory*, points out the advantage of a public school education for future orators: it puts them on a par and in fellowship with their audience. This advice is sound as regards argumentation on matters requiring no special knowledge. Otherwise, however, it is indispensable for holding an audience to have had a preliminary initiation into the body of ideas to be discussed.

In discussion with a single person or a small group, the establishment of a starting point is very different from before a large group. The particular opinions and convictions needed may have already been expressed previously, and the orator has no reason to believe that his interlocutors have changed their minds. Or he can use the technique of question and answer to set the premises of his argument on firm ground. Socrates proceeded in this way, taking the interlocutor's assent as a sign of the truth of the accepted thesis. Thus Socrates says to Callicles in the *Gorgias*:

If you agree with me in an argument about any point, that point will have been sufficiently tested by us, and will not require to be submitted to any further test. For you could not have agreed with me, either from lack of knowledge or from superfluity of modesty, nor yet from a desire to deceive me, for you are my friend, as you tell me yourself. And therefore when you and I are agreed, the result will be the attainment of perfect truth.³³

It is obvious that such a dialogue is out of the question when one is addressing a numerous assembly. In this case, the discourse must take as premises the presumptions that the orator has learned the audience will accept.³⁴

CREATING "PRESENCE"

What an audience accepts forms a body of opinion, convictions, and commitments that is both vast and indeterminate. From this body the orator must select certain elements on which he focuses

³³Plato, *Gorgias* 487 d-e, *GBWW*, Vol 7, p. 273. [Au.]

³⁴Perelman and Olbrechts-Tyteca, *The New Rhetoric*, p. 104. [Au.]

attention by endowing them, as it were, with a "presence." This does not mean that the elements left out are entirely ignored, but they are pushed into the background. Such a choice implicitly sets a value on some aspects of reality rather than others. Recall the lovely Chinese story told by Meng-Tseu: "A king sees an ox on its way to sacrifice. He is moved to pity for it and orders that a sheep be used in its place. He confesses he did so because he could see the ox, but not the sheep."³⁵

Things present, things near to us in space and time, act directly on our sensibility. The orator's endeavors often consist, however, in bringing to mind things that are not immediately present. Bacon was aware of this function of eloquence:

The affection beholdeth merely the present; reason beholdeth the future and sum of time. And therefore the present filling the imagination more, reason is commonly vanquished; but after that force of eloquence and persuasion hath made things future and remote appear as present, then upon the revolt of the imagination reason prevaieth.³⁶

To make "things future and remote appear as present," that is, to create presence, calls for special efforts of presentation. For this purpose all kinds of literary techniques and a number of rhetorical figures have been developed. *Hypotyposis* or *demonstratio*, for example, is defined as a figure "which sets things out in such a way that the matter seems to unfold, and the thing to happen, before our very eyes."³⁷ Obviously, such a figure is highly important as a persuasive factor. In fact, if their argumentative role is disregarded, the study of figures is a useless pastime, a search for strange names for rather farfetched and affected turns of speech. Other figures, such as *repetition*, *anaphora*, *amplification*, *congerie*, *metabole*, *pseudo direct discourse*, *enallage*, are all various means of increasing the feeling of presence in the audience.³⁸

In his description of facts, truths, and values,

³⁵*Ibid.*, p. 116. [Au.]

³⁶*Advancement of Learning*, Bk II, XVIII; *GBWW*, Vol. 30, p. 67. [Au.]

³⁷*Rhetorica ad Herennium* 4. 68. [Au.]

³⁸Perelman and Olbrechts-Tyteca, *The New Rhetoric*, Section 42. [Au.]

the orator must employ language that takes into account the classifications and valuations implicit in the audience's acceptance of them. For placing his discourse at the level of generality that he considers best adapted to his purpose and his audience, he has at hand a whole arsenal of linguistic categories—substantives, adjectives, verbs, adverbs—and a vocabulary and phrasing that enable him, under the guise of a descriptive narrative, to stress the main elements and indicate which are merely secondary.

In the selection of data and the interpretation and presentation of them, the orator is subject to the accusation of partiality. Indeed, there is no proof that his presentation has not been distorted by a tendentious vision of things. Hence, in law, the legal counsel must reply to the attorney general, while the judge forms an opinion and renders his decision only after hearing both parties. Although his judgment may appear more balanced, it cannot achieve perfect objectivity—which can only be an ideal. Even with the elimination of tendentious views and of errors, one does not thereby reach a perfectly just decision. So too in scientific or technical discourse, where the orator's freedom of choice is less because he cannot depart, without special reason, from the accepted terminology, value judgments are implicit, and their justification resides in the theories, classifications, and methodology that gave birth to the technical terminology. The idea that science consists of nothing but a body of timeless, objective truths has been increasingly challenged in recent years.³⁹

THE STRUCTURE OF ARGUMENT

Nonformal argument consists, not of a chain of ideas of which some are derived from others according to accepted rules of inference, but rather

³⁹To mention only a few works besides Thomas Kuhn's *The Structure of Scientific Revolutions* (Chicago, Ill.: University of Chicago Press, 1962), there is Michael Polanyi's fascinating work significantly entitled *Personal Knowledge* (London: Routledge & Kegan Paul, 1958). The social, persuasive, nay, the rhetorical aspect, of scientific methodology was stressed by the physicist John Ziman in his brilliant book *Public Knowledge* (London: Cambridge University Press, 1968). The latter is dedicated to the late Norwood Russell

of a web formed from all the arguments and all the reasons that combine to achieve the desired result. The purpose of the discourse in general is to bring the audience to the conclusions offered by the orator, starting from premises that they already accept—which is the case unless the orator has been guilty of a *petitio principii*. The argumentative process consists in establishing a link by which acceptance, or adherence, is passed from one element to another, and this end can be reached either by leaving the various elements of the discourse unchanged and associated as they are or by making a dissociation of ideas.

We shall now consider the various types of association and of dissociation that the orator has at his command. To simplify classification, we have grouped the processes of association into three classes: quasi-logical arguments, arguments based upon the structure of the real, and arguments that start from particular cases that are then either generalized or transposed from one sphere of reality to another.⁴⁰

QUASI-LOGICAL ARGUMENTS

These arguments are similar to the formal structures of logic and mathematics. In fact, men apparently first came to an understanding of purely formal proof by submitting quasi-logical arguments, such as many of the *loci* listed in Aristotle's *Topics*, to an analysis that yielded precision and formalization. There is a difference of paramount importance between an argument and a formal proof. Instead of using a natural language in which the same word can be used with different meanings, a logical calculus employs an artificial language so constructed that one sign can have only one meaning. In logic, the principle of identity designates a tautology, an indisputable but empty truth, whatever its formulation. But this is not the case in ordinary language. When I say "business is business," or "boys will be

Hanson, whose *Patterns of Discovery* (London: Cambridge University Press, 1958), and the *Concept of the Position* (London: Cambridge University Press, 1963), gave much weight to the new ideas. [Au.]

⁴⁰Perelman and Olbrechts-Tyteca, *The New Rhetoric*, Sections 45–88. [Au.]

boys,” or “war is war,” those hearing the words give preference, not to the univocity of the statement, but to its significant character. They will never take the statements as tautologies, which would make them meaningless, but will look for different plausible interpretations of the same term that will render the whole statement both meaningful and acceptable. Similarly, when faced with a statement that is formally a contradiction—“When two persons do the same thing it is not the same thing,” or “We step and we do not step twice into the same river,”—we look for an interpretation that eliminates the incoherence.

To understand an orator, we must make the effort required to render his discourse coherent and meaningful. This effort requires goodwill and respect for the person who speaks and for what he says. The techniques of formalization make calculation possible, and, as a result, the correctness of the reasoning is capable of mechanical control. This result is not obtained without a certain linguistic rigidity. The language of mathematics is not used for poetry any more than it is used for diplomacy.

Because of its adaptability, ordinary language can always avoid purely formal contradictions. Yet it is not free from incompatibilities, as, for instance, when two norms are recommended which cannot both apply to the same situation. Thus, telling a child not to lie and to obey his parents lays one open to ridicule if the child asks, “What must I do if my father orders me to lie?” When such an antinomy occurs, one seeks for qualifications or amendments—and recommends the primacy of one norm over the other or points out that there are exceptions to the rule. Theoretically, the most elegant way of eliminating an incompatibility is to have recourse to a dissociation of concepts—but of this, more later. Incompatibility is an important element in Socratic irony. By exposing the incompatibility of the answers given to his insidious questions, Socrates compels his interlocutor to abandon certain commonly accepted opinions.

Definitions play a very different role in argumentation from the one they have in a formal system. There they are mostly abbreviations. But in argumentation they determine the choice of one particular meaning over others—sometimes

by establishing a relation between an old term and a new one. Definition is regarded as a rhetorical figure—the oratorical definition—when it aims, not at clarifying the meaning of an idea, but at stressing aspects that will produce the persuasive effect that is sought. It is a figure relating to choice: the selection of facts brought to the fore in the definition is unusual because the definiens is not serving the purpose of giving the meaning of a term.⁴¹

Analysis that aims at dividing a concept into all its parts and interpretation that aims at elucidating a text without bringing anything new to it are also quasi-logical arguments and call to mind the principle of identity. This method can give way to figures of speech called aggregation and interpretation when they serve some purpose other than clarification and tend to reinforce the feeling of presence.⁴²

These few examples make it clear that expressions are called figures of style when they display a fixed structure that is easily recognizable and are used for a purpose different from their normal one—this new purpose being mainly one of persuasion. If the figure is so closely interwoven into the argumentation that it appears to be an expression suited to the occasion, it is regarded as an argumentative figure, and its unusual character will often escape notice.

Some reasoning processes—unlike definition or analysis, which aim at complete identification—are content with a partial reduction, that is, with an identification of the main elements. We have an example of this in the rule of justice that equals should be treated equally. If the agents and situations were identical, the application of the rule would take the form of an exact demonstration. As this is never the case, however, a decision will have to be taken about whether the differences are to be disregarded. This is why the recourse to precedent in legal matters is not a completely impersonal procedure but always requires the intervention of a judge.

Arguments of reciprocity are those that claim the same treatment for the antecedent as for the consequent of a relation—buyers-sellers, spectators-

⁴¹Ibid., pp. 172–73. [Au.]

⁴²Ibid., p. 176. [Au.]

actors, etc. These arguments presuppose that the relation is symmetrical. Unseasonable use of them is apt to have comic results, such as the following story, known to have made Kant laugh:

At Surat an Englishman is pouring out a bottle of ale which is foaming freely. He asks an Indian who is amazed at the sight what it is that he finds so strange. "What bothers me," replies the native, "isn't what is coming out of the bottle, but how you got it in there in the first place."

Other quasi-logical arguments take the transitivity of a relation for granted, even though it is only probable: "My friends' friends are my friends." Still other arguments apply to all kinds of other relations such as that between part and whole or between parts, relations of division, comparison, probability. They are clearly distinct from exact demonstration, since, in each case, complementary, nonformal hypotheses are necessary to render the argument compelling.⁴³

APPEAL TO THE REAL

Arguments based on the structure of reality can be divided into two groups according as they establish associations of succession or of coexistence.

Among relations of succession, that of causality plays an essential role. Thus we may be attempting to find the causes of an effect, the means to an end, the consequences of a fact, or to judge an action or a rule by the consequences that it has. This last process might be called the pragmatic argument, since it is typical of utilitarianism in morals and of pragmatism in general.⁴⁴

Arguments establishing relations of coexistence are based on the link that unites a person to his actions. When generalized, this argument establishes the relation between the essence and the act, a relation of paramount importance in the social sciences. From this model have come the classification of periods in history (Antiquity, the Middle Ages), all literary classifications (classicism, romanticism), styles (Gothic, baroque), economic or political systems (feudalism, capi-

⁴³Ibid., Sections 45–59. [Au.]

⁴⁴See J. S. Mill, *Utilitarianism*, *GBWW*, Vol. 43, pp. 443 ff. [Au.]

talism, fascism), and institutions (marriage, the church).⁴⁵ Rhetoric, conceived as the theory of argumentation, provides a guidance for the understanding both of the manner in which these categories were constituted and of the reasons for doing so. It helps us grasp the advantages and the disadvantages of using them and provides an insight into the value judgments that were present, explicitly or implicitly, when they took shape. The specificity of the social sciences can be best understood by considering the methodological reasons justifying the constitution of their categories—Max Weber's *Idealtypus*.

Thanks to the relations of coexistence, we are also able to gain an understanding of the argument from authority in all its shapes as well as an appreciation of the persuasive role of *ethos* in argumentation, since the discourse can be regarded as an act on the orator's part.⁴⁶

ESTABLISHING THE REAL

Arguments attempting to establish the structure of reality are first arguments by example, illustration, and model; second, arguments by analogy.

The example leads to the formulation of a rule through generalization from a particular case or through putting a new case on the same footing as an older one. Illustration aims at achieving presence for a rule by illustrating it with a concrete case. The argument from a model justifies an action by showing that it conforms to a model. One should also mention the argument from an antimodel; for example, the drunken Helot to whom the Spartans referred as a foil to show their sons how they should not behave.

In the various religions, God and all divine or quasi-divine persons are obviously preeminent models for their believers. Christian morality can be defined as the imitation of Christ, whereas Buddhist morality consists in imitating Buddha. The models that a culture proposes to its members for imitation provide a convenient way of characterizing it.⁴⁷

⁴⁵Ch. Perelman, ed., *Les Catégories en histoire* (Brussels: Editions de l'Institut de Sociologie, 1969). [Au.]

⁴⁶Perelman and Olbrechts-Tyteca, *The New Rhetoric*, Sections 60–74. [Au.]

⁴⁷Ibid., Sections 78–81. [Au.]

The argument from analogy is extremely important in nonformal reasoning. Starting from a relation between two terms A and B, which we call the *theme* since it provides the proper subject matter of the discourse, we can by analogy present its structure or establish its value by relating it to the terms C and D, which constitute the *phoros* of the analogy, so that A is to B as C is to D. Analogy, which derives its name from the Greek word for proportion, is nevertheless different from mathematical proportion. In the latter the characteristic relation of equality is symmetrical, whereas the *phoros* called upon to clarify the structure or establish the value of the theme must, as a rule, be better known than the theme. When Heraclitus says that in the eyes of God man is as childish as a child is in the eyes of an adult, it is impossible to change the *phoros* for the theme and vice versa, unless the audience is one that knows the relationship between God and man better than that between a child and an adult. It is also worth noting that when man is identified with adult, the analogy reduces to three terms, the middle one being repeated twice: C is to B as B is to A. This technique of argumentation is typical of Plato, Plotinus, and all those who establish hierarchies within reality.

Within the natural sciences the use of analogy is mainly heuristic, and the intent is ultimately to eliminate the analogy and replace it with a formula of a mathematical type. Things are different, however, in the social sciences and in philosophy, where the whole body of facts under study only offers reasons for or against a particular analogical vision of things.⁴⁸ This is one of the differences to which Wilhelm Dilthey refers when he claims that the natural sciences aim at explaining whereas the human sciences seek for understanding.

The metaphor is the figure of style corresponding to the argument from analogy. It consists of a condensed analogy in which one term of the theme is associated with one term of the

⁴⁸Ch. Perelman, "Analogie et métaphore en science, poésie, et philosophie," *Revue Internationale de Philosophie*, 1969, pp. 3–15. See also Hans Blumenberg, *Paradigmen zu einer Metaphorologie* (Bonn: H. Bouvier, 1960), and Enzo Melandri, *La linea e il circolo: Studio logico-filosofico sull'analogia* (Bologna: il Mulino, 1968). [Au.]

phoros. Thus "the morning of life" is a metaphor that summarizes the analogy: Morning is to day what youth is to life. Of course, in the case of a good many metaphors, the reconstruction of the complete analogy is neither easy nor unambiguous. When Berkeley, in his *Dialogues*,⁴⁹ speaks of "an ocean of false learning," there are various ways to supply the missing terms of the analogy, each one of which stresses a different relation unexpressed in the metaphor.

The use of analogies and metaphors best reveals the creative and literary aspects of argumentation. For some audiences their use should be avoided as much as possible, whereas for others the lack of them may make the discourse appear too technical and too difficult to follow. Specialists tend to hold analogies in suspicion and use them only to initiate students into their discipline. Scientific popularization makes extensive use of analogy, and only from time to time will the audience be reminded of the danger of identification of theme and *phoros*.⁵⁰

THE DISSOCIATION OF IDEAS

Besides argumentative associations, we must also make room for the dissociation of ideas, the study of which is too often neglected by the rhetorical tradition. Dissociation is the classical solution for incompatibilities that call for an alteration of conventional ways of thinking. Philosophers, by using dissociation, often depart from common sense and form a vision of reality that is free from the contradictions of opinion.⁵¹ The whole of the great metaphysical tradition, from Parmenides to our own day, displays a succession of dissociations where, in each case, reality is opposed to appearance.

Normally, reality is perceived through appearances that are taken as signs referring to it. When, however, appearances are incompatible—

⁴⁹George Berkeley, *Works*, 2 vols. (London, 1843), 2:259. [Au.]

⁵⁰Perelman and Olbrechts-Tyteca, *The New Rhetoric*, Sections 82–88. [Au.]

⁵¹Ch. Perelman, "Le réel commun et le réel philosophique," in *Etudes sur l'histoire de la philosophie, en hommage à Martial Gueroult* (Paris: Fischbacher, 1964), pp. 127–38. [Au.]

an oar in water looks broken but feels straight to the touch—we must admit, if we are to have a coherent picture of reality, that some appearances are illusory and may lead us to error regarding the real. One is thus brought to the construction of a conception of reality that at the same time is capable of being used as a criterion for judging appearances. Whatever is conformable to it is given value, whereas whatever is opposed is denied value and is considered a mere appearance.

Any idea can be subjected to a similar dissociation. To real justice we can oppose apparent justice and with real democracy contrast apparent democracy, or formal or nominal democracy, or quasi democracy, or even “democracy” (in quotes). What is thus referred to as apparent is usually what the audience would normally call justice, democracy, etc. It only becomes apparent after the criterion of real justice or real democracy has been applied to it and reveals the error concealed under the name. The dissociation results in a depreciation of what had until then been an accepted value and in its replacement by another conception to which is accorded the original value. To effect such a depreciation, one will need a conception that can be shown to be valuable, relevant, as well as incompatible with the common use of the same notion.

We may call “philosophical pairs” all sets of notions that are formed on the model of the “appearance-reality” pair. The use of such pairs makes clear how philosophical ideas are developed and also shows how they cannot be dissociated from the process of giving or denying value that is typical of all ontologies. One thus comes to see the importance of argumentative devices in the development of thought, and especially of philosophy.⁵²

INTERACTION OF ARGUMENTS

An argumentation is ordinarily a spoken or written discourse, of variable length, that combines a great number of arguments with the aim of winning the adherence of an audience to one or more theses. These arguments interact within the

⁵²Perelman and Olbrechts-Tyteca, *The New Rhetoric*, Sections 89–92. [Au.]

minds of the audience, reinforcing or weakening each other. They also interact with the arguments of the opponents as well as with those that arise spontaneously in the minds of the audience. This situation gives rise to a number of theoretical questions.

Are there limits, for example, to the number of arguments that can be usefully accumulated? Does the choice of arguments and the scope of the argumentation raise special problems? What is a weak or an irrelevant argument? What is the effect of a weak argument on the whole argumentation? Are there any criteria for assessing the strength or relevance of an argument? Are such matters relative to the audience, or can they be determined objectively?

We have no general answer to such questions. The answer seems to depend on the field of study and on the philosophy that controls its organization. In any case, they are questions that have seldom been raised and that never have received a satisfactory answer. Before any satisfactory answer can be given, it will be necessary to make many detailed studies in the various disciplines, taking account of the most varied audiences.

Once our arguments have been formulated, does it make any difference what order they are presented in? Should one start, or finish, with strong arguments, or do both by putting the weaker arguments in the middle—the so-called Nestorian order? This way of presenting the problem implies that the force of an argument is independent of its place in the discourse. Yet, in fact, the opposite seems to be true, for what appears as a weak argument to one audience often appears as a strong argument to another, depending on whether the presuppositions rejected by one audience are accepted by the other. Should we present our arguments then in the order that lends them the greatest force? If so, there should be a special technique devoted to the organization of a discourse.

Such a technique would have to point out that an *exordium* is all-important in some cases, while in others it is entirely superfluous. Sometimes the objections of one's opponent ought to be anticipated beforehand and refuted, whereas in other cases it is better to let the objections arise sponta-

neously lest one appear to be tearing down straw men.⁵³

In all such matters it seems unlikely that any hard-and-fast rules can be laid down, since one must take account of the particular character of the audience, of its evolution during the debate, and of the fact that habits and procedures that prove good in one sphere are no good in another. A general rhetoric cannot be fixed by precepts and rules laid down once for all. But it must be able to adapt itself to the most varied circumstances, matters, and audiences.

REASON AND RHETORIC

The birth of a new period of culture is marked by an eruption of original ideas and a neglect of methodological concerns and of academic classifications and divisions. Ideas are used with various meanings that the future will distinguish and disentangle. The fundamental ideas of Greek philosophy offer a good example of this process. One of the richest and most confused of all is that expressed by the term *logos*, which means among other things: word, reason, discourse, reasoning, calculation, and all that was later to become the subject of logic and the expression of reason. Reason was opposed to desire and the passions, being regarded as the faculty that ought to govern human behavior in the name of truth and wisdom. The operation of *logos* takes effect through long speeches or through questions and answers, thus giving rise to the distinction noted above between rhetoric and dialectic, even before logic was established as an autonomous discipline.

Aristotle's discovery of the syllogism and his development of the theory of demonstrative science raised the problem of the relation of syllogistic—the first formal logic—with dialectic and rhetoric. Can any and every form of reasoning be expressed syllogistically? Aristotle is often thought to have aimed at such a result, at least for deductive reasoning, since he was well aware that inductive reasoning and argument by example are entirely different from deduction. He knew too that the dialectical reasoning characteristic of discussion, and essentially critical in

purpose, differed widely from demonstrative reasoning deducing from principles the conclusions of a science. Yet he was content to locate the difference in the kind of premises used in the two cases. In analytical, or demonstrative, reasoning, the premises, according to Aristotle, are true and ultimate, or else derived from such premises, whereas in dialectical reasoning the premises consist of generally accepted opinion. The nature of reasoning in both cases was held to be the same, consisting in drawing conclusions from propositions posited as premises.⁵⁴

Rhetoric, on the other hand, was supposed to use syllogisms in a peculiar way, by leaving some premises unexpressed and so transforming them into enthymemes. The orator, as Aristotle saw, could not be said to use regular syllogisms; hence, his reasoning was said to consist of abbreviated syllogisms and of arguments from example, corresponding to induction.

What are we to think of this reduction to two forms of reasoning of all the wide variety of arguments that men use in their discussions and in pleading a cause or justifying an action? Yet, since the time of Aristotle, logic has confined its study to deductive and inductive reasoning, as though any argument differing from these was due to the variety of its content and not to its form. As a result, an argument that cannot be reduced to canonical form is regarded as logically valueless. What then about reasoning from analogy? What about the *a fortiori* argument? Must we, in using such arguments, always be able to introduce a fictive unexpressed major premise, so as to make them conform to the syllogism?

It can be shown that the practical reasoning involved in choice or decision making can always be expressed in the form of theoretical reasoning by introducing additional premises. But what is gained by such a move? The reasoning by which new premises are introduced is merely concealed, and resort to these premises appears entirely arbitrary, although in reality it too is the outcome of a decision that can be justified only in an argumentative, and not in a demonstrative, manner.⁵⁵

⁵³Ibid., Sections 97–105. [Au.]

⁵⁴*Topics* I, 100a 25–32; *GBWW*, Vol. 8, p. 143. [Au.]

⁵⁵Ch. Perelman, "Le raisonnement pratique," in *Contem-*

At first sight, it appears that the main difference between rhetoric and dialectic, according to Aristotle, is that the latter employs impersonal techniques of reasoning, whereas rhetoric relies on the orator's *ethos* (or character) and on the manner in which he appeals to the passions of his audience (or *pathos*).⁵⁶ For Aristotle, however, the *logos* or use of reasoning is the main thing, and he criticizes those authors before him, who laid the emphasis upon oratorical devices designed to arouse the passions. Thus he writes:

If the rules for trials which are now laid down in some states—especially in well-governed states—were applied everywhere, such people would have nothing to say. All men, no doubt, think that the laws should prescribe such rules, but some, as in the court of Areopagus, give practical effect to their thoughts and forbid talk about nonessentials. This is sound law and custom. It is not right to pervert the judge by moving him to anger or envy or pity—one might as well warp a carpenter's rule before using it.

For this reason, after a long discussion devoted to the role of passion in oratorical art, he concludes: "As a matter of fact, it (rhetoric) is a branch of dialectic and similar to it, as we said at the outset."⁵⁷

To sum up, it appears that Aristotle's conception, which is essentially empirical and based on the analysis of the material he had at his disposal, distinguishes dialectic from rhetoric only by the type of audience and, especially, by the nature of the questions examined in practice. His precepts are easy to understand when we keep in mind that he was thinking primarily of the debates held before assemblies of citizens gathered together either to deliberate on political or legal matters or to celebrate some public ceremony. There is no reason, however, why we should not also consider theoretical and, especially, philosophical questions expounded in unbroken discourse. In

porary Philosophy, ed. Raymond Klibansky (Florence: La Nuova Italia, 1969), 1:168–76. [Au.]

⁵⁶See *Rhetoric I*, 1356a, 15–18; *GBWW*, Vol. 9, p. 595. Paul I. Rosenthal, "The Concept of Ethos and the Structure of Persuasion," *Speech Monographs*, 1966, pp. 114–26. [Au.]

⁵⁷*Rhetoric I*, 1354a 19–27, 1356a 30–31; *GBWW*, Vol. 9, pp. 593, 595–96. [Au.]

this case, the techniques Aristotle would have presumably recommended would be those he himself used in his own work, following the golden rule that he laid down in his *Nicomachean Ethics*, that the method used for the examination and exposition of each particular subject must be appropriate to the matter, whatever its manner of presentation.⁵⁸

After Aristotle, dialectic became identified with logic as a technique of reasoning, due to the influence of the Stoics. As a result, rhetoric came to be regarded as concerned only with the irrational parts of our being, whether will, the passions, imagination, or the faculty for aesthetic pleasure. Those who, like Seneca and Epictetus, believed that the philosopher's role was to bring man to submit to reason were opposed to rhetoric, even when they used it, in the name of philosophy. Those like Cicero, on the other hand, who thought that in order to induce man to submit to reason one had to have recourse to rhetoric, recommended the union of philosophy and eloquence. The thinkers of the Renaissance followed suit, such as Valla, and Bacon too, who expected rhetoric to act on the imagination to secure the triumph of reason.

The more rationalist thinkers, like Ramus, as we have already noted, considered rhetoric as merely an ornament and insisted on a separation of form and content, the latter alone being thought worthy of a philosopher's attention. Descartes adopted the same conception and reinforced it. He regarded the geometrical method as the only method fit for the sciences as well as for philosophy and opposed rhetoric as exerting an action upon the will contrary to reason—thus adopting the position of the Stoics but with a different methodological justification. But to make room for eloquence within this scheme, we need only deny that reason possesses a monopoly of the approved way of influencing the will. Thus, Pascal, while professing a rationalism in a Cartesian manner, does not hesitate to declare that the truths that are most significant for him—that is, the truths of faith—have to be received by the heart before they can be accepted by reason:

⁵⁸*Ethics*, I, 1094b 12–27; *GBWW*, Vol. 9, pp. 339–40. [Au.]

We all know that opinions are admitted into the soul through two entrances, which are its chief powers, understanding and will. The more natural entrance is the understanding, for we should never agree to anything but demonstrated truths, but the more usual entrance, although against nature, is the will; for all men whatsoever are almost always led into belief not because a thing is proved but because it is pleasing. This way is low, unworthy, and foreign to our nature. Therefore everybody disavows it. Each of us professes to give his belief and even his love only where he knows it is deserved.

I am not speaking here of divine truths, which I am far from bringing under the art of persuasion, for they are infinitely above nature. God alone can put them into the soul, and in whatever way He pleases. I know He was willed they should enter into the mind from the heart and not into the heart from the mind, that He might make humble that proud power of reason. . . .⁵⁹

To persuade about divine matters, grace is necessary; it will make us love that which religion orders us to love. Yet it is also Pascal's intention to conduce to this result by his eloquence, although he has to admit that he can lay down the precepts of this eloquence only in a very general way:

It is apparent that, no matter what we wish to persuade of, we must consider the person concerned, whose mind and heart we must know, what principles he admits, what things he loves, and then observe in the thing in question what relations it has to these admitted principles or to these objects of delight. So that the art of persuasion consists as much in knowing how to please as in knowing how to convince, so much more do men follow caprice than reason.

Now of these two, the art of convincing and the art of pleasing, I shall confine myself here to the rules of the first, and to them only in the case where the principles have been granted and are held to unwaveringly; otherwise I do not know whether there would be an art for adjusting the proofs to the inconstancy of our caprices.

But the art of pleasing is incomparably more difficult, more subtle, more useful, and more wonderful, and therefore if I do not deal with it, it is because I am not able. Indeed I feel myself so unequal to its regulation that I believe it to be a thing impossible.

⁵⁹On *Geometrical Demonstration*; *GBWW*, Vol. 33, p. 440. [Au.]

Not that I do not believe there are as certain rules for pleasing as for demonstrating, and that whoever should be able perfectly to know and to practise them would be as certain to succeed in making himself loved by kings and by every kind of person as in demonstrating the elements of geometry to those who have imagination enough to grasp the hypotheses. But I consider, and it is perhaps my weakness that leads me to think so, that it is impossible to lay hold of the rules.⁶⁰

Pascal's reaction here with regard to formal rules of rhetoric already heralds romanticism with its reverence for the great orator's genius. But before romanticism held sway, associationist psychology developed in eighteenth-century England. According to the thinkers of this school, feeling, not reason, determines man's behavior, and books on rhetoric were written based on this psychology. The best known of these is Campbell's *The Philosophy of Rhetoric*, noted above.⁶¹ Fifty years later, Whately, following Bacon's lead, defined the subject of logic and of rhetoric as follows:

I remarked in treating of that Science [Logic], that Reasoning may be considered as applicable to two purposes, which I ventured to designate respectively by the terms "Inferring" and "Proving," i.e., the *ascertainment* of the truth by investigation and the *establishment* of it to the satisfaction of another; and I there remarked that Bacon, in his *Organon*, has laid down rules for the conduct of the former of these processes, and that the latter belongs to the province of Rhetoric; and it was added, that to infer, is to be regarded as the proper office of the Philosopher, or the Judge;—to prove, of the Advocate.⁶²

This conception, while stressing the social importance of rhetoric, makes it a negligible factor for the philosopher. This tendency increases under the influence of Kant and of the German idealists, who boasted of removing all matters of opinion from philosophy, for which only apodictic truths are of any importance.

⁶⁰*Ibid.*, p. 441. [Au.]

⁶¹Cf. V. M. Bevilacqua, "Philosophical Origins of George Campbell's *Philosophy of Rhetoric*," *Speech Monographs*, 1965, pp. 1–12; and Lloyd F. Bitzer, "Hume's *Philosophy of Rhetoric*," *Philosophy and Rhetoric*, 1969, pp. 139–66. [Au.]

⁶²Whately, *Elements of Rhetoric* (1828), pp. 6–7. [Au.]

The relation between the idea that we form of reason and the role assigned to rhetoric is of sufficient importance to deserve studies of all the great thinkers who have said anything about the matter—studies similar to those of Bacon by Prof. Karl Wallace and of Ramus by Prof. Walter J. Ong.⁶³ In what follows, I would like to sketch how the positivist climate of logical empiricism makes possible a new, or renovated, conception of rhetoric.

Within the perspective of neopositivism, the rational is restricted to what experience and formal logic enable us to verify and demonstrate. As a result, the vast sphere of all that is concerned with action—except for the choice of the most adequate means to reach a designated end—is turned over to the irrational. The very idea of a reasonable decision has no meaning and cannot even be defined satisfactorily with respect to the whole action in which it occurs. Logical empiricism has at its disposal no technique of justification except one founded on the theory of probability. But why should one prefer one action to another? Only because it is more efficacious? How can one choose between the various ends that one can aim at? If quantitative measures are the only ones that can be taken into account, the only reasonable decision would seem to be one that is in conformity with utilitarian calculations. If so, all ends would be reduced to a single one of pleasure or utility, and all conflicts of values would be dismissed as based on futile ideologies.

Now if one is not prepared to accept such a limitation to a monism of values in the world of action and would reject such a reduction on the ground that the irreducibility of many values is the basis of our freedom and of our spiritual life; if one considers how justification takes place in the most varied spheres—in politics, morals, law, the social sciences, and, above all, in philosophy—it seems obvious that our intellectual tools cannot all be reduced to formal logic, even when that is enlarged by a theory for the control of induction and the choice of the most effica-

cious techniques. In this situation, we are compelled to develop a theory of argumentation as an indispensable tool for practical reason.

In such a theory, as we have seen, argumentation is made relative to the adherence of minds, that is, to an audience, whether an individual deliberating or mankind as addressed by the philosopher in his appeal to reason. Whately's distinction between logic, as supplying rules of reasoning for the judge, and rhetoric, providing precepts for the counsel, falls to the ground as being without foundation. Indeed, the counsel's speech that aims at convincing the judge cannot rest on any different kind of reasoning than that which the judge uses himself. The judge having heard both parties, will be better informed and able to compare the arguments on both sides, but his judgment will contain a justification in no way different in kind from that of the counsel's argumentation. Indeed, the ideal counsel's speech is precisely one that provides the judge with all the information that he needs to state the grounds for his decision.

If rhetoric is regarded as complementary to formal logic and argumentation as complementary to demonstrative proof, it becomes of paramount importance in philosophy, since no philosophic discourse can develop without resorting to it. This became clear when, under the influence of logical empiricism, all philosophy that could not be reduced to calculation was considered as nonsense and of no worth. Philosophy, as a consequence, lost its status in contemporary culture. This situation can be changed only by developing a philosophy and a methodology of the reasonable. For if the rational is restricted to the field of calculation, measuring, and weighing, the reasonable is left with the vast field of all that is not amenable to quantitative and formal techniques. This field, which Plato and Aristotle began to explore by means of dialectical and rhetorical devices, lies open for investigation by the new rhetoric.

FURTHER DEVELOPMENTS

I introduced the new rhetoric to the public for the first time over twenty years ago, in a lecture delivered in 1949 at the Institut des Hautes Études de

⁶³Karl Wallace, *Francis Bacon on Communication and Rhetoric* (Chapel Hill: University of North Carolina Press, 1943); and Ong, *Ramus: Method, and the Decay of Dialogue*. [Au.]

Belgique.⁶⁴ In the course of the same year, the Centre National de Recherches de Logique was founded with the collaboration of the professors of logic in the Belgian universities. In 1953 this group organized an international colloquium on the theory of proof, in which the use and method of proof was studied in the deductive sciences, in the natural sciences, in law, and in philosophy—that is, in the fields where recourse to reasoning is essential.⁶⁵ On that occasion, Prof. Gilbert Ryle presented his famous paper entitled “Proofs in Philosophy,” which claims that there are no proofs in philosophy: “Philosophers do not provide proofs any more than tennis players score goals. Tennis players do not try in vain to score goals. Nor do philosophers try in vain to provide proofs; they are not inefficient or tentative provers. Goals do not belong to tennis, nor proofs to philosophy.”⁶⁶

What, then, is philosophical reasoning? What are “philosophical arguments”? According to Ryle, “they are operations not with premises and conclusions, but operations upon operations with premises and conclusions. In proving something, we are putting propositions through inference-hoops. In some philosophical arguments, we are matching the hoops through which certain batches of propositions will go against a worded recipe declaring what hoops they should go through. Proving is a one-level business; philosophical arguing is, anyhow sometimes, an inter-level business.”⁶⁷

If the notion of proof is restricted to the operation of drawing valid inferences, it is undeniable that philosophers and jurists only rarely prove what they assert. Their reasoning, however, does aim at justifying the points that they make, and such reasoning provides an example of the argumentation with which the new rhetoric is concerned.⁶⁸

⁶⁴It was published in 1950 in the *Revue philosophique de la France et de l'Étranger* under the title “Logique et Rhétorique,” 75th year, pp. 1–35, and reprinted in Ch. Perelman and L. Olbrechts-Tyteca, *Rhétorique et philosophie* (Paris: Presses universitaires de France, 1952), pp. 1–48. [Au.]

⁶⁵The Proceedings appeared in the *Revue Internationale de Philosophie*, 1954, 27–28. [Au.]

⁶⁶Gilbert Ryle, “Proofs in Philosophy,” *Revue Internationale de Philosophie*, 1954, p. 150. [Au.]

⁶⁷*Ibid.*, p. 156. [Au.]

⁶⁸See in this respect Perelman and Olbrechts-Tyteca, *Rhétorique et philosophie*, especially “La quête du rationnel,”

The part played by argumentation in philosophy has given rise to numerous discussions and to increasing interest, as is shown by the special issue of the *Revue Internationale de Philosophie* of 1961 devoted to the subject, by the colloquium on philosophical argumentation held in Mexico City in 1963,⁶⁹ by the collection of studies published by Maurice Natanson and Henry W. Johnstone, Jr., entitled *Philosophy, Rhetoric and Argumentation*,⁷⁰ and by the special number of *The Monist* in 1964 on the same subject.

Professor Johnstone has for many years been particularly interested in this topic and has published a book and many papers on it.⁷¹ To further the study of the relation between philosophy and rhetoric, he organized with Prof. Robert T. Oliver, then head of the Speech Department at Pennsylvania State University, a colloquium in which philosophers and members of the speech profession met in equal numbers to discuss the question. The interest aroused by this initiative led to the founding in 1968 of a journal called *Philosophy and Rhetoric*, edited jointly by Professor Johnstone and Prof. Carroll C. Arnold.

That so much attention should be focused on argumentation in philosophical thought cannot be

and “De la preuve en philosophie.” The latter was published in English in the *Hibbert Journal* 52 (1954): 354–59. The same theme was dealt with more fully in the articles “Self-evidence and Proof,” published in Perelman, *The Idea of Justice and the Problem of Argument*, pp. 109–24; and “Self-evidence in Metaphysics,” *International Philosophical Quarterly*, 1964, pp. 1–19. understood unless one appreciates the paramount importance of practical reason—that is, of finding “good reasons” to justify a decision. In 1954 I drew attention to the role of decision in the theory of knowledge,⁷² and Gidon Gottlieb further developed it, with particular attention to law, in his book *The Logic of Choice*.⁷³

Argumentation concerning decision, choice, and action in general is closely connected with the idea of justification, which also is an important element in the idea of justice. I have attempted to show that the traditional view is mistaken in claiming that justification is like demonstration but based on normative principles.⁷⁴ In fact, justification never directly concerns a proposition but looks instead to an attitude, a decision, or an action. “Justifying a proposition” actually consists in justifying one’s adherence to it, whether it is a statement capable of verification or an unverifiable norm. A question of justification ordinarily arises only in a situation that has given rise to criticism: no one is called upon to justify behavior that is beyond reproach. Such criticism, however, would be meaningless unless some accepted norm, end, or value had been infringed upon or violated. A decision or an action is criticized on the ground that it is immoral, illegal, unreasonable, or inefficient—that is, it fails to respect certain accepted rules or values. It always occurs within a social context; it is always “situated.” Criticism and justification are two forms of argumentation that call for the giving of reasons for or against, and it is these reasons that ultimately enable us to call the action or decision reasonable or unreasonable.

In 1967 a colloquium was held on the subject of demonstration, verification, justification, organized jointly by the Institut International de Philosophie and the Centre National de Re-

cherches de Logique.⁷⁵ At that meeting I emphasized the central role of justification in philosophy. Among other things, it enables us to understand the part played by the principle of induction in scientific methodology. Prof. A. J. Ayer claimed that the principle of induction cannot be based on probability theory,⁷⁶ yet it did seem possible to give good reasons for using induction as a heuristic principle.⁷⁷ But this is only a particular case of the use of justification in philosophy. It is essential wherever practical reason is involved.

In morals, for example, reasoning is neither deductive nor inductive, but justificative. Lucien Levy-Bruhl, in his famous book *La Morale et la science des moeurs* (1993), criticized the deductive character of much traditional moral philosophy and proposed the conception of the science of morals that made it a sociological discipline, inductive in character. Yet in morals absolute pre-eminence cannot be given either to principles—which would make morals a deductive discipline—or to the particular case—which would make it an inductive discipline. Instead, judgments regarding particulars are compared with principles, and preference is given to one or the other according to a decision that is reached by resorting to the techniques of justification and argumentation.⁷⁸

The idea of natural law is also misconceived when it is posed in ontological terms. Are there rules of natural law that can be known objectively? Or is positive law entirely arbitrary as embodying the lawmaker’s sovereign will? A satisfactory positive answer cannot be given to either question. We know that it is imperative for a lawmaker not to make unreasonable laws; yet we know too that there is no one single manner, objectively given, for making just and reasonable laws. Natural law is better considered as a body

of general principles or loci, consisting of ideas such as “the nature of things,” “the rule of law,” and of rules such as “No one is expected to perform impossibilities,” “Both sides should be heard”—all of which are capable of being applied in different ways. It is the task of the legislator or judge to decide which of the not unreasonable solutions should become a rule of positive law. Such a view, according to Michel Villey, corresponds to the idea of natural law found in Aristotle and St. Thomas Aquinas—what he calls the classical natural law.⁷⁹

For government to be considered legitimate, to have authority, there must be some way of justifying it. Without some reasonable argumentation for it, political power would be based solely on force. If it is to obtain respect, and not only obedience, and gain the citizen’s acceptance, it must have some justification other than force. All political philosophy, in fact, aims at criticizing and justifying claims to the legitimate exercise of power.⁸⁰

Argumentation establishes a link between political philosophy and law and shows that the legislator’s activity is not merely an expression of unenlightened will. From lack of such a theory, Hume and Kelsen were right in making a sharp distinction between what is and what ought to be and claiming that no inference can be made from one to the other. Things take a different outlook, however, when one recognizes the importance of argumentation in supplying good reasons for establishing and interpreting norms. Kelsen’s pure theory of the law then loses the main part of its logical justification.⁸¹ The same befalls Alf

Ross’s realist theory of the law, as has been shown in the remarkable essay by Prof. Stig Jørgensen.⁸²

The new rhetoric has also been used to throw new light upon the educator’s task, on the analysis of political propaganda, on the process of literary creation, as well as on the reasoning of the historian. But it is in the field of law that it has made the largest impact. Recent studies and colloquia devoted to the logic of law testify to the keen interest that the subject has aroused, especially among French-speaking jurists. The faculty of law at Brussels has just inaugurated a new series of lectures, entitled “Logic and Argumentation.”⁸³

Lawyers and philosophers working in collaboration have shown that the theory of argumentation can greatly illuminate the nature of legal reasoning. The judge is obliged by law to pass sentence on a case that comes before him. Thus Article 4 of the Code Napoleon declares: “The judge, who, under pretext of the silence, the obscurity, or the incompleteness of the law, refuses to pass sentence is liable to prosecution for the denial of justice.” He may not limit himself to declaring that there is an antinomy or *lacuna* in the legal system that he has to apply. He cannot, like the mathematician or formal logician, point

⁸²“Argumentation and Decision,” in *Festkrift Alf Ross*, ed. Mogens Blegvad, Max Sørensen, and Isi Foighel (Copenhagen: Juristforbundets Förlaget, 1969), pp. 261–84 (with numerous bibliographical notes). [Au.]

⁸³See Ch. Perelman, “Droit, logique et argumentation,” *Revue de l’Université de Bruxelles*, 1968, pp. 387–98. The works produced by the legal section of the Centre National de Recherches de Logique have undeniably brought a remarkable contribution to a renewed outlook of the whole subject (see A. Bayart, “le Centre National Belge de Recherches de Logique,” *Archives de Philosophie du Droit*, 1968, pp. 171–80; and Paul Foriers, “L’état des recherches de logique juridique en Belgique,” in *Etudes de Logique Juridique* 2, pp. 23–42). Besides numerous articles written by members and of which several appeared in the *Journal des Tribunaux*, Brussels, the Center has published, since 1961, three large volumes, respectively entitled *Le Fait et le droit* (Brussels: Bruylant, 1961), *Les Antinomies en droit* (Brussels: Bruylant, 1965), and *Le Problème des lacunes en droit* (Brussels: Bruylant, 1968). [Since then the following have been published: *La Règle de droit* (Brussels: Bruylant, 1971), *Les Présomptions et les fictions en droit* (Brussels: Bruylant, 1974), and *La Motivation des décisions de justice* (Brussels: Bruylant, 1978).] [Au.]

[Au.]

⁸⁰Ch. Perelman, “Autorité, idéologie et violence,” in *Annales de l’Institut de Philosophie de l’Université Libre de Bruxelles* (Brussels: Editions de l’Institut de Sociologie, 1969), pp. 9–20. [Au.]

⁸¹Ch. Perelman, “La théorie pure du droit et l’argumentation,” in *Law, State, and International Legal Order: Essays in Honor of Huns Kelsen*, ed. Salo Engel and Rudolf A. Metall (Knoxville: University of Tennessee Press, 1964), pp. 225–32. [Au.]

out that the system is incoherent or incomplete. He must himself solve the antinomy or fill in the lacuna. Ordinary logic by itself would suffice to show the existence of either an antinomy or a lacuna, but it cannot get him out of the resulting dilemma: only legal logic based on argumentation can accomplish that.

To conclude this general, but far from exhaustive, survey, it is necessary to stress again the import that the new rhetoric is having for philosophy and the study of its history. Twenty years ago, for example, the *Topics* and *Rhetoric* of Aristotle were completely ignored by philosophers, whereas today they are receiving much attention.⁸⁴ Renewed interest in this hitherto ignored side of Aristotle has thrown new light upon his entire metaphysics⁸⁵ and attached new importance to his notion of *phronesis* or prudence.⁸⁶ Renewed attention is being given to the classical rhetoric of Cicero.⁸⁷ and we are now gaining a better understanding of the historical development of rhetoric and logic during the Middle Ages and the Renaissance.⁸⁸

⁸⁴We will mention, in this respect, W. A. de Pater's thesis *Les Topiques d'Aristote et la dialectique platonicienne*, *Etudes Thomistiques*, vol. 10 (Fribourg: Editions St. Paul, 1965), as well as the fact that the 3rd Symposium Aristotelicum of Oxford has been entirely devoted to the Topics (G. E. L. Owen, ed., *Aristotle on Dialectic*, Oxford: Clarendon Press, 1968). [Au.]

⁸⁶Pierre Aubenque, *La Prudence chez Aristote* (Paris: Presses universitaires de France, 1963). [Au.]

⁸⁷Alain Michel published, in 1960, an essay on the philosophical foundations of the art of persuasion entitled *Rhétorique et philosophie chez Cicéron* (Paris: Presses universitaires de France), while Renato Barilli devoted an important, lively chapter to Cicero in his *Poetica e retorica*. . . [Au.]

⁸⁸We have already mentioned Alessandro Giuliani, whose works cover the period stretching from Aristotle to the Scottish philosophy, without neglecting medieval logic, and shed new light on the history of legal logic. Mention must also be made of G. Chevrier's suggestive study "Sur l'art de l'argumentation chez quelques romanistes médiévaux au XIIIe et au XIIIe siècle," *Archives de Philosophie du Droit*, 1966, pp. 115-48. Finally let us recall the well-known works of Eugenio Garin and of his disciples, which have drawn attention again to the Italian philosophy of the Renaissance and to fifteenth and sixteenth century humanism, in which discussions concerning the relations between philosophy, dialectic, and

It is possible too that the new rhetoric may provoke a reconsideration of the Hegelian conception of dialectic with its thesis and antithesis culminating in a synthesis, which might be compared to a reasonable judge who retains the valid part from antilogies. This new rhetorical perspective may also help us to a better understanding of the American pragmatists, especially of C. S. Peirce, who, in his approximation to Hegel's objective logic, aimed at developing a *rhetorica speculativa*.⁸⁹

For these inquiries to be pursued, however, the theory of argumentation must awaken the interest of philosophers and not merely that of lawyers and members of the speech profession. In a synoptic study of the subject, Professor Johnstone deplores the fact that the theory of argumentation is still little known in the United States, although it is now well known in Europe.⁹⁰ Attention has been focused on the problems raised by the use of practical reason, and the field has been explored and mapped by theoreticians and practitioners of the law. There is much that philosophers could learn from this work if they would cease confining their methodological inquiries to what can be accomplished by formal logic and the analysis of language.⁹¹ A more dynamic approach to the problems of language would also reveal the extent to which language, far from being only an instrument for communication, is also a tool for action and is well adapted

rhetoric occupied a central place: Garin, *Medioevo e Rinascimento* (Bari, Italy: Laterza 1961); and Garin, Paolo Rossi, and Cesare Vasoli, eds., *Testi umanistici sulla retorica* (Rome: Fratelli Bocca, 1953). Besides Garin's own writings, we must mention those of Paolo Rossi: "La celebrazione della retorica e la polemica antimetafisica nel De principiis di Mario Nizolio," in *La crisi dell'uso dogmatico delle ragioni*, ed. Antonio Banfi (Milan, 1953), pp. 99-221; and Cesare Vasoli, *La dialettica e la retorica dell'umanesimo* (Milan: Feltrinelli, 1968). [Au.]

Stephen Toulmin

b. 1922

Stephen Edelson Toulmin was born in London and was educated at Cambridge University, where he took his undergraduate degree in mathematics and science in 1942. He served in several capacities during World War II, first as a scientific officer in radar research and development and later in technical intelligence work. After the war, he earned his master's degree in 1946 and his Ph.D. in 1948, both in philosophy at Cambridge. He has held a variety of academic posts, at Oxford University, New York University, Brandeis University, Michigan State University, and the University of Chicago. After more than twenty years at Chicago, in 1995 he moved to the University of Southern California. He has published voluminously in the history and philosophy of science and has won a number of academic honors. Though his work on the structure of argument has had tremendous influence as a theory of rhetoric, Toulmin has betrayed little interest in the field, directing his work almost exclusively to philosophers.

In *The Uses of Argument* (1958), Toulmin notes that Aristotle conceived of logic as the study of how claims and conclusions of all kinds are proved or justified. But, laments Toulmin, logic became instead a highly abstract and formalized system intended to establish absolute, rational standards for the truth of propositions. Speaking as a philosopher, Toulmin is distressed by the isolation of logic, by its virtual irrelevance to the problems of knowledge in most academic disciplines, and by its separation from the practical reasoning that is essential in law, ethics, and daily life. Chaim Perelman (p. 1372) regrets the Cartesian implication that logic is the only ground of truth and that probabilistic reasoning is therefore essentially false. Toulmin, taking a different perspective, is concerned that logic itself is a solipsistic activity, cut off from the real work of human understanding.

To remedy this situation, Toulmin proposes a formal study of practical reasoning, a "logic" of arguments rather than of propositions. In *The Uses of Argument* (excerpted here), he sets forth a model of the structure of arguments that is remarkable for its clarity, flexibility, and reasonableness. His purpose in constructing this model is to demonstrate, first, that most arguments have a more complex structure than the syllogism and, second, that the syllogism misrepresents the very nature of argument by its arbitrary restriction to a three-part structure.

In Toulmin's scheme, a *claim* is based on *data*. Harry (to take Toulmin's example) is, we claim, a British subject. We base this claim on data—in this instance, that Harry was born in Bermuda. To establish the connection between claim and data, we may cite a *warrant*. Thus Harry is a British citizen (claim) by virtue of being born in Bermuda (data), because Bermudians are legally British (warrant). Often, a warrant needs further support, or *backing*. In Toulmin's example, we would cite British nationality statutes regarding British colonies to back up the warrant. The claim may have a *qualifier*, such as *surely*, *likely*, or *perhaps*; that is, it is likely that Harry is a British subject for the reasons we have given. Finally, there

may be conditions, indicated in the *rebuttal*, that would suspend the claim. Thus Harry was born in Bermuda (data), and so presumably (qualifier) he is a British subject (claim), because a person born in Bermuda will generally be a British subject (warrant), as we know from British nationality statutes regarding British colonies (backing), unless, of course, neither of Harry's parents were British subjects or Harry has become a naturalized citizen of another country (rebuttal).

Toulmin states that his argument model holds across fields (for example, academic disciplines) because the "force" of qualifying terms such as *probably* is the same in all fields, even though the specific criteria for determining what counts as a qualification (that is, what *probably* means) change from field to field. Probability, says Toulmin, has the same rational force in an argument whether it is calculated mathematically, meteorologically, or in any other way. Similarly, all arguments depend on warrants, though the nature of the warrant in a given argument depends on the field. Toulmin concludes that no field is intrinsically more rational or irrational than another. In every field, including formal logic itself, reasons are based on stipulated criteria. Toulmin chides traditional logicians for standing aloof from practical argument and further points out that a number of logical problems might be solved by carefully revising the syllogism along the lines he suggests here.

Like Perelman, Toulmin regrets the division of reasoning into rational and irrational, logical and rhetorical. Both writers try to discover the rationality of arguments about value in law, aesthetics, morals, and politics; Toulmin includes the sciences as well. For Toulmin as for Perelman, knowledge is the product of argument, which therefore deserves the attention of philosophers.

In *Human Understanding* (1972), Toulmin has two aims. First, he challenges Thomas Kuhn's thesis in *The Structure of Scientific Revolutions* (1970) that scientific knowledge advances not by accumulation but by revolutions in world view. Toulmin argues that evolution, not revolution, is the proper model for conceptual change in a discipline. Second, he analyzes and rejects both the absolutist and the relativist standards of rationality that have, he claims, dominated philosophy. Whereas absolutism errs in assuming that there are eternal standards of truth that must be the only grounds of knowledge, relativism errs in assuming that there are no standards at all. Toulmin seeks a middle ground, one where the evolution of concepts might be studied and the concepts themselves judged through an analysis of the arguments that constitute them. Seen as an extension of the concerns raised in *The Uses of Argument*, Toulmin's analysis raises the status of argument in defining rationality, though he studiously avoids using the word *argument*, even where it seems clearly called for. Indeed, Toulmin shows little interest in rhetoric as a subject. In his first book, *An Examination of the Place of Reason in Ethics* (1948), he uses the term *rhetoric* to refer to emotional statements about ethical principles. In place of the terms *rhetoric* and *argument*, he clearly prefers the phrase *practical reasoning*.

Toulmin's many books and articles concern the history, philosophy, and sociology of science, with the only exceptions being his textbook *Introduction to*

Reasoning (1979), based on the argument model in *Uses of Argument*, and the published lecture “Logic and the Criticism of Arguments” (1982; excerpted here). In that essay, Toulmin acknowledges the help of American speech communication scholars in showing him the connection between his work and rhetoric. Here, too, he abandons the hope that formal logic will wither away, but he calls for a rapprochement between logic and argument in pursuit of the study of practical reasoning.

Selected Bibliography

The Uses of Argument was published by Cambridge University Press in 1958 and was reprinted in 1964. “Logic and the Criticism of Arguments” was delivered as a lecture at the University of Michigan in 1982 and was printed in J. Golden et al., *The Rhetoric of Western Thought* (4th ed., 1983).

Other works by Toulmin include *An Examination of the Place of Reason in Ethics* (1948), *Human Understanding, Volume 1: The Collective Use and Understanding of Concepts* (1972), and *An Introduction to Reasoning* (1978), with Richard Rieke and Allan Janik. In *Knowing and Acting: An Invitation to Philosophy* (1976), Toulmin recasts his discussion of argument into an analysis of beliefs, reasons, inferences, and the role of philosophy in human affairs. *The Abuse of Casuistry: A History of Moral Reasoning* (1988), coauthored with Albert R. Jonsen, rehabilitates “case ethics” as a valuable form of practical reasoning or phronesis, tracing its history from Cicero to the Jesuits to Pascal and applying it to some modern instances.

The chapter on Toulmin in *Contemporary Perspectives on Rhetoric*, by S. Foss, K. Foss, and R. Trapp (1985), summarizes the argument scheme and the theory of the evolution of concepts. It includes an extensive bibliography of works by and about Toulmin. Wayne Brockriede and Douglas Ehninger compare Toulmin’s argument scheme with traditional models in “Toulmin on Argument: An Interpretation and Application” (*Quarterly Journal of Speech* 46 [February 1960]: 44–53). Their analysis is expanded in their textbook *Decision by Debate* (2nd ed., 1977). Charles Kneupper’s “Teaching Argument: An Introduction to the Toulmin Model” (*College Composition and Communication* 29 [October 1978]: 237–41) articulates the usefulness of Toulmin’s work for teaching argumentative writing to undergraduates; for some comments on the limitations of Toulmin’s model thus used, see Christopher Schroeder’s “Knowledge and Power, Logic and Rhetoric, and Other Reflections in the Toulmin Mirror: A Critical Consideration of Stephen Toulmin’s Contributions to Composition” (*Journal of Advanced Composition* 17 [1997]: 95–107). *The Toulmin Method: Exploration and Controversy* (ed. William E. Tanner and Betty Kay Seibt, 1991) collects essays presented at a 1988 symposium on Toulmin’s work at Texas Women’s University; most focus on his uses in literary study and composition instruction, and a bibliography is included. An interview of Toulmin by Gary A. Olson, in which Olson questions Toulmin about the implications of his work for rhetoric, appeared originally in the *Journal of Advanced Composition* and is reprinted in *Philosophy, Rhetoric, Literary Criticism: (Inter)views*, ed. Olson (1994).

The notion of fields of argument and the question of the field-dependence or field-invariance of the elements of argument sparked the growth of an entire subfield of rhetoric. The range of issues is suggested by Charles Arthur Willard’s *Argumentation and the Social Grounds of Knowledge* (1983) and by the collections of papers published by the National Communication Association in the *Proceedings of the Summer Conference on Argument*.

The *Proceedings*, first published in 1980, have from 1981 usually appeared in alternate years. In addition, the *Journal of the American Forensic Association* has published a large number of articles on argument fields since the 1960s, including a special issue (spring 1982).

From *The Uses of Argument*

For the sake of brevity, it will be convenient to introduce a technical term: let us accordingly talk of a *field* of arguments. Two arguments will be said to belong to the same field when the data and conclusions in each of the two arguments are, respectively, of the same logical type: they will be said to come from different fields when the backing or the conclusions in each of the two arguments are not of the same logical type. The proofs in Euclid's *Elements*, for example, belong to one field, the calculations performed in preparing an issue of the *Nautical Almanac* belong to another. The argument, "Harry's hair is not black, since I know for a fact that it is red," belongs to a third and rather special field—though one might perhaps question whether it really was an argument at all or, rather, a counter-assertion. The argument, "Petersen is a Swede, so he is presumably not a Roman Catholic," belongs to a fourth field; the argument, "This phenomenon cannot be wholly explained on my theory, since the deviations between your observations and my predictions are statistically significant," belongs to yet another; the argument, "This creature is a whale, so it is (taxonomically) a mammal," belongs to a sixth; and the argument, "Defendant was driving at 45 m.p.h. in a built-up area, so he has committed an offence against the Road Traffic Acts," comes from a seventh field, different yet again. The problems to be discussed in these inquiries are those that face us when we try to come to terms with the differences between the various fields of argument here illustrated.

The first problem we have set ourselves can be re-stated in the question, "What things about

the form and merits of our arguments are *field-invariant* and what things about them are *field-dependent*?" What things about the modes in which we assess arguments, the standards by reference to which we assess them and the manner in which we qualify our conclusions about them, are the same regardless of field (field-invariant), and which of them vary as we move from arguments in one field to arguments in another (field-dependent)? How far, for instance, can one compare the standards of argument relevant in a court of law with those relevant when judging a paper in the *Proceedings of the Royal Society*, or those relevant to a mathematical proof or a prediction about the composition of a tennis team?

It should perhaps be said at once that the question is not, how the standards we employ in criticising arguments in different fields compare in stringency, but rather how far there are common standards applicable in the criticism of arguments taken from different fields. Indeed, whether questions about comparative stringency can even be asked about arguments from different fields may be worth questioning. Within a field of arguments, questions about comparative stringency and looseness may certainly arise: we may, for instance, compare the standards of rigour recognised by pure mathematicians at different stages in the history of the subject, by Newton, Euler, Gauss or Weierstrass. How far, on the other hand, it makes sense to compare the mathematical rigour of Gauss or Weierstrass with the judicial rigour of Lord Chief Justice Goddard in another matter, and one whose consideration we must postpone. . . .

FORCE AND CRITERIA

At this point a distinction can be made, which will prove later of great importance. The meaning of a modal term, such as “cannot,” has two aspects: these can be referred to as the *force* of the term and the *criteria* for its use. By the “force” of a modal term I mean the practical implications of its use: the force of the term “cannot” includes, for instance, the implied general injunction that something-or-other has to be ruled out in this-or-that way and for such-a-reason. This force can be contrasted with the criteria, standards, grounds and reasons, by reference to which we decide in any context that the use of a particular modal term is appropriate. We are entitled to say that some possibility has to be ruled out only if we can produce grounds or reasons to justify this claim, and under the term “criteria” can be included the many sorts of things we have then to produce. We say, for instance, that something is physically, mathematically or physiologically impossible, that it is terminologically or linguistically out of order, or else morally or judicially improper: it is to be ruled out, accordingly, *qua* something or other. And when we start explaining “*qua* what” any particular thing is to be ruled out, we show what criteria we are appealing to in this particular situation.

The importance of the distinction between force and criteria will become fully clear only as we go along. It can be hinted at, perhaps, if we look for a moment at the notion of mathematical impossibility. Many theorems in geometry and pure mathematics state impossibilities of one sort or another: they tell us, e.g., that it is impossible to construct a regular heptagon using ruler and compass, and that you cannot find a rational square root of 2. Such a construction or such a square root is, we are told, a mathematical impossibility.

Now what is involved in saying this? What precisely is signified by this phrase “mathematical impossibility?” It is easy to give too simple an answer, and we must not be in a hurry. The natural thing to look at first is the procedure mathematicians have to go through in order to prove a theorem of this sort—to show, for instance, that there cannot be a rational square root

of 2. When we inquire what they establish in such a proof, we find that one thing is of supreme importance. The notion of “a rational square root of 2” leads us into contradictions: from the assumption that a number x is rational and that its square is equal to 2, we can by brief chains of argument reach two mutually contradictory conclusions. This is the reason, the conclusive reason, why mathematicians are led to consider the idea that any actual number x could have both these properties an impossible one.

Having remarked on this, we may be tempted to conclude at once that we have the answer to our question—namely, that the phrase “mathematically impossible” just means “self-contradictory, or leading to self-contradictions.” But this is too simple: to understand the notion properly, one must pay attention, not only to what mathematicians do before reaching the conclusion that something is impossible, but also to what they do after reaching this conclusion and *in consequence* of having reached it. The existence of a mathematical impossibility is not only something which requires proving, it is also something which has implications. To show the presence of the contradictions may be all that is required by a mathematician if he is to be justified in saying that the notion x is a mathematical impossibility—it may, that is, be a conclusive demonstration of its impossibility—but the force of calling it impossible involves more than simply labelling it as “leading to contradictions.” The notion x involves one in contradictions and is *therefore* or *accordingly* an impossibility: it is impossible *on account of* the contradictions, impossible *qua* leading one into contradictions. If “mathematically impossible” meant precisely the same as “contradictory,” the phrase “contradictory and so mathematically impossible” would be tautologous—“contradictory and so contradictory.” But this will not do: to say only, “This supposition leads one into contradictions or, to use another equivalent phrase, is impossible,” is to rob the idea of mathematical impossibility of a crucial part of its force, for it fails to draw the proper moral—it leaves the supposition unruled out.

Even in mathematics, therefore, one can distinguish the criterion or standard by reference to which the rational square root of 2 is dismissed

as impossible from the force of the conclusion that it *is* impossible. To state the presence of the contradictions is not thereby to dismiss the notion as impossible, though from the mathematicians' point of view this may be absolutely all we require in order to *justify* its dismissal. Once again, the force of calling the number *x* an "impossibility" is to dismiss it from consideration and, since we are to dismiss it from consideration from the mathematical standpoint, the grounds for doing so have to be of a kind appropriate to mathematics, e.g., the fact that operating with such a conception leads one into contradictions. Contradictoriness can be, mathematically speaking, a *criterion* of impossibility: the implied *force* or *moral* of such an impossibility is that the notion can have no place in subsequent mathematical arguments.

To insist on this distinction in the case of mathematical impossibility may seem to be mere hair-splitting. Mathematically, the consequences of the distinction may be negligible: philosophically, however, they are considerable, especially when one goes on (as we shall do in a later essay) to make the parallel distinction in the case of "logical impossibility." For this distinction between "force" and "criteria" as applied to modal terms is a near-relation to distinctions which have recently been made in other fields with great philosophical profit.

Let us look at this parallel for a moment. Philosophers studying the general use of evaluative terms have argued as follows:

A word like "good" can be used equally of an apple or an agent or an action, of a volley in tennis, a vacuum cleaner or a Van Gogh: in each case, to call the fruit or the person or the stroke or the painting "good" is to commend it, and to hold it out as being in some respect a praiseworthy, admirable or efficient member of its class—the word "good" is accordingly defined most accurately as "the most general adjective of commendation." But because the word is so general, the things we appeal to in order to justify commending different kinds of things as "good" will themselves be very different. A morally-good action, a domestically-good vacuum cleaner and a pomiculturally-good apple all come up to standard, but the standards they all come up to will be different—indeed, incomparable. So one can distinguish between the commendatory force of labelling a thing as "good," and

the criteria by reference to which we justify a commendation.

Our own discussion has led us to a position which is, in effect, only a special case of this more general one. For the pattern is the same whether the things we are grading or assessing or criticising are, on the one hand, apples or actions or paintings or, on the other, arguments and conclusions. In either case we are concerned with judging or evaluating, and distinctions which have proved fruitful in ethics and aesthetics will do so again when applied to the criticism of arguments. With "impossible" as with "good": the use of the term has a characteristic force, of commending in one case, of rejecting in the other; to commend an apple or an action is one thing, to give your reasons for commending it is another; to reject a suggestion as untenable is one thing, to give your reasons for rejecting it is another, however cogent and relevant these reasons may be.

What is the virtue of such distinctions? If we ignore them in ethics, a number of things may happen. We may, for instance, be tempted to think that the standards which a thing has to reach in order to deserve commendation are all we need point to in explaining what is meant by calling it "good." To call a vacuum cleaner good (we may conclude) is just to say that its efficiency, in terms of cubic-feet-of-dust-sucked-in per kilowatt-of-electricity-consumed and the like, is well above the average for machines of this type. (This is like thinking that the phrase "mathematically impossible" just *means* "involving self-contradictions" and no more.) Such a view, however, leads to unnecessary paradoxes. For it may now seem that the terms of commendation and condemnation in which we so frequently express our judgements of value have as many meanings as there are different sorts of things to evaluate, and this is a very unwelcome suggestion. As a counter to this, it has to be recognised that the *force* of commending something as "good" or condemning it as "bad" remains the same, whatever sort of thing it may be, even though the criteria for judging or assessing the merits of different kinds are very variable.

But this is not the only way in which we may be led astray, or indeed the most serious way.

Having recognised that, in the meaning of evaluative terms, a multiplicity of criteria are linked together by a common force, and that to evaluate something normally involves both grading it in an order of commendability and also referring to the criteria appropriate to things of its kind, we may nevertheless wish to take a further step. For, being preoccupied with some particular type of evaluation, we may come to feel that one particular set of criteria has a unique importance, and accordingly be tempted to pick on the criteria proper for the assessment of things of some one sort as the proper or unique standards of merit for all sorts of thing, so dismissing all other criteria either as misconceived or as unimportant. One may suspect that something of this kind happened to the Utilitarians, who were so wholehearted and single-minded in their concern for questions of legislation and social action that they came to feel that there was only one problem when evaluating things of all kinds: all one had to do was determine the *consequences* which could be associated with or expected from things of any kind.

The dangers of such single-mindedness become apparent when philosophers of this kind begin to generalise: preoccupied as they are with some one type of valuation, they blind themselves to the special problems involved in other sorts—to all the difficulties of aesthetic judgement, and to many of the issues facing one in the course of one's moral life. There are many sorts of assessment and grading besides the appraisal of legislative programmes and social reforms, and standards which may be wholly appropriate when judging the worthiness of a Bill before Parliament can be misleading or out-of-place when we are concerned with a painting, an apple or even our individual moral quandaries.

The same dangers can arise over arguments. The use of a modal term like "cannot" in connection with arguments from quite different fields involves, as we have seen, a certain common force, like the common force recognisable in a wide range of uses of the word "good." Yet the criteria to be invoked to justify ruling out conclusions of different types are very different. Here, as in ethics, two conclusions are tempting, both of which must be avoided. On the one hand, it will be wrong to say, merely on account of this

variation in criteria, that the word "cannot" means quite different things when it figures in different sorts of conclusions: not for nothing are physical, linguistic, moral and conceptual "cannots" linked by the use of a common term. It will also be a mistake, and a more serious one, to pick on some one criterion of impossibility and to elevate it into a position of unique philosophical importance. Yet in the history of recent philosophy both of these conclusions have been influential—the latter, I shall argue, disastrously so.

Before returning to our main question, there is one further caution. We have already, for the purposes of this present investigation, renounced the use of the word "logical"; it will be as well to renounce now the use of the word "meaning" and its associates also. For the distinction which we have here drawn between force and criteria is one which cuts across the common use of the term "meaning," and we need, for our present purposes, to operate with finer distinctions than the term "meaning" ordinarily allows one to draw. It is not enough to speak about the meaning or use of such terms as "good" or "impossible" as though it were an indivisible unit: the use of such terms has a number of distinguishable *aspects*, for two of which we have introduced the words "force" and "criteria." Until we make this distinction, the false trails of which I have spoken will remain tempting, for, when we are asked whether the differences between all the varied uses of the words "good," "cannot" and "possible" do or do not amount to differences in meaning, we shall inevitably find ourselves pulled in opposite directions. If we say that there *are* differences in meaning, we seem committed to making as many different entries in our dictionaries as there are sorts of possibility or impossibility or merit—indeed, as many entries as there are different kinds of thing to be possible or impossible or good—a ridiculous conclusion. On the other hand, to say that there is *no* difference in meaning between these varied uses suggests that we can expect to find our standards of goodness or possibility or impossibility proving field-invariant, and this conclusion is no better. If, however, we make the further distinction between the force of assessments and the criteria or standards applicable in the course of them, we can avoid giving any crude "yes or no" answer to the coarse-

grained question, “Are the meanings the same or different?” As we shift from one use to another, the criteria may change while the force remains the same: whether or not we decide to *call* this a change of meaning will be a matter of comparative indifference. . . .

THE PATTERN OF AN ARGUMENT: DATA AND WARRANTS

“What, then, is involved in establishing conclusions by the production of arguments?” Can we, by considering this question in a general form, build up from scratch a pattern of analysis which will do justice to all the distinctions which proper procedure forces upon us? That is the problem facing us.

Let it be supposed that we make an assertion, and commit ourselves thereby to the claim which any assertion necessarily involves. If this claim is challenged, we must be able to establish it—that is, make it good, and show that it was justifiable. How is this to be done? Unless the assertion was made quite wildly and irresponsibly, we shall normally have some facts to which we can point in its support: if the claim is challenged, it is up to us to appeal to these facts, and present them as the foundation upon which our claim is based. Of course we may not get the challenger even to agree about the correctness of these facts, and in that case we have to clear his objection out of the way by preliminary argument: only when this prior issue or “lemma,” as geometers would call it, has been dealt with, are we in a position to return to the original argument. But this complication we need only mention: supposing the lemma to have been disposed of, our question is how to set the original argument out most fully and explicitly. “Harry’s hair is not black,” we assert. What have we got to go on? we are asked. Our personal knowledge that it is in fact red: that is our datum, the ground which we produce as support for the original assertion. Petersen, we may say, will not be a Roman Catholic: why?: we base our claim on the knowledge that he is a Swede, which makes it very unlikely that he will be a Roman Catholic. Wilkinson, asserts the prosecutor in Court, has committed an offence against the Road Traffic Acts: in support of this claim, two policemen are prepared to testify that

they timed him driving at 45 m.p.h. in a built-up area. In each case, an original assertion is supported by producing other facts bearing on it.

We already have, therefore, one distinction to start with: between the *claim* or conclusion whose merits we are seeking to establish (C) and the facts we appeal to as a foundation for the claim—what I shall refer to as our *data* (D). If our challenger’s question is, “What have you got to go on?” producing the data or information on which the claim is based may serve to answer him; but this is only one of the ways in which our conclusion may be challenged. Even after we have produced our data, we may find ourselves being asked further questions of another kind. We may now be required not to add more factual information to that which we have already provided, but rather to indicate the bearing on our conclusion of the data already produced. Colloquially, the question may now be, not “What have you got to go on?” but “How do you get there?” To present a particular set of data as the basis for some specified conclusion commits us to a certain *step*; and the question is now one about the nature and justification of this step.

Supposing we encounter this fresh challenge, we must bring forward not further data, for about these the same query may immediately be raised again, but propositions of a rather different kind: rules, principles, inference-licences or what you will, instead of additional items of information. Our task is no longer to strengthen the ground on which our argument is constructed, but is rather to show that, taking these data as a starting point, the step to the original claim or conclusion is an appropriate and legitimate one. At this point, therefore, what are needed are general, hypothetical statements, which can act as bridges, and authorise the sort of step to which our particular argument commits us. These may normally be written very briefly (in form “If D, then C”); but, for candour’s sake, they can profitably be expanded, and made more explicit: “Data such as D entitle one to draw conclusions, or make claims, such as C,” or alternatively “Given data D, one may take it that C.”

Propositions of this kind I shall call *warrants* (W), to distinguish them from both conclusions and data. (These “warrants,” it will be observed, correspond to the practical standards or canons of

argument referred to in our earlier essays.) To pursue our previous examples: the knowledge that Harry's hair is red entitles us to set aside any suggestion that it is black, on account of the warrant, "If anything is red, it will not also be black." (The very triviality of this warrant is connected with the fact that we are concerned here as much with a counter-assertion as with an argument.) The fact that Petersen is a Swede is directly relevant to the question of his religious denomination for, as we should probably put it, "A Swede can be taken almost certainly not to be a Roman Catholic." (The step involved here is now trivial, so the warrant is not self-authenticating.) Likewise in the third case: our warrant will not be some such statement as that "A man who is proved to have driven at more than 30 m.p.h. in a built-up area can be found to have committed an offence against the Road Traffic Acts."

The question will at once be asked, how absolute is this distinction between data, on the one hand, and warrants, on the other. Will it always be clear whether a man who challenges an assertion is calling for the production of his adversary's data, or for the warrants authorising his steps? Can one, in other words, draw any sharp distinction between the force of the two questions, "What have you got to go on?" and "How do you get there?" By grammatical tests alone, the distinction may appear far from absolute, and the same English sentence may serve a double function: it may be uttered, that is, in one situation to convey a piece of information, in another to authorise a step in an argument, and even perhaps in some contexts to do both these things at once. (All these possibilities will be illustrated before too long.) For the moment, the important thing is not to be too cut-and-dried in our treatment of the subject, nor to commit ourselves in advance to a rigid terminology. At any rate we shall find it possible in *some* situations to distinguish clearly two different logical functions; and the nature of this distinction is hinted at if one contrasts the two sentences, "Whenever A, one *has found* that B" and "Whenever A, one *may take it* that B."

We now have the terms we need to compose the first skeleton of a pattern for analysing arguments. We may symbolise the relation between the data and the claim in support of which they

are produced by an arrow, and indicate the authority for taking the step from one to the other by writing the warrant immediately below the arrow:

Or, to give an example:

As this pattern makes clear, the explicit appeal in this argument goes directly back from the claim to the data relied on as foundation: the warrant is, in a sense, incidental and explanatory, its task being simply to register explicitly the legitimacy of the step involved and to refer it back to the larger class of steps whose legitimacy is being presupposed.

This is one of the reasons for distinguishing between data and warrants: data are appealed to explicitly, warrants implicitly. In addition, one may remark that warrants are general, certifying the soundness of *all* arguments of the appropriate type, and have accordingly to be established in quite a different way from the facts we produce as data. This distinction, between data and warrants, is similar to the distinction drawn in the law-courts between questions of fact and questions of law, and the legal distinction is indeed a special case of the more general one—we may argue, for instance, that a man whom we know to have been born in Bermuda is presumably a British subject, simply because the relevant laws give us a warrant to draw this conclusion.

One more general point in passing: unless, in any particular field of argument, we are prepared to work with warrants of *some* kind, it will become impossible in that field to subject arguments to rational assessment. The data we cite if a claim is challenged depend on the warrants we are prepared to operate with in that field, and the warrants to which we commit ourselves are im-

implicit in the particular steps from data to claims we are prepared to take and to admit. But supposing a man rejects all warrants whatever authorising (say) steps from data about the present and past to conclusions about the future, then for him rational prediction will become impossible; and many philosophers have in fact denied the possibility of rational prediction just because they thought they could discredit equally the claims of all past-to-future warrants.

The skeleton of a pattern which we have obtained so far is only a beginning. Further questions may now arise, to which we must pay attention. Warrants are of different kinds, and may confer different degrees of force on the conclusions they justify. Some warrants authorise us to accept a claim unequivocally, given the appropriate data—these warrants entitle us in suitable cases to qualify our conclusion with the adverb “necessarily”; others authorise us to make the step from data to conclusion either tentatively, or else subject to conditions, exceptions, or qualifications—in these cases other modal qualifiers, such as “probably” and “presumably,” are in place. It may not be sufficient, therefore, simply to specify our data, warrant and claim: we may need to add some explicit reference to the degree of force which our data confer on our claim in virtue of our warrant. In a word, we may have to put in a *qualifier*. Again, it is often necessary in the law-courts, not just to appeal to a given statute or common-law doctrine, but to discuss explicitly the extent to which this particular law fits the case under consideration, whether it must inevitably be applied in this particular case, or whether special facts may make the case an exception to the rule or one in which the law can be applied only subject to certain qualifications.

If we are to take account of these features of

i.e.,

our argument also, our pattern will become more complex. Modal qualifiers (Q) and conditions of exception or rebuttal (R) are distinct both from data and from warrants, and need to be given separate places in our layout. Just as a warrant (W) is itself neither a datum (D) nor a claim (C), since it implies in itself something about both D and C—namely, that the step from the one to the other is legitimate; so, in turn, Q and R are themselves distinct from W, since they comment implicitly on the bearing of W on this step—qualifiers (Q) indicating the strength conferred by the warrant on this step, conditions of rebuttal (R) indicating circumstances in which the general authority of the warrant would have to be set aside. To mark these further distinctions, we may write the qualifier (Q) immediately beside the conclusion which it qualifies (C), and the exceptional conditions which might be capable of defeating or rebutting the warranted conclusion (R) immediately below the qualifier.

To illustrate: our claim that Harry is a British subject may normally be defended by appeal to the information that he was born in Bermuda, for this datum lends support to our conclusion on account of the warrants implicit in the British Nationality Acts; but the argument is not by itself conclusive in the absence of assurances about his parentage and about his not having changed his nationality since birth. What our information does do is to establish that the conclusion holds good “presumably,” and subject to the appropriate provisos. The argument now assumes the form:

We must remark, in addition, on two further distinctions. The first is that between a statement of a warrant, and statements about its applicability—between “A man born in Bermuda will be British,” and “This presumption holds good provided his parents were not both aliens, etc.” The distinction is relevant not only to the law of the land, but also for an understanding of scientific laws or “laws of nature”: it is important, indeed, in all cases where the application of a law may be subject to exceptions, or where a warrant can be supported by pointing to a general correlation only, and not to an absolutely invariable one. We can distinguish also two purposes which may be served by the production of additional facts: these can serve as further data, or they can be cited to confirm or rebut the applicability of a warrant. Thus, the fact that Harry was born in Bermuda and the fact that his parents were not aliens are both of them directly relevant to the question of his present nationality; but they are relevant in different ways. The one fact is a datum, which by itself establishes a presumption of British nationality; the other fact, by setting aside one possible rebuttal, tends to confirm the presumption thereby created.

One particular problem about applicability we shall have to discuss more fully later: when we set out a piece of applied mathematics, in which some system of mathematical relations is used to throw light on a question of (say) physics, the correctness of the calculations will be one thing, their appropriateness to the problem in hand may be quite another. So the question “Is this calculation mathematically impeccable?” may be a very different one from the question “Is this the relevant calculation?” Here too, the applicability of a particular warrant is one question: the result we shall get from applying the warrant is another matter, and in asking about the *correctness* of the result we may have to inquire into both these things independently.

THE PATTERN OF AN ARGUMENT: BACKING OUR WARRANTS

One last distinction, which we have already touched on in passing, must be discussed at some

length. In addition to the question whether or on what conditions a warrant is applicable in a *particular* case, we may be asked why *in general* this warrant should be accepted as having authority. In defending a claim, that is, we may produce our data, our warrant, and the relevant qualifications and conditions, and yet find that we have still not satisfied our challenger; for he may be dubious not only about this particular argument but about the more general question whether the warrant (W) is acceptable at all. Presuming the general acceptability of this warrant (he may allow) our argument would no doubt be impeccable—if D-ish facts really do suffice as backing for C-ish claims, all well and good. But does not that warrant in its turn rest on something else? Challenging a particular claim may in this way lead on to challenging, more generally, the legitimacy of a whole range of arguments. “You presume that a man born in Bermuda can be taken to be a British subject,” he may say, “but why do you think that?” Standing behind our warrants, as this example reminds us, there will normally be other assurances, without which the warrants themselves would possess neither authority nor currency—these other things we may refer to as the *backing* (B) of the warrants. This “backing” of our warrants is something which we shall have to scrutinise very carefully: its precise relations to our data, claims, warrants and conditions of rebuttal deserve some clarification, for confusion at this point can lead to trouble later.

We shall have to notice particularly how the sort of backing called for by our warrants varies from one field of argument to another. The *form* of argument we employ in different fields

need not vary very much as between fields. “A whale will be a mammal,” “A Bermudan will be a Briton,” “A Saudi Arabian will be a Muslim”: here are three different warrants to which we might appeal in the course of a practical argument, each of which can justify the same sort of

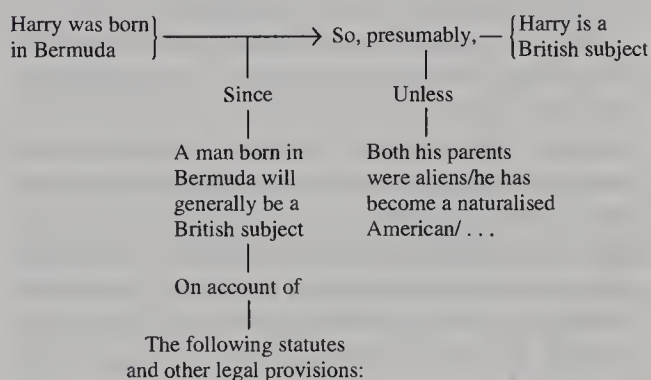

straightforward step from a datum to a conclusion. We might add for variety examples of even more diverse sorts, taken from moral, mathematical or psychological fields. But the moment we start asking about the *backing* which a warrant relies on in each field, great differences begin to appear: the kind of backing we must point to if we are to establish its authority will change greatly as we move from one field of argument to another. “A whale will be (i.e., *is classifiable as*) a mammal,” “A Bermudan will be (*in the eyes of the law*) a Briton,” “A Saudi Arabian will be (*found to be*) a Muslim”—the words in parentheses indicate what these differences are. One warrant is defended by relating it to a system of taxonomical classification, another by appealing to the statutes governing the nationality of people born in the British colonies, the third by referring to the statistics which record how religious beliefs are distributed among people of different nationalities. We can for the moment leave open the more contentious question, how we establish our warrants in the fields of morals, mathematics and psychology: for the moment all we are trying to show is the *variability* or *field-dependence* of the backing needed to establish our warrants.

We can make room for this additional element in our argument-pattern by writing it below the bare statement of the warrant for which it serves as backing (B):

This form may not be final, but it will be complex enough for the purpose of our present discussions. To take a particular example: in support of the claim (C) that Harry is a British subject, we appeal to the datum (D) that he was born in Bermuda, and the warrant can then be stated in the form, “A man born in Bermuda may be taken to be a British subject”: since, however, ques-

tions of nationality are always subject to qualifications and conditions, we shall have to insert a qualifying “presumably” (Q) in front of the conclusion, and note the possibility that our conclusion may be rebutted in case (R) it turns out that both his parents were aliens or he has since become a naturalised American. Finally, in case the warrant itself is challenged, its backing can be put in: this will record the terms and the dates of enactment of the Acts of Parliament and other legal provisions governing the nationality of persons born in the British colonies. The result will be an argument set out as follows:

In what ways does the backing of warrants differ from the other elements in our arguments? To begin with the differences between B and W: statements of warrants, we saw, are hypothetical, bridgelike statements, but the backing for warrants can be expressed in the form of categorical statements of fact quite as well as can the data appealed to in direct support of our conclusions. So long as our statements reflect these functional differences explicitly, there is no danger of confusing the backing (B) for a warrant with the warrant itself (W): such confusions arise only when these differences are disguised by our forms of expression. In our present example, at any rate, there need be no difficulty. The fact that the relevant statutes have been validly passed into law, and contain the provisions they do, can be ascertained simply by going to the records of the parliamentary proceedings concerned and to the relevant volumes in the books of statute law: the resulting discovery, that such-and-such a

statute enacted on such-and-such a date contains a provision specifying that people born in the British colonies of suitable parentage shall be entitled to British citizenship, is a straightforward statement of fact. On the other hand, the warrant which we apply *in virtue* of the statute containing this provision is logically of a very different character—"If a man was born in a British colony, he *may be presumed to be* British." Though the facts about the statute may provide all the backing required by this warrant, the explicit statement of the warrant itself is more than a repetition of these facts: it is a general *moral* of a practical character, about the ways in which we can safely argue in view of these facts.

We can also distinguish backing (B) from data (D). Though the data we appeal to in an argument and the backing lending authority to our warrants may alike be stated as straightforward matters-of-fact, the roles which these statements play in our argument are decidedly different. Data of some kind must be produced, if there is to be an argument there at all: a bare conclusion, without any data produced in its support, is no argument. But the backing of the warrants we invoke need not be made explicit—at any rate to begin with: the warrants may be conceded without challenge, and their backing left understood. Indeed, if we demanded the credentials of all warrants at sight and never let one pass unchallenged, argument could scarcely begin. Jones puts forward an argument invoking warrant W_1 , and Smith challenges that warrant; Jones is obliged, as a lemma, to produce another argument in the hope of establishing the acceptability of the first warrant, but in the course of this lemma employs a second warrant W_2 ; Smith challenges the credentials of this second warrant in turn; and so the game goes on. Some warrants must be accepted provisionally without further challenge, if argument is to be open to us in the field in question: we should not even know what sort of data were of the slightest relevance to a conclusion, if we had not at least a provisional idea of the warrants acceptable in the situation confronting us. The existence of considerations such as would establish the acceptability of the most reliable warrants is something we are entitled to take for granted.

Finally, a word about the ways in which B differs from Q and R: these are too obvious to need expanding upon, since the grounds for regarding a warrant as generally acceptable are clearly one thing, the force which the warrant lends to a conclusion another, and the sorts of exceptional circumstance which may in particular cases rebut the presumptions the warrant creates a third. They correspond, in our example, to the three statements, (i) that the statutes about British nationality *have in fact* been validly passed into law, and say this: . . . , (ii) that Harry *may be presumed* to be a British subject, and (iii) that Harry, having recently become a naturalised American, *is no longer covered* by these statutes.

One incidental point should be made, about the interpretation to be put upon the symbols in our pattern of argument: this may throw light on a slightly puzzling example which we came across when discussing Kneale's views on probability. Consider the arrow joining D and C. It may seem natural to suggest at first that this arrow should be read as "so" in one direction and as "because" in the other. Other interpretations are however possible. As we saw earlier, the step from the information that Jones has Bright's Disease to the conclusion that he cannot be expected to live to eighty does not reverse perfectly: we find it natural enough to say, "Jones cannot be expected to live to eighty, *because* he has Bright's Disease," but the fuller statement, "Jones cannot be expected to live to eighty, *because* the probability of his living that long is low, *because* he has Bright's Disease," strikes us as cumbersome and artificial, for it puts in an extra step which is trivial and unnecessary. On the other hand, we do not mind saying, "Jones has Bright's Disease, *so* the chances of his living to eighty are slight, *so* he cannot be expected to live that long," for the last clause is (so to speak) an *inter alia* clause—it states one of the many particular morals one can draw from the middle clause, which tells us his general expectation of life.

So also in our present case: reading along the arrow from right to left or from left to right we can normally say both "C, because D" and "D, so C." But it may sometimes happen that some more general conclusion than C may be war-

ranted, given D: where this is so, we shall often find it natural to write, not only “D, so C,” but also “D, so C’, so C,” C’ being the more general conclusion warranted in view of data D, from which in turn we infer *inter alia* that C. Where this is the case, our “so” and “because” are no longer reversible: if we now read the argument backwards the statement we get—“C, because C’, because D”—is again more cumbersome than the situation really requires.

AMBIGUITIES IN THE SYLLOGISM

The time has come to compare the distinctions we have found of practical importance in the layout and criticism of arguments with those which have traditionally been made in books on the theory of logic: let us start by seeing how our present distinctions apply to the syllogism or syllogistic argument. For the purposes of our present argument we can confine our attention to one of the many forms of syllogism—that represented by the time-honoured example:

Socrates is a man;
All men are mortal;
So Socrates is mortal.

This type of syllogism has certain special features. The first premiss is “singular” and refers to a particular individual, while the second premiss alone is “universal.” Aristotle himself was, of course, much concerned with syllogisms in which both the premisses were universal, since to his mind many of the arguments within scientific theory must be expected to be of this sort. But we are interested primarily in arguments by which general propositions are applied to justify particular conclusions about individuals; so this initial limitation will be convenient. Many of the conclusions we reach will, in any case, have an obvious application—*mutatis mutandis*—to syllogisms of other types. We can begin by asking the question “What corresponds in the syllogism to our distinction between data, warrant, and backing?” If we press this question, we shall find that the apparently innocent forms used in syllogistic arguments turn out to have a hidden complexity. This internal complexity is comparable with that

we observed in the case of modally-qualified conclusions: here, as before, we shall be obliged to disentangle two distinct things—the force of universal premisses, when regarded as warrants, and the backing on which they depend for their authority.

In order to bring these points clearly to light, let us keep in view not only the two universal premisses on which logicians normally concentrate—“All A’s are B’s” and “No A’s are B’s”—but also two other forms of statement which we probably have just as much occasion to use in practice—“Almost all A’s are B’s” and “Scarcely any A’s are B’s.” The internal complexity of such statements can be illustrated first, and most clearly, in the latter cases.

Consider, for instance, the statement, “Scarcely any Swedes are Roman Catholics.” This statement can have two distinct aspects: both of them are liable to be operative at once when the statement figures in an argument, but they can nevertheless be distinguished. To begin with, it may serve as a simple statistical report: in that case, it can equally well be written in the fuller form, “The proportion of Swedes who are Roman Catholics is less than (say) 2%”—to which we may add a parenthetical reference to the source of our information, “(According to the tables in *Whittaker’s Almanac*).” Alternatively, the same statement may serve as a genuine inference-warrant: in that case, it will be natural to expand it rather differently, so as to obtain the more candid statement, “A Swede can be taken almost certainly not to be a Roman Catholic.”

So long as we look at the single sentence “Scarcely any Swedes are Roman Catholics” by itself, this distinction may appear trifling enough: but if we apply it to the analysis of an argument in which this appears as one premiss, we obtain results of some significance. So let us construct an argument of quasi-syllogistic form, in which this statement figures in the position of a “major premiss.” This argument could be, for instance, the following:

Petersen is a Swede;
Scarcely any Swedes are Roman Catholic;
So, almost certainly, Petersen is not a Roman Catholic.

The conclusion of this argument is only tentative, but in other respects the argument is exactly like a syllogism.

As we have seen, the second of these statements can be expanded in each of two ways, so that it becomes either "The proportion of Swedes who are Roman Catholics is less than 2%," or else, "A Swede can be taken almost certainly not to be a Roman Catholic." Let us now see what happens if we substitute each of these two expanded versions in turn for the second of our three original statements. In one case we obtain the argument:

Petersen is a Swede;
A Swede can be taken almost certainly not to be a Roman Catholic;
So, almost certainly, Petersen is not a Roman Catholic.

Here the successive lines correspond in our terminology to the statement of a datum (D), a warrant (W), and a conclusion (C). On the other hand, if we make the alternative substitution, we obtain:

Petersen is a Swede;
The proportion of Roman Catholic Swedes is less than 2%;
So, almost certainly, Petersen is not a Roman Catholic.

In this case we again have the same datum and conclusion, but the second line now states the backing (B) for the warrant (W), which is itself left unstated.

For tidiness' sake, we may now be tempted to abbreviate these two expanded versions. If we do so, we can obtain respectively the two arguments:

(D) Petersen is a Swede;
(W) A Swede is almost certainly not a Roman Catholic;
So, (C) Petersen is almost certainly not a Roman Catholic;

and,

(D) Petersen is a Swede;
(B) The proportion of Roman Catholic Swedes is minute;

So, (C) Petersen is almost certainly not a Roman Catholic.

The relevance of our distinction to the traditional conception of "formal validity" should already be becoming apparent, and we shall return to the subject shortly.

Turning to the form "No A's are B's" (e.g., "No Swedes are Roman Catholics"), we can make a similar distinction. This form of statement also can be employed in two alternative ways, either as a statistical report, or as an inference-warrant. It can serve simply to report a statistician's discovery—say, that the proportion of Roman Catholic Swedes is in fact zero; or alternatively it can serve to justify the drawing of conclusions in argument, becoming equivalent to the explicit statement, "A Swede can be taken almost certainly not to be a Roman Catholic." Corresponding interpretations are again open to us if we look at an argument which includes our sample statement as the universal premiss. Consider the argument:

Petersen is a Swede;
No Swedes are Roman Catholics;
So, certainly, Petersen is not a Roman Catholic.

This can be understood in two ways; we may write it in the form:

Petersen is a Swede;
The proportion of Roman Catholic Swedes is zero;
So, certainly, Petersen is not a Roman Catholic,

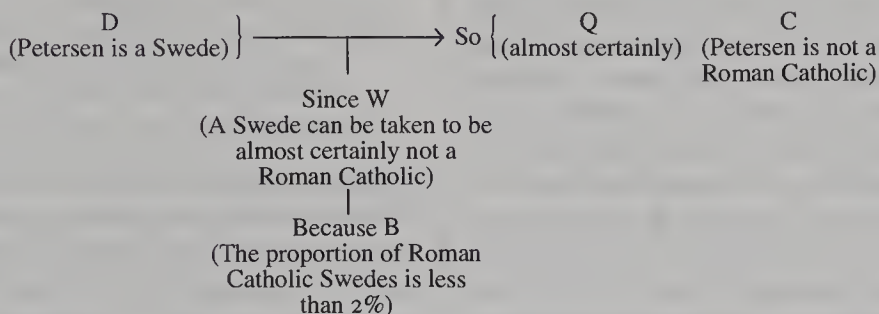

or alternatively in the form:

Petersen is a Swede;
A Swede is certainly not a Roman Catholic;
So, certainly, Petersen is not a Roman Catholic.

Here again the first formulation amounts, in our terminology, to putting the argument in the form "D, B, so C"; while the second formulation is equivalent to putting it in the form "D, W, so C." So, whether we are concerned with a "scarcely any . . ." argument or a "no . . ." argument, the customary form of expression will tend in either case to conceal from us the distinction between an inference-warrant and its backing. The same will be true in the case of "all" and "nearly all": there, too, the distinction between saying "Every, or nearly every single A *has been found* to be a B" and say-

ing “An A *can be taken*, certainly or almost certainly, to be a B” is concealed by the over-simple form of words “All A’s are B’s.” A crucial difference in practical function can in this way pass unmarked and unnoticed.

Our own more complex pattern of analysis, by

contrast, avoids this defect. It leaves no room for ambiguity: entirely separate places are left in the pattern for a warrant and for the backing upon which its authority depends. For instance, our “scarcely any . . .” argument will have to be set out in the following way:

Corresponding transcriptions will be needed for arguments of the other three types.

When we are theorising about the syllogism, in which a central part is played by propositions of the forms “All A’s are B’s” and “No A’s are B’s,” it will accordingly be as well to bear this distinction in mind. The form of statement “All A’s are B’s” is as it stands deceptively simple: it may have in use both the force of a warrant and the factual content of its backing, two aspects which we can bring out by expanding it in different ways. Sometimes it may be used, standing alone, in only one of these two ways at once; but often enough, especially in arguments, we make the single statement do both jobs at once and gloss over, for brevity’s sake, the transition from backing to warrant—from the factual information we are presupposing to the inference-licence which that information justifies us in employing. The practical economy of this habit may be obvious; but for philosophical purposes it leaves the effective structure of our arguments insufficiently candid.

There is a clear parallel between the complexity of “all . . .” statements and that of modal statements. As before, the *force* of the statements is invariant for all fields of argument. When we consider this aspect of the statements, the form “All A’s are B’s” may always be replaced by the form “An A can certainly be taken to be a B”:

this will be true regardless of the field, holding good equally of “All Swedes are Roman Catholics,” “All those born in British colonies are entitled to British citizenship,” “All whales are mammals,” and “All lying is reprehensible”—in each case, the general statement will serve as a warrant authorising an argument of precisely the same form, $D \rightarrow C$, whether the step goes from “Harry was born in Bermuda” to “Harry is a British citizen” or from “Wilkinson told a lie” to “Wilkinson acted reprehensibly.” Nor should there be any mystery about the nature of the step from D to C, since the whole *force* of the general statement “All A’s are B’s,” as so understood, is to authorise just this sort of step.

By contrast, the kind of *grounds* or *backing* supporting a warrant of this form will depend on the field of argument: here the parallel with modal statements is maintained. From this point of view, the important thing is the factual content, not the force of “all . . .” statements. Though a warrant of the form “An A can certainly be taken to be a B” must hold good in any field in virtue of *some* facts, the actual sort of facts in virtue of which any warrant will have currency and authority will vary according to the field of argument within which that warrant operates; so, when we expand the simple form “All A’s are B’s” in order to make explicit the nature of the backing it is used to express, the expansion we

must make will also depend upon the field with which we are concerned. In one case, the statement will become "The proportion of A's found to be B's is 100%"; in another, "A's are ruled by statute to count unconditionally as B's"; in a third, "The class of B's includes taxonomically the entire class of A's"; and in a fourth, "The practice of doing A leads to the following intolerable consequences, etc." Yet, despite the striking differences between them, all these elaborate propositions are expressed on occasion in the compact and simple form "All A's are B's."

Similar distinctions can be made in the case of the forms, "Nearly all A's are B's," "Scarcely any A's are B's," and "No A's are B's." Used to express warrants, these differ from "All A's are B's" in only one respect, that where before we wrote "certainly" we must now write "almost certainly," "almost certainly not" or "certainly not." Likewise, when we are using them to state not warrants but backing: in a statistical case we shall simply have to replace "100%" by (say) "at least 95%," "less than 5%" or "zero"; in the case of a statute replace "unconditionally" by "unless exceptional conditions hold," "only in exceptional circumstances" or "in no circumstances whatever"; and in a taxonomical case replace "the entirety of the class of A's" by "all but a small subclass . . .," "only a small subclass . . ." or "no part of . . ." Once we have filled out the skeletal forms "all . . ." and "no . . ." in this way, the field-dependence of the backing for our warrants is as clear as it could be. . . .

ANALYTIC AND SUBSTANTIAL ARGUMENTS

This distinction is best approached by way of a preamble. We remarked some way back that an argument expressed in the form "Datum; warrant; so conclusion" can be set out in a formally valid manner, regardless of the field to which it belongs; but this could never be done, it appeared, for arguments of the form "Datum; backing for warrant; so conclusion." To return to our stock example: if we are given information about Harry's birthplace, we may be able to draw a conclusion about his nationality, and defend it

with a formally valid argument of the form (D; W; so C). But the warrant we apply in this formally valid argument rests in turn for its authority on facts about the enactment and provisions of certain statutes, and we can therefore write out the argument in the alternative form (D; B; so C), i.e.:

Harry was born in Bermuda;
The relevant statutes (W₁ . . .) provide that people born in the colonies of British parents are entitled to British citizenship;
So, presumably, Harry is a British citizen.

When we choose this form, there is no question of claiming that the validity of the argument is evident simply from the formal relations between the three statements in it. Stating the backing for our warrant in such a case inevitably involves mentioning Acts of Parliament and the like, and these references destroy the formal elegance of the argument. In other fields, too, explicitly mentioning the backing for our warrant—whether this takes the form of statistical reports, appeals to the results of experiments, or references to taxonomical systems—will prevent us from writing the argument so that its validity shall be manifest from its formal properties alone.

As a general rule, therefore, we can set out in a formally valid manner arguments of the form "D; W; so C" alone: arguments of the form "D; B; so C" cannot be so expressed. There is, however, one rather special class of arguments which appears at first sight to break this general rule, and these we shall in due course christen *analytic* arguments. As an illustration we may take the following:

Anne is one of Jack's sisters;
All Jack's sisters have red hair;
So, Anne has red hair.

Arguments of this type have had a special place in the history of logic, and we shall have to pay close attention to them: it has not always been recognised how rare, in practice, arguments having their special characteristics are.

As a first move, let us expand this argument as we have already done those of other types. Writing the major premiss as a statement of backing, we obtain:

Anne is one of Jack's sisters;
Each one of Jack's sisters has (been checked individually to have) red hair;
So, Anne has red hair.

Alternatively, writing warrant in place of backing, we have:

Anne is one of Jack's sisters;
Any sister of Jack's will (i.e., may be taken to) have red hair;
So, Anne has red hair.

This argument is exceptional in the following respect. If each one of the girls has been checked individually to have red hair, then Anne's hair colour has been specifically checked in the process. In this case, accordingly, the backing of our warrant includes explicitly the information which we are presenting as our conclusion: indeed, one might very well replace the word "so" before the conclusion by the phrase "in other words," or "that is to say." In such a case, to accept the datum and the backing is *thereby* to accept implicitly the conclusion also; if we string datum, backing and conclusion together to form a single sentence, we end up with an actual tautology—"Anne is one of Jack's sisters and each one of Jack's sisters has red hair *and also* Anne has red hair." So, for once, not only the (D; W; so C) argument but also the (D; B; so C) argument can—it appears—be stated in a formally valid manner.

Most of the arguments we have practical occasion to make use of are, one need hardly say, not of this type. We make claims about the future, and back them by reference to our experience of how things have gone in the past; we make assertions about a man's feelings, or about his legal status, and back them by references to his utterances and gestures, or to his place of birth and to the statutes about nationality; we adopt moral positions, and pass aesthetic judgements, and declare support for scientific theories or political causes, in each case producing as grounds for our conclusion statements of quite other logical types than the conclusion itself. Whenever we do any of these things, there can be no question of the conclusion's being regarded as a mere restatement in other words of something already stated

implicitly in the datum and the backing: though the argument may be formally valid when expressed in the form "Datum; warrant; so conclusion," the step we take in passing to the conclusion from the information we have to rely on—datum and backing together—is a substantial one. In most of our arguments, therefore, the statement obtained by writing "Datum; backing; *and also* conclusion" will be far from a tautology—obvious it may be, where the legitimacy of the step involved is transparent, but tautological it will not.

In what follows, I shall call arguments of these two types respectively *substantial* and *analytic*. An argument from D to C will be called analytic if and only if the backing for the warrant authorising it includes, explicitly or implicitly, the information conveyed in the conclusion itself. Where this is so, the statement "D, B, and also C" will, as a rule, be tautological. (This rule is, however, subject to some exceptions which we shall study shortly.) Where the backing for the warrant does not contain the information conveyed in the conclusion, the statement "D, B, and also C" will never be a tautology, and the argument will be a substantial one.

The need for some distinction of this general sort is obvious enough, and certain aspects of it have forced themselves on the attention of logicians, yet its implications have never been consistently worked out. This task has been neglected for at least two reasons. To begin with, the internal complexity of statements of the form "All A's are B's" helps to conceal the full difference between analytic and substantial arguments. Unless we go to the trouble of expanding these statements, so that it becomes manifest whether they are to be understood as stating warrants or the backing for warrants, we overlook the great variety of arguments susceptible of presentation in the traditional syllogistic form: we have to bring out the distinction between backing and warrant explicitly in any particular case if we are to be certain what sort of argument we are concerned with on that occasion. In the second place, it has not been recognised how exceptional genuinely analytic arguments are, and how difficult it is to produce an argument which will be analytic

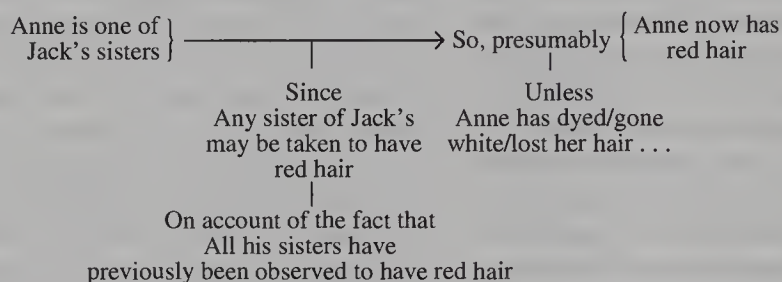

past all question: if logicians had recognised these facts, they might have been less ready to treat analytic arguments as a model which other types of arguments were to emulate.

Even our chosen example, about the colour of Anne's hair, may easily slip out of the analytic into the substantial class. If the backing for our step from datum, "Anne is Jack's sister," to conclusion, "Anne has red hair," is just the information that each of Jack's sisters has *in the past* been observed to have red hair, then—one might argue—the argument is a substantial one even as it stands. After all, dyeing is not unknown. So ought we not to rewrite the argument in such a

way as to bring out its substantial character openly? On this interpretation the argument will become:

Datum—Anne is one of Jack's sisters;
 Backing—All Jack's sisters have previously been observed to have red hair;
 Conclusion—So, presumably, Anne now has red hair.

The warrant relied on, for which the backing is here stated, will be of the form, "Any sister of Jack's may be taken to have red hair": for the reasons given, this warrant can be regarded as establishing no more than a presumption:

It seems, then, that I can defend my conclusion about Anne's hair with an unquestionably analytic argument only if at this very moment I have all of Jack's sisters in sight, and so can back my warrant with the assurance that every one of Jack's sisters has red hair at this moment. But, in such a situation, what need is there of an *argument* to establish the colour of Anne's hair? And of what relevance is the other sisters' hair colour? The thing to do now is use one's eyes, not hunt up a chain of reasoning. If the purpose of an argument is to establish conclusions about which we are not entirely confident by relating them back to other information about which we have greater assurance, it begins to be a little doubtful whether any genuine, practical argument could *ever* be properly analytic.

Mathematical arguments alone seem entirely safe: given the assurance that every sequence of six or more integers between 1 and 100 contains at least one prime number, and also the information that none of the numbers from 62 up to 66 is a prime, I can thankfully conclude that the number 67 is a prime; and that is an argument whose validity neither time nor the flux of change can call in question. This unique character of mathematical arguments is significant. Pure mathematics is possibly the only intellectual activity whose problems and solutions are "above time." A mathematical problem is not a quandary; its solution has no time limit; it involves no steps of substance. As a model argument for formal logicians to analyse, it may be seducingly elegant, but it could hardly be less representative.

From *Logic and the Criticism of Arguments*

It is time to state these points in more constructive terms. For this purpose, let me present three theses.

1. The rational criticism of arguments involves two distinct arts: one “analytical,” the other “topical.” The techniques of the first art are concerned with the question, “Am I arguing *rightly* (or impeccably)?” —i.e., Am I avoiding formal inconsistencies, and other errors of intellectual accountability? Those of the second are concerned with the question, “Are these the *right* (or relevant) arguments to use when dealing with this kind of problem, in this situation?” —i.e., Are they of a kind appropriate to the substantive demands of the problem and situation? The art of reasoning “rightly” is one concern of *formal logic*, with the help of which we recognize internal contradictions and similar formal errors. But the art of identifying and explaining the nature and mode of operation of “right” arguments is a field for which professional philosophers today no longer have a name. Historically, it was called by a dozen different names — among others, *topics*, *argumentation*, *rhetoric*, *organon*, and *method*. Today, this art is coming to be known as “informal” logic; but there are disadvantages to this *negative* name, which defines its scope only by what it is not, viz., “formal.” To make its actual scope and significance clearer, I would for myself prefer a more positive name, such as *substantive* logic.

2. The two arts quite properly employ distinct vocabularies. The language of formal logic comprises terms like “premise” and “conclusion,” “entailment” and “principle of inference,” “valid” and “invalid,” “necessary” and “contradictory”: the language of substantive logic comprises terms like “grounds” and “claim,” “support” and “warrant,” “sound” and “shaky,” “presumably” and “unfounded.” Far from these vocabularies having a significant overlap, it is well to keep them distinct; for, once again, the *arguments* to which they are addressed are not “arguments” in the same sense. The formal con-

nections in a string of propositions are *strong or weak*, in the sense of “valid” or “invalid”; and a string of propositions is an “argument” in my first sense. The substantive support which an attorney or scientist gives a claim, by producing the particular grounds he does, in the forum and at the time he does, is *strong or weak*, in the sense of “sound” or “shaky”; and, by stating his case as he does, each man presents an “argument” in my second, human interaction sense.

There are just a few, very general terms that have a use in both these arts: for example, the term “fallacy.” In thinking about these borderline issues, however, it becomes doubly prudent to keep in mind the differences between formal and substantive criticism. For instance, people writing introductory logic texts are sometimes tempted to equate the term “fallacious” with the term “invalid”; and this confuses the elementary student, by suggesting that fallacies are typically formal blunders, rather than (as they more often are) errors of substance. Scientific arguments may successfully use theoretical “models,” just as legal arguments successfully use theoretical “interpretations.” Yet, in both fields, arguments are also sometimes rejected, as appealing to “false analogies”; and, formally speaking, both the successful and the fallacious arguments are quite similar. What mark fallacious analogies off from fruitful models and theories, in practice, are matter of *substance*: e.g., the fact that the “theory” or “model” in question is *warranted* by deeper underlying principles, whereas by contrast the corresponding appeals to “mere analogy” are “unwarranted.”

3. The art of criticizing arguments on “topical” rather than “analytical” grounds is one in which (as Aristotle insisted from the outset) the central issues can be faced, and formulated, only if we address ourselves to *the nature of the case*: i.e., to the general demands of the problems currently under consideration, and the “forums” that are available for resolving them.

In Aristotelian usage, such issues are issues of *prudence*. In legal contexts, they overlap into *jurisprudence*: there, they are concerned with the “standards of proof” required in judicial proceedings of different kinds, the “rules of evidence” relevant in different branches of law, and the demands of “due process” that govern the conduct of different sorts of cases. As at earlier stages in the field of rhetoric and practical reasoning, lawyers today continue to pay more explicit attention to their methods of arguing than professionals in many other fields; so they have much clearer ideas than (say) scientists or physicians about the substantive tests which must be satisfied, if legal arguments are to serve the goals of the legal enterprise.

Does this mean that the “topical” aspects of legal reasoning can be understood only by trained lawyers? The answer to that question is not entirely obvious. We might equally ask, Can the corresponding aspects of medical and scientific reasoning be understood only by trained physicians and scientists? Just so long as such issues are treated as extensions of formal logic, it can be argued that they are philosophical not professional; but, if we view them rather as matters of substance, it is less clear that philosophers can monopolize them. Indeed, there has been a lively debate between those philosophers of science such as Popper and Lakatos, who still insist on the right to lay down methodological “statute law” to working scientists, and those others, like Polanyi and myself, who see scientific methods of argumentation as requiring more of a “common law” analysis.

While some detailed points of method in both law and science may be too refined for any but professionals, the *general pattern* of reasoning in both fields is quite intelligible to lay people as well. Logicians and philosophers also have something of their own to contribute, to the extent that the substantive merits and defects of disciplinary reasoning is discussed (as in Aristotle’s *Topics*) on a *comparative* basis. In what respects, for instance, do “theories” play the same kinds of part in law as in science? To what extent are appeals to authority admissible or fallacious in different fields of reasoning on the same occasions, and for the same reasons? And on what condi-

tions can arguments about questions of “causation” in medicine be assimilated to those about “causality” in pure science?

None of those questions is “proper to” law or science or medicine taken alone: still, none of them can be answered by someone who has no knowledge whatever (however general) of how people in fact think, argue and resolve problems in those fields. In short, the topical criticism of legal, scientific, and other technical arguments can become the substantive mode of inquiry it needs to be, only if the discussion of practical reasoning is made into a *collaborative* debate: one in which philosophers are prepared to listen to lawyers, scientists, and others, instead of merely lecturing them! Parts of the resulting debate may be somewhat technical: e.g., statistical analyses of the design of experiments, or jurisprudential discussions of the minuter rules of evidence. But a common framework of analysis, at least, covers the whole territory of practical argumentation; and the outcome of such a collaborative analysis would do for us, in our own day, just the kinds of things that Aristotle, Hermagoras and the medieval rhetoricians aimed at in earlier times.

To close, let me speak briefly about the philosophical and educational implications of the positions for which I have been arguing here. First, let me say something about the current controversy over the *rationality* of scientific argument, between Karl Popper and Paul Feyerabend.

1. I hinted earlier that, since the seventeenth century, a revival of the Platonist approach to argumentation has led professional philosophers to expel all the functional aspects of “rationality” from consideration; to equate “rationality” with “logicality”; and to look for *formal* criteria to judge the “rationality” of all arguments.

One glance at the Popper-Feyerabend dispute confirms this reading of the matter. Both men assume that the arguments by which scientists arrive at novel discoveries can be genuinely “rational,” only if they satisfy certain formal conditions, at least of a weak enough kind. Otherwise, such discoveries will merely be the products of good fortune, chance, irrational speculation, or pure intuition. Popper, for his part, still assumes that we can state such formal conditions in ad-

vance; and that scientific knowledge can thus be elevated—however hypothetically and fallibly—to the status of *episteme*: only so can he be satisfied that the procedures of science are truly “rational.”

Underlining the Platonist element in his position, Popper asserts that scientific knowledge is essentially concerned with a Third World of *eternal entities*, which are neither “physical objects,” nor “psychological thoughts” in the scientists’ heads. By contrast, Feyerabend believes that no such conditions can be found, still less imposed on the work of actual scientists; while Popper’s “Third World” is for him a reactionary myth. But, instead of arguing that it was a mistake to look for such formal conditions of rationality, Feyerabend strikes a disillusioned pose, and concludes (in the spirit of Nietzsche) that science can make progress, only if scientists deliberately reject all *method* in favor of an *irrational* “Scientific anarchism.”

Here, Karl Popper once again plays the part of the Utopian: to be a scientist one must believe in the invisible Third World, and only a scientist who shares that belief is truly “rational.” Paul Feyerabend defines a counter-position, but states it in the same terms: only, because (in his eyes) the Third World can have no practical relevance to the actual work of science, he calls on us to give up the idea that science is rational as a comfortable illusion. Both men take it for granted that we know what demands “rationality” makes of science, *in advance* of looking to see how the arguments of science function in actual practice. Neither of them has the patience to wait for a first-hand examination of “the nature of the case” to clarify our ideas about what kind of thing “scientific rationality” could in prac-

tice be. For both of them, Aristotle, Hermagoras and the rhetoricians wrote in vain.

2. Finally, let me turn to the educational implications of my argument. Any revival of “substantive logic,” “rhetoric,” “practical reasoning,” or “theory of argumentation” (call it what you will) requires both philosophers, and those whose work the philosophers reflect on—lawyers and physicians, scientists and critics—to modify their present claims to full disciplinary autonomy. The substantive analysis of practical argumentation is worthwhile only if it is *collaborative*, with philosophers and practitioners working together to establish, firstly, how reasons function in all these different fields of work, secondly, what are the accepted procedures and forums for the resulting arguments and, lastly, what standards are available for judging the “success” and “failure” of work in one field or another.

The differences between the ways we interpret issues, in one field or another, are *ineliminable*, and also *functional*. They cannot be explained away by formal devices: e.g., by inventing separate formal systems of alethic, deontic, or epistemic logic for every purpose and field. Practical argumentation has both field invariant and field dependent features. Some topical terms (e.g., “grounds” and “warrants”) have a use in most fields of argument; more specialized terms (e.g., numerical “probability”) are relevant only in very few fields. In between, a middle category of terms of topical analysis—“kind” and “degree,” “fallacy” and “analogy,” “cause” and “definition”—apply in varying ways as we move from one field to another. These are the notions which philosophers and practitioners can master fully only by pooling their efforts.

Michel Foucault

1926–1984

Michel Foucault was born in Poitiers, France, and was educated in Paris at the École Normale Supérieure and the University of Paris, Sorbonne, where he took degrees in philosophy (1948), psychology (1950), and psychiatry (1952). For the next several years, he worked in psychiatric hospitals and taught psychopathology at the École Normale and elsewhere. In 1961 he published *Madness and Civilization*, which was accepted as his Ph.D. dissertation. In this book, Foucault argues that the source of madness should be sought not in the pathology of the individual but in the history of definitions of reason and in social divisions that follow these stipulations.

Following publication of this book, Foucault served in several prestigious academic posts, which culminated in his election to the Collège de France in 1970, where he served as the chair of History of Systems of Thought until his death. During the 1960s, he wrote extensively about the complex interconnections between the historical development of knowledge, its formulation in discourse, and the effects of knowledge upon social practices. In the 1970s, Foucault shifted his attention to prisons, the treatment of prisoners, and the social history of imprisonment. He was actively involved in the prisoners' rights movement in France and published his study of incarceration, *Discipline and Punish*, in 1975.

Foucault's last major project focuses on the history of sexuality; it studies the ways in which social institutions exercise power over sexual identity and attitudes. Foucault's approach to historiography and his reconceptions of the relationships among language, knowledge, and social organization have made him a central figure in twentieth-century philosophy. Moreover, his work on the effects of discourse raises serious questions for any future definition of rhetoric.

In "The Order of Discourse" (1971; excerpted here), Foucault remarks that the tendency of Western philosophy since the demise of the Sophists has been to deny discourse its own reality and to think of discourse as the dress of thought or the conveyer of preexisting meaning. Foucault calls this tendency the "will to truth." The desire to locate truth in something other than discourse itself has, says Foucault, spawned several mistaken beliefs. One is that the author or speaker is the source of discourse and that the speaker's task is "to animate the empty forms of language." Another is that nature is the source of discourse, which merely names things in the world. Disciplines and institutions founded on such beliefs subscribe to the will to truth and reinforce the idea that the rules of discourse are subsidiary to the expression of thought. Discourse, they say, facilitates the exchange of knowledge but does not create it.

Foucault's project in "The Order of Discourse" and the earlier *Archaeology of Knowledge* (1969; excerpted here) is to question the will to truth and to "restore to discourse its character as an event." To do so, he reverses the order of the relationship between discourse and what is traditionally taken to be its source: That is, he treats author, meaning, and knowledge as a function of discourse, not as its source.

He therefore examines discourse as a practice, a form of action, and not as a reflection of the world.

Foucault's theory of discourse describes the relationship between language and knowledge; the functions of disciplines, institutions, and other discourse communities; the ways that particular statements come to have truth value; the constraints on the production of discourse about objects of knowledge; the effects of discursive practices on social action; and the uses of discourse to exercise power. *The Archaeology of Knowledge* is Foucault's most extensive exposition of this theory. Here, Foucault attempts to describe the methods and assumptions that guided his earlier books and to sketch a theory of discourse and knowledge that will guide his further work. He begins by discussing historiography and the dangers of easy assumptions about the continuity of the development of ideas. He then looks at how knowledge emerges from discourse.

What, Foucault asks, connects statements about an object of knowledge? He rejects the answer that it is the object itself: "It is not enough for us to open our eyes, to pay attention, or to be aware, for new objects suddenly to light up and emerge out of the ground. . . . [T]he object does not await in limbo the order that will free it and enable it to become embodied in a visible and prolix objectivity; it does not preexist itself."¹ Knowledge is created not by the act of observing, Foucault says, but through "relations . . . between institutions, economic and social processes, behavioral patterns, systems of norms, techniques, types of classification, modes of characterization; and these relations are not present in the object."² This is not to deny the existence of phenomena but to say that what we know of them is a function of the needs or desires of society and institutions and of available methods (which may be different in different communities) of coming to know something.

When discourse about knowledge is produced, Foucault asks (echoing Friedrich Nietzsche), who is speaking? What institutional role, legal status, social privilege, or educational or other certification determines who may claim the right to speak authoritatively? Only after we have established the perspective of the discourse community that authorizes such speakers and settings, Foucault says, is it possible to look at the forms of reasoning that may have been used in the statements. To do otherwise would be "to see discourse as a phenomenon of expression—the verbal translation of a previously established synthesis."³ The authority of the speaker, the authorizing powers, and the mode of expression are mutually defining, and all are part of the larger discursive formation that makes it possible to speak of certain objects at all. "Thus conceived, discourse is not the majestically unfolding manifestation of a thinking, knowing, speaking subject," says Foucault, "but, on the contrary, a totality, in which the dispersion of the subject and his discontinuity with himself may be determined."⁴

¹See p. 1439 in this book.

²See p. 1439 in this book.

³See p. 1444 in this book.

⁴See p. 1444 in this book.

Though Foucault seems eager to avoid traditional rhetorical categories, he notes that an analysis of discourse must examine the apparatus of conventions that disciplines and other discourse communities use for defining, comparing, and proving concepts. Such analysis must also look at standards of reasonableness and judgment, at standards of reference to common knowledge and to the history of the community, and at communal rules for the construction of texts.

Foucault also examines the “strategies” of discourse, by which he means the functions of discourse in different periods or communities. Part of the description of discursive practices, for Foucault, must include the effects of discourse in society and the means by which those effects are brought to bear, through teaching, in the formation of laws, or in the creation of disciplines. In *The Archaeology of Knowledge*, Foucault admits that describing the effects of discourse is the most difficult aspect of discursive formations, and in later books he takes up the idea under the rubric of “power,” through which he questions the relation of discourse to objects of observation, judgment, analysis, legal control, physical control, naming, management, regulation, and modification.

Foucault concludes that “there is no knowledge without a particular discursive practice, and any discursive practice may be defined by the knowledge that it forms.”⁵ There is no transcendental continuity to knowledge, in misty origins, in experience, or in the speaker. Knowledge is the function of a material discourse in a social order. Foucault’s project, as he defines it, is

an attempt to reveal discursive practices in their complexity and density; to show that to speak is to do something—something other than to express what one thinks; to translate what one knows, and something other than to play with the structures of a language (*langue*); to show that to add a statement to a pre-existing series of statements is to perform a complicated and costly gesture, which involves conditions (and not only a situation, a context, and motives), and rules (not the logical and linguistic rules of construction); to show that a change in the order of discourse does not presuppose “new ideas,” a little invention and creativity, a different mentality, but transformations in a practice, perhaps also in neighboring practices, and in their common articulation.⁶

Though Foucault avoids talking about rhetoric, preferring *discourse* as his comprehensive term, his theory addresses a number of ideas that are central to modern rhetoric. He makes a powerful argument that discourse (for which we may read *rhetoric*) is epistemic; he forcefully states that discourse is a form of social action; and he enriches and complicates the notion of context with a network of archives, disciplines, institutions, and social practices that control the production of discourse. Finally, he demonstrates the “microphysics of power” that resides in the knowledge that is disseminated in discourse and embodied in laws, regulations, texts, and in the very architecture of hospitals, schools, and prisons, showing how

⁵Michel Foucault, *The Archaeology of Knowledge and The Discourse on Language* (1969; trans. A. M. Sheridan Smith, New York: Harper, 1972), p. 183.

⁶Foucault, p. 209.

seemingly diverse discourses come together in formations that affect social practices and social controls. “It is in discourse,” he says in *The History of Sexuality*, “that power and knowledge are joined together.”⁷

Selected Bibliography

The Archaeology of Knowledge (1969) has been translated by A. M. Sheridan Smith (New York, 1972). Our text of “The Order of Discourse,” translated by Ian McLeod, is in *Untying the Text: A Post-Structuralist Reader*, ed. Robert Young (Boston, 1981).

Other works by Foucault include *Madness and Civilization: A History of Insanity in the Age of Reason* (1961; trans. Richard Howard, New York, 1965), *The Birth of the Clinic: An Archaeology of Medical Perception* (1963; trans. A. M. Sheridan Smith, New York, 1973), *The Order of Things: An Archaeology of the Human Sciences* (1966; New York, 1971), and *Discipline and Punish: The Birth of the Prison* (1975; trans. Alan Sheridan, New York, 1977). The three volumes of *The History of Sexuality* are *Volume I: An Introduction* (1976), *The Uses of Pleasure* (1982), and *The Care of the Self* (1983), all translated by Robert Hurley. Three good collections of Foucault’s essays are *Language, Counter-Memory, Practice: Selected Essays and Interviews*, trans. Donald F. Bouchard and Sherry Simon, ed. Donald F. Bouchard (Ithaca, 1977); *Power/Knowledge: Selected Interviews and Other Writings, 1972–1977*, trans. Colin Gordon, Leo Marshall, John Mepham, and Kate Soper, ed. Colin Gordon (New York, 1982); and *Politics, Philosophy, Culture: Interviews and Other Writings, 1977–1984*, ed. Lawrence Kritzman (Boston, 1988). Paul Rabinow has edited *The Essential Works of Michel Foucault, 1954–1984* (New York, 1997) in three volumes.

Michael Clark has compiled the monumental *Michel Foucault: An Annotated Bibliography* (New York, 1983), a testament to Foucault’s influence in a surprising number of fields. A more selective bibliography is in *Contemporary Perspectives on Rhetoric* by S. Foss, K. Foss, and R. Trapp (Prospect Heights, Ill., 1991).

There are three superb biographies in English, all of which use interviews with Foucault’s colleagues and friends and provide invaluable insight into the French intellectual scene. All are written in a clear journalistic style that is highly detailed and frank: Didier Eribon, *Michel Foucault* (Cambridge, Mass., 1991); James Miller, *The Passion of Michel Foucault* (New York, 1993); and David Macey, *The Lives of Michel Foucault* (New York, 1993).

An earlier but still useful overview of Foucault’s life and ideas can be found in Alan Sheridan’s *Michel Foucault: The Will to Truth* (New York, 1980). David R. Shumway’s *Michel Foucault* (Boston, 1989), in the Twayne series, is a brief summary of Foucault’s major ideas. A more extensive overview that is very accessible and coherent is Lois McNay’s *Foucault: A Critical Introduction* (New York, 1994).

Hayden White’s essay “Michel Foucault,” in *Structuralism and Since: From Levi-Strauss to Derrida*, ed. John Sturrock (Oxford, 1919), is quite helpful. An essential comparison of Foucault and Derrida is Edward Said’s “The Problem of Textuality: Two Exemplary Positions” (*Critical Inquiry* 4 [summer 1978]: 673–714; revised as “Criticism between Culture and System” in *The World, the Text, and the Critic* [Cambridge, Mass., 1983]). *The Cambridge Companion to Foucault*, ed. Gary Gutting (New York, 1994), comprises twelve essays that clearly outline the major issues in Foucault’s work. An interesting overview can be

⁷Michel Foucault, *The History of Sexuality, Volume 1: An Introduction*, trans. Robert Hurley (New York: Random House, 1978), p. 100.

gleaned from Peter Burke, ed., *Critical Essays on Michel Foucault* (Brookfield, Vt., 1992), which are facsimiles of reviews that appeared in the *New York Review*, *TLS*, and other journals.

For analysis of Foucault's theories, see Gilles Deleuze, *Foucault*, trans. Sean Hand (Minneapolis, 1988); Hubert Dreyfus and Paul Rabinow, *Michel Foucault: Beyond Structuralism and Hermeneutics* (Chicago, 1982); David Couzens Hoy, ed., *Foucault: A Critical Reader* (Oxford, 1984), a very good collection of essays; Mark Poster, *Foucault, Marxism, and History* (Oxford, 1984); and Karlis Racevskis, *Michel Foucault and the Subversion of Intellect* (Ithaca, 1983). On Foucault and rhetoric, see Foss, Foss, and Trapp (noted above); Bruce Herzberg, "Michel Foucault's Rhetorical Theory," in *Contending with Words: Composition and Rhetoric in a Postmodern Age*, ed. Patricia Harkin and John Schilb (New York, 1991); and Barbara Biesecker, "Michel Foucault and the Question of Rhetoric," *Philosophy and Rhetoric* 25.4 (1992): 351-64.

Part II *The Discursive Regularities*

CHAPTER 3 THE FORMATION OF OBJECTS

We must now list the various directions that lie open to us, and see whether this notion of "rules of formation"¹—of which little more than a rough sketch has so far been provided—can be given real content. Let us look first at the formation of objects. And in order to facilitate our analysis, let us take as an example the discourse of psychopathology from the nineteenth century onwards—a chronological break that is easy enough to accept in a first approach to the subject. There are enough signs to indicate it, but let us take just two of these: the establishment at the beginning of the century of a new mode of exclusion and confinement of the madman in a psychiatric hospital; and the possibility of tracing certain present-day

notions back to Esquirol, Heinroth, or Pinel (paranoia can be traced back to monomania, the intelligence quotient to the initial notion of imbecility, general paralysis to chronic encephalitis, character neurosis to nondelirious madness); whereas if we try to trace the development of psychopathology beyond the nineteenth century, we soon lose our way, the path becomes confused, and the projection of Du Laurens or even Van Swieten on the pathology of Kraepelin or Bleuler provides no more than chance coincidences. The objects with which psychopathology has dealt since this break in time are very numerous, mostly very new, but also very precarious, subject to change and, in some cases, to rapid disappearance: in addition to motor disturbances, hallucinations, and speech disorders (which were already regarded as manifestations of madness, although they were recognized, delimited, described, and analyzed in a different way), objects appeared that belonged to hitherto unused registers: minor behavioral disorders, sexual aberrations and disturbances, the phenomena of suggestion and hypnosis, lesions of the central nervous system, deficiencies of intellectual or motor adaptation, criminality. And on the basis of each of these registers a variety of objects were named, circumscribed, analyzed, then rectified, redefined, challenged, erased. Is it possible to lay down the rule to which their appearance was sub-

Translated by A. M. Sheridan Smith.

¹In the preceding chapters, Foucault rejects the usual ways of talking about the contexts that are called upon to explain the meaning of statements—tradition, discipline, author, and genre, for example. He will try instead, he says, to describe statements, their environments, and "the conditions of existence" for statements in a "discursive formation." He refers to these conditions of existence (which he has not yet discussed) as "rules of formation." [Ed.]

ject? Is it possible to discover according to which nondeductive system these objects could be juxtaposed and placed in succession to form the fragmented field—showing at certain points great gaps, at others a plethora of information—of psychopathology? What has ruled their existence as objects of discourse?

a. First we must map the first *surfaces* of their *emergence*: show where these individual differences, which, according to the degrees of rationalization, conceptual codes, and types of theory, will be accorded the status of disease, alienation, anomaly, dementia, neurosis or psychosis, degeneration, etc., may emerge, and then be designated and analyzed. These surfaces of emergence are not the same for different societies, at different periods, and in different forms of discourse. In the case of nineteenth-century psychopathology, they were probably constituted by the family, the immediate social group, the work situation, the religious community (which are all normative, which are all susceptible to deviation, which all have a margin of tolerance and a threshold beyond which exclusion is demanded, which all have a mode of designation and a mode of rejecting madness, which all transfer to medicine if not the responsibility for treatment and cure, at least the burden of explanation); although organized according to a specific mode, these surfaces of emergence were not new in the nineteenth century. On the other hand, it was no doubt at this period that new surfaces of appearance began to function: art with its own normativity, sexuality (its deviations in relation to customary prohibitions become for the first time an object of observation, description, and analysis for psychiatric discourse), penalty (whereas in previous periods madness was carefully distinguished from criminal conduct and was regarded as an excuse, criminality itself becomes—and subsequent to the celebrated “homicidal monomanias”—a form of deviance more or less related to madness). In these fields of initial differentiation, in the distances, the discontinuities, and the thresholds that appear within it, psychiatric discourse finds a way of limiting its domain, of defining what it is talking about, of giving it the status of an object—and therefore

of making it manifest, nameable, and describable.

b. We must also describe the authorities of delimitation: in the nineteenth century, medicine (as an institution possessing its own rules, as a group of individuals constituting the medical profession, as a body of knowledge and practice, as an authority recognized by public opinion, the law, and government) became the major authority in society that delimited, designated, named, and established madness as an object; but it was not alone in this: the law and penal law in particular (with the definitions of excuse, nonresponsibility, extenuating circumstances, and with the application of such notions as the *crime passionnel*, heredity, danger to society), the religious authority (in so far as it set itself up as the authority that divided the mystical from the pathological, the spiritual from the corporeal, the supernatural from the abnormal, and in so far as it practiced the direction of conscience with a view to understanding individuals rather than carrying out a casuistical classification of actions and circumstances), literary and art criticism (which in the nineteenth century treated the work less and less as an object of taste that had to be judged, and more and more as a language that had to be interpreted and in which the author’s tricks of expression had to be recognized).

c. Lastly, we must analyze the *grids of specification*: these are the systems according to which the different “kinds of madness” are divided, contrasted, related, regrouped, classified, derived from one another as objects of psychiatric discourse (in the nineteenth century, these grids of differentiation were: the soul, as a group of hierarchized, related, and more or less interpenetrable faculties; the body, as a three-dimensional volume of organs linked together by networks of dependence and communication; the life and history of individuals, as a linear succession of phases, a tangle of traces, a group of potential reactivations, cyclical repetitions; the interplays of neuropsychological correlations as systems of reciprocal projections, and as a field of circular causality).

Such a description is still in itself inadequate. And for two reasons. These planes of emergence,

authorities of delimitation, or forms of specification do not provide objects, fully formed and armed, that the discourse of psychopathology has then merely to list, classify, name, select, and cover with a network of words and sentences: it is not the families—with their norms, their prohibitions, their sensitivity thresholds—that decide who is mad, and present the “patients” to the psychiatrists for analysis and judgement; it is not the legal system itself that hands over certain criminals to psychiatry, that sees paranoia beyond a particular murder, or a neurosis behind a sexual offense. It would be quite wrong to see discourse as a place where previously established objects are laid one after another like words on a page. But the above enumeration is inadequate for a second reason. It has located, one after another, several planes of differentiation in which the objects of discourse may appear. But what relations exist between them? Why this enumeration rather than another? What defined and closed group does one imagine one is circumscribing in this way? And how can one speak of a “system of formation” if one knows only a series of different, heterogeneous determinations, lacking attributable links and relations?

In fact, these two series of questions refer back to the same point. In order to locate that point, let us reexamine the previous example. In the sphere with which psychopathology dealt in the nineteenth century, one sees the very early appearance (as early as Esquirol) of a whole series of objects belonging to the category of delinquency: homicide (and suicide), *crimes passionels*, sexual offenses, certain forms of theft, vagrancy—and then, through them, heredity, the neurogenic environment, aggressive or self-punishing behavior, perversions, criminal impulses, suggestibility, etc. It would be inadequate to say that one was dealing here with the consequences of a discovery: of the sudden discovery by a psychiatrist of a resemblance between criminal and pathological behavior, a discovery of the presence in certain delinquents of the classical signs of alienation, or mental derangement. Such facts lie beyond the grasp of contemporary research: indeed, the problem is how to decide what made them possible, and how these “discoveries” could lead to others that took them up, rectified them,

modified them, or even disproved them. Similarly, it would be irrelevant to attribute the appearance of these new objects to the norms of nineteenth-century bourgeois society, to a reinforced police and penal framework, to the establishment of a new code of criminal justice, to the introduction and use of extenuating circumstances, to the increase in crime. No doubt, all these processes were at work; but they could not of themselves form objects for psychiatric discourse; to pursue the description at this level one would fall short of what one was seeking.

If, in a particular period in the history of our society, the delinquent was psychologized and pathologized, if criminal behavior could give rise to a whole series of objects of knowledge, this was because a group of particular relations was adopted for use in psychiatric discourse. The relation between planes of specification like penal categories and degrees of diminished responsibility, and planes of psychological characterization (faculties, aptitudes, degrees of development or involution, different ways of reacting to the environment, character types, whether acquired, innate, or hereditary). The relation between the authority of medical decision and the authority of judicial decision (a really complex relation since medical decision recognizes absolutely the authority of the judiciary to define crime, to determine the circumstances in which it is committed, and the punishment that it deserves; but reserves the right to analyze its origin and to determine the degree of responsibility involved). The relation between the filter formed by judicial interrogation, police information, investigation, and the whole machinery of judicial information, and the filter formed by the medical questionnaire, clinical examinations, the search for antecedents, and biographical accounts. The relation between the family, sexual and penal norms of the behavior of individuals, and the table of pathological symptoms and diseases of which they are the signs. The relation between therapeutic confinement in hospital (with its own thresholds, its criteria of cure, its way of distinguishing the normal from the pathological) and punitive confinement in prison (with its system of punishment and pedagogy, its criteria of good conduct, improvement, and freedom). These are the relations that, oper-

ating in psychiatric discourse, have made possible the formation of a whole group of various objects.

Let us generalize: in the nineteenth century, psychiatric discourse is characterized not by privileged objects, but by the way in which it forms objects that are in fact highly dispersed. This formation is made possible by a group of relations established between authorities of emergence, delimitation, and specification. One might say, then, that a discursive formation is defined (as far as its objects are concerned, at least) if one can establish such a group; if one can show how any particular object of discourse finds in it its place and law of emergence; if one can show that it may give birth simultaneously or successively to mutually exclusive objects, without having to modify itself.

Hence a certain number of remarks and consequences.

1. The conditions necessary for the appearance of an object of discourse, the historical conditions required if one is to “say anything” about it, and if several people are to say different things about it, the conditions necessary if it is to exist in relation to other objects, if it is to establish with them relations of resemblance, proximity, distance, difference, transformation—as we can see, these conditions are many and imposing. Which means that one cannot speak of anything at any time; it is not easy to say something new; it is not enough for us to open our eyes, to pay attention, or to be aware, for new objects suddenly to light up and emerge out of the ground. But this difficulty is not only a negative one; it must not be attached to some obstacle whose power appears to be, exclusively, to blind, to hinder, to prevent discovery, to conceal the purity of the evidence or the dumb obstinacy of the things themselves; the object does not await in limbo the order that will free it and enable it to become embodied in a visible and prolix objectivity; it does not preexist itself, held back by some obstacle at the first edges of light. It exists under the positive conditions of a complex group of relations.

2. These relations are established between institutions, economic and social processes, behav-

ioral patterns, systems of norms, techniques, types of classification, modes of characterization; and these relations are not present in the object; it is not they that are deployed when the object is being analyzed; they do not indicate the web, the immanent rationality, that ideal nervure that reappears totally or in part when one conceives of the object in the truth of its concept. They do not define its internal constitution, but what enables it to appear, to juxtapose itself with other objects, to situate itself in relation to them, to define its difference, its irreducibility, and even perhaps its heterogeneity, in short, to be placed in a field of exteriority.

3. These relations must be distinguished first from what we might call “primary” relations, and which, independently of all discourse or all object of discourse, may be described between institutions, techniques, social forms, etc. After all, we know very well that relations existed between the bourgeois family and the functioning of judicial authorities and categories in the nineteenth century that can be analyzed in their own right. They cannot always be superposed upon the relations that go to form objects: the relations of dependence that may be assigned to this primary level are not necessarily expressed in the formation of relations that makes discursive objects possible. But we must also distinguish the secondary relations that are formulated in discourse itself: what, for example, the psychiatrists of the nineteenth century could say about the relations between the family and criminality does not reproduce, as we know, the interplay of real dependencies; but neither does it reproduce the interplay of relations that make possible and sustain the objects of psychiatric discourse. Thus a space unfolds articulated with possible discourses: a system of *real* or *primary relations*, a system of *reflexive* or *secondary relations*, and a system of relations that might properly be called *discursive*. The problem is to reveal the specificity of these discursive relations, and their interplay with the other two kinds.

4. Discursive relations are not, as we can see, internal to discourse: they do not connect concepts or words with one another; they do not establish a deductive or rhetorical structure between propositions or sentences. Yet they are not

relations exterior to discourse, relations that might limit it, or impose certain forms upon it, or force it, in certain circumstances, to state certain things. They are, in a sense, at the limit of discourse: they offer it objects of which it can speak, or rather (for this image of offering presupposes that objects are formed independently of discourse), they determine the group of relations that discourse must establish in order to speak of this or that object, in order to deal with them, name them, analyze them, classify them, explain them, etc. These relations characterize not the language (*langue*) used by discourse, nor the circumstances in which it is deployed, but discourse itself as a practice.

We can now complete the analysis and see to what extent it fulfills, and to what extent it modifies, the initial project.

Taking those group figures which, in an insistent but confused way, presented themselves as *psychology, economics, grammar, medicine*, we asked on what kind of unity they could be based: were they simply a reconstruction after the event, based on particular works, successive theories, notions and themes some of which had been abandoned, others maintained by tradition, and again others fated to fall into oblivion only to be revived at a later date? Were they simply a series of linked enterprises?

We sought the unity of discourse in the objects themselves, in their distribution, in the interplay of their differences, in their proximity or distance—in short, in what is given to the speaking subject; and, in the end, we are sent back to a setting-up of relations that characterizes discursive practice itself; and what we discover is neither a configuration, nor a form, but a group of *rules* that are immanent in a practice, and define it in its specificity. We also used, as a point of reference, a unity like *psychopathology*: if we had wanted to provide it with a date of birth and precise limits, it would no doubt have been necessary to discover when the word was first used, to what kind of analysis it could be applied, and how it achieved its separation from neurology on the one hand and psychology on the other. What has emerged is a unity of another type, which does not appear to have the same dates, or the

same surface, or the same articulations, but which may take account of a group of objects for which the term psychopathology was merely a reflexive, secondary, classificatory rubric. Psychopathology finally emerged as a discipline in a constant state of renewal, subject to constant discoveries, criticisms, and corrected errors; the system of formation that we have defined remains stable. But let there be no misunderstanding: it is not the objects that remain constant, nor the domain that they form; it is not even their point of emergence or their mode of characterization; but the relation between the surfaces on which they appear, on which they can be delimited, on which they can be analyzed and specified.

In the descriptions for which I have attempted to provide a theory, there can be no question of interpreting discourse with a view to writing a history of the referent. In the example chosen, we are not trying to find out who was mad at a particular period, or in what his madness consisted, or whether his disturbances were identical with those known to us today. We are not asking ourselves whether witches were unrecognized and persecuted madmen and madwomen, or whether, at a different period, a mystical or aesthetic experience was not unduly medicalized. We are not trying to reconstitute what madness itself might be, in the form in which it first presented itself to some primitive, fundamental, deaf, scarcely articulated² experience, and in the form in which it was later organized (translated, deformed, travestied, perhaps even repressed) by discourses, and the oblique, often twisted play of their operations. Such a history of the referent is no doubt possible; and I have no wish at the outset to exclude any effort to uncover and free these “pre-discursive” experiences from the tyranny of the text. But what we are concerned with here is not to neutralize discourse, to make it the sign of something else, and to pierce through its density in order to reach what remains silently anterior to it, but on the contrary to maintain it in its consistency, to make it emerge in its own complexity. What, in short, we wish to do is to dispense with

²This is written against an explicit theme of my book *Madness and Civilization*, and one that recurs particularly in the Preface. [Au.]

“things.” To “depresentify” them. To conjure up their rich, heavy, immediate plenitude, which we usually regard as the primitive law of a discourse that has become divorced from it through error, oblivion, illusion, ignorance, or the inertia of beliefs and traditions, or even the perhaps unconscious desire not to see and not to speak. To substitute for the enigmatic treasure of “things” anterior to discourse, the regular formation of objects that emerge only in discourse. To define these *objects* without reference to the *ground*, the *foundation of things*, but by relating them to the body of rules that enable them to form as objects of a discourse and thus constitute the conditions of their historical appearance. To write a history of discursive objects that does not plunge them into the common depth of a primal soil, but deploys the nexus of regularities that govern their dispersion.

However, to suppress the stage of “things themselves” is not necessarily to return to the linguistic analysis of meaning. When one describes the formation of the objects of a discourse, one tries to locate the relations that characterize a discursive practice, one determines neither a lexical organization, nor the scissions of a semantic field: one does not question the meaning given at a particular period to such words as “melancholia” or “madness without delirium,” nor the opposition of content between “psychosis” and “neurosis.” Not, I repeat, that such analyses are regarded as illegitimate or impossible; but they are not relevant when we are trying to discover, for example, how criminality could become an object of medical expertise, or sexual deviation a possible object of psychiatric discourse. The analysis of lexical contents defines either the elements of meaning at the disposal of speaking subjects in a given period, or the semantic structure that appears on the surface of a discourse that has already been spoken; it does not concern discursive practice as a place in which a tangled plurality—at once superposed and incomplete—of objects is formed and deformed, appears and disappears.

The sagacity of the commentators³ is not mistaken: from the kind of analysis that I have un-

dertaken, *words* are as deliberately absent as *things* themselves; any description of a vocabulary is as lacking as any reference to the living plenitude of experience. We shall not return to the state anterior to discourse—in which nothing has yet been said, and in which things are only just beginning to emerge out of the grey light; and we shall not pass beyond discourse in order to rediscover the forms that it has created and left behind it; we shall remain, or try to remain, at the level of discourse itself. Since it is sometimes necessary to dot the “i”s of even the most obvious absences, I will say that in all these searches, in which I have still progressed so little, I would like to show that “discourses,” in the form in which they can be heard or read, are not, as one might expect, a mere intersection of things and words: an obscure web of things, and a manifest, visible, colored chain of words; I would like to show that discourse is not a slender surface of contact, or confrontation, between a reality and a language (*langue*), the intrication of a lexicon and an experience; I would like to show with precise examples that in analyzing discourses themselves, one sees the loosening of the embrace, apparently so tight, of words and things, and the emergence of a group of rules proper to discursive practice. These rules define not the dumb existence of a reality, nor the canonical use of a vocabulary, but the ordering of objects. “Words and things” is the entirely serious title of a problem; it is the ironic title of a work that modifies its own form, displaces its own data, and reveals, at the end of the day, a quite different task.⁴ A task that consists of not—of no longer—treating discourses as groups of signs (signifying elements referring to contents or representations) but as practices that systematically form the objects of which they speak. Of course, discourses are composed of signs; but what they do is more than use these signs to designate things. It is this *more* that renders them irreducible to the language (*langue*) and to speech. It is this “more” that we must reveal and describe.

⁴“Words and things” is the literal translation of the title of Foucault’s book *Les Mots et les choses*, published in English as *The Order of Things*. [Ed.]

³That is, critics of Foucault’s earlier books. [Ed.]

CHAPTER 4

THE FORMATION OF ENUNCIATIVE MODALITIES

Qualitative descriptions, biographical accounts, the location, interpretation, and cross-checking of signs, reasonings by analogy, deduction, statistical calculations, experimental verifications, and many other forms of statement are to be found in the discourse of nineteenth-century doctors. What is it that links them together? What necessity binds them together? Why these and not others? Before attempting an answer to such questions, we must first discover the law operating behind all these diverse statements, and the place from which they come.

a. First question: who is speaking? Who, among the totality of speaking individuals, is accorded the right to use this sort of language (*langage*)? Who is qualified to do so? Who derives from it his own special quality, his prestige, and from whom, in return, does he receive if not the assurance, at least the presumption that what he says is true? What is the status of the individuals who—alone—have the right, sanctioned by law or tradition, juridically defined or spontaneously accepted, to proffer such a discourse? The status of doctor involves criteria of competence and knowledge; institutions, systems, pedagogic norms; legal conditions that give the right—though not without laying down certain limitations—to practice and to extend one's knowledge. It also involves a system of differentiation and relations (the division of attributions, hierarchical subordination, functional complementarity, the request for and the provision and exchange of information) with other individuals or other groups that also possess their own status (with the state and its representatives, with the judiciary, with different professional bodies, with religious groups and, at times, with priests). It also involves a number of characteristics that define its functioning in relation to society as a whole (the role that is attributed to the doctor according to whether he is consulted by a private person or summoned, more or less under compulsion, by society, according to whether he practices a profession or carries out a function; the right to intervene or make decisions that is ac-

corded him in these different cases; what is required of him as the supervisor, guardian, and guarantor of the health of a population, a group, a family, an individual; the payment that he receives from the community or from individuals; the form of contract, explicit or implicit, that he negotiates either with the group in which he practices, or with the authority that entrusts him with a task, or with the patient who requests advice, treatment, or cure). This status of the doctor is generally a rather special one in all forms of society and civilization: he is hardly ever an undifferentiated or interchangeable person. Medical statements cannot come from anybody; their value, efficacy, even their therapeutic powers, and, generally speaking, their existence as medical statements cannot be dissociated from the statutorily defined person who has the right to make them, and to claim for them the power to overcome suffering and death. But we also know that this status in western civilization was profoundly modified at the end of the eighteenth century when the health of the population became one of the economic norms required by industrial societies.

b. We must also describe the institutional *sites* from which the doctor makes his discourse, and from which this discourse derives its legitimate source and point of application (its specific objects and instruments of verification). In our societies, these sites are: the hospital, a place of constant, coded, systematic observation, run by a differentiated and hierarchized medical staff, thus constituting a quantifiable field of frequencies; private practice, which offers a field of less systematic, less complete, and far less numerous observations, but which sometimes facilitates observations that are more far-reaching in their effects, with a better knowledge of the background and environment; the laboratory, an autonomous place, long distinct from the hospital, where certain truths of a general kind, concerning the human body, life, disease, lesions, etc., which provides certain elements of the diagnosis, certain signs of the developing condition, certain criteria of cure, and which makes therapeutic experiment possible; lastly, what might be called the "library" or documentary field, which includes not only the books and treatises tradition-

ally recognized as valid, but also all the observations and case histories published and transmitted, and the mass of statistical information (concerning the social environment, climate, epidemics, mortality rates, the incidence of diseases, the centers of contagion, occupational diseases) that can be supplied to the doctor by public bodies, by other doctors, by sociologists, and by geographers. In this respect, too, these various "sites" of medical discourse were profoundly modified in the nineteenth century: the importance of the document continues to increase (proportionately diminishing the authority of the book or tradition); the hospital, which had been merely a subsidiary site for discourse on diseases, and which took second place in importance and value to private practice (in which diseases left in their natural environment were, in the eighteenth century, to reveal themselves in their vegetal truth), then becomes the site of systematic, homogeneous observations, large-scale confrontations, the establishment of frequencies and probabilities, the annulation of individual variants, in short, the site of the appearance of disease, not as a particular species, deploying its essential features beneath the doctor's gaze, but as an average process, with its significant guidelines, boundaries, and potential development. Similarly, it was in the nineteenth century that daily medical practice integrated the laboratory as the site of a discourse that has the same experimental norms as physics, chemistry, or biology.

c. The positions of the subject are also defined by the situation that it is possible for him to occupy in relation to the various domains or groups of objects: according to a certain grid of explicit or implicit interrogations, he is the questioning subject and, according to a certain program of information, he is the listening subject; according to a table of characteristic features, he is the seeing subject, and, according to a descriptive type, the observing subject; he is situated at an optimal perceptual distance whose boundaries delimit the wheat of relevant information; he uses instrumental intermediaries that modify the scale of the information, shift the subject in relation to the average or immediate perceptual level, ensure his movement from a superficial to a deep level, make him circulate in the interior space of

the body—from manifest symptoms to the organs, from the organs to the tissues, and finally from the tissues to the cells. To these perceptual situations should be added the positions that the subject can occupy in the information networks (in theoretical teaching or in hospital training; in the system of oral communication or of written document: as emitter and receiver of observations, case histories, statistical data, general theoretical propositions, projects, and decisions). The various situations that the subject of medical discourse may occupy were redefined at the beginning of the nineteenth century with the organization of a quite different perceptual field (arranged in depth, manifested by successive recourse to instruments, deployed by surgical techniques or methods of autopsy, centered upon lesional sites), and with the establishment of new systems of registration, notation, description, classification, integration in numerical series and in statistics, with the introduction of new forms of teaching, the circulation of information, relations with other theoretical domains (sciences or philosophy) and with other institutions (whether administrative, political, or economic).

If, in clinical discourse, the doctor is in turn the sovereign, direct questioner, the observing eye, the touching finger, the organ that deciphers signs, the point at which previously formulated descriptions are integrated, the laboratory technician, it is because a whole group of relations is involved. Relations between the hospital space as a place of assistance, of purified, systematic observation, and of partially proved, partially experimental therapeutics, and a whole group of perceptual codes of the human body—as it is defined by morbid anatomy; relations between the field of immediate observations and the domain of acquired information; relations between the doctor's therapeutic role, his pedagogic role, his role as an intermediary in the diffusion of medical knowledge, and his role as a responsible representative of public health in the social space. Understood as a renewal of points of view, contents, the forms and even the style of description, the use of inductive or probabilistic reasoning, types of attribution of causality, in short, as a renewal of the modalities of enunciation, clinical

medicine must not be regarded as the result of a new technique of observation—that of autopsy, which was practiced long before the advent of the nineteenth century; nor as the result of the search for pathogenic causes in the depths of the organism—Morgagni was engaged in such a search in the middle of the eighteenth century; nor as the effect of that new institution, the teaching hospital—such institutions had already been in existence for some decades in Austria and Italy; nor as the result of the introduction of the concept of tissue in Bichat's *Traité des membranes*. But as the establishment of a relation, in medical discourse, between a number of distinct elements, some of which concerned the status of doctors, others the institutional and technical site from which they spoke, others their position as subjects perceiving, observing, describing, teaching, etc. It can be said that this relation between different elements (some of which are new, while others were already in existence) is effected by clinical discourse: it is this, as a practice, that establishes between them all a system of relations that is not “really” given or constituted *a priori*; and if there is a unity, if the modalities of enunciation that it uses, or to which it gives place, are not simply juxtaposed by a series of historical contingencies, it is because it makes constant use of this group of relations.

One further remark. Having noted the disparity of the types of enunciation in clinical discourse, I have not tried to reduce it by uncovering the formal structures, categories, modes of logical succession, types of reasoning and induction, forms of analysis and synthesis that may have operated in a discourse; I did not wish to reveal the rational organization that may provide statements like those of medicine with their element of intrinsic necessity. Nor did I wish to reduce to a single founding act, or to a founding consciousness the general horizon of rationality against which the progress of medicine gradually emerged, its efforts to model itself upon the exact sciences, the contraction of its methods of observation, the slow, difficult expulsion of the images or fantasies that inhabit it, the purification of its system of reasoning. Lastly, I have not tried to describe the empirical genesis, nor the various component elements of the medical mentality:

how this shift of interest on the part of the doctors came about, by what theoretical or experimental model they were influenced, what philosophy or moral thematics defined the climate of their reflection, to what questions, to what demands, they had to reply, what efforts were required of them to free themselves from traditional prejudices, by what ways they were led towards a unification and coherence that were never achieved, never reached, by their knowledge. In short, I do not refer the various enunciative modalities to the unity of the subject—whether it concerns the subject regarded as the pure founding authority of rationality, or the subject regarded as an empirical function of synthesis. Neither the “knowing” (*le “connaître”*), nor the “knowledge” (*les “connaissances”*).

In the proposed analysis, instead of referring back to *the synthesis or the unifying function of a subject*, the various enunciative modalities manifest his dispersion.⁵ To the various statuses, the various sites, the various positions that he can occupy or be given when making a discourse. To the discontinuity of the planes from which he speaks. And if these planes are linked by a system of relations, this system is not established by the synthetic activity of a consciousness identical with itself, dumb and anterior to all speech, but by the specificity of a discursive practice. I shall abandon any attempt, therefore, to see discourse as a phenomenon of expression—the verbal translation of a previously established synthesis; instead, I shall look for a field of regularity for various positions of subjectivity. Thus conceived, discourse is not the majestically unfolding manifestation of a thinking, knowing, speaking subject, but, on the contrary, a totality, in which the dispersion of the subject and his discontinuity with himself may be determined. It is a space of exteriority in which a network of distinct sites is deployed. I showed earlier that it was neither by “words” nor by “things” that the regulation of the objects proper to a discursive formation should be defined; similarly, it must now be recognized that it is neither by recourse to a transcendental

⁵In this respect, the term “*regard médical*” used in my *Naissance de la clinique* [*The Birth of the Clinic*] was not a very happy one. [Au.]

subject nor by recourse to a psychological subjectivity that the regulation of its enunciations should be defined.

Part III

The Statement and the Archive

CHAPTER 1

DEFINING THE STATEMENT

I suppose that by now we have accepted the risk; that we are now willing, in order to articulate the great surface of discourse, to posit the existence of those somewhat strange, somewhat distant figures that I have called discursive formations; that we have put to one side, not in a definitive way, but for a time and out of methodological rigor, the traditional unities of the book and the *œuvre*; that we have ceased to accept as a principle of unity the laws of constructing discourse (with the formal organization that results), or the situation of the speaking subject (with the context and the psychological nucleus that characterize it); that we no longer relate discourse to the primary ground of experience, nor to the *a priori* authority of knowledge; but that we seek the rules of its formation in discourse itself. I suppose that we have agreed to undertake these long inquiries into the system of emergence of objects, the system of the appearance and distribution of enunciative modes, the system of the placing and dispersion of concepts, the system of the deployment of strategic choices. I suppose that we are willing to construct such abstract, problematic unities, instead of welcoming those that presented themselves as being more or less perceptually familiar, if not as self-evident realities.

But what, in fact, have I been speaking about so far? What has been the object of my inquiry? And what did I intend to describe? “Statements”—both in that discontinuity that frees them from all the forms in which one was so ready to allow them to be caught, and in the general, unlimited, apparently formless field of discourse. But I refrained from providing a preliminary definition of the statement. Nor did I try to construct one as I proceeded in order to justify the naivete of my starting point. Moreover—and this no doubt is the reason for so much unconcern—I wonder

whether I have not changed direction on the way; whether I have not replaced my first quest with another; whether, while analyzing “objects” or “concepts,” let alone “strategies,” I was in fact still speaking of statements; whether the four groups of rules by which I characterized a discursive formation really did define groups of statements. Lastly, instead of gradually reducing the rather fluctuating meaning of the word “discourse,” I believe that I have in fact added to its meanings: treating it sometimes as the general domain of all statements, sometimes as an individualizable group of statements, and sometimes as a regulated practice that accounts for a certain number of statements; and have I not allowed this same word “discourse,” which should have served as a boundary around the term “statement,” to vary as I shifted my analysis or its point of application, as the statement itself faded from view?

This, then, is the task that now confronts me: to take up the definition of the statement at its very root. And to see whether that definition really was present in my earlier descriptions; to see whether I really was dealing with the statement in my analysis of discursive formations.

On several occasions I have used the term “statement,” either to speak of a population of statements (as if I were dealing with individuals or isolated events), or in order to distinguish it from the groups that I called “discourses” (as the part is distinguished from the whole). At first sight, the statement appears as an ultimate, undecomposable element that can be isolated and introduced into a set of relations with other similar elements. A point without a surface, but a point that can be located in planes of division and in specific forms of groupings. A seed that appears on the surface of a tissue of which it is the constituent element. The atom of discourse.

And the problem soon arises: if the statement really is the elementary unit of discourse, what does it consist of? What are its distinctive features? What boundaries must one accord to it? Is this unity identical with that to which logicians have given the term “proposition,” and that which grammarians call a “sentence,” or that which “analysts” try to map by the term “speech act”? What place does it occupy among all those unities that the investigation of language (*langage*) has

already revealed? (Even though the theory of these unities is so often incomplete, on account of the difficulty of the problems that they present, and the difficulty in many cases of delimiting them with any degree of rigor.)

I do not think that the necessary and sufficient condition of a statement is the presence of a defined propositional structure, or that one can speak of a statement only when there is a proposition. In fact, one can have two perfectly distinct statements, referring to quite different discursive groupings, when one finds only one proposition, possessing only one value, obeying only one group of laws for its construction, and involving the same possibilities of use. "No one heard" and "It is true that no one heard" are indistinguishable from a logical point of view, and cannot be regarded as two different propositions. But in so many statements, these two formations are not equivalent or interchangeable. They cannot occupy the same place on the plane of discourse, nor can they belong to exactly the same group of statements. If one finds the formulation "No one heard" in the first line of a novel, we know, until a new order emerges, that it is an observation made either by the author, or by a character (aloud or in the form of an interior monologue); if one finds the second formulation, "It is true that no one heard," one can only be in a group of statements constituting an interior monologue, a silent discussion with oneself, or a fragment of dialogue, a group of questions and answers. In each case, there is the same propositional structure, but there are distinct enunciative characteristics. There may, on the other hand, be complex and doubled propositional forms, or, on the contrary, fragmentary, incomplete propositions, when one is quite obviously dealing with a simple, complete, autonomous statement (even if it is part of a group of other statements): the example "The present king of France is bald" is well known (it can be analyzed from a logical point of view only if one accepts, in the form of a single statement, two distinct propositions, each of which may be true or false on its own account), or again there is a proposition like "I am lying," which can be true only in relation to an assertion on a lower level. The criteria by which one can define the identity of a proposition, dis-

tinguish several of them beneath the unity of a formulation, characterize its autonomy or its completion are not valid when one comes to describe the particular unity of a statement.

And what of the sentence? Should we not accept an equivalence between sentence and statement? Wherever there is a grammatically isolable sentence, one can recognize the existence of an independent statement; but, on the other hand, one cannot speak of statement when, beneath the sentence itself, one reaches the level of its constituents. It would be pointless to object, against such an equivalence, that some statements may be composed, outside the canonical form of subject-copula-predicate, of a simple nominal syntagma ("That man!") or an adverb ("Absolutely"), or a personal pronoun ("You!"). For the grammarians themselves recognize such formulations as independent sentences, even if those formulations have been obtained through a series of transformations on the basis of the subject-predicate schema. Moreover: they recognize as "acceptable" sentences groups of linguistic elements that have not been correctly constructed, providing they are interpretable; on the other hand, they accord the status of grammatical sentences to interpretable groups on condition however that they are correctly formed. With so broad—and, in a sense, so lax—a definition of the sentence, it is difficult to see how one is to recognize sentences that are not statements, or statements that are not sentences.

Yet the equivalence is far from being a total one; and it is relatively easy to cite statements that do not correspond to the linguistic structure of sentences. When one finds in a Latin grammar a series of words arranged in a column: *amo*, *amas*, *amat*, one is dealing not with a sentence, but with the statement of the different personal inflections of the present indicative of the verb *amare*. One may find this example debatable; one may say that it is a mere artifice of presentation, that this statement is an elliptical, abbreviated sentence, spatialized in a relatively unusual mode, that should be read as the sentence "The present indicative of the verb *amare* is *amo* for the first person," etc. Other examples, in any case, are less ambiguous: a classificatory table of the botanical species is made up of statements,

not sentences (Linnaeus's *Genera Plantarum* is a whole book of statements, in which one can recognize only a small number of sentences); a genealogical tree, an accounts book, the calculations of a trade balance are statements; where are the sentences? One can go further: an equation of the n th degree, or the algebraic formula of the law of refraction must be regarded as statements: and although they possess a highly rigorous grammaticality (since they are made up of symbols whose meaning is determined by rules of usage, and whole succession is governed by laws of construction), this grammaticality cannot be judged by the same criteria that, in a natural language (*langue*), make it possible to define an acceptable, or interpretable sentence. Lastly, a graph, a growth curve, an age pyramid, a distribution cloud are all statements: any sentences that may accompany them are merely interpretation or commentary; they are in no way an equivalent: this is proved by the fact that, in a great many cases, only an infinite number of sentences could equal all the elements that are explicitly formulated in this sort of statement. It would not appear to be possible, therefore, to define a statement by the grammatical characteristics of the sentence.

One last possibility remains: at first sight, the most likely of all. Can one not say that there is a statement wherever one can recognize and isolate an act of formulation—something like the speech act referred to by English analysts?⁶ This term does not, of course, refer to the material act of speaking (aloud or to oneself) or of writing (by hand or typewriter); nor does it refer to the intention of the individual who is speaking (the fact that he wants to convince someone else, to be obeyed, to discover the solution to a problem, or to communicate information); nor does it refer to the possible result of what he has said (whether he has convinced someone or aroused his suspicion; whether he was listened to and whether his orders were carried out; whether his prayer was heard); what one is referring to is the operation that has been carried out by the formula itself, in its emergence: promise, order, decree, contract, agreement, observation. The speech act is not

⁶See *How to Do Things with Words* (2nd ed., Cambridge, Mass., 1975) by J. L. Austin, the "English analyst." [Ed.]

what took place just prior to the moment when the statement was made (in the author's thought or intentions); it is not what might have happened, after the event itself, in its wake, and the consequences that it gave rise to; it is what occurred by the very fact that a statement was made—and precisely this statement (and no other) in specific circumstances. Presumably, therefore, one individualization of statements refers to the same criteria as the location of acts of formulation: each act is embodied in a statement and each statement contains one of those acts. They exist through one another in an exact reciprocal relationship.

Yet such a correlation does not stand up to examination. For one thing, more than a statement is often required to effect a speech act: an oath, a prayer, a contract, a promise, or a demonstration usually require a certain number of distinct formulas or separate sentences: it would be difficult to challenge the right of each of these formulas and sentences to be regarded as a statement on the pretext that they are all imbued with one and the same speech act. In that case, it might be said that the act itself does not remain the same throughout the series of statements; that in a prayer there are as many limited, successive, and juxtaposed acts of prayer as demands formulated by distinct statements; and that in a promise there are as many engagements as sequences that can be individualized into separate statements. But one cannot be satisfied with this answer: first because the act of formulation would no longer serve to define the statement, but, on the contrary, the act of formulation would be defined by the statement—which raises problems, and requires criteria of individualization. Moreover, certain speech acts can be regarded as complete in their particular unity only if several statements have been made, each in its proper place. These acts are not constituted, therefore, by the series or sum of these statements, by their necessary juxtaposition; they cannot be regarded as being present whole and entire in the least of them, and as renewing themselves with each one. So one cannot establish a bi-univocal relation between the group of statements and that of speech acts either.

When one wishes to individualize statements,

one cannot therefore accept unreservedly any of the models borrowed from grammar, logic, or “analysis.” In all three cases, one realizes that the criteria proposed are too numerous and too heavy, that they limit the extent of the statement, and that although the statement sometimes takes on the forms described and adjusts itself to them exactly, it does not always do so: one finds statements lacking in legitimate propositional structure; one finds statements where one cannot recognize a sentence; one finds more statements than one can isolate speech acts. As if the statement were more tenuous, less charged with determinations, less strongly structured, more omnipresent, too, than all these figures; as if it had fewer features, and ones less difficult to group together; but as if, by that very fact, it rejected all possibility of describing anything. And this is all the more so, in that it is difficult to see at what level it should be situated, and by what method it should be approached: for all the analyses mentioned above, there is never more than a support, or accidental substance; in logical analysis, it is what is left when the propositional structure has been extracted and defined; for grammatical analysis, it is the series of linguistic elements in which one may or may not recognize the form of a sentence; for the analysis of speech acts, it appears as the visible body in which they manifest themselves. In relation to all these descriptive approaches, it plays the role of a residual element, of a mere fact, of irrelevant raw material.

Must we admit in the end that the statement cannot possess a character of its own and that it cannot be adequately defined, in so far as it is, for all analyses of language (*langage*), the extrinsic material on the basis of which they determine their own object? Must we admit that any series of signs, figures, marks, or traces—whatever their organization or probability may be—is enough to constitute a statement; and that it is the role of grammar to say whether or not it is a sentence, the role of logic to decide whether or not it contains a propositional form, the role of Analysis to determine what speech act it may embody? In which case, we would have to admit that there is a statement whenever a number of signs are juxtaposed—or even, perhaps—when there is a single sign. The threshold of the statement is the

threshold of the existence of signs. Yet even here, things are not so simple, and the meaning of a term like “the existence of signs” requires elucidation. What does one mean when one says that there are signs, and that it is enough for there *to be* signs for there *to be* a statement? What special status should be given to that verb *to be*?

For it is obvious that statements do not exist in the same sense in which a language (*langue*) exists, and, with that language, a collection of signs defined by their contrasting characteristics and their rules of use; a language in fact is never given in itself, in its totality; it could only be so in a secondary way, in the oblique form of a description that would take it as its object; the signs that make up its elements are forms that are imposed upon statements and control them from within. If there were no statements, the language (*langue*) would not exist; but no statement is indispensable for a language to exist (and one can always posit, in place of any statement, another statement that would in no way modify the language). The language exists only as a system for constructing possible statements; but in another respect, it exists only as a (more or less exhaustive) description obtained from a collection of real statements. Language (*langue*) and statement are not at the same level of existence; and one cannot say that there are statements in the same way as one says that there are languages (*langues*). But is it enough, then, that the signs of a language constitute a statement, if they were produced (articulated, drawn, made, traced) in one way or another, if they appeared in a moment of time and in a point in space, if the voice that spoke them or the gesture that formed them gave them the dimensions of a material existence? Can the letters of the alphabet written by me haphazardly on to a sheet of paper, as an example of what is not a statement, can the lead characters used for printing books—and one cannot deny their materiality, which has space and volume—can these signs, spread out, visible, manipulable, be reasonably regarded as statements?

When looked at more closely, however, these two examples (the lead characters and the signs that I wrote down on the sheet of paper) are seen to be not quite superposable. This pile of printer’s characters, which I can hold in my hand,

or the letters marked on the keyboard of a typewriter are not statements: at most they are tools with which one can write statements. On the other hand, what are the letters that I write down haphazardly on to a sheet of paper, just as they come to mind, and to show that they cannot, in their disordered state, constitute a statement? What figure do they form? Are they not a table of letters chosen in a contingent way, the statement of an alphabetical series governed by other laws than those of chance? Similarly, the table of random numbers that statisticians sometimes use is a series of numerical symbols that are not linked together by any syntactical structure; and yet that series is a statement: that of a group of figures obtained by procedures that eliminate everything that might increase the probability of the succeeding issues. Let us look at the example again: the keyboard of a typewriter is not a statement; but the same series of letters, A, Z, E, R, T, listed in a typewriting manual, is the statement of the alphabetical order adopted by French typewriters. So we are presented with a number of negative consequences: a regular linguistic construction is not required in order to form a statement (this statement may be made up of a series possessing a minimal probability); but neither is it enough to have any material effectuation of linguistic elements, any emergence of signs in time and space, for a statement to appear and to begin to exist. The statement exists therefore neither in the same way as a language (*langue*) (although it is made up of signs that are definable in their individuality only within a natural or artificial linguistic system), nor in the same way as the objects presented to perception (although it is always endowed with a certain materiality, and can always be situated in accordance with spatio-temporal coordinates).

This is not the place to answer the general question of the statement, but the problem can be clarified: the statement is not the same kind of unit as the sentence, the proposition, or the speech act; it cannot be referred therefore to the same criteria; but neither is it the same kind of unit as a material object, with its limits and independence. In its way of being unique (neither entirely linguistic, nor exclusively material), it is indispensable if we want to say whether or not

there is a sentence, proposition, or speech act; and whether the sentence is correct (or acceptable, or interpretable), whether the proposition is legitimate and well constructed, whether the speech act fulfills its requirements, and was in fact carried out. We must not seek in the statement a unit that is either long or short, strongly and weakly structured, but one that is caught up, like the others, in a logical, grammatical, locutory nexus. It is not so much one element among others, a division that can be located at a certain level of analysis, as a function that operates vertically in relation to these various units, and which enables one to say of a series of signs whether or not they are present in it. The statement is not therefore a structure (that is, a group of relations between variable elements, thus authorizing a possible infinite number of concrete models); it is a function of existence that properly belongs to signs and on the basis of which one may then decide, through analysis or intuition, whether or not they "make sense," according to what rule they follow one another or are juxtaposed, of what they are the sign, and what sort of act is carried out by their formulation (oral or written). One should not be surprised, then, if one has failed to find structural criteria of unity for the statement; this is because it is not in itself a unit, but a function that cuts across a domain of structures and possible unities, and which reveals them, with concrete contents, in time and space.

It is this function that we must now describe as such, that is, in its actual practice, its conditions, the rules that govern it, and the field in which it operates.

CHAPTER 2 THE ENUNCIATIVE FUNCTION

It is useless therefore to look for the statement among unitary groups of signs. The statement is neither a syntagma, nor a rule of construction, nor a canonic form of succession and permutation; it is that which enables such groups of signs to exist, and enables these rules or forms to become manifest. But although it enables them to exist, it does so in a special way—a way that must not be confused with the existence of signs as elements of a language (*langue*), or with the

material existence of those marks that occupy a fragment of space or last for a variable length of time. It is this special mode of existence, characteristic of every series of signs, providing it is stated, that we must now examine.

a. So let us take once again the example of those signs made or drawn in a defined materiality, and grouped in a particular way, which may or may not be arbitrary, but which, in any case, is not grammatical: the keyboard of a typewriter, or a handful of printer's characters. All that is required is that the signs be given, that I copy them on to a sheet of paper (in the same order in which they appear, but without producing a word) for a statement to emerge: the statement of the letters of the alphabet in an order that makes the typing of them easier, and the statement of a random group of letters. What has happened, then, that a statement should have been made? What can the second group possess that is not possessed by the first? Reduplication, the fact that it is a copy? Certainly not, since the keyboards of typewriters all copy a certain model and are not, by that very fact, statements. The intervention of a subject? This answer is inadequate for two reasons: it is not enough that the reiteration of a series be due to the initiative of an individual for it to be transformed, by that very fact, into a statement; and, in any case, the problem does not lie in the cause or origin of the reduplication, but in the special relation between the two identical series. The second series is not a statement because and only because a biunivocal relation can be established between each of its elements in the first series (this relation characterizes either the fact of duplication if it is simply a copy, or the exactitude of the statement if one has in fact crossed the threshold of enunciation; but it does not allow us to define this threshold and the very fact of the statement). A series of signs will become a statement on condition that it possesses "something else" (which may be strangely similar to it, and almost identical as in the example chosen), a specific relation that concerns itself—and not its cause, or its elements.

It may be objected that there is nothing enigmatic about this relation; that, on the contrary, it is a very familiar one, which is constantly being

analyzed: that, in fact, it concerns the relation of the signifier (*signifiant*) to the signified (*signifié*), of the name to what it designates; the relation of the sentence to its meaning; the relation of the proposition to its referent (*réfèrent*). But I believe that one can show that the relation of the statement to what it states is not superposable on any of these relations.

The statement, even if reduced to a nominal syntagma ("The boat!"), even if it is reduced to a proper noun ("Peter!"), does not have the same relation with what it states as the name with what it designates or signifies. The name or noun is a linguistic element that may occupy different places in grammatical groups: its meaning is defined by its rules of use (whether these concern individuals who may be validly designated by it, or syntactical structures in which it may correctly participate); a noun is defined by its possibility of recurrence. A statement exists outside any possibility of reappearing; and the relation that it possesses with what it states is not identical with a group of rules of use. It is a very special relation: and if in these conditions an identical formulation reappears, with the same words, substantially the same names—in fact, exactly the same sentence—it is not necessarily the same statement.

Nor should the relation between a statement and what it states be confused with the relation between a proposition and its referent. We know that logicians say that a proposition like "The golden mountain is in California" cannot be verified because it has no referent: its negation is therefore neither more nor less true than its affirmation. Should we say similarly that a statement refers to nothing if the proposition, to which it lends existence, has no referent? Rather the reverse. We should say not that the absence of a referent brings with it the absence of a correlate for the statement, but that it is the correlate of the statement—that to which it refers, not only what is said, but also what it speaks of, its "theme"—which makes it possible to say whether or not the proposition has a referent: it alone decides this in a definitive way. Let us suppose in fact that the formulation "The golden mountain is in California" is found not in a geography book, nor in a travel book, but in a novel, or in some fictional

context or other, one could still accord it a value of truth or error (according to whether the imaginary world to which it refers does or does not authorize such a geological and geographical fantasy). We must know to what the statement refers, what is its space of correlations, if we are to say whether a proposition has or has not a referent. "The present king of France is bald" lacks a referent only if one supposes that the statement refers to the world of contemporary historical information. The relation of the proposition to the referent cannot serve as a model or as a law for the relation of the statement to what it states. The latter relation not only does not belong to the same level as the former, but it is anterior to it.

Nor is it superposable to the relation that may exist between a sentence and its meaning. The gap between these two forms of relation appears clearly in the case of two famous sentences that are meaningless, in spite of their perfectly correct grammatical structure (as in the example: "Colorless green ideas sleep furiously"). In fact, to say that a sentence like this is meaningless presupposes that one has already excluded a number of possibilities—that it describes a dream, that it is part of a poetic text, that it is a coded message, that it is spoken by a drug addict—and that one assumes it to be a certain type of statement that must refer, in a very definite way, to some visible reality. The relation of a sentence with its meaning resides within a specific, well-stabilized enunciative relation. Moreover, even if these sentences are taken at an enunciative level at which they are meaningless, they are not, as statements, deprived of correlations: there are those that enable one to say, for example, that ideas are never either colored or colorless, and therefore that the sentence is meaningless (and these correlations concern a level of reality in which ideas are invisible, and in which colors can be seen, etc.); there are also those correlations that validate the sentence in question as a mention of a type of correct syntactical organization that was also meaningless (and these correlations concern the level of the language [*langue*], with its laws and properties). A sentence cannot be nonsignificant; it refers to something, by virtue of the fact that it is a statement.

How, then, can we define this relation that

characterizes the statement as statement—a relation that seems to be implicitly presupposed by the sentence or the proposition, and which is anterior to it? How can we disentangle it from those relations of meaning or those values of truth, with which it is usually confused? Any statement, as simple a statement as one can imagine, does not have as its *correlate* an individual or a particular object that is designated by this or that word in the sentence: in the case of a statement like "The golden mountain is in California," the *correlate* is not the formation, real or imaginary, possible or absurd, that is designated by the nominal syntagma that serves as the subject. But nor is the *correlate* of the statement a state of things or a relation capable of verifying the proposition (in the example chosen this would be the spatial inclusion of a particular mountain in a particular region). On the other hand, what might be defined as the *correlate* of the statement is a group of domains in which such objects may appear and to which such relations may be assigned: it would, for example, be a domain of material objects possessing a certain number of observable physical properties, relations of perceptible size—or, on the contrary, it would be a domain of fictitious objects, endowed with arbitrary properties (even if they have a certain constancy and a certain coherence), without any authority of experimental or perceptive verification; it would be a domain of spatial and geographical localizations, with coordinates, distances, relations of proximity and of inclusion—or, on the contrary, a domain of symbolic appurtenances and secret kinships; it would be a domain of objects that exist at the same moment and on the same time scale as the statement is formulated, or it would be a domain of objects that belongs to a quite different present—that indicated and constituted by the statement itself, and not that to which the statement also belongs. A statement is not confronted (face to face, as it were) by a *correlate*—or the absence of a *correlate*—as a proposition has (or has not) a referent, or as a proper noun designates someone (or no one). It is linked rather to a "referential" that is made up not of "things," "facts," "realities," or "beings," but of laws of possibility, rules of existence for the objects that are named, designated, or described

within it, and for the relations that are affirmed or denied in it. The referential of the statement forms the place, the condition, the field of emergence, the authority to differentiate between individuals or objects, states of things and relations that are brought into play by the statement itself; it defines the possibilities of appearance and delimitation of that which gives meaning to the sentence, a value as truth to the proposition. It is this group that characterizes the *enunciative* level of the formulation, in contrast to its grammatical and logical levels: through the relation with these various domains of possibility the statement makes of a syntagma, or a series of symbols, a sentence to which one may or may not ascribe a meaning, a proposition that may or may not be accorded a value as truth.

One can see in any case that the description of this enunciative level can be performed neither by a formal analysis, nor by a semantic investigation, nor by verification, but by the analysis of the relations between the statement and the spaces of differentiation, in which the statement itself reveals the differences.

b. A statement also differs from any series of linguistic elements by virtue of the fact that it possesses a particular relation with a subject. We must now define the nature of this relation, and, above all, distinguish it from other relations with which it might be confused.

We must not, in fact, reduce the subject of the statement to the first-person grammatical elements that are present within the sentence. First because the subject of the sentence is not within the linguistic syntagma; secondly because a statement that does not involve a first person nevertheless has a subject; lastly and above all, all statements that have a fixed grammatical form (whether in the first or second person) do not have the same type of relation with the subject of the statement. It is easy to see that this relation is not the same in a statement of the type "Night is falling," and "Every effect has a cause"; while in the case of a statement of the type "Longtemps, je me suis couché de bonne heure" ("For a long time I used to go to bed early"), the relation to the enunciating subject is not the same if one hears it spoken in the course of a conversation,

and if one reads it at the beginning of Proust's *A la recherche du temps perdu*.

Is not this subject exterior to the sentence quite simply the individual who spoke or wrote those words? As we know, there can be no signs without someone, or at least something, to emit them. For a series of signs to exist, there must—in accordance with the system of causality—be an "author" or a transmitting authority. But this "author" is not identical with the subject of the statement; and the relation of production that he has with the formulation is not superposable to the relation that unites the enunciating subject and what he states. Let us ignore the oversimple case of a group of signs that have been materially fashioned or traced: their production implies an author even though there is neither a statement nor a subject of a statement. One might also mention, by way of showing the dissociation between the transmitter of signs and the subject of a statement, the case of a text read by a third person, or that of an actor speaking his part. But these are extreme cases. Generally speaking, it would seem, at first sight at least, that the subject of the statement is precisely he who has produced the various elements, with the intention of conveying meaning. Yet things are not so simple. In a novel, we know that the author of the formulation is that real individual whose name appears on the title page of the book (we are still faced with the problem of the dialogue, and sentences purporting to express the thoughts of a character; we are still faced with the problem of texts published under a pseudonym: and we know all the difficulties that these duplications raise for practitioners of interpretative analysis when they wish to relate these formulations, *en bloc*, to the author of the text, to what he wanted to say, to what he thought, in short, to that great silent, hidden, uniform discourse on which they build that whole pyramid of different levels); but, even apart from those authorities of formulation that are not identical with the individual/author, the statements of the novel do not have the same subject when they provide, as if from the outside, the historical and spatial setting of the story, when they describe things as they would be seen by an anonymous, invisible, neutral individual who moves magi-

cally among the characters of the novel, or when they provide, as if by an immediate, internal decipherment, the verbal version of what is silently experienced by a character. Although the author is the same in each case, although he attributes them to no one other than himself, although he does not invent a supplementary link between what he is himself and the text that one is reading, these statements do not presuppose the same characteristics for the enunciating subject; they do not imply the same relation between this subject and what is being stated.

It might be said that the often quoted example of the fictional text has no conclusive validity; or rather that it questions the very essence of literature, and not the status of the subject of statements in general. According to this view, it is in the nature of literature that the author should appear to be absent, conceal himself within it, delegate his authority, or divide himself up; and one should not draw a general conclusion from this dissociation that the subject of the statement is distinct in everything—in nature, status, function, and identity—from the author of the formulation. Yet this gap is not confined to literature alone. It is absolutely general in so far as the subject of the statement is a particular function, but is not necessarily the same from one statement to another; in so far as it is an empty function, that can be filled by virtually any individual when he formulates the statement; and in so far as one and the same individual may occupy in turn, in the same series of statements, different positions, and assume the role of different subjects. Take the example of a mathematical treatise. In the sentence in the preface in which one explains why this treatise was written, in what circumstances, in response to what unsolved problems, or with what pedagogical aim in view, using what methods, after what attempts and failures, the position of the enunciative subject can be occupied only by the author, or authors, of the formulation: the conditions of individualization of the subject are in fact very strict, very numerous, and authorize in this case only one possible subject. On the other hand, if in the main body of the treatise, one meets a proposition like “Two quantities equal to a third quantity are equal to each

other,” the subject of the statement is the absolutely neutral position, indifferent to time, space, and circumstances, identical in any linguistic system, and in any code of writing or symbolization, that any individual may occupy when affirming such a proposition. Moreover, sentences like “We have already shown that . . .” necessarily involve statements of precise contextual conditions that were not implied by the preceding formulation: the position is then fixed within a domain constituted by a finite group of statements; it is localized in a series of enunciative events that must already have occurred; it is established in a demonstrative time whose earlier stages are never lost, and which do not need therefore to be begun again and repeated identically to be made present once more (a mention is enough to reactivate them in their original validity); it is determined by the prior existence of a number of effective operations that need not have been performed by one and the same individual (he who is speaking now), but which rightfully belong to the enunciating subject, which are at his disposal, and of which he may avail himself when necessary. The subject of such a statement will be defined by these requisites and possibilities taken together; and he will not be described as an individual who has really carried out certain operations, who lives in an unbroken, never forgotten time, who has interiorized, in the horizon of his consciousness, a whole group of true propositions, and who retains, in the living present of his thought, their potential reappearance (this is merely, in the case of individuals, the psychological, “lived” aspect of their position as enunciating subjects).

Similarly, one might describe the specific position of the enunciating subject in sentences like “I call straight any series of points that . . .” or “Let there be a finite series of any elements,” in each case the position of the subject is linked to the existence of an operation that is both determined and present; in each case, the subject of the statement is also the subject of the operation (he who establishes the definition of a straight line is also he who states it; he who posits the existence of a finite series is also, and at the same time, he who states it); and in each case, the

subject links, by means of this operation and the statement in which it is embodied, his future statements and operations (as an enunciating subject, he accepts this statement as his own law). There is a difference however: in the first case, what is stated is a convention of language (*langage*)—of that language that the enunciating subject must use, and within which he is defined: the enunciating subject and what is stated are therefore at the same level (whereas for a formal analysis a statement like this one implies the difference of level proper to metalanguage); in the second case, on the other hand, the enunciating subject brings into existence outside himself an object that belongs to a previously defined domain, whose laws of possibility have already been articulated, and whose characteristics precede the enunciation that posits it. We saw above that the position of the enunciating subject is not always identical in the affirmation of a true proposition; we now see that it is also not identical when an operation is carried out within the statement itself.

So the subject of the statement should not be regarded as identical with the author of the formulation—either in substance, or in function. He is not in fact the cause, origin, or starting point of the phenomenon of the written or spoken articulation of a sentence; nor is it that meaningful intention which, silently anticipating words, orders them like the visible body of its intuition; it is not the constant, motionless, unchanging focus of a series of operations that are manifested, in turn, on the surface of discourse through the statements. It is a particular, vacant place that may in fact be filled by different individuals; but, instead of being defined once and for all, and maintaining itself as such throughout a text, a book, or an *œuvre*, this place varies—or rather it is variable enough to be able either to persevere, unchanging, through several sentences, or to alter with each one. It is a dimension that characterizes a whole formulation *qua* statement. It is one of the characteristics proper to the enunciative function and enables one to describe it. If a proposition, a sentence, a group of signs can be called “statement,” it is not therefore because, one day, someone happened to speak them or put them into some concrete form of writing; it is because the

position of the subject can be assigned. To describe a formulation *qua* statement does not consist in analyzing the relations between the author and what he says (or wanted to say, or said without wanting to); but in determining what position can and must be occupied by any individual if he is to be the subject of it.

c. The third characteristic of the enunciative function: it cannot operate without the existence of an associated domain. This makes the statement something other, something more, than a mere collection of signs, which, in order to exist, need only a material base—a writing surface, sound, malleable material, the hollowed incision of a trace. But this also, and above all, distinguishes it from the sentence and the proposition.

Take a group of words or symbols. In order to decide whether they constitute a grammatical unit like the sentence or a logical unit like the proposition, it is necessary, and enough, to determine the rules according to which it was constructed. “Peter arrived yesterday” forms a sentence, but “Yesterday arrived Peter” does not; $A + B = C + D$ constitutes a proposition, but $ABC + = D$ does not. Only an examination of the elements and of their distribution, in reference to the system—natural or artificial—of the language (*langue*) enables us to distinguish between what is and what is not a proposition, between what is a sentence and what is merely an accumulation of words. Moreover, this examination is enough to determine to what type of grammatical structure the sentence in question belongs (affirmative sentence, in the past tense, containing a nominal subject, etc.), or to what type of proposition the series of signs in question belongs (an equivalence between two additions). One can even conceive of a sentence or a proposition that is “self-determining,” that requires no other sentence or proposition to serve as a context, no other associated sentences or propositions: that such a sentence or proposition would, in such conditions, be useless and unusable, does not mean that one would not be able to recognize it, even in its singularity.

One could no doubt make a number of objections to this. One might say, for example, that a proposition can be established and individualized as such only if one knows the system of axioms

that it obeys; do not those definitions, those rules, those conventions of writing form an associated field inseparable from the proposition (similarly, the rules of grammar, implicitly at work in the competence of the subject, are necessary if one is to recognize a sentence, and a sentence of a certain type)? It should be noted however that this group—actual or potential—does not belong to the same level as the proposition or the sentence: but that it has a bearing on their possible elements, succession, and distribution. The group is not associated with them: it is presupposed by them. One might also object that many (nontautological) propositions cannot be verified on the basis of their rules of construction alone, and that recourse to the referent is needed if one is to decide whether they are true or false: but true or false, a proposition remains a proposition, and it is not recourse to the referent that decides whether or not it is a proposition. The same goes for sentences; in many cases, they can yield their meaning only in relation to the context (whether they contain “deictic” elements that refer to a concrete situation; or make use of first- or second-person pronouns that designate the speaking subject and his interlocutors; or make use of pronominal elements or connecting particles that refer to earlier or later sentences); but the fact that its meaning cannot be completed does not prevent the sentence from being grammatically complete and autonomous. Certainly, one is not very sure what a group of words like “I’ll tell you that tomorrow” means; in any case, one can neither date this “tomorrow,” nor name the interlocutors, nor guess what is to be said. Nevertheless, it is a perfectly delimited sentence, obeying the rules of construction of the language (*langue*) in which it is written. Lastly, one might object that, without a context, it is sometimes difficult to define the structure of a sentence (I shall never know if he is dead” may be construed: “I shall never know whether or not he is dead” or “I shall never be informed of his death when this event occurs”). But this ambiguity is perfectly definable, simultaneous possibilities can be posited that belong to the structure proper of the sentence. Generally speaking, one can say that a sentence or a proposition—even when isolated, even divorced from the natural context that could

throw light on to its meaning, even freed or cut off from all the elements to which, implicitly or not, it refers—always remains a sentence or a proposition and can always be recognized as such.

On the other hand, the enunciative function—and this shows that it is not simply a construction of previously existing elements—cannot operate on a sentence or proposition in isolation. It is not enough to say a sentence, it is not even enough to say it in a particular relation to a field of objects or in a particular relation to a subject, for a statement to exist: it must be related to a whole adjacent field. Or rather, since this is not some additional relation that is superimposed on the others, one cannot say a sentence, one cannot transform it into a statement, unless a collateral space is brought into operation. A statement always has borders peopled by other statements. These borders are not what is usually meant by “context”—real or verbal—that is, all the situational or linguistic elements, taken together, that motivate a formulation and determine its meaning. They are distinct from such a “context” precisely in so far as they make it possible: the contextual relation between one sentence and those before and after it is not the same in the case of a novel and in that of a treatise in physics; the contextual relation between a formulation and the objective environment is not the same in a conversation and in the account of an experiment. It is against the background of a more general relation between the formulations, against the background of a whole verbal network, that the effect of context may be determined. Nor are these borders identical with the various texts and sentences that the subject may be conscious of when he speaks; again they are more extensive than such a psychological setting; and to a certain extent they determine that setting, for according to the position, status, and role of one formulation among others—according to whether it belongs to the field of literature or as an isolated remark, whether it is part of a narrative or the account of a demonstration—the way in which other statements are present in the mind of the subject will not be the same: neither the same level, nor the same form of linguistic experience, of verbal memory, of reference to what has already been

said, is operating in each case. The psychological halo of a formulation is controlled from afar by the arrangement of the enunciative field.

The associated field that turns a sentence or a series of signs into a statement, and which provides them with a particular context, a specific representative content, forms a complex web. It is made up first of all by the series of other formulations within which the statement appears and forms one element (the network of spoken formulations that make up a conversation, the architecture of a demonstration, bound on the one side by its premises and on the other by its conclusion, the series of affirmations that make up a narrative). The associated field is also made up of all the formulations to which the statement refers (implicitly or not), either by repairing them, modifying them, or adapting them, or by opposing them, or by commenting on them; there can be no statement that in one way or another does not reactualize others (ritual elements in a narrative; previously accepted propositions in a demonstration; conventional sentences in a conversation). The associated field is also made up of all the formulations whose subsequent possibility is determined by the statement, and which may follow the statement as its consequence, its natural successor, or its conversational retort (an order does not open up the same enunciative possibilities as the propositions of an axiomatic or the beginning of a narrative). Lastly, the associated field is made up of all the formulations whose status the statement in question shares, among which it takes its place without regard to linear order, with which it will fade away, or with which, on the contrary, it will be valued, preserved, sacralized, and offered, as a possible object, to a future discourse (a statement is not dissociable from the status that it may receive as "literature," or as an unimportant remark that is barely worthy of being forgotten, or as a scientific truth valid for all time, or as prophetic words, etc.). Generally speaking, one can say that a sequence of linguistic elements is a statement only if it is immersed in an enunciative field, in which it then appears as a unique element.

The statement is not the direct projection on to the plane of language (*langage*) of a particular situation or a group of representations. It is not

simply the manipulation by a speaking subject of a number of elements and linguistic rules. At the very outset, from the very root, the statement is divided up into an enunciative field in which it has a place and a status, which arranges for its possible relations with the past, and which opens up for it a possible future. Every statement is specified in this way: there is no statement in general, no free, neutral, independent statement; but a statement always belongs to a series or a whole, always plays a role among other statements, deriving support from them and distinguishing itself from them: it is always part of a network of statements, in which it has a role, however minimal it may be, to play. Whereas grammatical construction needs only elements and rules in order to operate; whereas one might just conceive of a language (*langue*)—an artificial one, of course—whose only purpose is the construction of a single sentence; whereas the alphabet, the rules of construction and transformation of a formal system being given, one can perfectly well define the first proposition of this language (*langage*), the same cannot be said of the statement. There is no statement that does not presuppose others; there is no statement that is not surrounded by a field of coexistences, effects of series and succession, a distribution of functions and roles. If one can speak of a statement, it is because a sentence (a proposition) figures at a definite point, with a specific position, in an enunciative network that extends beyond it.

Against this background of enunciative coexistence, there stand out, at an autonomous and describable level, the grammatical relations between sentences, the logical relations between propositions, the metalinguistic relations between an object language and one that defines the rules, the rhetorical relations between groups (or elements) of sentences. It is permissible, of course, to analyze all these relations without taking as one's theme the enunciative field itself, that is, the domain of coexistence in which the enunciative function operates. But they can exist and are analyzable only to the extent that these sentences have been "enunciated"; in other words, to the extent that they are deployed in an enunciative field that allows them to follow one another, order one another, coexist with one an-

other, and play roles in relation to one another. Far from being the principle of individualization of groups of “signifiers” (the meaningful “atom,” the minimum on the basis of which there is meaning), the statement is that which situates these meaningful units in a space in which they breed and multiply.

d. Lastly, for a sequence of linguistic elements to be regarded and analyzed as a statement, it must fulfill a fourth condition: it must have a material existence. Could one speak of a statement if a voice had not articulated it, if a surface did not bear its signs, if it had not become embodied in a sense-perceptible element, and if it had not left some trace—if only for an instant—in someone’s memory or in some space? Could one speak of a statement as an ideal, silent figure? The statement is always given through some material medium, even if that medium is concealed, even if it is doomed to vanish as soon as it appears. And the statement not only needs this materiality; its materiality is not given to it, in addition, once all its determinations have been fixed: it is partly made up of this materiality. Even if a sentence is composed of the same words, bears exactly the same meaning, and preserves the same syntactical and semantic identity, it does not constitute the same statement if it is spoken by someone in the course of a conversation, or printed in a novel; if it was written one day centuries ago, and if it now reappears in an oral formulation. The coordinates and the material status of the statement are part of its intrinsic characteristics. That is an obvious fact. Or almost. For as soon as one examines it a little more closely, things begin to blur and the problems increase.

Of course, it is tempting to say that if a statement is characterized, partly at least, by its material status, and if its identity is susceptible to a modification of that status, the same can be said of sentences and propositions: the materiality of signs is not, in fact, entirely indifferent to grammar or even to logic. We know what theoretical problems are presented to logic by the material constancy of the symbols used (how to define the identity of a symbol through the various substances in which it may be embodied and the variations of form that it can tolerate? How to

recognize it and make certain that it is the same, if it must be defined as “a concrete physical form”?); we know too what problems are presented to logic by the very notion of a series of symbols (what do “precede” and “follow” mean? Come “before” and “after”? In what space is such an order situated?). Much better known still are the relations of materiality and the language (*langue*)—the role of writing and the alphabet, the fact that neither the same syntax, nor the same vocabulary operate in a written text and in a conversation, in a newspaper and in a book, in a letter and on a poster; moreover, there are series of words that form perfectly individualized and acceptable sentences if they feature as newspaper headlines, and which, nevertheless, in the course of a conversation, could never stand as meaningful sentences. Yet the materiality plays a much more important role in the statement: it is not simply a principle of variation, a modification of the criteria of recognition, or a determination of linguistic subgroups. It is constitutive of the statement itself: a statement must have a substance, a support, a place, and a date. And when these requisites change, it too changes identity. At this point, a host of questions arises: Does the same sentence repeated very loudly and very softly form one or more statements? When one learns a text by heart, does each recitation constitute a statement, or should one regard it as a repetition of the same statement? A sentence is faithfully translated into a foreign language: two distinct statements or one? And in a collective recitation—a prayer or a lesson—how many statements are produced? How can one establish the identity of the statement through all these various forms, repetitions, and transcriptions?

The problem is no doubt obscured by the fact that there is often a confusion of different levels. To begin with, we must set aside the multiplicity of enunciations. We will say that an enunciation takes place whenever a group of signs is emitted. Each of these articulations has its spatio-temporal individuality. Two people may say the same thing at the same time, but since there are two people there will be two distinct enunciations. The same person may repeat the same sentence several times; this will produce the same number of enunciations distinct in time. The enunciation

is an unrepeatable event; it has a situated and dated uniqueness that is irreducible. Yet this uniqueness allows of a number of constants—grammatical, semantic, logical—by which one can, by neutralizing the moment of enunciation and the coordinates that individualize it, recognize the general form of a sentence, a meaning, a proposition. The time and place of the enunciation, and the material support that it uses, then become, very largely at least, indifferent: and what stands out is a form that is endlessly repeatable, and which may give rise to the most dispersed enunciations. But the statement itself cannot be reduced to this pure event of enunciation, for, despite its materiality, it cannot be repeated: it would not be difficult to say that the same sentence spoken by two people in slightly different circumstances constitutes only one statement. And yet the statement cannot be reduced to a grammatical or logical form because, to a greater degree than that form, and in a different way, it is susceptible to differences of material, substance, time, and place. What, then, is that materiality proper to the statement, and which permits certain special types of repetition? How is it that one can speak of the same statement when there are several distinct enunciations of it, yet must speak of several statements when one can recognize identical forms, structures, rules of construction, and intentions? What, then, is this rule of *repeatable materiality* that characterizes the statement?

This may not be a perceptible, qualitative materiality, expressed in the form of color, sound, or solidity, and divided up by the same spatio-temporal observation as the perceptual space. Let us take a very simple example: a text reproduced several times, the successive editions of a book, or, better still, the different copies of the same printing, do not give rise to the same number of distinct statements: in all the editions of *Les Fleurs du mal* (variants and rejected versions apart), we find the same set of statements; yet neither the characters, nor the ink, nor the paper, nor even the placing of the text and the positions of the signs, are the same: the whole texture of the materiality has changed. But in this case these “small” differences are not important enough to alter the identity of the statement and to bring about another: they are all neutralized in

the general element—material, of course, but also institutional and economic—of the “book”: a book, however many copies or editions are made of it, however many different substances it may use, is a locus and exact equivalence for the statements—for them it is an authority that permits repetition without any change of identity. We see from this first example that the materiality of the statement is not defined by the space occupied or the date of its formulation; but rather by its status as a thing or object. A status that is never definitive, but modifiable, relative, and always susceptible of being questioned: we know for example that, for literary historians, the edition of a book published with the agreement of the author does not have the same status as posthumous editions, that the statements in it have a unique value, that they are not one of the manifestations of one and the same whole, that they are that by relation to which there is and must be repetition. Similarly, between the text of a Constitution, or a will, or a religious revelation, and all the manuscripts or printed copies that reproduce them exactly, with the same writing, in the same characters, and on similar substances, one cannot say that there is an equivalence: on the one hand there are the statements themselves, and on the other their reproduction. The statement cannot be identified with a fragment of matter; but its identity varies with a complex set of material institutions.

For a statement may be the same, whether written on a sheet of paper or published in a book; it may be the same spoken, printed on a poster, or reproduced on a tape recorder; on the other hand, when a novelist speaks a sentence in daily life, then reproduces the same sentence in the manuscript that he is writing, attributing it to one of his characters, or even allowing it to be spoken by that anonymous voice that passes for that of the author, one cannot say that it is the same statement in each case. The rule of materiality that statements necessarily obey is therefore of the order of the institution rather than of the spatio-temporal localization; it defines *possibilities of reinscription and transcription* (but also thresholds and limits), rather than limited and perishable individualities.

The identity of a statement is subjected to a

second group of conditions and limits: those that are imposed by all the other statements among which it figures, by the domain in which it can be used or applied, by the role and functions that it can perform. The affirmation that the earth is round or that species evolve does not constitute the same statement before and after Copernicus, before and after Darwin; it is not, for such simple formulations, that the meaning of the words has changed; what changed was the relation of these affirmations to other propositions, their conditions of use and reinvestment, the field of experience, of possible verifications, of problems to be resolved, to which they can be referred. The sentence “dreams fulfill desires” may have been repeated throughout the centuries; it is not the same statement in Plato and in Freud. The schemata of use, the rules of application, the constellations in which they can play a part, their strategic potentialities constitute for statements a *field of stabilization* that makes it possible, despite all the differences of enunciation, to repeat them in their identity; but this same field may also, beneath the most manifest semantic, grammatical, or formal identities, define a threshold beyond which there can be no further equivalence, and the appearance of a new statement must be recognized. But it is possible, no doubt, to go further: there are cases in which one may consider that there is only one statement, even though the words, the syntax, and the language (*langue*) itself are not identical. Such cases are a speech and its simultaneous translation; a scientific text in English and its French version; a notice printed in three columns in three different languages: there are not, in such cases, the same number of statements as there are languages used, but a single group of statements in different linguistic forms. Better still: a given piece of information may be retransmitted with other words, with a simplified syntax, or in an agreed code; if the information content and the uses to which it could be put are the same, one can say that it is the same statement in each case.

Here too, we are concerned not with a criterion of individualization for the statement, but rather with its principle of variation: it is sometimes more diverse than the structure of the sentence (and its identity is then finer, more fragile,

more easily modifiable than that of a semantic or grammatical whole), sometimes more constant than that structure (and its identity is then broader, more stable, more susceptible to variations). Moreover, not only can this identity of the statement not be situated once and for all in relation to that of the sentence, but it is itself relative and oscillates according to the use that is made of the statement and the way in which it is handled. When one uses a statement in such a way as to reveal its grammatical structure, its rhetorical configuration, or the connotations that it may carry, it is obvious that one cannot regard it as being identical in its original language (*langue*) and in a translation. On the other hand, if it is intended as part of a procedure of experimental verification, then text and translation constitute a single enunciative whole. Or again, at a certain scale of macro-history, one may consider that an affirmation like “species evolve” forms the same statement in Darwin and in Simpson; at a finer level, and considering more limited fields of use (“neo-Darwinism” as opposed to the Darwinian system itself), we are presented with two different statements. The constancy of the statement, the preservation of its identity through the unique events of the enunciations, its duplications through the identity of the forms, constitute the function of the *field of use* in which it is placed.

The statement, then, must not be treated as an event that occurred in a particular time and place, and that the most one can do is recall it—and celebrate it from afar off—in an act of memory. But neither is it an ideal form that can be actualized in any body, at any time, in any circumstances, and in any material conditions. Too repeatable to be entirely identifiable with the spatio-temporal coordinates of its birth (it is more than the place and date of its appearance), too bound up with what surrounds it and supports it to be as free as a pure form (it is more than a law of construction governing a group of elements), it is endowed with a certain modifiable heaviness, a weight relative to the field in which it is placed, a constancy that allows of various uses, a temporal permanence that does not have the inertia of a mere trace or mark, and which does not sleep on its own past. Whereas an enunciation may be *begun again* or *re-evoked*, and a

(linguistic or logical) form may be *reactualized*, the statement may be *repeated*—but always in strict conditions.

This repeatable materiality that characterizes the enunciative function reveals the statement as a specific and paradoxical object, but also as one of those objects that men produce, manipulate, use, transform, exchange, combine, decompose and recompose, and possibly destroy. Instead of being something said once and for all—and lost in the past like the result of a battle, a geological

catastrophe, or the death of a king—the statement, as it emerges in its materiality, appears with a status, enters various networks and various fields of use, is subjected to transferences or modifications, is integrated into operations and strategies in which its identity is maintained or effaced. Thus the statement circulates, is used, disappears, allows or prevents the realization of a desire, serves or resists various interests, participates in challenge and struggle, and becomes a theme of appropriation or rivalry.

From *The Order of Discourse*

I

I wish I could have slipped surreptitiously into this discourse which I must present today, and into the ones I shall have to give here, perhaps for many years to come. I should have preferred to be enveloped by speech, and carried away well beyond all possible beginnings, rather than have to begin it myself. I should have preferred to become aware that a nameless voice was already speaking long before me, so that I should only have needed to join in, to continue the sentence it had started and lodge myself, without really being noticed, in its interstices, as if it had signalled to me by pausing, for an instant, in suspense. Thus there would be no beginning, and instead of being the one from whom discourse proceeded, I should be at the mercy of its chance unfolding, a slender gap, the point of its possible disappearance.

I should have liked there to be a voice behind me which had begun to speak a very long time before, doubling in advance everything I am going to say, a voice which would say: “You must go on, I can’t go on, you must go on, I’ll go on, you must say words, as long as there are any, until they find me, until they say me, strange pain, strange sin, you must go on, perhaps it’s done already, perhaps they have said me already, perhaps they have carried me to the threshold of

my story, before the door that opens on my story, that would surprise me, if it opens.”¹

I think a good many people have a similar desire to be freed from the obligation to begin, a similar desire to be on the other side of discourse from the outset, without having to consider from the outside what might be strange, frightening, and perhaps maleficent about it. To this very common wish, the institution’s reply is ironic, since it solemnizes beginnings, surrounds them with a circle of attention and silence, and imposes ritualized forms on them, as if to make them more easily recognizable from a distance.

Desire says: “I should not like to have to enter this risky order of discourse; I should not like to be involved in its peremptoriness and decisiveness; I should like it to be all around me like a calm, deep transparence, infinitely open, where others would fit in with my expectations, and from which truths would emerge one by one; I should only have to let myself be carried, within it and by it, like a happy wreck.” The institution replies: “You should not be afraid of beginnings; we are all here in order to show you that discourse belongs to the order of laws, that we have long been looking after its appearances; that a place has been made ready for it, a place which honors it but disarms it; and that if discourse may

sometimes have some power, nevertheless it is from us and us alone that it gets it.”

But perhaps this institution and this desire are nothing but two contrary replies to the same anxiety: anxiety about what discourse is in its material reality as a thing pronounced or written; anxiety about this transitory existence which admittedly is destined to be effaced, but according to a time scale which is not ours; anxiety at feeling beneath this activity (despite its grayness and ordinariness) powers and dangers that are hard to imagine; anxiety at suspecting the struggles, victories, injuries, dominations and enslavements, through so many words even though long usage has worn away their roughness.

What, then, is so perilous in the fact that people speak, and that their discourse proliferates to infinity? Where is the danger in that?

II

Here is the hypothesis which I would like to put forward tonight in order to fix the terrain—or perhaps the very provisional theater—of the work I am doing: that in every society the production of discourse is at once controlled, selected, organized, and redistributed by a certain number of procedures whose role is to ward off its powers and dangers, to gain mastery over its chance events, to evade its ponderous, formidable materiality.

In a society like ours, the procedures of exclusion are well known. The most obvious and familiar is the prohibition. We know quite well that we do not have the right to say everything, that we cannot speak of just anything in any circumstances whatever, and that not everyone has the right to speak of anything whatever. In the taboo on the object of speech, and the ritual of the circumstances of speech, and the privileged or exclusive right of the speaking subject, we have the play of three types of prohibition which intersect, reinforce, or compensate for each other, forming a complex grid which changes constantly. I will merely note that at the present time the regions where the grid is tightest, where the black squares are most numerous, are those of sexuality and politics; as if discourse, far from being that transparent or neutral element in which sexuality

is disarmed and politics pacified, is in fact one of the places where sexuality and politics exercise in a privileged way some of their most formidable powers. It does not matter that discourse appears to be of little account, because the prohibitions that surround it very soon reveal its link with desire and with power. There is nothing surprising about that, since, as psychoanalysis has shown, discourse is not simply that which manifests (or hides) desire—it is also the object of desire; and since, as history constantly teaches us, discourse is not simply that which translates struggles or systems of domination, but is the thing for which and by which there is struggle, discourse is the power which is to be seized.

There exists in our society another principle of exclusion, not another prohibition but a division and a rejection. I refer to the opposition between reason and madness. Since the depths of the Middle Ages, the madman has been the one whose discourse cannot have the same currency as others. His word may be considered null and void, having neither truth nor importance, worthless as evidence in law, inadmissible in the authentication of deeds or contracts, incapable even of bringing about the transubstantiation of bread into body at Mass. On the other hand, strange powers not held by any other may be attributed to the madman's speech: the power of uttering a hidden truth, of telling the future, of seeing in all naivete what the others' wisdom cannot perceive. It is curious to note that for centuries in Europe the speech of the madman was either not heard at all or else taken for the word of truth. It either fell into the void, being rejected as soon as it was proffered, or else people deciphered in it a rationality, naive or crafty, which they regarded as more rational than that of the sane. In any event, whether excluded, or secretly invested with reason, the madman's speech, strictly, did not exist. It was through his words that his madness was recognized; they were the place where the division between reason and madness was exercised, but they were never recorded or listened to. No doctor before the end of the eighteenth century had ever thought of finding out what was said, or how and why it was said, in this speech which nonetheless determined the difference. This whole immense discourse of the madman was

taken for mere noise, and he was only symbolically allowed to speak, in the theater, where he would step forward, disarmed and reconciled, because there he played the role of truth in a mask.

You will tell me that all this is finished today or is coming to an end; that the madman's speech is no longer on the other side of the divide: that it is no longer null and void; on the contrary, it puts us on the alert; that we now look for a meaning in it, for the outline or the ruins of some *oeuvre*; and that we have even gone so far as to come across this speech of madness in what we articulate ourselves, in that slight stumbling by which we lose track of what we are saying. But all this attention to the speech of madness does not prove that the old division is no longer operative. You have only to think of the whole framework of knowledge through which we decipher that speech, and of the whole network of institutions which permit someone—a doctor or a psychoanalyst—to listen to it, and which at the same time permit the patient to bring along his poor words or, in desperation, to withhold them. You have only to think of all this to become suspicious that the division, far from being effaced, is working differently along other lines, through new institutions, and with effects that are not at all the same. And even if the doctor's role were only that of lending an ear to a speech that is free at last, he still does this listening in the context of the same division. He is listening to a discourse which is invested with desire, and which—for its greater exaltation or its greater anguish—thinks it is loaded with terrible powers. If the silence of reason is required for the curing of monsters, it is enough for that silence to be on the alert, and it is in this that the division remains.

It is perhaps risky to consider the opposition between true and false as a third system of exclusion, along with those just mentioned. How could one reasonably compare the constraint of truth with divisions like those, which are arbitrary to start with or which at least are organized around historical contingencies; which are not only modifiable but in perpetual displacement; which are supported by a whole system of institutions which impose them and renew them; and which act in a constraining and sometimes violent way?

Certainly, when viewed from the level of a

proposition, on the inside of a discourse, the division between true and false is neither arbitrary nor modifiable nor institutional nor violent. But when we view things on a different scale, when we ask the question of what this will to truth has been and constantly is, across our discourses, this will to truth which has crossed so many centuries of our history; what is, in its very general form, the type of division which governs our will to know (*notre volonté de savoir*), then what we see taking shape is perhaps something like a system of exclusion, a historical, modifiable, and institutionally constraining system.

There is no doubt that this division is historically constituted. For the Greek poets of the sixth century B.C., the true discourse (in the strong and valorized sense of the word), the discourse which inspired respect and terror, and to which one had to submit because it ruled, was the one pronounced by men who spoke as of right and according to the required ritual; the discourse which dispensed justice and gave everyone his share; the discourse which in prophesying the future not only announced what was going to happen but helped to make it happen, carrying men's minds along with it and thus weaving itself into the fabric of destiny. Yet already a century later the highest truth no longer resided in what discourse was or did, but in what it said: a day came when truth was displaced from the ritualized, efficacious, and just act of enunciation, towards the utterance itself, its meaning, its form, its object, its relation to its reference. Between Hesiod and Plato a certain division was established, separating true discourse from false discourse: a new division because henceforth the true discourse is no longer precious and desirable, since it is no longer the one linked to the exercise of power. The sophist is banished.

This historical division probably gave our will to know its general form. However, it has never stopped shifting: sometimes the great mutations in scientific thought can perhaps be read as the consequences of a discovery, but they can also be read as the appearance of new forms in the will to truth. There is doubtless a will to truth in the nineteenth century which differs from the will to know characteristic of Classical culture in the forms it deploys, in the domains of objects to

which it addresses itself, and in the techniques on which it is based. To go back a little further: at the turn of the sixteenth century (and particularly in England), there appeared a will to know which, anticipating its actual contents, sketched out schemas of possible, observable, measurable, classifiable objects; a will to know which imposed on the knowing subject, and in some sense prior to all experience, a certain position, a certain gaze and a certain function (to see rather than to read, to verify rather than to make commentaries on); a will to know which was prescribed (but in a more general manner than by any specific instrument) by the technical level where knowledges had to be invested in order to be verifiable and useful. It was just as if, starting from the great Platonic division, the will to truth had its own history, which is not that of constraining truths: the history of the range of objects to be known, of the functions and positions of the knowing subject, of the material, technical, and instrumental investments of knowledge.

This will to truth, like the other systems of exclusion, rests on an institutional support; it is both reinforced and renewed by whole strata of practices, such as pedagogy, of course; and the system of books, publishing, libraries; learned societies in the past and laboratories now. But it is also renewed, no doubt more profoundly, by the way in which knowledge is put to work, valorized, distributed, and in a sense attributed, in a society. Let us recall at this point, and only symbolically, the old Greek principle: though arithmetic may well be the concern of democratic cities, because it teaches about the relations of equality, geometry alone must be taught in oligarchies, since it demonstrates the proportions within inequality.

Finally, I believe that this will to truth—leaning in this way on a support and an institutional distribution—tends to exert a sort of pressure and something like a power of constraint (I am still speaking of our own society) on other discourses. I am thinking of the way in which for centuries Western literature sought to ground itself on the natural, the “*vraisemblable*,” on sincerity, on science as well—in short, on “true” discourse. I am thinking likewise of the manner in which economic practices, codified as precepts or

recipes and ultimately as morality, have sought since the sixteenth century to ground themselves, rationalize themselves, and justify themselves in a theory of wealth and production. I am also thinking of the way in which a body as prescriptive as the penal system sought its bases or its justification, at first of course in a theory of justice, then, since the nineteenth century, in a sociological, psychological, medical, and psychiatric knowledge: it is as if even the word of the law could no longer be authorized, in our society, except by a discourse of truth.

Of the three great systems of exclusion which forge discourse—the forbidden speech, the division of madness, and the will to truth, I have spoken of the third at greatest length. The fact is that it is towards this third system that the other two have been drifting constantly for centuries. The third system increasingly attempts to assimilate the others, both in order to modify them and to provide them with a foundation. The first two are constantly becoming more fragile and more uncertain, to the extent that they are now invaded by the will to truth, which for its part constantly grows stronger, deeper, and more implacable.

And yet we speak of the will to truth no doubt least of all. It is as if, for us, the will to truth and its vicissitudes were masked by truth itself in its necessary unfolding. The reason is perhaps this: although since the Greeks “true” discourse is no longer the discourse that answers to the demands of desire, or the discourse which exercises power, what is at stake in the will to truth, in the will to utter this “true” discourse, if not desire and power? “True” discourse, freed from desire and power by the necessity of its form, cannot recognize the will to truth which pervades it; and the will to truth, having imposed itself on us for a very long time, is such that the truth it wants cannot fail to mask it.

Thus all that appears to our eyes is a truth conceived as a richness, a fecundity, a gentle and insidiously universal force, and in contrast we are unaware of the will to truth, that prodigious machinery designed to exclude. All those who, from time to time in our history, have tried to dodge this will to truth and to put it into question against truth, at the very point where truth undertakes to justify the prohibition and to define madness, all

of them, from Nietzsche to Artaud and Bataille, must now serve as the (no doubt lofty) signs for our daily work.

III

There are, of course, many other procedures for controlling and delimiting discourse. Those of which I have spoken up to now operate in a sense from the exterior. They function as systems of exclusion. They have to do with the part of discourse which puts power and desire at stake.

I believe we can isolate another group: internal procedures, since discourses themselves exercise their own control; procedures which function rather as principles of classification, of ordering, of distribution, as if this time another dimension of discourse had to be mastered: that of events and chance.

In the first place, commentary. I suppose—but without being very certain—that there is scarcely a society without its major narratives, which are recounted, repeated, and varied; formulae, texts, and ritualized sets of discourses which are recited in well-defined circumstances; things said once and preserved because it is suspected that behind them there is a secret or a treasure. In short, we may suspect that there is in all societies, with great consistency, a kind of gradation among discourse: those which are said in the ordinary course of days and exchanges, and which vanish as soon as they have been pronounced; and those which give rise to a certain number of new speech acts which take them up, transform them or speak of them, in short, those discourses which, over and above their formulation, are said indefinitely, remain said, and are to be said again. We know them in our own cultural system: they are religious or juridical texts, but also those texts (curious ones, when we consider their status) which are called “literary”; and to a certain extent, scientific texts.

This differentiation is certainly neither stable, nor constant, nor absolute. There is not, on the one side, the category of fundamental or creative discourses, given for all time, and on the other, the mass of discourses which repeat, gloss, and comment. Plenty of major texts become blurred and disappear, and sometimes commentaries

move into the primary position. But though its points of application may change, the function remains; and the principle of a differentiation is continuously put back in play. The radical effacement of this gradation can only ever be play, utopia, or anguish. The Borges-style play of a commentary which is nothing but the solemn and expected reappearance word for word of the text that is commented on; or the play of a criticism that would speak forever of a work which does not exist.² The lyrical dream of a discourse which is reborn absolutely new and innocent at every point, and which reappears constantly in all freshness, derived from things, feelings, or thoughts. The anguish of that patient of Janet’s for whom the least utterance was gospel truth, concealing inexhaustible treasures of meaning and worthy to be repeated, recommenced, and commented on indefinitely: “When I think,” he would say when reading or listening, “when I think of this sentence which like the others will go off into eternity, and which I have perhaps not yet fully understood.”³

But who can fail to see that this would be to annul one of the terms of the relation each time, and not to do away with the relation itself? It is a relation which is constantly changing with time; which takes multiple and divergent forms in a given epoch. The juridical exegesis is very different from the religious commentary (and this has been the case for a very long time). One and the same literary work can give rise simultaneously to very distinct types of discourse: the *Odyssey* as a primary text is repeated, in the same period, in the translation by Bérard, and in the endless “*explications de texte*,” and in Joyce’s *Ulysses*.

For the moment I want to do no more than indicate that, in what is broadly called commentary, the hierarchy between primary and secondary text plays two roles which are in solidarity with each other. On the one hand it allows the (endless) construction of new discourses: the dominance of the primary text, its permanence, its status as a discourse which can always be re-actualized, the multiple or hidden meaning with

²See Borges’s story, “Pierre Menard’s *Don Quixote*.” [Ed.]

³Pierre Janet (1859–1947), French psychologist. [Ed.]

which it is credited, the essential reticence and richness which is attributed to it, all this is the basis for an open possibility of speaking. But on the other hand the commentary's only role, whatever the techniques used, is to say at last what was silently articulated "beyond," in the text. By a paradox which it always displaces but never escapes, the commentary must say for the first time what had, nonetheless, already been said, and must tirelessly repeat what had, however, never been said. The infinite rippling of commentaries is worked from the inside by the dream of a repetition in disguise: at its horizon there is perhaps nothing but what was at its point of departure—mere recitation. Commentary exorcises the chance element of discourse by giving it its due; it allows us to say something other than the text itself, but on condition that it is this text itself which is said, and in a sense completed. The open multiplicity, the element of chance, are transferred, by the principle of commentary, from what might risk being said, on to the number, the form, the mask, and the circumstances of the repetition. The new thing here lies not in what is said but in the event of its return.

I believe there exists another principle of rarefaction of a discourse, complementary to the first, to a certain extent: the author. Not, of course, in the sense of the speaking individual who pronounced or wrote a text, but in the sense of a principle of grouping of discourses, conceived as the unity and origin of their meanings, as the focus of their coherence. This principle is not everywhere at work, nor in a constant manner: there exist all around us plenty of discourses which circulate without deriving their meaning or their efficacy from an author to whom they could be attributed: everyday remarks, which are effaced immediately; decrees or contracts which require signatories but no author; technical instructions which are transmitted anonymously. But in the domains where it is the rule to attribute things to an author—literature, philosophy, science—it is quite evident that this attribution does not always play the same role. In the order of scientific discourse, it was indispensable, during the Middle Ages, that a text should be attributed to an author, since this was an index of truthfulness. A proposition was considered as drawing even its

scientific value from its author. Since the seventeenth century, this function has steadily been eroded in scientific discourse: it now functions only to give a name to a theorem, an effect, an example, a syndrome. On the other hand, in the order of literary discourse, starting from the same epoch, the function of the author has steadily grown stronger: all those tales, poems, dramas, or comedies which were allowed to circulate in the Middle Ages in at least a relative anonymity are now asked (and obliged to say) where they come from, who wrote them. The author is asked to account for the unity of the texts which are placed under his name. He is asked to reveal or at least carry authentication of the hidden meaning which traverses them. He is asked to connect them to his lived experiences, to the real history which saw their birth. The author is what gives the disturbing language of fiction its unities, its nodes of coherence, its insertion in the real.

I know that I will be told: "But you are speaking there of the author as he is reinvented after the event by criticism, after he is dead and there is nothing left except for a tangled mass of scribbles; in those circumstances a little order surely has to be introduced into all that, by imagining a project, a coherence, a thematic structure that is demanded of the consciousness or the life of an author who is indeed perhaps a trifle fictitious. But that does not mean he did not exist, this real author, who bursts into the midst of all these worn-out words, bringing to them his genius or his disorder."

It would of course be absurd to deny the existence of the individual who writes and invents. But I believe that—at least since a certain epoch—the individual who sets out to write a text on the horizon of which a possible *oeuvre* is prowling, takes upon himself the function of the author: what he writes and what he does not write, what he sketches out, even by way of provisional drafts, as an outline of the *oeuvre*, and what he lets fall by way of commonplace remarks—this whole play of differences is prescribed by the author-function, as he receives it from his epoch, or as he modifies it in his turn. He may well overturn the traditional image of the author; nevertheless, it is from some new author-position that he will cut out, from everything he

could say and from all that he does say every day at any moment, the still trembling outline of his *oeuvre*.

The commentary-principle limits the chance-element in discourse by the play of an identity which would take the form of repetition and sameness. The author-principle limits this same element of chance by the play of an identity which has the form of individuality and the self.

We must also recognize another principle of limitation in what is called, not sciences but “disciplines”: a principle which is itself relative and mobile; which permits construction, but within narrow confines.

The organization of disciplines is just as much opposed to the principle of commentary as to that of the author. It is opposed to the principle of the author because a discipline is defined by a domain of objects, a set of methods, a corpus of propositions considered to be true, a play of rules and definitions, of techniques and instruments: all this constitutes a sort of anonymous system at the disposal of anyone who wants to or is able to use it, without their meaning or validity being linked to the one who happened to be their inventor. But the principle of a discipline is also opposed to that of commentary: in a discipline, unlike a commentary, what is supposed at the outset is not a meaning which has to be rediscovered, nor an identity which has to be repeated, but the requisites for the construction of new statements. For there to be a discipline, there must be the possibility of formulating new propositions, *ad infinitum*.

But there is more; there is more, no doubt, in order for there to be less: a discipline is not the sum of all that can be truthfully said about something; it is not even the set of all that can be accepted about the same data in virtue of some principle of coherence or systematicity. Medicine is not constituted by the total of what can be truthfully said about illness; botany cannot be defined by the sum of all the truths concerning plants. There are two reasons for this: first of all, botany and medicine are made up of errors as well as truths, like any other discipline—errors which are not residues or foreign bodies but which have positive functions, a historical efficacy, and a role that is often indissociable from that of the truths. And besides, for a proposition

to belong to botany or pathology, it has to fulfill certain conditions, in a sense stricter and more complex than pure and simple truth: but in any case, other conditions. It must address itself to a determinate plane of objects: from the end of the seventeenth century, for example, for a proposition to be “botanical” it had to deal with the visible structure of the plant, the system of its close and distant resemblances or the mechanism of its fluids; it could no longer retain its symbolic value, as was the case in the sixteenth century, nor the set of virtues and properties which were accorded to it in antiquity. But without belonging to a discipline, a proposition must use conceptual or technical instruments of a well-defined type; from the nineteenth century, a proposition was no longer medical—it fell “outside of medicine” and acquired the status of an individual phantasm or popular imagery—if it used notions that were at the same time metaphorical, qualitative, and substantial (like those of engorgement, of overheated liquids or of dried-out solids). In contrast it could and had to make use of notions that were equally metaphorical but based on another model, a functional and physiological one (that of the irritation, inflammation, or degeneration of the tissues). Still further: in order to be part of a discipline, a proposition has to be able to be inscribed on a certain type of theoretical horizon: suffice it to recall that the search for the primitive language, which was a perfectly acceptable theme up to the eighteenth century, was sufficient, in the second half of the nineteenth century, to make any discourse fall into—I hesitate to say error—chimera and reverie, into pure and simple linguistic monstrosity.

Within its own limits, each discipline recognizes true and false propositions; but it pushes back a whole teratology of knowledge beyond its margins. The exterior of a science is both more and less populated than is often believed: there is of course immediate experience, the imaginary themes which endlessly carry and renew immemorial beliefs; but perhaps there are no errors in the strict sense, for error can only arise and be decided inside a definite practice; on the other hand, there are monsters on the prowl whose form changes with the history of knowledge. In short, a proposition must fulfill complex and

heavy requirements to be able to belong to the grouping of a discipline: before it can be called true or false, it must be "in the true," as Canguilhem would say.

People have often wondered how the botanists or biologists of the nineteenth century managed not to see that what Mendel was saying was true. But it was because Mendel was speaking of objects, applying methods, and placing himself on a theoretical horizon which were alien to the biology of his time. Naudin, before him, had of course posited the thesis that hereditary traits are discrete; yet, no matter how new or strange this principle was, it was able to fit into the discourse of biology, at least as an enigma. What Mendel did was to constitute the hereditary trait as an absolutely new biological object, thanks to a kind of filtering which had never been used before: he detached the trait from the species, and from the sex which transmits it; the field in which he observed it being the infinitely open series of the generations, where it appears and disappears according to statistical regularities. This was a new object which called for new conceptual instruments and new theoretical foundations. Mendel spoke the truth, but he was not "within the true" of the biological discourse of his time: it was not according to such rules that biological objects and concepts were formed. It needed a complete change of scale, the deployment of a whole new range of objects in biology for Mendel to enter into the true and for his propositions to appear (in large measure) correct. Mendel was a true monster, which meant that science could not speak of him; whereas about thirty years earlier, at the height of the nineteenth century, Scheiden, for example, who denied plant sexuality, but in accordance with the rules of biological discourse, was merely formulating a disciplined error.

It is always possible that one might speak the truth in the space of a wild exteriority, but one is "in the true" only by obeying the rules of a discursive "policing" which one has to reactivate in each of one's discourses.

The discipline is a principle of control over the production of discourse. The discipline fixes limits for discourse by the action of an identity which takes the form of a permanent re-actuation of the rules.

We are accustomed to see in an author's fecundity, in the multiplicity of the commentaries, and in the development of a discipline so many infinite resources for the creation of discourses. Perhaps so, but they are nonetheless principles of constraint; it is very likely impossible to account for their positive and multiplicatory role if we do not take into consideration their restrictive and constraining function.

IV

There is, I believe, a third group of procedures which permit the control of discourses. This time it is not a matter of mastering their powers or averting the unpredictability of their appearance, but of determining the condition of their application, of imposing a certain number of rules on the individuals who hold them, and thus of not permitting everyone to have access to them. There is a rarefaction, this time, of the speaking subjects; none shall enter the order of discourse if he does not satisfy certain requirements or if he is not, from the outset, qualified to do so. To be more precise: not all the regions of discourse are equally open and penetrable; some of them are largely forbidden (they are differentiated and differentiating), while others seem to be almost open to all winds and put at the disposal of every speaking subject, without prior restrictions.

In this regard I should like to recount an anecdote which is so beautiful that one trembles at the thought that it might be true. It gathers into a single figure all the constraints of discourse: those which limit its powers, those which master its aleatory appearances, those which carry out the selection among speaking subjects. At the beginning of the seventeenth century, the Shogun heard tell that the Europeans' superiority in matters of navigation, commerce, politics, and military skill was due to their knowledge of mathematics. He desired to get hold of so precious a knowledge. As he had been told of an English sailor who possessed the secret of these miraculous discourses, he summoned him to his palace and kept him there. Alone with him, he took lessons. He learned mathematics. He retained power, and lived to a great old age. It was not until the nineteenth century that there were

Japanese mathematicians. But the anecdote does not stop there: it has its European side too. The story has it that this English sailor, Will Adams, was an autodidact, a carpenter who had learned geometry in the course of working in a shipyard. Should we see this story as the expression of one of the great myths of European culture? The universal communication of knowledge and the infinite free exchange of discourses in Europe, against the monopolized and secret knowledge of Oriental tyranny?

This idea, of course, does not stand up to examination. Exchange and communication are positive figures working inside complex systems of restriction, and probably would not be able to function independently of them. The most superficial and visible of these systems of restriction is constituted by what can be gathered under the name of ritual. Ritual defines the qualification which must be possessed by individuals who speak (and who must occupy such-and-such a position and formulate such-and-such a type of statement, in the play of a dialogue, of interrogation or recitation); it defines the gestures, behavior, circumstances, and the whole set of signs which must accompany discourse; finally, it fixes the supposed or imposed efficacy of the words, their effect on those to whom they are addressed, and the limits of their constraining value. Religious, judicial, therapeutic, and in large measure also political discourses can scarcely be dissociated from this deployment of a ritual which determines both the particular properties and the stipulated roles of the speaking subjects.

A somewhat different way of functioning is that of the "societies of discourse," which function to preserve or produce discourses, but in order to make them circulate in a closed space, distributing them only according to strict rules, and without the holders being dispossessed by this distribution. An archaic model for this is provided by the groups of rhapsodists who possessed the knowledge of the poems to be recited or potentially to be varied and transformed. But though the object of this knowledge was after all a ritual recitation, the knowledge was protected, defended and preserved within a definite group by the often very complex exercises of memory which it implied. To pass an apprenticeship in it allowed one to enter both a group and a secret

which the act of recitation showed but did not divulge; the roles of speaker and listener were not interchangeable.

There are hardly any such "societies of discourse" now, with their ambiguous play of the secret and its divulgation. But this should not deceive us: even in the order of "true" discourse, even in the order of discourse that is published and free from all ritual, there are still forms of appropriation of secrets, and noninterchangeable roles. It may well be that the act of writing as it is institutionalized today, in the book, the publishing-system and the person of the writer, takes place in a "society of discourse," which though diffuse is certainly constraining. The difference between the writer and any other speaking or writing subject (a difference constantly stressed by the writer himself), the intransitive nature (according to him) of his discourse, the fundamental singularity which he has been ascribing for so long to "writing," the dissymmetry that is asserted between "creation" and any use of the linguistic system—all this shows the existence of a certain "society of discourse," and tends moreover to bring back its play of practices. But there are many others still, functioning according to entirely different schemas of exclusivity and disclosure: e.g., technical or scientific secrets, or the forms of diffusion and circulation of medical discourse, or those who have appropriated the discourse of politics or economics.

At first glance, the "doctrines" (religious, political, philosophical) seem to constitute the reverse of a "society of discourse," in which the number of speaking individuals tended to be limited even if it was not fixed; between those individuals, the discourse could circulate and be transmitted. Doctrine, on the contrary, tends to be diffused, and it is by the holding in common of one and the same discursive ensemble that individuals (as many as one cares to imagine) define their reciprocal allegiance. In appearance, the only prerequisite is the recognition of the same truths and the acceptance of a certain rule of (more or less flexible) conformity with the validated discourses. If doctrines were nothing more than this, they would not be so very different from scientific disciplines, and the discursive control would apply only to the form or the content of the statement, not to the speaking subject.

But doctrinal allegiance puts in question both the statement and the speaking subject, the one by the other. It puts the speaking subject in question through and on the basis of the statement, as is proved by the procedures of exclusion and the mechanisms of rejection which come into action when a speaking subject has formulated one or several unassimilable statements; heresy and orthodoxy do not derive from a fanatical exaggeration of the doctrinal mechanisms, but rather belong fundamentally to them. And conversely the doctrine puts the statements in question on the basis of the speaking subjects, to the extent that the doctrine always stands as the sign, manifestation, and instrument of a prior adherence to a class, a social status, a race, a nationality, an interest, a revolt, a resistance or an acceptance. Doctrine binds individuals to certain types of enunciation and consequently forbids them all others; but it uses, in return, certain types of enunciation to bind individuals amongst themselves, and to differentiate them by that very fact from all others. Doctrine brings about a double subjection: of the speaking subjects to discourses, and of discourses to the (at least virtual) group of speaking individuals.

On a much broader scale, we are obliged to recognize large cleavages in what might be called the social appropriation of discourses. Although education may well be, by right, the instrument thanks to which any individual in a society like ours can have access to any kind of discourse whatever, this does not prevent it from following, as is well known, in its distribution, in what it allows and what it prevents, the lines marked out by social distances, oppositions, and struggles. Any system of education is a political way of maintaining or modifying the appropriation of discourses, along with the knowledges and powers which they carry.

I am well aware that it is very abstract to separate speech-rituals, societies of discourse, doctrinal groups, and social appropriations, as I have just done. Most of the time, they are linked to each other and constitute kinds of great edifices which ensure the distribution of speaking subjects into the different types of discourse and the appropriation of discourses to certain categories of subject. Let us say, in a word, that those are the major procedures of subjection used by dis-

course. What, after all, is an education system, other than a ritualization of speech, a qualification and a fixing of the roles for speaking subjects, the constitution of a doctrinal group, however diffuse, a distribution and an appropriation of discourse with its powers and knowledges? What is “*écriture*” (the writing of the “writers”) other than a similar system of subjection, which perhaps takes slightly different forms, but forms whose main rhythms are analogous? Does not the judicial system, does not the institutional system of medicine likewise constitute, in some of their aspects at least, similar systems of subjection of and by discourse?

V

I wonder whether a certain number of themes in philosophy have not come to correspond to these activities of limitation and exclusion, and perhaps also to reinforce them.

They correspond to them first of all by proposing an ideal truth as the law of discourse and an immanent rationality as the principle of their unfolding, and they reintroduce an ethic of knowledge, which promises to give the truth only to the desire for truth itself and only to the power of thinking it.

Then they reinforce the limitations and exclusions by a denial of the specific reality of discourse in general.

Ever since the sophists’ tricks and influence were excluded and since their paradoxes have been more or less safely muzzled, it seems that Western thought has taken care to ensure that discourse should occupy the smallest possible space between thought and speech. Western thought seems to have made sure that the act of discoursing should appear to be no more than a certain bridging (*apport*) between thinking and speaking—a thought dressed in its signs and made visible by means of words, or conversely the very structures of language put into action and producing a meaning-effect.

This very ancient elision of the reality of discourse in philosophical thought has taken many forms in the course of history. We have seen it again quite recently in the guise of several familiar themes.

Perhaps the idea of the founding subject is a

way of eliding the reality of discourse. The founding subject, indeed, is given the task of directly animating the empty forms of language with his aims; it is he who in moving through the density and inertia of empty things grasps by intuition the meaning lying deposited within them; it is likewise the founding subject who founds horizons of meaning beyond time which history will henceforth only have to elucidate and where propositions, sciences, and deductive ensembles will find their ultimate grounding. In his relation to meaning, the founding subject has at his disposal signs, marks, traces, letters. But he does not need to pass via the singular instance of discourse in order to manifest them.

The opposing theme, that of originating experience, plays an analogous role. It supposes that at the very basis of experience, even before it could be grasped in the form of a cogito, there were prior significations—in a sense, already said—wandering around in the world, arranging it all around us and opening it up from the outset to a sort of primitive recognition. Thus a primordial complicity with the world is supposed to be the foundation of our possibility of speaking of it, in it, or indicating it and naming it, or judging it and ultimately of knowing it in the form of truth. If there is discourse, then, what can it legitimately be other than a discreet reading? Things are already murmuring meanings which our language has only to pick up; and this language, right from its most rudimentary project, was already speaking to us of a being of which it is like the skeleton.

The idea of universal mediation is yet another way, I believe, of eliding the reality of discourse, and despite appearances to the contrary. For it would seem at first glance that by rediscovering everywhere the movement of a *logos* which elevates particularities to the status of concepts and allows immediate consciousness to unfurl in the end the whole rationality of the world, one puts discourse itself at the center of one's speculation. But this *logos*, in fact, is only a discourse that has already been held, or rather it is things themselves, and events, which imperceptibly turn themselves into discourse as they unfold the secret of their own essence. Thus discourse is little more than the gleaming of a truth in the process of being born to its own gaze; and when every-

thing finally can take the form of discourse, when everything can be said and when discourse can be spoken about everything, it is because all things, having manifested and exchanged their meaning, can go back into the silent interiority of their consciousness of self.

Thus in a philosophy of the founding subject, in a philosophy of originary experience, and in a philosophy of universal mediation alike, discourse is no more than a play, of writing in the first case, of reading in the second, and of exchange in the third, and this exchange, this reading, this writing never put anything at stake except signs. In this way, discourse is annulled in its reality and put at the disposal of the signifier.

What civilization has ever appeared to be more respectful of discourse than ours? Where has it ever been more honored, or better honored? Where has it ever been, seemingly, more radically liberated from its constraints, and universalized? Yet it seems to me that beneath this apparent veneration of discourse, under this apparent logophilia, a certain fear is hidden. It is just as if prohibitions, barriers, thresholds, and limits had been set up in order to master, at least partly, the great proliferation of discourse, in order to remove from its richness the most dangerous part, and in order to organize its disorder according to figures which dodge what is most uncontrollable about it. It is as if we had tried to efface all trace of its irruption into the activity of thought and language. No doubt there is in our society, and, I imagine, in all others, but following a different outline and different rhythms, a profound logophobia, a sort of mute terror against these events, against this mass of things said, against the surging-up of all these statements, against all that could be violent, discontinuous, pugnacious, disorderly as well, and perilous about them—against this great incessant and disordered buzzing of discourse.

And if we want to—I would not say, efface this fear, but—analyze it in its conditions, its action, and its effects, we must, I believe, resolve to take three decisions which our thinking today tends to resist and which correspond to the three groups of functions which I have just mentioned: we must call into question our will to truth, restore to discourse its character as an event, and finally throw off the sovereignty of the signifier.

Jacques Derrida

b. 1930

Jacques Derrida was born in Algiers in 1930. He was educated in Algeria and in France; in France, he studied philosophy at the *École Normale Supérieure* (1952–1956) and at the University of Paris, Sorbonne, earning his doctoral degree in 1967. Derrida also studied at Harvard for a year (1956–1957) and in the sixties was associated with the avant-garde journal *Tel Quel*. He taught for four years at the Sorbonne and then, since 1964, at the *École des Hautes Études en Sciences Sociales*, becoming *directeur d'études* (director of studies) in 1984. He has also served as visiting professor at Yale, Johns Hopkins, the University of California at Irvine, and Cornell.

In his many books and articles, Derrida persistently attacks the idea that language is or can be referential. He finds this idea an active premise in philosophy, in most discussions of language, and in everyday thought. For Derrida, as for Friedrich Nietzsche, Michel Foucault, and others, including the Sophists, language does not mediate our relationship to a more or less knowable world. Rather, Derrida maintains that “*il n’y a pas de hors-texte*”—there is nothing outside of the text.¹ By this he means that our knowledge of the world is constructed from language, and language is not a transparent medium of reference or of thought. Language cannot be transcended to reach the thing *signified* while disposing of the *signifier*. This effort to reach past language to the reality it names is what Derrida calls “the metaphysics of presence.”

In his attack on the metaphysics of presence that dominates philosophy, Derrida focuses on the notion that speech is prior to and somehow superior to writing. He points out that Plato was the first of many philosophers who distrusted writing. Speech, those philosophers claimed, is immediate, in the sense that it takes place at the moment of interaction between people who are exchanging their thoughts. Thus it is an expression of thought. It is clearly the expression of the speaker, who is, of course, present, and it is directed to the interlocutor, who is also present. Speech is an attempt to represent something else, to transfer thoughts, to communicate ideas. In this sense, it is an attempt to overcome language. Plato distrusted both rhetoric and writing because they subverted the attempt of speech to transcend itself. Rhetoric focused on motives for speaking that were not intended to reach the absolute truth. Moreover, it made a virtue of linguistic facility, attending to the material effects of style and structure. Plato similarly distrusted writing, which compounded the problems introduced by rhetoric in that it allowed the writer to manage the language, to review and revise, to polish—and then to disappear. Because the author of written discourse does not utter the words, complains Plato, the speech situation is absent; therefore, also absent is the possibility of the kind of dialogue that prompts clarification, probing of premises, corrections, and so on.

¹Jacques Derrida, *Of Grammatology*, trans. G. Spivak (Baltimore: Johns Hopkins University Press, 1976), p. 158.

Derrida finds this sort of argument repeated frequently through the history of philosophy: Writing is taken to be a representation of speech, but even if it is a faithful representation, writing somehow falsifies speech, simply by being at a further remove from the “original” signifying intention.

Derrida attacks this presumption by reversing the argument. Writing, he claims, is prior to speech—not historically, of course, but conceptually, in that writing shows more clearly than speech does how language is different from what it supposedly represents. Writing is undeniably a sign function, representing sounds and words. But the very fact that writing is at one remove from speech, that it escapes the speech situation, draws attention to the fact that speech, too, is a sign function. Writing is both distant from the moment of “utterance” and different in form from the utterance it supposedly represents. But in speech, too, verbal signs are distant and different from what they signify. Once the distance and difference are acknowledged, speech can be seen as a form of writing. Language itself operates by distance and difference, functions that Derrida combines in his coinage *différance*, “different and deferred.” Thus “writing” serves for Derrida the purpose that “rhetoric” served for Nietzsche: All language is writing (or rhetoric). There is no speech that effaces itself in the presence of truth. The metaphysics of presence is, says Derrida, the manifestation of a desire to hide or repress the absence of knowable referents for language, the gap or *différance* that constitutes language.

In his own writing, Derrida makes this argument in two principal ways: (a) by analyzing or “deconstructing” texts that contribute to the metaphysics of presence and (b) by adopting a style that resists the habit of assuming truth’s presence behind language. In deconstructing texts, Derrida finds and analyzes presuppositions about or arguments for the priority of speech and the fundamental referentiality of language. Here he reveals contradictions, betrayals of the premise by the premise itself, and evidence of absence in assertions about presence. In *Of Grammatology* (1967), for example, Derrida finds that Jean-Jacques Rousseau, for all his insistence on the primacy of speech, relies on the distance he can attain through writing in order to represent his ideas “truthfully.” In *Dissemination* (1972), Derrida analyzes the *Phaedrus* to show how far language always remains from any clear representation of ideas. But in constructing his analyses, Derrida resists the trap of claiming that he has at last found the right way to understand the relationship of language to idea. He avoids the binary oppositions that are, he says, manifestations of the metaphysics of presence: good/evil, nature/culture, speech/writing, man/woman—all versions of presence/absence. Instead, Derrida tends to rely on exorbitantly extended metaphors, elaborate and ambiguous syntax, and a special vocabulary (*différance*, for example) that emphasizes, problematizes, and finally collapses (or so he claims) binary distinctions.

Derrida is at once rhetorical and antirhetorical, as “Signature Event Context” (included here) demonstrates. On the rhetorical side, Derrida argues that language is neither referential nor transparent; it is, rather, always metaphorical and ambiguous, always in need of interpretation. Ultimately, there is nothing (no knowledge, that is) beyond this “text” of language. We might expect Derrida to conclude, then, that knowledge depends not on logic or reason that reaches through or past language to the truth but on the negotiated meanings brought by persuasion and interpretation. But Derrida does not draw this conclusion. He does not concern himself with lan-

guage as purposeful discourse. Indeed, Michel Foucault and others have criticized Derrida for neglecting the political, social, and historical circumstances that contribute to the formation of particular interpretations or methods of persuasion. The rhetorical situation that might *explain* a particular interpretation is not Derrida's topic. He seeks instead to reveal the way in which any explanation tends toward the metaphysics of presence.

In "Signature Event Context," Derrida in fact attacks the idea that "context" can help to account for meaning. How, he asks, can we specify the context without recourse to some settled notions about the conditions of meaning? In this discussion, he concisely summarizes his argument about the "primacy" of writing over speech. Even in the speech situation, he maintains, the meaning of an utterance is undecidable. The same holds true for a reader reading written discourse. In this sense, writing always escapes context. Derrida then criticizes speech-act theory for relying on this exploded notion of context. A number of critics have pointed out that Derrida is not as far from speech-act theory as he seems to suggest here. He appears to accept the general idea that there are "performative" utterances—that is, statements that are in and of themselves actions or necessary parts of actions with legal, social, and ethical consequences—even though he rejects what he takes to be an absolute belief in the availability of context or intention as specifiable conditions for these acts.

Derrida's work has been tremendously influential, not only in philosophy but also in literary criticism. His method of deconstructing texts has become a popular critical approach, and his speculations about language have stimulated a number of related theoretical projects. Despite Derrida's general avoidance of the term *rhetoric*, several commentators have seen his critique of philosophy as part of the long-standing conflict between philosophy and rhetoric as ways of knowing. By rhetoric, Derrida means, primarily, tropes and figures. Here is how he begins his essay "White Mythology: Metaphor in the Text of Philosophy": "From philosophy, rhetoric. That is, here, to make from a volume, approximately, more or less, a flower, to extract a flower, to mount it, or rather to have it mount itself, bring itself to light—and turning away, as if from itself, come round again."² Rhetoric is the flower, the ornament, one that turns away, in the (dare we say) literal meaning of *trope*. Derrida's hesitation with these notions is understandable: "The opposition of meaning . . . to its metaphorical signifier . . . is sedimented—another metaphor—by the entire history of philosophy."³ The danger of using rhetoric to designate an alternative to philosophy is that the terminology and categories of rhetoric have already been colonized by philosophy. Derrida's work, however, is one of the signs of liberation.

Selected Bibliography

"Signature Event Context" was read at the Congrès International des Sociétés de Philosophie de Langue Française in Montreal in 1971. Our text, translated by Samuel Weber and Jeffrey Mehlman, appeared in *Glyph 1* (Baltimore, 1977). Another translation, by Alan Bass, is in *Margins of Philosophy* (1972; Chicago, 1982), which also contains "White Mythology."

²Jacques Derrida, "White Mythology: Metaphor in the Text of Philosophy," in *Margins of Philosophy*, trans. Alan Bass (Chicago: University of Chicago Press, 1982), p. 209.

³Derrida, p. 228.

John Searle answers Derrida's criticisms of speech-act theory in "Reiterating the Differences: A Reply to Derrida," also in *Glyph I*. And Derrida answers Searle in "Limited Inc abc" in *Glyph II* (Baltimore, 1977). "Signature Event Context" and "Limited Inc abc" are reprinted, with an additional essay by Derrida, in *Limited Inc*, ed. Gerald Graff (Evanston, Ill., 1988).

Derrida discusses writing and speech in *Of Grammatology*, trans. Gayatri Spivak (1967; Baltimore, 1977). Spivak's introduction is very helpful. *Speech and Phenomena and Other Essays on Husserl's Theory of Signs*, trans. David Allison (1967; Evanston, Ill., 1973), contains the essay "Différance" as well as an excellent introduction by Newton Garver. *Writing and Difference*, trans. Alan Bass (1967; Chicago, 1978), contains an essay on Foucault and the fascinating "Freud and the Scene of Writing." *Dissemination*, trans. Barbara Johnson (1972; Chicago, 1981), contains "Plato's Pharmacy" and other essays; the translator's introduction offers a good overview of Derrida's ideas. *Positions*, trans. Alan Bass (1972; Chicago, 1981), is a collection of interviews with scholars.

Deconstruction in a Nutshell: A Conversation with Jacques Derrida, ed. John Caputo (New York, 1997), is an edited transcript of a round table on deconstruction at Villanova. Derrida, speaking in English, is remarkably clear (in other interviews in this period, in French, Derrida speaks the way he writes). An excellent anthology is *A Derrida Reader: Between the Blinds*, ed. Peggy Kamuf (New York, 1991), which contains "Signature Event Context" and "Plato's Pharmacy" along with helpful brief introductions to each piece and an invaluable annotated bibliography that goes to 1989.

For a good earlier bibliography and a clear overview of Derrida's ideas, see Christopher Norris's *Derrida* (Cambridge, Mass., 1987), as well as his earlier *Deconstruction: Theory and Practice* (New York, 1982). An excellent short introduction is Jonathan Culler's "Jacques Derrida," in *Structuralism and Since: From Levi-Strauss to Derrida*, ed. John Sturrock (London, 1979). Edward Said compares the theories of Derrida and Foucault in "The Problems of Textuality: Two Exemplary Positions" (*Critical Inquiry* 4 [summer 1978]: 673–714). Richard Rorty's "Philosophy as a Kind of Writing: An Essay on Derrida" (*New Literary History* 10 [fall 1978]: 141–60) locates Derrida in a modern non-Kantian tradition of philosophy. Frank Lentricchia places Derrida in modern literary theory and also discusses his influence in *After the New Criticism* (Chicago, 1980). John Llewelyn takes up the issue of signs, semiotics, and speech acts in *Derrida on the Threshold of Sense* (New York, 1986). Gregory Desilet addresses rhetoric's relation to deconstruction in "Heidegger and Derrida: The Conflict between Hermeneutics and Deconstruction in the Context of Rhetorical and Communication Theory" (*Quarterly Journal of Speech* 77 [1991]: 152–75). See also "Jacques Derrida on Rhetoric and Composition: A Conversation" in *(Inter)views: Cross-Disciplinary Perspectives on Rhetoric and Literacy*, ed. Gary Olson and Irene Gale (Carbondale, Ill., 1991).

Several helpful essays are in *Derrida: A Critical Reader*, ed. David Wood (Cambridge, Mass., 1992), which includes a brief but insightful essay by Richard Rorty, who has engaged Derrida in an important and long-running dialogue. For more on Rorty and Derrida, see *Deconstruction and Pragmatism*, ed. Chantal Mouffe (New York, 1996). For a broader account of Derrida's place in the philosophical tradition, see Rudolph Gasché, *On Jacques Derrida* (Cambridge, Mass., 1994).

Signature Event Context

Still confining ourselves for simplicity to spoken utterance.

—AUSTIN, *How to Do Things with Words*

Is it certain that to the word *communication* corresponds a concept that is unique, univocal, rigorously controllable, and transmittable: in a word, communicable? Thus, in accordance with a strange figure of discourse, one must first of all ask oneself whether or not the word or signifier “communication” communicates a determinate content, an identifiable meaning, or a describable value. However, even to articulate and to propose this question I have had to anticipate the meaning of the word *communication*: I have been constrained to predetermine communication as a vehicle, a means of transport or transitional medium of a *meaning*, and moreover of a *unified* meaning. If *communication* possessed several meanings and if this plurality should prove to be irreducible, it would not be justifiable to define communication *a priori* as the transmission of a *meaning*, even supposing that we could agree on what each of these words (transmission, meaning, etc.) involved. And yet, we have no prior authorization for neglecting *communication* as a word, or for impoverishing its polysemic aspects; indeed, this word opens up a semantic domain that precisely does not limit itself to semantics, semiotics, and even less to linguistics. For one characteristic of the semantic field of the word *communication* is that it designates nonsemantic movements as well. Here, even a provisional recourse to ordinary language and to the equivocations of natural language instructs us that one can, for instance, *communicate a movement* or that a tremor [*ébranlement*], a shock, a displacement of force can be communicated—that is, propagated, transmitted. We also speak of different or remote places communicating with each other by means of a passage or opening. What takes place, in this sense, what is transmitted, communicated, does not involve phenomena of meaning or signification. In such cases we are

dealing neither with a semantic or conceptual content, nor with a semiotic operation, and even less with a linguistic exchange.

We would not, however, assert that this non-semiotic meaning of the word *communication*, as it works in ordinary language, in one or more of the so-called natural languages, constitutes the *literal* or *primary* [*primitif*] meaning and that consequently the semantic, semiotic, or linguistic meaning corresponds to a derivation, extension, or reduction, a metaphoric displacement. We would not assert, as one might be tempted to do, that semio-linguistic communication acquired its title *more metaphorico*, by analogy with “physical” or “real” communication, inasmuch as it also serves as a passage, transporting and transmitting something, rendering it accessible. We will not assert this for the following reasons:

1. because the value of the notion of *literal meaning* [*sens propre*] appears more problematical than ever, and

2. because the value of displacement, of transport, etc., is precisely constitutive of the concept of metaphor with which one claims to comprehend the semantic displacement that is brought about from communication as a non-semio-linguistic phenomenon to communication as a semio-linguistic phenomenon.

(Let me note parenthetically that this communication is going to concern, indeed already concerns, the problem of polysemy and of communication, of dissemination—which I shall oppose to polysemy—and of communication. In a moment a certain concept of writing cannot fail to arise that may transform itself and perhaps transform the problematic under consideration).

It seems self-evident that the ambiguous field of the word “communication” can be massively reduced by the limits of what is called a *context* (and I give notice, again parenthetically, that this particular communication will be concerned with the problem of context and with the question of determining exactly how writing relates to

Translated by Samuel Weber and Jeffrey Mehlman.

context in general). For example, in a philosophical *colloquium* on philosophy in the *French language*, a conventional context—produced by a kind of consensus that is implicit but structurally vague—seems to prescribe that one propose “communications” concerning communication, communications in a discursive form, colloquial communications, oral communications destined to be listened to, and to engage or to pursue dialogues within the horizon of an intelligibility and truth that is meaningful, such that ultimately general agreement may, in principle, be attained. These communications are supposed to confine themselves to the element of a determinate, “natural” language, here designated as French, which commands certain very particular uses of the word *communication*. Above all, the object of such communications is supposed, by priority or by privilege, to organize itself around communication *qua discourse*, or in any case *qua signification*. Without exhausting all the implications and the entire structure of an “event” such as this one, an effort that would require extended preliminary analysis, the conditions that I have just recalled seem to be evident; and those who doubt it need only consult our program to be convinced.

But are the conditions [*les réquisits*] of a context ever absolutely determinable? This is, fundamentally, the most general question that I shall endeavor to elaborate. Is there a rigorous and scientific concept of *context*? Or does the notion of context not conceal, behind a certain confusion, philosophical presuppositions of a very determinate nature? Stating it in the most summary manner possible, I shall try to demonstrate why a context is never absolutely determinable, or rather, why its determination can never be entirely certain or saturated. This structural nonsaturation would have a double effect:

1. it would mark the theoretical inadequacy of the *current concept of context* (linguistic or nonlinguistic), as it is accepted in numerous domains of research, including all the concepts with which it is systematically associated;
2. it would necessitate a certain generalization and a certain displacement of the concept of writing. This concept would no longer be com-

prehensible in terms of communication, at least in the limited sense of a transmission of meaning. Inversely, it is within the general domain of writing, defined in this way, that the effects of semantic communication can be determined as effects that are particular, secondary, inscribed, and supplementary.

WRITING AND TELECOMMUNICATION

If we take the notion of writing in its currently accepted sense—one which should not—and that is essential—be considered innocent, primitive, or natural, it can only be seen as a *means of communication*. Indeed, one is compelled to regard it as an especially potent means of communication, *extending* enormously, if not infinitely, the domain of oral or gestural communication. This seems obvious, a matter of general agreement. I shall not describe all the *modes* of this extension in time and in space. I shall, however, pause for a moment to consider the import [*valeur*] of *extension* to which I have just referred. To say that writing *extends* the field and the powers of locutory or gestural communication presupposes, does it not, a sort of *homogeneous* space of communication? Of course the compass of voice or of gesture would encounter therein a factual limit, an empirical boundary of space and of time; while writing, in the same time and in the same space, would be capable of relaxing those limits and of opening the *same field* to a very much larger scope. The meaning or contents of the semantic message would thus be transmitted, *communicated*, by different *means*, by more powerful technical mediations, over a far greater distance, but still within a medium that remains fundamentally continuous and self-identical, a homogeneous element through which the unity and wholeness of meaning would not be affected in its essence. Any alteration would therefore be accidental.

The system of this interpretation (which is also, in a certain manner, *the* system of interpretation, or in any case of all hermeneutical interpretation), however currently accepted it may be, or inasmuch as it is current, like common sense, has been *represented* through the history of philosophy. I would even go so far as to say that it is

the interpretation of writing that is peculiar and proper to philosophy. I shall limit myself to a single example, but I do not believe that a single counter-example can be found in the entire history of philosophy as such; I know of no analysis that contradicts, essentially, the one proposed by Condillac, under the direct influence of Warburton, in the *Essay on the Origin of Human Knowledge* (*Essai sur l'origine des connaissances humaines*). I have chosen this example because it contains an *explicit* reflection on the origin and function of the written text (this explicitness is not to be found in every philosophy, and the particular conditions both of its emergence and of its eclipse must be analyzed) which organizes itself here within a philosophical discourse that, in this case and throughout philosophy, presupposes the simplicity of the origin, the continuity of all derivation, of all production, of all analysis, and the homogeneity of all dimensions [*orders*]. Analogy is a major concept in the thought of Condillac. I have also chosen this example because the analysis, “retracing” the origin and function of writing, is placed, in a rather uncritical manner, *under the authority of the category of communication*.¹ If men write it is: (1) because they have to communicate; (2) because what they have to communicate is their “thought,” their “ideas,” their representations. Thought, as representation, precedes and governs communication, which transports the “idea,” the signified content; (3) because men are *already* in a state that allows them to communicate their thought to themselves and to each other when, in a continuous manner, they invent the particular means of communication, writing. Here is a passage from Chapter XIII of the Second Part (“On Language and Method”), First Section (“On the Origins and Progress of Language”; writing is thus a modality of language and marks a continual progression in an essentially linguistic communication), paragraph XIII, “On Writing”: “Men in a state of communicating their thoughts by means of sounds, felt the necessity of imagining new signs capable of perpetuating those

¹The Rousseauist theory of language and of writing is also introduced under the general title of *communication* (“On the diverse means of communicating our thoughts” is the title of the first chapter of the *Essay on the Origin of Languages*). [Au.]

thoughts and of making them *known* to persons who are *absent*” (I underscore this value of *absence*, which, if submitted to renewed questioning, will risk introducing a certain break in the homogeneity of the system). Once men are already in the state of “communicating their thoughts,” and of doing it by means of sounds (which is, according to Condillac, a second step, when articulated language has come to “supplant” [*suppléer*] the language of action, which is the single and radical principle of all language), the birth and progress of writing will follow in a line that is direct, simple, and continuous. The history of writing will conform to a law of mechanical economy: to gain or save the most space and time possible by means of the most convenient abbreviation; hence writing will never have the slightest effect on either the structure or the contents of the meaning (the ideas) that it is supposed to transmit [*véhiculer*]. The same content, formerly communicated by gestures and sounds, will henceforth be transmitted by writing, by successively different modes of notation, from pictographic writing to alphabetic writing, collaterally by the hieroglyphic writing of the Egyptians and the ideographic writing of the Chinese. Condillac continues: “Thus the imagination will represent to them only the very *same* images that they had already expressed through actions and words, and which had, from the very beginning, rendered language figural and metaphorical. *The most natural means* was thus to depict [*dessiner*] images of things. To *express the idea* of a man or of a horse, one represented the form of the one or of the other, and the first attempt at writing was nothing but a simple painting” (my emphasis—J. D.).

The representational character of the written communication—writing as picture, reproduction, imitation of its content—will be the invariant trait of all progress to come. The concept of *representation* is here indissociable from those of *communication* and of *expression* that I have emphasized in Condillac’s text. Representation, of course, will become more complex, will develop supplementary ramifications and degrees; it will become the representation of a representation in various systems of writing, hieroglyphic, ideographic, or phonetic-alphabetical, but the representative structure which marks the first degree

of expressive communication, the relation idea/sign, will never be either annulled or transformed. Describing the history of the types of writing, their continuous derivation from a common root that is never displaced and which establishes a sort of community of analogical participation among all the species of writing, Condillac concludes (in what is virtually a citation of Warburton, as is most of this chapter): "Thus, the general history of writing proceeds by simple gradation from the state of painting to that of the letter; for letters are the final steps that are left to be taken after the Chinese marks which, on the one hand, participate in the nature of Egyptian hieroglyphics, and on the other, participate in that of letters just as the hieroglyphs participate both in Mexican paintings and Chinese characters. These characters are so close to our writing that an alphabet simply diminishes the inconvenience of their great number and is their succinct abbreviation."

Having thus confirmed the motif of economic reduction in its *homogeneous and mechanical* character, let us now return to the notion of *absence* that I underscored, in passing, in the text of Condillac. How is that notion determined there?

1. It is first of all the absence of the addressee. One writes in order to communicate something to those who are absent. The absence of the sender, of the receiver [*destinateur*], from the mark that he abandons, and which cuts itself off from him and continues to produce effects independently of his presence and of the present actuality of his intentions [*vouloir-dire*], indeed even after his death, his absence, which moreover belongs to the structure of all writing—and I shall add further on, of all language in general—this absence is not examined by Condillac.

2. The absence of which Condillac speaks is determined in the most classic manner as a continuous modification and progressive extenuation of presence. Representation regularly *supplants* [*supplée*] presence. However, articulating all the moments of experience insofar as it is involved in signification ("to supplant," *suppléer*, is one of the most decisive and most frequent operational

concepts in Condillac's *Essay*²), this operation of supplementation is not exhibited as a break in presence but rather as a continuous and homogeneous reparation and modification of presence in the representation.

I am not able to analyze, here, everything presupposed in Condillac's philosophy and elsewhere, by this concept of absence as the modification of presence. Let us note only that this concept governs another operational notion (for the sake of convenience I invoke the classical opposition between *operational* and *thematic*) which is no less decisive for the *Essay: tracing and retracing*. Like the concept of supplanting [*suppléance*], the concept of trace would permit an interpretation quite different from Condillac's. According to him, tracing means "expressing," "representing," "recalling," "rendering present" ("Thus painting probably owes its origin to the necessity of tracing our thoughts in the manner described, and this necessity has doubtless contributed to reserving the language of action as that which is most readily depictable" ["On Writing," p. 128]). The sign comes into being at the same time as imagination and memory, the moment it is necessitated by the absence of the object from present perception [*la perception présente*] ("Memory, as we have seen, consists in nothing but the power of recalling the signs of our ideas, or the circumstances that accompanied them; and this power only takes place by virtue of the *analogy* of the signs [my emphasis—J. D.: the concept of analogy, which organizes the entire system of Condillac, provides the general guarantee of all the continuities and in particular that linking presence to absence] that we have chosen; and by the order that we have instituted among our ideas, the objects that we wish to retrace are bound up with several of our present needs" I, II Ch. iv, #39). This holds true for all the orders of signs distinguished by Condillac (arbitrary, accidental, and even natural, distinctions that Condillac qual-

²Language supplants action or perception: articulated language supplants the language of action: writing supplants articulated language, etc. [Au.] [The word, *supplée*, used by Derrida and here by Rousseau, implies the double notion of supplanting, replacing, and also supplementing, bringing to completion, remedying.—Tr.]

ifies and, on certain points, even calls into question in his letters to Cramer). The philosophical operation that Condillac also calls “retracing” consists in reversing, by a process of analysis and continuous decomposition, the movement of genetic derivation that leads from simple sensation and present perception to the complex edifice of representation: from ordinary presence to the language of the most formal calculus [*calcul*].

It would be easy to demonstrate that, fundamentally, this type of analysis of written signification neither begins nor ends with Condillac. If I call this analysis “ideological,” I do so neither to oppose its notions to “scientific” concepts nor to appeal to the dogmatic—one might also say ideological—usage to which the term “ideology” is often put, while seldom subjecting either the various possibilities or the history of the word to serious consideration. If I define notions such as those of Condillac as “ideological” it is because, against the background [*sur le fond*] of a vast, powerful, and systematic philosophical tradition dominated by the prominence of the *idea* (*eidos, idea*), they delineate the field of reflection of the French “ideologues,” who in the wake of Condillac elaborated a theory of the sign as representation of the idea which itself represented the object perceived. From that point on, communication is that which circulates a representation as an ideal content (meaning); and writing is a species of this general communication. A species: a communication admitting a relative specificity within a genre.

If we now ask ourselves what, in this analysis, is the essential predicate of this *specific difference*, we rediscover *absence*.

I offer here the following two propositions or hypotheses:

1. since every sign, whether in the “language of action” or in articulated language (before even the intervention of writing in the classical sense), presupposes a certain absence (to be determined), the absence within the particular field of writing will have to be of an original type if one intends to grant any specificity whatsoever to the written sign;

2. if perchance the predicate thus introduced to characterize the absence peculiar and proper to

writing were to find itself no less appropriate to every species of sign and of communication, the consequence would be a general shift: writing would no longer be one species of communication, and all the concepts to whose generality writing had been subordinated (including the *concept* itself *qua* meaning, idea or grasp of meaning and of idea, the concept of communication, of the sign, etc.) would appear to be noncritical, ill-formed, or destined, rather, to insure the authority and the force of a certain historical discourse.

Let us attempt, then, while still continuing to take this classical discourse as our point of departure, to characterize the absence that seems to intervene in a specific manner in the functioning of writing.

A written sign is proffered in the absence of the receiver. How to style this absence? One could say that at the moment when I am writing, the receiver may be absent from my field of present perception. But is not this absence merely a distant presence, one which is delayed or which, in one form or another, is idealized in its representation? This does not seem to be the case, or at least this distance, divergence, delay, this deferral [*différance*] must be capable of being carried to a certain absoluteness of absence if the structure of writing, assuming that writing exists, is to constitute itself. It is at that point that the *différance* [difference and deferral, *trans.*] as writing could no longer (be) an (ontological) modification of presence. In order for my “written communication” to retain its function as writing, i.e., its readability, it must remain readable despite the absolute disappearance of any receiver, determined in general. My communication must be repeatable—iterable—in the absolute absence of the receiver or of any empirically determinable collectivity of receivers. Such iterability—(*iter*, again, probably comes from *itara, otha* in Sanskrit, and everything that follows can be read as the working out of the logic that ties repetition to alterity) structures the mark of writing itself, no matter what particular type of writing is involved (whether pictographical, hieroglyphic, ideographic, phonetic, alphabetic, to cite the old categories). A writing that is

not structurally readable—iterable—beyond the death of the addressee would not be writing. Although this would seem to be obvious, I do not want it accepted as such, and I shall examine the final objection that could be made to this proposition. Imagine a writing whose code would be so idiomatic as to be established and known, as secret cipher, by only two “subjects.” Could we maintain that, following the death of the receiver, or even of both partners, the mark left by one of them is still writing? Yes, to the extent that, organized by a code, even an unknown and nonlinguistic one, it is constituted in its identity as mark by its iterability, in the absence of such and such a person, and hence ultimately of every empirically determined “subject.” This implies that there is no such thing as a code—organon of iterability—which could be structurally secret. The possibility of repeating and thus of identifying the marks is implicit in every code, making it into a network [*une grille*] that is communicable, transmittable, decipherable, iterable for a third, and hence for every possible user in general. To be what it is, all writing must, therefore, be capable of functioning in the radical absence of every empirically determined receiver in general. And this absence is not a continuous modification of presence, it is a rupture in presence, the “death” or the possibility of the “death” of the receiver inscribed in the structure of the mark (I note in passing that this is the point where the value or the “effect” of transcendentalism is linked necessarily to the possibility of writing and of “death” as analyzed). The perhaps paradoxical consequence of my here having recourse to iteration and to code: the disruption, in the last analysis, of the authority of the code as a finite system of rules; at the same time, the radical destruction of any context as the protocol of code. We will come to this in a moment.

What holds for the receiver holds also, for the same reasons, for the sender or the producer. To write is to produce a mark that will constitute a sort of machine which is productive in turn, and which my future disappearance will not, in principle, hinder in its functioning, offering things and itself to be read and to be rewritten. When I say “my future disappearance” [*disparition*: also, demise, *trans.*], it is in order to render this propo-

sition more immediately acceptable. I ought to be able to say my disappearance, pure and simple, my non-presence in general, for instance the non-presence of my intention of saying something meaningful [*mon vouloir-dire, mon intention-designification*], of my wish to communicate, from the emission or production of the mark. For a writing to be a writing it must continue to “act” and to be readable even when what is called the author of the writing no longer answers for what he has written, for what he seems to have signed, be it because of a temporary absence, because he is dead, or, more generally, because he has not employed his absolutely actual and present intention or attention, the plenitude of his desire to say what he means, in order to sustain what seems to be written “in his name.” One could repeat at this point the analysis outlined above this time with regard to the addressee. The situation of the writer and of the underwriter [*du souscripteur*: the signatory, *trans.*] is, concerning the written text, basically the same as that of the reader. This essential drift [*dérive*] bearing on writing as an iterative structure, cut off from all absolute responsibility, from *consciousness* as the ultimate authority, orphaned and separated at birth from the assistance of its father, is precisely what Plato condemns in the *Phaedrus*. If Plato’s gesture is, as I believe, the philosophical movement par excellence, one can measure what is at stake here.

Before elaborating more precisely the inevitable consequences of these nuclear traits of all writing (that is: [1] the break with the horizon of communication as communication of consciousness or of presences and as linguistic or semantic transport of the desire to mean what one says [*vouloir-dire*]; [2] the disengagement of all writing from the semantic or hermeneutic horizons which, inasmuch as they are horizons of meaning, are riven [*crever*] by writing; [3] the necessity of disengaging from the concept of polysemics what I have elsewhere called *dissemination*, which is also the concept of writing; [4] the disqualification or the limiting of the concept of context, whether “real” or “linguistic,” inasmuch as its rigorous theoretical determination as well as its empirical saturation is rendered impossible or insufficient by writing), I would like to demonstrate that the traits that can be recog-

nized in the classical, narrowly defined concept of writing, are generalizable. They are valid not only for all orders of “signs” and for all languages in general but moreover, beyond semio-linguistic communication, for the entire field of what philosophy would call experience, even the experience of being: the above-mentioned “presence.”

What are in effect the essential predicates in a minimal determination of the classical concept of writing?

1. A written sign, in the current meaning of this word, is a mark that subsists, one which does not exhaust itself in the moment of its inscription and which can give rise to an iteration in the absence and beyond the presence of the empirically determined subject who, in a given context, has emitted or produced it. This is what has enabled us, at least traditionally, to distinguish a “written” from an “oral” communication.

2. At the same time, a written sign carries with it a force that breaks with its context, that is, with the collectivity of presences organizing the moment of its inscription. This breaking force [*force de rupture*] is not an accidental predicate but the very structure of the written text. In the case of a so-called “real” context, what I have just asserted is all too evident. This allegedly real context includes a certain “present” of the inscription, the presence of the writer to what he has written, the entire environment and the horizon of his experience, and above all the intention, the wanting-to-say-what-he-means, which animates his inscription at a given moment. But the sign possesses the characteristic of being readable even if the moment of its production is irrevocably lost and even if I do not know what its alleged author-scriptor consciously intended to say at the moment he wrote it, i.e., abandoned it to its essential drift. As far as the internal semiotic context is concerned, the force of the rupture is no less important: by virtue of its essential iterability, a written syntagma can always be detached from the chain in which it is inserted or given without causing it to lose all possibility of functioning, if not all possibility of “communicating,” precisely. One can perhaps come to recognize other possibilities in it by inscribing it or *grafting* it into other chains. No context can en-

tirely enclose it. Nor any code, the code here being both the possibility and impossibility of writing, of its essential iterability (repetition/alterity).

3. This force of rupture is tied to the spacing [*espacement*] that constitutes the written sign: spacing which separates it from other elements of the internal contextual chain (the always open possibility of its disengagement and graft), but also from all forms of present reference (whether past or future in the modified form of the present that is past or to come), objective or subjective. This spacing is not the simple negativity of a lacuna but rather the emergence of the mark. It does not remain, however, as the labor of the negative in the service of meaning, of the living concept, of the *telos*, supersedable and reducible in the *Aufhebung* of a dialectic.

Are these three predicates, together with the entire system they entail, limited, as is often believed, strictly to “written” communication in the narrow sense of this word? Are they not to be found in all language, in spoken language for instance, and ultimately in the totality of “experience” insofar as it is inseparable from this field of the mark, which is to say, from the network of effacement and of difference, of units of iterability, which are separable from their internal and external context and also from themselves, inasmuch as the very iterability which constituted their identity does not permit them ever to be a unity that is identical to itself?

Let us consider any element of spoken language, be it a small or large unit. The first condition of its functioning is its delineation with regard to a certain code; but I prefer not to become too involved here with this concept of code which does not seem very reliable to me; let us say that a certain self-identity of this element (mark, sign, etc.) is required to permit its recognition and repetition. Through empirical variations of tone, voice, etc., possibly of a certain accent, for example, we must be able to recognize the identity, roughly speaking, of a signifying form. Why is this identity paradoxically the division or dissociation of itself, which will make of this phonic sign a grapheme? Because this unity of the signifying form only constitutes itself by

virtue of its iterability, by the possibility of its being repeated in the absence not only of its “referent,” which is self-evident, but in the absence of a determinate signified or of the intention of actual signification, as well as of all intention of present communication. This structural possibility of being weaned from the referent or from the signified (hence from communication and from its context) seems to me to make every mark, including those which are oral, a grapheme in general; which is to say, as we have seen, the non-present *remainder* [*restance*] of a differential mark cut off from its putative “production” or origin. And I shall even extend this law to all “experience” in general as it is conceded that there is no experience consisting of *pure* presence but only of chains of differential marks.

Let us dwell for a moment on this point and return to that absence of the referent and even of the signified meaning, and hence of the correlative intention to signify. The absence of referent is a possibility easily enough admitted today. This possibility is not only an empirical eventuality. It constructs the mark; and the potential presence of the referent at the moment it is designated does not modify in the slightest the structure of the mark, which implies that the mark can do without the referent. Husserl, in his *Logical Investigations*, analyzed this possibility very rigorously, and in a two-fold manner:

1. An utterance [*énoncé*] whose object is not impossible but only possible can very well be made and understood without its real object (its referent) being present, either to the person who produced the statement or to the one who receives it. If while looking out the window, I say: “The sky is blue,” this utterance will be intelligible (let us say, provisionally if you like, communicable) even if the interlocutor does not see the sky; even if I do not see it myself, if I see it badly, if I am mistaken or if I wish to mislead my interlocutor. Not that this is always the case; but the structure of possibility of this utterance includes the capability to be formed and to function as a reference that is empty or cut off from its referent. Without this possibility, which is also that of iterability in general, “generable,” and generative of all marks, there would be no utterance.

2. The absence of the signified. Husserl analyzes this as well. He judges it to be always possible even if, according to the axiology and teleology that governs his analysis, he judges this possibility to be inferior, dangerous, or “critical”: it opens the phenomenon of the *crisis* of meaning. This absence of meaning can take three forms:

- a. I can manipulate symbols without animating them, in an active and actual manner, with the attention and intention of signification (crisis of mathematical symbolism, according to Husserl). Husserl insists on the fact that this does not prevent the sign from functioning: the crisis or the emptiness of mathematical meaning does not limit its technical progress (the intervention of writing is decisive here, as Husserl himself remarks in *The Origin of Geometry*).
- b. Certain utterances can have a meaning although they are deprived of *objective* signification. “The circle is squared” is a proposition endowed with meaning. It has sufficient meaning at least for me to judge it false or contradictory (*widersinnig* and not *sinnlos*, Husserl says). I place this example under the category of the absence of the signified, although in this case the tripartite division into signifier/signified/referent is not adequate to a discussion of the Husserlian analysis. “Squared circle” marks the absence of a referent, certainly, as well as that of a certain signified, but not the absence of meaning. In these two cases, the crisis of meaning (nonpresence in general, absence as the absence of the referent—of the perception—or of the meaning—of the intention of actual signification) is still bound to the essential possibility of writing; and this crisis is not an accident, a factual and empirical anomaly of spoken language, it is also its positive possibility and its “internal” structure, in the form of a certain outside [*dehors*].
- c. Finally there is what Husserl calls *Sinnlosigkeit* or agrammaticality. For instance, “the green is either” or “abracadabra” [*le vert est ou; the ambiguity of ou or où is noted below, trans.*]. In such cases Husserl

considers that there is no language any more, or at least no “logical” language, no cognitive language such as Husserl construes in a teleological manner, no language accorded the possibility of the intuition of objects given in person and signified in *truth*. We are confronted here with a decisive difficulty. Before stopping to deal with it, I note a point that touches our discussion of communication, namely that the primary interest of the Husserlian analysis to which I am referring here (while precisely detaching it up to a certain point, from its context or its teleological and metaphysical horizon, an operation which itself ought to provoke us to ask how and why it is always possible), is its claim rigorously to dissociate (not without a certain degree of success) from every phenomenon of communication the analysis of the sign or the expression (*Ausdruck*) as signifying sign, the seeking to say something (*bedeutsames Zeichen*).³

Let us return to the case of agrammatical *Sinnlosigkeit*. What interests Husserl in the *Logical Investigations* is the system of rules of a universal grammar, not from a linguistic point of view but from a logical and epistemological one. In an important note to the second edition,⁴ he

³“Up to now, we have considered expressions in their communicative function. This derives essentially from the fact that expressions operate as indexes. But a large role is also assigned to expressions in the life of the soul inasmuch as it is not engaged in a relation of communication. It is clear that this modification of the function does not affect what makes expressions expressions. They have, as before, their *Bedeutungen* and the same *Bedeutungen* as in collocation.” (*Logical Investigations I*, Ch. I, #8). What I assert here implies the interpretation that I have offered of the Husserlian procedure on this point. I therefore refer the reader to *Speech and Phenomenon (La Voix et le phénomène)*. [Au.]

⁴“In the first edition I spoke of ‘pure grammar,’ a name that was conceived on the analogy of ‘pure science of nature’ in Kant, and expressly designated as such. But to the extent that it cannot be affirmed that the pure morphology of *Bedeutungen* englobes all grammatical a priori in their universality, since for example relations of communication between psychic subjects, which are so important for grammar, entail their own a priori, the expression of *pure logical grammar* deserves priority . . .” (*LI II*, Part 2, Ch. iv). [Au.]

specifies that his concern is with a pure *logical* grammar, that is, with the universal conditions of possibility for a morphology of significations in their cognitive relation to a possible object, not with a pure grammar in *general*, considered from a psychological or linguistic point of view. Thus, it is solely in a context determined by a will to know, by an epistemic intention, by a conscious relation to the object as cognitive object within a horizon of truth, solely in this oriented contextual field is “the green is either” unacceptable. But as “the green is either” or “abracadabra” do not constitute their context by themselves, nothing prevents them from functioning in another context as signifying marks (or indices, as Husserl would say). Not only in contingent cases such as a translation from German into French, which would endow “the green is either” with grammaticality, since “either” (*oder*) becomes for the ear “where” [*où*] (a spatial mark). “Where has the green gone (of the lawn: the green is where),” “Where is the glass gone in which I wanted to give you something to drink?” [*Où est passé le verre dans lequel je voulais vous donner à boire?*] But even “the green is either” itself still signifies an *example of agrammaticality*. And this is the possibility on which I want to insist: the possibility of disengagement and citational graft which belongs to the structure of every mark, spoken or written, and which constitutes every mark in writing before and outside of every horizon of semio-linguistic communication; in writing, which is to say in the possibility of its functioning being cut off, at a certain point, from its “original” desire-to-say-what-one-means [*vouloir-dire*] and from its participation in a saturable and constraining context. Every sign, linguistic or nonlinguistic, spoken or written (in the current sense of this opposition), in a small or large unit, can be *cited*, put between quotation marks; in so doing it can break with every given context, engendering an infinity of new contexts in a manner which is absolutely illimitable. This does not imply that the mark is valid outside of a context, but on the contrary that there are only contexts without any center or absolute anchoring [*ancrage*]. This citationality, this duplication or duplicity, this iterability of the mark is neither an accident nor an anomaly, it is that (normal/

abnormal) without which a mark could not even have a function called "normal." What would a mark be that could not be cited? Or one whose origins would not get lost along the way?

PARASITES. ITER, OF WRITING: THAT IT PERHAPS DOES NOT EXIST

I now propose to elaborate a bit further this question with special attention to—but in order, as well, to pass beyond—the problematic of the *performative*. It concerns us here for several reasons:

1. First of all, Austin, through his emphasis on an analysis of perlocution and above all of illocution, appears to consider speech acts only as acts of communication. The author of the introduction to the French edition of *How to Do Things with Words*, quoting Austin, notes as much: "It is by comparing *constative* utterances (i.e., classical "assertions," generally considered as true or false "descriptions" of facts) with *performative* utterances (from the English "performative," i.e., allowing to accomplish something through speech itself) that Austin is led to consider *every* utterance worthy of the name (i.e., intended to communicate—thus excluding, for example, reflex-exclamations) as being primarily and above all a speech act produced in the *total* situation in which the interlocutors find themselves" (*How to Do Things with Words*, p. 147, G. Lane, Introduction to the French translation, p. 19).

2. This category of communication is relatively new. Austin's notions of illocution and perlocution do not designate the transference or passage of a thought-content, but, in some way, the communication of an original movement (to be defined within a *general theory of action*), an operation and the production of an effect. Communicating, in the case of the performative, if such a thing, in all rigor and in all purity, should exist (for the moment, I am working within that hypothesis and at that stage of the analysis), would be tantamount to communicating a force through the impetus [*impulsion*] of a mark.

3. As opposed to the classical assertion, to the constative utterance, the performative does

not have its referent (but here that word is certainly no longer appropriate, and this precisely is the interest of the discovery) outside of itself or, in any event, before and in front of itself. It does not describe something that exists outside of language and prior to it. It produces or transforms a situation, it effects; and even if it can be said that a constative utterance also effectuates something and always transforms a situation, it cannot be maintained that that constitutes its internal structure, its manifest function or destination, as in the case of the performative.

4. Austin was obliged to free the analysis of the performative from the authority of the truth *value*, from the true/false opposition,⁵ at least in its classical form, and to substitute for it at times the value of force, of difference of force (*illocutionary* or *perlocutionary* force). (In this line of thought, which is nothing less than Nietzschean, this in particular strikes me as moving in the direction of Nietzsche himself, who often acknowledged a certain affinity for a vein of English thought.)

For these four reasons, at least, it might seem that Austin has shattered the concept of communication as a purely semiotic, linguistic, or symbolic concept. The performative is a "communication" which is not limited strictly to the transference of a semantic content that is already constituted and dominated by an orientation toward truth (be it the *unveiling* of what is in its being or the *adequation-congruence* between a judicative utterance and the thing itself).

And yet—such at least is what I should like to attempt to indicate now—all the difficulties encountered by Austin in an analysis which is patient, open, aporetical, in constant transformation, often more fruitful in the acknowledgement of its impasses than in its positions, strike me as having a common root. Austin has not taken account of what—in the structure of *locution* (thus before any illocutory or perlocutory determination)—already entails that system of predicates I call *graphematic in general* and consequently

⁵Austin names the "two fetishes which I admit to an inclination to play Old Harry with, viz., (1) the true/false fetish, (2) the value/fact fetish" (p. 150). [Au.]

blurs [*brouille*] all the oppositions which follow, oppositions whose pertinence, purity, and rigor Austin has unsuccessfully attempted to establish.

In order to demonstrate this, I shall take for granted the fact that Austin's analyses at all times require a value of *context*, and even of a context exhaustively determined, in theory or teleologically; the long list of "infelicities" which in their variety may affect the performative event always comes back to an element in what Austin calls the total context.⁶ One of those essential elements—and not one among others—remains, classically, consciousness, the conscious presence of the intention of the speaking subject in the totality of his speech act. As a result, performative communication becomes once more the communication of an intentional meaning,⁷ even if that meaning has no referent in the form of a thing or of a prior or exterior state of things. The conscious presence of speakers or receivers participating in the accomplishment of a performative, their conscious and intentional presence in the totality of the operation, implies teleologically that no *residue* [*reste*] escapes the present totalization. No residue, either in the definition of the requisite conventions, or in the internal and linguistic context, or in the grammatical form, or in the semantic determination of the words employed; no irreducible polysemy, that is, no "dissemination" escaping the horizon of the unity of meaning. I quote from the first two lectures of *How to Do Things with Words*:

Speaking generally, it is always necessary that the *circumstances* in which the words are uttered should be in some way, or ways, *appropriate*, and it is very commonly necessary that either the speaker himself or other persons should *also* perform certain *other* actions, whether "physical" or "mental" actions or even acts of uttering further words. Thus, for naming the ship, it is essential that I should be the person appointed to name her; for (Christian) marrying, it is essential that I should not

⁶He says, for example, that "The total speech act in the total speech situation is the *only actual* phenomenon which, in the last resort, we are engaged in elucidating" (p. 147). [Au.]

⁷Which occasionally required Austin to reintroduce the criterion of truth in his description of performatives. Cf., for example, pp. 50–52 and pp. 89–90. [Au.]

be already married with a wife living, sane and undivorced, and so on; for a bet to have been made, it is generally necessary for the offer of the bet to have been accepted by a taker (who must have done something, such as to say "Done"), and it is hardly a gift if I say "I give it you" but never hand it over.

So far, well and good. (pp. 8–9)

In the Second Lecture, after eliminating the grammatical criterion in his customary manner, Austin examines the possibility and the origin of failures or "infelicities" of performative utterance. He then defines the six indispensable—if not sufficient—conditions of success. Through the values of "conventional procedure," "correctness," and "completeness," which occur in the definition, we necessarily find once more those of an exhaustively definable context, of a free consciousness present to the totality of the operation, and of absolutely meaningful speech [*vouloir-dire*] master of itself: the teleological jurisdiction of an entire field whose organizing center remains *intention*.⁸ Austin's procedure is rather remarkable and typical of that philosophical tradition with which he would like to have so few ties. It consists in recognizing that the possibility of the negative (in this case, of infelicities) is in fact a structural possibility, that failure is an essential risk of the operations under consideration; then, in a move which is almost *immediately simultaneous*, in the name of a kind of ideal regulation, it excludes that risk as accidental, exterior, one which teaches us nothing about the linguistic phenomenon being considered. This is all the more curious—and strictly speaking, untenable—in view of Austin's ironic denunciation of the "fetishized" opposition: *valueffect*.

Thus, for example, concerning the conventionality without which there is no performative, Austin acknowledges that *all* conventional acts are exposed to failure: "it seems clear in the first place that, although it has excited us (or failed to excite us) in connexion with certain facts which are or are in part acts of *uttering words*, infelicity is an ill to which *all* acts are heir which have the general character of ritual or ceremonial, all *conventional* acts: not indeed that *every* ritual is

⁸Pp. 10–15. [Au.]

liable to every form of infelicity (but then nor is every performative utterance)" (pp. 18–19, Austin's emphasis).

In addition to the questions posed by a notion as historically sedimented as "convention," it should be noted at this point:

1. that Austin, at this juncture, appears to consider solely the conventionality constituting the *circumstance* of the utterance [*énoncé*], its contextual surroundings, and not a certain conventionality intrinsic to what constitutes the speech act [*locution*] itself, all that might be summarized rapidly under the problematical rubric of "the arbitrary nature of the sign," which extends, aggravates, and radicalizes the difficulty. "Ritual" is not a possible occurrence [*éventualité*], but rather, *as* iterability, a structural characteristic of every mark.

2. that the value of risk or exposure to infelicity, even though, as Austin recognizes, it can affect *a priori* the totality of conventional acts, is not interrogated as an essential predicate or as a *law*. Austin does not ponder the consequences issuing from the fact that a possibility—a possible risk—is *always* possible, and is in some sense a necessary possibility. Nor whether—once such a necessary possibility of infelicity is recognized—infelicity still constitutes an accident. What is a success when the possibility of infelicity [*échec*] continues to constitute its structure?

The opposition success/failure [*échec*] in illocution and in perlocution thus seems quite insufficient and extremely secondary [*dérivée*]. It presupposes a general and systematic elaboration of the structure of locution that would avoid an endless alternation of essence and accident. Now it is highly significant that Austin rejects and defers that "general theory" on at least two occasions, specifically in the Second Lecture. I leave aside the first exclusion.

I am not going into the general doctrine here: in many such cases we may even say the act was "void" (or voidable for duress or undue influence) and so forth. Now I suppose some very general high-level doctrine might embrace both what we have called infelicities *and* these other "unhappy" features of the doing of actions—in our case ac-

tions containing a performative utterance—in a single doctrine: but we are not including this kind of unhappiness—we must just remember, though, that features of this sort can and do constantly obtrude into any case we are discussing. Features of this sort would normally come under the heading of "extenuating circumstances" or of "factors reducing or abrogating the agent's responsibility," and so on. (p. 21, my emphasis)

The second case of this exclusion concerns our subject more directly. It involves precisely the possibility for every performative utterance (and *a priori* every other utterance) to be "quoted." Now Austin excludes this possibility (and the general theory which would account for it) with a kind of lateral insistence, all the more significant in its off-handedness. He insists on the fact that this possibility remains *abnormal, parasitic*, that it constitutes a kind of extenuation or agonized succumbing of language that we should strenuously distance ourselves from and resolutely ignore. And the concept of the "ordinary," thus of "ordinary language," to which he has recourse is clearly marked by this exclusion. As a result, the concept becomes all the more problematical, and before demonstrating as much, it would no doubt be best for me simply to read a paragraph from the Second Lecture:

ii. Secondly, as *utterances* our performances are *also* heir to certain other kinds of ill, which infect *all* utterances. And these likewise though again they might be brought into a more general account, we are deliberately at present excluding. I mean, for example, the following: a performative utterance will, for example, be *in a peculiar way* hollow or void if said by an actor on the stage, or if introduced in a poem, or spoken in a soliloquy. This applies in a similar manner to any and every utterance—a sea-change in special circumstances. Language in such circumstances is in special ways—intelligibly—used not *seriously*, [my emphasis, J. D.] but in many ways *parasitic* upon its normal use—ways which fall under the doctrine of the *etiologies* of language. All this we are *excluding* from consideration. Our performative utterances, felicitous or not, are to be understood as issued in ordinary circumstances. (pp. 21–22)

Austin thus excludes, along with what he calls a "sea-change," the "nonserious," "parasitism."

“etiolation,” “the nonordinary” (along with the whole general theory which, if it succeeded in accounting for them, would no longer be governed by those oppositions), all of which he nevertheless recognizes as the possibility available to every act of utterance. It is as just such a “parasite” that writing has always been treated by the philosophical tradition, and the connection in this case is by no means coincidental.

I would therefore pose the following question: is this general possibility necessarily one of a failure or trap into which language may *fall* or lose itself as in an abyss situated outside of or in front of itself? What is the status of this *parasitism*? In other words, does the quality of risk admitted by Austin *surround* language like a kind of *ditch* or external place of perdition which speech [*la locution*] could never hope to leave, but which it can escape by remaining “at home,” by and in itself, in the shelter of its essence or *telos*? Or, on the contrary, is this risk rather its internal and positive condition of possibility? Is that outside its inside, the very force and law of its emergence? In this last case, what would be meant by an “ordinary” language defined by the exclusion of the very law of language? In excluding the general theory of this structural parasitism, does not Austin, who nevertheless claims to describe the facts and events of ordinary language, pass off as ordinary an ethical and teleological determination (the univocity of the utterance [*énoncé*]—that he acknowledges elsewhere [pp. 72–73] remains a philosophical “ideal”—, the presence to self of a total context, the transparency of intentions, the presence of meaning [*vouloir-dire*] to the absolutely singular uniqueness of a speech act, etc.)?

For, ultimately, isn’t it true that what Austin excludes as anomaly, exception, “nonserious,”⁹ *citation* (on stage, in a poem, or a soliloquy) is the determined modification of a general citationality—or rather, a general iterability—without which there would not even be a “successful” performative? So that—a paradoxical but un-

avoidable conclusion—a successful performative is necessarily an “impure” performative, to adopt the word advanced later on by Austin when he acknowledges that there is no “pure” performative.¹⁰

I take things up here from the perspective of positive possibility and not simply as instances of failure or infelicity: would a performative utterance be possible if a citational doubling [*doublure*] did not come to split and dissociate from itself the pure singularity of the event? I pose the question in this form in order to prevent an objection. For it might be said: you cannot claim to account for the so-called graphematic structure of locution merely on the basis of the occurrence of failures of the performative, however real those failures may be and however effective or general their possibility. You cannot deny that there are also performatives that succeed, and one has to account for them: meetings are called to order (Paul Ricoeur did as much yesterday); people say: “I pose a question”; they bet, challenge, christen ships, and sometimes even marry. It would seem that such events have occurred. And even if only one had taken place only once, we would still be obliged to account for it.

I’ll answer: “Perhaps.” We should first be clear on what constitutes the status of “occurrence” or the eventhood of an event that entails in its allegedly present and singular emergence the intervention of an utterance [*énoncé*] that in itself can be only repetitive or citational in its structure, or rather, since those two words may lead to confusion: iterable. I return then to a point that strikes me as fundamental and that now concerns the status of events in general, of events of speech or by speech, of the strange logic they entail and that often passes unseen.

Could a performative utterance succeed if its formulation did not repeat a “coded” or iterable

¹⁰From this standpoint, one might question the fact, recognized by Austin, that “very commonly the *same* sentence is used on different occasions of utterance in *both ways*, performative and constative. The thing seems hopeless from the start, if we are to leave utterances *as they stand* and seek for a criterion.” The graphematic root of citationality (iterability) is what creates this embarrassment and makes it impossible, as Austin says, “to lay down even a list of all possible criteria.” [Au.]

⁹Austin often refers to the suspicious status of the “nonserious” (cf., for example, pp. 104, 121). This is fundamentally linked to what he says elsewhere about *oratio obliqua* (pp. 70–71) and mime. [Au.]

utterance, or in other words, if the formula I pronounce in order to open a meeting, launch a ship or a marriage were not identifiable as *conforming* with an iterable model, if it were not then identifiable in some way as a “citation.” Not that citationality in this case is of the same sort as in a theatrical play, a philosophical reference, or the recitation of a poem. That is why there is a relative specificity, as Austin says, a “relative purity” of performatives. But this relative purity does not emerge *in opposition to* citationality or iterability, but in opposition to other kinds of iteration within a general iterability which constitutes a violation of the allegedly rigorous purity of every event of discourse or every *speech act*. Rather than oppose citation or iteration to the non-iteration of an event, one ought to construct a differential typology of forms of iteration, assuming that such a project is tenable and can result in an exhaustive program, a question I hold in abeyance here. In such a typology, the category of intention will not disappear; it will have its place, but from that place it will no longer be able to govern the entire scene and system of utterance [*l’énunciation*]. Above all, at that point, we will be dealing with different kinds of marks or chains of iterable marks and not with an opposition between citational utterances, on the one hand, and singular and original event-utterances, on the other. The first consequence of this will be the following: given that structure of iteration, the intention animating the utterance will never be through and through present to itself and to its content. The iteration structuring it *a priori* introduces into it a dehiscence and a cleft [*brisure*] which are essential. The “non-serious,” the *oratio obliqua* will no longer be able to be excluded, as Austin wished, from “ordinary” language. And if one maintains that such ordinary language, or the ordinary circumstances of language, excludes a general citationality or iterability, does that not mean that the “ordinariness” in question—the thing and the notion—shelter a lure, the teleological lure of consciousness (whose motivations, indestructible necessity, and systematic effects would be subject to analysis)? Above all, this essential absence of intending the actuality of utterance, this structural unconsciousness, if you like, prohibits any saturation of

the context. In order for a context to be exhaustively determinable, in the sense required by Austin, conscious intention would at the very least have to be totally present and immediately transparent to itself and to others, since it is a determining center [*foyer*] of context. The concept of—or the search for—the context thus seems to suffer at this point from the same theoretical and “interested” uncertainty as the concept of the “ordinary,” from the same metaphysical origins: the ethical and teleological discourse of consciousness. A reading of the connotations, this time, of Austin’s text, would confirm the reading of the descriptions; I have just indicated its principle.

Différance, the irreducible absence of intention or attendance to the performative utterance, the most “event-ridden” utterance there is, is what authorizes me, taking account of the predicates just recalled, to posit the general graphematic structure of every “communication.” By no means do I draw the conclusion that there is no relative specificity of effects of consciousness, or of effects of speech (as opposed to writing in the traditional sense), that there is no performative effect, no effect of ordinary language, no effect of presence or of discursive event (speech act). It is simply that those effects do not exclude what is generally opposed to them, term by term; on the contrary, they presuppose it, in an asymmetrical way, as the general space of their possibility.

SIGNATURES

That general space, is first of all spacing as a disruption of presence in a mark, what I here call writing. That all the difficulties encountered by Austin intersect in the place where both writing and presence are in question is for me indicated in a passage such as that in Lecture V in which the divided instance of the juridic signature [*seing*] emerges.

Is it an accident if Austin is there obliged to note: “I must explain again that we are floundering here. To feel the firm ground of prejudice slipping away is exhilarating, but brings its revenges” (p. 61). Shortly before, an “impasse” had appeared, resulting from the search for “any *single simple* criterion of grammar and vocabulary” in distinguishing between performative or

constative utterances. (I should say that it is this critique of linguisticism and of the authority of the code, a critique based on an analysis of language, that most interested and convinced me in Austin's undertaking). He then attempts to justify, with non-linguistic reasons, the preference he has shown in the analysis of performatives for the forms of the first person, the present indicative, the active voice. The justification, in the final instance, is the reference made therein to what Austin calls the *source* (p. 60)¹¹ of the utterance. This notion of *source*—and what is at stake in it is clear—frequently reappears in what follows and governs the entire analysis in the phase we are examining. Not only does Austin not doubt that the source of an oral utterance in the present indicative active is *present* to the utterance [*énonciation*] and its statement [*énoncé*] (I have attempted to explain why we had reasons not to believe so), but he does not even doubt that the equivalent of this tie to the source utterance is simply evident in and assured by a *signature*:

Where there is *not*, in the verbal formula of the utterance, a reference to the person doing the uttering, and so the acting, by means of the pronoun "I" (or by his personal name), then in fact he will be "referred to" in one of two ways:

- a. In verbal utterances, *by his being the person who does* the uttering—what we may call the *utterance-origin* which is used generally in any system of verbal reference-coordinates.
- b. In written utterances (or "inscriptions"), *by his appending his signature* (this has to be done because, of course, written utterances are not tethered to their origin in the way spoken ones are). (pp. 60–61)

An analogous function is attributed by Austin to the formula "hereby" in official documents.

From this point of view, let us attempt to analyze signatures, their relation to the present and to the source. I shall consider it as an implication of the analysis that every predicate established will be equally valid for that oral "signature" constituted—or aspired to—by the presence of the "author" as a "person who utters," as a "source," to the production of the utterance.

¹¹Austin's term is "utterance-origin"; Derrida's term (*source*) is hereafter translated as "source." [Tr.]

By definition, a written signature implies the actual or empirical nonpresence of the signer. But, it will be claimed, the signature also marks and retains his having been present in a past *now* or present [*maintenant*] which will remain a future *now* or present [*maintenant*], thus in a general *maintenant*, in the transcendental form of presentness [*maintenance*]. That general *maintenance* is in some way inscribed, pinpointed in the always evident and singular present punctuality of the form of the signature. Such is the enigmatic originality of every paraph. In order for the tethering to the source to occur, what must be retained is the absolute singularity of a signature-event and a signature-form: the pure reproducibility of a pure event.

Is there such a thing? Does the absolute singularity of signature as event ever occur? Are there signatures?

Yes, of course, every day. Effects of signature are the most common thing in the world. But the condition of possibility of those effects is simultaneously, once again, the condition of their impossibility, of the impossibility of their rigorous purity. In order to function, that is, to be readable, a signature must have a repeatable, iterable, imitable form; it must be able to be detached from the present and singular intention of its production. It is its sameness which, by corrupting its identity and its singularity, divides its seal [*sceau*]. I have already indicated above the principle of this analysis.

To conclude this very *dry* discussion:

1. as writing, communication, if we retain that word, is not the means of transference of meaning, the exchange of intentions and meanings [*vouloir-dire*], discourse and the "communication of consciousness." We are witnessing not an end of writing that would restore, in accord with McLuhan's ideological representation, a transparency or an immediacy to social relations; but rather the increasingly powerful historical expansion of a general writing, of which the system of speech, consciousness, meaning, presence, truth, etc., would be only an effect, and should be analyzed as such. It is the exposure of this effect that I have called elsewhere logocentrism;

2. the semantic horizon that habitually gov-

erns the notion of communication is exceeded or split by the intervention of writing, that is, by a *dissemination* irreducible to *polysemy*. Writing is read; it is not the site, "in the last instance," of a hermeneutic deciphering, the decoding of a meaning or truth;

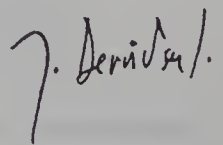

3. despite the general displacement of the classical, "philosophical," occidental concept of writing, it seems necessary to retain, provisionally and strategically, *the old name*. This entails an entire logic of *paleonymics* that I cannot develop here.¹² Very schematically: an opposition of metaphysical concepts (e.g., speech/writing, presence/absence, etc.) is never the confrontation of two terms, but a hierarchy and the order of subordination. Deconstruction cannot be restricted or immediately pass to a neutralization: it must, through a double gesture, a double science, a double writing—put into practice a *reversal* of the classical opposition *and* a general *displacement* of the system. It is on that condition alone that deconstruction will provide the means of *intervening* in the field of oppositions it criticizes and that is also a field of nondiscursive forces. Every concept, moreover, belongs to a systematic chain and constitutes in itself a system of predicates. There is no concept that is metaphysical in itself. There is a labor—metaphysical or not—performed on conceptual systems. Deconstruction does not consist in moving from one concept to another, but in reversing and displacing a conceptual order as well as the nonconceptual order with which it is articulated. For example, writing, as a classical concept, entails predicates that have been subordinated, excluded, or held in abeyance by forces and according to

¹²Cf. *La Dissémination and Positions*. [Au.]

necessities to be analyzed. It is those predicates (I have recalled several of them) whose force of generality, generalization, and generativity is liberated, grafted onto a "new" concept of writing that corresponds as well to what has always *resisted* the prior organization of forces, always constituted the *residue* irreducible to the dominant force organizing the hierarchy that we may refer to, in brief, as logocentric. To leave to this new concept the old name of writing is tantamount to maintaining the structure of the *graft*, the transition and indispensable adherence to an effective *intervention* in the constituted historical field. It is to give to everything at stake in the operations of deconstruction the chance and the force, the power of *communication*.

But this will have been understood, as a matter of course, especially in a philosophical colloquium: a disseminating operation *removed* from the presence (of being) according to all its modifications: writing, if there is any, perhaps communicates, but certainly does not exist. Or barely, hereby, in the form of the most improbable signature.

(Remark: the—written—text of this—oral—communication was to be delivered to the *Association des sociétés de philosophie de langue française* before the meeting. That dispatch should thus have been signed. Which I do, and counterfeit, here. Where? There. J. D.)

J. DERRIDA.

Wayne C. Booth

b. 1921

Wayne C. Booth was born in American Fork, Utah, and was educated at Brigham Young University and the University of Chicago. He returned to Chicago in 1962 as professor of English and sometime dean, remaining at Chicago through a long and distinguished career. He cofounded the influential journal *Critical Inquiry* and served as the president of the Modern Language Association in 1982.

Booth's prominence as a literary critic and rhetorical theorist began with the publication of *The Rhetoric of Fiction* (1961), which advanced the idea that authors imagined ideal audiences for their works and readers generally were willing to take on the role assigned to them. The rhetoric of fiction—or at least of nondidactic fiction—was thus a collaborative effort at communication. Much of Booth's work continued his analysis of rhetorical force in literature and art, notably in *The Rhetoric of Irony* and in the work excerpted here, *Modern Dogma and the Rhetoric of Assent*. Booth's commitment to the collaborative and communicative ideal of rhetoric may be found again in his brief memoir, "Confessions of an Aging, Hypocritical Ex-Missionary":

I've been learning the kind of rhetorical practice that these days I risk labeling with a neologism, "rhetorology": not rhetorical persuasion but rather a systematic, ecumenical probing of the essentials shared by rival rhetorics in any dispute—whether about religion or about other important matters. Though rhetorology shares many features with other "dialogical" efforts, what it perhaps most resembles is political diplomacy. But unlike skillful diplomats, rhetorologists do not just try to discover the rival basic commitments and then "bargain." Nor do they just tolerate, in a spirit of benign relativism. Instead, they search together for true grounds, then labor to decide how those grounds dictate a change of mind about more superficial beliefs. Any genuine rhetorologist entering any fray is committed to the possibility of conversion to the "enemy" camp.¹

The beginnings of this view of rhetoric can be seen in *Modern Dogma and the Rhetoric of Assent*.

Modern Dogma and the Rhetoric of Assent is the published version of four lectures delivered by Booth at Notre Dame in 1971. In the introduction to the volume, Booth explains that he was moved to the analysis offered in the lectures by his reflections on the protest movements of the late sixties. On both sides of the issues, he discovered deeply held assumptions about truth and reason that obviated fruitful engagement. These assumptions, which he calls the "dogmas of modernism," are founded on a deep distrust of reason itself, leaving on the one hand a reliance on scientific "fact" as the only real truth and on the other a reliance on baldly expressed—or demonstrated, as in the political demonstrations of the time—assertions of belief. The former Booth labels "scientism" and the latter "irrationalism." Against these assumptions, Booth asks whether it is possible to know, in a rational way, when we should change our minds, or how we should talk about what to believe.

¹"Confessions of an Aging, Hypocritical Ex-Missionary," *Sunstone* 21:1 (March/April 1998): 25–36.

These are issues that require rhetoric, and particularly a rhetoric of systematic assent that recognizes good reasons of many kinds.

Booth distinguishes five dogmas that arise from accepting the fact-value (or object-subject) split that underlies scientism and irrationalism. *Motivism* regards all reasons as determined by innate drives or prior conditioning. Thus there are no real reasons, only rationalizations. The second dogma holds that *humans are atomic mechanisms* and are therefore purposeless from the ethical or moral point of view. The third follows, namely, that *the universe itself is value-free* and that nature is therefore indifferent to human values. The fourth is the belief that the proper activity of the intellect is *systematic doubt*, a position advanced by many influential philosophical systems. From these dogmas derives the fifth, that *the purpose of argument is to win*. That is, if no proof can be brought for values, if rational argument is impossible or irrelevant, then one's convictions may be defended by any means, from exhortation to demonstration to violence.

Booth carefully dissects the dogmas and the underlying fact-value division to show their development and motives, their internal contradictions and their intolerable consequences in the world. He argues vigorously against the fact-value or object-subject split and is at pains, particularly in the extensive footnotes of the published version, to show the strength and appeal of the arguments opposing the split, arguments to be found particularly in philosophy and the social sciences. Booth thus pushes for a renewed respect for reasoning and rhetoric, which he defines as "the art of discovering warrantable beliefs and improving these beliefs in shared discourse."² Thus, like Chaim Perelman (whom he cites several times) and Stephen Toulmin, Booth fills in the areas of probability and good reasons that are denigrated by the search for certainty.

Our excerpt comprises most of Lecture 3 and part of Lecture 4. Lecture 1 elaborates the problem of the fact-value rift, particularly the problem of motivism. Lecture 2 analyzes Bertrand Russell as a main promulgator of the dogma of systematic doubt. The latter part of Lecture 4 deals with the uses of literature and the arts as argument. (We have excluded a number of the very long footnotes that provide bibliographic references to the philosophical sources of Booth's arguments against the dogmas.)

Selected Bibliography

Our excerpt is from *Modern Dogma and the Rhetoric of Assent* (Chicago: University of Chicago Press, 1974). Booth's other main works dealing with rhetoric are *The Rhetoric of Fiction* (University of Chicago Press, 1961), *Now Don't Try to Reason with Me: Essays and Ironies for a Credulous Age* (University of Chicago Press, 1970), *A Rhetoric of Irony* (University of Chicago Press, 1974), and *Vocation of a Teacher: Rhetorical Occasions, 1967-1988* (University of Chicago Press, 1989). In this last book, Booth argues, as a teacher of literature and composition, for the centrality of rhetoric in liberal education. Booth has written frequently about composition: See, for example, "The Rhetorical Stance," in *College*

²Wayne C. Booth, *Modern Dogma and the Rhetoric of Assent* (Chicago: University of Chicago Press, 1974), p. xiii.

Composition and Communication 14 (October 1963): 139–45, an article that exerted real influence to renew interest in rhetoric in departments of English. He develops the rhetorical stance further in “LITCOMP: Some Rhetoric Addressed to Cryptorhetoricians about a Rhetorical Solution to a Rhetorical Problem,” in *Composition and Literature: Bridging the Gap*, ed. W. B. Horner (University of Chicago Press, 1983).

Booth’s career and influence are examined in *Rhetoric and Pluralism: Legacies of Wayne Booth*, ed. Frederick J. Antczak (Ohio State University Press, 1995). These fifteen essays appreciate and challenge Booth’s work in literary criticism and rhetorical theory, recognize his influence in other fields such as music and economics, and seek to extend his key ideas about assent, ethics, and pluralism. In a charming afterword, Booth himself reflects on the essays, demonstrating his sense of “rhetorology.” This book also provides a complete bibliography of Booth’s works and reviews of his works.

From *Modern Dogma and the Rhetoric of Assent*

THREE: THE DOGMAS QUESTIONED

In my first lecture I promised to grapple with the highly general question of when we should change our minds, not just about what people call matters of fact or about what is “scientifically proved” but about value questions—about what we should admire, what we should do, what political protests we should support, and what institutions reject. I then described a great world religion, modernism, the dogmas of which, if accepted uncritically, make my promise absurd. If man is essentially and adequately defined as an accidental collocation of atoms in a value-free universe, if he can in no sense be said to choose among more or less good reasons but rather is always simply driven or motivated or conditioned, and if the only method for discovering knowledge about such matters is to apply the universal solvent of doubt in order to prove what cannot be doubted, then the purpose of offering reasons, in all nonscientific domains, cannot be to change men’s minds in the sense of showing that one view is genuinely superior to another. It can only be to trick or sway or condition or force or woo men to believe or do what the persuader desires.

Men will in fact continue, in this view, to

“change each others’ minds” in another sense, even in that part of life in which scientific proofs are not available: they will produce changes in what men do and in what they say they believe. But the difference between good and bad persuasion will become simply a difference in skill, not knowledge or wisdom. Except in scientific matters, education and mutual inquiry will become indistinguishable from propaganda or “mere rhetoric.”

The test of any mode of influence now becomes whether it works; the whole range of ways to influence men becomes a single indiscriminate conglomeration of devices, to be chosen simply on the basis of likely effectiveness in gaining agreement or compliance. Brainwashing, subliminal advertising, operant conditioning will be only technically different from each other and from psychoanalysis; reasoning with an opponent will be always seen as disguised trickery or, at best, “control.”

In this view the how and the what of mental change can still be studied rationally, meaning scientifically: sciences of information theory, group dynamics, propaganda analysis, behavioral therapy, and semantics will be devised to explain how men in fact are conditioned to change. All of these will have ethical commands built into them,

some of them openly, more of them in disguised form: “men *ought* to be logical”; “men *ought not* to be swayed by anything but scientific proof”; “thinking straight is a kind of defensive study, a way of keeping your dukes up at all times”; “men ought to be trained to recognize irrelevant emotional appeals”; and so on. B. F. Skinner, the best known scientismist of our time, often tells us how we *ought* to think about so-called values: “We do not say that simple biological reinforcers are effective because of self-love, and we *should not* attribute behaving for the good of others to a love of others”¹ (my italics).

Many freshman English texts—those new mass media studied by hundreds of thousands of Americans—have in the past several decades been defensive rhetorics in this sense. Accepting without question the dogmas of scientism, they have taught—as I accuse myself of having taught, during my first losing battles with freshman composition—that the goal of all thought and argument is to emulate the purity and objectivity and rigor of science, in order to protect oneself from the errors that passion and desire

¹*Beyond Freedom and Dignity* (New York, 1971), p. 110. Skinner protects himself from the charge of inconsistency in his use of value terms in two ways: “The text will often seem inconsistent. English, like all languages, is full of prescientific terms which usually suffice for purposes of casual discourse. . . . The book could have been written for a technical reader without expressions of that sort [even without the implicit *oughts*?], but the issues are important to the nonspecialist” (pp. 23–24). More important, he would say that his moral imperatives are all conditionals; *If* you think that people ought to behave as I say, *then* you ought to follow my program (see chap. 6, “Values,” esp. p. 112).

Needless to say, such protective coloration will not work for anyone reading him from nonbehaviorist points of view: the scholarly surface cannot conceal the presence of hundreds of unargued preachments. For example: (1) “These reactions to a scientific conception of man are certainly unfortunate. They immobilize *men of good will*, and anyone concerned with the future of his culture will do what he can to correct them” (pp. 212–13; my italics). (2) Mentalist explanations are bad, he tells us, because they bring “curiosity to an end” (p. 12). Leaving aside the obvious objection that *curiosity*, like *good will*, is certainly a mentalist term, why should I, in his terms, care? His formal answer, not provided when the term is used, would be that without curiosity my culture cannot survive. But it is clear that Skinner would, like the rest of us, value curiosity even if it had no survival value, and for reasons he does not mention. [Au.]

and metaphor and authority and all those logical fallacies lead us into.

As a teacher of literature I naturally lived an entirely different and more romantic life, asserting values aggressively and cheerfully, though often becoming cross with my students if they denied—using principles derived from my scientism—the literary values I tried to educate them to embrace. It should have been clear to me that the very word *educate* was suspect, if modernism were right: whenever I touched on values, all I could do was indoctrinate, unless in some sense the pursuit of literary values is reasonable.

Taken at face value, modernism thus sharply divorces all genuine thought or knowledge from those faiths we find in all nonscientific discourse. What had once been a domain with many grades of dubiety and credibility now becomes simply the dubious (for scientism) or the arena of conflicting faiths (for irrationalism). Where classical philosophers and rhetoricians saw gradations from ignorance to wisdom, we are given only a vast domain of ignorance or glorious personal preference. Where they saw a need for eloquence in the service of wisdom, so that moral and political and even metaphysical truth might be given its best chance for success in the world, we are given only a contest of skills and devices in the service of warring preferences and impulses and desires. Rhetorical probability, based on what is “commonly sensed,” becomes propagandistic plausibility.

Such disastrous consequences of modernist dogmas could not be considered, for modernists, as genuine reasons for rejecting those dogmas. Irrationalists will gladly accept the license to reject any doctrines that are inconvenient or unpleasant, seeking rather truths of the “heart” or “body.” And of course scientismists expected from the beginning that the objectivity² they sought would

²Though many now argue that such objectivity is impossible, since even the physical sciences and mathematics depend—and not just logically—on assumptions and values that cannot be objectively demonstrated, it is still often expressed as the ideal of human inquiry. C. C. Gillispie, for example, includes, along with a serious and sound account of how human desires have often delayed particular discoveries in the physical sciences, a completely nonscientific and unar-

disregard human results and follow only where the evidence leads. I could therefore go on till doomsday showing that, as “everyone already knows,” modernism is intellectually and morally and politically intolerable; I would not, according to the dogmas themselves, have said anything against them, only against our failure to face unpleasant truths.

But consider once again just how strange a thing it is that we should feel no *argumentative* force in disastrous consequences. To show that a given truth destroys the possibility of life, and indeed, if taken with full seriousness, turns on itself and denies the possibility of truth itself, surely should constitute some reason for reconsidering such a “truth.” But I know better than to rest with this argument today: as modernists all, we know that such thinking is not thinking but “wishful thinking,” “rationalization.” Indeed we often act as if the painfulness of a conclusion should reinforce our conviction: if it hurts it must be true.

gued running polemic for objectivity and impersonality in all things—except perhaps art. “The Latin genius speaks out in Galileo. His is the passionate objectivity of Machiavelli, which says that wishes do not signify—this is how the world works. He stripped from the skeleton of the cosmos the obscuring layers of sentience and pious moral and edifying lesson, and left as object of the search the hard, straight bones of Euclidean dimension” *The Edge of Objectivity* [Princeton, N.J., 1960], p. 40; see also pp. 197–201).

For social scientists, the questions are usually more complex—not only whether this or that kind of objectivity is desirable or possible in any science but also whether studying human beings requires a different method from that used in natural science. The issues are far trickier than I have been able to suggest here (see, for example, Dorothy Emmet and Alasdair MacIntyre, eds., *Sociological Theory and Philosophical Analysis* [London, 1970], esp. articles by Alfred Schutz, Sidney Morgenbesser, and Jürgen Habermas). The whole phenomenological movement could be described as an effort to show that man can make an end run around the forces of scientific objectivity and come out on the other side whole. A good introduction to the issues now being debated in this immensely diverse movement can be found in two books edited by James M. Edie, *Phenomenology in America* (Chicago 1967) and *New Essays in Phenomenology* (Chicago 1969). It is significant, I think, that in the second volume, one whole section is devoted to repudiating the irrationalism that threatens on the left flank whenever scientism is repudiated on the right (pt. 2, “Nihilism and the Absurd”). [Au.]

Changes of Scene and Dramatis Personae

I am not attempting in these lectures a direct and full disproof of any of the dogmas; the effort would be futile, because according to the dogmas themselves such matters are not amenable to proof. My hope is only to cast some doubt on doubt and to suggest grounds for confidence in exploring some forms of assent that have been suspect. But I think it is important to remind ourselves, as we begin, of how many major figures over the past three hundred years have attempted a systematic disproof of one or more of the dogmas.

To describe the full range of their attacks would require a lengthy history of thought from Descartes to the present. Perhaps I should say several histories, because the results would look very different depending on the historian’s assumptions about the history of ideas. The history would differ, for example, depending on whether the historian thought it possible to deal with individual dogmas, or subdogmas, in isolation (Arthur Lovejoy, for example) or believed on the contrary that no idea can be caught alive except in its original context (for example, Harry Prosch). But what is a proper context for an idea? Very different histories will result, depending on whether we seek to relate a given refutation of a given dogma to the complete philosophic statement in which it is found (in which case, for example, we would give a full account of Kant’s philosophy in order to show how Kant refutes the notion of a cold, hostile, and indifferent universe); or seek rather to relate each idea to the social and artistic currents and political forces surrounding it (for example, Marxists or Hegelians); or to the whole symbolic life of man (for example, Kenneth Burke, *A Grammar of Motives*, pt. 2). Further differences would depend upon whether the historian was more interested in metaphysical questions of substance or in epistemology or in questions about language or action.

Even if one narrows the field, as I am now going to do, to questions of how the mind is defined and how its works are divided, complexities still abound. The divorce between the logical or calculating or experimenting mind, the sole producer of *knowledge*, and the valuing organism

that irresponsibly commits itself to *all the rest* will be attacked in different ways, depending on convictions about what *the rest* amounts to. To choose terms for what is left over after the certainly provable has been deducted is already to commit oneself to some possibilities and to rule out others. It makes a great difference, for example, whether one's description of "the rest" distinguishes or lumps together terms like *intuition, will, action, choice, value, feeling, motive, drive, emotion, experience, wisdom, eloquence, the heart*, and so on. And as polemicists on all sides too frequently forget, the same word can cover contradictory concepts in two different systems; *reason*, for example, sometimes appears on the scientifically proved side and sometimes in opposition to it, and *knowledge* is sometimes contracted to mean only what is empirically known, sometimes expanded to include the statistically probable, or even the intuitively probable.

Aware of such complex differences among both philosophers and historians of thought, I offer the following "reminder of authorities on my side" with fingers crossed. As history it is surely useless. As classification of philosophers it is dangerously misleading. But as serious rhetoric, offering the good reasons of expert testimony, it can be taken as a preliminary effort at shaking confidence: look at all these major figures who have chosen *not* to divide up the mind, and hence the world, as modernists tell me I must if I am to qualify as thoroughly modern. (I do not really get around to establishing testimony as a valid kind of reasoning until the next lecture, yet I need it here; that's how life is in the domains of rhetoric. I ask the reader to add to the experts I now call to the stand, those I cite in Appendix B).

I have accused modernism of dividing man's responses to the world into two unequal parts, one of hard knowing and the other of soft faith or commitment. As we turn to refutations, it will be useful to divide the second part once again, into commitments or purposes on the one hand and feelings or passions on the other. We now have a tripartite picture of the human organism that is presumed to experience a change of mind, and the word *mind* has been immeasurably extended beyond the narrow calculator praised by scientismists or damned by irrationalists. Every human

being believes certain things to be true, acts for certain ends, and feels in certain ways, but we attach feelings to thoughts and actions in diverse ways. Belief or thought or knowledge, action or will or choice, feeling or emotion or passion occur in every theory of thinking, acting, or feeling; and though the terms shift, each of the three domains always appears somewhere, even if only for long enough to be dismissed as illusory or irrelevant. In this view, the challenge presented by the successive real triumphs of science, and by the related depredations of scientism and the defensive wails of irrationalism, was that of an arbitrary and destructive divorce of man's powers of thought from his necessity to act and his inescapable emotive life.

For scientismists, there has always been the promise of an ultimate reunion off somewhere in the future, when science will have been able to re-ingest all those other matters and then finally explain them. Behaviorism has only made explicit what all scientismists have hoped for: a way of reuniting science and values and feelings and actions under a scientific aegis. Both the enthusiasm and the hostility aroused by behaviorism result from its power as a representative extreme. We saw that Bertrand Russell at one time felt that he ought to be a behaviorist but couldn't quite make the grade. Russell was able to live with the resulting cognitive discord, though he struggled against it. Less protean minds have tried harder for harmony, either going all the way—behaviorism is perhaps now more widely espoused than ever before—or seeking for some other harmony between nature and value.³

Nature and Knowledge Revivified

One obvious possibility is to develop a religious or metaphysical counterpart to behaviorism—that is, to try to build new pictures of man-in-nature that will see men's values as in-

³I must repeat that what follows is, like almost everything in my absurdly brief encyclopaedia of all thought since God died, a terrible oversimplification. My truncated catalog of harmonies lumps together philosophers with many different languages and methods, and it thus distorts each of them. I take little comfort in knowing that everybody else's classification seems to me unfair to most or all of the views classified. [Au.]

separable from God's or nature's values. To the claim, "All values and emotions and preferences are simply the result of environmental controls that can be described in the language of scientific fact," many have replied, "The universe is made of, or permeated by, values; all (or many) facts can and should be described in the language of value or purpose." All of man's ethical and political and aesthetic and emotive life is thus taken back into the natural, and new ways are sought for talking about the old scholastic notion of an analogy of being between God and man.

Thus the reduction to the physical is countered by an elevation to the metaphysical. To see nature or "the way things are" or—in Wittgenstein's words—what "the case is" as essentially including human processes and values leads to new speculations, now to be found in great numbers, about how values are embedded in reality. This was, as I understand it, the major effort of Whitehead: "It should be the task of the philosophical schools of this century," he said, "to bring together the two streams (the one from Descartes and the other from Leibnitz) into an expression of the world-picture derived from science, and thereby end the divorce of science from the affirmations of our aesthetic and ethical experiences." By changing one's picture of the natural world from the mechanical, value-indifferent thing that Russell clung to, despite his many reservations, to a picture of the world as a collection of self-fulfilling (and hence valuable) processes or "procedures of organization," one can import values back into the domain of knowledge. In this view it is naturally good for all natural processes to be fulfilled; if the universe is, in its ultimate constitution, a pattern of purposes—directed processes and relations—value is inextricably bound in its workings, and man's valuing can be as rational as his most scientific endeavors.

Whitehead's process philosophy is only one of many efforts in this direction, though perhaps the most impressive. One could even describe Marx's scientific materialism as a redefinition of reality that makes possible a science of ethics and politics without reducing them to physics; and the Hegelian idealism that Russell first embraced and then rejected could equally be described as a

grand effort to reunify, under scientific laws of how the world really acts, parts of the world and of man's nature that had been alienated from each other.

Recent decades have seen many further attempts to reconstitute a universe in which values inhere in the nature of the facts. Revivals of Thomistic metaphysical inquiries in the work of Étienne Gilson, Jacques Maritain, and Bernard Lonergan; phenomenological inquiries into our modes of knowing facts in feeling and value, and feeling and values in the factual; and logical inquiries into "good reasons" by recent inheritors of the "ordinary language" tradition; these and many others have been challenging the divorce of fact from value, of the subjective from the objective, of the world of inert and value-free nature from the world of man's desires.

Nature as Will or Act

A second possibility is to expand the domain of action or will to repudiate or encompass the scientific picture of a value-free world. We find innumerable modern existentialisms claiming that though the universe, scientifically considered, may be absurd or unknowable, we can honestly affirm our purposes, and thus escape the trap of meaninglessness. What we *know* is our own existence, and we can *will* that existence to be whatever we want it to be, in opposition to the absurdity of the universe that created us. We need not worry over rational doubts about free will or the objectivity of values: we can simply affirm ourselves and thus in a sense come to know our freedom.

It has seemed clear to many philosophers, though perhaps not to many lay intellectuals grasping at straws, that this existentialist affirmation leaves us in a sense right back where we started, with our minds divided. Though our human dignity and freedom are in one sense restored, an essential part of the mind has been violated. Popular existentialism has always been full of shrill attacks on reason and the mind, and the shrillness springs, I think, from a sense that something is wrong somewhere still: Bertrand Russell¹⁴ and B. F. Skinner are laughing at us up

¹⁴In Lecture 2, Booth distinguishes three contradictory

their sleeves. What fools these affirmers of absurdity be, not to recognize as we do that these affirmings are logically—and thus rationally, and thus finally—undefensible.

To me a much more satisfactory effort at reunification under “will” was that of the pragmatists, especially Peirce, Dewey, and James. Our *purposes* and their fulfillment are here taken as something we really know, and scientific knowledge becomes a special case of fulfillment of human purpose—the purpose to know. Logic is no longer here an abstract propositional logic seeking truths that are certain, objective, divorced from man’s needs and desires: it becomes instead the logic of inquiry, and inquiry is a process informed by purpose and hence by human values. That I desire certain qualities, know and pursue certain relations, and “live my purposes” can here no longer be relegated to epiphenomena—purposes are as real and known as anything can be, and the world and nature are thus transformed.

Reality as Feeling: The Wisdom of the Body

A third possibility is to expand the domain of feeling to absorb all of what is called thinking and all other grounds for action. Sometimes the new center is an undefined feeling, as in Hemingway’s repeated formula that what is good is what feels good, or Lawrence’s attacks on the murderous intellect in the name of the darker gods. Sometimes it is art or a metaphysic of art, as in Wallace Stevens’ notion of a supreme fiction, or Nietzsche’s early claim “that art, rather than ethics, constituted the essential metaphysical activity of man, . . . [and] that existence could be justified only in esthetic terms. . . . God as the supreme artist, amoral, recklessly creating and destroying, realizing himself in-

positions espoused at different times by Russell, or as Booth puts it, three roles in which Russell cast himself. These Booth calls Russell I, II, and III. Russell I “sought certain knowledge about what he called ‘matters of fact’ or ‘the world’” (p. 46). Russell II, “the ‘man of reason,’ often of rational protest, tried to disestablish certain past beliefs and establish the more adequate beliefs taught, so he said, by science” (p. 47). And Russell III was “the man of action and passion, the poet and mystic” who fought for political causes (p. 47). Page references are to Wayne C. Booth, *Modern Dogma and the Rhetoric of Assent* (Chicago: University of Chicago Press, 1974). [Ed.]

differently in whatever he does or undoes.”⁵ Or it becomes some physiological center of wisdom, as in Wilhelm Reich’s offering of salvation through orgasm, or Norman O. Brown’s celebration of the “polymorphous perverse.” And sometimes it has been a carefully articulated philosophy in which Platonic identities of truth and goodness with beauty (or art) are explored, as in the work of George Santayana.

In all these views, taste or sensibility or—as in Henry James—“quality of consciousness” becomes the supreme arbiter; art can become the last, best schoolmaster or legislator of the world. What we call wrong is simply what is ugly; the final test of truth, even in the sciences, becomes elegance or harmonious simplicity. The arbiter is not what we cannot doubt, as in scientism, nor what we can know of totality, as in metaphysical renovations, nor what we find has instrumental value, as in pragmatism, but what we find gratifies our most delicate sensing apparatus.

There is no theoretical reason why such views must lead to extreme expressions of irrationalism; it can be as reasonable (as I shall suggest later on) to follow the reasons of art as the reasons of scientific inquiry. But in practice the hyperrationality of scientism, of reducing the world to nature, has been countered by the two branches of the countermovement of the late ’60s: the political activists, reducing the world to blind will; and the counterculturalists, reducing it to blind feeling. A leader of the Weathermen group cries, “principles-schminciples,” in the name of action without thought or feeling, and Leary cries, “Tune in, turn on, drop out,” in the name of feeling as against either thought or action.

Divers Orders, Divers “Logics”

All three of these directions have thus yielded, I think, both philosophically cogent refutations of the modernist slicings and popular reductions that restore the slicings and fight for the superiority of this or that slice. The philosophers would be decisive for anyone who took the trouble (sometimes immense, as in the case of White-

⁵“A Critical Backward Glance” (1886), commenting on *The Birth of Tragedy from the Spirit of Music* (1871), as translated by Francis Golfing in *The Birth of Tragedy and The Genealogy of Morals* (New York, 1956), p. 9. [Au.]

head, and always great for anyone who begins with different presuppositions) to understand them. If my goal were to find a single systematic philosophy that could be embraced once and for all, I clearly ought to choose one of the three and develop—from a conflation of “the genuinely known” or the “validly willed” or the “truly felt”—my alternative to modernism. But it is immediately clear, when I say that all three have yielded decisive alternatives, that I am exploring a different, pluralistic direction. My goal is (once again) not to establish a philosophy: my concern is with a befouled rhetorical climate which prevents our meeting to discover and pursue common interests. What we must find, I think, are grounds for confidence in a multiplicity of ways of knowing. Such grounds need not be what was sought by philosophers who based themselves in science: a theory providing fixed and proved principles from which all genuine reasoning could proceed. It need only be a revitalization of what we naturally assume as we go about our intellectual and practical business in the world: namely, that there are many logics, and that each of the domains of the mind (or person) has its own kind of knowing.

There have been comprehensive philosophies built on just this assumption. For Aristotle (and Aquinas and Maritain), there is first the domain of theoretical truth, which can be sought in every subject matter but which can yield “positive” knowledge only in natural, mathematical, and logical inquiry; in other subjects we can have probable or useful knowledge but not certainty. There is, secondly, the domain of practical deliberation, which must take into account whatever scientific knowledge is available but which in itself must at best be imprecise and chancy; still, as everyone knows, there really is a difference between a wise man and a fool, or between a good senator and a bad; and part of the difference is in what they know. Finally, there is productive activity and thought about it, yielding a knowledge of how to make and enjoy the graces of life that life’s other natural processes fail to provide; the arts are created and enjoyed not in a meaningless, relativized bedlam of “what each person happens to like” but in communities that share, through direct experience and through talk about it, the knowledge of good makings.

What I am attempting here is, however, a considerably looser assemblage of good reasons than such systematic philosophers construct. There may be, though I doubt it, a grand new philosophical synthesis hiding in the wings somewhere, or looming over the horizon—some smooth beast ready to stride proudly toward the twenty-first century to be born. But even if there is, we will not be in a condition to attend to it until we can once more believe in the ultimate value of attending. If finding such a belief depends on establishing a single philosophy, the history of ideas would seem to teach that we are doomed. But if there are good reasons for confidence in the values of discoursing together, then we can get about our business, whatever that may be: philosophers disputing the merits of rival philosophies, the rest of us finding other rhetorical communities that will differ from problem to problem, discipline to discipline, political and social need to political and social need. If we can find some way to rely on our common sense—what we “sense” and know in common—we can once again trust whatever standards of validation our reasonings together lead us to.

We do not begin, then, with theories about the mind or knowledge or the universe or semantics. Instead we remind ourselves of our experience—good empiricists all—and of the fact that when we make mistakes, whether in political and ethical choices or in aesthetic judgment, we find that they always include bad thinking as well as “feeling.” When we look at either the fanatics or the hyperrationalists who seem to us most threatening in what they do to their fellow men, we find as many signs of bad thinking and corrupted emotion in one group as the other. Fanatics are always “reasonable” in the sense of seeing rational connections between their abstract principles and their conclusions; their irrationality often consists in choosing the wrong principles validated by an inadequately considered group of “significant others.” They have lost their “common sense”—they do not test their commitments by seeking a genuinely common ground shared with the relevant fellow creatures. And the value-free scientismist is from this point of view equally irrational, because he too has chosen, on abstract principles, a validating group that ignores

what the common sense he shares with his fellows would teach.

Let us forget, then, for a while, the strangely compelling, seemingly self-evident notion that we know with one part of our minds or souls or selves or bodies, and will or feel with some other part. We can then search for what we agree on, what we meet in, where we *are* together.

Doubt and Assent

The full meaning of the choice I am making, with its deliberate embrace of circularity, will be clearer as I go along. For now it is enough if you will entertain the possibility of a kind of social test for truth: "It is reasonable to grant (one *ought* to grant) some degree of credence to whatever qualified men and women agree on, *unless* one has specific and stronger reasons to disbelieve." Abstract commands to "doubt pending proof" are now to be replaced with the ancient and natural command to "assent pending disproof." We will weigh many kinds of evidence, including testimony and authority; we will work as hard at discovering good witnesses as Russell would work at spotting logical fallacies. We will thus appraise more or less dubious reasons, assenting to the degree that *in the particular case* seems warranted.

You will remember that the dogma I am here proposing to replace teaches that we have no justification for asserting what can be doubted, and we are commanded by it to doubt whatever cannot be proved. In that view one never is advised (except by those who have an axe to grind—disreputable pushers of values, religious or political fanatics, mere rhetoricians) to see the capacity to believe as itself an intellectual virtue. Though few have ever put it quite so bluntly as the young Russell in his more prophetic moments, to doubt is taken as the supreme achievement of thought. The burden of proof is thus always placed on assent: to say, "I will believe unless I am given a *reason* to doubt" is self-evidently absurd.

The Criterion of Falsifiability

In its most sophisticated form, the principle of doubt becomes, in Karl Popper's widely influential development, the "criterion of falsifiability."

We do not know anything, Popper says, unless we know the operations that might disprove it if it were untrue, and unless we know that those operations do not in fact falsify it. Popper's criterion, already implicit in much intellectual activity, rapidly became a commonplace; it seemed to provide the most precise formulation of the only good way to rid the world of its intellectual rubbish. Notice how Edmund Leach assumes that an appeal to it will buttress his unsympathetic account of Freud and his questions about Lévi-Strauss's theories:

Lévi-Strauss on Myth has much the same fascination as Freud on the Interpretation of Dreams, and the same kind of weaknesses too. A first encounter with Freud is usually persuasive; it is all so neat, it simply must be right. But then you begin to wonder. Supposing the whole Freudian argument about symbolic associations and layers of conscious, unconscious and pre-conscious were entirely false, would it ever be possible to *prove* that it is false? And if the answer to that question is "No," you then have to ask yourself whether psycho-analytic arguments about symbol formation and free association can ever be anything better than clever talk.⁶

Here there are only two choices: either a doctrine passes this test, or it is nothing but "clever talk."

The test is a powerful one, in dealing with certain problems; I use it myself in trying to test my own guesses about how literary works are put together. But stated as a universal dogma it is highly questionable, as Popper himself sometimes seems to acknowledge. How, we may ask, does one know that *it* is true or valid? Can the criterion itself be put in falsifiable terms according to its own dictum? I would say that it cannot—that it claims status as knowledge without satisfying its own demands. (It is also, by the way, a value judgment on human intellectual operations, put in the form of a factual claim, and as a value judgment it is not, according to the dogmas, falsifiable.)

Aside from presenting this logical difficulty, the test is obviously crippling when applied to

⁶Frank Kermode, ed., *Lévi-Strauss* (London, 1970), chap. 4, p. 54. Popper's basic formulation, modified in later works, is in *Logik der Forschung*, trans. as *The Logic of Scientific Discovery* (London, 1959; 2d ed., 1968). [Au.]

our practical lives. If we know only what survives after we have done our best to doubt, we are driven to conclude that most of our action has no cognitive base, since we must almost always act on propositions that have not been proved in this sense. "How can you argue that men should be reasonable," a colleague asks, "when you know that we never have enough information to be *sure* about anything. I take a stand, on this or that war, on this or that act of injustice, and my choices cannot be rational because I simply cannot know enough." He is right, if "to know" must mean to be certain, to have scientific proof, to have propositions that have been tested by the criterion of falsifiability. But this is not in fact the choice we make.

Being reasonable in practical affairs is more like a process of systematic assent than systematic doubt. If my wife says, "I have a sudden terrible pain. Call a doctor quick!" I must and will act at once. Only if I have specific reasons to doubt her—if I know, let us say, that she is a notorious and sadistic practical joker—do I have warrant to intrude doubt into the process of assent. I do not and should not pause for skeptical probings, for proof; and I certainly should not take time to rephrase my hypothesis, "she is suffering," in falsifiable form.

Nor do I take time to bring to conscious testing the moral principle, "When my wife suffers, I ought to try to help." If I know anything, if *anything* about my life and the world makes sense, I know that this principle holds. Yet if I did pause to see whether it could survive the tests of systematic doubt, I would have great difficulty even in phrasing it in a form that could be falsified by any standard empirical test.

How could one do so, even if one had time for prolonged testing? "If it is true that one ought to help a loved one or friend in pain, *then* I should call the doctor." No empirical tests seem to follow from any version I can devise. "If it is not true that I ought to help a loved one in pain, *then* I have no moral command to help my wife now." The conclusion is absurd, but only because its absurdity follows from my knowledge that the premise is absurd, and *that* knowledge comes from principles of assent that cannot be stated in falsifiable form. Even if, as I believe, they are

principles that will finally withstand the most aggressive philosophical probing—like that, for example, of Plato, Kant, or the recent analytical philosophers I have mentioned—they will not withstand the scientific test of falsifiability. As Popper says of various faiths held by science, there are no strictly empirical observations (as even Bertrand Russell finally admitted) that could falsify either the proposition "Thou shalt help thy neighbor" or its opposite, "Thou shalt ignore thy neighbor's pain."

But let us push a bit further. "If it is true that one ought to help a friend in pain, *then* it must be true that if I do not help him, I will suffer, in my conscience." Here at last is a proposition in testable form: if it is false, my conscience won't hurt, and I know that my conscience usually, perhaps always, hurts when I act against the proposition. But I have really made no progress in satisfying empirical demands, because I will be told that the evidence is subjective and that therefore it does not hold. Besides, my conscience is simply the product of conditioning. Factual statements cannot, the dogma runs, validate normative statements—the question remains whether my conscience *ought* to hurt. Thus the proposition is not really falsifiable. "If . . . , then it must be true that she will not help me when I am in need," or "if . . . , then it must be true that society will fall apart, because it depends on people helping each other." Both of these might conceivably be tested, but not *until it is too late*. Besides, I know (on other grounds) that these consequences are not my main reasons but secondary arguments I fall back on only because men working with systematic doubt have put me on the defensive.

Finally, "if . . . , then it must be true that I would find life intolerable in a world in which husbands ignored their wives' needs." Again the experiment cannot be performed, and even if it were performed, it would yield only subjective "nonreplicable" results. ("What does *intolerable* mean, scientifically speaking?") If the principle turned out to be true and the experiment replicable—in the sense that what I found subjectively intolerable everyone else found subjectively intolerable—the result would still come too late: society would already have become intolerable for everyone.

Meanwhile, of course, the doctor has not been called, because I have pretended not to know something I know very well: that I ought to try to help when I encounter pain in a loved one.⁷ I know this through the way I know the world in the first place, that is, through a willing assent to the process of making an intelligible world with my fellow creatures. Together we have constructed and named a world, and just as I know what doubt means only through assent to other men's namings, so I know what at least some of my responsibilities are.

We have learned, we moderns, to chant the qualifications: "there are many borderline cases"; "the circle of my duties is not clearly defined in advance"; "I cannot possibly respond adequately to all the pain of all my friends, let alone my neighbors"; "men seem more often than not to deny my knowledge by hurting each other, and the proposition thus seems to be 'falsified' daily, hourly." But how strange it is that such qualifications, real and troublesome as they can be, should have been allowed to obscure the essential ground that is being qualified. None of the qualifications makes any sense unless the original process of knowing-through-assent makes sense, because each of them depends on assent to communal definitions and norms which if tested by systematic doubt can be quickly destroyed.

Systematic Assent

In view of these troubles with systematic doubt, it scarcely seems unreasonable to try out other ways of looking at what we know. Instead of making doubt primary, let us see what happens if we know whatever we can agree together that we have no good reason to doubt, whether or not we can apply other more formal tests of doubt. In this view, assent becomes the prior act of knowing: what we believe together with sureness is given "the benefit of the doubt"; the doubts I en-

⁷The principle of course applies to all fellow creatures, not just to those we love; in some ways the argument is cleaner, as Kant taught the world, when affection is not involved and duty counters other inclinations. My more sentimental example is chosen to represent a kind of knowledge that even the least altruistic reader will share. [Au.]

tain must offer reasons for themselves at least as good as I have for the initial belief.

The differences between the two formulations may not at first seem great, but their consequences differ tremendously, as would be shown if I paused here to listen to the chorus of objections that have occurred to some of you. Am I not now forced to accept any piece of silliness that any fanatic wants to advance, provided only that he can get somebody to assent to it and that it cannot be clearly refuted with particular disproofs? Charles Manson will be confirmed by the assent of his witches, Hitler by his SS troops, every Christian sect by its hundreds or millions of adherents, and indeed every political and religious program by its ability to present witnesses.

There is a kind of plausibility conferred on this objection by the widespread conviction that you can't "prove" a general negative. "You can't *prove* that there are not ghosts." "You can't prove that alchemy is a false system, or that astrology doesn't work." "You can't even disprove the existence of God." We would be left floundering in conflicting nonsensical schemes if we accepted all the views that we can't really disprove.

If giving up the principle that doubt is the essential, primary tool of thought meant embracing everything not refutable in this scientismist sense, I would thus be forced to accept abstract doubt in self-defense. But it is clear that we are again here victimized by a needlessly narrow definition of proof and disproof. As William James said in "The Will to Believe," when we decide to believe pending disproof we are not suddenly flooded with every belief that anyone offers. We begin only with those beliefs that really recommend themselves to us, wherever we are and wherever we find ourselves. We are all moderns or postmoderns here, and most of us have as part of our structures of perception a belief in natural law as firm as Hume's or Bertrand Russell's. Though we may not be as sure of what the laws of the universe are as Hume the skeptic seemed to be, we needn't give ready credence to any report—of ghosts or astral projection or flying saucers—that does not in some degree fit our own experience. Since I have never seen a ghost and do not even know anyone personally who

has claimed to see a ghost, and since most people I know who have thought about it do not believe in ghosts, I give my tentative assent to our collective experience. I need no disproof, though at the same time I see quite clearly that all of us could easily turn out to be wrong on this one; there are so many countervailing “experts” claiming to be heard. When I meet, as I did last year, a young Forest Service employee who believes that men on earth can project themselves instantaneously to Venus and back again, I do not grant assent pending disproof; I have no impulse to assent at all, since the claim runs counter to all of my experience. Similarly, I have very good specific reasons to doubt many of the claims of alchemy and astrology and phrenology, and I can therefore doubt them, for those reasons; on the other hand, if I find, as I do with the alchemical “humours,” a certain kind of poetic truth overlooked in simpler modern psychologies, I needn’t embrace all the chemical guesses simply because I have demoted the criteria I use in rejecting them. I have no need for a supreme, abstract command to doubt whatever has not been proved, as long as I am ready to reject whatever *has* been disproved. The geology of the Old Testament and the physiology of (say) Descartes have been disproved; I reject them. But I do not as a result leap, like Bertrand Russell cataloging the “intellectual rubbish” of the past, on every Biblical or Cartesian claim to truth that I cannot specifically prove.

Thus nonsense is no more threatening in this view than in any other, so long as I do not require scientific *disproof* of what is nonsensical. If “we” know that a belief is nonsense, we will not believe it, even if we cannot disprove it in any scientismist sense: in this respect, my new formulation simply accepts what is in fact our practice when faced with absurd doctrines that we cannot disprove.⁸

⁸The process is nicely illustrated whenever anyone advances an irrefutable but implausible hypothesis. When P. H. Gosse, Edmund’s father, tried to refute evolutionary theory with his *Omphalos* (London, 1857), he argued that the world had indeed been created all at once, about 4004 B.C., but that of course it had been created with all of the geological strata and fossil records that it would have had if it had evolved through endless time. At the moment of creation everything had to be in order for a going universe, right down to faecal

What is thus demanded by the principle of systematic assent is more rigorous thought than is customary about who “we” are, the group of relevant judges, the axiological experts whose shared experience confirms what we know together. Nobody ever gives equal weight to every voice. What satisfies us in practice, though the practice always can and should be refined, is the discovery that a given belief that fits our own structures of perception and belief is supported by those qualified to know. It is true that we often make the mistake of reversing the process, conferring the status of qualified expert on someone because he agrees with us. But this elementary human error, found in all groups, does not invalidate the conviction that a belief is confirmed *in some degree* whenever “someone who knows” shares it.

This is in formal structure—as Michael Polanyi among others has shown—the process of validation used even by scientists for a great share of their scientific beliefs. No scientist has ever performed experiments or calculations providing more than a tiny fraction of all the scientific beliefs he holds; the whole edifice of science depends on faith in witnesses, past and present—

matter in Adam’s colon. Now there is simply nothing in logic or in empirical science that could ever refute that position. It cannot be falsified, but neither can the scientific belief that it was designed to combat. Those who believe in a single natural order would of course say that Gosse violates the law of parsimony, that to invent the hypothesis of such a whimsical God is to complicate the world rather than explain it. But every man prefers his own way of applying Ockham’s razor, and it is clear that no theory of evolution has ever been as simple and efficient and parsimonious as Gosse’s, judged from his own point of view. With it he can account for any future scientific discovery about the world, while his opponents must go on debating about spontaneous mutation and natural selection and percentages and missing links. If scientists really believed only what they can state in falsifiable form, they would have struggled—hopelessly—to devise crucial experiments that would test Gosse’s views as against their own anticatastrophism. Or they would have felt driven to show that Gosse’s theory was in fact untestable and therefore meaningless.

But nothing so absurd happened. Though there were some negative reviews, Gosse was mainly refuted by the old-fashioned method of silence and indifference. Nobody felt the least bit threatened, and since he could get nobody else to take his views seriously, they were by that fact alone “refuted” and properly ignored. [Au.]

on testimony and tradition. There is nothing wrong in this, Polanyi argues; indeed, science would grind to a halt were it not so. Though scientific traditions of faith often support errors, making it difficult for new and sounder ideas to be embraced, no one could begin or carry through any experiment, to say nothing of writing a paper or attending a scientific conference, without relying (blindly?) on the traditions that make such errors inevitable.

Thus science is, in its larger structures, validated by the same social processes that I am arguing for in "all the rest." Even when we look in detail at how an individual scientist thinks when he is testing his ideas, we find, Polanyi suggests, that the appeal is more to an ideal "universal scientist" than to any particular person or group.⁹ The scientist is most convinced that he is right when he is most nearly convinced that *any* thoroughly informed and rational—that is, any thoroughly qualified—human being would agree with him.

We will follow the same rule. Needless to say, the various fanatical defenders of nonsense or viciousness, even if backed by millions of SS troops, cannot claim that kind of support. The Nazis, for example, could never claim that all reasonable and informed men would be forced by reason to agree to the extermination of all

⁹See, for example, *The Tacit Dimension* (Garden City, N.Y., 1966), esp. pp. 63–64: "The popular conception of science teaches that science is a collection of observable facts, which anybody can verify for himself. . . . But it is not true. . . . In the first place, you cannot possibly get hold of the equipment for testing, for example, a statement of astronomy or of chemistry. And supposing you could somehow get the use of an observatory or a chemical laboratory, you would probably damage their instruments beyond repair before you ever made an observation. . . . Scientists must rely heavily for their facts on the authority of fellow scientists." See also *ibid.*, pp. 67, 80.

For a perceptive account of some of the problems encountered when scientists attempt "persuasion" and "conversion" in matters not amenable to what they think of as proof, see Thomas S. Kuhn, *The Structure of Scientific Revolutions*, 2d ed. (Chicago, 1970), esp. chap. 12 and "Postscript," secs. 5–7. For Kuhn there can be no proof except empirical, logical, or mathematical proof. Nevertheless, in matters not amenable to such proof there can be "good reasons for being persuaded," and we need, if we are to understand this kind of reason, "a sort of study that has not previously been undertaken" (p. 152). A new rhetoric?

Jews: self-evidently, the Jews must be included in any reasonable decision about their fate, and self-evidently, without even the need for consultation, they will be known to disagree with any attempt at a consensus about their extermination.

But we need not go so far from this room to illustrate the procedures I am playing with. Suppose we say that we here "know"—that is, have good warrant to assent to—whatever *everyone in this hall* really believes, regardless of whether we can think of abstract arguments about why his belief is not proved by other tests. Instantaneously our domain of knowledge is immeasurably increased, just as it was immeasurably decreased by the slow triumph of scientism from Descartes to Russell. Our knowledge is of "whatever we have good reason to believe," in the sense of "having no good reason to doubt." There will of course be gradations of such knowledge—truth will no longer be made up of what is certain, in contrast to "all the rest." When any belief seems self-evident and we find empirically that we can think of nobody who in fact doubts it, we will be sure about it; when we find, as we usually will, that some men deny what we all agree to, we will be less sure but still able to act on our knowledge with confidence, so long as we

In my judgment, Kuhn fumbles the question of "good reasons," because he is unwilling to question his assumptions that in choices of values and paradigms, neither party to a dispute can be "convicted of a mistake. . . . There is no neutral algorithm for theory-choice, no systematic decision procedure which, properly applied, *must* lead each individual in the group to the same decision" (pp. 199–200; my italics). In other words, unless absolute proof, decisive for all inquirers, is available, one cannot speak of mistakes or of correctness of choice. One is either totally, demonstrably mistaken, in a scientific sense, or no correction is possible. And yet "good reasons" are somehow possible, and in the truncated rhetoric that Kuhn offers, it is clear that he is moving toward a notion of a reasonable persuasion that would be as respectable, in its way, as scientific proof (see pp. 153–59). But despite his awareness that the fact-value and objective-subjective distinction have become mere tags and can sometimes be destructive of thought, he allows himself to imply, again and again, that most of the reasons scientists might offer in debate about theories and values are necessarily more subjective and hence somehow less respectable than their scientific endeavors (see esp. p. 156). [Au.]

think we could persuade any reasonable person. But when we find ourselves or the postulated experts disagreeing, we will become more tentative in proportion to their qualifications and our own sense of where the good reasons lead us. And finally, we will be aware that there can be a genuine conflict of this kind of knowledge, in those areas where genuine values in fact clash: we have no reason to assume that the world is rational in the sense of harmonizing all of our “local” values; in fact we know that at every moment it presents—as in the conflict of values exhibited by every slaughterhouse and every feeling time in the wilderness—sharp clashes among good reasons. The sparrow and the sparrow hawk each has its reasons which reason, with a little effort, can ferret out, but we need not expect to find, at this local level, a Reason that will persuade the hawk to starve itself or the sparrow to sacrifice itself joyously to the hawk’s noonday meal.¹⁰

¹⁰See Alan Gewirth, “Categorical Consistency in Ethics,” *Philosophical Quarterly* 17 (October 1967): 289–99; idem, “Positive ‘Ethics’ and Normative ‘Science,’” *Philosophical Review* 69 (July 1960): 311–30. Those who know classical rhetoric will be aware that I am experimenting with the old notion of the *topoi*, those places, *loci*, or shared “standpoints” where good arguments could be found because in them men did in fact discover warrantable beliefs. The *topoi* have often been treated as simple devices of trickery: you probe around in a “place” until you find some assumption, however ridiculous in your own view, that your opponent will accept, and then you argue from it to conclusions you want him to adopt. But what would happen if you probed and found what assumptions your own intellectual convictions *really rest on*, then tested them against other people’s assumptions, and finally concluded with more or less confidence, depending on who agrees with you and for what proffered reasons. You would thus be developing as you went along a collection—or perhaps to be fashionable I should say a “structure”—of more or less probable (*probe*-able, *provable*) assumptions, assumptions that become principles usable not only in argument but in your own inquiry.

The collection of *topoi* from which such principles come would have become an organon, always to some degree shifting and uncertain, but reliable in discovering not only what you yourself believe but what you *should* believe: you should accept whatever you discover in testing discourse with others who are reasonable and in any sense qualified.

Instead of making an a priori list of topics at a high level of generality, as those who revive classical rhetoric sometimes do, I shall pursue the consequences of this notion inductively, as we inquire here together into our shared beliefs. [Au.]

In short, there is no assumption here like the one found in that growing cult of so-called reason, the Ayn Rand objectivists, that all truly reasonable men will always finally agree. On the contrary, it is assumed that reasonable men of differing interests, experience, and vocabulary will disagree about some questions to which reason, nevertheless, must apply. Consequently they not only can but must, by virtue of their common problems, search for meeting places where they can stand together and explore their differences about the choices life presents.

What Do We Know about Ourselves and Our “World”?

What do we know about the *arena of change*, the mind or self, if we know whatever no one in this hall seriously doubts? Remember: we must not cheat and fall back into modernism. It will not do to say, “Of course I can doubt that, if I put my mind to it.” In this game you are allowed to doubt only what you cannot *not* doubt, only what you have persuasive reason *to* doubt. If I seem to repeat myself, it is partly because I know from my own experience how hard it will be for some of us not to claim doubt except when we *really* doubt.

1. You and I and Bertrand Russell know, as surely as we know anything, that men are characteristically users of language. Though we don’t know much about the language of other animals, we do know, more surely than we know anything about the stars or the nucleus, and immeasurably more surely than we know about the chemistry of man’s brain, that men in all ages and cultures have employed symbols—not just the grunt language of immediate signs or pointing, but modes of referring both to particulars not present to the senses and to concepts that generalize intelligibly about particulars. We know this is not simply by a tautological use of definition: “What I mean by man is a symbol-using animal.” We know it from innumerable observations and reports of all known human cultures: all have language. In other words, we know that what we are doing at this moment—discursing together, trying to understand each other—is done in some form by every man and woman in all cultures in all ages.

Even the deaf and dumb “become human,” as Helen Keller and others have argued, the moment when language in this sense enters their lives. I am hungry; let’s go hunting. I think it will rain; let’s build a shelter. I love you; let us mate. I have just discovered that the sum of the angles of a triangle will always be 180 degrees; let me show you.

2. Not only do we talk and write and create art and mathematical systems and act as if we shared them: we really do share them, sometimes. Sometimes we *understand* each other. That is, we are often successful in exchanging ideas, emotions, and purposes, using not only words but a fantastically rich set of symbolic devices, ranging from facial expressions that seem much more resourceful than those available to other animals, bodily stances, dancing, music, mathematics, painting, sculpture, stories, rituals, and manipulation of social groups in war and politics. Except for occasional monstrous births, each man born of woman infers grief, anger, love, through symbolic interchange. Even madmen go on, for the most part, talking and painting and singing; those who recover usually report that even in the depths of madness the process of inferring other people’s conditions through symbolic clues goes on at a great pace. Some investigators would even argue that human madness consists precisely in this process running to riot; though animals can be conditioned to various forms of breakdown, only human beings can suffer from a wild excess of symbolic activity, with too little exchange and too much private inference. What we ordinarily mean when we say that a deformed birth is a “mere puppy” or “only a vegetable” is at the other end of the scale of normality: symbolic interchange as we know it is impossible, and the condition of being fully human has not been attained.

In short, we know other minds, sometimes, to some degree. That we often do not, and that the knowledge is never complete, is at this point irrelevant, though it has been sometimes talked about as if it proved that we are all hopelessly alone.

3. Not only do human beings successfully infer other human beings’ states of mind from symbolic clues; we know that they characteristi-

cally, in all societies, *build* each other’s minds. This is obvious knowledge—all the more genuine for being obvious. What an adult man or woman is, in all societies, is in large degree what other men and women have created through symbolic exchange. Each of us “takes in” other selves to build a self.

Other animals, too, are to some degree formed by their fellows, but the difference between the power of symbolic influence in man and in all other creatures is—as all students of society and culture have noted—tremendous. It is true that we all have some sort of common genetic base, and that base *may* include, as some recent theories would suggest, a kind of universal determination of the basic patterns of human speech, in all languages. But the existence of language and hence of a greatly enriched power for symbolic influence has meant that men are fantastically malleable by their fellows.

4. What is more, we know that we characteristically *intend* to change our fellows by symbolic devices, to “make them” or at least make them different. Though it is true that much of the cultural molding of minds that goes on, especially in childhood, is quite habitual or unconscious, people universally intend meanings, and hence intend changes of mind in other people (perhaps I should remind you once again that I am using the word *mind* much more broadly than is often the case: it includes those operations of the brain that are often attributed to the “gut” and “heart”; intentions in this sense need not be conscious).

5. Further, we are endowed with the capacity to infer intentions, not just in the linguistic sense of meanings but in the sense of purpose. One of the most curious impoverishments in the long retreat I have described is the exclusion of intentions from knowledge. At first, in the seventeenth century, intentions were excluded from the heavens, but as in all the other progressions of scientism, what was first denied to God was later denied to man: purposes became unknown and unknowable. And they are unknowable, if one accepts from the beginning that one knows only what one can prove by observation. I can observe only actions and physical processes: nobody has ever observed a purpose direct, except in himself,

“subjectively.” But we all know (in our new sense of the word) that everyone can sometimes “read” intentions successfully.

This point is sufficiently important to justify spending a bit of time on it. There has been a good deal of work on intentions and how we know them, but for the most part it has been ignored, until very recently, by modernists attempting to be rigorous about what we really know.¹¹ We really know only facts, and intentions are not facts but states of mind. We do not *know* them, even in ourselves: they are intuitive states of consciousness. We certainly do not know them in others; rather, we infer them and our inferences have at best a very low level of probability. Or so one tradition says.

I would like to suggest, in contrast, that of all things I know, some intentions, both of myself and of other persons, are what I know most surely. We should not allow ourselves to be confused because we often are mistaken about intentions; they are of course easily faked, as con men teach us daily. But to admit that we make mistakes about some intentions no more rules intentions from the realms of knowledge than to say that we make mistakes about the physical world forbids knowledge about the physical world. The question is whether in knowing intentions we ever know something that is real, whether they are, as William James and other pragmatists insisted, matters of fact, even though clearly they are also in one sense subjective. If we do, then I think we not only have good reason to repudiate the hard distinction between objective and subjective worlds, but we also have a major step in the discovery of how facts and values are combined.

Of all the kinds of intention, the most revealing to us here are those found in works of art.

¹¹See, for example, G. E. M. Anscombe, *Intention* (Ithaca, N.Y., 1957); and E. D. Hirsch Jr., *Validity in Interpretation* (New Haven, Conn., 1967). The first is in the tradition of linguistic analysis; the second is strongly influenced by the phenomenologists, especially Husserl and Gadamer. Both would agree (though in different languages) with my elementary claim that we know intentions. For a careful account of current debate about intentions as causes, see Georg Henrik von Wright, *Explanation and Understanding* (Ithaca, N.Y., 1971), esp. ch. iii. I deal with intentions more fully in *A Rhetoric of Irony* (Chicago, 1974). [Au.]

When someone paints a picture or tells me a joke, when someone writes or performs a tragedy, when someone recounts the Passion according to St. Matthew in a Gospel or in an oratorio, I can sometimes come to understand and share his intentions and the shared intentions of others participating with me; and I sometimes know them with a sureness that has often been overlooked. That the resulting knowledge is a kind of indwelling (as Polanyi calls it), that it includes subjective states not provable or demonstrable by ordinary hard tests should not trouble us by now in the least.

Suppose I were to violate decorum by telling a joke at this solemn moment, and suppose further—oh, fond fantasy!—that it is as uproariously successful as the best joke you’ve heard in the last year. And then suppose a critic were to tell you that you do not know whether I was joking or not, that for all you really can prove, I was intending to communicate my tragic sense of life. What we know, in his view, is what we can prove, in his notion of proof. I submit that we would have every right to call him unreasonable, dogmatic, and in fact a bit foolish, because our communally shared knowledge of joke telling, its purposes, its conventions, its effects, is very secure stuff indeed. My joke would of course reveal other intentions than merely to make you laugh: you would know, at this stage of my third lecture, that I intended the joke and the laughter as illustrative. If the critic tried to convince you that I intended anything else by it than to make you laugh in order to illustrate our communal understanding, you would have every right to call him unreasonable, or even—if you wanted to be playfully contentious—unscientific.

But let us rise to more formal literary jesting, choosing as a second illustration a piece of the kind of stuff that some modernists like to say demonstrates how ambiguous everything is and how impossibly isolated we all are: of course I mean irony. You will look for a long time in scientific treatises on communication without finding any analysis of even the simplest ironies. Indeed, even in the philosophers who specialize in “ordinary language” one finds almost nothing about a symbolic practice that is so ordinary that you and I experience dozens of instances of it

daily; I have searched with reasonable diligence through the works of Wittgenstein, for example, and with all his talk about language games, I find almost nothing that even approaches an account of the intricate game you and I securely play when we open, let us say, that marvelous novel, *Pride and Prejudice*: "It is a truth universally acknowledged, that a single man in possession of a good fortune, must be in want of a wife."

We experience this sentence—that is, we take it in as a complex ironic meaning, a very special kind of indirect and intricate kind of unspoken point. We reconstruct an elaborate set of meanings quite different from the surface meaning of the words, and we conclude that we have understood Jane Austen's special brand of irony. She does not think that all wealthy bachelors are seeking wives; she knows that it is *not* a truth *universally* acknowledged but a belief held only by a very special kind of social group. In fact, her point includes the notion that some people, especially needy and greedy mothers with unmarried daughters, are eager to find wealthy sons-in-law; it also includes the extraordinarily complex notion—one that you and I have not the slightest difficulty with—that such people are proper objects of ridicule. What is more, it includes Jane Austen's inference about *us*, a flattering but justified conception of our powers to reconstruct unstated subtleties! Our performance together is, like mental meetings through other kinds of figurative language, too intricate to allow for brief explanation. But even without the full account that I have recently attempted in *A Rhetoric of Irony*, we can see that to claim to reconstruct such an intention is to claim an important and neglected kind of knowing.

I say that I know Jane Austen's intentions with the sentence, at least in its main lines. But can I really call what I know in this sense knowledge? It is clearly subjective, it cannot be proved by any deductive chain of reasoning or by any ordinary laboratory experiment, and it is obviously doubtful both in the sense that many readers will not see it and can doubt it honestly and in the sense that anyone who is determined to doubt what cannot be demonstrated can *say* he doubts it.

Yet if I remember that the dogmas of scientism are themselves unproved by observation and

then ask whether I have good and adequate reasons for my conclusions, I see at once that I *know* what Jane Austen intended with the sentence far more solidly than I know many conclusions dignified with the name of knowledge—for example, that the universe is ten or twelve billion years old, or that Shakespeare wrote *Romeo and Juliet*, or that energy equals mass times the speed of light squared. All of my reasons are what some objectivists would call subjective, but they provide, when added together, a very solid platform indeed. Here are the main ones that occur to me, but there are undoubtedly others:

a. First, I have my own strength of conviction. As everyone knows, and as Russell never tired of saying, "subjective certainty" is no criterion of truth. But of course "everyone" has been wrong: it is *one* criterion, though one that is, like all the others, unreliable. My conviction is in itself worth something, though not a great deal until it is challenged and I have a chance to see how strongly it can stand up under probing. Convictions vary in intensity, and thought about them reveals that some which feel certain are in fact only hopes and wishes (though the *only* should not be used to mean *necessarily* false) while others, like my conviction that Jane Austen's intent is ironic, look stronger and stronger the more I push at them with further tests of their strength.

b. Agreement with other "subjects." If I have read a sentence as ironic and I find that all about me readers are taking it literally and defending their view with confidence, my degree of conviction should diminish—though only to the degree that I have good reason to trust their judgment; it can never be a matter of simple democratic vote.¹² About this sentence I have in fact never

¹²My statement ignores the complicating fact that all of us can apparently be shaken out of our firmest convictions, including those we think of as scientific, by mere social pressure, if it is heavy and prolonged. Experiments proving such malleability, which have been often used as shocking evidence for the relativity of values, can be read as showing that we are indeed made in symbolic exchange and that our moral and aesthetic worlds are constructed by the same processes of validation as our scientific worlds. See Peter L. Berger and Thomas Luckmann, *The Social Construction of Reality: A Treatise in the Sociology of Knowledge* (Garden City, N.Y., 1966), esp. part 1, "The Foundations of Knowledge in Everyday Life."

met anyone except totally inexperienced readers who saw no ironic joke, and even they were easily persuaded that they had missed the point.

Let us take a vote, by show of hands, of those who have read *Pride and Prejudice*: How many of you think you know that an ironic jest was not intended? (Pause.) Well, the level of intersubjective agreement shown by your unanimity about the sentence is, I would say, at least as high as about any current scientific proposition except the almost universally accepted (though unprovable) assumption that nature will somehow always and everywhere be the same. I read in the morning paper, under the headline “Laws of Universe Put into Question,” that “rarely in history have theorists [in the physical sciences] questioned so fundamentally the precepts of their time”—this in a report from an international conference. I am not surprised. But you could shock me into catatonia with the headline, “Majority of Experts at Annual MLA Convention Deny Irony in Austen’s Works.”

I am not making the foolish claim that the

The fact that one or a million voters have been persuaded is never in itself adequate reason for concluding that they are right. In rhetorical inquiry we must always take into account both the reasons and the voters’ qualifications. Aristotle makes this point partly by his way of defining rhetoric. It is not the art of persuading, or of winning in an argument. It is the “faculty of observing in any given case the available means of persuasion” (*Rhetoric*, 1355b–25; Rhys translation). The best rhetorician who ever lived might easily fail in a given “impossible” situation, as Burke failed to persuade the British parliament to change their policies toward the American colonies. My definition, of course, goes further in the direction of evaluation even than Aristotle’s; if rhetoric is the art of discovering warrants for assent, the notion of finding good reasons, not just what look like reasons, is built in from the beginning.

Confusion about this point is as widespread as the sharp and simple distinction between “factual” and “evaluative” statements. Consider for example what a student will learn from the following exercise, given by Young, Becker, and Pike (*Rhetoric: Discovery and Change* [New York, 1970], p. 211): “Classify the following statements as either descriptive or evaluative. Descriptive statements usually can be verified empirically; evaluations usually cannot. As a guide, ask yourself whether it would make sense to vote on each statement. An evaluation, being a matter of opinion, can be voted on; to vote on a descriptive statement, however, would be absurd, since it can be verified empirically.

1. John lives at 25 Avon Street.
2. The food was poor.

level of agreement will be similarly high about all other literary interpretations; naturally I have chosen what I take to be a clear and simple case, since if I can earn the right to call even one act of subjective literary interpretation *knowledge*, I have broken, irremediably, the hard division between the subjective, personal world of feeling and value and the objective, impersonal world of knowledge and truth or reality.

c. Coherence with other kinds of knowledge. The circularity of all proof about anything becomes highly evident here—but with no resulting scandal. My conviction that the sentence is ironic was arrived at in a “flash of intuition,” as I found its literal meaning incompatible with many things that I know and then discovered a new ironic meaning compatible with everything I know. Now, testing the truth in the hard light of good reasons, moving around the circle in the opposite direction, I find that the intuition was indeed coherent with every relevant piece of knowledge I can think of, whether I look at the work itself or at so-called external evidence.

3. I am a freshman.
4. I am only a freshman.
5. He’s a beatnik.”

Quite aside from the point that both (1) and (3) *could* be highly charged with value in certain contexts, what is the validity of saying that (2), (4), and (5) might be voted on? Their validity or falsehood is of course established communally, in some kind of intersubjective agreement. But does it make sense to say that they are in no way descriptive? If I am served spoiled meat, or concentration-camp soup, and I say, “The food is poor,” my statement is as factual, as descriptive, as (1) or (3). Moving to less extreme examples the same claim can hold: “The soufflé is poor” will be descriptive of a fallen soufflé, among those who know what a good soufflé is. Soufflé experts and concentration-camp inmates, both served the same poor soufflé, will probably vote differently; the latter might say, “The food today was marvelous,” meaning “by comparison.” Both groups would be right, but again their conflicting descriptions are both factual and evaluative; the rightness is not found in a vote but in a discussion that shares understandings. (A group of experts might of course properly vote on two excellent soufflés.) Finally, it is not hard to think of contexts in which a jury might find itself voting on (1), or a panel of deans voting on the truth of (3).

The authors go on to suggest that the student make comparable lists and explain “the basis of your classification. Are any of your statements difficult to classify? If so, why?” One hopes that many students will finally see that the reason for difficulty lies in the original disjunction. [Au.]

Looking at the rest of the novel, we find that it fits the sentence only if I read the sentence as ironic. Within a few lines, for example, I find Mr. Bennet refusing to acknowledge the “truth *universally* acknowledged”; unless Jane Austen is a slovenly novelist—and everything in my field of awareness tells me that she is not—the incongruity between literal statement and literal fact must be intended. Therefore: irony. Secondly—and here feeling becomes an inescapable part of hard knowledge—the sentence and many others like it (“Wickham is my favorite son-in-law”) give delight in themselves and as a growing pattern of human vision *if* they are read as I have read them, ironically. They yield nothing but insipidity if read otherwise. These are value judgments, of course, and we all have been told that value judgments are one thing, and knowledge and fact quite another. But again we see the claims as flatly wrong. My knowledge is inextricably bound with my conviction that this kind of pleasure is valued by myself and other readers, and that our valuing was intended by Jane Austen. (That she shared it is perhaps less sure but still highly probable; what *she* felt and valued is harder to know than what she intended *me* to feel and value.)

It would be tedious to run over all of the good external reasons I have for thinking that the sentence is ironic: what Jane Austen said about her work; what every critic says about Jane Austen or about this novel or about this sentence; what expectations are built by her other works; and so forth. If I find—as I do when I come to other sentences in Austen—that some experienced critics see them as ironic and some do not, my confidence about them should diminish, but only to the degree that is required by the reasons given. I will call my convictions knowledge only when I have good reasons shared—or at least shareable—with weighty witnesses. And I will expect, as in even the “hardest” of the scientific fields, that there will be borderline cases in which the intersubjective sharing of reasons yields no resolution.

d. A final criterion is teachability or corrigibility. If we know what we can teach other men to know, by showing how we correct mistakes about it, my knowledge of Jane Austen’s irony is

knowledge. Every English teacher has had the experience of difficulty in teaching ironic works. But no teacher has ever had more difficulty teaching students to see this kind of irony than every science teacher has had in teaching the elementary concepts in his field. There are perhaps some readers who are irony blind, just as there are many students who cannot seem to grasp simple mathematics or simple physical processes. But their errors are corrigible, if they will attend to arguments of correction. I’ll warrant that a larger percentage of your students will share your knowledge of Jane Austen’s intention in that opening sentence—and without unfair bludgeoning—than all but the best science teachers can get to understand the second law of thermodynamics.

6. A sixth kind of knowledge we share is inseparable from what has gone before: in knowing intentions we often know them under the aspect of values. (Perhaps we always do, but that step is not essential to us here.) My knowledge that Austen is teasing is apprehended as a set of shared values—both the values that are being played with and the value of the act of play. To ask whether my propositions are propositions of fact or propositions of value is meaningless, because they are inextricably both.

If a skeptic says that though I can infer Austen’s intentions, I know nothing about their value, since other men might value them differently, particularly if they were from another culture, I can reply that such disagreements, though real, have nothing to do with the claim. The question is whether anyone whose opinion the skeptic respects *on this subject* would quarrel with the claim. If there is anyone here today, at this hour, who thinks that the world would not lose an important value if it lost Jane Austen’s kind of irony, let him speak up now.

To clarify this point about our inference of value *as we infer intention to create value*, here are two more examples:

a. It is Easter time, 1971, and I am sitting in Orchestra Hall in Chicago, listening to Bach’s *St. Matthew Passion*. After the final grand chorus, climaxing more than three hours of listening, I sit in the silence—we have been asked not to applaud—with tears in my eyes. As I recover what

we call my “self” slightly, I become aware that my wife on one side and my sixteen-year-old daughter on the other are weeping too, and that in fact handkerchiefs are visibly and audibly at work all over the hall. As we get up to leave, I meet a friend who is ordinarily loquacious; he lowers his reddened eyes and does not speak. Later in the corridor, another friend, ordinarily fluent, says, “That was really . . .” and bogs down, unable to say what it was, really.

Now I ask you, what do I *know* about the various persons and acts implicated in this “sentimental” experience? I am not asking you only what I feel (though it is true that part of what I know is what I feel) but what I know, using standards as rigorous as you care to devise. I submit that I know a good deal about Bach’s artistic intentions across the gap of nearly two hundred and fifty years—not of course his motives, in the sense of my first lecture, but his artistic reasons, what his art was designed to do or be. If someone says to me, “Bach really intended to make you laugh, not weep, with that final chorus,” or, “The whole thing was in fact an elaborate parody or put-on—in fact a satire composed to attack the foolish pretensions of believing Christians as well as the conventions of baroque choral music,” I know that he is wrong. I may still be wrong in many details of my “reading,” but if so it will not be because he is right—the issue cannot be resolved by saying that his opinion is right for him and mine is right for me.

(My sense of sureness is partly a product of my intense feeling, and I must consequently be cautious. A questioner after this lecture said that all of this was mistaken because he sees the *St. Matthew Passion* as a grotesque piece of sentimentality, a work that could never move *him* to a deep emotional or spiritual experience, though it tries hard enough. But it seemed to me that the objection itself confirmed my point: he did not and could not doubt that the work intended an effect in that general range of effects. Even the skeptic thus knew something about the music that we sentimental weepers also knew. What is more, I’m sure that he would concede if pressed that Bach’s attempt, though for him a relative failure, was not worthless. If I gave him a choice between attending to it for three hours and at-

tending to my own soulful rendition of “Red Sails in the Sunset” repeated steadily for the same period, we know that he and every music lover in the history of man would choose Bach. Here’s consensus enough for my purposes.)

My confidence about shared intentions and values is thus a product of my final feeling multiplied by the conviction that all other listeners who have ever qualified themselves by really listening to that music would agree with me, regardless of whether they shared the feelings on a particular hearing: nobody has in fact ever suggested the interpretation of Bach as satirist of Christianity or of musical conventions and we can say with great confidence that no informed listener ever will.

What is more, I can say roughly the same about the meanings of the tears in my wife’s and daughter’s eyes, as also of what they report about the concert afterwards. They have shared with me Bach’s intentions and my valuing of those intentions, and we thus know a great deal about each other through the sharing. If a skeptic suggested to me that my daughter was faking the tears in order to gain credit with Daddy, I would safely bet far more on my reply than on the conclusion of most arguments in the latest copy of *Science*. It is by no means certain, and I cannot prove it to you. But I would be mad indeed if I refused to credit it as knowledge, just because it is not subject to standard empirical tests.

There will of course be loose edges about this knowledge—the total content of her response will be much different from mine, and mine will have elements in it that Bach could not have intended. What is more, different conductors will read the score somewhat differently. But such peripheral vaguenesses affect this conclusion in no degree whatsoever. There are simply vast numbers of moments, most of them less complex than this, about which I can be sure that the central intentions of other minds are what I in fact receive.

b. I shall now create an art work, a neatly turned couplet:

The Beatles are greater than Bach
And Einstein is smarter than Mach.

Is there anyone here who would like to argue that my artistic achievement and the intentions you

infer behind it are superior or equal in value to any famous poem I might now quote—say Blake’s “London”? (Long pregnant pause!) But if we all agree, as we seem to, surely we have again found a value judgment that is factual—subjective, yes, but not in the old sense; artistic values can be known, at least some of them can be, and judgments about them *can* be factual, in precisely the sense that a judgment that Arnold Palmer is a better golfer than I am is a value judgment and a factual judgment simultaneously: we know the criteria and the achievement, and though the act of relating the two can be more difficult and hence more often controversial in artistic and moral matters than in sports or mouse-trap making, the process of mutual validation by qualified judges can be as valid in one case as the other. The whole problem is reduced, as Hume said, to determining who are the qualified judges.

Many of us here have qualified ourselves in some degree in the judgment of poetry. It is easy to imagine a challenger who will say that he knows as much about poetry as we do and that we are wrong: Booth’s simplicity and clarity are better than Blake’s metaphoric fuzziness. Is the question of our comparative expertise subjective or is it “a matter of fact”? Clearly the dichotomy has become meaningless. Nobody here, we know, will accept the skeptic’s preference for Booth’s poem. We have known many instances of consummate skill in poetry, and the question of whether our skeptic’s experience qualifies him as a challenger is a question of fact—regardless of how difficult it is to determine. If he is to persuade us to reconsider, he must, in practice (and in our rhetorical theory), win adherents who seem to us qualified as experts in the question. And this is just another way of saying that he must convince us that he knows the facts about what words like *better*, *skill*, *couplet*, and *art* mean.

It is important to be clear that we are not agreeing merely to the fact that we all agree, or that we all prefer Blake to Booth. You and I know that the difference in quality is not merely a matter of preference or a matter to be settled by vote; except when we are being doctrinaire skeptics, we know that the one is a better work of art,

according to every criterion except usefulness as an example in this lecture. In other words, some preferences are merely subjective, in the old sense, and some are also objective—intersubjectively validated, as some sociologists put it. They can, like judgments of other factual matters, be right or wrong; they are corrigible in responsible discourse.

7. Finally, we know that despite these many agreements, men’s firmly held values, known and tested in these ways, often conflict; we produce a great flood of value-ridden rhetoric directed, as it were, against one another. We talk ceaselessly to each other—and quite evidently have done so from the beginning—trying to show that *this* value is genuinely superior to *that*. And we all do so as if persuasion really mattered, and as if choices among values could be judged as really right or wrong. Rhetoric in this sense is not something that was invented at an advanced stage of civilization when men began to make highly formalized speeches in law courts and public assemblies. It was practiced when the inventor of the wheel said, “Hey, fellows, here’s something interesting I want to show you—it’s more important than your dice game.” It was practiced when the first mother or father went beyond simply caressing or physical restraint and managed to convey, in sound or picture or sign language, “No, *because . . .*” or “Good *because . . .*,” completing the primitive sentence with a reason not present to the senses at the moment.

This speculative point about the origins of language in opinion exchange is usually made about material objects and the words that stand for them symbolically; we all know about Helen Keller and her leap into the human community when she learned that the letters traced on her hand meant *water*. But it is impossible, I think, to separate the first real symbolic usage—the first time even a seemingly neutral word like *water* or *fire* was used to stand for water or fire not present—from intentions to assert value (and thus, potentially, to change other minds about value). That’s precisely what such usage is—an intention to “call to mind” and thus place some sort of value on what is not sensibly present. When anything is called to mind, in this sense, mind is

changed. There is always an implicit “ought,” if only “You ought to attend to *my* way of perceiving and naming.” . . .

The Purposes of Rhetoric

It remains only to consider what is perhaps the most significant change made by this redefinition of man as rhetorical animal, what it does to our view of the purpose of trying to change other men’s minds. In the scientismist view, you’ll remember, the only conceivable purpose of changing minds was to implant our pre-formed views by any available means: force, conditioning, brainwashing, trickery, or at best what Kant calls “wooing.” Except in scientific matters, rational persuasion was impossible, because proof was impossible, and persuaders could only propagandize their view of the world.

But if all men make each other in symbolic interchange, then by implication they *should* make each other, and it is an inescapable value in their lives that it is good to do it well—whatever that will mean—and bad to do it badly. If even the most austere, isolated laboratory scientist cannot even claim to exist except as a social self who was made and is still being made in symbolic exchange with others (or the totality of “the other,” including the symbolically responsive nature that answers his questions), then his very existence depends on the many values he affirms when he respects the truth, refuses to cook his evidence, relies on the traditions and methods taught him by his mentors, and so on. The supreme purpose of persuasion in this view could not be to talk someone else into a preconceived view; rather it must be to engage in mutual inquiry or exploration. In such a world, our rhetorical purpose must always be to perform as well as possible in the same primal symbolic dance which makes us able to dance at all. If it is good for men to attend to each other’s reasons—and we all know that it is, because without such attending none of us could come to be and questions about value could not even be asked—it is also good to work for whatever conditions make such mutual inquiry possible. Whatever imposes belief without personal engagement becomes inferior to whatever makes mutual exchange more likely.

The purpose of mental change is thus to fulfill one’s nature as a creature capable of responding to symbolic offerings. The *process* of inquiry through discourse thus becomes more important than any possible conclusions, and whatever stultifies such fulfillment becomes demonstrably wrong. But this is not quite the same as the popular irrationalist claim that conclusions do not matter, or the favorite dodge of social scientists when their data won’t jell: “To raise questions is more important than to try for answers.” The process fulfills itself only when the reasons are as good and the conclusions thus as solid as the problems and circumstances allow for. Rhetoric is a supremely self-justifying activity for man only when those engaged in it fully respect the rules and the steps of inquiry. And this holds as much for a “primitive” priestess persuading with myth, ritual, and omens as for a modern scientist who knows that his conclusions are at best tentative.

How then should men change each other’s minds? If fact and value are not implacably separated but inextricably intertwined in man’s nature, we can feel free to seek the answer to our “ought” question by looking at the facts of what we do and at what we say about persuasion. Just as all of us knew, in advance of my arguments here, that other men ought to change their minds when we give them good reasons, we know now that this is not just a personal preference. The very process that led men to the modernist dogmas depends for its validity on denying those dogmas.

If a committed doubter says to us that he will not accept the valued fact of man’s rhetorical nature, we see now that he cannot avoid illustrating it as he tries to argue against it: we discuss our doubt together, therefore *we are*. If he chooses to deny the value we are placing on the fact that this is how we are made, we cannot, it is true, offer him any easy disproof, in his sense of the word. But we can point out that to be consistent he must apply his doubt to the value of everything, including every scientific pursuit, every mathematical proof, every thought or private experience that is in any sense derived from human converse—every act, in short, except blank silence

or suicide. And if he persists, we have only to ask him, "What are your reasons? Give us good ones for believing that we should not seek good reasons and attend to them when they are given." If he offers reasons, we ask him whether we *should accept* them. Does he feel any argumentative force in them? If he says yes, he has accepted our premises. If he says no, his direct challenge to our claims is of course removed, though we may well continue to worry—as in effect I have been doing here—about the intellectual climate that can make his kind of intellectual game seem less in need of defense than our own.

By this route, as by many another, we are forced to recognize—though without quite as much anguish as modernist discoveries of man's "absurd" plight have produced—what looks like an absolute limitation on our mental powers. Augustine says, "Unless you believe, you shall not understand." For Aristotle no science can prove its own first principles, and some principles can be discerned only by the intuitive reason. Gödel proved that no system can prove all the premises it needs. In our rhetorical terms, we can't get anywhere on any problem unless *we agree* on some knowledge for which the best proof is that *we agree* about it. In any formulation, it is just as irrational to shut oneself off from discourse about other men's affirmations of value as to ignore their skeptical doubts about logical proofs or "the facts."

That disputes about values often seem more difficult to resolve than disputes about fact should no longer mislead us; some disputes about what we call fact are harder to resolve than some disputes about more obviously value-laden assertions: (a) Is it a *fact* that space is curved? (b) Would it be *right* for me to conduct an experiment on a group of orphan children who are in my charge, blinding them slowly to observe the effects on their perceptual worlds? Except when we are victimized by dogmatic doubt, it is clearly much easier to settle the second of these questions.

Besides, "all of us here would surely agree that there is something wrong"—note my formula again—about refusing to wrestle with hard questions. So long as we have good reason to

know that disputes about values can *sometimes* be debated productively and resolved, we have good reason to tackle any dispute that seems to us, jointly, worth bothering about, no matter how hard it is.

To talk in this way is to leave a lot of questions unanswered. Tomorrow I shall try to give some examples, both of difficult cases when values conflict, and of some forms of warranted assent that are opened up to us through this view of things. If I am right, forms of assent that are often called irrational—assent to religious groups, to dramatic and fictional appeals, to music, to political leaders—are in this view restored to potential intellectual respectability and thus to meaningful debate.

FOUR: SOME WARRANTS OF ASSENT WITH NOTES ON THE TOPICS OF PROTEST

Rejecting the dogmas of modernism can in itself settle no questions; indeed, for a true believer it can be positively unsettling. For the scientismist who has clung to the dogmas as his last hold on reason in a world gone mad, questioning them will seem just one more failure of nerve. For the irrationalist who has relied on them as his license for unbridled romantic assertion and thoughtless action, the questioning can threaten a return to chains. In one sense a rhetoric of assent attempts merely to be a commonsensical defense of the way we naturally, inescapably, work upon each other, because we are made in rhetoric. But for an age of dogma—and that is what I am calling our open-minded, tolerant time—it will have far more wrenching implications than any one of us can foresee.

If the whole "scene" of the atomic self, isolated in a cold universe, is undermined, the great liberal, critical fiat, "Make up your own mind," no longer quite makes sense. If the self is in fact a kind of value-permeated field in which a value-permeated universe creates and is in turn "processed" by what is really a history of selves in interaction with selves, the handbooks of logical and rhetorical proofs and fallacies must be

rewritten.¹³ If systematic doubt is to be replaced by systematic assent among such selves, the whole history of Western thought begins to shift under one's gaze, and the lines between friends and enemies become blurred. If language is not a means of communication but the source of our being, and if the purpose of rhetoric is not to persuade but to meet other minds in the best possible symbolic exchange—that is, to maintain or improve the “source” itself—then a very great deal that is conventionally said about improving communication begins to look highly questionable. If there is, finally, an inescapable, natural command to “make minds meet,” then suddenly a host of commandments that men have said were simply

¹³In a quick check through several elementary handbooks that include lists of fallacies, I find that each author has inevitably committed a fair share of the fallacies he lists, most notably that prop without which all of us would fall, *petitio principii*.

Monroe C. Beardsley's *Thinking Straight* (1950; 3d ed., New York, 1966), one of the best and most widely used handbooks to clear thinking, relies on a model of logical thinking which would preclude much of Beardsley's own argument. He tells us, for example, that argument from analogy is “an unsound form of the inductive argument” (pp. 130–36, 284). But he himself often and inevitably argues from analogy, most notably the analogy of straightness or clean linearity dramatized in his title. Though much of what such books have taught (see, for examples of the best, L. Susan Stebbing, *Thinking to Some Purpose* [Harmondsworth, Middlesex, Eng., 1938]; and Robert H. Thouless, *Straight and Crooked Thinking* [New York, 1932]) must still be learned by every serious student of thought, their almost complete denigration of argument from authority, witnesses, and testimony, and their uncritical divorce of thought and emotion (the latter almost always for them suspect) will have to be revised. They further illustrate the belief that the chief task is seeing through other men's fallacies and confusions: “Analyze the fallacies and confusions in the following passage.” Beardsley tells the student again and again. These authors do not dwell on human failures caused by “correct” thought purified of emotion.

Max Black is open about this deficiency: “But what are we to say about the criticism of *feeling*? When is a man justified in expressing hate, indignation, approval, etc.? These questions, important as they are, take us out of the subject matter of this book into the fields of ethics and aesthetics. They illustrate the limitations of logic” (*Critical Thinking*, 2d ed. [New York, 1952], p. 176). They do indeed, but these books all imply that *here* is how we *think*—and then there are all those other things that somehow get in the way of thinking. [Au.]

an interesting, perhaps precious but finally indefensible heritage from this or that tradition become genuine imperatives again. If existence is unthinkable without the struggle to make minds meet, everything we value, including the achievement of science and mathematics, depends on this fact which is a value: men ought to attend to whatever good reasons are offered them by other men.

In short, if good reasons apply, many of those views that we have conveniently explained away with this or that form of motivism come flooding back in upon us, demanding a fair hearing. But the question of what is a fair hearing is now more open than any book of rules for clear thinking has ever suggested.

I don't know whether this position—many aspects of it are new to me in the past year, though some are old as the hills—will make me seem a flaming revolutionary or a last-ditch traditionalist. What I do know is that the questioning I have here traced has been for me enormously unsettling, and that the chapter of consequences I turn to now thus seems a deeply unsatisfying though at the same time exhilarating collection of hints and guesses.

The Great Reservoir of Good Reasons

A satisfactory account of good reasons in any one domain of life would necessarily require a sizable book. The repertory of good reasons could never be constructed by any one person, since it would include all good discourse about the grounds of valid discourse in any subject. What I do here should thus be viewed as an invitation to push even further the many recent efforts to develop methods of pluralism and manifold logics of inquiry, and to oppose assimilating all proof to a single paradigm.

Classical rhetoric, following Aristotle, distinguished three kinds of proof: (1) substantive arguments about the case to be established; for example, to say that we are not as well prepared for war as our enemy can be a cogent argument for not going to war at this time; (2) “ethical proof”—arguments based on the character of the speaker or his opponent; for example, to say that the king's counselor has lied to you frequently in

the past is reason for you to disbelieve his claim that we are not ready to wage war; (3) “emotional proof”—arguments appealing to the special emotions or attitudes of the audience; for example, to argue for peace before a group of middle-aged mothers I will stress “death of our sons” more strongly than I would when speaking to senators.

Almost everyone has agreed with Aristotle that the first kind, if available, is somehow superior as proof to the other two. Example and enthymeme, the rhetorical versions of induction and deduction used in dialectic, are the core of persuasion; and Aristotle often implies that whatever is not valid under one of these heads is very weak proof indeed. And even these as used in rhetoric are inferior to positive proof: “The duty of rhetoric is to deal with such matters as we deliberate upon without arts or systems to guide us”—so far so good—“in the hearing of persons who cannot take in at a glance a complicated argument, or follow a long chain of reasoning.”¹⁴ Other and better audiences would clearly be preferred if life could only be managed that way. It should be evident by now that for a rhetoric of assent, these priorities are questioned and perhaps in a sense even reversed; ethical proof—the art of taking in by contagion—now looks much more important.

Aristotle at least knew that practical life required rhetoric and that rhetoric could not be reduced to logic. But many modernists have moved in the contrary direction, not only making logical proof prior but, as we have seen, eliminating all other kinds entirely. The history of rhetoric since the seventeenth century could be described as a mounting suspicion and final rejection of ethical

¹⁴My quotations are from the W. Rhys Roberts translation. I am not following Aristotle strictly (*Rhetoric* 1357a and *passim*) but rather what seems to me the most common Aristotelian tradition. Perhaps I should add, for those who care about such matters and who are therefore likely to wander into a footnote this far along in a book like this, that the rhetoric of assent is not by any means Aristotelian; for my purposes here, Aristotle is much too interested in being scientific. Though I have resisted the temptation to attack him as the first scientist, there is a sense in which he seems to say: Oh, yes, indeed there *are* many other forms of proof besides the apodictic proof that scientific demonstration affords, and I will deign to give you a book about them; but isn't it, after all, a pity that it cannot all be done with greater rigor. [Au.]

and emotional proof and then a progressive narrowing of the range of what is accepted as substantive proof.

To reconstruct our languages according to a rhetoric of assent will be an immense task, as the efforts of the last two decades have shown. The reconstruction will not, if we do it honestly, lead to any comfortable set of rules for clear or straight thinking, though some rules will still be useful for limited cases (presumably physicists will still work at ruling out their emotions and preferences when assessing theories about black holes and quasars, even when they have recognized that they cannot do so in assessing their theories about big bangs and continuous states). It will not even lead to a reconstruction of a clear distinction among the three kinds of classical proof. Emotional and ethical proof will often turn out to be “substantive,” and logical proof useless and misleading. But if we recognize that the distinctions will now be hazier than in any traditional rhetoric, it is still useful to discuss our restored reasons under the three traditional heads, substantive or logical, ethical, and emotional. I can only hint, with an example or two in each case, at what a world of reconsiderations we now face.

Value Terms and Substantive Proofs

If what we have said about the potential status of value judgments is true, efforts to establish value through discourse can no longer be dismissed, in Russell's language, as “mere preaching.” Values can in some sense be demonstrated.

In classical rhetoric, three kinds of persuasion about values were usually distinguished: judicial or forensic, about the value-ridden facts of guilt or innocence concerning past actions; deliberative, about policy for the future; and demonstrative, praising or blaming persons or institutions in the present.¹⁵ In such a scheme, our modern

¹⁵The best discussion of these kinds is still the source itself: Aristotle, esp. bk. I, chaps. iii–x. For a rhetoric of assent the three types addressed to issues in past, present, and future would, I think, be supplemented by a rhetoric of ultimate values: the rhetoric of sciences and philosophy, inquiring into what was once called “eternal truth.” In such a scheme, much

demonstrations, designed to protest this or that evil or to demand this or that good, take on a special interest. If value can in fact be demonstrated in ways other than by public demonstrations of force or violence, it is also true that extreme public displays of commitment always say something real to anyone seriously inquiring into the values at stake in any conflict. To pretend that a display of commitment, even an extreme act of violence, is necessarily unrelated to how we think about such matters is, in our present view, to forget that the way we establish values is the way we establish anything: by earning communal validation through trying them out on other men.

To try them out in simple direct acts of physical protest has become a national habit partly because people seem convinced that they cannot try them out meaningfully in other ways. Thus we once again polarize ourselves, rationalists claiming that demonstrations demonstrate nothing, irrationalists claiming that nothing can be demonstrated without power or violence. The former talk of blind passion, senseless destructiveness, and fascist oppression by self-intoxicated and self-righteous mobs; the latter talk of inhuman and unfeeling machines, of bureaucrats rationalizing the status quo, and of fascist oppression by the entrenched elite. I scarcely expect that anything I say here will transform such groups into mutual inquirers; name-calling, like war, often achieves what we call results, and most men most of the time will probably fail to see the good reasons for rising above their local interests. But those who prefer to use their heads as well as their mouths and bodies need have no shame, if fact-values or valued-facts are accessible to reason.

Example 1: Finding a Concurring Public vs. Getting on the Bandwagon

Modern rhetorics have often listed the bandwagon technique as one fallacious kind of argument. In deciding what I want to believe or do, it is said, I must not be swayed by the fact that everyone's doing it. "Everyone" does a lot of

music and some literature (for example, poems like Eliot's *Four Quartets* that explicitly address metaphysical or religious truths) would become a "rhetoric of the timeless." [Au.]

crazy things; fads and fancies fill the air. Clearly the man who respects his mind will make his own decisions and not follow wherever the winds of group assent would carry him.

But of course one man's bandwagon is another man's reasoned consensus. A teacher may find himself arguing against the bandwagon technique in his composition course and then feeling annoyed when students in literature courses refuse to respect what *his* bandwagon says about the importance of literature or of critical thought. "Why should I think Shakespeare is great just because everybody says so?" the student asks, and the liberal teacher says, "Oh, of course you shouldn't; you should make up your own mind"—even while thinking that perhaps something has gone wrong if the weight of generations of thoughtful and sensitive critics counts for absolutely nothing as against the opinion of a green, arrogant, and alphabetic youth.

We should now be able to see (and to seek ways of teaching) that to resist one bandwagon is often to embrace another—possibly but not necessarily one that is older and "better established." The young student cannot make up his own mind about Shakespeare, if by that is meant coming to an opinion about Shakespeare uninfluenced by one tradition or another—even if it is only the tradition of taking TV shows as a standard of dramatic value. And to tell him not to jump on bandwagons because he should think for himself is once again to define his self negatively, as what is left over after all influences have been discounted. No wonder so many of his kind finally tell us, in effect, that whatever bandwagon comes along—Jesus freaks, Devil's Disciples, Hell's Angels, Children of God—is better than no bandwagon at all. After all, we have taught that there's no disputing about taste in bandwagons.

When established universities and their critics have clashed in recent years, the defense has often been in the name of a dispassionate neutrality, while the attackers have claimed, quite rightly, that the universities and colleges are not neutral, that they are defending their own commitments and interests. Professors and administrators have argued, again with justice, that they cannot pursue truth if the truth is prejudged by

political or social commitments of the kinds sought by protesting students. And students then have replied—after more or less perfunctory efforts to discuss matters—that “we tried to reason with you, but you wouldn’t listen, so we were forced to resort to sit-ins or violence.” (The same pattern of argument is heard, needless to say, in national disputes about racial injustice or the Vietnam war or women’s rights.) Again and again I’ve heard people on both sides say, “Well, of course, you can’t deal rationally with differences about values.” The academic defenders then go on to argue, in an obvious circle, that it is highly important to humanity to preserve institutions which pursue questions in an objective spirit, untainted with values. And the students, having heard the message that values are beyond dispute, grasp the other horn of the false dilemma, and say, “Since according to your own teachings, O my mentors, we cannot hope to deal rationally with our value differences, and since values matter to us more than they do to you, let us then deal with them irrationally: burn it down!” Or words to that effect.

But having examined critically the dogmas of modernism, we can rediscover what never should have been forgotten: that some values are in fact better-grounded than others, and that disputes about them can yield results that *ought* to be accepted by all parties to the dispute, even though they cannot be called certain or positive. A rational protest is possible, in short, about any violation of any value we hold dear. When I enter into the lists, I cannot be sure, it is true, that I will come out unchanged, since my protest may be invalidated—now that I have learned that listening is important—by the reasons offered by my opponents. But I have no good reason to believe, in advance of a conflict, that reasons will prove irrelevant simply because values are at stake. It is not only that most disputes about values turn out, on examination, to be about means and not ends (even the dogmatic modernists admit, most of them, that dispute about means can be rational). It is also that ends are themselves subject to meaningful communal inquiry.

I think, for example, that in pursuing a rhetoric of assent we have at the same time been discoursing about ends and pursuing the grounds

for a rationally legitimated protest. Or, to put it another way, *I* have been making what I take to be a reasonable protest against many of the modernist assumptions (and the practices that those assumptions imply) that have been felt to be dehumanizing and soul-destroying by some of the irrationalists who have protested in less discursive ways.

Since I know that I cannot disprove the dogmas in a positivist sense, one way to proceed might have been to organize a sit-in at my university, demanding that all dogmatic modernists be fired. But so long as I believe that the dogmas can and should be tested in another sense, by this kind of discourse, I could never resort to a kind of action that in effect proclaimed reason to be helpless and precluded my discovering how and where I am wrong. A protest, even the most violent protest, becomes legitimated when and only when the affirmations on which it is based are *in fact* (not just in personal conviction) supported by good reasons, good reasons shared or potentially sharable by the community that is relevant.

It is often said, by those who want to defend the rightness of individual protest, that one man plus God makes a majority. The formulation ignores the opposite truth, that one man plus the devil can make a hell on earth. If we are to make our protests not just self-satisfying, not just “sincere,” not just desperate and ineffectual last-ditch stands, we must validate them in the courts of communal exchange.

But if there really are such things as good reasons about ends, this is not so difficult a thing as we have often been led to believe. Whenever any person or institution violates the inherent values of free human exchange among persons, imposing upon anyone a diminution of his nature as a rhetorical animal, he is now shown, in this view, to be wrong—not just inconvenient or unpleasant but wrong. There are genuine values, intersubjectively demonstrable, that judge his wrongness. Those same values will of course sit in judgment on any mode of protest against the violation. I am not free to choose whether it is right to silence you because you would silence me: of course it will be wrong to silence you. I may of course be forced to do so in opposing a greater wrong, even knowing that my means are evil, as

we had to work at silencing the Nazis once they had set out to use force to silence the rest of us. But as I do so I will know that the justice of my action is determined by whether what *look like* good reasons for the employment of warfare are *in fact* good reasons. And that can only be determined in social or potentially social converse with reasonable men, not in private, isolated, “logical” consultation of my atomic self and its wisdom: as ethical theorists are fond of saying, I must act so that the principles of my conduct are reversible, against myself, universally applicable. Rhetorically speaking, this means that I must have good reason to believe that if my opponent would open his mind to full rhetorical exchange, he would be led, by good reasons, either to come to my view or at least to tolerate it as one reasonable view.

In some such way as this the philosophy of good reasons leads us to a reaffirmation of those central human values that other philosophies and religions have reached by other routes: of tolerance, of justice or fairness, of “democratic” equality of vote in all matters that concern all men equally. Kant once remarked that the result of all his philosophizing was to establish a rational basis for the pious beliefs of his ancestors: the golden rule reappears for him as the categorical imperative, and it reappears in our rhetorical view as the command to pay as much attention to your opponent’s reasons as you expect him to pay to yours. This traditionalism of our results doesn’t bother me: I revel in it, partly because it is so radical. Here we depend on the obvious and age-old belief that if there is any hope for man it can be found neither in repudiating all past truths nor in repudiating all revolutions. We must select, as always, from old and new by testing in

discourse which truths meet circumstances that are always both novel and precedented.

A society cannot exist, the past seems to teach us, unless it can somehow constitute itself as a rhetorical field, as what Dewey called “a public,”¹⁶ and this means that *we* cannot exist without recognizing that *some* of our shared values carry an inescapable weight for all of us. Too often our way of talking about the increasing fragmentation of publics is to throw up our hands: “You can’t talk with them because they have gone beyond the pale.” In other words, we decide to declare war. Though I hold no great hope that a revitalized rhetoric can ever eliminate “warfare”—lying, trickery, blackmail, and physical persuasions—I think the command upon us is inescapable: we must build new rhetorical communities, we must find a common faith in modes of argument, or every institution we care about will die. . . .

¹⁶See Dewey’s *The Public and Its Problems* (New York, 1927), esp. final chap. The point has of course been made by many sociologists, though in recent years it seems to have become more and more “anthropologized”—see Peter L. Berger and Thomas Luckmann, *The Social Construction of Reality: A Treatise in the Sociology of Knowledge* (Garden City, N.Y., 1966), esp. sec. 2, “Society as Objective Reality.” I cannot trace here what seems to be a general infiltration of the social sciences with “the rhetoric of structuralism,” according to which—to put it crudely—everything relates to everything else: every belief in a given culture will rely for its credibility on the total structure of beliefs and practices. All societies are in this view rational, in one sense, but no element can be proved outside its context unless, as many structuralists assume, all societies are *au fond* alike, in which case a Supreme Anthropologist could discern a Supreme Public and its Problems, and He could write—that ultimate Lévi-Strauss—an ultimate rhetoric of assent. Lacking such, we can still work with confidence as we assent to more localized publics. [Au.]

Hélène Cixous

b. 1937

Hélène Cixous (pronounced sik-soo) was born to Jewish parents in Oran, Algeria, when the country was still a French colony. From the beginning, her linguistic environment was complex: Her father, a Sephardic Jew from Morocco, spoke Spanish as his first language, and her mother and grandmother, from Austria, spoke German. Cixous studied Hebrew and Arabic with her father and learned French and English in school. This mixture of languages may help to explain why Cixous has been drawn to fiction written in several tongues; among her favorite authors are Shakespeare, Joyce, Rimbaud, Rilke, Kafka, and the Brazilian writer Clarice Lispector. It may also explain why her own written French is so verbally complex, so full of allusions, wit, and word play. Cixous has also suggested that her background as a Jewish woman and as a colonial has given her a critical perspective on French history and culture:

So I am three or four years old and the first thing I see in the street is that the world is divided in half, organized hierarchically, and that it maintains this distribution through violence. . . . The routine “our ancestors, the Gauls” was pulled on me. But I was born in Algeria, and my ancestors lived in Spain, Morocco, Austria, Hungary, Czechoslovakia, Germany; my brothers by birth are Arab. So where are we in history? I side with those who are injured, trespassed upon, colonized. I am (not) Arab. Who am I? I am “doing” French history. I am a Jewish woman.¹

Cixous has concentrated on siding with women.

Cixous’s earliest education took place in a school for Jewish children, who were not allowed to study with non-Jews. She was a brilliant student, traveling to France to finish her lycée work (at the high school level), receiving her license-ès-lettres (equivalent to a B.A.) in English literature in 1957, and, in 1968, at the age of 31, becoming the youngest person ever to receive the docteur-ès-lettres degree (equivalent to a Ph.D.), with a dissertation on James Joyce. Cixous also married at a young age, giving birth to a daughter in 1959 and a son in 1961 before her divorce in 1964.

While completing her doctoral work, Cixous taught in French universities, and by 1968 she had moved to the University of Nanterre. This was the most radical of French universities and the site of much of the action during the student uprisings of 1968, in which Cixous participated. In response to student demands for reform, the French government appointed Cixous to establish an experimental branch of the University of Paris at Vincennes. Here the hierarchy of professor over student was to be undermined by admitting students who did not have traditional academic preparation, allowing them to organize their studies across academic disciplines, and evaluating them more informally, without career-determining exams. Although Cixous would now say that not all of these reforms were successful—and most notably, that the professor-student hierarchy cannot really be dismantled—she has

¹Hélène Cixous, “Sorties,” in Hélène Cixous and Catherine Clément, *The Newly Born Woman*, trans. Betsy Wing (Minneapolis: University of Minnesota Press, 1986), pp. 70–71.

continued to teach English literature at the University of Paris-VIII (now located in Saint Denis). In 1974 she began the first women's studies program in France at Paris-VIII (there are still very few such programs).

Cixous's thought has been strongly influenced by Jacques Derrida (p. 1471)—like her, a Jew from Algeria—and by other poststructuralists. She analyzes Western culture in terms of binaries, such as France and colonial Algeria, or men and women, in which the dominant term defines itself by putting the other in a subordinate position. To attack these oppressive binaries, Cixous takes a two-pronged approach. She deconstructs them as she encounters them in literature, calling their seeming inevitability into question, and she also attempts to develop a nonhierarchical writing practice, which she calls “feminine,” that offers a way out of binary thinking. Cixous sees masculinity and femininity as culturally constructed for each individual from birth, and hence as having profound psychological implications that she is most interested to explore. Indeed, questions concerning the psychological impact of culturally defined gender identities are central to the work of the Paris-VIII Centre d'Études Féminines.

Cixous is known in France primarily as a writer of experimental fiction and drama, in which she attempts to develop nonhierarchical and psychologically nuanced writing practices. Her first novel, *Dedans (Within)*, published in 1969, won the prestigious Prix Médicis. She has since published more than forty books, most of which are difficult to categorize because they consistently employ poetic language whether her intent is primarily to create fiction or to pursue critical analysis. In her approach to writing, Cixous has been particularly interested in Freudian and post-Freudian psychoanalysis as a method of interpretation. She treats the texts of other writers as expressing their inner lives, whether consciously or unconsciously, and she attempts to represent her own inner life in her novels. Her earliest works were the most autobiographical, focusing on what the loss of the father does to the female narrative voice (Cixous's own father died when she was eleven years old) and making use of dream imagery and highly allusive, sensual language. Gradually her fiction focused more generally on “écriture féminine,” a kind of writing that aims to reflect women's sexuality and awareness of their own bodies. Most recently, Cixous's work has incorporated both introspective and historical elements; her plays focus on actual historical people such as Prince Norodom Sihanouk of Cambodia and Phoolan Devi, a low-caste Indian woman who became a bandit leader and political rebel. Little of this work has been translated into English, and indeed, it would be difficult to do so, given that her French is full of metaphors, word play, cryptic allusions, and esoteric wit. French literature scholar Lynn Penrod recommends reading *Vivre l'orange/To Live the Orange* (1979) to get a sense of Cixous's fiction; this book prints the French text on pages facing an English translation prepared under Cixous's direction by two long-time collaborators of hers, Sarah Cornell and Ann Liddle.

Cixous is best known to Anglophone readers as a theorist of *écriture féminine*. Her ideas on this kind of writing are found in a 1975 essay, “Le Rire de la Méduse,” translated in 1976 as “The Laugh of the Medusa” (included here), and in *La Jeune Née* (1975), translated as *The Newly Born Woman* (1986; includes “A Woman

Mistress,” included here). Cixous’s collaborator on *The Newly Born Woman* is Catherine Clément, a French intellectual in charge of cultural exchanges at the Ministry of External Relations. “The Laugh of the Medusa” both calls for and demonstrates what Cixous hopes is a new way of using language, specifically female but also powerful. This writing avoids linear and hierarchical textual structures and rather organizes itself diffusely around key themes. It provides a generous flow of allusive language and remains open to many viewpoints without trying to enforce just one. Cixous suggests that such diffuse, flowing, open writing parallels the ways women experience erotic sexuality.

Cixous is concerned to rebut French intellectual Jacques Lacan’s notion that women lack some key ability to use language because they lack a penis. The title of her essay alludes to the monster from ancient Greek mythology that has been taken as a negative image of the female sex. The Medusa’s beautiful female face, surrounded by hair made of poisonous snakes, grimaces horribly. To see the Medusa is to be turned to stone. In the Freudian interpretation, the Medusa’s open mouth ringed with curling “hair” resembles the female genitalia, at once arousing and terrifying because no penis is there. The viewer turned to stone is a man with an erection, or a man struck dead with horror. Cixous refashions the grimacing lips into a laugh and the threatening void into a mouth filled with beautiful language. She hopes to bring about, by celebrating in this essay, a rejection of male-dominated systems of interpretation that classify female bodies, mouths, and words as inferior. Hence Cixous is said to advocate women’s “writing their bodies.”

At the same time, Cixous has cautioned against thinking that *écriture féminine* is the exclusive province of those who are biologically female. Indeed, in her view, French writer Jean Genet is one of its chief practitioners. She has said that she “would like to rid us of words like ‘feminine’ and ‘masculine’” because they refer “to a classical vision of sexual opposition between men and women . . . that is what burdens us.” A more careful terminology, she suggests, would be “writing said to be feminine or masculine” because for her, *écriture féminine* denotes “a decipherable libidinal femininity which can be located in a writing that can have been produced by a male or a female.”²

Cixous explores the difficulties of employing such women’s writing in all kinds of discourse in *The Newly Born Woman*. Included here is the brief concluding dialogue, “A Woman Mistress,” by Cixous and Clément commenting on the stylistic “dialogue” set up by their two essays, which constitute the bulk of the book. Clément is aware that her essay (“The Guilty One,” a critique of Freud’s treatment of hysterics) could be considered complicit with an oppressive society—she nominates herself for the “dunce cap” of the academic style—but Cixous says that she too will use what she calls “the discourse of mastery” to assert her authority over her students. Cixous also terms this a rhetorical discourse, though not because she imagines it as employing classical devices. Rather, it is “rhetorical” in trying to master or control the audience, a power Cixous seeks for women while at the same time re-

²Hélène Cixous, “voice i . . .” [interview with Verena Andermatt Conley], *boundary 2* 12 (winter 1984): 51–52.

maintaining wary of its potential dangers of co-optation. If there is to be a “Woman Mistress,” as the title of the dialogue suggests, she must ultimately wield a new, less imperious kind of rhetorical power.

Cixous has been cautious about identifying herself as a feminist, and critics have argued that she does not go far enough. The feminist movement in France began as part of the 1968 uprisings, and Cixous has said that at that time she was not attracted to the movement because “it seemed violent, hard, aggressive.”³ She rejected political feminism because it merely attempted to reform existing patriarchal structures and hence was in danger of reproducing their inequalities. Even though she was criticized for thus neglecting action against women’s social problems, such as sexual abuse, Cixous concentrated on defining a sort of psychological feminism that would explore the inner bases for men’s sexism and women’s complicity in their own oppression, especially as these are expressed in literature. Cixous now describes herself as being “in complete solidarity” with the women’s movement, a phrasing that carefully avoids claiming membership in this movement.⁴ She thus distances herself from political feminism’s tendency to adopt what she sees as a typically male dualistic stance toward its opponents—an “us or them” mentality. Cixous has implied that she would like to see a politics based on attempting to understand and collaborate with others, which could address not only women’s issues but also other inequalities. In general, Cixous has been in favor of pluralism and multiple viewpoints, and against attempts to establish a dominant power, whether the field is literary interpretation, personal interactions, or political struggle. She values poetic language, as literary critic Susan Sellers has explained, because it resists single interpretations and calls attention to its resistance.

Selected Bibliography

Hélène Cixous’s “Le Rire de la Méduse” (1975) has been translated by Keith Cohen and Paula Cohen as “The Laugh of the Medusa” (*Signs* 1 [1976]: 875–93), from which the text printed here is taken. *La Jeune Née*, by Cixous and Catherine Clément (1975), has been translated by Betsy Wing as *The Newly Born Woman* (1986). The essay reprinted here, “A Woman Mistress,” is taken from this edition, which includes an introduction by Sandra M. Gilbert and a glossary by the translator. An interview with Cixous, as well as several of her texts in French and English, can be found in *boundary 2* (12 [winter 1984]), a special issue edited by Verena Andermatt Conley and William V. Spanos, entitled “On Feminine Writing: a Boundary 2 Symposium.” See also “Castration or Decapitation?,” trans. Annette Kuhn (*Signs* 7 [1981]: 41–55); Kuhn’s introduction gives some helpful bibliography that includes Cixous’s fiction. *The Hélène Cixous Reader* (ed. Susan Sellers, foreword by Jacques Derrida, 1994) collects excerpts from a number of her texts over her entire career to the date of publication. Cixous’s book on James Joyce is available in English (*The Exile of James Joyce*, 1976).

For overviews of Cixous’s thought, see the chapter on her in Toril Moi’s *Sexual/Textual Politics: Feminist Literary Theory* (1985), which is especially helpful on her apparent

³Lynn Penrod, *Hélène Cixous* (New York: Twayne, 1996), p. 7.

⁴Penrod, p. 8.

contradictions; Susan Sellers's introduction to her edited volume, *Writing Differences: Readings from the Seminar of Hélène Cixous* (1988); and Morag Shiach's *Hélène Cixous: A Politics of Writing* (1991). To consider the question of how feminist *écriture féminine* really is, see Domna Stanton, "Difference on Trial: A Critique of the Maternal Metaphor in Cixous, Irigaray, and Kristeva" (in *The Poetics of Gender*, ed. N. K. Miller, 1986). The *boundary 2* number edited by Conley and Spanos (cited above) includes essays that show how concepts of *écriture féminine* can be used to analyze other writers; examples are Judith Wilt on Emily Dickinson and Carol Mastrangelo Bové on Julia Kristeva. A good introduction to Cixous's fiction, which also provides much helpful biographical information, is Lynn Penrod's *Hélène Cixous* (1996).

The Laugh of the Medusa

I shall speak about women's writing: about *what it will do*. Woman must write her self: must write about women and bring women to writing, from which they have been driven away as violently as from their bodies—for the same reasons, by the same law, with the same fatal goal. Woman must put herself into the text—as into the world and into history—by her own movement.

The future must no longer be determined by the past. I do not deny that the effects of the past are still with us. But I refuse to strengthen them by repeating them, to confer upon them an irremovability the equivalent of destiny, to confuse the biological and the cultural. Anticipation is imperative.

Since these reflections are taking shape in an area just on the point of being discovered, they necessarily bear the mark of our time—a time during which the new breaks away from the old, and, more precisely, the (feminine) new from the old (*la nouvelle de l'ancien*). Thus, as there are no grounds for establishing a discourse, but rather an arid millennial ground to break, what I say has at least two sides and two aims: to break up, to destroy; and to foresee the unforeseeable, to project.

I write this as a woman, toward women. When

Translated by Keith Cohen and Paula Cohen. This is a revised version of "Le Rire de la Méduse," which appeared in *L'Arc* (1975), pp. 39–54.

I say "woman," I'm speaking of woman in her inevitable struggle against conventional man; and of a universal woman subject who must bring women to their senses and to their meaning in history. But first it must be said that in spite of the enormity of the repression that has kept them in the "dark"—that dark which people have been trying to make them accept as their attribute—there is, at this time, no general woman, no one typical woman. What they have *in common* I will say. But what strikes me is the infinite richness of their individual constitutions: you can't talk about *a* female sexuality, uniform, homogeneous, classifiable into codes—any more than you can talk about one unconscious resembling another. Women's imaginary is inexhaustible, like music, painting, writing: their stream of phantasms is incredible.

I have been amazed more than once by a description a woman gave me of a world all her own which she had been secretly haunting since early childhood. A world of searching, the elaboration of a knowledge, on the basis of a systematic experimentation with the bodily functions, a passionate and precise interrogation of her erogeneity. This practice, extraordinarily rich and inventive, in particular as concerns masturbation, is prolonged or accompanied by a production of forms, a veritable aesthetic activity, each stage of rapture inscribing a resonant vision, a composition, something beautiful. Beauty will no longer be forbidden.

I wished that that woman would write and

proclaim this unique empire so that other women, other unacknowledged sovereigns, might exclaim: I, too, overflow; my desires have invented new desires, my body knows unheard-of songs. Time and again I, too, have felt so full of luminous torrents that I could burst—burst with forms much more beautiful than those which are put up in frames and sold for a stinking fortune. And I, too, said nothing, showed nothing; I didn't open my mouth, I didn't repaint my half of the world. I was ashamed. I was afraid, and I swallowed my shame and my fear. I said to myself: You are mad! What's the meaning of these waves, these floods, these outbursts? Where is the ebullient, infinite woman who, immersed as she was in her naiveté, kept in the dark about herself, led into self-disdain by the great arm of parental-conjugal phallocentrism, hasn't been ashamed of her strength? Who, surprised and horrified by the fantastic tumult of her drives (for she was made to believe that a well-adjusted normal woman has a . . . divine composure), hasn't accused herself of being a monster? Who, feeling a funny desire stirring inside her (to sing, to write, to dare to speak, in short, to bring out something new), hasn't thought she was sick? Well, her shameful sickness is that she resists death, that she makes trouble.

And why don't you write? Write! Writing is for you, you are for you; your body is yours, take it. I know why you haven't written. (And why I didn't write before the age of twenty-seven.) Because writing is at once too high, too great for you, it's reserved for the great—that is, for "great men"; and it's "silly." Besides, you've written a little, but in secret. And it wasn't good, because it was in secret, and because you punished yourself for writing, because you didn't go all the way; or because you wrote, irresistibly, as when we would masturbate in secret, not to go further, but to attenuate the tension a bit, just enough to take the edge off. And then as soon as we come, we go and make ourselves feel guilty—so as to be forgiven; or to forget, to bury it until the next time.

Write, let no one hold you back, let nothing stop you: no man; not the imbecilic capitalist machinery, in which publishing houses are the crafty, obsequious relayers of imperatives handed down

by an economy that works against us and off our backs; and not *yourself*. Smug-faced readers, managing editors, and big bosses don't like the true texts of women—female-sexed texts. That kind scares them.

I write woman: woman must write woman. And man, man. So only an oblique consideration will be found here of man; it's up to him to say where his masculinity and femininity are at: this will concern us once men have opened their eyes and seen themselves clearly.¹

Now women return from afar, from always: from "without," from the heath where witches are kept alive; from below, from beyond "culture"; from their childhood which men have been trying desperately to make them forget, condemning it to "eternal rest." The little girls and their "ill-mannered" bodies immured, well-preserved, intact unto themselves, in the mirror. Frigidified. But are they ever seething underneath! What an effort it takes—there's no end to it—for the sex cops to bar their threatening return. Such a display of forces on both sides that the struggle has for centuries been immobilized in the trembling equilibrium of a deadlock.

Here they are, returning, arriving over and again, because the unconscious is impregnable. They have wandered around in circles, confined to the narrow room in which they've been given a deadly brainwashing. You can incarcerate them, slow them down, get away with the old Apartheid routine, but for a time only. As soon as they begin to speak, at the same time as they're taught their name, they can be taught that their

¹Men still have everything to say about their sexuality, and everything to write. For what they have said so far, for the most part, stems from the opposition activity/passivity, from the power relation between a fantasized obligatory virility meant to invade, to colonize, and the consequential phantasm of woman as a "dark continent" to penetrate and to "pacify." (We know what "pacify" means in terms of scotomizing the other and misrecognizing the self.) Conquering her, they've made haste to depart from her borders, to get out of sight, out of body. The way man has of getting out of himself and into her whom he takes not for the other but for his own, deprives him, he knows, of his own bodily territory. One can understand how man, confusing himself with his penis and rushing in for the attack, might feel resentment and fear of being "taken" by the woman, of being lost in her, absorbed, or alone. [Au.]

territory is black: because you are Africa, you are black. Your continent is dark. Dark is dangerous. You can't see anything in the dark, you're afraid. Don't move, you might fall. Most of all, don't go into the forest. And so we have internalized this horror of the dark.

Men have committed the greatest crime against women. Insidiously, violently, they have led them to hate women, to be their own enemies, to mobilize their immense strength against themselves, to be the executants of their virile needs. They have made for women an antinarcissism! A narcissism which loves itself only to be loved for what women haven't got! They have constructed the infamous logic of antilove.

We the precocious, we the repressed of culture, our lovely mouths gagged with pollen, our wind knocked out of us, we the labyrinths, the ladders, the trampled spaces, the bebies—we are black and we are beautiful.

We're stormy, and that which is ours breaks loose from us without our fearing any debilitation. Our glances, our smiles, are spent; laughs exude from all our mouths; our blood flows and we extend ourselves without ever reaching an end; we never hold back our thoughts, our signs, our writing; and we're not afraid of lacking.

What happiness for us who are omitted, brushed aside at the scene of inheritances; we inspire ourselves and we expire without running out of breath, we are everywhere!

From now on, who, if we say so, can say no to us? We've come back from always.

It is time to liberate the New Woman from the Old by coming to know her—by loving her for getting by, for getting beyond the Old without delay, by going out ahead of what the New Woman will be, as an arrow quits the bow with a movement that gathers and separates the vibrations musically, in order to be more than her self.

I say that we must, for, with a few rare exceptions, there has not yet been any writing that inscribes femininity; exceptions so rare, in fact, that, after plowing through literature across languages, cultures, and ages,² one can only be startled at this vain scouting mission. It is well known that the

²I am speaking here only of the place "reserved" for women by the Western world. [Au.]

number of women writers (while having increased very slightly from the nineteenth century on) has always been ridiculously small. This is a useless and deceptive fact unless from their species of female writers we do not first deduct the immense majority whose workmanship is in no way different from male writing, and which either obscures women or reproduces the classic representations of women (as sensitive—intuitive—dreamy, etc.)³

Let me insert here a parenthetical remark. I mean it when I speak of male writing. I maintain unequivocally that there is such a thing as *marked* writing; that, until now, far more extensively and repressively than is ever suspected or admitted, writing has been run by a libidinal and cultural—hence political, typically masculine—economy; that this is a locus where the repression of women has been perpetuated, over and over, more or less consciously, and in a manner that's frightening since it's often hidden or adorned with the mystifying charms of fiction; that this locus has grossly exaggerated all the signs of sexual opposition (and not sexual difference), where woman has never *her* turn to speak—this being all the more serious and unpardonable in that writing is precisely *the very possibility of change*, the space that can serve as a springboard for subversive thought, the precursory movement of a transformation of social and cultural structures.

Nearly the entire history of writing is confounded with the history of reason, of which it is at once the effect, the support, and one of the privileged alibis. It has been one with the phallogocentric tradition. It is indeed that same self-admiring, self-stimulating, self-congratulatory phallogocentrism.

With some exceptions, for there have been failures—and if it weren't for them, I wouldn't

³Which works, then, might be called feminine? I'll just point out some examples: one would have to give them full readings to bring out what is pervasively feminine in their significance. Which I shall do elsewhere. In France (have you noted our infinite poverty in this field?—the Anglo-Saxon countries have shown resources of distinctly greater consequence), leafing through what's come out of the twentieth century—and it's not much—the only inscriptions of femininity that I have seen were by Colette, Marguerite Duras, . . . and Jean Genêt. [Au.]

be writing (I-woman, escapee)—in that enormous machine that has been operating and turning out its “truth” for centuries. There have been poets who would go to any lengths to slip something by at odds with tradition—men capable of loving love and hence capable of loving others and of wanting them, of imagining the woman who would hold out against oppression and constitute herself as a superb, equal, hence “impossible” subject, untenable in a real social framework. Such a woman the poet could desire only by breaking the codes that negate her. Her appearance would necessarily bring on, if not revolution—for the bastion was supposed to be immutable—at least harrowing explosions. At times it is in the fissure caused by an earthquake, through that radical mutation of things brought on by a material upheaval when every structure is for a moment thrown off balance and an ephemeral wildness sweeps order away, that the poet slips something by, for a brief span, of woman. Thus did Kleist⁴ expend himself in his yearning for the existence of sister-lovers, maternal daughters, mother-sisters, who never hung their heads in shame. Once the palace of magistrates is restored, it’s time to pay: immediate bloody death to the uncontrollable elements.

But only the poets—not the novelists, allies of representationism. Because poetry involves gaining strength through the unconscious and because the unconscious, that other limitless country, is the place where the repressed manage to survive: women, or as Hoffmann would say, fairies.⁵

She must write her self, because this is the invention of a *new insurgent* writing which, when the moment of her liberation has come, will allow her to carry out the indispensable ruptures and transformations in her history, first at two levels that cannot be separated.

⁴B. Heinrich W. von Kleist (1777–1811), a German Romantic writer, whom Cixous admires. Among his works is a tragic play *Penthesilea*, referring to the mythic Amazon queen. [Ed.]

⁵E. T. A. Hoffman (1776–1822) was a German Romantic writer and composer known for his tales of the supernatural and fantastic, many of which feature magical female characters who both threaten the hero and seem to offer him prodigious creative powers. [Ed.]

a. Individually. By writing her self, woman will return to the body which has been more than confiscated from her, which has been turned into the uncanny stranger on display—the ailing or dead figure, which so often turns out to be the nasty companion, the cause and location of inhibitions. Censor the body and you censor breath and speech at the same time.

Write your self. Your body must be heard. Only then will the immense resources of the unconscious spring forth. Our naphtha will spread, throughout the world, without dollars—black or gold—nonassessed values that will change the rules of the old game.

To write. An act which will not only “realize” the decensored relation of woman to her sexuality, to her womanly being, giving her access to her native strength; it will give her back her goods, her pleasures, her organs, her immense bodily territories which have been kept under seal; it will tear her away from the superegoized structure in which she has always occupied the place reserved for the guilty (guilty of everything, guilty at every turn: for having desires, for not having any; for being frigid, for being “too hot”; for not being both at once; for being too motherly and not enough; for having children and for not having any; for nursing and for not nursing . . .)—tear her away by means of this research, this job of analysis and illumination, this emancipation of the marvelous text of her self that she must urgently learn to speak. A woman without a body, dumb, blind, can’t possibly be a good fighter. She is reduced to being the servant of the militant male, his shadow. We must kill the false woman who is preventing the live one from breathing. Inscribe the breath of the whole woman.

b. An act that will also be marked by woman’s *seizing* the occasion to *speak*, hence her shattering entry into history, which has always been based *on her suppression*. To write and thus to forge for herself the antilogos weapon. To become *at will* the taker and initiator, for her own right, in every symbolic system, in every political process.

It is time for women to start scoring their feats in written and oral language.

Every woman has known the torment of get-

ting up to speak. Her heart racing, at times entirely lost for words, ground and language slipping away—that's how daring a feat, how great a transgression it is for a woman to speak—even just open her mouth—in public. A double distress, for even if she transgresses, her words fall almost always upon the deaf male ear, which hears in language only that which speaks in the masculine.

It is by writing, from and toward women, and by taking up the challenge of speech which has been governed by the phallus, that women will confirm women in a place other than that which is reserved in and by the symbolic, that is, in a place other than silence. Women should break out of the snare of silence. They shouldn't be conned into accepting a domain which is the margin or the harem.

Listen to a woman speak at a public gathering (if she hasn't painfully lost her wind). She doesn't "speak," she throws her trembling body forward; she lets go of herself, she flies; all of her passes into her voice, and it's with her body that she vitally supports the "logic" of her speech. Her flesh speaks true. She lays herself bare. In fact, she physically materializes what she's thinking; she signifies it with her body. In a certain way she *inscribes* what she's saying, because she doesn't deny her drives the intractable and impassioned part they have in speaking. Her speech, even when "theoretical" or political, is never simple or linear or "objectified," generalized: she draws her story into history.

There is not that scission, that division made by the common man between the logic of oral speech and the logic of the text, bound as he is by his antiquated relation—servile, calculating—to mastery. From which proceeds the niggardly lip service which engages only the tiniest part of the body, plus the mask.

In women's speech, as in their writing, that element which never stops resonating, which, once we've been permeated by it, profoundly and imperceptibly touched by it, retains the power of moving us—that element is the song: first music from the first voice of love which is alive in every woman. Why this privileged relationship with the voice? Because no woman stockpiles as many defenses for countering the drives as does a

man. You don't build walls around yourself, you don't forego pleasure as "wisely" as he. Even if phallic mystification has generally contaminated good relationships, a woman is never far from "mother" (I mean outside her role functions: the "mother" as nonname and as source of goods). There is always within her at least a little of that good mother's milk. She writes in white ink.

Woman for women.—There always remains in woman that force which produces/is produced by the other—in particular, the other woman. *In* her, matrix, cradler; herself giver as her mother and child; she is her own sister-daughter. You might object, "What about she who is the hysterical offspring of a bad mother?" Everything will be changed once woman gives woman to the other woman. There is hidden and always ready in woman the source; the locus for the other. The mother, too, is a metaphor. It is necessary and sufficient that the best of herself be given to woman by another woman for her to be able to love herself and return in love the body that was "born" to her. Touch me, caress me, you the living no-name, give me my self as myself. The relation to the "mother," in terms of intense pleasure and violence, is curtailed no more than the relation to childhood (the child that she was, that she is, that she makes, re-makes, undoes, there at the point where, the same, she others herself). Text: my body—shot through with streams of song; I don't mean the overbearing, clutchy "mother" but, rather, what touches you, the equivocal that affects you, fills your breast with an urge to come to language and launches your force; the rhythm that laughs you; the intimate recipient who makes all metaphors possible and desirable; body (body? bodies?), no more describable than god, the soul, or the Other; that part of you that leaves a space between yourself and urges you to inscribe in language your woman's style. In women there is always more or less of the mother who makes everything all right, who nourishes, and who stands up against separation; a force that will not be cut off but will knock the wind out of the codes. We will rethink womankind beginning with every form and every period of her body. The Americans remind us, "We are all Lesbians"; that is, don't denigrate woman, don't make of her what men have made of you.

Because the "economy" of her drives is prodigious

gious, she cannot fail, in seizing the occasion to speak, to transform directly and indirectly *all* systems of exchange based on masculine thrift. Her libido will produce far more radical effects of political and social change than some might like to think.

Because she arrives, vibrant, over and again, we are at the beginning of a new history, or rather of a process of becoming in which several histories intersect with one another. As subject for history, woman always occurs simultaneously in several places. Woman un-thinks⁶ the unifying, regulating history that homogenizes and channels forces, herding contradictions into a single battlefield. In woman, personal history blends together with the history of all women, as well as national and world history. As a militant, she is an integral part of all liberations. She must be farsighted, not limited to a blow-by-blow interaction. She foresees that her liberation will do more than modify power relations or toss the ball over to the other camp; she will bring about a mutation in human relations, in thought, in all praxis: hers is not simply a class struggle, which she carries forward into a much vaster movement. Not that in order to be a woman-in-struggle(s) you have to leave the class struggle or repudiate it; but you have to split it open, spread it out, push it forward, fill it with the fundamental struggle so as to prevent the class struggle, or any other struggle for the liberation of a class or people, from operating as a form of repression, pretext for postponing the inevitable, the staggering alteration in power relations and in the production of individualities. This alteration is already upon us—in the United States, for example, where millions of night crawlers are in the process of undermining the family and disintegrating the whole of American sociality.

The new history is coming; it's not a dream, though it does extend beyond men's imagination, and for good reason. It's going to deprive them of their conceptual orthopedics, beginning with the destruction of their enticement machine.

It is impossible to *define* a feminine practice of writing, and this is an impossibility that will

⁶“*Dé-pense*,” a neologism formed on the verb *penser*, hence “unthinks,” but also “spends” (from *dépenser*). [Tr.]

remain, for this practice can never be theorized, enclosed, coded—which doesn't mean that it doesn't exist. But it will always surpass the discourse that regulates the phallogocentric system; it does and will take place in areas other than those subordinated to philosophico-theoretical domination. It will be conceived of only by subjects who are breakers of automatisms, by peripheral figures that no authority can ever subjugate.

Hence the necessity to affirm the flourishes of this writing, to give form to its movement, its near and distant byways. Bear in mind to begin with (1) that sexual opposition, which has always worked for man's profit to the point of reducing writing, too, to his laws, is only a historicocultural limit. There is, there will be more and more rapidly pervasive now, a fiction that produces irreducible effects of femininity. (2) That it is through ignorance that most readers, critics, and writers of both sexes hesitate to admit or deny outright the possibility or the pertinence of a distinction between feminine and masculine writing. It will usually be said, thus disposing of sexual difference: either that all writing, to the extent that it materializes, is feminine; or, inversely—but it comes to the same thing—that the act of writing is equivalent to masculine masturbation (and so the woman who writes cuts herself out a paper penis); or that writing is bisexual, hence neuter, which again does away with differentiation. To admit that writing is precisely working (in) the in-between, inspecting the process of the same and of the other without which nothing can live, undoing the work of death—to admit this is first to want the two, as well as both, the ensemble of the one and the other, not fixed in sequences of struggle and expulsion or some other form of death but infinitely dynamized by an incessant process of exchange from one subject to another. A process of different subjects knowing one another and beginning one another anew only from the living boundaries of the other: a multiple and inexhaustible course with millions of encounters and transformations of the same into the other and into the in-between, from which woman takes her forms (and man, in his turn; but that's his other history).

In saying “bisexual, hence neuter,” I am referring to the classic conception of bisexuality,

which, squashed under the emblem of castration fear and along with the fantasy of a “total” being (though composed of two halves), would do away with the difference experienced as an operation incurring loss, as the mark of dreaded secularity.

To this self-effacing, merger-type bisexuality, which would conjure away castration (the writer who puts up his sign: “bisexual written here, come and see,” when the odds are good that it’s neither one nor the other), I oppose the *other bisexuality* on which every subject not enclosed in the false theater of phallogocentric representationalism has founded his/her erotic universe. Bisexuality: that is, each one’s location in self (*répérage en soi*) of the presence—variously manifest and insistent according to each person, male or female—of both sexes, nonexclusion either of the difference or of one sex, and, from this “self-permission,” multiplication of the effects of the inscription of desire, over all parts of my body and the other body.

Now it happens that at present, for historico-cultural reasons, it is women who are opening up to and benefiting from this vatic bisexuality which doesn’t annul differences but stirs them up, pursues them, increases their number. In a certain way, “woman is bisexual”; man—it’s a secret to no one—being poised to keep glorious phallic monosexuality in view. By virtue of affirming the primacy of the phallus and of bringing it into play, phallogocentric ideology has claimed more than one victim. As a woman, I’ve been clouded over by the great shadow of the scepter and been told: idolize it, that which you cannot brandish. But at the same time, man has been handed that grotesque and scarcely enviable destiny (just imagine) of being reduced to a single idol with clay balls. And consumed, as Freud and his followers note, by a fear of being a woman! For, if psychoanalysis was constituted from woman, to repress femininity (and not so successful a repression at that—men have made it clear), its account of masculine sexuality is now hardly refutable; as with all the “human” sciences, it reproduces the masculine view, of which it is one of the effects.

Here we encounter the inevitable man-with-rock, standing erect in his old Freudian realm, in

the way that, to take the figure back to the point where linguistics is conceptualizing it “anew,” Lucan preserves it in the sanctuary of the phallos (φ) “sheltered” from *castration’s lack!* Their “symbolic” exists, it holds power—we, the sowers of disorder, know it only too well. But we are in no way obliged to deposit our lives in their banks of lack, to consider the constitution of the subject in terms of a drama manglingly restaged, to reinstate again and again the religion of the father. Because we don’t want that. We don’t fawn around the supreme hole. We have no womanly reason to pledge allegiance to the negative. The feminine (as the poets suspected) affirms: “. . . And yes,” says Molly, carrying *Ulysses* off beyond any book and toward the new writing; “I said yes, I will Yes.”

The Dark Continent is neither dark nor unexplorable.—It is still unexplored only because we’ve been made to believe that it was too dark to be explorable. And because they want to make us believe that what interests us is the white continent, with its monuments to Lack. And we believed. They riveted us between two horrifying myths: between the Medusa and the abyss. That would be enough to set half the world laughing, except that it’s still going on. For the phallogocentric sublation⁷ is with us, and it’s militant, regenerating the old patterns, anchored in the dogma of castration. They haven’t changed a thing: they’ve theorized their desire for reality! Let the priests tremble, we’re going to show them our sexts!

Too bad for them if they fall apart upon discovering that women aren’t men, or that the mother doesn’t have one. But isn’t this fear convenient for them? Wouldn’t the worst be, isn’t the worst, in truth, that women aren’t castrated, that they have only to stop listening to the Sirens (for the Sirens were men) for history to change its meaning? You only have to look at the Medusa straight on to see her. And she’s not deadly. She’s beautiful and she’s laughing.

Men say that there are two unrepresentable things: death and the feminine sex. That’s because they need femininity to be associated with

⁷Standard English term for the Hegelian *Aufhebung*, the French *la relève*. [Au.]

death; it's the jitters that gives them a hard-on! for themselves! They need to be afraid of us. Look at the trembling Perseuses moving backward toward us, clad in apotropes. What lovely backs! Not another minute to lose. Let's get out of here.

Let's hurry: the continent is not impenetrably dark. I've been there often. I was overjoyed one day to run into Jean Genêt. It was in *Pompes funèbres*.⁸ He had come there led by his Jean. There are some men (all too few) who aren't afraid of femininity.

Almost everything is yet to be written by women about femininity: about their sexuality, that is, its infinite and mobile complexity, about their eroticization, sudden turn-ons of a certain minuscule-immense area of their bodies; not about destiny, but about the adventure of such and such a drive, about trips, crossings, trudges, abrupt and gradual awakenings, discoveries of a zone at one time timorous and soon to be forthright. A woman's body, with its thousand and one thresholds of ardor—once, by smashing yokes and censors, she lets it articulate the profusion of meanings that run through it in every direction—will make the old single-grooved mother tongue reverberate with more than one language.

We've been turned away from our bodies, shamefully taught to ignore them, to strike them with that stupid sexual modesty; we've been made victims of the old fool's game: each one will love the other sex. I'll give you your body and you'll give me mine. But who are the men who give women the body that women blindly yield to them? Why so few texts? Because so few women have as yet won back their body. Women must write through their bodies, they must invent the impregnable language that will wreck partitions, classes, and rhetorics, regulations and codes, they must submerge, cut through, get beyond the ultimate reserve-discourse, including the one that laughs at the very idea of pronouncing the word "silence," the one that, aiming for the impossible, stops short before the word "impossible" and writes it as "the end."

Such is the strength of women that, sweeping

away syntax, breaking that famous thread (just a tiny little thread, they say) which acts for men as a surrogate umbilical cord, assuring them—otherwise they couldn't come—that the old lady is always right behind them, watching them make phallus, women will go right up to the impossible.

When the "repressed" of their culture and their society returns, it's an explosive, *utterly* destructive, staggering return, with a force never yet unleashed and equal to the most forbidding of suppressions. For when the Phallic period comes to an end, women will have been either annihilated or borne up to the highest and most violent incandescence. Muffled throughout their history, they have lived in dreams, in bodies (though muted), in silences, in aphonic revolts.

And with such force in their fragility; a fragility, a vulnerability, equal to their incomparable intensity. Fortunately, they haven't sublimated; they've saved their skin, their energy. They haven't worked at liquidating the impasse of lives without futures. They have furiously inhabited these sumptuous bodies: admirable hysterics who made Freud succumb to many voluptuous moments impossible to confess, bombarding his Mosaic statue with their carnal and passionate body words, haunting him with their inaudible and thundering denunciations, dazzling, more than naked underneath the seven veils of modesty. Those who, with a single word of the body, have inscribed the vertiginous immensity of a history which is sprung like an arrow from the whole history of men and from biblico-capitalist society, are the women, the supplicants of yesterday, who come as forebears of the new women, after whom no intersubjective relation will ever be the same. You, Dora, you the indomitable, the poetic body, you are the true "mistress" of the Signifier.⁹ Before long your efficacy will be seen at work when your speech is no longer suppressed, its point turned in against your breast, but written out over against the other.

⁹Dora is the name given to the young woman who figures in Freud's classic 1905 account of female hysteria. Dora claimed to have been molested by a family friend, Mr. K. Freud traced this fantasy to Dora's erotic attachment to

⁸Jean Genêt, *Pompes funèbres* (Paris, 1948), p. 185. [Au.]

In body.—More so than men who are coaxed toward social success, toward sublimation, women are body. More body, hence more writing. For a long time it has been in body that women have responded to persecution, to the familial-conjugal enterprise of domestication, to the repeated attempts of castrating them. Those who have turned their tongues 10,000 times seven times before not speaking are either dead from it or more familiar with their tongues and their mouths than anyone else. Now, I-woman am going to blow up the Law: an explosion henceforth possible and ineluctable; let it be done, right now, *in language*.

Let us not be trapped by an analysis still encumbered with the old automatisms. It's not to be feared that language conceals an invincible adversary, because it's the language of men and their grammar. We mustn't leave them a single place that's any more theirs alone than we are.

If woman has always functioned "within" the discourse of man, a signifier that has always referred back to the opposite signifier which annihilates its specific energy and diminishes or stifles its very different sounds, it is time for her to dislocate this "within," to explode it, turn it around, and seize it; to make it hers, containing it, taking it in her own mouth, biting that tongue with her very own teeth to invent for herself a language to get inside of. And you'll see with what ease she will spring forth from that "within"—the "within" where once she so drowsily crouched—to overflow at the lips she will cover the foam.

Nor is the point to appropriate their instruments, their concepts, their places, or to begrudge them their position of mastery. Just because there's a risk of identification doesn't mean that we'll succumb. Let's leave it to the worriers, to masculine anxiety and its obsession with how to dominate the way things work—knowing "how it works" in order to "make it work." For us the point is not to take possession in order to inter-

her father, whom she knew was having an affair with Mrs. K. Recent revisionist studies of this case have suggested that Dora was in fact molested by Mr. K., and that Freud's treatment of her confession as a fantasy constituted enforcement of the patriarchal or phallogocentric order. [Ed.]

nalize or manipulate, but rather to dash through and to "fly."¹⁰

Flying is woman's gesture—flying in language and making it fly. We have all learned the art of flying and its numerous techniques; for centuries we've been able to possess anything only by flying; we've lived in flight, stealing away, finding, when desired, narrow passages, hidden crossovers. It's no accident that *voler* has a double meaning, that it plays on each of them and thus throws off the agents of sense. It's no accident: women take after birds and robbers just as robbers take after women and birds. They (*illes*)¹¹ go by, fly the coop, take pleasure in jumbling the order of space, in disorienting it, in changing around the furniture, dislocating things and values, breaking them all up, emptying structures, and turning propriety upside down.

What woman hasn't flown/stolen? Who hasn't felt, dreamt, performed the gesture that jams sociality? Who hasn't crumbled, held up to ridicule, the bar of separation? Who hasn't inscribed with her body the differential, punctured the system of couples and opposition? Who, by some act of transgression, hasn't overthrown successiveness, connection, the wall of circumfession?

A feminine text cannot fail to be more than subversive. It is volcanic; as it is written it brings about an upheaval of the old property crust, carrier of masculine investments; there's no other way. There's no room for her if she's not a he. If she's a her-she, it's in order to smash everything, to shatter the framework of institutions, to blow up the law, to break up the "truth" with laughter.

For once she blazes *her* trail in the symbolic, she cannot fail to make of it the chaosmos of the "personal"—in her pronouns, her nouns, and her clique of referents. And for good reason. There will have been the long history of gynocide. This is known by the colonized peoples of yesterday, the workers, the nations, the species off whose backs the history of men has made its gold; those

¹⁰Also, "to steal." Both meanings of the verb *voler* are played on, as the text itself explains in the following paragraph. [Tr.]

¹¹*Illes* is a fusion of the masculine pronoun *ils*, which refers back to birds and robbers, with the feminine pronoun *elles*, which refers to women. [Tr.]

who have known the ignominy of persecution derive from it an obstinate future desire for grandeur; those who are locked up know better than their jailers the taste of free air. Thanks to their history, women today know (how to do and want) what men will be able to conceive of only much later. I say woman overturns the “personal,” for if, by means of laws, lies, blackmail, and marriage, her right to herself has been extorted at the same time as her name, she has been able, through the very movement of mortal alienation, to see more closely the inanity of “propriety,” the reductive stinginess of the masculine-conjugal subjective economy, which she doubly resists. On the one hand she has constituted herself necessarily as that “person” capable of losing a part of herself without losing her integrity. But secretly, silently, deep down inside, she grows and multiplies, for, on the other hand, she knows far more about living and about the relation between the economy of the drives and the management of the ego than any man. Unlike man, who holds so dearly to his title and his titles, his pouches of value, his cap, crown, and everything connected with his head, woman couldn’t care less about the fear of decapitation (or castration), adventuring, without the masculine temerity, into anonymity, which she can merge with without annihilating herself: because she’s a giver.

I shall have a great deal to say about the whole deceptive problematic of the gift. Woman is obviously not that woman Nietzsche dreamed of who gives only in order to.¹² Who could ever think of the gift as a gift-that-takes? Who else but man, precisely the one who would like to take everything?

If there is a “propriety of woman,” it is paradoxically her capacity to deappropriate unselfishly: body without end, without appendage, without principal “parts.” If she is a whole, it’s a whole composed of parts that are wholes, not simple partial objects but a moving, limitlessly changing

¹²Reread Derrida’s text, “Le Style de la femme,” in *Nietzsche aujourd’hui* (Paris: Union Générale d’Editions, Coll. 10/18), where the philosopher can be seen operating an *Aufhebung* of all philosophy in its systematic reducing of woman to the place of seduction; she appears as the one who is taken for; the bait in person, all veils unfurled, the one who doesn’t give but who gives only in order to (take). [Au.]

ensemble, a cosmos tirelessly traversed by Eros, an immense astral space not organized around any one sun that’s any more of a star than the others.

This doesn’t mean that she’s an undifferentiated magma, but that she doesn’t lord it over her body or her desire. Though masculine sexuality gravitates around the penis, engendering that centralized body (in political anatomy) under the dictatorship of its parts, woman does not bring about the same regionalization which serves the couple head/genitals and which is inscribed only within boundaries. Her libido is cosmic, just as her unconscious is worldwide. Her writing can only keep going, without ever inscribing or discerning contours, daring to make these vertiginous crossings of the other(s) ephemeral and passionate sojourns in him, her, them, whom she inhabits long enough to look at from the point closest to their unconscious from the moment they awaken, to love them at the point closest to their drives; and then further, impregnated through and through with these brief, identificatory embraces, she goes and passes into infinity. She alone dares and wishes to know from within, where she, the outcast, has never ceased to hear the resonance of fore-language. She lets the other language speak—the language of 1,000 tongues which knows neither enclosure nor death. To life she refuses nothing. Her language does not contain, it carries; it does not hold back, it makes possible. When *id* is ambiguously uttered—the wonder of being several—she doesn’t defend herself against these unknown women whom she’s surprised at becoming, but derives pleasure from this gift of alterability. I am spacious, singing flesh, on which is grafted no one knows which I, more or less human, but alive because of transformation.

Write! and your self-seeking text will know itself better than flesh and blood, rising, insurrectionary dough kneading itself, with sonorous, perfumed ingredients, a lively combination of flying colors, leaves, and rivers plunging into the sea we feed. “Ah, there’s her sea,” he will say as he holds out to me a basin full of water from the little phallic mother from whom he’s inseparable. But look, our seas are what we make of them, full of fish or not, opaque or transparent, red or

black, high or smooth, narrow or bankless; and we are ourselves sea, sand, coral, seaweed, beaches, tides, swimmers, children, waves. . . . More or less wavyly sea, earth, sky—what matter would rebuff us? We know how to speak them all.

Heterogeneous, yes. For her joyous benefit she is erogenous; she is the erotogeneity of the heterogeneous: airborne swimmer, in flight, she does not cling to herself; she is dispersible, prodigious, stunning, desirous and capable of others, of the other woman that she will be, of the other woman she isn't, of him, of you.

Woman be unafraid of any other place, of any same, or any other. My eyes, my tongue, my ears, my nose, my skin, my mouth, my body-for-(the)-other—not that I long for it in order to fill up a hole, to provide against some defect of mine, or because, as fate would have it, I'm spurred on by feminine "jealousy"; not because I've been dragged into the whole chain of substitutions that brings that which is substituted back to its ultimate object. That sort of thing you would expect to come straight out of "Tom Thumb," out of the *Penisneid* whispered to us by old grandmother ogresses, servants to their fathersons. If they believe, in order to muster up some self-importance, if they really need to believe that we're dying of desire, that we are this hole fringed with desire for their penis—that's their immemorial business. Undeniably (we verify it at our own expense—but also to our amusement), it's their business to let us know they're getting a hard-on, so that we'll assure them (we the maternal mistresses of their little pocket signifier) that they still can, that it's still there—that men structure themselves only by being fitted with a feather. In the child it's not the penis that the woman desires, it's not that famous bit of skin around which every man gravitates. Pregnancy cannot be traced back, except within the historical limits of the ancients, to some form of fate, to those mechanical substitutions brought about by the unconscious of some eternal "jealous woman"; not to penis envies; and not to narcissism or to some sort of homosexuality linked to the ever-present mother! Begetting a child doesn't mean that the woman or the man must fall in-

eluctably into patterns or must recharge the circuit of reproduction. If there's a risk there's not an inevitable trap: may women be spared the pressure, under the guise of consciousness-raising, of a supplement of interdictions. Either you want a kid or you don't—*that's your business*. Let nobody threaten you; in satisfying your desire, let not the fear of becoming the accomplice to a sociality succeed the old-time fear of being "taken." And man, are you still going to bank on everyone's blindness and passivity, afraid lest the child make a father and, consequently, that in having a kid the woman land herself more than one bad deal by engendering all at once child—mother—father—family? No; it's up to you to break the old circuits. It will be up to man and woman to render obsolete the former relationship and all its consequences, to consider the launching of a brand-new subject, alive, with defamialization. Let us demater-paternalize rather than deny woman, in an effort to avoid the co-optation of procreation, a thrilling era of the body. Let us defetishize. Let's get away from the dialectic which has it that the only good father is a dead one, or that the child is the death of his parents. The child is the other, but the other without violence, bypassing loss, struggle. We're fed up with the reuniting of bonds forever to be severed, with the litany of castration that's handed down and genealogized. We won't advance backward anymore; we're not going to repress something so simple as the desire for life. Oral drive, anal drive, vocal drive—all these drives are our strengths, and among them is the gestation drive—just like the desire to write: a desire to live self from within, a desire for the swollen belly, for language, for blood. We are not going to refuse, if it should happen to strike our fancy, the unsurpassed pleasures of pregnancy which have actually been always exaggerated or conjured away—or cursed—in the classic texts. For if there's one thing that's been repressed here's just the place to find it: in the taboo of the pregnant woman. This says a lot about the power she seems invested with at the time, because it has always been suspected, that, when pregnant, the woman not only doubles her market value, but—what's more important—takes on intrinsic value as a woman in her own eyes and, undeniably, acquires body and sex.

There are thousands of ways of living one's pregnancy; to have or not to have with that still invisible other a relationship of another intensity. And if you don't have that particular yearning, it doesn't mean that you're in any way lacking. Each body distributes in its own special way, without model or norm, the nonfinite and changing totality of its desires. Decide for yourself on your position in the arena of contradictions, where pleasure and reality embrace. Bring the other to life. Women know how to live detachment; giving birth is neither losing nor increasing. It's adding to life an other. Am I dreaming? Am I mis-recognizing? You, the defenders of "theory," the sacrosanct yes-men of Concept, enthroners of the phallus (but not of the penis):

Once more you'll say that all this smacks of "idealism," or what's worse, you'll sputter that I'm a "mystic."

And what about the libido? Haven't I read the "Signification of the Phallus"? And what about separation, what about that bit of self for which, to be born, you undergo an ablation—an ablation, so they say, to be forever commemorated by your desire?

Besides, isn't it evident that the penis gets around in my texts, that I give it a place and appeal? Of course I do. I want all. I want all of me with all of him. Why should I deprive myself of a part of us? I want all of us. Woman of course has a desire for a "loving desire" and not a jealous one. But not because she is gelded; not because she's deprived and needs to be filled out, like some wounded person who wants to console herself or seek vengeance: I don't want a penis to decorate my body with. But I do desire the other for the other, whole and entire, male or female; because living means wanting everything that is, everything that lives, and wanting it alive. Castration? Let others toy with it. What's a desire originating from a lack? A pretty meager desire.

The woman who still allows herself to be threatened by the big dick, who's still impressed by the commotion of the phallic stance, who still leads a loyal master to the beat of the drum: that's the woman of yesterday. They still exist, easy and numerous victims of the oldest of farces: either they're cast in the original silent version in which, as titanesses lying under the

mountains they make with their quivering, they never see erected that theoretic monument to the golden phallus looming, in the old manner, over their bodies. Or, coming today out of their *infans* period and into the second, "enlightened" version of their virtuous debasement, they see themselves suddenly assaulted by the builders of the analytic empire and, as soon as they've begun to formulate the new desire, naked, nameless, so happy at making an appearance, they're taken in their bath by the new old men, and then, whoops! Luring them with flashy signifiers, the demon of interpretation—oblique, decked out in modernity—sells them the same old handcuffs, baubles, and chains. Which castration do you prefer? Whose degrading do you like better, the father's or the mother's? Oh, what pwetty eyes, you pwetty little girl. Here, buy my glasses and you'll see the Truth-Me-Myself tell you everything you should know. Put them on your nose and take a fetishist's look (you are me, the other analyst—that's what I'm telling you) at your body and the body of the other. You see? No? Wait, you'll have everything explained to you, and you'll know at last which sort of neurosis you're related to. Hold still, we're going to do your portrait, so that you can begin looking like it right away.

Yes, the naives to the first and second degree are still legion. If the New Women, arriving now, dare to create outside the theoretical, they're called in by the cops of the signifier, fingerprinted, remonstrated, and brought into the line of order that they are supposed to know; assigned by force of trickery to a precise place in the chain that's always formed for the benefit of a privileged signifier. We are pieced back to the string which leads back, if not to the Name-of-the-Father, then, for a new twist, to the place of the phallic-mother.

Beware, my friend, of the signifier that would take you back to the authority of a signified! Beware of diagnoses that would reduce your generative powers. "Common" nouns are also proper nouns that disparage your singularity by classifying it into species. Break out of the circles; don't remain within the psychoanalytic closure. Take a look around, then cut through!

And if we are legion, it's because the war of liberation has only made as yet a tiny break-

through. But women are thronging to it. I've seen them, those who will be neither dupe nor domestic, those who will not fear the risk of being a woman; will not fear any risk, any desire, any space still unexplored in themselves, among themselves and others or anywhere else. They do not fetishize, they do not deny, they do not hate. They observe, they approach, they try to see the other woman, the child, the lover—not to strengthen their own narcissism or verify the solidity or weakness of the master, but to make love better, to invent

Other love.—In the beginning are our differences. The new love dares for the other, wants the other, makes dizzying, precipitous flights between knowledge and invention. The woman arriving over and over again does not stand still; she's everywhere, she exchanges, she is the desire-that-gives. (Not enclosed in the paradox of the gift that takes nor under the illusion of unitary fusion. We're past that.) She comes in, comes-in-between herself me and you, between the other me where one is always infinitely more than one and more than me, without the fear of ever reaching a limit; she thrills in our becoming. And we'll keep on becoming! She cuts through defensive loves, motherages, and devourations: beyond selfish narcissism, in the moving, open, transitional space, she runs her risks. Beyond the struggle-to-the-death that's been removed to the bed, beyond the love-battle that claims to represent exchange, she scorns at an Eros dynamic that would be fed by hatred. Hatred: a heritage, again, a remainder, a duping subservience to the phallus. To love, to watch-think-see the other in

the other, to despecularize, to unhoard. Does this seem difficult? It's not impossible, and this is what nourishes life—a love that has no commerce with the apprehensive desire that provides against the lack and stultifies the strange; a love that rejoices in the exchange that multiplies. Wherever history still unfolds as the history of death, she does not tread. Opposition, hierarchizing exchange, the struggle for mastery which can end only in at least one death (one master—one slave, or two nonmasters \neq two dead)—all that comes from a period in time governed by phallogocentric values. The fact that this period extends into the present doesn't prevent woman from starting the history of life somewhere else. Elsewhere, she gives. She doesn't "know" what she's giving, she doesn't measure it; she gives, though, neither a counterfeit impression nor something she hasn't got. She gives more, with no assurance that she'll get back even some unexpected profit from what she puts out. She gives that there may be life, thought, transformation. This is an "economy" that can no longer be put in economic terms. Wherever she loves, all the old concepts of management are left behind. At the end of a more or less conscious computation, she finds not her sum but her differences. I am for you what you want me to be at the moment you look at me in a way you've never seen me before: at every instant. When I write, it's everything that we don't know we can be that is written out of me, without exclusions, without stipulation, and everything we will be calls us to the unflagging, intoxicating, unappeasable search for love. In one another we will never be lacking.

Hélène Cixous and Catherine Clément

A Woman Mistress

If the position of mastery culturally comes back to men, what will become of (our) femininity when we find ourselves in this position?

When we use a master-discourse?

Mastery-knowledge, mastery-power: ideas demanding an explanation from us.

Other discourses?

CATHERINE: Let's start out with the difference between our discourses. Yours is a writing halfway between theory and fiction. Whereas my discourse is, or tries to be, more demonstrative and discursive, following the most traditional method of rhetorical demonstration. That doesn't bother me; I accept that method: it is the method of teaching and of transmitting ideas. We see there can be two women in the same space who are *differently* engaged, speaking of almost exactly the *same things*, investing in two or three different kinds of discourse and going from one to the other and then on to the spoken exchange.

HÉLÈNE: I distrust the identification of a subject with a single discourse. First, there is the discourse that suits the occasion. I use rhetorical discourse, the discourse of mastery, orally, for example, with my students, and obviously I do it on purpose; it is a refusal on my part to leave organized discourse entirely in men's power. I never fell for that sort of bait.

CATHERINE: There is no reason at all not to steal that discourse from men. . . . Besides, that doesn't mean anything; we don't steal anything at all—we are within the same cultural system. Granted it is a phallogocentric cultural system but trying to make another in advance is unfounded; perhaps we can think that, hypothetically, one day there might be another system but to will that it suddenly be there—at any minute—is utopian.

HÉLÈNE: There will not be *one* feminine dis-

course, there will be thousands of different kinds of feminine words, and then there will be the code for general communication, philosophical discourse, rhetoric like now but with a great number of subversive discourses in addition that are somewhere else entirely. That is what is going to happen. Until now women were not speaking out loud, were not writing, not creating their tongues—plural, but they will create them, which doesn't mean that the others (either men or tongues) are going to die off.

CATHERINE: In any case, there is no reason for women not to assume that transmission of knowledge. The term causing a problem is the word *mastery* in the phrase “discourse of mastery.” If inspired by Lacan, it refers to a relationship between mastery and university, which is such that the master's discourse—from the point of view of its political and economic power—is transferred onto and shapes any discourse dealing with knowledge to be transmitted.

HÉLÈNE: It think one has a hard time escaping the discourse of mastery when using, for example, as a teacher, discourse I'll call “objective”; by that I mean a discourse that does not involve an easily located subject of enunciation, that speaks at that particular moment not just in the name of but as universal knowledge itself.

The law does not exist.

In the little chapter “The Dawn of Phallogocentrism,” I took, on the one hand, a text by Freud on the origin of patriarchy, and I compared it with a Kafka text called *Before the Law*. It is a story that is both extraordinarily clear and as unclear as the question that is its crux: “What is the law?” There is a peasant who was an honest man: he was the only one who could have gone to the other side and seen the law—seen, therefore, that it doesn't exist. Because the door could be opened only for him. He didn't go in there. How

Translated by Betsy Wing.

could he have gone “there” since the law that doesn’t exist was himself? All that was needed was a door and a doorkeeper: he was the one who constantly fabricated the law, and he never saw that the law did not exist.

CATHERINE: Do you know what that story makes me think of? The mirror stage—the fact that the chimpanzee looks behind the mirror to see who is there, another chimpanzee, itself, or nobody—whereas man identifies and constitutes himself with the mirror. It reflects his image to him, *fixes* it as a subject and subjects it to the law, to the symbolic order, to language, and does it in a way that is both inalienable and alienating. The law exists.

HÉLÈNE: Except that the chimpanzee actually is the chimpanzee and we are the result of our relationship to the door. What is the discourse of mastery? There is one. It is what calls itself “the law” but is presented as “the open door” in precisely such a way that you never go to the other side of the door, that you never go to see “what is mastery?” So you never will know that there is no law and no mastery. That there is no master. The paradox of mastery is that it is made up of a sort of complex ideological secretion produced by an infinite quantity of doorkeepers.

Mastery ensures the transmission of knowledge.

CATHERINE: I wouldn’t say that in the same terms. It has to be said straight out: for me mastery is fundamental and necessary. I don’t particularly think one can transmit certain knowl-

Culture, which is superstructure, must not be considered as a thing, a good, the result of an evolution, a stock converted into intellectual luxury, but rather as a factor in evolution (which cannot be solely a factor of income) and especially as a process. (Brecht, *Writings on Politics and Society*)

One can say that general culture is what permits the individual to fully feel his solidarity with other men, in space and in time, with the men of his generation as well as with the generations which have preceded him and those yet to follow. To be cultivated, then, is to have received and constantly developed an initiation to different forms of human activity independently of those which correspond to a profession, so as to be able to enter into contact and communion with other men. (Paul Langevin)

edges—the knowledges—except through mastery. That involves everything having to do with democratic transmission. Paradoxically, information contained in a system of knowledge cannot be transmitted outside of mastery. It is dependent on the “law” of the Symbolic, like the doorkeeper, like the honest man. Subjectivity can be taken in, deluded, by it, of course, but it can also find there an explicit coherence, a certain number of connections shared by all, so that when the statement is transmitted, the receiver has access to it either immediately or through mediation.

Transmitting.

What is at stake is connection and consistency. I know perfectly well you are not about to tell me that truth sticks to what is consistent and that you are going to call into question the existence of other consistencies. As for me, the discourse of mastery exists; of course, it is ambivalent and full of traps as far as subjectivity is concerned: subjectivity finds the positions of psychoanalyst and professor to be almost equally untenable. But despite that, it is through the discourse of mastery that knowledge of the analytic act *is transmitted*. I am not talking about the rest of it.

HÉLÈNE: I can’t go along with you there. Your position, which I understand, disposes of a problem that is fundamental and primary for me: how is one to think and struggle against what mastery inevitably entails as a form of repression? A mastery’s contradiction, if it isn’t thought differently, is that, far from transmitting knowledge, it makes it still more inaccessible, makes it sacred. That is

Common public instruction for all citizens is to be created and organized and to be free with regard to those fields of instruction which are indispensable to all men. ([French] Constitution of 1791)

The institutions of instruction in their entirety were opened up to the people free of charge, and, at the same time they were cleared of any interference by the Church and the State. Thus, not only was instruction made accessible for everyone, but knowledge itself was set free of the chains which class prejudices and governmental power had laid on it. (Karl Marx, *On the Commune*)

The peoples whose women must work much more than is proper according to our ideas often have much more real consideration for women than our European populations. Civiliza-

Law's dirty trick. Only those people who already have a relationship of mastery, who already have dealings with culture, who are saturated with culture, have ever dared have access to the discourse that the master gives.

CATHERINE: Now, in this social and cultural system. But certainly you can conceive of societies structured differently, in which the conditions of access to knowledge would be profoundly different.

HÉLÈNE: That's why I believe one has to take a thousand precautions. At the present time, it is impossible for me to use the term "mastery" as it is currently used because of the repression it implies. Does someone already allied with a certain knowledge want to communicate it to others? Why does one want to communicate it to others? It's the usual question—"what's the use?" Does it serve any purpose? I would say yes, obviously, it has to serve—not serve itself and not serve a superior cause, et cetera. There is a drawback we all know as teachers, which is the almost insurmountable difficulty of occupying a position of mastery.

Giving.

The one who is in the master's place, even if not the master of a knowledge, is in a position of power. The only way to bar that is to execute the master, kill him, eliminate him, so that what he has to say can get through, so that he himself is not the obstacle, so it will be *given*. Something on the order of a personal gift, a subjective one.

CATHERINE: I don't like that term—personal gift, it tends toward oblation and sacrifice. . . .

tion's "lady," who is surrounded by feigned respect and who has become a stranger to any real work, has a far lower social position than the woman who is a barbarian, who worked hard, who counted as a real lady (*dame, froxa, Frau: domina*) and who, moreover, was one because of her character. . . .

We are confronted with this new form of family in all its severity among the Greeks. As Marx noted the position of the goddesses in mythology represents an earlier period, when women still occupied a freer and more respected place, in the Heroic Age, we already find women degraded owing to the predominance of the man and the competition of female slaves. . . . The modern conjugal family is based on . . . admitted or masked domestic slavery of woman, and modern society is a mass made up exclusively of conjugal families, like so

What one knows. . . . What one doesn't know.

HÉLÈNE: Giving isn't sacrificing. The person who transmits has to be able to function on the level of knowledge without knowing. I'm not at all referring to Socrates now. Just that one should be in a state of weakness, as we all are, and that *it be evident*. That one have the guts to occupy the position one has no right to occupy and that one show precisely how and why one occupies it. I set my sights high: I demand that love struggle within the master against the will for power.

Mistress woman or woman master?

CATHERINE: Just the same it will be mastery. When I hear *mastery*, I think of the present meaning of the word, which must come more or less from Hegel. Mastery, in Lacan, is inseparable from something fundamentally bound up with woman, with the hysteric, her referential figure. The hysteric puts the master and the academic, both power and knowledge, in check. What's more, this conjunction "power-knowledge" and this division between the two seem to me to be on the order of myth, with its mythic power and arbitrary nature. Admitting these terms for what they are, would that mean that the hysteric and hence, somehow, the woman does not have the right to move in the direction of mastery or academics or perhaps even toward the position of analyst? She has only one position, she "puts in check." That is inadmissible—grotesque. But the way you have defined a knowledge expounded with limits and holes is no longer, in

many molecules. In this day and age, man in the great majority of cases, must support and nourish the family, at least in the propertied classes; and this gives him a sovereign authority which does not need legal privilege to back it up. Within the family man is the bourgeois; woman plays the part of proletariat. But in the industrial sphere, the specific character of economic oppression that weighs on the proletariat is only manifested in all its severity after all the legal privileges of the capitalist class have been suppressed and complete legal equality of the two classes has been established; the democratic republic does not suppress the antagonism between the two classes, the contrary is true: that is what, first of all, provides the ground where the struggle is going to be resolved. (F. Engels, *The Origin of the Family, Private Property and the State*)

effect, entirely mastery. It does correspond just the same to what I meant just now, that is to say, a discourse that—for its own subject, for what concerns knowledge—offers some connections, punctuations, scansions, demonstrations—through which the data of knowledge are transmitted. I see no way to conceive of a cultural system in which there would be no transmission of knowledge in the form of a coherent statement. Right now, for social and ideological reasons, this coincides with a position of mastery.

HÉLÈNE: I don't know what you call "right now"; it has always been like that in our western societies. In our own history, the one we are still reacting to, that is what has happened and keeps on happening.

CATHERINE: That's not entirely true. There is a history of mastery, for us among others, that runs through the history of national education, via the major schools of teacher instruction, via Jules Ferry, via the struggles for a state school, et cetera. And I really think that, from women's point of view, there have been some rays of light in that history and some moments when women had mastery. Not that they have had economic mastery, of course, but it has come about that they had symbolic management of an intellectual activity. An example would be the time of the *trouvères* and *troubadours* . . . at the same time, what's more, as a mythology of the "inspiring woman" opposing this mastery.

I believe that *cultural* oppression of women coincides with economic evolution and is accentuated by the development of capitalism. Think of the "précieuses," who are not at all well known or well liked. There have sometimes been women in possession of knowledge.

HÉLÈNE: There has always been a split between those who are in possession of knowledge and culture and who occupy a position of mastery and the others. I don't rule out women's having been on that side, but even then they are not in the masters' position. I am not saying that knowledge is always associated with power, or that it must be: but that is its danger. And I am not saying women are never on the side of knowledge-power. But in the majority of cases in their history, one finds

them aligned with no knowledge or knowledge-without-power.

CATHERINE: By *power* you don't mean political power, you mean that scrap, that reflection of political power that the teacher exercises metaphorically and imaginarily. What exactly is the teacher's "power"?

HÉLÈNE: Where is the division between "powers"? It's impossible to separate them. I believe teaching goes hand in hand with ideology.

CATHERINE: I don't think so. If that was true, there would be no reason at all to struggle for a truly democratic transmission of knowledge—on the contrary! It is true that whole segments of knowledge are "trapped" in the dominant ideology, but still they are conveyed. There are, for example, Marxist historians: they teach history in a "history" program. It is not because they are in a position of mastery within the teaching structure as it is now that the *content* of their knowledge goes hand in hand with ideology. The division is more complex: it is between the subject's position in relation to knowledge and *the specific effects of the knowledge itself*. The transmission is effective in any kind of structure; even if it is attenuated by the instructional system, it is not *wiped out*.

HÉLÈNE: It is almost wiped out. Thank god there is always a tremendous resistance—young people's flexibility, for instance. Take people when they get out of high school, private schools, no matter what school, and see what you get. Zero.

CATHERINE: But they are receivers and under difficult conditions. . . .

HÉLÈNE: Receivers are what they have received. Certainly there are always tightly held lines, like a certain type of philosophical instruction. But that never has more than limited and postponed effectiveness. Despite absolutely incredible setbacks, it does keep alive a certain kind of spirit of change. But that's not what has taken power. Power lies always in the same direction. It always has.

CATHERINE: In the same direction because the bourgeoisie, the dominant class, is in power. But you can't say that on one side there is the dominant class with its power, its system of transmission and the content of that system—and that is

ideology, and on the other side is everything else. I don't think that is an actual split.

HÉLÈNE: That there could be a culture without culture or a world, a society without education is something I never thought.

CATHERINE: At the moment, it seems to me, you are making mastery absolutely coincide with knowledge, except in a few exceptional cases.

HÉLÈNE: Sure. But rather than mastery coinciding with knowledge, I would say that, with few exceptions, knowledge is constantly caught up in, is entrapped by a will for power. I know which people conveying knowledge don't seem to be dealing with the exercise of power. There are very few. In reality, most of the people I know make use of knowledge, consciously or unconsciously, and use it for something else or for themselves.

CATHERINE: It is inevitable on a certain level that they make it serve themselves; nothing can ever be done about that. Satisfaction is essential to avoid falling into what I've called "oblativity." The desire to teach has to find some satisfaction!

The non-master must be imagined.

HÉLÈNE: It's a question of quantity. I'm saying that people for whom the process of return is a normal process of revenue are rare. They get a certain satisfaction, of course, that's normal, but that satisfaction can take any form. You can be gratified by the feeling of drawing others to your high level or, on the contrary, of going down to their level, et cetera. The most usual satisfaction is not generous. "Masters," in general, try to really obtain an increase in value from mastery, a feeling of accrued superiority, an inflated narcissism. . . .

CATHERINE: Partly that's true. But all the more so when the knowledge has less support. It is particularly true, therefore, of the literary person—for example, where a personal gloss has considerable importance just now, where the discourse has progressed so slightly into theory that it is upheld only by a huge amount of inspiration, whose coherence is literally neurotic and which has no other way to defend itself. It is not knowledge that is being conveyed there but something

on the order of the poetic. Perhaps the misunderstanding is about the idea of knowledge. When it is a question of knowledge, I am talking about a body of coherent statements that is not a neurotic coherence, hence one that isn't held together by the *singular* phantasmic specialty of the one who does the conveying.

Cultural prohibition.

HÉLÈNE: Mastery is at play in the Imaginary as well, where interpretation plays a part and is always cropping up. When one talks about mastery, it is a mastery that can very easily become permeated with something going beyond the object, something that is a mythical power, an Imaginary power that is held sacred and that adjoins a scene of a different sort from knowledge. Everything on the order of culture and cultural objects has a prohibition placed on it, which causes class positions in relation to culture. Likewise, woman is uneasy in relation to a certain sort of production—the production of signs. . . . We don't go straight for it. We even wonder if we *can* go there. We say to ourselves: that possession is not for me. All that has been internalized for ever so long. What would this kind of power, belonging to the mastery of knowledge and, moreover, concealed, be in a field that doesn't pass through discourse? If, instead, it went through concrete practices, like manual work or even in the business world where there are mechanisms you can really dominate, where things probably don't escape you. Always for us, working in humanities and literature, there is a part that is uncontrollable. Mastery goes through real concrete power, in that case, political power, money, all the possible forms of power that are the equivalents of the sacred power of the master's word.

CATHERINE: What bothers me is this collusion between power/knowledge, invested with an effectiveness that I don't believe it has. The power to change—or to inhibit—knowledge comes through mediations that are too complex for us to judge what they might be. The power of power is first of all economic. What you describe is true on the level of a sort of huge, imaginary, mythical,

ideological space. It is not true for things that are part of the real functioning of those structures.

What remains of me at the university, within the university?

HÉLÈNE: For me ideology is a kind of vast membrane enveloping everything. We have to know that this skin exists even if it encloses us like a net or like closed eyelids. We have to know that, to change the world, we must constantly try to scratch and tear it. We can never rip the whole thing off, but we must never let it stick or stop being suspicious of it. It grows back and you start again.

CATHERINE: Let's go back to the discourse of knowledge, the discourse of the university; as for myself I'm hanging on to it, I accept the dunce cap so readily put on the academic's head at the moment, but can I say that it is as a woman that I hold on to it, or not? I don't think the question is at all pertinent.

HÉLÈNE: You're right that it has no pertinence in that instance. As a subject, I always suffered from being made inferior or was crushed by what comes through the surrounding knowledge, even if, to defend myself and out of curiosity, I said to myself: "I'm going to go see what it is." I didn't do as Kafka's peasant did; I went to see, but that comes from the fact that when I was in ignorance—which I was for a very long time—when I was "theoretically naive," as they say, I felt myself constantly under attack, aggressed, because it is very hard for people with a knowledge at their disposal not to be aggressive sometimes, even the best of masters. I'm thinking of B. . . ., who is a very intelligent woman with extraordinary talent. Recently I saw she was deeply troubled; a few people whom she had just seen had told her, "You know, women don't have to enter the Symbolic anyhow." It's ridiculous. For her it didn't mean anything, and for good reason—how could one expect her to know what "enter into the Symbolic" meant? The people she was talking to didn't even bother to say to themselves: she doesn't know what the Lacanian concept of the Symbolic is. It's not exactly your everyday word after all. From the moment one begins to *use* what can be called a concept, when it is mastered and enters your discourse and gets lost, it becomes an ordinary word; but that isn't

true at all for everybody else. That is mastery's trap. Being so much a master that you forget you are one.

Give me the password.

CATHERINE: What you said was "the best of masters," but then you described a mockery of a master. In other respects, however, I gladly invest a positive value in aggressivity, even that of the master, even that of the best of masters. Being aggressive is also allowing the other self-definition, it is *showing* oneself as a subject.

HÉLÈNE: Being able to organize or give order to a discourse and being able to make progress are absolutely indispensable, but there are opposite, negative effects as well. For example—controlling and censoring imagination, free production, other forms, et cetera. As a writer, even though I don't know very much, I'm already saying to myself, "That's enough, I know almost too much about it. Let's not slow down."

CATHERINE: With that, let's get back to writing, words, thought, feminine thought processes, whether there is coherence or not. You and I immediately agreed that when one made use of this discourse for transmitting, it didn't matter whether one was a man or a woman. Why did we agree so easily about that? Why is that so obvious?

HÉLÈNE: Because, precisely, I think it is a discourse that annihilates sexual difference—where there is no question of it.

CATHERINE: So—in other discourses it could be a question?

HÉLÈNE: It is a discourse agreeing more with masculinity than with femininity.

CATHERINE: We don't have any way to know that.

HÉLÈNE: Yes, I have ideas about it. There is something in woman's libidinal organization that doesn't enjoy this kind of discourse. . . .

CATHERINE: When you say that, you are moving in the direction of the women who say that feminine discourse can come only from splitting?

HÉLÈNE: No. I was very exact. I said, "Woman doesn't enjoy herself in it." I never said she was incapable of it. And I am sure of it—femininity doesn't enjoy itself there. I keep coming back to this: we are all bisexual. The problem is, what have we done with our bisexuality? What is becoming of it?

Henry Louis Gates Jr.

b. 1950

In the twentieth century, African Americans have continued to be eloquent public speakers, as they were in the nineteenth century, and they have continued to effect change in the structure of American society. Powerful leaders such as the Reverend Martin Luther King Jr. have followed in the footsteps of Frederick Douglass in activism for African American civil rights and human rights generally. At the same time, increasing educational opportunities for African Americans have meant that more have attained college-level and postgraduate schooling, and more have become academic researchers. Not surprisingly, among the many areas to which African American academics have contributed is the scholarly study of African American languages and rhetorics. Henry Louis Gates Jr. is among the most influential of these scholars, perhaps because he has combined a distinguished academic career with effective work as a public intellectual and cultural critic.

Gates grew up in Piedmont, a small town in West Virginia, where his father worked as a truck loader at the local paper mill and as a janitor for the telephone company. Gates much admired his older brother, who was an accomplished athlete. His mother, who sometimes worked as a domestic, was a community leader active in the local black church and the PTA. She came from a large extended family who, as Gates tells it in his memoir, *Colored People* (1994), surrounded him with warmth. His childhood was relatively happy, even though he grew up during the era of strict segregation and underwent the stresses and trials of the civil rights movement and other political upheavals of the 1960s and 1970s.

Gates took his B.A. in English language and literature summa cum laude at Yale University and worked for a while in London as a correspondent for *Time* magazine before taking his M.A. and Ph.D. in English literature at Clare College of the University of Cambridge. He has held academic appointments at Yale, Cornell, and Duke Universities. In 1991 he joined the faculty at Harvard University, where he is W. E. B. Du Bois Professor of the Humanities, chair of Afro-American Studies, and director of the W. E. B. Du Bois Institute for Afro-American Research. Gates's scholarly publications include *The Signifying Monkey: A Theory of Afro-American Literary Criticism* (1988), which won the American Book Award in 1989 and from which the chapter included here is taken; *Figures in Black: Words, Signs, and the "Racial" Self* (New York, 1986); and *Loose Canons: Notes on the Culture Wars* (1992). He has also edited several scholarly anthologies, including the multivolume *Schomburg Library of Nineteenth-Century Black Women Writers* (1991), the *Norton Anthology of Afro-American Literature* (1996), and, with Kwame Anthony Appiah, an encyclopedia about the African Diaspora published on CD-ROM as *Encarta Africana* and in a print edition as *Africana: The Encyclopedia of Africa and the African-American Experience* (1999). Among his publications as a cultural critic are *Colored People: A Memoir* (1994); *The Future of the Race* (1996), co-authored with Cornell West; and numerous articles for *The New Yorker*.

In *The Signifying Monkey*, Gates analyzes some rhetorical forms of Black English as part of an investigation of the forms of experience and interaction embodied in black speech and writing. Gates's work on Black English, built on earlier research by sociolinguists, extends rhetorical analysis to an area of communication that attracted little attention from academic rhetoricians before the twentieth century. Moreover, Gates's discussion has important implications for the development of rhetorical theory because it suggests that Black English is a fertile field for studying the ideological and epistemological powers of rhetoric conceived as a general theory of language.

BLACK ENGLISH

The distinctive qualities of African American language as a cultural phenomenon have been explored by linguists more than by rhetoricians, as Gates's research shows. However, that situation has changed recently, as noted below. The features of the black dialect of English have long been studied and have been found to be a completely grammatical and internally consistent version of the language of which Standard English is also a dialect, albeit a socially privileged one. Black English comes from the melding of several African languages and English. Thus, although it is clearly English, the black dialect retains some lexical, grammatical, and syntactic features of African languages.

But that is by no means the whole story. A complete description of Black English cannot be limited to linguistic analysis. Language and culture are inseparable, and though it is common practice to forget the cultural forces at work in descriptions of Standard English—that is, white English—it is impossible to forget, when examining the development of Black English, the often agonized relationship between white people and black people in the United States. Working out the connections among language, culture, and history has been the job of scholars in history and literature as well as of sociolinguists and folklorists.

BLACK RHETORIC

As noted in Part Five of this book, many African Americans became important public speakers in the nineteenth-century United States, and some of them, such as Maria W. Stewart (p. 1031) and Frederick Douglass (p. 1061), discussed the tensions they faced as speakers from a socially marginalized group attempting to persuade diverse audiences, both black and white. They began to articulate the special qualities of what might be called “black rhetoric” in its broad outlines (see the Stewart and Douglass headnotes and the introduction to Part Five). African American scholars also began to study the phenomenon of black rhetoric, for example, in historian William C. Nell's ground-breaking work, *Colored Patriots of the American Revolution* (1855), which examines rhetorical activities as well as military service, political leadership, and more.

In addition, twentieth-century scholars have collected the speeches of African Americans from both the nineteenth and twentieth centuries, and black and white

historians, rhetoricians, and literary critics have begun to analyze African American rhetorical practices from the early nineteenth century to the present. They have analyzed individual works by noted orators from both centuries, and some scholars have also published studies in which larger patterns of concerns have begun to emerge. African American studies specialist Wilson Jeremiah Moses has chronicled how black orators transformed the European American genre of the jeremiad for their own purposes of social criticism, and David Howard-Pitney has extended this analysis. Bradford Stull, trained in theology as well as rhetorical analysis, has shown how the three most powerful African American leaders of the twentieth century, W. E. B. Du Bois, Martin Luther King Jr., and Malcolm X, drew on European American cultural images of the Fall, the Orient, Africa, and Eden to enrich their critiques of American racism and their visions of a better world.

Rhetoric has also been treated by the folklorists and sociolinguists who have studied Black English. In studies of nonstandard dialects, however, sociolinguists have made only modest use of rhetoric as a theory of language, in contrast with the broader analyses of the humanistic scholars noted above. Rhetoric tends to mean, for the social scientists, figurative language and occasionally speech in a formalized or ritualized setting. Sociolinguist Geneva Smitherman, for example, relies on the term *semantics* to emphasize the deep connection between language and the contexts of its development and use. But even if sociolinguists seldom use rhetoric as an analytic tool, within the sociolinguistic analyses of Black English is a rhetorical analysis—not only of tropes and ritualized speech interactions but also of the range of speech and writing occasions, the intended ends of those forms of discourse, the appeals that speakers use to achieve those ends, and other features of language use that rhetorical theory can account for.

Where Smitherman uses the term *semantics* to suggest that language must be studied in use, Henry Louis Gates turns to rhetoric to suggest the same. Gates combines rhetoric with sociolinguistic analyses of black discourse, though he, too, uses rhetoric in a somewhat limited and specialized way. Rhetoric, for Gates, means tropes, but following Nietzsche and Derrida, Gates regards tropes as constitutive of language. He analyzes the discourse form that black dialect speakers call “signifying,” treating it as the “master trope” of black rhetoric, a trope that embodies cultural meanings and represents a complex set of social interactions. In the chapter from his book *The Signifying Monkey* that is excerpted here, Gates reviews much of the sociolinguistic research from the viewpoint of a rhetorical analysis of tropes. To set his study in perspective, it is worthwhile to outline the other features of black rhetoric that sociolinguists have suggested. Their detailed analyses of what might be called the micro-level of black rhetoric complement the macro-level studies of the humanists.

SETTING, AUDIENCE, AND PERFORMANCE

In the black communities cited in published studies, there appear to be three main settings for speech interactions: (1) the church, where speaking includes both sermons and responses by congregants; (2) the street, where talk is an interaction between equals; and (3) the home, where talk is dominated by the mother.

It seems obvious that an effective message will take the audience into account. Traditional rhetoric assumes that, to the extent that the audience can be characterized by age, gender, class, political or religious beliefs, ethnicity, region, and so on, the speaker or writer can tailor a message to increase its appeal. The same considerations apply in black communities. But a distinct difference between black rhetoric and what we might call white rhetoric is the typical relationship between speaker and audience. In most white speech interactions, as in traditional classical rhetoric, the speaker speaks and the audience listens; in black speech interactions, the audience responds almost constantly, with set responses, encouragement, suggestions, and nonverbal signals. Indeed, black discourse encourages such participation. Black discourse is (to borrow a term from Mikhail Bakhtin [p. 1206]) highly “dialogic.” Successful performance stimulates and can be measured by audience responses.

A corollary to this kind of speaker-audience relationship is the nature of the speech performance itself. There is less difference between performance and conversation in black discourse than in white. On the one hand, formal black speech situations, such as sermons, lectures, and political oratory, are marked by audience participation, and on the other hand, informal conversation is characterized by the stylized performances of the interlocutors. In white discourse, conversation generally is unstructured and informal. But black conversation uses many of the forms, tropes, and responses found in the formal speech types. And whereas in white discourse formal speeches are highly structured, in black discourse speeches and sermons are structured more loosely.

Thus black rhetoric usually tries to stir the audience to verbal response. Moreover, even the most casual interactions have a performance quality. Some exceptions exist. In the home, for example, parental discourse is not intended to elicit interactive response. And sermons typically have formal introductions, identifying the text and theme, during which there is not supposed to be any response. Beyond the introduction, however, the sermon’s purpose is both to exhort and to create solidarity, and participation is a sign that its purposes are being achieved.

The street is the scene of the most complex conversation-performance exchanges, which have at least three purposes: to exchange information; to enact social relationships of friendship, kinship, and business; and to establish the speaker’s social status. The street is the scene of verbal play (mostly male), which, even when it creates solidarity, has a competitive edge. Street exchanges establish the speaker’s reputation in the community. Where status based on economic or educational achievement is problematic, especially for men, the ability to rap, to establish dominance, camaraderie, solidarity, and opposition to white hegemony, as well as to entertain, is the measure of communal admiration. In black communities, linguistic virtuosity is highly prized, and as Gates emphasizes, there is a considerable body of black metadiscourse that identifies the forms and tropes that make up black rhetoric.

As for formal political speeches, analyses of the speeches of Frederick Douglass, Malcolm X, Martin Luther King Jr., Jesse Jackson, and others have amply shown that traditional rhetoric can be applied to the formal speeches of black leaders to explain some of their power. Black rhetoric is not utterly divorced from white rhetoric. The proofs and evidence, the appeals to ethos and pathos, the virtues of

metaphor and antithesis that work in white speeches also work in black ones. Shirley Wilson Logan (1999) has shown how African American women orators from Maria Stewart to Victoria Earle Matthews employed traditional classical figures of speech to enrich their persuasive discourse. Scholarship on black rhetoric will continue to specify distinctive forms of argument or particularly apposite tropes.

FORMS OF DISCOURSE

The forms of discourse are less formally distinct in black speech than in white. Formal speeches and conversation, as noted, are much more similar in black speech than in white speech. Moreover, prose in black speech often shades over into verse and back to prose. Talking may modulate into singing, and singing will stimulate dancing. Thus nonverbal responses might be categorized as forms of discourse along with verbal responses.

The sociolinguists, seconded by Gates, identify a large number of black speech forms as “tropes.” Many of these forms, like repetition, rhyming, and hyperbole, are similar or identical to traditional rhetorical tropes. Others, like *signifying*, which Gates calls the master trope of black rhetoric, seem more like genres or modes of discourse. Perhaps Bakhtin’s phrase *speech genres* would best identify them. Signifying, for example, is the general term for several forms of persuasion, insult, boasting, or lying, all by innuendo or indirection. This trope may be verbal, in prose or verse, or nonverbal, using gesture. And with signifying goes *sounding*, which refers to any of several forms of direct insult, boast, or lie. Other such forms are listed below. There is as yet no clear theoretical division between these speech genres or large-scale tropes and the more familiar small-scale figures of speech. With this proviso, then, some of the speech genres of black rhetoric appear to be as follows:

- sounding (direct insult, boast, and so on)
- signifying (indirect insult, boast, and so on)
- rapping (general ability to use rhetorical devices)
- narrative toasting (narrative verse)
- hipping (exposition; running it down)
- sweet-talk (courtship rapping)
- poetry
- testimony
- responding
- Standard (white) English (often used ironically)

Nonverbal forms

- singing
- dancing
- hand gesturing (giving skin, and so on)

This list is not intended to be exhaustive of either the terminology (which is detailed in the sources listed in the bibliography for this headnote) or of the forms of dis-

course used by blacks, since such familiar terms as *referential* or *ejaculative* might be applied to black discourse as well as to white.

It is important to note that black discourse names a great many rhetorical devices. There is, in other words, already a rhetorical terminology in black discourse, a great self-consciousness about the elaborate forms of language use in black speech. *Logos* in black discourse is often an appeal not to logic in the traditional sense but to language itself. *Ethos* is often established by linguistic heroism. Black culture is an oral culture, one that has internalized its oppositional status in the surrounding dominant culture, and one whose distinctive discourse is almost Sophistic in its displacement of cultural knowledge into language. Thus the metalinguistic terminology of black discourse is a significant part of the discourse itself.

TROPES

Although the word *trope* has some currency among sociolinguists as a general term for identifiable speech patterns, there are no category terms in black metalinguistic terminology. In addition, some disagreement about descriptive terminology and level of abstraction exists among reporters in different communities. Playing the dozens, for example, could as easily be a *form* as a trope. We place it here because it is a bit more specific in application than the general forms of insult under which it might be categorized.

A trope is, literally, a turn. In traditional rhetoric, tropes turn words away from their “literal” meaning to a metaphorical one. Thus Gates makes signifying a master trope in the sense that it embodies indirection or turning in black rhetoric (just as metaphoric comparison is the master trope of white rhetoric).

Verbal tropes

- signifying (as a master trope)
- playing the dozens (insulting someone’s mama)
- naming and nickname using
- jargon (of music, cars, drugs, sex, clothes, and so on)
- speech-action metaphor (run it by me; run it down)
- hyperbole
- repetition
- rhyming
- meaning reversal (bad = good)
- defiance (low-status usage to needle whitey)
- marking (mocking, imitation)
- tomming (as accommodation or irony)
- woofing (lying)
- yo’ mama (or “ask yo’ mama” — stock responses)

Nonverbal tropes

- pitch
- cadence

emphasis (accent shift on big words)
loud talking (stage whisper to convey innuendo)
giving skin (an approving response)
marking (imitating by gesture)

With tropes as with forms, this list is not exhaustive of either available terminology or of figurative types used by blacks. Of course, black rhetoric and white rhetoric share forms that are fairly common in discourse, such as alliteration.

Although most of the forms and tropes are adaptable to both church and street uses, there is a distinct difference in register in their sacred versus secular use. Signifying may appear in a sermon, but it will do so without the casual obscenity that usually accompanies it on the street. Moreover, a sermon may well include signifying but not playing the dozens. Similarly, the forms and tropes can shift in attitude from playful to serious. In playful insults or dozens, the accusations are so fanciful that the interlocutors are not personally attacked. The contest is to be witty, not destructive. Real personal remarks are serious, with corresponding consequences.

Generational markers may also appear as a kind of register. Jive, for example, is a form of social defiance that is regarded as adolescent when used to distance the family. And finally, in a double bind that undercuts the self-image of black men, the official standards of the community may characterize the whole assemblage of street forms and tropes as adolescent—or at least rude.

THE SIGNIFYING MONKEY

The linguistic features of Black English have been documented by sociolinguists like Smitherman, William Labov, and others, all of whom show that Black English is not incorrect Standard English, as white teachers have often thought, but a consistent system with a coherent and regular grammar. But more than that, these researchers identify the distinctive cultural content and relations that inhere in black speech forms: the background not only of African languages but also of tribal culture and social structures, myths, and music. They also note the effects of slavery and discrimination, the conflicted self-images of the oppressed and powerless, the succoring milieu of the church, and the push-pull relationship with the white world.

Gates's work focuses on the distinctive qualities of black language and literature as an expression of black experience. In studying black language in its social uses and communal behavior, Gates thus studies not linguistics but rhetoric. This is a rhetoric of speech genres, of literature and conversation, of social interaction and enabling cultural content. In some ways, such as in the naming of tropes, Gates's use of rhetoric is quite traditional. But his analysis is located at a critical juncture of culture, linguistic operation, social interaction, and political marginality. Gates is forced to be inclusive, to see rhetoric as the connective force and to see tropes as cognitive and epistemic forms of language. Here, rhetoric means daily speech as a form of action.

Gates traces the black rhetorical fascination with word magic back to the pan-African myths of the trickster god Esu-Elegbara, messenger of the gods, speaker of

all tongues, and sexual hero. Language for him and his admirers is a grand performance with strong effects. Gates finds in Esu-Elegbara the forerunner of the Signifying Monkey of Afro-American folklore. The Monkey figures in some of the Esu-Elegbara stories as a secondary character, but in the translation to the United States, the god disappears and the Monkey takes the primary role. The Monkey is the champion signifier, fomenting strife between others by clever innuendo and escaping blame by sophistry. Gates's examples make it quite clear how this operation works.

Gates notes that signifying, the act of linguistic misdirection, ironically redirects the white word for the passive act of representation. Black rhetoric seems to say (as modern literary and rhetorical theory says) that representing meaning is not passive, that it is the greatest trickery of all.

Selected Bibliography

Henry Louis Gates's essay reprinted here, "The Signifying Monkey and the Language of Signifyin(g): Rhetorical Difference and the Orders of Meaning," is the second chapter of *The Signifying Monkey: A Theory of Afro-American Literary Criticism* (New York, 1988).

The extensive notes provided by Gates in the excerpt printed here constitute an excellent bibliography of sources in black linguistics and protorhetoric. The richest of these sources are Geneva Smitherman's *Talkin and Testifyin: The Language of Black America* (Boston, 1977), Smitherman's *Talkin That Talk: Language, Culture and Education in African America* (London and New York, 2000), Roger Abrahams's *Talking Black* (Rowley, Mass., 1976), J. L. Dillard's *Lexicon of Black English* (New York, 1977), and the superb collection edited by Alan Dundes, *Mother Wit from the Laughing Barrel: Readings in the Interpretation of Afro-American Folklore* (Englewood Cliffs, N.J., 1973). Gates emphasizes his debt to *Blues, Ideology, and Afro-American Literature: A Vernacular Theory* (Chicago, 1984), by Houston A. Baker Jr. The bibliographies in Smitherman's books are quite extensive and helpful, though not annotated. Dundes discusses some of the bibliographic resources in black language and folklore at the end of his volume. *Talkin That Talk*, a collection of twenty-three of Smitherman's essays, reveals the political controversies that can ensue when teachers and administrators are not conversant with this sociolinguistic research. This collection includes several penetrating essays on the Ebonics uproar as well as the important article "'What Go Round Come Round': King in Perspective."

Collections of oratory by African Americans include *Documents of Upheaval* (1966), ed. Truman Nelson; *Negro Protest Pamphlets* (1969), ed. Dorothy Porter; *The Voice of Black America: Major Speeches by Negroes in the United States, 1797-1971* (1972), ed. Philip Foner; *Lift Every Voice: African American Oratory, 1787-1900* (1998), ed. Philip Foner and James Branham (an enlarged and chronologically refocused edition of *The Voice of Black America*); and *With Pen and Voice: A Critical Anthology of Nineteenth-Century African-American Women* (1995), ed. Shirley Wilson Logan. Richard Leeman has edited a helpful collection of biographical sketches with bibliographies, covering both the nineteenth and twentieth centuries: *African-American Orators: A Bio-Critical Sourcebook* (1996).

William C. Nell's *Colored Patriots of the American Revolution* (1855; rpt. 1969) reprints some texts of speeches and places early African American rhetorical activities in cultural and political contexts. Critical studies of African American rhetoric include Shirley Wilson Logan's *"We Are Coming": The Persuasive Discourse of Nineteenth-Century Black Women* (1999), which begins with Maria Stewart and discusses a number of figures who were active

well into the twentieth century, such as Anna Julia Cooper and Fannie Barrier Williams. Wilson Jeremiah Moses's *Black Messiahs and Uncle Toms: Social and Literary Manipulations of a Religious Myth* (1982) traces the African American jeremiad from the nineteenth century to the rhetoric of Marcus Garvey, Martin Luther King Jr., Ralph Ellison, and other twentieth-century figures. David Howard-Pitney's *The Afro-American Jeremiad: Appeals for Justice in America* (1990) builds on Moses's work and focuses on major figures, beginning with Frederick Douglass and concluding with W. E. B. Du Bois, Mary McLeod Bethune, and King. King, Du Bois, and Malcolm X as proponents of what Bradford Stull calls "emancipatory composition" are the focus of Stull's *Amid the Fall, Dreaming of Eden* (1999).

For additional references on nineteenth-century African American rhetoric, see the bibliographies accompanying the Introduction to Part Five and the headnotes for Maria W. Stewart and Frederick Douglass.

From *The Signifying Monkey* and the Language of Signifyin(g): Rhetorical Difference and the Orders of Meaning

Some of the best dozens players were girls. . . . before you can signify you got to be able to rap. . . . Signifying allowed you a choice—you could either make a cat feel good or bad. If you had just destroyed someone or if they were down already, signifying could help them over. Signifying was also a way of expressing your own feelings. . . . Signifying at its best can be heard when the brothers are exchanging tales.

—H. RAP BROWN

*And they asked me right at Christmas
If my blackness, would it rub off?
I said, ask your Mama.*

—LANGSTON HUGHES

I

If Esu-Elegbara¹ stands as the central figure of the Ifa system of interpretation,² then his Afro-American relative, the Signifying Monkey, stands as the

¹In the pan-African Yoruba mythologies, Esu-Elegbara is the messenger-god. Esu speaks the languages of gods and men; he is a trickster and a self-consciously rhetorical verbal virtuoso. [Ed.]

²Ifa is the Yoruba god who gave men the cryptic verses that bear his name. The priests divine the will of the gods by chanting the Odu Ifa, the divination poems. [Ed.]

rhetorical principle in Afro-American vernacular discourse. Whereas my concern in Chapter 1 was with the elaboration of an indigenous black hermeneutical principle, my concern in this chapter is to define a carefully structured system of rhetoric, traditional Afro-American figures of signification, and then to show how a curious figure becomes the trope of literary revision itself. My movement, then, is from hermeneutics to rhetoric and semantics, only to return to hermeneutics once again.

Thinking about the black concept of Signifyin(g) is a bit like stumbling unaware into a hall of mirrors: the sign itself appears to be doubled, at the very least, and (re)doubled upon ever closer examination. It is not the sign itself, however, which has multiplied. If orientation prevails over madness, we soon realize that only the signifier has been doubled and (re)doubled, a signifier in this instance that is silent, a "sound-image" as Saussure defines the signifier, but a "sound-image" *sans* the sound. The difficulty that we experience when thinking about the nature of the visual (re)doubling at work in a hall of mirrors is analogous to the difficulty we shall encounter in relating the black linguistic sign, "Signification," to the standard English sign,

“signification.” This level of conceptual difficulty stems from—indeed, seems to have been intentionally inscribed within—the selection of the signifier “Signification” to represent a concept remarkably distinct from that concept represented by the standard English signifier, “signification.” For the standard English word is a homonym of the Afro-American vernacular word. And, to compound the dizziness and the giddiness that we must experience in the vertiginous movement between these two “identical” signifiers, these two homonyms have everything to do with each other and, then again, absolutely nothing.³

In the extraordinarily complex relationship between the two homonyms, we both enact and recapitulate the received, classic confrontation between Afro-American culture and American culture. This confrontation is both political and metaphysical. We might profit somewhat by thinking of the curiously ironic relationship between these signifiers as a confrontation defined by the politics of semantics, semantics here defined as the study of the classification of changes in the signification of words, and more especially the relationships between theories of denotation and naming, as well as connotation and ambiguity. The relationship that black “Signification” bears to the English “signification” is, paradoxically, a relation of difference inscribed within a relation of identity. That, it seems to me, is inherent in the nature of metaphorical substitution and the pun, particularly those rhetorical tropes dependent on the repetition of a word with a change denoted by a difference in sound or in a letter (agnominatio), and in homonymic puns (antanaclasis). These tropes luxuriate in the chaos of ambiguity that repetition and difference (be that apparent difference centered in the signifier or in the signified, in the “sound-image” or in the concept) yield in either an aural or a visual pun.

This dreaded, if playful, condition of ambiguity would, of course, disappear in the instance at hand if the two signs under examination did not bear the same signifier. If the two signs were designated by two different signifiers, we could es-

cape our sense of vertigo handily. We cannot, however, precisely because the antanaclasis that I am describing turns upon the very identity of these signifiers, and the play of differences generated by the unrelated concepts (the signifieds) for which they stand.

What we are privileged to witness here is the (political, semantic) confrontation between two parallel discursive universes: the black American linguistic circle and the white. We see here the most subtle and perhaps the most profound trace of an extended engagement between two separate and distinct yet profoundly—even inextricably—related orders of meaning dependent precisely as much for their confrontation on relations of identity, manifested in the signifier, as on their relations of difference, manifested at the level of the signified. We bear witness here to a protracted argument over the nature of the sign itself, with the black vernacular discourse proffering its critique of the sign as the difference that blackness makes within the larger political culture and its historical unconscious.

“Signification” and “signification” create a noisy disturbance in silence, at the level of the signifier. Derrida’s neologism, “différance,” in its relation to “difference,” is a marvelous example of agnominatio, or repetition of a word with an alteration of both one letter and a sound. In this clever manner, Derrida’s term resists reduction to self-identical meaning. The curiously suspended relationship between the French verbs *to differ* and *to defer* both defines Derrida’s revision of Saussure’s notion of language as a relation of differences and embodies his revision which “in its own unstable meaning [is] a graphic example of the process at work.”⁴

I have encountered great difficulty in arriving at a suitably similar gesture. I have decided to signify the difference between these two signifiers by writing the black signifier in upper case (“Signification”) and the white signifier in lower case (“signification”). Similarly, I have selected to write the black term with a bracketed final g (“Signifyin[g]”) and the white term as “signify-

³Ferdinand de Saussure, *Course in General Linguistics*, ed. Charles Bally and Albert Sechehaye, trans. Wade Baskin (New York: McGraw-Hill, 1966). p. 66ff. [Au.]

ing.” The bracketed *g* enables me to connote the fact that this word is, more often than not, spoken by black people without the final *g* as “signifyin’.” This arbitrary and idiosyncratic convention also enables me to recall the fact that whatever historical community of Afro-Americans coined this usage did so in the vernacular as spoken, in contradistinction to the literate written usages of the standard English “shadowed” term. The bracketed or aurally erased *g*, like the discourse of black English and dialect poetry generally, stands as the trace of black difference in a remarkably sophisticated and fascinating (re)naming ritual graphically in evidence here. Perhaps replacing with a visual sign the *g* erased in the black vernacular shall, like Derrida’s neologism, serve both to avoid confusion and the reduction of these two distinct sets of homonyms to a false identity and to stand as the sign of a (black) Signifyin[*g*] difference itself. The absent *g* is a figure for the Signifyin[*g*] black difference.

Let me attempt to account for the complexities of this (re)naming ritual, which apparently took place anonymously and unrecorded in antebellum America. Some black genius or a community of witty and sensitive speakers emptied the signifier “signification” of its received concepts and filled this empty signifier with their own concepts. By doing so, by supplanting the received, standard English concept associated by (white) convention with this particular signifier, they (un)wittingly disrupted the nature of the sign = *signified/signifier* equation itself. I bracket *wittingly* with a negation precisely because origins are always occasions for speculation. Nevertheless, I tend to think, or I wish to believe, that this guerrilla action occurred intentionally on this term, because of the very concept with which it is associated in standard English.

“Signification,” in standard English, denotes the meaning that a term conveys, or is intended to convey. It is a fundamental term in the standard English semantic order. Since Saussure, at least, the three terms *signification*, *signifier*, *signified* have been fundamental to our thinking about general linguistics and, of late, about criticism specifically. These neologisms in the academic-critical community are homonyms of terms in the black vernacular tradition perhaps two cen-

turies old. By supplanting the received term’s associated concept, the black vernacular tradition created a homonymic pun of the profoundest sort, thereby making its sense of difference from the rest of the English community of speakers. Their complex act of language Signifies upon both formal language use and its conventions, conventions established, at least officially, by middle-class white people.

This political offensive could have been mounted against all sorts of standard English terms—and, indeed, it was. I am thinking here of terms such as *down*, *nigger*, *baby*, and *cool*, which snobbishly tend to be written about as “dialect” words or “slang.” There are scores of such revised words. But to revise the term *signification* is to select a term that represents the nature of the process of meaning-creation and its representation. Few other selections could have been so dramatic, or so meaningful. We are witnessing here a profound disruption at the level of the signifier, precisely because of the relationship of identity that obtains between the two apparently equivalent terms. This disturbance, of course, has been effected at the level of the conceptual, or the signified. How accidental, unconscious, or unintentional (or any other code-word substitution for the absence of reason) could such a brilliant challenge at the semantic level be? To revise the received sign (quotient) literally accounted for in the relation represented by *signified/signifier* at its most apparently denotative level is to critique the nature of (white) meaning itself, to challenge through a literal critique of the sign the meaning of meaning. What did/do black people signify in a society in which they were intentionally introduced as the subjugated, as the enslaved cipher? Nothing on the *x* axis of white signification, and everything on the *y* axis of blackness.⁵

It is not sufficient merely to reveal that black people colonized a white sign. A level of meta-discourse is at work in this process. If the signifier stands disrupted by the shift in concepts denoted and connoted, then we are engaged at the

⁵See my discussion of the word “down” in *Figures in Black: Words, Signs, and the Racial Self* (New York: Oxford University Press, 1986). [Au.]

level of meaning itself, at the semantic register. Black people vacated this signifier, then—incredibly—substituted as its concept a signified that stands for the system of rhetorical strategies peculiar to their own vernacular tradition. Rhetoric, then, has supplanted semantics in this most literal meta-confrontation within the structure of the sign. Some historical black community of speakers most certainly struck directly at the heart of the matter, on the ground of the referent itself, thereby demonstrating that even (or especially) the concepts signified by the signifier are themselves arbitrary. By an act of will, some historically nameless community of remarkably self-conscious speakers of English defined their ontological status as one of profound differences vis-à-vis the rest of society. What's more, they undertook this act of self-definition, implicit in a (re)naming ritual, within the process of signification that the English language had inscribed for itself. Contrary to an assertion that Saussure makes in his *Course*, “the masses” did indeed “have [a] voice in the matter” and replaced the sign “chosen by language.” We shall return to Saussure’s discussion of the “Immutability and Mutability of the Sign” below.⁶

Before critiquing Saussure’s discussion of signification, however, perhaps I can help to clarify an inherently confusing discussion by representing the black critique of the sign, the replacement of the semantic register by the rhetorical, in Chart 1.

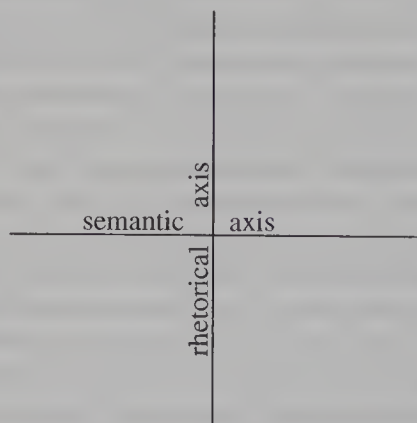

Chart 1. The Sign, “Signification”

⁶Saussure, *Course*, p. 71. [Au.]

Whereas in standard English usage signification can be represented *signified/signifier* and that which is signified is a concept, or concepts, in the black homonym, this relation of semantics has been supplanted by a relation of rhetoric, wherein the signifier “Signification” is associated with a concept that stands for the rhetorical structures of the black vernacular, the trope of tropes that is Signifyin(g). Accordingly, if in standard English

$$\text{signification} = \frac{\text{signified}}{\text{signifier}} = \frac{\text{concept}}{\text{sound-image}},$$

then in the black vernacular,

$$\text{Signification} = \frac{\text{rhetorical figures}}{\text{signifier}}.$$

In other words, the relation of signification itself has been critiqued by a black act of (re)doubling. The black term of *Signifyin(g)* has as its associated concept all of the rhetorical figures subsumed in the term *Signify*. To Signify, in other words, is to engage in certain rhetorical games, which I shall define and then compare to standard Western figures [later], in Chart 4.

It would be erroneous even to suggest that a concept can be erased from its relation to a signifier. A signifier is never, ultimately, able to escape its received meanings, or concepts, no matter how dramatically such concepts might change through time. In fact, homonymic puns antanacsis, turn precisely upon received meanings and their deferral by a vertical substitution. All homonyms depend on the absent presence of received concepts associated with a signifier.

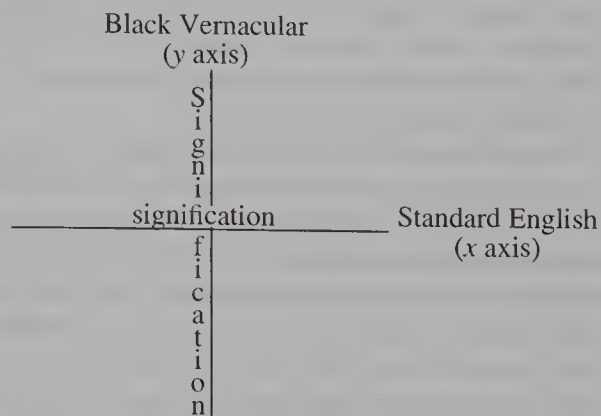

Chart 2. Black and Standard English

What does this mean in the instance of the black homonym *Signifyin(g)*, the shadowy revision of the white term? It means, it seems to me, that the signifier “Signification” has remained identical in spelling to its white counterpart to demonstrate, first, that a simultaneous, but negated, parallel discursive (ontological, political) universe exists within the larger white discursive universe, like the matter-and-antimatter fabulations so common to science fiction. It also seems apparent that retaining the identical signifier argues strongly that the most poignant level of black-white differences is that of meaning, of “signification” in the most literal sense. The play of doubles here occurs precisely on the axes, on the threshold or at Esu’s crossroads, where black and white semantic fields collide. We can imagine the relationship of these two discursive universes as depicted in Chart 2. Parallel universes, then, is an inappropriate metaphor; *perpendicular* universes is perhaps a more accurate visual description.

The English-language use of *signification* refers to the chain of signifiers that configure horizontally, on the syntagmatic axis. Whereas signification operates and can be represented on a syntagmatic or horizontal axis, *Signifyin(g)* operates and can be represented on a paradigmatic or vertical axis. *Signifyin(g)* concerns itself with that which is suspended, vertically: the chaos of what Saussure calls “associative relations,” which we can represent as the playful puns on a word that occupy the paradigmatic axis of language and which a speaker draws on for figurative substitutions. These substitutions in *Signifyin(g)* tend to be humorous, or function to name a person or a situation in a telling manner. Whereas signification depends for order and coherence on the exclusion of unconscious associations which any given word yields at any given time, *Signification* luxuriates in the inclusion of the free play of these associative rhetorical and semantic relations. Jacques Lacan calls these vertically suspended associations “a whole articulation of relevant contexts,” by which he means all of the associations that a signifier carries from other contexts, which must be deleted, ignored, or censored “for this signifier to be lined up with a signified to produce a specific

meaning.”⁷ Everything that must be excluded for meaning to remain coherent and linear comes to bear in the process of *Signifyin(g)*. As Anthony Easthope puts the matter in *Poetry as Discourse*,

All of these absences and dependencies which have to be barred in order for meaning to take place constitute what Lacan designates as the *Other*. The presence of meaning along the syntagmatic chain necessarily depends upon the absence of the Other, the rest of language, from the syntagmatic chain.⁸

Signifyin(g), in Lacan’s sense, is the Other of discourse; but it also constitutes the black Other’s discourse as its rhetoric. Ironically, rather than a proclamation of emancipation from the white person’s standard English, the symbiotic relationship between the black and white, between the syntagmatic and paradigmatic axes, between black vernacular discourse and standard English discourse, is underscored here, and signified, by the vertiginous relationship between the terms *signification* and *Signification*, each of which is dependent on the other. We can, then, think of American discourse as both the opposition between and the ironic identity of the movement, the very vertigo, that we encounter in a mental shift between the two terms.

The process of semantic appropriation in evidence in the relation of *Signification* to *signification* has been aptly described by Mikhail Bakhtin as a double-voiced word, that is, a word or utterance, in this context, decolonized for the black’s purposes “by inserting a new semantic orientation into a word which already has—and retains—its own orientation.” Although I shall return later in this chapter to a fuller consideration of this notion of double-voiced words and double-voiced discourse, Gary Saul Morson’s elaboration on Bakhtin’s concept helps to clarify what Bakhtin implies:

The audience of a double-voiced word is therefore meant to hear both a version of the original utterance as the embodiment of its speaker’s point of view (or “semantic position”) and the second speaker’s evaluation of that utterance from a different point of

⁷Jacques Lacan, *Ecrits: A Selection*, trans. Alan Sheridan (New York: Norton, 1977), p. 154. [Au.]

⁸Anthony Easthope, *Poetry as Discourse* (New York: Methuen, 1983), p. 37. [Au.]

view. I find it helpful to picture a double-voiced word as a special sort of palimpsest in which the uppermost inscription is a commentary on the one beneath it, which the reader (or audience) can know only by reading through the commentary that obscures in the very process of evaluating.⁹

The motivated troping effect of the disruption of the semantic orientation of signification by the black vernacular depends on the homonymic relation of the white term to the black. The sign, in other words, has been demonstrated to be mutable.

Bakhtin's notion, then, implicitly critiques Saussure's position that

the signifier . . . is fixed, not free, with respect to the linguistic community that uses it. The masses have no voice in the matter, and the signifier chosen by language could be replaced by no other. . . . [The] community itself cannot control so much as a single word; it is bound to the existing language.¹⁰

Saussure, of course, proceeds to account for "shift(s) in the relationship between the signified and the signifier," shifts in time that result directly from "the arbitrary nature of the sign." But, simultaneously, Saussure denies what he terms to be "arbitrary substitution": "A particular language-state is always the product of historical forces, and these forces explain why the sign is unchangeable, i.e., why it resists any arbitrary substitution." The double-voiced relation of the two terms under analysis here argues forcefully that "the masses," especially in a multiethnic society, draw on "arbitrary substitution" freely, to disrupt the signifier by displacing its signified in an intentional act of will. Signifyin(g) is black double-voicedness; because it always entails formal revision and an intertextual relation, and because of Esu's double-voiced representation in art, I find it an ideal metaphor for black literary criticism, for the formal manner in which texts seem concerned to address their antecedents. Repetition, with a signal difference, is fundamental to the nature of Signifyin(g), as we shall see.¹¹

II

The Poetry of Signification

The literature or tales of the Signifying Monkey and his peculiar language, Signifyin(g), is both extensive and polemical, involving as it does assertions and counterassertions about the relationship that Signifyin(g) bears to several other black tropes. I am not interested in either recapitulating or contributing to this highly specialized debate over whether or not speech act *x* is an example of this black trope or that. On the contrary, I wish to argue that Signifyin(g) is the black trope of tropes, the figure for black rhetorical figures. I wish to do so because this represents my understanding of the value assigned to Signifyin(g) by the members of the Afro-American speech community, of which I have been a signifier for quite some time. While the role of a certain aspect of linguistics study is to discern the shape and function of each tree that stands in the verbal terrain, my role as a critic, in this book at least, is to define the contours of the discursive forest or, perhaps more appropriately, of the jungle.¹²

Tales of the Signifying Monkey seem to have had their origins in slavery. Hundreds of these have been recorded since the early twentieth century. In black music, Jazz Gillum, Count Basie, Oscar Peterson, the Big Three Trio, Oscar Brown, Jr., Little Willie Dixon, Snatch and the Poontangs, Otis Redding, Wilson Pickett, Smokey Joe Whitfield, and Johnny Otis—among others—have recorded songs about either the Signifying Monkey or, simply, Signifyin(g). The theory of Signifyin(g) is arrived at by explicating these black cultural forms. Signifyin(g) in jazz performances and in the play of black language games is a mode of formal revision, it depends for its effects on troping, it is often characterized by pastiche, and, most crucially, it turns on repetition of formal structures and their differences. Learning how to Signify is often part of our adolescent education.

¹²See, for example, Claudia Mitchell-Kernan, *Language Behavior in a Black Urban Community* (Monographs of the Language-Behavior Laboratory, University of California, Berkeley, No. 2), pp. 88–90; and Roger D. Abrahams, *Talking Black* (Rowley, Mass.: Newbury House Publishers, 1976), pp. 50–51. [Au.]

Of the many colorful figures that appear in black vernacular tales, perhaps only Tar Baby is as enigmatic and compelling as is that oxymoron, the Signifying Monkey.¹³ The ironic reversal of a received racist image of the black as simianlike, the Signifying Monkey, he who dwells at the margins of discourse, ever punning, ever troping, ever embodying the ambiguities of language, is our trope for repetition and revision, indeed our trope of chiasmus, repeating and reversing simultaneously as he does in one deft discursive act. If Vico and Burke, or Nietzsche, de Man, and Bloom, are correct in identifying four and six “master tropes,” then we might think of these as the “master’s tropes,” and of Signifyin(g) as the slave’s trope, the trope of tropes, as Bloom characterizes metalepsis, “a trope-reversing trope, a figure of a figure.” Signifyin(g) is a trope in which are subsumed several other rhetorical tropes, including metaphor, metonymy, synecdoche, and irony (the master tropes), and also hyperbole, litotes, and metalepsis (Bloom’s supplement to Burke). To this list we could easily add aporia, chiasmus, and catechresis, all of which are used in the ritual of Signifyin(g).

Signifyin(g), it is clear, means in black discourse modes of figuration themselves. When one Signifies, as Kimberly W. Benston puns, one “tropes-a-dope.” Indeed, the black tradition itself has its own subdivision of Signifyin(g), which we could readily identify with the figures of signification received from classical and medieval rhetoric, as Bloom has done with his “map of misprision” and which we could, appropriately enough, label a “rap of misprision.” The black rhetorical tropes, subsumed under Signifyin(g), would include marking, loud-talking, testifying, calling out (of one’s name), sounding, rapping, playing the dozens, and so on.¹⁴ [See Chart 4, p. 1580.]

¹³On Tar Baby, see Ralph Ellison, “Hidden Name and Complex Fate: A Writer’s Experience in the United States,” *Shadow and Act* (New York: Random House, 1964), p. 147; and Toni Morrison, *Tar Baby* (New York: Knopf, 1981). [Au.]

¹⁴Geneva Smitherman defines these and other black tropes, then traces their use in several black texts. Smitherman’s work, like that of Mitchell-Kernan and Abrahams, is especially significant for literary theory. See Geneva Smitherman, *Talkin and Testifyin: The Language of Black America* (Boston: Houghton Mifflin, 1977), pp. 101–67. And on signi-

The Esu figures, among the Yoruba systems of thought in Benin and Nigeria, Brazil and Cuba, Haiti and New Orleans, are divine: they are gods who function in sacred myths, as do characters in a narrative. Esu’s functional equivalent in Afro-American profane discourse is the Signifying Monkey, a figure who would seem to be distinctly Afro-American, probably derived from Cuban mythology which generally depicts Echu-Elegua¹⁵ with a monkey at his side. Unlike his Pan-African Esu cousins, the Signifying Monkey exists not primarily as a character in a narrative but rather as a vehicle for narration itself. Like Esu, however, the Signifying Monkey stands as the figure of an oral writing within black vernacular language rituals. It is from the corpus of mythological narratives that Signifyin(g) derives. The Afro-American rhetorical strategy of Signifyin(g) is a rhetorical practice that is not engaged in the game of information-giving, as Wittgenstein said of poetry. Signifyin(g) turns on the play and chain of signifiers, and not on some supposedly transcendent signified. As anthropologists demonstrate, the Signifying Monkey is often called the Signifier, he who wreaks havoc upon the Signified. One is signified upon by the signifier. He is indeed the “signifier as such,” in Kristeva’s phrase, “a presence that precedes the signification of object or emotion.”

fying as a rhetorical trope, see Smitherman, *Talkin and Testifyin*, pp. 101–67; Thomas Kochman, *Rappin’ and Stylin’ Out: Communication in Urban Black America* (Urbana: University of Illinois Press, 1972); Thomas Kochman, “Rappin’ in the Black Ghetto,” *Trans-Action* 6 (February 1969): 32; Alan Dundes, *Mother Wit from the Laughing Barrel: Readings in the Interpretation of Afro-American Folklore* (Englewood Cliffs, N.J.: Prentice-Hall, 1973), p. 310; Ethen M. Albert, “‘Rhetoric,’ ‘Logic,’ and ‘Poetics’ in Burundi: Culture Patterning of Speech Behavior,” in John J. Gumperz and Dell Hymes, eds., *The Ethnography of Communication, American Anthropologist* 66 (1964): 35–54. One example of signifying can be gleaned from the following anecdote. While writing this essay, I asked a colleague, Dwight Andrews, if he had heard of the Signifying Monkey as a child. “Why, no,” he replied intently. “I never heard of the Signifying Monkey until I came to Yale and read about him in a book.” I had been signified upon. If I had responded to Andrews, “I know what you mean: your Mama read to me from that same book the last time I was in Detroit.” I would have signified upon him in return. [Au.]

¹⁵The Cuban variant of Esu-Elegbara. [Ed.]

Alan Dundes's suggestion that the origins of Signifyin(g) could "lie in African rhetoric" is not as far-fetched as one might think. I have argued for a consideration of a line of descent for the Signifying Monkey from his Pan-African cousin, Esu-Elegbara. I have done so not because I have unearthed archeological evidence of a transmission process, but because of their functional equivalency as figures of rhetorical strategies and of interpretation. Esu, as I have attempted to show in Chapter 1, is the Yoruba figure of writing within an oral system. Like Esu, the Signifying Monkey exists, or is figured, in a densely structured discursive universe, one absolutely dependent on the play of differences. The poetry in which the Monkey's antics unfold is a signifying system: in marked contrast to the supposed transparency of normal speech, the poetry of these tales turns upon the free play of language itself, upon the displacement of meanings, precisely because it draws attention to its rhetorical structures and strategies and thereby draws attention to the force of the signifier.¹⁶

In opposition to the apparent transparency of speech, this poetry calls attention to itself as an extended linguistic sign, one composed of various forms of the signifiers peculiar to the black vernacular. Meaning, in these poems, is not proffered; it is deferred, and it is deferred because the relationship between intent and meaning, between the speech act and its comprehension, is skewed by the figures of rhetoric or signification of which these poems consist. This set of skewed relationships creates a measure of undecidability within the discourse, such that it must be interpreted or decoded by careful attention to its play of differences. Never can this interpretation be definitive, given the ambiguity at work in its rhetorical structures. The speech of the Monkey exists as a sequence of signifiers, effecting meanings through their differential relation and calling attention to itself by rhyming, repetition, and several of the rhetorical figures used in larger cultural language games. Signifyin(g) epitomizes all

¹⁶Julia Kristeva, *Desire in Language: A Semiotic Approach to Literature and Art* (New York: Columbia University Press, 1980), p. 31; Dundes, editor's note, *Mother Wit from the Laughing Barrel*, p. 310. [Au.]

of the rhetorical play in the black vernacular. Its self-consciously open rhetorical status, then, functions as a kind of writing, wherein rhetoric is the writing of speech, of oral discourse. If Esu is the figure of writing in Ifa, the Signifying Monkey is the figure of a black rhetoric in the Afro-American speech community. He exists to embody the figures of speech characteristic to the black vernacular. He is the principle of self-consciousness in the black vernacular, the meta-figure itself. Given the play of doubles at work in the black appropriation of the English-language term that denotes relations of meaning, the Signifying Monkey and his language of Signifyin(g) are extraordinary conventions, with Signification standing as the term for black rhetoric, the obscuring of apparent meaning.

Scholars have for some time commented on the peculiar use of the word *Signifyin(g)* in black discourse. Though sharing some connotations with the standard English-language word, *Signifyin(g)* has rather unique definitions in black discourse. While we shall consider these definitions later in this chapter, it is useful to look briefly at one suggested by Robert D. Abrahams:

Signifying seems to be a Negro term, in use if not in origin. It can mean any of a number of things; in the case of the toast about the signifying monkey, it certainly refers to the trickster's ability to talk with great innuendo, to carp, cajole, needle, and lie. It can mean in other instances the propensity to talk around a subject, never quite coming to the point. It can mean making fun of a person or situation. Also it can denote speaking with the hands and eyes, and in this respect encompasses a whole complex of expressions and gestures. Thus it is signifying to stir up a fight between neighbors by telling stories; it is signifying to make fun of a policeman by parodying his motions behind his back; it is signifying to ask for a piece of cake by saying, "my brother needs a piece a cake."¹⁷

¹⁷Roger D. Abrahams, *Deep Down in the Jungle: Negro Narrative Folklore from the Streets of Philadelphia* (Chicago: Aldine Publishing, 1970), pp. 51-52, 66-67, 264. Abrahams's awareness of the need to define uniquely black significations is exemplary. As early as 1964, when he published the first edition of *Deep Down in the Jungle*, he saw fit to add a glossary, as an appendix of "Unusual Terms and Expressions," a title which unfortunately suggests the social scientist's apologia. [Au.]

Essentially, Abrahams continues, Signifyin(g) is a “*technique* of indirect argument or persuasion,” “a language of implication,” “to imply, goad, beg, boast, by *indirect* verbal or gestural means.” “The name ‘signifying,’” he concludes, “shows the monkey to be a trickster, signifying being the language of trickery, that set of words or gestures achieving Hamlet’s ‘direction through indirection.’” The Monkey, in short, is not only a master of technique, as Abrahams concludes; he *is* technique, or style, or the literariness of literary language; he is the great Signifier. In this sense, one does not signify something; rather, one signifies in *some way*.¹⁸

The Signifying Monkey poems, like the *ese* of the Yoruba *Odu*,¹⁹ reward careful explication; this sort of extensive practical criticism, however, is outside the scope of this book, as fascinating as it might be. The stanzaic form of this poetry can vary a great deal, as is readily apparent from the selections listed in this book’s appendix. The most common structure is the rhyming couplet in an a-a-b-b pattern. Even within the same poem, however, this pattern can be modified, as in the stanzas cited below, where an a-a-b-c-b and an a-b-c-b pattern obtain (followed in the latter example by an a-b-a concluding “moral”). Rhyming is extraordinarily important in the production of the humorous effect that these poems have and has become the signal indication of expertise among the street poets who narrate them. The rhythm of the poems is also crucial to the desired effect, an effect in part reinforced by their quasimusical nature of delivery.

The Monkey tales generally have been recorded from male poets, in predominantly male settings such as barrooms, pool halls, and street corners. Accordingly, given their nature as rituals of insult and naming, recorded versions have a phallogocentric bias. As we shall see below, however, Signifyin(g) itself can be, and is, undertaken with equal facility and effect by women as well as men.²⁰

Whereas only a relatively small number of people are accomplished narrators of Signifying Monkey tales, a remarkably large number of Afro-Americans are familiar with, and practice, modes of Signifyin(g), defined in this instance as the rubric for various sorts of playful language games, some aimed at reconstituting the subject while others are aimed at demystifying a subject. The poems are of interest to my argument primarily in three ways: as the source of the rhetorical act of Signification, as examples of the black tropes subsumed within the trope of Signifyin(g), and, crucially, as evidence for the valorization of the signifier. One of these subsumed tropes is concerned with repetition and difference; it is the trope, that of naming, which I have drawn upon as a metaphor for black intertextuality and, therefore, for formal literary history. Before discussing this process of revision, however, it is useful to demonstrate the formulaic structure of the Monkey tales and then to compare several attempts by linguists to define the nature and function of Signifyin(g). While other scholars have interpreted the Monkey tales against the binary opposition between black and white in American society, to do so is to ignore the *trinary* forces of the Monkey, the Lion, and the Elephant. To read the Monkey tales as a simple allegory of the black’s political oppression is to ignore the hulking presence of the Elephant, the crucial third term of the depicted action. To note this is not to argue that the tales are not allegorical or that their import is not political. Rather, this is to note that to reduce such complex structures of meaning to a simple two-term opposition (white versus black) is to fail to account for the strength of the Elephant.

There are many versions of the toasts of the Signifying Monkey, most of which commence with a variant of the following formulaic lines:

Deep down in the jungle so they say
 There’s a signifying monkey down the way
 There hadn’t been no disturbin’ in the jungle for
 quite a bit,
 For up jumped the monkey in the tree one day and
 laughed
 “I guess I’ll start some shit.”²¹

²¹Abrahams, p. 113. In the second line of the stanza, “motherfucker” is often substituted for “monkey.” [Au.]

¹⁸Ibid., pp. 66–67, 264. (Emphasis added.) [Au.]

¹⁹The *Odu Ifa* are the 256 cryptic verses given by the god Ifa. These are arranged into *ese*, the poems uttered by the priests in a divination session. [Ed.]

²⁰Gloria Hall is a well-known professional storyteller, and she includes in her repertoire the Signifying Monkey poems. [Au.]

Endings, too, tend toward the formulaic, as in the following:

“Monkey,” said the Lion
Beat to his unbooted knees,
“You and your signifying children
Better stay up in the trees.”
Which is why today
Monkey does his signifying
A-way-up out of the way.²²

In the narrative poems, the Signifying Monkey invariably repeats to his friend, the Lion, some insult purportedly generated by their mutual friend, the Elephant. The Monkey, however, speaks figuratively. The Lion, indignant and outraged, demands an apology of the Elephant, who refuses and then trounces the Lion. The Lion, realizing that his mistake was to take the Monkey literally, returns to trounce the Monkey. It is this relationship between the literal and the figurative, and the dire consequences of their confusion, which is the most striking repeated element of these tales. The Monkey’s trick depends on the Lion’s inability to mediate between these two poles of signification, of meaning. There is a profound lesson about reading here. While we cannot undertake a full reading of the poetry of the Signifying Monkey, we can, however, identify the implications for black vernacular discourse that are encoded in this poetic diction.

Signifyin(g) as a rhetorical strategy emanates directly from the Signifying Monkey tales. The relationship between these poems and the related, but independent, mode of formal language use must be made clear. The action represented in Monkey tales turns upon the action of three stock characters—the Monkey, the Lion, and the Elephant—who are bound together in a trinary relationship. The Monkey—a trickster figure, like Esu, who is full of guile, who tells lies,²³ and who is a rhetorical genius—is intent on demystifying the Lion’s self-imposed status as King of the Jungle. The Monkey, clearly, is no match for the Lion’s physical prowess: the Elephant is,

²²“The Signifying Monkey,” *Book of Negro Folklore*, ed. Langston Hughes and Arna Bontemps (New York: Dodd, Mead, 1958), pp. 365–66. [Au.]

²³*Lies* is a traditional Afro-American word for figurative discourse, tales, or stories. [Au.]

however. The Monkey’s task, then, is to trick the Lion into tangling with the Elephant, who is the true King of the Jungle for everyone else in the animal kingdom. This the Monkey does with a rhetorical trick, a trick of mediation. Indeed, the Monkey is a term of (anti)mediation, as are all trickster figures, between two forces he seeks to oppose for his own contentious purposes, and then to reconcile.

The Monkey’s trick of mediation—or, more properly, antimeditation—is a play on language use. He succeeds in reversing the Lion’s status by supposedly repeating a series of insults purportedly uttered by the Elephant about the Lion’s closest relatives (his wife, his “mama,” his “grandmama, too!”). These intimations of sexual use, abuse, and violation constitute one well-known and commonly used mode of Signifyin(g).²⁴ The Lion, who perceives his shaky, self-imposed status as having been challenged, rushes off in outrage to find the Elephant so that he might redress his grievances and preserve appearances. The self-confident but unassuming Elephant, after politely suggesting to the Lion that he must be mistaken, proceeds to trounce the Lion firmly. The Lion, clearly defeated and dethroned from his self-claimed title, returns to find the Monkey so that he can at the very least exact some sort of physical satisfaction and thereby restore his image somewhat as the impregnable fortress-in-waiting that he so urgently wishes to be. The Monkey, absolutely ecstatic at the success of his deception, commences to Signify upon the Lion, as in the following exchange:

Now the Lion come back more dead than alive,
that’s when the Monkey started some more of his
old signifying.

He said, “King of the Jungles, ain’t you a bitch,
you look like someone with the seven-year-itch.”

He said, “When you left [me earlier in the narra-
tive] the lightning’ flashed and the bells rung,
you look like something been damn near hung.”

He said, “Whup! Motherfucker, don’t you roar,
I’ll jump down on the ground and beat your funky
ass some more.”

Say, “While I’m swinging around in my tree,”
say, “I ought to swing over your chickenshit head
and pee.”

²⁴Also known as “the dozens.” [Au.]

Say, "Everytime me and my old lady be tryin' to get a little bit, here you come down through the jungle with that old 'Hi Ho' shit."²⁵

This is a salient example of Signifyin(g), wherein a verbal fusilade of insults spews forth in a structure of ritual rhetorical exchanges.

What happens next is also fascinating. The Monkey, at this point in the discourse deliriously pleased with himself, slips and falls to the ground:

Now the little old Monkey was dancing all around his feet slipped and his ass must have hit the ground.

The startled Monkey, now vulnerable, seeks to repair his relationship with the Lion in the most urgent manner. So he begs initially:

Like a streak of lightning and a bolt of white heat, the Lion was on the Monkey with all four feet. Monkey looks up with tears in his eyes, he says, "I'm sorry, brother Lion," say, "I apologize."

The Lion says, "Apologize, shit," say "I'm gonna stop you from your signifyin'." (p. 165)

The Lion now turns on the Monkey (only, incidentally, to be tricked rhetorically again), not because he has been severely beaten but because he has been beaten, then Signified upon. Another text substitutes the following direct speech of the Lion for that quoted immediately above:

[The Lion say], "I'm not gonna whip your ass 'cause that Elephant whipped mine, I'm gonna whip your ass for signifyin'." (p. 168)

The Monkey's trick of Signification has been to convince the hapless Lion that he has spoken literally, when all along he has spoken figuratively. The Lion, though slow-witted enough to repeat his misreading through the eternity of discourse, realizes that his status has been deflated, not because of the Elephant's brutal self-defense but because he fundamentally misunderstood the sta-

tus of the Monkey's statements. As still another poem represents this moment of clarity:

Said, "Monkey, I'm not kicking your ass for lyin', I'm kicking your hairy ass for signifyin'." (p. 172)²⁶

The black term *to lie*, as J. L. Dillard, Sterling A. Brown, and Zora Neale Hurston amply demonstrate, signifies tale-telling and constitutes a signal form of Signifyin(g).²⁷ But it is the naming ritual, in which the Monkey speaks aloud his editorial recapitulation of the previous events and their import, which even the dense Lion recognizes to be his most crucial threat, and against which he must defend himself, especially since the Lion returns to the Monkey's tree initially, at least, to impose *his* interpretation on his interchange with the Elephant:

Now the Lion looked up to the Monkey, "You know I didn't get beat."

He said, "You're a lyin' motherfucker, I had a ring-side seat."

The Lion looked up out of his one good eye, said, "Lord, let that skinny bastard fall out of that tree before I die." (p. 172)

Which he, of course, does, only (in most cases) to escape once again, to return to Signify on another day:

He said, "You might as well stop, there ain't no use tryin'

because no motherfucker is gonna stop me from signifyin'." (p. 163)

While the insult aspect of the Monkey's discourse is important to the tales, linguists have often failed to recognize that insult is not at all central to the nature of Signifyin(g); it is merely one mode of a rhetorical strategy that has several other modes, all of which share the use of troping. They have, in other words, mistaken the trees for the forest. For Signifyin(g) constitutes

²⁶A clear example of paradigmatic contiguity is the addition of the metonym "hairy" as an adjective for "ass" in the second quoted line. [Au.]

²⁷J. L. Dillard, *Lexicon of Black English* (New York: Continuum, 1977), pp. 130-41; Zora Neale Hurston, *Mules and Men* (Philadelphia: J. B. Lippincott, 1935), p. 37; Sterling A. Brown, "Folk Literature," in *The Negro Caravan* (1941; New York: Arno, 1969), p. 433. [Au.]

all of the language games, the figurative substitutions, the free associations held in abeyance by Lacan's or Saussure's paradigmatic axis, which disturb the seemingly coherent linearity of the syntagmatic chain of signifiers, in a way analogous to Freud's notion of how the unconscious relates to the conscious. The black vernacular trope of Signifyin(g) exists on this vertical axis, wherein the materiality of the signifier (the use of words as things, in Freud's terms of the discourse of the unconscious) not only ceases to be disguised but comes to bear prominently as the dominant mode of discourse.

I do not cite Freud idly here. *Jokes and Their Relation to the Unconscious* and *The Interpretation of Dreams* have informed my reading of Signifyin(g), just as have Lacan's reading of Freud and Saussure, and Derrida's emphasis on the "graphematic" aspect of even oral discourse. Just as jokes often draw upon the sounds of words rather than their meanings, so do the poetry of the Signifying Monkey and his language of Signifyin(g). Directing, or redirecting, attention from the semantic to the rhetorical level defines the relationship, as we have seen, between signification and Signification. It is this redirection that allows us to bring the repressed meanings of a word, the meanings that lie in wait on the paradigmatic axis of discourse, to bear upon the syntagmatic axis. This redirection toward sound, without regard for the scrambling of sense that it entails, defines what is meant by the materiality of the signifier, its thingness. As Freud explained, there is nothing necessarily infantile about this, although infants, of course, engage in such paradigmatic substitutions gleefully. Similarly, there is absolutely nothing infantile about Signifyin(g) either, except perhaps that we learn to use language in this way in adolescence, despite the strangely compulsive repetition of this adjective as a pejorative in the writings of linguists about Signifyin(g).

If Freud's analysis of the joke mechanism is a useful analogue for Signifyin(g), then so too is his analysis of the "dream-work," which by now is so familiar as not to warrant summary here. The Signifying Monkey poems can usefully be thought of as quasi-dreams, or daydreams, dream narratives in which monkeys, lions, and ele-

phants manifest their feelings in direct speech. Animals, of course, do not speak, except in dreams or in mythological discourse. As Freud puts it in *The Interpretation of Dreams*,

this symbolism is not peculiar to dreams, but is characteristic of unconscious ideation, in particular among the people, and it is to be found in *folklore*, and in popular myths, legends, linguistic idioms, proverbial wisdom and current jokes, to a *more complete extent* than in dreams.²⁸ (emphasis added)

The Signifying Monkey tales, in this sense, can be thought of as versions of daydreams, the Daydream of the Black Other, chiasitic fantasies of reversal of power relationships. One of the traditional Signifying poems names this relationship explicitly:

The Monkey laid up in a tree and he thought up a scheme,
and thought he'd try one of his fantastic dreams.
(p. 167)

To dream the fantastic is to dream the dream of the Other.

Because these tales originated in slavery, we do not have to seek very far to find typological analogues for these three terms of an allegorical structure. Since to do so, inescapably, is to be reductive, is to redirect attention away from the materiality of the signifier toward its supposed signified, I shall avoid repeating what other scholars have done at such great length. For the importance of the Signifying Monkey poems is their repeated stress on the sheer materiality, and the willful play, of the signifier itself. . . .

III

Signifyin(g): Definitions

Signifyin(g) is so fundamentally black, that is, it is such a familiar rhetorical practice, that one encounters the great resistance of inertia when writing about it. By inertia I am thinking here of the difficulty of rendering the implications of a concept that is so shared in one's culture as to have long ago become second nature to its users. The

²⁸Sigmund Freud, *The Interpretation of Dreams*, trans. James Strachey (1953; New York: Avon, 1965), p. 386. [Au.]

critic is bound to encounter Ralph Ellison's "Little Man at Chehaw Station."²⁹

Who is he? Ellison tells a marvelous story about himself when he was a student of music at Tuskegee. Having failed at an attempt to compensate for a lack of practice with a virtuoso style of performance, Ellison had sought some solace from the brilliant Hazel Harrison, one of his professors, with whom he had a sustained personal relationship. Instead of solace, however, his friend and mentor greeted his solicitation with a riddle. The exchange is relevant here:

"All right," she said, "you must *always* play your best, even if it's only in the waiting room at Chehaw Station, because in this country there'll always be a little man hidden behind the stove."

"A what?"

She nodded. "That's right," she said, "there'll always be the little man whom you don't expect, and he'll know the *music*, and the *tradition*, and the standards of *musicianship* required for whatever you set out to perform!"³⁰

This little man, who appears at such out-of-the-way places as the Chehaw Railroad Station, is, of course, a trickster figure surfacing when we least expect him, at a crossroads of destiny. This particular little man evokes Esu, the little man whose earthly dwelling place is the crossroads, as indicated in the following excerpts from a Yoruba poem:

Latopa, Esu little man
Latopa, Esu little man

Short, diminutive man
Tiny, little man.
He uses both hands to sniffle!
We call him master
He who sacrifices without inviting the manumitter
Will find his sacrifice unacceptable
Manumitter, I call on you.
Man by the roadside, bear our sacrifice to heaven
directly

²⁹Houston A. Baker's reading of Ellison's essay suggested the alternative reading that I am giving it here. See Baker, *Blues, Ideology and Afro-American Literature: A Vernacular Theory*, pp. 12–13, 64, 66. [Au.]

³⁰Ralph Ellison, "The Little Man at Chehaw Station," *The American Scholar* (winter 1977–78): 26. [Au.]

Master, and son of the owner of Idere
Who came from Idere to found the town,
The son of the energetic small fellow
The little man who cleans the gates for the masquerade.
Elderly spirit deity!³¹

The "little man" or woman is bound to surface when the literary critic begins to translate a signal concept from the black vernacular milieu into the discourse of critical theory. While critics write for writers and other critics, they also write—in this instance—for "little" men and women who dwell at the crossroads.

The critic of comparative black literature also dwells at a sort of crossroads, a discursive crossroads at which two languages meet, be these languages Yoruba and English, or Spanish and French, or even (perhaps especially) the black vernacular and standard English. This sort of critic would seem, like Esu, to live at the intersection of these crossroads. When writing a book that lifts one concept from two discrete discursive realms, only to compare them, the role of the critic as the trickster of discourse seems obvious. The concept of Signification is such an instance.

What Ellison's professor did to him was a salient example of Signifyin(g). His professor, subtle and loving as she must have been, Signified upon her young protégé so that he would never allow himself to succumb to the lure of the temptation to skip the necessary gates placed in the apprentice's path, gates which must somehow be opened or hurdled. Ellison was Signified upon because his dilemma was resolved through an allegory. This mode of rhetorical indirection, as Roger D. Abrahams and Claudia Mitchell-Kernan have defined it, is a signal aspect of Signifyin(g). Despite its highly motivated, often phallogocentric orientation, then, Signifyin(g), it is clear, can mean any number of modes of rhetorical play.

An article printed in the *New York Times* on April 17, 1983, entitled "Test on Street Language Says It's Not Grant in That Tomb," affords an

³¹*Oriki Esu*, quoted by Ayodele Ogundipe, *Esu Elegbara, the Yoruba God of Chance and Uncertainty: A Study in Yoruba Mythology*, 2 vols. Ph.D. dissertation, Indiana University, 1978, Vol. II, pp. 12, 77. [Au.]

opportunity to expand somewhat on received definitions of Signifyin(g). The test referred to in the story's title is one created by "some high school students" in Winston-Salem, North Carolina, "who were dismayed at [McGraw-Hill's] own standardized tests." The examination, a multiple-choice intelligence test, is entitled "The In Your Face Test of No Certain Skills." It was created shortly after the students told their teacher, Rob Slater, that "they had trouble relating to a standardized achievement test." As Slater explains, "They were taking one of these tests one day and one of my students looked up and asked what the reason for the test was, because all it did to him was make him feel academically inferior. After the test was over," Slater concludes, "I asked them if they wanted to get even. They took it from there."³²

The students devised a test to measure vocabulary mastery in street language. They sent ten copies to McGraw-Hill, where eight employees took the test, only to score C's and D's. One of the test's questions, to which the *Times's* article title refers, is an example of the most familiar mode of Signifyin(g). The question reads, "Who is buried in Grant's tomb?" The proper response to this question is, "Your mama." It is difficult to explain why this response is so funny and why it is an example of Signifyin(g). "Your mama" jokes abound in black discourse, all the way from the field and the street to Langston Hughes's highly accomplished volume of poems, *Ask Your Mama*, from which an epigraph to this chapter has been taken. The presence in the students' test of this centuries-old black joke represents an inscription of the test's Signifyin(g) nature, because it serves as an echo of the significance of the test's title, "The In Your Face Test of No Certain Skills." The title Signifies in two ways. First, "In your face" is a standard Signifyin(g) retort, meaning that by which you intend to confine (or define) me I shall return to you squarely in your face. And second, the title is a parody (repetition motivated to underscore irony) of test titles such as "The Iowa Test of Basic Skills," which my generation was made to suffer through from the fourth grade through high school. The test it-

³²"Test on Street Language Says It's Not Grant in That Tomb," *New York Times*, April 17, 1983, p. 30. [Au.]

self, then, is an extended Signifyin(g) sign of repetition and reversal, a chiasmic slaying at the crossroads where two discursive units meet. As the *Times* article observes, "The students' point was that they did not look at things in the same way as the people at McGraw-Hill. The results of the 'In Your Face' test clearly show that McGraw-Hill and the ninth-graders at Hill High *do not speak the same language.*"³³

The language of blackness encodes and names its sense of independence through a rhetorical process that we might think of as the Signifyin(g) black difference. As early as the eighteenth century, commentators recorded black usages of Signification. Nicholas Cresswell, writing between 1774 and 1777, made the following entry in his journal: "In [the blacks'] songs they generally relate the usage they have received from their Masters or Mistresses in a very satirical stile [*sic*] and manner."³⁴ Cresswell strikes at the heart of the matter when he makes explicit "the usage" that the black slaves "have received," for black people frequently "enounce" their sense of difference by repetition with a signal difference. The eighteenth century abounds in comments from philosophers such as David Hume in "Of National Characters" and statesmen such as Thomas Jefferson in *Notes on the State of Virginia*, who argued that blacks were "imitative" rather than "creative." All along, however, black people were merely Signifyin(g) through a motivated repetition.

Frederick Douglass, a masterful Signifier himself, discusses this use of troping in his *Narrative* of 1845. Douglass, writing some seventy years after Cresswell, was an even more acute observer. Writing about the genesis of the lyrics of black song, Douglass noted the crucial role of the signifier in the determination of meaning:

[The slaves] would compose and sing as they went along, consulting neither time nor tune. The thought that came up, came out—if not in the *word*, in the *sound*;—and as frequently in the one

³³Langston Hughes, *Ask Your Mama: 12 Moods for Jazz* (New York: Knopf, 1971), p. 8; "Test on Street Language," p. 30. (Emphasis added.) [Au.]

³⁴*Journal of Nicholas Cresswell, 1774-1777*, ed. L. MacVeigh (New York: Dial Press, 1924), pp. 17-19. [Au.]

as in the other . . . they would sing, as a chorus, to words which to many seem *unmeaning jargon*, but which, nevertheless, were *full of meaning* to themselves.³⁵

Meaning, Douglass writes, was as determined by sound as by sense, whereby phonetic substitutions determined the shape of the songs. Moreover, the neologisms that Douglass's friends created, "unmeaning jargon" to standard English speakers, were "full of meaning" to the blacks, who were literally defining themselves in language, just as did Douglass and hundreds of other slave narrators. This, of course, is an example of both sorts of signification, black vernacular and standard English. Douglass continues his discussion by maintaining that his fellow slaves "would sing the most pathetic sentiment in the most rapturous tone, and the most rapturous sentiment in the most pathetic tone," a set of oppositions which led to the song's misreading by nonslaves. As Douglass admits,

I have often been utterly astonished, since I came to the north, to find persons who could speak of the singing, among slaves, as evidence of their contentment and happiness. It is impossible to conceive of a greater mistake.³⁶

This great mistake of interpretation occurred because the blacks were using antiphonal structures to reverse their apparent meaning, as a mode of encoding for self-preservation. Whereas black people under Cresswell's gaze Signified openly, those Douglass knew Signified protectively, leading to the misreading against which Douglass rails. As Douglass writes in his second autobiography, however, blacks often Signified directly, as in the following lyrics:

We raise de wheat,
Dey gib us de corn;
We bake de bread,
Dey gib us de cruss;
We sif de meal,
Dey gib us de huss;
We peal de meat,

³⁵Frederick Douglass, *Narrative of the Life of Frederick Douglass, An American Slave, Written by Himself* (1845; New York: Doubleday, 1963), pp. 13–14. (Emphasis added.) [Au.]

³⁶*Ibid.*, pp. 13, 15. [Au.]

Dey gib us de skin
And dat's de way
Dey takes us in.³⁷

As William Faux wrote in 1819, slaves commonly used lyrics to Signify upon their oppressors: "Their verse was their own, and abounding either in praise or satire intended for kind and unkind masters."³⁸

I cite these early references to motivated language use only to emphasize that black people have been Signifyin(g), without explicitly calling it that, since slavery, as we might expect. One ex-slave, Wash Wilson, in an interview he granted a member of the Federal Writers Project in the 1930s, implies that "sig'fication" was an especial term and practice for the slaves:

When de niggers go round singin' "Steal Away to Jesus," dat mean dere gwine be a 'ligious meetin' dat night. Dat de *sig'fication* of a meetin'. De masters 'fore and after freedom didn't like dem 'ligious meetin's, so us natcherly slips off at night, down in de bottoms or somewheres. Sometimes us sing and pray all night.³⁹

This usage, while close to its standard English shadow, recalls the sense of Signification as an indirect form of communication, as a troping. The report of Wilson's usage overlaps with Zora Neale Hurston's definition of *signify* in *Mules and Men*, published in 1935. These two usages of the words are among the earliest recorded; Wilson's usage argues for an origin of "sig'fication" in slavery, as does the allegorical structure of the Monkey poems and the nature of their figuration, both of which suggest a nineteenth-century provenance. I shall defer a fuller examination of Hurston's sense of Signification to Chapter 5. I wish to explore, in the remainder of this section of this chapter, received definitions of Signifyin(g) before elaborating my own use of this practice in literary criticism.

We can gain some appreciation of the complexity of Signifyin(g) by examining various definitions of the concept. Dictionary definitions give us an idea of how unstable the concepts are that can be signified by Signifyin(g). Clarence Major's *Dictionary of Afro-American Slang* says that "Signify" is the "same as the *Dirty Dozens*; to censure in 12 or fewer statements," and advises the reader to see "Cap on." The "Dirty Dozens" he defines as "a very elaborate game traditionally played by black boys, in which the participants insult each other's relatives, especially their mothers. The object of the game is to test emotional strength. The first person to give in to anger is the loser." To "Cap on" is "to censure," in the manner of the dozens. For Major, then, to Signify is to be engaged in a highly motivated rhetorical act, aimed at figurative, ritual insult.⁴⁰

Hermese E. Roberts, writing in *The Third Ear: A Black Glossary*, combines Major's emphasis on insult and Roger D. Abrahams's emphasis on implication. Roberts defines "signifying," or "siggin(g)," as "language behavior that makes direct or indirect implications of baiting or boasting, the essence of which is making fun of another's appearance, relatives, or situation." For Roberts, then, a signal aspect of Signifyin(g) is "making fun of" as a mode of "baiting" or "boasting." It is curious to me how very many definitions of Signifyin(g) share this stress on what we might think of as the black person's symbolic aggression, enacted in language, rather than upon the play of language itself, the metarhetorical structures in evidence. "Making fun of" is a long way from "making fun," and it is the latter that defines Signifyin(g).⁴¹

Roberts lists as subcategories of Signifyin(g) the following figures: "joning, playing the dozens, screaming on, sounding." Under "joning" and "sounding," Roberts asks the reader to "See signifying." "Screaming on" is defined as "telling someone off; i.e., to get on someone's case," "case" meaning among other things "an imagi-

nary region of the mind in which is centered one's vulnerable points, eccentricities, and sensitivities." "Screaming on" also means "embarrassing someone publicly." "Playing the dozens" Roberts defines as "making derogatory, often obscene, remarks about another's mother, parents, or family members. ('Yo' mama' is an expression used as retribution for previous vituperation.)" Roberts, in other words, consistently groups Signifyin(g) under those tropes of contention wherein aggression and conflict predominate. Despite this refusal to transcend surface meaning to define its latent meaning, Roberts's decision to group joning, playing the dozens, screaming on, and sounding as synonyms of Signifyin(g) is exemplary for suggesting that Signifyin(g) is the trope of tropes in the black vernacular.

Mezz Mezzrow, the well-known jazz musician, defines "Signify" in the glossary of his autobiography, *Really the Blues*, as "hint, to put on an act, boast, make a gesture." In the body of his text, however, Mezzrow implicitly defines signifying as the homonymic pun. In an episode in which some black people in a bar let some white gangsters know that their identity as murderers is common knowledge, the blacks, apparently describing a musical performance, use homonyms such as "killer" and "murder" to Signify upon the criminals. As Mezzrow describes the event:

He could have been talking about the music, but everybody in the room knew different. Right quick another cat spoke up real loud, saying, "That's murder man, really murder," and his eyes were *signifying* too. All these gunmen began to shift from foot to foot, fixing their ties and scratching their noses, faces red and Adam's apples jumping. Before we knew it they had gulped their drinks and beat it out the door, saying good-bye to the bartender with their hats way down over their eyebrows and their eyes gunning the ground. That's what Harlem thought of the white underworld.⁴²

Signifying here connotes the play of language—both spoken and body language—drawn upon to name something figuratively.

Mezzrow's definitions are both perceptive and

⁴⁰Clarence Major, *Dictionary of Afro-American Slang* (New York: International Publishers, 1970), pp. 104, 46, 34. [Au.]

⁴¹Hermese E. Roberts, *The Third Ear: A Black Glossary*, entry on signifying. [Au.]

⁴²Mezz Mezzrow and Bernard Wolfe, *Really the Blues* (New York: Random House, 1946), pp. 378, 230. [Au.]

subtle. Signifyin(g) for him is one mode of “verbal horseplay,” designed to train the subject “to think faster and be more nimble-witted.” Mezzrow, then, is able to penetrate the content of this black verbal horseplay to analyze the significance of the rhetorical structures that transcend any fixed form of Signifyin(g), such as the verbal insult rituals called the dozens. Indeed, Mezzrow was one of the first commentators to recognize that Signifyin(g) as a structure of performance could apply equally to verbal texts and musical texts. As he summarizes:

Through all these friendly but lively competitions you could see the Negro’s appreciation of real talent and merit, his demand for fair play, and his ardor for the best man wins and don’t you come around here with no jive. Boasting doesn’t cut any ice; if you think you’ve got something, don’t waste time talking yourself up, go to work and prove it. If you have the stuff the other cats will recognize it frankly, with solid admiration. That’s especially true in the field of music, which has a double importance to the Negro because that’s where he really shines, where his inventiveness and artistry come through in full force. The colored boys prove their musical talents in those competitions called cutting contests, and there it really is the best man wins, because the Negro audience is extra critical when it comes to music and won’t accept anything second-rate. These cutting contests are just a musical version of the verbal duels. They’re staged to see which performer can snag and cap all the others *musically*. And by the way, these battles have helped to produce some of the race’s greatest musicians.⁴³

Signifyin(g) for Mezzrow is not what is played or said; it is rather a form of rhetorical training, an on-the-streets exercise in the use of troping, in which the play is the thing—not specifically what is said, but how. All definitions of Signifyin(g) that do not distinguish between manner and matter succumb, like the Lion, to serious misreading.

Malachi Andrews and Paul T. Owens, in *Black Language*, acutely recognize two crucial aspects of Signifyin(g): first, that the signifier invents a myth to commence the ritual and, second, that in the Monkey tales at least, trinary structure

prevails over binary structure: “To Signify,” they write,

is to tease, to provoke into anger. The *signifier* creates a myth about someone and tells him a *third* person started it. The *signified* person is aroused and seeks that person. . . . Signifying is completely successful when the *signifier* convinces the chump he is working on, that what he is saying is true and that it gets him angered to wrath.⁴⁴

Andrews and Owens’s definition sticks fairly closely to the action of the Signifying Monkey tales. While Signifyin(g) can, and indeed does, occur between two people, the three terms of the traditional mythic structure serve to dispel a simple relation of identity between the allegorical figures of the poem and the binary political relationship, outside the text, between black and white. The third term both critiques the idea of the binary opposition and demonstrates that Signifyin(g) itself encompasses a larger domain than merely the political. It is a game of language, independent of reaction to white racism or even to collective black wish-fulfillment vis-à-vis white racism. I cannot stress too much the import of the presence of this third term, or in Hermese E. Roberts’s extraordinarily suggestive phrase, “The Third Ear,” an intraracial ear through which encoded vernacular language is deciphered.

J. L. Dillard, who along with William Labov and William A. Stewart is one of the most sensitive observers of black language use, defines Signifyin(g) as “a familiar discourse device from the inner city, [which] tends to mean ‘communicating (often an obscene or ridiculing message) by indirection.’”⁴⁵ Dillard here is elaborating somewhat upon Zora Neale Hurston’s gloss printed in *Mules and Men*, where she writes that to signify is to “show off.”⁴⁶ This definition seems to be an anomalous one, unless we supply Hurston’s missing, or implied, terms: to show off *with*

⁴⁴Malachi Andrews and Paul T. Owens, *Black Language* (West Los Angeles: Seymour-Smith, 1973), p. 95. (Emphasis added.) See also their entry on “Wolf,” p. 106. [Au.]

⁴⁵Dillard, *Lexicon of Black English*, pp. 154, 177. [Au.]

⁴⁶Hurston, *Mules and Men*, p. 161. See also C. Merton Babcock, “A Word List from Zora Neale Hurston,” *Publications of the American Dialect Society*, No. 40 (University, Ala.: University of Alabama Press, 1963), pp. 1–12. I analyze Hurston’s uses of Signifyin(g) in Chapter 5. [Au.]

⁴³*Ibid.*, pp. 230–31. [Au.]

language use. Dillard, however, is more concerned with the dozens than he is with Signifyin(g). In an especially perceptive chapter entitled “Discourse Distribution and Semantic Difference in Homophonous Items,” Dillard ignores the homophone *signify* but suggests that so-called inner-city verbal rituals, such as the dozens, could well be contemporary revisions of “the ‘lies’ told by Florida Blacks studied by Hurston and the Anansi stories of the southern plantations,” sans the “sex and scatology.” “Put those elements back,” Dillard continues, “and you have something like the rhymed ‘toasts’ of the inner city.”⁴⁷ The “toasts,” as Bruce Jackson has shown, include among their types the Signifying Monkey tales.⁴⁸ There can be little doubt that Signifyin(g) was found by linguists in the black urban neighborhoods in the fifties and sixties because black people from the South migrated there and passed the tradition along to subsequent generations.

We can see the extremes of dictionary and glossary definitions of *Signify* in two final examples, one taken from *The Psychology of Black Language*, by Jim Haskins and Hugh F. Butts, and the other from the *Dictionary of American Slang*, compiled by Harold Wentworth and Stuart Berg Flexner. Haskins and Butts, in a glossary appended to their text, define “to signify” as “To berate, degrade.”⁴⁹ In their text, however, they define “signifying” as “a more humane form of verbal bantering” than the dozens, admitting, however, that Signifyin(g) “has many meanings,” including meanings that contradict their own glossary listing: “It is, again, the clever and humorous use of words, but it can be used for many purposes—‘putting down’ another person, making another person feel better, or simply expressing one’s feelings.”⁵⁰ Haskins and Butts’s longer definition seems to contradict their glossary listing—unless we recall that Signifyin(g) can mean all of these meanings, and more, precisely be-

⁴⁷Dillard, *Lexicon of Black English*, p. 134. [Au.]

⁵⁰*Ibid.*, p. 51. [Au.]

cause so many black tropes are subsumed within it. Signifyin(g) does not, on the other hand, mean “To pretend to have knowledge; to pretend to be hip, esp. when such pretensions cause one to trifle with an important matter,” as Wentworth and Flexner would have it.⁵¹ Indeed, this definition sounds like a classic black Signification, in which a black informant, as it were, Signified upon either Wentworth or Flexner, or lexicographers in general who “pretend to have knowledge.”

There are several other dictionary definitions that I could cite here. My intention, however, has been to suggest the various ways in which Signifyin(g) is (mis)understood, primarily because few scholars have succeeded in defining it as a full concept. Rather, they often have taken the part—one of its several tropes—as its whole. The delightfully “dirty” lines of the dozens seem to have generated far more interest from scholars than has Signifyin(g), and perhaps far more heat than light. The dozens are an especially compelling subset of Signifyin(g), and its name quite probably derives from an eighteenth-century meaning of the verb *dozen*, “to stun, stupefy, daze,” in the black sense, through language.⁵² Let us examine more substantive definitions of Signifyin(g) by H. Rap Brown, Roger D. Abrahams, Thomas Kochman, Claudia Mitchell-Kernan, Geneva Smitherman, and Ralph Ellison. . . .

H. Rap Brown earned his byname because he was a master of black vernacular rhetorical games and their attendant well-defined rhetorical strategies. Brown’s understanding of Signifyin(g) is unsurpassed by that of any scholar. In the second chapter of his autobiography, *Die Nigger Die!*, Brown represents the scenes of instruction by which he received his byname. “I learned to talk in the street,” he writes, “not from reading about Dick and Jane going to the zoo and all that simple shit.” Rather, Brown continues, “we exercised our minds,” not by studying arithmetic but “by playing the Dozens”:

⁵¹Harold Wentworth and Stuart Berg Flexner, comp. and ed., *Dictionary of American Slang*, Second Supplemental Edition (New York: Thomas Y. Crowell, 1975), p. 477. [Au.]

⁵²Peter Tamary, quoted in Robert S. Gold, *Jazz Talk* (New York: Bobbs-Merrill, 1975), p. 76. [Au.]

I fucked your mama
Till she went blind.
Her breath smells bad,
But she sure can grind.

I fucked your mama
For a solid hour.
Baby came out
Screaming, Black Power.

Elephant and the Baboon
Learning to screw.
Baby came out looking
Like Spiro Agnew.

Brown argues that his teachers sought to teach him “poetry,” meaning poems from the Western tradition, when he and his fellows were *making* poetry in the streets. “If anybody needed to study poetry,” he maintains, “my teacher needed to study mine. We played the Dozens,” he concludes, “like white folks play Scrabble.” “[They] call me Rap,” he writes humorously if tautologically, “’cause I could rap.” To rap is to use the vernacular with great dexterity. Brown, judging from his poetry printed in this chapter of his autobiography, most certainly earned his by-name.⁵³

Brown’s definitions and examples are as witty as they are telling. He insists, as does Claudia Mitchell-Kernan, that both men and women can play the dozens and Signify: “Some of the best Dozens players,” he writes, “were girls.” Whereas the dozens were an unrelentingly “mean game because what you try to do is totally destroy somebody else with words,” Signifyin(g) was “more humane”: “Instead of coming down on somebody’s mother, you come down on them.” Brown’s account of the process of Signifyin(g) is especially accurate:

A session would start maybe by a brother saying, “Man, before you mess with me you’d rather run rabbits, eat shit and bark at the moon.” Then, if he was talking to me, I’d tell him:

Man, you must don’t know who I am.
I’m sweet peeter jeeter the womb beater
The baby maker the cradle shaker

⁵³H. Rap Brown, *Die Nigger Die!* (New York: Dial Press, 1969), pp. 25–26. [Au.]

The deerslayer the buckbinder the women finder
Known from the Gold Coast to the rocky shores of
Maine

Rap is my name and love is my game.
I’m the bed tucker the cock plucker the mother-
fucker

The milkshaker the record breaker the population
maker

The gun-slinger the baby bringer

The hum-dinger the pussy ringer

The man with the terrible middle finger.

The hard hitter the bullshitter the poly-nussy
getter

The beast from the East the Judge the sludge

The women’s pet the men’s fret and the punks’ pin-
up boy

They call me Rap the dicker the ass kicker

The cherry picker the city slicker the titty licker

And I ain’t giving up nothing but bubble gum and
hard times and I’m fresh out of bubble gum.

I’m giving up wooden nickels ’cause I know they
won’t spend

And I got a pocketful of splinter change.

I’m a member of the bathtub club: I’m seeing a
whole lot of ass but I ain’t taking no shit.

I’m the man who walked the water and tied the
whale’s tail in a knot

Taught the little fishes how to swim

Crossed the burning sands and shook the devil’s
hand

Rode round the world on the back of a snail carry-
ing a sack saying AIR MAIL.

Walked 49 miles of barbed wire and used a Cobra
snake for a necktie

And got a brand new house on the roadside made
from a cracker’s hide,

Got a brand new chimney setting on top made from
the cracker’s skull

Took a hammer and nail and built the world and
calls it “THE BUCKET OF BLOOD.”

Yes, I’m hemp the demp the women’s pimp

Women fight for my delight.

I’m a bad motherfucker. Rap the rip-saw the devil’s
brother’n law.

I roam the world I’m known to wander and this .45
is where I get my thunder.

I’m the only man in the world who knows why
white milk makes yellow butter.

I know where the lights go when you cut the switch
off.

I might not be the best in the world, but I’m in the
top two and my

brother’s getting old.

And ain’t nothing bad ’bout you but your breath.

Whereas the dozens were structured to make one's subject feel bad, "Signifying allowed you a choice—you could either make a cat feel good or bad. If you had just destroyed someone [verbally] or if they were just down already, signifying could help them over."⁵⁴

Few scholars have recognized this level of complexity in Signifyin(g), which Brown argues implicitly to be the rhetorical structures at work in the discourse, rather than a specific content uttered. In addition to making "a cat feel good or bad," Brown continues, "Signifying was also a way of expressing your own feelings," as in the following example:

Man, I can't win for losing.
 If it wasn't for bad luck, I wouldn't have no luck at all.
 I been having buzzard luck
 Can't kill nothing and won't nothing die
 I'm living on the welfare and things is stormy
 They borrowing their shit from the Salvation Army
 But things bound to get better 'cause they can't get no worse
 I'm just like the blind man, standing by a broken window
 I don't feel no pain.
 But it's your world
 You the man I pay rent to
 If I had you hands I'd give 'way both my arms.
 Cause I could do without them
 I'm the man but you the main man
 I read the books you write
 You set the pace in the race I run
 Why, you always in good form
 You got more foam than Alka Seltzer . . .⁵⁵

Signifyin(g), then, for Brown, is an especially expressive mode of discourse that turns upon forms of figuration rather than intent or content. Signifyin(g), to cite Brown, is "what the white folks call verbal skills. We learn how to throw them words together." Signifying, "at its best," Brown concludes, "can be heard when brothers are exchanging tales." It is this sense of storytelling, repeated and often shared (almost communal canonical stories, or on-the-spot recountings of current events) in which Signifyin(g) as a rhetorical strategy can most clearly be seen. We shall

⁵⁴Ibid., pp. 26–29. [Au.]

⁵⁵Ibid., pp. 29–30. [Au.]

return to Brown's definition in the next section of this chapter.⁵⁶

One of the most sustained attempts to define Signifyin(g) is that of Roger D. Abrahams, a well-known and highly regarded literary critic, linguist, and anthropologist. Abrahams's work in this area is seminal, as defined here as a work against which subsequent works must, in some way, react. Between 1962 and 1976, Abrahams published several significant studies of Signifyin(g). To tract Abrahams's interpretative evolution helps us to understand the complexities of this rhetorical strategy but is outside the scope of this book.⁵⁷

Abrahams in 1962 brilliantly defines Signifyin(g) in terms that he and other subsequent scholars shall repeat:

The name "Signifying Monkey" shows [the hero] to be a trickster, "signifying" being the language of trickery, that set of words or gestures which arrives at "direction through indirection."⁵⁸

Signifyin(g), Abrahams argues implicitly, is the black person's use of figurative modes of language use. The word *indirection* hereafter recurs in the literature with great, if often unacknowledged, frequency. Abrahams expanded on this theory of Signifyin(g) in two editions of *Deep Down in the Jungle* (1964, 1970). It is useful to list the signal aspects of his extensive definitions:

1. Signifyin(g) "can mean any number of things."
2. It is a black term and a black rhetorical device.
3. It can mean the "ability to talk with great innuendo."
4. It can mean "to carp, cajole, needle, and lie."
5. It can mean "the propensity to talk around a subject, never quite coming to the point."
6. It can mean "making fun of a person or situation."

⁵⁶Ibid. [Au.]

⁵⁷See Roger D. Abrahams, "The Changing Concept of the Negro Hero," in *The Golden Log*, ed. Mody C. Boatright, Wilson M. Hudson, and Allen Maxwell (Dallas: Southern Methodist University Press, 1962), pp. 119–34; Abrahams, *Deep Down in the Jungle*, esp. "Introduction to the Second Edition" (1970). [Au.]

⁵⁸Abrahams, "The Changing Concept," p. 125. [Au.]

7. It can “also denote speaking with the hands and eyes.”
8. It is “the language of trickery, that set of words achieving Hamlet’s ‘direction through indirection.’”
9. The Monkey “is a ‘signifier,’ and the Lion, therefore, is the signified.”

Finally, in his appended glossary of “Unusual Terms and Expressions,” Abrahams defines “Signify” as “To imply, goad, beg, boast by indirect verbal or gestural means. A language of implication.”⁵⁹

These definitions are exemplary insofar as they emphasize “indirection” and “implication,” which we can read as synonyms of *figurative*. Abrahams was the first scholar, to my knowledge, to define Signifyin(g) as a language, by which he means a particular rhetorical strategy. Whereas he writes that the Monkey is a master of this technique, it is even more accurate to write that he *is* technique, the literariness of language, the ultimate source for black people of the figures of signification. If we think of rhetoric as the “writing” of spoken discourse, then the Monkey’s role as the source and encoded keeper of Signifyin(g) helps to reveal his functional equivalency with his Pan-African cousin, *Esu-Elegbara*, the figure of writing in Ifa.

Abrahams’s work helps us to understand that Signifyin(g) is an adult ritual, which black people learn as adolescents, almost exactly like children learned the traditional figures of signification in classically structured Western primary and secondary schools, training one hopes shall be returned to contemporary education. As we shall see below, Claudia Mitchell-Kernan, an anthropologist-linguist, shares an anecdote that demonstrates, first, how Signifyin(g) truly is a conscious rhetorical strategy and, second, how adult black people implicitly instruct a mature child in its most profound and subtle uses by an indirect mode of narration only implicitly related in form to the Monkey tales, perhaps as extract relates to the vanilla bean, or as sand relates to the pearl, or, as Esu might add, as palm wine relates to the

palm tree. Black adults teach their children this exceptionally complex system of rhetoric, almost exactly like Richard A. Lanham describes a generic portrait of the teaching of the rhetorical *paideia* to Western schoolchildren. The mastery of Signifyin(g) creates *homo rhetoricus Africanus*, allowing—through the manipulation of these classic black figures of Signification—the black person to move freely between two discursive universes. This is an excellent example of what I call linguistic masking, the verbal sign of the mask of blackness that demarcates the boundary between the white linguistic realm and the black, two domains that exist side by side in a homonymic relation signified by the very concept of Signification. To learn to manipulate language in such a way as to facilitate the smooth navigation between these two realms has been the challenge of black parenthood, and remains so even today. Teaching one’s children the fine art of Signifyin(g) is to teach them about this mode of linguistic circumnavigation, to teach them a second language that they can share with other black people.⁶⁰ Black adolescents engaged in the dozens and in Signifyin(g) rituals to learn the classic black figures of Signification. As H. Rap Brown declares passionately, his true school was the street. Richard Lanham’s wonderful depiction of the student passing through the rhetorical *paideia* reads like a description of vernacular black language training:

Start your student young. Teach him a minute concentration on the word, how to write it, speak it, remember it. . . . From the beginning, stress behavior as performance, reading aloud, speaking with gesture, a full range of histrionic adornment. . . . Develop elaborate memory schemes to keep them readily at hand. Teach, as theory of personality, a

⁶⁰Richard A. Lanham, *The Motives of Eloquence: Literary Rhetoric in the Renaissance* (New Haven: Yale University Press, 1976), pp. 2–3. See also Abrahams, *Deep Down in the Jungle*, p. 17; and Edith A. Folb, *Runnin’ Down Some Lines: The Language and Culture of Black Teenagers* (Cambridge: Harvard University Press, 1980), p. 90: “Young people growing up in the black community play endless verbal games with one another, much as their mainstream white counterparts play games of war, cops and robbers, or cowboys and Indians. Like skilled musicians, children early on learn to refine their verbal skills, to develop their instrument so that it can play a variety of songs.” [Au.]

⁵⁹Abrahams, *Deep Down in the Jungle*, pp. 51–53, 66–70, 113–19, 142–47, 153–56, 264. [Au.]

corresponding set of accepted personality types, a taxonomy of impersonation. . . . Nourish an acute sense of social situation. . . . Stress, too, the need for improvisation, ad-lib quickness, the coaxing of chance. Hold always before the student rhetoric's practical purpose: to win, to persuade. But train for this purpose with continual verbal play, rehearsal for the sake of rehearsal.

Use the "case" method. . . . Practice this recreation always in an agnostic context. The aim is scoring. Urge the student to go into the world and observe its doings from this perspective. And urge him to continue his rehearsal method all his life, forever rehearsing a spontaneous real life. . . . Training in the word thus becomes a badge, as well as a diversion, of the leisure class.⁶¹

This reads very much like a black person's training in Signifyin(g). Lanham's key words—among which are "a taxonomy of impersonation," "improvisation," "ad-lib quickness," "to win," "to persuade," "continual verbal play," "the 'case' method," "the aim is scoring"—echo exactly the training of blacks to Signify. Even Lanham's concept of a "leisure" class applies ironically here, since blacks tend in capitalist societies to occupy a disproportionate part of the "idle" unemployed, a leisure-class with a difference. To Signify, then, is to master the figures of black Signification.

Few black adults can recite an entire Monkey tale; black adults, on the other hand, can—and do—Signify. The mastering of the Monkey tales corresponds to this early part of Lanham's account of Western rhetorical training. Words are looked at in the Monkey tales because the test of this form of *poesis* is to arrive at a phonetic coincidence of similar parts of speech, as I have shown above. The splendid example of Signifyin(g) that I have cited in Ralph Ellison's anecdote about Hazel Harrison, and the anecdote of Claudia Mitchell-Kernan's that I shall discuss below, conform to Lanham's apt description of the mature capacity to look through words for their full meaning. Learning the Monkey tales, then, is somewhat akin to attending troping school, where one learns to "trope-a-dope."

The Monkey is a hero of black myth, a sign of the triumph of wit and reason, his language of

Signifyin(g) standing as the linguistic sign of the ultimate triumph of self-consciously formal language use. The black person's capacity to create this rich poetry and to derive from these rituals a complex attitude toward attempts at domination, which can be transcended in and through language, is a sign of their originality, of their extreme consciousness of the metaphysical. Abrahams makes these matters clear.

In *Talking Black*, published in 1976, Abrahams's analysis of Signifyin(g) as an act of language is even more subtle than his earlier interpretations. Abrahams repeats his insightful definition that Signifyin(g) turns upon indirection. Black women, he maintains, and "to a certain extent children," utilize "more indirect methods of signifying." His examples are relevant ones:

These range from the most obvious kinds of indirection, like using an unexpected pronoun in discourse ("Didn't *we* come to shine, today?" or "Who thinks his drawers don't stink?"), to the more subtle technique, of *louding* or *loud-talking* in a different sense from the one above. A person is loud-talking when he says something of someone just loud enough for that person to hear, but indirectly, so he cannot properly respond (Mitchell-Kernan). Another technique of signifying through indirection is making reference to a person or group not present, in order to start trouble between someone present and the ones who are not. An example of this technique is the famous toast, "The Signifying Monkey."⁶²

These examples are salient for two reasons: first, because he has understood that adults use the modes of signification commonly, even if they cannot recite even one couplet from the Monkey tales, and, second, because he has realized that other tropes, such as loud-talking, are subtropes of Signifyin(g). His emphasis on the mature forms of Signifyin(g)—that is, the indirect modes—as more common among women and children does not agree with my observations. Indeed, I have found that black men and women use indirection with each other to the same degree.

Next, Abrahams states that Signifyin(g) can also be used "in recurrent black-white encounters

⁶¹Lanham, *The Motives of Eloquence*, pp. 2–3. [Au.]

⁶²Roger D. Abrahams, *Talking Black* (Rawley, Mass.: Newbury House, 1976), p. 19. [Au.]

as masking behavior.” Since the full effectiveness of Signifyin(g) turns upon all speakers possessing the mastery of reading, what Abrahams calls “intergroup” Signifyin(g) is difficult to effect, if only because the inherent irony of discourse most probably will not be understood. Still, Signifyin(g) is one significant mode of verbal masking or troping.⁶³

Abrahams’s most important contribution to the literature on Signifyin(g) is his discovery that Signifyin(g) is primarily a term for rhetorical strategies, which often is called by other names depending on which of its several forms it takes. As he concludes, “with *signifying* we have a term not only for a way of speaking but for a rhetorical strategy that may be characteristic of a number of other designated events.”⁶⁴ I would add to this statement that, for black adults, Signifyin(g) is the name for the figures of rhetoric themselves, the figure of the figure. Abrahams lists the following terms as synonyms of Signifyin(g), as derived from several other scholars, and which I am defining to be black tropes as subsumed within the trope of Signifyin(g): *talking shit, woofing, spouting, mucky muck, boogerbang, beating your gums, talking smart, putting down, putting on, playing, sounding, telling lies, shaglag, marking, shucking, jiving, jitterbugging, bugging, mounting, charging, cracking, harping, rapping, bookooing, low-rating, hoorawing, sweet-talking, smart-talking*, and no doubt a few others that I have omitted.⁶⁵ This is a crucial contribution to our understanding of this figure because it transcends the disagreements, among linguists, about whether trope *x* or *y* is evidenced by speech act *a* or *b*. What’s more, Abrahams reveals, by listing its synonyms, that black people can mean at least twenty-eight figures when they call something Signifyin(g). He represents a few of the figures embedded in Signifyin(g) in Chart 3. He could have listed several others. When black people say that “Signification is the Nigger’s occupation,” we can readily see what

they mean, since mastering all of these figures of Signification is a lifetime’s work!

When a black person speaks of Signifyin(g), he or she means a “style-focused message . . . styling which is *foregrounded* by the devices of making a point by indirection and wit.” What is foregrounded, of course, is the signifier itself, as we have seen in the rhyme scheme of the Monkey tales. The Monkey is called the signifier because he foregrounds the signifier in his use of language. Signifyin(g), in other words, turns on the sheer play of the signifier. It does not refer primarily to the signified; rather, it refers to the style of language, to that which transforms ordinary discourse into literature. Again, one does not Signify some thing; one Signifies in *some way*.⁶⁶

The import of this observation for the study of black literature is manifold. When I wrote earlier that the black tradition theorized about itself in the vernacular, this is what I meant in part. Signifyin(g) is the black rhetorical difference that negotiates the language user through several orders of meaning. In formal literature, what we commonly call figuration corresponds to Signification. Again, the originality of so much of the black tradition emphasizes refiguration, or repetition and difference, or troping, underscoring the foregrounding of the chain of signifiers, rather than the mimetic representation of a novel content. Critics of Afro-American, Caribbean, and African literatures, however, have far more often than not directed their attention to the signified, often at the expense of the signifier, as if the latter were transparent. This functions contrary to the principles of criticism inherent in the concept of Signifyin(g).

Thomas Kochman’s contribution to the literature on Signifyin(g) is the recognition that the Monkey is the Signifier, and that one common form of this rhetorical practice turns upon repetition and difference. Kochman also draws an important distinction between directive and expressive modes of Signification. Directive Signifyin(g), paradoxically, turns upon an indirective strategy:

... when the function of signifying is *directive*, and the *tactic* which is employed is one of *indirection*—i.e., the signifier reports or repeats what someone has said about the listener; the "report" is couched in plausible language designed to compel belief and arouse feelings of anger and hostility.⁶⁷

Kochman argues that the function of this sort of claim to repetition is to challenge and reverse the status quo:

There is also the implication that if the listener fails to do anything about it—what has to be "done" is usually quite clear—his status will be seriously compromised. Thus the lion is compelled to vindicate the honor of his family by fighting or else leave the impression that he is afraid, and that he is not "king of the jungle." When used to direct action, signifying is like shucking in also being deceptive and subtle in approach and depending for success on the naïveté or gullibility of the person being put on.⁶⁸

⁶⁷Thomas Kochman, "Towards an Ethnography of Black American Speech Behavior," in *Rappin' and Stylin' Out: Communication in Urban Black America* (Urbana: University of Illinois Press, 1972), p. 257. See also Kochman's "'Rapping' in the Black Ghetto," *Trans-action* 6 (February 1969): 26–35. Kochman's "Towards an Ethnography" was originally published in *Afro-American Anthropology: Contemporary Perspectives*, ed. Norman E. Whitten, Jr., and John F. Swzed (New York: Free Press, 1970), pp. 145–63. [Au.]

⁶⁸Kochman, "Ethnography," p. 257. [Au.]

Kochman's definition of expressive Signifyin(g), while useful, is less inclusive than that proposed by H. Rap Brown, including as it does only negative intentions: "to arouse feelings of embarrassment, shame, frustration, or futility, for the purpose of diminishing someone's status, but without directive implication." Expressive Signifyin(g), Kochman continues, employs "direct" speech tactics "in the form of a taunt, as in the ... example where the monkey is making fun of the lion." For Kochman, Signifyin(g) implies an aggressive mode of rhetoric, a form of symbolic action that yields catharsis.⁶⁹

While several other scholars have discussed the nature and function of Signifyin(g), the theories of Claudia Mitchell-Kernan and Geneva Smitherman are especially useful for the theory of revision that I am outlining in this chapter.⁷⁰ Mitchell-Kernan's theory of Signifyin(g) is among the most thorough and the most subtle in the linguistic literature, while Smitherman's

⁶⁹Ibid., p. 258. [Au.]

⁷⁰See also Herbert L. Foster, *Ribbin', Jivin', and Playin' the Dozens: The Unrecognized Dilemma of Inner City Schools* (Cambridge: Ballinger, 1974), pp. 203–10; and Edith A. Folb, *Runnin' Down Some Lines: The Language and Culture of Black Teenagers* (Cambridge: Harvard University Press, 1980), esp. pp. 69–131. [Au.]

work connects linguistic analysis with the Afro-American literary tradition. . . .

Mitchell-Kernan is quick to demonstrate that Signifyin(g) has received most scholarly attention as “a tactic employed in game activity—verbal dueling—which is engaged in as an end in itself,” as if this one aspect of the rhetorical concept amounted to its whole. In fact, however, “*Signifying* . . . also refers to a way of encoding messages or meanings which involves, in most cases, an element of indirection.” This alternative definition amounts to nothing less than a polite critique of the linguistic studies of Signifyin(g), since the subtleties of this rhetorical strategy somehow escaped most other scholars before Mitchell-Kernan. As she expands her definition, “This kind of *signifying* might be best viewed as an alternative message form, selected for its artistic merit, and may occur embedded in a variety of discourse. Such *signifying* is not focal to the linguistic interaction in the sense that it does not define the entire speech event.”⁷¹

I cannot stress too much the importance of this definition, for it shows that Signifyin(g) is a pervasive mode of language use rather than merely one specific verbal game, an observation that somehow escaped the notice of every other scholar before Mitchell-Kernan. This definition alone serves as a corrective to what I think of as the tendency among linguists who have fixed their gaze upon the aggressive ritual part and thereby avoided seeing the concept as a whole. What’s more, Mitchell-Kernan’s definition points to the implicit parallels between Signifyin(g) and the use of language that we broadly define to be figurative, by which I mean in this context an intentional deviation from the ordinary form or syntactical relation of words.⁷²

⁷¹See Claudia Mitchell-Kernan, *Language Behavior in a Black Urban Community*, Monographs of the Language-Behavior Laboratory, University of California, Berkeley, No. 2 (February 1971), esp. pp. 87–129, reprinted as “Signifying as a Form of Verbal Art” in *Mother Wit from the Laughing Barrel: Readings in the Interpretation of Afro-American Folklore*, ed. Alan Dundes (Englewood Cliffs, N.J.: Prentice-Hall, 1973), pp. 310–28; and Kochman, *Rappin’ and Stylin’ Out*, pp. 315–36. These quotations appear on p. 311 of the Dundes reprint. All subsequent page numbers refer to this volume. [Au.]

⁷²Mitchell-Kernan, “Signifying,” p. 311. [Au.]

Signifyin(g), in other words, is synonymous with figuration. Mitchell-Kernan’s work is so rich because she studied the language behavior of adults as well as adolescents, and of women as well as men. Whereas her colleagues studied lower-class male language use, then generalized from this strictly limited sample, Mitchell-Kernan’s data are derived from a sample more representative of the black speech community. Hers is a sample that does not undermine her data because it accounts for the role of age and sex as variables in language use. In addition, Mitchell-Kernan refused to be captivated by the verbal insult rituals, such as sounding, playing the dozens, and Signifyin(g), as ritual speech events, unlike other linguists whose work suffers from an undue attention to the use of words such as *mother-fucker*, to insults that turn on sexual assertions about someone’s mama, and to supposed Oedipal complexes that arise in the literature only because the linguist is reading the figurative as a literal statement, like our friend, the Signified Lion.

These scholars, unlike Mitchell-Kernan, have mistaken the language games of adolescents as an end rather than as the drills common to classical rhetorical study as suggested in Lanham’s hypothetical synopsis quoted earlier in this chapter. As Mitchell-Kernan concludes, both the sex and the age of the linguist’s informants “may slant interpretation, particularly because the insult dimension [of Signifyin(g)] looms large in contexts where verbal dueling is focal.” In the neighborhood in which she was raised, she argues, whereas “*Sounding and Playing the Dozens* categorically involved verbal insult (typically joking behavior); *signifying* did not.” Mitchell-Kernan is declaring, most unobtrusively, that, for whatever reasons, linguists have misunderstood what Signifyin(g) means to black people who practice it. While she admits that one relatively minor aspect of this rhetorical principle involves the ritual of insult, the concept is much more profound than merely this. Indeed, Signifyin(g) alone serves to underscore the uniqueness of the black community’s use of language: “the terminological use of *signifying* to refer to a particular kind of language specialization defines the Black community as a speech community in contrast to non-Black communities.” Mitchell-Kernan here both

critiques the work of other linguists who have wrestled unsuccessfully with this difficult concept (specifically Abrahams and Kochman) and provides an ardently needed corrective by defining Signifyin(g) as a way of figuring language. Mitchell-Kernan's penetrating work enables Signifyin(g) to be even further elaborated upon for use in literary theory.⁷³

Because it is difficult to arrive at a consensus of definitions of Signifyin(g), as this chapter already has made clear, Mitchell-Kernan proceeds "by way of analogy to inform the reader of its various meanings as applied in interpretation." This difficulty of definition is a direct result of the fact that Signifyin(g) is the black term for what in classical European rhetoric are called the figures of signification. Because to Signify is to be figurative, to define it in practice is to define it through any number of its embedded tropes. No wonder even Mitchell-Kernan could not arrive at a consensus among her informants—except for what turns out to be the most crucial shared aspects of all figures of speech, an indirect use of words that changes the meaning of a word or words. Or, as Quintilian put it, figuration turns on some sort of "change in signification." While linguists who disagree about what it means to Signify all repeat the role of indirection in this rhetorical strategy, none of them seems to have understood that the ensuing alteration or deviation of meaning makes Signifyin(g) the black trope for all other tropes, the trope of tropes, the figure of figures. Signifyin(g) *is* troping.⁷⁴

Mitchell-Kernan begins her elaboration of the concept by pointing to the unique usage of the word in black discourse:

What is unique in Black English usage is the way in which signifying is extended to cover a range of meanings and events which are not covered in its Standard English usage. In the Black community it is possible to say, "He is signifying" and "Stop signifying"—sentences which would be anomalous elsewhere.⁷⁵

⁷³Ibid., pp. 312–13, 311–12, 322–23. [Au.]

⁷⁴Ibid., p. 313. See Richard A. Lanham, *A Handlist of Rhetorical Terms* (Berkeley: University of California Press, 1969), pp. 101–3, 52. [Au.]

⁷⁵Mitchell-Kernan, "Signifying," p. 313. [Au.]

Because in standard English signification denotes meaning and in the black tradition it denotes ways of meaning, Mitchell-Kernan argues for discrepancies between meanings of the same term in two distinct discourses:

The Black concept of *signifying* incorporates essentially a folk notion that dictionary entries for words are not always sufficient for interpreting meanings or messages, or that meaning goes beyond such interpretations. Complimentary remarks may be delivered in a left-handed fashion. A particular utterance may be an insult in one context and not another. What pretends to be informative may intend to be persuasive. The hearer is thus constrained to attend to all potential meaning carrying symbolic systems in speech events—the total universe of discourse.⁷⁶

Signifyin(g), in other words, is the figurative difference between the literal and the metaphorical, between surface and latent meaning. Mitchell-Kernan calls this feature of discourse an "implicit content or function, which is potentially obscured by the surface content or function." Finally, Signifyin(g) presupposes an "encoded" intention to say one thing but to mean quite another.⁷⁷

Mitchell-Kernan presents several examples of Signifyin(g), as she is defining it. Her first example is a conversation among three women about the meal to be served at dinner. One woman asks the other two to join her for dinner, that is, if they are willing to eat "chit'lins." She ends her invitation with a pointed rhetorical question: "Or are you one of those Negroes who don't eat chit'lins?" The third person, the woman not addressed, responds with a long defense of why she prefers "prime rib and T-bone" to "chit'lins," ending with a traditional ultimate appeal to special pleading, a call to unity within the ranks to defeat white racism. Then she leaves. After she has gone, the initial speaker replies to her original addressee in this fashion: "Well, I wasn't signifying at her, but like I always say, if the shoe fits wear it." Mitchell-Kernan concludes that while the manifest subject of this exchange was dinner, the latent subject was the political orientation of two black people vis-à-vis cultural

⁷⁶Ibid., p. 314. [Au.]

⁷⁷Ibid. [Au.]

assimilation or cultural nationalism, since many middle-class blacks refuse to eat this item from the traditional black cuisine. Mitchell-Kernan labels this form of Signifyin(g) “allegory,” because “the significance or meaning of the words must be derived from known symbolic values.”⁷⁸

This mode of Signifyin(g) is commonly practiced by Afro-American adults. It is functionally equivalent to one of its embedded tropes, often called louding or loud-talking, which as we might expect connotes exactly the opposite of that which it denotes: one successfully loud-talks by speaking to a second person remarks in fact directed to a third person, at a level just audible to the third person. A sign of the success of this practice is an indignant “What?” from the third person, to which the speaker responds, “I wasn’t talking to you.” Of course, the speaker was, yet simultaneously was not. Loud-talking is related to Mitchell-Kernan’s second figure of Signification, which she calls “obscuring the addressee” and which I shall call naming. Her example is one commonly used in the tradition, in which “the remark is, on the surface, directed toward no one in particular”:

I saw a woman the other day in a pair of stretch pants, she must have weighed 300 pounds. If she knew how she looked she would burn those things.⁷⁹

If a member of the speaker’s audience is overweight and frequently wears stretch pants, then this message could well be intended for her. If she protests, the speaker is free to maintain that she was speaking about someone else and to ask why her auditor is so paranoid. Alternatively, the speaker can say, “if the shoe fits. . . .” Mitchell-Kernan says that a characteristic of this form of Signifyin(g) is the selection of a subject that is “selectively relevant to the speaker’s audience.”⁸⁰ I once heard a black minister name the illicit behavior of specific members of his congregation by performing a magnificent reading of “The Text of the Dry Bones,” which is a reading or gloss upon Ezekiel 37:1–14. Following this sermon, a prayer was offered by Lin Allen. As

⁷⁸Ibid., pp. 314–15. [Au.]

⁷⁹Ibid. [Au.]

⁸⁰Ibid., p. 316. [Au.]

“Mr. Lin,” as we called him, said, “Dear Lord, go with the gambling man . . . not forgetting the gambling woman,” the little church’s eerie silence was shattered by the loud-talking voice of one of my father’s friends (Ben Fisher, rest his soul), whom the congregation “overheard” saying, “Got *you* that time, Gates, got *you* that time, Newtsy!” My father and one of our neighbors, Miss Newtsy, had been Signified upon.

Mitchell-Kernan presents several examples of Signifyin(g) that elaborate on its subtypes.⁸¹ Her conclusion is crucial to the place of her research in the literature of Signification. “*Signifying*,” she declares as conclusion, “does not . . . always have negative valuations attached to it; it is clearly thought of as a kind of art—a clever way of conveying messages.”⁸² A literary critic might call this troping, an interpretation or mistaking of meaning, to paraphrase Harold Bloom, because, as Mitchell-Kernan maintains, “*signifying* . . . alludes to and implies things which are never made explicit.”⁸³ Let me cite two brief examples. In the first, “Grace” introduces the exchange by defining its context:

(After I had my little boy, I swore I was not having any more babies. I thought four kids was a nice-sized family. But it didn’t turn out that way. I was a little bit disgusted and didn’t tell anybody when I discovered I was pregnant. My sister came over one day and I had started to show by that time.) . . .

ROCHELLE: Girl, you sure do need to join the Metrecal for lunch bunch.

GRACE: (noncommittally) Yes, I guess I am putting on a little weight.

ROCHELLE: Now look here, girl, we both standing here soaking wet and you still trying to tell me it ain’t raining.⁸⁴

This form of Signifyin(g) is obviously a long way from the sort usually defined by scholars. One final example of the amusing, troping exchange follows, again cited by Mitchell-Kernan:

⁸¹Ibid., pp. 316–21. [Au.]

⁸²Ibid., p. 318. [Au.]

⁸³Harold Bloom, *A Map of Misreading* (New York: Oxford University Press, 1975), p. 93, esp. pp. 83–105; Mitchell-Kernan, “Signifying,” p. 319. [Au.]

⁸⁴Mitchell-Kernan, “Signifying,” pp. 318–19. [Au.]

I. Man, when you gon pay me my five dollars?

II: Soon as I get it.

I: (to audience) Anybody want to buy a five dollar nigger? I got one to sell.

II: Man, if I gave you five dollars, you wouldn't have nothing to signify about.

I: Nigger, long as you don't change, I'll always have me a subject.⁸⁵

This sort of exchange is common in the black community and represents Signifyin(g) at its more evolved levels than the more obvious examples (characterized by confrontation and insult) discussed by linguists other than Mitchell-Kernan.

The highly evolved form of Signifyin(g) that H. Rap Brown defines and that Ralph Ellison's anecdote about Hazel Harrison epitomizes is represented in a wonderful anecdote that Mitchell-Kernan narrates. This tale bears repeating to demonstrate how black adults teach their children to "hold a conversation":

At the age of seven or eight I encountered what I believe was a version of the tale of the "Signifying Monkey." In this story a monkey reports to a lion that an elephant has been maligning the lion and his family. This stirs the lion into attempting to impose sanctions against the elephant. A battle ensues in which the elephant is victor and the lion returns extremely chafed at the monkey. In this instance, the recounting of this story is a case of signifying for directive purposes. I was sitting on the stoop of a neighbor who was telling me about his adventures as a big game hunter in Africa, a favorite tall-tale topic, unrecognized by me as tall-tale at the time. A neighboring woman called to me from her porch and asked me to go to the store for her. I refused, saying that my mother had told me not to, a lie which Mr. Waters recognized and asked me about. Rather than simply saying I wanted to listen to his stories, I replied that I had refused to go because I hated the woman. Being pressured for a reason for my dislike, and sensing Mr. Waters's disapproval, I countered with another lie, "I hate her because she say you were lazy," attempting, I suppose, to regain his favor by arousing ire toward someone else. Although I had heard someone say that he was lazy, it

had not been this woman. He explained to me that he was not lazy and that he didn't work because he had been laid-off from his job and couldn't find work elsewhere, and that if the lady had said what I reported, she had not done so out of meanness but because she didn't understand. Guilt-ridden, I went to fetch the can of Milnot milk. Upon returning, the tale of the "Signifying Monkey" was told to me, a censored prose version in which the monkey is rather brutally beaten by the lion after having suffered a similar fate in the hands of the elephant. I liked the story very much and righteously approved of its ending, not realizing at the time that he was *signifying* at me. Mr. Waters reacted to my response with a great deal of amusement. It was several days later in the context of retelling the tale to another child that I understood its timely telling. My apology and admission of lying were met by affectionate humor, and I was told that I was finally getting to the age where I could "hold a conversation," i.e., understand and appreciate implications.⁸⁶

Black people call this kind of lesson "schooling," and this label denotes its function. The child must learn to hold a conversation. We cannot but recall Richard Lanham's ideal presentation of rhetorical training and conclude that what Mr. Waters says to the child, Claudia, is analogous to an adult teacher of rhetoric attempting to show his pupils how to employ the tropes that they have memorized in an act of communication and its interpretation. This subtle process of instruction in the levels of Signification is related to, but far removed from, adolescent males insulting each other with the Signifying Monkey tales. The language of Signifyin(g), in other words, is a strategy of black figurative language use.

I have been drawing a distinction between the ritual of Signifyin(g), epitomized in the Monkey tales, and the language of Signifyin(g), which is the vernacular term for the figurative use of language. These terms correspond to what Mitchell-Kernan calls "third-party signifying" and "metaphorical signifying." Mitchell-Kernan defines their distinction as follows:

In the metaphorical type of *signifying*, the speaker attempts to transmit his message indirectly and it is

⁸⁵Ibid., pp. 320-21. [Au.]

⁸⁶Ibid., pp. 321-22. [Au.]

only by virtue of the hearers defining the utterance as *signifying* that the speaker's intent (to convey a particular message) is realized. In third-party signifying, the speaker may realize his aim only when the converse is true, that is, if the addressee fails to recognize the speech act as *signifying*. In [the Signifying Monkey toast] the monkey succeeds in goading the lion into a rash act because the lion does not define the monkey's message as *signifying*.⁸⁷

In other words, these two dominant modes of Signification function conversely, another sign of the maturation process demanded to move, as it were, from the repetition of tropes to their application.

The Monkey tales inscribe a dictum about interpretation, whereas the language of Signifyin(g) addresses the nature and application of rhetoric. The import of the Monkey tales for the interpretation of literature is that the Monkey dethrones the Lion only because the Lion cannot read the nature of his discourse. As Mitchell-Kernan argues cogently, "There seems something of symbolic relevance from the perspective of language in this poem. The monkey and lion do not speak the same language; the lion is not able to interpret the monkey's use of language, he is an outsider, un-hip, in a word." In other words, the Monkey speaks figuratively, while the Lion reads his discourse literally. For his act of misinterpretation, he suffers grave consequences. This valorization of the figurative is perhaps the most important moral of these poems, although the Monkey's mastery of figuration has made him one of the canonical heroes in the Afro-American mythic tradition, a point underscored by Mitchell-Kernan.⁸⁸

Mitchell-Kernan's summary of the defining characteristics of "Signifying as a Form of Verbal Art" helps to clarify this most difficult, and elusive, mode of rhetoric. We can outline these characteristics for convenience. The most important defining features of Signifyin(g) are "indirect intent" and "metaphorical reference." This aspect of indirection is a formal device, and "appears to be almost purely stylistic"; moreover, "its art characteristics remain in the forefront."

Signifyin(g), in other words, turns upon the foregrounding of the Signifier. By "indirection" Mitchell-Kernan means

that the correct semantic (referential interpretation) or signification of the utterance cannot be arrived at by a consideration of the dictionary meaning of the lexical items involved and the syntactic rules for their combination alone. The apparent significance of the message differs from its real significance. *The apparent meaning of the sentence signifies its actual meaning.*⁸⁹

The relationship between latent and manifest meaning is a curious one, as determined by the formal properties of the Signifyin(g) utterance. In one of several ways, manifest meaning directs attention away from itself to another, latent level of meaning. We might compare this relationship to that which obtains between the two parts of a metaphor, tenor (the inner meaning) and vehicle (the outer meaning).

Signifyin(g), according to Mitchell-Kernan, operates so delightfully because "apparent meaning serves as a key which directs hearers to some shared knowledge, attitudes, and values or signals that reference must be produced metaphorically." The decoding of the figurative, she continues, depends "upon shared knowledge . . . and this shared knowledge operates on two levels." One of these two levels is that the speaker and his audience realize that "*signifying* is occurring and that the dictionary-syntactical meaning of the utterance is to be ignored." In addition, a silent second text, as it were, which corresponds rightly to what Mitchell-Kernan is calling "shared knowledge," must be brought to bear upon the manifest content of the speech act and "employed in the reinterpretation of the utterance." Indeed, this element is of the utmost importance in the esthetics of Signifyin(g), for "it is the cleverness used in directing the attention of the hearer and audience to this shared knowledge upon which a speaker's artistic talent is judged." Signifyin(g), in other words, depends on the success of the signifier at invoking an absent meaning ambiguously "present" in a carefully wrought statement.⁹⁰

Chart 4. The Figures of Signification

RHETORICAL TROPE	BLOOM'S REVISIONARY RATIO	AFRO-AMERICAN SIGNIFYIN(G) TROPE	CLASSICAL YORUBA	LEXICALLY BORROWED YORUBA
Irony	Clinamen	Signifyin(g) ("Nigger business" in the West Indies)	<i>Ríràn (èràn)</i>	<i>Áírónì</i>
Synecdoche	Tessera	Calling out of one's name		<i>Mètónímì</i>
Metonymy	Kenosis			
Hyperbole, litotes	Daemonization	Stylin' or woofing ("Flash" in the West Indies)	<i>Ìhàlè (Èpón)</i>	
Metaphor	Askesis	Naming	{ <i>Àfiwé (elélòó)</i> <i>Àfiwé gaan</i>	<i>Métáfò</i> (indirect "naming") ¹ <i>Símìlì</i> (direct "naming") ¹
Metalepsis	Apophrades	Capping	<i>Afikún; Àjámó;</i> <i>Ènì</i>	

¹N.B. "Naming" is an especially rich trope in Yoruba. Positive naming is called *Oriki*, while negative naming is called *Inagije*. Naming is also an especially luxurious (if potentially volatile) trope in the Afro-American vernacular tradition. "Naming" someone and "Calling [someone] Out of [his] name" are among the most commonly used tropes in Afro-American vernacular discourse. Scores of proverbs and epigrams in the black tradition turn upon figures for naming.

As I have attempted to show, there is much confusion and disagreement among linguists about the names and functions of the classical black tropes. While the specific terminology may vary from scholar to scholar, city to city, or generation to generation, however, the rhetorical functions of these tropes remain consistent. It is a fairly straightforward exercise to compare the black slave tropes to the master tropes identified by Vico, Nietzsche, Burke, and Bloom, and to map a black speech act, such as Signifyin(g), into its component Western tropes. Chart 4 is intended to Signify upon Harold Bloom's "map of misprision."⁹¹ I echo the essence of this map here, adding columns that list the Yoruba and

Afro-American tropes that correspond to their Western counterparts.

We can, furthermore, chart our own map, in which we graph the separate lines of a "Signifyin(g) Riff," as follows:⁹²

Slave Trope of Tropes, Signifyin(g)	
Your mama's a man	(metaphor)
Your daddy's one too	(irony)
They live in a tin can	(metonymy)
That smells like a zoo	(synecdoche)

The fact that the street rhymes of blacks and their received rhetorical tropes configure into the categories of classical Western rhetoric should come as no surprise. Indeed, this aspect of black language use recalls Montaigne's statement, in "Of the Vanity of Words," that "When you hear people

Consciousness: Afro-American Folk Thought from Slavery to Freedom (New York: Oxford University Press, 1977), pp. 346, 378–80, 483, 498–99. [Au.]

⁹¹Harold Bloom, *A Map of Misreading*, p. 84. [Au.]

⁹²The source for this riff and its analysis is a personal conversation with Kimberly W. Benston. [Au.]

talk about metonymy, metaphor, allegory, and other such names in grammar, doesn't it seem that they mean some rare and exotic form of language?" Rather, Montaigne concludes, "They are terms that apply to the babble of your chambermaid."⁹³ We can add that these terms also apply to the rapping of black kids on street corners, who recite and thereby preserve the classical black rhetorical structures.

Signification is a complex rhetorical device that has elicited various, even contradictory, definitions from linguists, as should be apparent from this summary of its various definitions. While many of its manifestations and possibilities are figured in the tales of the Signifying Monkey, most people who Signify do not engage in the narration of these tales. Rather, the Monkey tales stand as the canonical poems from which what I am calling the language of Signifyin(g) extends.

⁹³Montaigne, "Of the Vanity of Words," in *The Complete Essays of Montaigne*, trans. Donald M. Frame (Stanford: Stanford University Press, 1965), p. 223. [Au.]

The degree to which the figure of the Monkey is anthropologically related to the figure of the Pan-African trickster, Esu-Elegbara, shall most probably remain a matter of speculation.

Nevertheless, the two figures are related as functional equivalents because each in its own way stands as a moment of consciousness of black formal language use, of rhetorical structures and their appropriate modes of interpretation. As I have argued, both figures connote what we might think of as the writing implicit in an oral literature, and both figures function as repositories for a tradition's declarations about how and why formal literary language departs from ordinary language use. The metaphor of a double-voiced Esu-Elegbara corresponds to the double-voiced nature of the Signifyin(g) utterance. When one text Signifies upon another text, by tropological revision or repetition and difference, the double-voiced utterance allows us to chart discrete formal relationships in Afro-American literary history. Signifyin(g), then, is a metaphor for textual revision.

Gloria Anzaldúa

b. 1942

Gloria Anzaldúa was born on the ranch settlement of Jesus Maria of the Valley in south Texas, where her parents, Mexican Americans Urbano and Amalia Garcia Anzaldúa, farmed with several other families. She has a sister and two brothers. As she explains in her book *Borderlands/La frontera* (1987; excerpted here), Anzaldúa grew up in a linguistically rich environment, learning several dialects of Spanish and English and some Nahuatl, an indigenous language of Mexico. In 1953 the family moved to Hargill, Texas, a tiny farming community, to look for better employment. Anzaldúa's parents had no more than an elementary school education. However, her father valued education highly, especially for his sons, and he refused migrant farm work because he did not want his children to miss school. Anzaldúa's father died when she was fifteen. While her mother held a job as a nurse's aide, Anzaldúa worked in the fields to help support the family, continuing through high school and through college at Pan American University, where she took a B.A. in 1969. Anzaldúa has said that from an early age, she felt at odds with her family, who did not approve of her love for reading, writing, and drawing and who were shocked by her emerging lesbian identity. Her family opposed her seeking higher education, believing that it was not appropriate for women and that she could provide more financial help to the family by staying at work full time. Anzaldúa explains: "I was the only woman, not just the only woman, the only person from the area who ever went to college."¹

Anzaldúa persevered, going on to earn an M.A. in English and art education from the University of Texas at Austin in 1972. She then began teaching the children of migrant workers in Texas and Indiana who traveled a route between the two states. From 1974 to 1977 she enrolled in the comparative literature program at the University of Texas at Austin but left without completing her Ph.D. because she was not allowed to write her thesis on feminist Chicana literature. While at the University of Texas, Anzaldúa studied with rhetorician James Sledd, who first encouraged her to write in the mixture of languages and styles found in *Borderlands* and who, she says, also served as a role model for her of someone "who crosses back and forth between insider and outsider" in the academy.² So that she could pursue graduate work in Chicana studies, Anzaldúa moved to the University of California at Santa Cruz in 1979. She still lives in Santa Cruz and has taught at the university and various other schools in California and at Vermont College of Norwich University, where, she has said, the experience of feeling like a "foreigner" in New England prompted her to write *Borderlands*.³

¹Quoted in Héctor A. Torres, "Gloria Anzaldúa (26 September 1942–)," in *Dictionary of Literary Biography: Chicano Writers, Second Series*, volume 122, ed. Francisco A. Lomeli and Carl R. Shirley (Detroit, London: Gale Research Company, 1992), p. 9.

²Quoted in Andrea Lunsford, "Toward a Mestiza Rhetoric: Gloria Anzaldúa on Composition and Postcoloniality," *Journal of Advanced Composition* 18, no. 1 (1998): 23.

³Quoted in Torres, p. 10.

Anzaldúa has become a well-known poet and woman of letters, frequently reading her work around the country and publishing numerous essays and poems in literary journals such as *Sinister Wisdom*, a periodical focusing on lesbian issues. She has served on the editorial board of that journal since 1984. Anzaldúa has also edited two collections of writing by women of color, *This Bridge Called My Back: Writings by Radical Women of Color*, coedited with Cherríe Moraga (1981), which won the 1986 Before Columbus Foundation American Book Award, and *Making Face, Making Soul/Haciendo Caras: Creative and Critical Perspectives by Feminists of Color* (1990). Both anthologies have become standard texts in women's studies courses. Her 1987 collection of her own essays and poems, *Borderlands/La frontera: The New Mestiza*, is generally considered to be her most important work and one of the most important works in twentieth-century feminist theory. Scholars are beginning to recognize this book's significance for women's language and rhetoric.

In *Borderlands*, Anzaldúa pioneers the use of new discursive resources for women writers, particularly women of color, by mixing dialects of English and Spanish, analytic and autobiographical material, and formal and informal genres. Chicano scholar Héctor Torres characterizes the mix in this way: "Anzaldúa shows herself conversant in several of the standard academic "codes"—such as critical theory, history, and sociolinguistics—but, not satisfied with any single one of them, she chooses to blend them into her own polyvalent voice. The result is an autobiographical work that, in suspending the traditional prohibition against mixing genres, functions as both literary and referential discourse."⁴ Rhetorician and composition scholar Andrea Lunsford has called this mixed discourse a "mestiza rhetoric," with "mestiza" referring not only to the specific racial and cultural mixing that has produced the Mexican American people, but also to a more generalized concept of internal multiplicity, or complex identity, that is expressed in language drawn from a variety of cultural sources.⁵ Lunsford describes Anzaldúa's "new kind of writing style" in this way: "She shifts from poetry to reportorial prose to autobiographical stream of consciousness to incantatory mythic chants to sketches and graphs—and back again, weaving images from her multiple selves and from many others into a kind of tapestry or patchwork quilt of language."⁶ Mestiza rhetoric deals with a condition Anzaldúa analyzes as "nepantilism," from an Aztec word meaning "torn between ways": She sees mestiza rhetoric as a way to repair, without erasing, the internal rips, that is, to make internal multiplicity into a positive discursive resource. As Anzaldúa explains it, "It's a hybridity, a mixture, because I live in this liminal state in between worlds, in between realities, in between systems of knowledge, in between symbology systems. This liminal, borderland, terrain or passageway, this interface, is what I call *Nepantla*."⁷

Chicana studies scholar Yvonne Yarbro-Bejarano and women's studies scholar Jane Hedley both defend Anzaldúa from the charges leveled by some Chicano and Chicana critics that her project in *Borderlands* is not sufficiently political. Hedley

⁴Torres, p. 13.

⁵Lunsford, p. 2.

⁶Lunsford, p. 2.

⁷Lunsford, p. 17, emphasis in original.

and Yarbrow-Bejarano both argue that Anzaldúa describes and fosters a process of self-formation that treats cultural multiplicity, however painful at times, as a discursive resource, and further, that she presents this kind of self-formation as a necessary prerequisite to the self-confidence needed for collective political action against racism, sexism, and homophobia. Literary scholar AnaLouise Keating would agree; she finds many similarities between Anzaldúa's work and that of Hélène Cixous (p. 1520)—terming Anzaldúa's concept a “mestizaje écriture”⁸—but sees Anzaldúa as more free than Cixous from charges of essentialism because of the political slant of her work. At the same time, Yarbrow-Bejarano has warned against detaching Anzaldúa from her specific Chicana context, because white feminists must acknowledge the sorts of racial loyalties that inform her work and because to detach her would be irresponsible scholarship given the influences on her of earlier women thinkers of color who have articulated concepts of multiple identity. Nevertheless, scholars agree that Anzaldúa calls for coalitions among all people who want to fight oppression, whether they are gay or straight, white or of color, and that she also allows her theory of mestiza consciousness to be used to help explicate the socially constructed nature of all identity and the implications of such constructed identities for language use.

Anzaldúa is committed to mixing art and politics and very aware that this agenda highlights the need to communicate effectively across cultural, sexual, and class boundaries. She understands that mestiza rhetoric must be deployed tactically:

OK, if I write in this style and I code-switch too much and I go into Spanglish too much and I do an associative kind of logical progression in a composition, am I going to lose those people that I want to affect, to change? Am I going to lose the respect of my peers—who are other writers and other artists and other academicians—when I change too much? When I change not only the style, but also the rhetoric, the way that this is done?⁹

As Andrea Lunsford has said, “One of the reasons work like yours is so important to the future of composition studies is that it gives concrete evidence of many voices in a text, many voices speaking out of who you are, many voices that you allow to speak.”¹⁰ Anzaldúa has shown that one can do such switching and mixing while communicating very powerfully.

Selected Bibliography

Anzaldúa's major publications are her two anthologies, *This Bridge Called My Back: Writings by Radical Women of Color* (1981), coedited with Cherríe Moraga, and *Making Face, Making Soul/Haciendo Caras: Creative and Critical Perspectives by Feminists of Color* (1990), and the collection of her own work, *Borderlands/La frontera: The New Mestiza* (1987), from which the excerpts printed here are taken.

Biographical information on Anzaldúa can be gained from her essay, “La Prieta,” in *This Bridge Called My Back*; from Héctor A. Torres's entry on her in the *Dictionary of Literary*

⁸See AnaLouise Keating, *Women Reading Women Writing* (Philadelphia: Temple University Press, 1996).

⁹Lunsford, p. 7.

¹⁰Lunsford, p. 12.

Biography: Chicano Writers, Second Series (ed. Francisco A. Lomeli and Carl R. Shirley, 1992); and from her interview with Andrea Lunsford, "Toward a Mestiza Rhetoric: Gloria Anzaldúa on Composition and Postcoloniality" (*Journal of Advanced Composition* 18 [1998]: 1–27; rpt. in *Race, Rhetoric, and the Postcolonial*, ed. Gary A. Olson and Lynn Worsham, 1999).

Andrea Lunsford's introduction to the interview cited above explains the significance of Anzaldúa's work to rhetoric. For commentary on Chicano and Chicana responses to Anzaldúa's work, and for analysis of the relationship between mixed internal identity and mixed discourse, see Yvonne Yarbro-Bejarano, "Gloria Anzaldúa's *Borderlands/La frontera*: Cultural Studies, 'Difference,' and the Non-Unitary Subject" (*Cultural Critique* 28 [fall 1994]: 5–28), and Jane Hedley, "Nepantlist Poetics: Narrative and Cultural Identity in the Mixed-Language Writings of Irena Klepfisz and Gloria Anzaldúa" (*Narrative* 4 [January 1996]: 35–54). Comparing Anzaldúa's work to that of Paula Gunn Allen and Audre Lorde, two other feminists of color with similar "border-crossing" theoretical concerns, as well as to the work of Hélène Cixous, is AnaLouise Keating's *Women Reading Women Writing* (1996).

From *Borderlands/La frontera*

HOW TO TAME A WILD TONGUE

"We're going to have to control your tongue," the dentist says, pulling out all the metal from my mouth. Silver bits plop and tinkle into the basin. My mouth is a motherlode.

The dentist is cleaning out my roots. I get a whiff of the stench when I gasp. "I can't cap that tooth yet, you're still draining," he says.

"We're going to have to do something about your tongue," I hear the anger rising in his voice. My tongue keeps pushing out the wads of cotton, pushing back the drills, the long thin needles. "I've never seen anything as strong or as stubborn," he says. And I think, how do you tame a wild tongue, train it to be quiet, how do you bridle and saddle it? How do you make it lie down?

Who is to say that robbing a people of its language is less violent than war?

—RAY GWYN SMITH¹

I remember being caught speaking Spanish at recess—that was good for three licks on the

¹Ray Gwyn Smith, *Moorland is Cold Country*, unpublished book. [Au.]

knuckles with a sharp ruler. I remember being sent to the corner of the classroom for "talking back" to the Anglo teacher when all I was trying to do was tell her how to pronounce my name. "If you want to be American, speak 'American.' If you don't like it, go back to Mexico where you belong."

"I want you to speak English. *Pa' hallar buen trabajo tienes que saber hablar el inglés. Qué vale toda tu educación si todavía hablas inglés con un 'accent,'*" my mother would say, mortified that I spoke English like a Mexican. At Pan American University, I, and all Chicano students were required to take two speech classes. Their purpose: to get rid of our accents.

Attacks on one's form of expression with the intent to censor are a violation of the First Amendment. *El Anglo con cara de inocente nos arrancó la lengua.* Wild tongues can't be tamed, they can only be cut out.

Overcoming the Tradition of Silence

*Ahogadas, escupimos el oscuro.
Peleando con nuestra propia sombra
el silencio nos sepulta.*

En boca cerrada no entran moscas. "Flies don't enter a closed mouth" is a saying I kept hearing

when I was a child. *Ser habladora* was to be a gossip and a liar, to talk too much. *Muchachitas bien criadas*, well-bred girls don't answer back. *Es una falta de respeto* to talk back to one's mother or father. I remember one of the sins I'd recite to the priest in the confession box the few times I went to confession: talking back to my mother, *hablar pa' tras*, *repelar*. *Hociconas*, *repelona*, *chismosa*, having a big mouth, questioning, carrying tales are all signs of being *mal criada*. In my culture they are all words that are derogatory if applied to women—I've never heard them applied to men.

The first time I heard two women, a Puerto Rican and a Cuban, say the word "*nosotras*," I was shocked. I had not known the word existed. Chicanas use *nosotras* whether we're male or female. We are robbed of our female being by the masculine plural. Language is a male discourse.

And our tongues have become
dry the wilderness has
dried out our tongues and
we have forgotten speech.

—IRENA KLEPFISZ²

Even our own people, other Spanish speakers *nos quieren poner candados en la boca*. They would hold us back with their bag of *reglas de academia*.

Oyé como ladra: el lenguaje de la frontera

Quien tiene boca se equivoca.

—Mexican saying

"*Pocho*, cultural traitor, you're speaking the oppressor's language by speaking English, you're ruining the Spanish language," I have been accused by various Latinos and Latinas. Chicano Spanish is considered by the purist and by most Latinos deficient, a mutilation of Spanish.

But Chicano Spanish is a border tongue which developed naturally. Change, *evolución*, *enriquecimiento de palabras nuevas por invención o adopción* have created variants of Chicano Spanish, *un nuevo lenguaje*. *Un lenguaje que corre-*

²Irena Klepfisz, "*Di rayze aheym/The Journey Home*," in *The Tribe of Dina: A Jewish Women's Anthology*, Melanie Kaye/Kantrowitz and Irena Klepfisz, eds. (Montpelier, VT: Sinister Wisdom Books, 1986), 49. [Au.]

sponde a un modo de vivir. Chicano Spanish is not incorrect, it is a living language.

For a people who are neither Spanish nor live in a country in which Spanish is the first language; for a people who live in a country in which English is the reigning tongue but who are not Anglo; for a people who cannot entirely identify with either standard (formal, Castillian) Spanish nor standard English, what recourse is left to them but to create their own language? A language which they can connect their identity to, one capable of communicating the realities and values true to themselves—a language with terms that are neither *español ni inglés*, but both. We speak a patois, a forked tongue, a variation of two languages.

Chicano Spanish sprang out of the Chicanos' need to identify ourselves as a distinct people. We needed a language with which we could communicate with ourselves, a secret language. For some of us, language is a homeland closer than the Southwest—for many Chicanos today live in the Midwest and the East. And because we are a complex, heterogeneous people, we speak many languages. Some of the languages we speak are:

1. Standard English
2. Working class and slang English
3. Standard Spanish
4. Standard Mexican Spanish
5. North Mexican Spanish dialect
6. Chicano Spanish (Texas, New Mexico, Arizona and California have regional variations)
7. Tex-Mex
8. *Pachuco* (called *caló*)

My "home" tongues are the languages I speak with my sister and brothers, with my friends. They are the last five listed, with 6 and 7 being closest to my heart. From school, the media and job situations, I've picked up standard and working class English. From Mamagrande Locha and from reading Spanish and Mexican literature, I've picked up Standard Spanish and Standard Mexican Spanish. From *los recién llegados*, Mexican immigrants, and *braceros*, I learned the North Mexican dialect. With Mexicans I'll try to speak either Standard Mexican Spanish or the North Mexican dialect. From my parents and Chicanos living in the Valley, I picked up Chicano Texas Spanish, and I speak it with my mom,

younger brother (who married a Mexican and who rarely mixes Spanish with English), aunts and older relatives.

With Chicanas from *Nuevo México* or *Arizona* I will speak Chicano Spanish a little, but often they don't understand what I'm saying. With most California Chicanas I speak entirely in English (unless I forget). When I first moved to San Francisco, I'd rattle off something in Spanish, unintentionally embarrassing them. Often it is only with another Chicana *tejana* that I can talk freely.

Words distorted by English are known as anglicisms or *pochismos*. The *poch* is an anglicized Mexican or American of Mexican origin who speaks Spanish with an accent characteristic of North Americans and who distorts and reconstructs the language according to the influence of English.³ Tex-Mex, or Spanglish, comes most naturally to me. I may switch back and forth from English to Spanish in the same sentence or in the same word. With my sister and my brother Nune and with Chicano *tejano* contemporaries I speak in Tex-Mex.

From kids and people my own age I picked up *Pachuco*. *Pachuco* (the language of the zoot suiters) is a language of rebellion, both against Standard Spanish and Standard English. It is a secret language. Adults of the culture and outsiders cannot understand it. It is made up of slang words from both English and Spanish. *Ruca* means girl or woman, *vato* means guy or dude, *chale* means no, *simón* means yes, *churro* is sure, talk is *periquiar*, *pigionear* means petting, *que gacho* means how nerdy, *ponte águila* means watch out, death is called *la pelona*. Through lack of practice and not having others who can speak it, I've lost most of the *Pachuco* tongue.

Chicano Spanish

Chicanos, after 250 years of Spanish/Anglo colonization have developed significant differences in the Spanish we speak. We collapse two adjacent vowels into a single syllable and sometimes shift the stress in certain words such as *maíz/maiz*, *co-*

hete/cuete. We leave out certain consonants when they appear between vowels: *lado/lao*, *majado/mojao*. Chicanos use "archaisms," words that are no longer in the Spanish language, words that have been evolved out. We say *semos*, *truje*, *haiga*, *ansina*, and *naiden*. We retain the "archaic" *j*, as in *jalar*, that derives from an earlier *h*, (the French *halar* or the Germanic *halon* which was lost to standard Spanish in the 16th century), but which is still found in several regional dialects such as the one spoken in South Texas. (Due to geography, Chicanos from the Valley of South Texas were cut off linguistically from other Spanish speakers. We tend to use words that the Spaniards brought over from Medieval Spain. The majority of the Spanish colonizers in Mexico and the Southwest came from Extremadura—Hernán Cortés was one of them—and Andalucía. Andalusians pronounce *ll* like a *y*, and their *d*'s tend to be absorbed by adjacent vowels: *tirado* becomes *tirao*. They brought *el lenguaje popular, dialectos y regionalismos*.⁴)

Chicanos and other Spanish speakers also shift *ll* to *y* and *z* to *s*.⁵ We leave out initial syllables, saying *tar* for *estar*, *toy* for *estoy*, *hora* for *ahora* (*cubanos* and *puertorriqueños* also leave out initial letters of some words.) We also leave out the final syllable such as *pa* for *para*. The intervocalic *y*, the *ll* as in *tortilla*, *ella*, *botella*, gets replaced by *tortia* or *tortiya*, *ea*, *botea*. We add an additional syllable at the beginning of certain words: *atocar* for *tocar*, *agastar* for *gastar*. Sometimes we'll say *lavaste las vacijas*, other times *lavates* (substituting the *ates* verb endings for the *aste*).

We use anglicisms, words borrowed from English: *bola* from ball, *carpeta* from carpet, *máquina de lavar* (instead of *lavadora*) from washing machine. Tex-Mex argot, created by adding a Spanish sound at the beginning or end of an English word such as *cookiari* for cook, *watchari* for watch, *parkari* for park, and *rapiari* for rape, is the result of the pressures on Spanish speakers to adapt to English.

⁴Eduardo Hernández-Chávez, Andrew D. Cohen, and Anthony F. Beltramo, *El Lenguaje de los Chicanos: Regional and Social Characteristics of Language Used By Mexican Americans* (Arlington, VA: Center for Applied Linguistics, 1975), 39. [Au.]

⁵Hernández-Chávez, xvii. [Au.]

³R. C. Ortega, *Dialectología Del Barrio*, trans. Hortencia S. Alwan (Los Angeles, CA: R. C. Ortega Publisher & Bookseller, 1977), 132. [Au.]

We don't use the word *vosotros/as* or its accompanying verb form. We don't say *claro* (to mean yes), *imagínate*, or *me emociona*, unless we picked up Spanish from Latinas, out of a book, or in a classroom. Other Spanish-speaking groups are going through the same, or similar, development in their Spanish.

Linguistic Terrorism

Deslenguadas. Somos los del español deficiente. We are your linguistic nightmare, your linguistic aberration, your linguistic *mestisaje*, the subject of your *burla*. Because we speak with tongues of fire we are culturally crucified. Racially, culturally and linguistically *somos huérfanos*—we speak an orphan tongue.

Chicanas who grew up speaking Chicano Spanish have internalized the belief that we speak poor Spanish. It is illegitimate, a bastard language. And because we internalize how our language has been used against us by the dominant culture, we use our language differences against each other.

Chicana feminists often skirt around each other with suspicion and hesitation. For the longest time I couldn't figure it out. Then it dawned on me. To be close to another Chicana is like looking into the mirror. We are afraid of what we'll see there. *Pena*. Shame. Low estimation of self. In childhood we are told that our language is wrong. Repeated attacks on our native tongue diminish our sense of self. The attacks continue throughout our lives.

Chicanas feel uncomfortable talking in Spanish to Latinas, afraid of their censure. Their language was not outlawed in their countries. They had a whole lifetime of being immersed in their native tongue; generations, centuries in which Spanish was a first language, taught in school, heard on radio and TV, and read in the newspaper.

If a person, Chicana or Latina, has a low estimation of my native tongue, she also has a low estimation of me. Often with *mexicanas y latinas* we'll speak English as a neutral language. Even among Chicanas we tend to speak English at parties or conferences. Yet, at the same time, we're afraid the other will think we're *agringadas* because we don't speak Chicano Spanish. We op-

press each other trying to out-Chicano each other, vying to be the "real" Chicanas, to speak like Chicanos. There is no one Chicano language just as there is no one Chicano experience. A monolingual Chicana whose first language is English or Spanish is just as much a Chicana as one who speaks several variants of Spanish. A Chicana from Michigan or Chicago or Detroit is just as much a Chicana as one from the Southwest. Chicano Spanish is as diverse linguistically as it is regionally.

By the end of this century, Spanish speakers will comprise the biggest minority group in the U.S., a country where students in high schools and colleges are encouraged to take French classes because French is considered more "cultured." But for a language to remain alive it must be used.⁶ By the end of this century English, and not Spanish, will be the mother tongue of most Chicanos and Latinos.

So, if you want to really hurt me, talk badly about my language. Ethnic identity is twin skin to linguistic identity—I am my language. Until I can take pride in my language, I cannot take pride in myself. Until I can accept as legitimate Chicano Texas Spanish, Tex-Mex and all the other languages I speak, I cannot accept the legitimacy of myself. Until I am free to write bilingually and to switch codes without having always to translate, while I still have to speak English or Spanish when I would rather speak Spanglish, and as long as I have to accommodate the English speakers rather than having them accommodate me, my tongue will be illegitimate.

I will no longer be made to feel ashamed of existing. I will have my voice: Indian, Spanish, white. I will have my serpent's tongue—my woman's voice, my sexual voice, my poet's voice. I will overcome the tradition of silence.

My fingers
move sly against your palm
Like women everywhere, we speak in code. . . .
—MELANIE KAYE/KANTROWITZ⁷

⁶Irena Klepfisz, "Secular Jewish Identity: Yidishkayt in America," in *The Tribe of Dina*, Kaye/Kantrowitz and Klepfisz, eds., 43. [Au.]

⁷Melanie Kaye/Kantrowitz, "Sign," in *We Speak in Code*:

“Vistas,” corridos, y comida:
My Native Tongue

In the 1960s, I read my first Chicano novel. It was *City of Night* by John Rechy, a gay Texan, son of a Scottish father and a Mexican mother. For days I walked around in stunned amazement that a Chicano could write and could get published. When I read *I am Joaquín*⁸ I was surprised to see a bilingual book by a Chicano in print. When I saw poetry written in Tex-Mex for the first time, a feeling of pure joy flashed through me. I felt like we really existed as a people. In 1971, when I started teaching High School English to Chicano students, I tried to supplement the required texts with works by Chicanos, only to be reprimanded and forbidden to do so by the principal. He claimed that I was supposed to teach “American” and English literature. At the risk of being fired, I swore my students to secrecy and slipped in Chicano short stories, poems, a play. In graduate school, while working toward a Ph.D., I had to “argue” with one advisor after the other, semester after semester, before I was allowed to make Chicano literature an area of focus.

Even before I read books by Chicanos or Mexicans, it was the Mexican movies I saw at the drive-in—the Thursday night special of \$1.00 a carload—that gave me a sense of belonging. “*Vámonos a las vistas*,” my mother would call out and we’d all—grandmother, brothers, sister and cousins—squeeze into the car. We’d wolf down cheese and bologna white bread sandwiches while watching Pedro Infante in melodramatic tear-jerkers like *Nosotros los pobres*, the first “real” Mexican movie (that was not an imitation of European movies). I remember seeing *Cuando los hijos se van* and surmising that all Mexican movies played up the love a mother has for her children and what ungrateful sons and daughters suffer when they are not devoted to their mothers. I remember the singing-

type “westerns” of Jorge Negrete and Miquel Aceves Mejía. When watching Mexican movies, I felt a sense of homecoming as well as alienation. People who were to amount to something didn’t go to Mexican movies, or *bailes* or tune their radios to *bolero*, *rancherita*, and *corrido* music.

The whole time I was growing up, there was *norteño* music sometimes called North Mexican border music, or Tex-Mex music, or Chicano music, or *cantina* (bar) music. I grew up listening to *conjuntos*, three- or four-piece bands made up of folk musicians playing guitar, *bajo sexto*, drums and button accordion, which Chicanos had borrowed from the German immigrants who had come to Central Texas and Mexico to farm and build breweries. In the Rio Grande Valley, Steve Jordan and Little Joe Hernández were popular, and Flaco Jiménez was the accordion king. The rhythms of Tex-Mex music are those of the polka, also adapted from the Germans, who in turn had borrowed the polka from the Czechs and Bohemians.

I remember the hot, sultry evenings when *corridos*—songs of love and death on the Texas-Mexican borderlands—reverberated out of cheap amplifiers from the local *cantinas* and wafted in through my bedroom window.

Corridos first became widely used along the South Texas/Mexican border during the early conflict between Chicanos and Anglos. The *corridos* are usually about Mexican heroes who do valiant deeds against the Anglo oppressors. Pancho Villa’s song, “*La cucaracha*,” is the most famous one. *Corridos* of John F. Kennedy and his death are still very popular in the Valley. Older Chicanos remember Lydia Mendoza, one of the great border *corrido* singers who was called *la Gloria de Tejas*. Her “*El tango negro*,” sung during the Great Depression, made her a singer of the people. The everpresent *corridos* narrated one hundred years of border history, bringing news of events as well as entertaining. These folk musicians and folk songs are our chief cultural myth-makers, and they made our hard lives seem bearable.

I grew up feeling ambivalent about our music. Country-western and rock-and-roll had more status.

Poems and Other Writings (Pittsburgh, PA: Motherroot Publications, Inc., 1980), 85. [Au.]

⁸Rodolfo Gonzales, *I Am Joaquín/Yo Soy Joaquín* (New York, NY: Bantam Books, 1972). It was first published in 1967. [Au.]

In the 50s and 60s, for the slightly educated and *agringado* Chicanos, there existed a sense of shame at being caught listening to our music. Yet I couldn't stop my feet from thumping to the music, could not stop humming the words, nor hide from myself the exhilaration I felt when I heard it.

There are more subtle ways that we internalize identification, especially in the forms of images and emotions. For me food and certain smells are tied to my identity, to my homeland. Woodsmoke curling up to an immense blue sky; woodsmoke perfuming my grandmother's clothes, her skin. The stench of cow manure and the yellow patches on the ground; the crack of a .22 rifle and the reek of cordite. Homemade white cheese sizzling in a pan, melting inside a folded *tortilla*. My sister Hilda's hot, spicy *menudo*, *chile colorado* making it deep red, pieces of *panza* and hominy floating on top. My brother Carlito barbecuing *fajitas* in the backyard. Even now and 3,000 miles away, I can see my mother spicing the ground beef, pork and venison with *chile*. My mouth salivates at the thought of the hot steaming *tamales* I would be eating if I were home.

Si le preguntas a mi mamá, "¿Qué eres?"

Identity is the essential core of who we are as individuals, the conscious experience of the self inside.

—KAUFMAN⁹

Nosotros los Chicanos straddle the borderlands. On one side of us, we are constantly exposed to the Spanish of the Mexicans, on the other side we hear the Anglos' incessant clamoring so that we forget our language. Among ourselves we don't say *nosotros los americanos*, *o nosotros los españoles*, *o nosotros los hispanos*. We say *nosotros los mexicanos* (by *mexicanos* we do not mean citizens of Mexico; we do not mean a national identity, but a racial one). We distinguish between *mexicanos del otro lado* and *mexicanos de este lado*. Deep in our hearts we believe that being Mexican has

⁹Gerшен Kaufman, *Shame: The Power of Caring* (Cambridge, MA: Schenkman Books, Inc., 1980), 68. [Au.]

nothing to do with which country one lives in. Being Mexican is a state of soul—not one of mind, not one of citizenship. Neither eagle nor serpent, but both. And like the ocean, neither animal respects borders.

Dime con quien andas y te diré quien eres.

(Tell me who your friends are and I'll tell you who you are.)

—Mexican saying

Si le preguntas a mi mamá, "¿Qué eres?" te dirá, "Soy mexicana." My brothers and sisters say the same. I sometimes will answer "*soy mexicana*" and at others will say "*soy Chicana*" or "*soy tejana*." But I identified as "*Raza*" before I ever identified as "*mexicana*" or "*Chicana*."

As a culture, we call ourselves Spanish when referring to ourselves as a linguistic group and when copping out. It is then that we forget our predominant Indian genes. We are 70–80% Indian.¹⁰ We call ourselves Hispanic¹¹ or Spanish-American or Latin American or Latin when linking ourselves to other Spanish-speaking peoples of the Western hemisphere and when copping out. We call ourselves Mexican-American¹² to signify we are neither Mexican nor American, but more the noun "American" than the adjective "Mexican" (and when copping out).

Chicanos and other people of color suffer economically for not acculturating. This voluntary (yet forced) alienation makes for psychological conflict, a kind of dual identity—we don't identify with the Anglo-American cultural values and we don't totally identify with the Mexican cultural values. We are a synergy of two cultures with various degrees of Mexicanness or Angloness. I have so internalized the borderland conflict that sometimes I feel like one cancels out the other and we are zero, nothing, no one. *A veces*

¹⁰John R. Chávez, *The Lost Land: The Chicano Images of the Southwest* (Albuquerque, NM: University of New Mexico Press, 1984), 88–90. [Au.]

¹¹"Hispanic" is derived from *Hispanis* (*España*, a name given to the Iberian Peninsula in ancient times when it was a part of the Roman Empire) and is a term designated by the U.S. government to make it easier to handle us on paper. [Au.]

¹²The Treaty of Guadalupe Hidalgo created the Mexican-American in 1848. [Au.]

no soy nada ni nadie. Pero hasta cuando no lo soy, lo soy.

When not copping out, when we know we are more than nothing, we call ourselves Mexican, referring to race and ancestry; *mestizo* when affirming both our Indian and Spanish (but we hardly ever own our Black ancestry); Chicano when referring to a politically aware people born and/or raised in the U.S.; *Raza* when referring to Chicanos; *tejanos* when we are Chicanos from Texas.

Chicanos did not know we were a people until 1965 when Cesar Chavez and the farmworkers united and *I Am Joaquín* was published and *la Raza Unida* party was formed in Texas. With that recognition, we became a distinct people. Something momentous happened to the Chicano soul—we became aware of our reality and acquired a name and a language (Chicano Spanish) that reflected that reality. Now that we had a name, some of the fragmented pieces began to fall together—who we were, what we were, how we had evolved. We began to get glimpses of what we might eventually become.

Yet the struggle of identities continues, the struggle of borders is our reality still. One day the inner struggle will cease and a true integration take place. In the meantime, *tenemos que hacer la lucha. ¿Quién está protegiendo los ranchos de mi gente? ¿Quién está tratando de cerrar la fisura entre la india y el blanco en nuestra sangre? El Chicano, sí, el Chicano que anda como un ladrón en su propia casa.*

Los Chicanos, how patient we seem, how very patient. There is the quiet of the Indian about us.¹³ We know how to survive. When other races have given up their tongue, we've kept ours. We know what it is to live under the hammer blow of the dominant *norteamericano* culture. But more than we count the blows, we count the days the weeks the years the centuries the eons until the white laws and commerce and customs will rot in the deserts they've created, lie bleached. *Humildes*

¹³Anglos, in order to alleviate their guilt for dispossessing the Chicano, stressed the Spanish part of us and perpetrated the myth of the Spanish Southwest. We have accepted the fiction that we are Hispanic, that is Spanish, in order to accommodate ourselves to the dominant culture and its abhorrence of Indians. Chávez, 88–91. [Au.]

yet proud, *quietos* yet wild, *nosotros los mexicanos-Chicanos* will walk by the crumbling ashes as we go about our business. Stubborn, persevering, impenetrable as stone, yet possessing a malleability that renders us unbreakable, we, the *mestizas* and *mestizos*, will remain.

TLILLI, TLAPALLI

THE PATH OF THE RED AND BLACK INK

Out of poverty, poetry;
out of suffering, song.
—a Mexican saying

When I was seven, eight, nine, fifteen, sixteen years old, I would read in bed with a flashlight under the covers, hiding my self-imposed insomnia from my mother. I preferred the world of the imagination to the death of sleep. My sister, Hilda, who slept in the same bed with me, would threaten to tell my mother unless I told her a story.

I was familiar with *cuentos*—my grandmother told stories like the one about her getting on top of the roof while down below rabid coyotes were ravaging the place and wanting to get at her. My father told stories about a phantom giant dog that appeared out of nowhere and sped along the side of the pickup no matter how fast he was driving.

Nudge a Mexican and she or he will break out with a story. So, huddling under the covers, I made up stories for my sister night after night. After a while she wanted two stories per night. I learned to give her installments, building up the suspense with convoluted complications until the story climaxed several nights later. It must have been then that I decided to put stories on paper. It must have been then that working with images and writing became connected to night.

Invoking Art

In the ethno-poetics and performance of the shaman, my people, the Indians, did not split the artistic from the functional, the sacred from the

secular, art from everyday life. The religious, social and aesthetic purposes of art were all intertwined. Before the Conquest, poets gathered to play music, dance, sing and read poetry in open-air places around the *Xochicuauhitl, el Árbol Florido*, Tree-in-Flower. (The *Coaxihuítl* or morning glory is called the snake plant and its seeds, known as *ololiuhqui*, are hallucinogenic.¹⁴) The ability of story (prose and poetry) to transform the storyteller and the listener into something or someone else is shamanistic. The writer, as shape-changer, is a *nahual*, a shaman.

In looking at this book that I'm almost finished writing, I see a mosaic pattern (Aztec-like) emerging, a weaving pattern, thin here, thick there. I see a preoccupation with the deep structure, the underlying structure, with the gesso underpainting that is red earth, black earth. I can see the deep structure, the scaffolding. If I can get the bone structure right, then putting flesh on it proceeds without too many hitches. The problem is that the bones often do not exist prior to the flesh, but are shaped after a vague and broad shadow of its form is discerned or uncovered during beginning, middle and final stages of the writing. Numerous overlays of paint, rough surfaces, smooth surfaces make me realize I am preoccupied with texture as well. Too, I see the barely contained color threatening to spill over the boundaries of the object it represents and into other "objects" and over the borders of the frame. I see a hybridization of metaphor, different species of ideas popping up here, popping up there, full of variations and seeming contradictions, though I believe in an ordered, structured universe where all phenomena are interrelated and imbued with spirit. This almost finished product seems an assemblage, a montage, a beaded work with several leitmotifs and with a central core, now appearing, now disappearing in a crazy dance. The whole thing has had a mind of its own, escaping me and insisting on putting together the pieces of its own puzzle with minimal direction from my will. It is a rebellious, willful entity, a precocious girl-child

¹⁴R. Gordon Wasson, *The Wondrous Mushroom: Mycolatry in Mesoamerica* (New York, NY: McGraw-Hill Book Company, 1980), 59, 103. [Au.]

forced to grow up too quickly, rough, unyielding, with pieces of feather sticking out here and there, fur, twigs, clay. My child, but not for much longer. This female being is angry, sad, joyful, is *Coatlicue*, dove, horse, serpent, cactus. Though it is a flawed thing—a clumsy, complex, groping blind thing—for me it is alive, infused with spirit. I talk to it; it talks to me.

I make my offerings of incense and cracked corn, light my candle. In my head I sometimes will say a prayer—an affirmation and a voicing of intent. Then I run water, wash the dishes or my underthings, take a bath, or mop the kitchen floor. This "induction" period sometimes takes a few minutes, sometimes hours. But always I go against a resistance. Something in me does not want to do this writing. Yet once I'm immersed in it, I can go fifteen to seventeen hours in one sitting and I don't want to leave it.

My "stories" are acts encapsulated in time, "enacted" every time they are spoken aloud or read silently. I like to think of them as performances and not as inert and "dead" objects (as the aesthetics of Western culture think of art works). Instead, the work has an identity; it is a "who" or a "what" and contains the presences of persons, that is, incarnations of gods or ancestors or natural and cosmic powers. The work manifests the same needs as a person, it needs to be "fed," *la tengo que bañar y vestir*.

When invoked in rite, the object/event is "present"; that is, "enacted," it is both a physical thing and the power that infuses it. It is metaphysical in that it "spins its energies between gods and humans" and its task is to move the gods. This type of work dedicates itself to managing the universe and its energies. I'm not sure what it is when it is at rest (not in performance). It may or may not be a "work" then. A mask may only have the power of presence during a ritual dance and the rest of the time it may merely be a "thing." Some works exist forever invoked, always in performance. I'm thinking of totem poles, cave paintings. Invoked art is communal and speaks of everyday life. It is dedicated to the validation of humans; that is, it makes people

hopeful, happy, secure, and it can have negative effects as well, which propel one towards a search for validation.¹⁵

The aesthetic of virtuosity, art typical of Western European cultures, attempts to manage the energies of its own internal system such as conflicts, harmonies, resolutions and balances. It bears the presences of qualities and internal meanings. It is dedicated to the validation of itself. Its task is to move humans by means of achieving mastery in content, technique, feeling. Western art is always whole and always “in power.” It is individual (not communal). It is “psychological” in that it spins its energies between itself and its witness.¹⁶

Western cultures behave differently toward works of art than do tribal cultures. The “sacrifices” Western cultures make are in housing their art works in the best structures designed by the best architects; and in servicing them with insurance, guards to protect them, conservators to maintain them, specialists to mount and display them, and the educated and upper classes to “view” them. Tribal cultures keep art works in honored and sacred places in the home and elsewhere. They attend them by making sacrifices of blood (goat or chicken), libations of wine. They bathe, feed, and clothe them. The works are treated not just as objects, but also as persons. The “witness” is a participant in the enactment of the work in a ritual, and not a member of the privileged classes.¹⁷

Ethnocentrism is the tyranny of Western aesthetics. An Indian mask in an American museum is transposed into an alien aesthetic system where what is missing is the presence of power invoked through performance ritual. It has become a conquered thing, a dead “thing” separated from nature and, therefore, its power.

Modern Western painters have “borrowed,” copied, or otherwise extrapolated the art of tribal cultures and called it cubism, surrealism, symbolism. The music, the beat of the drum, the

¹⁶Armstrong, 10. [Au.]

¹⁷Armstrong, 4. [Au.]

Blacks’ jive talk. All taken over. Whites, along with a good number of our own people, have cut themselves off from their spiritual roots, and they take our spiritual art objects in an unconscious attempt to get them back. If they’re going to do it, I’d like them to be aware of what they are doing and to go about doing it the right way. Let’s all stop importing Greek myths and the Western Cartesian split point of view and root ourselves in the mythological soil and soul of this continent. White America has only attended to the body of the earth in order to exploit it, never to succor it or to be nurtured in it. Instead of surreptitiously ripping off the vital energy of people of color and putting it to commercial use, whites could allow themselves to share and exchange and learn from us in a respectful way. By taking up *curanderismo*, Santeria, shamanism, Taoism, Zen and otherwise delving into the spiritual life and ceremonies of multi-colored people, Anglos would perhaps lose the white sterility they have in their kitchens, bathrooms, hospitals, mortuaries and missile bases. Though in the conscious mind, black and dark may be associated with death, evil and destruction, in the subconscious mind and in our dreams, white is associated with disease, death and hopelessness. Let us hope that the left hand, that of darkness, of femaleness, of “primitiveness,” can divert the indifferent, right-handed, “rational” suicidal drive that, unchecked, could blow us into acid rain in a fraction of a millisecond.

Ni cuicani: I, the Singer

For the ancient Aztecs, *tlilli, tlapalli, la tinta negra y roja de sus códices* (the black and red ink painted on codices) were the colors symbolizing *escritura y sabiduría* (writing and wisdom).¹⁸ They believed that through metaphor and symbol, by means of poetry and truth, communication with the Divine could be attained, and *topan* (that which is above—the gods and spirit world) could be bridged with *mictlán* (that which is below—the underworld and the region of the dead).

¹⁸Miguel Leon-Portilla, *Los Antiguos Mexicanos: A través de sus crónicas y cantares* (México, D.F.: Fondo de Cultura Económica, 1961), 19, 22. [Au.]

Poet: she pours water from the mouth of the pump, lowers the handle then lifts it, lowers, lifts. Her hands begin to feel the pull from the entrails, the live animal resisting. A sigh rises up from the depths, the handle becomes a wild thing in her hands, the cold sweet water gushes out, splashing her face, the shock of nightlight filling the bucket.

An image is a bridge between evoked emotion and conscious knowledge; words are the cables that hold up the bridge. Images are more direct, more immediate than words, and closer to the unconscious. Picture language precedes thinking in words; the metaphorical mind precedes analytical consciousness.

The Shamanic State

When I create stories in my head, that is, allow the voices and scenes to be projected in the inner screen of my mind, I “trance.” I used to think I was going crazy or that I was having hallucinations. But now I realize it is my job, my calling, to traffic in images. Some of these film-like narratives I write down; most are lost, forgotten. When I don’t write the images down for several days or weeks or months, I get physically ill. Because writing invokes images from my unconscious, and because some of the images are residues of trauma which I then have to reconstruct, I sometimes get sick when I *do* write. I can’t stomach it, become nauseous, or burn with fever, worsen. But, in reconstructing the traumas behind the images, I make “sense” of them, and once they have “meaning” they are changed, transformed. It is then that writing heals me, brings me great joy.

To facilitate the “movies” with soundtracks, I need to be alone, or in a sensory-deprived state. I plug up my ears with wax, put on my black cloth eye-shades, lie horizontal and unmoving, in a state between sleeping and waking, mind and body locked into my fantasy. I am held prisoner by it. My body is experiencing events. In the beginning it is like being in a movie theater, as pure spectator. Gradually I become so engrossed with the activities, the conversations, that I become a participant in the drama. I have to struggle to “disengage” or escape from my “animated story,” I have to get some sleep so I can write tomorrow. Yet I am gripped by a story which won’t let me go. Outside the frame, I am film di-

rector, screenwriter, camera operator. Inside the frame, I am the actors — male and female — I am desert sand, mountain, I am dog, mosquito. I can sustain a four- to six-hour “movie.” Once I am up, I can sustain several “shorts” of anywhere between five and thirty minutes. Usually these “narratives” are the offspring of stories acted out in my head during periods of sensory deprivation.

My “awakened dreams” are about shifts. Thought shifts, reality shifts, gender shifts: one person metamorphoses into another in a world where people fly through the air, heal from mortal wounds. I am playing with my Self, I am playing with the world’s soul, I am the dialogue between my Self and *el espíritu del mundo*. I change myself, I change the world.

Sometimes I put the imagination to a more rare use. I choose words, images, and body sensations and animate them to impress them on my consciousness, thereby making changes in my belief system and reprogramming my consciousness. This involves looking my inner demons in the face, then deciding which I want in my psyche. Those I don’t want, I starve; I feed them no words, no images, no feelings. I spend no time with them, share not my home with them. Neglected, they leave. This is harder to do than to merely generate “stories.” I can only sustain this activity for a few minutes.

I write the myths in me, the myths I am, the myths I want to become. The word, the image and the feeling have a palatable energy, a kind of power. *Con imagenes domo mi miedo, cruzo los abismos que tengo por dentro. Con palabras me hago piedra, pájaro, puente de serpientes arrastrando a ras del suelo todo lo que soy, todo lo que algún día seré.*

*Los que están mirando (leyendo),
los que cuentan (o refieren lo que leen).
Los que vuelven ruidosamente las hojas de los
códices.
Los que tienen en su poder
la tinta negra y roja (la sabiduría)
y lo pintado,
ellos nos llevan, nos guían,
nos dicen el camino.¹⁹*

¹⁹Leon-Portilla, 125. [Au.]

Writing Is a Sensuous Act

Tallo mi cuerpo como si estuviera lavando un trapo. Toco las saltadas venas de mis manos, mis chichis adormecidas como pájaras a la anoche- cer. Estoy encorbada sobre la cama. Las ima- genes aleteán alrededor de mi cama como mur- ciélagos, la sábana como que tuviese alas. El ruido de los trenes subterráneos en mi sentido como conchas. Parece que las paredes del cuarto se me arriman cada vez más cerquita.

Picking out images from my soul's eye, fish- ing for the right words to recreate the images. Words are blades of grass pushing past the ob- stacles, sprouting on the page; the spirit of the words moving in the body is as concrete as flesh and as palpable; the hunger to create is as sub- stantial as fingers and hand.

I look at my fingers, see plumes growing there. From the fingers, my feathers, black and red ink drips across the page. *Escribo con la tinta de mi sangre.* I write in red. Ink. Intimately knowing the smooth touch of paper, its speech- lessness before I spill myself on the insides of trees. Daily, I battle the silence and the red. Daily, I take my throat in my hands and squeeze until the cries pour out, my larynx and soul sore from the constant struggle.

Something to Do with the Dark

*Quien canta, sus males espanta.
—un dicho*

The toad comes out of its hiding place inside the lobes of my brain. It's going to happen again. The ghost of the toad that betrayed me—I hold it in my hand. The toad is sipping the strength from my veins, it is sucking my pale heart. I am a dried serpent skin, wind scuttling me across the hard ground, pieces of me scattered over the countryside. And there in the dark I meet the crippled spider crawling in the gutter, the day-old newspaper fluttering in the dirty rain water.

Musa bruja, venga. Cu- brese con una sábana y espante mis demonios que a rempujones y a cachetadas me roban la pluma me rompen el sueño. Musa, ¡misericordia!

Óigame, musa bruja.

¿Porqué huye uste' en mi cara? Su grito me des- arrolla de mi caracola, me sacude el alma. Vieja, quítese de aquí con sus alas de navaja. Ya no me despedaze mi cara. Vaya con sus pinche uñas que me desgarran de los ojos hasta los talones. Váyese a la tiznada. Que no me coman, le digo. Que no me coman sus nueve dedos caníbales.

Hija negra de la noche, carnala, ¿Porqué me sacas las tripas, porqué cardas mis entrañas? Este hilvanando palabras con tripas me está matando. Jija de la noche ¡vete a la chingada!

Writing produces anxiety. Looking inside my- self and my experience, looking at my conflicts, engenders anxiety in me. Being a writer feels very much like being a Chicana, or being queer—a lot of squirming, coming up against all sorts of walls. Or its opposite: nothing defined or definite, a boundless, floating state of limbo where I kick my heels, brood, percolate, hiber- nate and wait for something to happen.

Living in a state of psychic unrest, in a Bor- derland, is what makes poets write and artists create. It is like a cactus needle embedded in the flesh. It worries itself deeper and deeper, and I keep aggravating it by poking at it. When it be- gins to fester I have to do something to put an end to the aggravation and to figure out why I have it. I get deep down into the place where it's rooted in my skin and pluck away at it, playing it like a musical instrument—the fingers pressing, making the pain worse before it can get better. Then out it comes. No more discomfort, no more ambivalence. Until another needle pierces the skin. That's what writing is for me, an endless cycle of making it worse, making it better, but al- ways making meaning out of the experience, whatever it may be.

*My flowers shall not cease to live;
my songs shall never end;
I, a singer, intone them;
they become scattered, they are spread about.
—Cantares mexicanos*

To write, to be a writer, I have to trust and be- lieve in myself as a speaker, as a voice for the images. I have to believe that I can communicate with images and words and that I can do it well.

A lack of belief in my creative self is a lack of belief in my total self and vice versa—I cannot separate my writing from any part of my life. It is all one.

When I write it feels like I'm carving bone. It feels like I'm creating my own face, my own heart—a Nahuatl concept. My soul makes itself through the creative act. It is constantly remaking and giving birth to itself through my body. It is this learning to live with *la Coatlicue* that transforms living in the Borderlands from a nightmare into a numinous experience. It is always a path/state to something else.

In *Xóchitl* in *Cuícatl*²⁰

She writes while other people sleep. Something is trying to come out. She fights the words, pushes them down, down, a woman with morning sickness in the middle of the night. How much easier it would be to carry a baby for nine months and then expel it permanently. These continuous multiple pregnancies are going to kill her. She is the battlefield for the pitched fight between the inner image and the words trying to recreate it. *La musa bruja* has no manners. Doesn't she know, nights are for sleeping?

She is getting too close to the mouth of the abyss. She is teetering on the edge, trying to balance while she makes up her mind whether to jump in or to find a safer way down. That's why she makes herself sick—to postpone having to jump blindfolded into the abyss of her own being and there in the depths confront her face, the face underneath the mask.

To be a mouth—the cost is too high—her whole life enslaved to that devouring mouth. *Todo pasaba por esa boca, el viento, el fuego, los mares y la Tierra*. Her body, a crossroads, a fragile bridge, cannot support the tons of cargo passing through it. She wants to install 'stop' and 'go' signal lights, instigate a curfew, police Poetry. But something wants to come out.

Blocks (*Coatlicue* states) are related to my cultural identity. The painful periods of confu-

²⁰In *Xóchitl* in *Cuícatl* is Nahuatl for flower and song, *flor y canto*. [Au.]

sion that I suffer from are symptomatic of a larger creative process: cultural shifts. The stress of living with cultural ambiguity both compels me to write and blocks me. It isn't until I'm almost at the end of the blocked state that I remember and recognize it for what it is. As soon as this happens, the piercing light of awareness melts the block and I accept the deep and the darkness and I hear one of my voices saying, "I am tired of fighting. I surrender. I give up, let go, let the walls fall. On this night of the hearing of faults, *Tlazolteotl, diosa de la cara negra*, let fall the cockroaches that live in my hair, the rats that nestle in my skull. Gouge out my lame eyes, rout my demon from its nocturnal cave. Set torch to the tiger that stalks me. Loosen the dead faces gnawing my cheekbones. I am tired of resisting. I surrender. I give up, let go, let the walls fall."

And in descending to the depths I realize that down is up, and I rise up from and into the deep. And once again I recognize that the internal tension of oppositions can propel (if it doesn't tear apart) the mestiza writer out of the *metate* where she is being ground with corn and water, eject her out as *nahual*, an agent of transformation, able to modify and shape primordial energy and therefore able to change herself and others into turkey, coyote, tree, or human.

I sit here before my computer, *Amiguita*, my altar on top of the monitor with the *Virgen de Coatlatlopeuh* candle and copal incense burning. My companion, a wooden serpent staff with feathers, is to my right while I ponder the ways metaphor and symbol concretize the spirit and etherealize the body. The Writing is my whole life, it is my obsession. This vampire which is my talent does not suffer other suitors.²¹ Daily I court it, offer my neck to its teeth. This is the sacrifice that the act of creation requires, a blood sacrifice. For only through the body, through the pulling of flesh, can the human soul be transformed. And for images, words, stories to have this transformative power, they must arise from the human body—flesh and bone—and from the Earth's body—stone, sky, liquid, soil. This work, these images, piercing tongue or ear lobes with

²¹Nietzsche, in *The Will to Power*, says that the artist lives under a curse of being vampirized by his talent. [Au.]

cactus needle, are my offerings, are my Aztec blood sacrifices.

LA CONCIENCIA DE LA MESTIZA TOWARDS A NEW CONSCIOUSNESS

*Por la mujer de mi raza
hablará el espíritu.*²²

Jose Vasconcelos, Mexican philosopher, envisaged *una raza mestiza, una mezcla de razas afines, una raza de color—la primera raza síntesis del globo*. He called it a cosmic race, *la raza cósmica*, a fifth race embracing the four major races of the world.²³ Opposite to the theory of the pure Aryan, and to the policy of racial purity that white America practices, his theory is one of inclusivity. At the confluence of two or more genetic streams, with chromosomes constantly “crossing over,” this mixture of races, rather than resulting in an inferior being, provides hybrid progeny, a mutable, more malleable species with a rich gene pool. From this racial, ideological, cultural and biological cross-pollination, an “alien” consciousness is presently in the making—a new *mestiza* consciousness, *una conciencia de mujer*. It is a consciousness of the Borderlands.

Una lucha de fronteras/ A Struggle of Borders

Because I, a *mestiza*,
continually walk out of one culture
and into another,
because I am in all cultures at the same time,
alma entre dos mundos, tres, cuatro,
me zumba la cabeza con lo contradictorio.
Estoy norteada por todas las voces que me hablan
simultáneamente.

The ambivalence from the clash of voices results in mental and emotional states of perplexity. Internal strife results in insecurity and indecisiveness. The *mestiza*'s dual or multiple personality is plagued by psychic restlessness.

In a constant state of mental nepantilism, an

²²This is my own “take off” on Jose Vasconcelos' idea. Jose Vasconcelos, *La Raza Cósmica: Misión de la Raza Ibero-Americana* (México: Aguilar S.A. de Ediciones, 1961). [Au.]

²³Vasconcelos. [Au.]

Aztec word meaning torn between ways, *la mestiza* is a product of the transfer of the cultural and spiritual values of one group to another. Being tricultural, monolingual, bilingual, or multilingual, speaking a patois, and in a state of perpetual transition, the *mestiza* faces the dilemma of the mixed breed: which collectivity does the daughter of a darkskinned mother listen to?

El choque de un alma atrapado entre el mundo del espíritu y el mundo de la técnica a veces la deja entullada. Cradled in one culture, sandwiched between two cultures, straddling all three cultures and their value systems, *la mestiza* undergoes a struggle of flesh, a struggle of borders, an inner war. Like all people, we perceive the version of reality that our culture communicates. Like others having or living in more than one culture, we get multiple, often opposing messages. The coming together of two self-consistent but habitually incompatible frames of reference²⁴ causes *un choque*, a cultural collision.

Within us and within *la cultura chicana*, commonly held beliefs of the white culture attack commonly held beliefs of the Mexican culture, and both attack commonly held beliefs of the indigenous culture. Subconsciously, we see an attack on ourselves and our beliefs as a threat and we attempt to block with a counterstance.

But it is not enough to stand on the opposite river bank, shouting questions, challenging patriarchal, white conventions. A counterstance locks one into a duel of oppressor and oppressed; locked in mortal combat, like the cop and the criminal, both are reduced to a common denominator of violence. The counterstance refutes the dominant culture's views and beliefs, and, for this, it is proudly defiant. All reaction is limited by, and dependent on, what it is reacting against. Because the counterstance stems from a problem with authority—outer as well as inner—it's a step towards liberation from cultural domination. But it is not a way of life. At some point, on our way to a new consciousness, we will have to leave the opposite bank, the split between the two mortal combatants somehow healed so that

²⁴Arthur Koestler termed this “bisociation.” Albert Rothenberg, *The Creative Process in Art, Science, and Other Fields* (Chicago, IL: University of Chicago Press, 1979), 12. [Au.]

we are on both shores at once and, at once, see through serpent and eagle eyes. Or perhaps we will decide to disengage from the dominant culture, write it off altogether as a lost cause, and cross the border into a wholly new and separate territory. Or we might go another route. The possibilities are numerous once we decide to act and not react.

A Tolerance for Ambiguity

These numerous possibilities leave *la mestiza* floundering in uncharted seas. In perceiving conflicting information and points of view, she is subjected to a swamping of her psychological borders. She has discovered that she can't hold concepts or ideas in rigid boundaries. The borders and walls that are supposed to keep the undesirable ideas out are entrenched habits and patterns of behavior; these habits and patterns are the enemy within. Rigidity means death. Only by remaining flexible is she able to stretch the psyche horizontally and vertically. *La mestiza* constantly has to shift out of habitual formations; from convergent thinking, analytical reasoning that tends to use rationality to move toward a single goal (a Western mode), to divergent thinking,²⁵ characterized by movement away from set patterns and goals and toward a more whole perspective, one that includes rather than excludes.

The new *mestiza* copes by developing a tolerance for contradictions, a tolerance for ambiguity. She learns to be an Indian in Mexican culture, to be Mexican from an Anglo point of view. She learns to juggle cultures. She has a plural personality, she operates in a pluralistic mode—nothing is thrust out, the good the bad and the ugly, nothing rejected, nothing abandoned. Not only does she sustain contradictions, she turns the ambivalence into something else.

She can be jarred out of ambivalence by an intense, and often painful, emotional event which inverts or resolves the ambivalence. I'm not sure exactly how. The work takes place underground—subconsciously. It is work that the soul performs.

²⁵In part, I derive my definitions for "convergent" and "divergent" thinking from Rothenberg, 12–13. [Au.]

That focal point or fulcrum, that juncture where the *mestiza* stands, is where phenomena tend to collide. It is where the possibility of uniting all that is separate occurs. This assembly is not one where severed or separated pieces merely come together. Nor is it a balancing of opposing powers. In attempting to work out a synthesis, the self has added a third element which is greater than the sum of its severed parts. That third element is a new consciousness—a *mestiza* consciousness—and though it is a source of intense pain, its energy comes from continual creative motion that keeps breaking down the unitary aspect of each new paradigm.

En unas pocas centurias, the future will belong to the *mestiza*. Because the future depends on the breaking down of paradigms, it depends on the straddling of two or more cultures. By creating a new mythos—that is, a change in the way we perceive reality, the way we see ourselves, and the ways we behave—*la mestiza* creates a new consciousness.

The work of *mestiza* consciousness is to break down the subject-object duality that keeps her a prisoner and to show in the flesh and through the images in her work how duality is transcended. The answer to the problem between the white race and the colored, between males and females, lies in healing the split that originates in the very foundation of our lives, our culture, our languages, our thoughts. A massive uprooting of dualistic thinking in the individual and collective consciousness is the beginning of a long struggle, but one that could, in our best hopes, bring us to the end of rape, of violence, of war.

La encrucijada / The Crossroads

A chicken is being sacrificed
at a crossroads, a simple mound of earth
a mud shrine for *Eshu*,
Yoruba god of indeterminacy,
who blesses her choice of path.
She begins her journey.

Su cuerpo es una bocacalle. La mestiza has gone from being the sacrificial goat to becoming the officiating priestess at the crossroads.

As a *mestiza* I have no country, my homeland

cast me out; yet all countries are mine because I am every woman's sister or potential lover. (As a lesbian I have no race, my own people disclaim me; but I am all races because there is the queer of me in all races.) I am cultureless because, as a feminist, I challenge the collective cultural/religious male-derived beliefs of Indo-Hispanics and Anglos; yet I am cultured because I am participating in the creation of yet another culture, a new story to explain the world and our participation in it, a new value system with images and symbols that connect us to each other and to the planet. *Soy un amasamiento*, I am an act of kneading, of uniting and joining that not only has produced both a creature of darkness and a creature of light, but also a creature that questions the definitions of light and dark and gives them new meanings.

We are the people who leap in the dark, we are the people on the knees of the gods. In our very flesh, (r)evolution works out the clash of cultures. It makes us crazy constantly, but if the center holds, we've made some kind of evolutionary step forward. *Nuestra alma el trabajo*, the opus, the great alchemical work; spiritual *mestizaje*, a "morphogenesis,"²⁶ an inevitable unfolding. We have become the quickening serpent movement.

Indigenous like corn, like corn, the *mestiza* is a product of crossbreeding, designed for preservation under a variety of conditions. Like an ear of corn—a female seed-bearing organ—the *mestiza* is tenacious, tightly wrapped in the husks of her culture. Like kernels she clings to the cob; with thick stalks and strong brace roots, she holds tight to the earth—she will survive the crossroads.

Lavando y remojando el maíz en agua de cal, despojando el pellejo. Moliendo, mixteando,

²⁶To borrow chemist Ilya Prigogine's theory of "dissipative structures." Prigogine discovered that substances interact not in predictable ways as it was taught in science, but in different and fluctuating ways to produce new and more complex structures, a kind of birth he called "morphogenesis," which created unpredictable innovations. Harold Gilliam, "Searching for a New World View," *This World* (January 1981), 23. [Au.]

*amasando, haciendo tortillas de masa.*²⁷ She steepes the corn in lime, it swells, softens. With stone roller on *metate*, she grinds the corn, then grinds again. She kneads and moulds the dough, pats the round balls into *tortillas*.

We are the porous rock in the stone *metate* squatting on the ground.

We are the rolling pin, *el maíz y agua, la masa harina. Somos el amasijo.*

Somos lo molido en el metate.

We are the *comal* sizzling hot, the hot *tortilla*, the hungry mouth.

We are the coarse rock.

We are the grinding motion, the mixed potion, *somos el molcajete.*

We are the pestle, the *comino, ajo, pimienta,*

We are the *chile colorado*, the green shoot that cracks the rock.

We will abide.

El camino de la mestiza / The Mestiza Way

Caught between the sudden contraction, the breath sucked in and the endless space, the brown woman stands still, looks at the sky. She decides to go down, digging her way along the roots of trees. Sifting through the bones, she shakes them to see if there is any marrow in them. Then, touching the dirt to her forehead, to her tongue, she takes a few bones, leaves the rest in their burial place.

She goes through her backpack, keeps her journal and address book, throws away the muni-bart metromaps. The coins are heavy and they go next, then the greenbacks flutter through the air. She keeps her knife, can opener and eyebrow pencil. She puts bones, pieces of bark, *hierbas*, eagle feather, snakeskin, tape recorder, the rattle and drum in her pack and she sets out to become the complete *tolteca*.²⁸

Her first step is to take inventory. *Despojando, desgranando, quitando paja*. Just what did she inherit from her ancestors? This weight on her back—which is the baggage from the Indian

²⁷*Tortillas de masa harina*: corn tortillas are of two types, the smooth uniform ones made in a tortilla press and usually bought at a tortilla factory or supermarket, and *gorditas*, made by mixing *masa* with lard or shortening or butter (my mother sometimes puts in bits of bacon or *chicharrones*). [Au.]

²⁸Anzaldúa's reference for this quote is missing in the original. [Ed.]

mother, which the baggage from the Spanish father, which the baggage from the Anglo?

Pero es difícil differentiating between *lo heredado, lo adquirido, lo impuesto*. She puts history through a sieve, winnows out the lies, looks at the forces that we as a race, as women, have been a part of. *Luego bota lo que no vale, los desmientos, los desencuentos, el embrutecimiento. Aguarda el juicio, hondo y enraizado, de la gente antigua*. This step is a conscious rupture with all oppressive traditions of all cultures and religions. She communicates that rupture, documents the struggle. She reinterprets history and, using new symbols, she shapes new myths. She adopts new perspectives toward the darkskinned, women and queers. She strengthens her tolerance (and intolerance) for ambiguity. She is willing to share, to make herself vulnerable to foreign ways of seeing and thinking. She surrenders all notions of safety, of the familiar. Deconstruct, construct. She becomes a *nahual*, able to transform herself into a tree, a coyote, into another person. She learns to transform the small “I” into the total Self. *Se hace moldeadora de su alma. Según la concepción que tiene de sí misma, así será.*

Que no se nos olvide los hombres

*Tú no sirves pa' nada—
you're good for nothing.
Eres pura vieja.*

“You’re nothing but a woman” means you are defective. Its opposite is to be *un macho*. The modern meaning of the word “machismo,” as well as the concept, is actually an Anglo invention. For men like my father, being “macho” meant being strong enough to protect and support my mother and us, yet being able to show love. Today’s macho has doubts about his ability to feed and protect his family. His “machismo” is an adaptation to oppression and poverty and low self-esteem. It is the result of hierarchical male dominance. The Anglo, feeling inadequate and inferior and powerless, displaces or transfers these feelings to the Chicano by shaming him. In the Gringo world, the Chicano suffers from excessive humility and self-effacement, shame of self and self-deprecation. Around Latinos he suffers from a sense of language inadequacy and its accompanying discomfort; with Native Ameri-

cans he suffers from a racial amnesia which ignores our common blood, and from guilt because the Spanish part of him took their land and oppressed them. He has an excessive compensatory hubris when around Mexicans from the other side. It overlays a deep sense of racial shame.

The loss of a sense of dignity and respect in the macho breeds a false machismo which leads him to put down women and even to brutalize them. Coexisting with his sexist behavior is a love for the mother which takes precedence over that of all others. Devoted son, macho pig. To wash down the shame of his acts, of his very being, and to handle the brute in the mirror, he takes to the bottle, the snort, the needle, and the fist.

Though we “understand” the root causes of male hatred and fear, and the subsequent wounding of women, we do not excuse, we do not condone, and we will no longer put up with it. From the men of our race, we demand the admission/acknowledgment/disclosure/testimony that they wound us, violate us, are afraid of us and of our power. We need them to say they will begin to eliminate their hurtful put-down ways. But more than the words, we demand acts. We say to them: We will develop equal power with you and those who have shamed us.

It is imperative that mestizas support each other in changing the sexist elements in the Mexican-Indian culture. As long as woman is put down, the Indian and the Black in all of us is put down. The struggle of the mestiza is above all a feminist one. As long as *los hombres* think they have to *chingar mujeres* and each other to be men, as long as men are taught that they are superior and therefore culturally favored over *la mujer*, as long as to be a *vieja* is a thing of derision, there can be no real healing of our psyches. We’re halfway there—we have such love of the Mother, the good mother. The first step is to unlearn the *puta/virgen* dichotomy and to see *Coatlapoeh-Coatlicue* in the Mother, *Guadalupe*.

Tenderness, a sign of vulnerability, is so feared that it is showered on women with verbal abuse and blows. Men, even more than women, are fettered to gender roles. Women at least have had the guts to break out of bondage. Only gay men have had the courage to expose themselves to the woman inside them and to challenge the current

masculinity. I've encountered a few scattered and isolated gentle straight men, the beginnings of a new breed, but they are confused, and entangled with sexist behaviors that they have not been able to eradicate. We need a new masculinity and the new man needs a movement.

Lumping the males who deviate from the general norm with man, the oppressor, is a gross injustice. *Asombra pensar que nos hemos quedado en ese pozo oscuro donde el mundo encierra a las lesbianas. Asombra pensar que hemos, como feministas y lesbianas, cerrado nuestros corazones a los hombres, a nuestros hermanos los jotos, desheredados y marginales como nosotros.* Being the supreme crossers of cultures, homosexuals have strong bonds with the queer white, Black, Asian, Native American, Latino, and with the queer in Italy, Australia and the rest of the planet. We come from all colors, all classes, all races, all time periods. Our role is to link people with each other—the Blacks with Jews with Indians with Asians with whites with extraterrestrials. It is to transfer ideas and information from one culture to another. Colored homosexuals have more knowledge of other cultures; have always been at the forefront (although sometimes in the closet) of all liberation struggles in this country; have suffered more injustices and have survived them despite all odds. Chicanos need to acknowledge the political and artistic contributions of their queer. People, listen to what your *jotería* is saying.

The mestizo and the queer exist at this time and point on the evolutionary continuum for a purpose. We are a blending that proves that all blood is intricately woven together, and that we are spawned out of similar souls.

Somos una gente

*Hay tantísimas fronteras
que dividen a la gente,
pero por cada frontera
existe también un puente.*

—GINA VALDÉS²⁹

Divided Loyalties. Many women and men of color do not want to have any dealings with

²⁹Gina Valdés, *Puentes y Fronteras: Coplas Chicanas* (Los Angeles, CA: Castle Lithograph, 1982), 2. [Au.]

white people. It takes too much time and energy to explain to the downwardly mobile, white middle-class women that it's okay for us to want to own "possessions," never having had any nice furniture on our dirt floors or "luxuries" like washing machines. Many feel that whites should help their own people rid themselves of race hatred and fear first. I, for one, choose to use some of my energy to serve as mediator. I think we need to allow whites to be our allies. Through our literature, art, *corridos*, and folktales we must share our history with them so when they set up committees to help Big Mountain Navajos or the Chicano farmworkers or *los Nicaragienses* they won't turn people away because of their racial fears and ignorances. They will come to see that they are not helping us but following our lead.

Individually, but also as a racial entity, we need to voice our needs. We need to say to white society: We need you to accept the fact that Chicanos are different, to acknowledge your rejection and negation of us. We need you to own the fact that you looked upon us as less than human, that you stole our lands, our personhood, our self-respect. We need you to make public restitution: to say that, to compensate for your own sense of defectiveness, you strive for power over us, you erase our history and our experience because it makes you feel guilty—you'd rather forget your brutish acts. To say you've split yourself from minority groups, that you disown us, that your dual consciousness splits off parts of yourself, transferring the "negative" parts onto us. (Where there is persecution of minorities, there is shadow projection. Where there is violence and war, there is repression of shadow.) To say that you are afraid of us, that to put distance between us, you wear the mask of contempt. Admit that Mexico is your double, that she exists in the shadow of this country, that we are irrevocably tied to her. Gringo, accept the doppelganger in your psyche. By taking back your collective shadow the intracultural split will heal. And finally, tell us what you need from us.

By Your True Faces We Will Know You

I am visible—see this Indian face—yet I am invisible. I both blind them with my beak nose and am their blind spot. But I exist, we exist. They'd

like to think I have melted in the pot. But I haven't, we haven't.

The dominant white culture is killing us slowly with its ignorance. By taking away our self-determination, it has made us weak and empty. As a people we have resisted and we have taken expedient positions, but we have never been allowed to develop unencumbered—we have never been allowed to be fully ourselves. The whites in power want us people of color to barricade ourselves behind our separate tribal walls so they can pick us off one at a time with their hidden weapons; so they can whitewash and distort history. Ignorance splits people, creates prejudices. A misinformed people is a subjugated people.

Before the Chicano and the undocumented worker and the Mexican from the other side can come together, before the Chicano can have unity with Native Americans and other groups, we need to know the history of their struggle and they need to know ours. Our mothers, our sisters and brothers, the guys who hang out on street corners, the children in the playgrounds, each of us must know our Indian lineage, our *afro-mestisaje*, our history of resistance.

To the immigrant *mexicano* and the recent arrivals we must teach our history. The 80 million *mexicanos* and the Latinos from Central and South America must know of our struggles. Each one of us must know basic facts about Nicaragua, Chile and the rest of Latin America. The Latinoist movement (Chicanos, Puerto Ricans, Cubans and other Spanish-speaking people working together to combat racial discrimination in the market place) is good but it is not enough. Other than a common culture we will have nothing to hold us together. We need to meet on a broader communal ground.

The struggle is inner: Chicano, *indio*, American Indian, *mojado*, *mexicano*, immigrant Latino, Anglo in power, working class Anglo, Black, Asian—our psyches resemble the bordertowns and are populated by the same people. The struggle has always been inner, and is played out in the outer terrains. Awareness of our situation must come before inner changes, which in turn

come before changes in society. Nothing happens in the “real” world unless it first happens in the images in our heads.

El día de la Chicana

I will not be shamed again
Nor will I shame myself.

I am possessed by a vision: that we Chicanas and Chicanos have taken back or uncovered our true faces, our dignity and self-respect. It's a validation vision.

Seeing the Chicana anew in light of her history. I seek an exoneration, a seeing through the fictions of white supremacy, a seeing of ourselves in our true guises and not as the false racial personality that has been given to us and that we have given to ourselves. I seek our woman's face, our true features, the positive and the negative seen clearly, free of the tainted biases of male dominance. I seek new images of identity, new beliefs about ourselves, our humanity and worth no longer in question.

Estamos viviendo en la noche de la Raza, un tiempo cuando el trabajo se hace a lo quieto, en el oscuro. El día cuando aceptamos tal y como somos y para en donde vamos y porque—ese día será el día de la Raza. Yo tengo el compromiso de expresar mi visión, mi sensibilidad, mi percepción de la revalidación de la gente mexicana, su mérito, estimación, honra, aprecio, y validez.

On December 2nd when my sun goes into my first house, I celebrate *el día de la Chicana y el Chicano*. On that day I clean my altars, light my *Coatlalopeuh* candle, burn sage and copal, take *el baño para espantar basura*, sweep my house. On that day I bare my soul, make myself vulnerable to friends and family by expressing my feelings. On that day I affirm who we are.

On that day I look inside our conflicts and our basic introverted racial temperament. I identify our needs, voice them. I acknowledge that the self and the race have been wounded. I recognize the need to take care of our personhood, of our racial self. On that day I gather the splintered and disowned parts of *la gente mexicana* and

hold them in my arms. *Todas las partes de nosotros valen.*

On that day I say, “Yes, all you people wound us when you reject us. Rejection strips us of self-worth; our vulnerability exposes us to shame. It is our innate identity you find wanting. We are ashamed that we need your good opinion, that we need your acceptance. We can no longer camouflage our needs, can no longer let defenses and fences sprout around us. We can no longer withdraw. To rage and look upon you with contempt is to rage and be contemptuous of ourselves. We can no longer blame you, nor disown the white parts, the male parts, the pathological parts, the queer parts, the vulnerable parts. Here we are weaponless with open arms, with only our magic. Let’s try it our way, the mestiza way, the Chicana way, the woman way.

On that day, I search for our essential dignity as a people, a people with a sense of purpose—to belong and contribute to something greater than our *pueblo*. On that day I seek to recover and reshape my spiritual identity. *¡Anímate! Raza, a celebrar el día de la Chicana.*

El retorno

All movements are accomplished in six stages, and the seventh brings return.

—I Ching³⁰

*Tanto tiempo sin verte casa mía,
mi cuna, mi hondo nido de la huerta.*

—“Soledad”³¹

I stand at the river, watch the curving, twisting serpent, a serpent nailed to the fence where the mouth of the Rio Grande empties into the Gulf.

I have come back. *Tanto dolor me costó el alejamiento.* I shade my eyes and look up. The bone beak of a hawk slowly circling over me, checking me out as potential carrion. In its wake a little bird flickering its wings, swimming sporadically like a fish. In the distance the expressway and the slough of traffic like an irritated sow.

³⁰Richard Wilhelm, *The I Ching or Book of Changes*, trans. Cary F. Baynes (Princeton, NJ: Princeton University Press, 1950), 98. [Au.]

³¹“Soledad” is sung by the group, *Haciendo Punto en Otro Son*. [Au.]

The sudden pull in my gut, *la tierra, los aguaceros*. My land, *el viento soplando la arena, el lagartijo debajo de un nopalito. Me acuerdo como era antes. Una región desértica de vasta llanuras, costeras de baja altura, de escasa lluvia, de chaparrales formados por mesquites y huizaches*. If I look real hard I can almost see the Spanish fathers who were called “the cavalry of Christ” enter this valley riding their burros, see the clash of cultures commence.

Tierra natal. This is home, the small towns in the Valley, *los pueblitos* with chicken pens and goats picketed to mesquite shrubs. *En las colonias* on the other side of the tracks, junk cars line the front yards of hot pink and lavender-trimmed houses—Chicano architecture we call it, self-consciously. I have missed the TV shows where hosts speak in half and half, and where awards are given in the category of Tex-Mex music. I have missed the Mexican cemeteries blooming with artificial flowers, the fields of aloe vera and red pepper, rows of sugar cane, of corn hanging on the stalks, the cloud of *polvareda* in the dirt roads behind a speeding pickup truck, *el sabor de tamales de rez y venado*. I have missed *la yegua colorada* gnawing the wooden gate of her stall, the smell of horse flesh from Carito’s corrals. *He hecho menos las noches calientes sin aire, noches de linternas y lechuzas* making holes in the night.

I still feel the old despair when I look at the unpainted, dilapidated, scrap lumber houses consisting mostly of corrugated aluminum. Some of the poorest people in the U.S. live in the Lower Rio Grande Valley, an arid and semi-arid land of irrigated farming, intense sunlight and heat, citrus groves next to chaparral and cactus. I walk through the elementary school I attended so long ago, that remained segregated until recently. I remember how the white teachers used to punish us for being Mexican.

How I love this tragic valley of South Texas, as Ricardo Sánchez calls it; this borderland between the Nueces and the Rio Grande. This land has survived possession and ill-use by five countries: Spain, Mexico, the Republic of Texas, the U.S., the Confederacy, and the U.S. again. It has

survived Anglo-Mexican blood feuds, lynchings, burnings, rapes, pillage.

Today I see the Valley still struggling to survive. Whether it does or not, it will never be as I remember it. The borderlands depression that was set off by the 1982 peso devaluation in Mexico resulted in the closure of hundreds of Valley businesses. Many people lost their homes, cars, land. Prior to 1982, U.S. store owners thrived on retail sales to Mexicans who came across the border for groceries and clothes and appliances. While goods on the U.S. side have become 10, 100, 1000 times more expensive for Mexican buyers, goods on the Mexican side have become 10, 100, 1000 times cheaper for Americans. Because the Valley is heavily dependent on agriculture and Mexican retail trade, it has the highest unemployment rates along the entire border region; it is the Valley that has been hardest hit.³²

"It's been a bad year for corn," my brother, Nune, says. As he talks, I remember my father scanning the sky for a rain that would end the drought, looking up into the sky, day after day, while the corn withered on its stalk. My father has been dead for 29 years, having worked himself to death. The life span of a Mexican farm laborer is 56—he lived to be 38. It shocks me that I am older than he. I, too, search the sky for rain. Like the ancients, I worship the rain god and the maize goddess, but unlike my father I have recovered their names. Now for rain (irrigation) one offers not a sacrifice of blood, but of money.

³²Out of the twenty-two border counties in the four border states, Hidalgo County (named for Father Hidalgo who was shot in 1810 after instigating Mexico's revolt against Spanish rule under the banner of *la Virgen de Guadalupe*) is the most poverty-stricken county in the nation as well as the largest home base (along with Imperial in California) for migrant farmworkers. It was here that I was born and raised. I am amazed that both it and I have survived. [Au.]

"Farming is in a bad way," my brother says. "Two to three thousand small and big farmers went bankrupt in this country last year. Six years ago the price of corn was \$8.00 per hundred pounds," he goes on. "This year it is \$3.90 per hundred pounds." And, I think to myself, after taking inflation into account, not planting anything puts you ahead.

I walk out to the back yard, stare at *los rosales de mamá*. She wants me to help her prune the rose bushes, dig out the carpet grass that is choking them. *Mamagrande Ramona también tenía rosales*. Here every Mexican grows flowers. If they don't have a piece of dirt, they use car tires, jars, cans, shoe boxes. Roses are the Mexican's favorite flower. I think, how symbolic—thorns and all.

Yes, the Chicano and Chicana have always taken care of growing things and the land. Again I see the four of us kids getting off the school bus, changing into our work clothes, walking into the field with Papí and Mamí, all six of us bending to the ground. Below our feet, under the earth lie the watermelon seeds. We cover them with paper plates, putting *terremotes* on top of the plates to keep them from being blown away by the wind. The paper plates keep the freeze away. Next day or the next, we remove the plates, bare the tiny green shoots to the elements. They survive and grow, give fruit hundreds of times the size of the seed. We water them and hoe them. We harvest them. The vines dry, rot, are plowed under. Growth, death, decay, birth. The soil prepared again and again, impregnated, worked on. A constant changing of forms, *renacimientos de la tierra madre*.

This land was Mexican once
was Indian always
and is.
And will be again.

Stanley Fish

b. 1938

Stanley Eugene Fish was born in Providence, Rhode Island, and grew up in Philadelphia. He was educated at the University of Pennsylvania and earned his Ph.D. in 1962 at Yale. He taught at the University of California at Berkeley and subsequently at Johns Hopkins University and at Duke University, where he was professor of both English and law, chair of the English Department, and director of the university press. He left Duke in 1998 to become dean of arts and sciences at the University of Illinois at Chicago.

Fish's earliest scholarly work focused on the Renaissance (with a book based on his dissertation on John Skelton's poetry in 1965) and on the work of Milton and George Herbert. His first major work, *Surprised by Sin: The Reader in "Paradise Lost"* (1967), applies an early version of reader-response theory, arguing that Milton uses literary strategies to lead his readers to a sense of the sinfulness of pride, only to then "surprise" them by showing how they themselves have been prideful in their very reading of the poem. This approach shifts the critical focus from the idea that meaning is in the text itself to the idea that meaning occurs as a result of the operation of the text upon the reader. Fish's scholarly writing from this time forward is distinguished by his careful attention to literary theories, particularly those based on language theories, such as reader-response, speech acts, and, later, deconstruction.

In *Surprised by Sin*, Fish maintains that the "surprise" works in *Paradise Lost* because of Milton's goal of bringing the reader to self-consciousness about sin. But soon, in several articles later collected in *Is there a Text in this Class?*, *The Authority of Interpretive Communities* (1980) and in a book, *Self-Consuming Artifacts: The Experience of Seventeenth-Century Literature* (1972), Fish generalizes his theory and shows that it applies to other works, indeed to all works of literature. The "artifact" of the literary work does not, he argues, contain its own meaning. The meaning emerges as a result of the act of reading, which therefore ought to be the focus of the critic's attention.

Fish is himself one of the severest critics of the theory he put forward at this time. In the introduction to *Is there a Text in this Class?*, he points out the flaw of his method and of much reader-response criticism, namely, that of presuming to know how reading works in some universal sense (at least for all educated readers) and to be able to describe it. Moreover, he notes, in a book like *Surprised by Sin*, the critic assumes that the effects achieved are the effects intended by the author, which simply returns the meaning or the responsibility for the meaning to the text itself. In the essays collected in *Is there a Text in this Class?*, Fish argues that the reader "creates" the text by deciding which of its features are relevant or significant. But how does the reader decide? Fish was not content (as were other reader-response critics) to allow mere individual preference to rule. Instead, he puts forward the enormously influential idea of the *interpretive community* (later to appear as "discourse community" in rhetoric scholarship) that maintains the values and conventions that "always

already” constrain its members as they come to the text. In answering the question of whether there is a text in the class, Fish answers “no,” if by “text” one means an object with a fixed and determinate meaning. Rather, the text is a creation of the community, for what is there is what a particular community agrees or is constrained to see there. This means that any interpretation that makes sense or is persuasive is so only because it arises within and is directed to a community that sees or is willing to see the text through the same lens of assumptions about what counts as literature, or even about what words and phrases may mean. This analysis implies, in its turn, that the proper business of criticism is to address and argue about the way the lens is or ought to be shaped—that is, the interpretive assumptions that one does or ought to apply. It also implies that the very definition of “literature” is communally bound, and therefore that there is no such thing as a quintessentially literary text. All texts, indeed, are “always already” under interpretation.

Fish’s work during the succeeding decade elaborates these insights, examining the sources and criticizing the implications of “foundationalist” theory—namely, “theory that promises to put our calculations and determinations on a firmer footing than can be provided by mere belief or unjustified practice.”¹ He sees the foundationalist assumption operating widely, almost universally, as a belief that interpretation must seek some underlying truth that is “really” there or at least some objective basis for assessing our beliefs. Fish also takes up the question of what an antifoundational view of language and interpretation might be. The essays in *Doing What Comes Naturally: Change, Rhetoric, and the Practice of Theory in Literary and Legal Studies* (1989) address these issues. Here is what Fish says this title means:

I intend it to refer to the unreflective actions that follow from being embedded in a context of practice. This kind of action—and in my argument there is no other—is anything but natural in the sense of proceeding independently of historical and social formations; but once those formations are in place (and they always are), what you think to do will not be calculated in relation to a higher law or an overarching theory but will issue from you as naturally as breathing.²

Meaning, then, follows from the set of presuppositions that constitute or characterize the social formation (or the particular moment and its context) rather than from anything inherent in the words or sentences or other symbols that are used for communication. Most importantly for Fish, there is no place to stand that is outside some context and set of presuppositions. It is not possible, that is, to assess a given interpretation in an absolute way. Nor is it possible to articulate a theory that accounts for all of the features of context and thereby become completely self-conscious about the way one’s interpretive acts are bound. This last point leads Fish to assert that theory (as in literary theory or philosophical method) has no consequences.

A further consequence of the antifoundationalist position is to recognize that although the set of interpretive principles in force at any time (Fish is thinking of

¹Stanley Fish, *Doing What Comes Naturally: Change, Rhetoric, and the Practice of Theory in Literary and Legal Studies* (Durham: Duke University Press, 1989), p. 321.

²Fish, p. ix.

principles of law especially) may be arbitrary in some sense—that is, they cannot be based on ultimate reality or transcendent truth—they are nonetheless *in force* and not *absent*. Fish insists that he is *not* arguing that there aren't constraints, that we should adopt rampant relativism, or that all interpretations are personal. That position is just as untenable, he argues, as the foundationalist position.

Interpretive systems obviously change, and Fish wants to know how that change occurs. They do not change because of theory, he argues, if by theory we mean “a set of rules or principles or procedures that is attached to . . . no particular activity, but is of sufficient generality to be thought of as a constraint on (and an explanation of) all fields of activity.”³ They change, rather, because of an argument that, although it may not be “right” in an absolute sense, is able to change the prevailing way of thinking about the world to another way—another way that is just as bound by circumstances and contexts but that comes to seem superior. Fish is following Thomas Kuhn to a considerable extent in this analysis. Both recognize that a new idea or way of seeing—a new “paradigm”—does not come into being without being argued for. This is the operation, Fish says, of rhetoric.

In his subsequent work, the essays collected in *Professional Correctness: Literary Studies and Political Change* (1994) and *There's No Such Thing as Free Speech, and It's a Good Thing, Too* (1995), and in a remarkable range of essays in print and electronic journals, speeches, and interviews, Fish explores the consequences of his basic argument in literature, cultural studies, education, law, and various areas of public policy. In *Professional Correctness*, he argues that because literary criticism is a highly specialized interpretive community, it lacks the power to effect political change. Therefore, critics are mistaken when they claim that change will occur because of the kind of texts they study or the forms of interpretation they use. This, Fish says, is the underlying error in the great multiculturalism debates.

Fish has won a wide audience in the law and philosophy of law communities, judging by the responses to both *Doing What Comes Naturally* and *There's No Such Thing as Free Speech*. “Virtually all students of law, the social sciences, and social philosophy should read” the latter book, says one review.⁴ The chapters in it (many of them transcripts of Fish's debates with conservative ideologue Dinesh D'Souza) concern public policy issues, basic precepts of liberalism, and, once again, multiculturalism. The title essay repeats Fish's now basic thesis in the form of the argument that all speech is situated and purposeful. Except in the artificial environment of a college seminar, all speech is rhetorical or instrumental, intended to accomplish something. Fish shows that all free speech advocates will say that there are “of course” some limits to what speech can be allowed in public. That “of course” is determined by the social situation, and since all speech is socially situated, there will always be some “of course” limits. The only condition in which speech could really be “free” would be one in which speech meant nothing and was offered for no reason.

³Fish, p. 14.

<www.unt.edu/lpbr/subpages/reviews/fish.htm>

The essay “Rhetoric” that is reprinted here comes from *Doing What Comes Naturally*. Fish reviews the history of rhetoric as a contest between foundational and antifoundational views. He holds rhetoric in high regard for its underlying Sophistic belief in an antifoundational worldview. Protagoras was correct, says Fish, in recognizing that only the situated and contingent reality is meaningful. Therefore, rhetoric is necessary for civilized life. Moreover, the revival of rhetoric in the twentieth century is a good thing: It both reflects and enhances the “interpretive turn” (what others have called the linguistic turn) in many disciplines. Fish’s roll call of the heroes of the interpretive turn is a helpful summary of the central theme of twentieth-century rhetorical theory.

Selected Bibliography

“Rhetoric” appeared originally as Chapter 20 in *Doing What Comes Naturally: Change, Rhetoric, and the Practice of Theory in Literary and Legal Studies* (Durham and London, 1989). It is reprinted in *The Stanley Fish Reader*, ed. H. Aram Veesser (New York, 1999), with a headnote by Steven Mailloux. This collection contains eleven well-chosen essays by Fish, each with a brief headnote. “Rhetoric” is also reprinted in *Rhetoric in an Antifoundational World: Language, Culture, and Pedagogy*, ed. Michael Bernard-Donals and Richard R. Glezjer (New Haven, 1998).

Fish’s major works are *Surprised by Sin: The Reader in “Paradise Lost”* (Cambridge, Mass., 1967; 2nd ed. 1998); *Self-Consuming Artifacts: The Experience of Seventeenth-Century Literature* (Cambridge, Mass., 1972); *Is there a Text in this Class? The Authority of Interpretive Communities* (Cambridge, Mass., 1980); *Professional Correctness: Literary Studies and Political Change* (Oxford and New York, 1994); and *There’s No Such Thing as Free Speech, and It’s a Good Thing, Too* (Oxford and New York, 1995). Another collection of essays on law, religion, and politics is *The Trouble with Principle* (Cambridge, Mass., 1999).

A wide-ranging interview with Gary Olson is “Fish Tales: A Conversation with ‘The Contemporary Sophist’” in *Journal of Advanced Composition* 12.2 (fall 1992): 253–77, reprinted, with responses by Patricia Bizzell and John Trimbur, in *Philosophy, Rhetoric, Literary Criticism: (Inter)views*, ed. Gary Olson (Carbondale, Ill., 1994). A good overview of Fish’s theories and development is Paul H. Fry’s essay on Fish in the *Dictionary of Literary Biography, Volume 67: Modern American Critics Since 1955*, ed. Gregory Jay (Milwaukee, 1988), pp. 97–105. John Schilb analyzes Fish’s work on rhetoric in *Between the Lines: Relating Composition Theory and Literary Theory* (Portsmouth, N.H., 1996). The “Introduction” to *Rhetoric in an Antifoundational World*, noted above, relates Fish’s ideas (clearly crucial to this collection) to the theories of Derrida, Rorty (a contributor), and others. The essays in the collection—most notably Frank Farmer’s “Foundational Thuggery”—frequently address Fish’s work.

. . . up rose
 Belial, in act more graceful and humane;
 A fairer person lost not Heav'n; he seem'd
 For dignity compos'd and high exploit:
 But all was false and hollow; though his Tongue
 Dropt Manna, and could make the worse appear
 The better reason, to perplex and dash
 Maturest counsels: for his thoughts were low; . . .
 . . . yet he pleas'd the ear
 And with persuasive accent thus began.
 Paradise Lost, II, 108–15, 117–18

I

For Milton's seventeenth-century readers this passage, introducing one of the more prominent of the fallen angels, would have been immediately recognizable as a brief but trenchant essay on the art and character of the rhetorician. Indeed, in these few lines Milton has managed to gather and restate with great rhetorical force (a paradox of which more later) all of the traditional arguments against rhetoric. Even Belial's gesture of rising is to the (negative) point: he catches the eye even before he begins to speak, just as Satan will in book IX when he too raises himself and moves so that "each part, / Motion, each act won audience ere the tongue" (673–74). That is, he draws attention to his appearance, to his surface, and the suggestion of superficiality (a word to be understood in its literal meaning) extends to the word "act"; that is, that which can be seen. That act is said to be "graceful," the first in a succession of double meanings (one of the stigmatized attributes of rhetorical speech) we find in the passage. Belial is precisely *not* full of grace; that is simply his outward aspect, and the same is true for "humane" and "fairer." The verse's judgment on all of his apparent virtues is delivered in the last two words of line 110—"he seem'd"—and the shadow of "seeming" falls across the next line which in isolation might "seem" to be high praise. But under the pressure of what precedes it, the assertion of praise undoes itself with every Janus-faced word (the verse now begins to imitate the object of its criticism by displaying a per-

vative disjunction between its outer and inner meanings; indicting seeming, it itself repeatedly seems): "compos'd" now carries its pejorative meaning of affected or made-up; "high" at once refers to the favored style of bombastic orators and awaits its ironic and demeaning contrast with the lowness of his thoughts; "dignity" is an etymological joke, for Belial is anything but worthy; in fact, he is just what the next line says he is, "false and hollow," an accusation that repeats one of the perennial antirhetorical topoi, that rhetoric, the art of fine speaking, is all show, grounded in nothing but its own empty pretensions, unsupported by any relation to truth. "There is no need," declares Socrates in Plato's *Gorgias*, "for rhetoric to know the facts at all, for it has hit upon a means of persuasion that enables it to appear in the eyes of the ignorant to know more than those who really know" (459),¹ and in the *Phaedrus* the title figure admits that the "man who plans to be an orator" need not "learn what is really just and true, but only what seems so to the crowd" (260).²

This reference to the vulgar popular ear indicates that rhetoric's deficiencies are not only epistemological (sundered from truth and fact) and moral (sundered from true knowledge and sincerity) but social: it panders to the worst in people and moves them to base actions, exactly as Belial is said to do in the next famous run-on statement, "and could make the worse appear / The better reason." This is an explicit reference to a nest of classical sources: the most familiar is Aristotle, *Rhetoric*, II, 1402, 23, condemning the skill of being able to make arguments on either side of a question: "This . . . illustrates what is meant by making the worse argument appear the better. Hence people were right in objecting to the training Protagoras undertook to give them."³

¹*Gorgias*, ed. and trans. W. C. Helmbold (Indianapolis, 1952), p. 18. [Au.]

²Plato, *Phaedrus*, ed. and trans. W. C. Helmbold and W. G. Rabinowitz (Indianapolis, 1956), p. 46. [Au.]

³*The Works of Aristotle*, vol. 11, ed. and trans. W. Rhys Roberts (Oxford, 1946). [Au.]

Socrates makes the same point in the *Phaedrus*: “an orator who knows nothing about good or evil undertakes to persuade a city in the same state of ignorance . . . by recommending evil as though it were good” (260). Behind Belial (or descending from him; the direction of genealogy in *Paradise Lost* is always problematic) is the line of sophists—Protagoras, Hippias, Gorgias, shadowy figures known to us mostly through the writings of Plato where they appear always as relativist foils for the idealistic Socrates. The judgment made on them by a philosophic tradition dominated by Plato is the judgment here made on Belial; their thoughts were low, centered on the suspect skills they taught for hire; the danger they represented is the danger Belial represents: despite the lowness of their thoughts, perhaps *because* of the lowness of their thoughts, they pleased the ear, at least the ear of the promiscuous crowd (there is always just beneath the surface of the antirhetorical stance a powerful and corrosive elitism), and the explanation of their unfortunate success is the power Belial now begins to exercise, the power of “persuasive accent.” Encoded in this phrase is a continuing debate about the essence of rhetoric, a debate whose two poles are represented by Gorgias’s praise in the *Encomium of Helen* of rhetoric as an irresistible force and the stoic Cato’s characterization of the rhetorician as a good man skilled at speaking (“*vir bonus, dicendi peritus*”). The difference is that for Gorgias the skill is detached from any necessary moral center and represents a self-sustaining power (“persuasion allied to words can mould men’s minds”), while for Cato the skill is a by-product of a focus on goodness and truth (thus the other of his famous aphorisms, “seize the thing, the words will follow”—“*rem tene, verba sequentur*”—which later flowers in the Renaissance distinction between *res et verba*).⁴ In one position eloquence is the hard-won creation of a special and technical facility, a facility one acquires by mastering a set of complicated—and morally neutral—rules; in the other eloquence is what naturally issues when a

man is in close touch with the Truth and allows it to inspire him. Born, it would seem, in a posture of defensiveness, rhetoric has often gravitated toward this latter view in an effort to defuse the charge that it is amoral. Quintilian’s formulation (itself gathered from the writings of Cicero) is one that will later be echoed in countless treatises: “no man can speak well who is not good himself” (“*bene dicere non possit nisi bonus,*” *Institutes*, II, xv, 34). As a defense, however, this declaration has the disadvantage of implying the superfluousness of rhetoric, an implication fully realized in Augustine’s *On Christian Doctrine* where eloquence is so much subordinated to wisdom that it disappears as a distinct and separable property. Belial, in contrast, is wholly defined by that property, by his ability to produce “persuasive accents.” “Accent” here is a powerfully resonant word, one of whose relevant meanings is “mode of utterance peculiar to an individual, locality or nation” (OED). He who speaks “in accent” speaks from a particular *angled* perspective into which he tries to draw his auditors; he also speaks in the rhythms of song (etymologically, accent means “song added to speech”) which as Milton will soon observe “*charms the sense*” (II, 556). “Persuasive accent,” then, is almost a redundancy: the two words mean the same thing and what they tell the reader is that he is about to be exposed to a force whose exercise is unconstrained by any sense of responsibility either to the Truth or to the Good. Indeed, so dangerous does Milton consider this force that he feels it necessary to provide a corrective gloss as soon as Belial stops speaking: “Thus *Belial* with words cloth’d in reason’s garb / Counsell’d ignoble ease and peaceful sloth” (II, 226–27). Just in case you hadn’t noticed.

I have lingered so long over this passage because we can extrapolate from it almost all of the binary oppositions in relation to which rhetoric has received its (largely negative) definition: inner/outer, deep/surface, essential/peripheral, unmediated/mediated, clear/colored, necessary/contingent, straightforward/angled, abiding/fleeting, reason/passion, things/words, realities/illusions, fact/opinion, neutral/partisan. Underlying this list, which is by no means exhaustive, are three basic oppositions: first, between a truth

⁴See A. C. Howell, “*Res et Verba: Words and Things.*” in *Seventeenth Century Prose: Modern Essays and Criticism*, ed. S. Fish (Oxford, 1971). [Au.]

that exists independently of all perspectives and points of view and the many truths that emerge and seem perspicuous when a particular perspective or point of view has been established and is in force; second, an opposition between true knowledge, which is knowledge as it exists apart from any and all systems of belief, and the knowledge, which because it flows from some or other system of belief, is incomplete and partial (in the sense of biased); and third, an opposition between a self or consciousness that is turned outward in an effort to apprehend and attach itself to truth and true knowledge and a self or consciousness that is turned inward in the direction of its own prejudices, which, far from being transcended, continue to inform its every word and action. Each of these oppositions is attached in turn to an opposition between two kinds of language: on the one hand, language that faithfully reflects or reports on matters of fact uncolored by any personal or partisan agenda or desire; and on the other hand, language that is infected by partisan agendas and desires, and therefore colors and distorts the facts which it purports to reflect. It is use of the second kind of language that makes one a rhetorician, while adherence to the first kind makes one a seeker after truth and an objective observer of the way things are. It is this distinction that, as Thomas Kuhn notes, underwrites the claims of science to be a privileged form of discourse because it has recourse to a “neutral observation language,”⁵ a language uninflected by any mediating presuppositions or preconceptions; and it is the same distinction that informs Aristotle’s observation (*Rhetoric*, III, 1404, 13) that “Nobody uses fine language when teaching geometry.” The language of geometry—of formal rules with no substantive content—is contrasted by Aristotle to all those languages that are intended only to “charm the hearer,” the languages of manipulation, deception, and self-consciously deployed strategy.

It is this understanding of linguistic possibilities and dangers that generates a succession of efforts to construct a language from which all per-

⁵Thomas Kuhn, *The Structure of Scientific Revolutions* (Chicago, 1962), p. 125. [Au.]

spectival bias (a redundant phrase) has been eliminated, efforts that have sometimes taken as a model the notations of mathematics, at other times the operations of logic, and more recently the purely formal calculations of a digital computer. Whether it issues in the elaborate linguistic machines of seventeenth-century “projectors” like Bishop Wilkins (*An Essay Towards a Real Character and a Philosophical Language*, 1668), or in the building (à la Chomsky) of a “competence” model of language abstracted from any particular performance, or in the project of Esperanto or some other artificial language claiming universality,⁶ or in the fashioning of a Habermasian “ideal speech situation” in which all assertions express “a ‘rational will’ in relation to a common interest ascertained without deception,”⁷ the impulse behind the effort is always the same: to establish a form of communication that escapes partiality and aids us in first determining and then affirming what is absolutely and objectively true, a form of communication that in its structure and operations is the very antithesis of rhetoric, of passionate partisan discourse.

That desideratum and the fears behind it have received countless articulations, but never have they been articulated with more precision than in these sentences from Bishop Sprat’s *History of the Royal Society of London*, 1667:

When I consider the means of *happy living*, and the causes of their *corruption*, I can hardly forbear . . . concluding that *eloquence* ought to be banish’d out of all *civil societies*, as a thing fatal to Peace and good Manners. . . . They [the ornaments of speaking] are in open defiance against *Reason*; professing not to hold much correspondence with that; but with its slaves, the *Passions*: they give the mind a motion too changeable, and bewitching, to consist with *right practice*. Who can behold, without indignation, how many mists and uncertainties, these specious *Tropes* and *Figures* have brought on our Knowledge? How many rewards, which are due to more profitable, and difficult arts, have been snatch’d away by the easie vanity of *fine speaking*? (pp. 111–13)

⁶See Andrew Lange, *The Artificial Language Movement* (Oxford, New York, and London, 1985). [Au.]

⁷Jürgen Habermas, *Legitimation Crisis* (Boston, 1975), p. 108. [Au.]

The terms of banishment are exactly those invoked by Plato against the poets in book X of his *Republic*: Homer, Socrates says, may be “the most poetic of poets and the first of tragedians, but we must know the truth [and] we can admit no poetry into our city save only hymns to the gods and the praises of good men; for if you grant admission to the honeyed Muse . . . pleasure and pain will be lords of your city instead of law and that which shall . . . have approved itself to the general reason as the best” (607a). The “honeyed muse” is precisely what Belial becomes when his tongue drops Manna (113), a quintessentially idolatrous act in which he substitutes his own word for the word sent down to us by God and therefore deprives us of the direction that God’s word might have given us. Although the transition from classical to Christian thought is marked by many changes, one thing that does not change is the status of rhetoric in relation to a foundational vision of truth and meaning. Whether the center of that vision is a personalized deity or an abstract geometric reason, rhetoric is the force that pulls us away from that center and into its own world of ever-shifting shapes and shimmering surfaces.

Of course, the allure of surfaces and shapes, of “specious *Tropes* and *Figures*,” would not be felt if there were not something already in us that inclined to it. Rhetoric may be a danger that assaults us from without, but its possible success is a function of an *inner* weakness. The entire art, as Aristotle explains regretfully, is predicated on “the defects of our hearers” (*Rhetoric*, III, 1404, 8), on the assumption that members of the audience will be naturally susceptible to the rhetorician’s appeal. The anti-rhetorical stance can only be coherent if it posits an *incoherence* at the heart (literally) of the self that is both rhetoric’s victim and its source. That self is always presented as divided, as the site of contesting forces; in Christian terms the forces are named the carnal and the spiritual; in secular psychologies the names are passion and reason or the willful and the rational; but whatever the names, the result is a relationship of homology between the inner and outer landscapes, both of which contain a core element of truth and knowledge that is continually threatened by a

penumbra of irrationality.⁸ If tropes and figures “give the mind a motion too changeable,” it is because the principle of change, in the form of the passions, already lives in the mind, and it follows then that banishing eloquence and the poets from your republic will only do half the job. As Milton puts it in the *Areopagitica*, “they are not skillful considerers of human things who imagine to remove sin by removing the matter of sin”;⁹ policing the outer landscape will be of little effect if the inner landscape remains host to the enemy, to sin, to error, to show.

It is the view of the anti-rhetoricians that this double task of inner and outer regulation can be accomplished by linguistic reform, by the institution of conditions of communication that at once protect discourse from the irrelevancies and contingencies that would compromise its universality and insulate the discoursing mind from those contingencies and irrelevancies it itself harbors. Wilkins proposes to fashion a language that will admit neither *Superfluities*—plural signifiers of a single signified, more than one word for a particular thing—nor *Equivocals*—signifiers doing multiple duty, single words that refer to several things—nor *Metaphor*—a form of speech that interposes itself between the observer and the referent and therefore contributes “to the disguising of it with false appearances” (pp. 17–18). The idea is that such a language, purged of ambiguity, redundancy, and indirection, will be an appropriate instrument for the registering of an independent reality, and that if men will only submit themselves to that language and remain within the structure of its stipulated definitions and exclusions, they will be incapable of formulating and expressing wayward, subjective thoughts and will cease to be a danger either to themselves or to those who hearken to them. In this way, says Wilkins, they will be returned to that original state in which the language spoken was the language God gave Adam, a language in which every word perfectly expressed its referent (on the model of Adam’s simultaneously understand-

⁸This is the language of H. L. A. Hart’s *The Concept of Law* (Oxford, 1961). [Au.]

⁹John Milton, “*Areopagitica*,” in *Milton’s Prose*, ed. J. Max Patrick et al. (New York, 1968), p. 297. [Au.]

ing the nature of the animals and conferring upon them their names), a language that in the course of time and “emergencies” has unfortunately “admitted various and *casual alterations*” (p. 19).

In the twentieth century Wilkins’s program is echoed point for point (absent the theological scaffolding) by Rudolf Carnap: Carnap would admit into the lexicon only words that can be tied firmly to “protocol” or “observation” sentences, sentences that satisfy certain truth conditions and are therefore verifiable by reference to the facts of the world. The stipulation of this criterion, Carnap asserts, “takes away one’s freedom to decide what one wishes to ‘mean’ by [a] word.”¹⁰ The freedom of individual speakers and hearers would be further taken away if the words of a verifiable lexicon were embedded in a grammar that “corresponded exactly to logical syntax,” for if that were the case “pseudo-statements could not arise” (p. 68). That is, no one could be misled either by the words of another or by that part of his consciousness inclined to wander from the path of truth; the tendency of language to perform in excess of its proper duty—to report or reflect matters of fact—would be curbed in advance, and the mind’s susceptibility to the power of a language unconstrained by its empirical moorings would be neutralized. In short, the danger posed by rhetoric, both to the field of discourse and the discoursing consciousness, would have been eliminated. Of course, there are important differences to be noted between the idealism of Plato, the antienthusiasm of a Restoration bishop, and the logical positivism of a member of the Vienna Circle, but together (and in the company of countless others) they stand on the same side of a quarrel that Plato was already calling “old” in the fifth century before Christ. That quarrel, the quarrel between philosophy and rhetoric, survives every sea change in the history of Western thought, continually presenting us with the (skewed) choice between the plain unvarnished truth straightforwardly presented and the powerful but insidious appeal of “fine lan-

¹⁰Rudolf Carnap, “The Elimination of Metaphysics,” in *Logical Positivism*, ed. A. J. Ayer (Glencoe, Ill., 1959), p. 63. [Au.]

guage,” language that has transgressed the limits of representation and substituted its own forms for the forms of reality.¹¹

II

To this point my presentation has been as skewed as this choice, because it has suggested that rhetoric has received only negative characterizations. In fact, there have always been friends of rhetoric, from the sophists to the anti-fundamentalists of the present day, and in response to the realist critique they have devised (and repeated) a number of standard defenses. Two of these defenses are offered by Aristotle in the *Rhetoric*. First, he defines rhetoric as a faculty or art whose practice will help us to observe “in any given base the available means of persuasion” (I, 1355, 27) and points out that as a faculty it is not in and of itself inclined away from truth. Of course, bad men may abuse it, but that after all “is a charge which may be made in common against all good things.” “What makes a man a ‘sophist,’” he declares, “is not his faculty, but his moral purpose” (I, 1355, 17). To the anticipated objection that rhetoric’s potential for misuse is a reason for eschewing it, Aristotle replies that it is sometimes a necessary adjunct to the cause of truth, first, because if we leave the art to be cultivated by deceivers, they will lead truth-seekers astray, and, second, because, regrettable though it may be, “before some audiences not even the possession of the exactest knowledge will make it easy for what we say to produce conviction” and on those occasions “we must use, as our modes of persuasion and argument, notions possessed by everybody” (I, 1355, 27). That is, because of the defects of our hearers the truth itself must often be rhetorically dressed so that it will gain acceptance.¹²

Aristotle’s second defense is more aggressively positive and responds directly to one of the most damaging characterizations of rhetoric:

¹¹See on this point George Kennedy, *The Art of Persuasion in Greece* (Princeton, NJ, 1963), p. 23. [Au.]

¹²See John Milton, “Reason of Church Government,” in *The Complete Prose Works of John Milton*, ed. D. M. Wolfe et al., vol. 1 (New Haven, Conn., 1953), pp. 817–18. [Au.]

“We must be able to employ persuasion, just as strict reasoning can be employed, on opposite sides of a question, not in order that we may in practice employ it in both ways (for we must not make people believe what is wrong), but in order that we may see clearly what the facts are” (I, 1355, 28–33). In short, properly used, rhetoric is a heuristic, helping us not to distort the facts, but to discover them; moreover, adds Aristotle, the setting forth of contrary views of a matter will have the beneficial effect of showing us which of those views most accords with the truth because “the underlying facts do not lend themselves equally well to the contrary views.” By this argument, as Peter Dixon has pointed out, Aristotle “removes rhetoric from the realm of the haphazard and the fanciful”¹³ and rejoins it to that very realm of which it was said to be the great subverter.

But if this is the strength of Aristotle’s defense, it is also its weakness, for in making it he reinforces the very assumptions in relation to which rhetoric will always be suspect, assumptions of an independent reality whose outlines can be perceived by a sufficiently clear-eyed observer who can then represent them in a transparent verbal medium. The stronger defense, because it hits at the heart of the opposing tradition, is one that embraces the accusations of that tradition and makes of them a claim. The chief accusation, as we have seen, is that rhetoricians hold “the probable (or likely-seeming, plausible) in more honour than the true” (*Phaedrus*, 267a). The sophist response is to assert that the realm of the probable—of what is likely to be so given particular conditions within some local perspective—is the only relevant realm of consideration for human beings. The argument is contained in two statements attributed famously to Protagoras. The first declares the unavailability (not the unreality) of the gods: “About gods I cannot say either that they are or that they are not.”¹⁴ And the second follows necessarily from the absence of godly guidance: “Man is the measure of all things, of the things that are that they are, and of

the things that are not that they are not” (quoted in Plato, *Theaetetus*, 152a). What this means, as W. K. C. Guthrie has pointed out, is “that the Sophists recognized only accidental as opposed to essential being, . . . the conditional and relative as opposed to the self-existent.”¹⁵ This is not to say that the categories of the true and good are abandoned, but that in different contexts they will be filled differently and that there exists no master context (for that could only be occupied by the unavailable gods) from the vantage point of which the differences could be assessed and judged.

The result is to move rhetoric from the disreputable periphery to the necessary center: for if the highest truth for any man is what he believes it to be (*Theaetetus*, 152a), the skill which produces belief and therefore establishes what, in a particular time and particular place, is true, is the skill essential to the building and maintaining of a civilized society. In the absence of a revealed truth, rhetoric is that skill, and in teaching it the sophists were teaching “the one thing that mattered, how to take care of one’s own affairs and the business of the state.”¹⁶ The rhetorician is like a physician; it is his job “to diagnose the particular institution and prescribe the best course of action for a man or a state under given conditions”¹⁷ (see Plato, *Theaetetus*, 167b–d, *Protagoras*, 318e–19a); and when Socrates asks Protagoras if he is “promising to make men good citizens,” the reply is firm: “That . . . is exactly what I profess to do” (*Protagoras*, 319a). Of course, in this context words like “good” and “best” do not have the meanings a Plato or Socrates would want them to have—good and best in any and all circumstances; rather, they refer to what would appear to be the better of the courses that seem available in what are generally understood to be the circumstantial constraints of a particular situation; but since, according to the sophist view, particular situations are the only kind there are, circumstantial determinations of what is good are as good as you’re going to get.

¹³*Rhetoric* (London, 1971), p. 14. [Au.]

¹⁶*Ibid.*, p. 186. [Au.]

¹⁷*Ibid.*, p. 187. [Au.]

That is, as I have already said, the strongest of the defenses rhetoric has received because it challenges the basic premise of the anti-rhetorical stance, the premise that any discourse must be measured against a stable and independent reality. To the accusation that rhetoric deals only with the realms of the probable and contingent and forsakes truth, the sophists and their successors respond that truth itself is a contingent affair and assumes a different shape in the light of differing local urgencies and the convictions associated with them. "Truth was individual and temporary, not universal and lasting, for the truth for any man was . . . what he could be persuaded of."¹⁸ Not only does this make rhetoric—the art of analyzing and presenting local exigencies—a form of discourse no one can afford to ignore, it renders the opposing discourse—formal philosophy—beside the point. This is precisely Isocrates' thesis in his *Antidosis*. Abstract studies like geometry and astronomy, he says, do not have any "useful application either to private or public affairs; . . . after they are learned . . . they do not attend us through life nor do they lend aid in what we do, but are wholly divorced from our necessities."¹⁹ Indeed, he goes so far as to deny to such disciplines the label "philosophy," for "I hold that man to be wise who is able by his powers of conjecture to arrive generally at the best course, and I hold that man to be a philosopher who occupies himself with the studies from which he will most quickly gain that kind of insight" (p. 271). Men who want to do some good in the world, he concludes, "must banish utterly from their interests all vain speculations and all activities which have no bearing on our lives."

What Isocrates does (at least rhetorically) is shift the balance of power between philosophy and rhetoric by putting philosophy on the defensive. This same strategy is pursued after him by Cicero and Quintilian, the most influential of the Roman rhetoricians. In the opening pages of his *De Inventione* Cicero elaborates the myth that will subsequently be invoked in every defense of

humanism and belles lettres. There was a time, he says, when "men wandered at large in the field like animals," and there was "as yet no ordered system of religious worship nor of social duties."²⁰ It was then that a "great and wise" man "assembled and gathered" his uncivilized brothers and "introduced them to every useful and honorable occupation, though they cried out against it at first because of its novelty." Nevertheless, he gained their attention through "reason and eloquence" ("*propter rationem atque orationem*") and by these means he "transformed them from wild savages into a kind and gentle folk." Nor would it have been possible, Cicero adds, to have "turned men . . . from their habits" if wisdom had been "mute and voiceless"; only "a speech at the same time powerful and entrancing could have induced one who had great physical strength to submit to justice without violence." From that time on, "many cities have been founded, . . . the flames of a multitude of wars have been extinguished, and . . . the strongest alliances and most sacred friendships have been formed not only by the use of reason, but also more easily by the use of eloquence" (I, 1). Whereas in the foundationalist story an original purity (of vision, purpose, procedure) is corrupted when rhetoric's siren song proves too sweet, in Cicero's story (later to be echoed by countless others)²¹ all the human virtues, and indeed humanity itself, are wrested by the arts of eloquence from a primitive and violent state of nature. Significantly (and this is a point to which we shall return), both stories are stories of power, rhetoric's power; it is just that in one story that power must be resisted lest civilization fall, while in the other that power brings order and a genuine political process where before there was only the rule of "physical strength."

The contrast between the two stories can hardly be exaggerated because what is at stake is not simply a matter of emphasis or priority (as it

¹⁸Ibid., p. 51. [Au.]

¹⁹Isocrates, "Antidosis," in *Isocrates*, vol. 2, ed. and trans. George Norlin (Cambridge: Harvard University Press, 1962), pp. 275, 277. [Au.]

²⁰Cicero, "De Inventione," in *Cicero*, vol. 2, ed. and trans. H. M. Hubbell (Cambridge: Harvard University Press, 1968), I, 2. [Au.]

²¹See, for example, John Lawson, *Lectures Concerning Oratory*, ed. E. N. Claussen and K. R. Wallace (Carbondale and Edwardsville: Southern Illinois University Press, 1972), p. 27. [Au.]

seems to be in Aristotle's effort to demonstrate an *alliance* between rhetoric and truth) but a difference in worldviews. The quarrel between rhetorical and foundational thought is itself foundational; its content is a disagreement about the basic constituents of human activity and about the nature of human nature itself. In Richard Lanham's helpful terms, it is a disagreement as to whether we are members of the species *homo seriusus* or *homo rhetoricus*. *Homo seriusus* or Serious Man

possesses a central self, an irreducible identity. These selves combine into a single, homogeneously real society which constitutes a referent reality for the men living in it. This referent society is in turn contained in a physical nature itself referential, standing "out there" independent of man. Man has invented language to communicate with his fellow man. He communicates facts and concepts about both nature and society. He can also communicate a third category of response, emotions. When he is communicating facts or concepts, success is measured by something we call *clarity*. When he is communicating feelings, success is measured by something we call *sincerity, faithfulness to the self* who is doing the feeling.²²

Homo rhetoricus or rhetorical man, on the other hand,

is an actor; his reality public, dramatic. His sense of identity, depends on the reassurance of daily histrionic reenactment. He is thus centered in time and concrete local event. The lowest common denominator of his life is a social situation. . . . He assumes a natural agility in changing orientations. . . . From birth, almost, he has dwelt not in a single value-structure but in several. He is thus committed to no single construction of the world; much rather, to prevailing in the game at hand. . . . He accepts the present paradigm and explores its resources. Rhetorical man is trained not to discover reality but to manipulate it. Reality is what is accepted as reality, what is useful. (p. 4)

As rhetorical man manipulates reality, establishing through his words the imperatives and urgencies to which he and his fellows must respond, he

²²*The Motives of Eloquence* (New Haven, Conn., 1976), p. 1. [Au.]

manipulates or fabricates himself, simultaneously conceiving of and occupying the roles that become first possible and then mandatory given the social structure his rhetoric has put in place. By exploring the available means of persuasion in a particular situation, he tries them on, and as they begin to suit him, he becomes them.²³ "I hold," says Isocrates, "that people can become better and worthier if they conceive an ambition to speak well," for in the setting forth of his position the orator "will select from all the actions of men . . . those examples which are the most illustrious and the most edifying; and habituating himself to contemplate and appraise such examples, he will feel their influence not only in the preparation of a given discourse but in all the actions of his life" (pp. 275, 277). What serious man fears—the invasion of the fortress of essence by the contingent, the protean, and the unpredictable—is what rhetorical man celebrates and incarnates. In the philosopher's vision of the world rhetoric (and representation in general) is merely the (disposable) form by which a prior and substantial content is conveyed; but in the world of *homo rhetoricus* rhetoric is *both* form and content, the manner of presentation and what is presented; the "improvising power of the rhetor" is at once all-creating and the guarantee of the impermanence of its creations: "to make a thing beautiful or unbeautiful, just or unjust, good or bad is both a human power and a sign of the insubstantiality of these attributes."²⁴ Having been made they can be made again.

Which of these views of human nature is the correct one? The question can only be answered from within one or the other, and the evidence of one party will be regarded by the other either as illusory or as grist for its own mill. When presented with the ever-changing panorama of history, serious man will see variation on a few basic themes; and when confronted with the per-

²³See Thomas Sloane, *Donne, Milton, and the End of Humanist Rhetoric* (Berkeley, Los Angeles, and London, 1985), p. 87: "Rhetoric succeeded in humanism's great desideratum, the artistic creation of adept personhood." See also Stephen Greenblatt, *Renaissance Self-Fashioning* (Chicago, 1980). [Au.]

²⁴Nancy Streuver, *The Language of History in the Renaissance* (Princeton, NJ, 1970), pp. 15, 12. [Au.]

sistence of essentialist questions and answers, rhetorical man will reply as Lanham does by asserting that serious man is himself a supremely fictional achievement; seriousness is just another style, not the state of having escaped style:

In a fallen cosmetic world, [plain Jane] is asking *not* to be considered, wants to be overlooked—or perhaps to claim attention by contrast. She is as rhetorical as her made up sister, proclaims as loudly an attitude. Thus the whole range of ornament from zero to 100 is equally rhetorical, equally deep or equally superficial. (p. 30)

That is to say, for rhetorical man the distinctions (between form and content, periphery and core, ephemeral and abiding) invoked by serious man are nothing more than the scaffolding of the theater of seriousness, are themselves instances of what they oppose. And on the other side, if serious man were to hear *that* argument, he would regard it as one more example of rhetorical manipulation and sleight of hand, an outrageous assertion that flies in the face of common sense, the equivalent in debate of “so’s your old man.” And so it would go, with no prospect of ever reaching accord, an endless round of accusation and counteraccusation in which truth, honesty, and linguistic responsibility are claimed by everyone: “from serious premises, all rhetorical language is suspect; from a rhetorical point of view, transparent language seems dishonest; false to the world.”²⁵

And so it *has* gone; the history of Western thought could be written as the history of this quarrel. And, indeed, such histories have been written and with predictably different emphases. In one version written many times, the mists of religion, magic, and verbal incantation (all equivalently suspect forms of fantasy) are dispelled by the Enlightenment rediscovery of reason and science; enthusiasm and metaphor alike are curbed by the refinement of method, and the effects of difference (point of view) are bracketed and held in check by a procedural rigor. In another version (told by a line stretching from Vico to Foucault) a carnivalesque world of exuberance and possibility is drastically impoverished by the ascen-

dency of a soulless reason, a brutally narrow perspective that claims to be objective and proceeds in a repressive manner to enforce its claim. It is not my intention here to endorse either history or to offer a third or to argue as some have for a nonhistory of discontinuous *episteme* innocent of either a progressive or lapsarian curve; rather, I only wish to point out that the debate continues to this very day and that its terms are exactly those one finds in the dialogues of Plato and the orations of the sophists.

III

As I write, the fortunes of rhetorical man are on the upswing, as in discipline after discipline there is evidence of what has been called the interpretive turn, the realization (at least for those it seizes) that the givens of any field of activity—including the facts it commands, the procedures it trusts in, and the values it expresses and extends—are socially and politically constructed, are fashioned by man rather than delivered by God or Nature. The most recent (and unlikely) field to experience this revolution, or at least to hear of its possibility, is economics. The key text is Donald McCloskey’s *The Rhetoric of Economics* (Wisconsin, 1985), a title that is itself polemical since, as McCloskey points out, mainstream economists don’t like to think of themselves as employing a rhetoric; rather, they regard themselves as scientists whose methodology insulates them from the appeal of special interests or points of view. They think, in other words, that the procedures of their discipline will produce “knowledge free from doubt, free from metaphysics, morals and personal conviction” (p. 16). To this, McCloskey responds by declaring (in good sophistic terms) that no such knowledge is available, and that while economic method promises to deliver it, “what it is able to deliver [and] renames as scientific methodology [are] the scientist’s and especially the economic scientist’s metaphysics, moral, and personal convictions” (p. 16). Impersonal method, then, is both an illusion and a danger (as a kind of rhetoric it masks its rhetorical nature), and as an antidote to it McCloskey offers rhetoric, which he says, deals not with abstract truth, but with the truth

²⁵Lanham, *Motives*, p. 28. [Au.]

that emerges in the context of distinctly human conversations (pp. 28–29). Within those conversations there are always

particular arguments good or bad. After making them there is no point in asking a last, summarizing question: “Well, is it True?” It’s whatever it is—persuasive, interesting, useful, and so forth. . . . There is no reason to search for a general quality called Truth, which answers only the unanswerable question, “What is it in the mind of God?” (p. 47)

The answerable questions are always asked within the assumptions of particular situations, and both question and answer “will always depend on one’s audience and the human purposes involved” (p. 150). The real truth, concludes McCloskey, is that “assertions are made for purposes of persuading some audience” and that, given the unavailability of a God’s-eye view, “this is not a shameful fact,” but the bottom line fact in a rhetorical world.

At the first conference called to consider McCloskey’s arguments, the familiar anti-rhetorical objections were heard again in the land, and the land might have been fifth-century Athens as well as Wellesley, Massachusetts, in 1986. One participant spoke of “the primrose path to extreme relativism” which proceeds from “Kuhn’s conception of the incommensurability of paradigms” to the “contention that there are no objective and unambiguous procedures for applying . . . rules since the meanings of particular actions and terms are entirely . . . context-dependent.” Other voices proclaimed that nothing in McCloskey’s position was new (an observation certainly true), that everyone already knew it, and that at any rate it didn’t touch the core of the economists’s practice. Still others invoked a set of related (and familiar) distinctions between empirical and interpretive activities, between demonstration and persuasion, between verifiable procedures and anarchic irrationalism. Of course, each of these objections had already been formulated (or reformulated) in those disciplines that had heard rhetoric’s siren song long before it reached the belated ears of economists. The name that everyone always refers to (in praise or blame) is Thomas Kuhn. His *The Structure of Scientific Revolutions* is arguably the most fre-

quently cited work in the humanities and social sciences in the past twenty-five years, and it is rhetorical through and through. Kuhn begins by rehearsing and challenging the orthodox model of scientific inquiry in which independent facts are first collected by objective methods and then built up into a picture of nature, a picture that he himself either confirms or rejects in the context of controlled experiments. In this model, science is a “cumulative process” (p. 3) in which each new discovery adds “one more item to the population of the scientist’s world” (p. 7). The shape of that world—of the scientist’s professional activities—is determined by the shapes (of fact and structure) already existing in the larger world of nature, shapes that constrain and guide the scientist’s work.

Kuhn challenges this story by introducing the notion of a paradigm, a set of tacit assumptions and beliefs within which research goes on, assumptions which rather than deriving from the observation of facts are determinative of the facts that could possibly be observed. It follows, then, that when observations made within different paradigms conflict, there is no principled (i.e., nonrhetorical) way to adjudicate the dispute. One cannot put the competing accounts to the test of fact, because the specification of fact is precisely what is at issue between them; a fact cited by one party would be seen as a mistake by the other. What this means is that science does not proceed by offering its descriptions to the independent judgment of nature; rather, it proceeds when the proponents of one paradigm are able to present their case in a way that the adherents of other paradigms find compelling. In short, the “motor” by which science moves is not verification or falsification, but persuasion. Indeed, says Kuhn, in the end the force of scientific argument “is *only* that of persuasion” (p. 94). In the case of disagreement, “each party must try, by persuasion, to convert the other” (p. 198), and when one party succeeds there is no higher court to which the outcome might be referred: “there is no standard higher than the assent of the relevant community” (p. 94). “What better criterion,” asks Kuhn, “could there be?” (p. 170).

The answer given by those who were horrified by Kuhn’s rhetoricization of scientific procedure

was predictable: a better criterion would be one that was not captive to a particular paradigm but provided a neutral space in which competing paradigms could be disinterestedly assessed. By denying such a criterion, Kuhn leaves us in a world of epistemological and moral anarchy. The words are Israel Scheffler's:

Independent and public controls are no more, communication has failed, the common universe of things is a delusion, reality itself is made . . . rather than discovered. . . . In place of a community of rational men following objective procedures in the pursuit of truth, we have a set of isolated monads, within each of which belief forms without systematic constraints.²⁶

Kuhn and those he has persuaded have, of course, responded to these accusations, but, needless to say, the debate continues in terms readers of this essay could easily imagine; and the debate has been particularly acrimonious because the area of contest—science and its procedures—is so heavily invested in as the one place where the apostles of rhetorical interpretivism would presumably fear to tread.

At one point in his argument Kuhn remarks that in the tradition he is critiquing scientific research is “reputed to proceed” from “raw data” or “brute experience”; but, he points out, if that were truly the mode of proceeding, it would require a “neutral observation language” (p. 125), a language that registers facts without any mediation by paradigm-specific assumptions. The problem is that “philosophical investigation has not yet provided even a hint of what a language able to do that would be like” (p. 127). Even a specially devised language “embodies a host of expectations about nature,” expectations that limit in advance what can be described. Just as one cannot (in Kuhn's view) have recourse to neutral facts in order to settle a dispute, so one cannot have recourse to a neutral language in which to report those facts or even to report on the configuration of the dispute. The difference that divides men “is prior to the application of the languages in which it is nevertheless reflected”

(p. 201). Whatever reports a particular language (natural or artificial) offers us will be the report on the world as it is seen from within some particular situation; there is no other aperspectival way to see and no language other than a situation-dependent language—an interested, rhetorical language—in which to report.

This same point was being made with all the force of philosophical authority by J. L. Austin in a book published, significantly, in the same year (1962) that saw the publication of *The Structure of Scientific Revolutions*. Austin begins *How to Do Things with Words* by observing that traditionally the center of the philosophy of language has been just the kind of utterance Kuhn declares unavailable, the context-independent statement that offers objective reports on an equally independent world in sentences of the form “He is running” and “Lord Raglan won the battle of Alma” (pp. 47, 142). Such utterances, which Austin calls “constative,” are answerable to a requirement of truth and verisimilitude (“the truth of the constative . . . ‘he is running’ depends on his being running”); the words must match the world, and if they do not they can be criticized as false and inaccurate. There are, however, innumerable utterances that are not assessable in this way. If, for example, I say to you, “I promise to pay you five dollars” or “Leave the room,” it would be odd were you to respond by saying “true” or “false”; rather, you would say to the first “good” or “that's not enough” or “I won't hold my breath” and to the second “yes, sir” or “but I'm expecting a phone call” or “who do you think you are?” These and many other imaginable responses would not be judgments on the truth or accuracy of my utterance but on its appropriateness given our respective positions in some social structure of understanding (domestic, military, economic, etc.). It is only if the circumstances are of a certain kind—that is, if five dollars is a reasonable rather than an insulting amount, if the room I order you to leave is mine not yours—that the utterances will “take” and achieve the meaning of being a promise or a command. Thus the very identity, and therefore the meaning, of this type of utterance—Austin names it “performative”—depends on the context in which it is produced and received. There

²⁶*Science and Subjectivity* (Indianapolis, 1967), p. 19. [Au.]

is no regular—in the sense of reliable and predictable—relationship between the form of the linguistic marks (the words and their order) and their significance. Nothing guarantees that “I promise to pay you five dollars” will be either intended or heard as a promise; in different circumstances it could be received as a threat or a joke (as when I utter it from debtors’ prison), and in many circumstances it will be intended as one act and understood as another (as when your opinion of my trustworthiness is much lower than my own). When the criterion of verisimilitude has been replaced by the criterion of appropriateness, meaning becomes radically contextual, potentially as variable as the situated (and shifting) understandings of countless speakers and hearers.

It is, of course, precisely this property of performatives—their force is contingent and cannot be formally constrained—that is responsible for their being consigned by philosophers of language to the category of the “derived” or “parasitic,” where, safely tucked away, they are prevented from contaminating the core category of the constative. But it is this act of segregation and quarantining that Austin undoes in the second half of his book when he extends the analysis of performatives to constatives and finds that they too mean differently in the light of differing contextual circumstances. Consider the exemplary constative, “Lord Raglan won the battle of Alma.” Is it true, accurate, a faithful report? It depends, says Austin, on the context in which it is uttered and received (pp. 142–43). In a high school textbook it might be accepted as true because of the in-place assumptions as to what, exactly, a battle is, what constitutes winning, what the function of a general is, etc., while in a work of “serious” historical research all of these assumptions may have been replaced by others, with the result that the very notions “battle” and “won” would have a different shape. The properties that supposedly distinguish constatives from performatives—fidelity to preexisting facts, accountability to a criterion of truth—turn out to be as dependent on particular conditions of production and reception as performatives. “True” and “false,” Austin concludes, are not names for the possible relationships between freestanding (constative) utterances and an equally freestand-

ing state of affairs; rather, they are situation-specific judgments on the relationship between contextually produced utterances and states of affairs that are themselves no less contextually produced. At the end of the book constatives are “discovered” to be a subset of performatives, and with this discovery the formal core of language disappears entirely and is replaced by a world of utterances vulnerable to the sea change of every circumstance, the world, in short, of rhetorical (situated) man.

This is a conclusion Austin himself resists when he attempts to isolate (and thereby contain) the rhetorical by invoking another distinction between serious and nonserious utterance. Serious utterances are utterances for which the speaker takes responsibility; he means what he says, and therefore you can infer his meaning by considering his words in context. A nonserious utterance is an utterance produced in circumstances that “abrogate” (p. 21) the speaker’s responsibility, and therefore one cannot with any confidence—that is, without the hazard of ungrounded conjecture—determine what he means:

a performative utterance will, for example, be . . . hollow or void if said by an actor on the stage, or if introduced in a poem, or spoken in a soliloquy. . . . Language in such circumstances is in special ways . . . used not seriously, but in ways *parasitic* upon its normal use. . . . All this we are *excluding* from consideration. Our performative utterances . . . are to be understood as issued in ordinary circumstances. (p. 22)

The distinction, then, is between utterances that are, as Austin puts it later, “tethered to their origin” (p. 61), anchored by a palpable intention, and utterances whose origin is hidden by the screen of a theatrical or literary stage setting. This distinction and the passage in which it appears were taken up in 1967 by Jacques Derrida in a famous (and admiring) critique of Austin. Derrida finds Austin working against his own best insights and forgetting what he has just acknowledged, that “infelicity [communication going astray, in an unintended direction] is an ill to which *all* [speech] acts are heir.”²⁷ Despite

²⁷Jacques Derrida, “Signature Event Context,” *Glyph* 1 (1977): 190. [Au.]

this acknowledgment, Austin continues to think of infelicity—of those cases in which the tethering origin of utterances is obscure and must be constructed by interpretive conjecture—as special, whereas, in Derrida’s view, infelicity is itself the originary state in that any determination of meaning must always proceed within an interpretive construction of a speaker’s intention. The origin that supposedly tethers the interpretation of an utterance will always be the product of that interpretation; the special circumstances in which meaning must be inferred through a screen rather than directly are the circumstances of every linguistic transaction. In short, there are no ordinary circumstances, merely those myriad and varied circumstances in which actors embedded in stage settings hazard interpretations of utterances produced by actors embedded in other stage situations. All the world, as Shakespeare says, is a stage, and on that stage “the quality of risk admitted by Austin” is not something one can avoid by sticking close to ordinary language in ordinary circumstances, but is rather “the internal and positive condition” of any act of communication.”²⁸

In the same publication in which the English translation of Derrida’s essay appeared, John Searle, a student of Austin’s, replied in terms that make clear the affiliation of this particular debate to the ancient debate whose configurations we have been tracing. Searle’s strategy is basically to repeat Austin’s points and declare that Derrida has missed them: “Austin’s idea is simply this: if we want to know what it is to make a promise we had better not *start* our investigations with promises made by actors on stage . . . because in some fairly obvious way such utterances are not standard cases of promises” (p. 204). But in Derrida’s argument, the category of the “obvious” is precisely what is being challenged or “deconstructed.” Although it is true that we consider promises uttered in everyday contexts more direct—less etiolated—than promises made on a stage, this (Derrida would say) is only because the stage settings within which everyday life proceeds are so powerfully—that is, rhetorically—in place that they are in effect invisible, and

therefore the meanings they make possible are experienced as if they were direct and unmediated by any screens. The “obvious” cannot be opposed to the “staged,” as Searle assumes, because it is simply the achievement of a staging that has been particularly successful. One does not escape the rhetorical by fleeing to the protected area of basic communication and common sense because common sense in whatever form it happens to take is always a rhetorical—partial, partisan, interested—construction. This does not mean, Derrida hastens to add, that all rhetorical constructions are equal, just that they are equally rhetorical, equally the effects and extensions of some limited and challengeable point of view. The “citationality”—the condition of being in quotes, of being *indirect*—of an utterance in a play is not the same as the citationality of a philosophical reference or a deposition before a court; it is just that no one of these performatives is more serious—more direct, less mediated, less rhetorical—than any other. Whatever opposition there is takes place within a “general” citationality which “constitutes a violation of the allegedly rigorous purity of every event of discourse or every *speech act*” (p. 192).

Searle points out (p. 205) that in order to achieve a “general theory of speech acts,” one must perform acts of exclusion or idealization like Austin’s; but it is the possibility of a general theory—of an account that is itself more than an extension of some *particular* context or perspective—that Derrida denies. His is the familiar world of Rhetorical Man, teeming with roles, situations, strategies, interventions, but containing no master role, no situation of situations, no strategy for outflanking all strategies, no intervention in the arena of dispute that does not expand the arena of dispute, no neutral point of rationality from the vantage point of which the “merely rhetorical” can be identified and held in check. That is why deconstructive or post-structuralist thought is supremely rhetorical: it systematically asserts and demonstrates the mediated, constructed, partial, socially constituted nature of all realities, whether they be phenomenal, linguistic, or psychological. To deconstruct a text, says Derrida, is to “work through the structured genealogy of its concepts in the most scrupulous

²⁸Ibid. [Au.]

and immanent fashion, but at the same time to determine from a certain external perspective that it cannot name or describe what this history may have concealed or excluded, constituting itself as history through this repression in which it has a stake."²⁹ The "external perspective" is the perspective from which the analyst knows in advance (by virtue of his commitment to the rhetorical or anti-foundational worldview) that the coherences presented by a text (and an institution or an economy can in this sense be a text) rests on a contradiction it cannot acknowledge, rests on the suppression of the challengeable rhetoricity of its own standpoint, a standpoint that offers itself as if it came from nowhere in particular and simply delivered things as they really (i.e., nonperspectivally) are. A deconstructive reading will surface those contradictions and expose those suppressions and thus "trouble" a unity that is achieved only by covering over all the excluded emphases and interests that might threaten it. These exclusions are part of the text in that the success of its totalizing effort depends on them. Once they are made manifest, the hitherto manifest meaning of the text is undermined—indeed, is shown to have always and already been undermined—as "the rhetorical operations that produce the supposed ground of argument, the key concept or premise," are deprived of the claim to be *unrhetorical*, serious, disinterested.³⁰

Nor is this act performed in the service of something beyond rhetoric. Derridean deconstruction does not uncover the operations of rhetoric in order to reach the Truth; rather, it continually uncovers the truth of rhetorical operations, the truth that all operations, including the operation of deconstruction itself, are rhetorical. If, as Paul de Man asserts, "a deconstruction always has for its target to reveal the existence of hidden articulations and fragmentations within assumedly monadic totalities," care must be taken that a new monadic totality is not left as the

legacy of the deconstructive gesture. Since the course of a deconstruction is to uncover a "fragmented stage that can be called natural with regard to the system that is being undone," there is always the danger that the "natural" pattern will "substitute *its* relational system for the one it helped to dissolve."³¹ The only way to escape this danger is to perform the deconstructive act again and again, submitting each new emerging constellation to the same suspicious scrutiny that brought it to light, and resisting the temptation to put in place of the truths it rhetoricizes the truth that everything is rhetorical. One cannot rest even in the insight that there is no place to rest. "Rhetoric," says de Man, "suspends logic and opens up vertiginous possibilities of referential aberration" (p. 10). But the rhetorical vision is foreclosed on and made into a new absolute if those "vertiginous possibilities" are celebrated as the basis of a new wisdom. The rhetorical beat must by definition go on, endlessly repeating the sequence by which "the lure of solid ground" is succeeded by "the ensuing demystification."³² When de Man approvingly quotes Nietzsche's identification of truth with "a moving army of metaphors, metonymies and anthropomorphisms," a rhetorical construction whose origin has been (and must be) forgotten, he does not exempt Nietzsche's text from its own corrosive effects. If Nietzsche declares (well in advance of Kuhn and Austin, but well after Gorgias and Protagoras) that "there is no such thing as an unrhetorical, 'natural' language," for "tropes are not something that can be added or subtracted from language at will," the insight must be extended to that very declaration: "A text like *On Truth and Lie*, although it presents itself legitimately as a demystification of literary rhetoric, remains entirely literary, and deceptive itself" (p. 113). The "rhetorical mode," the mode of deconstruction, is a mode of "endless reflection," since it is "unable ever to escape from the rhetorical deceit it announces" (p. 115).

IV

That, however, is just what is wrong with deconstructive practice from the viewpoint of the intellectual left, many of whose members subscribe to Nietzsche's account of truth and reality as rhetorical but find that much of post-structuralist discourse uses that account as a way of escaping into new versions of idealism and formalism. Frank Lentricchia, for example, sees in some of de Man's texts an intention to place "discourse in a realm where it can have no responsibility to historical life" and fears that we are being invited into "the realm of the thoroughly predictable linguistic transcendental," the "rarified region of the undecidable," where every text "speaks synchronically and endlessly the same tale . . . of its own duplicitous self-consciousness."³³ Terry Eagleton's judgment is even harsher. Noting that in the wake of Nietzschean thought, rhetoric, "mocked and berated for centuries by an abrasive rationalism," takes its "terrible belated revenge" by finding itself in every rationalist project, Eagleton complains that many rhetoricians seem content to stop there, satisfied with the "Fool's function of unmasking all power as self-rationalization, all knowledge as a mere fumbling with metaphor."³⁴ Operating as a "vigorous demystifier of all ideology," rhetoric functions only as a form of thought and ends up by providing "the final ideological rationale for political inertia." In retreat "from market place to study, politics to philology, social practice to semiotics," deconstructive rhetoric turns the emancipatory promise of Nietzschean thought into "a gross failure of ideological nerve," allowing the liberal academic the elitist pleasure of repeatedly exposing "vulgar commercial and political hectorings" (pp. 108–9). In both his study of Benjamin and his influential *Literary Theory: An Introduction*, Eagleton urges a return to the Ciceronian-Isocratic tradition in which the rhetorical arts are inseparable from the practice of a politics, "techniques of persuasion indissociable from the substantive issues and

audiences involved," techniques whose employment is "closely determined by the pragmatic situation at hand."³⁵ In short, he calls for a rhetoric that will do real work and cites as an example the slogan "black is beautiful," which he says is "paradigmatically rhetorical since it employs a figure of equivalence to produce particular discursive and extra-discursive effects without direct regard for truth."³⁶ That is, someone who says "black is beautiful" is not so much interested in the accuracy of the assertion (it is not constatively intended) as he is in the responses it may provoke—surprise, outrage, urgency, solidarity—responses that may in turn set in motion "practices that are deemed, in the light of a particular set of falsifiable hypotheses, to be desirable."³⁷

For Eagleton, the desirable practices are Marxist-socialist and the rhetoric that will help establish them has three tasks:

First, to participate in the production of works and events which . . . so fictionalize the "real" as to intend those effects conducive to the victory of socialism. Second, as "critic" to expose the rhetorical structures by which non-socialist works produce politically undesirable effects. . . . Third, to interpret such words where possible "against the grain," so as to appropriate from them whatever may be valuable for socialism.³⁸

It is, of course, the second of these tasks that presents conceptual and cognitive problems. If all cultural work is, as Eagleton says in the sentence just before this passage, rhetorical, then how does one's own rhetoric escape the inauthenticity it discovers in the rhetoric of others? Eagleton's answer is contained in his assumption of the superiority of the socialist program; any rhetorical work in the service of that program will be justified in advance, while conversely any rhetorical work done in opposition to socialist urgencies will flow from "false consciousness" and will deserve to be exposed. This confidence in his objectives makes Eagleton impatient with those for

³⁸Ibid. [Au.]

whom the rhetoricity of all discourse is something to be savored for itself, something to be lovingly and obsessively demonstrated again and again. It is not, he says, “a matter of starting from certain theoretical or methodological problems; it is a matter of starting from what we want to *do*, and then seeing which methods and theories will best help us to achieve these ends.”³⁹ Theories, in short, are themselves rhetorics whose usefulness is a function of contingent circumstances. It is ends—specific goals in local contexts—that rule the invocation of theories, not theories that determine goals and the means by which they can be reached.

There are those on the left, however, for whom the direction is the other way around, from the theoretical realization of rhetoric’s pervasiveness to a vision and a program for implementing it. In their view the discovery (or rediscovery) that all discourse and therefore all knowledge is rhetorical leads or should lead to the adoption of a *method* by which the dangers of rhetoric can be at least mitigated and perhaps extirpated. This method has two stages: the first is a stage of de-bunking, and it issues from the general suspicion in which all orthodoxies and arrangements of power are held once it is realized that their basis is not reason or nature but the success of some rhetorical / political agenda. Armed with this realization, one proceeds to expose the contingent and therefore challengeable basis of whatever presents itself as natural and inevitable. So far this is precisely the procedure of deconstruction; but whereas deconstructive practice (at least of the Yale variety) seems to produce nothing but the occasion for its endless repetition, some cultural revolutionaries discern in it a more positive residue, the loosening or weakening of the structures of domination and oppression that now hold us captive. The reasoning is that by repeatedly uncovering the historical and ideological basis of established structures (both political and cognitive), one becomes sensitized to the effects of ideology and begins to clear a space in which those effects can be combated; and as that sensitivity grows more acute, the area of combat will become larger until it encompasses the under-

³⁹*Literary Theory* (Minneapolis, 1983), p. 211. [Au.]

lying structure of assumptions that confers a spurious legitimacy on the powers that currently be. The claim, in short, is that the radically rhetorical insight of Nietzschean/Derridean thought can do radical political work; becoming aware that everything is rhetorical is the first step in countering the power of rhetoric and liberating us from its force. Only if deeply entrenched ways of thinking and acting are made the objects of suspicion will we be able “even to *imagine* that life could be different and better.”

This last sentence is taken from an essay by Robert Gordon entitled “New Developments in Legal Theory.”⁴⁰ Gordon is writing as a member of the Critical Legal Studies Movement, a group of legal academics who have discovered the rhetorical nature of legal reasoning and are busily exposing as interested the supposedly disinterested operations of legal procedures. Gordon’s pages are replete with the vocabulary of enclosure or prison; we are “locked into” a system of belief we did not make; we are “demobilized” (that is, rendered less mobile); we must “break out” (p. 291), we must “unfreeze the world as it appears to common sense” (p. 289). What will help us to break out, to unfreeze, is the discovery “that the belief-structures that rule our lives are not found in nature but are historically contingent,” for that discovery, says Gordon, “is extraordinarily liberating” (p. 289). What it will liberate are the mental energies that were before prevented by the “paralysis-inducing” effects of received systems of thought from even imagining that “life could be different and better.” In the words of Roberto Unger (another prominent member of the movement), if you start with an awareness of the insight “that no one scheme of human association has conclusive authority” and come to an understanding of the “flawed” nature of the schemes now in place, you can then “imagine the actualizations [i.e., present-day arrangements of things] transformed” and in time “transform them in fact.”⁴¹ The result will be a “cultural-revolutionary practice” that will bring about the “progressive emancipation from a

⁴⁰*The Politics of Law* (New York, 1983), p. 287. [Au.]

⁴¹“The Critical Legal Studies Movement,” *Harvard Law Review* 96 (1983): 580. [Au.]

background plan of social division and hierarchy" (p. 587). To the question, what is the *content* of that emancipation, given a world that is rhetorical through and through, those who work Gordon's and Unger's side of the street usually reply that emancipation will take the form of a strengthening and enlarging of a capacity of mind that stands to the side of, and is therefore able to resist, the appeal of the agenda that would enslave us. That capacity of mind has received many names, but the one most often proposed is "critical self-consciousness." Critical self-consciousness is the ability (stifled in some, developed in others) to discern in any "scheme of association," including those one finds attractive and compelling, the partisan aims it hides from view; and the claim is that as it performs this negative task, critical self-consciousness participates in the positive task of formulating schemes of associations (structures of thought and government) that are in the service not of a particular party but of all mankind.

It need hardly be said that this claim veers back in the direction of the rationalism and universalism that the critical/deconstructive project sets out to demystify. That project begins by rejecting the rationalities of present life as rationalizations and revealing the structure of reality to be rhetorical, that is, partial; but then it turns around and attempts to use the insight of partiality to build something that is less partial, less hostage to the urgencies of a particular vision and more responsive to the needs of men and women in general. Insofar as this "turn" is taken to its logical conclusion, it ends up reinventing at the conclusion of a rhetorically informed critique the entire array of anti-rhetorical gestures and exclusions. One sees this clearly in the work of Jürgen Habermas, a thinker whose widespread influence is testimony to the durability of the tradition that began (at least) with Plato. Habermas's goal is to bring about something he calls the "ideal speech situation," a situation in which all assertions proceed not from the perspective of individual desires and strategies, but from the perspective of a general rationality upon which all parties are agreed. In such a situation nothing would count except the claims to universal validity of all assertions. "No force except that of the better argu-

ment is exercised; and, . . . as a result, all motives except that of the cooperative search for truth are excluded."⁴² Of course, in the world we now inhabit there is no such purity of motive; nevertheless, says Habermas, even in the most distorted of communicative situations there remains something of the basic impulse behind all utterance, "the intention of communicating a true [*wahr*] proposition . . . so that the hearer can share the knowledge of the speaker."⁴³ If we could only eliminate from our discourse performances those intentions that reflect baser goals—the intentions to deceive, to manipulate, to persuade—the ideal speech situation could be approximated.

What stands in our way is the fact that many of our speech acts issue from the perspective of local and historically contingent contexts, and these by definition cannot contribute to the building up of a general rationality. Therefore, it is incumbent upon us to choose and proffer utterances that satisfy (or at least claim and desire to satisfy) *universal* conditions of validity. This is the project Habermas names "Universal Pragmatics" and the name tells its own story. Habermas recognizes, as all modern and postmodern contextualists do, that language is a social and not a purely formal phenomenon, but he thinks that the social/pragmatic aspect of language use is itself "accessible to formal analysis" (p. 6) and that therefore it is possible to construct a universal "communicative competence" (p. 29) parallel to Chomsky's linguistic competence. Sentences produced according to the rules and norms of this communicative competence would be tied not to "particular epistemic presuppositions and changing contexts" (p. 29), but to the unchanging context (the context of contexts) in which one finds the presuppositions underlying the general possibility of successful speech. "A *general* theory of speech acts would . . . describe . . . that fundamental system of rules that adult subjects master to the extent that they can fulfill *the conditions of happy employment of sentences in utterances* no matter to which particular language the sentences may belong and in which accidental contexts the

⁴²*Legitimation Crisis* (Boston, 1975), pp. 107–8. [Au.]

⁴³*Communication and the Evolution of Society* (Boston, 1979), p. 2. [Au.]

utterances may be embedded" (p. 26). If we can operate on the level of that fundamental system, the distorting potential of "accidental contexts" will be neutralized because we will always have one eye on what is essential, the establishing by rational cooperation of an interpersonal (non-accidental) truth. Once speakers are oriented to this goal and away from others, oriented toward *general* understanding, they will be incapable of deception and manipulation: "Truthfulness guarantees the transparency of a subjectivity representing itself in language" (p. 57). A company of transparent subjectivities will join together in the fashioning of a transparent truth and of a world in which the will to power has been eliminated.

In his book *Textual Power* (New Haven, 1985), Robert Scholes examines the rationalist epistemology in which a "complete self confronts a solid world, perceiving it directly and accurately, . . . capturing it perfectly in a transparent language" and declares it to be so thoroughly discredited that it now "is lying in ruins around us" (pp. 132–33). Perhaps so, in some circles, but the fact of Habermas's work and of the audience he commands suggests that even now those ruins are collecting themselves and rising again into the familiar anti-rhetorical structure. It would seem that any announcement of the death of either position will always be premature, slightly behind the institutional news that in some corner of the world supposedly abandoned questions are receiving what at least appear to be new answers. Only recently the *public* fortunes of rationalist-foundationalist thought have taken a favorable turn with the publication of books like Allan Bloom's *The Closing of the American Mind* and E. D. Hirsch's *Cultural Literacy*, both of which (Bloom's more directly) challenge the "new Orthodoxy" of "extreme cultural relativism" and reassert, albeit in different ways, the existence of normative standards. In many quarters these books have been welcomed as a return to the common sense that is necessary if civilization is to avoid the dark night of anarchy. One can expect administrators and legislators to propose reforms (and perhaps even purges) based on Bloom's arguments (the rhetorical force of anti-rhetoricalism is always being revived), and one

can expect too a host of voices raised in opposition to what will surely be called the "new positivism." Those voices will include some that have been mentioned here and some others that certainly merit recording but can only be noted in a list that is itself incomplete. The full story of rhetoric's twentieth-century resurgence would boast among its cast of characters: Kenneth Burke, whose "dramatism" anticipates so much of what is considered avant-garde today; Wayne Booth, whose *The Rhetoric of Fiction* was so important in legitimizing the rhetorical analysis of the novel; Mikhail Bakhtin, whose contrast of monologic to dialogic and heteroglossic discourse sums up so many strands in the rhetorical tradition; Roland Barthes, who in the concept of "jouissance" makes a (non) constitutive principle of the tendency of rhetoric to resist closure and extend play; the ethnomethodologists (Harold Garfinkel and company) who discover in every supposedly rule-bound context the operation of a principle (exactly the wrong word) of "ad-hoc-ing"; Chaim Perelman and L. Olbrechts-Tyteca whose *The New Rhetoric: A Treatise on Argumentation* provides a sophisticated modern source book for would-be rhetoricians weary of always citing Aristotle; Barbara Herrnstein Smith who, in the course of espousing an unashamed relativism, directly confronts and argues down the objections of those who fear for their souls (and more) in a world without objective standards; Fredric Jameson and Hayden White who teach us (among other things) that "history . . . is unaccessible to us except in textual form, and that our approach to it and to the Real itself necessarily passes through its prior textualization";⁴⁴ reader-oriented critics like Norman Holland, David Bleich, Wolfgang Iser, and H. R. Jauss who, by shifting the emphasis from the text to its reception, open up the act of interpretation to the infinite variability of contextual circumstance; innumerable feminists who relentlessly unmark male hegemonic structures and expose as rhetorical the rational posturings of the legal and political systems; equally innumerable theorists of composition who, under the slogan "process, not product," insist on the rhetorical nature of com-

⁴⁴*The Political Unconscious* (Ithaca, 1981), p. 35. [Au.]

munication and argue for far-reaching changes in the way writing is taught. The list is already formidable, but it could go on and on, providing support for Scholes's contention that the rival epistemology has been vanquished and for Clifford Geertz's announcement (and he too is a contributor to the shift he reports) that "Something is happening to the way we think about the way we think."⁴⁵

But it would seem, from the evidence marshaled in this essay, that something is always happening to the way we think, and that it is always the same something, a tug-of-war between two views of human life and its possibilities, no one of which can ever gain complete and lasting ascendancy because in the very moment of its triumphant articulation each turns back in the direction of the other. Thus Wayne Booth feels obliged in both *The Rhetoric of Fiction* and *A Rhetoric of Irony* to confine the force of rhetoric by sharply distinguishing its legitimate uses from two extreme-limit cases (the "unreliable narrator" and "unstable irony"); some reader-response critics deconstruct the autonomy and self-sufficiency of the text, but in the process end up privileging the autonomous and self-sufficient subject; some feminists challenge the essentialist claims of "male reason" in the name of a female rationality or nonrationality apparently no less essential; Jameson opens up the narrativity of history in order to proclaim one narrative the true and unifying one. Here one might speak of the return of the repressed (and thereby invoke Freud whose writings and influence would be still an-

⁴⁵"Blurred Genres: The Refiguration of Social Thought," *The American Scholar* 49 (spring 1980). [Au.]

other chapter in the story I have not even begun to tell) were it not that the repressed—whether it be the fact of difference or the desire for its elimination—is always so close to the surface that it hardly need be unearthed. What we seem to have is a tale full of sound and fury, and signifying itself, signifying a durability rooted in inconclusiveness, in the impossibility of there being a last word.

In an essay, however, someone must have the last word and I give it to Richard Rorty. Rorty is himself a champion of the antiessentialism that underlies rhetorical thinking; his neo-pragmatism makes common cause with Kuhn and others who would turn us away from the search for transcendental absolutes and commend to us (although it would seem superfluous to do so) the imperatives and goals already informing our practices. It is, however, not the polemicist Rorty whom I call upon to sum up, but the Rorty who is the brisk chronicler of our epistemological condition:

There . . . are two ways of thinking about various things. . . . The first . . . thinks of truth as a vertical relationship between representations and what is represented. The second . . . thinks of truth horizontally—as the culminating reinterpretation of our predecessor's reinterpretation of their predecessors' reinterpretation. . . . It is the difference between regarding truth, goodness, and beauty as eternal objects which we try to locate and reveal, and regarding them as artifacts whose fundamental design we often have to alter.⁴⁶

It is the difference between serious and rhetorical man. It is the difference that remains.

⁴⁶*Consequences of Pragmatism* (Minneapolis, 1982), p. 92. [Au.]

Glossary

abolitionism Advocacy on behalf of ending slavery. American abolitionist societies first formed in the 1780s. After northern states abolished slavery in the decades after the Revolution, the movement languished until the 1830s when a new, radical, and interracial antislavery movement sprang up. Even after the enactment of the Thirteenth Amendment outlawing slavery, some abolitionists continued work on behalf of African American education and civil rights.

a fortiori Literally, “from the stronger.” An argument in which the rhetor draws a conclusion by first setting up two possibilities, one of which is more probable than the other. Whatever can be affirmed about the less probable can be affirmed with even greater force about the more probable.

allegory A narrative or story in which the agents, actions, and sometimes the settings offer both literal and figurative meanings. In historical and political allegory, characters and actions in the story represent historical persons and events. In allegories of ideas, characters stand for abstract concepts such as virtues, vices, or states of mind, and the plot communicates a doctrine or moral.

appeals, rhetorical and persuasive Aristotle defined three ways a rhetor could persuade an audience: through *ethos*, *pathos*, and *logos*. *Ethos* is the appeal to the audience’s trust in the speaker’s character and authority. *Pathos* is the appeal to the audience’s emotions. *Logos* is the appeal to the audience’s reason or logic.

arrangement See *canons of rhetoric*.

ars arengandi (are en GAN dee) Medieval instruction in forensic speaking.

ars dictaminis (dik tuh MIN us) The medieval art of letter composition, which originated as part of rhetorical study and flourished in the eleventh and twelfth centuries during a revival of classical studies. It is sometimes called *ars dictandi*.

ars poetria (poe et TREE ah) Literally, “the art of poetry.” The stylistic analysis of poetry engaged in by medieval grammarians in order to teach correct grammar and style, with an emphasis on **tropes** and **figures**.

ars praedicandi (pry dik CON dee) The rhetorically organized art of preaching. The systematic study of preaching began in the twelfth century and gained momentum in the thirteenth as preaching became a more important part of the clergy’s work. A flood of manuals on preaching then appeared, describing how to structure a “thematic” sermon based on detailed discussion of a biblical text and suggesting rhetorical features to employ in sermons.

Asianist style A style featuring ornamentation and a swift, even wild manner of speech. The term arose in the mid-first century B.C.E. to describe the rhetoric of Greek colonists from Asia Minor who had preserved Sophism. Its counterpart is the **Atticist** style. Cicero, one of the first users of the term, also distinguished a second Asianist style, epigrammatic and charming.

Atticist style A classical Roman style based on allegedly Attic (Greek) standards of purity, simplicity, and grace. Atticists advocated studying and imitating classical Greek orators and returning to classical Greek rules of diction and composition. In the seventeenth century, the conflict between **Senecans** and **Neo-Ciceronians** replayed the battle between Atticists and **Asianists**.

belles lettres (bell LET tre) Writing valued for its style and aesthetic qualities rather than its persuasive force or informational content.

black jeremiad *Jeremiad*, from the biblical prophet Jeremiah, means “a bitter lamentation.” Seventeenth-century New England Puritans developed the jeremiad as an oratorical form in which ministers first cited God’s promise to the audience as a chosen people, went on to criticize the audience’s sins and failings, and finally prophesied that the group would redeem itself as the chosen people in God’s eyes. African American rhetors such as Frederick Douglass, Mary McLeod Bethune, and Martin Luther King Jr. adapted this jeremiad form. Their speeches posited African Americans as a chosen people within a chosen nation—America—and argued that America had a covenantal duty to deal justly with African Americans.

canon A body of texts that a culture’s literary establishment considers the best and most influential.

canons of rhetoric *Canon* is an ancient term for a division or part. The five canons or parts of classical oral rhetoric are **invention**, arrangement, style, **memory**, and delivery. Invention is the art of making persuasive arguments in any given rhetorical situation; arrangement means ordering the parts of a discourse according to the rhetor’s audience and purpose; style is the use of appropriate and effective language; memory is memorization; and delivery is the art of performing a speech using gestures, tones, and vocal modulations.

commonplaces or common topics Called *topoi* in Greek, *loci* in Latin. The commonplaces or topics are the “locations” of standard categories of arguments. Aristotle distinguishes four common topics: whether a thing has occurred, whether it will occur, whether things are bigger or smaller than they seem, and whether a thing is or is not possible. Other commonplaces are definition, comparison, relationship, and testimony, each with its own subtopics.

current-traditional composition A phrase coined by Daniel Fogarty, S.J., in 1959 to describe the most common method of American writing instruction during the greater part of the twentieth century. It focused on Alexander Bain’s modes of discourse—description, narration, exposition, and persuasion—and embraced a prescriptive view of grammar, usage, and structure.

declamation A highly embellished type of ceremonial speech originating in Imperial Rome, when censorship made overtly political rhetoric impossible. Declamations were taught in the schools and often practiced as a form of private entertainment. In deliberative declamations, the speech dealt with a dilemma confronting a historical or mythological person. In *controversia*, laws were stated and an unusual situation involving them sketched out. The orator could invent any situation and portray any party in the case. In modern usage, declamation is any speech or recitation delivered with strong feeling.

deconstruction A method of textual analysis and philosophical argument pioneered by Jacques Derrida that involves the close reading of texts, most often in the fields of literature, philosophy, linguistics, or anthropology, to reveal incompatibilities between the explicit and implicit planes of discourse in a text and to show how the text disguises these incompatibilities. Typically, a deconstructive reading focuses on binary oppositions within a text. It shows how those oppositions are structured hierarchically (that is, that one of the terms is “favored”), and then overturns those hierarchies to make the text say the opposite of what it initially said. The final move in deconstructive reading is to displace the opposition and reassert both terms within a nonhierarchical relationship. In this way, deconstruction subverts a text’s implicit claim to possess adequate grounds to establish its own structure, unity, and meaning.

deduction/deductive method Reasoning from the general to the specific; deriving a conclusion from comparison of general to particular premises. Aristotle called deduction “a discussion in which certain things having been laid down, something other than those things necessarily results through them.” Deductive reasoning is expressed in the form of a **sylogism** or **enthymeme**. The most famous example is:

1. All people are mortal.
2. Socrates is a person.
3. Therefore, Socrates is mortal.

dialectic The practice of inquiry and argumentation through conversation. To Aristotle, dialectic meant the art of discussion by question and answer in order to approach probable truth in questions about human affairs. To Ramus, it was an art that sought to perfect the **syllogism** as a way of examining statements about the world. In current usage, it is the art of arriving at the truth through the exchange of logical arguments.

dialogism (die a LOW jiz em) Term used by twentieth-century philosopher and literary critic Mikhail Bakhtin to characterize verbal interactions between individuals. According to Bakhtin, language is born not within isolated humans but in interactions between two or more humans. Dialogism also encompasses the dialogue the reader must engage in with the text; prose literature in which several contesting voices, representing different ideological positions, participate equally in dialogue; and the implicit dialogue any word user carries on with previous users of the word.

dramatism A method of linguistic and conceptual analysis developed by twentieth-century rhetorician Kenneth Burke that treats language and thought primarily as modes of symbolic action rather than means of conveying information. Any act involves an agent performing the action, a scene, some means or agency, and a purpose; *act*, *agent*, *scene*, *agency*, and *purpose* thus comprise the dramatistic pentad. Some aspect of these elements, Burke asserts, motivates every narrative act.

écriture féminine (ec reh TURE fem e NEEN) A set of concepts and a writing style associated with French writers Julia Kristeva, Luce Irigaray, Hélène Cixous, and Monique Wittig. These writers contend that Western cultures' religions, philosophies, literature, and languages support the notion that the male—possessor of the phallus—is the center of meaning; men define the rest of the world, particularly women, as the “Other.” Practitioners of *écriture féminine* try to represent the marginalized “Other” in their works by defying narrative conventions, blending theoretical and literary writing, mixing criticism and polemic with fantasy and wordplay, and emphasizing the **semiotic** aspect of language. Some scholars criticize writers involved with *écriture féminine* for assuming that wo-

men's biology invariably affects their psychology and language use.

elocution The art of oral delivery, especially of speeches or memorized literary texts. Eighteenth-century works on elocution emphasized proper pronunciation and effective gestures and physical expressions.

enthymeme [EN th' meem] A means of proof in an argument wherein the rhetor places together probable premises about human action in order to arrive at a probable conclusion. The form of an enthymeme is the same as that of a **syllogism**. Rhetors usually choose a widely held belief as the first or major premise, then apply the premise to the particular case about which they are arguing.

epistemology The branch of philosophy concerned with the nature of knowledge. More generally, the term describes the ways in which people come to acquire knowledge. “Ways of knowing” is sometimes used as a synonym.

ethos See **appeals, rhetorical and persuasive**.

faculty psychology An eighteenth-century philosophy, associated with the work of John Locke, that divided the human mind into four different functions or “faculties”: reason or understanding, imagination, the passions, and the will. George Campbell, Hugh Blair, Richard Whately, and Alexander Bain, among others, applied faculty psychology to rhetoric by stating that a successful rhetor must appeal to each faculty by using a specific form of communication and a corresponding style. For example, the rhetor must first appeal to reason by informing, using a style characterized by perspicuity (clearness). Persuasion finally results when the rhetor has informed and convinced the *reason*, pleased the *imagination*, and moved the *will*.

figure An artful use of language to achieve a special meaning or effect. In figures, as compared to **tropes**, the departure from standard usage is not primarily in the meaning but in the order of the words. Figures involve unusual patterns of language, such as repetition or juxtaposition of similar words. **Tropes**, in contrast, radically change the meaning of the words themselves.

grammar In Aristotle, a set of verbal terms or categories by means of which a discourse can be analyzed. In the medieval era, grammar was the first of the seven liberal arts, encompassing literary analysis along with the study of language. In contemporary usage,

“prescriptive” grammar sets forth the current standards of language use, whereas “descriptive” grammar catalogs current usage.

hermeneutics (**her men NEW tiks**) The theory of interpretation of texts, especially biblical or literary texts, as opposed to the practice of interpretation (exegesis).

heuristics (**hyoo RIS tiks**) The study or use of aids to discovery.

humanism/humanitas (**hue MON ee tas**) The study of literature, moral philosophy, and civics. Humanism flourished during the Renaissance: Humanists studied, translated, and idolized classical Latin and Greek authors. Humanism in the schools emphasized grammar, rhetoric, poetry, history, and moral philosophy. The humanism movement began in northern Italy, where Petrarch advocated Cicero’s concept of *humanitas* as an ideal of cultivated learning.

identification Kenneth Burke’s term for the ways in which the members of a group promote social cohesion by identifying with something larger and more comprehensive. Identification is neither completely deliberate nor completely unconscious. Burke offers the concept of rhetorical identification in order to go beyond the traditional view that rhetoric solely encompasses deliberate efforts to persuade.

ideology The body of beliefs, doctrines, or values held by a single individual, group, or culture. To Marx, Engels, and later Marxists, the term refers to any body of beliefs or statements that assert the naturalness and desirability of a particular set of social structures and social practices and, at the same time, conceal the real nature of social relations, thus helping to justify and perpetuate the oppressive social dominance of one class over others.

induction/inductive method The act or process of deriving general principles from particular facts and instances. In rhetorical induction, an argument moves from observations about particular group members to a conclusion about all members of the group.

intertextuality A contemporary literary theory first espoused by scholars such as Roland Barthes and Julia Kristeva, which posits that no text can be read apart from other, preexisting works. Both the text and its reader exist in a web of relationships that create expecta-

tations in readers, and every text continuously refers to other texts.

invention The first of the five **canons** of rhetoric: the art of discovering available, persuasive arguments. Classical rhetoricians thought of invention as the stage where they generated appeals to reason, or *logos*. **Commonplaces**, the **stasis**, and other **heuristics** helped rhetors discover arguments. Contemporary writers use techniques such as brainstorming, outlining, and clustering as aids to invention.

kairos (**KY ross**) Classical Greek term meaning the right time or circumstances; the immediate social situation within which a solution to a problem must be proposed.

langue/parole (**langh/pa ROLE**) *Langue* (language) refers to a system of language as a whole, shaped by the entire community of language users. *Parole* (speech) refers to an individual speech act, or utterance, within the confines of *langue*. Ferdinand de Saussure first introduced the distinction.

licentia docendi (**lie KEN tee ah doh KEN dee**) Licenses to teach granted in the Middle Ages by *studia*, a collection of schools where lectures took place. Eventually the Church regulated *licentia docendi*, and graduates of Church-approved schools could teach anywhere in Christendom.

linguistics The study of the nature, form, and structure of language. It encompasses the study of utterances (*parole*) within the larger system of language (*langue*). Most twentieth-century linguists, such as Ferdinand de Saussure, believe that the study of transcendental form or structure is more valuable than the study of individual speech acts. Opponents of this view include Mikhail Bakhtin and Kenneth Burke.

literacy The ability to read and write. In contemporary usage, the word sometimes refers to a range of more specialized reading and writing skills. Some scholars have claimed that literacy, in the sense of reading and writing ability, leads to cognitive differences and cultural change, but others vehemently disagree. See **orality**.

logographer In classical Greece, a writer of forensic speeches for litigants to deliver.

logos In classical rhetoric, the appeal to reason. The word means “speech” or “statement” in Greek; thus, to

Aristotle arguments from *logos* are those that derive from the issue itself, not from emotion (*pathos*) or the speaker's authority (*ethos*).

memory The fourth of the five **canons** of rhetoric. In classical rhetoric, memory pertained to the memorization of a completed discourse or set of prompts. Classical and medieval rhetoricians enhanced their memory through training and practice. For example, a speaker would memorize the sequence of rooms in a building, assign a vivid image to each section of the speech, and then associate the image with a location in the memorized building. Because people could retrieve ideas from the ordered places within memory and reorganize and expand on them, memory became a means of invention as well.

Methodism A religious movement within the Anglican Church begun by John Wesley in the eighteenth century. It formed a separate sect in 1791 and now constitutes one of the largest Protestant denominations worldwide. Methodists believe in salvation by grace through faith, confirmed by good works; the witness of the Holy Spirit to a person's salvation; and the theoretical possibility of personal triumph over temptation. During the nineteenth century, Methodists assigned major responsibilities to laypersons and enrolled women as leaders and even as preachers.

neo-Ciceronianism A seventeenth-century stylistic approach that acknowledged the five-part domain of rhetoric and thus attempted to preserve rhetoric from **Ramism** and scientific reductionism. Neo-Ciceronians focused on style, especially amplification and ornament. Their opposition to the **Senecan** school echoed the earlier conflict between **Asianist** and **Atticist** rhetoricians.

Neoplatonism A philosophical school developed by Plotinus during Imperial Rome that became the dominant philosophy in the Greco-Roman world from the end of the third century B.C.E. to the sixth century C.E. Neoplatonists posited that all existence emanated from a single source, with which an individual soul could mystically unite, and they read the works of Plato and Aristotle as mythical allegories. Saint Augustine was the most influential Neoplatonic Christian theorist.

New Criticism A tendency in literary criticism beginning after World War I and preeminent in Ameri-

can high schools and colleges in the 1940s and 1950s. New Critics saw literary texts as independent and self-sufficient objects; they de-emphasized the biography of the author, the social conditions when the text was produced, and the text's effects on readers. Instead, they emphasized close reading, or explication: the detailed analysis of interrelations and ambiguities of the work's elements. Opponents of New Criticism charge that it ignores historical and social factors that shape literary experience.

orality A condition of society in which speaking and listening form the only or principal channel through which communication in language occurs. Some anthropologists have argued that in oral cultures, both verbal style and thought processes feature simple juxtaposition of ideas, concrete imagery that appeals to the sense and emotions, ritualized references to authority, and competitive, emotion-laden disputation. *See* **literacy**.

pathos *See* **appeals, rhetorical and persuasive**.

persuasion The process through which language or symbolic actions influence the choices of others. Aristotle called rhetoric "the art of discovering all the available means of persuasion in any given situation." He said we persuade others by three means: *logos*, *ethos*, and *pathos*.

phronesis Aristotle's word for the mental ability to select the best course of action in situations fraught with uncertain knowledge and competing claims of morality and practicality. Individuals use *phronesis* to make life decisions, and rhetors should cultivate and employ it in rhetorical deliberations.

positivism A philosophical system contending that every rationally justifiable assertion can be scientifically verified or logically or mathematically proven. Though Auguste Comte coined the term in 1820, elements of positivism reach back to the Platonic tradition.

pragmatism A philosophical movement during the early twentieth century encompassing the thought of John Dewey, William James, and C. S. Peirce, among others. Although pragmatists believed in empiricism, they thought that problems, whether academic or social, were not resolvable by a single formula or system. They claimed that knowledge was an evolving process; saw traditionally eternal ideas of space, time,

axiomatic truth, causation, and values as relative to varying social, historical, psychological, or logical contexts; held a probabilistic view of physical and social hypotheses and laws in opposition to dogmatic certainty; and espoused a secular, democratic individualism, asserting the right of individuals to live in a free society.

Ramism The intellectual trends associated with the work of Renaissance professor Peter Ramus. He challenged Aristotle's authority, disparaged Cicero and Quintilian, and advocated his own reformulation of the arts and sciences. Ramus assigned **invention to dialectic** instead of rhetoric and dropped **memory** from his scheme altogether, leaving only style—which to Ramus meant the use of tropes and figures—and delivery to rhetoric. He also criticized ornateness and encouraged a plain style, very cerebral and analytic, as near “mathematical” expression as possible.

salon A regular social gathering of intellectuals and other eminent people at the home of a woman prominent in high society. Salons flourished in seventeenth- and eighteenth-century France.

Scholasticism (sko LAS ti siz em) The system of thought that dominated the schools of Western Europe from the eleventh to the fifteenth century. Its objective was the clarification of Christian faith through the use of reason. Scholasticists emphasized dialectical examination of apparent contradictions in Church doctrine. They believed in a version of Aristotelian empiricism that required an individual to seek to know external reality rather than emphasizing the mind's power to reimagine and shape reality.

scientific method An inductive method of discovery and analysis that has characterized natural science since the seventeenth century. It consists of systematic observation, measurement, experiment, and the formation, testing, and modification of hypotheses. Both the scientific method and the intellectual method **Ramus** developed, which assigned the process of invention to dialectic and confined rhetoric to stylistic ornamentation, stemmed from the Renaissance desire for universal, teachable methods.

Second Sophistic Period of Roman rhetoric from Quintilian's time to the sack of Rome in 410. Rhetors of the Second Sophistic shared with the earliest Greek Sophists an interest in etymologies, grammar, and the

power of stylistic variety and abundance. However, the Second Sophists did not claim to use their rhetorical skill for important social or political ends, as their predecessors had. Instead, since rhetoric had been deprived of political importance by Imperial censorship, these rhetors practiced declamations and closet oratory and sometimes performed carefully composed speeches for special ceremonies.

semantics (se MAN tiks) The branch of philosophy that focuses on language itself and examines such issues as meaning, synonymy, ambiguity, and the relationship between the structure of language and the structure of reality. In the twentieth century, **semiotics** is the most significant kind of semantic theory.

semiotics (sem ee AH tiks) The domain of investigation that explores the nature and function of signs within diverse kinds of signifying systems; semiotics includes the study of language, the use of specifically verbal signs. Semioticians believe that signs consist of two inseparable parts, the signifier (in language, the speech-sounds or marks on a page), and the signified (the concept or idea that is the meaning of the sign). No inherent, natural connection exists between a verbal signifier and what it signifies. Instead, both signifier and signified develop within a network of relationships within a particular symbolic system.

Senecan style A seventeenth-century rhetorical style characterized by loose structure, relatively brief sentences, succinct and pithy phrasing, and jerky rhythm. Practitioners of Senecan style saw it as akin to the **Atticist** style of classical Greek rhetoric and opposed to the ornamental **Neo-Ciceronian** style.

sign Within the field of **semiotics**, that which represents or stands as a substitute for something else. Ferdinand de Saussure defines the linguistic sign as combining the signifier, or acoustic image, and the signified, or concept.

signifying The process within **semiotics** by which signs transmit meaning. Meaning is not intrinsic to these signs but attaches to them arbitrarily. In black rhetoric, signifying refers to several forms of persuasion, insult, boasting or lying, verbal and nonverbal, all accomplished through innuendo or indirection. Henry Louis Gates Jr. calls signifying the master **trope** of black rhetoric.

skepticism The contention that human reason is incapable of gaining access to true knowledge, a position championed by sixteenth-century scholar Michel de Montaigne. Some scholars think Montaigne discredited reason in order to discredit rational arguments against religion. Others think he meant to deny the authority of all received wisdom, since such wisdom changes with changing historical circumstances — thus clearing a space for modern science.

Sophistic rhetoric/Sophists (sof IS tic/SOF ists) The Sophists were a school of rhetoric teachers working in and around Athens in the fourth and fifth centuries B.C.E. They practiced rhetoric as an intellectual method, a way of generating knowledge. They believed that social circumstances limit knowledge; whatever people can know must be context-bound. Since no absolute sources of knowledge exist, the power of language becomes almost total. Plato disparaged the Sophists, depicting their rhetoric as a manipulative attempt to persuade people that they had learned the truth, whether or not the truth was in fact conveyed.

sprezzatura (spretz ah TOUR uh) A term in Castiglione's *The Courtier* sometimes translated as "nonchalance." *Sprezzatura* encompasses formidable accomplishment without undignified display. Using easy grace and superiority, the perfect courtier must make whatever he says and does appear to be effortless.

stasis/stasis theory (STASE iss) *Staseis*, in Greek, means "questions" or "issues." Stasis theory, formulated by classical Greek rhetors, is a **heuristic** or theory of invention that gives rhetors a set of questions to help them determine their key points of disagreement and agreement with their audiences in a given case. Ancient rhetoricians subdivided *staseis* into *specific* or *definite* issues, those involving actual persons, places, and events; and *general* or *indefinite* issues, or matters suited to political, ethical, or philosophic discussion. Hermagoras designated four major stasis questions: conjecture ("Is there an act to be considered?"), definition ("How can the act be defined?"), quality ("How serious was the act?"), and procedure ("What should we do?").

stylistics The systematic study of style. Since the 1950s, the term has referred to a method of analyzing literary and rhetorical texts that tries to replace the

"subjectivity" of standard criticism with a more "objective" or "scientific" analysis. For example, some stylisticians perform computer analysis to catalog how an author uses particular grammatical features, **figures**, or **tropes** in many texts. Stylistics contrasts with the more general advice on style that classical rhetoricians offered.

syllogism (SILL o jiz im) A form of **deductive reasoning** consisting of a major premise, a minor premise, and a conclusion that follows from the two.

tautology (taw TOL oh gee) In logic, a statement composed of simpler statements in a fashion that makes the full statement logically true whether the simpler statements are factually true or not; for example, "If she has a baby, it will be either a boy or a girl." A tautological argument is thus empty or circular because it assumes to be true what it has to prove as true: for example, "Abortionists are murderers because abortion is murder."

topoi/loci (TOE poy/LOW key) From the Greek *topos*, place. Stock formulas such as comparison and contrast, cause and effect, and puns, which rhetors can use to generate rational appeals and arguments. These basic categories of relationships among ideas belong to the **invention** process since they help the rhetor discover things to say about a subject. *See commonplaces.*

trope "Turn" in Greek. According to Quintilian, a trope is an artful substitution of one term for another for rhetorical effect. This substitution affects the standard meaning of a word. Unlike a **figure**, a trope usually involves a single word and changes the word's proper meaning. In contemporary rhetorical and literary criticism, *trope* refers to the use of words in other than their literal sense, as in metaphor, irony, or synecdoche.

utterance An individual speech act or natural unit of linguistic communication, spoken or written. Utterances are also called *parole*. According to Mikhail Bakhtin, utterances are the basis of linguistics. Although Bakhtin contends that an individual utterance is an isolated event, Ferdinand de Saussure argues in his discussion of **semiotics** that an utterance is actually a social event.

About the Editors

Patricia Bizzell (Ph.D., Rutgers University) is professor of English at the College of the Holy Cross, where she has served as director of Writing Programs and director of the College Honors Program. She started the Writing across the Curriculum Program there as well as the Writer's Workshop, a student-staffed peer tutoring facility. She has taught courses in composition theory and pedagogy, women's studies, and composition. A frequent speaker at professional meetings, Bizzell has published a collection of essays, *Academic Discourse and Critical Consciousness*, and many articles on basic writing, writing across the curriculum, and rhetorical theory in such journals as *College English*, *College Composition and Communication*, *PRE/TEXT*, and *Rhetoric Review*.

Bruce Herzberg (Ph.D., Rutgers University) is professor and chair of English at Bentley College, where he has served as director of the Expository Writing Program and ESL Program, the Writing across the Curriculum Program, and the Business Communication Program, and he has taught speech communication, rhetorical theory, composition, and literature. A regular speaker at the Conference on College Composition and Communication and other conferences, Herzberg has published articles on rhetoric and composition in *MLN*, *Rhetoric Review*, *Journal of the Council of Writing Program Administrators*, *JAC*, and several anthologies including *Contending with Words* and *The Politics of Writing Instruction*.

Together Bizzell and Herzberg have edited *Negotiating Difference: Cultural Case Studies for Composition* (Bedford Books, 1996) and, with Nedra Reynolds, *The Bedford Bibliography for Teachers of Writing*, Fifth Edition (Bedford/St. Martin's, 2000).

Praise for The Rhetorical Tradition

“As the only comprehensive collection of rhetorical theory on the market and an excellent work in its own right, *The Rhetorical Tradition* provides a great resource for teachers and students of rhetoric.”

— Martin Jacobi, *Clemson University*

“*The Rhetorical Tradition* is a superior work.”

— Richard Leo Enos, *Texas Christian University*

“The strengths of *The Rhetorical Tradition* include its comprehensive coverage and its excellent introductions to periods and individuals; its richness and diversity of texts allow instructors to select the most pertinent for their classes.”

— John Hagaman, *Western Kentucky University*

“*The Rhetorical Tradition* is an incredibly useful volume, not only for compositionists and all other rhetoricians, but for the potentially larger audience of humanists and social scientists becoming more and more interested in rhetoric today.”

— Steven Mailloux, *University of California, Irvine*
