PATRICIA BIZZELL AND BRUCE HERZBERG

THE RHETORICAL TRADITION

READINGS FROM CLASSICAL TIMES
TO THE PRESENT

SECOND EDITION

Winner of the 1992 CCCC Outstanding Book Award, *The Rhetorical Tradition* examines rhetorical theory from classical antiquity to the present day through a comprehensive anthology of primary texts. Extensive introductions and headnotes make it an ideal text for the beginning student of the history of rhetoric as well as an essential reference for professional scholars.

The second edition includes 84 selections — 33 new to this edition — from 57 major figures, including 13 women. Included here are foundational texts such as Plato's *Gorgias* and *Phaedrus*; important but otherwise unavailable works such as Book IV of the *Rhetorica ad Herennium* and selections from Erasmus's *Ecclesiastes*; and recent writings by such contemporary figures as Gloria Anzaldúa and Stanley Fish.

Women rhetoricians are now represented in each part, and two separate parts cover eighteenth- and nineteenth-century rhetoric. A new glossary of rhetorical terms has been included and the bibliographies and introductions have been carefully updated.

Accompanying the selections are substantial introductions to each period and to each selection; these provide a general grounding in the history of rhetorical theory and set each selection in a social and intellectual context.

Preface

Since 1989, when we sent the first edition of *The Rhetorical Tradition* to the printer, there has been an explosion of new work on the history of rhetoric by scholars in classics, composition studies, English literature, history, philosophy, rhetoric, and speech communication. Courses in the history of rhetoric have proliferated in the graduate programs of these disciplines as well. There has certainly been, as we anticipated in the preface to the first edition, a renewed interest in historical antecedents in all fields that deal with the ways humans make meaning in language.

The first edition was of necessity organized around the long-standing canon of Western rhetoric and its major authors: Plato, Aristotle, Cicero, Quintilian, Augustine, Erasmus, Ramus, Bacon, Campbell, and Blair, to cite some important names from before the twentieth century. We still believe, as stated in the preface to the first edition, that these canonical works are theoretically and pedagogically rich, and also provide important historical contexts for contemporary work. Even so, in the first edition we chose to include in addition some works traditionally regarded as “minor,” such as those of Gorgias, Thomas Wilson, and Vico, which we felt also made important contributions. These canonical but traditionally marginalized thinkers on rhetoric will still be found in the second edition, in some cases with enlarged selections, along with additional “minor” figures from the traditional canon such as Geoffrey of Vinsauf and Herbert Spencer.

Given the state of scholarship at the time we assembled the first edition, it would have been very difficult to represent any alternative Western traditions, such as women’s rhetorics or rhetorics of color, even though a very few proponents of these strands were included, among them Christine de Pizan, Sarah Grimké, and Henry Louis Gates Jr. Thanks to new scholarship, however, we have been able to include more work by men and women of color and white women in this second edition, such as Mary Astell, Maria W. Stewart, Frederick Douglass, Virginia Woolf, and Gloria Anzaldúa. To be sure, much more needs to be done to recover and analyze the diverse components of Western rhetoric. The old canonical “major” names listed above still loom large. But we believe that a significantly greater number of European and European American women and African American and Hispanic women and men are represented here. We hope that these new additions will, at the very least, point to directions for future scholarship.

Because of the increased diversity in our selections, we considered changing the title of the anthology to *Rhetorical Traditions*. We realized, of course, that the singular title could appear to convey a monolithic view of human language-using potential. But upon reflection, we decided that all the writers we included really were working within a common Western tradition, even if reacting against it. Also, we did not want the title to suggest greater diversity than we had actually achieved,

especially given our decision to remain within the Western tradition in our selections. We therefore decided to retain the recognizable singular title.

The second edition of *The Rhetorical Tradition* incorporates other changes as well, many of them suggested by the first edition's helpful readers and reviewers and by new scholarly developments. We have significantly enlarged Part One, the section on classical rhetoric, with new material on Sophistic rhetoric (the *Dissoi Logoi*), new selections from Aristotle, additional selections from Cicero, and—representing stylistic rhetoric—*On the Sublime*. Although we still believe that rhetoric focusing on the political and epistemological powers of discourse, as we put it in the preface to the first edition, is the most generative strand for contemporary work on language in use, we have added material on stylistic rhetoric in several places—for example, the *Poetria Nova* (in Part Two), Hume's essay on taste (Part Four), and Spencer on style (Part Five). New material from Erasmus also allows us to pay more attention to the rhetoric of sermons, a strand continued in Part Five with excerpts from Phoebe Palmer and Frances Willard. Also, we have moved some selections from the first edition to new sections of the anthology to better reflect current periodization (Christine de Pizan to the medieval section, for example).

Unchanged is *The Rhetorical Tradition's* focus on rhetorical theory. Once again, we have concentrated on work that deals with language in use. We have excluded transcripts of rhetorical performances and other texts that exhibit rhetorical organizing principles, tropes, and so on. The availability of work in English translation has been another constraint upon our choices. Also, given rhetoric's great diversity and the difficulty of representing it fully in an already lengthy collection, we have omitted very recent work on rhetoric from the fields of composition studies, speech communication, and English. For an overview of this work, readers may wish to consult *The Bedford Bibliography for Teachers of Writing*.

In the second edition of *The Rhetorical Tradition*, we have continued to favor complete works, or lengthy excerpts from works that could not be printed in their entirety. The first edition included fifty-six selections from forty-four authors; covering virtually the same historical span, from the fifth century B.C.E. to the twentieth century C.E., the second edition includes eighty-four selections from fifty-seven authors. Our audience still comprises students new to the rhetorical tradition. We have continued to provide biographical and critical headnotes for each author, accompanied by updated bibliographies. Selections are still grouped chronologically in major periods, each with its own historical and critical introduction and bibliography, now updated. We decided, however, that the advent of men and women of color and white women on the speaker's platform in dramatically greater numbers in the nineteenth century gave this period a distinctive character. Abandoning the view of some traditional histories of rhetoric that the nineteenth century did little more than elaborate theoretical developments from the eighteenth, we separated the Enlightenment—a single section in the first edition—into two, making a total of six sections for this edition: classical, medieval, Renaissance, eighteenth century, nineteenth century, and modern and postmodern.

The bibliographies, which are still intended to be introductory, cite a few important studies, take note of current issues, and point the way for further research. For the benefit of beginning students, the bibliographies continue to cite only works published in English. To make *The Rhetorical Tradition* a more useful teaching text, we have included a glossary, new to this edition, prepared by Julia Anne Garbus.

A note on conventions: Footnotes in the excerpts have been numbered sequentially (that is, they do not correspond to footnote numbers that may appear in the source edition). Also, the footnotes are marked to indicate that they are by the selection author [Au.], by the translator [Tr.], or by us [Ed.]. We have added notes, where needed, to the selections to provide glosses on obscure terms and to give internal references. In a few instances, we have retained an earlier editor's footnotes for the particular edition reprinted here; such footnotes are marked with the editor's initials in brackets. As for translators' footnotes, we have retained only the explanatory notes and internal references to material included in our selections. To indicate dates, we have adopted the notations B.C.E. (before the common era) and C.E. (of the common era) in place of the traditional and ethnocentric B.C. (before Christ) and A.D. (*anno Domini*, in the year of the Lord).

ACKNOWLEDGMENTS

Even more than the first edition, the second edition of *The Rhetorical Tradition* represents a collaborative effort by many hands. We must first mention the many users of the first edition who have generously corresponded with us about the book, requesting changes, pointing out problems, and insisting on what must stay. Our heartfelt thanks for all of these suggestions.

In addition, we have had the benefit of careful reviews of the first edition. We wish to thank the following scholars who answered a detailed questionnaire to help us see what might need to be added or deleted: Lillian Bridwell-Bowles, University of Minnesota; Jody D. Brown, Ferrum College; Stuart C. Brown, New Mexico State University; Adrienne Christiansen, Macalester College; J. Rocky Colavito, Northwestern State University; Catherine Ann Collins, Willamette University; Robert Eddy, Fayetteville State University; D. C. Elder, Washington State University; Keith V. Erickson, University of Southern Mississippi; David Faldet, Luther College; Rosalind J. Gabin, State University of New York, Binghamton; Fredric G. Gale, University of Arkansas; Victoria J. Gallagher, North Carolina State University; John Hagaman, Western Kentucky University; Carol Harding, Western Oregon State; Frank Hubbard, Marquette University; Carol Jablonski, University of South Florida; Stephen Julian, Nyack College; Kevin Koch, Loras College; Shirley Wilson Logan, University of Maryland; Michael Mendelson, Iowa State University; Roxanne D. Mountford, Rensselaer Polytechnic Institute; Christine Oravec, University of Utah; Jo Alyson Parker, Saint Joseph's University; William M. Purcell, Seattle Pacific University; John D. Schaeffer, Northern Illinois University; Edward Schiappa, University of Minnesota; Mary M. Schmelzer, Saint Joseph's University; Thomas J. Schorle, Robert Morris College; Henrietta Nickels Shirk, University of North Texas; Paul Sladky, Augusta College; Sheila Teahan, Michigan State University; David Wallace, Iowa State University; Barbara Warnick, University of Washington; Thomas Willard, University of Arizona; Linda T. Woodson, The University of Texas at San Antonio; and Heping Zhao, California State University, Fullerton. Especially helpful were the detailed reviews of the first edition, with many suggestions for additions to both primary and secondary materials, provided by Karlyn Kohrs Campbell, Richard Leo Enos, S. Michael Halloran, Martin Jacobi, Shirley Wilson Logan, Raymie E. McKerrow, James J. Murphy, Edward Schiappa, and Richard Young.

We have also benefited from detailed criticism of draft materials for the second edition, from Vincent Bevilaqua, Martin Camargo, Richard Leo Enos, Cheryl Glenn, Stephen Mailloux, James J. Murphy, Thomas O. Sloane, Carol Mattingly, and Marjorie Curry Woods.

We must also thank James L. Butrica of the Department of Classics, Memorial University of Newfoundland, Canada, for producing on very short notice the translation of Erasmus's *Ecclesiastes* that appears in this volume. He came to our rescue when we were notified at the last minute that we could not use the source we had found for the work.

We owe a very special debt of gratitude to James J. Murphy. He has been this project's most enthusiastic supporter ever since it was first considered over fifteen years ago. He has helped us solve problems in every area of the book, connected us with other scholars who could help us, and generally kept up our conviction that the often daunting, indeed overwhelming task of putting this book together was worth doing. Few scholars have contributed more to the study of premodern rhetoric than Professor Murphy, and we offer him our deepest thanks.

Once again, the interlibrary loan staff and research librarians at the College of the Holy Cross provided invaluable assistance in completing the book. We would like especially to thank Sister Irene Mizula and Gail Montysko of Interlibrary Loan, and Dawn Thistle and Jayne Fox, consecutive directors of Reader Services. The College of the Holy Cross also provided generous leave time to support this project.

Finally, we wish to thank the copyeditor, Susan Zorn, and the following people at Bedford/St. Martin's: Charles Christensen, Joan Feinberg, managing editor Elizabeth Schaaf, developmental editor John Sullivan, editorial assistant Katherine Gilbert, permissions editor Eva Pettersson, and production editor Karen Baart.

THE RHETORICAL TRADITION

Readings from Classical Times to the Present

GENERAL INTRODUCTION

In parturition begins the centrality of the nervous system. The different nervous systems, through language and the ways of production, erect various communities of interests and insights, social communities varying in nature and scope. And out of the division and the community arises the “universal” rhetorical situation.

—KENNETH BURKE

Rhetoric has a number of overlapping meanings: the practice of oratory; the study of the strategies of effective oratory; the use of language, written or spoken, to inform or persuade; the study of the persuasive effects of language; the study of the relation between language and knowledge; the classification and use of tropes and figures; and, of course, the use of empty promises and half-truths as a form of propaganda. Nor does this list exhaust the definitions that might be given. Rhetoric is a complex discipline with a long history: It is less helpful to try to define it once and for all than to look at the many definitions it has accumulated over the years and to attempt to understand how each arose and how each still inhabits and shapes the field.

This general introduction offers an overview of the historical development of rhetoric divided into conventional chronological periods: the Classical (from the birth of rhetoric in ancient Greece to about 400 C.E.), the Medieval (to about 1400), the Renaissance (to about 1700), the Enlightenment (from the late seventeenth through the eighteenth century), the Nineteenth Century, and the Modern and Post-modern (the twentieth century). The introductions to each of the six parts of *The Rhetorical Tradition* provide a more detailed historical and theoretical picture of the development of rhetoric.

THE ORIGINS OF RHETORIC

Rhetoric in its various incarnations has been a powerful force in public affairs and in education for most of its existence since the fifth century B.C.E., when it developed in Greek probate courts and flourished under Greek democracy. Rhetoric was, first and

foremost, the art of persuasive speaking. In civil disputes, persuasion established claims where no clear truth was available. Persuasive speech, too, could depose or empower tyrants, determine public policy, and administer laws. Public speaking was inseparable from the business of government and civil affairs, and early on some enterprising orators turned to teaching the art of persuasive speech as well as practicing it. Speeches required arguments that would convince and stories that would move. Speeches could be divided into parts, the parts had strategies, the strategies varied with the occasion and the audience, and the finished speech had to be memorized and finally delivered. Rhetoric thus came to designate both the practice of persuasive oratory and the description of ways to construct a successful speech.

Rhetoric selects, from the vast realm of human discourse, occasions for speaking and writing that can be regarded as persuasive in intent. Rhetoric categorizes the types of discourse it has selected, analyzes each of those types in terms of structure and purpose, and identifies the means for successfully constructing each type. In pursuing these goals, rhetoric comes to endorse codes for linguistic correctness and to make taxonomies of artful ways to use language. It suggests resources for evidence and argument and gives rules for accurate reasoning. And it divides the mind into faculties to which persuasive appeals, both logical and psychological, can be addressed.

The study of rhetoric dominated formal education in most of Europe and the United States until well into the nineteenth century. To study rhetoric was, for much of its history, to study Greek and Latin grammar, classical literature and history, and logic, as well as to practice the composition and delivery of speeches. But by and large, rhetoric has not been a form of inquiry seeking to extend its scope by looking into the various uses of discourse that might be considered persuasive. Rather, it has been chiefly prescriptive, intended to teach a practical art and to provide guidelines for discourse in several well-defined social, political, and artistic arenas. Nonetheless, a vital art inevitably produces a body of theory—some of it implicit in its practical systems, some of it abstract and speculative—that investigates philosophical underpinnings in addition to techniques and effects. So it is with rhetorical theory, which seeks to penetrate the complexities of communication and persuasion.

At its very inception, the study of rhetoric generated not only an elaborate system for investigating language practices but also a set of far-reaching, theoretical questions about the relationship of language to knowledge. The system of classical rhetoric was too powerful to be limited to the few forms of public speaking to which it was originally applied, and the questions about language and knowledge raised by classical rhetoricians were never to be put to rest. After the classical period, the bounds of rhetoric expanded, until today they encompass virtually all forms of discourse and symbolic communication. Yet the classical system remained the basis of rhetoric throughout its history and in large measure remains so today.

CLASSICAL RHETORIC

Late in the fourth century B.C.E., Aristotle reduced the concerns of rhetoric to a system that thereafter served as its touchstone. To speak of classical rhetoric is thus to speak of Aristotle's system and its elaboration by Cicero and Quintilian.

Types of Rhetorical Discourse

The classical system of rhetoric defines three principal kinds of public speech: the legal or forensic speech, which takes place in the courtroom and concerns judgment about a past action; the political or deliberative speech in the legislative assembly, concerned with moving people to future action; and the ceremonial or epideictic speech in a public forum, intended to strengthen shared beliefs about the present state of affairs. In the classical system, these three situations constitute the entire domain of rhetoric. Later rhetoricians expanded this list to include sermons, letters, and eventually all forms of discourse, even conversation, that could be seen as persuasive in intent.

Psychology and Audience Analysis

The rhetorical occasion always includes an audience, and the speaker must consider the motives that are likely to influence audiences of the three types of speech. Classical rhetoric accordingly examines the psychology and moral assumptions of the different kinds of people who may comprise an audience. Aristotle assumes that people always seek to serve their own self-interest and that different people perceive their self-interest differently; he thus compares young men and old, the rich and the poor, and rulers of democracies and of oligarchies. He treats most psychological attributes as human nature, common to all people in all circumstances (all young men have hot tempers and strong appetites, for example). Even for those attributes that are conditioned by social class, political interest, and history, he seeks the most general explanation. Audience analysis helps chiefly to determine the kinds of emotional appeals that might be used, for logical appeals (as we shall see) are not supposed to be subject to such vagaries.

The Preparation of a Speech

Classical rhetoric divides the process of preparing a persuasive speech into five stages:

1. Invention, the search for persuasive ways to present information and formulate arguments
2. Arrangement, the organization of the parts of a speech to ensure that all the means of persuasion are present and properly disposed
3. Style, the use of correct, appropriate, and striking language throughout the speech
4. Memory, the use of mnemonics and practice of the speech
5. Delivery, the use of effective gestures and vocal modulation to present the speech

This five-part composing process remains a cornerstone of the study of rhetoric.

The speaker is supposed to produce a discourse by proceeding stepwise through the stages. Although the speaker's specific choices in each stage of the process

depend on the occasion for his (or, rarely, her) speech, the five-part process is taken to be appropriate for composing any kind of speech. All of the parts are necessary to ensure production of a full range of appeals. The classical system assumes that there are three forms of persuasive appeal: to reason (*logos*), to emotion (*pathos*), and to the speaker's authority (*ethos*). We shall see how these forms are included in a speech as we examine each stage of the process.

Invention. In the classical system, the first stage of composing, invention, is the most important, because here rational arguments—appeals to *logos*—are devised. Logical appeals are regarded as superior to the other two. Aristotle assumes that rationality is the most uniform and universal of the human mental abilities, or faculties, and so logical arguments will presumably have the widest currency. At the same time, he argues that emotional appeals are needed in the effective speech, though he and his successors lament the fact that rational appeals alone are not enough. Classical rhetoric emphasizes *logos* as if in recognition that human beings respond most strongly to rational appeals, though this idea may be more a hope than a fact, an attempt to increase the power of rational appeals by valorizing them.

Classical rhetoric offers several methods of generating rational appeals. One is to consider the common topics, or *topoi* (commonplaces or *loci* in Latin), to see whether arguments can be developed in terms of any of them. The topics are stock formulas in which arguments may be cast. They include comparison and contrast, cause and effect, and argument a fortiori; they also include such seemingly nonrational appeals as puns on proper names. In addition to the universally applicable topics are special topics for particular kinds of speech or subject matter—the rules of evidence in criminal law, for example. When employing any of these heuristic devices, the rhetorician “invents” arguments in the sense of finding ways to combine and present evidence persuasively.

Rational appeals in classical invention are not designed to be equivalent to scientific demonstration. Aristotle draws important distinctions among demonstration, dialectic, and rhetoric and the type of knowledge found in each. Demonstration reveals unalterable truths about the physical world. Dialectic uses rigorous syllogistic logic to approach probable truths in questions about human affairs and philosophy that do not lend themselves to absolute certainty. Rhetoric also seeks probable truth in the realm of human affairs, relying on knowledge produced by demonstration and dialectic, along with traditional or received wisdom and the various means of finding persuasive connections, such as those suggested by the common topics.

Another form of rational appeal is the enthymeme, which, like the syllogism used in dialectic, deduces a conclusion from a general premise. But whereas the general premise of a syllogism is supposed to be true and its deduction therefore necessary, the general premise of an enthymeme is merely probable, leading to a tentative conclusion. Often this premise is not stated explicitly but is assumed to be part of the audience's common knowledge.

The rhetorician constructing an argument must draw on sources of knowledge that lie outside the domain of rhetoric. To ensure access to these sources, the rhetorician must be learned in philosophy, history, law, literature, and other fields of

study, a point heavily stressed by Cicero and Quintilian. Given the scope of rhetoric, however, the distinctions between *inside* and *outside* can blur, making unclear the nature of the rhetorician's activities with respect to knowledge. This problem is a continuing theme of rhetorical theory. In the classical view, rhetoric manages knowledge, conveying but not creating it; the rhetorician's activities are subordinate to the truth-seeking of the scientist and the philosopher. But people have not always agreed that philosophy or science has access to true knowledge. If, as some philosophers maintain, all knowledge is uncertain and constructed by argument, then rhetoric has all the more value because it studies the ways in which argument and persuasion create conviction, and because it creates the provisional agreements and shared values on which human community depends.

In Aristotle's day, the position that all knowledge is contingent was defended most ardently by the Sophists, who saw themselves as both philosophers and rhetoricians. In modern parlance, the Sophists treat rhetoric as epistemic, as making knowledge. Moreover, they tend to see all language use as rhetorical—that is, persuasive in intent. Through language, people collectively construct a value-laden worldview (the only kind of worldview available) and reach agreement on how to act together for their mutual benefit in light of that worldview. Different communities may see things differently because of their cultural traditions and historical circumstances. For the Sophists, there are no privileged nonrhetorical discourses and no privileged nonrhetorical knowledge.

The Sophists' position was attacked and discredited by Aristotle's teacher Plato. In traditional histories of rhetoric, the Sophists are often slighted, but their epistemic vision of rhetoric haunts the subject to the present day. Even Plato, who condemned the Sophists, came to see rhetoric as an essential component in the search for true knowledge. And in other eras the Sophistic view of rhetoric has reasserted itself. Today, philosophical skepticism about true or foundational knowledge has sparked renewed interest in Sophism.

Arrangement. In the stage of arrangement, the arguments devised through invention are placed in the most effective order. Aristotle says that all speeches have four parts: the introduction, the statement of the issue, the argument, and the conclusion. Logical appeals should go into the statement and argument, while appeals to pathos and ethos should appear in the introduction and conclusion. Cicero spells out a five-part structure with a more precise distribution of appeals: The introduction should contain ethical and pathetic appeals; the narration of the facts of the case, while ostensibly logical, should also be an occasion for pathetic appeals; the statement of position should hold the logical arguments in favor of the position; the refutation should make logical arguments against the opponent's position; and the conclusion should embody further pathetic and ethical appeals.

Emotional appeals are something of an embarrassment in the classical system. They are generated by a kind of invention process that examines the nature of emotions, the kinds of stimuli that may excite them, and the motives and inclinations of the different types of people to whom the emotional appeals might be directed. In the classical system, this process of formulating nonlogical appeals is distinguished

from logical invention, and it shifts by default from the invention stage to the arrangement stage. In the arrangement stage, the speaker considers the kind of discourse to be presented, the nature of the subject, and the characteristics of the audience, all of which guide decisions about the relative weight and placement of logical and emotional appeals. Arrangement itself is thus a form of nonlogical appeal, as later rhetoricians acknowledged. From the seventeenth century on, philosophers paid increasing attention to psychology, which put both arrangement and emotional appeals on a new footing. Psychological theories offered a “natural” sequence of mental operations leading from reasoning to belief to action. Psychology also confirmed in new ways the classical observation that reason could rarely persuade by itself.

Style. Style is separate from invention and arrangement in the classical five-part scheme. It dresses up previously formulated ideas in attractive verbal garb. Aristotle tends to treat style as decoration, a sop to the base human desire for sensual enticements. Nevertheless, he begins what would become the habitual, not to say obsessive, practice among rhetoricians of cataloging and illustrating large numbers of verbal figures. Several times in its long history, the study of rhetoric has contracted to little more than the study of style. Rhetoric in the schools has often consisted of memorizing long lists of figures of speech. In the Renaissance, for example, stylistic rhetoric texts filled with such lists abounded. Highly ornamented styles have often been valued for their beauty and ingenuity, and stylistic rhetoric came in time to be as closely allied with poetry as it was with oratory.

Stylistic rhetoric does not typically address the question of generating ideas, which is the province of invention. But for some rhetoricians, the search for effective figures is akin to invention. The rhetorical figures, like the topics of invention, can be seen as parallel to human thought processes. Hence, formulating ideas in figures and ornamenting arguments will make them structurally more understandable, memorable, and convincing. At the same time, the process of stylistic formulation can be seen as a heuristic method, in which ideas are discovered by the search for figurative expression. Metaphor in particular has been regarded as generative. The Sophists made this connection between style and generative thought and have been chastised for it. Renaissance stylistics would be denounced in turn. More recently, though, deconstructive critics have been working to rehabilitate this insight into the inventive power of style.

The sensual power of word magic to create belief was perhaps most potently felt while rhetoric was still employed largely in oral genres, and response to this power may have dwindled as rhetoric increasingly moved to written forms. Certainly the last two stages of the five-part composing process, memory and delivery, dwindled in importance with the turn to print, though they did not disappear entirely.

Memory. Classical rhetoric adopted the notion that memory could be improved by treating it as a system of visualized locations, somewhat similar to the way the commonplaces are imagined to reside in actual mental locations that one tours dur-

ing the invention process. The speaker memorizes the sequence of rooms in a building, assigns a vivid image to each section of the speech, and then associates the image with a location in the memorized building. This approach means memorizing two things rather than one, but there were those who found it workable.

For Plato, memory is a link not just with earthly places but with those heavenly places where ideal forms and true knowledge reside. The right method of cultivating memory, then, might give one access to these remote, transcendent realms of knowledge. Neoplatonists until well into the Renaissance sought to devise memory systems sufficiently sensitive to the supposedly parallel structures of mind and world to facilitate the acquisition of vast amounts of new knowledge. Hence the presence of memory in the system of rhetoric raises in yet another form the question of how knowledge is represented in the mind.

Delivery. For Aristotle, delivery is an art akin to acting, which he despises. Like memory, delivery has often received rather perfunctory treatment, even by Quintilian and others who take a brighter view than Aristotle and acknowledge its importance. The Roman rhetoricians understand that voice, gestures, and facial expressions materially affect the impact of all that has gone into a speech. Delivery is a system of nonverbal signs that has enormous power, a power recognized by eighteenth-century elocutionists and by twentieth-century electronic media analysts, among others.

The Influence of Classical Rhetoric

Rhetoric has frequently been treated as if it were chiefly a succession of reformulations of the classical system outlined above. There is some justice in this view. The fundamental concerns of rhetoric in all ages appear to be those defined in the classical period: purpose, audience, composition, argumentation, organization, and style. Not only do the classical categories of rhetorical study persist, but so do many of the particulars. In every period we find discussions of the common and special topics, the steps in composing, the figures of speech, and so on. And with respect to larger questions of theory, the status of knowledge as true or contingent continues even today to be unsettled. Yet for all the continuity of the rhetorical tradition, rhetoric has grown and changed. Classical rhetoric may name many of the fundamental concerns, but it does not exhaust the possibilities for understanding the nature of persuasive discourse, as a review of the history of rhetoric will suggest.

Late Classical Rhetoric in Rome

Roman rhetoricians (such as Cicero and Quintilian) draw largely on the Greeks (chiefly Gorgias, Plato, Isocrates, and Aristotle). Much of the work by the Roman writers is prescriptive, providing guidelines for employing the techniques arrayed in the five-part composing process. But Cicero and others also went beyond considerations of structure to speculate about the ways in which persuasion shaped belief and

action. Oratory in Cicero's time (the first century B.C.E.) was a powerful political weapon—one Cicero himself wielded—and rhetoric, however derivative its theory, was an art that helped organize civilized communal life. By the time of Quintilian (the first century C.E.), Rome was an empire and political oratory was suppressed. Rhetoric was still used in the law courts, but it also became a form of entertainment, focused on stylistic extravagance. Yet Quintilian envisions the creation, through rhetorical training that includes broadly humane learning, of a “good man speaking well” who might save the state.

MEDIEVAL RHETORIC

Early Christianity

If Quintilian's good speaker were to be found in early medieval times, perhaps he would be a member of the new faith, Christianity. But many of the Church fathers doubted that pagan rhetoric could serve the needs of the new religion. They saw rhetoric as part of the hated Greco-Roman culture, imbued with the hopeless moral corruption of the pagan world. Moreover, rhetorical invention generates probable knowledge through the commonplaces and the enthymeme, but Christian knowledge is absolute. Similarly, whereas rhetoric (and classical philosophy generally) relies on reason to produce knowledge, Christian knowledge comes from revelation. Augustine, at the turn of the fifth century C.E., makes at last a practical decision in favor of rhetoric by focusing on the issue of persuasion: Christianity cannot afford to eschew a powerful tool for defending and expounding its principles and beliefs.

The Later Middle Ages

Augustine's accommodation of rhetoric and Christianity did not result in much new work on rhetoric in the Middle Ages, however. Not long after Augustine's death, Boethius, one of the last scholars with classical training in Greek and Latin, wrote a brief summary of classical rhetoric. His summary, more widely available than the originals, reduced thousands of pages of theory and practical advice to a few lines on each of the most general points. This kind of work is typical of the treatment of rhetoric—and most other branches of learning—for almost eight hundred years after the times of Augustine and Boethius. Classical texts were rare, and the Church, while preserving them, also wished to preserve their rarity.

Rhetoric in the Middle Ages did produce sets of rules for the art of preaching and for the legal letters through which the far-flung Church and secular governments were administered. Manuals of preaching and of letter writing began to appear in great numbers after the twelfth century. Also persisting through the medieval period was the study of style, generally separated from other rhetorical concerns and associated with the composition of verse. The uses of rhetoric by both men and women in more informal kinds of political interaction—for example, in negotiations at a royal court—were also increasingly recognized, as in the work of Christine de Pizan.

THE RENAISSANCE

Stylistic Rhetoric

The study of figures gave names to every sort of phrase and sentence, a practice that became more widespread in the fifteenth century. The emphasis on style was stimulated by renewed interest in classical learning. It was not possible, in the Renaissance, to speak without “using” rhetoric, and a great occupation of clever rhetors in this period was amplification of the names of figures and copious demonstrations of their use for the delectation of other experts. Many rhetorical terms, too, found their way into the new science of vernacular grammar: colon, comma, apostrophe, and parenthesis. For stylistic rhetoric texts in the Renaissance, the idea that all language use could be treated rhetorically was confined for the most part to style, to the forms of statements and not to the social situations of their utterance.

Private Discourse in Rhetoric

Private discourse, however persuasive, had hitherto remained outside the boundaries of rhetoric. Now the art of letter writing, in the hands of the Renaissance humanists, grew to include private as well as public communications. By the late seventeenth century, private conversation, too, came to be seen as rhetorical, in guides such as Madeleine de Scudéry’s that placed rhetoric at the site of considerable political power in a society increasingly governed by monarchs and their advisers. Scudéry was well known both for her influence at the court of Louis XIV and for the high literary quality of the dialogues in which she explained and exemplified the art of courtly conversation.

Public Discourse by Women

Women’s literacy increased in the Renaissance, and although few women received instruction in rhetoric and almost all women were forbidden to speak in public, more women ventured into public forums. Often their motive was to promote their religious views, but always they found themselves forced to defend their very right to read, write, and speak. In the late seventeenth century, an early leader of the Society of Friends, or Quakers, Margaret Fell, was one of the first women to publish an aggressive defense of these rights. She attacked prevailing interpretations of such pronouncements against women’s speaking as are found in the writings of the Apostle Paul, which were frequently cited to silence women. Ironically, this sort of defense had to be mounted repeatedly over the next two centuries, as women’s arguments, even those well known at the time, like Fell’s, tended to go out of print rapidly and to be lost to later women writers. In this way the defense of the right to speak becomes almost a trope in women’s rhetoric, from the writings of Fell’s contemporary Sor Juana Inés de la Cruz in the late seventeenth century to Sarah Grimké’s defense of women abolitionists in the nineteenth century. While the scope of classical rhetoric was narrowing in the work of late Renaissance male theorists, women were enlarging their claims on rhetoric’s traditional powers.

Ramus

In the sixteenth century, the classical approach to rhetoric was assailed by the French philosopher Peter Ramus, who proposed a popular reform of the allied arts of dialectic and rhetoric. Dialectic sought to perfect the syllogism as a way of examining statements about the world. Logically perfect statements, as long as they were not inconsistent with divine revelation, were presumably true. Dialectic would thus grasp the truth (through the syllogism), while rhetoric would offer it to the public. Ramus, however, formally separates invention (and arrangement as well) from rhetoric and assigns it to dialectic. Ramus believes that contiguous fields of study should not overlap, especially where one field possesses a clearly superior method—as in this case, where dialectic is, he says, superior. Rhetoric in Ramus's scheme is confined to style, memory, and delivery. Ramistic rhetoric, taken up almost entirely with matters of style, flourished well into the seventeenth century, though it was vigorously opposed by Ciceronians, who argued for the continued importance of all five parts of the classical composing process.

Science, Epistemology, and Rhetoric

The Ramistic conception of dialectic was overturned by the inductive orientation of the new approach to science. Francis Bacon, at the turn of the seventeenth century, argues that the syllogism cannot discover anything new. The proper distinction to draw, Bacon says, is between inquiry, as the work of science, and recovery, as the work of rhetorical invention. Even though Bacon supports a rhetoric that includes all its traditional parts, one consequence of the new scientific movement of the seventeenth and early eighteenth centuries was the further estrangement of rhetoric from the source of knowledge. Some of Bacon's followers attack rhetoric as an unreliable tool for handling knowledge. And not only rhetoric but language itself comes under this attack.

But if language is unreliable, how is truth to be known? Can words and sentences, even if purged of ornament, stand for mental representations? Can language be purified for science or philosophy? Bacon addresses the problem this way: Human knowledge must be regarded as only a version of the objective truth, a version warped by prejudices, preconceptions, and imprecise language. Verbal representations of this knowledge introduce distortion because they are signs that may lose their definition, their link to the signified. Bacon hopes that careful observation and skeptical induction will overcome these epistemological limitations and reveal the truth of things, a truth that rhetoric may then disseminate. But by the very fact of elaborating the nature of mental and verbal "distortion," he reopens the possibility that the processes of thought and language are never neutral conveyors of truth.

THE ENLIGHTENMENT

John Locke also struggled with this problem. Human language must make use of generalizations, Locke contends, or else words will proliferate along with the multitude of things in the world until language becomes too cumbersome to use conve-

niently. Generalities don't actually exist: They are ideas, similarities perceived by human observers. But while Locke seems certain that the general idea comes first, he also suggests that it is in some sense created by language. In any case, there is no guarantee that the generality signified by a word will convey the same idea to all users of the language. This is a serious problem, and Locke and his successors blame rhetoric for making it worse. If only stylistic extravagance were curbed, they say, language might be closer to the things it names—if not to things out in the world, then at least to people's clear and distinct ideas about them.

For a number of seventeenth- and eighteenth-century rhetoricians, these complaints were a call for reform. Rhetoric was out of step with the times, it seemed, because invention relied on outdated deductive methods and stylistic rhetoric impeded the already difficult search for truth. Rhetoric ought to moderate its reliance on the topics for invention because those topics depend on received wisdom rather than observed fact. Furthermore, syllogistic reasoning should be limited, as in Bacon's scheme, to avoiding fallacies. And clearness (or "perspicuity") should of course be preferred to an ornamented style. These reforms proved to be widely influential and later allowed for the development of a more epistemologically sophisticated rhetoric.

The Eighteenth Century

Giambattista Vico, an Italian professor of rhetoric of the early eighteenth century, was one of the few in his day to challenge science's claim of epistemological superiority. Responding to the philosophy of René Descartes, Vico objects that the famous philosopher's method relies, no less than rhetoric does, on probability and belief rather than demonstration of absolute truth. Vico even sees rhetoric as superior to the Cartesian method, for rhetoric takes probability seriously, understands the ways in which argument produces belief, and trains young people for responsible civic action, while Cartesianism does not. An honest analysis of the function of language, Vico argues, will reveal the ways in which knowledge is actually formed, in contrast to the Cartesians' claims to have the real truth. Vico's ideas, however, had little influence in his own day. His elaboration of the epistemological doubts hinted at in Bacon conflicted with the positive thrust of the new theory of knowledge, a thrust that was supported by the growth of empirical scientific learning. Vico was seen as a reactionary, an opponent of scientific and philosophical progress.

But Bacon had already suggested an obvious and less contentious connection that rhetoric could make with epistemology—namely, through psychology. Rhetoric could observe the structure of the mind and thereby enhance communication. Rhetoric, after all, addresses the faculties of the mind. Should it not study the ways of making this address most efficient and effective? By taking a scientific attitude toward the study of language, rhetoric could ally itself with a power that would otherwise remain a dangerous enemy. Thus eighteenth-century rhetoricians endorse clarity as an ideal of style, support "natural" arrangement, and favor a rhetorical theory that follows "human nature" in appealing to reason and emotions. Moreover, they regard the classical authors as excellent observers of human nature. According to Locke's theory of uniform psychology, human nature presumably has not changed

since the classical authors' day; therefore, studying these writers' works could not conflict with the new "scientific" standards of psychology.

Bacon identifies along with each mental faculty a genre that especially addresses it: philosophy for Reason, history for Memory, and literature for Imagination. George Campbell, writing late in the eighteenth century, extends Bacon's taxonomy of faculties and genres. Scientific demonstration is but one form of communication, says Campbell, appealing to one faculty, Reason, through a preferred style, perspicuity or clarity. Campbell even steers close to Vico's argument here, pointing out that demonstration relies on belief in previous demonstrations, proofs, and axioms. Between science and rhetoric, then, Campbell sees a range of probabilistic reasoning, not a difference in kind. Rhetoric will give the best account not only of reason but also of the other faculties of the human mind, Campbell argues, for rhetoric studies human sentiments, passions, dispositions, and purposes in order to affect them.

Though Bacon, Campbell, and others repeat the traditional definitions of occasions for oratory—at the bar, in the pulpit, and in the legislature—one effect of the psychological turn was to be the emphasis on "universal" modes of discourse, modes that address not audiences but mental faculties. Thus rhetoric moves toward a more "scientific" theory and takes a proprietary interest in psychology.

Rhetoric and Psychology

Psychology had been a concern for rhetoric since the time of Aristotle. Indeed, Aristotle has more care for psychology than most of his rhetorical descendants do. Most rhetorical systems focus on reasoning, discourse structures, and style but have little to say about appealing to a variety of audiences, beyond the rather obvious advice to adjust style and learning to their capacities. Ironically, perhaps, the new approach to psychology in the eighteenth century does not focus attention on audiences at all. Instead, it treats all minds as essentially the same. This approach conforms to Locke's influential idea of universal psychology; it is democratic (in the sense of being uniform, hence egalitarian), and it is expedient for an expanded theory of communication. The scene of psychological rhetoric, in its textbooks and theories, is a mind, not a public forum.

NINETEENTH-CENTURY RHETORIC

So closely connected were rhetoric and psychology by the nineteenth century that the influential psychologist Alexander Bain taught rhetoric and wrote a textbook on written composition. Bain argues that figures of speech reflect the mental operations of comparison, contrast, and association and that the modes of discourse—description, narration, exposition, argument, and poetry—correspond to mental faculties. For Bain, invention and arrangement are more or less determined by the nature of the modes of discourse: That is, description presents an object whose parts must be set forth in some convenient order, narrative is the presentation of a chronological sequence of actions, and so on. For argument, invention combines knowledge of the

subject and syllogistic reasoning. As for style, clarity is still the standard, except, of course, for imaginative literature.

Challenges to Rhetoric and Psychology

The comfortable notion promoted by Bain's faculty psychology that all audiences were essentially the same was disrupted in the nineteenth century, as public speakers and their audiences became increasingly diverse. White women, who had begun to claim a public voice in the Renaissance, now mounted the speaker's platform in increasing numbers to agitate for a variety of social reforms. In doing so, they still had to defend their right to speak, and often they did so by drawing on religious authority. Women and men of color also addressed new audiences, although, as Maria Stewart learned, African American women sometimes faced stiff resistance to their public speaking even within the black community; and as Frederick Douglass experienced, white audiences often attempted to impose racist stereotypes on African American speakers. But no longer would the typical rhetorical situation in the West be one in which speaker and audience were all the same race and sex, and rhetorical theory, though slowly, began to take this diversity into account.

Though still seeking universals, psychology changed radically at the close of the nineteenth century, largely through the work of Sigmund Freud. The patient's speech is at the heart of psychoanalysis, but Freud and his followers were interested in what was hidden in this speech—in its source in nonverbal experiences and unconscious drives—not in its persuasive effects. Psychoanalysis pointed to mental realms apparently beyond the reach of verbal persuasion, and so rhetoric continued to rely for the structure of its appeals upon the older psychology of Bain. Yet the inadequacy of Bain's system was demonstrated not only by changes in the science of psychology but also by changing rhetorical situations.

In the nineteenth century, too, schools and colleges added a vast number of new subjects, responding at last to the demands of science, technology, and business as well as to the pressure for mass education. Rhetoric had had the lion's share of the curriculum, but competition from other disciplines now forced rhetoric into one- or two-semester courses. Narrowed in compass, rhetoric focused more and more on written composition. Soon written composition became an adjunct of newly formed departments of English literature, and separate departments of speech communication arose to take over instruction in oral delivery and the study of rhetoric's history. Moreover, education beyond the elementary level became increasingly available to white women and to men and women of color, and the traditional curriculum designed for a white male elite would not meet these new students' needs.

But if science, self, and society all escaped the domain of the rhetorical—at least for a time—they have returned in the modern era. In the late nineteenth century, philosopher and one-time rhetoric teacher Friedrich Nietzsche challenged the self-satisfied assumptions on which scientific knowledge appeared, to its defenders, to rest. What we are pleased to call Truth, says Nietzsche (echoing the Sophists), is a social arrangement, not a glimpse of ultimate reality. Scientists and philosophers delude themselves in thinking otherwise. They construct the world they wish to

believe in, using a language that is far from objective and neutral. Language can never be so, says Nietzsche: It is always partial, value-laden, intentional—in short, rhetorical. Nietzsche’s ideas, so dissonant in his own time, have made their mark in ours.

MODERN AND POSTMODERN RHETORIC

The Twentieth Century

A number of twentieth-century rhetoricians have offered rhetorically grounded theories of meaning, value, intention, and knowledge. I. A. Richards, for example, sees in rhetoric an approach to meaning that can correct the “proper meaning fallacy”—the idea (already attacked by Nietzsche) that there is a direct link between words and the things or ideas they represent. Rhetoric shows, for Richards, that meaning is a function of context. Words are meaningful only in discourse (not, that is, in dictionaries), and discourse is meaningful to people who understand language by relating its present use to their previous experience of it. Richards thus defines rhetoric broadly, as the study of communication and understanding.

Kenneth Burke follows a similar path in his work. Discourse of all kinds, he says, seeks to motivate people in some way, so we should seek meaning in intentions and effects. Language is a form of human action: It requires an agent with a purpose, a scene of action, a rhetorical strategy, and an actual speech or text. Seeing discourse this way, “dramatistically” as Burke calls it, is to see all language as motivated, hence as rhetorical. Burke also searches discourse for its ideological function of promoting identification with communities and their beliefs. In his analyses, rhetoric merges with political, psychological, sociological, religious, and aesthetic investigations of human behavior.

For Chaim Perelman, rhetoric is a powerful and necessary alternative to formal logic for the study of practical reasoning. Indeed, he says, formal logic is useless outside its own tiny, abstract realm. Echoing Vico, Perelman objects to the Cartesian implication that probabilistic argument is not rational and therefore not worthy of development because it does not produce absolute truth. But probabilistic arguments are the basis of legal, ethical, and practical decisions that guide our lives. Rhetoric can tell us, says Perelman, about the way that knowledge and belief are formed by arguments based on probable reasoning, experience, and established custom. Moreover, a rhetorical view of knowledge serves as a warning against the claim, often advanced in illiberal causes, that some knowledge is absolute and beyond argument. Even in science, as modern philosophers of science admit (or at least debate), knowledge arises through argument within communities that share assumptions and beliefs.

Rhetorical theory, following these lines of development, has come to focus today on the question of the source and status of knowledge. Philosophers like Mikhail Bakhtin, Michel Foucault, and Jacques Derrida, who do not work in the rhetorical tradition, nonetheless contribute to modern rhetorical theory through their important studies of language and its relation to knowledge. Foucault, for example, follows Nietzsche in attacking the idea that language is the passive conveyor of knowledge.

Discourse, he says, is part of the network of knowledge and power, shaped by disciplines and institutions with their complex interactions and motivations. Authority to speak about certain kinds of knowledge (*ethos*, we might say) comes from institutional certification; reasoning is a function of accepted modes of reference and discipline-specific processes of validation; and the persistence of institutions and their prerogatives depends upon power that is maintained and exercised through discourse itself. In thus regarding language as intentional, powerful, caught up in the creation of knowledge and its uses, Foucault offers a theory that is entirely in line with the modern approach to rhetoric.

Concern about the status of knowledge and its relationship to language is by no means limited to the fields of rhetoric and philosophy. Scientific knowledge now appears to progress not by rational observation and the accumulation of facts but by argument. The unconscious mind produces a kind of persuasive discourse, from the modern point of view, making psychoanalysis a form of rhetorical criticism. Such conclusions are echoed in virtually every field of knowledge: Our learning comes from interpretation, our disciplines grow by argument, our communities cohere through discourse, our ideologies are structures of persuasion. Reality itself is a function of the way we use language.

The epistemic questions raised by the human sciences and even the natural sciences point to the need to study speech acts and speech genres, discursive formations and discourse communities, the dramatic scenes of communication, the linguistic construction of consciousness, and the rhetorical construction of knowledge. And indeed, this is the program put forward by the rhetoricians of our age. For rhetorical theory now, language is always persuasive in intent, always imbued with ethics and ideology. Language, as Richard Weaver puts it, is sermonic. It is not first a mental system but a social one, founded on dialogue, not linguistics. Rhetoric is synonymous with meaning, for meaning is in use and context, not in words themselves. Knowledge and belief are products of persuasion, which seeks to make the arguable seem natural, to turn positions into premises—and it is rhetoric's responsibility to reveal these ideological operations. Such are the new concerns of rhetoric.

New Rhetorics

In examining its own ideological operations, rhetoric is looking critically at its own canon and its own exclusions. As white women and women and men of color have increasingly participated in public forums, they have begun to theorize the differences race and gender make in language use. This work parallels other contemporary theory that investigates the epistemic nature of rhetoric, since women's rhetorics and rhetorics of color typically find that language use is constitutive of gender and racial identities. Virginia Woolf was one of the first to forthrightly address the social and economic barriers to women's use of the full range of the powers of language. She argued that, because of these barriers, what women can really do with language is not yet known—a sister to Shakespeare, she notes, has not yet been published—but she suggests in the form of her own essays what distinctively feminine writing might be like. Later twentieth-century writers, following Woolf's

lead, have explicitly searched for language and rhetoric specific to women. Hélène Cixous describes an *écriture féminine* that draws its sensually expressive fluidity, she argues, from the nature of female sexuality. At the same time, characteristics specific to African American language and rhetoric have begun to be studied. Among theorists of rhetorics of color, Gloria Anzaldúa presents the most searching challenge, perhaps, to classical rhetorical models, in that she envisions, and enacts, communication across linguistic as well as cultural and ideological borders. For her, the full use of all her linguistic resources is crucial both to her sense of self and to her ability to communicate a complex cultural viewpoint to diverse audiences.

The epistemological and ideological orientation of rhetoric is not an entirely new development. Rhetoric has always been concerned with political action and the search for knowledge. The history of rhetoric is the story of a long struggle to understand the relationships between discourse and knowledge, communication and its effects, language and experience. Thus the latest theories of rhetoric recover its earliest and most abiding concerns and build on a long tradition that is now, more than ever, worthy of our close attention.

Part One

CLASSICAL RHETORIC

Introduction

The classical period in rhetoric begins with the Sophistic Movement in Greece during the fifth century B.C.E. and ends with Saint Augustine (d. 430 C.E.). Rhetoric became a major cultural force in this period, its development closely tied to the development of new forms of government and social organization.

Around the tenth century B.C.E. in the mountainous country of Greece, the palace centers of tribal groups were developing into small city-states. Each city-state was isolated from its neighbors and commanded just enough territory to support a small population at a barely comfortable level. Raids against neighboring city-states procured relatively little in the way of spoils or territory, but even this was enough to raise the victors' standard of living substantially. Hence military prowess was highly valued. A few families in each city-state were slightly more well off than the rest by virtue of holding more land, and they could afford heavy weapons and the leisure to train in using them. These families occupied a powerful position in the city-state, and the city-state king had to defer to them as counselors. Oligarchy thus became the typical form of government in the early city-states.

The city-states usually were not able to conquer or ally with one another. As the population gradually grew, then, they had to turn to the sea to look for room to expand. City-states established colonies in Asia Minor to the east and in southern Italy and Sicily to the west, and trade gradually increased. With trade, wealth began to grow, and the oligarchic form of government became unstable. On the one hand, as some families became significantly more well off than the rest, it was now possible for one man to have enough wealth to buy support that would make him the sole ruler, or tyrant. On the other hand, the larger populations of prosperous, if not wealthy, men in the cities sometimes took the political power that numbers gave them and created another new form of government, the democracy.

As these changes were occurring, it became increasingly difficult to rely for public order on a common understanding of "how things are done" and on the oligarchs' personal judgment to settle difficult disputes. Written law codes were introduced, such as Solon's reforms in Athens ca. 593 B.C.E. At this time only a few people were literate. Literacy slowly increased during the sixth century B.C.E.,

however, and with it came written works such as the lyric poetry of Sappho and the philosophy of Pythagoras.

Classicist Eric Havelock has argued that the advent of alphabetic literacy in Greece was a crucial catalyst in the cultural changes occurring throughout the period from the sixth to the fourth century B.C.E. He sees preliterate Greece immersed in what he calls a culture of “orality.” According to Havelock, when speech is the sole medium of verbal communication, both verbal style and thought processes are characterized by parataxis, the simple juxtaposition of ideas; by concrete imagery that appeals to the senses and the emotions; by ritualized references to authority in the form of proverbs, epithets, incantations, and other formulas; and by an agonistic posture in disputation. But Havelock argues that alphabetic literacy worked a decisive change:

The alphabet converted the Greek spoken tongue into an artefact [sic], thereby separating it from the speaker and making it into a “language,” that is, an object available for inspection, reflection, analysis. . . . It could be rearranged, reordered, and rethought to produce forms of statement and types of discourse not previously available because not easily memorizable. . . . The syntax of Greek began to adapt to an increasing opportunity offered to state propositions in place of describing events.¹

Hence, according to Havelock, Greek culture gradually took on the stylistic and cognitive characteristics of literacy, as opposed to orality: hypotaxis, the subordination of one idea to another in logical hierarchies; generalizations that appeal to reason and text-assisted memory for validation; a questioning relationship to authority and custom, encouraging the disinterested criticism of ideas; and, over all, a greater ability to think abstractly.

Havelock has suggested that the spread of literacy in the fifth century B.C.E. led to a more instrumental approach to all experience. Consideration of language as an artifact that could be examined and molded, he argues, brought about an upsurge in philosophical activity, that of the Pre-Socratics. Although scholars dispute the causal relationships drawn in Havelock’s argument, there is no doubt that the changes he describes did occur, especially in Athens.

Athens was unusual among city-states in that when it conquered its neighbors, it adopted them into the Athenian way of life rather than simply despoiling them. This practice was made possible partly by the Athenians’ sophisticated understanding of the stabilizing power of checks and balances in statecraft. After 510 B.C.E, the government of Athens was a democracy in which members of the old oligarchic families were encouraged to play leading roles as a check against the rise of tyrants. Be it noted that in Athenian democracy, political participation was restricted to free, native-born men. Women, slaves, and “metics” (foreigners) held lower status.

In 478 Athens organized the Delian League of Greek city-states for protection from Persia. Athens controlled the military and financial resources of the League and was by far its strongest member. In effect, the League became Athens’s small Greek empire, and Athens grew rich. In 449 Pericles, the new leader of the demo-

¹Eric Havelock, *The Literate Revolution in Greece and Its Cultural Consequences* (Princeton: Princeton University Press, 1982), pp. 7–8.

cratic party in Athens, made peace with Persia, and there followed a great flowering of culture, represented by Gorgias, Socrates, and other philosophers, the sculptor Phidias, the poet Pindar, the playwrights Sophocles, Euripides, and Aristophanes, the historians Herodotus and Thucydides, and the scientists Hippocrates and Democritus. Work on the Parthenon began in 447 B.C.E.

Athenian prosperity and expanding political hegemony aroused hostility among neighboring city-states, and the Peloponnesian War broke out among the Greeks in 431 B.C.E., continuing intermittently until 404. This war destroyed the Delian League and decimated Athens. The first half of the fourth century B.C.E. saw the city-states struggling among themselves, with none the clear victor. Athens managed to retain its democracy and its cultural leadership, however, and the period produced the philosophers Isocrates, Plato, and Aristotle. Greek unity was achieved by force when Philip II, king of the Macedonians, defeated Athens and Thebes at Chaeronea in 338 and subjugated all of Greece. His son Alexander, who succeeded him in 336, continued his empire-building activities and began a massive political reorganization of the Mediterranean and Near East, which would ultimately provide the basis for the power of Rome.

Part of the intellectual flowering of Greece from the sixth to the fourth century B.C.E. was an interest in the study of rhetoric. As classical rhetorical scholar Richard Leo Enos has shown, Greek culture was highly rhetorical even before this time. Lengthy speeches figured largely in the oral poetry of Homer and other rhapsodes. Written texts by historians such as Herodotus attempted to sway readers to a particular viewpoint on history. But the first study of how language achieves such rhetorical effects is often credited to the Pre-Socratic philosopher Empedocles (d. ca. 444 B.C.E.). He was interested in the power of language, and *rhetoric* in its earliest manifestation might be understood to designate the self-conscious study of the power of language, as opposed to the self-forgetful submission to its power induced by poetry. Empedocles experimented with the ability of such study to appropriate poetic language—he wrote his philosophy in hexameters, for example. Also, tenets of Empedocles' philosophy became important for other early philosophers interested in rhetoric, specifically his view that human knowledge must come from sense perception only, and is therefore necessarily limited and flawed, but is capable of being refined toward probable truth through the exploration of opposing positions.

The first “rhetoricians” in the Greek tradition, however, were interested in using this kind of language study for practical ends. Several classical historical accounts name Corax and Tisias as the first practitioners of a schematized rhetoric. They worked in the Greek colony of Syracuse in Sicily after 467 B.C.E., when Syracuse overthrew its tyrant and became a democracy. One account suggests that Corax excelled as a deliberative speaker in the new democratic assemblies and taught his fellow citizens, among them Tisias, the effective tripartite speech structure that he had devised. Another account identifies Corax as an outstanding forensic orator and Tisias as a logographer—or writer of forensic speeches for litigants to deliver—who compiled Corax's practices in handbook form. Such a handbook would be needed because the Greek legal system had no professional lawyers. People brought charges and defended themselves in person, and in a litigious society, people

might easily become embroiled in lawsuits. Tisias may also have been a pupil of Empedocles, as was Gorgias, the most famous of the Sicilian orators (ca. 480–ca. 380 B.C.E.). Gorgias excelled in ceremonial oratory, as shown by his “Encomium of Helen” (ca. 415; p. 44). When he and Tisias were sent to Athens on an embassy in 427, the performances of Gorgias caused a sensation.

The skillful use of language became increasingly important in a society that was rapidly changing. The spread of democracy gave oral deliberations a new importance, and the upper classes eagerly sought political careers. Moreover, economic changes gave rise to a new middle class whose money allowed them to climb socially by purchasing linguistic and philosophical training for their children. Many aristocrats bitterly protested such developments and maintained that leadership qualities were conferred primarily by noble birth and that education should focus on athletic and military training, as it had traditionally done. Athens was a center of this cultural ferment.

THE SOPHISTIC MOVEMENT

The Sophists were a diverse group of early philosophers who were interested in exploring all branches of knowledge. They wandered from city to city, expounding their views to those who could pay for the privilege of listening, and also committing their ideas to writing. These early literates fostered the spread of literacy and of a standard written form, or grapholect, of the Greek language. Unfortunately, few of their texts have survived, in part because of the scorn heaped on their work by those who came after, especially Plato. For many of these men, all we have are a few fragments. Classical scholarship has attempted to reconstruct their thinking from the fragments and from what was said about the Sophists by the Greek thinkers who came after them and built on their work, often while denouncing them.

Following Empedocles, the Sophists believed that human knowledge relies solely on sense perception and is therefore necessarily flawed. Certainty or absolute truth is not available to humans, the Sophists argued, but probable knowledge can be refined by pitting opposing positions against one another and examining the arguments thus brought forward. A modern version of this practice is the adversarial trial system in the United States, which assumes that the truth of a doubtful matter is best revealed by the jury’s rational judgment of the presentations of skilled speakers arguing opposing sides of the case.

This view of knowledge was highly controversial in its own day. On the one hand, it appeared to destabilize traditional society by denying that human beings can know anything about the transcendent or even that the transcendent exists. In the absence of transcendent sources of values such as respect for justice and the rule of law, it was feared, civil order would disintegrate. Moreover, the Sophists taught young people that they could improve themselves via Sophistic teaching. They did not need to defer to the wisdom of their elders or social betters—self-improvement was open to anyone who could pay for it, and anyone, no matter what his or her natural endowments, could make some progress under Sophistic teaching. Hence the traditional privileges of the aristocracy were undermined.

At the same time, the Sophistic view of knowledge was exciting precisely because it celebrated human potential. If people can achieve knowledge only by attempting to discriminate rationally among the flawed input of their senses, yet, even so, as demonstrated in the work of the Sophists and their followers, they can achieve more than earlier societies were able to produce, in the areas of science, medicine, and the arts, for example. Whatever area of knowledge the Sophists explored, it was clear that language—in which Greek culture was deeply interested—was crucial to the exploration. Not all the Sophists were equally engaged with rhetoric; judging by the surviving fragments, Protagoras, Gorgias, Prodicus, Hippias, Antiphon, Critias, and Thrasymachus seem to have had the most to say about it.

Protagoras, the first, most famous, and most influential of the Sophists, advised the great political orator Pericles. Most scholars agree that Plato and Aristotle took Protagoras seriously as a philosopher and rhetorician, no matter how much they may have disagreed with him. Protagoras encouraged the study of the precise meaning of words—a further instance of the objectification of language that comes with literacy, as Havelock explains. Protagoras also developed the technique of exploring probable truth via opposing arguments, or “dissoi logoi.” The anonymous treatise *Dissoi Logoi* (ca. 400 B.C.E.; p. 48) is very Protagoran in approach. Protagoras even went so far as to say that opposing arguers should strive to make the weaker case appear the stronger. But most classical scholars agree that this directive was not intended to pervert justice but rather to make sure that all possible avenues are explored.

In the Sophists’ view, because the exploration of opposing views has to be conducted through language, which is fraught with emotional and cultural baggage, it can never be “objective” in the modern sense. The Sophists sought to call attention to the function of language in inducing belief, rather than encouraging audiences to give themselves up uncritically to its power to move and persuade. Gorgias (ca. 480–380 B.C.E.) is a primary exponent of this critical view of language. His own elaborately musical prose at once incorporates the devices of the poets and points out how these devices can manipulate listeners (see his “Encomium of Helen,” p. 44). We can be said to be “deceived” when we are convinced of a probable truth by the power of crafted language. But there need be no moral turpitude in this deception, if probable knowledge, based in our deceptive, limited sensory organism, is all that humans can achieve anyway.

Gorgias with his eloquence persuaded Athens to come to the aid of his hometown, Leontini in Sicily, against its aggressive neighbor Syracuse—precipitating the war that eventually debilitated Athens. Perhaps this linkage of Sophistic rhetoric with dangerous statecraft helped to discredit it in the eyes of later thinkers such as Plato, Isocrates, and Aristotle, who lived amid the social and political turmoil that followed Athens’s golden age, in which the Sophists had dominated. Plato encouraged the view that the Sophists were concerned merely with the manipulative aspects of how humans acquire knowledge—that is, with how people could be persuaded that they had learned the truth, whether or not truth was in fact conveyed. Plato’s condemnation of the Sophists became authoritative for centuries and

contributed to the loss of Sophistic texts and neglect of the remaining fragments. The scholarly tradition depicts only Plato and Aristotle as concerned with truth, meaning absolute truth that can be demonstrated by empirical evidence or insight into divinely instilled ideals. Modern rehabilitative readings of the Sophists have not disputed that the Sophists thought absolute knowledge impossible to attain but have preferred the Sophists' views for that reason, as more congruent with modern ideas about knowledge. The Sophists, like many contemporary theorists, believe that only provisional or probable knowledge is available to human beings.

Does the Sophist view of the function of language in persuasion actually destroy social order? Historian of rhetoric John Poulakos has argued that, as cosmopolitan intellectuals, the Sophists were well equipped to launch criticism of all things traditional. In so doing, they adapted the customary Athenian interest in public athletic competitions and theatrical performances to their own public battles among ideas, couched in technically dazzling language. In their verbal competitions, the idea that the stronger and better would prevail—a main tenet of traditional competition—was undermined by the playfulness of their techniques. Similarly, they overthrew the idea that philosophical discussion should aim to measure the actual by the ideal; they preferred to suggest possibilities—simply aiming to make people see that what has always been so does not necessarily have to continue. As for what course of action to pursue, then, the Sophists suggested that, rather than agonizing over what is proper or improper according to unchanging social rules, people should consider their immediate circumstances and what would be expedient at the moment. This is the Sophistic doctrine of *kairos*, that is, the idea that the elements of a situation, its cultural and political contexts, rather than transcendent unchanging laws, will produce both the best solutions to problems and the best verbal means of presenting them persuasively.

But as French classicist Jacqueline de Romilly has pointed out, the Sophists by no means advocated anarchy. They did say that the transcendent is inaccessible to humans, or even that it does not exist. Prodicus, for example, sounding much like a modern anthropologist, suggests in one fragment that people denominated as gods those natural forces that were beneficial to them, and “persons who first invented shelters or found new means of obtaining food or hit upon useful techniques were called names like Demeter, Dionysus, and the like.”² If society's laws for human behavior do not come from some godly source, then one cannot presume them to be ideally designed to suit human nature. Antiphon pointed out that human laws and natural laws are often antithetical, in that human law may require people to do things that go against their natural appetites. Nevertheless, it is often to people's advantage to obey human law, even if doing so requires suppressing some natural instincts. Protagoras, for instance, advocated the voluntary commitment to obey human laws in one's own ultimate self-interest—an early version of what later political theorists would term the “social contract.” Powerful language that induces people to take on this commitment, then, is actually an instrument for social stability.

²Rosamond Kent Sprague, ed., *The Older Sophists* (Columbia, S.C.: University of South Carolina Press, 1972), p. 83.

Moreover, the Sophists' ability to see many sides of an issue encouraged cultural tolerance, which would be a stabilizing factor in a diverse society, as Athens increasingly was because of the influx of foreigners seeking to enjoy Athenian cultural and political advantages or to avoid the ravages of war elsewhere. The Sophists traveled widely and thus came to know that customs varied greatly from place to place. This cross-cultural perspective is reflected in the *Dissoi Logoi*, for example, when the author observes that Spartan women have more freedom to engage in athletic exercises than Ionian women do. These insights, derived from a comparison of customs and political goals, may have contributed to the pan-Hellenism frequently advocated by Sophists. They saw the possibility of communities uniting, not on grounds of a common (Greek) culture, but on grounds of a common recognition that humanity could express itself in many ways and was not subject to an absolute standard that could mark some ways for annihilation.

ISOCRATES AND EDUCATION IN RHETORIC

Isocrates and Plato, who were close in age, reacted in two ways to the earlier Sophists. Both attempted to distinguish themselves from these men who had been their teachers. Plato was concerned with what human beings can know, but he wanted to find pathways to absolute truth. He rejected the Sophists' view that humans are not capable of achieving this truth. Isocrates, on the other hand, emphasized the active rather than the contemplative side of Sophism. He studied with Tisias, Prodicus, Socrates, and Gorgias, and eventually saw himself primarily as an educator. In his school, the first of its kind, his main purpose was to train talented men to become ethical and effective political leaders. Isocrates, too, wanted to claim that he taught philosophy, but for him the word meant a sort of applied intellectualism, something like modern political science, as he explains in his "Against the Sophists" (ca. 390 B.C.E.; p. 72) and *Antidosis* (353 B.C.E.; p. 75). By becoming a professional educator, Isocrates aligned himself firmly with the Sophistic idea that education could improve the natural talents of all comers—and that it should be useful to the state. He also placed himself in direct competition with Plato when the latter opened his Academy a few years after Isocrates opened his school.

Until recently, Isocrates (436–338 B.C.E.) has been known to modern scholars mainly as one of the Ten Attic Orators. The Ten comprised a canon of the best orators of the lively era 450–350 B.C.E., a canon well established by the time of Quintilian, a rhetorician in Imperial Rome (discussed below). Some, such as Demosthenes, were noted for their brilliant and effective political oratory, and some, such as Lysias, for their limpid prose style. The speech by Demosthenes in defense of his political career, "On The Crown," is still widely regarded as the most impressive speech of the classical era. Isocrates was also noted for his prose style, best exemplified in speeches composed to be read rather than heard, and for his vigorous advocacy of pan-Hellenism during the confusion that followed the Peloponnesian War. After a brief period as a logographer, however, Isocrates built his career around his role as an educator in Athens.

As Plato emphasizes in his dialogues attacking them, many Sophists charged

fees for teaching rhetoric as they moved from town to town. Isocrates also charged for his instruction, but he was the first to settle in his own school, which was organized for advanced pupils and had entrance requirements and a course of study lasting several years. His aim, as noted above, was to prepare civic leaders. Isocrates never claimed to impart wisdom in his school, thereby distinguishing himself not only from Sophists as characterized in Plato's attacks but also perhaps from Plato himself with his quest for absolute knowledge. Isocrates argues that public business won't wait while the philosopher pursues abstruse studies. Truth is not available to finite humans in any transcendent, absolute form. Thus it is the philosopher's higher duty to educate men for their current affairs, to help them learn to make wise decisions in the face of limited knowledge, and to use rhetoric to unify people in support of these decisions. By all accounts Isocrates was tremendously successful at performing this duty of the philosopher. Not only did he educate many famous Greek orators and political leaders, but his school became the model for the Roman world and ultimately for Christendom. His influence is still visible in modern conceptions of liberal education.

Isocrates saw natural talent, practice in varied situations, and instruction in general principles as the three elements of rhetorical and philosophical success—that is, as the three elements requisite to becoming a valuable citizen. He ranked their importance in the order listed, weighing the student's contribution much more heavily than the teacher's. Nevertheless, talent could be developed by skilled instruction. If this included moral instruction, rhetoric could be rescued from Platonic charges that it was merely manipulative. Isocrates never claimed that a virtuous teacher could impart his virtue directly to his students. But such a teacher could influence them by being a virtuous audience for their rhetorical efforts. Even if the student is motivated at first only by the desire for personal triumph, if he seeks to move a virtuous audience he must choose material that will appeal to such an audience—that is, he must concern himself with the noble. Isocrates hoped that prolonged contact with the noble would inspire the pupil. Such an educational system is founded on emulation.

Isocrates was not the only thinker to link education with philosophy and rhetoric. Almost any man practicing philosophy and rhetoric in this period did so in an educational setting; if he was not the head of a school, his social circle likely included the sons of friends given over to him for informal instruction. This context foregrounded the personal element in knowing and persuading. Intense homoerotic relationships often developed between mentor and pupil, which apparently were considered appropriate aids to emulation. Homosexuality was an accepted form of sexual expression in ancient Greece and usually took the form of an attachment between a mature man and a young boy or adolescent. In the most socially approved version of such a relationship, the younger partner accepted a passive sexual role out of gratitude for the older partner's kindnesses to him, which often included intellectual, artistic, or athletic instruction, and out of admiration for his accomplishments in these areas. Such relationships were encouraged by the fact that education, like the rest of ancient Greek society, was usually strictly segregated by sex. Al-

though Plato did admit some women to his Academy, the school of Isocrates, like most others, was for men only.

ASPASIA AND OPPORTUNITIES FOR WOMEN

Did women receive higher education elsewhere than in the schools dominated by men? There is much scholarly debate on the position of women in classical Greece. Women were supposed to remain sequestered within the home and to be concerned solely with domestic matters. Greek literature contains many contemptuous references to women and often praises homosexual relationships as a far better source of emotional sustenance than marriage. Women generally received less education than men, had far fewer legal rights, and were greatly restricted in their public roles. All this suggests that women would have been unable to contribute much to the development of classical philosophy or rhetoric, and indeed, no theoretical texts on these subjects by Greek (or Roman) women have survived.

On the other hand, women did not appear to be totally oppressed. Even a woman who did nothing but tend her home might have considerable responsibilities, for she might be in charge of numerous servants and slaves engaged in domestic and handicraft activities. Also, women participated in some public religious ceremonies. By the second and first centuries B.C.E., women with great advantages of wealth or birth might even hold public office, as surviving inscriptions indicate. Henri-Irénée Marrou, a historian of classical education, says that a few schools existed for upper-class Greek girls that were very similar to the schools for their brothers.³ Sappho, one of the first Greek lyric poets, headed such a school. Girls attended in their teenage years, before marriage, and studied poetry, music, dance, and athletics. Advanced students studied rhetoric, philosophy, and political theory. According to Marrou, by the second and first centuries B.C.E. it was not unusual for girls of the upper classes to attend such schools. Cities sponsored competitions for them in recitation, music, and athletics. A few learned women appear in classical history, such as Diotima, whom Plato depicts in the *Symposium* as teaching philosophy to Socrates (although she may be a fictional character).

Aspasia, mistress of Pericles (p. 56), is mentioned in Plato's "Menexenus" and other classical sources as being a much-sought-after teacher of rhetoric and political theory. The persistent tradition concerning Aspasia's rhetorical skills suggests that here was one woman, at least, who had an impact on the public rhetoric of her day. Some sources suggest that she taught the so-called Socratic method to Socrates.

If some women were receiving advanced education and producing work in philosophy and rhetoric themselves, then it becomes more difficult to explain the absence of any surviving texts by them. No doubt in classical times the occasions for a woman to use rhetoric in public were very few—perhaps only on family ceremonial occasions, if there were no male relative to deliver a eulogy, for example. Yet

³Henri-Irénée Marrou, *A History of Education in Antiquity*, trans. George Lamb (New York: Sheed and Ward, 1956, 1982), pp. 33–35.

many examples suggest that some women at least knew about rhetoric, even if they didn't usually practice it. These include the examples mentioned above, as well as the playwright Aristophanes' creation in *Ecclesiazusae* (ca. 392 B.C.E.) of a female character who delivers a speech of over a hundred lines in a political assembly, before men. Classicist G. B. Kerferd has suggested that, although women certainly were oppressed in classical Greece, one important strand of Sophistic social thought argued for greater equality for them. This strand influenced even that enemy of Sophism, Plato, as seen by the equality between the sexes that he recommended for the oligarchy of his ideal state (in *Republic*). The position of women became a topic for debate, with the literature reflecting extreme views both for and against. Conflicting evidence in the historical record thus reflects the social ferment of the times. But, Kerferd speculates, because change stopped far short of a modern feminist position, works of the losing party of women were neglected and lost just as the works of the male Sophists were.⁴

PLATO: TRUE AND FALSE RHETORIC

Plato (ca. 428–347 B.C.E., p. 80) is not usually characterized as an educator, as is his rival Isocrates, but rather as a philosopher in the modern sense of the word, even though he wrote all of his important works while head of his Academy. At the end of Plato's *Phaedrus* his own teacher Socrates says that he wishes to plant seeds of knowledge in well-disposed young minds and perpetuate himself in this way rather than through biological reproduction. If Plato held such seminal aspirations for his own work, they have certainly been richly fulfilled by his eminent position in the history of Western thought.

Rhetorical theorist Kenneth Burke has suggested that Socrates' homosexuality, as described by Plato, may be taken as a symbol of Socrates'—and by extension Plato's—philosophical project. Refusal to reproduce the tribe biologically symbolizes refusal to reproduce tribal wisdom culturally. Rather, for Plato, education must be based in a relationship between essentially distinct individuals—not two who cleave together as one flesh—who come together with the aim of transcending history, not leaving offspring to carry it on. In this relationship, discourse should be used as a means to uncover absolute truth, not merely to induce belief in probable truth or received wisdom.⁵

Rhetoric thus becomes a key subject for Plato, for true and false rhetoric must be distinguished. His two most important works on rhetoric attack the false—the *Gorgias* (ca. 386 B.C.E.; p. 87)—and define the true—the *Phaedrus* (ca. 370 B.C.E.; p. 138). For Plato, false rhetoric is precisely that of the Sophists, rhetoric that relies on *kairos* or the situation in order to determine provisional truth or probable knowledge. Plato faults the Sophists for not using rhetoric to try to discover absolute truth. He ignores the fact that they do not do so because they do not believe that absolute truth is accessible to humans and suggests that the Sophists' neglect of it comes

⁴G. B. Kerferd, *The Sophistic Movement* (London: Cambridge University Press, 1981), pp. 159–62.

⁵Kenneth Burke, *A Grammar of Motives* (New York: Prentice-Hall, 1954), p. 426.

from a frivolous, or worse, malicious intent simply to entertain and manipulate their audiences. In the *Gorgias*, Plato shows the severe political consequences of Sophistic rhetoric as he depicts it, in the brutality of Callicles. Perhaps this example lends some support to the idea that Plato condemns Sophistic rhetoric at least in part because he blames it for the political chaos in Athens. John Poulakos points out, at any rate, that Plato seems to need this version of Sophistic rhetoric in order to define his own philosophical positions against it. Without Sophism, says Poulakos, Plato's rhetoric would have been very different.⁶

True rhetoric, as displayed in the *Phaedrus*, becomes the method whereby the philosopher and his pupil free themselves from conventional beliefs and all worldly encumbrances in the pursuit and eventual attainment of transcendent absolute truth. Plato sanctions two uses of rhetoric to reach truth. One use is to convey truth that is already in the rhetor's possession to an ignorant audience—by any effective means, so long as the virtuous rhetor keeps the audience's best interests at heart. An example of this use of rhetoric in the *Phaedrus* might be Socrates' speech on the soul as a charioteer with two battling horses, a speech that aims to manipulate Phaedrus with spiritually uplifting ethical and pathetic appeals.

The second use of rhetoric is more methodological. This use is illustrated in the *Phaedrus* by the lengthy passages of give-and-take between the older and younger man. Here Socrates does not simply seek to convey a preconceived truth to Phaedrus, but he actually works out the truth in his own mind by talking to Phaedrus about it and correcting the less experienced thinker's misconceptions. This process might be likened to clearing away the conventional underbrush so that the truth can be seen. Whereas Plato's first use of rhetoric might be regarded as manipulative, even if in a good cause, the second is more truly collaborative, requiring the informed participation of all parties. This is the highest form of rhetoric, in Plato's view.

The way Plato practices philosophy is rhetorical in the sense that he frames his treatises as conversations among a few interlocutors. This format allows him to model the face-to-face questioning that seeks truth, while at the same time using a full range of dramatic and literary devices to persuade his readers to accept his own view of the truth. (Richard Leo Enos points out, for example, that in the *Gorgias* Plato stacks the deck rhetorically by compelling Gorgias to assent to a discussion of abstract terms that Gorgias would never have tried to define out of context, and to limit himself to short replies instead of the extended speeches at which he excelled.)⁷ With its deft characterizations, this format also allows Plato to imply that the absolute truth he seeks is not to be uncovered by people's rational abilities, or *logos*, alone; ethical and pathetic elements necessarily accompany conversations among real people. Indeed, by using Socrates as a literary persona through which to express his own philosophical views (whether or not these views were learned from Socrates) Plato supplements the logical appeal of his arguments with the ethical

⁶John Poulakos, *Sophistical Rhetoric in Classical Greece* (Columbia, S.C.: University of South Carolina Press, 1995), p. 77.

⁷Richard Leo Enos, *Greek Rhetoric before Aristotle* (Prospect Heights, Ill.: Waveland Press, 1993), pp. 97–99.

appeal of Socrates' advanced age and reputed wisdom and the pathetic appeal of his well-known martyrdom. Yet at the same time that Plato stresses the importance of oral questioning, he frames his philosophy in written form, which, as he points out in the *Phaedrus*, is distinguished precisely by its unresponsiveness to questioning. Irony cannot operate undetected in speech, for a nuance can always be questioned; but what is to prevent the written text from deceiving?

ARISTOTLE: SYSTEMATIC RHETORIC

Aristotle (384–322 B.C.E.), originally Plato's pupil, taught in Plato's school for many years and conducted his own Peripatetic School in Athens, 334–323 B.C.E. He apparently began working on his *Rhetoric* (p. 179) while serving as tutor to the young Alexander the Great, and stopped working on it around 330. Scholars disagree about whether the text should be regarded as completed, or even whether Aristotle was its chief author: The existing text may be no more than lecture notes compiled by students in Aristotle's classes on rhetoric.

Aristotle was perhaps a more "academic" thinker on rhetoric than any of his predecessors. He had no public role as a rhetorician; no speeches written by him are extant. He appears to have been totally absorbed by his activities as a teacher and scholar. He founded what came to be known as the Peripatetic School. Aristotle attempted to place all branches of human knowledge in systematic order. He wrote extensively in almost every area of knowledge known to the ancient world, including rhetoric. Aristotle did not appear to agonize over the good and bad uses of rhetoric, as his predecessors had done, especially Isocrates and Plato. He seemingly did not feel particularly hostile to the Sophists or need to devote much time to refuting their ideas. John Poulakos suggests that he evaluated them simply on the basis of their contributions to Hellenic thought: important, but now outmoded.⁸ What interested Aristotle was how to sort through what was known about rhetoric in his own day and to put what was useful in usable order.

Aristotle defines rhetoric as the art of discovering the means of persuasion available for any occasion. This art of discovery requires that the rhetor investigate systematically both the situation with which he (almost always he) is presented and his own inner resources for handling it. Aristotle classifies speech into three categories, determined by the situation in which each would be used: deliberative or political oratory, intended to recommend a future course of action; epideictic or ceremonial oratory, intended to praise or blame a current state of affairs; and forensic or legal oratory, intended to provoke judgment concerning a past action. These were the three main types used in Greek life, and after Aristotle the three dominant categories for all oratorical study.

Aristotle's *Rhetoric* deals with the process of speech composition. The first two books focus on the rhetor's attempts to organize what he knows and to structure his arguments. This invention process can be guided by formal procedures called *heuristics*, such as the "common topics" or *topoi*. Aristotle conceptualized these as

⁸Poulakos, p. 152.

“places to look” for arguments; we would think of them more as structural devices. For example, a topic might be comparison (“Here is how *A* is like *B* or unlike *B*”) or “greater and lesser” (“Here is how *A* is greater than *B* or less than *B*”). The rhetor should also consider his audience, in terms of both their particular cultural predilections and their individual emotions, which are conditioned by age and social class. To this end, Aristotle pioneered the study of what we would call psychology, of the individual and of the group. Book III of the *Rhetoric* considers how to place the content of the speech in effective order—which argument to make first, and so on. Then the rhetor polishes his style and prepares to deliver the speech, planning his gestures, dress, and other nonverbal means of enhancing his message. Although Aristotle does not mention the need to commit the speech to memory, classical rhetoric was replete with memorizing techniques, often involving spatial metaphors. The composing process that Aristotle treats in his *Rhetoric*, plus attention to memory, would become formalized into five “canons” or stages by the time of Cicero (see below).

The arguments that one discovers or “invents” should appeal to reason (*logos*), emotion about the subject under discussion (*pathos*), and trust in the speaker’s character (*ethos*). For Aristotle, the appeal to reason was by far the most important. In emphasizing it, he differentiated himself from earlier rhetoricians, sometimes even conveying the idea that he would prefer to conduct persuasion by reason alone. His treatment of *pathos* and *ethos*, however, shows that he realized that these more emotional elements were also usually necessary for persuasion. The pathetic appeal seeks to align the audience’s emotions with the speaker’s position (for example, arousing the audience’s anger against an enemy nation one wishes to attack). The ethical appeal evokes the speaker’s moral authority (“I am old and wise and of a noble family”) or the shared concerns of speaker and audience. Even rational appeals are not devoid of ethical and pathetic elements, for they rely upon either the enthymeme, a syllogism that takes its major premise from received wisdom, which the audience has been conditioned to respect, or the example, an illustration that must be recognizable and meaningful to audience members as a part of their own cultural history. Thus assent is gained to truths that must be only provisional or probable, not certain, such truths being the usual domain of rhetoric.

Aristotle differentiates among kinds of knowledge more rigidly than any of his predecessors. For him, absolute truth is available only through scientific demonstration. It is thus more materialist or scientific than the idealist or transcendent absolute truth sought by Plato. Dialectic, a rigorous form of argumentative dialogue between experts, can test whether absolute truth has been achieved; dialectic does not, however, play any role in the discovery of absolute truth. Neither does rhetoric, in Aristotle’s scheme, but that does not mean that rhetoric is useless to Aristotle—far from it. It may be used to convey absolute truth to the ignorant. It may also be used to arrive at probable truth in situations where demonstration is not possible. Like Isocrates, Aristotle values rhetoric as an aid to reaching agreement on questions of value or preference that demand immediate action in everyday life. If for Isocrates this study has a political bent, and a philosophical angle for Plato, for Aristotle the interest seems to be psychological.

The manuscript of Aristotle's treatise on rhetoric was lost after the death of Theophrastus, who took over his school, and it was not recopied and circulated until Cicero's day (see below). Perhaps for this reason, Aristotle was less influential on the Romans than were Plato or Isocrates. Several classificatory schemes derived from Aristotle's work, such as the three kinds of speech and the five canons of composing, were widely used, but otherwise his rhetorical theory was less influential than that of either of his eminent predecessors until the twentieth century.

THE RISE OF ROME AND THE RHETORIC OF CICERO

Aristotle's pupil Alexander conquered an enormous territory. By the time he died in 323 B.C.E., Alexander the Great's domain stretched from the eastern Mediterranean, including Greece and Egypt, to the Indus River valley in Pakistan. No one could hold this empire together. Alexander's generals divided it up, eventually establishing three dynasties: the Antigonids in Greece; the Ptolemies in Egypt and Palestine; and the Seleucids in Turkey and in the territories further east. These imperial states shared a Hellenistic culture, with Greek as the common tongue and Greek customs prevailing among the aristocratic and educated classes. No matter what one's origins, one could be accepted as "Greek" by adopting Hellenistic culture.

The Hellenistic world was dominated by great cities, much larger and more socially complex than the old Greek city-states. These cities grew up around the centers of imperial government and were cosmopolitan on a scale never seen before, as trade mingled the various Hellenized peoples. Greek-influenced art and learning flourished throughout the area Alexander had conquered, and learned professions such as medicine and engineering developed. By the third century B.C.E., the city of Alexandria at the mouth of the Nile had become the center of Hellenistic scholarship, with a huge library under royal patronage.

Rhetoric continued to flourish in the two hundred years following the death of Aristotle. Although despotic governments did not always allow the free exercise of deliberative rhetoric, forensic and epideictic rhetoric were always required. Even deliberative rhetoric found a place in the diplomatic and trade negotiations that linked the Hellenistic Mediterranean. Aristotle's heir Theophrastus wrote many treatises on rhetoric (all now lost) and thus ensured the transmission of a Peripatetic view of rhetoric. Another strand was added with the founding of the Stoic school of philosophy by Zeno at Athens around 300 B.C.E. The Stoics valued simplicity, brevity, and correctness in discourse. They also greatly extended and ramified the classification of tropes and figures.

The most significant development in rhetoric in this period was the work on "stasis" of the Greek rhetorician Hermagoras in the second century B.C.E. None of his writings survive, but modern scholars have reconstructed his ideas, relying in part on their extensive treatment in the work of Cicero, Quintilian, and other later writers. Stasis theory guides forensic orators in defining the key questions in any case. Aristotle had suggested in the *Rhetoric* (Book III) that there are four key questions: Did something happen? If so, was harm done? If so, was it great harm? If so, was the great harm justified? Hermagoras built upon these questions in developing his

four questions. First, conjecture: What are the signs that *X* committed an act? This derives from Aristotle's first question. Second, definition: If *X* committed an act, was it criminal? This combines Aristotle's second and third questions, on the nature of the harm done. Third, quality: If *X* committed a crime, were there extenuating circumstances? This derives from Aristotle's fourth question. Finally, objection: If *X* does deserve to be tried for committing this act, is the trial being conducted properly? In modifying Aristotle's questions, Hermagoras gives them a more legalistic focus, perhaps appropriate to the more complex social order of his day.

By the first century B.C.E., instruction in rhetoric had become a regular feature of the education of upper-class young men, whether in schools or with tutors, throughout the territory Alexander had conquered. Instruction in precepts was accompanied by composition of the *progymnasmata*, writing exercises in various modes, such as the fable, and by declamation of practice speeches, often in response to imaginary legal or political situations. These exercises were valued for their practicality, as they prepared for the kinds of rhetoric used in adult life, and at the same time for their ability to inculcate social values. The Greek language was often the medium of this training, because the best teachers of rhetoric continued to be Greek and because the language was deemed to have a beautifying influence on young people's use of their native tongues.

Meanwhile, a new power was emerging in Rome, on the western hinterlands of the Hellenistic world. Originally an oligarchic city-state but enjoying more fertile and open terrain than its Greek counterparts, Rome was able to ally with the surrounding settlements it conquered, offering the freemen Roman citizenship and intermarrying with local oligarchies. Greek ideas about rhetoric entered Roman culture via the Greek colonies in southern Italy that Rome absorbed, as Richard Leo Enos has shown (in *Roman Rhetoric*). By the middle of the third century B.C.E., the Roman alliance controlled the entire Italian peninsula, and by the beginning of the second century B.C.E., having beaten Carthage and the Antigonid and Seleucid rulers, Rome became the dominant political force in the old Hellenistic empire.

Rome had been governed by a system that supposedly balanced democracy and oligarchy. Democratic assemblies voted on laws and holders of civic offices. But most of the officeholders were from the aristocratic or "patrician" class, and the final legislative authority rested with a senate composed of former officeholders. Economic changes resulting from Rome's military success unbalanced this system. During the second century B.C.E., Roman conquests all around the Mediterranean basin brought great wealth through the new provinces' tax payments to the Roman generals and senators. Gradually the democratic assemblies' power diminished to mere formalities, and the senate controlled the empire. Displaced farmers and landless soldiers became an impoverished, disenfranchised mob in Rome.

Rome's growing middle class, called the "equestrian" class, was made up of families who had achieved wealth through managing military supply contracts and tax-collecting enterprises. They competed with the patricians for a share of the loot from the provinces but were usually unable to break into the patrician-controlled senate. This bourgeoisie began to vie with the aristocrats for influence over the dangerously large mob. The patricians offered the poor state-supported welfare, free

food, and brutal entertainment. The equestrians offered them positions as soldiers to fight, not for Rome, but for a general who would ensure that they got generous shares of the spoils.

The first century B.C.E., the time of Cicero, saw Rome wracked by conflict as one general after another added to Rome's conquests and then attempted to set himself up as a tyrant and destroy the senate's power. The most successful of these was Julius Caesar. By 50 B.C.E., he had conquered much of northern Europe, and he then attacked those in Rome opposed to his taking complete power. He defeated the senatorial army and his principal military opposition, General Pompey. But in 44 B.C.E. he was assassinated. A struggle for power ensued, involving, among others, Caesar's subordinate officer, Mark Antony, and Caesar's nephew and chosen heir, Octavius. Cicero died in a last-ditch effort to prevent Mark Antony from becoming tyrant. But the eventual victor was Octavius, or Caesar Octavian, who defeated Antony and his new wife, the Egyptian queen Cleopatra, in 31 B.C.E. Octavian consolidated his power by reducing the senate to a powerless advisory body and accepting from it the title of Augustus, which made him officially a demigod. The reign of Imperial Rome—Rome governed by a tyrant or, more politely, an emperor—might be said to begin from this time.

Cicero (106–43 B.C.E.; p. 283) was born well before these dramatic changes took place, and he spent the last years of his life resisting them. He is generally regarded as the next great rhetorician in the classical tradition after Aristotle. The anonymous *Rhetorica ad Herennium* (p. 243) was thought to be his work until the Renaissance. It is the oldest surviving rhetoric manual in Latin, roughly contemporary with Cicero's youthful work, *De Inventione* (ca. 86 B.C.E.). Numerous similarities between the two works suggest the standardization of education in Rome by the first century B.C.E.—that is, education in rhetoric following Greek models. These two works were by far the most widely read classical rhetorics until the Renaissance.

In *De Inventione* Cicero summarizes the categories for rhetorical study that were apparently commonplace at the time of his schooling. One set of categories delimits Aristotle's kinds of discourse, with which rhetoric is properly concerned: deliberative, forensic, and ceremonial. Another set delineates the five-part process derived from Aristotle for composing a speech: Step one is invention, when heuristics are used to generate arguments; step two is arrangement, when the best arguments are selected and placed in effective order; step three is style, ensuring that the best words are used to convey the arguments; step four is memory, that is, the use of mnemonic devices to learn a written speech by heart; and step five is delivery of the speech, attending to effective use of the voice, gesture, costume, and other nonverbal aids to persuasion. These five canons of rhetoric—invention, arrangement, style, memory, and delivery—became standard from classical times forward, even influencing modern studies of composition. *De Inventione* gives detailed information only on invention (evidently the complete text has not survived, or else it never was completed); consequently, during its long reading history it was usually supplemented with the *Rhetorica ad Herennium*, which treats all five canons.

The upper-class men who received the training reflected in these handbooks would use it to argue legal cases, to participate in political life, and to perform at

private entertainments and family occasions such as funerals. Cicero used his training in all these ways, beginning his career as a lawyer. His family, though wealthy, was equestrian, not patrician, and so could not launch him into politics from the first. But Cicero always aspired to public service. He achieved a series of political offices, culminating in the very high rank of consul, before being assassinated by Mark Antony's agents in 43 B.C.E.

Cicero is perhaps the most variously accomplished of all the classical rhetoricians. He was the most brilliant lawyer in Rome, and many of his forensic speeches, such as the "Pro Milone," are still regarded as exemplary oratory. Moreover, he was a potent political force, defending Roman law from the threats of both popular demagoguery and tyranny, as in his series of speeches attacking Antony, known as the *Phillipics*. His prose style attracted admiration from his own to the present day. It is a style characterized by amplification and heightened emotion. Yet he deplored the excessive ornamentation of the Asianists, whose style had developed in the Greek colonies from the earlier Sophistic Movement. At the same time, he defended Latin against the purism of the Neo-Atticists, who wished to regularize the language in light of ancient models. Cicero argued that the usage of the well-educated men and women of any era should set the era's linguistic standards, even if this meant that the language would change over time. Cicero also argued that the skillful rhetorician should vary his style depending on the effect he wants to produce: plain for exposition, middle for engaging attention, and high or grand for arousing noble emotion.

In addition to leading a varied and demanding public life, Cicero was a prolific writer, producing seven main treatises on rhetoric, among other works. The most important of these for its theory is his dialogue *De Oratore* (*Of Oratory*; 55 B.C.E.; p. 289), in which the character Crassus is generally believed to express Cicero's views while the opposition of Antonius helps to draw them out. Although Cicero never conducted a school or taught formally, his treatises suggest that he was a mentor to younger public servants. His works circulated privately among his friends and became tremendously influential in Western culture through late classical, medieval, and Renaissance times up to the present. Cicero's style in Latin has come to be regarded as a model of excellence. Moreover, his rhetorical treatises are valued not only for the knowledge they convey about earlier rhetoricians but also for the way they fuse the earlier tradition into a new vision of rhetoric for public service.

In composing *De Oratore*, Cicero had the benefit of Aristotle's *Rhetoric*, newly arrived in Rome. While showing Aristotle's influence, the treatise also combines the views of Isocrates and Plato. Like Isocrates, Crassus argues that natural ability is by far the most important requisite for success in public speaking, and that rules of thumb are of limited assistance. Frequent practice, particularly in real-life situations, can go far toward developing natural ability, but in spite of what Antonius says in *De Oratore*, practice alone does not suffice to reach the level of excellence to which Cicero aspires. Broad learning in history, literature, and law is essential, says Crassus, implicitly nodding toward Plato's idea that the rhetor must discover the truth elsewhere before conveying it to the audience. The orator must bring considerable knowledge to the rhetorical situation, even knowledge well beyond what the particular situation calls for.

Cicero goes beyond both Isocrates and Plato in his aspirations for the orator's beneficial social power. Isocrates depicted the orator as taking moral tone from the audience. In the *Antidosis*, Isocrates berates the Athenians for producing corrupt orators by responding only to base appeals. Plato sought to detach his orator from any audience at all, except perhaps a fellow seeker for absolute truth: The life of the mind is more important than worldly affairs and ultimately seeks to transcend them. Cicero implies that the audience will take its moral tone from the orator. Hence the orator must be broadly learned so as to elevate the audience, to make it prefer the most moral solutions to common problems. If the orator's own times do not adequately present noble models for emulation, such models must be found in books, for it is the orator's duty not only to prove the case and to engage the hearers' attention, but also to move them to right action. In other words, the best orator is one who can fulfill three offices: teaching, pleasing, and moving.

IMPERIAL ROME AND THE RHETORIC OF QUINTILIAN

Cicero's noble aspirations for rhetoric in the Roman Republic were eclipsed by the political exigencies of the Empire. Over the next three hundred years, the government fluctuated as popular generals toppled "dynasties" of a few decades' standing and as the emperor's personality influenced everyone's lives. Rome was declining in political dominance and internal stability, albeit slowly, and the decisive fall finally came in 476 C.E. when the Visigoths sacked the city.

From 96 to 180 C.E., however, the so-called period of Five Good Emperors, Roman society was relatively stable and culture flourished. Monumental architecture and roads were built throughout the Empire. The comfortable upper classes, now culturally enriched by citizens from the provinces, especially Spain and Gaul, produced the literary artists Martial, Juvenal, Lucian, and Apuleius and the historians Tacitus, Suetonius, and the Greek Plutarch. Stoic philosophy promoted detachment from what seemed a hopelessly corrupt world, and Christianity, pointing to a better life after death, spread in spite of intermittent but violent persecution. Around 250 C.E., Plotinus introduced Neoplatonism, a competitor with Christianity that read Plato and Aristotle as mystical allegories.

Tacitus wrote a dialogue on oratory (ca. 100 C.E.) that imitates Cicero's *De Oratore* while lamenting the decline of the art in his own day. The young wasted their time in decadent pleasures, he claimed, while education was ineffectual and political repression emasculating. Nevertheless, the historical accounts of Suetonius, his contemporary, show a wide variety of orators and rhetoric teachers functioning in Rome. Even if one could not criticize the imperial government, deliberative rhetoric was still needed in local politics and diplomacy; forensic rhetoric was still important; and epideictic rhetoric reached new heights of display as a popular form of entertainment.

Hence rhetorical training still remained the basis of Roman education, whether undertaken with private tutors or in small schools. Boys and girls of the privileged classes might attend grammar school together, and according to H.-I. Marrou, the emperor Trajan even provided for some indigent boys and girls to receive grammar

school education.⁹ Two grammar handbooks produced near the end of this period (by Donatus, ca. 350 C.E.) became the standard texts used in Europe until the Renaissance. The study of grammar was regarded as an important prerequisite to the acquisition of the elaborate declamatory style taught in the secondary-level schools, such as Quintilian's, which were schools of rhetoric.

Young women as well as young men sometimes pursued these higher-level studies in rhetoric, and also in philosophy. Indeed, classicist Robert W. Cape has argued that women had more opportunities for education in Rome than in Greece, and that their cultivated abilities in "sermo," or private conversation, which was regarded rhetorically, were highly valued. As noted in Quintilian (see below), a mother's verbal abilities provided an elevating early influence on her children, particularly the boys, who were much more likely to become public speakers. But women might occasionally speak in public as well, at a family occasion such as a funeral or even in a court of law, where they had the legal right to defend themselves. Cape cites records of a few women who actually did so, and also mentions the name of Hortensia, who engaged in political oratory when she protested a new tax on women to the ruling triumvirs. Although no extant Roman text discusses women's rhetoric specifically, and few written remains of these women orators exist, further research on Roman women seems promising.¹⁰

The form of oratory perhaps most characteristic of this imperial period was a highly stylized ceremonial speech called a declamation. Declamations were usually a form of private entertainment in which the orator might portray a participant in some fantastic historical event (a "suasoria") or complicated crime (a "controversia"), or extravagantly praise an athlete, a bride, or a trifle. Historian Aubrey Gwynn, S.J., cites the following example of a controversia:

The law requires that children should support their parents or be imprisoned. A man has slain one of his brothers as a tyrant and another because he was taken in adultery, though his father begged for mercy. The man is captured by pirates, who write to the father for a ransom. The father answers that he will pay them double if they will cut off his son's hands. The son is released by the pirates, and refuses to support his father.¹¹

In declamations, traditional values were lauded, sometimes ironically, since these speeches could be used to express dangerous political views covertly. Stylistic embellishment was the mark of a good declamation.

This declamatory rhetoric developed from the work of the Asianists of Cicero's time, so called because they originated in Asia Minor (Turkey) among Greek colonists who had preserved and developed the fifth century B.C.E. Sophistic Movement. The eastern Mediterranean produced many famous orators and rhetoric teachers who strongly influenced education in and performance of rhetoric at Rome. Hence Graeco-Roman rhetoric from around the time of Quintilian to the sack of

⁹Marrou, p. 303.

¹⁰Robert W. Cape Jr., "Roman Women in the History of Rhetoric and Oratory," in *Listening to Their Voices: The Rhetorical Activities of Historical Women*, ed. Molly Meijer Wertheimer (Columbia, S.C.: University of South Carolina Press, 1997), pp. 112–32.

¹¹Aubrey Gwynn, S.J., *Roman Education from Cicero to Quintilian* (Oxford, Great Britain: Clarendon Press, 1926), pp. 159–60.

Rome in 476 was, and is, commonly termed the “Second Sophistic.” The label was invented by a Sophist of the third century C.E., Philostratus, to characterize the orators he describes in his *Lives of the Sophists* (ca. 230 C.E.). Participants in the Second Sophistic shared with the earliest Greek Sophists an interest in etymologies, grammar, and the power of stylistic variety and abundance, to which they added an antiquarian nostalgia for earlier Greek culture, regardless of their own ethnic origins. They were, however, more likely to be associated with home cities than to be wanderers, and they often held important civic positions, sometimes under imperial patronage. They might be involved in local government or diplomatic ventures, but their greatest fame came from their masterful displays of elaborate declamatory rhetoric.

One of the leading lights of the Second Sophistic was the Greek rhetorician Hermogenes, who began his career as a child prodigy at declamation. Later he wrote a treatise on style in which he attempted to characterize the one ideal style, based on qualities found primarily in Demosthenes, a project implicitly opposed to Cicero’s definition of three major types of good style (plain, middle, grand). Another work that pushed considerations of literary style in the direction of philosophical questions was *On the Sublime* (p. 346), written in Greek by an unknown author in the first century C.E. (the author is sometimes called Pseudo-Longinus because the essay was once thought to be the work of a Greek rhetorician, Longinus, of the first century B.C.E.). These works show the tendency of the Second Sophistic to produce rhetoric with more literary than political implications. Indeed, throughout the classical period, rhetoric and literature were not separated as they have been in the modern period. The study of literature was thought to provide resources for the orator, and writers often showed their rhetorical training in their literary works.

Quintilian (ca. 35–96 C.E.), the last great rhetorician of the classical period, lived at the beginning of the Second Sophistic but attempted to resist its values in his one surviving work, the massive *Institutes of Oratory* (*Institutio Oratoria*, 95 C.E.; p. 364). He called for students to emulate the style of Cicero, which was less ornamented than that of the latter-day Sophists, and he urged that rhetorical skill be used only for moral ends. Like Cicero, Quintilian began his career as a lawyer, but instead of moving on to fame in politics, he made his name as a teacher in a school subsidized by the emperor. Unlike Cicero, Quintilian retired with honor and wealth. Among his pupils were many famous writers, perhaps including Tacitus, who waxed cynical about the moral standards of Roman rhetorical schools such as Quintilian’s, arguing that young men were emasculated by the focus on declamation, a pointless exercise, while tyranny raged unchecked.

Quintilian did not attempt wholesale reform of Roman education, let alone Roman politics. His resistance to prevailing standards emerges in various ways, however. Although his students did concentrate on performing declamations, Quintilian used his own experience as a lawyer to make their subjects closer to real life. He condemned brutal punishment in education, instead calling for teacher and student to be inspired by familial love. In place of pettifogging stylistic exercises, Quintilian insisted that the student read widely in the great works of earlier ages, Greek and Latin, as the surest way to develop his own mastery of language. Cicero

is continually held up as a stylistic model against the elaborate ornamentation then fashionable. Throughout, the *Institutes* is infused with the spirit of a kindly and learned teacher, unequaled in any other classical treatise.

Quintilian's project for rhetorical education is the most ambitious of any classical writer: He wants to produce the "good man speaking well," one who combines a Platonic commitment to virtue and absolute truth with the Isocratean and Ciceronian focus on effective public service. To produce this man, parents and teachers must begin at birth to draw out the boy's natural abilities and equip him with broad learning. The *Institutes* is organized by the order in which a man would study and practice rhetoric from childhood to old age. The first books deal with fundamentals such as grammar; the middle books with the five parts of the rhetorical composing process (invention, arrangement, style, memory, and delivery); and the final books with the adult orator's public career, including advice on how to leave it gracefully. Quintilian is seeking a moral leader, and he goes into far greater detail than other writers on how such a paragon can be produced—even in a corrupt age.

Whether Quintilian added anything new to rhetorical theory is open to debate. He depicts himself as a mere compiler and synthesizer and downplays any contribution of his own. Yet the modern reader may be struck by two special features of Quintilian's work. One of these is his developmental understanding of learning. More than any other classical educator, he seems to realize that learning is a complex and lengthy process. It is strongly influenced by social surroundings and proceeds in stages reflecting the ages and natural talents of the students, stages that pedagogy must take into account. The other feature is his moral earnestness, in a way more intense than Plato's. It seems that, for Quintilian, we must have rhetoric to save the world: The good man speaking well is almost messianic.

The man who became Saint Augustine (see Part Two) began life very much as Cicero and Quintilian had begun it, receiving rhetorical training from his well-to-do family so as to become a lawyer. Like Quintilian, too, he became a rhetoric teacher to make money, though he tells us that Cicero's love of learning inspired him to keep wrestling with the Christianity his mother hoped he would embrace. Augustine's baptism in 387 C.E. might be imagined as the appearance, at last, of the good man speaking well. Given the changes in the political climate since Cicero, the speaker's goodness had to be ratified by religion rather than civic virtue. The medieval transformation of rhetoric, following Augustine, to the service of Christian preaching restored a meaningful content to an art enervated by political oppression.

Selected Bibliography

Helpful bibliographic essays are Richard Leo Enos and Ann M. Blakeslee, "The Classical Period" (in *The Present State of Scholarship in Historical and Contemporary Rhetoric*, ed. Horner, rev. ed. 1990), which discusses primary and secondary sources; and John C. Briggs, "Philosophy and Rhetoric" (in *Research in Composition and Rhetoric: A Bibliographic Sourcebook*, ed. Moran and Lunsford, 1984), which discusses mainly secondary sources. See also George Kennedy, "Review Article: The Present State of the Study of Ancient Rhetoric"

(*Classical Philology* 70 [1975]: 278–82), and *Fifty Years (and Twelve) of Classical Scholarship*, ed. Platnauer (1968).

Sources of the works included below are cited in the headnotes. James J. Murphy's *A Synoptic History of Classical Rhetoric* (2nd ed., 1990) summarizes the major works of the period. A number of major and minor works are excerpted briefly in *Readings in Classical Rhetoric*, ed. Benson and Prosser (1969, rpt. 1988).

The standard general historical source for the entire classical period is George Kennedy's trilogy, *The Art of Persuasion in Greece* (1963), *The Art of Rhetoric in the Roman World* (1972), and *Greek Rhetoric under Christian Emperors* (1983); Kennedy has revised and abridged these three volumes in a single work, *A New History of Classical Rhetoric* (1994). See also his *Classical Rhetoric and Its Christian and Secular Tradition from Ancient to Modern Times* (1980, 1999), which ranges from Homeric rhetoric to the end of the eighteenth century. Also, Charles Sears Baldwin's *Ancient Rhetoric and Poetic* (1924) is still useful. Especially accessible to undergraduate students is Thomas Conley, *Rhetoric in the European Tradition* (1990). A collection of major essays on the entire Greek period, including some cited in headnotes in this volume, is *Landmark Essays on Classical Greek Rhetoric* (ed. Schiappa, 1994). A revisionist view is found in Samuel IJsseling's *Rhetoric and Philosophy in Conflict* (1976), which ranges from the Sophists to Nietzsche.

On cultural roots of the Athenian flowering of rhetoric, see *Greek Rhetoric before Aristotle* by Richard Leo Enos (1993). Taking a somewhat different view, Thomas Cole argues in *The Origins of Rhetoric in Ancient Greece* (1991) that both rhetoric and philosophy were inventions of Plato and Aristotle, owing little to earlier thinkers. For histories of the Sophistic movement, see the headnote on Gorgias, and John Poulakos, *Sophistical Rhetoric in Classical Athens* (1995). A good source of biographical information on Greek rhetoricians is R. C. Jebb's *The Attic Orators from Antiphon to Isaeos* (2 vols., 1962). On the transition from Greek to Roman rhetoric, see Richard Leo Enos, *Roman Rhetoric: Revolution and the Greek Influence* (1995). On the Second Sophistic, see Graham Anderson, *The Second Sophistic: A Cultural Phenomenon in the Roman Empire* (1993).

An introduction to philosophical issues in rhetoric from classical to modern times is Mortimer Adler's "Dialectic" (in *The Great Ideas: A Synopticon of the Great Books of the Western World*, ed. Adler and Gorman, vol. I, 1971). The definitive essay on philosophical issues in classical rhetoric is Richard McKeon's "The Hellenistic and Roman Foundations of the Tradition of Aristotle in the West" (*Review of Metaphysics* 32 [1979]: 677–715).

A magisterial history of education that ranges from early Greece to the early Middle Ages is Henri-Irénée Marrou's *A History of Education in Antiquity* (1956; rpt. 1982). A similarly commanding work that concentrates more upon the medieval period as the conduit between classical times and the Renaissance is R. R. Bolgar's *The Classical Heritage and Its Beneficiaries* (1954). Focusing more specifically on classical rhetoric education are David L. Clark's *Rhetoric in Greco-Roman Education* (1957), Stanley F. Bonner's *Education in Ancient Rome from the Elder Cato to the Younger Pliny* (1977), Aubrey Gwynn's *Roman Education from Cicero to Quintilian* (1926), and Martin Clarke's *Rhetoric at Rome* (1953). See also Kathleen E. Welch, "Writing Instruction in Ancient Athens after 450 B.C.," and James J. Murphy, "Roman Writing Instruction as Described by Quintilian" (in *A Short History of Writing Instruction: From Ancient Greece to Twentieth-Century America*, ed. James J. Murphy, 1990). A contemporary textbook that is also a compendium of information of the period is Edward P. J. Corbett's *Classical Rhetoric for the Modern Student* (4th ed., with Robert J. Connors, 1999).

Ray Nadeau's "Classical Systems of Stases" (*Greek, Roman, and Byzantine Studies* 2 [1959]: 51–71) surveys the stasis theories of Hermagoras, Hermogenes, and a few others.

William Satler's "Conceptions of Ethos" (*Speech Monographs* 14 [1947]: 55–65) surveys the treatment of *ethos* in all the major rhetoricians of the period, except Gorgias. A good source on style from Homer to Longinus is G. M. A. Grube, *The Greek and Roman Critics* (1965).

Eric Havelock's major work on orality and literacy in classical Greece is *The Literate Revolution in Greece and Its Cultural Consequences* (1982). For a summary, see Robert J. Connors, "Greek Rhetoric and the Transition from Orality" (*Philosophy and Rhetoric* 19 [1986]: 38–63). Current developments from his work include Kevin Robb's *Literacy and Paideia in Ancient Greece* (1994). For alternatives to Havelock's view, see Jacqueline de Romilly's *Magic and Rhetoric in Ancient Greece* (1975) and C. Jan Swearingen's *Rhetoric and Irony: Western Literacy and Western Lies* (1991), which ranges from the Sophists to Augustine.

Beatrice Zedler has translated seventeenth-century classicist Gilles Ménage's compendium, *The History of Women Philosophers* (1984), which surveys sources on classical women. See also A. W. Gomme, "The Position of Women in Athens in the Fifth and Fourth Centuries" (*Classical Philology* 20 (1925): 1–25); Sarah Pomeroy's *Goddesses, Whores, Wives and Slaves* (1975); Mary Lefkowitz's *Women in Greek Myth* (1986); Eve Cantarella's *Pandora's Daughters: The Role and Status of Women in Greek and Roman Antiquity* (1981; trans. 1987); and Sue Blundell's *Women in Ancient Greece* (1995). Cheryl Glenn discusses possibilities and obstacles for classical women's rhetorical practice in *Rhetoric Retold: Re-gendering the Tradition from Antiquity through the Renaissance* (1997). Robert W. Cape Jr., in "Roman Women in the History of Rhetoric and Oratory" (in *Listening to Their Voices*, ed. Molly Meijer Wertheimer, 1997), argues that Roman women were better educated than Greek women and had more opportunities for rhetorical training and performance. For additional references on women in antiquity, see Cape's bibliography and the headnote on Aspasia (p. 56).

For a careful and thorough discussion of Greek homosexuality, see K. J. Dover's *Greek Homosexuality* (1978).

In *Black Athena: The Afroasiatic Roots of Classical Civilization* (2 vols.; 1987, 1991), Martin Bernal argues that the elements of Greek culture were derived from black African culture in Egypt via Semitic cultures of Palestine, a genealogy concealed by racist and anti-Semitic nineteenth-century classicists. For critiques of Bernal's hypotheses by contemporary classicists, linguists, and anthropologists, see *Black Athena Revisited*, ed. Mary R. Lefkowitz and Guy MacLean Rogers (1996).

A sampling of recent scholarship primarily by rhetoricians within English studies can be found in *Essays on Classical Rhetoric and Modern Discourse*, ed. Connors, Ede, and Lunsford (1984), and *Rhetoric and Praxis: The Contribution of Classical Rhetoric to Practical Reasoning*, ed. Moss (1986). On relations between classical rhetoric and contemporary composition studies, see Kathleen Welch's *The Contemporary Reception of Classical Rhetoric: Appropriations of Ancient Discourse* (1990).

Gorgias

ca. 480–ca. 380 B.C.E.

Gorgias was born in Leontini in Sicily, which is considered by many scholars to be the birthplace of the formal study of rhetoric. He may have studied philosophy with Empedocles, a Pre-Socratic philosopher, and may have known the early rhetoricians Corax and Tisias. Gorgias became one of the best known of the Sophists. In 427 he brought Sicilian rhetoric to mainland Greece when he was sent by his native city on an embassy to Athens, perhaps with Tisias. Gorgias received such acclaim for his speaking that he remained in Greece, demonstrating and teaching rhetoric. He specialized in ceremonial oratory and, according to one tradition, could produce it extemporaneously on subjects suggested by the audience at his public performances. He was also a noted advocate of pan-Hellenism. Like other Sophists, Gorgias traveled from city to city; he died in Thessaly.

Gorgias was awarded many honors not usually given to foreigners in Greece, such as invitations to speak at the festivals. That Gorgias's performances were eagerly anticipated is suggested by Socrates at the beginning of Plato's *Gorgias*, when he compares listening to the orator to consuming a banquet (an image, of course, with ironic repercussions when the dialogue later relates Gorgianic rhetoric to cookery). Several chroniclers describe a solid gold statue of Gorgias, set up—perhaps by himself—at Delphi. Isocrates, who had been his student, claims (in the *Antidosis*) that, although not exactly wealthy, Gorgias amassed more than any other Sophist because he lived long, lacked a wife and children to support, and wandered too much to become liable for taxes in any city.

Gorgias's style has often been characterized as overly antithetical and symmetrical in structure and overly alliterative and assonant in sound. How could the Greek audience have valued so highly a style that jingles unpleasantly to modern ears? One possible answer is that the Greek audience was conditioned by its oral culture to respond to such auditory spellbinding. Listening to Gorgias apparently aroused not only intense sensual pleasure but also a shared sense of participation in a kind of wisdom available no other way. The power of his words was akin to magic, conjuring up conviction where no knowledge had existed before. At the same time that Gorgias's rhetoric provided this magical experience, however, which was like the power of poetry, its very artificiality called attention to its manipulative effects. In other words, Gorgianic rhetoric pointed up the fact that language can be crafted to suit particular purposes; powerful speech is not simply the result of the speaker's inspiration or the audience's transport.

Recent scholarship has begun to treat Gorgias more seriously as a philosopher. Following Empedocles, Gorgias believed that provisional knowledge is the only knowledge we can attain. He denied the existence of transcendent essences. Therefore, he thought, if we are to believe anything, we must be distracted from the limitations of provisional knowledge. Provisional knowledge must be presented to us with the aid of rhetoric that appeals ethically and pathetically as well as logically—

it must appeal to our whole person. Like King Oedipus, we achieve confidence in our own wisdom only through deception, not knowing that we do not know. But without this confidence, we cannot act, cannot govern wisely.

These views are expressed in the few texts by Gorgias that have survived. In his philosophical treatise “On Nature” (probably written before he came to Greece, ca. 444 B.C.E.), Gorgias poses a series of paradoxes: Nothing exists; or if it does exist, we cannot know it; or if we can know it, we cannot communicate our knowledge to another person. These paradoxes seem so counter to ordinary experience, and indeed so nihilistic, as to invite interpretation as parody. They are often read, however, as pointing to the nonexistence of transcendent essences and the impossibility of describing any such thing. Hence, human encounters with the world and the exchange of knowledge about it are necessarily limited, provisional, and shared experiences that rely upon a shared deception effected by language.

The “Encomium of Helen” (ca. 414; included here) argues for the totalizing power of language. Gorgias excuses Helen for succumbing to Paris if he persuaded her, for “speech is a powerful lord.” Gorgias compares the power of language to magic and drugs, and even characterizes it as deceitful, a damning admission to many scholars and one that has led some to see the “Encomium” as an ironic *jeu d’esprit*. But other scholars assert that Gorgias is making the strongest possible case for the power of language to change the whole person. Indeed, he seems to regard Helen as more intimately, thoroughly violated by persuasion than she would have been by forcible rape. And this power holds even in “the verbal disputes of the philosophers.” Language creates and changes the opinions that are our only available knowledge.

Selected Bibliography

Collected here are general references on the Sophistic Movement, as well as sources on Gorgias. Few writings of the Sophists remain, and scholars have pieced together their ideas in part by relying on references to them in other classical sources. For example, the long speech attributed to Protagoras in Plato’s dialogue by that name is generally taken to be a trustworthy picture of the Sophist’s thought. Fragments of Sophistic texts do exist, however. The principal translations of them are Rosamond Kent Sprague’s *The Older Sophists* (1972), the source of George A. Kennedy’s version of the “Encomium of Helen” included here; Kathleen Freeman’s *The Pre-Socratic Philosophers: A Companion to Diels-Kranz, “Fragments der Vorsokratiker”* (1966); and Freeman’s *Ancilla to the Pre-Socratic Philosophers* (1971). Both of Freeman’s works include much helpful commentary. Kennedy has also published a new translation of Gorgias’s “Encomium of Helen” in an appendix to his translation of Aristotle, *Aristotle, On Rhetoric: A Theory of Civic Discourse* (1991). Another translation of the “Encomium,” though an incomplete one, illustrates Gorgias’s alliterative style more vividly than the version in Sprague: LaRue Van Hook, “The Encomium on Helen, by Gorgias” (*The Classical Weekly* 6 [1913]: 122–23). *Contrasting Arguments* (1979), T. L. Robinson’s translation of a lengthy anonymous Sophistic text, the *Dissoi Logoi* (p. 48), contains excellent commentary on that text.

Gorgias and the Sophists generally were often slighted in histories of rhetoric, but this situation is changing. A good introductory survey is Everett Lee Hunt’s “On the Sophists” (in

The Province of Rhetoric, ed. Joseph Schwartz and John A. Rycenga, 1965). Histories of the movement are W. K. C. Guthrie, *The Sophists* (1971); G. B. Kerferd, *The Sophistic Movement* (1981); and Jacqueline de Romilly, *Great Sophists in Periclean Athens* (1988; trans. Janet Lloyd, 1992). In addition to providing a history of the Sophists, Richard Leo Enos's *Greek Rhetoric before Aristotle* (1993) and John Poulakos's *Sophistical Rhetoric in Classical Greece* (1995) discuss their reception by later classical thinkers. A study of an individual Sophist that also contains much information about the whole movement is Edward Schiappa's *Protagoras and Logos: A Study in Greek Philosophy and Rhetoric* (1991). Eric Havelock's *The Liberal Temper in Greek Politics* (1957) provides social and political background.

Overtly rehabilitative and revisionist work on the Sophists includes Werner Jaeger's *Paideia: The Ideals of Greek Culture* (3 vols., 1954–1961), Samuel IJsseling's *Rhetoric and Philosophy in Conflict* (1976), and Susan Jarratt's *Rereading the Sophists: Classical Rhetoric Refigured* (1991).

Scholars exploring the philosophical and especially the epistemological implications of Sophistic thought include Mario Untersteiner's major work, *The Sophists* (1954); Charles P. Segal, "Gorgias and the Psychology of Logos" (*Harvard Studies in Classical Philology* 66 [1962]: 99–155); Richard Engnell, "Implications of the Rhetorical Epistemology of Gorgias" (*Western Speech* 37 [1973]: 175–84); and Richard Leo Enos, "The Epistemology of Gorgias's Rhetoric: A Re-examination" (*Southern Speech Communication Journal* 42 [1976]: 35–51).

Eric Charles White employs Gorgias's tragic theory of knowledge for literary criticism in *Kaironomia: On the Will-to-Invent* (1987).

Encomium of Helen¹

1. What is becoming to a city is manpower, to a body beauty, to a soul wisdom, to an action virtue, to a speech truth, and the opposites of these are unbecoming. Man and woman and speech and deed and city and object should be honored with praise if praiseworthy and incur blame if unworthy, for it is an equal error and mistake to blame the praisable and to praise the blamable. 2. It is the duty of one and the same man both to speak the needful rightly and to refute (the unrightfully spoken. This it is right to refute) those who rebuke Helen, a woman about

whom the testimony of inspired poets has become univocal and unanimous as had the ill omen of her name, which has become a reminder of misfortunes. For my part, by introducing some reasoning into my speech, I wish to free the accused of blame and, having reproved her detractors as prevaricators and proved the truth, to free her from their ignorance.

3. Now it is not unclear, not even to a few, that in nature and in blood the woman who is the subject of this speech is preeminent among preeminent men and women. For it is clear that her mother was Leda, and her father was in fact a god, Zeus, but allegedly a mortal, Tyndareus, of whom the former was shown to be her father because he was and the latter was disproved because he was said to be, and the one was the most powerful of men and the other the lord of all.

4. Born from such stock, she had godlike beauty, which taking and not mistaking, she kept. In many did she work much desire for her love,

Translated by George A. Kennedy.

¹The beautiful Helen, wife of Menelaus, King of Sparta, was abducted by Paris, a prince of the city of Troy in Asia Minor. To get her back, the Greeks united in a war against Troy that destroyed the city. Helen returned to Greece with Menelaus. These events supposedly took place ca. 1000 B.C.E. Their retelling in the oral poetry eventually codified in Homer's *Iliad* formed a central element in Greek culture. [Ed.]

and her one body was the cause of bringing together many bodies of men thinking great thoughts for great goals, of whom some had greatness of wealth, some the glory of ancient nobility, some the vigor of personal agility, some command of acquired knowledge. And all came because of a passion which loved to conquer and a love of honor which was unconquered. 5. Who it was and why and how he sailed away, taking Helen as his love, I shall not say. To tell the knowing what they know shows it is right but brings no delight. Having now gone beyond the time once set for my speech, I shall go on to the beginning of my future speech, and I shall set forth the causes through which it was likely that Helen's voyage to Troy should take place.

6. For either by will of Fate and decision of the gods and vote of Necessity did she do what she did, or by force reduced or by words seduced (or by love possessed). Now if through the first, it is right for the responsible one to be held responsible; for god's predetermination cannot be hindered by human premeditation. For it is the nature of things, not for the strong to be hindered by the weak, but for the weaker to be ruled and drawn by the stronger, and for the stronger to lead and the weaker to follow. God is a stronger force than man in might and in wit and in other ways. If then one must place blame on Fate and on a god, one must free Helen from disgrace.

7. But if she was raped by violence and illegally assaulted and unjustly insulted, it is clear that the raper, as the insulter, did the wronging, and the raped, as the insulted, did the suffering. It is right then for the barbarian who undertook a barbaric undertaking in word and law and deed to meet with blame in word, exclusion in law, and punishment in deed. And surely it is proper for a woman raped and robbed of her country and deprived of her friends to be pitied rather than pilloried. He did the dread deeds; she suffered them. It is just therefore to pity her but to hate him.

8. But if it was speech which persuaded her and deceived her heart, not even to this is it difficult to make an answer and to banish blame as follows. Speech is a powerful lord, which by means of the finest and most invisible body effects the divinest works: it can stop fear and banish grief and create joy and nurture pity. I shall

show how this is the case, since 9. it is necessary to offer proof to the opinion of my hearers: I both deem and define all poetry as speech with meter. Fearful shuddering and tearful pity and grievous longing come upon its hearers, and at the actions and physical sufferings of others in good fortunes and in evil fortunes, through the agency of words, the soul is wont to experience a suffering of its own. But come, I shall turn from one argument to another. 10. Sacred incantations sung with words are bearers of pleasure and banishers of pain, for, merging with opinion in the soul, the power of the incantation is wont to beguile it and persuade it and alter it by witchcraft. There have been discovered two arts of witchcraft and magic: one consists of errors of soul and the other of deceptions of opinion. 11. All who have and do persuade people of things do so by molding a false argument. For if all men on all subjects had (both) memory of things past and (awareness) of things present and foreknowledge of the future, speech would not be similarly similar, since as things are now it is not easy for them to recall the past nor to consider the present nor to predict the future. So that on most subjects most men take opinion as counselor to their soul, but since opinion is slippery and insecure it casts those employing it into slippery and insecure successes. 12. What cause then prevents the conclusion that Helen similarly, against her will, might have come under the influence of speech, just as if ravished by the force of the mighty? For it was possible to see how the force of persuasion prevails; persuasion has the form of necessity, but it does not have the same power. For speech constrained the soul, persuading it which it persuaded, both to believe the things said and to approve the things done. The persuader, like a constrainer, does the wrong and the persuaded, like the constrained, in speech is wrongly charged. 13. To understand that persuasion, when added to speech, is wont also to impress the soul as it wishes, one must study: first, the words of astronomers who, substituting opinion for opinion, taking away one but creating another, make what is incredible and unclear seem true to the eyes of opinion; then, second, logically necessary debates in which a single speech, written with art but not spoken with truth, bends a great crowd

and persuades; <and> third, the verbal disputes of philosophers in which the swiftness of thought is also shown making the belief in an opinion subject to easy change. 14. The effect of speech upon the condition of the soul is comparable to the power of drugs over the nature of bodies. For just as different drugs dispel different secretions from the body, and some bring an end to disease and others to life, so also in the case of speeches, some distress, others delight, some cause fear, others make the hearers bold, and some drug and bewitch the soul with a kind of evil persuasion.

15. It has been explained that if she was persuaded by speech she did not do wrong but was unfortunate. I shall discuss the fourth cause in a fourth passage. For if it was love which did all these things, there will be no difficulty in escaping the charge of the sin which is alleged to have taken place. For the things we see do not have the nature which we wish them to have, but the nature which each actually has. Through sight the soul receives an impression even in its inner features. 16. When belligerents in war buckle on their warlike accouterments of bronze and steel, some designed for defense, others for offense, if the sight sees this, immediately it is alarmed and it alarms the soul, so that often men flee, panic-stricken, from future danger <as though it were> present. For strong as is the habit of obedience to the law, it is ejected by fear resulting from sight, which coming to a man causes him to be indifferent both to what is judged honorable because of the law and to the advantage to be derived from victory. 17. It has happened that people, after having seen frightening sights, have also lost presence of mind for the present moment; in this way fear extinguishes and excludes thought. And many have fallen victim to useless labor and

dread diseases and hardly curable madresses. In this way the sight engraves upon the mind images of things which have been seen. And many frightening impressions linger, and what lingers is exactly analogous to <what is> spoken. 18. Moreover, whenever pictures perfectly create a single figure and form from many colors and figures, they delight the sight, while the creation of statues and the production of works of art furnish a pleasant sight to the eyes. Thus it is natural for the sight to grieve for some things and to long for others, and much love and desire for many objects and figures is engraved in many men. 19. If therefore, the eye of Helen, pleased by the figure of Alexander,² presented to her soul eager desire and contest of love, what wonder? If, <being> a god, <love has> the divine power of the gods, how could a lesser being reject and refuse it? But if it is a disease of human origin and a fault of the soul, it should not be blamed as a sin, but regarded as an affliction. For she came, as she did come, caught in the net of Fate, not by the plans of the mind, and by the constraints of love, not by the devices of art.

20. How then can one regard blame of Helen as just, since she is utterly acquitted of all charge, whether she did what she did through falling in love or persuaded by speech or ravished by force or constrained by divine constraint?

21. I have by means of speech removed disgrace from a woman; I have observed the procedure which I set up at the beginning of the speech; I have tried to end the injustice of blame and the ignorance of opinion; I wished to write a speech which would be a praise of Helen and a diversion to myself.

²Alexander is another name for Paris. [Ed.]

Anonymous

ca. 403–395 B.C.E.

The *Dissoi Logoi*, or *Opposing Arguments*, draws its title from its first few words; the original text is untitled and concerns more than opposing arguments. The treatise was written by an anonymous author around 403 to 395 B.C.E. Although numerous scholarly speculations have been put forward concerning the author's identity, it remains unknown. Most scholars agree, however, that the author was a Sophist (and therefore probably male) who was strongly influenced by Protagoras and was even possibly his student, and by Hippias, Gorgias, and Socrates. Translator T. M. Robinson believes that the text, written in a Doric Greek dialect, may have been lecture notes prepared by this unknown Sophist, a native speaker of an Ionian dialect, to organize his thoughts for a Doric-speaking audience.¹

The text we have, which is incomplete, consists of the following divisions: the first five sections (the fifth is untitled) explore opposing arguments on a number of topics. Sections six through nine (the last three untitled) investigate, in order, the questions of whether "wisdom and moral excellence" can be taught, whether political offices should be assigned by lot, what qualities the excellent rhetorician should have, and how his (or her) memory might be trained. Since the text appears to conclude at the end of section six, some scholars have argued that it is a disjointed assemblage of unrelated observations. Robinson, although believing the text to be incomplete, contends that the topics of all nine extant sections are related to the general theme of good government and how it is to be maintained through discourse. To understand this theme, one would need to know about methods of argument, the qualities and training of the orator, and so on.²

The "opposing arguments" of the first five sections typically take the same form. Two abstract terms, such as "good and bad" or "seemly and shameful," are first presented as being "the same thing" because the same thing may be good for some people but bad for others. Death is bad for those who die but good for the undertakers, to give one pithy example. This approach may seem to advocate a sort of situational ethics, which in some cases leads to cultural relativism. In other words, only an individual's perspective can determine the value of a given object, act, experience, and so on. This approach realizes the famous dictum of Protagoras that "of all things the measure is man, of things that are that they are, and of things that are not that they are not."³

Next, the two terms are presented as being essentially different, usually through arguments that emphasize the absurdity of calling the same action both good and bad, or both seemly and shameful, and so on. This approach seems to endorse the idea that these abstract qualities exist independent of the particular situation or

¹T. M. Robinson, *Contrasting Arguments: An Edition of the "Dissoi Logoi"* (New York: Arno Press, 1979), p. 51.

²Robinson, p. 79.

³Rosamond Kent Sprague, ed., *The Older Sophists* (Columbia, S.C.: University of South Carolina Press, 1972), p. 18.

object in which they are manifested—an approach that Plato would take one step further, assigning such abstract qualities a transcendent essence.

Can we infer that the author takes a position among these competing arguments? Much scholarly debate has focused on this question. The use of the first person cannot help us decide, because it was typical Sophist practice to argue for more than one side of an issue using “I.” This practice, no doubt, heightened the performative value of the verbal display, but it also had a serious intellectual purpose: to encourage the exploration of all possible sides of a question. The scholarly tradition credits Protagoras as the first Sophist to teach this method of intellectual exploration, but it became characteristic of the whole Sophistic Movement. At the very least, the practice destabilized the unquestioned authority of arguments based on essential qualities. As the lengthiest surviving text by an ancient Greek Sophist, the *Dissoi Logoi* continues to provide a rich ground for scholarly investigation of the movement’s philosophical and rhetorical views.

Selected Bibliography

T. M. Robinson’s *Contrasting Arguments: An Edition of the “Dissoi Logoi”* (1979) is the source of the translation included here. Robinson’s introduction and notes also provide the most complete current scholarly discussion of the text. Protagoras and the method of presenting contrasting arguments, or *dissoi logoi*, and sometimes also the *Dissoi Logoi* text itself, are discussed in most histories of the Sophistic Movement. See especially G. B. Kerferd, *The Sophistic Movement* (1981); Jacqueline de Romilly, *Great Sophists in Periclean Athens* (1988; 1992); and Edward Schiappa, *Protagoras and Logos: A Study in Greek Philosophy and Rhetoric* (1991). Other references can be found in the bibliography for Gorgias (p. 43).

Dissoi Logoi

I. ON GOOD AND BAD

On the matter of what is good and what is bad contrasting arguments are put forward in Greece by educated people: some say that what is good and what is bad are two different things, others that they are the same thing, and that the same thing is good for some but bad for others, or at one time good and at another time bad for the same person. For myself, I side with the latter group, and I shall examine the view by reference to human life, with its concern for food and drink and sex. For these things are bad for those who are sick, but good for the person who is healthy

and needs them. Or again, lack of restraint in these matters is bad for those who lack restraint, but good for those who sell these commodities and make money out of them. And illness is bad for the sick but good for the doctors. And death is bad for those who die, but good for the undertakers and the grave-diggers. Farming also, when it makes a handsome success of producing crops, is good for the farmers, but bad for the merchants. And it is bad for the ship-owner if his merchantships are involved in a collision or get smashed up, but good for the shipbuilders. Furthermore, it is bad for everyone else, but good for the blacksmiths if a tool corrodes or loses its sharp edge or gets broken to pieces. And undoubtedly it is bad for everyone else, but good for the potters if pot-

Translated by T. M. Robinson.

tery gets smashed. And it is bad for everyone else, but good for the cobbler if footwear wears out or gets ripped apart. Again, when it comes to contests, be they gymnastic, or artistic, or military—for example, when it comes to games (i.e., foot-races)—victory is good for the winner, but bad for the losers. And the same is also true for wrestlers and boxers and all those who take part in artistic contests as well; for example, lyre-playing is good for the winner, but bad for the losers. And in the matter of war (I shall speak first of the most recent events) the Spartan victory over the Athenians and their allies was good for the Spartans, but bad for the Athenians and their allies; and the victory which the Greeks won over the Persians was good for the Greeks, but bad for the non-Greeks. Again, the capture of Troy was good for the Achaeans, but bad for the Trojans. And the same holds for what happened to the Thebans and to the Argives. And the battle between the Lapiths and the Centaurs was good for the Lapiths, but bad for the Centaurs. And it is certainly the case that the fabled battle of the gods and Giants, and its victorious outcome, was good for the gods, but bad for the Giants. Another view is that what is good is one thing and what is bad is another thing; as the name differs, so likewise does the reality. I myself also distinguish the two in the above-mentioned manner. For I think it not even clear what sort of thing would be good and what sort of thing bad if each of the two were the same thing and not different things; the situation would be an astonishing one indeed. And I think that the man who says the above-mentioned things would not even be able to make a reply if someone were to put the following question: "Tell me now, did you ever before now do to your parents anything that was good?" He might say, "Yes, I did a great deal that was *very* good." "In that case you ought to do them a great deal that is *very bad*, if what is good and what is bad are the same thing. Tell me, did you ever before now do to your relatives anything that was good? In such a case you were doing them something bad. Or tell me, did you ever before now do harm to your enemies? In such a case you did them a great deal that was very beneficial. And please answer me this as well: Are you not in the position of pitying beg-

gars because they are in a very bad way and also (contrariwise) congratulating them for being well off, if the same thing is good and bad?" And there is nothing to stop the King of Persia from being in the same condition as beggars. For what is for him a great deal of good is also a great deal of evil, if the same thing is good and evil. And we can assume that these things have been said for every case. However, I shall also go through each individual case, beginning with eating and drinking and sexual intercourse. For, in the same way as has been mentioned above, if the same thing is good and bad, it is good for those who are ill should they do these things. And being sick is bad for the sick and also good for them if what is good and what is bad are the same thing. And for all else that has been mentioned in the above argument this holds good. Not that I am saying what the good *is*; I am trying rather to point out that it is not the same thing which is bad and good, but that each is different from the other.

2. ON SEEMLY AND SHAMEFUL

Contrasting arguments are also put forward on what is seemly and shameful. For some say that what is seemly and what is shameful are two different things; as the name differs, so likewise does the reality. Others, however, say that the same thing is both seemly and shameful. For my part, I shall attempt an exposition of the matter along the following lines: for example, it is seemly for a boy in the flower of his growth to gratify a respectable lover, but it is shameful for a handsome boy to gratify one who is *not* his lover. And it is seemly for women to wash indoors, but shameful to do it in a wrestling school; but for men it is seemly to wash in a wrestling-school or gymnasium. And to have sexual intercourse with one's husband in private, where one will be concealed from view by walls, is seemly: to do it outside, however, where somebody will see, is shameful. And it is seemly to have sexual intercourse with one's own husband, but very shameful with someone else's. Yes—and for the husband too it is seemly to have sexual intercourse with his own wife, but shameful with someone else's. And for the husband it is shame-

ful to adorn himself and smear himself with white lead and wear gold ornaments, but for the wife it is seemly. And it is seemly to treat one's friends kindly, but shameful to treat one's enemies in such a way. And it is shameful to run away from one's enemies, but seemly to run away from one's competitors in a stadium. And it is shameful to slaughter those who are friends or fellow-citizens, but seemly to slaughter one's enemies. And the above points apply to every case. However, I shall go on to what cities and nations consider shameful. To Spartans, for example, it is seemly that girls should exercise naked or walk around bare-armed or without a tunic, but to Ionians this is shameful. And (in Sparta) it is seemly that boys should *not* learn arts or letters, but to Ionians it is shameful not to know all these things. Among Thessalians it is seemly for a man first to select the horses from the herd and then train them and the mules *himself*, and seemly for a man first to select a steer and then slaughter, skin, and cut it up *himself*; in Sicily, however, such activities are shameful, and the work of slaves. To Macedonians it appears to be seemly that girls should love and have intercourse with a man before marrying a man, but shameful to do this once they are married. To Greeks both practices are shameful. The Thracians count it an adornment that their girls tattoo themselves, but in the eyes of everyone else tattoo-marks are a punishment for wrongdoers. And the Scythians consider it seemly that, after killing a man, one should on the one hand scalp him and carry the frontal hair on one's horse's brow and on the other hand gild or silver over the skull and drink from it and offer libations to the gods; among the Greeks no one would want to go into the same house as a person who had done that sort of thing. Massagetes cut up their parents and then eat them, and it seems to them an especially seemly form of entombment to be buried inside one's children; if a person did this in Greece he would be driven out of Greece and die a miserable death for doing things that are shameful and horrible. The Persians consider it seemly for men, too, to adorn themselves, like women, and to have sexual intercourse with their daughter or mother or sister; the Greeks consider such actions shameful and unlawful. Again, to Lydians it appears seemly that

girls should prostitute themselves to earn money, and in that way get married; among the Greeks no one would be willing to marry any such girl. And Egyptians differ from everyone else in their views on what is seemly. For here it appears seemly that women should weave and do manual work, but there it appears seemly that *men* should do such things and that women should do what men do here. Kneading clay with the hands, or dough with the feet, is for them seemly, but for us just the opposite. I think that if one were to order all mankind to bring together into a single pile all that each individual considered shameful, and then again to take from this mass what each thought seemly, nothing would be left, but they would all, severally, take away everything. For not everyone has the same views. I shall bring forward as additional evidence some verses:

For if you make this distinction you will see the other law that holds for mortal men: there is nothing that is in every respect seemly or shameful, but the Right Moment takes the same things and makes them shameful and then changes them round and makes them seemly.

To put the matter generally, all things are seemly when done at the right moment, but shameful when done at the wrong moment. What then have I managed to do? I said I would demonstrate that the same things are shameful and seemly, and I demonstrated it in all the above-mentioned cases. It is also said, when what is shameful and what seemly is under discussion, that each differs from the other. For if one were to ask those who say that the same thing is shameful and seemly whether any *seemly* thing has ever been done by them, they will have to agree that what they did was *shameful*, if what is shameful and what is seemly are the same thing. And if they know that a particular man is handsome, they know that this same man is also ugly; and if white, also black. And if it is seemly to treat the gods with respect, it is also shameful to treat the gods with respect, if the same thing is shameful and seemly. And it can be assumed that I have made the same point in each and every instance. Turning to their (specific) argument: If it is seemly for a woman to adorn herself, it is shameful for a woman to adorn herself, if the

same thing is shameful and seemly. And this applies to all the other cases: In Sparta it is seemly for girls to exercise naked, in Sparta it is shameful for girls to exercise naked—and similarly in all the other instances. They say that if some people were to bring together from every part of the world those things that are shameful, and were then to call people together and command them to take what each considered seemly, everything would be taken away as seemly. I personally profess my astonishment if things that were shameful when they were brought together are going to turn out to be seemly, and not the sort of things they were when they came. Certainly if they had brought horses or cattle or sheep or people they would not have taken something else away. For they would not even have taken brass away if they had brought gold, nor lead if they had brought silver coin. Do they really then take away things that are seemly in place of the shameful that they brought? Come now, if someone had brought along an ugly man, would he have taken him away handsome instead? They also adduce as witnesses poets—who write their poetry to give pleasure, not to propound truth.

3. ON JUST AND UNJUST

Contrasting arguments are also put forward on the matter of what is just and what is unjust. Some say that what is just and what is unjust are two different things, others that the same thing is just and unjust. For my part, I shall attempt to bolster the latter view. And I shall say first of all that it is just to tell lies and to deceive. Opponents of this view might say that doing these things to one's enemies is shameful and base; yet they would *not* say that it is shameful and base to do them to those whom one holds very dear—parents, for example. For if it were necessary that one's father or mother should consume some medicament (whether in solid or liquid form), but he or she was unwilling, is it not just to give them the medicament in their food or in their drink and not say that it is in it? So it is already clear that it is just to tell lies and to deceive one's parents, and for that matter to steal the property of one's friends and use violence on those whom one holds very dear.

For example, if some member of one's household had been brought to grief in some way and were on the point of doing away with himself with a sword or rope or some other implement, it is just to steal these implements, should one be able to, or, should one arrive late on the scene and come upon him with the implement in his hand, to take it away from him by force. And surely it is just to enslave one's enemies, should one prove able to capture an entire city and sell it into slavery? And breaking into buildings which are the public property of one's fellow-citizens appears to be just. For if one's father has been overpowered by his enemies and jailed, under sentence of death, is it not just to break in through the wall and steal one's father away and so save him? Or take oath-breaking. If a man were captured by the enemy and undertook on oath to betray his city if they set him free, would this man be acting justly if he *kept* his oath? I for my part do not think so, but rather that he would save his city and his friends and the ancestral temples by breaking his oath. So it is already clear that oath-breaking too is just. And temple-robbery as well.

I am excluding those temples which are the private possessions of particular cities; but is it not just to take and use for war-purposes those temples which are the public property of Greece—those of Delphi and Olympia—if the foreign invader is on the point of capturing Greece, and if preservation depends on money? And it is just to slaughter those who are dearest, since both Orestes and Alcmaeon did—and the god declared that they had acted justly. I shall turn to the arts—particularly the compositions of poets. For in the writing of tragedies and in painting the best person is the one who deceives the most in creating things that are *like* the real thing. And I want to adduce evidence from older poetry, like that of Cleobuline:

I saw a man stealing and deceiving by force,
And gaining his ends by force in this way was a
very just action.

These lines were in existence a long time ago.
The next are from Aeschylus:

God does not stand aloof from just deception.
There are occasions when God respects an oppor-
tune moment for lies.

To this view also there is an opposing view, to the effect that what is just and what is unjust are different things; as the name differs, so likewise does the reality. For if one were to ask those who say that the same thing is just and unjust whether they had ever up to then performed any just action towards their parents, they will say Yes. But in that case it was also an *unjust* action; for they concede that the same thing is just and unjust. Or take another point. If somebody knows that some man is just, he in that case knows that the same man is *unjust* and by the same token big and small. But if a man *has* been very *unjust* in his actions he ought to be executed!—For he has brought about (a situation that warrants death?). Let that suffice for these points. I shall turn to the (specific) arguments they use when they claim that they can demonstrate that the same thing is both just and unjust. For, if what they say is true, (the fact? to demonstrate?) that stealing the enemy's possessions is just is to demonstrate that this very action is *unjust*; and likewise for all the other cases. They adduce as evidence arts in which what is just and what is unjust have no place. And poets never write their poems to pound truth but to give pleasure.

4. ON TRUTH AND FALSEHOOD

Contrasting arguments are also put forward on what is true and what is false. The one view affirms that the true statement and the false statement are different things; the other group affirms that the two statements are on the contrary the same. I for my part also hold the latter view: first, because the two statements are expressed in the same words; and next, because whenever a statement is made, if the event has taken place in the way indicated by the statement, the statement is true; but if the event has *not* taken place in the way indicated, the same statement is false. For example, suppose a statement consists of an accusation against somebody of temple-robbery. If the act did in fact take place, the statement is true; if not, the statement is false. And likewise with the statement of the man defending himself against the charge. And lawcourts in fact judge the same statement to be both true and false. For

the fact is, even if, sitting next to one another in a row, we were (as a group) to say, "I am an initiate," we shall all be saying the same thing, but only I shall be telling the truth, since only I *am* an initiate. It is clear, then, that the same statement is false when the false is present to it, and true when the true is present to it (just as a person is the same person, though at one time a child, at another a youth, at another an adult, and at another an old man). It is also said that the false statement is different from the true statement; as the name differs, so likewise does the reality. For if anyone were to ask those who say that the same statement is false and true which of the two their own statement is, if the reply were "false," it is clear that a true statement and a false statement *are* two different things, but if he were to reply "true" then this same statement is also *false*. And if at any time he said something true or testified that something was true, then he also testified that these same things were false. And if he knows that a certain man is an honest man, he knows the same man is a liar. And in accord with their thesis they say that a statement is true if the event to which it refers took place, but false if it did not. It is therefore important to ask jurymen in their turn what their *judgment* is (jurymen, of course, not being personally present at the events). Even they themselves agree that that with which the false is intermingled is false, and that that with which the true is intermingled is true. But this view is totally different (from their original thesis).

5. "The demented, the sane, the wise and the ignorant both say and do the same things. First of all they call things by the same name: 'earth,' 'man,' 'horse,' 'fire,' and everything else. And they do the same things: they sit, eat, drink, lie down, and so on, in the same way. What is more, the same thing is also both bigger and smaller, and more and less, and heavier and lighter. For in those respects all objects are the same. The talent is heavier than the mina and lighter than two talents; the same thing then is both lighter and heavier. And the same man is alive and is not alive; and the same things exist (are the case) and do not exist (are not the case). For what exists (is the

case) here does not exist (is not the case) in Libya; nor does what exists (is what is the case) in Libya exist (turn out to be the case) in Cyprus. And so on in all other instances, using the same argument. Consequently, things both exist (are the case) and do not exist (are not the case).” Those who say this—that the demented and the wise and the ignorant do and say the same things, and all the other things that follow from the argument—are in error. For if one were to ask them if dementedness differs from sanity or wisdom from ignorance, they say “Yes.” For it is quite obvious, even from the actions of each group, that they will grant this point. So even if they do the same things (as the demented do) the wise are not demented, nor the demented wise, nor is everything turned into confusion. And one ought to bring up the question whether it is those who are sane or those who are demented who speak at the right *moment*. For whenever one asks them they say that the two groups say the same things, only the wise say them at the right moment and the demented at moments when it is not proper. And in saying this they seem to me to have added the small phrases “when it is proper” and “when it is not proper,” with the result that it is no longer the *same* thing. I myself do not think that things *are* altered by the addition of such qualifications, but rather when an accent is altered. For example: “Γλαῦκος” (Glaucus) and “γλαυκός” (green), or “Ξάνθος” (Xanthus) and “ξανθός” (blonde), or “Ξοῦθος” (Xuthus) and “ξουθός” (nimble). The above differed by a difference in the placing of the accent: the following by being spoken with longer or shorter vowel-lengths: “Τύρος” (Tyre) and “τυρός” (cheese), “σάκος” (shield) and “σακός” (enclosure), and yet others by a change in the ordering of their letters: “κάρτος” (strength) and “κρατός” (of a head), “ὄνος” (ass) and “νόος” (mind). Since, therefore, there is such a difference when nothing is taken away, what if in that case somebody does either add something or take something away? I shall give an example of the sort of thing I mean. If a man were to take away one from ten, there would no longer be ten or even one, and so on in the same way in all other instances. As for the affirmation that the same man exists and does

not exist I ask, “Does he exist in some particular respect or in every respect?” Thus if anyone denies that the man in question exists, he is making the mistake of asserting “in *every* respect.” The conclusion is that all these things exist in *some* way.

6. ON WHETHER WISDOM AND MORAL EXCELLENCE ARE TEACHABLE

There is a certain view put forward which is neither true nor new, to the effect that wisdom and moral excellence can be neither taught nor learnt. Those who say this use the following proofs: That it is impossible, if you impart something to some other person, for you to retain possession of that thing. This is one proof. Another is that, had wisdom and moral excellence been able to be taught, there would have existed recognized teachers of them—the way there have been recognized teachers of the arts. A third proof is that those men in Greece who became wise would have taught wisdom to their own children and their friends. A fourth proof is that before now there have been people who frequented sophists and gained no benefit. A fifth proof is that a large number of people who did not associate with sophists have become eminent. I myself consider this line of reasoning exceedingly simple-minded. For I know that teachers *do* teach those letters which each one happens to possess himself, and that harp-players *do* teach people how to play the harp. As for the second proof—that there do not in fact exist acknowledged teachers—what in that case do the *sophists* teach, if not wisdom and moral excellence? And what were the followers of Anaxagoras and Pythagoras? As for the third proof, Polyclitus *did* teach his son how to make statues. Even if an individual man does *not* teach (his own wisdom) nothing will have been proved; but if he *is* able to teach it, there is your proof that it is *possible* to do so. The fourth point (is valid only) if those in question do not become wise after associating with *skilled* sophists. (I say *skilled*) because a lot of people do *not* learn their letters, even though they have taken a course in them. There is also an important natural talent

whereby a person becomes capable, without having learned his competence from sophists, of comprehending the greater part (of a subject) with ease (provided he is also naturally well-endowed), after learning (only?) a small part (of it) from those from whom we also learn words. And some of these latter things (be it a greater or smaller number) one person learns from his father and another from his mother. And if someone is not convinced that we learn our words, but feels sure we are born knowing them, let him ascertain the truth from the following evidence: should a person send a child to Persia immediately it was born and have it brought up there without ever hearing the speech of Greece, the child would speak Persian; should one bring the child from Persia to Greece, the child would speak Greek. *That* is the way we learn words, and we do not know who it was who taught us. With that my argument is completed, and you have its beginning, end, and middle. I am not saying that wisdom and moral excellence *are* teachable, but that the above-mentioned proofs do not satisfy me.

7. Some of the public speakers say that offices should be assigned by lot; but this opinion of theirs is not a very good one. If only somebody would ask him (i.e., the man who says this), "Why in that case don't you assign your household slaves their jobs by lot, so that the ox-driver, if he draws the job of cook as his lot, will cook, while the cook will drive oxen, and so on in all other instances? And why don't we bring together smiths and cobblers, carpenters and goldsmiths, and assign them jobs by lot, forcing them to perform whatever craft each one draws by lot, not the craft of which each has expert knowledge?" Likewise in the case of artistic contests: one could make the contestants draw lots, and each compete in whatever contest he draws. A flute-player will perhaps be playing the harp, or a harpist the flute. And in war an archer or hoplite will be a cavalryman, and a cavalryman will be an archer; with the result that everyone will be doing things of which they have neither the knowledge nor the capability. And they say that this is a good method, and exceedingly democratic. I personally consider it the *least* democratic of all methods. For there are in cities men who

hate the people (*demos*), and if ever the lot falls to them they will *destroy* the people (*demos*). But the people itself ought to keep watch and elect all those who are well-disposed towards itself, and ought to choose as its army-commanders those who are suitable for the job, and to choose others to serve as guardians of the law, and so on.

8. I consider it a characteristic of the same man and of the same art to be able to converse in brief questions and answers, to know the truth of things, to plead one's cause correctly, to be able to speak in public, to have an understanding of argument-skills, and to teach people about the nature of everything—both how everything is and how it came into being. First of all, will not the man who knows about the nature of everything also be able to *act* rightly in regard to everything? Furthermore, the man acquainted with the skills involved in argument will also know how to speak correctly on every topic. For the man who intends to speak correctly must speak on the topics of which he has knowledge; and he will, one must at any rate suppose, have knowledge of *everything*. For he has knowledge of all argument-skills, and all arguments are about everything that is. And the man who intends to speak correctly on whatever matter he speaks about must know () and (how to) give sound advice to the city on the performance of good actions and prevent them from performing evil ones. In knowing these things he will also know the things that differ from them—since he will know everything. For these (objects of knowledge) are part of *all* (objects of knowledge), and the exigency of the situation will, if need be, provide him with those (other objects), so as to achieve the same end. Even if he does not know how to play the flute, he will always prove able to play the flute should the situation ever call for his doing this. And the man who knows how to plead his cause must have a correct understanding of what is just; for that is what legal cases have to do with. And in knowing this he will know both that which is the contrary of it, and the (other things?) different in kind (from it?). He must also know all the laws. If, however, he is going to have no knowledge of the facts, he will have no knowledge of the laws either. For

who is it knows the rules (laws) of music? The man acquainted with music. Whereas the man unacquainted with music is also unacquainted with the rules that govern it. At any rate, if a man knows the truth of things, the argument follows without difficulty that he knows everything. As for the man who is able to converse in brief questions and answers, he must under questioning give answers on every subject. So he must have knowledge of every subject.

9. A very great and most attractive discovery that has been made for the way we live is (the power of) memory; it is useful for all purposes, for both general education and practical wisdom. This is true, (as you will see) if you concentrate your attention (upon the matter). For by following this course your mind will come to perceive

more “as a whole” that which you have learned. Second, you must, whenever you hear anything, go over it carefully. For by frequent repetition of what you hear you commit it to memory. Third, you must, whenever you hear anything, connect it to what you know, as in the following example: you need to remember the name Chrysippus? Then you ought to connect it with χρυσός (gold) and ἵππος (horse). Another example, the name Pylilampes: you should connect it with πῦρ (fire) and λάμπειν (to gleam). These examples have to do with names. In the case of things you must act as follows: if you need to remember “courage” you should connect it with Ares and Achilles; you should likewise connect “metal-working” with Hephaestus, and “cowardice” with Epeius. . . .

Aspasia

fl. fifth century B.C.E.

Aspasia, the daughter of Axiochus, was born in Miletus, an Ionian Greek city in Asia Minor. After she came to Athens around 440 B.C.E., she lived with the famous political leader Pericles (she could not marry him because she was a foreigner), and her social circle encompassed many Athenian cultural and political leaders, including Socrates. Aspasia was famous both in her own day and later, through several classical sources, as a teacher of rhetoric, although none of her texts are known to have survived. Some sources say that she wrote several of Pericles' important speeches and taught Socrates what is now known as the Socratic method.

Madeleine Henry, who has carefully evaluated all the available sources on Aspasia's life, points out that no hard evidence survives from the fifth century B.C.E. concerning her date of birth, adult relationships, or intellectual life. Piecing together her biography from later sources is a hazardous enterprise, especially since, as Henry points out, historical images of her have been continually reinvented as images of classical Athens have been reassessed. Moreover, whatever Aspasia's intellectual contributions to fifth-century Athens may have been, posterity has persistently viewed them through a lens that emphasized not only her gender but also her putatively illicit sexuality. Obviously, this approach hinders any effort to create a "usable" Aspasia for modern rhetorical studies. Yet, to have the activities of any classical-era woman preserved in such detail is remarkable, and it argues that, at the very least, Aspasia did have an impact on the Athenian society of her day.

The clouded historical record concerning Aspasia may be attributed in part to the many social and legal restrictions that had been imposed on Athenian women by the fifth century B.C.E. Women had long participated in some public religious and familial rituals, as well as engaging in private conversations on philosophical and rhetorical issues with children under their instruction and also with peers. Women were occasionally admitted to the Academy of Plato, and some probably also functioned as private teachers of philosophy and rhetoric, as suggested by the role of Diotima in Plato's *Symposium*, which parallels what history suggests for Aspasia.

Nevertheless, these public and private rhetorical activities were occulted by the fact that no women were politically active Athenian citizens, not even women born free in Athens and married to Athenian men. Legally, women were considered on a par with minor children and were required to be under the care and control of a man throughout their lives, usually the father or husband. Married women of the upper classes were confined to the home except on a few religious or family occasions (such as a funeral). Even within the home, they seldom socialized with men other than family members; they remained in seclusion when their husbands entertained, and female company at a banquet would typically be provided by slaves or prostitutes. Lower-class married women had somewhat more freedom of movement and could work in the fields or assist at their husband's trade.

Further restrictions obtained for women such as Aspasia who were not native-born Athenians. Legally barred from marrying an Athenian citizen, they could

marry only other “metics,” or foreigners. If a woman was not someone’s wife—or someone’s slave—virtually the only social roles open to her were varieties of prostitution. She might be a common prostitute or a better-educated and more expensive one, called a hetaera, who socialized with men at banquets, providing entertainment and cultured conversation as well as sexual services; or she might enter a long-term, but legally unprotected, relationship as someone’s concubine. As a metic, Aspasia was legally barred from marrying Pericles, but he established her as his concubine.

Remarkably, given that a concubine would usually live in wifely seclusion, Aspasia’s home became something of an intellectual salon. Even more remarkably, she received not only the Athenian male elite but also their wives, according to Plutarch’s life of Pericles (excerpted here). Plutarch depicts her home as a location for philosophical and rhetorical conversations in mixed company. Among her visitors was Socrates, who, it is said, first encountered Alcibiades there while the young man was Pericles’ ward.

Was Aspasia a hetaera when Pericles met her? So say some sources, adding that she ran a house of prostitution; her name, which may be translated as “Welcomer” or “Gladhander,” might seem to be a prostitute’s professional nickname. But others attribute this charge to the Athenians’ hatred of her, because she was so influential with the era’s leaders and stepped so far outside what was considered the bounds of proper womanhood. Henry believes that she was never a prostitute, but that the image of her as sexually promiscuous and manipulative entered the historical record via Greek comedy that was critical of Pericles.¹ Jacqueline de Romilly refers to her simply as a “cultivated Milesian woman.”² It seems clear that she was unpopular in Athens. According to one story, the truth of which is disputed, a trumped-up charge of impiety was actually lodged against her, but Pericles pleaded successfully for her acquittal.

After Pericles divorced his wife, Aspasia apparently lived with him until his death in 429 B.C.E. His devotion to her was noted in Plutarch’s life of Pericles and elsewhere. Tradition states that they had a son together, and Plutarch recounts that after Pericles’ two sons by his wife died in a plague, he obtained the repeal of a law he himself had passed forbidding the sons of foreign women to become Athenian citizens, so that his son by Aspasia could become his legal heir. This was an extraordinary step for a man of Pericles’ eminence to take for the child of a woman who was viewed by many as little better than a prostitute. After the death of Pericles, Aspasia married a lower-class man, a sheep dealer named Lysicles (possibly the only sort of match available to one with her background), and under her tutelage he later became an important Athenian leader.

One classical source, Athenaeus, says that Aspasia “was the specialist in sophistic learning and teacher of speechwriting to Pericles.”³ The kind of verbal skill

¹Madeleine Henry, *Prisoner of History: Aspasia of Miletus and Her Biographical Tradition* (New York: Oxford University Press, 1995), p. 20ff.

²Jacqueline de Romilly, *Great Sophists in Periclean Athens* (1988; trans. Janet Lloyd, Oxford, Great Britain: Clarendon of Oxford University Press, 1992), p. 25.

³Quoted in Eva C. Keuls, *The Reign of the Phallus: Sexual Politics in Ancient Athens* (New York: Harper and Row, 1985), p. 198.

attributed to hetaerae never rose above the level of coarse jokes, but Aspasia's abilities were of an entirely different order. Plutarch says, "Aspasia, some say, was courted and caressed by Pericles upon account of her knowledge and skill in politics" (see excerpt included here)—that is, rather than for her beauty—and "she had the repute of being resorted to by many of the Athenians for instruction in the art of speaking" (see excerpt included here).

Several sources depict her as teaching rhetoric to Socrates. For example (in a passage excerpted here), Plutarch notes that Socrates would sometimes visit her. In *Deipnosophistae*, Athenaeus several times associates Aspasia with Socrates, and he says flatly that she was "Socrates' teacher in rhetoric" (see excerpt included here). In this passage she is shown teaching Socrates to woo the man he loves, Alcibiades, not with sexual allure but with intellectual inducements. A dialogue attributed to her by Xenophon is cited without question by Cicero as an illustration of what he calls "inductive" argument, a Socratic approach (*De Inventione* I, XXXI; excerpted here). Rhetorician C. Jan Swearingen has suggested that Diotima in Plato's *Symposium* is a semifictional character modeled on Aspasia.⁴ And Plato's dialogue "Menexenus" (excerpted here) has her teaching Socrates a funeral oration modeled after one she wrote for Pericles to deliver (a famous one attributed to him by Thucydides). Socrates repeatedly expresses admiration for her skill.

How plausible is it that a woman could have possessed this skill? Plato could be read as making fun of her in "Menexenus." The speech attributed to her is exaggerated in style, with just the sorts of embellishments that Socrates elsewhere condemns, and full of historical errors that create an absurdly positive view of Athens. Menexenus responds to Socrates' praise of this speech by saying, "You are always making fun of the rhetoricians" (see excerpt included here). Moreover, the speech purports to commemorate the fallen soldiers of the Corinthian war, but both Aspasia and Socrates were dead by the time the war began. Classicist Edmund F. Bloedow suggests that Plato intended to criticize the mindless patriotism of the Athenians of his day, underscoring the dangers of listening to such rhetoric by putting the speech in the mouth of the most (professionally) seductive of the founders of Athenian oratory, Aspasia, who comes under attack here as "a co-architect of the Sophistic movement."⁵ Feminist rhetoricians Susan Jarratt and Rory Ong further suggest that the elaborate trope of autochthony⁶ that Plato puts in Aspasia's mouth is a way of forcing her to testify to her own devaluation as a female.⁷ Other scholars, however, propose that Socrates really did admire Aspasia and that Plato is doing no more than poking fun at this ad-

⁴C. Jan Swearingen, "A Lover's Discourse: Diotima, Logos, and Desire," in *Reclaiming Rhetorica: Women in the Rhetorical Tradition*, ed. Andrea A. Lunsford (Pittsburgh: University of Pittsburgh Press, 1995), p. 33.

⁵Edmund F. Bloedow, "Aspasia and the 'Mystery' of the 'Menexenos,'" *Wiener Studien* 9 (1975):48.

⁶Autochthony, a common trope in funeral orations for fallen soldiers, refers to the imagined birth of male heroes from the soil of the motherland rather than from human wombs.

⁷Susan Jarratt and Rory Ong, "Aspasia: Rhetoric, Gender, and Colonial Ideology," in *Reclaiming Rhetorica: Women in the Rhetorical Tradition*, ed. Andrea A. Lunsford (Pittsburgh: University of Pittsburgh Press, 1995), p. 18ff.

miration with the exaggerated deference Socrates pays to a second-rate performance in the “Menexenus.”⁸

The surviving fragments of dialogue attributed to Aspasia do indicate a distinctive view of rhetoric. That she might have developed such a view is suggested by the possibility that she received some sort of education encouraging reflection. Jarratt and Ong have pointed out that Aspasia’s birth in Miletus locates her in an important source of early Greek philosophy.⁹ Somehow she gained an education that contributed to her influence in Athens, and she may have done so as a pupil of a philosopher in her native town. Feminist historian of rhetoric Cheryl Glenn observes that, at any rate, she certainly seemed to be well educated by the time she arrived in Athens.¹⁰

The dialogues on love reported by Athenaeus and Cicero hint at an egalitarian view of rhetoric. While promoting a view of love that rejects dominance and submission and that encourages the partnership of intellectual equals, Aspasia treats her interlocutors as her intellectual equals, not attempting to knock them down with agonistic argument but rather gently drawing them toward her own point of view by means of premises they provide and endorse. Cicero suggests that Socrates preferred this method “because he wished to present no arguments himself, but preferred to get a result from the material which the interlocutor had given him—a result which the interlocutor was bound to approve as following necessarily from what he had already granted” (see excerpt included here). It is easy to imagine that such an indirect method originated with a woman who was legally powerless, in a compromised and vulnerable position, but who attempted to advise and influence men of great power.

The fact remains that apparently no texts authored by Aspasia have survived. Like Socrates, she is known to us only through the representations of others. Including her in a history of rhetoric, therefore, is problematic. As Glenn explains, however, there is evidence that some women did function as rhetors even under the oppressive classical social order, and of these Aspasia is by far the best known and most influential. If indeed she did teach Socrates the so-called Socratic method, her contribution to the history of both philosophy and rhetoric is far-ranging. At the very least, recognizing her activity here erects a monument to the rhetorical labors of Aspasia and other classical women and marks the spot where a more substantial edifice may be built if the search for textual remains succeeds.

Selected Bibliography

As noted above, no texts written by Aspasia have survived. Our excerpts are drawn from Benjamin Jowett’s translation of “Menexenus” in *The Dialogues of Plato* (vol. IV; 1871); H. M. Hubbell’s translation of Cicero’s *De Inventione* in the Loeb Classical Library series

⁸See Keuls, 198–99, and Eva Cantarella, *Pandora’s Daughters: The Role and Status of Women in Greek and Roman Antiquity* (1981; trans. Maureen B. Fant, Baltimore: Johns Hopkins University Press, 1987), pp. 54–55.

⁹Jarratt and Ong, pp. 10–12.

¹⁰Cheryl Glenn, *Rhetoric Retold: Regendering the Tradition from Antiquity through the Renaissance* (Carbondale: Southern Illinois University Press, 1997), p. 36.

(vol. II; 1949); Charles Burton Gulick's translation of *Deipnosophistae* by Athenaeus (vol. II; 1927); and the translations by various hands of Plutarch's *Lives*, revised and edited by Arthur Hugh Clough (vol. I; 1864).

Plato's "Menexenus" has traditionally presented many problems to scholars; a helpful survey is in W. K. C. Guthrie, *A History of Greek Philosophy*, volume 4, *Plato: The Man and His Dialogues: Earlier Period* (1975). Edmund F. Bloedow, in "Aspasia and the 'Mystery' of the 'Menexenus'" (*Wiener Studien* 9 [1975]: 34–48), argues that these problems can be addressed by considering why Plato chose to place the funeral oration in the mouth of Aspasia.

Madeleine Henry's *Prisoner of History: Aspasia of Miletus and Her Biographical Tradition* (1995) is a thorough consideration not only of the classical remains pertaining to the life of Aspasia but also of later Western interpretations of her in philosophy, literature, and art up to the modern period. Cheryl Glenn makes a strong case for recuperating Aspasia in the history of rhetoric in "sex, lies, and manuscript: Refiguring Aspasia in the History of Rhetoric" (*College Composition and Communication* 45 [May 1994]: 180–99). Glenn's bibliography is also helpful. A more extensive discussion of Aspasia that locates her in her cultural milieu can be found in Glenn's *Rhetoric Retold: Regendering the Tradition from Antiquity through the Renaissance* (1997). For both information on the clouded historical record concerning Aspasia and informed speculation on what her role might have been, see also Susan Jarratt and Rory Ong, "Aspasia: Rhetoric, Gender and Colonial Ideology," and C. Jan Swearingen, "A Lover's Discourse: Diotima, Logos, and Desire," both in *Reclaiming Rhetorica: Women in the Rhetorical Tradition*, ed. Andrea A. Lunsford (1995).

Jacqueline de Romilly's *Great Sophists in Periclean Athens* (1988; trans. Lloyd, 1992) has little to say about Aspasia but provides an excellent introduction to her cultural setting. Discussing Aspasia and providing an excellent general background on women and sexual politics in ancient Greece are Eva Cantarella, *Pandora's Daughters: The Role and Status of Women in Greek and Roman Antiquity* (1981; trans. Fant, 1987), and Eva Keuls, *The Reign of the Phallus: Sexual Politics in Ancient Athens* (1985). For a more explicitly legal focus, see Roger Just, *Women in Athenian Law and Life* (1989).

Plato

From *Menexenus*

SOCRATES: Whence come you, Menexenus? Are you from the agora?

MENEXENUS: Yes, Socrates; I have been at the council.

SOCRATES: And what might you be doing at the council? And yet I need hardly ask, for I see that you believe yourself to have arrived at the

end of education and of philosophy. You think that you have had enough of them, and, being now grown up, are going higher, and intend to govern us old men like the rest of your family, which has always provided some one who kindly took care of us.

MENEXENUS: Yes, Socrates, I shall be ready to hold office, if you allow and advise that I should, but not if you think otherwise. I went to the coun-

Translated by Benjamin Jowett.

cil chamber because I heard that the council was about to choose some one who was to speak over the dead. For you know that there is to be a public funeral?

SOCRATES: Yes, I know that. And whom did they choose?

MENEXENUS: No one; they delayed the election until to-morrow, but I believe that either Aeschines or Dion will be chosen.

SOCRATES: O Menexenus! death in battle is certainly in many respects a noble thing. The dead man gets a fine and costly funeral, although he may have been poor, and a speech is made over him by a wise man who weighs his words, and has long ago prepared what he has to say, although he who is praised may not have been good for much. The speakers praise him for what he has done and for what he has not done—that is the beauty of them—and they steal our souls with their embellished words; in every conceivable form they praise the city; and they praise those who died in the war, and all our ancestors who went before us; and they praise ourselves also who are still alive, until I feel quite elevated by their laudations, and I stand listening to their words, Menexenus, and become enchanted by them, and all of a sudden I imagine myself to have grown up into a greater and nobler and finer man than I was before. And if, as often happens, there are any foreigners who accompany me to the speech, I become suddenly conscious of having a sort of exaltation over them, and they seem to experience a corresponding feeling of admiration at me, and at the greatness of the city, which appears to them, when they are under the influence of the speaker, more wonderful than ever. This consciousness of dignity lasts me more than three days, and not until the fourth or fifth day do I come to my senses and know where I am; in the mean time I fancy that I am living in the Islands of the Blest. Such is the art of our rhetoricians, and in such manner does the sound of their words keep ringing in our ears.

MENEXENUS: You are always making fun of the rhetoricians, Socrates; this time, however, I am inclined to think that the speaker who is chosen will not have much to say, for the choice has been quite sudden, and he will be compelled almost to improvise.

SOCRATES: But why, my friend, should he not have plenty to say? Every rhetorician has speeches ready made; nor is there any difficulty in improvising that sort of stuff. Had the orator to praise Athenians among Peloponnesians, or Peloponnesians among Athenians, he must be a good rhetorician who could succeed and gain credit. But there is no difficulty in a man's winning applause when he is contending for fame among the persons who are being praised.

MENEXENUS: Do you think not, Socrates?

SOCRATES: Indeed "not."

MENEXENUS: Do you think that you could speak yourself if there was a necessity, and if the council was to choose you?

SOCRATES: That I should be able to speak is no great wonder, Menexenus, considering that I had an excellent mistress in the art of rhetoric; she who made so many good speakers, and one who was the best among all Hellenes—Pericles the son of Xanthippus.

MENEXENUS: And who was she? I suppose that you mean Aspasia.

SOCRATES: Yes, that I do; and I had also Connus the son of Metrobius, as a master, and he was my master in music, as she was in rhetoric. No wonder that a man who has received such an education should be a finished speaker; even the pupil of very inferior masters, say, for example, one who had learned music of Lamprus, and rhetoric of Antiphon the Rhamnusian, might make a figure if he were to praise the Athenians among the Athenians.

MENEXENUS: And what would you be able to say if you had to speak?

SOCRATES: Of my own wit, most likely nothing; but yesterday I heard Aspasia composing a funeral oration about these very dead. For she had been told, as you were saying, that the Athenians were going to choose a speaker, and she repeated to me the sort of speech which he should deliver, partly improvising and partly from previous thought, putting together fragments of the funeral oration which Pericles spoke, and, I believe, she composed.

MENEXENUS: And can you remember what Aspasia said?

SOCRATES: I ought to be able, for she taught

me, and I was all but beaten because I had a bad memory.

MENEXENUS: Then why will you not rehearse what she said?

SOCRATES: Because I am afraid that my mistress may be angry with me if I publish her speech.

MENEXENUS: Nay, Socrates, let us have the speech, whether Aspasia's or any one else's, no matter about that. I hope that you will oblige me.

SOCRATES: But I am afraid that you will laugh at me if I continue the games of youth in old age.

MENEXENUS: Far otherwise, Socrates: let us by all means have the speech.

SOCRATES: Truly I have such a disposition to oblige you, that if you bid me dance naked I should not like to refuse, since we are alone. Listen, then. If I remember rightly, she began as follows, with the mention of the dead: —

There is a tribute of deeds and of words. The departed have already had the first, when going forth on their destined journey they were attended on their way by the state and by their friends; the tribute of words remains to be given to them, as it meet and by law ordained. For noble words are a memory and crown of noble actions, which is given to the doers of them by the hearers. A word is needed which will duly praise the dead and gently admonish the living, exhorting the brethren and descendants of the departed to imitate their virtue, and consoling their fathers and mothers and the survivors, if any, who may chance to be alive of the previous generation. What sort of a word will this be, and how shall we rightly begin the praises of these brave men? In their life they rejoiced their own friends with their virtue, and their death they gave in exchange for the salvation of the living. And I think that we should praise them in the order in which nature made them good, for they were good because they were sprung from good fathers. Wherefore let us first of all praise the goodness of their birth; secondly, their nurture and education; and then let us set forth how noble their actions were, and how worthy of the education which they had received.

And first as to their birth. Their ancestors were not strangers, nor are these their descendants sojourners only, whose fathers have come from another country; but they are the children of the soil,

dwelling and living in their own land. And the country which brought them up is not like other countries, a step-mother to her children, but their own true mother; she bore them and nourished them and received them, and in her bosom they now repose. It is meet and right, therefore, that we should begin by praising the land which is their mother, and that will be a way of praising their noble birth.

The country is worthy to be praised, not only by us, but by all mankind; first, and above all, as being dear to the gods. This is proved by the strife and contention of the gods respecting her. And ought not that country which the gods praise to be praised by all mankind? The second praise which may be fairly claimed by her, is that at the time when the whole earth was sending forth and creating diverse animals, tame and wild, this our mother was free and pure from savage monsters, and out of all animals selected and brought forth man, who is superior to the rest in understanding, and alone has justice and religion. And a great proof that she was the mother of us and of our ancestors, is that she provided the means of support for her offspring. For as a woman proves her motherhood by giving milk to her young ones (and she who has no fountain of milk is not a mother), so did this our land prove that she was going to be the mother of men, for in those days she alone and first of all brought forth wheat and barley for human food, which is the best and noblest sustenance for man, whom she regarded as her true offspring. And these are truer proofs of motherhood in a country than in a woman, for the woman in her conception and generation is but the imitation of the earth, and not the earth of the woman. And of the fruit of the earth she gave a plenteous supply, not only to her offspring, but to others also; and after that she made the olive to spring up as a boon to their descendants, and to be the help of their toils. And when she had herself nursed them and brought them up to manhood, she gave them gods to be their rulers and teachers. Their names are known, and need not now be repeated; they are the gods who first ordered our lives, and taught us the arts of daily existence, and the possession and use of arms for the guardianship of the country.

Thus born into the world and thus educated, the ancestors of the departed lived and made themselves a government, which I ought briefly to commemorate. For government is the nurture of man, and the government of good men is good, and of bad men bad. And I must show that our ancestors were trained under a good government, and for this

reason were good, as our contemporaries are good, among whom our departed friends are to be reckoned. Then as now, and indeed always, from that time to this, speaking generally, our government was an aristocracy—a form of government which receives various names, according to the fancies of men, and is sometimes called democracy, being really an aristocracy of the many who love virtue. For kings we have always had, once hereditary and now elected, and authority is mostly in the hands of the people, who dispense offices and power to those who appear to be most deserving of them. Neither is a man rejected from weakness or poverty or obscurity of origin, nor honored by reason of the opposite, as in other states, but there is one principle—he who appears to be wise and good is a governor and ruler. The basis of this our government is equality of birth; for other states are made up of all sorts and unequal conditions of men, and therefore their governments are unequal; there are tyrannies and there are oligarchies, in which the one party are slaves and the others masters. But we and our citizens are brethren, the children all of one mother, and we do not claim to be one another's masters or servants; but the natural equality of birth compels us to seek for legal equality, and to recognize no superiority except in the reputation of virtue and wisdom. . . .

These, O ye children and parents of the dead, are the words which they bid us proclaim to you, and which I do proclaim to you with the utmost good-will. And on their behalf I beseech you, the children, to imitate your fathers, and you, parents, to be of good cheer about yourselves; for we will nourish your age, and take care of you both publicly and privately in any place in which one of us may meet one of you who are the parents of the dead. And the care which the city shows you yourselves know; for she has made provision by law concerning the parents and children of those who die in war; and the highest authority is specially intrusted with the duty of watching over them above all other citizens, in order to see that there is no wrong done to them. She herself takes part in the nurture of the children, desiring as far as it is possible that their orphanhood may not be felt by them; she is a parent to them while they are children, and

when they arrive at the age of manhood she sends them to their several duties, clothing them in complete armor; she displays to them and recalls to their minds the pursuits of their fathers, and puts into their hands the instruments of their fathers' virtues; for the sake of the omen, she would have them begin and go to rule in the houses of their fathers arrayed in their strength and arms. And she never ceases honoring the dead every year, celebrating in public the rites which are proper to each and all; and in addition to this, holding gymnastic and equestrian festivals, and musical festivals of every sort. She is to the dead in the place of a son and heir, and to their sons in the place of a father, and to their parents and elder kindred in the place of a protector—ever and always caring for them. Considering this, you ought to bear your calamity the more gently; for thus you will be most endeared to the dead and to the living, and your sorrows will heal and be healed. And now do you and all, having lamented the dead together in the usual manner, go your ways.

Such, Menexenus, was the oration of Aspasia the Milesian.

MENEXENUS: Truly, Socrates, I marvel that Aspasia, who is only a woman, should be able to compose such a speech; she must be a rare one.

SOCRATES: Well, if you are incredulous, you may come with me and hear her.

MENEXENUS: I have often met Aspasia, Socrates, and know what she is like.

SOCRATES: Well, and do you not admire her, and are you not grateful for her speech?

MENEXENUS: Yes, Socrates, I am very grateful to her or to him who told you, and still more to you who have told me.

SOCRATES: Very good. But you must take care not to tell of me, and then at some other time I will repeat to you many more excellent political speeches of hers.

MENEXENUS: Fear not; only tell me, and I will keep the secret.

SOCRATES: Then I will keep my promise.

Cicero

From *De Inventione*

XXXI. All argumentation, then, is to be carried on either by induction or by deduction.¹

Induction is a form of argument which leads the person with whom one is arguing to give assent to certain undisputed facts; through this assent it wins his approval of a doubtful proposition because this resembles the facts to which he has assented. For instance, in a dialogue by Aeschines Socraticus Socrates reveals that Aspasia reasoned thus with Xenophon's wife and with Xenophon himself: "Please tell me, madam, if your neighbor had a better gold ornament than you have, would you prefer that one or your own?" "That one," she replied. "Now, if she had dresses and other feminine finery more expensive than you have, would you prefer yours or hers?" "Hers, of course," she replied. "Well now, if she had a better husband than you have, would you prefer your husband or hers?" At this the woman blushed. But Aspasia then began to speak to Xenophon. "I wish you would tell me, Xenophon," she said, "if your

neighbor had a better horse than yours, would you prefer your horse or his?" "His," was his answer. "And if he had a better farm than you have, which farm would you prefer to have?" "The better farm, naturally," he said. "Now, if he had a better wife than you have, would you prefer yours or his?" And at this Xenophon, too, himself was silent. Then Aspasia: "Since both of you have failed to tell me the only thing I wished to hear, I myself will tell you what you both are thinking. That is, you, madam, wish to have the best husband, and you, Xenophon, desire above all things to have the finest wife. Therefore unless you can contrive that there be no better man or finer woman on earth you will certainly always be in dire want of what you consider best, namely, that you be the husband of the very best of wives, and that she be wedded to the very best of men." In this instance, because assent has been given to undisputed statements, the result is that the point which would appear doubtful if asked by itself is through analogy conceded as certain, and this is due to the method employed in putting the question. Socrates used this conversational method a good deal, because he wished to present no arguments himself, but preferred to get a result from the material which the interlocutor had given him—a result which the interlocutor was bound to approve as following necessarily from what he had already granted.

Translated by H. M. Hubbell.

¹I have kept the traditional terms, induction and deduction, but it should be understood that Cicero was describing a rhetorical, not a logical, kind of reasoning, and that his use of such terms is loose and, at times, careless. The process which he calls induction might more accurately be described as analogy, and under deduction he describes not the syllogism of Aristotle, but the enthymeme or epicheireme, a rhetorical adaptation of the syllogism. [Tr.]

Athenaeus

From *Deipnosophistae*

But further: not one of the scandals uttered by Plato concerning Socrates is mentioned even by any comic poet; for example, that he was the son of a strapping midwife, or that Xanthippe was a shrew who poured slops over his head, or that he lay down to sleep with Alcibiades under the same coverlet. And yet this last must inevitably have been proclaimed with the ringing of bells by Aristophanes, who was present at the symposium, according to Plato; Aristophanes would never have hushed up this bit of gossip, seeing that he accused Socrates of corrupting the young men. The clever Aspasia, to be sure, who was Socrates' teacher in rhetoric, says in the verses which are extant under her name and which are quoted by Herodicus, the disciple of Crates: "Socrates, I have not failed to notice that thy heart is smitten with desire for the son of Deinomache and Cleinias. But hearken, if thou wouldst prosper in thy suit. Disregard not my message, and it will be much better for thee. For so soon as I heard, my body was suffused with the glow of joy, and tears not unwelcome fell from my eyelids. Restrain thyself, filling thy soul with the conquering Muse; and with her aid thou shalt win him; pour her into the ears of his desire. For she is the true beginning of love in both;

through her thou shalt master him, by offering to his ear gifts for the unveiling of his soul."¹

So, then, the noble Socrates goes a-hunting, employing the woman of Miletus as his preceptor in love, instead of being hunted himself, as Plato has said, being caught in Alcibiades' net. And what is more, he does not leave off weeping, being, I fancy, unfortunate in his pursuit. For seeing what a state he was in, Aspasia says: "Why art thou all tears, dear Socrates? Can it be that the thunderbolt of desire, rankling in thy breast, stirs thee up—the bolt which crashed from the eyes of the lad invincible, whom I promised to make tame for thee?" And that Socrates really had a passion for Alcibiades is disclosed by Plato in the *Protagoras*, although Alcibiades was little short of thirty years old. Plato says: "Where do you come from, Socrates? But I know for certain: you have come from the hunt, and the beauty of Alcibiades is your quarry. As a matter of fact, when I saw the man the other day he looked handsome still, though a man, between ourselves, Socrates, who is already covered with a beard under his chin. SOCRATES. Well, what of it? Don't you approve Homer when he says that the most beautiful age is that of the bearded man, the age which Alcibiades himself has now attained?"

Translated by Charles Burton Gulick.

¹Referring to the gifts brought by the bridegroom when the bride removed her veil. [Tr.]

Plutarch

From *Lives*

After this, having made a truce between the Athenians and Lacedæmonians for thirty years, he ordered, by public decree, the expedition against the isle of Samos, on the ground, that, when they were bid to leave off their war with the Milesians they had not complied. And as these measures against the Samians are thought to have been taken to please Aspasia, this may be a fit point for inquiry about the woman, what art or charming faculty she had that enabled her to captivate, as she did, the greatest statesmen, and to give the philosophers occasion to speak so much about her, and that, too, not to her disparagement. That she was a Milesian by birth, the daughter of Axiochus, is a thing acknowledged. And they say it was in emulation of Thargelia, a courtesan of the old Ionian times, that she made her addresses to men of great power. Thargelia was a great beauty, extremely charming, and at the same time sagacious; she had numerous suitors among the Greeks, and brought all who had to do with her over to the Persian interest; and by their means, being men of the greatest power and station, sowed the seeds of the Median faction up and down in several cities. Aspasia, some say, was courted and caressed by Pericles upon account of her knowledge and skill in politics. Socrates himself would sometimes go to visit her, and some of his acquaintance with him; and those who frequented her company would carry their wives with them to listen to her. Her occupation was anything but creditable, her house being a home for young courtesans. Æschines tells us, also, that Lysicles, a sheep-dealer, a man of low birth and character, by keeping Aspasia company after Pericles's death, came to be a chief man in Athens. And in Plato's *Menæxenus*, though we do not take the introduction as quite serious, still thus much seems to be historical,

Translation revised and edited by Arthur Hugh Clough.

that she had the repute of being resorted to by many of the Athenians for instruction in the art of speaking. Pericles's inclination for her seems, however, to have rather proceeded from the passion of love. He had a wife that was near of kin to him, who had been married first to Hipponicus, by whom she had Callias, surnamed the Rich; and also she brought Pericles, while she lived with him, two sons, Xanthippus and Paralus. Afterwards, when they did not well agree, nor like to live together, he parted with her, with her own consent, to another man, and himself took Aspasia, and loved her with wonderful affection; every day, both as he went out and as he came in from the market-place, he saluted and kissed her.

In the comedies she goes by the nicknames of the new *Omphale* and *Deianira*, and again is styled *Juno*. *Cratinus*, in downright terms, calls her a harlot.

To find him a *Juno* the goddess of lust
Bore that harlot past shame,
Aspasia by name.

It should seem also that he had a son by her; *Eupolis*, in his *Demi*, introduced Pericles asking after his safety, and *Myronides* replying—

“My son?” “He lives: a man he had been long,
But that the harlot-mother did him wrong.”

Aspasia, they say, became so celebrated and renowned, that *Cyrus*, also who made war against *Artaxerxes* for the Persian monarchy, gave her whom he loved the best of all his concubines the name of Aspasia, who before that was called *Milto*. She was a *Phocæan* by birth, the daughter of one *Hermotimus*, and, when *Cyrus* fell in battle, was carried to the king, and had great influence at court. These things coming into my memory as I am writing this story, it would be unnatural for me to omit them.

Isocrates

436–338 B.C.E.

Isocrates was a young boy when Gorgias first brought Sicilian rhetoric to Athens. Because his father owned a highly profitable flute factory, Isocrates received the finest education money could buy, studying with Gorgias and other Sophists and perhaps also with Socrates. Gorgias is depicted on Isocrates' memorial stone, showing him a globe. Isocrates was forced to earn his living after his wealthy family was ruined in the Peloponnesian War. At first he supported himself as a logographer, writing speeches for other people to deliver in their own defense in the law courts. Apparently he regarded this profession as rather disgraceful, for in later life he vehemently denied ever having practiced it. When Isocrates was in his early forties, around 393 B.C.E., he opened the first school of rhetoric in Athens. It was a tremendous success, restoring his wealth and establishing his fame as the mentor of many important political leaders.

Isocrates is included in the canon of the Ten Attic Orators, although tradition has it that he was a poor speaker—supposedly, his voice was weak and he suffered from stage fright. His quality as an orator is known through “speeches” written primarily for publication, not delivery, a genre for which he was one of the first to compose. Historian of rhetoric Kathleen Welch has suggested that Isocrates decided to put his efforts into written rather than spoken texts because he realized the potential power of the new technology of literacy. She argues that he himself may even have circulated the rumor concerning his inadequacies as a speaker, in order to protect and justify the time he spent in private, composing written texts. Isocrates' style is antithetical and symmetrical, but without many of the aural devices employed by Gorgias. His major contribution both to Greek writing and to later prose was to develop the periodic sentence. Although politically Isocrates supported his native city of Athens, he felt that pan-Hellenism was a higher goal. Hence he sometimes exposed himself to attacks on his patriotism for promoting strong leaders, such as Philip of Macedon, who showed promise of uniting Greece. Tradition says that Isocrates died of grief upon learning that Philip had defeated and subjugated the Greek forces at Chaeronea.

Isocrates was the contemporary of Plato, who was only a few years younger and who opened his Academy a few years after Isocrates opened his school. Both men distanced themselves from what they saw as the extravagant claims of earlier Sophists, but their own views on philosophy, rhetoric, and education were quite disparate. As historian of rhetoric William Benoit and others have shown, Isocrates rejected Plato's view of philosophy as the search for absolute truth, seeing it as more properly the study of how to address immediate practical problems. Rhetoric, then, in Isocrates' opinion, was a powerful tool for investigating such problems—where only probable, not certain, knowledge was available—and for moving people to action for the common good. This was opposed to Plato's view that rhetoric was

useful only as the purveyor of truth to mentally inferior audiences—truth discovered by philosophical inquiry or science. Education, for Isocrates, should form men who are capable of serving the state, whereas Plato concentrated on helping individuals develop their innate capacities for seeking absolute truth. Rhetoric was unimportant in the curriculum of Plato's school, but it was central to Isocrates' educational project. In fact, rhetoric was not even taught at the Academy until much later, when Aristotle, as an advanced pupil there, began to offer lectures on rhetoric in response to the tremendous success of Isocrates in this area.

Plato won the battle with Isocrates over the definitions of philosophy and rhetoric, at least in the Western philosophical tradition. Plato is regarded as the founder of Western philosophical thought, and his views on rhetoric have been tremendously influential, whereas Isocrates has been relegated to the status of minor philosopher and accorded very little intensive study. Historian of rhetoric Takis Poulakos has suggested that this relative neglect is due also to Isocrates' lack of interest in establishing rhetoric as a fully theorized discipline; his focus was always relentlessly practical. Plato allows Socrates to praise Isocrates in the *Phaedrus* (p. 138), but most scholars, among them James A. Coulter and Ronna Burger, agree that this praise is meant to be an ironic putdown. Nevertheless, Isocrates triumphed over Plato in his conception of education.

Isocrates was perhaps the first to institute systematic training for older students that would fit them to lead in public life. Although, like the earlier Sophists, he charged high fees for this training, unlike them he stayed in one city and worked with his students for several years. This allowed Isocrates to develop a more mentoring relationship with them, which several acknowledged with gratitude after they concluded their studies. He admitted only older adolescent boys who had already mastered the stylistic studies associated with grammar. He proposed to rehearse them under his critical guidance in various kinds of speeches, which they would first compose in writing and then speak aloud, a new and controversial procedure in his day. These speeches were to address serious subjects, not to indulge in flights of fancy as earlier Sophists sometimes had, and were to evidence the reflection that written composition made possible, rather than grasping any weapon that might lead to victory, as in extemporaneous oral address. Ultimately, teacher and students would pursue some of the issues in political philosophy that the speeches might be expected to raise. Many scholars credit Isocrates with establishing a pattern of education for well-to-do young men that prevailed throughout Greece and then Rome. The system spread to Europe with the Roman conquests and was eventually codified in the trivium of grammar, rhetoric, and dialectic that remained unchanged until the Renaissance and that was influential in liberal education thereafter, up to the present day.

Isocrates typically discusses rhetorical theory and education together. His "Against the Sophists" (ca. 390 B.C.E.; included here), which exists now only as a fragment, was written to publicize his school shortly after it opened. And in the *Antidosis* (353 B.C.E.; excerpted here), Isocrates imagines defending himself against a capital charge by reviewing his whole life as an educator. His theory of rhetoric

changes little from the work written early in his educational career to the one composed as an old man in his eighties.

In “Against the Sophists,” Isocrates distinguishes himself from anyone who purveys general principles, whether these refer to the “foreknowledge” needed to live a good life or the formulae needed to compose good speeches. Thus he rejects both the philosophers—such as Plato—seeking absolute truth and the handbook writers seeking universally applicable techniques for composing. Some ancient sources speak of a handbook on rhetoric written by Isocrates himself, but it is now lost, and many modern scholars, such as Michael Cahn, believe that, true to his principles, he never wrote one. To Isocrates, all general principles must fail because they screen out the particulars of a given situation, which must be considered in all truly good moral and rhetorical decisions. “Fitness for the occasion”—*kairos*—is all, to Isocrates.

Hence what is important to rhetorical success can be ranked in descending order from particular to general. Most important is the individual’s own natural ability, which the teacher can develop but not create. Next in importance is practice framing speeches for particular situations, the contents of which speeches the teacher can criticize but not prescribe. Finally, of least importance are general principles that have emerged as useful to the teacher, who should be a practiced rhetorician. Isocrates perhaps contradicts himself by reintroducing the general principles he has condemned, but in his scheme they are so subordinate as to be more like rules of thumb, emerging only provisionally from the specificity of many particular occasions.

In “Against the Sophists” Isocrates seems most eager to dissociate himself from the claim that he can teach virtue. He does suggest that the study of rhetoric can be morally improving, but the process of improvement itself seems to be rhetorical, acting by persuasion rather than empirical demonstration or insight. The existing fragment of “Against the Sophists” breaks off before Isocrates can explain how this persuasion is to be achieved, but he goes into more detail in the *Antidosis*.

Isocrates probably lost an actual lawsuit in which he was judged sufficiently wealthy to be compelled to fund a “liturgy,” or public project, for Athens (perhaps fitting out a warship). The title *antidosis* refers to such a suit. Isocrates felt that the negative judgment resulted as much from misunderstanding of his teaching—exacerbated by his pan-Hellenism—as from overestimation of his wealth. He thus wrote for publication a very long “speech” in which he imagines himself, like Socrates, facing the capital charge of corrupting the young. Written about thirty-five years after “Against the Sophists,” when the author was eighty-two, the *Antidosis* most fully represents the rhetorical and educational theories of Isocrates. It is excerpted here; what follows is a synopsis of the whole work.

SUMMARY OF *ANTIDOSIS*

The *Antidosis* begins with the author summarizing the actual circumstances that prompt him to compose a lengthy self-defense. The trial on a capital charge is openly adopted as a fiction. The prosecutors’ indictment against Isocrates echoes

the one read against Socrates: “charging that I corrupt young men by teaching them to speak and gain their own advantage in the courts contrary to justice.”¹ Isocrates insists that he has wronged no one. None of his speeches or his students has been vicious, as he proves with many examples. He discusses at length his illustrious pupil the Athenian general Timotheus, concluding that the man’s worst fault was his inability or unwillingness to protect himself from lying orators who inflamed public opinion against him. Isocrates now hints that he himself, like Timotheus, has not done enough to gain public good will through fair speech.

Isocrates then begins an exposition of his blameless theory of rhetorical education by dividing education into gymnastics, which trains the body, and philosophy, which trains the mind. He sees himself as a teacher of philosophy who should “impart all the forms of discourse in which the mind expresses itself.”² But such instruction does not impart a “science” of “virtue.” He argues that teaching can improve the ability to speak, however. This is surely not corrupting, for why, asks Isocrates, would I hurt myself by producing students who would discredit me? And why would students seek me out if they expected to be hurt? Misuse of oratorical ability is the fault of the orator, not of oratory.

At this point begins the passage excerpted below, with a long panegyric on the civilizing powers of the “logos.” Speech facilitates the construction of “true wisdom,” which for Isocrates resides in the ability “by his powers of conjecture [assessing probabilities] to arrive generally [usually] at the best course” in a particular situation (see excerpt included here). Isocrates suggests that the aspiring orator, even if motivated solely by desire for fame, will thereby be shaped by the best of conventional morality. If he emulates moral behavior merely to impress his audience, virtue will become a habit with him and gradually modify the inner man as well.

The corruption that now attends some displays of oratorical ability, Isocrates contends, must be laid at the door of corrupt public opinion, which refuses to be moved by noble examples and goals and so encourages young men to dissipation. On the contrary, the highest praise should go to those who unite philosophy and rhetoric, the inner and the outer man, because they “never speak without weighing their words” (see excerpt included here).

After the passage excerpted below, Isocrates concludes by berating the Athenians for their low standards. He rejects the use of cheap pathetic devices in his own defense (although he does allude to his advanced age) and vows to rely solely upon his words.

Traditional scholarship has typically treated Isocrates as a minor philosopher because he is not concerned with the pursuit of absolute or transcendent knowledge of the Platonic kind. Indeed, Isocrates explicitly rejects the possibility of teaching such knowledge and suggests that it is extremely hard to come by. He makes very few

¹Isocrates, *Antidosis*, in *On the Peace. Areopagiticus. Against the Sophists. Antidosis. Panathenaicus*, trans. George Norlin (London: W. Heinemann, 1928–29; rpt. Cambridge: Harvard University Press, 1979), p. 203.

²Norlin, p. 289.

references to the gods or other possible sources of transcendent knowledge. Perhaps Isocrates is not concerned with the existence or availability of absolute knowledge because he defines his primary task as service to the state. Hence he is most concerned with developing the probabilistic wisdom used in practical affairs of serious import, a kind of knowledge that is developed and applied socially.

Isocrates almost seems to regard the search for transcendent truth as immoral because the search brings social isolation—as Socrates was isolated. Isocrates believes the community has an undeniable claim on the philosopher-rhetor. He must try to be a useful citizen and to make useful citizens of the young men entrusted to his care.

Selected Bibliography

The excerpts printed here are taken from the Loeb Classical Library volume, *Isocrates, On the Peace. Areopagiticus. Against the Sophists. Antidosis. Panathenaicus* (trans. George Norlin, 1929). This is the standard translation; Norlin's commentary is also helpful.

Although garnering increased attention recently, Isocrates has received surprisingly little scholarly treatment that focuses on his work alone, as can be seen by the brevity of William Benoit's "A Brief Bibliography of Works on Isocrates in English" (*Rhetoric Society Quarterly* 11 [1981]: 263–64). The standard account of Isocrates' importance is Werner Jaeger's "The Rhetoric of Isocrates and Its Cultural Ideal" (in *The Province of Rhetoric*, ed. Joseph Schwartz and John A. Rycenga, 1965). For a good short summary, see Benoit's "Isocrates on Rhetorical Education" (*Communication Education* 33 [1984]: 109–20). Takis Poulakos has eloquently defended Isocrates from Platonic strictures and has praised his commitment to forming men who could serve the state in *Speaking for the Polis: Isocrates' Rhetorical Education* (1997). Recent studies also include Michael Cahn, "Reading Rhetoric Rhetorically: Isocrates and the Marketing of Insight" (*Rhetorica* 12 [1989]: 121–44), and Andrew Ford, "The Price of Art in Isocrates: Formalism and the Escape from Politics" (in *Rethinking the History of Rhetoric*, ed. Takis Poulakos, 1993). Isocrates is discussed in R. C. Jebb's *The Attic Orators from Antiphon to Isaeos* (2 vols., 1962), George Kennedy's *The Art of Persuasion in Greece* (1963), Kathleen E. Welch's *The Contemporary Reception of Classical Rhetoric* (1990), and John Poulakos's *Sophistical Rhetoric in Classical Greece* (1995).

Isocrates is often compared with contemporary rhetoricians and philosophers whom he knew and with whom, often, he had theoretical disputes. See, for example, LaRue Van Hook, "Alcidamas versus Isocrates: The Spoken versus the Written Word" (*The Classical Weekly* 12 [1919]: 89–94); Terry M. Perkins, "Isocrates and Plato: Relativism vs. Idealism" (*Southern Speech Communication Journal* 50 [1984]: 49–66); and William Benoit's two essays, "Isocrates and Aristotle on Rhetoric" (*Rhetoric Society Quarterly* 20 [1990]: 251–59) and "Isocrates and Plato on Rhetoric and Rhetorical Education" (*Rhetoric Society Quarterly* 21 [1991]: 60–71), both of which include helpful bibliographies. On Plato's treatment of Isocrates in the *Phaedrus*, see James A. Coulter, "*Phaedrus* 279a: The Praise of Isocrates" (*Greek Roman and Byzantine Studies* 8 [1967]: 225–36), and Ronna Burger, "Isocrates the Beautiful" in her *Plato's "Phaedrus": A Defense of a Philosophical Art of Writing* (1980). For the influence of Isocrates on later developments in rhetoric, see R. H. Wagner, "The Rhetorical Theory of Isocrates" (in *Readings in Rhetoric*, ed. Lionel Crocker and Paul A. Carmack, 1965), and H. M. Hubbell, *The Influence of Isocrates on Cicero, Dionysius, and Aristides* (1913).

Against the Sophists¹

If all who are engaged in the profession of education were willing to state the facts instead of making greater promises than they can possibly fulfill, they would not be in such bad repute with the lay-public. As it is, however, the teachers who do not scruple to vaunt their powers with utter disregard of the truth have created the impression that those who choose a life of careless indolence are better advised than those who devote themselves to serious study.

Indeed, who can fail to abhor, yes to condemn, those teachers, in the first place, who devote themselves to disputation,² since they pretend to search for truth, but straightway at the beginning of their professions attempt to deceive us with lies?³ For I think it is manifest to all that foreknowledge of future events is not vouchsafed to our human nature, but that we are so far removed from this prescience⁴ that Homer, who has been conceded the highest reputation for wisdom, has pictured even the gods as at times debating among themselves about the future⁵—not that he

Translated by George Norlin.

¹Isocrates regards himself as one of the sophists (see *Antid.* 220), but sets himself apart from the “common herd” of sophists. [Tr.]

²Captious argumentation in the field of ethics. He is not thinking of Socrates, who did not teach for pay, nor of Plato’s dialectic, which was not yet famous, but of the minor Socratics, especially Antisthenes and Euclides, who taught for money while affecting contempt for it. In general he is thinking of such quibblers as are later shown up in Plato’s *Euthydemus*. [Tr.]

³Theirs is a cloud morality, not truth to live by on earth. [Tr.]

⁴There is, according to Isocrates, no “science” which can teach us to do under all circumstances the things which will insure our happiness and success. Life is too complicated for that, and no man can foresee exactly the consequences of his acts—“the future is a thing unseen.” All that education can do is to develop a sound judgment (as opposed to knowledge) which will meet the contingencies of life with resourcefulness and, in most cases, with success. This is a fundamental doctrine of his “philosophy” which he emphasizes and echoes again and again in opposition to the professors of a “science of virtue and happiness.” [Tr.]

⁵Homer’s epic poem, the *Iliad*, describes the Greek conquest of Troy, a war in which the gods are depicted as taking sides. [Ed.]

knew their minds but that he desired to show us that for mankind this power lies in the realms of the impossible.

But these professors have gone so far in their lack of scruple that they attempt to persuade our young men that if they will only study under them they will know what to do in life and through this knowledge will become happy and prosperous. More than that, although they set themselves up as masters and dispensers of goods so precious, they are not ashamed of asking for them a price of three or four minae!⁶ Why, if they were to sell any other commodity for so trifling a fraction of its worth they would not deny their folly; nevertheless, although they set so insignificant a price on the whole stock of virtue and happiness, they pretend to wisdom and assume the right to instruct the rest of the world. Furthermore, although they say that they do not want money and speak contemptuously of wealth as “filthy lucre,” they hold their hands out for a trifling gain and promise to make their disciples all but immortal!⁷ But what is most ridiculous of all is that they distrust those from whom they are to get this money—they distrust, that is to say, the very men to whom they are about to deliver the science of just dealing—and they require that the fees advanced by their students be entrusted for safe keeping⁸ to those who have never been under their instruction, being well advised as to their security, but doing the opposite of what they preach. For it is permissible to those who give any other instruction to be exacting in matters open to dispute, since nothing prevents those who have been made adept in other lines of training from being dishonorable in the matter of contracts. But men who inculcate virtue and

⁶Socrates speaks with the same sarcasm of a sophist named Evenus, who professed to teach all the virtues necessary to a good man and a good citizen for five minae. [Tr.]

⁷That is, to make them all but gods. [Tr.]

⁸For their security, they required that the fees charged to their students be deposited with third parties until the end of the course. [Tr.]

sobriety — is it not absurd if they do not trust in their own students before all others?⁹ For it is not to be supposed that men who are honorable and just-dealing with others will be dishonest with the very preceptors who have made them what they are.

When, therefore, the layman puts all these things together and observes that the teachers of wisdom and dispensers of happiness are themselves in great want but exact only a small fee from their students, that they are on the watch for contradictions in words¹⁰ but are blind to inconsistencies in deeds, and that, furthermore, they pretend to have knowledge of the future but are incapable either of saying anything pertinent or of giving any counsel regarding the present, and when he observes that those who follow their judgments are more consistent and more successful than those who profess to have exact knowledge, then he has, I think, good reason to condemn such studies and regard them as stuff and nonsense, and not as a true discipline of the soul.

But it is not these sophists alone who are open to criticism, but also those who profess to teach political discourse.¹¹ For the latter have no interest whatever in the truth,¹² but consider that they are masters of an art if they can attract great numbers of students by the smallness of their charges and the magnitude of their professions and get something out of them. For they are themselves so stupid and conceive others to be so dull that, although the speeches which they compose are worse than those which some laymen improvise, nevertheless they promise to make their students such clever orators that they will not overlook any of the possibilities which a subject affords. More than that, they do not attribute any of this power either to the practical experience or to the native ability of the student, but undertake to transmit the science of discourse as

⁹*Cf.* the same ridicule in Plato, *Gorg.* 519 c, 460 E. [Tr.]

¹⁰The aim of “eristic” (ἐρις means contention) is to show up the contradictions in the accepted morality. [Tr.]

¹¹The whole field of “deliberative” oratory, but the most “useful” branch of it in “litigious Athens” was the forensic. [Tr.]

¹²Their interest was not in the triumph of justice but in making “the worse reason appear the better.” [Tr.]

simply as they would teach the letters of the alphabet, not having taken trouble to examine into the nature of each kind of knowledge, but thinking that because of the extravagance of their promises they themselves will command admiration and the teaching of discourse will be held in higher esteem — oblivious of the fact that the arts are made great, not by those who are without scruple in boasting about them, but by those who are able to discover all of the resources which each art affords.

For myself, I should have preferred above great riches that philosophy had as much power as these men claim; for, possibly, I should not have been the very last in the profession nor had the least share in its profits. But since it has no such power, I could wish that this prating might cease. For I note that the bad repute which results therefrom does not affect the offenders only, but that all the rest of us who are in the same profession share in the opprobium.¹³

But I marvel when I observe these men setting themselves up as instructors of youth who cannot see that they are applying the analogy of an art with hard and fast rules to a creative process. For, excepting these teachers, who does not know that the art of using letters remains fixed and unchanged, so that we continually and invariably use the same letters for the same purposes, while exactly the reverse is true of the art of discourse?¹⁴ For what has been said by one speaker is not equally useful for the speaker who comes after him; on the contrary, he is accounted most skilled in this art who speaks in a manner worthy of his subject and yet is able to discover in it topics which are nowise the same as those used by others. But the greatest proof of the difference between these two arts is that oratory is good only if it has the qualities of fitness for the occasion,¹⁵ propriety of style, and originality of treatment, while in the case of letters there is no such need whatsoever. So that those who make use of such analogies ought more justly to pay out than to accept fees, since they attempt to teach others

¹³*Cf.* *Antid.* 168. [Tr.]

¹⁴That is, mechanical formulas are not sufficient. There must be inventiveness, resourcefulness, in a word, creative imagination. [Tr.]

¹⁵A fundamental requisite. [Tr.]

when they are themselves in great need of instruction.

However, if it is my duty not only to rebuke others, but also to set forth my own views, I think all intelligent people will agree with me that while many of those who have pursued philosophy have remained in private life,¹⁶ others, on the other hand, who have never taken lessons from any one of the sophists have become able orators and statesmen. For ability, whether in speech or in any other activity, is found in those who are well endowed by nature and have been schooled by practical experience.¹⁷ Formal training makes such men more skillful and more resourceful in discovering the possibilities of a subject; for it teaches them to take from a readier source the topics which they otherwise hit upon in haphazard fashion. But it cannot fully fashion men who are without natural aptitude into good debaters or writers, although it is capable of leading them on to self-improvement and to a greater degree of intelligence on many subjects.

But I desire, now that I have gone this far, to speak more clearly on these matters. For I hold that to obtain a knowledge of the elements out of which we make and compose all discourses is not so very difficult if anyone entrusts himself, not to those who make rash promises, but to those who have some knowledge of these things. But to choose from these elements those which should be employed for each subject, to join them together, to arrange them properly, and also, not to miss what the occasion demands but appropriately to adorn the whole speech with striking thoughts and to clothe it in flowing and melodious phrase¹⁸—these things, I hold, require much study and are the task of a vigorous and imaginative mind:¹⁹ for this, the student must not only have the requisite aptitude but he must learn the different kinds of discourse and practise himself in their use; and the

¹⁶Isocrates himself. [Tr.]

¹⁷Isocrates insists that the requisites of a good orator are first natural ability, second practical experience, and third formal training. See *Antid.* 186–88. [Tr.]

¹⁸Prose should have the same finish and charm as poetry. [Tr.]

¹⁹Unmistakably this phrase is parodied in Plato, *Gorgias* 463 A: δοχεῖ τοῖσιν μοι, ὦ Γοργία, εἶναί τι ἐπιτήδευμα τεχνικὸν μὲν οὖν, ψυχῆς δὲ οὐλοχαστικῆς καὶ ἀνδρείας καὶ φύσει δεινῆς προσομιλεῖν τοῖς ἀνθρώποις. [Tr.]

teacher, for his part, must so expound the principles of the art with the utmost possible exactness as to leave out nothing that can be taught, and, for the rest, he must in himself set such an example of oratory that the students who have taken form under his instruction and are able to pattern after him will, from the outset, show in their speaking a degree of grace and charm which is not found in others. When all of these requisites are found together, then the devotees of philosophy will achieve complete success; but according as any one of the things which I have mentioned is lacking, to this extent must their disciples of necessity fall below the mark.

Now as for the sophists who have lately sprung up and have very recently embraced these pretensions,²⁰ even though they flourish at the moment, they will all, I am sure, come round to this position. But there remain to be considered those who lived before our time and did not scruple to write the so-called arts of oratory.²¹ These must not be dismissed without rebuke, since they professed to teach how to conduct lawsuits, picking out the most discredited of terms,²² which the enemies, not the champions, of this discipline might have been expected to employ—and that too although this facility, in so far as it can be taught, is of no greater aid to forensic than to all other discourse. But they were much worse than those who dabble in disputation; for although the latter expounded such captious theories that were anyone to cleave to them in practice he would at once be in all manner of trouble, they did, at any rate, make professions of virtue and sobriety in their teaching, whereas the former, although exhorting others to study political discourse, neglected all the good things which this study affords, and became nothing more than professors of meddlesomeness and greed.²³

And yet those who desire to follow the true

²⁰The sophists before mentioned. The teaching of the older sophists is discussed in the *Antidosis*. [Tr.]

²¹Especially the first to write such treatises, Corax and Tisias of Syracuse. τέχνη, like *ars* in Latin, was the accepted term for a treatise on rhetoric. [Tr.]

²²Again and again Isocrates expresses his repugnance to this kind of oratory, and in general it was in bad odor. The precepts of Corax (Crow), for example, were called “the bad eggs of the bad Corax.” [Tr.]

²³The same complaint is made by Aristotle. *Rhet.* i.1.10. [Tr.]

precepts of this discipline may, if they will, be helped more speedily towards honesty of character²⁴ than towards facility in oratory. And let no one suppose that I claim that just living can be taught;²⁵ for, in a word, I hold that there does not exist an art of the kind which can implant sobri-

²⁴For the kind of political discourse which Isocrates extols, and its ethical influence see *Antid.* 275. [Tr.]

²⁵See *Antid.* 274 ff. [Tr.]

ety and justice in depraved natures. Nevertheless, I do think that the study of political discourse can help more than any other thing to stimulate and form such qualities of character.

But in order that I may not appear to be breaking down the pretensions of others while myself making greater claims than are within my powers, I believe that the very arguments by which I myself was convinced will make it clear to others also that these things are true.

From *Antidosis*

We ought, therefore, to think of the art of discourse just as we think of the other arts, and not to form opposite judgments about similar things, nor show ourselves intolerant toward that power which, of all the faculties which belong to the nature of man, is the source of most of our blessings. For in the other powers which we possess, as I have already said on a former occasion, we are in no respect superior to other living creatures; nay, we are inferior to many in swiftness and in strength and in other resources; but, because there has been implanted in us the power to persuade each other and to make clear to each other whatever we desire, not only have we escaped the life of wild beasts, but we have come together and founded cities and made laws and invented arts; and, generally speaking, there is no institution devised by man which the power of speech has not helped us to establish. For this it is which has laid down laws concerning things just and unjust, and things honorable and base; and if it were not for these ordinances we should not be able to live with one another. It is by this also that we confute the bad and extol the good. Through this we educate the ignorant and appraise the wise; for the power to speak well is taken as the surest index of a sound understanding, and discourse which is true and lawful and just is the outward image of a good and faithful soul. With this faculty we both contend against others on matters which are open to dispute and

seek light for ourselves on things which are unknown; for the same arguments which we use in persuading others when we speak in public, we employ also when we deliberate in our own thoughts; and, while we call eloquent those who are able to speak before a crowd, we regard as sage those who most skillfully debate their problems in their own minds. And, if there is need to speak in brief summary of this power, we shall find that none of the things which are done with intelligence take place without the help of speech, but that in all our actions as well as in all our thoughts speech is our guide, and is most employed by those who have the most wisdom.

But without reflecting at all on these truths, Lysimachus has dared to attack those who aspire to an accomplishment which is the source of blessings so many and so great. But why should we be surprised at him when even among the professors of disputation¹ there are some who talk no less abusively of the art of speaking on general and useful themes than do the most benighted of men, not that they are ignorant of its power or of the advantage which it quickly gives to those who avail themselves of it, but because they think that by decrying this art they will enhance the standing of their own.

I could, perhaps, say much harsher things of them than they of me, but I refrain for a double

¹Lysimachus represents the Aristotelian point of view. The professors of disputation or *eristics* taught arguing-to-win without regard to truth or virtue. [Ed.]

reason. I want neither to descend to the level of men whom envy has made blind nor to censure men who, although they do no actual harm to their pupils are less able to benefit them than are other teachers. I shall, however, say a few words about them, first because they also have paid their compliments to me; second, in order that you, being better informed as to their powers, may estimate us justly in relation to each other; and, furthermore, that I may show you clearly that we who are occupied with political discourse and whom they call contentious are more considerate than they; for although they are always saying disparaging things of me, I shall not answer them in kind but shall confine myself to the simple truth.

For I believe that the teachers who are skilled in disputation and those who are occupied with astronomy and geometry and studies of that sort² do not injure but, on the contrary, benefit their pupils, not so much as they profess, but more than others give them credit for. Most men see in such studies nothing but empty talk and hair-splitting; for none of these disciplines has any useful application either to private or to public affairs; nay, they are not even remembered for any length of time after they are learned because they do not attend us through life nor do they lend aid in what we do, but are wholly divorced from our necessities. But I am neither of this opinion nor am I far removed from it; rather it seems to me both that those who hold that this training is of no use in practical life are right and that those who speak in praise of it have truth on their side. If there is a contradiction in this statement, it is because these disciplines are different in their nature from the other studies which make up our education; for the other branches avail us only after we have gained a knowledge of them, whereas these studies can be of no benefit to us after we have mastered them unless we have elected to make our living from this source, and only help us while we are in the process of learning. For while we are occupied with the subtlety and exactness of astronomy and geometry and are forced to apply our minds to difficult prob-

²Compare Socrates' views, Xen. *Memorabilia* iv. 7. 2ff. [Tr.]

lems, and are, in addition, being habituated to speak and apply ourselves to what is said and shown to us, and not to let our wits go wool-gathering, we gain the power, after being exercised and sharpened on these disciplines, of grasping and learning more easily and more quickly those subjects which are of more importance and of greater value. I do not, however, think it proper to apply the term "philosophy" to a training which is no help to us in the present either in our speech or in our actions, but rather I would call it a gymnastic of the mind and a preparation for philosophy. It is, to be sure, a study more advanced than that which boys in school pursue, but it is for the most part the same sort of thing; for they also when they have labored through their lessons in grammar, music,³ and the other branches, are not a whit advanced in their ability to speak and deliberate on affairs, but they have increased their aptitude for mastering greater and more serious studies. I would, therefore, advise young men to spend some time on these disciplines,⁴ but not to allow their minds to be dried up by these barren subtleties, nor to be stranded on the speculations of the ancient sophists, who maintain, some of them, that the sum of things is made up of infinite elements; Empedocles that it is made up of four, with strife and love operating among them; Ion, of not more than three; Alcmaeon, of only two; Parmenides and Melissus, of one; and Gorgias, of none at all.⁵ For I think that such curiosities of thought are on a par with jugglers' tricks which, though they do not profit anyone, yet attract great crowds of the empty-minded, and I hold that men who want to do some good in the world must banish utterly from their interests all vain speculations and all activities which have no bearing on our lives.

³A broad term including the study of poetry. [Tr.]

⁴Compare Callicles' similar view about the study of philosophy in Plato, *Gorgias* 484 c. [Tr.]

⁵The fruitlessness of the speculations of the early philosophers (physicists) is shown, according to Isocrates, in the utter diversity of their views, for example, regarding the first principles or primary elements from which the world was created. At one extreme was Anaxagoras, who held that the primary elements were infinite in number; at the other was Gorgias, who in his nihilistic philosophy denied that there was any such thing as being or entity at all. Cf. *Hel.* 3; Xen. *Memorabilia* i. 1.14ff.; Plato, *Sophist* 242. [Tr.]

Now I have spoken and advised you enough on these studies for the present. It remains to tell you about “wisdom” and “philosophy.” It is true that if one were pleading a case on any other issue it would be out of place to discuss these words (for they are foreign to all litigation), but it is appropriate for me, since I am being tried on such an issue, and since I hold that what some people call philosophy is not entitled to that name, to define and explain to you what philosophy, properly conceived, really is. My view of this question is, as it happens, very simple. For since it is not in the nature of man to attain a science by the possession of which we can know positively what we should do or what we should say, in the next resort I hold that man to be wise who is able by his powers of conjecture to arrive generally at the best course, and I hold that man to be a philosopher who occupies himself with the studies from which he will most quickly gain that kind of insight.

What the studies are which have this power I can tell you, although I hesitate to do so; they are so contrary to popular belief and so very far removed from the opinions of the rest of the world, that I am afraid lest when you first hear them you will fill the whole courtroom with your murmurs and your cries. Nevertheless, in spite of my misgivings, I shall attempt to tell you about them; for I blush at the thought that anyone might suspect me of betraying the truth to save my old age and the little of life remaining to me. But, I beg of you, do not, before you have heard me, judge that I could have been so mad as to choose deliberately, when my fate is in your hands, to express to you ideas which are repugnant to your opinions if I had not believed that these ideas follow logically on what I have previously said, and that I could support them with true and convincing proofs.

I consider that the kind of art which can implant honesty and justice in depraved natures has never existed and does not now exist, and that people who profess that power will grow weary and cease from their vain pretensions before such an education is ever found.⁶ But I do hold that people can become better and worthier if they

conceive an ambition to speak well,⁷ if they become possessed of the desire to be able to persuade their hearers, and, finally, if they set their hearts on seizing their advantage—I do not mean “advantage” in the sense given to that word by the empty-minded, but advantage in the true meaning of that term;⁸ and that this is so I think I shall presently make clear.

For, in the first place, when anyone elects to speak or write discourses which are worthy of praise and honor, it is not conceivable that he will support causes which are unjust or petty or devoted to private quarrels, and not rather those which are great and honorable, devoted to the welfare of man and our common good; for if he fails to find causes of this character, he will accomplish nothing to the purpose. In the second place, he will select from all the actions of men which bear upon his subject those examples which are the most illustrious and the most edifying; and, habituating himself to contemplate and appraise such examples, he will feel their influence not only in the preparation of a given discourse but in all the actions of his life. It follows, then, that the power to speak well and think right will reward the man who approaches the art of discourse with love of wisdom and love of honor.

Furthermore, mark you, the man who wishes to persuade people will not be negligent as to the matter of character; no, on the contrary, he will apply himself above all to establish a most honorable name among his fellow-citizens; for who does not know that words carry greater conviction when spoken by men of good repute than when spoken by men who live under a cloud, and that the argument which is made by a man’s life is of more weight than that which is furnished by words?⁹ Therefore, the stronger a man’s desire to persuade his hearers, the more zealously will he strive to be honorable and to have the esteem of his fellow-citizens.

And let no one of you suppose that while all other people realize how much the scales of persuasion incline in favor of one who has the

⁶Cf. *Against the Sophists* 121. [Tr.]

approval of his judges, the devotees of philosophy alone are blind to the power of goodwill. In fact, they appreciate this even more thoroughly than others, and they know, furthermore, that probabilities and proofs and all forms of persuasion support only the points in a case to which they are severally applied, whereas an honorable reputation not only lends greater persuasiveness to the words of the man who possesses it, but adds greater luster to his deeds, and is, therefore, more zealously to be sought after by men of intelligence than anything else in the world.

I come now to the question of “advantage”—the most difficult of the points I have raised. If any one is under the impression that people who rob others or falsify accounts or do any evil thing get the advantage, he is wrong in his thinking; for none are at a greater disadvantage throughout their lives than such men; none are found in more difficult straits, none live in greater ignominy; and, in a word, none are more miserable than they. No, you ought to believe rather that those are better off now and will receive the advantage in the future at the hands of the gods who are the most righteous and the most faithful in their devotions, and that those receive the better portion at the hands of men who are the most conscientious in their dealings with their associates, whether in their homes or in public life, and are themselves esteemed as the noblest among their fellows.

This is verily the truth, and it is well for us to adopt this way of speaking on the subject, since, as things now are, Athens has in many respects been plunged into such a state of topsy-turvy and confusion that some of our people no longer use words in their proper meaning but wrest them from the most honorable associations and apply them to the basest pursuits. On the one hand, they speak of men who play the buffoon and have a talent for mocking and mimicking as “gifted”—an appellation which should be reserved for men endowed with the highest excellence; while, on the other hand, they think of men who indulge their depraved and criminal instincts and who for small gains acquire a base reputation as “getting the advantage,” instead of applying this term to the most righteous and the most upright, that is, to men who take advantage of the good and not

the evil things of life. They characterize men who ignore our practical needs and delight in the mental juggling of the ancient sophists as “students of philosophy,” but refuse this name to those who pursue and practice those studies which will enable us to govern wisely both our own households and the commonwealth—which should be the objects of our toil, of our study, and of our every act.

It is from these pursuits that you have for a long time now been driving away our youth, because you accept the words of those who denounce this kind of education. Yes, and you have brought it about that the most promising of our young men are wasting their youth in drinking bouts, in parties, in soft living and childish folly, to the neglect of all efforts to improve themselves; while those of grosser nature are engaged from morning until night in extremes of dissipation which in former days an honest slave would have despised. You see some of them chilling their wine at the “Nine-fountains”;¹⁰ others, drinking in taverns; others, tossing dice in gambling dens; and many, hanging about the training schools of the flute girls.

And as for those who encourage them in these things, no one of those who profess to be concerned for our youth has ever haled them before you for trial, but instead they persecute me, who, whatever else I may deserve, do at any rate deserve thanks for this, that I discourage such habits in my pupils.

But so inimical to all the world is this race of sycophants that when men pay a ransom¹¹ of a hundred and thirty minae¹² for women who bid fair to help them make away with the rest of their property besides, so far from reproaching them, they actually rejoice in their extravagance; but when men spend any amount, however small, upon their education, they complain that they are being corrupted. Could any charge be more unjust

¹⁰A famous spring near the Acropolis, first called Callirhoe (Fair-flowing). Later, when enclosed and adorned by Pisistratus, it was called the Fountain of Nine Spouts. See Thuc, ii. 15; Gardner, *Ancient Athens*, p. 18. [Tr.]

¹²The mina = 100 drachmas. A drachma was the standard wage of a day-laborer. [Tr.]

than this against our students? For, while in the prime of vigor, when most men of their age are most inclined to indulge their passions, they have disdained a life of pleasure; when they might have saved expense and lived softly, they have elected to pay out money and submit to toil; and, though hardly emerged from boyhood, they have come to appreciate what most of their elders do not know; namely, that if one is to govern his youth rightly and worthily and make the proper start in life, he must give more heed to himself than to his possessions, he must not hasten and seek to rule over others¹³ before he has found a master to direct his own thoughts, and he must not take as great pleasure or pride in other advantages as in the good things which spring up in the soul under a liberal education. I ask you, then, when young men have governed themselves by these principles, ought they not to be praised rather than censured, ought they not to be recognized as the best and the most sober-minded among their fellows?

I marvel at men who felicitate those who are eloquent by nature on being blessed with a noble gift, and yet rail at those who wish to become eloquent, on the ground that they desire an immoral and debasing education. Pray, what that is noble by nature becomes shameful and base when one attains it by effort? We shall find that there is no such thing, but that, on the contrary, we praise, at least in other fields, those who by their own devoted toil are able to acquire some good thing more than we praise those who inherit it from their ancestors. And rightly so; for it is well that in all activities, and most of all in the art of speaking, credit is won, not by gifts of fortune, but by efforts of study. For men who have been gifted with eloquence by nature and by fortune, are governed in what they say by chance, and not by any standard of what is best, whereas those who have gained this power by the study of philosophy and by the exercise of reason never speak without weighing their words, and so are less often in error as to a course of action.

¹³Cf. Plato, *Gorgias* 491. [Tr.]

Plato

ca. 428–347 B.C.E.

Plato was born to a wealthy aristocratic family in Athens at about the time that Gorgias paid his first visit there. The traditional stories of Plato's boyhood depict a handsome, well-educated youth much like some of Socrates' interlocutors in the Platonic dialogues. It is said that Plato enjoyed both comic and tragic theater, befriended Aristophanes, and attempted to compose his own tragedies. When Plato was about twenty years old, he began to associate with Socrates (ca. 470–399 B.C.E.), who kept no formal school. After his mentor's execution—Plato attended the trial—he traveled to Italy, Sicily, and perhaps Egypt. This journey was motivated in part by dismay at the death of Socrates, but scholars also speculate about what Plato may have studied in the Greek colonies of Italy and Sicily, where rhetoric flourished, or in Egypt, an ancient source of hermetic learning. Returning to Athens in 387, Plato opened a school in the grove of Academus, a religious site sacred to the Muses, where he wrote and taught for the rest of his life. He made two more trips to Sicily in his sixties.

PLATO'S IMPORTANCE TO RHETORIC

Unlike the school of his contemporary Isocrates, Plato's Academy was not known for producing political leaders. He failed at tutoring both the elder and the younger Dionysius, successive tyrants of Syracuse in Sicily. Plato's school, however, produced philosophers, most notably Aristotle. The curriculum emphasized mathematics, natural science, and political theory. Scholars debate about whether rhetoric was taught—at least before Aristotle, as an advanced pupil, began to offer lectures on the subject—but clearly discussions of the kind depicted in Plato's written dialogues were important to learning in the Academy. And, as shown in the *Symposium*, in which a woman named Diotima instructs Socrates, these discussions sometimes included women. Unlike Isocrates, Plato occasionally admitted female students to his school.

In spite of their differences, however, both Isocrates and Plato had a tremendous influence on the future course of Western education. If Isocrates influenced its curricular structure, Plato influenced its philosophical content, through his own work and that of his students. Plato's achievements as educator, literary artist, and philosopher of ethics, politics, aesthetics, and rhetoric defy summary. He was a prolific writer, and many of his works survive.

Although, as scholar of classical rhetoric Edward Schiappa explains, some evidence points to Plato's having coined the term *rhetoric*, Plato has become known as rhetoric's implacable foe, largely responsible for its unsavory reputation in the Western tradition. This notion that Plato condemns all rhetoric is an error, but it arises from the fact that Plato developed his philosophical project in opposition to the Sophistic Movement and the kind of rhetoric he associated with it. Competing

notions of rhetoric, in turn, arose from differing ideas about what kind of knowledge was available to human beings.

Plato believed that transcendent truth exists and is accessible to human beings. We can recognize it because we somehow “knew” it before our birth, when our souls were with the Divine. Finding truth now, when we exist in the flesh, is difficult, however, because it requires remembering what has been covered over in our minds by the experience of carnality and temporality. To Plato, the philosopher’s task is to help others remember by clearing away the worldly debris that obscures the truth, or, to use the metaphor Socrates advances in Plato’s *Theaetetus*, the philosopher is a midwife who aids the other mind to bring forth those true ideas hidden in the mind’s secret places before its own birth. Since this process of inquiry takes place through verbal exchange, the definition of rhetoric’s proper province is central to Plato’s understanding of knowledge.

The Sophists, in contrast, did not believe that humans can obtain absolute knowledge, and consequently they concerned themselves only with probabilities, which Plato regarded as mere appearances of truth. Sophistic discourse for Plato is synthetic, emotional, and rhetorical in a pejorative sense. It seeks to induce belief without regard for whether the belief is transcendentally true. Plato envisioned another kind of rhetoric: discourse that is more analytic, objective, and dialectical. He believed that such discourse can delineate the truth behind appearances. Plato viewed the Sophists as moral relativists who therefore had no reason not to be manipulative, deceitful, or downright corrupting in their use of discourse. He associated their uses of rhetoric with the kind of political discourse that, he believed, was corrupting Athens under democratic rule. But Plato saw himself as didactic, not manipulative, using discourse to shape his audience for its own good.

The dialogue form embodies Plato’s ambivalence about the function of language in aiding philosophical inquiry. It is a written genre, and yet it depicts oral discourse. In the dialogue, Socrates, who left no written work, develops his ideas by talking with the people around him. For Plato’s Socrates, as for the Sophists, oral exchange is valuable because it responds flexibly to *kairos*, the immediate social situation in which solutions to philosophical problems must be proposed. Socrates deems such responsiveness impossible for a fixed, written text. For Plato, the relative merits of oral and written philosophy seem less clear. Both Plato and his contemporary Isocrates blurred oral and written genres in their written works: Isocrates by writing “speeches” intended from the first to be read, not heard; Plato by composing the closet drama of his dialogues.

Modern questions about Plato’s view of rhetoric are complicated by the fact that the ideas expressed in various dialogues do not fit together neatly into a systematic theory. Moreover, scholars agree that it would be a mistake to assume that Plato endorses every view placed in the mouth of Socrates. Generations of readers have preferred to treat the dialogues as literary works, with lines given to the various characters as much for dramatic effect as to propound philosophical ideas. Considered as products of a literary artist’s career, the *Gorgias* (ca. 386) is generally regarded as an “early” work, and the *Phaedrus* (ca. 370, contemporary with the *Republic* and the *Symposium*) as “mature.” The *Gorgias* was probably written just

after Plato returned from his first trip to Sicily, when he was opening his school. Thus it may be seen as a public declaration of educational principles, similar in aim to Isocrates' "Against the Sophists" (p. 72), to which it often seems to respond implicitly. Many scholars also believe that in this dialogue Plato defends his own decision to follow the path of a contemplative philosopher and educator, rather than that of an active politician. The *Phaedrus*, like Isocrates' *Antidosis* (p. 75), can be seen as a retrospective statement on the author's work as an educator; Plato continued to revise the piece intermittently throughout his life. The *Gorgias* develops Plato's most extensive condemnation of false rhetoric, and the *Phaedrus* displays his most complete realization of true rhetoric.

GORGIAS

The *Gorgias* (reprinted in full here) is one of the most dramatically staged of Plato's dialogues. As the discussion progresses, it becomes more heated and even violent, with Callicles and Socrates trading insults and threats. The scene is laid mainly within an opulent Athenian home, where Gorgias has just finished an oratorical performance, probably one in which he spoke extemporaneously and at length on any subject the audience suggested. This scene depicts how the Sophists took part in Greek society (see also the discussion of Gorgias on p. 42). The aged Gorgias is attended by his vigorous young follower Polus. The host, Callicles, is a mature and powerful man. The group is joined by Socrates, whom we should imagine as older than Callicles but not yet of advanced age, attended by the boy Chaerephon. As the dialogue unfolds, Socrates takes on progressively more accomplished opponents—first the rather feeble Gorgias, then the impulsive Polus, and then the masterful Callicles. The end of the dialogue probably brought the actual trial of Socrates to mind for Plato's audience, as Callicles taunts Socrates with being unable to defend himself in a court of law and Socrates counters with a grim picture of Callicles' appearance before a higher court after death.

The question at issue here is the value of rhetoric. First, Gorgias says that rhetoric is valuable because it confers the power to be more convincing on any subject than even experts. Under pressure from Socrates, Gorgias waffles on whether he as a rhetoric teacher is responsible for, or capable of, teaching his students how to use this power beneficially. Gorgias appears quite ineffectual in his exchanges with Socrates here, perhaps enacting Plato's negative view of the older Sophists. Historians of rhetoric Richard Leo Enos and John Poulakos have both pointed out that Plato sets up a dramatic situation that puts Gorgias at a disadvantage. Gorgias is not allowed to make any of the long speeches for which he was famous, but only to give short answers to questions posed by Socrates. Moreover, Gorgias is made to agree to a discussion of abstract terms, such as *art* or *justice*, which he probably would have said could not be adequately defined in the abstract but required exploration within specific social contexts. Furthermore, Gorgias's defender Polus—as usual with Sophists in Plato's dialogues—is inadequate.

Polus comes to his aged mentor's aid by arguing that since Socrates does not deny that rhetoric confers the power Gorgias says it does, he should admit that

rhetoric is beneficial to orators, for it enables them to get what they want. Socrates counters that if orators exercise their power at other people's expense, they are destroying their souls; hence rhetoric is terribly harmful, not beneficial, to them.

At this point Callicles takes over the interchange with Socrates. Scholars have speculated that Callicles is not based on any one historical personage, but rather is a composite that embodies the worst political opportunism of the Athenian demagogues Plato attacked. Callicles responds to Socrates' condemnation of rhetoric as a tool of exploitation by arguing that exploiting other people is not evil if one is strong enough to do it. Since rhetoric enhances one's strength, it is clearly beneficial. Callicles means mental strength, the ability to dominate, and this is the greatest good a person can attain. Socrates counterattacks by pointing out that the strong man must do nothing to diminish his strength, the best source of which is his goodness. But rhetoric, by helping him satisfy his desires, may lead him to pursue pleasure to the detriment of his strength; hence rhetoric may not be beneficial. Socrates now presents his own position, that rhetoric is beneficial only when it enables one to bring just punishment upon oneself or a loved one, for correction maintains the health of the soul, which is the greatest good.

Underlying this discussion of rhetoric's value is the question of the relation between rhetoric and knowledge. Gorgias voices a damaging admission near the start of the dialogue when he says that rhetoric is not concerned with all language, but only with public political and judicial deliberations. Evidently public deliberations treat questions that have only probable, uncertain answers. Socrates then sets up a distinction between knowledge and belief, the true and the probable. Socrates admits that the mind must be persuaded to grasp both knowledge and belief, but given the way Gorgias has limited rhetoric's domain, evidently rhetoric deals only with belief. The orator can induce belief in questions of justice but cannot convey true knowledge of the just. One can master rhetoric without acquiring any moral knowledge that will direct how one uses rhetoric.

This point is underlined in the exchange with Polus, since Polus imagines that the rhetor uses rhetoric to achieve his desires at others' expense, which he would not do if he had gained knowledge of the just and good along with his rhetorical power. Socrates sets up the famous opposition between cosmetics, cookery, sophistic (political oratory), and rhetoric (forensic oratory) on the one hand, and gymnastics, medicine, legislation, and justice on the other. This opposition suggests that rhetoric is not just morally neutral, but actually pernicious, for it can be used to conceal the truth and offer a counterfeit in its place. For the remainder of the dialogue, Socrates hammers home the theme of what seems to be true (belief, the probable, the conventional—what rhetoric purveys) versus what is true (knowledge, the certain, the transcendent—what philosophy seeks).

Socrates rejects convention in favor of his own insight. Callicles, too, claims to be independent of social convention. He will pursue his desires, he says, no matter what anyone thinks. Socrates is able to show, however, that Callicles is actually the slave of convention. Callicles uses rhetoric to get what he wants, but to do so he must flatter convention. He must seek to become similar to his audience in order to persuade them. Socrates, to the contrary, really is independent because he rejects

conventional belief in order to be free to pursue truth. This is the point of Socrates' concluding insistence on the judgment after death—it symbolizes the transcendent knowledge he seeks. If such knowledge does not in fact exist, Socrates' argument, and his defense of his conduct, falls to the ground.

PHAEDRUS

The *Phaedrus* (reprinted in full here) is also based on a distinction between knowledge and belief, but the dramatic situation is very different. The *Phaedrus* is unusual among Platonic dialogues for having a rural setting and only two characters, Socrates and the handsome young Phaedrus. It is also unusual in that Socrates makes several long speeches. But what has most puzzled readers is that this dialogue, supposedly about rhetoric, has love as its ostensible subject. Some of the themes raised in the *Gorgias* provide clues to this puzzle. In the *Gorgias*, when Socrates depicts Callicles as the slave of convention, he implies that the rhetor who conforms in order to persuade changes his own inner nature—he cannot hope to manipulate while remaining untouched himself. Moreover, Socrates links this danger of conformity to a similar danger for the lover, who conforms to the views of his beloved in order to please and to achieve his desire. Socrates forges this link through a play on the word *Demus*, which is the name of the boy Callicles admires, and which also refers to the populace Callicles must persuade to achieve his political desires. Athenian homosexuality provides Socrates with a symbol of what is wrong with conforming to convention—the superior soul is retarded in its development by the need to conform to the opinions of the immature or inferior soul.

The idea that persuader and persuaded come to resemble one another is important to the *Phaedrus* in that the dialogue's subtext focuses on how we learn. In the *Gorgias* Socrates says that the mind requires persuasion to grasp true knowledge as well as belief. But the *Gorgias* asks what kind of persuasion leads to true knowledge. The relationship between Socrates and Phaedrus illustrates this kind of persuasion and how it comes about. It is a kind of persuasion that combats the power of convention and seeks to rise above it, rather than trying to exploit convention so as to satisfy base desires. For this persuasion to function, the student should take care to choose a teacher who will raise the student to the teacher's higher level, and the teacher should take care to choose a student who will not drag the teacher down. Phaedrus and Socrates are such a student and teacher.

The discussion in the *Phaedrus* is a model lesson on rhetoric that is organized inductively. Three speeches are presented in ascending order of quality, first the one by Lysias that Phaedrus reads and then the two composed on the spot, Sophist-fashion, by Socrates. Socrates does not allow Phaedrus to compose his own speech on love because he does not want the discussion to descend to Phaedrus's level. Indeed, Socrates is embarrassed by his own first speech because by composing it he has descended somewhat toward Phaedrus's conception of love, which Socrates knows is inferior to his own. In his second speech, Socrates attempts to raise Phaedrus to his superior level. At the same time, he does more than lecture. Discussion is an important part of this "class," and it is very friendly, even flirtatious.

There must be discussion so that Phaedrus can practice the higher level of discourse to which Socrates would raise him, and there must be flirtation to symbolize the total quality of the transformation that Socrates wishes to effect.

Indeed, this is why love must be the subject of a discussion about rhetoric. Socrates suggests that persuasion-to-belief—bad rhetoric—is like the lust of the nonlover, which exploits the object of lust at the same time it destroys the one who lusts. But persuasion-to-knowledge—good rhetoric—is like love, which seeks only to make the beloved a better person, to bring the beloved closer to transcendent good, and not to satisfy the carnal desires of the lover. We must sense Socrates' attraction to Phaedrus so that we can note that he refuses to gratify it, even though Phaedrus seems quite willing. At the same time, the motion toward transcendence must begin with carnality, with the physical attraction between two people, even if the goal is to progress beyond this level. The lovers must have bodies, in other words, if eventually, in Socrates' striking image, the lovers' bodies are to grow wings.

The nature of the good rhetoric that encourages wings to grow must be explored carefully. Socrates begins by avoiding Gorgias's initial mistake: Socrates says that rhetoric is the art of influencing the soul through words, in all kinds of speaking, not just in public deliberations. To influence the soul, the rhetor must know the truth. To know the truth, the rhetor must first make distinctions among things, defining his terms carefully—that is, he must analyze—and then he must be able to recombine his ideas in an organic form, in which each part is necessarily linked to what comes before and after—that is, he must synthesize. Thinking and speaking seem to be interrelated here for Socrates. One improves one's thinking by doing the analytic and synthetic groundwork for speaking, and one's speaking cannot be truly good, cannot communicate knowledge, unless it is informed by careful thinking. The rhetor should also apply analysis and synthesis to the subject of rhetoric itself, but not for such useless purposes as cataloging the parts of a speech. Rather he should catalog the kinds of human soul so that he can adapt his discourse to whomever he addresses. This is Socrates' version of *kairos*.

Ultimately the goal of this thinking and speaking is true, transcendent knowledge. When Phaedrus mocks the provenance of Socrates' Egyptian tale on the invention of writing, Socrates reproaches him for focusing on the tale's conventional aspects. One should focus on the transcendent truth the tale contains. This rebuke reinforces the condemnation of writing conveyed in the tale, a condemnation based on the culture-bound nature of writing. Socrates says, in effect, that a written text can only remind us of what we already know: that is, it depends on contextual information for its interpretation. Oral dialogue between congenial souls is far superior to writing because it can lead to truth.

The good rhetoric employed in such dialogue thus seems very close to dialectic. Socrates characterizes this dialogue with a reproductive metaphor. The teacher who is raising the student toward transcendence plants seeds in the student's soul that will eventually flower and, in turn, reproduce themselves in other souls. This kind of reproduction is superior to mere physical reproduction because it propagates only transcendent knowledge, not the beliefs of the tribe, which are typically inculcated

in young children. At the same time, it is necessary to have two parties to this process. Socrates—and by extension Plato—reject the possibility of a totally autonomous method (a method Descartes would later seek in isolated meditation). Good rhetoric may not itself generate truth, but it is an absolutely necessary pathway to truth.

Selected Bibliography

The Loeb Classical Library contains translations of Plato's works, including those reproduced here, from *Euthyphro. Apology. Crito. Phaedo. Phaedrus* (trans. H. N. Fowler, 1914), and *Lysis. Symposium. Gorgias* (trans. W. R. M. Lamb, 1925). Also highly regarded are Benjamin Jowett's translations (*The Works of Plato: Lysis. Euthyphro. Apology. Crito. Phaedo. Protagoras. Phaedrus. Symposium. The Republic. Theaetetus*, ed. Irwin Edman, Modern Library, 1956), and the W. C. Helmbold and W. G. Rabinowitz translations: *Gorgias* (trans. Helmbold, 1953, rpt. Library of Liberal Arts, 1985) and *Phaedrus* (trans. Helmbold and Rabinowitz, 1956, rpt. Library of Liberal Arts, 1985).

A good introduction to the voluminous scholarship on Plato and a place to start for further bibliography is a collection edited by Keith Erickson, *Plato: True and Sophistic Rhetoric* (1979). A helpful summary reprinted in Erickson is Edwin Black's "Plato's View of Rhetoric." For a historical introduction and overview of scholarly issues involved in the dialogues, see W. K. C. Guthrie, *A History of Greek Philosophy*, vol. 4, *Plato: The Man and His Dialogues: Earlier Period* (1975). Placing Plato helpfully in the context of the Sophistic Movement are Richard Leo Enos, *Greek Rhetoric before Aristotle* (1993), John Poulakos, *Sophistical Rhetoric in Classical Greece* (1995), and C. Jan Swearingen, "Plato," in *Encyclopedia of Rhetoric and Composition: Communication from Ancient Times to the Information Age*, ed. Theresa Enos (1996). More sources on the Sophists can be found in the bibliography accompanying this volume's selection from *Gorgias* (p. 00). On Plato's coining the term *rhetoric*, see Edward Schiappa, "Did Plato Coin *Rhetorike*?" (*American Journal of Philology* 111 (1990): 457–70). See also the bibliography for Isocrates in the present volume (p. 000) for work relating Plato to his chief rival.

On the dialogues as literary works, see Michael C. Stokes, *Plato's Socratic Conversations* (1986), James A. Arieti, *Interpreting Plato: The Dialogues as Drama* (1991), and Andrea Wilson Nightingale, *Genres in Dialogue: Plato and the Construct of Philosophy* (1995).

Works focusing on the relationship between rhetoric and philosophy in Plato's thought and especially the possibilities of rhetoric as an intellectual method includes Stanley Rosen, *Plato's Symposium* (1968), Ronna Burger, *Plato's "Phaedrus": A Defense of a Philosophical Art of Writing* (1980), Lynette Hunter, *The Rhetorical Stance in Modern Literature* (1984), Charles Griswold, *Self-Knowledge in Plato's "Phaedrus"* (1986), and Jasper Neel, *Plato, Derrida and Writing* (1988). Two other excellent essays on the *Phaedrus* are Richard L. Weaver's "The *Phaedrus* and the Nature of Rhetoric," reprinted here (see Part Six), and the title essay in William Gass's *Habitations of the Word* (1985). On the *Gorgias* as a demonstration of philosophy's need for rhetoric, see James Kastely, "In Defense of Plato's *Gorgias*" (*PMLA* 106 [1991]: 96–109).

Eric Havelock develops his theory of orality and literacy in *A Preface to Plato* (1963). For an extension and correction of his work, see C. Jan Swearingen, "The Rhetor as Eiron: Plato's Defense of Dialogue" (*PRE/TEXT* 3 [1982]: 289–336). Also building on Havelock, Thomas Cole's *The Origins of Rhetoric in Ancient Greece* (1991) shows how the advent of

literacy and the attendant ability to detach a text's content from its verbal form contributed to Plato's view of rhetoric.

A helpful collection of current scholarship concerning Plato's views on women is *Feminist Interpretations of Plato*, ed. Nancy Tuana (1994). In this volume is the script of a theater piece by Tuana and William Cowling, "The Presence and Absence of the Feminine in Plato's Philosophy," which attempts to imagine what female rhetorical voices might sound like in the context of Plato's thought. On the function of female characters in the Platonic dialogues, see Elena Duverges Blair, "Women: The Unrecognized Teachers of the Platonic Socrates" (*Ancient Philosophy* 16 [1996]: 333–50), and C. Jan Swearingen, "A Lover's Discourse: Diotima, Logos, and Desire" in *Reclaiming Rhetorica*, ed. Andrea A. Lunsford (1995).

Gorgias

or On Rhetoric; Reputative

CALLICLES: To join in a fight or a fray, as the saying is, Socrates, you have chosen your time well enough.

SOCRATES: Do you mean, according to the proverb, we have come too late for a feast?

CALLICLES: Yes, a most elegant feast; for Gorgias gave us a fine and varied display but a moment ago.

SOCRATES: But indeed, Callicles, it is Chaerephon here who must take the blame for this; he forced us to spend our time in the marketplace.

CHAEREPHON: No matter, Socrates: I will take the curing of it too; for Gorgias is a friend of mine, so that he will give us a display now, if you think fit, or if you prefer, on another occasion.

CALLICLES: What, Chaerephon? Has Socrates a desire to hear Gorgias?

CHAEREPHON: Yes, it is for that very purpose we are here.

CALLICLES: Then whenever you have a mind to pay me a call—Gorgias is staying with me, and he will give you a display.

SOCRATES: Thank you, Callicles: but would he consent to discuss with us? For I want to find out from the man what is the function of his art, and what it is that he professes and teaches. As for

the rest of his performance, he must give it us, as you suggest, on another occasion.

CALLICLES: The best way is to ask our friend himself, Socrates: for indeed that was one of the features of his performance. Why, only this moment he was pressing for whatever questions anyone in the house might like to ask, and saying he would answer them all.

SOCRATES: What a good idea! Ask him, Chaerephon.

CHAEREPHON: What am I to ask?

SOCRATES: What he is.

CHAEREPHON: How do you mean?

SOCRATES: Just as, if he chanced to be in the shoemaking business, his answer would have been, I presume, "a shoemaker." Now, don't you see my meaning?

CHAEREPHON: I see, and will ask him. Tell me, Gorgias, is Callicles here correct in saying that you profess to answer any questions one may ask you?

GORGAS: He is, Chaerephon; indeed, I was just now making this very profession, and I may add that nobody has asked me anything new for many years now.

CHAEREPHON: So I presume you will easily answer, Gorgias.

GORGAS: You are free to make trial of that, Chaerephon.

POLUS: Yes, to be sure; and, if you like, Chaerephon, of me. For I think Gorgias must be

Translated by W. R. M. Lamb.

quite tired out, after the long discourse he has just delivered.

CHAEREPHON: Why, Polus, do you suppose you could answer more excellently than Gorgias?

POLUS: And what does that matter, if I should satisfy you?

CHAEREPHON: Not at all; since it is your wish, answer.

POLUS: Ask.

CHAEREPHON: Then I ask you, if Gorgias chanced to be skilled in the same art as his brother Herodicus, what should we be justified in calling him? What we call his brother, should we not?

POLUS: Certainly.

CHAEREPHON: Then we should make a right statement if we described him as a doctor.

POLUS: Yes.

CHAEREPHON: And if he were expert in the same art as Aristophon, son of Aglaophon, or his brother,¹ what name should we rightly give him?

POLUS: Obviously that of painter.

CHAEREPHON: But as it is, we would like to know in what art he is skilled, and hence by what name we should rightly call him.

POLUS: Chaerephon, there are many arts among mankind that have been discovered experimentally, as the result of experiences: for experience conducts the course of our life according to art, but inexperience according to chance. Of these several arts various men partake in various ways, and the best men of the best. Gorgias here is one of these, and he is a partner in the finest art of all.

SOCRATES: Fine, at any rate, Gorgias, is the equipment for discourse that Polus seems to have got: but still he is not performing his promise to Chaerephon.

GORGAS: How exactly, Socrates?

SOCRATES: He does not seem to me to be quite answering what he is asked.

GORGAS: Well, will you please ask him?

SOCRATES: No, if you yourself will be so good as to answer, why, I would far rather ask you. For I see plainly, from what he has said, that Polus has had more practice in what is called rhetoric than in discussion.

POLUS: How so, Socrates?

SOCRATES: Because, Polus, when Chaerephon has asked in what art Gorgias is skilled, you merely eulogize his art as though it were under some censure, instead of replying what it is.

POLUS: Why, did I not reply that it was the finest?

SOCRATES: You certainly did: but nobody asked what was the quality of his art, only what it was, and by what name we ought to call Gorgias. Just as Chaerephon laid out the lines for you at first, and you answered him properly in brief words, in the same way you must now state what is that art, and what we ought to call Gorgias; or rather, Gorgias, do you tell us yourself in what art it is you are skilled, and hence, what we ought to call you.

GORGAS: Rhetoric, Socrates.

SOCRATES: So we are to call you a rhetorician?

GORGAS: Yes, and a good one, if you would call me what—to use Homer's phrase—"I vaunt myself to be."²

SOCRATES: Well, I shall be pleased to do so.

GORGAS: Then call me such.

SOCRATES: And are we to say that you are able to make others like yourself?

GORGAS: Yes, that is what I profess to do, not only here, but elsewhere also.

SOCRATES: Then would you be willing, Gorgias, to continue this present way of discussion, by alternate question and answer, and defer to some other time that lengthy style of speech in which Polus made a beginning? Come, be true to your promise, and consent to answer each question briefly.

GORGAS: There are some answers, Socrates, that necessitate a lengthy expression: however, I will try to be as brief as possible; for indeed it is one of my claims that no one could express the same thing in briefer terms than myself.

SOCRATES: That is just what I want, Gorgias: give me a display of this very skill—in brevity of speech; your lengthy style will do another time.

GORGAS: Well, I will do that, and you will admit that you never heard anyone speak more briefly.

¹Polygnotus, the famous painter who decorated public buildings in Athens from about 470 B.C. [Tr.]

²The regular phrase of a Homeric hero in boasting of his valor, parentage, etc.; cf. *Il.* vi. 211, xiv. 113. [Tr.]

SOCRATES: Come then; since you claim to be skilled in rhetorical art, and to be able to make anyone else a rhetorician, tell me with what particular thing rhetoric is concerned: as, for example, weaving is concerned with the manufacture of clothes, is it not?

GORGIAS: Yes.

SOCRATES: And music, likewise, with the making of tunes?

GORGIAS: Yes.

SOCRATES: Upon my word, Gorgias, I do admire your answers! You make them as brief as they well can be.

GORGIAS: Yes, Socrates, I consider myself a very fair hand at that.

SOCRATES: You are right there. Come now, answer me in the same way about rhetoric: with what particular thing is its skill concerned?

GORGIAS: With speech.

SOCRATES: What kind of speech, Gorgias? Do you mean that which shows sick people by what regimen they could get well?

GORGIAS: No.

SOCRATES: Then rhetoric is not concerned with all kinds of speech.

GORGIAS: No, I say.

SOCRATES: Yet it does make men able to speak.

GORGIAS: Yes.

SOCRATES: And to understand also the things about which they speak.

GORGIAS: Of course.

SOCRATES: Now, does the medical art, which we mentioned just now, make men able to understand and speak about the sick?

GORGIAS: It must.

SOCRATES: Hence the medical art also, it seems, is concerned with speech.

GORGIAS: Yes.

SOCRATES: That is, speech about diseases?

GORGIAS: Certainly.

SOCRATES: Now, is gymnastic also concerned with speech about the good and bad condition of our bodies?

GORGIAS: Quite so.

SOCRATES: And moreover it is the same, Gorgias, with all the other arts; each of them is concerned with that kind of speech which deals with the subject matter of that particular art.

GORGIAS: Apparently.

SOCRATES: Then why, pray, do you not give the name "rhetorical" to those other arts, when they are concerned with speech, if you call that "rhetoric" which has to do with speech?

GORGIAS: Because, Socrates, the skill in those other arts is almost wholly concerned with manual work and similar activities, whereas in rhetoric there is no such manual working, but its whole activity and efficacy is by means of speech. For this reason I claim for the rhetorical art that it is concerned with speech, and it is a correct description, I maintain.

SOCRATES: Now, do I understand what sort of art you choose to call it? Perhaps, however, I shall get to know this more clearly. But answer me this: we have arts, have we not?

GORGIAS: Yes.

SOCRATES: Then amongst the various arts some, I take it, consist mainly of work, and so require but brief speech; while others require none, for the art's object may be achieved actually in silence, as with painting, sculpture, and many other arts. It is to such as these that I understand you to refer when you say rhetoric has no concern with them; is not that so?

GORGIAS: Your supposition is quite correct, Socrates.

SOCRATES: But there is another class of arts which achieve their whole purpose through speech and—to put it roughly—require either no action to aid them, or very little; for example, numeration, calculation, geometry, draught-playing, and many other arts: some of these have the speech in about equal proportion to the action, but most have it as the larger part, or absolutely the whole of their operation and effect is by means of speech. It is one of this class of arts that I think you refer to as rhetoric.

GORGIAS: You are right.

SOCRATES: But, mind you, I do not think it is any one of these that you mean to call rhetoric; though, so far as your expression went, you did say that the art which has its effect through speech is rhetoric, and one might retort, if one cared to strain at mere words: So, Gorgias, you call numeration rhetoric! But I do not believe it is either numeration or geometry that you call rhetoric.

GORGIAS: Your belief is correct, Socrates, and your supposition just.

SOCRATES: Come now, and do your part in finishing off the answer to my question. Since rhetoric is in fact one of these arts which depend mainly on speech, and there are likewise other arts of the same nature, try if you can tell me with what this rhetoric, which has its effect in speech, is concerned. For instance, suppose some one asked me about one or other of the arts which I was mentioning just now: Socrates, what is the art of numeration? I should tell him, as you did me a moment ago, that it is one of those which have their effect through speech. And suppose he went on to ask: With what is its speech concerned? I should say: With the odd and even numbers, and the question of how many units there are in each. And if he asked again: What art is it that you call calculation? I should say that this also is one of those which achieve their whole effect by speech. And if he proceeded to ask: With what is it concerned? I should say—in the manner of those who draft amendments in the Assembly—that in most respects calculation is in the same case as numeration, for both are concerned with the same thing, the odd and the even; but that they differ to this extent, that calculation considers the numerical values of odd and even numbers not merely in themselves but in relation to each other. And suppose, on my saying that astronomy also achieves its whole effect by speech, he were to ask me: And the speech of astronomy, with what is it concerned? I should say: With the courses of the stars and sun and moon, and their relative speeds.

GORGIAS: And you would be right, Socrates.

SOCRATES: Come then and do your part, Gorgias: rhetoric is one of those arts, is it not, which carry out their work and achieve their effect by speech?

GORGIAS: That is so.

SOCRATES: Then tell me what they deal with: what subject is it, of all in the world, that is dealt with by this speech employed by rhetoric?

GORGIAS: The greatest of human affairs, Socrates, and the best.

SOCRATES: But that also, Gorgias, is ambiguous, and still by no means clear. I expect you have heard people singing over their cups the old

catch, in which the singers enumerate the best things in life,—first health, then beauty, and thirdly, as the maker of the catch puts it, wealth got without guile.

GORGIAS: Yes, I have heard it; but what is the point of your quotation?

SOCRATES: I mean that, supposing the producers of those blessings which the maker of the catch commends—namely, the doctor, the trainer, and the money-getter—were to stand before you this moment, and the doctor first should say: “Gorgias is deceiving you, Socrates; for it is not his art, but mine, that deals with man’s greatest good.” Then supposing I were to ask him: “And who are you, to say so?” He would probably reply: “A doctor.” “Well, what do you mean? That the work of your art is the greatest good?” “What else, Socrates,” I expect he would reply, “is health? What greater good is there for men than health?” And supposing the trainer came next and said: “I also should be surprised indeed, Socrates, if Gorgias could show you a greater good in his art than I can in mine.” Again I should say to him in his turn: “And who are you, sir? What is your work?” “A trainer,” he would reply, “and my work is making men’s bodies beautiful and strong.” After the trainer would come the money-getter, saying—with, I fancy, a fine contempt for every one: “Pray consider, Socrates, if you can find a good that is greater than wealth, either in Gorgias’ view or in that of anyone else at all.” “Why then,” we should say to him, “are you a producer of that?” “Yes,” he would say. “And who are you?” “A money-getter.” “Well then,” we shall say to him, “do you judge wealth to be the greatest good for men?” “Of course,” he will reply. “But look here,” we should say; “our friend Gorgias contends that his own art is a cause of greater good than yours.” Then doubtless his next question would be: “And what is that good? Let Gorgias answer.” Now come, Gorgias; imagine yourself being questioned by those persons and by me, and tell us what is this thing that you say is the greatest good for men, and that you claim to produce.

GORGIAS: A thing, Socrates, which in truth is the greatest good, and a cause not merely of freedom to mankind at large, but also of dominion to single persons in their several cities.

SOCRATES: Well, and what do you call it?

GORGIAS: I call it the ability to persuade with speeches either judges in the law courts or statesmen in the council-chamber or the commons in the Assembly or an audience at any other meeting that may be held on public affairs. And I tell you that by virtue of this power you will have the doctor as your slave, and the trainer as your slave; your money-getter will turn out to be making money not for himself, but for another,—in fact for you, who are able to speak and persuade the multitude.

SOCRATES: I think now, Gorgias, you have come very near to showing us the art of rhetoric as you conceive it, and if I at all take your meaning, you say that rhetoric is a producer of persuasion, and has therein its whole business and main consummation. Or can you tell us of any other function it can have beyond that of effecting persuasion in the minds of an audience?

GORGIAS: None at all, Socrates; your definition seems to me satisfactory; that is the main substance of the art.

SOCRATES: Then listen, Gorgias: I, let me assure you, for so I persuade myself—if ever there was a man who debated with another from a desire of knowing the truth of the subject discussed, I am such a man; and so, I trust, are you.

GORGIAS: Well, what then, Socrates?

SOCRATES: I will now tell you. What the real nature of the persuasion is that you speak of as resulting from rhetoric, and what the matters are with which persuasion deals, I assure you I do not clearly understand; though I may have my suspicions as to what I suppose you to mean by it, and with what things you think it deals. But nevertheless I will ask you what you do mean by the persuasion that results from rhetoric, and with what matters you think it deals. Now why is it that, having a suspicion of my own, I am going to ask you this, instead of stating it myself? It is not on your account, but with a view to the argument, and to such a progress in it as may best reveal to us the point we are discussing. Just see if you do not think it fair of me to press you with my question: suppose I happened to ask you what Zeuxis was among painters, and you said “a figure painter,” would it not be fair of me to ask you what sort of figures he painted, and where?

GORGIAS: Certainly.

SOCRATES: Would this be the reason—that there are also other painters who depict a variety of other figures?

GORGIAS: Yes.

SOCRATES: But if no one besides Zeuxis were a painter, your answer would have been right?

GORGIAS: Yes, of course.

SOCRATES: Come then, tell me now about rhetoric: do you think rhetoric alone effects persuasion, or can other arts do it as well? I mean, for example, when a man teaches anything, does he persuade in his teaching? Or do you think not?

GORGIAS: No, to be sure, Socrates, I think he most certainly does persuade.

SOCRATES: Then let us repeat our question with reference to the same arts that we spoke of just now: does not numeration, or the person skilled in numeration, teach us all that pertains to number?

GORGIAS: Certainly.

SOCRATES: And persuades also?

GORGIAS: Yes.

SOCRATES: So that numeration also is a producer of persuasion?

GORGIAS: Apparently.

SOCRATES: Then if we are asked what kind of persuasion, and dealing with what, we shall reply, I suppose: The instructive kind, which deals with the amount of an odd or an even number; and we shall be able to demonstrate that all the other arts which we mentioned just now are producers of persuasion, and what kind it is, and what it deals with, shall we not?

GORGIAS: Yes.

SOCRATES: Hence rhetoric is not the only producer of persuasion.

GORGIAS: You are right.

SOCRATES: Since then it is not the only one that achieves this effect, but others can also, we should be justified in putting this further question to the speaker, as we did concerning the painter: Then of what kind of persuasion, and of persuasion dealing with what, is rhetoric the art? Or do you not consider that such a further question would be justified?

GORGIAS: Yes, I do.

SOCRATES: Then answer me, Gorgias, since you agree with me on that.

GORGAS: Well then, I mean that kind of persuasion, Socrates, which you find in the law courts and in any public gatherings, as in fact I said just now; and it deals with what is just and unjust.

SOCRATES: I, too, I may tell you, had a suspicion that it was this persuasion that you meant, and as dealing with those things, Gorgias; but you must not be surprised if I ask you by-and-by some such question as may seem to be obvious, though I persist in it; for, as I say, I ask my questions with a view to an orderly completion of our argument—I am not aiming at you, but only anxious that we do not fall into a habit of snatching at each other's words with a hasty guess, and that you may complete your own statement in your own way, as the premises may allow.

GORGAS: And I think you are quite right in doing so, Socrates.

SOCRATES: Come then, let us consider another point. Is there something that you call "having learned"?

GORGAS: There is.

SOCRATES: And again, "having believed"?

GORGAS: Yes.

SOCRATES: Then do you think that having learned and having believed, or learning and belief, are the same thing, or different?

GORGAS: In my opinion, Socrates, they are different.

SOCRATES: And your opinion is right, as you can prove in this way: if some one asked you—Is there, Gorgias, a false and a true belief?—you would say, Yes, I imagine.

GORGAS: I should.

SOCRATES: But now, is there a false and a true knowledge?

GORGAS: Surely not.

SOCRATES: So it is evident again that they³ are not the same.

GORGAS: You are right.

SOCRATES: But yet those who have learned have been persuaded, as well as those who have believed.

GORGAS: That is so.

SOCRATES: Then would you have us assume two forms of persuasion—one providing belief

without knowledge, and the other sure knowledge?

GORGAS: Certainly.

SOCRATES: Now which kind of persuasion is it that rhetoric creates in law courts or any public meeting on matters of right and wrong? The kind from which we get belief without knowledge, or that from which we get knowledge?

GORGAS: Obviously, I presume, Socrates, that from which we get belief.

SOCRATES: Thus rhetoric, it seems, is a producer of persuasion for belief, not for instruction in the matter of right and wrong.

GORGAS: Yes.

SOCRATES: And so the rhetorician's business is not to instruct a law court or a public meeting in matters of right and wrong, but only to make them believe; since, I take it, he could not in a short while instruct such a mass of people in matters so important.

GORGAS: No, to be sure.

SOCRATES: Come then, let us see what actually is our account of rhetoric: for I confess I am not yet able to distinguish what my own account of it is. When the city holds a meeting to appoint doctors or shipbuilders or any other set of craftsmen, there is no question then, is there, of the rhetorician giving advice? And clearly this is because in each appointment we have to elect the most skillful person. Again, in a case of building walls or constructing harbors or arsenals, our only advisers are the master-builders; or in consulting on the appointment of generals, or on a maneuver against the enemy, or on a military occupation, it is the general staff who will then advise us, and not the rhetoricians. Or what do you say, Gorgias, to these instances? For as you claim to be an orator yourself and to make orators of others, it is proper to inquire of you concerning your own craft. And here you must regard me as furthering your own interest: for it is quite likely that some one within these walls has a wish to become your pupil—indeed I fancy I perceive more than one, yes, a number of them, who, perhaps, would be ashamed to press you with questions. So, when you are being pressed with mine, consider that you are being questioned by them as well: "What shall we get, Gorgias, by coming to hear you? On what matters shall we be enabled to give advice

³I.e., knowledge and belief. [Tr.]

to the state? Will it be only on right and wrong, or on those things besides which Socrates was mentioning just now?" So try to give them an answer.

GORGAS: Well, I will try, Socrates, to reveal to you clearly the whole power of rhetoric: and in fact you have correctly shown the way to it yourself. You know, I suppose, that these great arsenals and walls of Athens, and the construction of your harbors, are due to the advice of Themistocles, and in part to that of Pericles, not to your craftsmen.

SOCRATES: So we are told, Gorgias, of Themistocles; and as to Pericles, I heard him myself when he was advising us about the middle wall.⁴

GORGAS: So whenever there is an election of such persons as you were referring to, Socrates, you see it is the orators who give the advice and get resolutions carried in these matters.

SOCRATES: That is just what surprises me, Gorgias, and has made me ask you all this time what in the world the power of rhetoric can be. For, viewed in this light, its greatness comes over me as something supernatural.

GORGAS: Ah yes, if you knew all, Socrates, — how it comprises in itself practically all powers at once! And I will tell you a striking proof of this: many and many a time have I gone with my brother or other doctors to visit one of their patients, and found him unwilling either to take medicine or submit to the surgeon's knife or cautery; and when the doctor failed to persuade him I succeeded, by no other art than that of rhetoric. And I further declare that, if a rhetorician and a doctor were to enter any city you please, and there had to contend in speech before the Assembly or some other meeting as to which of the two should be appointed physician, you would find the physician was nowhere, while the master of speech would be appointed if he wished. And if he had to contend with a member of any other profession whatsoever, the rhetorician would persuade the meeting to appoint him

before anyone else in the place: for there is no subject on which the rhetorician could not speak more persuasively than a member of any other profession whatsoever, before a multitude. So great, so strange, is the power of this art. At the same time, Socrates, our use of rhetoric should be like our use of any other sort of exercise. For other exercises are not to be used against all and sundry, just because one has learned boxing or wrestling or fighting in armor so well as to vanquish friend and foe alike: this gives one no right to strike one's friends, or stab them to death. Nor, in all conscience, if a man took lessons at a wrestling-school, and having got himself into good condition and learned boxing he proceeded to strike his father and mother, or some other of his relations or friends, should that be a reason for hating athletic trainers and teachers of fighting in armor, and expelling them from our cities. For they imparted their skill with a view to its rightful use against enemies and wrongdoers, in self-defense, not provocation; whereas the others have perverted their strength and art to an improper use. So it is not the teachers who are wicked, nor is the art either guilty or wicked on this account, but rather, to my thinking, those who do not use it properly. Now the same argument applies also to rhetoric: for the orator is able, indeed, to speak against every one and on every question in such a way as to win over the votes of the multitude, practically in any matter he may choose to take up: but he is no whit the more entitled to deprive the doctors of their credit, just because he could do so, or other professionals of theirs; he must use his rhetoric fairly, as in the case of athletic exercise. And, in my opinion, if a man becomes a rhetorician and then uses this power and this art unfairly, we ought not to hate his teacher and cast him out of our cities. For he imparted that skill to be used in all fairness, while this man puts it to an opposite use. Thus it is the man who does not use it aright who deserves to be hated and expelled and put to death, and not his teacher.

SOCRATES: I expect, Gorgias, that you as well as I have had no small practice in arguments, and have observed the following fact about them, that it is not easy for people to define to each other the matters which they take in hand to discuss,

⁴Built about 440 B.C. between the two walls built in 456 B.C., one connecting the Piraeus, and the other Phalerum, with Athens. The "middle wall" ran parallel to the former, and secured from hostile attack a narrow strip of land between Athens and the Piraeus. Socrates was born in 469 B.C. [Tr.]

and to make such exchange of instruction as will fairly bring their debate to an end: no, if they find that some point is in dispute between them, and one of them says that the other is speaking incorrectly or obscurely, they are annoyed and think the remark comes from jealousy of themselves, and in a spirit of contention rather than of inquiry into the matter proposed for discussion. In some cases, indeed, they end by making a most disgraceful scene, with such abusive expressions on each side that the rest of the company are vexed on their own account that they allowed themselves to listen to such fellows. Well, what is my reason for saying this? It is because your present remarks do not seem to me quite in keeping or accord with what you said at first about rhetoric. Now I am afraid to refute you, lest you imagine I am contentiously neglecting the point and its elucidation, and merely attacking you. I therefore, if you are a person of the same sort as myself, should be glad to continue questioning you: if not, I can let it drop. Of what sort am I? One of those who would be glad to be refuted if I say anything untrue, and glad to refute anyone else who might speak untruly; but just as glad, mind you, to be refuted as to refute, since I regard the former as the greater benefit, in proportion as it is a greater benefit for oneself to be delivered from the greatest evil than to deliver some one else. For I consider that a man cannot suffer any evil so great as a false opinion on the subjects of our actual argument. Now if you say that you too are of that sort, let us go on with the conversation; but if you think we had better drop it, let us have done with it at once and make an end of the discussion.

GORGIAS: Nay, I too, Socrates, claim to be of the sort you indicate; though perhaps we should have taken thought also for the wishes of our company. For, let me tell you, some time before you and your friend arrived, I gave the company a performance of some length; and if we now have this conversation I expect we shall seriously protract our sitting. We ought, therefore, to consider their wishes as well, in case we are detaining any of them who may want to do something else.

CHAEREPHON: You hear for yourselves, Gorgias and Socrates, the applause by which these gentlemen show their desire to hear anything you may say; for my own part, however, Heaven for-

bid that I should ever be so busy as to give up a discussion so interesting and so conducted, because I found it more important to attend to something else.

CALLICLES: Yes, by all that's holy, Chaerephon; and let me say, moreover, for myself that among the many discussions which I have attended in my time I doubt if there was one that gave me such delight as this present one. So, for my part, I shall count it a favor even if you choose to continue it all day long.

SOCRATES: Why, Callicles, I assure you there is no hindrance on my side, if Gorgias is willing.

GORGIAS: After that, Socrates, it would be shameful indeed if I were unwilling, when it was I who challenged everybody to ask what questions they pleased. But if our friends here are so minded, go on with the conversation and ask me anything you like.

SOCRATES: Hark you then, Gorgias, to what surprises me in your statements: to be sure, you may possibly be right, and I may take your meaning wrongly. You say you are able to make a rhetorician of any man who chooses to learn from you?

GORGIAS: Yes.

SOCRATES: Now, do you mean, to make him carry conviction to the crowd on all subjects, not by teaching them, but by persuading?

GORGIAS: Certainly I do.

SOCRATES: You were saying just now, you know, that even in the matter of health the orator will be more convincing than the doctor.

GORGIAS: Yes, indeed, I was—meaning, to the crowd.

SOCRATES: And “to the crowd” means “to the ignorant”? For surely, to those who know, he will not be more convincing than the doctor.

GORGIAS: You are right.

SOCRATES: And if he is to be more convincing than the doctor, he thus becomes more convincing than he who knows?

GORGIAS: Certainly.

SOCRATES: Though not himself a doctor, you agree?

GORGIAS: Yes.

SOCRATES: But he who is not a doctor is surely without knowledge of that whereof the doctor has knowledge.

GORGIAS: Clearly.

SOCRATES: So he who does not know will be more convincing to those who do not know than he who knows, supposing the orator to be more convincing than the doctor. Is that, or something else, the consequence?

GORGIAS: In this case it does follow.

SOCRATES: Then the case is the same in all the other arts for the orator and his rhetoric: there is no need to know the truth of the actual matters, but one merely needs to have discovered some device of persuasion which will make one appear to those who do not know to know better than those who know.

GORGIAS: Well, and is it not a great convenience, Socrates, to make oneself a match for the professionals by learning just this single art and omitting all the others?

SOCRATES: Whether the orator is or is not a match for the rest of them by reason of that skill, is a question we shall look into presently, if our argument so requires: for the moment let us consider first whether the rhetorician is in the same relation to what is just and unjust, base and noble, good and bad, as to what is healthful, and to the various objects of all the other arts; he does not know what is really good or bad, noble or base, just or unjust, but he has devised a persuasion to deal with these matters so as to appear to those who, like himself, do not know to know better than he who knows. Or is it necessary to know, and must anyone who intends to learn rhetoric have a previous knowledge of these things when he comes to you? Or if not, are you, as the teacher of rhetoric, to teach the person who comes to you nothing about them—for it is not your business—but only to make him appear in the eyes of the multitude to know things of this sort when he does not know, and to appear to be good when he is not? Or will you be utterly unable to teach him rhetoric unless he previously knows the truth about these matters? Or what is the real state of the case, Gorgias? For Heaven's sake, as you proposed just now, draw aside the veil and tell us what really is the function of rhetoric.

GORGIAS: Why, I suppose, Socrates, if he happens not to know these things he will learn them too from me.

SOCRATES: Stop there: I am glad of that statement. If you make a man a rhetorician he must needs know what is just and unjust either previously or by learning afterwards from you.

GORGIAS: Quite so.

SOCRATES: Well now, a man who has learned building is a builder, is he not?

GORGIAS: Yes.

SOCRATES: And he who has learned music, a musician?

GORGIAS: Yes.

SOCRATES: Then he who has learned medicine is a medical man, and so on with the rest on the same principle; anyone who has learned a certain art has the qualification acquired by his particular knowledge?

GORGIAS: Certainly.

SOCRATES: And so, on this principle, he who has learned what is just is just?

GORGIAS: Absolutely, I presume.

SOCRATES: And the just man, I suppose, does what is just.

GORGIAS: Yes.

SOCRATES: Now the just man must *wish* to do what is just?

GORGIAS: Apparently.

SOCRATES: Hence the just man will never wish to act unjustly?

GORGIAS: That must needs be so.

SOCRATES: But it follows from our statements⁵ that the rhetorician must be just.

GORGIAS: Yes.

SOCRATES: Hence the rhetorician will never wish to do wrong.

GORGIAS: Apparently not.

SOCRATES: Then do you remember saying a little while ago that we ought not to complain against the trainers or expel them from our cities, if a boxer makes not merely use, but an unfair use, of his boxing? So in just the same way, if an orator uses his rhetoric unfairly, we should not complain against his teacher or banish him from our city, but the man who does the wrong and misuses his rhetoric. Was that said or not?

GORGIAS: It was.

SOCRATES: But now we find that this very per-

⁵I.e., that he must know what is just, and that he who knows this must be just. [Tr.]

son, the rhetorician, could never be guilty of wrongdoing, do we not?

GORGIAS: We do.

SOCRATES: And in our first statements, Gorgias, we said that rhetoric dealt with speech, not on even and odd, but on the just and unjust, did we not?

GORGIAS: Yes.

SOCRATES: Well then, I supposed at the time when you were saying this that rhetoric could never be an unjust thing, since the speeches it made were always about justice; but when a little later you told us that the orator might make even an unjust use of his rhetoric, that indeed surprised me, and thinking the two statements were not in accord I made those proposals,—that if, like myself, you counted it a gain to be refuted, it was worth while to have the discussion, but if not, we had better have done with it. And now that we have come to examine the matter, you see for yourself that we agree once more that it is impossible for the rhetorician to use his rhetoric unjustly or consent to do wrong. Now, to distinguish properly which way the truth of the matter lies will require, by the Dog,⁶ Gorgias, no short sitting.

POLUS: How is this, Socrates? Is that really your opinion of rhetoric, as you now express it? Or, think you, because Gorgias was ashamed not to admit your point that the rhetorician knows what is just and noble and good, and will himself teach these to anyone who comes to him without knowing them; and then from this admission I daresay there followed some inconsistency in the statements made—the result that you are so fond of—when it was yourself who led him into that set of questions!⁷ For who do you think will deny that he has a knowledge of what is just and can also teach it to others? I call it very bad taste to lead the discussion in such a direction.

SOCRATES: Ah, sweet Polus, of course it is for

⁶This favorite oath of Socrates was derived from Egypt, where the god Anubis was represented with a dog's head; cf. 482 B. [Tr.]

⁷The defective construction of this sentence is probably intended to mark the agitated manner of Polus in making his protest. [Tr.] The name "Polus" means young colt, and Polus's entry into the discussion here suggests in its style the awkward, impulsive gait of a colt. [Ed.]

this very purpose we possess ourselves of companions and sons, that when the advance of years begins to make us stumble, you younger ones may be at hand to set our lives upright again in words as well as deeds. So now if Gorgias and I are stumbling in our words, you are to stand by and set us up again—it is only your duty; and for my part I am willing to revoke at your pleasure anything that you think has been wrongly admitted, if you will kindly observe one condition.

POLUS: What do you mean by that?

SOCRATES: That you keep a check on that lengthy way of speaking, Polus, which you tried to employ at first.

POLUS: Why, shall I not be at liberty to say as much as I like?

SOCRATES: It would indeed be a hard fate for you, my excellent friend, if having come to Athens, where there is more freedom of speech than anywhere in Greece, you should be the one person there who could not enjoy it. But as a setoff to that, I ask you if it would not be just as hard on me, while you spoke at length and refused to answer my questions, not to be free to go away and avoid listening to you. No, if you have any concern for the argument that we have carried on, and care to set it on its feet again, revoke whatever you please, as I suggested just now; take your turn in questioning and being questioned, like me and Gorgias; and thus either refute or be refuted. For you claim, I understand, that you yourself know all that Gorgias knows, do you not?

POLUS: I do.

SOCRATES: Then are you with him also in bidding us ask at each point any questions we like of you, as one who knows how to answer?

POLUS: Certainly I am.

SOCRATES: So now, take whichever course you like: either put questions, or answer them.

POLUS: Well, I will do as you say. So answer me this, Socrates: since you think that Gorgias is at a loss about rhetoric, what is your own account of it?

SOCRATES: Are you asking what art I call it?

POLUS: Yes.

SOCRATES: None at all, I consider, Polus, if you would have the honest truth.

POLUS: But what do you consider rhetoric to be?

SOCRATES: A thing which you say—in the treatise which I read of late —“made art.”

POLUS: What thing do you mean?

SOCRATES: I mean a certain habitude.

POLUS: Then do you take rhetoric to be a habitude?

SOCRATES: I do, if you have no other suggestion.

POLUS: Habitude of what?

SOCRATES: Of producing a kind of gratification and pleasure.

POLUS: Then you take rhetoric to be something fine—an ability to gratify people?

SOCRATES: How now, Polus? Have you as yet heard me tell you what I say it is, that you ask what should follow that—whether I do not take it to be fine?

POLUS: Why, did I not hear you call it a certain habitude?

SOCRATES: Then please—since you value “gratification”—be so good as gratify me in a small matter.

POLUS: I will.

SOCRATES: Ask me now what art I take cookery to be.

POLUS: Then I ask you, what art is cookery?

SOCRATES: None at all, Polus.

POLUS: Well, what is it? Tell me.

SOCRATES: Then I reply, a certain habitude.

POLUS: Of what? Tell me.

SOCRATES: Then I reply, of production of gratification and pleasure, Polus.

POLUS: So cookery and rhetoric are the same thing?

SOCRATES: Not at all, only parts of the same practice.

POLUS: What practice do you mean?

SOCRATES: I fear it may be too rude to tell the truth; for I shrink from saying it on Gorgias’ account, lest he suppose I am making satirical fun of his own profession. Yet indeed I do not know whether this is the rhetoric which Gorgias practices, for from our argument just now we got no very clear view as to how he conceives it; but what I call rhetoric is a part of a certain business which has nothing fine about it.

GORGIAS: What is that, Socrates? Tell us, without scruple on my account.

SOCRATES: It seems to me then, Gorgias, to be

a pursuit that is not a matter of art, but showing a shrewd, gallant spirit which has a natural bent for clever dealing with mankind, and I sum up its substance in the name *flattery*. This practice, as I view it, has many branches, and one of them is cookery; which appears indeed to be an art but, by my account of it, is not an art but habitude or knack. I call rhetoric another branch of it, as also personal adornment and sophistry—four branches of it for four kinds of affairs. So if Polus would inquire, let him inquire: he has not yet been informed to what sort of branch of flattery I assign rhetoric; but without noticing that I have not yet answered that, he proceeds to ask whether I do not consider it a fine thing. But I am not going to reply to the question whether I consider rhetoric a fine or a base thing, until I have first answered what it is; for it would not be fair, Polus: but if you want the information, ask me what sort of branch of flattery I assert rhetoric to be.

POLUS: I ask you then; so answer, what sort of branch it is.

SOCRATES: Now, will you understand when I answer? Rhetoric, by my account, is a semblance⁸ of a branch of politics.

POLUS: Well then, do you call it a fine or a base thing?

SOCRATES: A base one. I call it—for all that is bad I call base—since I am to answer you as though you had already understood my meaning.

GORGIAS: Nor do I myself, upon my word, Socrates, grasp your meaning either.

SOCRATES: And no wonder, Gorgias, for as yet my statement is not at all clear; but Polus⁹ here is so young and fresh!

GORGIAS: Ah, do not mind him; but tell me what you mean by rhetoric being a semblance of a branch of politics.

SOCRATES: Well, I will try to express what rhetoric appears to me to be: if it is not in fact what I say, Polus here will refute me. There are things, I suppose, that you call body and soul?

GORGIAS: Of course.

SOCRATES: And each of these again you believe to have a good condition?

⁸I.e., an unreal image or counterfeit: Quintilian (ii. 15.25) renders *simulacrum*. [Tr.]

⁹Socrates alludes to the meaning of πῶλος (a colt). [Tr.]

GORGIAS: I do.

SOCRATES: And again, a good condition that may seem so, but is not? As an example, let me give the following: many people seem to be in good bodily condition when it would not be easy for anyone but a doctor, or one of the athletic trainers, to perceive that they are not so.

GORGIAS: You are right.

SOCRATES: Something of this sort I say there is in body and in soul, which makes the body or the soul seem to be in good condition, though it is none the more so in fact.

GORGIAS: Quite so.

SOCRATES: Now let me see if I can explain my meaning to you more clearly. There are two different affairs to which I assign two different arts: the one, which has to do with the soul, I call politics; the other, which concerns the body, though I cannot give you a single name for it offhand, is all one business, the tendance of the body, which I can designate in two branches as gymnastic and medicine. Under politics I set legislation in the place of gymnastic, and justice to match medicine. In each of these pairs, of course—medicine and gymnastic, justice and legislation—there is some intercommunication, as both deal with the same thing; at the same time they have certain differences. Now these four, which always bestow their care for the best advantage respectively of the body and the soul, are noticed by the art of flattery which, I do not say with knowledge, but by speculation, divides herself into four parts, and then, insinuating herself into each of those branches, pretends to be that into which she has crept, and cares nothing for what is the best, but dangles what is most pleasant for the moment as a bait for folly, and deceives it into thinking that she is of the highest value. Thus cookery assumes the form of medicine, and pretends to know what foods are best for the body; so that if a cook and a doctor had to contend before boys, or before men as foolish as boys, as to which of the two, the doctor or the cook, understands the question of sound and noxious foods, the doctor would starve to death. Flattery, however, is what I call it, and I say that this sort of thing is a disgrace, Polus—for here I address you—because it aims at the pleasant and ignores the best; and I say it is not an art, but a habitude, since it has no

account to give of the real nature of the things it applies, and so cannot tell the cause of any of them. I refuse to give the name of art to anything that is irrational: if you dispute my views, I am ready to give my reasons. However, as I put it, cookery is flattery disguised as medicine; and in just the same manner self-adornment personates gymnastic: with its rascally, deceitful, ignoble, and illiberal nature it deceives men by forms and colors, polish and dress, so as to make them, in the effort of assuming an extraneous beauty, neglect the native sort that comes through gymnastic. Well, to avoid prolixity, I am willing to put it to you like a geometer¹⁰—for by this time I expect you can follow me: as self-adornment is to gymnastic, so is sophistry to legislation; and as cookery is to medicine, so is rhetoric to justice.¹¹ But although, as I say, there is this natural distinction between them,¹² they are so nearly related that sophists and orators are jumbled up as having the same field and dealing with the same subjects, and neither can they tell what to make of each other, nor the world at large what to make of them. For indeed, if the soul were not in command of the body, but the latter had charge of itself, and so cookery and medicine were not surveyed and distinguished by the soul, but the body itself were the judge, forming its own estimate of them by the gratifications they gave it, we should have a fine instance of what Anaxagoras described, my dear Polus—for you are versed in these matters: everything would be jumbled together, without distinction as between medicinal and healthful and tasty concoctions. Well now, you have heard what I state rhetoric to be—the counterpart of cookery in the soul, acting here as that does on the body. It may, indeed, be absurd of me, when I do not allow you to make long speeches, to have extended mine to so considerable a length. However, I can fairly claim indulgence: for when I spoke briefly you did not understand me; you were unable to make any use of the answer I gave you, but required a full exposition. Now if I on my part cannot tell what use

¹⁰I.e., in the concise mathematical manner, such as that which later appeared in the writings of Euclid. [Tr.]

¹¹Administrative justice is here specially meant. [Tr.]

¹²I.e., sophistry and rhetoric. [Tr.]

to make of any answers you may give me, you shall extend your speech also; but if I can make some use of them, allow me to do it; that will only be fair. And now, if you can make any use of this answer of mine, do so.

POLUS: Then what is it you say? Do you take rhetoric to be flattery?

SOCRATES: Well, I said rather a branch of flattery. Why, at your age, Polus, have you no memory? What will you do later on?

POLUS: Then do you think that good orators are considered to be flatterers in their cities, and so worthless?

SOCRATES: Is that a question you are asking, or are you beginning a speech?

POLUS: I am asking a question.

SOCRATES: To my mind, they are not considered at all.

POLUS: How not considered? Have they not the chief power in their cities?

SOCRATES: No, if you mean power in the sense of something good for him who has it.

POLUS: Why, of course I mean that.

SOCRATES: Then, to my thinking, the orators have the smallest power of all who are in their city.

POLUS: What? Are they not like the despots, in putting to death anyone they please, and depriving anyone of his property and expelling him from their cities as they may think fit?

SOCRATES: By the Dog, I fear I am still in two minds, Polus, at everything you say, as to whether this is a statement on your own part, and a declaration of your own opinion, or a question you are putting to me.

POLUS: Why, I am asking you.

SOCRATES: Very well, my friend: then are you asking me two things at once?

POLUS: How two?

SOCRATES: Were you not this moment saying something like this: Is it not the case that the orators put to death anyone they wish, like the despots, and deprive people of property and expel them from their cities as they may think fit?

POLUS: I was.

SOCRATES: Then I tell you that there are two questions here, and I will give you answers to them both. For I say, Polus, that the orators and the despots alike have the least power in their cities, as I stated just now; since they do nothing

that they wish to do, practically speaking, though they do whatever they think to be best.

POLUS: Well, and is not that a great power to have?

SOCRATES: No, judging at least by what Polus says.

POLUS: I say no! Pardon me, I say yes.

SOCRATES: No, by the——, you do not; for you said that great power is a good to him who has it.

POLUS: Yes, and I maintain it.

SOCRATES: Then do you regard it as a good, when a man does what he thinks to be best, without having intelligence? Is that what you call having a great power?

POLUS: No, I do not.

SOCRATES: Then will you prove that the orators have intelligence, and that rhetoric is an art, not a flattery, and so refute me? Else, if you are going to leave me unrefuted, the orators who do what they think fit in their cities, and the despots, will find they have got no good in doing that, if indeed power is, as you say, a good, but doing what one thinks fit without intelligence is—as you yourself admit, do you not?—an evil.

POLUS: Yes, I do.

SOCRATES: How then can the orators or the despots have great power in their cities, unless Socrates is refuted by Polus, and admits that they do what they wish?

POLUS: Hark at the man——!

SOCRATES: I deny that they do what they wish: there, refute me.

POLUS: Did you not admit just now that they do what they think best?

SOCRATES: Yes, and I admit it now.

POLUS: Then do they not do what they wish?

SOCRATES: I say no.

POLUS: When they do what they think fit?

SOCRATES: Yes.

POLUS: What shocking, nay, monstrous answers, Socrates!

SOCRATES: Spare your invective, peerless Polus—if I may address you in your own style:¹³

¹³The assonance in ὦ λῆστε Πῶλε is a mocking allusion to the nicely balanced clauses and jingling phrases which Polus imitated from his master Gorgias. Something of this style appears in Polus's speech above, 448 c. [Tr.]

but if you have a question to ask me, expose my error; otherwise, make answer yourself.

POLUS: Well, I am ready to answer, in order that I may know what you mean.

SOCRATES: Then is it your view that people wish merely that which they do each time, or that which is the object of their doing what they do? For instance, do those who take medicine by doctor's orders wish, in your opinion, merely what they do—to take the medicine and suffer the pain of it—or rather to be healthy, which is the object of their taking it?

POLUS: To be healthy, without a doubt.

SOCRATES: And so with seafarers and such as pursue profit generally in trade; what they wish is not what they are doing at each moment—for who wishes to go on a voyage, and incur all its danger and trouble? It is rather, I conceive, the object of their voyage—to get wealth; since it is for wealth that they go on it.

POLUS: Certainly.

SOCRATES: And is it not just the same in every case? If a man does something for an object, he does not wish the thing that he does, but the thing for which he does it.

POLUS: Yes.

SOCRATES: Now is there any existent thing that is not either good or bad or between these—neither good nor bad?

POLUS: Most assuredly nothing, Socrates.

SOCRATES: Well, do you call wisdom and health and wealth and everything else of that kind good, and their opposites bad?

POLUS: I do.

SOCRATES: And by things neither good nor bad do you mean such things as sometimes partake of the good, sometimes of the bad, and sometimes of neither—for example, sitting, walking, running, and sailing, or again, stones and sticks and anything else of that sort? These are what you mean, are they not? Or are there other things that you describe as neither good nor bad?

POLUS: No, these are what I mean.

SOCRATES: Then do people do these intermediate things, when they do them, for the sake of the good things, or the good things for the intermediate?

POLUS: The intermediate, I presume, for the good.

SOCRATES: Thus it is in pursuit of the good that we walk, when we walk, conceiving it to be better; or on the contrary, stand, when we stand, for the sake of the same thing, the good: is it not so?

POLUS: Yes.

SOCRATES: And so we put a man to death, if we do put him to death, or expel him or deprive him of his property, because we think it better for us to do this than not?

POLUS: Certainly.

SOCRATES: So it is for the sake of the good that the doers of all these things do them?

POLUS: I agree.

SOCRATES: And we have admitted that when we do things for an object, we do not wish those things, but the object for which we do them?

POLUS: Quite so.

SOCRATES: Then we do not wish to slaughter people or expel them from our cities or deprive them of their property as an act in itself, but if these things are beneficial we wish to do them, while if they are harmful, we do not wish them. For we wish what is good, as you say; but what is neither good nor bad we do not wish, nor what is bad either, do we? Is what I say true in your opinion, Polus, or not? Why do you not answer?

POLUS: It is true.

SOCRATES: Then, as we agree on this, if a man puts anyone to death or expels him from a city or deprives him of his property, whether he does it as a despot or an orator, because he thinks it better for himself though it is really worse, that man, I take it, does what he thinks fit, does he not?

POLUS: Yes.

SOCRATES: Now is it also what he wishes, supposing it to be really bad? Why do you not answer?

POLUS: No, I do not think he does what he wishes.

SOCRATES: Can such a man then be said to have great power in that city, if to have great power is something good, according to your admission?

POLUS: He cannot.

SOCRATES: Then I spoke the truth when I said that it is possible for a man to do what he thinks fit in a city and yet not to have great power nor to do what he wishes.

POLUS: As if you, Socrates, would not accept the liberty of doing what you think fit in your city rather than not, and would not envy a man whom you observed to have put some one to death as he thought fit, or deprived him of his property or sent him to prison!

SOCRATES: Justly, do you mean, or unjustly?

POLUS: Whichever way he does it, is it not enviable in either case?

SOCRATES: Hush, Polus!

POLUS: Why?

SOCRATES: Because we ought not to envy either the unenviable or the wretched, but pity them.

POLUS: What! Is that the state in which you consider those people, of whom I speak, to be?

SOCRATES: Yes, for so I must.

POLUS: Then do you consider that a man who puts another to death as he thinks fit, and justly puts him to death, is wretched and pitiable?

SOCRATES: Not I; but not enviable either.

POLUS: Did you not say just now that he was wretched?

SOCRATES: Only he who unjustly put some one to death, my friend, and I called him pitiable as well: if he acted justly, then he is unenviable.

POLUS: I suppose, at any rate, the man who is put to death unjustly is both pitiable and wretched.

SOCRATES: Less so than he who puts him to death, Polus, and less so than he who is put to death justly.

POLUS: In what way can that be, Socrates?

SOCRATES: In this, that to do wrong is the greatest of evils.

POLUS: What, is this the greatest? Is not to suffer wrong a greater?

SOCRATES: By no means.

POLUS: Then would you wish rather to suffer wrong than to do it?

SOCRATES: I should wish neither, for my own part; but if it were necessary either to do wrong or to suffer it, I should choose to suffer rather than do it.

POLUS: Then you would not accept a despot's power?

SOCRATES: No, if you mean by a despot's power the same as I do.

POLUS: Why, what I mean is, as I did just now,

the liberty of doing anything one thinks fit in one's city—putting people to death and expelling them and doing everything at one's own discretion.

SOCRATES: My gifted friend, let me speak, and you shall take me to task in your turn. Suppose that in a crowded market I should hide a dagger under my arm and then say to you: "Polus, I have just acquired, by a wonderful chance, the power of a despot; for if I should think fit that one of those people whom you see there should die this very instant, a dead man he will be, just as I think fit; or if I think fit that one of them shall have his head broken, broken it will be immediately; or to have his cloak torn in pieces, torn it will be: so great is my power in this city." Then suppose that on your disbelieving this I showed you my dagger; I expect when you saw it you would say: "Socrates, at this rate every one would have great power, for any house you thought fit might be set ablaze on these methods, and the Athenian arsenals also, and the men-of-war and all the rest of the shipping, both public and private." But surely this is not what it is to have great power—merely doing what one thinks fit. Or do you think it is?

POLUS: Oh no, not in that way.

SOCRATES: Then can you tell me why you disapprove of this kind of power?

POLUS: I can.

SOCRATES: Why, then? Tell me.

POLUS: Because it is inevitable that he who acts thus will be punished.

SOCRATES: And is it not a bad thing to be punished?

POLUS: Certainly.

SOCRATES: So, my remarkable friend, you have come round again to the view that if doing what one thinks fit is attended by advantage in doing it, this is not merely a good thing but at the same time, it seems, the possession of great power; otherwise it is a bad thing and means little power. And let us consider another point besides; do we not admit that sometimes it is better to do those things that we were mentioning just now—to put people to death and banish them and deprive them of property—while sometimes it is not?

POLUS: To be sure.

SOCRATES: Then here is a point, it seems, that is admitted both on your side and on mine.

POLUS: Yes.

SOCRATES: Then when do you say it is better to do these things? Tell me where you draw the line.

POLUS: Nay, I would rather that you, Socrates, answered that.

SOCRATES: Well then I say, Polus, if you prefer to hear it from me, that it is better when these things are done justly, and worse when unjustly.

POLUS: So hard to refute you, Socrates! Nay, a mere child could do it, could he not, and prove your words are untrue?

SOCRATES: Then I shall be most grateful to the child, and equally to you, if you refute me and rid me of foolery. Come, do not grow weary in well-doing toward your friend, but refute me.

POLUS: Well, to be sure, Socrates, there is no need to refute you with ancient instances; for those happenings of but a day or two ago are enough to refute you, and prove that many a wrongdoer is happy.

SOCRATES: What sort of thing do you mean?

POLUS: I suppose you see that Archelaus, son of Perdiccas, is ruler of Macedonia?¹⁴

SOCRATES: Well, if I do not, at any rate I hear it.

POLUS: Do you consider him happy or wretched?

SOCRATES: I do not know, Polus; I have never met the man.

POLUS: What? Could you find out by meeting him, and cannot otherwise tell, straight off, that he is happy?

SOCRATES: No, indeed, upon my word.

POLUS: Then doubtless you will say, Socrates, that you do not know that even the Great King is happy.

SOCRATES: Yes, and I shall be speaking the truth; for I do not know how he stands in point of education and justice.

POLUS: Why, does happiness entirely consist in that?

SOCRATES: Yes, by my account, Polus; for a good and honorable man or woman, I say, is happy, and an unjust and wicked one is wretched.

POLUS: Then this Archelaus, on your statement, is wretched?

SOCRATES: Yes, my friend, supposing he is unjust.

POLUS: Well, but how can he be other than unjust? He had no claim to the throne which he now occupies, being the son of a woman who was a slave of Perdiccas' brother Alcetas, and in mere justice he was Alcetas' slave; and if he wished to do what is just, he would be serving Alcetas and would be happy, by your account; but, as it is, he has become a prodigy of wretchedness, since he has done the most enormous wrong. First of all he invited this very master and uncle of his to his court, as if he were going to restore to him the kingdom of which Perdiccas had deprived him; and after entertaining him and his son Alexander—his own cousin, about the same age as himself—and making them drunk, he packed them into a carriage, drove them away by night, and murdered and made away with them both. And after all these iniquities he failed to observe that he had become a most wretched person, and had no repentance, but a while later he refused to make himself happy by bringing up, as he was justly bound, his brother, the legitimate son of Perdiccas, a boy about seven years old who had a just title to the throne, and restoring the kingdom to him; but he cast him into a well and drowned him, and then told his mother Cleopatra that he had fallen in and lost his life while chasing a goose. So now, you see, as the greatest wrongdoer in Macedonia, he is the most wretched of all the Macedonians, not the happiest; and I dare say some Athenians could be found who would join you in preferring to change places with any other Macedonian of them all, rather than with Archelaus!

SOCRATES: At the beginning of our discussion, Polus, I complimented you on having had, as I consider, a good training in rhetoric, while you seem to have neglected disputation; and now, accordingly, this is the argument, is it, with which any child could refute me? By this statement, you think, I now stand refuted at your hands, when I assert that the wrongdoer is not happy? How so,

¹⁴Archelaus usurped the throne of Macedonia in 413 B.C., and ruled till his death in 399 B.C. Euripides, Agathon, and other distinguished Athenians were guests at his court; Socrates was also invited, but declined to visit him (Aristot. *Rhet.* ii. 23. 8), and this is probably the point of Socrates' next remark. [Tr.]

my good friend? Why, I tell you I do not admit a single point in what you say.

POLUS: No, because you do not want to; for you really agree with my statement.

SOCRATES: My gifted friend, that is because you attempt to refute me in rhetorical fashion, as they understand refuting in the law courts. For there, one party is supposed to refute the other when they bring forward a number of reputable witnesses to any statements they may make, whilst their opponent produces only one, or none. But this sort of refutation is quite worthless for getting at the truth; since occasionally a man may actually be crushed by the number and reputation of the false witnesses brought against him. And so now you will find almost everybody, Athenians and foreigners, in agreement with you on the points you state, if you like to bring forward witnesses against the truth of what I say: if you like, there is Nicias, son of Niceratus, with his brothers, whose tripods are standing in a row in the Dionysium;¹⁵ or else Aristocrates, son of Scellias, whose goodly offering again is well known at Delphi; or if you choose, there is the whole house of Pericles or any other family you may like to select in this place. But I, alone here before you, do not admit it, for you fail to convince me: you only attempt, by producing a number of false witnesses against me, to oust me from my reality, the truth. But if on my part I fail to produce yourself as my one witness to confirm what I say, I consider I have achieved nothing of any account toward the matter of our discussion, whatever it may be; nor have you either, I conceive, unless I act alone as your one witness, and you have nothing to do with all these others. Well now, this is one mode of refutation, as you and many other people understand it; but there is also another which I on my side understand. Let us therefore compare them with each other and consider if there is a difference between them. For indeed the points which we have at issue are by no means of slight importance: rather, one might say,

¹⁵These tripods were prizes won by dramatic performances supported as a public service by Nicias and his brothers, and they were placed in the precincts of the temple of Dionysus. The persons here mentioned are selected as instances of public men who won high reputation in their time through the pursuit of material wealth and influence. [Tr.]

they are matters on which it is most honorable to have knowledge, and most disgraceful to lack it; for in sum they involve our knowing or not knowing who is happy and who is not. To start at once with the point we are now debating, you consider it possible for a man to be happy while doing wrong, and as a wrongdoer, since you regard Archelaus as a wrongdoer, and yet happy. We are to conclude, are we not, that this is your opinion?

POLUS: Certainly.

SOCRATES: And I say it is impossible. There we have one point at issue. Very good; but then, will a man be happy in wrongdoing if he comes in for requital and punishment?

POLUS: Not at all, since in that case he would be most wretched.

SOCRATES: But if the wrongdoer escapes requital, by your account he will be happy?

POLUS: Yes.

SOCRATES: Whereas in my opinion, Polus, the wrongdoer or the unjust is wretched anyhow; more wretched, however, if he does not pay the penalty and gets no punishment for his wrongdoing, but less wretched if he pays the penalty and meets with requital from gods and men.

POLUS: What a strange doctrine, Socrates, you are trying to maintain!

SOCRATES: Yes, and I will endeavor to make you too, my friend, maintain it with me: for I count you as a friend. Well now, these are the points on which we differ; just examine them yourself. I think I told you at an earlier stage that wrongdoing was worse than being wronged.

POLUS: Certainly you did.

SOCRATES: And you thought that being wronged was worse.

POLUS: Yes.

SOCRATES: And I said that wrongdoers were wretched, and I was refuted by you.

POLUS: Upon my word, yes.

SOCRATES: At least to your thinking, Polus.

POLUS: Yes, and true thinking too.

SOCRATES: Perhaps. But you said, on the other hand, that wrongdoers are happy, if they pay no penalty.

POLUS: Certainly.

SOCRATES: Whereas I say they are most wretched, and those who pay the penalty, less so. Do you wish to refute that as well?

POLUS: Why, that is still harder to refute, Socrates, than the other!

SOCRATES: Not merely so, Polus, but impossible; for the truth is never refuted.

POLUS: How do you mean? If a man be caught criminally plotting to make himself a despot, and he be straightway put on the rack and castrated and have his eyes burned out, and after suffering himself, and seeing inflicted on his wife and children, a number of grievous torments of every kind, he be finally crucified or burned in a coat of pitch, will he be happier than if he escape and make himself despot, and pass his life as the ruler in his city, doing whatever he likes, and envied and congratulated by the citizens and the foreigners besides? Impossible, do you tell me, to refute that?

SOCRATES: You are trying to make my flesh creep this time, my spirited Polus, instead of refuting me; a moment ago you were for calling witnesses. However, please refresh my memory a little: "criminally plotting to make himself a despot," you said?

POLUS: I did.

SOCRATES: Then neither of them will ever be happier than the other—neither he who has unjustly compassed the despotic power, nor he who pays the penalty; for of two wretched persons neither can be *happier*; but still more wretched is he who goes scot-free and establishes himself as despot. What is that I see, Polus? You are laughing? Here we have yet another form of refutation—when a statement is made, to laugh it down, instead of disproving it!

POLUS: Do you not think yourself utterly refuted, Socrates, when you make such statements as nobody in the world would assent to? You have only to ask anyone of the company here.

SOCRATES: Polus, I am not one of your statesmen: indeed, last year, when I was elected a member of the Council, and, as my tribe held the Presidency, I had to put a question to the vote, I got laughed at for not understanding the procedure.¹⁶ So do not call upon me again to take the votes of the company now; but if, as I said this moment,

¹⁶Socrates refers humorously to his noble act in refusing to put to the vote an illegal proposal against the generals who fought at Arginusae, 406 B.C. By saying "last year" he fixes the supposed date of this conversation at 405 B.C. [Tr.]

you have no better disproof than those, hand the work over to me in my turn, and try the sort of refutation that I think the case requires. For I know how to produce one witness in support of my statements, and that is the man himself with whom I find myself arguing; the many I dismiss: there is also one whose vote I know how to take, whilst to the multitude I have not a word to say. See therefore if you will consent to be put to the proof in your turn by answering my questions. For I think, indeed, that you and I and the rest of the world believe that doing wrong is worse than suffering it, and escaping punishment worse than incurring it.

POLUS: And I, that neither I nor anyone else in the world believes it. You, it seems, would choose rather to suffer wrong than to do it.

SOCRATES: Yes, and so would you and everyone else.

POLUS: Far from it; neither I nor you nor anybody else.

SOCRATES: Then will you answer?

POLUS: To be sure I will, for indeed I am eager to know what on earth you will say.

SOCRATES: Well then, so that you may know, tell me, just as though I were asking you all over again, which of the two seems to you, Polus, to be the worse—doing wrong or suffering it?

POLUS: Suffering it, I say.

SOCRATES: Now again, which is fouler—doing wrong or suffering it? Answer.

POLUS: Doing it.

SOCRATES: And also more evil, if fouler.

POLUS: Not at all.

SOCRATES: I see: you hold, apparently, that fair and good are not the same, nor evil and foul.

POLUS: Just so.

SOCRATES: But what of this? All fair things, like bodies and colors and figures and sounds and observances—is it according to no standard that you call these fair in each case? Thus in the first place, when you say that fair bodies are fair, it must be either in view of their use for some particular purpose that each may serve, or in respect of some pleasure arising when, in the act of beholding them, they cause delight to the beholder. Have you any description to give beyond this of bodily beauty?

POLUS: I have not.

SOCRATES: And so with all the rest in the same

way, whether they be figures or colors, is it for some pleasure or benefit or both that you give them the name of “fair”?

POLUS: It is.

SOCRATES: And sounds also, and the effects of music, are not these all in the same case?

POLUS: Yes.

SOCRATES: And further, in all that belongs to laws and observances, surely the “fairness” of them cannot lie beyond those limits of being either beneficial or pleasant or both.

POLUS: I think not.

SOCRATES: And is it not just the same with the “fairness” of studies also?

POLUS: Doubtless; and this time, Socrates, your definition is quite fair, when you define what is fair by pleasure and good.

SOCRATES: And foul by their opposites, pain and evil?

POLUS: That needs must follow.

SOCRATES: Thus when of two fair things one is fairer, the cause is that it surpasses in either one or both of these effects, either in pleasure, or in benefit, or in both.

POLUS: Certainly.

SOCRATES: And again, when one of two foul things is fouler, this will be due to an excess either of pain or of evil: must not that be so?

POLUS: Yes.

SOCRATES: Come then, what was it we heard just now about doing and suffering wrong? Were you not saying that suffering wrong is more evil, but doing it fouler?

POLUS: I was.

SOCRATES: Well now, if doing wrong is fouler than suffering it, it is either more painful, and fouler by an excess of pain or evil or both; must not this also be the case?

POLUS: Yes, of course.

SOCRATES: Then let us first consider if doing wrong exceeds suffering it in point of pain—if those who do wrong are more pained than those who suffer it.

POLUS: Not so at all, Socrates.

SOCRATES: Then it does not surpass in pain.

POLUS: No, indeed.

SOCRATES: And so, if not in pain, it can no longer be said to exceed in both.

POLUS: Apparently.

SOCRATES: It remains, then, that it exceeds in the other.

POLUS: Yes.

SOCRATES: In evil.

POLUS: So it seems.

SOCRATES: Then it is by an excess of evil that doing wrong is fouler than suffering it.

POLUS: Yes, obviously.

SOCRATES: Now it is surely admitted by the mass of mankind, as it was too by you in our talk a while ago, that doing wrong is fouler than suffering it.

POLUS: Yes.

SOCRATES: And now it has been found to be more evil.

POLUS: So it seems.

SOCRATES: Then would you rather have the evil and foul when it is more than when it is less? Do not shrink from answering, Polus; you will get no hurt by it: but submit yourself bravely to the argument, as to a doctor, and reply yes or no to my question.

POLUS: Why, I should not so choose, Socrates.

SOCRATES: And would anybody else in the world?

POLUS: I think not, by this argument at least.

SOCRATES: Then I spoke the truth when I said that neither you nor anyone else in the world would choose to do wrong rather than suffer it, since it really is more evil.

POLUS: Apparently.

SOCRATES: So you see, Polus, that when one proof is contrasted with the other they have no resemblance, but whereas you have assent of every one else except myself, I am satisfied with your sole and single assent and evidence, and I take but your vote only and disregard the rest. Now let us leave this matter where it stands, and proceed next to examine the second part on which we found ourselves at issue—whether for a wrongdoer to pay the penalty is the greatest of evils, as you supposed, or to escape it is a greater, as I on my side held. Let us look at it this way: do you call paying the just penalty, and being justly punished, for wrongdoing the same thing?

POLUS: I do.

SOCRATES: And can you maintain that all just things are not fair, in so far as they are just? Consider well before you speak.

POLUS: No, I think they are, Socrates.

SOCRATES: Then take another point: if a man does anything, must there be something which is also acted upon by this doer of the thing?

POLUS: I think so.

SOCRATES: And does it suffer what the doer does, and is the effect such as the agent's action makes it? I mean, for example, when one strikes a blow something must needs be struck?

POLUS: It must.

SOCRATES: And if the striker strikes hard or quick, the thing struck is struck in the same way?

POLUS: Yes.

SOCRATES: Hence the effect in the thing struck is such as the striker makes it?

POLUS: Certainly.

SOCRATES: And so again, if one burns, something must be burned?

POLUS: Yes, of course.

SOCRATES: And if one burns severely or sorely, the thing burned is burned according as the burner burns it?

POLUS: Certainly.

SOCRATES: And again, if one cuts, the same may be said? For something is cut.

POLUS: Yes.

SOCRATES: And if the cut is large or deep or sore, the cut made in the thing cut is such as the cutter cuts it?

POLUS: Apparently.

SOCRATES: Then putting it all in a word, see if you agree that what I was just saying applies to all cases—that the patient receives an effect of the same kind as the agent's action.

POLUS: I do agree.

SOCRATES: Then this being admitted, is paying the penalty suffering something, or doing it?

POLUS: Suffering it must be, Socrates.

SOCRATES: And at the hands of an agent?

POLUS: Yes, of course; at the hands of the punisher.

SOCRATES: And he who punishes aright punished justly?

POLUS: Yes.

SOCRATES: Doing what is just, or not?

POLUS: What is just.

SOCRATES: And he who pays the penalty by being punished suffers what is just?

POLUS: Apparently.

SOCRATES: And what is just, I think we have agreed, is fair?

POLUS: Certainly.

SOCRATES: Then of these two, the one does what is fair and the other, he who is punished, suffers it.

POLUS: Yes.

SOCRATES: And so, if fair, good? For that is either pleasant or beneficial.¹⁷

POLUS: It must be so.

SOCRATES: So he who pays the penalty suffers what is good?

POLUS: It seems so.

SOCRATES: Then he is benefited?

POLUS: Yes.

SOCRATES: Is it the benefit I imagine—that he becomes better in soul if he is justly punished?

POLUS: Quite likely.

SOCRATES: Then is he who pays the penalty relieved from badness of soul?

POLUS: Yes.

SOCRATES: And so relieved from the greatest evil? Look at it this way; in a man's pecuniary resources do you perceive any other badness than poverty?

POLUS: No, only poverty.

SOCRATES: And what in his bodily resources? You would say that badness there is weakness or disease or ugliness or the like?

POLUS: I would.

SOCRATES: And in soul too you believe there is a certain wickedness?

POLUS: Of course.

SOCRATES: And do you not call this injustice, ignorance, cowardice, and so forth?

POLUS: Certainly I do.

SOCRATES: So now in property, body, and soul, these three, you have mentioned three vices—poverty, disease, and injustice?

POLUS: Yes.

SOCRATES: Then which of these vices is the foulest? Is it not injustice—in short, the vice of the soul?

POLUS: Far the foulest.

SOCRATES: And if foulest, then also most evil?

POLUS: How do you mean, Socrates?

SOCRATES: Just this: the foulest is foulest in

¹⁷As was agreed above, 474 D, E. [Tr.]

each case because it produces the greatest pain or harm of both; this follows from our previous admissions.

POLUS: Quite so.

SOCRATES: And foulest of all, we have just agreed, is injustice and, in general, vice of soul?

POLUS: Yes, we have.

SOCRATES: So then either it is most painful, that is, foulest of these vices by an excess of painfulness, or else of harmfulness, or in both ways?

POLUS: Necessarily.

SOCRATES: Then do you think that being unjust, licentious, cowardly, and ignorant is more painful than being poor and sick?

POLUS: No, I do not, Socrates, from what we have said.

SOCRATES: Portentous then must be the extent of harm, and astonishing the evil, by which the soul's vice exceeds all the others so as to be the foulest of all, since it is not by pain, on your view of the matter.

POLUS: Apparently.

SOCRATES: But further, I suppose, whatever has an excess of harm in the greatest measure, must be the greatest evil in the world.

POLUS: Yes.

SOCRATES: So injustice, licentiousness, and in general, vice of soul, are the greatest evils in the world?

POLUS: Apparently.

SOCRATES: Now what is the art that relieves from poverty? Is it not money-making?

POLUS: Yes.

SOCRATES: And what from disease? Is it not medicine?

POLUS: It must be.

SOCRATES: And what from wickedness and injustice? If you are not ready for that offhand, consider it thus: whither and to whom do we take those who are in bodily sickness?

POLUS: To the doctor, Socrates.

SOCRATES: And whither the wrongdoers and libertines?

POLUS: To the law court, do you mean?

SOCRATES: Yes, and to pay the penalty?

POLUS: I agree.

SOCRATES: Then is it not by employing a kind of justice that those punish who punish aright?

POLUS: Clearly so.

SOCRATES: Then money-making relieves us from poverty, medicine from disease, and justice from licentiousness and injustice.

POLUS: Apparently.

SOCRATES: Which then is the fairest of these things?

POLUS: Of what things, pray?

SOCRATES: Money-making, medicine, justice.

POLUS: Justice, Socrates, is far above the others.

SOCRATES: Now again, if it is fairest, it causes either most pleasure or benefit or both.

POLUS: Yes.

SOCRATES: Well then, is it pleasant to be medically treated, and do those who undergo such treatment enjoy it?

POLUS: I do not think so.

SOCRATES: But it is beneficial, is it not?

POLUS: Yes.

SOCRATES: Because one is relieved of a great evil, and hence it is worth while to endure the pain and be well.

POLUS: Of course.

SOCRATES: Is this then the happiest state of body for a man to be in—that of being medically treated—or that of never being ill at all?

POLUS: Clearly, never being ill.

SOCRATES: Yes, for what we regarded as happiness, it seems, was not this relief from evil, but its nonacquisition at any time.

POLUS: That is so.

SOCRATES: Well now, which is the more wretched of two persons who have something evil either in body or in soul, he who is medically treated and is relieved of the evil, or he who is not treated and keeps it?

POLUS: To my thinking, he who is not treated.

SOCRATES: And we found that paying the penalty is a relief from the greatest evil, wickedness?

POLUS: We did.

SOCRATES: Because, I suppose, the justice of the court reforms us and makes us juster, and acts as a medicine for wickedness.

POLUS: Yes.

SOCRATES: Happiest therefore is he who has no vice in his soul, since we found this to be the greatest of evils.

POLUS: Clearly so.

SOCRATES: Next after him, I take it, is he who is relieved of it.

POLUS: So it seems.

SOCRATES: And that was the man who is reformed, reprimanded, and made to pay the penalty.

POLUS: Yes.

SOCRATES: Hence the worst life is led by him who has the vice and is not relieved of it.

POLUS: Apparently.

SOCRATES: And this is the man who in committing the greatest wrongs and practicing the greatest injustice has contrived to escape reproof and chastisement and penalty alike, as you say Archelaus has succeeded in doing, and the rest of the despots and orators and overlords?

POLUS: So it seems.

SOCRATES: Because, I conceive, my excellent friend, what these persons have contrived for themselves is very much as though a man who was the victim of the worst diseases should contrive not to submit to the doctor's penalty for his bodily transgressions and take the prescribed treatment, from a childish fear of cautery or incision, as being so painful. Or do you not agree to this view of it?

POLUS: I do.

SOCRATES: Since he was ignorant, it would seem, of the virtue of bodily health and fitness. For it is very probable, from what we have just agreed, that something like this is done also by those who evade their due penalty, Polus; they perceive its painfulness, but are blind to its benefits, and are unaware how much more wretched than lack of health in the body it is to dwell with a soul that is not healthy, but corrupt, unjust, and unholy; and hence it is that they do all they can to avoid paying the penalty and being relieved of the greatest of evils, by providing themselves with money and friends and the ability to excel in persuasive speech. But if what we have agreed is true, Polus, do you observe the consequences of our argument? Or, if you like, shall we reckon them up together?

POLUS: Yes, if you do not mind.

SOCRATES: Then does it result that injustice and wrongdoing is the greatest evil?

POLUS: Yes, apparently.

SOCRATES: And further, it appeared that paying the penalty is a relief from this evil?

POLUS: It looks like it.

SOCRATES: Whereas not paying it is a retention of the evil in us?

POLUS: Yes.

SOCRATES: Thus wrongdoing is second of evils in greatness; but to do wrong and not pay the penalty is the greatest and takes the first place among all evils.

POLUS: It seems so.

SOCRATES: Well now, my friend, was this the point at issue between us, that you counted Archelaus, who did the greatest wrong, happy because he paid no penalty, whilst I on the contrary thought that anyone—whether Archelaus or any other person you please—who pays no penalty for the wrong he has done, is peculiarly and preeminently wretched among men, and that it is always the wrongdoer who is more wretched than the wronged, and the unpunished than the punished? Is not this what I stated?

POLUS: Yes.

SOCRATES: Then has it not been proved that this was a true statement?

POLUS: Apparently.

SOCRATES: Very well: so if this is true, Polus, what is the great use of rhetoric? For you see by what we have just agreed that a man must keep a close watch over himself so as to avoid wrongdoing, since it would bring a great deal of evil upon him; must he not?

POLUS: Certainly.

SOCRATES: But if he is guilty of wrongdoing, either himself or anyone else he may care for, he must go of his own freewill where he may soonest pay the penalty, to the judge as if to his doctor, with the earnest intent that the disease of his injustice shall not become chronic and cause a deep incurable ulcer in his soul. Or what are we to say, Polus, if our former conclusions stand? Must not our later ones accord with them in this way, and in this only?

POLUS: Yes, what else, indeed, are we to say, Socrates?

SOCRATES: Then for pleading in defense of injustice, whether it is oneself or one's parents or friends or children or country that has done the wrong, rhetoric is of no use to us at all, Polus;

except one were to suppose, perchance, to the contrary, that a man ought to accuse himself first of all, and in the second place his relations or anyone else of his friends who may from time to time be guilty of wrong; and, instead of concealing the iniquity, to bring it to light in order that he may pay the penalty and be made healthy; and, moreover, to compel both himself and his neighbors not to cower away but to submit with closed eyes and good courage, as it were, to the cutting and burning of the surgeon, in pursuit of what is good and fair, and without reckoning in the smart: if his crimes have deserved a flogging, he must submit to the rod; if fetters, to their grip; if a fine, to its payment; if banishment, to be banished; or if death, to die; himself to be the first accuser either of himself or of his relations, and to employ his rhetoric for the purpose of so exposing their iniquities that they may be relieved of that greatest evil, injustice. Shall this be our statement or not, Polus?

POLUS: An extraordinary one, Socrates, it seems to me, though perhaps you do find it agrees with what went before.

SOCRATES: Well, either that must be upset, or this necessarily follows.

POLUS: Yes, that certainly is so.

SOCRATES: And so again conversely, supposing it is our duty to injure somebody, whether an enemy or anyone else—provided only that it is not against oneself that wrong has been done by such enemy, for this we must take care to avoid¹⁸—but supposing our enemy has wronged some one else, we must make every exertion of act and word to prevent him from being punished or coming to trial, or if he does, we must contrive that our enemy shall escape and not be punished; nay, if he has carried off a great lot of gold, that he shall not refund it but keep and spend it on himself and his, unjustly and godlessly, or if he has committed crimes that deserve death, that he shall not die; if possible, never die, but be deathless in his villainy, or failing that, live as long a time as may be in that condition. Such are the

¹⁸The parenthesis humorously anticipates an objection that might be made, in a particular case, to this theory of what a really thorough enmity would be: if our enemy has robbed us of gold, of course we cannot, as is presently urged, take care that “he shall not refund it.” [Tr.]

purposes, as it seems to me, Polus, for which rhetoric is useful, since to him who has no intention of doing wrong it is, I consider, of no great use, if indeed there is any use in it at all; for in our previous argument it was nowhere to be found.

CALLICLES: Tell me, Chaerephon, is Socrates in earnest over this, or only joking?

CHAEREPHON: To my thinking, Callicles, prodigiously in earnest: still, there is nothing like asking him.

CALLICLES: Upon my word, just what I want to do. Tell me, Socrates, are we to take you as serious just now, or joking? For if you are serious and what you say is really true, must not the life of us human beings have been turned upside down, and must we not be doing quite the opposite, it seems, of what we ought to do?

SOCRATES: Callicles, if men had not certain feelings, each common to one sort of people, but each of us had a feeling peculiar to himself and apart from the rest, it would not be easy for him to indicate his own impression to his neighbor. I say this because I notice that you and I are at this moment in much the same condition, since the two of us are enamored each of two things—I of Alcibiades, son of Cleinias, and philosophy, and you of two, the Athenian Demus, and the son of Pylilampes.¹⁹ Now I always observe that, for all your cleverness, you are unable to contradict your favorite, however much he may say or whatever may be his account of anything, but are ever changing over from side to side. In the Assembly, if the Athenian Demus disagrees with some statement you are making, you change over and say what it desires; and just the same thing happens to you in presence of that fair youth, the son of Pylilampes; you are unable to resist the counsels and statements of your darling, so that if anyone showed surprise at the strangeness of the things you are constantly saying under that influence, you would probably tell him, if you chose to speak the truth, that unless somebody makes your favorite stop speaking thus, you will never stop speaking thus either. Consider yourself

¹⁹Pylilampes' son was named Demus, and was famous for his beauty; cf. Aristoph. *Wasps*, 97. “Demus” was the ordinary word for the “people” of a city. [Tr.]

therefore obliged to hear the same sort of remark from me now, and do not be surprised at my saying it, but make my darling, philosophy, stop talking thus. For she, my dear friend, speaks what you hear me saying now, and she is far less fickle to me than any other favorite: that son of Cleinias is ever changing his views, but philosophy always holds the same, and it is her speech that now surprises you, and she spoke it in your own presence. So you must either refute her, as I said just now, by proving that wrongdoing and impunity for wrong done is not the uttermost evil; or, if you leave that unproved, by the Dog, god of the Egyptians, there will be no agreement between you, Callicles, and Callicles, but you will be in discord with him all your life. And yet I, my very good sir, should rather choose to have my lyre, or some chorus that I might provide for the public, out of tune and discordant, or to have any number of people disagreeing with me and contradicting me, than that I should have internal discord and contradiction in my own single self.

CALLICLES: Socrates, you seem to be roistering recklessly in your talk, like the true demagogue that you are; and you are declaiming now in this way because Polus has got into the same plight as he was accusing Gorgias of letting himself be led into by you. For he said, I think, when you asked Gorgias whether, supposing a man came to him with no knowledge of justice but a desire to learn rhetoric, he would instruct the man, Gorgias showed some shame and said he would, because of the habit of mind in people which would make them indignant if refused—and so, because of this admission, he was forced to contradict himself, and that was just what suited you—and Polus was right, to my thinking, in mocking at you as he did then; but this time he has got into the very same plight himself. For my own part, where I am not satisfied with Polus is just that concession he made to you—that doing wrong is fouler than suffering it; for owing to this admission he too in his turn got entangled in your argument and had his mouth stopped, being ashamed to say what he thought. For you, Socrates, really turn the talk into such low, popular clap-trap, while you give out that you are pursuing the truth—into stuff that is “fair,” not by

nature, but by convention.²⁰ Yet for the most part these two—nature and convention—are opposed to each other, so that if a man is ashamed and dares not say what he thinks, he is forced to contradict himself. And this, look you, is the clever trick you have devised for our undoing in your discussions: when a man states anything according to convention you slip “according to nature” into your questions; and again, if he means nature, you imply convention. In the present case, for instance, of doing and suffering wrong, when Polus was speaking of what is conventionally fouler, you followed it up in the sense of what is naturally so. For by nature everything is fouler that is more evil, such as suffering wrong: doing it is fouler only by convention. Indeed this endurance of wrong done is not a man’s part at all, but a poor slave’s, for whom it is better to be dead than alive, as it is for anybody who, when wronged or insulted, is unable to protect himself or anyone else for whom he cares. But I suppose the makers of the laws are the weaker sort of men, and the more numerous. So it is with a view to themselves and their own interest that they make their laws and distribute their praises and censures; and to terrorize the stronger sort of folk who are able to get an advantage, and to prevent them from getting one over *them*, they tell them that such aggrandizement is foul and unjust, and that wrongdoing is just this endeavor to get the advantage of one’s neighbors: for I expect they are well content to see themselves on an equality, when they are so inferior. So this is why by convention it is termed unjust and foul to aim at an advantage over the majority, and why they call it wrongdoing: but nature, in my opinion, herself proclaims the fact that it is right for the better to have advantage of the worse, and the abler of the feebler. It is obvious in many cases that this is so, not only in the animal world, but in the states and races, collectively, of men—that right has been decided to consist in the sway and advantage of the stronger over the weaker. For by what man-

²⁰The distinction between “natural,” or absolute, and “conventional,” or legal, right, first made by the Ionian Archelaus who taught Socrates in his youth, is developed at length in the *Republic* (i. 388 foll.), and was a constant subject of discussion among the sophists of Plato’s time. [Tr.]

ner of right did Xerxes march against Greece, or his father against Scythia? Or take the countless other cases of the sort that one might mention. Why, surely these men follow nature—the nature of right—in acting thus; yes, on my soul, and follow the law²¹ of nature—though not that, I dare say, which is made by us; we mold the best and strongest amongst us, taking them from their infancy like young lions, and utterly enthral them by our spells and witchcraft, telling them the while that they must have but their equal share, and that this is what is fair and just. But, I fancy, when some man arises with a nature of sufficient force, he shakes off all that we have taught him, bursts his bonds, and breaks free; he tramples underfoot our codes and juggleries, our charms and “laws,” which are all against nature; our slave rises in revolt and shows himself our master, and there dawns the full light of natural justice. And it seems to me that Pindar adds his evidence to what I say, in the ode where he says—

Law the sovereign of all,
Mortals and immortals,

which, so he continues, —

Carries all with highest hand,
Justifying the utmost force: in proof I take
The deeds of Hercules, for unpurchased —

the words are something like that—I do not know the poem well—but it tells how he drove off the cows as neither a purchase nor a gift from Geryones; taking it as a natural right that cows or any other possessions of the inferior and weaker should all belong to the superior and stronger.

Well, that is the truth of the matter; and you will grasp it if you will now put philosophy aside and pass to greater things. For philosophy, you know, Socrates, is a charming thing, if a man has to do with it moderately in his younger days; but if he continues to spend his time on it too long, it is ruin to any man. However well endowed one may be, if one philosophizes far on into life, one must needs find oneself ignorant of everything

²¹Callicles boldly applies the word νόμος, which so far has been used in the sense of man-made law or convention, in its widest sense of “general rule” or “principle.” [Tr.]

that ought to be familiar to the man who would be a thorough gentleman and make a good figure in the world. For such people are shown to be ignorant of the laws of their city, and of the terms which have to be used in negotiating agreements with their fellows in private or in public affairs, and of human pleasures and desires; and, in short, to be utterly inexperienced in men’s characters. So when they enter upon any private or public business they make themselves ridiculous, just as on the other hand, I suppose, when public men engage in your studies and discussions, they are quite ridiculous. The fact is, as Euripides has it—

Each shines in that, to that end presses on,
Allotting there the chiefest part o’ the day,
Wherein he haply can surpass himself —²²

whereas that in which he is weak he shuns and vilifies; but the other he praises, in kindness to himself, thinking in this way to praise himself also. But the most proper course, I consider, is to take a share of both. It is a fine thing to partake of philosophy just for the sake of education, and it is no disgrace for a lad to follow it: but when a man already advancing in years continues in its pursuit, the affair, Socrates, becomes ridiculous; and for my part I have much the same feeling toward students of philosophy as toward those who lisp or play tricks. For when I see a little child, to whom it is still natural to talk in that way, lisping or playing some trick, I enjoy it, and it strikes me as pretty and ingenuous and suitable to the infant’s age; whereas if I hear a small child talk distinctly, I find it a disagreeable thing, and it offends my ears and seems to me more befitting a slave. But when one hears a grown man lisp, or sees him play tricks, it strikes one as something ridiculous and unmanly, that deserves a whipping. Just the same, then, is my feeling toward the followers of philosophy. For when I see philosophy in a young lad I approve of it; I consider

²²Eurip. fr. *Antiope*. Zethus and Amphion, twins born to Zeus by Antiope, were left by her on Mt. Cithaeron, where Zethus grew up as a man of the field, and Amphion as a musician. Here probably Amphion is speaking in defense of the quieter life; further on, in the quotations given in 486 B.C., Zethus reproaches him with his effeminacy. [Tr.]

it suitable, and I regard him as a person of liberal mind: whereas one who does not follow it I account illiberal and never likely to expect of himself any fine or generous action. But when I see an elderly man still going on with philosophy and not getting rid of it, that is the gentleman, Socrates, whom I think in need of a whipping. For as I said just now, this person, however well endowed he may be, is bound to become unmanly through shunning the centers and marts of the city, in which, as the poet²³ said, "men get them note and glory"; he must cower down and spend the rest of his days whispering in a corner with three or four lads, and never utter anything free or high or spirited. Now I, Socrates, am quite fairly friendly to you, and so I feel very much at this moment as Zethus did, whom I have mentioned, towards Amphion in Euripides.²⁴ Indeed I am prompted to address you in the same sort of words as he did his brother: "You neglect, Socrates, what you ought to mind; you distort with a kind of boyish travesty a soul of such noble nature; and neither will you bring to the counsels of justice any rightly spoken word, nor will you accept any as probable or convincing, nor advise any gallant plan for your fellow." And yet, my dear Socrates—now do not be annoyed with me, for I am going to say this from goodwill to you—does it not seem to you disgraceful to be in the state I consider you are in, along with the rest of those who are ever pushing further into philosophy? For as it is, if somebody should seize hold of you or anyone else at all of your sort, and drag you off to prison, asserting that you were guilty of a wrong you had never done, you know you would be at a loss what to do with yourself, and would be all dizzy and agape without a word to say; and when you came up in court, though your accuser might be ever so paltry a rascal, you would have to die if he chose to claim death as your penalty. And yet what wisdom is there, Socrates, in "an art that found a man of goodly parts and made him worse," unable either to succor himself, or to deliver himself or anyone else from the greatest dangers, but

²³Homer, *Il.* ix. 441. [Tr.]

²⁴That is, Callicles reproaches Socrates for choosing private study over public, political action. [Ed.]

like to be stripped by his enemies of all his substance, and to live in his city as an absolute outcast? Such a person, if one may use a rather low expression, can be given a box on the ear with impunity. No, take my advice, my good sir, "and cease refuting; some practical proficiency induce,"—something that will give you credit for sense: "to others leave these pretty toys,"—call them vaporings or fooleries as you will,— "which will bring you to inhabit empty halls"; and emulate, not men who probe these trifles, but who have means and repute and other good things in plenty.

SOCRATES: If my soul had happened to be made of gold, Callicles, do you not think I should have been delighted to find one of those stones with which they test gold, and the best one; which, if I applied it, and it confirmed to me that my soul had been properly tended, would give me full assurance that I am in a satisfactory state and have no need of other testing?

CALLICLES: What is the point of that question, Socrates?

SOCRATES: I will tell you. I am just thinking what a lucky stroke I have had in striking up with you.

CALLICLES: How so?

SOCRATES: I am certain that whenever you agree with me in any view that my soul takes, this must be the very truth. For I conceive that whoever would sufficiently test a soul as to rectitude of life or the reverse should go to work with three things which are all in your possession—knowledge, goodwill, and frankness. I meet with many people who are unable to test me, because they are not wise as you are; while others, though wise, are unwilling to tell me the truth, because they do not care for me as you do; and our two visitors here, Gorgias and Polus, though wise and friendly to me, are more lacking in frankness and inclined to bashfulness than they should be: nay, it must be so, when they have carried modesty to such a point that each of them can bring himself, out of sheer modesty, to contradict himself in face of a large company, and that on questions of the greatest importance. But you have all these qualities which the rest of them lack: you have had a sound education, as many here in Athens will agree; and you are well disposed to me. You

ask what proof I have? I will tell you. I know, Callicles, that four of you have formed a partnership in wisdom—you, Tisander of Aphidnae, Andron, son of Androtion, and Nausicydes of Cholargos;²⁵ and I once overheard you debating how far the cultivation of wisdom should be carried, and I know you were deciding in favor of some such view as this—that one should not be carried away into the minuter points of philosophy, but you exhorted one another to beware of making yourselves overwise, lest you should unwittingly work your own ruin. So when I hear you giving me the same advice as you gave your own most intimate friends, I have proof enough that you really are well disposed to me. And further, as to your ability to speak out frankly and not be bashful, you not only claim this yourself, but you are borne out too by the speech that you made a short while ago. Well, this is clearly the position of our question at present: if you can bear me out in any point arising in our argument, that point can at once be taken as having been amply tested by both you and me, and there will be no more need of referring it to a further test; for no defect of wisdom or access of modesty could ever have been your motive in making this concession, nor again could you make it to deceive me: for you are my friend, as you say yourself. Hence any agreement between you and me must really have attained the perfection of truth. And on no themes could one make more honorable inquiry, Callicles, than on those which you have reproached me with—what character one should have, and what should be one's pursuits and up to what point, in later as in earlier years. For I assure you that if there is any fault of conduct to be found in my own life it is not an intentional error, but due to my ignorance: so I ask you not to break off in the middle of your task of admonishing me, but to make fully clear to me what it is that I ought to pursue and by what means I may attain it; and if you find me in agreement with you now, and afterwards failing to do what I agreed to, regard me as a regular

²⁵Andron is one of the wise men who meet in the house of Callias, *Protag.* 315; Nausicydes may be the wealthy meal-merchant mentioned in Aristoph. *Eccles.* 426, and Xen. *Mem.* ii. 7. 6. Of Tisander nothing is known. [Tr.]

dunce and never trouble any more to admonish me again—a mere good-for-nothing. Now, go right back and repeat to me what you and Pindar hold natural justice to consist in: is it that the superior should forcibly despoil the inferior, the better rule the worse, and the nobler have more than the meaner? Have you some other account to give of justice, or do I remember aright?

CALLICLES: Why, that is what I said then, and I say it now also.

SOCRATES: Is it the same person that you call “better” and “superior”? For I must say I was no more able then to understand what your meaning might be. Is it the stronger folk that you call superior, and are the weaker ones bound to hearken to the stronger one—as for instance I think you were also pointing out then, that the great states attack the little ones in accordance with natural right, because they are superior and stronger, on the ground that the superior and the stronger and the better are all the same thing; or is it possible to be better and yet inferior and weaker, and to be superior and yet more wicked? Or is the definition of the better and the superior the same? This is just what I bid you declare in definite terms—whether the superior and the better and the stronger are the same or different.

CALLICLES: Well, I tell you plainly, they are all the same.

SOCRATES: Now, are the many superior by nature to the one? I mean those who make the laws to keep a check on the one, as you were saying yourself just now.

CALLICLES: Of course.

SOCRATES: Then the ordinances of the many are those of the superior.

CALLICLES: Certainly.

SOCRATES: And so of the better? For the superior are far better, by your account.

CALLICLES: Yes.

SOCRATES: And so their ordinances are by nature “fair,” since they are superior who made them?

CALLICLES: I agree.

SOCRATES: Then is it the opinion of the many that—as you also said a moment ago—justice means having an equal share, and it is fouler to wrong than be wronged. Is that so, or not? And mind you are not caught this time in a bashful fit.

Is it, or is it not, the opinion of the many that to have one's equal share, and not more than others, is just, and that it is fouler to wrong than be wronged? Do not grudge me an answer to this, Callicles, so that—if I find you agree with me—I may then have the assurance that comes from the agreement of a man so competent to decide.

CALLICLES: Well, most people do think so.

SOCRATES: Then it is not only by convention that doing wrong is fouler than suffering it, and having one's equal share is just, but by nature also: and therefore it looks as though your previous statement was untrue, and your count against me incorrect, when you said that convention and nature are opposites and that I, forsooth, recognizing that, am an unscrupulous debater, turning to convention when the assertion refers to nature, and to nature when it refers to convention.

CALLICLES: What an inveterate driveller the man is! Tell me, Socrates, are you not ashamed to be word-catching at your age, and if one makes a verbal slip, to take that as a great stroke of luck? Do you imagine that, when I said "being superior," I meant anything else than "better"? Have I not been telling you ever so long that I regard the better and the superior as the same thing? Or do you suppose I mean that if a pack of slaves and all sorts of fellows who are good for nothing, except perhaps in point of physical strength, gather together and say something, that is a legal ordinance?

SOCRATES: Very well, most sapient Callicles: you mean that, do you?

CALLICLES: Certainly I do.

SOCRATES: Why, my wonderful friend, I have myself been guessing ever so long that you meant something of this sort by "superior," and if I repeat my questions it is because I am so keen to know definitely what your meaning may be. For I presume you do not consider that two are better than one, or that your slaves are better than yourself, just because they are stronger than you are. Come now, tell me again from the beginning what it is you mean by the better, since you do not mean the stronger: only, admirable sir, do be more gentle with me over my first lessons, or I shall cease attending your school.

CALLICLES: You are sarcastic, Socrates.

SOCRATES: No, by Zethus, Callicles, whom

you made use of just now²⁶ for aiming a good deal of sarcasm at me: but come, tell us whom you mean by the better.

CALLICLES: I mean the more excellent.

SOCRATES: So you see, you are uttering mere words yourself, and explaining nothing. Will you not tell us whether by the better and superior you mean the wiser, or some other sort?

CALLICLES: Why, to be sure, I mean those, and very much so.

SOCRATES: Then one wise man is often superior to ten thousand fools, by your account, and he ought to rule and they to be ruled, and the ruler should have more than they whom he rules. That is what you seem to me to intend by your statement—and I am not word-catching here—if the one is superior to the ten thousand.

CALLICLES: Why, that is my meaning. For this is what I regard as naturally just—that being better and wiser he should have both rule and advantage over the baser people.

SOCRATES: Stop there now. Once more, what is your meaning this time? Suppose that a number of us are assembled together, as now, in the same place, and we have in common a good supply of food and drink, and we are of all sorts—some strong, some weak; and one of us, a doctor, is wiser than the rest in this matter and, as may well be, is stronger than some and weaker than others; will not he, being wiser than we are, be better and superior in this affair?

CALLICLES: Certainly.

SOCRATES: Then is he to have a larger ration than the rest of us because he is better, or ought he as ruler to have the distribution of the whole stock, with no advantage in spending and consuming it upon his own person, if he is to avoid retribution, but merely having more than some and less than others? Or if he chance to be the weakest of all, ought he not to get the smallest share of all though he be the best, Callicles? Is it not so, good sir?

CALLICLES: You talk of food and drink and doctors and drivel: I refer to something different.

SOCRATES: Then tell me, do you call the wiser better? Yes or no?

CALLICLES: Yes, I do.

²⁶Above, 486 A. [Tr.]

SOCRATES: But do you not think the better should have a larger share?

CALLICLES: Yes, but not of food and drink.

SOCRATES: I see; of clothes, perhaps; and the ablest weaver should have the largest coat, and go about arrayed in the greatest variety of the finest clothes?

CALLICLES: What have clothes to do with it?

SOCRATES: Well, shoes then; clearly he who is wisest in regard to these, and best, should have some advantage. Perhaps the shoemaker should walk about in the biggest shoes and wear the largest number.

CALLICLES: Shoes—what have they to do with it? You keep on drivelling.

SOCRATES: Well, if you do not mean things of that sort, perhaps you mean something like this: a farmer, for instance, who knows all about the land and is highly accomplished in the matter, should perhaps have an advantage in sharing the seed, and have the largest possible amount of it for use on his own land.

CALLICLES: How you keep repeating the same thing, Socrates!

SOCRATES: Yes, and not only that, Callicles, but on the same subjects too.

CALLICLES: I believe, on my soul, you absolutely cannot ever stop talking of cobblers and fullers, cooks and doctors, as though our discussion had to do with them.

SOCRATES: Then will you tell me in what things the superior and wiser man has a right to the advantage of a larger share? Or will you neither put up with a suggestion from me nor make one yourself?

CALLICLES: Why, I have been making mine for some time past. First of all, by “the superior” I mean, not shoemakers or cooks, but those who are wise as regards public affairs and the proper way of conducting them, and not only wise but manly, with ability to carry out their purpose to the full; and who will not falter through softness of soul.

SOCRATES: Do you perceive, my excellent Callicles, that your count against me is not the same as mine against you? For you say I am ever repeating the same things, and reproach me with it, whereas I charge you, on the contrary, with never saying the same thing on the same subject; but at

one moment you defined the better and superior as the stronger, and at another as the wiser, and now you turn up again with something else: “the manlier” is what you now tell us is meant by the superior and better. No, my good friend, you had best say, and get it over, whom you do mean by the better and superior, and in what sphere.

CALLICLES: But I have told you already: men of wisdom and manliness in public affairs. These are the persons who ought to rule our cities, and justice means this—that these should have more than other people, the rulers than the ruled.

SOCRATES: How so? Than themselves, my friend?

CALLICLES: What do you mean?

SOCRATES: I mean that every man is his own ruler; or is there no need of one’s ruling oneself, but only of ruling others?

CALLICLES: What do you mean by one who rules himself?

SOCRATES: Nothing recondite; merely what most people mean—one who is temperate and self-mastering, ruler of the pleasures and desires that are in himself.

CALLICLES: You will have your pleasantry! You mean “the simpletons” by “the temperate.”

SOCRATES: How so? Nobody can fail to see that I do not mean that.

CALLICLES: Oh, you most certainly do, Socrates. For how can a man be happy if he is a slave to anybody at all? No, natural fairness and justice, I tell you now quite frankly, is this—that he who would live rightly should let his desires be as strong as possible and not chasten them, and should be able to minister to them when they are at their height by reason of his manliness and intelligence, and satisfy each appetite in turn with what it desires. But this, I suppose, is not possible for the many; whence it comes that they decry such persons out of shame, to disguise their own impotence, and are so good as to tell us that licentiousness is disgraceful, thus enslaving—as I remarked before—the better type of mankind; and being unable themselves to procure achievement of their pleasures they praise temperance and justice by reason of their own unmanliness. For to those who started with the advantage of being either kings’ sons or able by their own parts to procure some authority or

monarchy or absolute power, what in truth could be fouler or worse than temperance and justice in such cases? Finding themselves free to enjoy good things, with no obstacle in the way, they would be merely imposing on themselves a master in the shape of the law, the talk and the rebuke of the multitude. Or how could they fail to be sunk in wretchedness by that “fairness” of justice and temperance, if they had no larger portion to give to their own friends than to their enemies, and that too when they were rulers in their own cities? No, in good truth, Socrates—which you claim to be seeking—the fact is this: luxury and licentiousness and liberty, if they have the support of force, are virtue and happiness, and the rest of these embellishments—the unnatural covenants of mankind—are all mere stuff and nonsense.

SOCRATES: Far from ignoble, at any rate, Callicles, is the frankness with which you develop your thesis: for you are now stating in clear terms what the rest of the world think indeed, but are loth to say. So I beg you not to give up on any account, that it may be made really evident how one ought to live. Now tell me: do you say the desires are not to be chastened if a man would be such as he ought to be, but he should let them be as great as possible and provide them with satisfaction from some source or other, and this is virtue?

CALLICLES: Yes, I say that.

SOCRATES: Then it is not correct to say, as people do, that those who want nothing are happy.

CALLICLES: No, for at that rate stones and corpses would be extremely happy.

SOCRATES: Well, well, as you say, life is strange. For I tell you I should not wonder if Euripides’ words were true, when he says:

Who knoweth if to live is to be dead,
And to be dead, to live?

and we really, it may be, are dead; in fact I once heard one of our sages say that we are now dead, and the body is our tomb,²⁷ and the part of the

²⁷The sage was perhaps Philolaus, a Pythagorean philosopher contemporary with Socrates. The phrase *σῶμα σῆμα*, suggesting a mystical similarity between “body” and “tomb,” was part of the Orphic doctrine. [Tr.]

soul in which we have desires is liable to be overpersuaded and to vacillate to and fro, and so some smart fellow, a Sicilian, I daresay, or Italian,²⁸ made a fable in which—by a play of words—he named this part, as being so impressionable and persuadable, a jar, and the thoughtless he called uninitiate: in these uninitiate that part of the soul where the desires are, the licentious and fissured part, he named a leaky jar in his allegory, because it is so insatiate. So you see this person, Callicles, takes the opposite view to yours, showing how of all who are in Hades—meaning of course the invisible—these uninitiate will be most wretched, and will carry water into their leaky jar with a sieve which is no less leaky. And then by the sieve, as my storyteller said, he means the soul: and the soul of the thoughtless he likened to a sieve, as being perforated, since it is unable to hold anything by reason of its unbelief and forgetfulness. All this, indeed, is bordering pretty well on the absurd; but still it sets forth what I wish to impress upon you, if I somehow can, in order to induce you to make a change, and instead of a life of insatiate licentiousness to choose an orderly one that is set up and contented with what it happens to have got. Now, am I at all prevailing upon you to change over to the view that the orderly people are happier than the licentious; or will no amount of similar fables that I might tell you have any effect in changing your mind?

CALLICLES: The latter is more like the truth, Socrates.

SOCRATES: Come now, let me tell you another parable from the same school²⁹ as that I have just told. Consider if each of the two lives, the temperate and the licentious, might be described by imagining that each of two men had a number of jars, and those of one man were sound and full, one of wine, another of honey, a third of milk, and various others of various things, and that the sources of each of these supplies were scanty and difficult and only available through much hard toil: well, one man, when he has taken his fill, neither draws off any more nor troubles himself a

²⁸“Sicilian” may refer to Empedocles; “Italian” to one of the Pythagoreans. [Tr.]

²⁹Probably of Pythagoras. [Tr.]

jot, but remains at ease on that score; while the other finds, like his fellow, that the sources are possible indeed, though difficult, but his vessels are leaky and decayed, and he is compelled to fill them constantly, all night and day, or else suffer extreme distress. If such is the nature of each of the two lives, do you say that the licentious man has a happier one than the orderly? Do I, with this story of mine, induce you at all to concede that the orderly life is better than the licentious, or do I fail?

CALLICLES: You fail, Socrates. For that man who has taken his fill can have no pleasure any more; in fact it is what I just now called living like a stone, when one has filled up and no longer feels any joy or pain. But a pleasant life consists rather in the largest possible amount of inflow.

SOCRATES: Well then, if the inflow be large, must not that which runs away be of large amount also, and must not the holes for such outflow be of great size?

CALLICLES: Certainly.

SOCRATES: Then it is a plover's life³⁰ you are describing this time, not that of a corpse or a stone. Now tell me, is the life you mean something like feeling hunger and eating when hungry?

CALLICLES: Yes, it is.

SOCRATES: And feeling thirst and drinking when thirsty?

CALLICLES: Yes, and having all the other desires, and being able to satisfy them, and so with these enjoyments leading a happy life.

SOCRATES: Bravo, my fine fellow! Do go on as you have begun, and mind you show no bashfulness about it. I too, it seems, must try not to be too bashful. First of all, tell me whether a man who has an itch and wants to scratch, and may scratch in all freedom, can pass his life happily in continual scratching.

CALLICLES: What an odd person you are, Socrates—a regular stump-orator!

SOCRATES: Why, of course, Callicles, that is how I upset Polus and Gorgias, and struck them with bashfulness; but you, I know, will never be upset or abashed; you are such a manly fellow. Come, just answer that.

³⁰Referring to this bird's habit of drinking water and then ejecting it. [Tr.]

CALLICLES: Then I say that the man also who scratches himself will thus spend a pleasant life.

SOCRATES: And if a pleasant one, a happy one also?

CALLICLES: Certainly.

SOCRATES: Is it so if he only wants to scratch his head? Or what more am I to ask you? See, Callicles, what your answer will be, if you are asked everything in succession that links on to that statement; and the culmination of the case, as stated—the life of catamites—is not that awful, shameful, and wretched? Or will you dare to assert that these are happy if they can freely indulge their wants?

CALLICLES: Are you not ashamed, Socrates, to lead the discussion into such topics?

SOCRATES: What, is it I who am leading it there, noble sir, or the person who says outright that those who enjoy themselves, with whatever kind of enjoyment, are happy, and draws no distinction between the good and bad sorts of pleasure? But come, try again now and tell me whether you say that pleasant and good are the same thing, or that there is some pleasure which is not good.

CALLICLES: Then, so that my statement may not be inconsistent through my saying they are different, I say they are the same.

SOCRATES: You are spoiling your first statements,³¹ Callicles, and you can no longer be a fit partner with me in probing the truth, if you are going to speak against your own convictions.

CALLICLES: Why, you do the same, Socrates.

SOCRATES: Then I am just as much in the wrong if I do, as you are. But look here, my gifted friend, perhaps the good is not mere unconditional enjoyment: for if it is, we have to face not only that string of shameful consequences I have just shadowed forth, but many more besides.

CALLICLES: In your opinion, that is, Socrates.

SOCRATES: And do you, Callicles, really maintain that it is?

CALLICLES: I do.

SOCRATES: Then are we to set about discussing it as your serious view?

³¹Cf. 482 D, where Callicles blamed Polus for not saying what he really thought. [Tr.]

CALLICLES: Oh yes, to be sure.

SOCRATES: Come then, since that is your opinion, resolve me this: there is something, I suppose, that you call knowledge?

CALLICLES: Yes.

SOCRATES: And were you not saying just now that knowledge can have a certain courage coupled with it?

CALLICLES: Yes, I was.

SOCRATES: And you surely meant that they were two things, courage being distinct from knowledge?

CALLICLES: Quite so.

SOCRATES: Well now, are pleasure and knowledge the same thing, or different?

CALLICLES: Different, I presume, O sage of sages.

SOCRATES: And courage too, is that different from pleasure?

CALLICLES: Of course it is.

SOCRATES: Come now, let us be sure to remember this, that Callicles the Acharnian said pleasant and good were the same, but knowledge and courage were different both from each other and from the good.

CALLICLES: And Socrates of Alopece refuses to grant us this; or does he grant it?

SOCRATES: He does not; nor, I believe, will Callicles either, when he has rightly considered himself. For tell me, do you not regard people who are well off as being in the opposite condition to those who are badly off?

CALLICLES: I do.

SOCRATES: Then if these conditions are opposite to each other, must not the same hold of them as of health and disease? For, you know, a man is never well and ill at the same time, nor gets rid of health and disease together.

CALLICLES: How do you mean?

SOCRATES: Take, for instance, any part of the body you like by itself, and consider it. A man, I suppose, may have a disease of the eyes, called ophthalmia?

CALLICLES: Certainly.

SOCRATES: Then I presume he is not sound also at that time in those same eyes?

CALLICLES: By no conceivable means.

SOCRATES: And what say you, when he gets

rid of his ophthalmia? Does he at that time get rid too of the health of his eyes, and so at last is rid of both things together?

CALLICLES: Far from it.

SOCRATES: Because, I imagine, this would be an astonishing and irrational result, would it not?

CALLICLES: Very much so.

SOCRATES: Whereas, I take it, he gets and loses either in turn?

CALLICLES: I agree.

SOCRATES: And so with strength and weakness in just the same way?

CALLICLES: Yes.

SOCRATES: And speed and slowness?

CALLICLES: Certainly.

SOCRATES: And so too with good things and happiness and their opposites—bad things and wretchedness—does one take on each of these in turn, and in turn put it off?

CALLICLES: Absolutely, I presume.

SOCRATES: Then if we find any things that a man puts off and retains at one and the same moment, clearly these cannot be the good and the bad. Do we admit this? Now consider very carefully before you answer.

CALLICLES: Oh, I admit it down to the ground.

SOCRATES: So now for our former admissions: did you say that being hungry was pleasant or painful? I mean, hunger itself.

CALLICLES: Painful, I said; though eating when one is hungry I call pleasant.

SOCRATES: I see; but at all events hunger itself is painful, is it not?

CALLICLES: I agree.

SOCRATES: And so too with thirst?

CALLICLES: Quite so.

SOCRATES: Then am I to ask you any further questions, or do you admit that all want and desire is painful?

CALLICLES: I admit it; no, do not question me further.

SOCRATES: Very good; but drinking when one is thirsty you surely say is pleasant?

CALLICLES: I do.

SOCRATES: Now, in this phrase of yours the words “when one is thirsty,” I take it, stand for “when one is in pain”?

CALLICLES: Yes.

SOCRATES: But drinking is a satisfaction of the want, and a pleasure?

CALLICLES: Yes.

SOCRATES: So in the act of drinking, you say, one has enjoyment?

CALLICLES: Quite so.

SOCRATES: When one is thirsty?

CALLICLES: I agree.

SOCRATES: That is, in pain?

CALLICLES: Yes.

SOCRATES: Then do you perceive the conclusion,—that you say one enjoys oneself, though in pain at the same moment, when you say one drinks when one is thirsty? Or does this not occur at once, at the same place and time—in either soul or body, as you please? For I fancy it makes no difference. Is this so or not?

CALLICLES: It is.

SOCRATES: But further, you say it is impossible to be badly off, or to fare ill, at the same time as one is faring well.

CALLICLES: Yes, I do.

SOCRATES: But to enjoy oneself when feeling pain you have admitted to be possible.

CALLICLES: Apparently.

SOCRATES: Hence enjoyment is not faring well, nor is feeling pain faring ill, so that the pleasant is found to be different from the good.

CALLICLES: I cannot follow these subtleties of yours, Socrates.

SOCRATES: You can, but you play the innocent, Callicles. Just go on a little further, that you may realize how subtle is your way of reproving me. Does not each of us cease at the same moment from thirst and from the pleasure he gets by drinking?

CALLICLES: I cannot tell what you mean.

GORGIAS: No, no, Callicles, you must answer him, for our sakes also, that the arguments may be brought to a conclusion.

CALLICLES: But Socrates is always like this, Gorgias; he keeps on asking petty, unimportant questions until he refutes one.

GORGIAS: Why, what does that matter to you? In any case it is not your credit that is at stake, Callicles; just permit Socrates to refute you in such manner as he chooses.

CALLICLES: Well then, proceed with those little

cramped questions of yours, since Gorgias is so minded.

SOCRATES: You are fortunate, Callicles, in having been initiated into the Great Mysteries before the Little:³² I did not think that was the proper thing. So go on answering where you left off—as to whether each of us does not cease to feel thirst and pleasure at the same time.

CALLICLES: I grant it.

SOCRATES: And so with hunger and the rest, does he cease to feel the desires and pleasures at the same time?

CALLICLES: That is so.

SOCRATES: And also ceases to feel the pains and pleasures at the same time?

CALLICLES: Yes.

SOCRATES: But still he does not cease to have the good and bad at the same time, as you agreed; and now, you do not agree?

CALLICLES: I do; and what then?

SOCRATES: Only that we get the result, my friend, that the good things are not the same as the pleasant, nor the bad as the painful. For with the one pair the cessation is of both at once, but with the other two it is not, since they are distinct. How then can pleasant things be the same as good, or painful things as bad? Or if you like, consider it another way—for I fancy that even after that you do not admit it. Just observe: do you not call good people good owing to the presence of good things, as you call beautiful those in whom beauty is present?

CALLICLES: I do.

SOCRATES: Well now, do you give the name of good men to fools and cowards? It was not they just now but brave and wise men whom you so described. Or is it not these that you call good?

CALLICLES: To be sure it is.

SOCRATES: And now, have you ever seen a silly child enjoying itself?

CALLICLES: I have.

SOCRATES: And have you never seen a silly man enjoying himself?

CALLICLES: I should think I have; but what has that to do with it?

SOCRATES: Nothing; only answer.

³²Socrates means that one cannot hope to know great things without first learning the truth about little things. [Tr.]

CALLICLES: I have seen one.

SOCRATES: And again, a man of sense in a state of pain or enjoyment?

CALLICLES: Yes.

SOCRATES: And which sort are more apt to feel enjoyment or pain, the wise or the foolish?

CALLICLES: I should think there is not much difference.

SOCRATES: Well, that will suffice. In war have you ever seen a coward?

CALLICLES: Of course I have.

SOCRATES: Well now, when the enemy withdrew, which seemed to you to enjoy it more, the cowards or the brave?

CALLICLES: Both did, I thought; or if not that, about equally.

SOCRATES: No matter. Anyhow, the cowards do enjoy it?

CALLICLES: Very much.

SOCRATES: And the fools, it would seem.

CALLICLES: Yes.

SOCRATES: And when the foe advances, do the cowards alone feel pain, or the brave as well?

CALLICLES: Both.

SOCRATES: Alike?

CALLICLES: More, perhaps, the cowards.

SOCRATES: And when the foe withdraws, do they not enjoy it more?

CALLICLES: Perhaps.

SOCRATES: So the foolish and the wise, and the cowardly and the brave, feel pain and enjoyment about equally, according to you, but the cowardly more than the brave?

CALLICLES: I agree.

SOCRATES: But further, are the wise and brave good, and the cowards and fools bad?

CALLICLES: Yes.

SOCRATES: Then the good and the bad feel enjoyment and pain about equally?

CALLICLES: I agree.

SOCRATES: Then are the good and the bad about equally good and bad? Or are the bad in some yet greater measure good and bad?

CALLICLES: Why, upon my word, I cannot tell what you mean.

SOCRATES: You are aware, are you not, that you hold that the good are good by the presence of good things, and that the bad are so by the presence of bad things? And that the plea-

sure are the good things, and the pains bad things?

CALLICLES: Yes, I am.

SOCRATES: Hence in those who have enjoyment the good things—the pleasures—are present, so long as they enjoy?

CALLICLES: Of course.

SOCRATES: Then good things being present, those who enjoy are good?

CALLICLES: Yes.

SOCRATES: Well now, in those who feel pain are not bad things present, namely pains?

CALLICLES: They are.

SOCRATES: And it is by the presence of bad things, you say, that the bad are bad? Or do you no longer say so?

CALLICLES: I do say so.

SOCRATES: Then whoever enjoys is good, and whoever is pained, bad?

CALLICLES: Certainly.

SOCRATES: You mean, those more so who feel these things more, and those less who feel less, and those about equally who feel about equally?

CALLICLES: Yes.

SOCRATES: Now you say that the wise and the foolish, the cowardly and the brave, feel enjoyment and pain about equally, or the cowards even more?

CALLICLES: I do.

SOCRATES: Then just help me to reckon up the results we get from our admissions; for you know they say:

That which seemeth well, 'tis well
Twice and also thrice to tell,³³

and to examine too. We say that the wise and brave man is good, do we not?

CALLICLES: Yes.

SOCRATES: And that the foolish and cowardly is bad?

CALLICLES: Certainly.

SOCRATES: And again, that he who enjoys is good?

CALLICLES: Yes.

SOCRATES: And that he who feels pain is bad?

CALLICLES: Necessarily.

³³The saying—*καὶ δις γὰρ ὁ δεῖ χαλόν ἐστιν ἐνισπεῖν*—was attributed by some to Empedocles. [Tr.]

SOCRATES: And that the good and the bad feel enjoyment and pain in a like manner, or perhaps the bad rather more?

CALLICLES: Yes.

SOCRATES: Then is the bad man made bad or good in a like manner to the good man, or even good in a greater measure? Does not this follow, along with those former statements, from the assumption that pleasant things and good things are the same? Must not this be so, Callicles?

CALLICLES: Let me tell you, Socrates, all the time that I have been listening to you and yielding you agreement, I have been remarking the puerile delight with which you cling to any concession one may make to you, even in jest. So you suppose that I or anybody else in the world does not regard some pleasures as better, and others worse!

SOCRATES: Oh ho, Callicles, what a rascal you are, treating me thus like a child—now asserting that the same things are one way, now another, to deceive me! And yet I started with the notion that I should not have to fear any intentional deception on your part, you being my friend; but now I find I was mistaken, and it seems I must, as the old saying goes, e'en make the best of what I have got, and accept just anything you offer. Well then, what you now state, it seems, is that there are certain pleasures, some good, and some bad; is not that so?

CALLICLES: Yes.

SOCRATES: Then are the beneficial ones good, and the harmful ones bad?

CALLICLES: Certainly.

SOCRATES: And are those beneficial which do some good, and those evil which do some evil?

CALLICLES: I agree.

SOCRATES: Now are these the sort you mean—for instance, in the body, the pleasures of eating and drinking that we mentioned a moment ago? Then the pleasures of this sort which produce health in the body, or strength, or any other bodily excellence,—are these good, and those which have the opposite effects, bad?

CALLICLES: Certainly.

SOCRATES: And similarly in the case of pains, are some worthy and some base?

CALLICLES: Of course.

SOCRATES: So it is the worthy pleasures and pains that we ought to choose in all our doings?

CALLICLES: Certainly.

SOCRATES: And the base ones not?

CALLICLES: Clearly so.

SOCRATES: Because, you know, Polus and I, if you recollect, decided³⁴ that everything we do should be for the sake of what is good. Do you agree with us in this view—that the good is the end of all our actions, and it is for its sake that all other things should be done, and not it for theirs? Do you add your vote to ours, and make a third?

CALLICLES: I do.

SOCRATES: Then it is for the sake of what is good that we should do everything, including what is pleasant, not the good for the sake of the pleasant.

CALLICLES: Certainly.

SOCRATES: Now is it in every man's power to pick out which sort of pleasant things are good and which bad, or is professional skill required in each case?

CALLICLES: Professional skill.

SOCRATES: Then let us recall those former points I was putting to Polus and Gorgias.³⁵ I said, if you remember, that there were certain industries, some of which extend only to pleasure, procuring that and no more, and ignorant of better and worse; while others know what is good and what bad. And I placed among those that are concerned with pleasure the habitude, not art, of cookery, and among those concerned with good the art of medicine. Now by the sanctity of friendship, Callicles, do not on your part indulge in jesting with me, or give me random answers against your conviction, or again, take what I say as though I were jesting. For you see that our debate is upon a question which has the highest conceivable claims to the serious interest even of a person who has but little intelligence—namely, what course of life is best; whether it should be that to which you invite me, with all those manly pursuits of speaking in Assembly and practicing rhetoric and going in for politics after the fashion of you modern politicians, or this life of philosophy; and what makes the difference between these two. Well, perhaps it is best to do what I attempted a while ago, and distinguish them; and then, when we have

³⁴Cf. 468 c. [Tr.]

³⁵Cf. 464–5. [Tr.]

distinguished them and come to an agreement with each other as to these lives being really two, we must consider what is the difference between them and which of them is the one we ought to live. Now I daresay you do not yet grasp my meaning.

CALLICLES: No, I do not.

SOCRATES: Well, I will put it to you more plainly. Seeing that we have agreed, you and I, that there is such a thing as “good,” and such a thing as “pleasant,” and that the pleasant is other than the good, and that for the acquisition of either there is a certain practice or preparation—the quest of the pleasant in the one case, and that of the good in the other—but first you must either assent or object to this statement of mine: do you assent?

CALLICLES: I am with you entirely.

SOCRATES: Then try and come to a definite agreement with me on what I was saying to our friends here, and see if you now find that what I then said was true. I was saying, I think, that cookery seems to me not an art but a habitude, unlike medicine, which, I argued, has investigated the nature of the person whom she treats and the cause of her proceedings, and has some account to give of each of these things; so much for medicine: whereas the other, in respect of the pleasure to which her whole ministrations is given, goes to work there in an utterly inartistic manner, without having investigated at all either the nature or the cause of pleasure, and altogether irrationally—with no thought, one may say, of differentiation, relying on routine and habitude for merely preserving a memory of what is wont to result; and that is how she is enabled to provide her pleasures. Now consider first whether you think that this account is satisfactory, and that there are certain other such occupations likewise, having to do with the soul; some artistic, with forethought for what is to the soul’s best advantage, and others making light of this, but again, as in the former case, considering merely the soul’s pleasure and how it may be contrived for her, neither inquiring which of the pleasures is a better or a worse one, nor caring for aught but mere gratification, whether for better or worse. For I, Callicles, hold that there are such, and for my part I call this sort of thing flattery, whether in relation to the body or to the soul or to anything else, whenever anyone ministers to its

pleasure without regard for the better and the worse; and you now, do you support us with the same opinion on this matter, or do you gainsay us?

CALLICLES: Not I; I agree with you, in order that your argument may reach a conclusion, and that I may gratify Gorgias here.

SOCRATES: And is this the case with only one soul, and not with two or many?

CALLICLES: No, it is also the case with two or many.

SOCRATES: Then is it possible also to gratify them all at once, collectively, with no consideration of what is best?

CALLICLES: I should think it is.

SOCRATES: Then can you say what are the pursuits which effect this? Or rather, if you like, when I ask you, and one of them seems to you to be of this class, say yes, and when one does not, say no. And first let us consider flute-playing. Does it not seem to you one of this sort, Callicles, aiming only at our pleasure, and caring for naught else?

CALLICLES: It does seem so to me.

SOCRATES: And so too with all similar pursuits, such as harp-playing in the contests?

CALLICLES: Yes.

SOCRATES: And what of choral productions and dithyrambic compositions? Are they not manifestly, in your view, of the same kind? Or do you suppose Cinesias,³⁶ son of Meles, cares a jot about trying to say things of a sort that might be improving to his audience, or only what is likely to gratify the crowd of spectators?

CALLICLES: Clearly the latter is the case, Socrates, with Cinesias.

SOCRATES: And what of his father Meles? Did he ever strike you as looking to what was best in his minstrelsy? Or did he, perhaps, not even make the pleasantest his aim? For his singing used to be a pain to the audience. But consider now: do you not think that all minstrelsy and composing of dithyrambs have been invented for the sake of pleasure?

CALLICLES: I do.

³⁶A dithyrambic poet whose extravagant style was ridiculed by Aristophanes (*Frogs*, 153; *Clouds*, 333; *Birds*, 1379). [Tr.]

SOCRATES: Then what of the purpose that has inspired our stately and wonderful tragic poetry? Are her endeavor and purpose, to your mind, merely for the gratification of the spectators, or does she strive hard, if there be anything pleasant and gratifying, but bad for them, to leave that unsaid, and if there be anything unpleasant, but beneficial, both to speak and sing that, whether they enjoy it or not? To which of these two aims, think you, is tragic poetry devoted?

CALLICLES: It is quite obvious, in her case, Socrates, that she is bent rather upon pleasure and the gratification of the spectators.

SOCRATES: Well now, that kind of thing, Callicles, did we say just now, is flattery?

CALLICLES: Certainly.

SOCRATES: Pray then, if we strip any kind of poetry of its melody, its rhythm and its meter, we get mere speeches as the residue, do we not?

CALLICLES: That must be so.

SOCRATES: And those speeches are spoken to a great crowd of people?

CALLICLES: Yes.

SOCRATES: Hence poetry is a kind of public speaking.

CALLICLES: Apparently.

SOCRATES: Then it must be a rhetorical public speaking; or do you not think that the poets use rhetoric in the theaters?

CALLICLES: Yes, I do.

SOCRATES: So now we have found a kind of rhetoric addressed to such a public as is compounded of children and women and men, and slaves as well as free; an art that we do not quite approve of, since we call it a flattering one.

CALLICLES: To be sure.

SOCRATES: Very well; but now, the rhetoric addressed to the Athenian people, or to the other assemblies of freemen in the various cities—what can we make of that? Do the orators strike you as speaking always with a view to what is best, with the single aim of making the citizens as good as possible by their speeches, or are they, like the poets, set on gratifying the citizens, and do they, sacrificing the common weal to their own personal interest, behave to these assemblies as to children, trying merely to gratify them, nor care a jot whether they will be better or worse in consequence?

CALLICLES: This question of yours is not quite so simple; for there are some who have a regard for the citizens in the words that they utter, while there are also others of the sort that you mention.

SOCRATES: That is enough for me. For if this thing also is twofold, one part of it, I presume, will be flattery and a base mob-oratory, while the other is noble—the endeavor, that is, to make the citizens' souls as good as possible, and the persistent effort to say what is best, whether it prove more or less pleasant to one's hearers. But this is a rhetoric you never yet saw; or if you have any orator of this kind that you can mention, without more ado let me know who he is!

CALLICLES: No, upon my word, I cannot tell you of anyone, at least among the orators of today.

SOCRATES: Well then, can you mention one among those of older times whom the Athenians have to thank for any betterment that started at the time of his first harangues, as a change from the worse state in which he originally found them? For my part, I have no idea who the man is.

CALLICLES: Why, do you hear no mention of Themistocles and what a good man he was, and Cimon and Miltiades and the great Pericles, who has died recently,³⁷ and whom you have listened to yourself?

SOCRATES: Yes, Callicles, if that which you spoke of just now is true virtue—the satisfaction of one's own and other men's desires; but if that is not so, and the truth is—as we were compelled to admit in the subsequent discussion—that only those desires which make man better by their satisfaction should be fulfilled, but those which make him worse should not, and that this is a special art, then I for one cannot tell you of any man so skilled having appeared among them.

CALLICLES: Ah, but if you search properly you will find one.

SOCRATES: Then let us just consider the matter calmly, and see if any of them has appeared with that skill. Come now: the good man, who is intent on the best when he speaks, will surely not speak at random in whatever he says, but with a

³⁷429 B.C. We saw at 473 E that the supposed date of the discussion is 405 B.C., so that "recently" here is hardly accurate. [Tr.]

view to some object? He is just like any other craftsman, who having his own particular work in view selects the things he applies to that work of his, not at random, but with the purpose of giving a certain form to whatever he is working upon. You have only to look, for example, at the painters, the builders, the shipwrights, or any of the other craftsmen, whichever you like, to see how each of them arranges everything according to a certain order, and forces one part to suit and fit with another, until he has combined the whole into a regular and well-ordered production; and so of course with all the other craftsmen, and the people we mentioned just now, who have to do with the body—trainers and doctors; they too, I suppose, bring order and system into the body. Do we admit this to be the case, or not?

CALLICLES: Let it be as you say.

SOCRATES: Then if regularity and order are found in a house, it will be a good one, and if irregularity, a bad one?

CALLICLES: I agree.

SOCRATES: And it will be just the same with a ship?

CALLICLES: Yes.

SOCRATES: And further, with our bodies also, can we say?

CALLICLES: Certainly.

SOCRATES: And what of the soul? If it shows irregularity, will it be good, or if it has a certain regularity and order?

CALLICLES: Our former statements oblige us to agree to this also.

SOCRATES: Then what name do we give to the effect of regularity and order in the body?

CALLICLES: Health and strength, I suppose you mean.

SOCRATES: I do. And what, again, to the effect produced in the soul by regularity and order? Try to find the name here, and tell it me as before.

CALLICLES: Why not name it yourself, Socrates?

SOCRATES: Well, if you prefer it, I will; and do you, if I seem to you to name it rightly, say so; if not, you must refute me and not let me have my way. For it seems to me that any regularity of the body is called healthiness, and this leads to health being produced in it, and general bodily excellence. Is that so or not?

CALLICLES: It is.

SOCRATES: And the regular and orderly states of the soul are called lawfulness and law, whereby men are similarly made law-abiding and orderly; and these states are justice and temperance. Do you agree or not?

CALLICLES: Be it so.

SOCRATES: Then it is this that our orator, the man of art and virtue, will have in view, when he applies to our souls the words that he speaks, and also in all his actions, and in giving any gift he will give it, and in taking anything away he will take it, with this thought always before his mind—how justice may be engendered in the souls of his fellow-citizens, and how injustice may be removed; how temperance may be bred in them and licentiousness cut off; and how virtue as a whole may be produced and vice expelled. Do you agree to this or not?

CALLICLES: I agree.

SOCRATES: For what advantage is there, Callicles, in giving to a sick and ill-conditioned body a quantity of even the most agreeable things to eat and drink, or anything else whatever, if it is not going to profit thereby any more, let us say, than by the opposite treatment, on any fair reckoning, and may profit less? Is this so?

CALLICLES: Be it so.

SOCRATES: Because, I imagine, it is no gain for a man to live in a depraved state of body, since in this case his life must be a depraved one also. Or is not that the case?

CALLICLES: Yes.

SOCRATES: And so the satisfaction of one's desires—if one is hungry, eating as much as one likes, or if thirsty, drinking—is generally allowed by doctors when one is in health; but they practically never allow one in sickness to take one's fill of things that one desires: do you agree with me in this?

CALLICLES: I do.

SOCRATES: And does not the same rule, my excellent friend, apply to the soul? So long as it is in a bad state—thoughtless, licentious, unjust, and unholy—we must restrain its desires and not permit it to do anything except what will help it to be better: do you grant this, or not?

CALLICLES: I do.

SOCRATES: For thus, I take it, the soul itself is better off?

CALLICLES: To be sure.

SOCRATES: And is restraining a person from what he desires correcting him?

CALLICLES: Yes.

SOCRATES: Then correction is better for the soul than uncorrected license, as you were thinking just now.

CALLICLES: I have no notion what you are referring to, Socrates; do ask some one else.

SOCRATES: Here is a fellow who cannot endure a kindness done him, or the experience in himself of what our talk is about—a correction!

CALLICLES: Well, and not a jot do I care, either, for anything *you* say; I only gave you those answers to oblige Gorgias.

SOCRATES: Very good. So now, what shall we do? Break off our argument midway?

CALLICLES: You must decide that for yourself.

SOCRATES: Why, they say one does wrong to leave off even stories in the middle; one should set a head on the thing, that it may not go about headless. So proceed with the rest of your answers, that our argument may pick up a head.

CALLICLES: How overbearing you are, Socrates! Take my advice, and let this argument drop, or find some one else to argue with.

SOCRATES: Then who else is willing? Surely we must not leave the argument there, unfinished?

CALLICLES: Could you not get through it yourself, either talking on by yourself or answering your own questions?

SOCRATES: So that, in Epicharmus's phrase,³⁸ "what two men spake erewhile" I may prove I can manage single-handed. And indeed it looks as though it must of sheer necessity be so. Still, if we are to do this, for my part I think we ought all to vie with each other in attempting a knowledge of what is true and what false in the matter of our argument; for it is a benefit to all alike that it be revealed. Now I am going to pursue the argument as my view of it may suggest; but if any of you think the admissions I am making to myself are not the truth, you must seize upon them and refute me. For I assure you I myself do not say what I say as knowing it, but as joining in the search with you; so that if anyone who disputes

³⁸Epicharmus of Cos produced philosophic comedies in Sicily during the first part of the fifth century. The saying is quoted in full by Athenaeus, vii. 308 τὰ πρὸ τοῦ δὲ ἀνδρες ἔλεγον εἰς ἐγὼν ἀποχρέω. [Tr.]

my statements is found to be on the right track, I shall be the first to agree with him. This, however, I say on the assumption that you think the argument should be carried through to a conclusion; but if you would rather it were not, let us have done with it now and go our ways.

GORGAS: Well, my opinion is, Socrates, that we ought not to go away yet, but that you should go through with the argument; and I fancy the rest of them think the same. For I myself, in fact, desire to hear you going through the remainder by yourself.

SOCRATES: Why, to be sure, Gorgias, I myself should have liked to continue discussing with Callicles here until I had paid him an Amphion's speech in return for his of Zethus.³⁹ But since you, Callicles, are unwilling to join me in finishing off the argument, you must at any rate pull me up, as you listen, if it seems to you that my statements are wrong. And if you refute me, I shall not be vexed with you as you were with me; you will only be recorded in my mind as my greatest benefactor.

CALLICLES: Proceed, good sir, by yourself, and finish it off.

SOCRATES: Give ear, then; but first I will resume our argument from the beginning. Are the pleasant and the good the same thing? Not the same, as Callicles and I agreed. Is the pleasant thing to be done for the sake of the good, or the good for the sake of the pleasant? The pleasant for the sake of the good. And is that thing pleasant by whose advent we are pleased, and that thing good by whose presence we are good? Certainly. But further, both we and everything else that is good, are good by the advent of some virtue? In my view this must be so, Callicles. But surely the virtue of each thing, whether of an implement or of a body, or again of a soul or any live creature, does not arrive most properly by accident, but by an order or rightness or art that is apportioned to each. Is that so? I certainly agree. Then the virtue of each thing is a matter of regular and orderly arrangement? I at least should say so. Hence it is a certain order proper to each existent thing that by its advent in each makes it good? That is my view. So then a soul which has its own proper order is better than one which is

³⁹Cf. 485 above. [Tr.]

unordered? Necessarily. But further, one that has order is orderly? Of course it will be. And the orderly one is temperate? Most necessarily. So the temperate soul is good. For my part, I can find nothing to say in objection to this, my dear Callicles; but if you can, do instruct me.

CALLICLES: Proceed, good sir.

SOCRATES: I say, then, that if the temperate soul is good, one that is in the opposite state to this sensible⁴⁰ one is bad; and that was the senseless and dissolute one. Certainly. And further, the sensible man will do what is fitting as regards both gods and men; for he could not be sensible if he did what was unfitting. That must needs be so. And again, when he does what is fitting as regards men, his actions will be just, and as regards the gods, pious; and he who does what is just and pious must needs be a just and pious man. That is so. And surely he must be brave also: for you know a sound or temperate mind is shown, not by pursuing and shunning what one ought not, but by shunning and pursuing what one ought, whether they be things or people or pleasures or pains, and by steadfastly persevering in one's duty; so that it follows of strict necessity, Callicles, that the temperate man, as shown in our exposition, being just and brave and pious, is the perfection of a good man; and that the good man does well and fairly whatever he does; and that he who does well is blessed and happy,⁴¹ while the wicked man or evil-doer is wretched. And this must be the man who is in an opposite case to the temperate,—the licentious man whom you were commending.

So there is my account of the matter, and I say that this is the truth; and that, if this is true, anyone, as it seems, who desires to be happy must ensure and practice temperance, and flee from licentiousness, each of us as fast as his feet will carry him, and must contrive, if possible, to need no correction; but if he have need of it, either

himself or anyone belonging to him, either an individual or a city, then right must be applied and they must be corrected, if they are to be happy. This, in my opinion, is the mark on which a man should fix his eyes throughout life; he should concentrate all his own and his city's efforts on this one business of providing a man who would be blessed with the needful justice and temperance; not letting one's desires go unrestrained and in one's attempts to satisfy them—an interminable trouble—leading the life of a robber. For neither to any of his fellowmen can such a one be dear, nor to God; since he cannot commune with any, and where there is no communion, there can be no friendship. And wise men tell us, Callicles, that heaven and earth and gods and men are held together by communion and friendship, by orderliness, temperance, and justice; and that is the reason, my friend, why they call the whole of this world by the name of order,⁴² not of disorder or dissoluteness. Now you, as it seems to me, do not give proper attention to this, for all your cleverness, but have failed to observe the great power of geometrical equality among both gods and men: you hold that self-advantage is what one ought to practice, because you neglect geometry. Very well: either we must refute this statement, that it is by the possession of justice and temperance that the happy are happy and by that of vice the wretched are wretched; or if this is true, we must investigate its consequences. Those former results, Callicles, must all follow, on which you asked me if I was speaking in earnest when I said that a man must accuse himself or his son or his comrade if he do any wrong, and that this is what rhetoric must be used for; and what you supposed Polus to be conceding from shame is after all true—that to do wrong is worse, in the same degree as it is baser, than to suffer it, and that whoever means to be the right sort of rhetorician must really be just and well-informed of the ways of justice, which again Polus said that Gorgias was only shamed into admitting.

This being the case, let us consider what weight, if any, there is in the reproaches you cast

⁴²Κόσμος ("order") was the name first given to the universe by the Pythagoreans. [Tr.]

⁴⁰The argument here makes use of a more literal meaning of σῶφρων—"sound minded" (verging on "consciousness," as in what immediately follows). [Tr.]

⁴¹As the various meanings of σῶφροσύνη have been brought out to suggest that one side of that virtue involves the others, so here the apparent quibble of εὖ πράττειν ("act well" and "fare well") is intended to suggest a real dependence of happiness upon virtue. [Tr.]

upon me,⁴³ is it fairly alleged or not that I am unable to stand up for myself or any of my friends and relations, or to deliver them from the sorest perils, but am exposed like an outcast to the whim of anyone who chooses to give me—the dashing phrase is yours—a box on the ear; or strip me of my substance or expel me from the city; or, worst of all, put me to death; and that to be in such a case is the lowest depth of shame, as your account has it? But mine—though it has been frequently stated already, there can be no objection to my stating it once again—is this: I deny, Callicles, that to be wrongfully boxed on the ear is the deepest disgrace, or to have either my person cut or my purse; I hold that to strike or cut me or mine wrongfully is yet more of a disgrace and an evil, and likewise stealing and kidnapping and housebreaking, and in short any wrong whatsoever done to me or mine, are both worse and more shameful to the wrongdoer than to me the wronged. All this, which has been made evident in the form I have stated some way back in our foregoing discussion, is held firm and fastened—if I may put it rather bluntly—with reasons of steel and adamant (so it would seem, at least, on the face of it) which you or somebody more gallant than yourself must undo, or else accept this present statement of mine as the only possible one. For my story is ever the same, that I cannot tell how the matter stands, and yet of all whom I have encountered, before as now, no one has been able to state it otherwise without making himself ridiculous. Well now, once more I assume it to be so; but if it is so, and injustice is the greatest of evils to the wrongdoer, and still greater than this greatest, if such can be, when the wrongdoer pays no penalty, what rescue is it that a man must be able to effect for himself if he is not to be ridiculous in very truth? Is it not one which will avert from us the greatest harm? Nay, rescue must needs be at its shamefullest, if one is unable to rescue either oneself or one's own friends and relations, and second to it is inability in face of the second sort of evil, and third in face of the third, and so on with the rest; according to the gravity attaching to each evil is either the glory of being

able to effect a rescue from each sort, or the shame of being unable. Is it so or otherwise, Callicles?

CALLICLES: Not otherwise.

SOCRATES: Then of these two, doing and suffering wrong, we declare doing wrong to be the greater evil, and suffering it the less. Now with what should a man provide himself in order to come to his own rescue, and so have both of the benefits that arise from doing no wrong on the one hand, and suffering none on the other? Is it power or will? What I mean is, will a man avoid being wronged by merely wishing not to be wronged, or will he avoid it by providing himself with power to avert it?

CALLICLES: The answer to that is obvious: by means of power.

SOCRATES: But what about doing wrong? Will the mere not wishing to do it suffice—since, in that case, he will not do it—or does it require that he also provide himself with some power or art, since unless he has got such learning or training he will do wrong? I really must have your answer on this particular point, Callicles—whether you think that Polus and I were correct or not in finding ourselves forced to admit, as we did in the preceding argument, that no one does wrong of his own wish, but that all who do wrong do it against their will.

CALLICLES: Let it be as you would have it, Socrates, in order that you may come to a conclusion of your argument.

SOCRATES: Then for this purpose also, of not doing wrong, it seems we must provide ourselves with a certain power or art.

CALLICLES: To be sure.

SOCRATES: Now what can be the art of providing so that we suffer no wrong, or as little as possible? Consider if you take the same view of it as I do. For in my view it is this: one must either be a ruler, or even a despot, in one's city, or else an associate of the existing government.

CALLICLES: So you note, Socrates, how ready I am to praise, when you say a good thing? This seems to me excellently spoken.

SOCRATES: Then see if this next statement of mine strikes you as a good one too. It seems to me that the closest possible friendship between man and man is that mentioned by the sages of old time as "like to like." Do you not agree?

⁴³Socrates proceeds to recall the reproaches of Callicles, above, 486. [Tr.]

CALLICLES: I do.

SOCRATES: So where you have a savage, uneducated ruler as despot, if there were some one in the city far better than he, I suppose the despot would be afraid of him and could never become a friend to him with all his heart?

CALLICLES: That is so.

SOCRATES: Nor a friend to anyone who was much inferior to him either; for the despot would despise him and never show him the attention due to a friend.

CALLICLES: That is true also.

SOCRATES: Then the only friend of any account that remains for such a person is a man of his own temper, who blames and praises the same things, and is thus willing to be governed by him and to be subject to his rule. He is a man who will have great power in that state; him none will wrong with impunity. Is it not so?

CALLICLES: Yes.

SOCRATES: Hence if one of the young men in the city should reflect: In what way can I have great power, and no one may do me wrong?—this, it would seem, is the path he must take, to accustom himself from his earliest youth to be delighted and annoyed by the same things as his master, and contrive to be as like the other as possible. Is it not so?

CALLICLES: Yes.

SOCRATES: And so this man will have attained to a condition of suffering no wrong and having great power—as your party maintain—in the city.

CALLICLES: Certainly.

SOCRATES: And of doing no wrong likewise? Or is it quite the contrary, if he is to be like his unjust ruler, and have great influence with him? Well, for my part, I think his efforts will be all the opposite way, that is, towards enabling himself to do as much wrong as possible and to pay no penalty for the wrong he does; will they not?

CALLICLES: Apparently.

SOCRATES: And thus he will find himself possessed of the greatest evil, that of having his soul depraved and maimed as a result of his imitation of his master and the power he has got.

CALLICLES: You have a strange way of twisting your arguments, at each point, this way or that, Socrates! Surely you know that this imitator

will put to death anyone who does not imitate his master, if he pleases, and will strip him of his property.

SOCRATES: I know that, my good Callicles, if I am not deaf, as I have heard it so often of late from you and Polus, and from almost every one else in the town; but you in return must hear what I say—that he will put a man to death if he pleases, but it will be a villain slaying a good man and true.

CALLICLES: And is not this the very thing that makes one indignant?⁴⁴

SOCRATES: Not if one is a man of sense, as our argument indicates. Or do you suppose that the object of a man's efforts should be to live as long a time as possible, and to cultivate those arts which preserve us from every danger; such as that which you bid me cultivate—rhetoric, the art that preserves us in the law courts?

CALLICLES: Yes, on my word I do, and sound advice it is that I give you.

SOCRATES: But now, my excellent friend, do you think there is anything grand in the accomplishment of swimming?

CALLICLES: No, in truth, not I.

SOCRATES: Yet, you know, that too saves men from death, when they have got into a plight of the kind in which that accomplishment is needed. But if this seems to you too small a thing, I will tell you of a more important one, the art of piloting, which saves not only our lives but also our bodies and our goods from extreme perils, as rhetoric does. And at the same time it is plain-fashioned and orderly, not giving itself grand airs in a pretense of performing some transcendent feat; but in return for performing the same as the forensic art—bringing one safely over, it may be, from Aegina—it charges a fee, I believe, of two obols⁴⁵ or if it be from Egypt or the Pontus, at the very most—for this great service of bringing safe home, as I said just now, oneself and children and goods and womenfolk—on landing us in harbor it charges a couple of drachmae;⁴⁶ and the actual possessor of the art, after perform-

⁴⁴*Cf.* Callicles' warning (486 B) against the danger of being put to death on the false accusation of some paltryascal. [Tr.]

⁴⁵About fourpence. [Tr.]

⁴⁶About two shillings. [Tr.]

ing all this, goes ashore and strolls on the quay by his vessel's side, with an unobtrusive demeanor. For he knows, I expect, how to estimate the uncertainty as to which of his passengers he has benefited by not letting them be lost at sea, and which he has injured, being aware that he has put them ashore not a whit better than when they came aboard, either in body or in soul. And so he reckons out how wrong it is that, whereas a victim of severe and incurable diseases of the body who has escaped drowning is miserable in not having died, and has got no benefit at his hands, yet, if a man has many incurable diseases in that part of him so much more precious than the body, his soul, that such a person is to live, and that he will be doing him the services of saving him either from the sea or from a law court or from any other peril whatsoever: no, he knows it cannot be better for a man who is vicious to live, since he must needs live ill.

This is why it is not the custom for the pilot to give himself grand airs, though he does save our lives; nor for the engineer either, my admirable friend, who sometimes has the power of saving lives in no less degree than a general—to say nothing of a pilot—or anyone else: for at times he saves whole cities. Can you regard him as comparable with the lawyer? And yet, if he chose to speak as you people do, Callicles, magnifying his business, he would bury you in a heap of words, pleading and urging the duty of becoming engineers, as the only thing; for he would find reasons in plenty. But you nonetheless despise him and his special art, and you would call him “engineer” in a taunting sense, and would refuse either to bestow your daughter on his son or let your own son marry his daughter. And yet after the praises you sing of your own pursuits what fair ground have you for despising the engineer and the others whom I was mentioning just now? I know you would claim to be a better man and of better birth. But if “better” has not the meaning I give it, but virtue means just saving oneself and one's belongings, whatever one's character may be, you are merely ridiculous in caviling at the engineer and the doctor and every other art that has been produced for our safety. No, my gifted friend, just see if the noble and the good are not something different from saving and

being saved. For as to living any particular length of time, this is surely a thing that any true man should ignore, and not set his heart on mere life; but having resigned all this to Heaven and believing what the women say—that not one of us can escape his destiny—he should then proceed to consider in what way he will best live out his allotted span of life; whether in assimilating himself to the constitution of the state in which he may be dwelling—and so therefore now, whether it is your duty to make yourself as like as possible to the Athenian people, if you intend to win its affection and have great influence in the city: see if this is to your advantage and mine, so that we may not suffer, my distinguished friend, the fate that they say befalls the creatures who would draw down the moon—the hags of Thessaly,⁴⁷ that our choice of this power in the city may not cost us all that we hold most dear. But if you suppose that anyone in the world can transmit to you such an art as will cause you to have great power in this state without conforming to its government either for better or for worse, in my opinion you are ill-advised, Callicles; for you must be no mere imitator, but essentially like them, if you mean to achieve any genuine sort of friendship with Demus the Athenian people, ay, and I dare swear, with Demus son of Ppyrilampes⁴⁸ as well. So whoever can render you most like them is the person to make you a statesman in the way that you desire to be a statesman, and a rhetorician; for everybody is delighted with words that are designed for his special temper, but is annoyed by what is spoken to suit aliens—unless you have some other view, dear creature. Have we any objection to this, Callicles?

CALLICLES: It seems to me, I cannot tell how, that your statement is right, Socrates, but I share the common feeling; I do not quite believe you.

SOCRATES: Because the love of Demus, Callicles, is there in your soul to resist me: but if haply we come to examine these same questions more than once, and better, you will believe.

⁴⁷Socrates alludes to the popular theory that the practice of witchcraft is a serious danger or utter destruction to the practitioner. [Tr.]

⁴⁸Cf. above, 481 D. [Tr.]

Remember, however, that we said there were two treatments that might be used in the tendance of any particular thing, whether body or soul: one, making pleasure the aim in our dealings with it; the other, working for what is best, not indulging it but striving with it as hard as we can. Was not this the distinction we were making at that point?

CALLICLES: Certainly.

SOCRATES: Then the one, aiming at pleasure, is ignoble and really nothing but flattery, is it not?

CALLICLES: Be it so, if you like.

SOCRATES: And the aim of the other is to make that which we are tending, whether it be body or soul, as good as may be.

CALLICLES: To be sure.

SOCRATES: Then ought we not to make it our endeavor, in tending our city and its citizens, to make those citizens as good as possible? For without this, you see, as we found in our former argument, there is no use in offering any other service, unless the intentions of those who are going to acquire either great wealth or special authority or any other sort of power be fair and honorable. Are we to grant that?

CALLICLES: Certainly, if you so prefer.

SOCRATES: Then if you and I, Callicles, in setting about some piece of public business for the state, were to invite one another to see to the building part of it, say the most important erections either of walls or arsenals or temples, would it be our duty to consider and examine ourselves, first as to whether we understood the art of building or not, and from whom we had learned it? Would we have to do this, or not?

CALLICLES: Certainly.

SOCRATES: And so again, in the second place, whether we had ever erected any building privately for one of our friends or for ourselves, and whether such building was handsome or ugly? And if we found on consideration that we had been under good and reputable masters, and that there were many handsome buildings that had been erected by us with our masters' guidance, and many also by ourselves alone, after we had dispensed with our masters, it might, in those circumstances, be open to men of sense to enter upon public works: but if we had neither a master of ourselves to point to, nor any buildings at all,

or only a number of worthless ones, in that case surely it would be senseless to attempt public works or invite one another to take them in hand. Shall we agree to the correctness of this statement or not?

CALLICLES: Yes, to be sure.

SOCRATES: And so too with all the rest: suppose, for instance, we had undertaken the duties of state-physicians, and were to invite one another to the work as qualified doctors, we should, I presume, have first inquired of each other, I of you and you of me: Let us see now, in Heaven's name; how does Socrates himself stand as regards his body's health? Or has anyone else, slave or free, ever had Socrates to thank for ridding him of a disease? And I also, I fancy, should make the same sort of inquiry about you; and then if we found we had never been the cause of an improvement in the bodily condition of anyone, stranger or citizen, man or woman—by Heaven, Callicles, would it not in truth be ridiculous that men should descend to such folly that, before having plenty of private practice, sometimes with indifferent results, sometimes with success, and so getting adequate training in the art, they should, as the saying is, try to learn pottery by starting on a wine jar,⁴⁹ and start public practice themselves and invite others of their like to do so? Do you not think it would be mere folly to act thus?

CALLICLES: I do.

SOCRATES: And now, most excellent sir, since you are yourself just entering upon a public career, and are inviting me to do the same, and reproaching me for not doing it, shall we not inquire of one another: Let us see, has Callicles ever made any of the citizens better? Is there one who was previously wicked, unjust, licentious, and senseless, and has to thank Callicles for making him an upright, honorable man, whether stranger or citizen, bond or free? Tell me, if anyone examines you in these terms, Callicles, what will you say? What human being will you claim to have made better by your intercourse? Do you shrink from answering, if there really is some

⁴⁹That is, instead of a small pot involving little waste in case of failure. [Tr.]

work of yours in private life that can serve as a step to your public practice?

CALLICLES: You are contentious, Socrates!

SOCRATES: No, it is not from contentiousness that I ask you this, but from a real wish to know in what manner you can imagine you ought to conduct yourself as one of our public men. Or can it be, then, that you will let us see you concerning yourself with anything else in your management of the city's affairs than making us, the citizens, as good as possible? Have we not more than once already admitted that this is what the statesman ought to do? Have we admitted it or not? Answer. We have: I will answer for you. Then if this is what the good man ought to accomplish for his country, recall now those men whom you mentioned a little while ago, and tell me if you still consider that they showed themselves good citizens—Pericles and Cimon and Miltiades and Themistocles.

CALLICLES: Yes, I do.

SOCRATES: Then if they were good, clearly each of them was changing the citizens from worse to better. Was this so, or not?

CALLICLES: Yes.

SOCRATES: So when Pericles began to speak before the people, the Athenians were worse than when he made his last speeches?

CALLICLES: Perhaps.

SOCRATES: Not “perhaps,” as you say, excellent sir; it follows of necessity from what we have admitted, on the assumption that he was a good citizen.

CALLICLES: Well, what then?

SOCRATES: Nothing: but tell me one thing in addition,—whether the Athenians are said to have become better because of Pericles, or quite the contrary, to have been corrupted by him. What I, for my part, hear is that Pericles has made the Athenians idle, cowardly, talkative, and avaricious, by starting the system of public fees.⁵⁰

CALLICLES: You hear that from the folk with battered ears,⁵¹ Socrates.

⁵⁰This refers especially to the payment of dicasts or jurors, introduced by Pericles in 462–1 B.C. [Tr.]

⁵¹I.e., people who show their Spartan sympathies by an addiction to boxing; cf. *Protag.* 342 B. [Tr.]

SOCRATES: Ah, but what is no longer a matter of hearsay, but rather of certain knowledge, for you as well as for me, is that Pericles was popular at first, and the Athenians passed no degrading sentence upon him so long as they were “worse”; but as soon as they had been made upright and honorable by him, at the end of our Pericles' life they convicted him of embezzlement, and all but condemned him to death, clearly because they thought him a rogue.

CALLICLES: What then? Was Pericles a bad man on that account?

SOCRATES: Well, at any rate a herdsman in charge of asses or horses or oxen would be considered a bad one for being like that—if he took over animals that did not kick him or butt or bite, and in the result they were found to be doing all these things out of sheer wildness. Or do you not consider any keeper of any animal whatever a bad one, if he turns out the creature he received tame so much wilder than he found it? Do you, or do you not?

CALLICLES: Certainly I do, to oblige you.

SOCRATES: Then oblige me still further by answering this: is man also one of the animals, or not?

CALLICLES: Of course he is.

SOCRATES: And Pericles had charge of men?

CALLICLES: Yes.

SOCRATES: Well now, ought they not, as we admitted this moment, to have been made by him more just instead of more unjust, if he was a good statesman while he had charge of them?

CALLICLES: Certainly.

SOCRATES: And the just are gentle, as Homer said.⁵² But what say you? Is it not so?

CALLICLES: Yes.

SOCRATES: But, however, he turned them out wilder than when he took them in hand, and that against himself, the last person he would have wished them to attack.

CALLICLES: You wish me to agree with you?

SOCRATES: Yes, if you consider I am speaking the truth.

⁵²Our text of Homer contains no such saying. The nearest is that in *Od.* vi. 120, and ix. 175—ἢ ῥ' οἴγ' ὑβρισταί τε καὶ ἄγριοι, οὐδὲ δίκαιοι, “Wanton and wild are they, not just.” [Tr.]

CALLICLES: Then be it so.

SOCRATES: And if wilder, more unjust and worse?

CALLICLES: Be it so.

SOCRATES: Then Pericles was not a good statesman, by this argument.

CALLICLES: You at least say not.

SOCRATES: And you, too, I declare, by what you admitted. And now about Cimon once more, tell me, did not the people whom he tended ostracize him in order that they might not hear his voice for ten years? And Themistocles, did they not treat him in just the same way, and add the punishment of exile? And Miltiades, the hero of Marathon, they sentenced to be flung into the pit, and had it not been for the president, in he would have gone. And yet these men, had they been good in the way that you describe them, would never have met with such a fate. Good drivers, at any rate, do not keep their seat in the chariot at their first race to be thrown out later on, when they have trained their teams and acquired more skill in driving! This never occurs either in charioteering or in any other business; or do you think it does?

CALLICLES: No, I do not.

SOCRATES: So what we said before, it seems, was true, that we know of nobody who has shown himself a good statesman in this city of ours. You admitted there was nobody among those of the present day, but thought there were some among those of former times, and you gave these men the preference. But these we have found to be on a par with ours of the present day; and so, if they were orators, they employed neither the genuine art of rhetoric—else they would not have been thrown out—nor the flattering form of it.

CALLICLES: But still there can be no suggestion, Socrates, that any of the present-day men has ever achieved anything like the deeds of anyone you may choose amongst those others.

SOCRATES: My admirable friend, neither do I blame the latter, at least as servants of the state; indeed, I consider they have shown themselves more serviceable than those of our time, and more able to procure for the city the things she desired. But in diverting her desires another way instead of complying with them—in persuading

or compelling her people to what would help them to be better—they were scarcely, if at all, superior to their successors; and that is the only business of a good citizen. But in providing ships and walls and arsenals, and various other things of the sort, I do grant you that they were cleverer than our leaders. Thus you and I are doing an absurd thing in this discussion: for during all the time that we have been debating we have never ceased circling round to the same point and misunderstanding each other. I at all events believe you have more than once admitted and decided that this management of either body or soul is a twofold affair, and that on one side it is a menial service, whereby it is possible to provide meat for our bodies when they are hungry, drink when thirsty, and when they are cold, clothing, bedding, shoes, or anything else that bodies are apt to desire: I purposely give you the same illustrations, in order that you may the more easily comprehend. For as to being able to supply these things, either as a tradesman or a merchant or a manufacturer of any such actual things—baker or cook or weaver or shoemaker or tanner—it is no wonder that a man in such capacity should appear to himself and his neighbors to be a minister of the body; to every one, in fact, who is not aware that there is besides all these an art of gymnastics and medicine which really is, of course, ministrations to the body, and which actually has a proper claim to rule over all those arts and to make use of their works, because it knows what is wholesome or harmful in meat and drink to bodily excellence, whereas all those others know it not; and hence it is that, while those other arts are slavish and menial and illiberal in dealing with the body, gymnastics and medicine can fairly claim to be their mistresses. Now, that the very same is the case as regards the soul you appear to me at one time to understand to be my meaning, and you admit it as though you knew what I meant; but a little later you come and tell me that men have shown themselves upright and honorable citizens in our city, and when I ask you who, you seem to me to be putting forward men of exactly the same sort in public affairs; as if, on my asking you who in gymnastics have ever been or now are good trainers of the body, you were to tell me, in all seriousness, “Thearion,

the baker, Mithaecus, the author of the book on Sicilian cookery, Sarambus, the vintner—these have shown themselves wonderful ministers of the body; the first providing admirable loaves, the second tasty dishes, and the third wine.” Now perhaps you would be indignant should I say to you; “Sir, you know nothing about gymnastics; servants you tell me of, and caterers to appetites, fellows who have no proper and respectable knowledge of them, and who peradventure will first stuff and fatten men’s bodies to the tune of their praises, and then cause them to lose even the flesh they had to start with; and these in their turn will be too ignorant to cast the blame of their maladies and of their loss of original weight upon their regalers, but any people who chance to be by at the time and offer them some advice—just when the previous stuffing has brought, after the lapse of some time, its train of disease, since it was done without regard to what is wholesome—these are the people they will accuse and chide and harm as far as they can, while they will sing the praises of that former crew who caused the mischief. And you now, Callicles, are doing something very similar to this: you belaud men who have regaled the citizens with all the good cheer they desired. People do say they have made the city great; but that it is with the swelling of an imposthume, due to those men of the former time, this they do not perceive. For with no regard for temperance and justice they have stuffed the city with harbors and arsenals and walls and tribute and suchlike trash; and so whenever that access of debility comes they will lay the blame on the advisers who are with them at the time, and belaud Themistocles and Cimon and Pericles, who caused all the trouble; and belike they will lay hold of you, if you are not on your guard, and my good friend Alcibiades, when they are losing what they had originally as well as what they have acquired, though you are not the authors, except perhaps part-authors, of the mischief. And yet there is a senseless thing which I see happening now, and hear of, in connection with the men of former times. For I observe that whenever the state proceeds against one of her statesmen as a wrongdoer, they are indignant and protest loudly against such monstrous treatment: after all their long and valuable services to the

state they are unjustly ruined at her hands, so they protest. But the whole thing is a lie; since there is not a single case in which a ruler of a city could ever be unjustly ruined by the very city that he rules. For it is very much the same with pretenders to statesmanship as with professors of sophistry. The sophists, in fact, with all their other accomplishments, act absurdly in one point: claiming to be teachers of virtue, they often accuse their pupils of doing them an injury by cheating them of their fees and otherwise showing no recognition of the good they have done them. Now what can be more unreasonable than this plea? That men, after they have been made good and just, after all their injustice has been rooted out by their teacher and replaced by justice, should be unjust through something that they have not!⁵³ Does not this seem to you absurd, my dear friend? In truth you have forced me to make quite a harangue, Callicles, by refusing to answer.

CALLICLES: And you are the man who could not speak unless somebody answered you?

SOCRATES: Apparently I can. Just now, at any rate, I am rather extending my speeches, since you will not answer me. But in the name of friendship, my good fellow, tell me if you do not think it unreasonable for a man, while professing to have made another good, to blame him for being wicked in spite of having been made good by him and still being so?

CALLICLES: Yes, I do.

SOCRATES: Well, and you hear such things said by those who profess to give men education in virtue?

CALLICLES: I do; but what is one to say of such worthless people?

SOCRATES: And what is one to say of those who, professing to govern the state and take every care that she be as good as possible, turn

⁵³Socrates rings changes here on a well-known story involving Corax and Tisias, the first rhetoricians. In this story Tisias is depicted as Corax’s pupil, and he refuses to pay for his lessons. Corax takes him to court. Tisias argues that if the court decides against him, he should pay nothing, because obviously he has not been taught well enough to defend himself. Corax counters that if the court decides for Tisias, then obviously Tisias should pay for the lessons that enabled him to win. The case was dismissed. [Ed.]

upon her and accuse her, any time it suits them, of being utterly wicked? Do you see any difference between these men and the others? Sophist and orator, my estimable friend, are the same thing, or very much of a piece, as I was telling Polus; but you in your ignorance think the one thing, rhetoric, a very fine affair, and despise the other. Yet in reality sophistic is a finer thing than rhetoric by so much as legislation is finer than judicature, and gymnastic than medicine: in fact, for my own part, I always regarded public speakers and sophists as the only people who have no call to complain of the thing that they themselves educate, for its wickedness towards them; as otherwise they must in the same words be also charging themselves with having been of no use to those whom they say they benefit. Is it not so?

CALLICLES: Certainly.

SOCRATES: And they alone, I presume, could most likely afford to give away their services without fee, if their words were true. For when a man has received any other service, for example, if he has acquired a fast pace from a trainer's lessons, he might possibly cheat him of his due if the trainer freely offered himself and did not stipulate for a fee to be paid down by the other as nearly as possible at the moment when he imparted to him the fast pace he required; for it is not through a slow pace, I conceive, that men act unjustly, but through injustice; is it not?

CALLICLES: Yes.

SOCRATES: And so whoever removed this particular thing, injustice, need never have a fear of being unjustly treated; this benefit alone may be freely bestowed without risk, granted that one really had the power of making people good. Is it not so?

CALLICLES: I agree.

SOCRATES: Then this, it seems, is the reason why there is no disgrace in taking money for giving every other kind of advice, as about building or the rest of the arts.

CALLICLES: It does seem so.

SOCRATES: But about this business of finding the way to be as good as possible, and of managing one's own household or city for the best, it is recognized to be a disgrace for one to decline to give advice except for a payment in cash, is it not?

CALLICLES: Yes.

SOCRATES: The reason evidently being that this is the only sort of service that makes the person so served desire to do one in return; and hence it is felt to be a good sign when this service that one has done is repaid to one in kind; but when this is not so, the contrary is felt. Is the case as I say?

CALLICLES: It is.

SOCRATES: Then please specify to which of these two ministrations to the state you are inviting me—that of struggling hard, like a doctor, with the Athenians to make them as good as possible, or that of seeking to serve their wants and humor them at every turn? Tell me the truth. Callicles; for it is only right that, as you began by speaking to me frankly, you should continue to tell me what you think. So now speak out like a good, generous man.

CALLICLES: I say then, the way of seeking to serve them.

SOCRATES: So it is to a flatterer's work, most noble sir, that you invite me?

CALLICLES: Work for a mean Mysian,⁵⁴ if you prefer the name, Socrates; for unless you do as I say—

SOCRATES: Do not tell me, what you have so often repeated, that anyone who pleases will put me to death, lest I on my side should have to tell you that it will be a villain killing a good man; nor that anyone may strip me of whatever I have, lest I should have to say in my turn: Well, but when he has stripped me, he will not know what use to make of his spoil, but as he stripped me unjustly so will he use his spoil unjustly, and if unjustly, foully, and if foully, ill.

CALLICLES: It quite strikes me, Socrates, that you believe not one of these troubles could befall you, as though you dwelt out of the way, and could never be dragged into a law court by some perhaps utterly paltry rascal.

SOCRATES: Then I am a fool, Callicles, in truth, if I do not suppose that in this city anyone, whoever he was, might find himself, as luck should have it, in any sort of plight. Of one thing,

⁵⁴The Mysians, like the Carians (*cf. Euthyd.* 285 c), were regarded as the lowest of the low. Callicles heatedly taunts Socrates with putting the matter in its worst light. [Tr.]

however, I am sure—that if ever I am brought before the court and stand in any such danger as you mention, it will be some villain who brings me there, for no honest man would prosecute a person who had done no wrong; and it would be no marvel if I were put to death. Would you like me to tell you my reason for expecting this?

CALLICLES: Do, by all means.

SOCRATES: I think I am one of few, not to say the only one, in Athens who attempts the true art of statesmanship, and the only man of the present time who manages affairs of state: hence, as the speeches that I make from time to time are not aimed at gratification, but at what is best instead of what is most pleasant, and as I do not care to deal in “these pretty toys”⁵⁵ that you recommend, I shall have not a word to say at the bar. The same case that I made out to Polus will apply to me; for I shall be like a doctor tried by a bench of children on a charge brought by a cook.⁵⁶ Just consider what defense a person like that would make at such a pass, if the prosecutor should speak against him thus: “Children, this fellow has done you all a great deal of personal mischief, and he destroys even the youngest of you by cutting and burning, and starves and chokes you to distraction, giving you nasty bitter drafts and forcing you to fast and thirst; not like me, who used to gorge you with abundance of nice things of every sort.” What do you suppose a doctor brought to this sad pass could say for himself? Or if he spoke the truth—“All this I did, my boys, for your health”—how great, think you, would be the outcry from such a bench as that? A loud one, would it not?

CALLICLES: I daresay: one must suppose so.

SOCRATES: Then you suppose he would be utterly at a loss what to say?

CALLICLES: Quite so.

SOCRATES: Such, however, I am sure would be my own fate if I were brought before the court. For not only shall I have no pleasures to plead as having been provided by me—which they regard as services and benefits, whereas I envy neither

those who provide them nor those for whom they are provided—but if anyone alleges that I either corrupt the younger men by reducing them to perplexity, or revile the older with bitter expressions whether in private or in public, I shall be unable either to tell the truth and say—“It is on just grounds that I say all this, and it is your interest that I serve thereby, gentlemen of the jury”—or to say anything else; and so I dare say any sort of thing, as luck may have it, will befall me.

CALLICLES: Then do you think, Socrates, that a man in such a case and with no power of standing up for himself makes a fine figure in a city?

SOCRATES: Yes, if he had that one resource, Callicles, which you have repeatedly admitted; if he had stood up for himself by avoiding any unjust word or deed in regard either to men or to gods. For this has been repeatedly admitted by us to be the most valuable kind of self-protection. Now if I were convicted of inability to extend this sort of protection to either myself or another, I should be ashamed, whether my conviction took place before many or few, or as between man and man; and if that inability should bring about my death, I should be sorely vexed: but if I came to my end through a lack of flattering rhetoric, I am quite sure you would see me take my death easily. For no man fears the mere act of dying, except he be utterly irrational and unmanly; doing wrong is what one fears: for to arrive in the nether world having one’s soul full fraught with a heap of misdeeds is the uttermost of all evils. And now, if you do not mind, I would like to tell you a tale to show you that the case is so.

CALLICLES: Well, as you have completed the rest of the business, go on and complete this also.

SOCRATES: Give ear then, as they say, to a right fine story, which you will regard as a fable, I fancy, but I as an actual account; for what I am about to tell you I mean to offer as the truth. By Homer’s account, Zeus, Poseidon, and Pluto divided the sovereignty among them when they took it over from their father. Now in the time of Cronos there was a law concerning mankind, and it holds to this very day among the gods, that every man who has passed a just and holy life departs after his decease to the Isles of the Blessed,

⁵⁵Socrates retorts the phrase of Euripides, which Callicles applied (above, 486 c to philosophic debate, upon the practical pursuits which Callicles recommended. [Tr.]

⁵⁶Cf. 464 d. [Tr.]

and dwells in all happiness apart from ill; but whoever has lived unjustly and impiously goes to the dungeon of requital and penance which, you know, they call Tartarus. Of these men there were judges in Cronos' time, and still of late in the reign of Zeus—living men to judge the living upon the day when each was to breathe his last; and thus the cases were being decided amiss. So Pluto and the overseers from the Isles of the Blessed came before Zeus with the report that they found men passing over to either abode undeserving. Then spake Zeus: "Nay," said he, "I will put a stop to these proceedings. The cases are now indeed judged ill; and it is because they who are on trial are tried in their clothing, for they are tried alive. Now many," said he, "who have wicked souls are clad in fair bodies and ancestry and wealth, and at their judgment appear many witnesses to testify that their lives have been just. Now, the judges are confounded not only by their evidence but at the same time by being clothed themselves while they sit in judgment, having their own soul muffled in the veil of eyes and ears and the whole body. Thus all these are a hindrance to them, their own habiliments no less than those of the judged. Well, first of all," he said, "we must put a stop to their foreknowledge of their death; for this they at present foreknow. However, Prometheus has already been given the word to stop this in them. Next they must be stripped bare of all those things before they are tried; for they must stand their trial dead. Their judge also must be naked, dead, beholding with very soul the very soul of each immediately upon his death, bereft of all his kin and having left behind on earth all that fine array, to the end that the judgment may be just. Now I, knowing all this before you, have appointed sons of my own to be judges; two from Asia, Minos and Rhadamanthus, and one from Europe, Aeacus. These, when their life is ended, shall give judgment in the meadow at the dividing of the road, whence are the two ways leading, one to the Isles of the Blessed, and the other to Tartarus. And those who come from Asia shall Rhadamanthus try, and those from Europe, Aeacus; and to Minos I will give the privilege of the final decision, if the other two be in any doubt; that the judgment upon this journey of mankind may be supremely just."

This, Callicles, is what I have heard and believe to be true; and from these stories, on my reckoning, we must draw some such moral as this: death, as it seems to me, is actually nothing but the disconnection of two things, the soul and the body, from each other. And so when they are disconnected from one another, each of them keeps its own condition very much as it was when the man was alive, the body having its own nature, with its treatments and experiences all manifest upon it. For instance, if anyone's body was large by nature or by feeding or by both when he was alive, his corpse will be large also when he is dead; and if he was fat, it will be fat too after his death, and so on for the rest; or again, if he used to follow the fashion of long hair, long-haired also will be his corpse. Again, if anyone had been a sturdy rogue, and bore traces of his stripes in scars on his body, either from the whip or from other wounds, while yet alive, then after death too his body has these marks visible upon it; or if anyone's limbs were broken or distorted in life, these same effects are manifest in death. In a word, whatever sort of bodily appearance a man had acquired in life, that is manifest also after his death either wholly or in the main for some time. And so it seems to me that the same is the case with the soul too, Callicles: when a man's soul is stripped bare of the body, all its natural gifts, and the experiences added to that soul as the result of his various pursuits, are manifest in it. So when they have arrived in presence of their judge, they of Asia before Rhadamanthus, these Rhadamanthus sets before him and surveys the soul of each, not knowing whose it is; nay, often when he has laid hold of the Great King or some other prince or potentate, he perceives the utter unhealthiness of his soul, striped all over with the scourge, and a mass of wounds, the work of perjuries and injustice; where every act has left its smirch upon his soul, where all is awry through falsehood and imposture, and nothing straight because of a nurture that knew not truth: or, as the result of an unbridled course of fastidiousness, insolence, and incontinence, he finds the soul full fraught with disproportion and ugliness. Beholding this he sends it away in dishonor straight to the place of custody, where on its arrival it is to endure the

sufferings that are fitting. And it is fitting that every one under punishment rightly inflicted on him by another should either be made better and profit thereby, or serve as an example to the rest, that others seeing the sufferings he endures may in fear amend themselves. Those who are benefited by the punishment they get from gods and men are they who have committed remediable offenses; but still it is through bitter throes of pain that they receive their benefit both here and in the nether world; for in no other way can there be riddance of iniquity. But of those who have done extreme wrong and, as a result of such crimes, have become incurable, of those are the examples made; no longer are they profited at all themselves, since they are incurable, but others are profited who behold them undergoing for their transgressions the greatest, sharpest, and most fearful sufferings evermore, actually hung up as examples there in the infernal dungeon, a spectacle and a lesson to such of the wrongdoers as arrive from time to time. Among them I say Archelaus also will be found, if what Polus tells us is true, and every other despot of his sort. And I think, moreover, that most of these examples have come from despots and kings and potentates and public administrators; for these, since they have a free hand, commit the greatest and most impious offenses. Homer also testifies to this; for he has represented kings and potentates as those who are punished everlastingly in the nether world—Tantalus and Sisyphus and Tityus; but Thersites, or any other private person who was wicked, has been portrayed by none as incurable and therefore subjected to heavy punishment; no doubt because he had not a free hand, and therefore was in fact happier than those who had. For in fact, Callicles, it is among the powerful that we find the specially wicked men. Still there is nothing to prevent good men being found even among these, and it deserves our special admiration when they are; for it is hard, Callicles, and deserving of no slight praise, when a man with a perfectly free hand for injustice lives always a just life. The men of this sort are but few; for indeed there have been, and I expect there yet will be, both here and elsewhere, men of honor and excellence in this virtue of administering justly what is committed to their charge. One in fact

there has been whose fame stands high among us and throughout the rest of Greece, Aristeides, son of Lysimachus; but most of those in power, my excellent friend, prove to be bad. So, as I was saying, whenever the judge Rhadamanthus had to deal with such a one, he knows nothing else of him at all, neither who he is nor of what descent, but only that he is a wicked person; and on perceiving this he sends him away to Tartarus, first setting a mark on him to show whether he deems it a curable or an incurable case; and when the man arrives there he suffers what is fitting. Sometimes, when he discerns another soul that has lived a holy life in company with truth, a private man's or any other's—especially, as I claim, Callicles, a philosopher's who has minded his own business and not been a busybody in his lifetime—he is struck with admiration and sends it off to the Isles of the Blessed. And exactly the same is the procedure of Aeacus: each of these two holds a rod in his hand as he gives judgment; but Minos sits as supervisor, distinguished by the golden scepter that he holds, as Odysseus in Homer tells how he saw him—

Holding a golden scepter, speaking dooms to the dead.

Now for my part, Callicles, I am convinced by these accounts, and I consider how I may be able to show my judge that my soul is in the best of health. So giving the go-by to the honors that most men seek I shall try, by inquiry into the truth, to be really good in as high a degree as I am able, both in my life and, when I come to die, in my death. And I invite all other men likewise, to the best of my power, and you particularly I invite in return⁵⁷ to this life and this contest, which I say is worth all other contests on this earth; and I make it a reproach to *you*, that you will not be able to deliver yourself when your trial comes and the judgment of which I told you just now; but when you go before your judge, the son of Aegina,⁵⁸ and he grips you and drags you up, you will gape and feel dizzy there no less

⁵⁷I.e., in return for Callicles' invitation to him to pursue the life of rhetoric and politics, 521 A. [Tr.]

⁵⁸Aegina, daughter of the river god Asopus, was the mother of Aeacus by Zeus. [Tr.]

than I do here, and some one perhaps will give you, yes, a degrading box on the ear, and will treat you with every kind of contumely.

Possibly, however, you regard this as an old wife's tale, and despise it; and there would be no wonder in our despising it if with all our searching we could somewhere find anything better and truer than this: but as it is, you observe that you three, who are the wisest of the Greeks in our day—you and Polus and Gorgias—are unable to prove that we ought to live any other life than this, which is evidently advantageous also in the other world. But among the many statements we have made, while all the rest are refuted this one alone is unshaken—that doing wrong is to be more carefully shunned than suffering it; that above all things a man should study not to seem but to be good both in private and in public; that if one becomes bad in any respect one must be corrected; that this is good in the second place,—next to being just, to become so and to be corrected by paying the penalty; and that every kind of flattery, with regard either to oneself or to others, to few or to many, must be avoided; and that rhetoric is to be used for this one purpose always, of pointing to what is just, and so in every other

activity. Take my advice, therefore, and follow me where, if you once arrive, you will be happy both in life and after life's end, as this account declares. And allow anyone to contemn you as a fool and foully maltreat you if he chooses; yes, by Heaven, and suffer undaunted the shock of that ignominious cuff; for you will come to no harm if you be really a good and upright man, practicing virtue. And afterwards having practiced it together, we shall in due course, if we deem it right, embark on politics, or proceed to consult on whatever we may think fit, being then better equipped for such counsel than we are now. For it is disgraceful that men in such a condition as we now appear to be in should put on a swaggering, important air when we never continue to be of the same mind upon the same questions, and those the greatest of all—we are so sadly uneducated. Let us therefore take as our guide the doctrine now disclosed, which indicates to us that this way of life is best—to live and die in the practice alike of justice and of all other virtue. This then let us follow, and to this invite every one else; not that to which you trust yourself and invite me, for it is nothing worth, Callicles.

Phaedrus

or On the Beautiful; *Ethical*

SOCRATES: Dear Phaedrus,¹ whither away, and where do you come from?

PHAEDRUS: From Lysias,² Socrates, the son of Cephalus; and I am going for a walk outside the wall. For I spent a long time there with Lysias,

Translated by H. N. Fowler.

¹Phaedrus, who appears in several dialogues as a follower of Socrates, is said by one classical source to have been Plato's favorite among his fellow students. [Ed.]

²Lysias, one of the Ten Attic Orators, was noted for his flowing and limpid style, which is represented accurately in the speech attributed to him here. Plato may have composed it, however. [Ed.]

sitting since early morning; and on the advice of your friend and mine, Acumenus, I am taking my walk on the roads; for he says they are less fatiguing than the streets.

SOCRATES: He is right, my friend. Then Lysias, it seems, was in the city?

PHAEDRUS: Yes, at Epicrates' house, the one that belonged to Morychus, near the Olympieum.

SOCRATES: What was your conversation? But it is obvious that Lysias entertained you with his speeches.

PHAEDRUS: You shall hear, if you have leisure to walk along and listen.

SOCRATES: What? Don't you believe that I consider hearing your conversation with Lysias

“a greater thing even than business,” as Pindar says?³

PHAEDRUS: Lead on, then.

SOCRATES: Speak.

PHAEDRUS: Indeed, Socrates, you are just the man to hear it. For the discourse about which we conversed, was in a way, a love-speech. For Lysias has represented one of the beauties being tempted, but not by a lover; this is just the clever thing about it; for he says that favors should be granted rather to the one who is not in love than to the lover.

SOCRATES: O noble Lysias! I wish he would write that they should be granted to the poor rather than to the rich, to the old rather than to the young, and so of all the other qualities that I and most of us have; for truly his discourse would be witty and of general utility. I am so determined to hear you, that I will not leave you, even if you extend your walk to Megara, and, as Herodicus says, go to the wall and back again.⁴

PHAEDRUS: What are you saying, my dear Socrates? Do you suppose that I, who am a mere ordinary man, can tell from memory, in a way that is worthy of Lysias, what he, the cleverest writer of our day, composed at his leisure and took a long time for? Far from it; and yet I would rather have that ability than a good sum of money.

SOCRATES: O Phaedrus! If I don't know Phaedrus, I have forgotten myself. But since neither of these things is true, I know very well that when listening to Lysias he did not hear once only, but often urged him to repeat; and he gladly obeyed. Yet even that was not enough for Phaedrus, but at last he borrowed the book and read what he especially wished, and doing this he sat from early morning. Then, when he grew tired, he went for a walk, with the speech, as I believe, by the Dog, learned by heart, unless it was very

³Pindar *Isthm.* i. 1. Μᾶτερ ἐμά, τὸ τεόν, χρύσασπι Θήβα, πράγμα καὶ ἀσχολίας ὑπέρτερον θήσομαι. “My mother, Thebes of the golden shield, I will consider thy interest greater even than business.” [Tr.]

⁴Herodicus, Sch.: ἰατρὸς ἦν καὶ τὰ γυμνάσια ἔξω τείχους ἐποίητο, ἀρχόμενος ἀπὸ τῶς διαστήματος οὐ μακροῦ ἀλλὰ συμμετρῶν, ἄχρι τοῦ τείχους, καὶ ἀναστρέφων. “He was a physician and exercised outside the wall, beginning at some distance, not great but moderate, going as far as the wall and turning back.” [Tr.]

long. And he was going outside the wall to practice it. And meeting the man who is sick with the love of discourse, he was glad when he saw him, because he would have someone to share his revel, and told him to lead on. But when the lover of discourse asked him to speak, he feigned coyness, as if he did not yearn to speak; at last, however, even if no one would listen willingly, he was bound to speak whether or no. So, Phaedrus, ask him to do now what he will presently do anyway.

PHAEDRUS: Truly it is best for me to speak as I may; since it is clear that you will not let me go until I speak somehow or other.

SOCRATES: You have a very correct idea about me.

PHAEDRUS: Then this is what I will do. Really, Socrates, I have not at all learned the words by heart; but I will repeat the general sense of the whole, the points in which he said the lover was superior to the nonlover, giving them in summary, one after the other, beginning with the first.

SOCRATES: Yes, my dear, when you have first shown me what you have in your left hand, under your cloak. For I suspect you have the actual discourse. And if that is the case, believe this of me, that I am very fond of you, but when Lysias is here I have not the slightest intention of lending you my ears to practice on. Come now, show it.

PHAEDRUS: Stop. You have robbed me of the hope I had of practicing on you. But where shall we sit and read?

SOCRATES: Let us turn aside here and go along the Ilissus; then we can sit down quietly wherever we please.

PHAEDRUS: I am fortunate, it seems, in being barefoot; you are so always. It is easiest then for us to go along the brook with our feet in the water, and it is not unpleasant, especially at this time of the year and the day.

SOCRATES: Lead on then, and look out for a good place where we may sit.

PHAEDRUS: Do you see that very tall plane tree?

SOCRATES: What of it?

PHAEDRUS: There is shade there and a moderate breeze and grass to sit on, or, if we like, to lie down on.

SOCRATES: Lead the way.

PHAEDRUS: Tell me, Socrates, is it not from some place along here by the Ilissus that Boreas is said to have carried off Oreithyia?

SOCRATES: Yes, that is the story.

PHAEDRUS: Well, is it from here? The streamlet looks very pretty and pure and clear and fit for girls to play by.

SOCRATES: No, the place is about two or three furlongs farther down, where you cross over to the precinct of Agra; and there is an altar of Boreas somewhere thereabouts.

PHAEDRUS: I have never noticed it. But, for Heaven's sake, Socrates, tell me; do you believe this tale is true?

SOCRATES: If I disbelieved, as the wise men do, I should not be extraordinary; then I might give a rational explanation, that a blast of Boreas, the north wind, pushed her off the neighboring rocks as she was playing with Pharmacea, and that when she had died in this manner she was said to have been carried off by Boreas.⁵ But I, Phaedrus, think such explanations are very pretty in general, but are the inventions of a very clever and laborious and not altogether enviable man, for no other reason than because after this he must explain the forms of the Centaurs, and then that of the Chimaera, and there presses in upon him a whole crowd of such creatures, Gorgons and Pegasi, and multitudes of strange, inconceivable, portentous natures. If anyone disbelieves in these, and with a rustic sort of wisdom, undertakes to explain each in accordance with probability, he will need a great deal of leisure. But I have no leisure for them at all; and the reason, my friend, is this: I am not yet able, as the Delphic inscription has it, to know myself; so it seems to me ridiculous, when I do not yet know that, to investigate irrelevant things. And so I dismiss these matters and accepting the customary belief about them, as I was saying just now, I investigate not these things, but myself, to know whether I am a monster more complicated and more furious than Typhon or a gentler and sim-

⁵The MSS. insert here ἢ ἐξ Ἀρείου πάγου λέγεται γὰρ αὐτῆς οὕτως ὁ λόγος, ὡς ἐχέθη ἀλλ' οὐχ ἐνθένδε ἤρπασθη, "or from the Areopagus, for this story is also told, that she was carried off from there and not from here." Schanz follows Bast and many editors in rejecting this as a gloss. [Tr.]

pler creature, to whom a divine and quiet lot is given by nature. But, my friend, while we were talking, is not this the tree to which you were leading us?

PHAEDRUS: Yes, this is it.

SOCRATES: By Hera, it is a charming resting place. For this plane tree is very spreading and lofty, and the tall and shady willow is very beautiful, and it is in full bloom, so as to make the place most fragrant; then, too, the spring is very pretty as it flows under the plane tree, and its water is very cool, to judge by my foot. And it seems to be a sacred place of some nymphs and of Achelous, judging by the figurines and statues. Then again, if you please, how lovely and perfectly charming the breeziness of the place is! and it resounds with the shrill summer music of the chorus of cicadas.⁶ But the most delightful thing of all is the grass, as it grows on the gentle slope, thick enough to be just right when you lay your head on it. So you have guided the stranger most excellently, dear Phaedrus.

PHAEDRUS: You are an amazing and most remarkable person. For you really do seem exactly like a stranger who is being guided about, and not like a native. You don't go away from the city out over the border, and it seems to me you don't go outside the walls at all.

SOCRATES: Forgive me, my dear friend. You see, I am fond of learning. Now the country places and the trees won't teach me anything, and the people in the city do. But you seem to have found the charm to bring me out. For as people lead hungry animals by shaking in front of them a branch of leaves or some fruit, just so, I think, you, by holding before me discourses in books, will lead me all over Attica and wherever else you please. So now that I have come here, I intend to lie down, and do you choose the position in which you think you can read most easily, and read.

PHAEDRUS: Hear then.

You know what my condition is, and you have heard how I think it is to our advantage to arrange these matters. And I claim that I ought not to be refused what I ask because I am not

⁶The cicadas' song suggests the presence of the Muses on this spot. [Ed.]

your lover. For lovers repent of the kindnesses they have done when their passion ceases; but there is no time when nonlovers naturally repent. For they do kindnesses to the best of their ability, not under compulsion, but of their free will, according to their view of their own best interest. And besides, lovers consider the injury they have done to their own concerns on account of their love, and the benefits they have conferred, and they add the trouble they have had, and so they think they have long ago made sufficient return to the beloved; but nonlovers cannot aver neglect of their own affairs because of their condition, nor can they take account of the pains they have been at in the past, nor lay any blame for quarrels with their relatives; and so, since all these evils are removed, there is nothing left for them but to do eagerly what they think will please the beloved. And besides, if lovers ought to be highly esteemed because they say they have the greatest love for the objects of their passion, since both by word and deed they are ready to make themselves hated by others to please the beloved, it is easy to see that, if what they say is true, whenever they fall in love afterwards, they will care for the new love more than for the old and will certainly injure the old love, if that pleases the new. And how can one reasonably entrust matters of such importance to one who is afflicted with a disease such that no one of any experience would even try to cure it? For they themselves confess that they are insane, rather than in their right mind, and that they know they are foolish, but cannot control themselves; and so, how could they, when they have come to their senses, think those acts were good which they determined upon when in such a condition? And if you were to choose the best from among your lovers, your choice would be limited to a few; whereas it would be made from a great number, if you chose the most congenial from nonlovers, so that you would have a better chance, in choosing among many, of finding the one most worthy of your affection.

Now if you are afraid of public opinion, and fear that if people find out your love affair you will be disgraced, consider that lovers, believing that others would be as envious of them as they are of others, are likely to be excited by posses-

sion and in their pride to show everybody that they have not toiled in vain; but the nonlovers, since they have control of their feelings, are likely to choose what is really best, rather than to court the opinion of mankind. Moreover, many are sure to notice and see the lovers going about with their beloved ones and making that their chief business, and so, when they are seen talking with each other, people think they are met in connection with some love-matter either past or future; but no one ever thinks of finding fault with nonlovers because they meet, since everyone knows that one must converse with somebody, either because of friendship or because it is pleasant for some other reason. And then, too, if you are frightened by the thought that it is hard for friendship to last, and that under other circumstances any quarrel would be an equal misfortune to both, but that when you have surrendered what you prize most highly you would be the chief sufferer, it would be reasonable for you to be more afraid of the lovers; for they are pained by many things and they think everything that happens is done for the sake of hurting them. Therefore they prevent their loves from associating with other men, for they fear the wealthy, lest their money give them an advantage, and the educated, lest they prove superior in intellect; and they are on their guard against the influence of everyone who possesses any other good thing. If now they persuade you to incur the dislike of all these, they involve you in a dearth of friends, and if you consider your own interest and are more sensible than they, you will have to quarrel with them. But those who are not in love, but who have gained the satisfaction of their desires because of their merit, would not be jealous of those who associated with you, but would hate those who did not wish to do so, thinking that you are slighted by these last and benefited by the former, so that there is much more likelihood that they will gain friendship than enmity from their love affair with you.

And then, too, many lovers are moved by physical passion before they know the character or have become acquainted with the connections of the beloved, so that it is uncertain whether they will wish to be your friends after their passion has ceased. But in the case of those who are

not in love, who were your friends before entering into the closer relation, the favors received are not likely to make the friendship less, but will remain as pledges of future joys. And then, too, it will be better for your character to yield to me than to a lover. For lovers praise your words and acts beyond due measure, partly through fear of incurring your displeasure, and partly because their own judgment is obscured by their passion. For such are the exhibitions of the power of Love: he makes the unsuccessful lovers think that things are grievous which cause no pain to others, and he compels the successful to praise what ought not to give pleasure; therefore those whom they love are more to be pitied than envied. But if you yield to me, I shall consort with you, not with a view to present pleasure only, but to future advantage also, not being overcome by passion but in full control of myself, and not taking up violent enmity because of small matters, but slowly gathering little anger when the transgressions are great, forgiving involuntary wrongs and trying to prevent intentional ones; for these are the proofs of a friendship that will endure for a long time. But if you have a notion that friendship cannot be firm unless one is in love, you should bear in mind that in that case we should not have great affection for sons or for fathers and mothers, nor should we possess faithful friends who have been gained not through passion but through associations of a different kind.

Besides, if you ought to grant favors to those who ask for them most eagerly, you ought in other matters also to confer benefits, not on the best, but on the most needy; for they will be most grateful, since they are relieved of the greatest ills. And then, too, at private entertainments you ought not to invite your friends, but beggars and those who need a meal; for they will love you and attend you and come to your doors and be most pleased and grateful, and will call down many blessings upon your head. Perhaps, however, you ought not to grant favors to those who beg for them, but to those who are most able to repay you; and not to those who ask merely, but to the most deserving; and not to those who will enjoy your youthful beauty, but to those who will share their good things with you when you are older; and not to those who, when they have suc-

ceeded, will boast to others of their success, but to those who will modestly keep it a secret from all; and not to those who will be enamored for a little while, but to those who will be your friends for life; and not to those who will seek a pretext for a quarrel when their passion has died out, but to those who will show their own merit when your youth is passed. Do you, then, remember what I have said, and bear this also in mind, that lovers are admonished by their friends, who think their way of life is bad, but no relative ever blamed a nonlover for bad management of his own interests on account of that condition.

Perhaps you may ask me if I advise you to grant favors to all nonlovers. But I think the lover would not urge you to be so disposed toward all lovers either; for the favor, if scattered broadcast, is not so highly prized by the rational recipient, nor can you, if you wish, keep your relations with one hidden from the rest. But from love no harm ought to come, but benefit to both parties. Now I think I have said enough. But if you feel any lack, or think anything has been omitted, ask questions.

What do you think of the discourse, Socrates? Is it not wonderful, especially in diction?

SOCRATES: More than that, it is miraculous, my friend; I am quite overcome by it. And this is due to you, Phaedrus, because as I looked at you, I saw that you were delighted by the speech as you read. So, thinking that you know more than I about such matters, I followed in your train and joined you in the divine frenzy.

PHAEDRUS: Indeed! So you see fit to make fun of it?

SOCRATES: Do I seem to you to be joking and not to be in earnest?

PHAEDRUS: Do not jest, Socrates, but, in the name of Zeus, the god of friendship, tell me truly, do you think any other of the Greeks could speak better or more copiously than this on the same subject?

SOCRATES: What? Are you and I to praise the discourse because the author has said what he ought, and not merely because all the expressions are clear and well rounded and finely turned? For if that is expected, I must grant it for your sake, since, because of my stupidity, I did not notice it. I was attending only to the rhetorical manner,

and I thought even Lysias himself would not think that satisfactory. It seemed to me, Phaedrus, unless you disagree, that he said the same thing two or three times, as if he did not find it easy to say many things about one subject, or perhaps he did not care about such a detail; and he appeared to be in youthful fashion to be exhibiting his ability to say the same thing in two different ways and in both ways excellently.

PHAEDRUS: Nonsense, Socrates! Why that is the especial merit of the discourse. He has omitted none of the points that belong to the subject, so that nobody could ever speak about it more exhaustively or worthily than he has done.

SOCRATES: There I must cease to agree with you; for the wise men and women of old, who have spoken and written about these matters, will rise up to confute me, if, to please you, I assent.

PHAEDRUS: Who are they? And where have you heard anything better than this?

SOCRATES: I cannot say, just at this moment; but I certainly must have heard something, either from the lovely Sappho or the wise Anacreon, or perhaps from some prose writers. What ground have I for saying so? Why, my dear friend, I feel that my own bosom is full, and that I could make another speech, different from this and quite as good. Now I am conscious of my own ignorance, and I know very well that I have never invented these things myself, so the only alternative is that I have been filled through the ears, like a pitcher, from the well springs of another; but, again because of my stupidity, I have forgotten how and from whom I heard it.

PHAEDRUS: Most noble Socrates, that is splendid! Don't tell, even if I beg you, how or from whom you heard it; only do as you say; promise to make another speech better than that in the book and no shorter and quite different. Then I promise, like the nine archons, to set up at Delphi a statue as large as life, not only of myself, but of you also.

SOCRATES: You are a darling and truly golden,⁷ Phaedrus, if you think I mean that Lysias has failed in every respect and that I can

⁷Truly golden: The statues Phaedrus is promising, like those erected to honor winners in the Olympic games, would be of gold. A gold statue of Gorgias was erected at Delphi. [Ed.]

compose a discourse containing nothing that he has said. That, I fancy, could not happen even to the worst writer. For example, to take the subject of his speech, who do you suppose, in arguing that the nonlover ought to be more favored than the lover, could omit praise of the nonlover's calm sense and blame of the lover's unreason, which are inevitable arguments, and then say something else instead? No, such arguments, I think, must be allowed and excused; and in these the arrangement, not the invention, is to be praised; but in the case of arguments which are not inevitable and are hard to discover, the invention deserves praise as well as the arrangement.

PHAEDRUS: I concede your point, for I think what you say is reasonable. So I will make this concession: I will allow you to begin with the premise that the lover is more distraught than the nonlover; and if you speak on the remaining points more copiously and better than Lysias, without saying the same things, your statue of beaten metal shall stand at Olympia beside the offering of the Cypselids.

SOCRATES: Have you taken my jest in earnest, Phaedrus, because, to tease you, I laid hands on your beloved, and do you really suppose I am going to try to surpass the rhetoric of Lysias and make a speech more ingenious than his?

PHAEDRUS: Now, my friend, you have given me a fair hold; for you certainly must speak as best you can, lest we be compelled to resort to the comic "you're another"; be careful and do not force me to say "O Socrates, if I don't know Socrates, I have forgotten myself," and "he yearned to speak, but feigned coyness." Just make up your mind that we are not going away from here until you speak out what you said you had in your breast. We are along in a solitary spot, and I am stronger and younger than you; so, under these circumstances, take my meaning, and speak voluntarily, rather than under compulsion.

SOCRATES: But, my dear Phaedrus, I shall make myself ridiculous if I, a mere amateur, try without preparation to speak on the same subject in competition with a master of his art.

PHAEDRUS: Now listen to me. Stop trying to fool me; for I can say something which will force you to speak.

SOCRATES: Then pray don't say it.

PHAEDRUS: Yes, but I will. And my saying shall be an oath. I swear to you by—by what god? By this plane tree? I take my solemn oath that unless you produce the discourse in the very presence of this plane tree, I will never read you another or tell you of another.

SOCRATES: Oh! Oh! You wretch! How well you found out how to make a lover of discourse do your will!

PHAEDRUS: Then why do you try to get out of it?

SOCRATES: I won't anymore, since you have taken this oath; for how could I give up such pleasures?

PHAEDRUS: Speak then.

SOCRATES: Do you know what I'm going to do?

PHAEDRUS: About what?

SOCRATES: I'm going to keep my head wrapped up while I talk, that I may get through my discourse as quickly as possible and that I may not look at you and become embarrassed.

PHAEDRUS: Only speak, and in other matters suit yourself.

SOCRATES: Come then, O tuneful Muses, whether ye receive this name from the quality of your song or from the musical race of the Ligyans, grant me your aid in the tale this most excellent man compels me to relate, that his friend whom he has hitherto considered wise, may seem to him wiser still.

Now there was once upon a time a boy, or rather a stripling, of great beauty: and he had many lovers. And among these was one of peculiar craftiness, who was as much in love with the boy as anyone, but had made him believe that he was not in love; and once in wooing him, he tried to persuade him of this very thing, that favors ought to be granted rather to the nonlover than to the lover; and his words were as follows:

There is only one way, dear boy, for those to begin who are to take counsel wisely about anything. One must know what the counsel is about, or it is sure to be utterly futile, but most people are ignorant of the fact that they do not know the nature of things. So, supposing that they do not know it, they come to no agreement in the beginning of their enquiry, and as they go on they reach the natural result—they agree neither with themselves nor with each other. Now you and I must not fall into the error which we condemn in

others, but, since we are to discuss the question, whether the lover or the nonlover is to be preferred let us first agree on a definition of love, its nature and its power, and then, keeping this definition in view and making constant reference to it, let us enquire whether love brings advantage or harm. Now everyone sees that love is a desire; and we know too that nonlovers also desire the beautiful. How then are we to distinguish the lover from the nonlover? We must observe that in each one of us there are two ruling and leading principles, which we follow whithersoever they lead; one is the innate desire for pleasures, the other an acquired opinion which strives for the best. These two sometimes agree within us and are sometimes in strife; and sometimes one, and sometimes the other has the greater power. Now when opinion leads through reason toward the best and is more powerful, its power is called self-restraint, but when desire irrationally drags us toward pleasures and rules within us, its rule is called excess. Now excess has many names, for it has many members and many forms; and whichever of these forms is most marked gives its own name, neither beautiful nor honorable, to him who possesses it. For example, if the desire for food prevails over the higher reason and the other desires, it is called gluttony, and he who possesses it will be called by the corresponding name of glutton, and again, if the desire for drink becomes the tyrant and leads him who possesses it toward drink, we know what he is called; and it is quite clear what fitting names of the same sort will be given when any desire akin to these acquires the rule. The reason for what I have said hitherto is pretty clear by this time, but everything is plainer when spoken than when unspoken; so I say that the desire which overcomes the rational opinion that strives toward the right, and which is led away toward the enjoyment of beauty and again is strongly forced by the desires that are kindred to itself toward personal beauty, when it gains the victory, takes its name from that very force, and is called love.⁸

Well, my dear Phaedrus, does it seem to you, as it does to me, that I am inspired?

⁸This somewhat fanciful statement is based on a supposed etymological connection between ἔρως and ῥώμη, ἐρρωμένως, ῥωσθεῖνα. [Tr.]

PHAEDRUS: Certainly, Socrates, you have an unusual fluency.

SOCRATES: Then listen to me in silence; for truly the place seems filled with a divine presence; so do not be surprised if I often seem to be in a frenzy as my discourse progresses, for I am already almost uttering dithyrambics.

PHAEDRUS: That is very true.

SOCRATES: You are responsible for that; but hear what follows; for perhaps the attack may be averted. That, however, is in the hands of God; we must return to our boy.

Well, then, my dearest, what the subject is, about which we are to take counsel, has been said and defined, and now let us continue, keeping our attention fixed upon that definition, and tell what advantage or harm will naturally come from the lover or the nonlover to him who grants them his favors.

He who is ruled by desire and is a slave to pleasure will inevitably desire to make his beloved as pleasing to himself as possible. Now to one who is of unsound mind everything is pleasant which does not oppose him, but everything that is better or equal is hateful. So the lover will not, if he can help it, endure a beloved who is better than himself or his equal, but always makes him weaker and inferior; but the ignorant is inferior to the wise, the coward to the brave, the poor speaker to the eloquent, the slow of wit to the clever. Such mental defects, and still greater than these, in the beloved will necessarily please the lover, if they are implanted by Nature, and if they are not, he must implant them or be deprived of his immediate enjoyment. And he is of necessity jealous and will do him great harm by keeping him from many advantageous associations, which would most tend to make a man of him, especially from that which would do most to make him wise. This is divine philosophy, and from it the lover will certainly keep his beloved away, through fear of being despised; and he will contrive to keep him ignorant of everything else and make him look to his lover for everything, so that he will be most agreeable to him and most harmful to himself. In respect to the intellect, then, a man in love is by no means a profitable guardian or associate.

We must next consider how he who is forced to follow pleasure and not good will keep the body of him whose master he is, and what care

he will give to it. He will plainly court a beloved who is effeminate, not virile, not brought up in the pure sunshine, but in mingled shade, unused to manly toils and the sweat of exertion, but accustomed to a delicate and unmanly mode of life, adorned with a bright complexion of artificial origin, since he has none by nature, and in general living a life such as all this indicates, which it is certainly not worth while to describe further. We can sum it all up briefly and pass on. A person with such a body, in war and in all important crises, gives courage to his enemies, and fills his friends, and even his lovers themselves, with fear.

This may be passed over as self-evident, but the next question, what advantage or harm the intercourse and guardianship of the lover will bring to his beloved in the matter of his property, must be discussed. Now it is clear to everyone, and especially to the lover, that he would desire above all things to have his beloved bereft of the dearest and kindest and holiest possessions; for he would wish him to be deprived of father, mother, relatives and friends, thinking that they would hinder and censure his most sweet intercourse with him. But he will also think that one who has property in money or other possessions will be less easy to catch and when caught will be less manageable; wherefore the lover must necessarily begrudge his beloved the possession of property and rejoice at its loss. Moreover the lover would wish his beloved to be as long as possible unmarried, childless, and homeless, since he wishes to enjoy as long as possible what is pleasant to himself.

Now there are also other evils, but God has mingled with most of them some temporary pleasure; so, for instance, a flatterer is a horrid creature and does great harm, yet Nature has combined with him a kind of pleasure that is not without charm, and one might find fault with a courtesan as an injurious thing, and there are many other such creatures and practices which are yet for the time being very pleasant; but a lover is not only harmful to his beloved but extremely disagreeable to live with as well. The old proverb says, "birds of a feather flock together"; that is, I suppose, equality of age leads them to similar pleasures and through similarity begets friendship; and yet even they grow tired of each other's society. Now compulsion of every kind is

said to be oppressive to every one, and the lover not only is unlike his beloved, but he exercises the strongest compulsion. For he is old while his love is young, and he does not leave him day or night, if he can help it, but is driven by the sting of necessity, which urges him on, always giving him pleasure in seeing, hearing, touching, and by all his senses perceiving his beloved, so that he is glad to serve him constantly. But what consolation or what pleasure can he give the beloved? Must not this protracted intercourse bring him to the uttermost disgust, as he looks at the old, unlovely face, and other things to match, which it is not pleasant even to hear about, to say nothing of being constantly compelled to come into contact with them? And he is suspiciously guarded in all ways against everybody, and has to listen to untimely and exaggerated praises and to reproaches which are unendurable when the man is sober, and when he is in his cups and indulges in wearisome and unrestrained freedom of speech become not only unendurable but disgusting.

And while he is in love he is harmful and disagreeable, but when his love has ceased he is thereafter false to him whom he formerly hardly induced to endure his wearisome companionship through the hope of future benefits by making promises with many prayers and oaths. But now that the time of payment has come he has a new ruler and governor within him, sense and reason in place of love and madness, and has become a different person; but of this his beloved knows nothing. He asks of him a return for former favors, reminding him of past sayings and doings, as if he were speaking to the same man; but the lover is ashamed to say that he has changed, and yet he cannot keep the oaths and promises he made when he was ruled by his former folly, now that he has regained his reason and come to his senses, lest by doing what he formerly did he become again what he was. He runs away from these things, and the former lover is compelled to become a defaulter. The shell has fallen with the other side up,⁹ and he changes his part and runs away; and the other is forced to run after him in

⁹This refers to a game played with oyster shells, in which the players ran away or pursued as the shell fell with one or the other side uppermost. [Tr.]

anger and with imprecations, he who did not know at the start that he ought never to have accepted a lover who was necessarily without reason, but rather a reasonable nonlover; for otherwise he would have to surrender himself to one who was faithless, irritable, jealous, and disagreeable, harmful to his property, harmful to his physical condition, and most harmful by far to the cultivation of his soul, than which there neither is nor ever will be anything of higher importance in truth either in heaven or on earth. These things, dear boy, you must bear in mind, and you must know that the fondness of the lover is not a matter of goodwill, but of appetite which he wishes to satisfy:

Just as the wolf loves the lamb, so the lover adores his beloved.

There it is, Phaedrus! Do not listen to me any longer; let my speech end here.

PHAEDRUS: But I thought you were in the middle of it, and would say as much about the nonlover as you have said about the lover, to set forth all his good points and show that he ought to be favored. So now, Socrates, why do you stop?

SOCRATES: Did you not notice, my friend, that I am already speaking in hexameters, not mere dithyrambics, even though I am finding fault with the lover? But if I begin to praise the nonlover, what kind of hymn do you suppose I shall raise? I shall surely be possessed of the nymphs to whom you purposely exposed me. So, in a word, I say that the nonlover possess all the advantages that are opposed to the disadvantages we found in the lover. Why make a long speech? I have said enough about both of them. And so my tale shall fare as it may; I shall cross this stream and go away before you put some further compulsion upon me.

PHAEDRUS: Not yet, Socrates, till the heat is past. Don't you see that it is already almost noon? Let us stay and talk over what has been said, and then, when it is cooler, we will go away.

SOCRATES: Phaedrus, you are simply a superhuman wonder as regards discourses! I believe no one of all those who have been born in your lifetime has produced more discourses than you, either by speaking them yourself or compelling others to do so. I except Simmias the Theban; but you are far

ahead of all the rest. And now I think you have become the cause of another, spoken by me.

PHAEDRUS: That is not exactly a declaration of war! But how is this, and what is the discourse?

SOCRATES: My good friend, when I was about to cross the stream, the spirit and the sign that usually comes to me came—it always holds me back from something I am about to do—and I thought I heard a voice from it which forbade my going away before clearing my conscience, as if I had committed some sin against deity. Now I am a seer, not a very good one, but, as the bad writers say, good enough for my own purposes; so now I understand my error. How prophetic the soul is, my friend! For all along, while I was speaking my discourse, something troubled me, and “I was distressed,” as Ibycus says, “lest I be buying honor among men by sinning against the gods.” But now I have seen my error.

PHAEDRUS: What do you mean?

SOCRATES: Phaedrus, a dreadful speech it was, a dreadful speech, the one you brought with you, and the one you made me speak.

PHAEDRUS: How so?

SOCRATES: It was foolish, and somewhat impious. What could be more dreadful than that?

PHAEDRUS: Nothing, if you are right about it.

SOCRATES: Well, do you not believe that Love is the son of Aphrodite and is a god?

PHAEDRUS: So it is said.

SOCRATES: Yes, but not by Lysias, nor by your speech which was spoken by you through my mouth that you bewitched. If Love is, as indeed he is, a god or something divine, he can be nothing evil; but the two speeches just now said that he was evil. So then they sinned against Love; but their foolishness was really very funny besides, for while they were saying nothing sound or true, they put on airs as though they amounted to something, if they could cheat some mere manikins and gain honor among them. Now I, my friend, must purify myself; and for those who have sinned in matters of mythology there is an ancient purification, unknown to Homer, but known to Stesichorus. For when he was stricken with blindness for speaking ill of Helen, he was not, like Homer, ignorant of the reason, but since he was educated, he knew it and straightway he writes the poem:

“That saying is not true; thou didst not go within the well-oared ships, nor didst thou come to the walls of Troy”;

and when he had written all the poem, which is called the recantation, he saw again at once. Now I will be wiser than they in just this point: before suffering any punishment for speaking ill of Love, I will try to atone by my recantation, with my head bare this time, not, as before, covered through shame.

PHAEDRUS: This indeed, Socrates, is the most delightful thing you could say.

SOCRATES: Just consider, my good Phaedrus, how shameless the two speeches were, both this of mine and the one you read out of the book. For if any man of noble and gentle nature, one who was himself in love with another of the same sort, or who had ever been loved by such a one, had happened to hear us saying that lovers take up violent enmity because of small matters and are jealously disposed and harmful to the beloved, don't you think he would imagine he was listening to people brought up among low sailors, who had never seen a generous love? Would he not refuse utterly to assent to our censure of Love?

PHAEDRUS: I declare, Socrates, perhaps he would.

SOCRATES: I therefore, because I am ashamed at the thought of this man and am afraid of Love himself, wish to wash out the brine from my ears with the water of a sweet discourse. And I advise Lysias also to write as soon as he can, that other things being equal, the lover should be favored rather than the nonlover.

PHAEDRUS: Be assured that he will do so: for when you have spoken the praise of the lover, Lysias must of course be compelled by me to write another discourse on the same subject.

SOCRATES: I believe you, so long as you are what you are.

PHAEDRUS: Speak then without fear.

SOCRATES: Where is the youth to whom I was speaking? He must hear this also, lest if he do not hear it, he accept a nonlover before we can stop him.

PHAEDRUS: Here he is, always close at hand whenever you want him.

SOCRATES: Understand then, fair youth, that the former discourse was by Phaedrus, the son of Pythocles (Eager for Fame) of Myrrhinus (Myrrhtown); but this which I shall speak is by Stesichorus, son of Euphemus (Man of pious Speech) of Himera (Town of Desire). And I must say that this saying is not true, which teaches that when a lover is at hand the nonlover should be more favored, because the lover is insane, and the other sane. For if it were a simple fact that insanity is an evil, the saying would be true; but in reality the greatest of blessings comes to us through madness, when it is sent as a gift of the gods. For the prophetess at Delphi and the priestesses at Dodona when they have been mad have conferred many splendid benefits upon Greece both in private and in public affairs, but few or none when they have been in their right minds; and if we should speak of the Sibyl and all the others who by prophetic inspiration have foretold many things to many persons and thereby made them fortunate afterwards, anyone can see that we should speak a long time. And it is worthwhile to adduce also the fact that those men of old who invented names thought that madness was neither shameful nor disgraceful; otherwise they would not have connected the very word mania with the noblest of arts, that which foretells the future, by calling it the manic art. No, they gave this name thinking that mania, when it comes by gift of the gods, is a noble thing, but nowadays people call prophecy the mantic art, tastelessly inserting a *T* in the word. So also, when they gave a name to the investigation of the future which rational persons conduct through observation of birds and by other signs, since they furnish mind (*nous*) and information (*historia*) to human thought (*oiesis*) from the intellect (*dianoia*) they called it the oionostic (*oionoistike*) art, which modern folk now call oiōnistic, making it more high-sounding by introducing the long *O*. The ancients, then testify that in proportion as prophecy (*mantike*) is superior to augury, both in name and in fact, in the same proportion madness, which comes from god, is superior to sanity, which is of human origin. Moreover, when diseases and the greatest troubles have been visited upon certain families through some ancient guilt, madness has

entered in and by oracular power has found a way of release for those in need, taking refuge in prayers and the service of the gods, and so, by purifications and sacred rites, he who has this madness is made safe for the present and the after time, and for him who is rightly possessed of madness a release from present ills is found. And a third kind of possession and madness comes from the Muses. This takes hold upon a gentle and pure soul, arouses it and inspires it to songs and other poetry, and thus by adorning countless deeds of the ancients educates later generations. But he who without the divine madness comes to the doors of the Muses, confident that he will be a good poet by art, meets with no success, and the poetry of the sane man vanishes into nothingness before that of the inspired madmen.

All these noble results of inspired madness I can mention, and many more. Therefore let us not be afraid on that point, and let no one disturb and frighten us by saying that the reasonable friend should be preferred to him who is in a frenzy. Let him show in addition that love is not sent from heaven for the advantage of lover and beloved alike, and we will grant him the prize of victory. We, on our part, must prove that such madness is given by the gods for our greatest happiness; and our proof will not be believed by the merely clever, but will be accepted by the truly wise. First, then, we must learn the truth about the soul divine and human by observing how it acts and is acted upon. And the beginning of our proof is as follows:

Every soul is immortal. For that which is ever moving is immortal; but that which moves something else or is moved by something else, when it ceases to move, ceases to live. Only that which moves itself, since it does not leave itself, never ceases to move, and this is also the source and beginning of motion for all other things which have motion. But the beginning is ungenerated. For everything that is generated must be generated from a beginning, but the beginning is not generated from anything; for if the beginning were generated from anything, it would not be generated from a beginning. And since it is ungenerated it must be also indestructible; for if the beginning were destroyed, it could never be gen-

erated from anything nor anything else from it, since all things must be generated from a beginning. Thus that which moves itself must be the beginning of motion. And this can be neither destroyed nor generated, otherwise all the heavens and all generation must fall in ruin and stop and never again have any source of motion or origin. But since that which is moved by itself has been seen to be immortal, one who says that this self-motion is the essence and the very idea of the soul, will not be disgraced. For everybody which derives motion from without is soulless, but that which has its motion within itself has a soul, since that is the nature of the soul; but if this is true—that that which moves itself is nothing else than the soul,—then the soul would necessarily be ungenerated and immortal.

Concerning the immortality of the soul this is enough; but about its form we must speak in the following manner. To tell what it really is would be a matter for utterly superhuman and long discourse, but it is within human power to describe it briefly in a figure; let us therefore speak in that way. We will liken the soul to the composite nature of a pair of winged horses and a charioteer. Now the horses and charioteers of the gods are all good and of good descent, but those of other races are mixed; and first the charioteer of the human soul drives a pair, and secondly one of the horses is noble and of noble breed, but the other quite the opposite in breed and character. Therefore in our case the driving is necessarily difficult and troublesome. Now we must try to tell why a living being is called mortal or immortal. Soul, considered collectively, has the care of all that which is soulless, and it traverses the whole heaven, appearing sometimes in one form and sometimes in another; now when it is perfect and fully winged, it mounts upward and governs the whole world; but the soul which has lost its wings is borne along until it gets hold of something solid, when it settles down, taking upon itself an earthly body, which seems to be self-moving, because of the power of the soul within it; and the whole, compounded of soul and body, is called a living being, and is further designated as mortal. It is not immortal by any reasonable supposition, but we, though we have never seen or rightly conceived a god, imagine an immortal

being which has both a soul and a body which are united for all time. Let that, however, and our words concerning it, be as is pleasing to God; we will now consider the reason why the soul loses its wings. It is something like this.

The natural function of the wing is to soar upwards and carry that which is heavy up to the place where dwells the race of the gods. More than any other thing that pertains to the body it partakes of the nature of the divine. But the divine is beauty, wisdom, goodness, and all such qualities; by these then the wings of the soul are nourished and grow, but by the opposite qualities, such as vileness and evil, they are wasted away and destroyed. Now the greater leader in heaven, Zeus, driving a winged chariot, goes first, arranging all things and caring for all things. He is followed by an army of gods and spirits, arrayed in eleven squadrons; Hestia alone remains in the house of the gods. Of the rest, those who are included among the twelve great gods and are accounted leaders, are assigned each to his place in the army. There are many blessed sights and many ways hither and thither within the heaven, along which the blessed gods go to and fro attending each to his own duties; and whoever wishes, and is able, follows, for jealousy is excluded from the celestial band. But when they go to a feast and a banquet, they proceed steeply upward to the top of the vault of heaven, where the chariots of the gods, whose well matched horses obey the rein, advance easily, but the others with difficulty; for the horse of evil nature weighs the chariot down, making it heavy and pulling toward the earth the charioteer whose horse is not well trained. There the utmost toil and struggle await the soul. For those that are called immortal, when they reach the top, pass outside and take their place on the outer surface of the heaven, and when they have taken their stand, the revolution carries them round and they behold the things outside of the heaven.

But the region above the heaven was never worthily sung by any earthly poet, nor will it ever be. It is, however, as I shall tell; for I must dare to speak the truth, especially as truth is my theme. For the colorless, formless, and intangible truly existing essence, with which all true knowledge is concerned, holds this region and is visible only

to the mind, the pilot of the soul. Now the divine intelligence, since it is nurtured on mind and pure knowledge, and the intelligence of every soul which is capable of receiving that which befits it, rejoices in seeing reality for a space of time and by gazing upon truth is nourished and made happy until the revolution brings it again to the same place. In the revolution it beholds absolute justice, temperance, and knowledge, not such knowledge as has a beginning and varies as it is associated with one or another of the things we call realities, but that which abides in the real eternal absolute; and in the same way it beholds and feeds upon the other eternal verities, after which, passing down again within the heaven, it goes home, and there the charioteer puts up the horses at the manger and feeds them with ambrosia and then gives them nectar to drink.

Such is the life of the gods; but of the other souls, that which best follows after God and is most like him, raises the head of the charioteer up into the outer region and is carried round in the revolution, troubled by the horses and hardly beholding the realities; and another sometimes rises and sometimes sinks, and, because its horses are unruly, it sees some things and fails to see others. The other souls follow after, all yearning for the upper region but unable to reach it, and are carried round beneath, trampling upon and colliding with one another, each striving to pass its neighbor. So there is the greatest confusion and sweat of rivalry, wherein many are lamed, and many wings are broken through the incompetence of the drivers; and after much toil they all go away without gaining a view of reality, and when they have gone away they feed upon opinion. But the reason of the great eagerness to see where the plain of truth is, lies in the fact that the fitting pasturage for the best part of the soul is in the meadow there, and the wing on which the soul is raised up is nourished by this. And this is a law of Destiny, that the soul which follows after God and obtains a view of any of the truths is free from harm until the next period, and if it can always attain this, is always unharmed; but when, through inability to follow, it fails to see, and through some mischance is filled with forgetfulness and evil and grows heavy, and when it has grown heavy, loses its wings and

falls to the earth, then it is the law that this soul shall never pass into any beast as its first birth, but the soul that has seen the most shall enter into the birth of a man who is to be a philosopher or a lover of beauty, or one of a musical or loving nature, and the second soul into that of a lawful king or a warlike ruler, and the third into that of a politician or a man of business or a financier, the fourth into that of a hard-working gymnast or one who will be concerned with the cure of the body, and the fifth will lead the life of a prophet or someone who conducts mystic rites; to the sixth, a poet or some other imitative artist will be united, to the seventh, a craftsman or a husbandman, to the eighth, a sophist or a demagogue, to the ninth, a tyrant.

Now in all these states, whoever lives justly obtains a better lot, and whoever lives unjustly, a worse. For each soul returns to the place whence it came in ten thousand years; for it does not regain its wings before that time has elapsed, except the soul of him who has been a guileless philosopher or a philosophical lover; these, when for three successive periods of a thousand years they have chosen such a life, after the third period of a thousand years becomes winged in the three thousandth year and go their way; but the rest, when they have finished their first life, receive judgment, and after the judgment some go to the places of correction under the earth and pay their penalty, while the others, made light and raised up into a heavenly place by justice, live in a manner worthy of the life they led in human form. But in the thousandth year both come to draw lots and choose their second life, each choosing whatever it wishes. Then a human soul may pass into the life of a beast, and a soul which was once human, may pass again from a beast into a man. For the soul which has never seen the truth can never pass into human form. For a human being must understand a general conception formed by collecting into a unity by means of reason the many perceptions of the senses; and this is a recollection of those things which our soul once beheld, when it journeyed with God and, lifting its vision above the things which we now say exist, rose up into real being. And therefore it is just that the mind of the philosopher only has wings, for he is always, so

far as he is able, in communion through memory with those things the communion with which causes God to be divine. Now a man who employs such memories rightly is always being initiated into perfect mysteries and he alone becomes truly perfect; but since he separates himself from human interests and turns his attention toward the divine, he is rebuked by the vulgar, who consider him mad and do not know that he is inspired.

All my discourse so far has been about the fourth kind of madness, which causes him to be regarded as mad, who, when he sees the beauty on earth, remembering the true beauty, feels his wings growing and longs to stretch them for an upward flight, but cannot do so, and, like a bird, gazes upward and neglects the things below. My discourse has shown that this is, of all inspirations, the best and of the highest origin to him who has it or who shares in it, and that he who loves the beautiful, partaking in this madness, is called a lover. For, as has been said, every soul of man has by the law of nature beheld the realities, otherwise it would not have entered into a human being, but it is not easy for all souls to gain from earthly things a recollection of those realities, either for those which had but a brief view of them at that earlier time, or for those which, after falling to earth, were so unfortunate as to be turned toward unrighteousness through some evil communications and to have forgotten the holy sights they once saw. Few then are left which retain an adequate recollection of them; but these when they see here any likeness of the things of that other world, are stricken with amazement and can no longer control themselves; but they do not understand their condition, because they do not clearly perceive. Now in the earthly copies of justice and temperance and the other ideas which are precious to souls there is no light, but only a few, approaching the images through the darkling organs of sense, behold in them the nature of that which they imitate, and these few do this with difficulty. But at that former time they saw beauty shining in brightness, when, with a blessed company—we following in the train of Zeus, and others in that of some other god—they saw the blessed sight and vision and were initiated into that which is rightly called the

most blessed of mysteries, which we celebrated in a state of perfection, when we were without experience of the evils which awaited us in the time to come, being permitted as initiates to the sight of perfect and simple and calm and happy apparitions, which we saw in the pure light, being ourselves pure and not entombed in this which we carry about with us and call the body, in which we are imprisoned like an oyster in its shell.

So much, then, in honor of memory, on account of which I have now spoken at some length, through yearning for the joys of that other time. But beauty, as I said before, shone in brilliance among those visions; and since we came to earth we have found it shining most clearly through the clearest of our senses; for sight is the sharpest of the physical senses, though wisdom is not seen by it, for wisdom would arouse terrible love, if such a clear image of it were granted as would come through sight, and the same is true of the other lovely realities; but beauty alone has this privilege, and therefore it is most clearly seen and loveliest. Now he who is not newly initiated, or has been corrupted, does not quickly rise from this world to that other world and to absolute beauty when he sees its namesake here, and so he does not revere it when he looks upon it, but gives himself up to pleasure and like a beast proceeds to lust and begetting; he makes license his companion and is not afraid or ashamed to pursue pleasure in violation of nature. But he who is newly initiated, who beheld many of those realities, when he sees a godlike face or form which is a good image of beauty, shudders at first, and something of the old awe comes over him, then, as he gazes, he reveres the beautiful one as a god, and if he did not fear to be thought stark mad, he would offer sacrifice to his beloved as to an idol or a god. And as he looks upon him, a reaction from his shuddering comes over him, with sweat and unwonted heat; for as the effluence of beauty enters him through the eyes, he is warmed; the effluence moistens the germ of the feathers, and as he grows warm, the parts from which the feathers grow, which were before hard and choked, and prevented the feathers from sprouting, become soft, and as the nourishment streams upon him, the quills of the feathers swell

and begin to grow from the roots over all the form of the soul; for it was once all feathered.

Now in this process the whole soul throbs and palpitates, and as in those who are cutting teeth there is an irritation and discomfort in the gums, when the teeth begin to grow, just so the soul suffers when the growth of the feathers begins; it is feverish and is uncomfortable and itches when they begin to grow. Then when it gazes upon the beauty of the boy and receives the particles which flow thence to it (for which reason they are called yearning),¹⁰ it is moistened and warmed, ceases from its pain and is filled with joy; but when it is alone and grows dry, the mouths of the passages in which the feathers begin to grow become dry and close up, shutting in the sprouting feathers, and the sprouts within, shut in with the yearning, throb like pulsing arteries, and each sprout pricks the passage in which it is, so that the whole soul, stung in every part, rages with pain; and then again, remembering the beautiful one, it rejoices. So, because of these two mingled sensations, it is greatly troubled by its strange condition; it is perplexed and maddened, and in its madness it cannot sleep at night or stay in any one place by day, but it is filled with longing and hastens wherever it hopes to see the beautiful one. And when it sees him and is bathed with the waters of yearning, the passages that were sealed are opened, the soul has respite from the stings and is eased of its pain, and this pleasure which it enjoys is the sweetest of pleasures at the time. Therefore the soul will not, if it can help it, be left alone by the beautiful one, but esteems him above all others, forgets for him mother and brothers and all friends, neglects property and cares not for its loss, and despising all the customs and proprieties in which it formerly took pride, it is ready to be a slave and to sleep wherever it is allowed, as near as possible to the beloved; for it not only reveres him who possesses beauty, but finds in him the only healer of its greatest woes. Now this condition, fair boy, about which I am speaking, is called Love by

¹⁰The play on the words μέρη and ἕμερος cannot be rendered accurately in English. Jowett approaches a rendering by the use of the words *motion* and *emotion*, but emotion is too weak a word for ἕμερος. [Tr.]

men, but when you hear what the gods call it, perhaps because of your youth you will laugh. But some of the Homeridae, I believe, repeat two verses on Love from the spurious poems of Homer, one of which is very outrageous and not perfectly metrical. They sing them as follows:

Mortals call him winged Love, but the immortals call him The Winged One, because he must needs grow wings.

You may believe this, or not; but the condition of lovers and the cause of it are just as I have said.

Now he who is a follower of Zeus, when seized by Love can bear a heavier burden of the winged god; but those who are servants of Ares and followed in his train, when they have been seized by Love and think they have been wronged in any way by the beloved, become murderous and are ready to sacrifice themselves and the beloved. And so it is with the follower of each of the other gods; he lives, so far as he is able, honoring and imitating that god, so long as he is uncorrupted, and is living his first life on earth, and in that way he behaves and conducts himself toward his beloved and toward all others. Now each one chooses his love from the ranks of the beautiful according to his character, and he fashions him and adorns him like a statue, as though he were his god, to honor and worship him. The followers of Zeus desire that the soul of him whom they love be like Zeus; so they seek for one of philosophical and lordly nature, and when they find him and love him, they do all they can to give him such a character. If they have not previously had experience, they learn then from all who can teach them anything; they seek after information themselves, and when they search eagerly within themselves to find the nature of their god, they are successful, because they have been compelled to keep their eyes fixed upon the god, and as they reach and grasp him by memory they are inspired and receive from him character and habits, so far as it is possible for a man to have part in God. Now they consider the beloved the cause of all this, so they love him more than before, and if they draw the waters of their inspiration from Zeus, like the bacchantes, they pour it out upon the beloved and make him, so far as possible, like their god. And those who followed

after Hera seek a kingly nature, and when they have found such an one, they act in a corresponding manner toward him in all respects; and likewise the followers of Apollo, and of each of the gods, go out and seek for their beloved a youth whose nature accords with that of the god, and when they have gained his affection, by imitating the god themselves and by persuasion and education they lead the beloved to the conduct and nature of the god, so far as each of them can do so; they exhibit no jealousy or meanness toward the loved one, but endeavor by every means in their power to lead him to the likeness of the god whom they honor. Thus the desire of the true lovers, and the initiation into the mysteries of love, which they teach, if they accomplish what they desire in the way I describe, is beautiful and brings happiness from the inspired lover to the loved one, if he be captured; and the fair one who is captured is caught in the following manner:

In the beginning of this tale I divided each soul into three parts, two of which had the form of horses, the third that of a charioteer. Let us retain this division. Now of the horses we say one is good and the other bad; but we did not define what the goodness of the one and the badness of the other was. That we must now do. The horse that stands at the right hand is upright and has clean limbs; he carries his neck high, has an aquiline nose, is white in color, and has dark eyes; he is a friend of honor joined with temperance and modesty, and a follower of true glory; he needs no whip, but is guided only by the word of command and by reason. The other, however, is crooked, heavy, ill put together, his neck is short and thick, his nose flat, his color dark, his eyes grey and bloodshot; he is the friend of insolence and pride, is shaggy-eared and deaf, hardly obedient to whip and spurs. Now when the charioteer beholds the love-inspiring vision, and his whole soul is warmed by the sight, and is full of the tickling and prickings of yearning, the horse that is obedient to the charioteer, constrained then as always by modesty, controls himself and does not leap upon the beloved; but the other no longer heeds the pricks or the whip of the charioteer, but springs wildly forward, causing all possible trouble to his mate and to the charioteer, and forcing them to approach the beloved and

propose the joys of love. And they at first pull back indignantly and will not be forced to do terrible and unlawful deeds; but finally, as the trouble has no end, they go forward with him, yielding and agreeing to do his bidding. And they come to the beloved and behold his radiant face.

And as the charioteer looks upon him, his memory is borne back to the true nature of beauty, and he sees it standing with modesty upon a pedestal of chastity, and when he sees this he is afraid and falls backward in reverence, and in falling he is forced to pull the reins so violently backward as to bring both horses upon their haunches, the one quite willing, since he does not oppose him, but the unruly beast very unwilling. And as they go away, one horse in his shame and wonder wets all the soul with sweat, but the other, as soon as he is recovered from the pain of the bit and the fall, before he has fairly taken breath, breaks forth into angry reproaches, bitterly reviling his mate and the charioteer for their cowardice and lack of manhood in deserting their post and breaking their agreement; and again, in spite of their unwillingness, he urges them forward and hardly yields to their prayer that he postpone the matter to another time. Then when the time comes which they have agreed upon, they pretend that they have forgotten it, but he reminds them; struggling, and neighing, and pulling he forces them again with the same purpose to approach the beloved one, and when they are near him, he lowers his head, raises his tail, takes the bit in his teeth, and pulls shamelessly. The effect upon the charioteer is the same as before, but more pronounced; he falls back like a racer from the starting-rope, pulls the bit backward even more violently than before from the teeth of the unruly horse, covers his scurrilous tongue and jaws with blood, and forces his legs and haunches to the ground, causing him much pain. Now when the bad horse has gone through the same experience many times and has ceased from his unruliness, he is humbled and follows henceforth the wisdom of the charioteer, and when he sees the beautiful one, he is overwhelmed with fear; and so from that time on the soul of the lover follows the beloved in reverence and awe.

Now the beloved, since he receives all service

from his lover, as if he were a god, and since the lover is not feigning, but is really in love, and since the beloved himself is by nature friendly to him who serves him, although he may at some earlier time have been prejudiced by his school-fellows or others, who said that it was a disgrace to yield to a lover, and may for that reason have repulsed his lover, yet, as time goes on, his youth and destiny cause him to admit him to his society. For it is the law of fate that evil can never be a friend to evil and that good must always be friend to good. And when the lover is thus admitted, and the privilege of conversation and intimacy has been granted him, his good will, as it shows itself in close intimacy, astonishes the beloved, who discovers that the friendship of all his other friends and relatives is as nothing when compared with that of his inspired lover. And as this intimacy continues and the lover comes near and touches the beloved in the gymnasium and in their general intercourse, then the fountain of that stream which Zeus, when he was in love with Ganymede, called "desire" flows copiously upon the lover, and some of it flows into him, and some, when he is filled, overflows outside; and just as the wind or an echo rebounds from smooth, hard surfaces and returns whence it came, so the stream of beauty passes back into the beautiful one through the eyes, the natural inlet to the soul, where it reanimates the passages of the feathers, waters them and makes the feathers begin to grow, filling the soul of the loved one with love. So he is in love, but he knows not with whom; he does not understand his own condition and cannot explain it; like one who has caught a disease of the eyes from another, he can give no reason for it; he sees himself in his lover as in a mirror, but is not conscious of the fact. And in the lover's presence, like him he ceases from his pain, and in his absence, like him he is filled with yearning such as he inspires, and love's image, requited love, dwells within him; but he calls it, and believes it to be, not love, but friendship. Like the lover, though less strongly, he desires to see his friend, to touch him, kiss him, and lie down by him; and naturally these things are soon brought about. Now as they lie together, the unruly horse of the lover has something to say to the charioteer, and demands a little enjoyment in return for his many troubles; and

the unruly horse of the beloved says nothing, but teeming with passion and confused emotions he embraces and kisses his lover, caressing him as his best friend; and when they lie together, he would not refuse his lover any favor, if he asked it; but the other horse and the charioteer oppose all this with modesty and reason.

If now the better elements of the mind, which lead to a well ordered life and to philosophy, prevail, they live a life of happiness and harmony here on earth, self controlled and orderly, holding in subjection that which causes evil in the soul and giving freedom to that which makes for virtue; and when this life is ended they are light and winged, for they have conquered in one of the three truly Olympic contests. Neither human wisdom nor divine inspiration can confer upon man any greater blessing than this. If however they live a life less noble and without philosophy, but yet ruled by the love of honor, probably, when they have been drinking, or in some other moment of carelessness, the two unruly horses, taking the souls off their guard, will bring them together and seize upon and accomplish that which is by the many accounted blissful; and when this has once been done, they continue the practice, but infrequently, since what they are doing is not approved by the whole mind. So these two pass through life as friends, though not such friends as the others, both at the time of their love and afterwards, believing that they have exchanged the most binding pledges of love, and that they can never break them and fall into enmity. And at last, when they depart from the body, they are not winged, to be sure, but their wings have begun to grow, so that the madness of love brings them to small reward; for it is the law that those who have once begun their upward progress shall never again pass into darkness and the journey under the earth, but shall live a happy life in the light as they journey together, and because of their love shall be alike in their plumage when they receive their wings.

These blessings, so great and so divine, the friendship of a lover will confer upon you, dear boy; but the affection of the nonlover, which is alloyed with mortal prudence and follows mortal and parsimonious rules of conduct, will beget in the beloved soul the narrowness which the common folk praise as virtue; it will cause the soul to

be a wanderer upon the earth for nine thousand years and a fool below the earth at last. There, dear Love, thou hast my recantation, which I have offered and paid as beautifully and as well as I could, especially in the poetical expressions which I was forced to employ on account of Phaedrus. Pardon, I pray, my former words and accept these words with favor; be kind and gracious to me; do not in anger take from me the art of love which thou didst give me, and deprive me not of sight, but grant unto me to be even more than now esteemed by the beautiful. And if in our former discourse Phaedrus and I said anything harsh against thee, blame Lysias, the father of that discourse, make him to cease from such speeches, and turn him, as his brother Polemarchus is turned, toward philosophy, that his lover Phaedrus may no longer hesitate, as he does now, between two ways, but may direct his life with all singleness of purpose toward love and philosophical discourses.

PHAEDRUS: I join in your prayer, Socrates, and pray that this may come to pass, if this is best for us. But all along I have been wondering at your discourse, you made it so much more beautiful than the first; so that I am afraid Lysias will make a poor showing, if he consents to compete with it. Indeed, lately one of the politicians was abusing him for this very thing, and through all his abusive speech kept calling him a speech-writer; so perhaps out of pride he may refrain from writing.

SOCRATES: That is an absurd idea, young man, and you are greatly mistaken in your friend if you think he is so much afraid of noise. Perhaps, too, you think the man who abused him believed what he was saying.

PHAEDRUS: He seemed to believe, Socrates; and you know yourself that the most influential and important men in our cities are ashamed to write speeches and leave writings behind them, through fear of being called sophists by posterity.

SOCRATES: You seem to be unacquainted with the "sweet elbow,"¹¹ Phaedrus, and besides the elbow, you seem not to know that the proudest of the statesmen are most fond of writing and of

¹¹This is a proverbial expression, similar in meaning to our "sour grapes." The explanation given in the MSS., that the sweet elbow gets its name from the long bend, or elbow, in the Nile may be an addition by some commentator; at any rate, it hardly fits our passage. [Tr.]

leaving writings behind them, since they care so much for praise that when they write a speech they add at the beginning the names of those who praise them in each instance.

PHAEDRUS: What do you mean? I don't understand.

SOCRATES: You don't understand that the name of the approver is written first in the writings of statesmen.

PHAEDRUS: How so?

SOCRATES: The writer says, "It was voted by the senate (or the people, or both), and so-and-so-moved," mentioning his own name with great dignity and praise, then after that he goes on, displaying his own wisdom to his approvers, and sometimes making a very long document. Does it seem to you that a thing of that sort is anything else than a written speech?

PHAEDRUS: No, certainly not.

SOCRATES: Then if this speech is approved, the writer leaves the theatre in great delight; but if it is not recorded and he is not granted the privilege of speech-writing and is not considered worthy to be an author, he is grieved, and his friends with him.

PHAEDRUS: Decidedly.

SOCRATES: Evidently not because they despise the profession, but because they admire it.

PHAEDRUS: To be sure.

SOCRATES: Well then, when an orator or a king is able to rival the greatness of Lysurgus or Solon or Darius and attain immortality as a writer in the state, does he not while living think himself equal to the gods, and has not posterity the same opinion of him, when they see his writings?

PHAEDRUS: Very true.

SOCRATES: Do you think, then, that any of the statesmen, no matter how ill-disposed toward Lysias, reproaches him for being a writer?

PHAEDRUS: It is not likely, according to what you say; for he would be casting reproach upon that which he himself desires to be.

SOCRATES: Then that is clear to all, that writing speeches is not in itself a disgrace.

PHAEDRUS: How can it be?

SOCRATES: But the disgrace, I fancy, consists in speaking or writing not well, but disgracefully and badly.

PHAEDRUS: Evidently.

SOCRATES: What, then, is the method of writ-

ing well or badly? Do we want to question Lysias about this, and anyone else who ever has written or will write anything, whether a public or private document, in verse or in prose, be he poet or ordinary man?

PHAEDRUS: You ask if we want to question them? What else should one live for, so to speak, but for such pleasures? Certainly not for those which cannot be enjoyed without previous pain, which is the case with nearly all bodily pleasures and causes them to be justly called slavish.

SOCRATES: We have plenty of time, apparently; and besides, the locusts seem to be looking down upon us as they sing and talk with each other in the heat. Now if they should see us not conversing at midday, but, like most people, dozing, lulled to sleep by their song because of our mental indolence, they would quite justly laugh at us, thinking that some slaves had come to their resort and were slumbering about the fountain at noon like sheep. But if they see us conversing and sailing past them unmoved by the charm of their Siren voices, perhaps they will be pleased and give us the gift which the gods bestowed on them to give to men.

PHAEDRUS: What is this gift? I don't seem to have heard of it.

SOCRATES: It is quite improper for a lover of the Muses never to have heard of such things. The story goes that these locusts were once men, before the birth of the Muses, and when the Muses were born and song appeared, some of the men were so overcome with delight that they sang and sang, forgetting food and drink, until at last unconsciously they died. From them the locust tribe afterwards arose, and they have this gift from the Muses, that from the time of their birth they need no sustenance, but sing continually, without food or drink, until they die, when they go to the Muses and report who honors each of them on earth. They tell Terpsichore of those who have honored her in dances, and make them dearer to her; they gain the favor of Erato for the poets of love, and that of the other Muses for their votaries, according to their various ways of honoring them; and to Calliope, the eldest of the Muses, and to Urania who is next to her, they make report of those who pass their lives in philosophy and who worship these Muses who are

most concerned with heaven and with thought divine and human and whose music is the sweetest. So for many reasons we ought to talk and not sleep in the noontime.

PHAEDRUS: Yes, we ought to talk.

SOCRATES: We should, then, as we were proposing just now, discuss the theory of good (or bad) speaking and writing.

PHAEDRUS: Clearly.

SOCRATES: If a speech is to be good, must not the mind of the speaker know the truth about the matters of which he is to speak?

PHAEDRUS: On that point, Socrates, I have heard that one who is to be an orator does not need to know what is really just, but what would seem just to the multitude who are to pass judgment, and not what is really good or noble, but what will seem to be so; for they say that persuasion comes from what seems to be true, not from the truth.

SOCRATES: "The word," Phaedrus, which the wise "speak must not be rejected,"¹² but we must see if they are right; so we must not pass by this which you just said.

PHAEDRUS: You are right.

SOCRATES: Let us then examine it in this way.

PHAEDRUS: How?

SOCRATES: If I should urge you to buy a horse and fight against the invaders, and neither of us knew what a horse was, but I merely knew this about you, that Phaedrus thinks a horse is the one of the tame animals which has the longest ears—

PHAEDRUS: It would be ridiculous, Socrates.

SOCRATES: No, not yet; but if I tried to persuade you in all seriousness, composing a speech in praise of the ass, which I called a horse, and saying that the beast was a most valuable possession at home and in war, that you could use him as a mount in battle, and that he was able to carry baggage and was useful for many other purposes—

PHAEDRUS: Then it would be supremely ridiculous.

SOCRATES: But is it not better to be ridiculous than to be clever and an enemy?

PHAEDRUS: To be sure.

SOCRATES: Then when the orator who does not

¹²Homer, *Iliad* ii. 361. [Tr.]

know what good and evil are undertakes to persuade a state which is equally ignorant, not by praising the “shadow of an ass”¹³ under the name of a horse, but by praising evil under the name of good, and having studied the opinions of the multitude persuades them to do evil instead of good, what harvest do you suppose his oratory will reap thereafter from the seed he has sown?

PHAEDRUS: No very good harvest.

SOCRATES: Well, do you think we have reproached the art of speaking too harshly? Perhaps she might say: “Why do you talk such nonsense, you strange men? I do not compel anyone to learn to speak without knowing the truth, but if my advice is of any value, he learns that first and then acquires me. So what I claim is this, that without my help the knowledge of the truth does not give the art of persuasion.”

PHAEDRUS: And will she be right in saying this?

SOCRATES: Yes, if the arguments that are coming against her testify that she is an art. For I seem, as it were, to hear some arguments approaching and protesting that she is lying and is not an art, but a craft devoid of art. A real art of speaking, says the Laconian, which does not seize hold of truth, does not exist and never will.

PHAEDRUS: We have need of these arguments, Socrates. Bring them here and examine their words and their meaning.

SOCRATES: Come here, then, noble creatures, and persuade the fair young Phaedrus that unless he pay proper attention to philosophy he will never be able to speak properly about anything. And let Phaedrus answer.

PHAEDRUS: Ask your questions.

SOCRATES: Is not rhetoric in its entire nature an art which leads the soul by means of words, not only in law courts and the various other public assemblages, but in private companies as well? And is it not the same when concerned with small things as with great, and, properly speaking, no more to be esteemed in important than in trifling matters? Is this what you have heard?

PHAEDRUS: No, by Zeus, not that exactly; but the art of speaking and writing is exercised

chiefly in lawsuits, and that of speaking also in public assemblies; and I never heard of any further uses.

SOCRATES: Then you have heard only of the treatises on rhetoric by Nestor and Odysseus, which they wrote when they had nothing to do at Troy, and you have not heard of that by Palamedes?

PHAEDRUS: Nor of Nestor’s either, unless you are disguising Gorgias under the name of Nestor and Thrasymachus or Theodorus under that of Odysseus.¹⁴

SOCRATES: Perhaps I am. However, never mind them; but tell me, what do the parties in a lawsuit do in court? Do they not contend in speech, or what shall we say they do?

PHAEDRUS: Exactly that.

SOCRATES: About the just and the unjust?

PHAEDRUS: Yes.

SOCRATES: Then he whose speaking is an art will make the same thing appear to the same persons at one time just and at another, if he wishes, unjust?

PHAEDRUS: Certainly.

SOCRATES: And in political speaking he will make the same things seem to the State at one time good and at another the opposite?

PHAEDRUS: Just so.

SOCRATES: Do we not know that the Eleatic Palamedes (Zeno) has such an art of speaking that the same things appear to his hearers to be alike and unlike, one and many, stationary and in motion?

PHAEDRUS: Certainly.

SOCRATES: Then the art of contention in speech is not confined to courts and political gatherings, but apparently, if it is an art at all, it would be one and the same in all kinds of speaking, the art by which a man will be able to produce a resemblance between all things between which it can be produced, and to bring to the light the resemblances produced and disguised by anyone else.

PHAEDRUS: What do you mean by that?

¹⁴Nestor and Odysseus are depicted by Homer as the most skillful speakers among the Greeks at Troy. Palamedes is another name for the philosopher Zeno. Thrasymachus and Theodorus, like Gorgias, were Sophists. [Ed.]

¹³A proverbial expression. [Tr.]

SOCRATES: I think it will be plain if we examine the matter in this way. Is deception easier when there is much difference between things or when there is little?

PHAEDRUS: When there is little.

SOCRATES: And if you make a transition by small steps from anything to its opposite you will be more likely to escape detection than if you proceed by leaps and bounds.

PHAEDRUS: Of course.

SOCRATES: Then he who is to deceive another, and is not to be deceived himself, must know accurately the similarity and dissimilarity of things.

PHAEDRUS: Yes, he must.

SOCRATES: Now will he be able, not knowing the truth about a given thing, to recognize in other things the great or small degree of likeness to that which he does not know?

PHAEDRUS: It is impossible.

SOCRATES: In the case, then, of those whose opinions are at variance with facts and who are deceived, this error evidently slips in through some resemblances.

PHAEDRUS: It does happen in that way.

SOCRATES: Then he who does not understand the real nature of things will not possess the art of making his hearers pass from one thing to its opposite by leading them through the intervening resemblances, or of avoiding such deception himself?

PHAEDRUS: Never in the world.

SOCRATES: Then, my friend, he who knows not the truth, but pursues opinions, will, it seems, attain an art of speech which is ridiculous, and not an art at all.

PHAEDRUS: Probably.

SOCRATES: Shall we look in the speech of Lysias, which you have with you, and in what I said, for something which we think shows art and the lack of art?

PHAEDRUS: By all means, for now our talk is too abstract, since we lack sufficient examples.

SOCRATES: And by some special good fortune, as it seems, the two discourses contain an example of the way in which one who knows the truth may lead his hearers on with sportive words; and I, Phaedrus, think the divinities of the place are the cause thereof; and perhaps, too, the prophets of the Muses, who are singing above our

heads, may have granted this boon to us by inspiration; at any rate, I possess no art of speaking.

PHAEDRUS: So be it; only make your meaning clear.

SOCRATES: Read me the beginning of Lysias' discourse.

PHAEDRUS: You know what my condition is, and you have heard how I think it is to our advantage to arrange these matters. And I claim that I ought not to be refused what I ask because I am not your lover. For lovers repent of—

SOCRATES: Stop. Now we must tell what there is in this that is faulty and lacks art, must we not?

PHAEDRUS: Yes.

SOCRATES: It is clear to everyone that we are in accord about some matters of this kind and at variance about others, is it not?

PHAEDRUS: I think I understand your meaning, but express it still more clearly.

SOCRATES: When one says "iron" or "silver," we all understand the same thing, do we not?

PHAEDRUS: Surely.

SOCRATES: What if he says "justice" or "goodness"? Do we not part company, and disagree with each other and with ourselves?

PHAEDRUS: Certainly.

SOCRATES: Then in some things we agree and in others we do not.

PHAEDRUS: True.

SOCRATES: Then in which of the two are we more easy to deceive, and in which has rhetoric the greater power?

PHAEDRUS: Evidently in the class of doubtful things.

SOCRATES: Then he who is to develop an art of rhetoric must first make a methodical division and acquire a clear impression of each class, that in which people must be in doubt and that in which they are not.

PHAEDRUS: He who has acquired that would have conceived an excellent principle.

SOCRATES: Then I think when he has to do with a particular case, he will not be ignorant, but will know clearly to which of the two classes the thing belongs about which he is to speak.

PHAEDRUS: Of course.

SOCRATES: Well then, to which does Love belong? To the doubtful things or the others?

PHAEDRUS: To the doubtful, surely; if he did

not, do you think he would have let you say what you said just now about him, that he is an injury to the beloved and to the lover, and again that he is the greatest of blessings?

SOCRATES: Excellent. But tell me this—for I was in such an ecstasy that I have quite forgotten—whether I defined love in the beginning of my discourse.

PHAEDRUS: Yes, by Zeus, and wonderfully well.

SOCRATES: Oh, how much more versed the nymphs, daughters of Achelous, and Pan, son of Hermes, are in the art of speech than Lysias, son of Cephalus! Or am I wrong, and did Lysias also, in the beginning of his discourse on Love, compel us to suppose Love to be some one thing which he chose to consider it, and did he then compose and finish his discourse with that in view? Shall we read the beginning of it again?

PHAEDRUS: If you like; but what you seek is not in it.

SOCRATES: Read, that I may hear Lysias himself.

PHAEDRUS: You know what my condition is, and you have heard how I think it is to our advantage to arrange these matters. And I claim that I ought not to be refused what I ask because I am not your lover. For lovers repent of the kindnesses they have done when their passion ceases.

SOCRATES: He certainly does not at all seem to do what we demand, for he does not even begin at the beginning, but undertakes to swim on his back up the current of his discourse from its end, and begins with what the lover would say at the end to his beloved. Am I not right, Phaedrus my dear?

PHAEDRUS: Certainly that of which he speaks is an ending.

SOCRATES: And how about the rest? Don't you think the parts of the discourse are thrown out helter-skelter? Or does it seem to you that the second topic had to be put second for any cogent reason, or that any of the other things he says are so placed? It seemed to me, who am wholly ignorant, that the writer uttered boldly whatever occurred to him. Do you know any rhetorical reason why he arranged his topics in this order?

PHAEDRUS: You flatter me in thinking that I can discern his motives so accurately.

SOCRATES: But I do think you will agree to this, that every discourse must be organized, like a living being, with a body of its own, as it were, so as not to be headless or footless, but to have a middle and members, composed in fitting relation to each other and to the whole.

PHAEDRUS: Certainly.

SOCRATES: See then whether this is the case with your friend's discourse, or not. You will find that it is very like the inscription that some say is inscribed on the tomb of Midas the Phrygian.

PHAEDRUS: What sort of inscription is that, and what is the matter with it?

SOCRATES: This is it:

A bronze maiden am I; and I am placed upon the tomb of Midas.

So long as water runs and tall trees put forth leaves,
Remaining in this very spot upon a much lamented tomb,

I shall declare to passers by that Midas is buried here;

and you perceive, I fancy, that it makes no difference whether any line of it is put first or last.

PHAEDRUS: You are making fun of our discourse, Socrates.

SOCRATES: Then, to spare your feelings, let us say no more of this discourse—and yet I think there were many things in it which would be useful examples to consider, though not exactly to imitate—and let us turn to the other discourses; for there was in them, I think, something which those who wish to investigate rhetoric might well examine.

PHAEDRUS: What do you mean?

SOCRATES: The two discourses were opposites; for one maintained that the lover, and the other that the nonlover, should be favored.

PHAEDRUS: And they did it right manfully.

SOCRATES: I thought you were going to speak the truth and say “madly”; however, that is just what I had in mind. We said that love was a kind of madness, did we not?

PHAEDRUS: Yes.

SOCRATES: And that there are two kinds of madness, one arising from human diseases, and the other from a divine release from the customary habits.

PHAEDRUS: Certainly.

SOCRATES: And we made four divisions of the divine madness, ascribing them to four gods, saying that prophecy was inspired by Apollo, the mystic madness of Dionysus, the poetic by the Muses, and the madness of love, inspired by Aphrodite and Eros, we said was the best. We described the passion of love in some sort of figurative manner, expressing some truth, perhaps, and perhaps being led away in another direction, and after composing a somewhat plausible discourse, we chanted a sportive and mythic hymn in need and pious strain to the honor of your lord and mine, Phaedrus, Love, the guardian of beautiful boys.

PHAEDRUS: Yes, and I found it very pleasant to hear.

SOCRATES: Here let us take up this point and see how the discourse succeeded in passing from blame to praise.

PHAEDRUS: What do you mean?

SOCRATES: It seems to me that the discourse was, as a whole, really sportive jest; but in these chance utterances were involved two principles, the essence of which it would be gratifying to learn, if art could teach it.

PHAEDRUS: What principles?

SOCRATES: That of perceiving and bringing together in one idea the scattered particulars, that one may make clear by definition the particular thing which he wishes to explain; just as now, in speaking of Love, we said what he is and defined it, whether well or ill. Certainly by this means the discourse acquired clearness and consistency.

PHAEDRUS: And what is the other principle, Socrates?

SOCRATES: That of dividing things again by classes, where the natural joints are, and not trying to break any part, after the manner of a bad carver. As our two discourses just now assumed one common principle, unreason, and then, just as the body, which is one, is naturally divisible into two, right and left, with parts called by the same names, so our two discourses conceived of madness as naturally one principle within us, and one discourse, cutting off the left-hand part, continued to divide this until it found among its parts a sort of left-handed love, which is very justly reviled, but the other discourse, leading us to the

right-hand part of madness, found a love having the same name as the first, but divine, which it held up to view and praised as the author of our greatest blessings.

PHAEDRUS: Very true.

SOCRATES: Now I myself, Phaedrus, am a lover of these processes of division and bringing together, as aids to speech and thought; and if I think any other man is able to see things that can naturally be collected into one and divided into many, him I follow after and "walk in his footsteps as if he were a god."¹⁵ And whether the name I give to those who can do this is right or wrong, God knows, but I have called them hitherto dialecticians. But tell me now what name to give to those who are taught by you and Lysias, or is this that art of speech by means of which Thrasymachus and the rest have become able speakers themselves, and make others so, if they are willing to pay them royal tribute?

PHAEDRUS: They are royal men, but not trained in the matters about which you ask. I think you give this method the right name when you call it dialectic; but it seems to me that rhetoric still escapes us.

SOCRATES: What do you mean? Can there be anything of importance, which is not included in these processes and yet comes under the head of art? Certainly you and I must not neglect it, but must say what it is that remains of rhetoric.

PHAEDRUS: A great many things remain, Socrates, the things that are written in the books on rhetoric.

SOCRATES: Thank you for reminding me. You mean that there must be an introduction first, at the beginning of the discourse; these are the things you mean, are they not?—the niceties of the art.

PHAEDRUS: Yes.

SOCRATES: And the narrative must come second with the testimony after it, and third the proofs, and fourth the probabilities; and confirmation and further confirmation are mentioned, I believe, by the man from Byzantium, that most excellent artist in words.

PHAEDRUS: You mean the worthy Theodorus?

¹⁵Homer, *Odyssey* v, 193. ὁ δ' ἔπειτα μετ' ἵχθυα βαῖνε θεοῦ (and he walked in the footsteps of the god). [Tr.]

SOCRATES: Of course. And he tells how refutation and further refutation must be accomplished, both in accusation and in defense. Shall we not bring the illustrious Parian, Evenus, into our discussion, who invented covert allusion and indirect praises? And some say that he also wrote indirect censures, composing them in verse as an aid to memory; for he is a clever man. And shall we leave Gorgias and Tisias undisturbed, who saw that probabilities are more to be esteemed than truths, who make small things seem great and great things small by the power of their words, and new things old and old things the reverse, and who invented conciseness of speech and measureless length on all subjects? And once when Prodicus heard these inventions, he laughed, and said that he alone had discovered the art of proper speech, that discourses should be neither long nor short, but of reasonable length.

PHAEDRUS: O Prodicus! How clever!

SOCRATES: And shall we not mention Hippias, our friend from Elis? I think he would agree with him.

PHAEDRUS: Oh yes.

SOCRATES: And what shall we say of Polus and his shrines of learned speech, such as duplication and sententiousness and figurativeness, and what of the names with which Licymnius presented him to effect beautiful diction?

PHAEDRUS: Were there not some similar inventions of Protagoras, Socrates?

SOCRATES: Yes, my boy, correctness of diction, and many other fine things. For tearful speeches, to arouse pity for old age and poverty, I think the precepts of the mighty Chalcedonian hold the palm,¹⁶ and he is also a genius, as he said, at rousing large companies to wrath, and soothing them again by his charms when they are angry, and most powerful in devising and abolishing calumnies on any grounds whatsoever. But all seem to be in agreement concerning the conclusion of discourses, which some call recapitulation, while others give it some other name.

¹⁶Evenus, Prodicus, Hippias, Licymnius, Protagoras, Tisias (one of the first rhetoricians), Polus (probably not the Polus of the *Gorgias*), and “the mighty Chalcedonian” (Thrasymachus), like Gorgias, were all Sophists, and some appear as interlocutors in other Platonic dialogues. [Ed.]

PHAEDRUS: You mean making a summary of the points of the speech at the end of it, so as to remind the hearers of what has been said?

SOCRATES: These are the things I mean, these and anything else you can mention concerned with the art of rhetoric.

PHAEDRUS: There are only little things, not worth mentioning.

SOCRATES: Never mind the little things; let us bring these other things more under the light and see what force of art they have and when.

PHAEDRUS: They have a very powerful force, at least in large assemblies.

SOCRATES: They have; but my friend, see if you agree with me in thinking that their warp has gaps in it.

PHAEDRUS: Go on and show them.

SOCRATES: Tell me; if anyone should go to your friend Eryximachus or to his father Acumenus and should say “I know how to apply various drugs to people, so as to make them warm, or, if I wish, cold, and I can make them vomit, if I like, or can make their bowels move, and all that sort of thing; and because of this knowledge I claim that I am a physician and can make any other man a physician, to whom I impart the knowledge of these things”; what do you think they would say?

PHAEDRUS: They would ask him of course, whether he knew also whom he ought to cause to do these things, and when, and how much.

SOCRATES: If then he should say: “No, not at all; but I think that he who has learned these things from me will be able to do by himself the things you ask about”?

PHAEDRUS: They would say, I fancy, that the man was crazy and, because he had read something in a book or had stumbled upon some medicines, imagined that he was a physician when he really had no knowledge of the art.

SOCRATES: And what if someone should go to Sophocles or Euripides and should say that he knew how to make very long speeches about a small matter, and very short ones about a great affair, and pitiful utterances, if he wished, and again terrible and threatening ones, and all that sort of thing, and that he thought by imparting those things he could teach the art of writing tragedies?

PHAEDRUS: They also, I fancy, Socrates, would laugh at him, if he imagined that tragedy was anything else than the proper combination of these details in such a way that they harmonize with each other and with the whole composition.

SOCRATES: But they would not, I suppose, rebuke him harshly, but they would behave as a musician would, if he met a man who thought he understood harmony because he could strike the highest and lowest notes. He would not say roughly, "You wretch, you are mad," but being a musician, he would say in gentler tones, "My friend, he who is to be a harmonist must know these things you mention, but nothing prevents one who is at your stage of knowledge from being quite ignorant of harmony. You know the necessary preliminaries of harmony, but not harmony itself."

PHAEDRUS: Quite correct.

SOCRATES: So Sophocles would say that the man exhibited the preliminaries of tragedy, not tragedy itself, and Acumenus that he knew the preliminaries of medicine, not medicine itself.

PHAEDRUS: Exactly so.

SOCRATES: Well then, if the mellifluous Adrastus¹⁷ or Pericles¹⁸ heard of the excellent accomplishments which we just enumerated, brachylogies and figurative speech and all the other things we said we must bring to the light and examine, do we suppose they would, like you and me, be so illbred as to speak discourteously of those who have written and taught these things as the art of rhetoric? Would they not, since they are wiser than we, censure us also and say, "Phaedrus and Socrates, we ought not to be angry, but lenient, if certain persons who are ignorant of dialectics have been unable to define the nature of rhetoric and on this account have thought, when they possessed the knowledge that is a necessary preliminary to rhetoric, that they had discovered rhetoric, and believe that by

¹⁷Tyrtaeus, ed. Bergk, first ed. frg. 9, 7, οὐδ' εἴ Τανχά'. δεῶ Πέλοπος βασιλεύτερος εἶη γλώσσαν δ' Ἀδρήστου μελιχόγηρον ἔχοι, "not even if he were more kingly than Pelops and had the mellifluous tongue of Adrastus." Perhaps the orator Antiphon is referred to under the name of Adrastus, cf. chapter xliii above. [Tr.]

¹⁸Pericles and Adrastus are cited here as examples of men who put oratory to beneficial public use. [Ed.]

teaching these preliminaries to others they have taught them rhetoric completely, and that the persuasive use of these details and the composition of the whole discourse is a small matter which their pupils must supply of themselves in their writings or speeches."

PHAEDRUS: Well, Socrates, it does seem as if that which those men teach and write about as the art of rhetoric were such as you describe. I think you are right. But how and from whom is the truly rhetorical and persuasive art to be acquired?

SOCRATES: Whether one can acquire it, so as to become a perfect orator, Phaedrus, is probably, and perhaps must be, dependent on conditions, like everything else. If you are naturally rhetorical, you will become a notable orator, when to your natural endowments you have added knowledge and practice; at whatever point you are deficient in these, you will be incomplete. But so far as the art is concerned, I do not think the quest of it lies along the path of Lysias and Thrasymachus.

PHAEDRUS: Where then?

SOCRATES: I suppose, my friend, Pericles is the most perfect orator in existence.

PHAEDRUS: Well?

SOCRATES: All great arts demand discussion and high speculation about nature; for this loftiness of mind and effectiveness in all directions seem somehow to come from such pursuits. This was in Pericles added to his great natural abilities; for it was, I think, his falling in with Anaxagoras, who was just such a man, that filled him with high thoughts and taught him the nature of mind and of lack of mind, subjects about which Anaxagoras used chiefly to discourse, and from these speculations he drew and applied to the art of speaking what is of use to it.

PHAEDRUS: What do you mean by that?

SOCRATES: The method of the art of healing is much the same as that of rhetoric.

PHAEDRUS: How so?

SOCRATES: In both cases you must analyze a nature, in one that of the body and in the other that of the soul, if you are to proceed in a scientific manner, not merely by practice and routine, to impart health and strength to the body by prescribing medicine and diet, or by proper dis-

courses and training to give to the soul the desired belief and virtue.

PHAEDRUS: That, Socrates, is probably true.

SOCRATES: Now do you think one can acquire any appreciable knowledge of the nature of the soul without knowing the nature of the whole man?

PHAEDRUS: If Hippocrates the Asclepiad is to be trusted, one cannot know the nature of the body, either, except in that way.

SOCRATES: He is right, my friend; however, we ought not to be content with the authority of Hippocrates, but to see also if our reason agrees with him on examination.

PHAEDRUS: I assent.

SOCRATES: Then see what Hippocrates and true reason say about nature. In considering the nature of anything, must we not consider first, whether that in respect to which we wish to be learned ourselves and to make others learned is simple or multiform, and then, if it is simple, enquire what power of acting it possesses, or of being acted upon, and by what, and if it has many forms, number them, and then see in the case of each form, as we did in the case of the simple nature, what its action is and how it is acted upon and by what?

PHAEDRUS: Very likely, Socrates.

SOCRATES: At any rate, any other mode of procedure would be like the progress of a blind man. Yet surely he who pursues any study scientifically ought not to be comparable to a blind or a deaf man, but evidently the man whose rhetorical teaching is a real art will explain accurately the nature of that to which his words are to be addressed, and that is the soul, is it not?

PHAEDRUS: Of course.

SOCRATES: Then this is the goal of all his effort; he tries to produce conviction in the soul. Is not that so?

PHAEDRUS: Yes.

SOCRATES: So it is clear that Thrasymachus, or anyone else who seriously teaches the art of rhetoric, will first describe the soul with perfect accuracy and make us see whether it is one and all alike, or, like the body, of multiform aspect; for this is what we call explaining its nature.

PHAEDRUS: Certainly.

SOCRATES: And secondly he will say what its

action is and toward what it is directed, or how it is acted upon and by what.

PHAEDRUS: To be sure.

SOCRATES: Thirdly, he will classify the speeches and the souls and will adapt each to the other, showing the causes of the effects produced and why one kind of soul is necessarily persuaded by certain classes of speeches, and another is not.

PHAEDRUS: That would, I think, be excellent.

SOCRATES: By no other method of exposition or speech will this, or anything else, ever be written or spoken with real art. But those whom you have heard, who write treatises on the art of speech nowadays, are deceivers and conceal the nature of the soul, though they know it very well. Until they write and speak by this method we cannot believe that they write by the rules of art.

PHAEDRUS: What is this method?

SOCRATES: It is not easy to tell the exact expressions to be used; but I will tell how one must write, if one is to do it, so far as possible, in a truly artistic way.

PHAEDRUS: Speak then.

SOCRATES: Since it is the function of speech to lead souls by persuasion, he who is to be a rhetorician must know the various forms of soul. Now they are so and so many and of such and such kinds, wherefore men also are of different kinds: these we must classify. Then there are also various classes of speeches, to one of which every speech belongs. So men of a certain sort are easily persuaded by speeches of a certain sort for a certain reason to actions or beliefs of a certain sort, and men of another sort cannot be so persuaded. The student of rhetoric must, accordingly, acquire a proper knowledge of these classes and then be able to follow them accurately with his senses when he sees them in the practical affairs of life; otherwise he can never have any profit from the lectures he may have heard. But when he has learned to tell what sort of man is influenced by what sort of speech, and is able, if he comes upon such a man, to recognize him and to convince himself that this is the man and this now actually before him is the nature spoken of in a certain lecture, to which he must now make a practical application of a certain kind of speech in a certain way to persuade

his hearer to a certain action or belief—when he has acquired all this, and has added thereto a knowledge of the times for speaking and for keeping silence, and has also distinguished the favorable occasions for brief speech or pitiful speech or intensity and all the classes of speech which he has learned, then, and not till then, will his art be fully and completely finished; and if anyone who omits any of these points in his speaking or writing claims to speak by the rules of art, the one who disbelieves him is the better man. “Now then,” perhaps the writer of our treatise will say, “Phaedrus and Socrates, do you agree to all this? Or must the art of speech be described in some other way?”

PHAEDRUS: No other way is possible, Socrates. But it seems a great task to attain to it.

SOCRATES: Very true. Therefore you must examine all that has been said from every point of view, to see if no shorter and easier road to the art appears, that one may not take a long and rough road, when there is a short and smooth one. If you have heard from Lysias or anyone else anything that can help us, try to remember it and tell it.

PHAEDRUS: If it depended on trying, I might, but just now I have nothing to say.

SOCRATES: Then shall I tell something that I have heard some of those say who make these matters their business?

PHAEDRUS: Pray do.

SOCRATES: Even the wolf, you know, Phaedrus, has a right to an advocate, as they say.

PHAEDRUS: Do you be his advocate.

SOCRATES: Very well. They say that there is no need of treating these matters with such gravity and carrying them back so far to first principles with many words; for, as we said in the beginning of this discussion, he who is to be a competent rhetorician need have nothing at all to do, they say, with truth in considering things which are just or good, or men who are so, whether by nature or by education. For in the courts, they say, nobody cares for truth about these matters, but for that which is convincing; and that is probability, so that he who is to be an artist in speech must fix his attention upon probability. For sometimes one must not even tell what was actually done, if it was not likely to be done, but what was

probable, whether in accusation or defense; and in brief, a speaker must always aim at probability, paying no attention to truth; for this method, if pursued throughout the whole speech, provides us with the entire art.

PHAEDRUS: You have stated just what those say who pretend to possess the art of speech, Socrates. I remember that we touched upon this matter briefly before,¹⁹ but the professional rhetoricians think it is of great importance.

SOCRATES: Well, there is Tisias whom you have studied carefully; now let Tisias himself tell us if he does not say that probability is that which most people think.

PHAEDRUS: That is just what he says.

SOCRATES: Apparently after he had invented this clever scientific definition, he wrote that if a feeble and brave man assaulted a strong coward, robbed him of his cloak or something, and was brought to trial for it, neither party ought to speak the truth; the coward should say that he had not been assaulted by the brave man alone, whereas the other should prove that only they two were present and should use the well-known argument, “How could a little man like me assault such a man as he is?” The coward will not acknowledge his cowardice, but will perhaps try to invent some other lie, and thus give his opponent a chance to confute him. And in other cases there are other similar rules of art. Is that not so, Phaedrus?

PHAEDRUS: Certainly.

SOCRATES: Oh, a wonderfully hidden art it seems to be which Tisias has brought to light, or some other, whoever he may be and whatever country he is proud to call his own! But, my friend, shall we say in reply to this, or shall we not—

PHAEDRUS: What?

SOCRATES: “Tisias, some time ago, before you came along, we were saying that this probability of yours was accepted by the people because of its likeness to truth; and we just stated that he who knows the truth is always best able to discover likenesses. And so, if you have anything else to say about the art of speech, we will listen to you; but if not, we will put our trust in what

¹⁹See 259 E. [Tr.]

we said just now, that unless a man take account of the characters of his hearers and is able to divide things by classes and to comprehend particulars under a general idea, he will never attain the highest human perfection in the art of speech. But this ability he will not gain without much diligent toil, which a wise man ought not to undergo for the sake of speaking and acting before men, but that he may be able to speak and to do everything, so far as possible, in a manner pleasing to the gods. For those who are wiser than we, Tisias, say that a man of sense should surely practice to please not his fellow slaves, except as a secondary consideration, but his good and noble masters. Therefore, if the path is long, be not astonished; for it must be trodden for great ends, not for those you have in mind. Yet your ends also, as our argument says, will be best gained in this way, if one so desires."

PHAEDRUS: I think what you have said is admirable, if one could only do it.

SOCRATES: But it is noble to strive after noble objects, no matter what happens to us.

PHAEDRUS: Certainly.

SOCRATES: We have, then, said enough about the art of speaking and that which is no art.

PHAEDRUS: Assuredly.

SOCRATES: But we have still to speak of propriety and impropriety in writing, how it should be done and how it is improper, have we not?

PHAEDRUS: Yes.

SOCRATES: Do you know how you can act or speak about rhetoric so as to please God best?

PHAEDRUS: Not at all; do you?

SOCRATES: I can tell something I have heard of the ancients; but whether it is true, they only know. But if we ourselves should find it out, should we care any longer for human opinions?

PHAEDRUS: A ridiculous question! But tell me what you say you have heard.

SOCRATES: I heard, then, that at Naucratis, in Egypt, was one of the ancient gods of that country, the one whose sacred bird is called the ibis, and the name of the god himself was Theuth. He it was who invented numbers and arithmetic and geometry and astronomy, also draughts and dice, and, most important of all, letters. Now the king of all Egypt at that time was the god Thamus, who lived in the great city of the upper region,

which the Greeks call the Egyptian Thebes, and they call the god himself Ammon. To him came Theuth to show his inventions, saying that they ought to be imparted to the other Egyptians. But Thamus asked what use there was in each, and as Theuth enumerated their uses, expressed praise or blame, according as he approved or disapproved. The story goes that Thamus said many things to Theuth in praise or blame of the various arts, which it would take too long to repeat; but when they came to the letters, "This invention, O king," said Theuth, "will make the Egyptians wiser and will improve their memories; for it is an elixir of memory and wisdom that I have discovered." But Thamus replied, "Most ingenious Theuth, one man has the ability to beget arts, but the ability to judge of their usefulness or harmfulness to their users belongs to another; and now you, who are the father of letters, have been led by your affection to ascribe to them a power the opposite of that which they really possess. For this invention will produce forgetfulness in the minds of those who learn to use it, because they will not practice their memory. Their trust in writing, produced by external characters which are no part of themselves, will discourage the use of their own memory within them. You have invented an elixir not of memory, but of reminding; and you offer your pupils the appearance of wisdom, not true wisdom, for they will read many things without instruction and will therefore seem to know many things, when they are for the most part ignorant and hard to get along with, since they are not wise, but only appear wise."

PHAEDRUS: Socrates, you easily make up stories of Egypt or any country you please.

SOCRATES: They used to say, my friend, that the words of the oak in the holy place of Zeus at Dodona were the first prophetic utterances. The people of that time, not being so wise as you young folks, were content in their simplicity to hear an oak or a rock, provided only it spoke the truth; but to you, perhaps, it makes a difference who the speaker is and where he comes from, for you do not consider only whether his words are true or not.

PHAEDRUS: Your rebuke is just; and I think the Theban is right in what he says about letters.

SOCRATES: He who thinks, then, that he has

left behind him any art in writing, and he who receives it in the belief that anything in writing will be clear and certain, would be an utterly simple person, and in truth ignorant of the prophecy of Ammon²⁰ if he thinks written words are of any use except to remind him who knows the matter about which they are written.

PHAEDRUS: Very true.

SOCRATES: Writing, Phaedrus, has this strange quality, and is very like painting; for the creatures of painting stand like living beings, but if one asks them a question, they preserve a solemn silence. And so it is with written words; you might think they spoke as if they had intelligence, but if you question them, wishing to know about their sayings, they always say only one and the same thing. And every word, when once it was written, is bandied about, alike among those who understand and those who have no interest in it, and it knows not to whom to speak or not to speak; when ill-treated or unjustly reviled it always needs its father to help it; for it has no power to protect or help itself.

PHAEDRUS: You are quite right about that, too.

SOCRATES: Now tell me; is there not another kind of speech, or word, which shows itself to be the legitimate brother of this bastard one, both in the manner of its begetting and in its better and more powerful nature?

PHAEDRUS: What is this word and how is it begotten, as you say?

SOCRATES: The word is written with intelligence in the mind of the learner, which is able to defend itself and knows to whom it should speak, and before whom to be silent.

PHAEDRUS: You mean the living and breathing word of him who knows, of which the written word may justly be called the image.

SOCRATES: Exactly. Now tell me this. Would a sensible husbandman, who has seeds which he cares for and which he wishes to bear fruit, plant them with serious purpose in the heat of summer in some garden of Adonis, and delight in seeing them appear in beauty in eight days, or would he do that sort of thing, when he did it at all, only in play and for amusement? Would he not, when he

was in earnest, follow the rules of husbandry, plant his seeds in fitting ground, and be pleased when those which he had sowed reached their perfection in the eighth month?

PHAEDRUS: Yes, Socrates, he would, as you say, act in that way when in earnest and in the other way only for amusement.

SOCRATES: And shall we suppose that he who has knowledge of the just and the good and beautiful has less sense about his seeds than the husbandman?

PHAEDRUS: By no means.

SOCRATES: Then he will not, when in earnest, write them in ink, sowing them through a pen with words which cannot defend themselves by argument and cannot teach the truth effectually.

PHAEDRUS: No, at least, probably not.

SOCRATES: No. The gardens of letters he will, it seems, plant for amusement, and will write, when he writes, to treasure up reminders for himself, when he comes to the forgetfulness of old age, and for others who follow the same path, and he will be pleased when he sees them putting forth tender leaves. When others engage in other amusements, refreshing themselves with banquets and kindred entertainments, he will pass the time in such pleasures as I have suggested.

PHAEDRUS: A noble pastime, Socrates, and a contrast to those base pleasures, the pastime of the man who can find amusement in discourse, telling stories about justice, and the other subjects of which you speak.

SOCRATES: Yes, Phaedrus, so it is; but, in my opinion, serious discourse about them is far nobler, when one employs the dialectic method and plants and sows in a fitting soul intelligent words which are able to help themselves and him who planted them, which are not fruitless, but yield seed from which there spring up in other minds other words capable of continuing the process for ever, and which make their possessor happy, to the farthest possible limit of human happiness.

PHAEDRUS: Yes, that is far nobler.

SOCRATES: And now, Phaedrus, since we have agreed about these matters, we can decide the others.

PHAEDRUS: What others?

SOCRATES: Those which brought us to this point through our desire to investigate them, for

²⁰Ammon, or Zeus, delivered his prophecies only orally, as through the murmuring leaves of the Dodona oak. [Ed.]

we wished to examine into the reproach against Lysias as a speech-writer,²¹ and also to discuss the speeches themselves and see which were the products of art and which were not. I think we have shown pretty clearly what is and what is not a work of art.

PHAEDRUS: Yes, I thought so, too; but please recall to my mind what was said.

SOCRATES: A man must know the truth about all the particular things of which he speaks or writes, and must be able to define everything separately; then when he has defined them, he must know how to divide them by classes until further division is impossible; and in the same way he must understand that nature of the soul, must find out the class of speech adapted to each nature, and must arrange and adorn his discourse accordingly, offering to the complex soul elaborate and harmonious discourses, and simple talks to the simple soul. Until he has attained to all this, he will not be able to speak by the method of art, so far as speech can be controlled by method, either for purposes of instruction or of persuasion. This has been taught by our whole preceding discussion.

PHAEDRUS: Yes, certainly, that is just about our result.

SOCRATES: How about the question whether it is a fine or a disgraceful thing to be a speaker or writer and under what circumstances the profession might properly be called a disgrace or not? Was that made clear a little while ago when we said—

PHAEDRUS: What?

SOCRATES: That if Lysias or anyone else ever wrote or ever shall write, in private, or in public as lawgiver, a political document, and in writing it believes that it possesses great certainty and clearness, then it is a disgrace to the writer, whether anyone says so, or not. For whether one be awake or asleep; ignorance of right and wrong and good and bad is in truth inevitably a disgrace, even if the whole mob applaud it.

PHAEDRUS: That is true.

SOCRATES: But the man who thinks that in the written word there is necessarily much that is playful, and that no written discourse, whether in

meter or in prose, deserves to be treated very seriously (and this applies also to the recitations of the rhapsodes, delivered to sway people's minds, without opportunity for questioning and teaching), but that the best of them really serve only to remind us of what we know; and who thinks that only in words about justice and beauty and goodness spoken by teachers for the sake of instruction and really written in a soul is clearness and perfection and serious value, that such words should be considered the speaker's own legitimate offspring, first the word within himself, if it be found there, and secondly its descendants or brothers which may have sprung up in worthy manner in the souls of others, and who pays no attention to the other words—that man, Phaedrus, is likely to be such as you and I might pray that we ourselves may become.

PHAEDRUS: By all means that is what I wish and pray for.

SOCRATES: We have amused ourselves with talk about words long enough. Go and tell Lysias that you and I came down to the fountain and sacred place of the nymphs, and heard words which they told us to repeat to Lysias and anyone else who composed speeches, and to Homer or any other who has composed poetry with or without musical accompaniment, and third to Solon and whoever has written political compositions which he calls laws:—If he has composed his writings with knowledge of the truth, and is able to support them by discussion of that which he has written, and has the power to show by his own speech that the written words are of little worth, such a man ought not to derive his title from such writings, but from the serious pursuit which underlies them.

PHAEDRUS: What titles do you grant them then?

SOCRATES: I think, Phaedrus, that the epithet “wise” is too great and befits God alone; but the name “philosopher,” that is, “lover of wisdom,” or something of the sort would be more fitting and modest for such a man.

PHAEDRUS: And quite appropriate.

SOCRATES: On the other hand, he who has nothing more valuable than the things he has composed or written, turning his words up and down at his leisure, adding this phrase and taking

²¹See 257 c. [Tr.]

that away, will you not properly address him as poet or writer of speeches or of laws?

PHAEDRUS: Certainly.

SOCRATES: Tell this then to your friend.

PHAEDRUS: But what will you do? For your friend ought not to be passed by.

SOCRATES: What friend?

PHAEDRUS: The fair Isocrates.²² What message will you give him? What shall we say that he is?

SOCRATES: Isocrates is young yet, Phaedrus; however, I am willing to say what I prophesy for him.

PHAEDRUS: What is it?

SOCRATES: I think he has a nature above the speeches of Lysias and possesses a nobler character; so that I should not be surprised if, as he grows older, he should so excel in his present

²²Isocrates, one of the Ten Attic Orators and a well-known educator (p. 67), was roughly contemporary with Plato, although he studied with Gorgias while Plato followed Socrates. Scholars debate about whether the retroactive praise of Isocrates here (he was actually an old man at the time the dialogue was written) is sincere. But Plato's follower Aristotle explicitly condemned Isocrates' teaching on rhetoric. [Ed.]

studies that all who have ever treated of rhetoric shall seem less than children; and I suspect that these studies will not satisfy him, but a more divine impulse will lead him to greater things; for my friend, something of philosophy is inborn in his mind. This is the message that I carry from these deities to my favorite Isocrates, and do you carry the other to Lysias, your favorite.

PHAEDRUS: It shall be done; but now let us go, since the heat has grown gentler.

SOCRATES: Is it not well to pray to the deities here before we go?

PHAEDRUS: Of course.

SOCRATES: O beloved Pan and all ye other gods of this place, grant to me that I be made beautiful in my soul within, and that all external possessions be in harmony with my inner man. May I consider the wise man rich; and may I have such wealth as only the self-restrained man can bear or endure.—Do we need anything more, Phaedrus? For me that prayer is enough.

PHAEDRUS: Let me also share in this prayer; for friends have all things in common.

SOCRATES: Let us go.

Aristotle

384–322 B.C.E.

Aristotle was born to Greek parents in the Macedonian town of Stagira, at about the time that Plato was opening the Academy in Athens. Aristotle's father was court physician to the Macedonian royal family and trained his son in medicine. When Aristotle was seventeen years old, in 367 B.C.E., he went to Athens and entered the Academy. He stayed on as a teacher, leaving twenty years later on Plato's death in 347. According to one story, Plato gave him the nickname "The Reader." An ancient biographical source suggests that Aristotle had a speech impediment; at any rate, so far as is known, he never wrote speeches for public delivery, whether by himself or by others. His oral rhetorical skills were used entirely in teaching.

Aristotle was apparently the first to teach rhetoric at the Academy, as a co-curricular subject offered in the afternoons. His *Rhetoric*, never published in his lifetime, began as notes for these classes. Scholars have suggested that Aristotle taught rhetoric to compete with Isocrates. Aristotle seemed to disapprove of Isocrates' approach to rhetoric as much as Plato did. At about the same time that he started teaching rhetoric (ca. 358), Aristotle wrote a Platonic-style dialogue, the *Gryllus*, now lost, in which he is said to have mounted criticisms of Sophistic rhetoric similar to those in Plato's *Gorgias*. (Aristotle also wrote another work, likewise lost, on rhetoric: the *Theoedectea*, which summarized the views on rhetoric of the playwright and orator Theodectes.) Isocrates' defense of his life work, the *Antidosis* (353 B.C.E.; p. 75), was published not long after Aristotle began to teach rhetoric and may be regarded in part as a riposte. Also at about this time, Aristotle compiled a survey of the rhetoric handbooks up to his day, the *Synagoge Tekhnon*, now lost.

Coming to Athens from the royal court of Macedon, Aristotle was associated in the public mind with Philip of Macedon and his son, Alexander. Hence his fortunes rose and fell in Athens as anti-Macedonian feeling waxed and waned. After 347 B.C.E., Aristotle left Athens not only because, as a foreigner, or metic, he could not assume leadership of Plato's Academy, but also because he needed to avoid the anti-Macedonian feeling aroused there by Philip's military victories. In 342, Philip appointed Aristotle as one of the tutors for the teenaged Alexander; Aristotle served for about two years and then returned to Stagira. The *Rhetorica ad Alexandrum*, the earliest complete Greek manual of rhetoric now extant, was once thought to have been composed by Aristotle for his famous pupil. It is now believed to be the work of Anaximenes.

When Philip died in 336 B.C.E., hostility toward Macedonians abated sufficiently for Aristotle to return to Athens and open his own school, which convened in the covered walk (*peripatos*) adjoining the lyceum, a public gymnasium. Aristotle wrote and taught at the Peripatetic School until 323, when the death of his former student, now Alexander the Great, again aroused anti-Macedonian feeling in Athens. Aristotle left the school to his pupil Theophrastus and died abroad a year later.

Like Plato, Aristotle studied a staggering array of subjects. He taught biology, ethics, politics, rhetoric, and zoology as well as philosophy, and produced many works on these subjects, some now lost. For Aristotle, only scientific demonstration and the analysis of formal logic can arrive at absolute truth. Here he agrees with Plato—both would call this kind of truth the only true knowledge—but Plato emphasized its transcendent origins, whereas Aristotle emphasized the empirical means by which it was obtained. In addition to demonstration and logic, dialectic and rhetoric constitute the other two major methods in Aristotle’s view of human inquiry, but these deal with subjects on which true knowledge is not available. Dialectic arrives at probable knowledge (what Plato called belief) in disciplined academic inquiry that allows for rigorous questioning of premises and testing of conclusions. Rhetoric functions in situations in which such rigorous analysis is not possible (because the audience is not qualified) or desirable (due to the exigency of the questions at hand). Instead of examining everything, rhetorical argument builds, whenever possible, on assumptions the audience already holds. Rhetoric may convey the results of scientific demonstration or dialectic to nonexperts by summarizing the reasoning used to arrive at these results. It may also be used to explore possible solutions to practical problems, such as are likely to confront governmental deliberative bodies or courts of law; it may arrive at probable answers that are more provisional, because less rigorously tested, than the results of dialectic but still trustworthy enough—if the rhetorical process has been conducted properly—for people to use the conclusions to manage their affairs. Thus even though he aligned himself philosophically with Plato, Aristotle reflected some of Isocrates’ concern that rhetoric make itself useful to society.

THE THEORY OF RHETORIC

Aristotle begins the *Rhetoric* (excerpted here) by differentiating himself from those “sophists” whose reprehensible moral purpose is to tell how to pervert the judgments of those addressed (such rhetoricians as are condemned in Plato’s *Gorgias*.) But Aristotle goes on to respond to the more complex views on rhetoric expressed in Plato’s *Phaedrus*. In the *Phaedrus*, rhetoric is ennobled because it persuades others to true knowledge. In the *Rhetoric*, Aristotle attempts to dignify its use in making decisions about matters on which true knowledge is not available. The *Phaedrus* suggests that the proper province for rhetoric is the study of souls and the occasions for moving them. In the *Rhetoric* these elements are analyzed and classified exhaustively.

Yet the *Rhetoric* was probably never intended for publication as a literary work, systematic treatise, or even handbook. It apparently comprises Aristotle’s lecture notes on the subject, gradually assembled during his two stays in Athens (367–347 and 335–323 B.C.E.), when he did most of his rhetoric teaching. Possibly he stopped working on this collection of notes just before returning to Athens for the second time. He never really finished this work, in the sense that a manuscript prepared for publication (like many of his other works) would be finished. Although many readers have felt that he did not always remove ambiguous or contradictory material or

provide cues to a larger structure, classicist W. M. A. Grimaldi, S.J., makes a persuasive argument for the book's coherence. The book divisions are probably Aristotle's; chapter divisions are more likely the work of later editors. Many scholars believe that Books I and II were originally intended as a unit and Book III was added later. Much of the text we have may be the work of his students, redacting their own notes of his lectures.

Dating the *Rhetoric*, therefore, is difficult. The earliest material is probably Book I, Chapters 1–3, which defines a philosophical rhetoric, and Book II, Chapters 23–26, on common topics or lines of argument. Chapters 4–15 in Book I and Chapters 1–17 in Book II were probably inserted later, to link argumentative premises to the occasion of the speech in Book I and to add a discussion of *ethos* and *pathos* to Book II. Book II, Chapters 18–22, a more detailed treatment of enthymeme and example, may have come next. Book III on style and arrangement is probably the last addition (although some material collected there may be among Aristotle's earliest lessons on rhetoric) and the most likely to have come from a student's hand.

Our knowledge of this difficult text is complicated, too, by the fact that after Aristotle's death, his library, including the unpublished manuscript of the *Rhetoric*, passed through various hands and did not reach a scholarly editor until 83 B.C.E., when the collection was sent to Rome. Shortly thereafter, the *Rhetoric* was "published" (hand-copied) for the first time by Andronicus of Rhodes, who was assisted by the grammarian Tyrannio. The first printed edition of the *Rhetoric* was George of Trebizond's Latin translation, published in 1475 C.E. Interestingly, given the relevance of Aristotelian rhetoric to civic life, the first English translation (actually a paraphrase) was prepared by political philosopher Thomas Hobbes and was published in 1637.

Aristotle's rhetorical theory is constructed hierarchically. To understand it, therefore, one must be able to classify his complex terms in relation to each other. Scholars agree that the starting point is Aristotle's division of rhetoric into two major categories: "artistic" proofs, for which the rhetorician constructs the material (e.g., "My client is too good to have committed this crime"), and "inartistic" proofs, for which the rhetorician interprets existing evidence (e.g., "These three witnesses place my client elsewhere at the time the crime was committed"). Traditionally, Aristotle has been read as dividing artistic proofs into appeals to *logos*, *pathos*, and *ethos*. Logical or rational appeals stress the reasonableness of the rhetorician's argument. Pathetic appeals raise emotions favorable to the rhetorician's position. Ethical appeals raise emotions favorable to the rhetorician's moral character.

According to this traditional view, Aristotle next divides rational appeals into "enthymeme," "maxim," and "example." The enthymeme is a form of deductive argument also called the rhetorical syllogism. Scholars disagree about what distinguishes the enthymeme from other syllogisms. A common view is that in the enthymeme the first premise is based on probable, not certain, knowledge, and the entire train of reasoning may be truncated. For example, a syllogism might be: All men are mortal; Socrates is a man; therefore, Socrates is mortal. An enthymeme might be: Socrates is virtuous, for he is wise. The premise that all wise men are virtuous is merely probable, not certain like the premise that all men are mortal; and

the premise is not stated in the enthymeme on the assumption that the audience already knows it. However, these two distinguishing features, although they may be typical of the enthymeme, are not necessary conditions to define it; that is, Aristotle does not forbid the rhetor to employ a train of reasoning that begins from certain knowledge or to state every step in the argument. George Kennedy, a historian of rhetoric and translator of Aristotle's *Rhetoric*, suggests that, in general, the enthymeme is the kind of reasoning an audience of nonexperts can easily understand.¹

A rational appeal to a "maxim" may refer to it as if citing an authority or may provide a kind of premise for enthymemes, as shown at some places in the *Rhetoric*. An example of such usage might be: Let's not rush into this decision, for haste makes waste. (The implied argument is: Haste makes waste [a well-known maxim]; we are hastening into a decision; the decision will turn out badly for us.)

The rational appeal to "example" is inductive argument. Aristotle notes that it is often used most effectively with enthymematic argument. For instance, the rhetor might begin with the following enthymeme: This leader has accepted invitations to lavish entertainments at the homes of the wealthy and therefore we must beware of him, for he is planning to pervert justice in their favor (suppressed here is the premise that those who accept expensive attentions are planning favoritism). The rhetor might then follow this point with several historical examples of leaders who favored the rich after accepting invitations and presents from them.

To explore rational appeals further, Aristotle next must specify the kinds of speeches in which they could be employed. He identifies three: forensic speeches, typical of the law courts, which examine past actions; deliberative speeches, typical of governing bodies, which consider future actions; and epideictic or ceremonial speeches, such as might be given at an awards ceremony or a funeral, which attempt to establish the moral qualities of someone or something in the present. Aristotle suggests that arguments for each of these kinds of speeches can be found by considering *topoi* special to each, as well as *topoi* that are common to all speeches.

A persistent source of difficulty in Aristotle's treatment of rational appeals is his description of *topoi*—topics or "places"—where arguments may be found. The visual imagery of "places" is consistent with other classical rhetorical practices, such as memorizing a speech by visualizing a building and associating each part of the speech with a room and its contents. As George Kennedy points out, it is also especially characteristic of Aristotle's thought.² In the *Rhetoric*, in Books I and II, Aristotle talks about not only "common topics" that can generate arguments for any kind of speech, but also "special topics" that are useful only for a particular kind of speech or subject matter. Because the discussion is dispersed, it is sometimes hard to determine what each kind of topic is. How topics were generally supposed to work can be described, however.

Imagine, for example, that one must compose a eulogy. The eulogist at a loss for words can consult Aristotle's ethical special topics for deliberative and ceremonial speeches in Book I, Chapters 5, 6, and 9, which suggest praising the deceased for

¹George Kennedy, *Aristotle on Rhetoric: A Theory of Civic Discourse* (New York: Oxford University Press, 1991), p. 42.

²Kennedy, p. 45.

his or her ancestry, education, wealth, personal appearance, virtuous children, and so on, as well as for his or her virtuous deeds. These “topics” are useful only in this type of speech. In contrast, imagine the uses for one of the common topics suggested in Book II, Chapter 23, namely, to argue that the purpose for which something might have been done is in fact the purpose for which it was done. The accuser in a legal case, looking for some way to drive home the defendant’s guilt, might argue that the defendant had no reason to go to a secluded spot that the victim was known to frequent except to waylay the victim: Since this might have been the defendant’s purpose in going there, the accuser can argue that it was indeed his or her purpose. Similarly, a diplomat engaged in debate over an untrustworthy ally’s motives might argue that this ally sent an ambassador to a rival state to make a treacherous treaty with it: Since that might have been the ambassador’s purpose in going there, the diplomat can argue that this was probably the purpose. Even the eulogist could use this common topic: Since the deceased might have given money to charity purely from a desire to help the needy (and not, for instance, from a desire to bask in the resulting public praise), the eulogist can assert that the selfless motive was in fact the sole purpose of the benefaction. The special and common topics are intended to help the rhetor invent material for any kind of discourse.

In the traditional reading of Aristotle’s system, classifying enthymeme, example, and maxim under rational appeals has tended to privilege rational appeals and devalue pathetic and ethical appeals. The category of rational appeals thus contains the major argumentative structures, and pathetic and ethical appeals appear to be dispensable. Aristotle seems to encourage this interpretation in the opening chapters of Book I, where he deplores the use of appeals to emotion by other rhetoricians. This view of Aristotle has caused his work on rhetoric to be traditionally associated with arguments that essentially downgrade rhetoric, seeking to minimize its influence and to make its practice as much like dialectic, if not scientific inquiry, as possible.

The very fact that Aristotle taught rhetoric, however, and compiled his ideas into the text we now have suggests that he saw it as a worthy subject of study. Debate over perceived inconsistencies in the text has made some modern scholars dissatisfied with the traditional reading of Aristotle’s system. For example, scholars have noted that after initially condemning pathetic and ethical appeals, Aristotle later gives much advice on how to make good ones. Moreover, the pure rationality of his rational appeals can be questioned on grounds that all three kinds are culture-bound: The maxim is by definition a piece of received wisdom; the example must be drawn from history or mythology known to the audience; and the enthymeme is usually developed from premises that accord with the audience’s view of the world, what is taken to be common sense.

Hence an influential alternative to the traditional reading is the work of Grimaldi, which suggests the hierarchical arrangement depicted in Figure 1.³ Instead of treating rational, ethical, and pathetic appeals as the three major subdivisions of artistic

³William M. A. Grimaldi, S.J., *Studies in the Philosophy of Aristotle’s Rhetoric* (Wiesbaden: Franz Steiner Verlag, 1972). Figure 1 is by the editors of the present volume.

RHETORIC

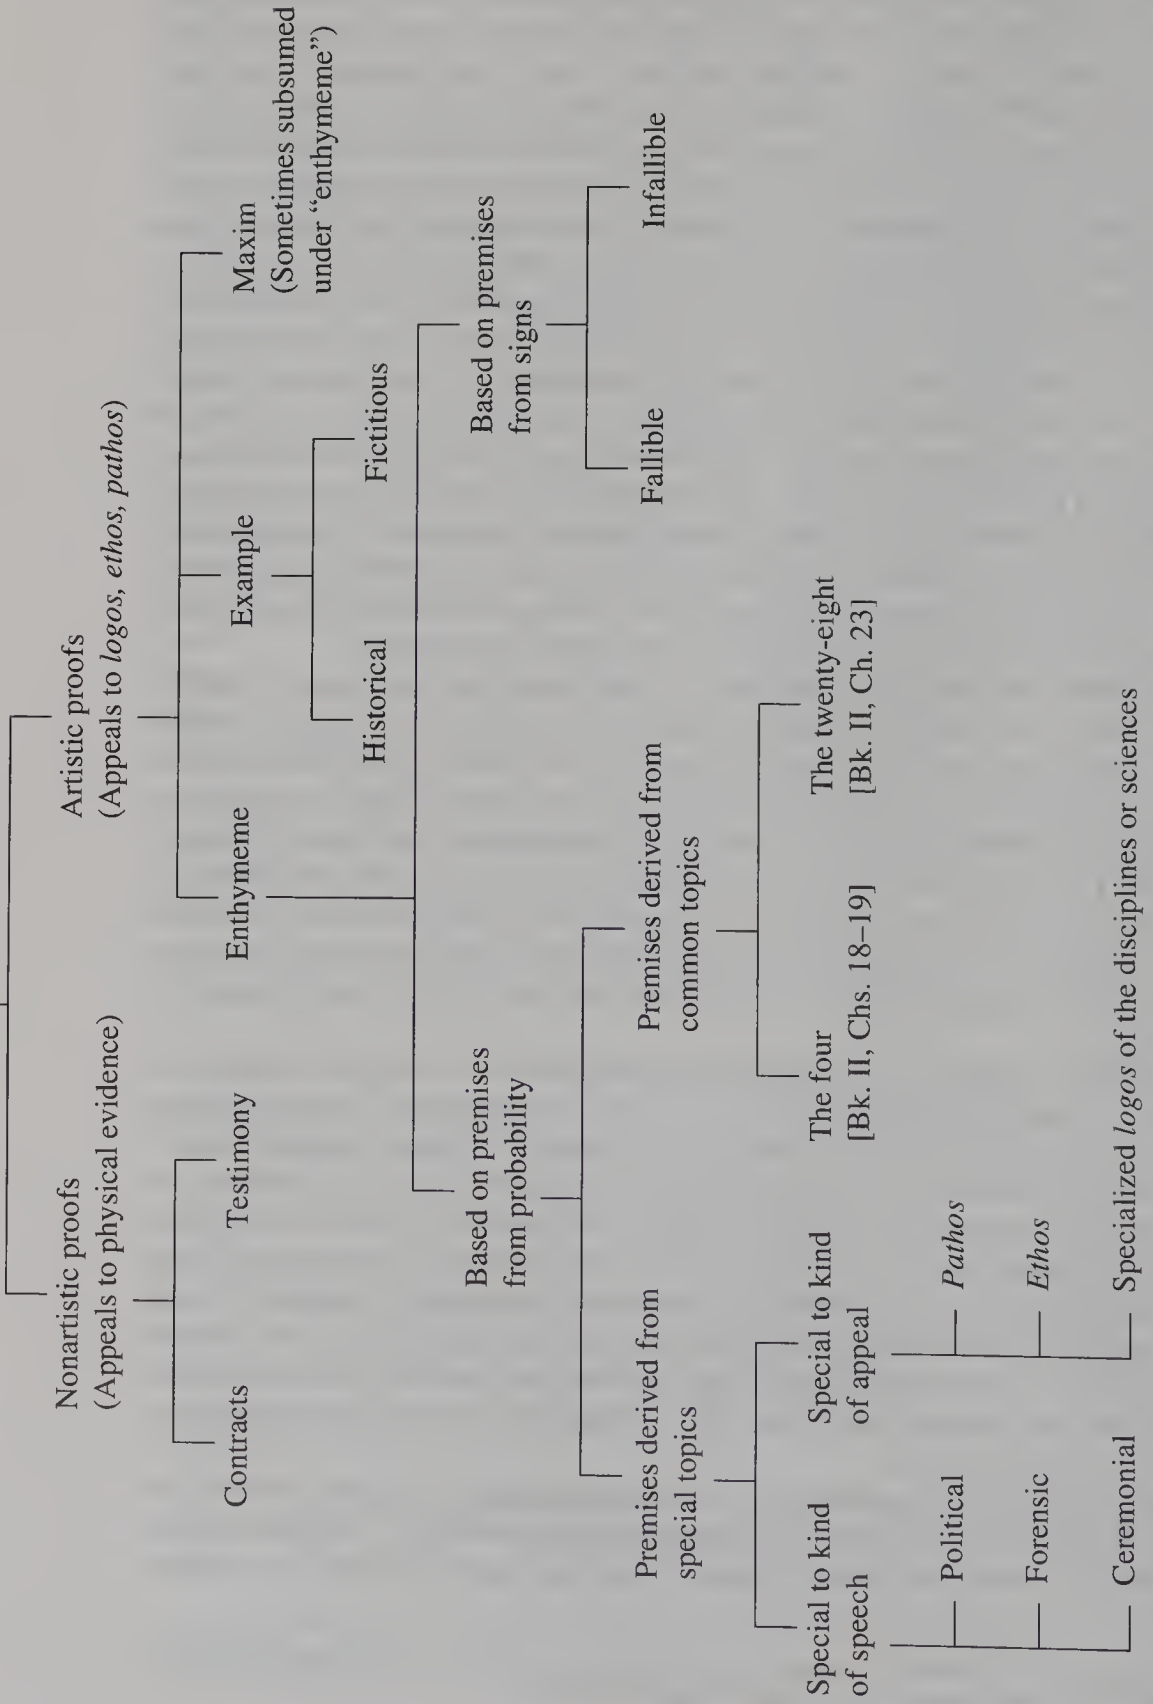

Figure 1

proof, he reads Aristotle as dividing artistic proof into two major categories, enthymeme and example. Rational, ethical, and pathetic appeals then become subdivisions under both enthymeme and example. Grimaldi's reorganization of the traditional reading of Aristotle's system gives all artistic proofs a basically reasonable structure, either deductive (enthymeme)—the one that Grimaldi believes is most important in Aristotle's view—or inductive (example). Rational, ethical, and pathetic appeals are typically present in all reasonable arguments.

This understanding of artistic proofs implies that Aristotle treats rhetoric as legitimately appealing to the whole person, not just to the "rational being." Thus this view undercuts the customary use of Aristotle to defend a purely logical or scientific use of language, free from all circumstantial influences, to convey information.

Aristotle is often cited as the source of the five "canons" or stages in the composing process known to later rhetoricians: invention, arrangement, style, memory, and delivery. Nowhere in the *Rhetoric* does Aristotle outline such a five-stage process. But Books I and II clearly are devoted to what we would now call "invention," developing ideas to be used in a text. Book III touches on delivery only briefly and ignores memory (techniques for memorizing a speech to be delivered orally), and discusses how to arrange the parts of an argument and how to use metaphor and other stylistic devices. Hence most of the five canons can indeed be extrapolated from the *Rhetoric*, as they were by later rhetoricians.

SYNOPSIS OF *RHETORIC*

Included are Book I (all), Book II, Chapters 1–3, 12–13, and 18–25, and Book III, Chapters 1–2, 13, from Aristotle's *Rhetoric*. What follows is a synopsis of the whole work, putting these excerpts in context.

In Book I, Chapters 1–3, Aristotle defines rhetoric as the counterpart ("antistrophē") of dialectic and lays out other key terms. Book I, Chapters 4–8, considers how to make arguments concerning the utility of a future action. This is the kind of question most often addressed in the deliberative speech, which is one of three kinds of speech Aristotle classifies in Book I, Chapter 3. Among other things, political speakers must understand different forms of government so that they can suit their proposals to the interests of the rulers they wish to persuade. "All men are persuaded by considerations of their interest" (Bk. I, Ch. 8). Aristotle classifies governments into four kinds based on who holds power: democracy (the citizens), oligarchy (those with property), aristocracy (those with education in the dominant culture), and monarchy (either a king limited by prescribed conditions, or a tyrant limited by none).

In Book I, Chapter 9, Aristotle considers the arguments special to the second of his three speech categories, the ceremonial: how to make a person seem noble and virtuous or base and vicious. Aristotle notes that these same arguments can be used to develop ethical appeals. In Book I, Chapters 10–14, Aristotle treats arguments special to forensic speeches, the last of the three categories. In suggesting that criminals are motivated by a search for pleasure, Aristotle presents pleasure as a potentially destructive goal, inferior to happiness, much as Plato does in the *Gorgias*.

Also reminiscent of the *Gorgias* is Aristotle's suggestion that criminals prey on those less powerful than they.

Inserted here is a discussion of the relationship of law and justice. In discussing justice Aristotle distinguishes between "particular law," "that which each community lays down and applies to its own members" through written laws and unwritten customs, and "universal law," "the law of nature" that "every one to some extent divines" and that is binding even between people who are not united politically (Bk. I, Ch. 13). Some legal cruxes call for an appeal to universal law, the "equity" that "goes beyond the written law" and repairs its "defects" (Bk. I, Ch. 13). Equity serves the spirit rather than the letter of the law, and Aristotle seems to regard it as a higher good. "Equity bids us be merciful to the weakness of human nature" (Bk. I, Ch. 13). Aristotle concludes Book I with a brief discussion of how to handle nonartistic proofs. The discussion is probably placed here because nonartistic proofs are most often used as forensic evidence.

Book II, Chapters 1–17, considers ethical and pathetic appeals together, perhaps because both appeal to the emotions, whether felt toward the speaker or the speaker's position. Aristotle analyzes the emotions scientifically in terms of their essential nature (the "state of mind" of people experiencing a particular emotion) and their causes (toward whom and on what grounds people generally experience a particular emotion). In these psychological analyses, the emotions are grouped in pairs and often defined antithetically. Aristotle then examines the particular circumstances that constrain an individual's response to emotional appeals, such as age and wealth.

Aristotle now turns to enthymeme and example (Bk. II, Chs. 18–26; the abrupt transition may be due to the hand of a later editor). First Aristotle lays out four lines of argument or common topics that can be used to organize material in enthymemes in any kind of speech. Then he suggests guidelines for finding examples and arguing from maxims again in any kind of speech. Next, having given advice on generating enthymemes, Aristotle argues that the best enthymemes will be based on knowledge specific to one's subject, such as politics or physics. He then describes twenty-eight more lines of argument. Scholars disagree about whether these twenty-eight should be regarded as special topics—that is, sources of material for the "best" kind of enthymeme, which Aristotle has just been discussing—or additional common topics to organize material for enthymemes in any kind of speech. Grimaldi's view is perhaps the prevailing one: that the group of twenty-eight is intended to generate material for specific types of speeches, which can then be organized according to argumentative structures suggested by the group of four. Many readers have felt that the four and the twenty-eight topics are awkwardly juxtaposed here and have used this as evidence of the text's piecemeal construction. Aristotle concludes Book II by briefly discussing how to refute enthymemes and detect spurious ones.

Book III covers how to present the persuasive arguments devised with the aid of the first two books. Aristotle briefly mentions the importance of delivery. While reflecting on the degrading prospect of the rhetorician studying an actor's skills, Aristotle extends his chagrin to all that may influence persuasion "beyond the bare

facts”: “we ought in fairness to fight our case with no help beyond the bare facts: nothing, therefore, should matter except the proof of those facts” (Bk. III, Ch. 1). He admits that “the way in which a thing is said does affect its intelligibility,” but only “owing to the defects of the hearers” (Bk. III, Ch. 1). Charm is unnecessary, however, when the argument is self-evident: “Nobody uses fine language when teaching geometry” (Bk. III, Ch. 1).

Aristotle announces that he will discuss only prose style. He rebukes Gorgias for leading people to expect poetic language in rhetoric, and indeed, he generally separates rhetoric and poetic much more rigorously than most other ancient thinkers. The ensuing discussion (Bk. III, Chs. 2–12) characterizes good style as “clear” and “appropriate.” The “foundation” of good style is “correctness” (Bk. III, Ch. 5). Although it is permissible to increase the impressiveness of style, highly emotional language should be used only “ironically, after the manner of Gorgias and of the passages in [Plato’s] *Phaedrus*” (Bk. III, Ch. 7). “Prose writers must, however, pay specially careful attention to metaphor,” because it “gives style clearness, charm, and distinction as nothing else can” (Bk. III, Ch. 2). Metaphor may also have meaning-making power: “Metaphors must be drawn, as has been said already, from things that are related to the original thing, and yet not obviously so related—just as in philosophy also an acute mind will perceive resemblances even in things far apart” (Bk. III, Ch. 11). Each of the three kinds of speeches has its appropriate style. (From this hint, Aristotle’s pupil Theophrastus developed the influential categories of plain, middle, and grand style.)

Book III, Chapters 13–19, most resemble the rhetoric handbooks of Aristotle’s day. Concerning arrangement, or the parts of a speech, Aristotle contends that a speech really needs only a statement of the case and an argument or proof (Bk. III, Ch. 13). An introduction and an epilogue may be added, however, as well as other parts useful in specific sorts of speech, such as narration in the forensic (Bk. III, Ch. 13).

Aristotle then discusses each part in turn. He notes when a part of a speech requires special handling to fit a particular kind of speech. For example, a certain kind of argument or proof is most appropriate to forensic speeches. He advises forensic orators to argue that the alleged act was not committed, that it did no harm, that the harm was less than alleged, or that the harm was justified by circumstances. These lines of argument would be developed by later rhetoricians into stasis theory (see the introduction to Part One, p. 32), which comprises a set of special topics for forensic speeches, somewhat out of place here in Book III.

Finally, for the epilogue, Aristotle recommends emulating the terseness of Lysias: “I have done. You have heard me. The facts are before you. I ask for your judgment.” These are the last words of Aristotle’s *Rhetoric*.

Selected Bibliography

George Kennedy’s excellent translation *Aristotle on Rhetoric: A Theory of Civic Discourse* (1991) highlights problems with translating the Greek and provides especially helpful notes and appendixes. Other highly regarded versions include *The “Art” of Rhetoric* (trans. John Henry Freese, Loeb Classical Library, 1926, rpt. 1991); *The Rhetoric* (trans. Lane Cooper,

1932, rpt. 1960); and W. Rhys Roberts's 1924 translation for the Jowett Edition (excerpted here), reprinted with a helpful introduction by E. P. J. Corbett in *The Rhetoric and Poetics of Aristotle* (trans. Roberts [*Rhetoric*], Ingram Bywater [*Poetics*], ed. Friedrich Solmsen, intro. Corbett, Modern Library, 1954). A good overview of Aristotle's career, with translation of key passages, is W. D. Ross, *Aristotle: A Complete Exposition of His Works and Thought* (1959).

Most histories of rhetoric discuss Aristotle extensively. For an introduction to the wealth of scholarship focusing on his work, and for further bibliography, see the collections edited by Keith Erickson, *Aristotle: The Classical Heritage of Rhetoric* (1974), and by Richard Leo Enos and Lois Peters Agnew, *Landmark Essays on Aristotelian Rhetoric* (1998). Richard J. Burke's "Aristotle and the Limits of Argument" (*Philosophical and Phenomenological Research* 27 [1967]: 386–400) situates Aristotle in the history of philosophy. W. S. Howell's "Aristotle and Horace on Rhetoric and Poetic" (*Quarterly Journal of Speech* 54 [1968]: 325–39) situates Aristotle in the history of literary criticism, as it relates to rhetoric. On the Peripatetic School in rhetoric after Aristotle, see Friedrich Solmsen, "The Aristotelian Tradition in Ancient Rhetoric" (*American Journal of Philology* 62 [1941]: 35–50). Two recent collections, coming mainly from the perspectives of philosophy and the classics, are *Aristotle's Rhetoric: Philosophical Essays* (ed. David J. Furley and Alexander Nehamas, 1994) and *Essays on Aristotle's Rhetoric* (ed. Amelie Oksenberg Rorty, 1996). Several disciplines are represented in the essays collected in *Feminist Interpretations of Aristotle*, ed. Cynthia A. Freeland (1998); in one of the essays, "(Re)positioning Pedagogy: A Feminist Historiography of Aristotle's *Rhetorica*," Carol Poster argues that feminist historians of rhetoric would do better to look for classical roots in the ancient handbook tradition rather than in the work of Aristotle.

The best entry into W. M. A. Grimaldi's groundbreaking work on Aristotle is his *Studies in the Philosophy of Aristotle's Rhetoric* (1972, 1988), which is also reprinted in Enos and Agnew. His helpful essay, "The Aristotelian Topics" (*Traditio* 14 [1958]: 1–16), is also included in Erickson. For a critique of Grimaldi and a helpful discussion of Aristotle's conception of rhetoric as a productive art, see Janet Atwill, *Rhetoric Reclaimed: Aristotle and the Liberal Arts Tradition* (1998).

Key to Aristotle's notion of rhetorical argument is the enthymeme, and much scholarship has focused on this subject, including that of Grimaldi; E. H. Madden, "The Enthymeme" (*Philosophical Review* 61 [1952]: 368–76), a good summary; Arthur Miller and John Bee, "Enthymemes: Body and Soul" (*Philosophy and Rhetoric* 5 [1972]: 201–14); Sally Raphael, "Rhetoric, Dialectic, and Syllogistic Argument" (*Phronesis* 19 [1974]: 153–67); and Lois Self, "Rhetoric and 'Phronesis': Aristotle's Ideal" (*Philosophy and Rhetoric* 12 [1979]: 130–45).

More work needs to be done on Aristotle's understanding of the power of rhetorical argument to effect civic virtue. Gerard A. Hauser argues for the civic importance of Aristotelian epideictic in "Aristotle on Epideictic: The Formation of Public Morality" (*Rhetoric Society Quarterly* 29 [winter 1999]: 5–23). See Larry Arnhart, *Aristotle on Political Reasoning: A Commentary* (1981), and Eugene Garver, *Aristotle's "Rhetoric": An Art of Character* (1994), for readings generally favorable to Aristotle's efforts to defend rhetoric as a civic tool. Attacking Aristotle, on the other hand, for generating a tradition in which rhetoric is dominated by logic and used for oppressive political purposes is Jasper Neel in *Aristotle's Voice: Rhetoric, Theory and Writing in America* (1994).

From *Rhetoric*

BOOK I

1354^a I. Rhetoric is the counterpart of Dialectic.¹ Both alike are concerned with such things as come, more or less, within the general ken of all men and belong to no definite science. Accordingly all men make use, more or less, of both; for to a certain extent all men attempt to discuss statements and to maintain them, to defend themselves and to attack others. Ordinary people do this either at random or through practice and from acquired habit. Both ways being possible, the subject can plainly be handled systematically, for it is possible to inquire the reason why some speakers succeed through practice and others spontaneously; and every one will at once agree that such an inquiry is the function of an art.²

Now, the framers of the current treatises on rhetoric have constructed but a small portion of that art. The modes of persuasion³ are the only true constituents of the art: everything else is merely accessory. These writers, however, say nothing about enthymemes,⁴ which are the substance of rhetorical persuasion, but deal mainly with non-essentials. The arousing of prejudice, pity, anger, and similar emotions has nothing to do with the essential facts, but is merely a personal appeal to the

Translated by W. Rhys Roberts. Edited by Friedrich Solmsen.

¹“Rhetoric” and “Dialectic” may be roughly Englished as “the art of public speaking” and “the art of logical discussion.” Aristotle’s philosophical definition of “Rhetoric” is given at the beginning of c. 2. [Tr.]

²Here and in later passages the term “art” stands for methodical treatment of a subject. [F.S.]

³Aristotle here means by [“modes of persuasion”] those attempts at *logical argument* on which he would himself like to see Rhetoric rely. In the next chapter, 1355^b35–1356^a4, he gives to the term the wide range it had in current rhetorical usage, and concludes with a reference to the argumentative side. . . . A uniform rendering of the word is hardly possible, but at the outset it is important to stress Aristotle’s fundamental view . . . that, from the nature of its materials, Rhetoric is, in general, *persuasive* rather than fully *demonstrative*. When in later portions of the treatise a single-word rendering is given, “arguments” will be preferred to “proofs.” . . . [Tr.]

⁴Rhetorical arguments. [Tr.]

man who is judging the case. Consequently if the rules for trials which are now laid down in some states — especially in well-governed states — were applied everywhere, such people would have nothing to say. All men, no doubt, *think* that the laws should prescribe such rules, but some, as in the court of Areopagus,⁵ give practical effect to their thoughts and forbid talk about non-essentials. This is sound law and custom. It is not right to pervert the judge⁶ by moving him to anger or envy or pity — one might as well warp a carpenter’s rule before using it. Again, a litigant has clearly nothing to do but to show that the alleged fact is so or is not so, that it has or has not happened. As to whether a thing is important or unimportant, just or unjust, the judge must surely refuse to take his instructions from the litigants: he must decide for himself all such points as the law-giver has not already defined for him.

Now, it is of great moment that well-drawn laws should themselves define all the points they possibly can and leave as few as may be to the decision of the judges; and this for several reasons. First, to find one man, or a few men, who are sensible persons and capable of legislating and administering justice is easier than to find a large number. Next, laws are made after long consideration, whereas decisions in the courts are given at short notice, which makes it hard for those who try the case to satisfy the claims of justice and expediency. The weightiest reason of all is that the decision of the lawgiver is not particular but prospective and general, whereas members of the assembly and the jury find it *their* duty to decide on definite cases brought before them. They will often have allowed themselves to be so much influenced by feelings of friendship or hatred or self-interest that they lose any clear vision of the truth and have their judgement obscured by considerations of personal

1354^b

⁵Highest criminal court of Athens. [F.S.]

⁶Here, and in what follows, the . . . reader should understand “judge” in a broad sense, including “jurymen” and others who “judge.” [Tr.]

pleasure or pain. In general, then, the judge should, we say, be allowed to decide as few things as possible. But questions as to whether something has happened or has not happened, will be or will not be, is or is not, must of necessity be left to the judge, since the lawgiver cannot foresee them. If this is so, it is evident that any one who lays down rules about other matters, such as what must be the contents of the "introduction" or the "narration" or any of the other divisions of a speech, is theorizing about non-essentials as if they belonged to the art. The only question with which these writers here deal is how to put the judge into a given frame of mind. About the orator's proper modes of persuasion they have nothing to tell us; nothing, that is, about how to gain skill in enthymemes.

Hence it comes that, although the same systematic principles apply to political as to forensic oratory, and although the former is a nobler business, and fitter for a citizen, than that which concerns the relations of private individuals, these authors say nothing about political oratory, but try, one and all, to write treatises on the way to plead in court. The reason for this is that in political oratory there is less inducement to talk about non-essentials. Political oratory is less given to unscrupulous practices than forensic, because it treats of wider issues. In a political debate the man who is forming a judgment is making a decision about his own vital interests. There is no need, therefore, to prove anything except that the facts are what the supporter of a measure maintains they are. In forensic oratory this is not enough; to conciliate the listener is what pays here. It is other people's affairs that are to be decided, so that the judges, intent on their own satisfaction and listening with partiality, surrender themselves to the disputants instead of judging between them. Hence in many places, as we have said already,⁷ irrelevant speaking is forbidden in the law-courts: in the public assembly those who have to form a judgement are themselves well able to guard against that.

It is clear, then, that rhetorical study, in its strict sense, is concerned with the modes of per-

suasion. Persuasion is clearly a sort of demonstration, since we are most fully persuaded when we consider a thing to have been demonstrated. The orator's demonstration is an enthymeme, and this is, in general, the most effective of the modes of persuasion. The enthymeme is a sort of syllogism, and the consideration of syllogisms of all kinds, without distinction, is the business of dialectic, either of dialectic as a whole or of one of its branches. It follows plainly, therefore, that he who is best able to see how and from what elements a syllogism is produced will also be best skilled in the enthymeme, when he has further learnt what its subject-matter is and in what respects it differs from the syllogism of strict logic. The true and the approximately true are apprehended by the same faculty; it may also be noted that men have a sufficient natural instinct for what is true, and usually do arrive at the truth. Hence the man who makes a good guess at truth is likely to make a good guess at probabilities.

It has now been shown that the ordinary writers on rhetoric treat of non-essentials; it has also been shown why they have inclined more towards the forensic branch of oratory.

Rhetoric is useful (1) because things that are true and things that are just have a natural tendency to prevail over their opposites, so that if the decisions of judges are not what they ought to be, the defeat must be due to the speakers themselves, and they must be blamed accordingly. Moreover, (2) before some audiences not even the possession of the exactest knowledge will make it easy for what we say to produce conviction. For argument based on knowledge implies instruction, and there are people whom one cannot instruct. Here, then, we must use, as our modes of persuasion and argument, notions possessed by everybody, as we observed in the *Topics*⁸ when dealing with the way to handle a popular audience. Further, (3) we must be able to employ persuasion, just as strict reasoning can be employed, on opposite sides of a question, not in order that we may in practice employ it in both ways (for we must not make people believe what

⁷1354^a22. [Tr.]

⁸*Topics*, i. 2, 101^a30-4. [Tr.]

is wrong), but in order that we may see clearly what the facts are, and that, if another man argues unfairly, we on our part may be able to confute him. No other of the arts draws opposite conclusions: dialectic and rhetoric alone do this. Both these arts draw opposite conclusions impartially. Nevertheless, the underlying facts do not lend themselves equally well to the contrary views. No; things that are true and things that are better are, by their nature, practically always easier to prove and easier to believe in. Again, (4) it is absurd to hold that a man ought to be ashamed of being unable to defend himself with his limbs, but not of being unable to defend himself with speech and reason,⁹ when the use of rational speech is more distinctive of a human being than the use of his limbs. And if it be objected that one who uses such power of speech unjustly might do great harm, *that* is a charge which may be made in common against all good things except virtue, and above all against the things that are most useful, as strength, health, wealth, generalship. A man can confer the greatest of benefits by a right use of these, and inflict the greatest of injuries by using them wrongly.

It is clear, then, that rhetoric is not bound up with a single definite class of subjects, but is as universal as dialectic; it is clear, also, that it is useful. It is clear, further, that its function is not simply to succeed in persuading, but rather to discover the means of coming as near such success as the circumstances of each particular case allow. In this it resembles all other arts. For example, it is not the function of medicine simply to make a man quite healthy, but to put him as far as may be on the road to health; it is possible to give excellent treatment even to those who can never enjoy sound health. Furthermore, it is plain that it is the function of one and the same art to discern the real and the apparent means of persuasion, just as it is the function of dialectic to discern the real and the apparent syllogism. What

makes a man a “sophist” is not his faculty, but his moral purpose. In rhetoric, however, the term “rhetorician” may describe either the speaker’s knowledge of the art, or his moral purpose.¹⁰ In dialectic it is different: a man is a “sophist” because he has a certain kind of moral purpose, a “dialectician” in respect, not of his moral purpose, but of his faculty.

Let us now try to give some account of the systematic principles of Rhetoric itself—of the right method and means of succeeding in the object we set before us. We must make as it were a fresh start, and before going further define what rhetoric is.

II. Rhetoric may be defined as the faculty of observing in any given case the available means of persuasion. This is not a function of any other art. Every other art can instruct or persuade about its own particular subject-matter; for instance, medicine about what is healthy and unhealthy, geometry about the properties of magnitudes, arithmetic about numbers, and the same is true of the other arts and sciences. But rhetoric we look upon as the power of observing the means of persuasion on almost any subject presented to us; and that is why we say that, in its technical character, it is not concerned with any special or definite class of subjects.

Of the modes of persuasion some belong strictly to the art of rhetoric and some do not. By the latter I mean such things as are not supplied by the speaker but are there at the outset—witnesses, evidence given under torture, written contracts, and so on. By the former I mean such as we can ourselves construct by means of the principles of rhetoric. The one kind has merely to be used, the other has to be invented.

Of the modes of persuasion furnished by the spoken word there are three kinds. The first kind depends on the personal character of the speaker; the second on putting the audience into a certain frame of mind; the third on the proof, or apparent proof, provided by the words of the speech itself.

⁹By “speech” and “reason” the translator here has done justice to the twofold meaning of the Greek word “logos.” [F.S.]

¹⁰ . . . [“Rhetorician,”] in fact, can mean either a *trained speaker* or a *tricky speaker*. [Tr.]

Persuasion is achieved by the speaker's personal character when the speech is so spoken as to make us think him credible. We believe good men more fully and more readily than others: this is true generally whatever the question is, and absolutely true where exact certainty is impossible and opinions are divided. This kind of persuasion, like the others, should be achieved by what the speaker says, not by what people think of this character before he begins to speak. It is not true, as some writers assume in their treatises on rhetoric, that the personal goodness revealed by the speaker contributes nothing to his power of persuasion; on the contrary, his character may almost be called the most effective means of persuasion he possesses. Secondly, persuasion may come through the hearers, when the speech stirs their emotions. Our judgements when we are pleased and friendly are not the same as when we are pained and hostile. It is towards producing these effects, as we maintain, that present-day writers on rhetoric direct the whole of their efforts. This subject shall be treated in detail when we come to speak of the emotions.¹¹ Thirdly, persuasion is effected through the speech itself when we have proved a truth or an apparent truth by means of the persuasive arguments suitable to the case in question.

There are, then, these three means of effecting persuasion. The man who is to be in command of them must, it is clear, be able (1) to reason logically, (2) to understand human character and goodness in their various forms, and (3) to understand the emotions—that is, to name them and describe them, to know their causes and the way in which they are excited. It thus appears that rhetoric is an offshoot of dialectic and also of ethical studies. Ethical studies may fairly be called political; and for this reason rhetoric masquerades as political science, and the professors of it as political experts—sometimes from want of education, sometimes from ostentation, sometimes owing to other human failings. As a matter of fact, it is a branch of dialectic and similar to it,

¹¹ii, cc. 2–11. [Tr.]

as we said at the outset.¹² Neither rhetoric nor dialectic is the scientific study of any one separate subject: both are faculties for providing arguments. This is perhaps a sufficient account of their scope and of how they are related to each other.

With regard to the persuasion achieved by proof or apparent proof: just as in dialectic there is induction on the one hand and syllogism or apparent syllogism on the other, so it is in rhetoric. The example is an induction, the enthymeme is a syllogism, and the apparent enthymeme is an apparent syllogism. I call the enthymeme a rhetorical syllogism, and the example a rhetorical induction. Every one who effects persuasion through proof does in fact use either enthymemes or examples: there is no other way. And since every one who proves anything at all is bound to use either syllogisms or inductions (and this is clear to us from the *Analytics*¹³), it must follow that enthymemes are syllogisms and examples are inductions. The difference between example and enthymeme is made plain by the passages in the *Topics*¹⁴ where induction and syllogism have already been discussed. When we base the proof of a proposition on a number of similar cases, this is induction in dialectic, example in rhetoric; when it is shown that, certain propositions being true, a further and quite distinct proposition must also be true in consequence, whether invariably or usually, this is called syllogism in dialectic, enthymeme in rhetoric. It is plain also that each of these types of oratory has its advantages. Types of oratory, I say: for what has been said in the *Methodics*¹⁵ applies equally well here; in some oratorical styles examples prevail, in others enthymemes; and in like manner, some orators are better at the former and some at the latter. Speeches that rely on examples are as persuasive as the other kind, but those which rely on enthymemes excite the louder applause. The sources of examples and

¹⁵Lost logical treatise of Aristotle. . . . [Tr.]

enthymemes,¹⁶ and their proper uses, we will discuss later.¹⁷ Our next step is to define the processes themselves more clearly.

A statement is persuasive and credible either because it is directly self-evident or because it appears to be proved from other statements that are so. In either case it is persuasive because there is somebody whom it persuades. But none of the arts theorize about individual cases. Medicine, for instance, does not theorize about what will help to cure Socrates or Callias, but only about what will help to cure any or all of a given class of patients: this alone is its business: individual cases are so infinitely various that no systematic knowledge of them is possible. In the same way the theory of rhetoric is concerned not with what seems probable to a given individual like Socrates or Hippias, but with what seems probable to men of a given type; and this is true of dialectic also. Dialectic does not construct its syllogisms out of any haphazard materials, such as the fancies of crazy people, but out of materials that call for discussion; and rhetoric, too, draws upon the regular subjects of debate. The duty of rhetoric is to deal with such matters as we deliberate upon without arts or systems to guide us, in the hearing of persons who cannot take in at a glance a complicated argument, or follow a long chain of reasoning. The subjects of our deliberation are such as seem to present us with alternative possibilities: about things that could not have been, and cannot now or in the future be, other than they are, nobody who takes them to be of this nature wastes his time in deliberation.

It is possible to form syllogisms and draw conclusions from the results of previous syllogisms; or, on the other hand, from premisses which have not been thus proved, and at the same time are so little accepted that they call for proof. Reasonings of the former kind will necessarily be hard to follow owing to their length, for we assume an audience of untrained thinkers; those of the latter kind will fail to win assent, because

they are based on premisses that are not generally admitted or believed.

The enthymeme and the example must, then, deal with what is in the main contingent, the example being an induction, and the enthymeme a syllogism, about such matters. The enthymeme must consist of few propositions, fewer often than those which make up the normal syllogism. For if any of these propositions is a familiar fact, there is no need even to mention it; the hearer adds it himself. Thus, to show that Dorieus has been victor in a contest for which the prize is a crown, it is enough to say "For he has been victor in the Olympic games," without adding "And in the Olympic games the prize is a crown," a fact which everybody knows.

There are few facts of the "necessary" type that can form the basis of rhetorical syllogisms.¹⁸ Most of the things about which we make decisions, and into which therefore we inquire, present us with alternative possibilities. For it is about our actions that we deliberate and inquire, and all our actions have a contingent character; hardly any of them are determined by necessity. Again, conclusions that state what is merely usual or possible must be drawn from premisses that do the same, just as "necessary" conclusions must be drawn from "necessary" premisses; this too is clear to us from the *Analytics*.¹⁹ It is evident, therefore, that the propositions forming the basis of enthymemes, though some of them may be "necessary," will most of them be only usually true. Now the materials of enthymemes are Probabilities and Signs, which we can see must correspond respectively with the propositions that are generally and those that are necessarily true. A Probability is a thing that usually happens; not, however, as some definitions would suggest, anything whatever that usually happens, but only if it belongs to the class of the "contingent" or "variable." It bears the same relation to that in respect of which it is probable²⁰ as the

¹⁸"Material sources" or even "premisses." [F.S.]

¹⁹*An. Pr.* i. 8, 12–14, 27.

²⁰I.e. bears the same relation to the conclusion to be reached: "to that to which its general probability is directed"—to the particular probable case which has to be proved. [Tr.]

¹⁶An alternate and perhaps better reading would be "the reason of this." [F.S.]

¹⁷ii, cc. 20–4. [Tr.]

universal bears to the particular. Of Signs, one kind bears the same relation to the statement it supports as the particular bears to the universal, the other the same as the universal bears to the particular. The infallible kind is a "complete proof" (τεκμήριον); the fallible kind has no specific name. By infallible signs I mean those on which syllogisms proper may be based: and this shows us why this kind of Sign is called "complete proof": when people think that what they have said cannot be refuted, they then think that they are bringing forward a "complete proof," meaning that the matter has now been demonstrated and completed (πεπερασμένον); for the word πέρας has the same meaning (of "end" or "boundary") as the word τέκμαρ in the ancient tongue. Now the one kind of Sign (that which bears to the proposition it supports the relation of particular to universal) may be illustrated thus. Suppose it were said, "The fact that Socrates was wise and just is a sign that the wise are just." Here we certainly have a Sign; but even though the proposition be true, the argument is refutable, since it does not form a syllogism. Suppose, on the other hand, it were said, "The fact that he has a fever is a sign that he is ill," or, "The fact that she is giving milk is a sign that she has lately borne a child." Here we have the infallible kind of Sign, the only kind that constitutes a complete proof, since it is the only kind that, if the particular statement is true, is irrefutable. The other kind of Sign, that which bears to the proposition it supports the relation of universal to particular, might be illustrated by saying, "The fact that he breathes fast is a sign that he has a fever." This argument also is refutable, even if the statement about the fast breathing be true, since a man may breathe hard without having a fever.

It has, then, been stated above what is the nature of a Probability, of a Sign, and of a complete proof, and what are the differences between them. In the *Analytics*²¹ a more explicit description has been given of these points; it is there shown why some of these reasonings can be put into syllogisms and some cannot.

The "example" has already been described as

²¹*An. Pr.* ii. 27. [Tr.]

one kind of induction; and the special nature of the subject-matter that distinguishes it from the other kinds has also been stated above. Its relation to the proposition it supports is not that of part to whole, nor whole to part, nor whole to whole, but of part to part, or like to like. When two statements are of the same order, but one is more familiar than the other, the former is an "example." The argument may, for instance, be that Dionysius,²² in asking as he does for a bodyguard, is scheming to make himself a despot. For in the past Peisistratus²³ kept asking for a bodyguard in order to carry out such a scheme, and did make himself a despot as soon as he got it; and so did Theagenes²⁴ at Megara; and in the same way all other instances known to the speaker are made into examples, in order to show what is not yet known, that Dionysius has the same purpose in making the same request: all these being instances of the one general principle, that a man who asks for a bodyguard is scheming to make himself a despot. We have now described the sources of those means of persuasion which are popularly supposed to be demonstrative. 1358^a

There is an important distinction between two sorts of enthymemes that has been wholly overlooked by almost everybody—one that also subsists between the syllogisms treated of in dialectic. One sort of enthymeme really belongs to rhetoric, as one sort of syllogism really belongs to dialectic; but the other sort really belongs to other arts and faculties, whether to those we already exercise or to those we have not yet acquired. Missing this distinction, people fail to notice that the more correctly they handle their particular subject the further they are getting away from pure rhetoric or dialectic. This statement will be clearer if expressed more fully. I mean that the proper subjects of dialectical and rhetorical syllogisms are the things with which we say the regular or universal Lines of Argument²⁵ are concerned, that is to say those lines of argument that apply equally to questions of right conduct, natural science, politics, and many other

²²Tyrant of Syracuse. [F.S.]

²³Tyrant of Athens. [F.S.]

²⁴Tyrant of Megara. [F.S.]

²⁵Or Topics, Commonplaces. [Tr.]

things that have nothing to do with one another. Take, for instance, the line of argument concerned with “the more or less.”²⁶ On this line of argument it is equally easy to base a syllogism or enthymeme about any of what nevertheless are essentially disconnected subjects—right conduct, natural science, or anything else whatever. But there are also those special Lines of Argument which are based on such propositions as apply only to particular groups or classes of things. Thus there are propositions about natural science on which it is impossible to base any enthymeme or syllogisms about ethics, and other propositions about ethics on which nothing can be based about natural science. The same principle applies throughout. The general Lines of Argument have no special subject-matter, and therefore will not increase our understanding of any particular class of things. On the other hand, the better the selection one makes of propositions suitable for special Lines of Argument, the nearer one comes, unconsciously, to setting up a science that is distinct from dialectic and rhetoric. One may succeed in stating the required principles, but one’s science will be no longer dialectic or rhetoric, but the science to which the principles thus discovered belong. Most enthymemes are in fact based upon these particular or special Lines of Argument; comparatively few on the common or general kind. As in the *Topics*,²⁷ therefore, so in this work, we must distinguish, in dealing with enthymemes, the special and the general Lines of Argument on which they are to be founded. By special Lines of Argument I mean the propositions peculiar to each several class of things, by general those common to all classes alike. We may begin with the special Lines of Argument. But first of all, let us classify rhetoric into its varieties. Having distinguished these we may deal with them one by one, and try to discover the elements of which each is composed, and the propositions each must employ.

III. Rhetoric falls into three divisions, determined by the three classes of listeners to speeches. For of the three elements in speech-making—

²⁶I.e. the topic of *degree*. [Cp. 1397^b12 ff.] [Tr.]

²⁷Cp. *Top.* i. 10, 14; iii. 5; *Soph. El.* 9. [Tr.]

speaker, subject, and person addressed—it is the last one, the hearer, that determines the speech’s end and object. The hearer must be either a judge, with a decision to make about things past or future, or an observer.²⁸ A member of the assembly decides about future events, a jurymen about past events: while those who merely decide on the orator’s skill are observers. From this it follows that there are three divisions of oratory—(1) political, (2) forensic, and (3) the ceremonial oratory of display.²⁹

Political speaking urges us either to do or not to do something: one of these two courses is always taken by private counsellors, as well as by men who address public assemblies. Forensic speaking either attacks or defends somebody: one or other of these two things must always be done by the parties in a case. The ceremonial oratory of display either praises or censures somebody. These three kinds of rhetoric refer to three different kinds of time. The political orator is concerned with the future: it is about things to be done hereafter that he advises, for or against. The party in a case at law is concerned with the past; one man accuses the other, and the other defends himself, with reference to things already done. The ceremonial orator is, properly speaking, concerned with the present, since all men praise or blame in view of the state of things existing at the time, though they often find it useful also to recall the past and to make guesses at the future.

Rhetoric has three distinct ends in view, one for each of its three kinds. The political orator aims at establishing the expediency or the harmfulness of a proposed course of action; if he urges its acceptance, he does so on the ground that it will do good; if he urges its rejection, he does so on the ground that it will do harm; and all other

²⁸θεωρῶς: a mere onlooker, present at a show, where he decides no grave political or legal issue (cp. 1391^b16–20) and plays no higher role than that of speech taster or oratorical connoisseur.—*Political* has been preferred to *deliberative*, as being clearer to the English reader. The oratory of the “(parliamentary) counsellor” is meant. [Tr.]

²⁹Or: deliberative (advisory), legal, and epideictic—the oratory respectively of parliamentary assemblies, of law-courts, and of ceremonial occasions when there is an element of “display,” “show,” “declamation,” and the result is a “set speech” or “harangue.” [Tr.]

points, such as whether the proposal is just or unjust, honourable or dishonourable, he brings in as subsidiary and relative to this main consideration. Parties in a law-case aim at establishing the justice or injustice of some action, and they too bring in all other points as subsidiary and relative to this one. Those who praise or attack a man aim at proving him worthy of honour or the reverse, and they too treat all other considerations with reference to this one.

That the three kinds of rhetoric do aim respectively at the three ends we have mentioned is shown by the fact that speakers will sometimes not try to establish anything else. Thus, the litigant will sometimes not deny that a thing has happened or that he has done harm. But that he is guilty of injustice he will never admit; otherwise there would be no need of a trial. So too, political orators often make any concession short of admitting that they are recommending their hearers to take an inexpedient course or not to take an expedient one. The question whether it is not *unjust* for a city to enslave its innocent neighbours often does not trouble them at all. In like manner those who praise or censure a man do not consider whether his acts have been expedient or not, but often make it a ground of actual praise that he has neglected his own interest to do what was honourable. Thus, they praise Achilles because he championed his fallen friend Patroclus, though he knew that this meant death, and that otherwise he need not die: yet while to die thus was the nobler thing for him to do, the expedient thing was to live on.³⁰

It is evident from what has been said that it is these three subjects, more than any others, about which the orator must be able to have propositions at his command. Now the propositions of Rhetoric are Complete Proofs, Probabilities, and Signs. Every kind of syllogism is composed of propositions, and the enthymeme is a particular kind of syllogism composed of the aforesaid propositions.³¹

Since only possible actions, and not impos-

³⁰Homer. *Iliad*, xviii. 97 ff. [Tr.]

³¹I.e. of Complete Proofs, Probabilities, and Signs relating to the three subjects of the expedient, the just, and the noble. [Tr.]

sible ones, can ever have been done in the past or the present, and since things which have not occurred, or will not occur, also cannot have been done or be going to be done, it is necessary for the political, the forensic, and the ceremonial speaker alike to be able to have at their command propositions about the possible and the impossible, and about whether a thing has or has not occurred, will or will not occur. Further, all men, in giving praise or blame, in urging us to accept or reject proposals for action, in accusing others or defending themselves, attempt not only to prove the points mentioned but also to show that the good or the harm, the honour or disgrace, the justice or injustice, is great or small, either absolutely or relatively; and therefore it is plain that we must also have at our command propositions about greatness or smallness and the greater or the lesser—propositions both universal and particular. Thus, we must be able to say which is the greater or lesser good, the greater or lesser act of justice or injustice; and so on.

Such, then, are the subjects regarding which we are inevitably bound to master the propositions relevant to them. We must now discuss each particular class of these subjects in turn, namely those dealt with in political, in ceremonial, and lastly in legal, oratory.

IV. First, then, we must ascertain what are the kinds of things, good or bad, about which the political orator offers counsel. For he does not deal with all things, but only with such as may or may not take place. Concerning things which exist or will exist inevitably, or which cannot possibly exist or take place, no counsel can be given. Nor, again, can counsel be given about the whole class of things which may or may not take place; for this class includes some good things that occur naturally, and some that occur by accident; and about these it is useless to offer counsel. Clearly counsel can only be given on matters about which people deliberate; matters, namely, that ultimately depend on ourselves, and which we have it in our power to set going. For we turn a thing over in our mind until we have reached the point of seeing whether we can do it or not.

Now to enumerate and classify accurately the usual subjects of public business, and further to

frame, as far as possible, true definitions of them, is a task which we must not attempt on the present occasion. For it does not belong to the art of rhetoric, but to a more instructive art and a more real branch of knowledge;³² and as it is, rhetoric has been given a far wider subject-matter than strictly belongs to it. The truth is, as indeed we have said already, that rhetoric is a combination of the science of logic and of the ethical branch of politics;³³ and it is partly like dialectic, partly like sophistical reasoning. But the more we try to make either dialectic or rhetoric not, what they really are, practical faculties, but sciences, the more we shall inadvertently be destroying their true nature; for we shall be re-fashioning them and shall be passing into the region of sciences dealing with definite subjects rather than simply with words and forms of reasoning. Even here, however, we will mention those points which it is of practical importance to distinguish, their fuller treatment falling naturally to political science.

The main matters on which all men deliberate and on which political speakers make speeches are some five in number: ways and means, war and peace, national defence, imports and exports, and legislation.

As to Ways and Means, then, the intending speaker will need to know the number and extent of the country's sources of revenue, so that, if any is being overlooked, it may be added, and, if any is defective, it may be increased. Further, he should know all the expenditure of the country, in order that, if any part of it is superfluous, it may be abolished, or, if any is too large, it may be reduced. For men become richer not only by increasing their existing wealth but also by reducing their expenditure. A comprehensive view of these questions cannot be gained solely from experience in home affairs; in order to advise on such matters a man must be keenly interested in the methods worked out in other lands.

As to Peace and War, he must know the extent of the military strength of his country, both actual and potential, and also the nature of that actual and potential strength; and further, what wars his country has waged, and how it has

waged them. He must know these facts not only about his own country, but also about neighbouring countries; and also about countries with which war is likely, in order that peace may be maintained with those stronger than his own, and that his own may have power to make war or not against those that are weaker. He should know, too, whether the military power of another country is like or unlike that of his own; for this is a matter that may affect their relative strength. With the same end in view he must, besides, have studied the wars of other countries as well as those of his own, and the way they ended; similar causes are likely to have similar results.

With regard to National Defence: he ought to know all about the methods of defence in actual use, such as the strength and character of the defensive force and the positions of the forts—this last means that he must be well acquainted with the lie of the country—in order that a garrison may be increased if it is too small or removed if it is not wanted, and that the strategic points may be guarded with special care.

With regard to the Food Supply: he must know what outlay will meet the needs of his country; what kinds of food are produced at home and what imported; and what articles must be exported or imported. This last he must know in order that agreements and commercial treaties may be made with the countries concerned. There are, indeed, two sorts of state to which he must see that his countrymen give no cause for offence, states stronger than his own, and states with which it is advantageous to trade.

But while he must, for security's sake, be able to take all this into account, he must before all things understand the subject of legislation; for it is on a country's laws that its whole welfare depends. He must, therefore, know how many different forms of constitution there are; under what conditions each of these will prosper and by what internal developments or external attacks each of them tends to be destroyed. When I speak of destruction through internal developments I refer to the fact that all constitutions, except the best one of all, are destroyed both by not being pushed far enough and by being pushed too far. Thus, democracy loses its vigour, and finally passes into oligarchy, not only when it is not pushed far

1360^a

³²To political science. [F.S.]

³³I.e. of ethical theory. Cp. I. 2 1356^a25 ff. [F.S.]

enough, but also when it is pushed a great deal too far;³⁴ just as the aquiline and the snub nose not only turn into normal noses by not being aquiline or snub enough, but also by being too violently aquiline or snub arrive at a condition in which they no longer look like noses at all.

It is useful, in framing laws, not only to study the past history of one's own country, in order to understand which constitution is desirable for it now, but also to have a knowledge of the constitutions of other nations, and so to learn for what kinds of nation the various kinds of constitution are suited. From this we can see that books of travel are useful aids to legislation, since from these we may learn the laws and customs of different races. The political speaker will also find the researches of historians useful. But all this is the business of political science and not of rhetoric.

1360^b These, then, are the most important kinds of information which the political speaker must possess. Let us now go back and state the premisses from which he will have to argue in favour of adopting or rejecting measures regarding these and other matters.

V. It may be said that every individual man and all men in common aim at a certain end which determines what they choose and what they avoid. This end, to sum it up briefly, is happiness and its constituents. Let us, then, by way of illustration only, ascertain what is in general the nature of happiness, and what are the elements of its constituent parts. For all advice to do things or not to do them is concerned with happiness and with the things that make for or against it; whatever creates or increases happiness or some part of happiness, we ought to do; whatever destroys or hampers happiness, or gives rise to its opposite, we ought not to do.³⁵

We may define happiness as prosperity combined with virtue; or as independence of life; or as the secure enjoyment of the maximum of pleasure; or as a good condition of property and body, together with the power of guarding one's

³⁴Aristotle deals more fully with the causes by which constitutions are destroyed or changed into one another in Book V of his *Politics*. [F.S.]

³⁵For a more philosophic discussion of "happiness" see Book I of the *Nicomachean Ethics*. [F.S.]

property and body and making use of them. That happiness is one or more of these things, pretty well everybody agrees.

From this definition of happiness it follows that its constituent parts are:—good birth, plenty of friends, good friends, wealth, good children, plenty of children, a happy old age, also such bodily excellences as health, beauty, strength, large stature, athletic powers, together with fame, honour, good luck, and virtue. A man cannot fail to be completely independent if he possesses these internal and these external goods; for besides these there are no others to have. (Goods of the soul and of the body are internal. Good birth, friends, money, and honour are external.) Further, we think that he should possess resources and luck, in order to make his life really secure. As we have already ascertained what happiness in general is, so now let us try to ascertain what each of these parts of it is.

Now good birth in a race or a state means that its members are indigenous or ancient;³⁶ that its earliest leaders were distinguished men, and that from them have sprung many who were distinguished for qualities that we admire.

The good birth of an individual, which may come either from the male or the female side, implies that both parents are free citizens, and that, as in the case of the state, the founders of the line have been notable for virtue or wealth or something else which is highly prized, and that many distinguished persons belong to the family, men and women, young and old.

The phrases "possession of good children" and "of many children" bear a quite clear meaning. Applied to a community, they mean that its young men are numerous and of good quality: good in regard to bodily excellences, such as stature, beauty, strength, athletic powers; and also in regard to the excellences of the soul, which in a young man are temperance and courage. Applied to an individual, they mean that his own children are numerous and have the good qualities we have described. Both male and female are here included; the excellences of the latter are, in body, beauty and stature; in soul, self-

³⁶A matter of great pride especially for the Athenians. [F.S.]

command and an industry that is not sordid. Communities as well as individuals should lack none of these perfections, in their women as well as in their men. Where, as among the Lacedaemonians, the state of women is bad, almost half of human life is spoilt.

The constituents of wealth are: plenty of coined money and territory; the ownership of numerous, large, and beautiful estates; also the ownership of numerous and beautiful implements, live stock, and slaves. All these kinds of property are our own, are secure, gentlemanly, and useful. The useful kinds are those that are productive, the gentlemanly kinds are those that provide enjoyment. By “productive” I mean those from which we get our income; by “enjoyable,” those from which we get nothing worth mentioning except the use of them. The criterion of “security” is the ownership of property in such places and under such conditions that the use of it is in our power; and it is “our own” if it is in our own power to dispose of it or keep it. By “disposing of it” I mean giving it away or selling it. Wealth as a whole consists in using things rather than in owning them; it is really the activity—that is, the use—of property that constitutes wealth.

Fame means being respected by everybody, or having some quality that is desired by all men, or by most, or by the good, or by the wise.

Honour is the token of a man’s being famous for doing good. It is chiefly and most properly paid to those who have already done good; but also to the man who can do good in future. Doing good refers either to the preservation of life and the means of life, or to wealth, or to some other of the good things which it is hard to get either always or at that particular place or time—for many gain honour for things which seem small, but the place and the occasion account for it. The constituents of honour are: sacrifices; commemoration, in verse or prose; privileges; grants of land; front seats at civic celebrations; state burial;³⁷ statues; public maintenance;³⁸ among foreigners, obeisances and giving place; and such presents as are among various bodies of men re-

garded as marks of honour. For a present is not only the bestowal of a piece of property, but also a token of honour; which explains why honour-loving as well as money-loving persons desire it. The present brings to both what they want; it is a piece of property, which is what the lovers of money desire; and it brings honour, which is what the lovers of honour desire. 1361^b

The excellence of the body is health; that is, a condition which allows us, while keeping free from disease, to have the use of our bodies; for many people are “healthy” as we are told Herodicus³⁹ was; and these no one can congratulate on their “health,” for they have to abstain from everything or nearly everything that men do.—Beauty varies with the time of life. In a young man beauty is the possession of a body fit to endure the exertion of running and of contests of strength; which means that he is pleasant to look at; and therefore all-round athletes are the most beautiful, being naturally adapted both for contests of strength and for speed also. For a man in his prime, beauty is fitness for the exertion of warfare, together with a pleasant but at the same time formidable appearance. For an old man, it is to be strong enough for such exertion as is necessary, and to be free from all those deformities of old age which cause pain to others.⁴⁰ Strength is the power of moving some one else at will; to do this, you must either pull, push, lift, pin, or grip him; thus you must be strong in all of those ways or at least in some. Excellence in size is to surpass ordinary people in height, thickness, and breadth by just as much as will not make one’s movements slower in consequence. Athletic excellence of the body consists in size, strength, and swiftness; swiftness implying strength. He who can fling forward his legs in a certain way, and move them fast and far, is good at running; he who can grip and hold down is good at wrestling; he who can drive an adversary from his ground with the right blow is a good boxer: he who can do both the last is a good pancratiast, while he who can do all is an “all-round” athlete.

³⁷Or, (splendid) tombs; sepulchres. [Tr.]

³⁸“Pensions.” [Tr.]

³⁹A physician. His strange health regime is described in Plato, *Republic*, iii 406^aff. [F.S.]

⁴⁰Text and meaning uncertain. [F.S.]

Happiness in old age is the coming of old age slowly and painlessly; for a man has not this happiness if he grows old either quickly, or tardily but painfully. It arises both from the excellences of the body and from good luck. If a man is not free from disease, or if he is not strong, he will not be free from suffering; nor can he continue to live a long and painless life unless he has good luck. There is, indeed, a capacity for long life that is quite independent of health or strength; for many people live long who lack the excellences of the body; but for our present purpose there is no use in going into the details of this.

The terms "possession of many friends" and "possession of good friends" need no explanation; for we define a "friend" as one who will always try, for your sake, to do what he takes to be good for you. The man towards whom many feel thus has many friends; if these are worthy men, he has good friends.

1362^a "Good luck" means the acquisition or possession of all or most, or the most important, of those good things which are due to luck. Some of the things that are due to luck may also be due to artificial contrivance; but many are independent of art, as for example those which are due to nature—though, to be sure, things due to luck may actually be contrary to nature. Thus health may be due to artificial contrivance, but beauty and stature are due to nature. All such good things as excite envy are, as a class, the outcome of good luck. Luck is also the cause of good things that happen contrary to reasonable expectation: as when, for instance, all your brothers are ugly, but you are handsome yourself; or when you find a treasure that everybody else has overlooked; or when a missile hits the next man and misses you; or when you are the only man not to go to a place you have gone to regularly, while the others go there for the first time and are killed. All such things are reckoned pieces of good luck.

As to virtue, it is most closely connected with the subject of Eulogy, and therefore we will wait to define it until we come to discuss that subject.⁴¹

VI. It is now plain what our aims, future or actual, should be in urging, and what in deprecating,

⁴¹i. c. 9. [Tr.]

ing, a proposal; the latter being the opposite of the former. Now the political or deliberative orator's aim is utility: deliberation seeks to determine not ends but the means to ends, i.e. what it is most useful to do. Further, utility is a good thing. We ought therefore to assure ourselves of the main facts about Goodness and Utility in general.

We may define a good thing as that which ought to be chosen for its own sake; or as that for the sake of which we choose something else; or as that which is sought after by all things, or by all things that have sensation or reason, or which will be sought after by any things that acquire reason; or as that which must be prescribed for a given individual by reason generally, or is prescribed for him by his individual reason, this being his individual good; or as that whose presence brings anything into a satisfactory and self-sufficing condition; or as self-sufficiency; or as what produces, maintains, or entails characteristics of this kind, while preventing and destroying their opposites. One thing may entail another in either of two ways—(1) simultaneously, (2) subsequently. Thus learning entails knowledge subsequently, health entails life simultaneously. Things are productive of other things in three senses: first, as being healthy produces health; secondly, as food produces health; and thirdly, as exercise does—i.e. it does so usually. All this being settled, we now see that both the acquisition of good things and the removal of bad things must be good; the latter entails freedom from the evil things simultaneously, while the former entails possession of the good things subsequently. The acquisition of a greater in place of a lesser good, or of a lesser in place of a greater evil, is also good, for in proportion as the greater exceeds the lesser there is acquisition of good or removal of evil.⁴² The virtues, too, must be something good; for it is by possessing these that we are in a good condition, and they tend to produce good works and good actions. They must be severally named and described

1362^b
⁴² . . . Other readings are (1) . . . "for the difference between the greater and the lesser constitutes acquisition of good in the one case and removal of evil in the other"; and (2) . . . "for the acquisition and the removal of the difference between the greater and the lesser amount to the acquisition of good and the removal of evil respectively." [Tr.]

elsewhere.⁴³ Pleasure, again, must be a good thing, since it is the nature of all animals to aim at it. Consequently both pleasant and beautiful things must be good things, since the former are productive of pleasure, while of the beautiful things some are pleasant and some desirable in and for themselves.

The following is a more detailed list of things that must be good. Happiness, as being desirable in itself and sufficient by itself, and as being that for whose sake we choose many other things. Also justice, courage, temperance, magnanimity,⁴⁴ magnificence, and all such qualities, as being excellences of the soul.⁴⁵ Further, health, beauty, and the like, as being bodily excellences and productive of many other good things: for instance, health is productive both of pleasure and of life, and therefore is thought the greatest of goods, since these two things which it causes, pleasure and life, are two of the things most highly prized by ordinary people. Wealth, again: for it is the excellence of possession, and also productive of many other good things. Friends and friendship: for a friend is desirable in himself and also productive of many other good things. So, too, honour and reputation, as being pleasant, and productive of many other good things, and usually accompanied by the presence of the good things that cause them to be bestowed. The faculty of speech and action; since all such qualities are productive of what is good. Further—good parts, strong memory, receptiveness, quickness of intuition, and the like, for all such faculties are productive of what is good. Similarly, all the sciences and arts. And life: since, even if no other good were the result of life, it is desirable in itself. And justice, as the cause of good to the community.

The above are pretty well all the things admittedly good. In dealing with things whose goodness is disputed, we may argue in the following ways:—That is good of which the contrary is bad. That is good the contrary of which is to the advantage of our enemies; for example, if it is to

⁴³ . . . “separately”; in c. 9. [Tr.]

⁴⁴ I.e. loftiness of mind, greatness of spirit. [Tr.]

⁴⁵ As such they are treated in the *Nicomachean Ethics*. [Tr.]

the particular advantage of our enemies that we should be cowards, clearly courage is of particular value to our countrymen. And generally, the contrary of that which our enemies desire, or of that at which they rejoice, is evidently valuable. Hence the passage beginning:

Surely would Priam exult.⁴⁶

This principle usually holds good, but not always, since it may well be that our interest is sometimes the same as that of our enemies. Hence it is said that “evils draw men together”; that is, when the same thing is hurtful to them both. 1363^a

Further: that which is not in excess is good,⁴⁷ and that which is greater than it should be is bad. That also is good on which much labour or money has been spent; the mere fact of this makes it seem good, and such a good is assumed to be an end—an end reached through a long chain of means; and any end is a good. Hence the lines beginning:

And for Priam (and Troy-town’s folk) should they leave behind them a boast;⁴⁸

and

Oh, it were shame

To have tarried so long and return empty-handed as erst we came;⁴⁹

and there is also the proverb about “breaking the pitcher at the door.”

That which most people seek after, and which is obviously an object of contention, is also a good; for, as has been shown,⁵⁰ that is good which is sought after by everybody, and “most people” is taken to be equivalent to “everybody.” That which is praised is good, since no one praises what is not good. So, again, that which is praised by our enemies [or by the worthless]; for when even those who have a grievance think a

⁴⁶ Sc., if he learned of the Greeks’ quarrels amongst themselves. [F.S.] *Iliad*, i. 255.—The verse-translations throughout are by Dr. A. S. Way, with occasional adaptations.—Aristotle, like other Greek writers, often indicates, as here, a whole passage by a few words taken from it. [Tr.]

⁴⁷ . . . The “mean” is meant. [Tr.]

⁴⁸ *Iliad*, ii. 160. [Tr.]

⁴⁹ *Iliad*, ii. 298. [Tr.]

⁵⁰ 1362^a23. [Tr.]

thing good, it is at once felt that every one must agree with them; our enemies can admit the fact only because it is evident, just as those must be worthless whom their friends censure and their enemies do not. (For this reason the Corinthians conceived themselves to be insulted by Simonides when he wrote:

Against the Corinthians hath Ilium no complaint.⁵¹)

Again, that is good which has been distinguished by the favour of a discerning or virtuous man or woman, as Odysseus was distinguished by Athena, Helen by Theseus, Paris by the goddesses, and Achilles by Homer. And, generally speaking, all things are good which men deliberately choose to do; this will include the things already mentioned, and also whatever may be bad for their enemies or good for their friends, and at the same time practicable. Things are "practicable" in two senses: (1) it is possible to do them, (2) it is easy to do them. Things are done "easily" when they are done either without pain or quickly: the "difficulty" of an act lies either in its painfulness or in the long time it takes. Again, a thing is good⁵² if it is as men wish; and they wish to have either no evil at all or at least a balance of good over evil. This last will happen where the penalty is either imperceptible or slight. Good, too, are things that are a man's very own, possessed by no one else, exceptional; for this increases the credit of having them.⁵³ So are things which befit the possessors, such as whatever is appropriate to their birth or capacity, and whatever they feel they ought to have but lack—such things may indeed be trifling, but none the less men deliberately make them the goal of their action. And things easily effected; for these are practicable (in the sense of being easy); such things are those in which every one, or most people, or one's equals, or one's inferiors have succeeded. Good also are the things by which we shall gratify our friends or annoy our enemies; and the things chosen by those whom we admire:

⁵¹Fragm. of Simonides of Keos, famous poet of choral lyrics (556–468 B.C.) [F.S.]

⁵²Or perhaps better, "Men deliberately choose a thing if it is. . . ." [Tr.]

⁵³Or, "the value put upon them" (sc. by their possessor). [Tr.]

and the things for which we are fitted by nature or experience, since we think we shall succeed more easily in these: and those in which no worthless man can succeed, for such things bring greater praise: and those which we do in fact desire, for what we desire is taken to be not only pleasant but also better. Further, a man of a given disposition makes chiefly for the corresponding things: lovers of victory make for victory, lovers of honour for honour, money-loving men for money, and so with the rest. These, then, are the sources from which we must derive our means of persuasion about Good and Utility. 1363^b

VII. Since however, it often happens that people agree that two things are both useful but do not agree about which is the more so, the next step will be to treat of relative goodness and relative utility.

A thing which surpasses another may be regarded as being that other thing plus something more, and that other thing which is surpassed as being what is contained in the first thing. Now to call a thing "greater" or "more" always implies a comparison of it with one that is "smaller" or "less," while "great" and "small," "much" and "little," are terms used in comparison with normal magnitude. The "great" is that which surpasses the normal, the "small" is that which is surpassed by the normal; and so with "many" and "few."

Now we are applying the term "good" to what is desirable for its own sake and not for the sake of something else;⁵⁴ to that at which all things aim; to what they would choose if they could acquire understanding and practical wisdom; and to that which tends to produce or preserve such goods, or is always accompanied by them. Moreover, that for the sake of which things are done is the end (an end being that for the sake of which all else is done), and for each individual that thing is a good which fulfils these conditions in regard to himself. It follows, then, that a greater number of goods is a greater good than one or than a smaller number, if that one or that smaller number is included in the count; for then the larger number surpasses the smaller, and the smaller quantity is surpassed as being contained in the larger.

⁵⁴Cp. 1362^a24. [Tr.]

Again, if the largest member of one class surpasses the largest member of another, then the one class surpasses the other; and if one class surpasses another, then the largest member of the one surpasses the largest member of the other. Thus, if the tallest man is taller than the tallest woman, then men in general are taller than women. Conversely, if men in general are taller than women, then the tallest man is taller than the tallest woman. For the superiority of class over class is proportionate to the superiority possessed by their largest specimens. Again, where one good is always accompanied by another, but does not always accompany it, it is greater than the other, for the use of the second thing is implied in the use of the first. A thing may be accompanied by another in three ways, either simultaneously, subsequently, or potentially. Life accompanies health simultaneously (but not health life), knowledge accompanies the act of learning subsequently, cheating accompanies sacrilege potentially, since a man who has committed sacrilege is always capable of cheating. Again, when two things each surpass a third, that which does so by the greater amount is the greater of the two; for it must surpass the greater as well as the less of the other two. A thing productive of a greater good than another is productive of itself a greater good than that other. For this conception of “productive of a greater” has been implied in our argument.⁵⁵ Likewise, that which is produced by a greater good is itself a greater good; thus, if what is wholesome is more desirable and a greater good than what gives pleasure, health too must be a greater good than pleasure. Again, a thing which is desirable in itself is a greater good than a thing which is not desirable in itself, as for example bodily strength than what is wholesome, since the latter is not pursued for its own sake, whereas the former is; and this was our definition of the good.⁵⁶ Again, if one of two things is an end, and the other is not, the former is the greater good, as being chosen for its own sake and not for the sake of something else; as, for example,

exercise is chosen for the sake of physical well-being. And of two things that which stands less in need of the other, or of other things, is the greater good, since it is more self-sufficing. (That which stands “less” in need of others is that which needs either *fewer* or *easier* things.) So when one thing does not exist or cannot come into existence without a second, while the second can exist without the first, the second is the better. That which does not need something else is more self-sufficing than that which does, and presents itself as a greater good for that reason. Again, that which is a beginning of other things is a greater good than that which is not, and that which is a cause is a greater good than that which is not; the reason being the same in each case, namely that without a cause and a beginning nothing can exist or come into existence. Again, where there are two sets of consequences arising from two different beginnings or causes, the consequences of the more important beginning or cause are themselves the more important; and conversely, that beginning or cause is itself the more important which has the more important consequences. Now it is plain, from all that has been said, that one thing may be shown to be more important than another from two opposite points of view: it may appear the more important (1) because it is a beginning and the other thing is not, and also (2) because it is not a beginning and the other thing is — on the ground that the end is more important and is not a beginning.⁵⁷ So Leodamas, when accusing Callistratus, said that the man who prompted the deed was more guilty than the doer, since it would not have been done if he had not planned it.⁵⁸ On the other hand, when accusing Chabrias he said that the doer was worse than the prompter, since there would have been no deed without some one to do it; men, said he, plot a thing only in order to carry it out.

⁵⁷We might perhaps expect “on the ground that it is the end, not the beginning, that matters” . . . [Tr.]

⁵⁸Leodamas of Acharnae, a famous orator of the 4th century; Callistratus of Aphidna, also a distinguished Athenian orator and politician. His accusation by Leodamas here mentioned seems to have been directed against his conduct in the affairs of Oropus in 366 B.C. in which he was associated with Chabrias, an Athenian general, and with him was brought to trial. [F.S.]

⁵⁵I.e. we have already (1363^b15) said that what is productive of good is good; it follows, then, from our way of looking at “productivity” and “degree,” that what is productive of a greater good is a greater good. [Tr.]

⁵⁶1362^a22. [Tr.]

Further, what is rare is a greater good than what is plentiful. Thus, gold is a better thing than iron, though less useful: it is harder to get, and therefore better worth getting. Reversely, it may be argued that the plentiful is a better thing than the rare, because we can make more use of it. For what is often useful surpasses what is seldom useful, whence the saying

The best of things is water.⁵⁹

More generally: the hard thing is better than the easy, because it is rarer: and reversely, the easy thing is better than the hard, for it is as we wish it to be. That is the greater good whose contrary is the greater evil, and whose loss affects us more. Positive goodness and badness are more important than the mere *absence* of goodness and badness: for positive goodness and badness are ends, which the mere absence of them cannot be. Further, in proportion as the functions of things are noble or base, the things themselves are good or bad: conversely, in proportion as the things themselves are good or bad, their functions also are good or bad; for the nature of results corresponds with that of their causes and beginnings, and conversely the nature of causes and beginnings corresponds with that of their results. Moreover, those things are greater goods, superiority in which is more desirable or more honourable. Thus, keenness of sight is more desirable than
1364^b keenness of smell, sight generally being more desirable than smell generally; and similarly, unusually great love of friends being more honourable than unusually great love of money, ordinary love of friends is more honourable than ordinary love of money. Conversely, if one of two normal things is better or nobler than the other, an unusual degree of that thing is better or nobler than an unusual degree of the other. Again, one thing is more honourable or better than another if it is more honourable or better to desire it; the importance of the object of a given instinct corresponds to the importance of the instinct itself; and for the same reason, if one thing is more honourable or better than another, it is more honourable and better to desire it. Again, if one science is more honourable and valuable

than another, the activity with which it deals is also more honourable and valuable; as is the science, so is the reality that is its object, each science being authoritative in its own sphere. So, also, the more valuable and honourable the object of a science, the more valuable and honourable the science itself is in consequence. Again, that which would be judged, or which has been judged, a good thing, or a better thing than something else, by all or most people of understanding, or by the majority of men, or by the ablest, must be so; either without qualification, or in so far as they use their understanding to form their judgement. This is indeed a general principle, applicable to all other judgements also; not only the goodness of things, but their essence, magnitude, and general nature are in fact just what knowledge and understanding will declare them to be. Here the principle is applied to judgements of goodness, since one definition of "good" was "what beings that acquire understanding will choose in any given case":⁶⁰ from which it clearly follows that that thing is *better* which understanding declares to be so. That, again, is a better thing which attaches to better men, either absolutely, or in virtue of their being better; as courage is better than strength. And that is a greater good which would be chosen by a better man, either absolutely, or in virtue of his being better: for instance, to suffer wrong rather than to do wrong, for that would be the choice of the juster man. Again, the pleasanter of two things is the better, since *all* things pursue pleasure, and things instinctively desire pleasurable sensation *for its own sake*; and these are two of the characteristics by which the "good" and the "end" have been defined. One pleasure is greater than another if it is more unmixed with pain, or more lasting. Again, the nobler thing is better than the less noble, since the noble is either what is pleasant or what is desirable in itself. And those things also are greater goods which men desire more earnestly to bring about for themselves or for their friends, whereas those things which they least desire to bring about are greater evils. And those things which are more lasting are better than those which are more fleeting, and the more

⁵⁹Pindar. *Olympians*, i, 1. [Tr.]

⁶⁰Cp. 1363^b14 [and 1362^a24]. [Tr.]

secure than the less; the enjoyment of the lasting has the advantage of being longer, and that of the secure has the advantage of suiting our wishes, being there for us whenever we like. Further, in accordance with the rule of co-ordinate terms and inflexions of the same stem, what is true of one such related word is true of all. Thus if the action qualified by the term “brave” is more noble and desirable than the action qualified by the term “temperate,” then “bravery” is more desirable than “temperance” and “being brave” than “being temperate.” That, again, which is chosen by all is a greater good than that which is not, and that chosen by the majority than that chosen by the minority. For that which *all* desire is good, as we have said;⁶¹ and so, the more a thing is desired, the better it is. Further, that is the better thing which is considered so by competitors or enemies, or again, by authorized judges or those whom they select to represent them. In the first two cases the decision is virtually that of every one, in the last two that of authorities and experts. And sometimes it may be argued that what all share is the better thing, since it is a dishonour not to share in it; at other times, that what none or few share is better, since it is rarer. The more praiseworthy things are, the nobler and therefore the better they are. So with the things that earn greater honours than others—honour is, as it were, a measure of value; and the things whose absence involves comparatively heavy penalties; and the things that are better than others admitted or believed to be good. Moreover, things look better merely by being divided into their parts, since they then seem to surpass a greater number of things than before. Hence Homer says that Meleager was roused to battle by the thought of

All horrors that light on a folk whose city is ta'en
of their foes,
When they slaughter the men, when the burg is
wasted with ravening flame,
When strangers are haling young children to thral-
dom, (fair women to shame).⁶²

⁶¹1363^b14. [Tr.]

⁶²*Iliad*, ix. 592–4 (Aristotle seems to quote from memory, here and elsewhere). [Tr.]

The same effect is produced by piling up facts in a climax after the manner of Epicharmus.⁶³ The reason is partly the same as in the case of division (for combination too makes the impression of great superiority), and partly that the original thing appears to be the cause and origin of important results. And since a thing is better when it is harder or rarer than other things, its superiority may be due to seasons, ages, places, times, or one's natural powers. When a man accomplishes something beyond his natural power, or beyond his years, or beyond the measure of people like him, or in a special way, or at a special place or time, his deed will have a high degree of nobleness, goodness, and justice, or of their opposites. Hence the epigram on the victor at the Olympic games:

In time past, bearing a yoke on my shoulders, of
wood unshaven,
I carried my loads of fish from Argos to Tegea
town.⁶⁴

So Iphicrates⁶⁵ used to extol himself by describing the low estate from which he had risen. Again, what is natural is better than what is acquired, since it is harder to come by. Hence the words of Homer:

I have learnt from none but myself.⁶⁶

And the best part of a good thing is particularly good; as when Pericles in his funeral oration said that the country's loss of its young men in battle was “as if the spring were taken out of the year.”⁶⁷ So with those things which are of service when the need is pressing; for example, in old age and times of sickness. And of two things that which leads more directly to the end in view is the better. So too is that which is better for people generally as well as for a particular individual. Again, what *can* be got is better than what

⁶³Sicilian writer of comedies. [F.S.]

⁶⁴Fragm. of Simonides. [F.S.]

⁶⁵The son of a shoemaker, he became an honored Athenian general, contemporary of Aristotle. He is cited many times in the *Rhetoric*, and must have been a colorful person. [F.S.]

⁶⁶*Odyssey*, xxii. 347. [Tr.]

⁶⁷Cp. iii, c. 10, 1411^a4. . . . [Tr.] The funeral oration alluded to is not the one made famous by Thucydides but the one on those fallen in the Samian War, 440 B.C. [F.S.]

cannot, for it is good in a given case and the other thing is not. And what is at the end of life is better than what is not, since those things are ends in a greater degree which are nearer the end. What aims at reality is better than what aims at appearance. We may define what aims at appearance as what a man will not choose if nobody is to know of his having it. This would seem to show that to receive benefits is more desirable than to confer them, since a man will choose the former even if nobody is to know of it, but it is not the general view that he will choose the latter if nobody knows of it. What a man wants to *be* is better than what a man wants to *seem*, for in aiming at that he is aiming more at reality. Hence men say that justice is of small value, since it is more desirable to seem just than to be just, whereas with health it is not so. That is better than other things which is more useful than they are for a number of different purposes; for example, that which promotes life, good life, pleasure, and noble conduct. For this reason wealth and health are commonly thought to be of the highest value, as possessing all these advantages. Again, that is better than other things which is accompanied both with less pain and with actual pleasure; for here there is more than one advantage; and so here we have the good of feeling pleasure and also the good of not feeling pain. And of two good things that is the better whose addition to a third thing makes a better whole than the addition of the other to the same thing will make. Again, those things which we are seen to possess are better than those which we are not seen to possess, since the former have the air of reality. Hence wealth may be regarded as a greater good if its existence is known to others. That which is dearly prized is better than what is not—the sort of thing that some people have only one of, though others have more like it. Accordingly, blinding a one-eyed man inflicts worse injury than half-blinding a man with two eyes; for the one-eyed man has been robbed of what he dearly prized.

The grounds on which we must base our arguments, when we are speaking for or against a proposal, have now been set forth more or less completely.

VIII. The most important and effective qualification for success in persuading audiences and

speaking well on public affairs is to understand all the forms of government and to discriminate their respective customs, institutions, and interests. For all men are persuaded by considerations of their interest, and their interest lies in the maintenance of the established order. Further, it rests with the supreme authority to give authoritative decisions, and this varies with each form of government; there are as many different supreme authorities as there are different forms of government. The forms of government are four—democracy, oligarchy, aristocracy, monarchy. The supreme right to judge and decide always rests, therefore, with either a part or the whole of one or other of these governing powers.

A Democracy is a form of government under which the citizens distribute the offices of state among themselves by lot, whereas under oligarchy there is a property qualification, under aristocracy one of education.⁶⁸ By education I mean that education which is laid down by the law; for it is those who have been loyal to the national institutions that hold office under an aristocracy. These are bound to be looked upon as “the best men,” and it is from this fact that this form of government has derived its name (“the rule of the best”). Monarchy, as the word implies, is the constitution in which one man has authority over all. There are two forms of monarchy: kingship, which is limited by prescribed conditions, and “tyranny,”⁶⁹ which is not limited by anything.

We must also notice the ends which the various forms of government pursue, since people choose in practice such actions as will lead to the realization of their ends. The end of democracy is freedom; of oligarchy, wealth; of aristocracy, the maintenance of education and national institutions; of tyranny, the protection of the tyrant. It is clear, then, that we must distinguish those particular customs, institutions, and interests which tend to realize the ideal of each constitution, since men choose their means with reference to their ends. But rhetorical persuasion is effected not only by demonstrative but by ethical argument; it helps a speaker to convince us, if we be-

⁶⁸Perhaps “discipline”: with special reference to Sparta. [Tr.]

⁶⁹Despotism, autocracy. [Tr.]

lieve that he has certain qualities himself, namely, goodness, or goodwill towards us, or both together. Similarly, we should know the moral qualities characteristic of each form of government, for the special moral character of each is bound to provide us with our most effective means of persuasion in dealing with it. We shall learn the qualities of governments in the same way as we learn the qualities of individuals, since they are revealed in their deliberate acts of choice; and these are determined by the end that inspires them.

We have now considered the objects, immediate or distant, at which we are to aim when urging any proposal, and the grounds on which we are to base our arguments in favour of its utility. We have also briefly considered the means and methods by which we shall gain a good knowledge of the moral qualities and institutions peculiar to the various forms of government—only, however, to the extent demanded by the present occasion; a detailed account of the subject has been given in the *Politics*.⁷⁰

IX. We have now to consider Virtue and Vice, the Noble and the Base,⁷¹ since these are the objects of praise and blame. In doing so, we shall at the same time be finding out how to make our hearers take the required view of our own characters—our second method of persuasion.⁷² The ways in which to make them trust the goodness of other people are also the ways in which to make them trust our own. Praise, again, may be serious or frivolous; nor is it always of a human or divine being but often of inanimate things, or of the humblest of the lower animals. Here too we must know on what grounds to argue, and must, therefore, now discuss the subject, though by way of illustration only.

The Noble is that which is both desirable for its own sake and also worthy of praise; or that which is both good and also pleasant because good. If this is a true definition of the Noble, it follows that virtue must be noble, since it is both

⁷⁰*Politics*, iii and iv. [Tr.]

⁷¹Or (here and elsewhere), “Goodness and Badness, the Fine and the Mean.” [Tr.]

⁷²I 356^a2 and 5. [Tr.]

a good thing and also praiseworthy. Virtue is, according to the usual view, a faculty of providing and preserving good things; or a faculty of conferring many great benefits, and benefits of all kinds on all occasions. The forms of Virtue are justice, courage, temperance, magnificence, magnanimity, liberality, gentleness, prudence, wisdom. If virtue is a faculty of beneficence, the highest kinds of it must be those which are most useful to others, and for this reason men honour most the just and the courageous, since courage is useful to others in war, justice both in war and in peace. Next comes liberality; liberal people let their money go instead of fighting for it, whereas other people care more for money than for anything else. Justice is the virtue through which everybody enjoys his own possessions in accordance with the law; its opposite is injustice, through which men enjoy the possessions of others in defiance of the law. Courage is the virtue that disposes men to do noble deeds in situations of danger, in accordance with the law and in obedience to its commands; cowardice is the opposite. Temperance is the virtue that disposes us to obey the law where physical pleasures are concerned; incontinence is the opposite. Liberality disposes us to spend money for others' good; illiberality is the opposite. Magnanimity is the virtue that disposes us to do good to others on a large scale: [its opposite is meanness of spirit]. Magnificence is a virtue productive of greatness in matters involving the spending of money. The opposites of these two are smallness of spirit and meanness respectively. Prudence is that virtue of the understanding which enables men to come to wise decisions about the relation to happiness of the goods and evils that have been previously mentioned.⁷³

The above is a sufficient account, for our present purpose, of virtue and vice in general, and of their various forms. As to further aspects of the subject, it is not difficult to discern the facts; it is evident that things productive of virtue are noble, as tending towards virtue; and also the effects of virtue, that is, the signs of its presence and the acts to which it leads. And since the signs of

⁷³Cp. I 362^b10–28. [Tr.] References to the “virtues” in the *Nicomachean Ethics*. [F.S.]

virtue, and such acts as it is the mark of a virtuous man to do or have done to him, are noble, it follows that all deeds or signs of courage, and everything done courageously, must be noble things; and so with what is just and actions done justly. (Not, however, actions justly done to us; here justice is unlike the other virtues; “justly” does not always mean “nobly”; when a man is punished, it is more shameful that this should be justly than unjustly done to him). The same is true of the other virtues. Again, those actions are noble for which the reward is simply honour, or honour more than money. So are those in which a man aims at something desirable for some one else’s sake; actions good absolutely, such as those a man does for his country without thinking of himself; actions good in their own nature; actions that are not good simply for the individual, since individual interests are selfish. Noble also
1367^a are those actions whose advantage may be enjoyed after death, as opposed to those whose advantage is enjoyed during one’s lifetime: for the latter are more likely to be for one’s own sake only. Also, all actions done for the sake of others, since these less than other actions are done for one’s own sake; and all successes which benefit others and not oneself; and services done to one’s benefactors, for this is just; and good deeds generally, since they are not directed to one’s own profit. And the opposites of those things of which men feel ashamed, for men are ashamed of saying, doing, or intending to do shameful things. So when Alcaeus said

Something I fain would say to thee,
Only shame restraineth me,⁷⁴

Sappho wrote

If for things good and noble thou wert yearning,
If to speak baseness were thy tongue not burning,
No load of shame would on thine eyelids weigh;
What thou with honour wishes thou wouldst say.⁷⁵

Those things, also, are noble for which men strive anxiously, without feeling fear; for they feel thus about the good things which lead to fair fame. Again, one quality or action is nobler than

⁷⁴Fragm. of Alcaeus. [F.S.]

⁷⁵Fragm. of Sappho. [F.S.]

another if it is that of a naturally finer being: thus a man’s will be nobler than a woman’s. And those qualities are noble which give more pleasure to other people than to their possessors; hence the nobleness of justice and just actions. It is noble to avenge oneself on one’s enemies and not to come to terms with them; for requital is just, and the just is noble; and not to surrender is a sign of courage, Victory, too, and honour belong to the class of noble things, since they are desirable even when they yield no fruits, and they prove our superiority in good qualities. Things that deserve to be remembered are noble, and the more they deserve this, the nobler they are. So are the things that continue even after death: those which are always attended by honour; those which are exceptional; and those which are possessed by one person alone—these last are more readily remembered than others. So again are possessions that bring no profit, since they are more fitting than others for a gentleman. So are the distinctive qualities of a particular people, and the symbols of what it specially admires, like long hair in Sparta, where this is a mark of a free man, as it is not easy to perform any menial task when one’s hair is long. Again, it is noble not to practise any sordid craft, since it is the mark of a free man not to live at another’s beck and call. We are also to assume, when we wish either to praise a man or blame him, that qualities closely allied to those which he actually has are identical with them; for instance, that the cautious man is cold-blooded and treacherous, and that the stupid man is an honest fellow or the thick-skinned man a good-tempered one. We can always idealize any given man by drawing on the virtues akin to his actual qualities; thus we may say that the passionate and excitable man is “outspoken”; or that the arrogant man is “superb” or “impressive.” Those who run to extremes will be said to possess the corresponding good qualities; rashness will be called courage, and extravagance generosity. That will be what most people think; and at the same time this method enables an advocate to draw a misleading inference from the motive, arguing that if a man runs into danger needlessly, much more will he do so in a noble cause; and if a man is open-handed to any one and every one, he will be so to his friends also,

1367^b

since it is the extreme form of goodness to be good to everybody.

We must also take into account the nature of our particular audience when making a speech of praise; for, as Socrates used to say, it is not difficult to praise the Athenians to an Athenian audience.⁷⁶ If the audience esteems a given quality, we must say that our hero has that quality, no matter whether we are addressing Scythians or Spartans or philosophers. Everything, in fact, that is esteemed we are to represent as noble. After all, people regard the two things as much the same.

All actions are noble that are appropriate to the man who does them: if, for instance, they are worthy of his ancestors or of his own past career. For it makes for happiness, and is a noble thing, that he should add to the honour he already has. Even inappropriate actions are noble if they are better and nobler than the appropriate ones would be; for instance, if one who was just an average person when all went well becomes a hero in adversity, or if he becomes better and easier to get on with the higher he rises. Compare the saying of Iphicrates, "Think what I was and what I am"; and the epigram on the victor at the Olympic games,

In time past, bearing a yoke on my shoulders, of wood unshaven⁷⁷;

and the encomium of Simonides,

A woman whose father, whose husband, whose brethren were princes all.⁷⁸

Since we praise a man for what he has actually done, and fine actions are distinguished from others by being intentionally⁷⁹ good, we must try to prove that our hero's noble acts are intentional.⁷⁹ This is all the easier if we can make out that he has often acted so before, and therefore we must assert coincidences and accidents to have been intended.⁷⁹ Produce a number of good actions, all of the same kind, and people will think that they must have been intended,⁷⁹ and

⁷⁶Cp. Plato, *Menexenus*, 235 D. [Tr.]

⁷⁷Cp. i. 7, 1365^a24–8, for this and the previous quotation. [Tr.]

⁷⁸Fragm. of Simonides. [F.S.]

⁷⁹Deliberate intention, based on moral choice, is meant in all these cases. [Tr.]

that they prove the good qualities of the man who did them.

Praise is the expression in words of the eminence of a man's good qualities, and therefore we must display his actions as the product of such qualities. Encomium refers to what he has actually done; the mention of accessories, such as good birth and education, merely helps to make our story credible—good fathers are likely to have good sons, and good training is likely to produce good character. Hence it is only when a man has already done something that we bestow *encomiums* upon him. Yet the actual deeds are evidence of the doer's character: even if a man has not actually done a given good thing, we shall bestow *praise* on him, if we are sure that he is the sort of man who *would* do it. To call any one blest is, it may be added, the same thing as to call him happy; but these are not the same thing as to bestow praise and encomium upon him; the two latter are a part of "calling happy," just as goodness is a part of happiness.

To praise a man is in one respect akin to urging a course of action. The suggestions which would be made in the latter case become encomiums when differently expressed. When we know what action or character is required, then, in order to express these facts as suggestions for action, we have to change and reverse our form of words. Thus the statement "A man should be proud not of what he owes to fortune but of what he owes to himself," if put like this, amounts to a suggestion; to make it into praise we must put it thus, "Since he is proud not of what he owes to fortune but of what he owes to himself." Consequently, whenever you want to praise any one, think what you would urge people to do; and when you want to urge the doing of anything, think what you would praise a man for having done. Since suggestion may or may not forbid an action, the praise into which we convert it must have one or other of two opposite forms of expression accordingly.

There are, also, many useful ways of heightening the effect of praise. We must, for instance, point out that a man is the only one, or the first, or almost the only one who has done something, or that he has done it better than any one else; all these distinctions are honourable. And we must,

1368^a

further, make much of the particular season and occasion of an action, arguing that we could hardly have looked for it just then. If a man has often achieved the same success, we must mention this; that is a strong point; he himself, and not luck, will then be given the credit. So, too, if it is on his account that observances have been devised and instituted to encourage or honour such achievements as his own: thus we may praise Hippolochus⁸⁰ because the first encomium ever made was for him, or Harmodius and Aristogeiton⁸¹ because their statues were the first to be put up in the market-place. And we may censure bad men for the opposite reason.

Again, if you cannot find enough to say of a man himself, you may pit him against others, which is what Isocrates used to do owing to his want of familiarity with forensic pleading.⁸² The comparison should be with famous men; that will strengthen your case; it is a noble thing to surpass men who are themselves great. It is only natural that methods of "heightening the effect"⁸³ should be attached particularly to speeches of praise; they aim at proving superiority over others, and any such superiority is a form of nobleness. Hence if you cannot compare your hero with famous men, you should at least compare him with other people generally, since any superiority is held to reveal excellence. And, in general, of the lines of argument which are common to all speeches, this "heightening of effect" is most suitable for declamations, where we take our hero's actions as admitted facts, and our business is simply to invest these with dignity and nobility. "Examples" are most suitable to deliberative speeches; for we judge of future events by divination from past events. Enthymemes are most suitable to forensic speeches; it is our doubts about past events that most admit of arguments showing why a thing must have happened or proving that it did happen.

⁸⁰Of Hippolochus nothing is known. [F.S.]

⁸¹Harmodius and Aristogeiton were famous tyrannicides. Their attempt to kill the sons of Peisistratus in 514 B.C. only partly succeeded. Cp. Aristotle, *Politics*, viii 10. [F.S.]

⁸²Some manuscripts have what is perhaps the better reading, "owing to his familiarity." [F.S.]

⁸³... Rhetorical efforts to magnify, extol, amplify. Cp. 1368^b10 and ii. c. 26. [Tr.]

The above are the general lines on which all, or nearly all, speeches of praise or blame are constructed. We have seen the sort of thing we must bear in mind in making such speeches, and the materials out of which encomiums and censures are made. No special treatment of censure and vituperation is needed. Knowing the above facts, we know their contraries; and it is out of these that speeches of censure are made.

X. We have next to treat of Accusation and Defence,⁸⁴ and to enumerate and describe the ingredients of the syllogisms used therein. There are three things we must ascertain—first, the nature and number of the incentives to wrongdoing; second, the state of mind of wrongdoers; third, the kind of persons who are wronged, and their condition. We will deal with these questions in order. But before that let us define the act of "wrong-doing."

We may describe "wrong-doing" as injury voluntarily inflicted contrary to law, "Law" is either special or general. By special law I mean that written law which regulates the life of a particular community; by general law, all those unwritten principles which are supposed to be acknowledged everywhere. We do things "voluntarily" when we do them consciously and without constraint. (Not all voluntary⁸⁵ acts are deliberate, but all deliberate acts are conscious⁸⁶—no one is ignorant of what he deliberately intends.) The causes of our deliberately intending harmful and wicked acts contrary to law are (1) vice, (2) lack of self-control. For the wrongs a man does to others will correspond to the bad quality or qualities that he himself possesses. Thus it is the mean man who will wrong others about money, the profligate in matters of physical pleasure, the effeminate in matters of comfort, and the coward where danger is concerned—his terror makes him abandon those who are involved in the same danger. The ambitious man⁸⁷ does wrong for the sake of honour, the quick-tempered from anger, the lover of victory for the sake of victory, the

⁸⁴It is of two forms of forensic speech. [F.S.]

⁸⁵I.e. and therefore conscious. [Tr.]

⁸⁶I.e. and therefore voluntary. [Tr.]

⁸⁷Greek, "the honour-loving man." [Tr.]

embittered man for the sake of revenge, the stupid man because he has misguided notions of right and wrong, the shameless man because he does not mind what people think of him; and so with the rest—any wrong that any one does to others corresponds to his particular faults of character.⁸⁸

However, this subject has already been cleared up in part in our discussion of the virtues⁸⁹ and will be further explained later when we treat of the emotions.⁹⁰ We have now to consider the motives and states of mind of wrongdoers, and to whom they do wrong.

Let us first decide what sort of things people are trying to get or avoid when they set about doing wrong to others. For it is plain that the prosecutor must consider, out of all the aims that can ever induce us to do wrong to our neighbours, how many, and which, affect his adversary; while the defendant must consider how many, and which, do *not* affect him. Now every action of every person either is or is not due to that person himself. Of those not due to himself some are due to chance, the others to necessity; of these latter, again, some are due to compulsion, the others to nature. Consequently all actions that are not due to a man himself are due either to chance or to nature or to compulsion. All actions that *are* due to a man himself and caused by himself are due either to habit or to rational or irrational craving. Rational craving is a craving for good, i.e. a *wish*—nobody wishes for anything unless he thinks it good. Irrational craving is two fold, viz. anger and appetite.⁹¹

Thus every action must be due to one or other of seven causes: chance, nature, compulsion, habit, reasoning, anger, or appetite. It is superfluous further to distinguish actions according to the doers' ages, moral states, or the like; it is of course true that, for instance, young men do have hot tempers and strong appetites; still, it is not

⁸⁸Lit., "and similarly each of the other people (who do wrong to others does it) with reference to his particular part of the subject matter (of bad character)." Cp. . . . 1359^b15. [Tr.]

⁸⁹i, c. 9. [Tr.]

⁹⁰ii, cc. 1–11. [Tr.]

⁹¹ . . . In translating ἐπιθυμία, "desire" has sometimes been used, as well as "appetite." [Tr.]

through youth that they act accordingly, but through anger or appetite. Nor, again, is action due to wealth or poverty; if it is of course true that poor men, being short of money, do have an appetite for it, and that rich men, being able to command needless pleasures, do have an appetite for such pleasures: but here, again, their actions will be *due* not to wealth or poverty but to appetite. Similarly, with just men, and unjust men, and all others who are said to act in accordance with their moral qualities, their actions will really be due to one of the causes mentioned—either reasoning or emotion: due, indeed, sometimes to good dispositions and good emotions, and sometimes to bad; but that good qualities should be followed by good emotions, and bad by bad, is merely an accessory fact—it is no doubt true that the temperate man, for instance, because he is temperate, *is* always and at once attended by healthy opinions and appetites in regard to pleasant things, and the intemperate man by unhealthy ones. So we must ignore such distinctions. Still we must consider what kinds of actions and of people usually go together; for while there are no definite kinds of action associated with the fact that a man is fair or dark, tall or short, it does make a difference if he is young or old, just or unjust. And, generally speaking, all those accessory qualities that cause distinctions of human character are important: e.g. the sense of wealth or poverty, of being lucky or unlucky. This shall be dealt with later⁹²—let us now deal first with the rest of the subject before us.

The things that happen by chance are all those whose cause cannot be determined, that have no purpose, and that happen neither always nor usually nor in any fixed way. The definition of chance shows just what they are. Those things happen by nature which have a fixed and internal cause; they take place uniformly, either always or usually. There is no need to discuss in exact detail the things that happen contrary to nature, nor to ask whether they happen in some sense naturally or from some other cause; it would seem that chance is at least partly the cause of such events. Those things happen through compulsion which take place contrary to the desire or reason

⁹²ii, cc. 12–17. [Tr.]

of the doer, yet through his own agency. Acts are done from habit which men do because they have often done them before. Actions are due to reasoning when, in view of any of the goods already mentioned,⁹³ they appear useful either as ends or as means to an end, and are performed for that reason: "for that reason," since even licentious persons perform a certain number of useful actions, but because they are pleasant and not because they are useful. To passion and anger are due all acts of revenge. Revenge and punishment are different things. Punishment is inflicted for the sake of the person punished; revenge for that of the punisher, to satisfy his feelings. (What anger is will be made clear when we come to discuss the emotions.⁹⁴) Appetite is the cause of all actions that appear pleasant. Habit, whether acquired by mere familiarity or by effort, belongs to the class of pleasant things, for there are many actions not naturally pleasant which men perform with pleasure, once they have become used to them. To sum up then, all actions due to ourselves either are or seem to be either good or pleasant. Moreover, as all actions due to ourselves are done voluntarily and actions not due to ourselves are done involuntarily, it follows that all voluntary actions must either be or seem to be either good or pleasant; for I reckon among goods escape from evils or apparent evils and the exchange of a greater evil for a less (since these things are in a sense positively desirable), and likewise I count among pleasures escape from painful or apparently painful things and the exchange of a greater pain for a less. We must ascertain, then, the number and nature of the things that are useful and pleasant. The useful has been previously examined in connexion with political oratory;⁹⁵ let us now proceed to examine the pleasant. Our various definitions must be regarded as adequate, even if they are not exact, provided they are clear.

XI. We may lay it down that Pleasure is a movement, a movement by which the soul as a whole is consciously brought into its normal state

⁹³i, c. 6. [Tr.]

⁹⁴ii, c. 2. [Tr.]

⁹⁵i, c. 6. [Tr.]

of being; and that Pain is the opposite.⁹⁶ If this is what pleasure is, it is clear that the pleasant is what tends to produce this condition, while that which tends to destroy it, or to cause the soul to be brought into the opposite state, is painful. It must therefore be pleasant as a rule to move towards a natural state of being, particularly when a natural process has achieved the complete recovery of that natural state. Habits also are pleasant; for as soon as a thing has become habitual, it is virtually natural; habit is a thing not unlike nature; what happens often is akin to what happens always, natural events happening always, habitual events often. Again, that is pleasant which is not forced on us; for force is unnatural, and that is why what is compulsory is painful, and it has been rightly said

All that is done on compulsion is bitterness unto the soul.⁹⁷

So all acts of concentration, strong effort, and strain are necessarily painful; they all involve compulsion and force, unless we are accustomed to them, in which case it is custom that makes them pleasant. The opposites to these are pleasant; and hence ease, freedom from toil, relaxation, amusement, rest, and sleep belong to the class of pleasant things; for these are all free from any element of compulsion. Everything, too, is pleasant for which we have the desire within us, since desire is the craving for pleasure. Of the desires some are irrational, some associated with reason.⁹⁸ By irrational I mean those which do not arise from any opinion held by the mind. Of this kind are those known as "natural"; for instance, those originating in the body, such as the desire for nourishment, namely hunger and thirst, and a separate kind of desire answering to each kind of nourishment; and the desires connected with taste and sex and sensations of touch in general; and those of smell, hearing, and vi-

⁹⁶The relation here established between pleasure and the soul points to a Platonic background. The second part of the definition may have originated in medical circles; it is closely paralleled in Plato, *Timaeus*, 64c-65b. [F.S.]

⁹⁷Fragm. of Euenus of Paros, elegiac poet and sophist, contemporary of Socrates. [F.S.]

⁹⁸"are accompanied, or not accompanied, by a rational principle." [Tr.]

sion. Rational desires are those which we are induced to have; there are many things we desire to see or get because we have been told of them and induced to believe them good. Further, pleasure is the consciousness through the senses of a certain kind of emotion; but imagination⁹⁹ is a feeble sort of sensation, and there will always be in the mind of a man who remembers or expects something an image or picture of what he remembers or expects. If this is so, it is clear that memory and expectation also, being accompanied by sensation, may be accompanied by pleasure. It follows that anything pleasant is either present and perceived, past and remembered, or future and expected, since we perceive present pleasures, remember past ones, and expect future ones. Now the things that are pleasant to remember are not only those that, when actually perceived as present, *were* pleasant, but also some things that were not, provided that their results have subsequently proved noble and good. Hence the words

Sweet 'tis when rescued to remember pain,¹⁰⁰

and

Even his griefs are a joy long after to one that remembers

All that he wrought and endured.¹⁰¹

The reason of this is that it is pleasant even to be merely free from evil. The things it is pleasant to expect are those that when present are felt to afford us either great delight or great but not painful benefit. And in general, all the things that delight us when they are present also do so, as a rule, when we merely remember or expect them. Hence even being angry is pleasant—Homer said of wrath that

Sweeter it is by far than the honeycomb dripping with sweetness¹⁰²—

for no one grows angry with a person on whom there is no prospect of taking vengeance, and we feel comparatively little anger, or none at all, with those who are much our superiors in power.

⁹⁹ . . . “mental picturing,” “fancy,” “impression.” [Tr.]

¹⁰⁰ Euripides, *Andromeda*, fragm. [Tr.]

¹⁰¹ Cp. *Odyssey*, xv. 400, 401. [Tr.]

¹⁰² *Iliad*, xviii. 109. [Tr.]

Some pleasant feeling is associated with most of our appetites; we are enjoying either the memory of a past pleasure or the expectation of a future one, just as persons down with fever, during their attacks of thirst, enjoy remembering the drinks they have had and looking forward to having more. So also a lover enjoys talking or writing about his loved one, or doing any little thing connected with him; all these things recall him to memory and make him actually present to the eye of imagination. Indeed, it is always the first sign of love, that besides enjoying some one's presence, we remember him when he is gone, and feel pain as well as pleasure, because he is there no longer. Similarly there is an element of pleasure even in mourning and lamentation for the departed. There is grief, indeed, at his loss, but pleasure in remembering him and as it were seeing him before us in his deeds and in his life. We can well believe the poet when he says

He spake, and in each man's heart he awakened the love of lament.¹⁰³

Revenge, too, is pleasant; it is pleasant to get anything that it is painful to fail to get, and angry people suffer extreme pain when they fail to get their revenge; but they enjoy the prospect of getting it. Victory also is pleasant, and not merely to “bad losers,” but to every one; the winner sees himself in the light of a champion, and everybody has a more or less keen appetite for being that. The pleasantness of victory implies of course that combative sports and intellectual contests are pleasant (since in these it often happens that some one wins) and also games like knucklebones, ball, dice, and draughts. And similarly with the serious sports; some of these become pleasant when one is accustomed to them; while others are pleasant from the first, like hunting with hounds, or indeed any kind of hunting. For where there is competition, there is victory. That is why forensic pleading and debating contests are pleasant to those who are accustomed to them and have the capacity for them. Honour and good repute are among the most pleasant things of all; they make a man see himself in the character of a fine fellow, especially when he is credited with it

¹⁰³ *Iliad*, xxiii. 108; *Odyssey*, iv. 183. [Tr.]

by people whom he thinks good judges. His neighbours are better judges than people at a distance; his associates and fellow-countrymen better than strangers; his contemporaries better than posterity; sensible persons better than foolish ones; a large number of people better than a small number: those of the former class, in each case, are the more likely to be good judges of him. Honour and credit bestowed by those whom you think much inferior to yourself—e.g. children or animals—you do not value: not for its own sake, anyhow: if you do value it, it is for some other reason. Friends belong to the class of pleasant things; it is pleasant to love—if you love wine, you certainly find it delightful: and it is pleasant to be loved, for this too makes a man see himself as the possessor of goodness, a thing that every being that has a feeling for it desires to possess: to be loved means to be valued for one's own personal qualities. To be admired is also pleasant, simply because of the honour implied. Flattery and flatterers are pleasant: the flatterer is a man who, you believe, admires and likes you. To do the same thing often is pleasant, since, as we saw, anything habitual is pleasant.¹⁰⁴ And to change is also pleasant: change means an approach to nature, whereas invariable repetition of anything causes the excessive prolongation of a settled condition: therefore, says the poet,

Change is in all things sweet.¹⁰⁵

That is why what comes to us only at long intervals is pleasant, whether it be a person or a thing; for it is a change from what we had before, and, besides, what comes only at long intervals has the value of rarity. Learning things and wondering at things are also pleasant as a rule; wondering implies the desire of learning,¹⁰⁶ so that the object of wonder is an object of desire; while in learning one is brought into one's natural condition. Conferring and receiving benefits belong to the class of pleasant things; to receive a benefit is to get what one desires; to confer a benefit implies both possession and superiority, both of which are things we try to attain. It is because

¹⁰⁴i, c. 10, 1369^b16. [Tr.]

¹⁰⁵Euripides, *Orestes*, 234. [Tr.]

¹⁰⁶Text uncertain. [F.S.]

beneficent acts are pleasant that people find it pleasant to put their neighbours straight again and to supply what they lack. Again, since learning and wondering are pleasant, it follows that such things as acts of imitation must be pleasant—for instance, painting, sculpture, poetry—and every product of skilful imitation; this latter, even if the object imitated is not itself pleasant; for it is not the object itself which here gives delight; the spectator draws inferences (“That is a so-and-so”) and thus learns something fresh.¹⁰⁷ Dramatic turns of fortune and hairbreadth escapes from perils are pleasant, because we feel all such things are wonderful.

And since what is natural is pleasant, and things akin to each other seem natural to each other, therefore all kindred and similar things are usually pleasant to each other; for instance, one man, horse, or young person is pleasant to another man, horse, or young person. Hence the proverbs “mate delights mate,” “like to like,”¹⁰⁸ “beast knows beast,” “jackdaw to jackdaw,” and the rest of them. But since everything like and akin to oneself is pleasant, and since every man is himself more like and akin to himself than any one else is, it follows that all of us must be more or less fond of ourselves. For all this resemblance and kinship is present particularly in the relation of an individual to himself. And because we are all fond of ourselves, it follows that what is our own is pleasant to all of us, as for instance our own deeds and words. That is why we are usually fond of our flatterers, [our lovers,] and honour; also of our children, for our children are our own work. It is also pleasant to complete what is defective, for the whole thing thereupon becomes our own work. And since power over others is very pleasant, it is pleasant to be thought wise, for practical wisdom secures us power over others. (Scientific wisdom is also pleasant, because it is the knowledge of many wonderful things.) Again, since most of us are ambitious, it must be pleasant to disparage our neighbours as well as to have power over them. It is pleasant for a man to spend his time over what he feels he can do best; just as the poet says,

¹⁰⁷Cp. *Poetics*, c. 4. 1448^b5–19. [Tr.]

¹⁰⁸*Odyssey*, xvii. 218. [Tr.]

To that he bends himself,
To that each day allots most time, wherein
He is indeed the best part of himself.¹⁰⁹

372^a Similarly, since amusement and every kind of relaxation and laughter too belong to the class of pleasant things, it follows that ludicrous things are pleasant, whether men, words, or deeds. We have discussed the ludicrous separately in the treatise on the *Art of Poetry*.¹¹⁰

So much for the subject of pleasant things: by considering their opposites we can easily see what things are unpleasant.

XII. The above are the motives that make men do wrong to others; we are next to consider the states of mind in which they do it, and the persons to whom they do it.

They must themselves suppose that the thing can be done, and done by them: either that they can do it without being found out, or that if they are found out they can escape being punished, or that if they are punished the disadvantage will be less than the gain for themselves or those they care for. The general subject of apparent possibility and impossibility will be handled later on,¹¹¹ since it is relevant not only to forensic but to all kinds of speaking. But it may here be said that people think that they can themselves most easily do wrong to others without being punished for it if they possess eloquence, or practical ability, or much legal experience, or a large body of friends, or a great deal of money. Their confidence is greatest if they personally possess the advantages mentioned: but even without them they are satisfied if they have friends or supporters or partners who do possess them: they can thus both commit their crimes and escape being found out and punished for committing them. They are also safe, they think, if they are on good terms with their victims or with the judges who try them. Their victims will in that case not be on their guard against being wronged, and will make some arrangement with them instead of prosecuting; while their judges will favour them because they like them, either letting them off altogether or im-

posing light sentences. They are not likely to be found out if their appearance contradicts the charges that might be brought against them: for instance, a weakling is unlikely to be charged with violent assault, or a poor and ugly man with adultery. Public and open injuries are the easiest to do, because nobody could at all suppose them possible, and therefore no precautions are taken. The same is true of crimes so great and terrible that no man living could be suspected of them: here too no precautions are taken. For all men guard against ordinary offences, just as they guard against ordinary diseases; but no one takes precautions against a disease that nobody has ever had. You feel safe, too, if you have either no enemies or a great many; if you have none, you expect not to be watched and therefore not to be detected; if you have a great many, you will be watched, and therefore people¹¹² will think you can never risk an attempt on them, and you can defend your innocence by pointing out that you could never have taken such a risk. You may also trust to hide your crime by the way you do it or the place you do it in, or by some convenient means of disposal.

You may feel that even if you are found out you can stave off a trial, or have it postponed, or corrupt your judges: or that even if you are sentenced you can avoid paying damages, or can at least postpone doing so for a long time: or that you are so badly off that you will have nothing to lose. You may feel that the gain to be got by wrong-doing is great or certain or immediate, and that the penalty is small or uncertain or distant. It may be that the advantage to be gained is greater than any possible retribution: as in the case of despotic power, according to the popular view. You may consider your crimes as bringing you solid profit, while their punishment is nothing more than being called bad names. Or the opposite argument may appeal to you: your crimes may bring you some credit (thus you may, incidentally, be avenging your father or mother, like Zeno),¹¹³ whereas the punishment may amount to a fine, or banishment, or something of that sort. People may be led on to wrong others by either of these motives or feelings; but no man by

¹⁰⁹Euripides, *Antiope*, fragm. [F.S.]

¹¹⁰Not found in the *Poetics*, as it exists today. Aristotle probably analysed the causes and conditions of laughter, when treating of Comedy in his lost Second Book. [Tr.]

¹¹¹ii, c. 19. [Tr.]

¹¹²I.e. the victims of the injustice. [Tr.]

¹¹³Nothing is known of the man or the case. [F.S.]

both—they will affect people of quite opposite characters. You may be encouraged by having often escaped detection or punishment already; or by having often tried and failed; for in crime, as in war, there are men who will always refuse to give up the struggle. You may get your pleasure on the spot and the pain later, or the gain on the spot and the loss later. That is what appeals to weak-willed persons—and weakness of will may be shown with regard to all the objects of desire. It may on the contrary appeal to you—as it does appeal to self-controlled and sensible people—that the pain and loss are immediate, while the pleasure and profit come later and last longer. You may feel able to make it appear that your crime was due to chance, or to necessity, or to natural causes, or to habit: in fact, to put it generally, as if you had failed to do right rather than actually done wrong. You may be able to trust other people to judge you equitably. You may be stimulated by being in want: which may mean that you want necessities, as poor people do, or that you want luxuries, as rich people do. You may be encouraged by having a particularly good reputation, because that will save you from being suspected: or by having a particularly bad one, because nothing you are likely to do will make it worse.

The above, then, are the various states of mind in which a man sets about doing wrong to others. The kind of people to whom he does wrong, and the ways in which he does it, must be considered next. The people to whom he does it are those who have what he wants himself, whether this means necessities or luxuries and materials for enjoyment. His victims may be far off or near at hand. If they are near, he gets his profit quickly; if they are far off, vengeance is show, as those think who plunder the Carthaginians. They may be those who are trustful instead of being cautious and watchful, since all such people are easy to elude. Or those who are too easy-going to have enough energy to prosecute an offender. Or sensitive people, who are not apt to show fight over questions of money. Or those who have been wronged already by many people, and yet have not prosecuted; such men must surely be the proverbial “Mysian prey,”¹¹⁴ Or those who have

¹¹⁴I.e. an easy prey. [Tr.]

either never or often been wronged before; in neither case will they take precautions; if they have never been wronged they think they never will, and if they have often been wronged they feel that surely it cannot happen again. Or those whose character has been attacked in the past, or is exposed to attack in the future: they will be too much frightened of the judges to make up their minds to prosecute, nor can they win their case if they do: this is true of those who are hated or unpopular. Another likely class of victim is those who their injurer can pretend have, themselves or through their ancestors or friends, treated badly, or intended to treat badly, the man himself, or his ancestors, or those he cares for; as the proverb says, “wickedness needs but a pretext.” A man may wrong his enemies, because that is pleasant: he may equally wrong his friends, because that is easy. Then there are those who have no friends, and those who lack eloquence and practical capacity; these will either not attempt to prosecute, or they will come to terms, or failing that they will lose their case. There are those whom it does not pay to waste time in waiting for trial or damages, such as foreigners and small farmers; they will settle for a trifle, and always be ready to leave off. Also those who have themselves wronged others, either often, or in the same way as they are now being wronged themselves—for it is felt that next to no wrong is done to people when it is the same wrong as they have often themselves done to others: if, for instance, you assault a man who has been accustomed to behave with violence to others. So too with those who have done wrong to others, or have meant to, or mean to, or are likely to do so; there is something fine and pleasant in wronging such persons, it seems as though almost no wrong were done. Also those by doing wrong to whom we shall be gratifying our friends, or those we admire or love, or our masters, or in general the people by reference to whom we mould our lives. Also those whom we may wrong and yet be sure of equitable treatment. Also those against whom we have had any grievance, or any previous differences with them, as Callippus had when he behaved as he did to Dion:¹¹⁵ here too it seems as if

¹¹⁵Dion, a friend of Plato, freed Sicily of the tyranny of

almost no wrong were being done. Also those who are on the point of being wronged by others if we fail to wrong them ourselves, since here we feel we have no time left for thinking the matter over. So Aenesidemus¹¹⁶ is said to have sent the “cottabus”¹¹⁷ prize to Gelon,¹¹⁸ who had just reduced a town to slavery, because Gelon had got there first and forestalled his own attempt. Also those by wronging whom we shall be able to do many righteous acts; for we feel that we can then easily cure the harm done. Thus Jason the Thesalian¹¹⁹ said that it is a duty to do some unjust acts in order to be able to do many just ones.

Among the kinds of wrong done to others are those that are done universally, or at least commonly: one expects to be forgiven for doing these. Also those that can easily be kept dark, as where things that can rapidly be consumed like eatables are concerned, or things that can easily be changed in shape, colour, or combination, or things that can easily be stowed away almost anywhere—portable objects that you can stow away in small corners, or things so like others of which you have plenty already that nobody can tell the difference. There are also wrongs of a kind that shame prevents the victim speaking about, such as outrages done to the women in his household or to himself or to his sons. Also those for which you would be thought very litigious to prosecute any one—trifling wrongs, or wrongs for which people are usually excused.

The above is a fairly complete account of the circumstances under which men do wrong to others, of the sort of wrongs they do, of the sort of persons to whom they do them, and of their reasons for doing them.

373^b XIII. It will now be well to make a complete classification of just and unjust actions. We may begin by observing that they have been defined

the older Dionysius and with Plato’s assistance attempted to set up an ideal state. In 354 B.C. he was murdered by his former friend and associate Callippus. [F.S.]

¹¹⁶Tyrant of Leontin. [F.S.]

¹¹⁷A Sicilian game; the prize was a gift of eggs, cakes, and sweetmeats. [F.S.]

¹¹⁸Tyrant of Syracuse. [F.S.]

¹¹⁹Jason of Pherae, ruler of Thessaly in the 4th cent. [F.S.]

relatively to two kinds of law, and also relatively to two classes of persons. By the two kinds of law I mean particular law and universal law.¹²⁰ Particular law is that which each community lays down and applies to its own members: this is partly written and partly unwritten. Universal law is the law of nature. For there really is, as every one to some extent divines, a natural justice and injustice that is binding on all men, even on those who have no association or covenant with each other. It is this that Sophocles’ *Antigone* clearly means when she says that the burial of Polyneices was a just act in spite of the prohibition: she means that it was just by nature.

Not of to-day or yesterday it is,
But lives eternal: none can date its birth.¹²¹

And so Empedocles, when he bids us kill no living creature, says that doing this is not just for some people while unjust for others,

Nay, but, an all-embracing law, through the realms
of the sky
Unbroken it stretcheth, and over the earth’s immensity.¹²²

And as Alcidas¹²³ says in his *Messeniac Oration*. . . .

The actions that we ought to do or not to do have also been divided into two classes as affecting either the whole community or some one of its members. From this point of view we can perform just or unjust acts in either of two ways—towards one definite person, or towards the community. The man who is guilty of adultery or assault is doing wrong to some definite person; the man who avoids service in the army is doing wrong to the community.

Thus the whole class of unjust actions may be divided into two classes, those affecting the community, and those affecting one or more other persons. We will next, before going further,

¹²⁰Cp. 1368^a8 ff. [F.S.]

¹²¹Sophocles, *Antigone*, 456–7. [Tr.]

¹²²Fragm. of Empedocles, a physical philosopher of the 5th cent. [F.S.]

¹²³According to the scholast, the words of Alcidas [a 5th cent. sophist and orator] were, “God has left all men free; Nature has made no man a slave.” . . . [Tr.]

remind ourselves of what "being wronged" means. Since it has already¹²⁴ been settled that "doing a wrong" must be intentional, "being wronged" must consist in having an injury done to you by some one who *intends* to do it. In order to be wronged, a man must (1) suffer actual harm, (2) suffer it against his will. The various possible forms of harm are clearly explained by our previous¹²⁵ separate discussion of goods and evils. We have also seen that a voluntary action is one where the doer knows what he is doing.¹²⁶ We now see that every accusation must be of an action affecting either the community or some individual. The doer of the action must either understand and intend the action, or not understand and intend it. In the former case, he must be acting either from deliberate choice or from passion. (Anger will be discussed when we speak of the passions¹²⁷; the motives for crime and the state of mind of the criminal have already¹²⁸ been discussed.) Now it often happens that a man will admit an act, but will not admit the prosecutor's label¹²⁹ for the act nor the facts which that label implies. He will admit that he took a thing but not that he "stole" it; that he struck some one first, but not that he committed "outrage"; that he had intercourse with a woman, but not that he committed "adultery"; that he is guilty of theft, but not that he is guilty of "sacrilege," the object stolen not being consecrated; that he has encroached, but not that he has "encroached on State lands"; that he has been in communication with the enemy, but not that he has been guilty of "treason." Here therefore we must be able to distinguish what is theft, outrage, or adultery, from what is not, if we are to be able to make the justice of our case clear, no matter whether our aim is to establish a man's guilt or to establish his innocence. Wherever such charges are brought against a man, the question is whether he is or is not guilty of a criminal offence. It is deliberate purpose that constitutes wickedness and criminal

guilt, and such names as "outrage" or "theft" imply deliberate purpose as well as the mere action. A blow does not always amount to "outrage," but only if it is struck with some such purpose as to insult the man struck or gratify the striker himself. Nor does taking a thing without the owner's knowledge always amount to "theft," but only if it is taken with the intention of keeping it and injuring the owner. And as with these charges, so with all the others.

We saw that there are two kinds of right and wrong conduct towards others, one provided for by written ordinances, the other by unwritten. We have now discussed the kind about which the laws have something to say. The other kind has itself two varieties. First, there is the conduct that springs from exceptional goodness or badness, and is visited accordingly with censure and loss of honour, or with praise and increase of honour and decorations: for instance, gratitude to, or requital of, our benefactors, readiness to help our friends, and the like. The second kind makes up for the defects of a community's written code of law. This is what we call equity; people regard it as just; it is, in fact, the sort of justice which goes beyond the written law. Its existence partly is and partly is not intended by legislators; not intended, where they have noticed no defect in the law; intended, where they find themselves unable to define things exactly, and are obliged to legislate as if that held good always which in fact only holds good usually; or where it is not easy to be complete owing to the endless possible cases presented, such as the kinds and sizes of weapons that may be used to inflict wounds—a lifetime would be too short to make out a complete list of these. If, then, a precise statement is impossible and yet legislation is necessary, the law must be expressed in wide terms; and so, if a man has no more than a finger-ring on his hand when he lifts it to strike or actually strikes another man, he is guilty of a criminal act according to the written words of the law; but he is innocent really, and it is equity that declares him to be so. From this definition of equity it is plain what sort of actions, and what sort of persons, are equitable or the reverse. Equity must be applied to forgivable actions; and it must make us distinguish between criminal acts on the one hand, and errors of

¹²⁹ . . . a specification or description of the alleged offence, with a claim for a corresponding penalty. [Tr.]

judgement, or misfortunes, on the other. (A “misfortune” is an act, not due to moral badness, that has unexpected results: an “error of judgement” is an act, also not due to moral badness, that has results that might have been expected: a “criminal act” has results that might have been expected, but *is* due to moral badness, for that is the source of all actions inspired by our appetites.) Equity bids us be merciful to the weakness of human nature; to think less about the laws than about the man who framed them, and less about what he said than about what he meant; not to consider the actions of the accused so much as his intentions; nor this or that detail so much as the whole story; to ask not what a man is now but what he has always or usually been. It bids us remember benefits rather than injuries, and benefits received rather than benefits conferred; to be patient when we are wronged; to settle a dispute by negotiation and not by force; to prefer arbitration to litigation—for an arbitrator goes by the equity of a case, a judge by the strict law, and arbitration was invented with the express purpose of securing full power for equity.

The above may be taken as a sufficient account of the nature of equity.

XIV. The worse of two acts of wrong done to others is that which is prompted by the worse disposition. Hence the most trifling acts may be the worst ones; as when Callistratus¹³⁰ charged Melanopus with having cheated the temple-builders of three consecrated half-obols. The converse is true of just acts. This is because the greater is here potentially contained in the less: there is no crime that a man who has stolen three consecrated half-obols would shrink from committing. Sometimes, however, the worse act is reckoned not in this way but by the greater harm that it does. Or it may be because no punishment for it is severe enough to be adequate; or the harm done may be incurable—a difficult and even hopeless crime to defend;¹³¹ or the sufferer may not be able to get his injurer legally pun-

¹³⁰For Callistratus cp. note to 1364^a21. Melanopus was a political rival; the exact nature of the offence here alluded to is unknown. [F.S.]

¹³¹Or, “due punishment then being difficult or impossible.” [Tr.]

ished, a fact that makes the harm incurable, since legal punishment and chastisement are the proper cure. Or again, the man who has suffered wrong may have inflicted some fearful punishment on himself; then the doer of the wrong ought in justice to receive a still more fearful punishment. Thus Sophocles,¹³² when pleading for retribution to Euctemon, who had cut his own throat because of the outrage done to him, said he would not fix a penalty less than the victim had fixed for himself. Again, a man’s crime is worse if he has been the first man, or the only man, or almost the only man, to commit it; or if it is by no means the first time he has gone seriously wrong in the same way; or if his crime has led to the thinking-out and invention of measures to prevent and punish similar crimes—thus in Argos a penalty is inflicted on a man on whose account a law is passed, and also on those on whose account the prison was built: or if a crime is specially brutal, or specially deliberate: or if the report of it awakes more terror than pity. There are also such rhetorically effective ways of putting it as the following: That the accused has disregarded and broken not one but many solemn obligations like oaths, promises, pledges, or rights of intermarriage between states—here the crime is worse because it consists of many crimes; and that the crime was committed in the very place where criminals are punished, as for example perjurers do—it is argued that a man who will commit a crime in a law-court would commit it anywhere. Further, the worse deed is that which involves the doer in special shame; that whereby a man wrongs his benefactors—for he does more than one wrong, by not merely doing them harm but failing to do them good; that which breaks the unwritten laws of justice—the better sort of man will be just without being forced to be so, and the written laws depend on force while the unwritten ones do not. It may however be argued otherwise, that the crime is worse which breaks the written laws: for the man who commits crimes for which terrible penalties are provided will not hesitate over crimes for which no penalty is

¹³²Not the tragedian but a statesman and orator advanced in years at the end of the Peloponnesian war. The case mentioned here is unknown. [F.S.]

provided at all.—So much, then, for the comparative badness of criminal actions.

XV. There are also the so-called “non-technical”¹³³ means of persuasion; and we must now take a cursory view of these, since they are specially characteristic of forensic oratory. They are five in number: laws, witnesses, contracts, tortures, oaths.

First, then, let us take laws and see how they are to be used in persuasion and dissuasion, in accusation and defence. If the written law tells against our case, clearly we¹³⁴ must appeal to the universal law, and insist on its greater equity and justice. We must argue that the juror’s oath “I will give my verdict according to my honest opinion” means that one will not simply follow the letter of the written law. We must urge that the principles of equity are permanent and changeless, and that the universal law does not change either, for it is the law of nature, whereas written laws often do change. This is the bearing of the lines in Sophocles’ *Antigone*, where Antigone pleads that in burying her brother she had broken Creon’s law, but not the unwritten law:

1375^b Not of to-day or yesterday they are,
But live eternal: (none can date their birth.)
Not I would fear the wrath of any man,
(And brave Gods’ vengeance) for defying these.¹³⁵

We shall argue that justice indeed is true and profitable, but that sham justice is not, and that consequently the written law is not, because it does not fulfil the true purpose of law. Or that justice is like silver, and must be assayed by the judges, if the genuine is to be distinguished from the counterfeit. Or that the better a man is, the more he will follow and abide by the unwritten law in preference to the written. Or perhaps that the law in question contradicts some other highly-esteemed law, or even contradicts itself. Thus it may be that one law will enact that all

¹³³Cp. c. 2, *supra*. [Tr.]

¹³⁴Here, and in what follows, “we” must be taken in a general sense. More literally, “tells against his case, clearly the litigant must. . . . He must argue, &c.” So with “you” elsewhere: e.g. 1372^{a,b}. [Tr.]

¹³⁵Sophocles, *Antigone*, 456. . . . [Tr.]

contracts must be held binding, while another forbids us ever to make illegal contracts. Or if a law is ambiguous, we shall turn it about and consider which construction best fits the interests of justice or utility, and then follow that way of looking at it. Or if, though the law still exists, the situation to meet which it was passed exists no longer, we must do our best to prove this and to combat the law thereby. If however the written law supports our case, we must urge that the oath “to give my verdict according to my honest opinion” is not meant to make the judges give a verdict that is contrary to the law, but to save them from the guilt of perjury if they misunderstand what the law really means. Or that no one chooses what is absolutely good, but every one what is good for himself.¹³⁶ Or that not to use the laws is as bad as to have no laws at all. Or that, as in the other arts, it does not pay to try to be cleverer than the doctor: for less harm comes from the doctor’s mistakes than from the growing habit of disobeying authority. Or that trying to be cleverer than the laws is just what is forbidden by those codes of law that are accounted best.—So far as the laws are concerned, the above discussion is probably sufficient.

As to witnesses, they are of two kinds, the ancient and the recent; and these latter, again, either do or do not share in the risks of the trial. By “ancient” witnesses I mean the poets and all other notable persons whose judgements are known to all. Thus the Athenians appealed to Homer¹³⁷ as a witness about Salamis; and the men of Tenedos not long ago appealed to Periander¹³⁸ of Corinth in their dispute with the people of Sigeum; and Cleophon¹³⁹ supported his accusation of Critias by quoting the elegiac verse of Solon, maintaining that discipline had long been slack in the family of Critias, or Solon would never have written,

¹³⁶Sc., and our written laws, which were made for us, may not reach the abstract ideal of perfection, but they probably suit us better than if they did. [Tr.]

¹³⁷Claiming against Megara their ancient right to the possession of Salamis. The *Iliad* verses B 557–58 have often in antiquity been called an Athenian interpolation. [F.S.]

¹³⁸Famous tyrant of Corinth in the 7th cent. B.C. The incident referred to is unknown. [F.S.]

¹³⁹Cleophon and Ciritas, leaders of opposite parties at the end of the Peloponnesian war. [F.S.]

Pray thee, bid the red-haired Critias do what his father commands him.¹⁴⁰

These witnesses are concerned with past events. As to future events we shall also appeal to soothsayers: thus Themistocles¹⁴¹ quoted the oracle about “the wooden wall” as a reason for engaging the enemy’s fleet. Further, proverbs are, as has been said,¹⁴² one form of evidence. Thus if you are urging somebody not to make a friend of an old man, you will appeal to the proverb,

Never show an old man kindness.

Or if you are urging that he who has made away with fathers should also make away with their sons, quote,

Fool, who slayeth the father and leaveth his sons to avenge him.¹⁴³

“Recent” witnesses are well-known people who have expressed their opinions about some disputed matter: such opinions will be useful support for subsequent disputants on the same points: thus Eubulus¹⁴⁴ used in the law-courts against Chares the reply Plato¹⁴⁵ had made to Archibius,¹⁴⁶ “It has become the regular custom in this country to admit that one is a scoundrel.” There are also those witnesses who share the risk of punishment if their evidence is pronounced false. These are valid witnesses to the fact that an action was or was not done, that something is or is not the case; they are not valid witnesses to the quality of an action, to its being just or unjust, useful or harmful. On such questions of *quality* the opinion of detached persons is highly trust-

worthy. Most trustworthy of all are the “ancient” witnesses, since they cannot be corrupted.

In dealing with the evidence of witnesses, the following are useful arguments. If you have no witnesses on your side, you will argue that the judges must decide from what is probable; that this is meant by “giving a verdict in accordance with one’s honest opinion”; that probabilities cannot be bribed to mislead the court; and that probabilities are never convicted of perjury. If you *have* witnesses, and the other man has not, you will argue that probabilities cannot be put on their trial, and that we could do without the evidence of witnesses altogether if we need do no more than balance the pleas advanced on either side.

The evidence of witnesses may refer either to ourselves or to our opponent; and either to questions of fact or to questions of personal character: so, clearly, we need never be at a loss for useful evidence. For if we have no evidence of fact supporting our own case or telling against that of our opponent, at least we can always find evidence to prove our own worth or our opponent’s worthlessness. Other arguments about a witness—that he is a friend or an enemy or neutral, or has a good, bad, or indifferent reputation, and any other such distinctions—we must construct upon the same general lines as we use for the regular rhetorical proofs.¹⁴⁷

Concerning contracts argument can be so far employed as to increase or diminish their importance and their credibility; we shall try to increase both if they tell in our favour, and to diminish both if they tell in favour of our opponent. Now for confirming or upsetting the credibility of contracts the procedure is just the same as for dealing with witnesses, for the credit to be attached to contracts depends upon the character of those who have signed them or have the custody of them. The contract being once admitted genuine, we must insist on its importance, if it supports our case. We may argue that a contract is a law, though of a special and limited kind; and that, while contracts do not of course make the law binding, the law does make any lawful contract binding, and that the law itself as a whole is a sort of contract, so that any one who disregards or repudiates any contract is repudiating the law

¹⁴¹Herodotus, vii. 141, 143. [Tr.] The engagement was the battle of Salamis where Themistocles commanded the Greek fleet. [F.S.]

¹⁴²A general statement, apparently. Or possibly (cp. *Poetics* 1454^a25) “proverbs are evidence in the sense indicated,” i.e. evidence of the future. But the Greek expression usually has the meaning which it bears in (e.g.) 1395^b5. [Tr.]

itself. Further, most business relations—those, namely, that are voluntary—are regulated by contracts, and if these lose their binding force, human intercourse ceases to exist. We need not go very deep to discover the other appropriate arguments of this kind. If, however, the contract tells against us and for our opponents, in the first place those arguments are suitable which we can use to fight a law that tells against us. We do not regard ourselves as bound to observe a bad law which it was a mistake ever to pass: and it is ridiculous to suppose that we are bound to observe a bad and mistaken contract. Again, we may argue that the duty of the judge as umpire is to decide what is just, and therefore he must ask where justice lies, and not what this or that document means. And that it is impossible to pervert justice by fraud or by force, since it is founded on nature, but a party to a contract may be the victim of either fraud or force. Moreover, we must see if the contract contravenes either universal law or any written law of our own or another country; and also if it contradicts any other previous or subsequent contract; arguing that the subsequent is the binding contract, or else that the previous one was right and the subsequent one fraudulent—whichever way suits us. Further, we must consider the question of utility, noting whether the contract is against the interest of the judges or not; and so on—these arguments are as obvious as the others.

1377^a Examination by torture is one form of evidence, to which great weight is often attached because it is in a sense compulsory. Here again it is not hard to point out the available grounds for magnifying its value, if it happens to tell in our favour, and arguing that it is the only form of evidence that is infallible; or, on the other hand, for refuting it if it tells against us and for our opponent, when we may say what is true of torture of every kind alike, that people under its compulsion tell lies quite as often as they tell the truth, sometimes persistently refusing to tell the truth, sometimes recklessly making a false charge in order to be let off sooner. We ought to be able to quote cases, familiar to the judges, in which this sort of thing has actually happened. [We must say that evidence under torture is not trustworthy, the fact being that many men whether thick-witted, tough-skinned, or stout of heart endure their

ordeal nobly, while cowards and timid men are full of boldness till they see the ordeal of these others: so that no trust can be placed in evidence under torture.]

In regard to oaths, a fourfold division can be made. A man may either both offer and accept an oath,¹⁴⁸ or neither, or one without the other—that is, he may offer an oath but not accept one, or accept an oath but not offer one. There is also the situation that arises when an oath has already been sworn either by himself or by his opponent.

If you refuse to offer an oath, you may argue that men do not hesitate to perjure themselves; and that if your opponent does swear, you lose your money, whereas, if he does not, you think the judges will decide against him; and that the risk of an unfavourable verdict is preferable, since you trust the judges and do not trust him.

If you refuse to accept an oath, you may argue that an oath is always paid for; that you would of course have taken it if you had been a rascal, since if you *are* a rascal you had better make something by it, and you would in that case have to swear in order to succeed. Thus your refusal, you argue, must be due to high principle, not to fear of perjury: and you may aptly quote the saying of Xenophanes,

'Tis not fair that he who fears not God should challenge him who doth.¹⁴⁹

It is as if a strong man were to challenge a weakling to strike, or be struck by, him.

If you agree to accept an oath, you may argue that you trust yourself but not your opponent; and that (to invert the remark of Xenophanes) the fair thing is for the impious man to offer the oath and for the pious man to accept it; and that it would be monstrous if you yourself were unwilling to accept an oath in a case where you demand that the judges should do so before giving their verdict. If you wish to offer an oath, you may argue that piety disposes you to commit the issue to the gods; and that your opponent ought not to want other judges than himself, since you leave the de-

¹⁴⁸I.e. both demand an oath from his adversary (call upon him to swear to the truth of his statements) and take an oath himself. [Tr.]

¹⁴⁹Fragm. of Xenophanes of Colophon, traditionally associated with the Eleatic school of philosophy. [F.S.]

cision with him; and that it is outrageous for your opponents to refuse to swear about this question, when they insist that others should do so.

Now that we see how we are to argue in each case separately, we see also how we are to argue when they occur in pairs, namely, when you are willing to accept the oath but not to offer it; to offer it but not to accept it; both to accept and to offer it; or to do neither. These are of course combinations of the cases already mentioned, and so your arguments also must be combinations of the arguments already mentioned.

If you have already sworn an oath that contradicts your present one, you must argue that it is not perjury, since perjury is a crime, and a crime must be a voluntary action, whereas actions due to the force of fraud of others are involuntary. You must further reason from this that perjury depends on the intention and not on the spoken words. But if it is your opponent who has already sworn an oath that contradicts his present one, you must say that if he does not abide by his oaths he is the enemy of society, and that this is the reason why men take an oath before administering the laws. "My opponents insist that you, the judges, must abide by the oath you have sworn, and yet they are not abiding by their own oaths." And there are other arguments which may be used to magnify the importance of the oath—[So much, then, for the "non-technical" modes of persuasion.]

BOOK II

I. We have now considered the materials to be used in supporting or opposing a political measure, in pronouncing eulogies or censures, and for prosecution and defence in the law courts. We have considered the received opinions on which we may best base our arguments so as to convince our hearers—those opinions with which our enthymemes deal, and out of which they are built, in each of the three kinds of oratory, according to what may be called the special needs of each.

But since rhetoric exists to affect the giving of decisions—the hearers decide between one political speaker and another, and a legal verdict is a decision—the orator must not only try to make the argument of his speech demonstrative and

worthy of belief; he must also make his own character look right and put his hearers, who are to decide, into the right frame of mind. Particularly in political oratory, but also in lawsuits, it adds much to an orator's influence that his own character should look right and that he should be thought to entertain the right feelings towards his hearers; and also that his hearers themselves should be in just the right frame of mind. That the orator's own character should look right is particularly important in political speaking: that the audience should be in the right frame of mind, in lawsuits. When people are feeling friendly and placable, they think one sort of thing; when they are feeling angry or hostile, they think either something totally different or the same thing with a different intensity: when they feel friendly to the man who comes before them for judgement, they regard him as having done little wrong, if any; when they feel hostile, they take the opposite view. Again, if they are eager for, and have good hopes of, a thing that will be pleasant if it happens, they think that it certainly will happen and be good for them: whereas if they are indifferent or annoyed, they do not think so.

There are three things which inspire confidence in the orator's own character—the three, namely, that induce us to believe a thing apart from any proof of it: good sense, good moral character, and goodwill. False statements and bad advice are due to one or more of the following three causes. Men either form a false opinion through want of good sense; or they form a true opinion, but because of their moral badness do not say what they really think; or finally, they are both sensible and upright, but not well disposed to their hearers, and may fail in consequence to recommend what they know to be the best course. These are the only possible cases. It follows that any one who is thought to have all three of these good qualities will inspire trust in his audience. The way to make ourselves thought to be sensible and morally good must be gathered from the analysis of goodness already given:¹⁵⁰ the way to establish your own goodness is the same as the way to establish that of others. Good will

¹⁵⁰i, c. 9. [Tr.]

and friendliness of disposition will form part of our discussion of the emotions,¹⁵¹ to which we must now turn.

The Emotions are all those feelings that so change men as to affect their judgements, and that are also attended by pain or pleasure. Such are anger, pity, fear and the like, with their opposites. We must arrange what we have to say about each of them under three heads. Take, for instance, the emotion of anger: here we must discover (1) what the state of mind of angry people is, (2) who the people are with whom they usually get angry, and (3) on what grounds they get angry with them. It is not enough to know one or even two of these points; unless we know all three, we shall be unable to arouse anger in any one. The same is true of the other emotions. So just as earlier in this work we drew up a list of useful propositions for the orator, let us now proceed in the same way to analyse the subject before us.

1378^b II. Anger may be defined as an impulse, accompanied by pain, to a conspicuous revenge for a conspicuous slight directed without justification towards what concerns oneself or towards what concerns one's friends. If this is a proper definition of anger, it must always be felt towards some particular individual, e.g. Cleon, and not "man" in general. It must be felt because the other has done or intended to do something to him or one of his friends. It must always be attended by a certain pleasure—that which arises from the expectation of revenge. For since nobody aims at what he thinks he cannot attain, the angry man is aiming at what he can attain, and the belief that you will attain your aim is pleasant. Hence it has been well said about wrath,

Sweeter it is by far than the honeycomb dripping with sweetness,

And spreads through the hearts of men.¹⁵²

It is also attended by a certain pleasure because the thoughts dwell upon the act of vengeance, and the images then called up cause pleasure, like the images called up in dreams.

¹⁵¹ii, c. 4. [Tr.]

¹⁵²*Iliad*, xviii, 109 (cp. i, c. 11, 1370^b12 *supra*). [Tr.]

Now slighting is the actively entertained opinion of something as obviously of no importance. We think bad things, as well as good ones, have serious importance; and we think the same of anything that tends to produce such things, while those which have little or no such tendency we consider unimportant. There are three kinds of slighting—contempt, spite, and insolence. (1) Contempt is one kind of slighting: you feel contempt for what you consider unimportant, and it is just such things that you slight. (2) Spite is another kind;¹⁵³ it is a thwarting another man's wishes, not to get something yourself but to prevent his getting it. The slight arises just from the fact that you do not aim at something for yourself: clearly you do not think that he can do you harm, for then you would be afraid of him instead of slighting him, nor yet that he can do you any good worth mentioning, for then you would be anxious to make friends with him. (3) Insolence is also a form of slighting, since it consists in doing and saying things that cause shame to the victim, not in order that anything may happen to yourself, or because anything has happened to yourself, but simply for the pleasure involved. (Retaliation is not "insolence," but vengeance.) The cause of the pleasure thus enjoyed by the insolent man is that he thinks himself greatly superior to others when ill-treating them. That is why youths and rich men are insolent; they think themselves superior when they show insolence. One sort of insolence is to rob people of the honour due to them; you certainly slight them thus; for it is the unimportant, for good or evil, that has no honour paid to it. So Achilles says in anger:

He hath taken my prize for himself and hath done me dishonour,

and

Like an alien honoured by none,¹⁵⁴

meaning that this is why he is angry. A man expects to be specially respected by his inferiors in birth, in capacity, in goodness, and generally in anything in which he¹⁵⁵ is much their superior: as

¹⁵³Or, "spite seems to show contempt." . . . [Tr.]

¹⁵⁴*Iliad*, i. 356; *Ib.* ix. 648. [Tr.]

¹⁵⁵ . . . Or "in anything common to them and him in which he," &c. [Tr.]

where money is concerned a wealthy man looks for respect from a poor man; where speaking is concerned, the man with a turn for oratory looks for respect from one who cannot speak; the ruler demands the respect of the ruled, and the man who thinks he ought to be a ruler demands the respect of the man whom he thinks he ought to be ruling. Hence it has been said

Great is the wrath of kings, whose father is Zeus almighty,

and

Yea, but his rancour abideth long afterward also,¹⁵⁶

their great resentment being due to their great superiority. Then again a man looks for respect from those who he thinks owe him good treatment, and these are the people whom he has treated or is treating well, or means or has meant to treat well, either himself, or through his friends, or through others at his request.

It will be plain by now, from what has been said, (1) in what frame of mind, (2) with what persons, and (3) on what grounds people grow angry. (1) The frame of mind is that in which any pain is being felt. In that condition, a man is always aiming at something. Whether, then, another man opposes him either directly in any way, as by preventing him from drinking when he is thirsty, or indirectly, the act appears to him just the same; whether some one works against him, or fails to work with him, or otherwise vexes him while he is in this mood, he is equally angry in all these cases. Hence people who are afflicted by sickness or poverty or love or thirst or any other unsatisfied desires are prone to anger and easily roused: especially against those who slight their present distress. Thus a sick man is angered by disregard of his illness, a poor man by disregard of his poverty, a man waging war by disregard of the war he is waging, a lover by disregard of his love, and so throughout, any other sort of slight being enough if special slights are wanting. Each man is predisposed, by the emotion now controlling him, to his own particular anger. Further, we are angered if we happen to be expecting a contrary result: for a quite unex-

pected evil is specially painful, just as the quite unexpected fulfilment of our wishes is specially pleasant. Hence it is plain what seasons, times, conditions, and periods of life tend to stir men easily to anger, and where and when this will happen; and it is plain that the more we are under these conditions the more easily we are stirred.

These, then, are the frames of mind in which men are easily stirred to anger. The persons with whom we get angry are those who laugh, mock, or jeer at us, for such conduct is insolent. Also those who inflict injuries upon us that are marks of insolence. These injuries must be such as are neither retaliatory nor profitable to the doers: for only then will they be felt to be due to insolence. Also those who speak ill of us, and show contempt for us, in connexion with the things we ourselves most care about: thus those who are eager to win fame as philosophers get angry with those who show contempt for their philosophy; those who pride themselves upon their appearance get angry with those who show contempt for their appearance; and so on in other cases. We feel particularly angry on this account if we suspect that we are in fact, or that people think we are, lacking completely or to an effective extent in the qualities in question. For when we are convinced that we excel in the qualities for which we are jeered at, we can ignore the jeering. Again, we are angrier with our friends than with other people, since we feel that our friends ought to treat us well and not badly. We are angry with those who have usually treated us with honour or regard, if a change comes and they behave to us otherwise: for we think that they feel contempt for us, or they would still be behaving as they did before. And with those who do not return our kindnesses or fail to return them adequately, and with those who oppose us though they are our inferiors: for all such persons seem to feel contempt for us; those who oppose us seem to think us inferior to themselves, and those who do not return our kindnesses seem to think that those kindnesses were conferred by inferiors. And we feel particularly angry with men of no account at all, if they slight us. For, by our hypothesis, the anger caused by the slight is felt towards people who are not justified in slighting us, and our inferiors are not thus justified. Again, we feel angry

1379^b

¹⁵⁶*Iliad*, ii. 196; *Ib.* i. 82. [Tr.]

with friends if they do not speak well of us or treat us well; and still more, if they do the contrary; or if they do not perceive our needs, which is why Plexippus is angry with Meleager in Antiphon's play;¹⁵⁷ for this want of perception shows that they are slighting us—we do not fail to perceive the needs of those for whom we care. Again, we are angry with those who rejoice at our misfortunes or simply keep cheerful in the midst of our misfortunes, since this shows that they either hate us or are slighting us. Also with those who are indifferent to the pain they give us: this is why we get angry with bringers of bad news. And with those who listen to stories about us or keep on looking at our weaknesses; this seems like either slighting us or hating us; for those who love us share in all our distresses and it must distress any one to keep on looking at his own weaknesses. Further, with those who slight us before five classes of people: namely, (1) our rivals, (2) those whom we admire, (3) those whom we wish to admire us, (4) those for whom we feel reverence, (5) those who feel reverence for us: if any one slights us before such persons, we feel particularly angry. Again, we feel angry with those who slight us in connexion with what we are as honourable men bound to champion—our parents, children, wives, or subjects. And with those who do not return a favour, since such a slight is unjustifiable. Also with those who “reply with humorous levity when we are speaking seriously, for such behaviour indicates contempt. And with those who treat us less well than they treat everybody else; it is another mark of contempt that they should think we do not deserve what every one else deserves. Forgetfulness, too, causes anger, as when our own names are forgotten, trifling as this may be; since forgetfulness is felt to be another sign that we are being slighted; it is due to negligence, and to neglect us is to slight us.

1380^a The persons with whom we feel anger, the frame of mind in which we feel it, and the reasons why we feel it, have now all been set forth. Clearly the orator will have to speak so as to bring his hearers into a frame of mind that will

¹⁵⁷Fragm. of the *Meleager* of Antiphon, a tragedian of the 4th cent. B.C. [F.S.]

dispose them to anger, and to represent his adversaries as open to such charges and possessed of such qualities as do make people angry.

III. Since growing calm is the opposite of growing angry, and calmness¹⁵⁸ the opposite of anger, we must ascertain in what frames of mind men are calm, towards whom they feel calm, and by what means they are made so. Growing calm may be defined as a settling down or quieting of anger. Now we get angry with those who slight us; and since slighting is a voluntary act, it is plain that we feel calm towards those who do nothing of the kind, or who do or seem to do it involuntarily. Also towards those who intended to do the opposite of what they did do. Also towards those who treat themselves as they have treated us: since no one can be supposed to slight himself. Also towards those who admit their fault and are sorry: since we accept their grief at what they have done as satisfaction, and cease to be angry. The punishment of servants shows this: those who contradict us and deny their offence we punish all the more, but we cease to be incensed against those who agree that they deserved their punishment. The reason is that it is shameless to deny what is obvious, and those who are shameless towards us slight us and show contempt for us: anyhow, we do not feel shame before those of whom we are thoroughly contemptuous. Also we feel calm towards those who humble themselves before us and do not gainsay us; we feel that they thus admit themselves our inferiors, and inferiors feel fear, and nobody can slight any one so long as he feels afraid of him. That our anger ceases towards those who humble themselves before us is shown even by dogs, who do not bite people when they sit down. We also feel calm towards those who are serious when we are serious, because then we feel that we are treated seriously and not contemptuously. Also towards those who have done us more kindnesses than we have done them. Also towards those who pray to us and beg for mercy, since they humble themselves by doing so. Also towards those who do not insult or mock at or

¹⁵⁸Or: gentleness, mildness, placability, patience. . . . [Tr.]

slight any one at all, or not any worthy person or any one like ourselves. In general, the things that make us calm may be inferred by seeing what the opposites are of those that make us angry. We are not angry with people we fear or respect, as long as we fear or respect them; you cannot be afraid of a person and also at the same time angry with him. Again, we feel no anger, or comparatively little, with those who have done what they did through anger; we do not feel that they have done it from a wish to slight us, for no one slights people when angry with them, since slighting is painless, and anger is painful. Nor do we grow angry with those who reverence us.

As to the frame of mind that makes people calm, it is plainly the opposite to that which makes them angry, as when they are amusing themselves or laughing or feasting; when they are feeling prosperous or successful or satisfied; when, in fine, they are enjoying freedom from pain, or inoffensive pleasure, or justifiable hope. Also when time has passed and their anger is no longer fresh, for time puts an end to anger. And vengeance previously taken on one person puts an end to even greater anger felt against another person. Hence Philocrates,¹⁵⁹ being asked by some one, at a time when the public was angry with him, "Why don't you defend yourself?" did right to reply, "The time is not yet." "Why, when is the time?" "When I see some one else calumniated." For men become calm when they have spent their anger on somebody else. This happened in the case of Ergophilus:¹⁶⁰ though the people were more irritated against him than against Callisthenes,¹⁶⁰ they acquitted him because they had condemned Callisthenes to death the day before. Again, men become calm if they have convicted¹⁶¹ the offender; or if he has already suffered worse things than they in their anger would have themselves inflicted upon him; for they feel as if they were already avenged. Or if they feel that they themselves are in the wrong and are suffering justly (for anger is not excited by what is just), since men no longer think then

that they are suffering without justification; and anger, as we have seen, means this. Hence we ought always to inflict a preliminary punishment in words: if that is done, even slaves are less aggrieved by the actual punishment. We also feel calm if we think that the offender will not see that he is punished on our account and because of the way he has treated us. For anger has to do with individuals. This is plain from the definition. Hence the poet has well written:

Say that it was Odysseus, sacker of cities,¹⁶²

implying that Odysseus would not have considered himself avenged unless the Cyclops perceived both by whom and for what he had been blinded. Consequently we do not get angry with any one who cannot be aware of our anger, and in particular we cease to be angry with people once they are dead, for we feel that the worst has been done to them, and that they will neither feel pain nor anything else that we in our anger aim at making them feel. And therefore the poet has well made Apollo say, in order to put a stop to the anger of Achilles against the dead Hector,

For behold in his fury he doeth despite to the senseless clay.¹⁶³

It is now plain that when you wish to calm others you must draw upon these lines of argument; you must put your hearers into the corresponding frame of mind, and represent those with whom they are angry as formidable, or as worthy of reverence, or as benefactors, or as involuntary agents, or as much distressed at what they have done. . . .

XII. Let us now consider the various types of human character, in relation to the emotions and moral qualities, showing how they correspond to our various ages and fortunes. By emotions I mean anger, desire, and the like; these we have discussed already.¹⁶⁴ By moral qualities I mean virtues and vices; these also have been discussed already,¹⁶⁵ as well as the various things that

¹⁵⁹A contemporary political figure. [F.S.]

¹⁶⁵i, c. 9. [Tr.]

various types of men tend to will and to do.¹⁶⁶ By ages I mean youth, the prime of life, and old age. By fortune I mean birth, wealth, power, and their opposites—in fact, good fortune and ill fortune.

To begin with the Youthful type of character. Young men have strong passions, and tend to gratify them indiscriminately. Of the bodily desires, it is the sexual by which they are most swayed and in which they show absence of self-control. They are changeable and fickle in their desires, which are violent while they last, but quickly over: their impulses are keen but not deep-rooted, and are like sick people's attacks of hunger and thirst. They are hot-tempered and quick-tempered, and apt to give way to their anger; bad temper often gets the better of them, for owing to their love of honour they cannot bear being slighted, and are indignant if they imagine themselves unfairly treated. While they love honour, they love victory still more; for youth is eager for superiority over others, and victory is one form of this. They love both more than they love money, which indeed they love very little, not having yet learnt what it means to be without it—this is the point of Pittacus' remark about Amphiaraus.¹⁶⁷ They look at the good side rather than the bad, not having yet witnessed many instances of wickedness. They trust others readily, because they have not yet often been cheated. They are sanguine; nature warms their blood as though with excess of wine; and besides that, they have as yet met with few disappointments. Their lives are mainly spent not in memory but in expectation; for expectation refers to the future, memory to the past, and youth has a long future before it and a short past behind it: on the first day of one's life one has nothing at all to remember, and can only look forward. They are easily cheated, owing to the sanguine disposition just mentioned. Their hot tempers and hopeful dispositions make them more courageous than older men are; the hot temper prevents fear, and the hopeful disposition creates confidence; we

cannot feel fear so long as we are feeling angry, and any expectation of good makes us confident. They are shy, accepting the rules of society in which they have been trained, and not yet believing in any other standard of honour. They have exalted notions, because they have not yet been humbled by life or learnt its necessary limitations; moreover, their hopeful disposition makes them think themselves equal to great things—and that means having exalted notions. They would always rather do noble deeds than useful ones: their lives are regulated more by moral feeling than by reasoning; and whereas reasoning leads us to choose what is useful, moral goodness leads us to choose what is noble. They are fonder of their friends, intimates, and companions than older men are, because they like spending their days in the company of others, and have not yet come to value either their friends or anything else by their usefulness to themselves. All their mistakes are in the direction of doing things excessively and vehemently. They disobey Chilon's¹⁶⁸ precept¹⁶⁹ by overdoing everything; they love too much and hate too much, and the same with everything else. They think they know everything, and are always quite sure about it; this, in fact, is why they overdo everything. If they do wrong to others, it is because they mean to insult them, not to do them actual harm. They are ready to pity others, because they think every one an honest man, or anyhow better than he is: they judge their neighbour by their own harmless natures, and so cannot think he deserves to be treated in that way. They are fond of fun and therefore witty, wit being well-bred insolence.

XIII. Such, then, is the character of the Young. The character of Elderly Men—men who are past their prime—may be said to be formed for the most part of elements that are the contrary of all these. They have lived many years: they have often been taken in, and often made mistakes; and life on the whole is a bad business. The result is that they are sure about nothing and *under-do*

¹⁶⁶May be tentatively identified with i. 10, 11, 12. [F.S.]

¹⁶⁷The remark is unknown. [Tr.] Pittacus of Mytilene was one of the Seven Sages. Amphiaraus may be one of the Seven Against Thebes. [F.S.]

¹⁶⁸Chilon of Lacedaemon, another of the Seven Sages. [F.S.]

¹⁶⁹...“(do) nothing in excess.” “don't overdo anything.” [Tr.]

everything. They “think,” but they never “know”; and because of their hesitation they always add a “possibly” or a “perhaps,” putting everything this way and nothing positively. They are cynical;¹⁷⁰ that is, they tend to put the worse construction on everything. Further, their experience makes them distrustful and therefore suspicious of evil. Consequently they neither love warmly nor hate bitterly, but following the hint of Bias¹⁷¹ they love as though they will some day hate and hate as though they will some day love.¹⁷² They are small-minded, because they have been humbled by life: their desires are set upon nothing more exalted or unusual than what will help them to keep alive. They are not generous, because money is one of the things they must have, and at the same time their experience has taught them how hard it is to get and how easy to lose. They are cowardly, and are always anticipating danger; unlike that of the young, who are warm-blooded, their temperature is chilly; old age has paved the way for cowardice; fear is, in fact, a form of chill. They love life; and all the more when their last day has come, because the object of all desire is something we have not got, and also because we desire most strongly that which we need most urgently. They are too fond of themselves; this is one form that small-mindedness takes. Because of this, they guide their lives too much by considerations of what is useful and too little by what is noble—for the useful is what is good for oneself, and the noble what is good absolutely. They are not shy, but shameless rather; caring less for what is noble than for what is useful, they feel contempt for what people may think of them. They lack confidence in the future; partly through experience—for most things go wrong, or anyhow turn out worse than one expects; and partly because of their cowardice. They live by memory rather than by hope; for what is left to them of life is but little as compared with the long past; and hope is of the future, memory of the past. This, again, is the cause of their lo-

¹⁷⁰Taking up 1389^a17, which may be translated “they are not cynical but charitable.” [Tr.]

¹⁷¹Bias of Priene, the last of the Seven Sages. [F.S.]

¹⁷²Or, “they treat their friends as probable future enemies and their enemies as probable future friends”; cp. note on 1380^b34. [Tr.]

quacity; they are continually talking of the past, because they enjoy remembering it. Their fits of anger are sudden but feeble. Their sensual passions have either altogether gone or have lost their vigour: consequently they do not feel their passions much, and their actions are inspired less by what they do feel than by the love of gain. Hence men at this time of life are often supposed to have a self-controlled character; the fact is that their passions have slackened, and they are slaves to the love of gain. They guide their lives by reasoning more than by moral feeling; reasoning being directed to utility and moral feeling to moral goodness. If they wrong others, they mean to injure them, not to insult them. Old men may feel pity, as well as young men, but not for the same reason. Young men feel it out of kindness; old men out of weakness, imagining that anything that befalls any one else might easily happen to them, which, as we saw,¹⁷³ is a thought that excites pity. Hence they are querulous, and not disposed to jesting or laughter—the love of laughter being the very opposite of querulousness.

Such are the characters of Young Men and Elderly Men. People always think well of speeches adapted to, and reflecting, their own character: and we can now see how to compose our speeches so as to adapt both them and ourselves to our audiences. . . .

XVIII. The use of persuasive speech is to lead to decisions. (When we know a thing, and have decided about it, there is no further use in speaking about it.) This is so even if one is addressing a single person and urging him to do or not to do something, as when we scold a man for his conduct or try to change his views: the single person is as much your “judge” as if he were one of many; we may say, without qualification, that any one is your judge whom you have to persuade. Nor does it matter whether we are arguing against an actual opponent or against a mere proposition; in the latter case we still have to use speech and overthrow the opposing arguments, and we attack these as we should attack an actual opponent. Our principle holds good of ceremo-

¹⁷³ii, c. 8, 1386^a24 and 20. [Tr.]

nial speeches also; the “onlookers” for whom such a speech is put together are treated as the judges of it. Broadly speaking, however, the only sort of person who can strictly be called a judge is the man who decides the issue in some matter of public controversy; that is, in law suits and in political debates, in both of which there are issues to be decided. In the section on political oratory an account has already been given of the types of character that mark the different constitutions.¹⁷⁴

The manner and means of investing speeches with moral character may now be regarded as fully set forth.

Each of the main divisions of oratory has, we have seen,¹⁷⁵ its own distinct purpose. With regard to each division, we have noted the accepted views and propositions upon which we may base our arguments—for political,¹⁷⁶ for ceremonial,¹⁷⁷ and for forensic speaking.¹⁷⁸ We have further determined completely by what means speeches may be invested with the required moral character.¹⁷⁹ We are now to proceed to discuss the arguments common to *all* oratory. All orators, beside their special lines of argument, are bound to use, for instance, the topic of the Possible and Impossible; and to try to show that a thing has happened, or will happen in future. Again, the topic of Size is common to all oratory; all of us have to argue that things are bigger or smaller than they seem, whether we are making political speeches, speeches of eulogy or attack, or prosecuting or defending in the law-courts. Having analysed these subjects, we will try to say what we can about the general principles of arguing by “enthymeme” and “example,” by the addition of which we may hope to complete the project with which we set out. Of the above-mentioned general lines of argument, that concerned with Amplification is—as has been already said¹⁸⁰—most appropriate to ceremonial speeches; that concerned with the Past, to foren-

sic speeches, where the required decision is always about the past; that concerned with Possibility and the Future, to political speeches.

XIX. Let us first speak of the Possible and Impossible. It may plausibly be argued: That if it is possible for one of a pair of contraries to be or happen, then it is possible for the other: e.g. if a man can be cured, he can also fall ill; for any two contraries are equally possible, in so far as they are contraries. That if of two similar things one is possible, so is the other. That if the harder of two things is possible, so is the easier. That if a thing can come into existence in a good and beautiful form, then it can come into existence generally; thus a house can exist more easily than a beautiful house. That if the beginning of a thing can occur, so can the end; for nothing impossible occurs or begins to occur; thus the commensurability of the diagonal of a square with its side neither occurs nor can begin to occur. That if the end is possible, so is the beginning; for all things that occur have a beginning. That if that which is posterior in essence or in order of generation can come into being, so can that which is prior: thus if a man can come into being, so can a boy, since the boy comes first in order of generation; and if a boy can, so can a man, for the man also is first.¹⁸¹ That those things are possible of which the love or desire is natural; for no one, as a rule, loves or desires impossibilities. That things which are the object of any kind of science or art are possible and exist or come into existence. That anything is possible the first step in whose production depends on men or things which we can compel or persuade to produce it, by our greater strength, our control of them, or our friendship with them. That where the parts are possible, the whole is possible; and where the whole is possible, the parts are usually possible. For if the slit in front, the toepiece, and the upper leather can be made, then shoes can be made; and if shoes, then also the front slit and toepiece. That if a whole genus is a thing that can occur, so can the species; and if the species can occur, so can the genus: thus, if a sailing vessel can be made, so also can a trireme; and if a trireme, then a sail-

¹⁸⁰i, c. 9. [Tr.] 1368^a10 ff. [F.S.]

¹⁸¹Viz. in essence. . . . [Tr.]

ing vessel also. That if one of two things whose existence depends on each other is possible, so is the other; for instance, if “double,” then “half,” and if “half,” then “double.” That if a thing can be produced without art or preparation, it can be produced still more certainly by the careful application of art to it. Hence Agathon has said:

To some things we by art must needs attain,
Others by destiny or luck we gain.¹⁸²

That if anything is possible to inferior, weaker, and stupider people, it is more so for their opposites; thus Isocrates said that it would be a strange thing if he could not discover a thing that Euthynus had found out.¹⁸³ As for Impossibility, we can clearly get what we want by taking the contraries of the arguments stated above.

Questions of Past Fact may be looked at in the following ways: First, that if the less likely of two things has occurred, the more likely must have occurred also. That if one thing that usually follows another has happened, then that other thing has happened; that, for instance, if a man has forgotten a thing, he has also once learnt it. That if a man had the power and the wish to do a thing, he has done it; for every one does whatever he intends to do whenever he can do it, there being nothing to stop him. That, further, he has done the thing in question either if he intended it and nothing external prevented him; or if he had the power to do it and was angry at the time; or if he had the power to do it and his heart was set upon it—for people as a rule do what they long to do, if they can; bad people through lack of self-control; good people, because their hearts are set upon good things. Again, that if a thing was “going to happen,” it has happened; if a man was “going to do something,” he has done it, for it is likely that the intention was carried out. That if one thing has happened which naturally happens before another or with a view to it, the other has happened; for instance, if it has lightened, it has also thundered; and if an action has been attempted, it has been done. That if one thing has happened which naturally happens after another, or with a view to which that other

happens, then that other (that which happens first, or happens with a view to this thing) has also happened; thus, if it has thundered it has also lightened, and if an action has been done it has been attempted. Of all these sequences some are inevitable and some merely usual. The arguments for the *non*-occurrence of anything can obviously be founded by considering the opposites of those that have been mentioned.

How questions of Future Fact should be argued is clear from the same considerations. That a thing will be done if there is both the power and the wish to do it; or if along with the power to do it there is a craving for the result, or anger, or calculation, prompting it. That the thing will be done, in these cases, if the man is actually setting about it, or even if he means to do it later—for usually what we mean to do happens rather than what we do not mean to do. That a thing will happen if another thing which naturally happens before it has already happened; thus, if it is clouding over, it is likely to rain. That if the means to an end have occurred, then the end is likely to occur; thus, if there is a foundation, there will be a house.

For arguments about the Greatness and Smallness of things, the greater and the lesser, and generally great things and small, what we have already said will show the line to take. In discussing deliberative oratory we have spoken about the relative greatness of various goods, and about the greater and lesser in general.¹⁸⁴ Since therefore in each type of oratory the object under discussion is some kind of good—whether it is utility, nobleness, or justice—it is clear that every orator must obtain the materials of amplification through these channels. To go further than this, and try to establish abstract laws of greatness and superiority, is to argue without an object; in practical life particular facts count more than generalizations.

Enough has now been said about these questions of possibility and the reverse, of past or future fact, and of the relative greatness or smallness of things.

XX. The special forms of oratorical argument having now been discussed, we have next to treat

¹⁸²Fragm. of Agathon, the tragedian. [F.S.]

¹⁸³Cp. Isocr. xviii. 15. [Tr.]

¹⁸⁴i, c. 7. [Tr.]

of those which are common to all kinds of oratory. These are of two main kinds, "Example" and "Enthymeme"; for the "Maxim" is part of an enthymeme.¹⁸⁵

We will first treat of argument by Example, for it has the nature of induction, which is the foundation of reasoning. This form of argument has two varieties; one consisting in the mention of actual past facts, the other in the invention of facts by the speaker. Of the latter, again, there are two varieties, the illustrative parallel and the fable (e.g. the fables of Aesop, or those from Libya). As an instance of the mention of actual facts, take the following. The speaker may argue thus: "We must prepare for war against the king of Persia and not let him subdue Egypt. For Darius of old did not cross the Aegean until he had seized Egypt; but once he had seized it, he did cross. And Xerxes, again, did not attack us until he had seized Egypt; but once he had seized it, he did cross. If therefore the present king seizes Egypt, he also will cross, and therefore we must not let him."¹³⁹³

The illustrative parallel is the sort of argument Socrates used: e.g. "Public officials ought not to be selected by lot. That is like using the lot to select athletes, instead of choosing those who are fit for the contest; or using the lot to select a steersman from among a ship's crew, as if we ought to take the man on whom the lot falls, and not the man who knows most about it."

Instances of the fable are that of Stesichorus¹⁸⁶ about Phalaris,¹⁸⁷ and that of Aesop in defence of the popular leader. When the people of Himera had made Phalaris military dictator, and were going to give him a bodyguard, Stesichorus wound up a long talk by telling them the fable of the horse who had a field all to himself. Presently there came a stag and began to spoil his pasturage. The horse, wishing to revenge himself on the stag, asked a man if he could help him to do so. The man said, "Yes, if you will let me bridle you and get on to your back with javelins in my

hand." The horse agreed, and the man mounted; but instead of getting his revenge on the stag, the horse found himself the slave of the man. "You too," said Stesichorus, "take care lest, in your desire for revenge on your enemies, you meet the same fate as the horse. By making Phalaris military dictator, you have already let yourselves be bridled. If you let him get on to your backs by giving him a bodyguard, from that moment you will be his slaves."

Aesop, defending before the assembly at Samos a popular leader who was being tried for his life, told this story: A fox, in crossing a river, was swept into a hole in the rocks; and, not being able to get out, suffered miseries for a long time through the swarms of fleas that fastened on her. A hedgehog, while roaming around, noticed the fox; and feeling sorry for her asked if he might remove the fleas. But the fox declined the offer; and when the hedgehog asked why, she replied, "These fleas are by this time full of me and not sucking much blood; if you take them way, others will come with fresh appetites and drink up all the blood I have left." "So, men of Samos," said Aesop, "my client will do you no further harm; he is wealthy already. But if you put him to death, others will come along who are not rich, and their peculations will empty your treasury completely."¹³⁹⁴

Fables are suitable for addresses to popular assemblies; and they have one advantage—they are comparatively easy to invent, whereas it is hard to find parallels among actual past events. You will in fact frame them just as you frame illustrative parallels: all you require is the power of thinking out your analogy, a power developed by intellectual training. But while it is easier to supply parallels by inventing fables, it is more valuable for the political speaker to supply them by quoting what has actually happened, since in most respects the future will be like what the past has been.

Where we are unable to argue by Enthymeme, we must try to demonstrate our point by this method of Example, and to convince our hearers thereby. If we *can* argue by Enthymeme, we should use our Examples as subsequent supplementary evidence. They should not precede the

¹⁸⁵I.e. not (as some think) a third main kind. Cp. 1394^a27-9. [Tr.]

¹⁸⁶An early poet of choral lyrics, circ. 640-555 B.C. [F.S.]

¹⁸⁷6th cent. tyrant of Acragas, famous for his cruelty. [F.S.]

Enthymemes: that will give the argument an inductive air, which only rarely suits the conditions of speech-making.¹⁸⁸ If they follow the enthymemes, they have the effect of witnesses giving evidence, and this always tells. For the same reason, if you put your examples first you must give a large number of them; if you put them last, a single one is sufficient; even a single witness will serve if he is a good one. It has now been stated how many varieties of argument by Example there are, and how and when they are to be employed.

XXI. We now turn to the use of Maxims, in order to see upon what subjects and occasions, and for what kind of speaker, they will appropriately form part of a speech. This will appear most clearly when we have defined a maxim. It is a statement; not about a particular fact, such as the character of Iphicrates,¹⁸⁹ but of a general kind; nor is it about any and every subject—e.g. “straight is the contrary of curved” is not a maxim—but only about questions of practical conduct, courses of conduct to be chosen or avoided. Now an Enthymeme is a syllogism dealing with such practical subjects. It is therefore roughly true that the premisses or conclusions of Enthymemes, considered apart from the rest of the argument, are Maxims: e.g.

Never should any man whose wits are sound
Have his sons taught more wisdom than their fellows.¹⁹⁰

Here we have a Maxim; add the reason or explanation, and the whole thing is an Enthymeme; thus—

It makes them idle; and therewith they earn
Ill-will and jealousy throughout the city.¹⁹¹

394^b Again,

There is no man in all things prosperous,¹⁹²

¹⁸⁸Perhaps, “which does not suit skilled orators except before a small audience.” [Tr.]

¹⁸⁹Cp. 1365^a28. [F.S.]

¹⁹⁰Euripides, *Medea*, 295. [Tr.]

¹⁹¹Ib. 297. [Tr.]

¹⁹²Euripides, fragm. 661, N.² [Tr.]

and

There is no man among us all is free,
are maxims; but the latter, taken with what follows it, is an Enthymeme—

For all are slaves of money or of chance.¹⁹³

From this definition of a maxim it follows that there are four kinds of maxims. In the first place, the maxim may or may not have a supplement. Proof is needed where the statement is paradoxical¹⁹⁴ or disputable; no supplement is wanted where the statement contains nothing paradoxical,¹⁹⁴ either because the view expressed is already a known truth, e.g.

Chiefest of blessings is health for a man, as it seemeth to me,¹⁹⁵

this being the general opinion: or because, as soon as the view is stated, it is clear at a glance, e.g.

No love is true save that which loves for ever.¹⁹⁶

Of the Maxims that do have a supplement attached, some are part of an Enthymeme, e.g.

Never should any man whose wits are sound,
&c.¹⁹⁷

Others have the essential character of Enthymemes, but are not stated as parts of Enthymemes; these latter are reckoned the best; they are those in which the reason for the view expressed is simply implied, e.g.

O mortal man, nurse not immortal wrath.¹⁹⁸

To say “it is not right to nurse immortal wrath” is a maxim; the added words “O mortal man” give the reason. Similarly, with the words

Mortal creatures ought to cherish mortal, not immortal thoughts.¹⁹⁹

What has been said has shown us how many kinds of Maxim there are, and to what subjects

¹⁹³Euripides, *Hecuba*, 864 f. [Tr.]

¹⁹⁴Surprising, startling, heretical, unorthodox. [Tr.]

¹⁹⁸From an unidentified tragedy. [F.S.]

¹⁹⁹Epicharmus?

the various kinds are appropriate. They must not be given without supplement if they express disputed or paradoxical views: we must, in that case, either put the supplement first and make a maxim of the conclusion, e.g., you might say, "For my part, since both unpopularity and idleness, are undesirable, I hold that it is better not to be educated"; or you may say this first, and then add the previous clause. Where a statement, without being paradoxical, is not obviously true, the reason should be added as concisely as possible. In such cases both laconic and enigmatic sayings

1395^a

are suitable: thus one might say what Stesichorus said to the Locrians, "Insolence is better avoided, lest the cicalas chirp on the ground."²⁰⁰

The use of Maxims is appropriate only to elderly men, and in handling subjects in which the speaker is experienced. For a young man to use them is—like telling stories—unbecoming; to use them in handling things in which one has no experience is silly and ill-bred: a fact sufficiently proved by the special fondness of country fellows for striking out maxims, and their readiness to air them.

To declare a thing to be universally true when it is not is most appropriate when working up feelings of horror and indignation in our hearers; especially by way of preface, or after the facts have been proved. Even hackneyed and commonplace maxims are to be used, if they suit one's purpose: just because they are commonplace, every one seems to agree with them, and therefore they are taken for truth. Thus, any one who is calling on his men to risk an engagement without obtaining favourable omens may quote

One omen of all is best, that we fight for our fatherland.²⁰¹

Or, if he is calling on them to attack a stronger force—

The War-God showeth no favour.²⁰²

Or, if he is urging people to destroy the innocent children of their enemies—

²⁰⁰Cp. 1393^b9. [F.S.] . . . The cicalas would have to chirp on the ground if an enemy cut down the trees. [Tr.]

²⁰¹*Iliad*, xii. 243. [Tr.]

²⁰²*Ib.* xviii. 309. [Tr.]

Fool, who slayeth the father and leaveth his sons to avenge him.²⁰³

Some proverbs are also maxims, e.g., the proverb "An Attic neighbour."²⁰⁴ You are not to avoid uttering maxims that contradict such sayings as have become public property (I mean such sayings as "know thyself" and "nothing in excess"), if doing so will raise your hearers' opinion of your character, or convey an effect of strong emotion—e.g., an angry speaker might well say, "It is not true that we ought to know ourselves: anyhow, if this man had known himself, he would never have thought himself fit for an army command." It will raise people's opinion of our character to say, for instance, "We ought not to follow the saying that bids us treat our friends as future enemies: much better to treat our enemies as future friends."²⁰⁵ The moral purpose should be implied partly by the very wording of our maxim. Failing this, we should add our reason: e.g. having said "We should treat our friends, not as the saying advises, but as if they were going to be our friends always," we should add "for the other behaviour is that of a traitor: or we might put it, "I disapprove of that saying. A true friend will treat his friend as if he were going to be his friend for ever"; and again, "Nor do I approve of the saying 'nothing in excess': we are bound to hate bad men excessively."

One great advantage of Maxims to a speaker is due to the want of intelligence in his hearers, who love to hear him succeed in expressing as a universal truth the opinions which they hold themselves about particular cases. I will explain what I mean by this, indicating at the same time how we are to hunt down the maxims required. The maxim, as has been already said, is a general statement, and people love to hear stated in general terms what they already believe in some particular connexion: e.g. if a man happens to have bad neighbours or bad children, he will agree with any one who tells him "Nothing is more annoying than having neighbours," or, "Nothing is more foolish than to be the parent of children." The orator has therefore to guess the subjects on

²⁰³Cp. i, c. 15, 1376^a7. [Tr.]

²⁰⁴"An Attic neighbour" is a restless neighbor. [F.S.]

²⁰⁵Cp. ii, c. 13, 1389^b23-5. [Tr.]

which his hearers really hold views already, and what those views are, and then must express, as general truths, these same views on these same subjects. This is one advantage of using maxims. There is another which is more important—it invests a speech with moral character. There is moral character in every speech in which the moral purpose is conspicuous: and maxims always produce this effect, because the utterance of them amounts to a general declaration of moral principles: so that, if the maxims are sound, they display the speaker as a man of sound moral character. So much for the Maxim—its nature, varieties, proper use, and advantages.

XXII. We now come to the Enthymemes, and will begin the subject with some general consideration of the proper way of looking for them, and then proceed to what is a distinct question, the lines of argument to be embodied in them. It has already²⁰⁶ been pointed out that the Enthymeme is a syllogism, and in what sense it is so. We have also noted the differences between it and the syllogism of dialectic. Thus we must not carry its reasoning too far back, or the length of our argument will cause obscurity: nor must we put in all the steps that lead to our conclusion, or we shall waste words in saying what is manifest. It is this simplicity that makes the uneducated more effective than the educated when addressing popular audiences—makes them, as the poets²⁰⁷ tell us, “charm the crowd’s ears more finely.” Educated men lay down broad general principles; uneducated men argue from common knowledge and draw obvious conclusions. We must not, therefore, start from any and every accepted opinion, but only from those we have defined—those accepted by our judges or by those whose authority they recognize: and there must, moreover, be no doubt in the minds of most, if not all, of our judges that the opinions put forward really are of this sort. We should also base our arguments upon probabilities as well as upon certainties.

The first thing we have to remember is this. Whether our argument concerns public affairs or

some other subject, we must know some, if not all, of the facts about the subject on which we are to speak and argue. Otherwise we can have no materials out of which to construct arguments. I mean, for instance, how could we advise the Athenians whether they should go to war or not, if we did not know their strength, whether it was naval or military or both, and how great it is; what their revenues amount to; who their friends and enemies are; what wars, too, they have waged, and with what success; and so on? Or how could we eulogize them if we knew nothing about the sea-fight at Salamis, or the battle of Marathon, or what they did for the Heracleidae,²⁰⁸ or any other facts like that? All eulogy is based upon the noble deeds—real or imaginary—that stand to the credit of those eulogized. On the same principle, invectives are based on facts of the opposite kind: the orator looks to see what base deeds—real or imaginary—stand to the discredit of those he is attacking, such as treachery to the cause of Hellenic freedom, or the enslavement of their gallant allies against the barbarians (Aegina,²⁰⁹ Potidaea,²¹⁰ &c.), or any other misdeeds of this kind that are recorded against them. So, too, in a court of law: whether we are prosecuting or defending, we must pay attention to the existing facts of the case. It makes no difference whether the subject is the Lacedaemonians or the Athenians, a man or a god; we must do the same thing. Suppose it to be Achilles whom we are to advise, to praise or blame, to accuse or defend; here too we must take the facts, real or imaginary; these must be our material, whether we are to praise or blame him for the noble or base deeds he has done, to accuse or defend him for his just or unjust treatment of others, or to advise him about what is or is not to his interest. The same thing applies to any subject whatever. Thus, in handling the question whether justice is or is not a good, we must start with the real facts about justice and goodness. We see, then, that this is the only way in which any one

²⁰⁸These are some of the historical and mythical merits claimed by the Athenians mentioned in all praises of their city and their ancestors. [F.S.]

²⁰⁹Cp. Thucyd. ii. 27; iv. 57. [Tr.]

²¹⁰Cp. Thucyd. ii. 70. [Tr.]

²⁰⁶i, c. 2, 1356^b3, 1357^a16. [Tr.]

²⁰⁷Cp. Euripides, *Hippolytus*, 989. [Tr.]

1396^b ever proves anything, whether his arguments are strictly cogent or not: not all facts can form his basis, but only those that bear on the matter in hand: nor, plainly, can proof be effected otherwise by means of the speech. Consequently, as appears in the *Topics*,²¹¹ we must first of all have by us a selection of arguments about questions that may arise and are suitable for us to handle; and then we must try to think out arguments of the same type for special needs as they emerge; not vaguely and indefinitely, but by keeping our eyes on the actual facts of the subject we have to speak on, and gathering in as many of them as we can that bear closely upon it: for the more actual facts we have at our command, the more easily we prove our case; and the more closely they bear on the subject, the more they will seem to belong to that speech only instead of being commonplaces. By “commonplaces” I mean, for example, eulogy of Achilles because he is a human being or a demigod, or because he joined the expedition against Troy: these things are true of many others, so that this kind of eulogy applies no better to Achilles than to Diomedes. The special facts here needed are those that are true of Achilles alone; such facts as that he slew Hector, the bravest of the Trojans, and Cycnus the invulnerable, who prevented all the Greeks from landing, and again that he was the youngest man who joined the expedition, and was not bound by oath to join it, and so on.

Here, then, we have our first principle of selection of Enthymemes — that which refers to the lines of argument selected. We will now consider the various elementary classes of enthymemes. (By an “elementary class” of enthymeme I mean the same thing as a “line of argument.”) We will begin, as we must begin, by observing that there are two kinds of enthymemes. One kind proves some affirmative or negative proposition; the other kind disproves one. The difference between the two kinds is the same as that between syllogistic proof and disproof in dialectic. The demonstrative enthymeme is formed by the conjunction of compatible propositions; the refutative, by the conjunction of incompatible propositions.

We may now be said to have in our hands the lines of argument for the various *special* subjects

²¹¹Cp. *Top.* i, c. 14. [Tr.]

that it is useful or necessary to handle, having selected the propositions suitable in various cases. We have, in fact, already ascertained the lines of argument applicable to enthymemes about good and evil, the noble and the base, justice and injustice, and also to those about types of character, emotions, and moral qualities.²¹² Let us now lay hold of certain facts about the whole subject, 1399 considered from a different and more general point of view. In the course of our discussion we will take note of the distinction between lines of proof and lines of disproof:²¹³ and also of those lines of argument used in what seem to be enthymemes, but are not, since they do not represent valid syllogisms.²¹⁴ Having made all this clear, we will proceed to classify Objections and Refutations, showing how they can be brought to bear upon enthymemes.²¹⁵

XXIII. I. One line of positive proof is based upon consideration of the opposite of the thing in question. Observe whether that opposite has the opposite quality. If it has not, you refute the original proposition; if it has, you establish it. E.g., “Temperance is beneficial; for licentiousness is hurtful.” Or, as in the Messenian speech,²¹⁶ “If war is the cause of our present troubles, peace is what we need to put things right again.” Or —

For if not even evil-doers should
Anger us if they meant not what they did,
Then can we owe no gratitude to such
As were constrained to do the good they did us.²¹⁷

Or —

Since in this world liars may win belief,
Be sure of the opposite likewise — that this world
Hears many a true word and believes it not.²¹⁸

2. Another line of proof is got by considering some modification of the key-word, and arguing that what can or cannot be said of the one, can or cannot be said of the other: e.g. “just” does not

²¹²i, cc. 4–14; ii, cc. 1–18. [Tr.]

²¹³ii, c. 23. [Tr.]

²¹⁴ii, c. 24. [Tr.]

²¹⁵ii, c. 25. [Tr.]

²¹⁶Cp. 1373^b18. [Tr.] A speech attributed to Alcidas, a fifth century sophist and orator. [F.S.]

²¹⁷From an unidentified tragedy. [F.S.]

²¹⁸Fragm. of Euripides, *Thyestes*. [Tr.]

always mean “beneficial,” or “justly” would always mean “beneficially,” whereas it is *not* desirable to be justly put to death.²¹⁹

3. Another line of proof is based upon correlative ideas. If it is true that one man *gave* noble or just treatment to another, you argue that the other must have *received* noble or just treatment; or that where it is right to command obedience, it must have been right to obey the command. Thus Diomedon, the tax-farmer, said of the taxes: “If it is no disgrace for you to sell them,²²⁰ it is no disgrace for us to buy them.” Further, if “well” or “justly” is true of the person to whom a thing is done, you argue that it is true of the doer. But it is possible to draw a false conclusion here. It may be just that A should be treated in a certain way, and yet *not* just that he should be so treated by B. Hence you must ask yourself two distinct questions: (1) Is it right that A should be thus treated? (2) Is it right that B should thus treat him? and apply your results properly, according as your answers are Yes or No. Sometimes in such a case the two answers differ: you may quite easily have a position like that in the *Alcmaeon* of Theodectes:

And was there none to loathe thy mother’s crime?²²¹ to which question Alcmaeon in reply says,

Why, there are two things to examine here.

And when Alpheisiboea asks what he means, he rejoins:

They judged *her* fit to die, not *me* to slay her.

Again there is the lawsuit about Demosthenes²²² and the men who killed Nicanor; as they were judged to have killed him justly, it was thought that he was killed justly. And in the case of the man who was killed at Thebes,²²³ the judges were requested to decide whether it was unjust that he should be killed, since if it was not, it was argued that it could not have been unjust to kill him.

²¹⁹Cp. i, c. 9, 1366^b33. [Tr.]

²²⁰I.e. the right of collecting them. [Tr.]

²²¹I.e. was there nobody who thought the slaying a just act? [Tr.] Fragm. of the *Alcmaeon* of Theodectes. The tragedian and orator was a personal friend of Aristotle. [F.S.]

²²²Probably not the famous orator. Nicanor is unknown. [F.S.]

²²³Xenophon, *Hellen*. viii. 3. [F.S.]

4. Another line of proof is the *a fortiori*. Thus it may be argued that if even the gods are not omniscient, certainly human beings are not. The principle here is that, if a quality does not in fact exist where it is *more* likely to exist, it clearly does not exist where it is *less* likely. Again, the argument that a man who strikes his father also strikes his neighbours follows from the principle that, if the less likely thing is true, the more likely thing is true also; for a man is less likely to strike his father than to strike his neighbours. The argument, then, may run thus. Or it may be urged that, if a thing is not true where it is more likely, it is not true where it is less likely; or that, if it is true where it is less likely, it is true where it is more likely: according as we have to show that a thing *is* or is *not* true.²²⁴ This argument might also be used in a case of parity, as in the lines:

Thou hast pity for *thy* sire, who has lost his sons:

Hast none for Oeneus, whose brave son is dead?²²⁵

And, again, “if Theseus did no wrong, neither did Paris”; or “if the sons of Tyndareus did no wrong, neither did Paris”; or “if Hector did well to slay Patroclus, Paris did well to slay Achilles.”²²⁶ And “if other followers of an art are not bad men, neither are philosophers.” And “if generals are not bad men because it often happens that they are condemned to death, neither are sophists.” And the remark that “if each individual among you ought to think of his own city’s reputation, you ought all to think of the reputation of Greece as a whole.”

5. Another line of argument is based on considerations of time. Thus Iphicrates, in the case against Harmodius, said, “if before doing the deed I had bargained that, if I did it, I should have a statue, you would have given me one. Will you not give me one now that I *have* done the deed? You must not make promises when you are expecting a thing to be done for you, and

²²⁴The reasoning in the text shows confusion, and the text is uncertain. We might rather have expected the following connexion of thought: “The argument, then, may run thus—that if the less likely is true the more likely is true; or as before—that if the more likely is not true, the less likely is not true: according as we have to show, &c.” [Tr.]

²²⁵Fragm. probably from a play about Meleager. [F.S.]

²²⁶From a speech of the rhetorician Polycrates. [F.S.]

refuse to fulfill them when the thing has been done.”²²⁷ And, again, to induce the Thebans to let Philip pass through their territory into Attica, it was argued²²⁸ that “if he had insisted on this before he helped them against the Phocians, they would have promised to do it. It is monstrous, therefore, that just because he threw away his advantage then, and trusted their honour, they should not let him pass through now.”

6. Another line is to apply to the other speaker what he has said against yourself. It is an excellent turn to give to a debate, as may be seen in the *Teucer*.²²⁹ It was employed by Iphicrates in his reply to Aristophon. “Would you,” he asked, “take a bribe to betray the fleet?” “No,” said Aristophon; and Iphicrates replied, “Very good: if you, who are Aristophon, would not betray the fleet, would I, who am Iphicrates?”²³⁰ Only, it must be recognized beforehand that the other man is more likely than you are to commit the crime in question. Otherwise you will make yourself ridiculous; if it is Aristeides²³¹ who is prosecuting, you cannot say that sort of thing to him. The purpose is to discredit the prosecutor, who as a rule would have it appear that his character is better than that of the defendant, a pretension which it is desirable to upset. But the use of such an argument is in all cases ridiculous if you are attacking others for what you do or would do yourself, or are urging others to do what you neither do nor would do yourself.

7. Another line of proof is secured by defining your terms. Thus, “What is the supernatural? Surely it is either a god or the work of a god. Well, any one who believes that the work of a god exists, cannot help also believing that gods

exist.”²³² Or take the argument of Iphicrates, “Goodness is true nobility; neither Harmodius nor Aristogeiton had any nobility before they did a noble deed.” He also argued that he himself was more akin to Harmodius and Aristogeiton than his opponent was. “At any rate, my deeds are more akin to those of Harmodius and Aristogeiton than yours are.”²³³ Another example may be found in the *Alexander*.²³⁴ “Every one will agree that by incontinent people we mean those who are not satisfied with the enjoyment of one love.” A further example is to be found in the reason given by Socrates for not going to the court of Archelaus. He said that “one is *insulted* by being unable to requite benefits, as well as by being unable to requite injuries.”²³⁵ All the persons mentioned define their term and get at its essential meaning, and then use the result when reasoning on the point at issue.

8. Another line of argument is founded upon the various senses of a word. Such a word is “rightly,” as has been explained in the *Topics*.²³⁶

9. Another line is based upon logical division. Thus, “All men do wrong from one of three motives, *A*, *B*, or *C*: in my case *A* and *B* are out of the question, and even the accusers do not allege *C*.”

10. Another line is based upon induction. Thus from the case of the woman of Peparethus it might be argued that women everywhere can settle correctly the facts about their children. Another example of this occurred at Athens in the case between the orator Mantias²³⁷ and his son, when the boy’s mother revealed the true facts: and yet another at Thebes, in the case between Ismenias and Stilbon, when Dodonis proved that it

1399

²²⁷Iphicrates, the general, was granted a statue for his defeat of the Lacedaemonians in 392 B.C. He claimed his statue only after his retirement in 371 B.C. Harmodius, a political opponent, opposed the honor. [F.S.]

²²⁸In 339 B.C. Philip of Macedonia sent an embassy to the Thebans requesting passage through their territory into Attica. An Athenian counter-embassy persuaded the Thebans to refuse the request. The words here quoted are words of the Macedonian ambassadors, not of Philip. [F.S.]

²²⁹Of Sophocles; cp. iii, c. 15, 1416^b1. [Tr.]

²³⁰Aristophon, a celebrated orator of the century, prosecuted Iphicrates in 355 B.C. for a failure in a recent war. [F.S.]

²³¹An Athenian political leader of the 5th cent., famous for his justice and integrity. [F.S.]

²³²Cp. Plato, *Apol.* 27 c–e. [Tr.]

²³³Another example taken from Iphicrates’ speech against Harmodius (cp. 1397^b28 ff.) who claimed descent from Harmodius, the tyrannicide. The argument seems to have been: personal merit, not family relationship, conveys true nobility. On account of my merit I am closer to the tyrannicides than you, their descendant. [F.S.]

²³⁴From some rhetorical essay on Alexander (viz. Paris), possibly by Polycrates. [Cp. 1393^b23.] . . . [Tr.]

²³⁵Cp. Xenophon, *Apol. Socr.* 17; Diog. Laert., *Vit. Socr.* ii, 5, 25. [Tr.]

²³⁶. . . [Or.] “in the *Topics* the right use of words has been discussed.” Cp. *Topics*, i, c. 15 and ii, c. 3. [Tr.]

²³⁷Possibly the person mentioned in Demosth. *Or.* xviii, 7, 10. [F.S.]

was Ismenias who was the father of her son Thetalscus, and he was in consequence always regarded as being so.²³⁸ A further instance of induction may be taken from the *Law of Theodectes*:²³⁹ “If we do not hand over our horses to the care of men who have mishandled other people’s horses, nor ships to those who have wrecked other people’s ships, and if this is true of everything else alike, then men who have failed to secure other people’s safety are not to be employed to secure our own.” Another instance is the argument of Alcidas.²⁴⁰ “Every one honours the wise. Thus the Parians have honoured Archilochus, in spite of his bitter tongue; the Chians Homer, though he was not their countryman; the Mytilenaeans Sappho, though she was a woman; the Lacedaemonians actually made Chilon a member of their senate, though they are the least literary of men; the Italian Greeks honoured Pythagoras; the inhabitants of Lampsacus gave public burial to Anaxagoras, though he was an alien, and honour him even to this day. (It may be argued that peoples for whom philosophers legislate are always prosperous) on the ground that the Athenians became prosperous under Solon’s laws and the Lacedaemonians under those of Lycurgus, while at Thebes no sooner did the leading men become philosophers than the country began to prosper.

II. Another line of argument is founded upon some decision already pronounced, whether on the same subject or on one like it or contrary to it. Such a proof is most effective if every one has always decided thus; but if not every one, then at any rate most people; or if all, or most, wise or good men have thus decided, or the actual judges of the present question, or those whose authority they accept, or any one whose decision they cannot gainsay because he has complete control over them, or those whom it is not seemly to gainsay, as the gods, or one’s father, or one’s teachers. Thus Autocles²⁴¹ said, when attacking Mixidemides, that it was a strange thing that the Dread

²³⁸Nothing known of the case and the people. [F.S.]

²³⁹The tragedian, rhetor, and friend of Aristotle. [F.S.]

²⁴⁰The sophist and orator. [F.S.]

²⁴¹Autocles, an Athenian political figure and versatile orator, contemporary of Aristotle. Of the case and Mixidemides nothing is known. The reference is to the Erinyes as seen in

Goddesses could without loss of dignity submit to the judgement of the Areopagus, and yet Mixidemides could not. Or as Sappho said, “Death is an evil thing; the gods have so judged it, or they would die.”²⁴² Or again as Aristippus²⁴³ said in reply to Plato when he spoke somewhat too dogmatically, as Aristippus thought: “Well, anyhow, our *friend*,” meaning Socrates, “never spoke like that.” And Hegesippus, having previously consulted Zeus at Olympia, asked Apollo at Delphi “whether his opinion was the same as his father’s,” implying that it would be shameful for him to contradict his father. Thus too Isocrates argued that Helen must have been a good woman, because Theseus decided that she was; and Paris a good man, because the goddesses chose him before all others; and Evagoras also, says Isocrates, was good, since when Conon met with his misfortune he betook himself to Evagoras without trying any one else on the way.²⁴⁴

1399^a

12. Another line of argument consists in taking separately the parts of a subject. Such is that given in the *Topics*:²⁴⁵ “What *sort* of motion is the soul? for it must be this or that.” The *Socrates* of Theodectes provides an example: “What temple has he profaned? What gods recognized by the state has he not honoured?”²⁴⁶

13. Since it happens that any given thing usually has both good and bad consequences, another line of argument consists in using those consequences as a reason for urging that a thing should or should not be done, for prosecuting or defending any one, for eulogy or censure. E.g. education leads both to unpopularity, which is bad, and to wisdom, which is good. Hence, you either argue, “It is therefore not well to be educated, since it is not well to be unpopular”: or you answer, “No, it is well to be educated, since it is well to be wise.” The *Art of Rhetoric* of

Aeschylus’ play “*The Eumenides*” where they submit to the judgement of Areopagus. [F.S.]

²⁴²Fragm. of Sappho. [F.S.]

²⁴³Aristippus of Cyrene, pupil of Socrates, founder of the Cyrenaic school of philosophy and as such a rival of Plato. [F.S.]

²⁴⁴Isocrates, *Helen*, 18–38; *Ibid.*, 41–8 . . . ; Isocrates, *Evagoras*, 51 ff. [Tr.]

²⁴⁵Cp. *Top* ii. 4; iv. 1. [Tr.]

²⁴⁶Fragm. of *Defense of Socrates* by Theodectes. [F.S.]

Callippus²⁴⁷ is made up of this line of argument, with the addition of those of Possibility and the others of that kind already described.²⁴⁸

14. Another line of argument is used when we have to urge or discourage a course of action that may be done in either of two opposite ways, and have to apply the method just mentioned to both. The difference between this one and the last is that, whereas in the last any two things are contrasted, here the things contrasted are opposites. For instance, the priestess enjoined upon her son not to take to public speaking: "For," she said, "if you say what is right, men will hate you; if you say what is wrong, the gods will hate you." The reply might be, "On the contrary, you *ought* to take to public speaking: for if you say what is right, the gods will love you; if you say what is wrong, men will love you." This amounts to the proverbial "buying the marsh with the salt." It is just this situation, viz. when each of two opposites has both a good and a bad consequence opposite respectively to each other, that has been termed *divarication*.

15. Another line of argument is this: The things people approve of openly are not those which they approve of secretly: openly, their chief praise is given to justice and nobleness; but in their hearts they prefer their own advantage. Try, in face of this, to establish the point of view which your opponent has not adopted. This is the most effective of the forms of argument that contradict common opinion.

16. Another line is that of rational correspondence. E.g. Iphicrates, when they were trying to compel his son, a youth under the prescribed age, to perform one of the state duties because he was tall, said "If you count tall boys men, you will next
1399^b be voting short men boys."²⁴⁹ And Theodectes in his *Law*²⁵⁰ said, "You make citizens of such mercenaries²⁵¹ as Strabax and Charidemus, as a re-

ward of their merits; will you not make exiles of such citizens as those who have done irreparable harm among the mercenaries?"

17. Another line is the argument that if two results are the same their antecedents are also the same. For instance, it was a saying of Xenophanes that to assert that the gods had birth is as impious as to say that they die; the consequence of both statements is that there is a time when the gods do not exist.²⁵² This line of proof assumes generally that the result of any given thing is always the same: e.g. "you are going to decide not about Isocrates, but about the value of the whole profession of philosophy."²⁵³ Or, "to give earth and water" means slavery; or, "to share in the Common Peace" means obeying orders. We are to make either such assumptions or their opposite, as suits us best.

18. Another line of argument is based on the fact that men do not always make the same choice on a later as on an earlier occasion, but reverse their previous choice. E.g. the following enthymeme: "When we were exiles, we fought in order to return; now we have returned, it would be strange to choose exile in order not to have to fight."²⁵⁴ On one occasion, that is, they chose to be true to their homes at the cost of fighting, and on the other to avoid fighting at the cost of deserting their homes.

19. Another line of argument is the assertion that some *possible* motive for an event or state of things is the *real* one: e.g. that a gift was given in order to cause pain by its withdrawal. This notion underlies the lines:

God gives to many great prosperity,
Not of good will towards them, but to make
The ruin of them more conspicuous.²⁵⁵

Or take the passage from the *Meleager* of Antiphon:

was rewarded by being made a citizen. Strabax is less well known but also was made an Athenian citizen. [F.S.]

²⁵²Fragm. of Xenophanes the Eleatic philosopher. Cp. 1377^a20. [F.S.]

²⁵³The manuscripts read "Socrates" but the passage has been identified in the *Antidosis* speech (173) of Isocrates. [F.S.]

²⁵⁴From a speech of Lysias. [F.S.]

²⁵⁵From an unidentified tragedy. [F.S.]

²⁴⁷Calippus is quoted again in 1400^a4. Nothing is known of him or his work. He may have been an early pupil of Isocrates. [F.S.]

²⁴⁸ii, c. 19. [Tr.]

²⁴⁹For Iphicrates cp. 1397^b28 and 1398^a19. [F.S.]

²⁵⁰Cp. 1398^b6. [Tr.]

²⁵¹The mercenaries were a problem for the Greek cities from the beginning of the 4th cent. Charidemus, their celebrated leader in the middle of the century, served Athens and

To slay no boar, but to be witnesses
Of Meleager's prowess unto Greece.²⁵⁶

Or the argument in the *Ajax* of Theodectes, that Diomedes chose out Odysseus²⁵⁷ not to do him honour, but in order that his companion might be a lesser man than himself—such a motive for doing so is quite possible.

20. Another line of argument is common to forensic and deliberative oratory, namely, to consider inducements and deterrents, and the motives people have for doing or avoiding the actions in question. These are the conditions which make us bound to act if they are for us, and to refrain from action if they are against us: that is, we are bound to act if the action is possible, easy, and useful to ourselves or our friends or hurtful to our enemies; this is true even if the action entails loss, provided the loss is outweighed by the solid advantage. A speaker will urge action by pointing to such conditions, and discourage it by pointing to the opposite. These same arguments also form the materials for accusation or defence—the deterrents being pointed out by the defence, and the inducements by the prosecution. As for the defence, . . . This topic forms the whole *Art of Rhetoric* both of Pamphilus and of Callippus.²⁵⁸

21. Another line of argument refers to things which are supposed to happen and yet seem incredible. We may argue that people could not have believed them, if they had not been true or nearly true: even that they are the more likely to be true because they are incredible. For the things which men believe are either facts or probabilities: if, therefore, a thing that *is* believed is improbable and even incredible, it must be true, since it is certainly not believed because it is at all probable or credible. An example is what Androcles of the deme Pitthus said in his well-known arraignment of the law. The audience tried to shout him down when he observed that the laws required a law to set them right. "Why," he went on, "fish need salt, improbable and incredible as this might seem for creatures reared

in salt water; and olive-cakes need oil, incredible as it is that what produces oil should need it."

22. Another line of argument is to refute our opponent's case by noting any contrasts or contradictions of dates, acts, or words that it anywhere displays; and this in any of the three following connexions. (1) Referring to our opponent's conduct, e.g. "He says he is devoted to you, yet he conspired with the Thirty." (2) Referring to our own conduct, e.g. "He says I am litigious, and yet he cannot prove that I have been engaged in a single lawsuit." (3) Referring to both of us together, e.g. "*He* has never even *lent* any one a penny, but *I* have *ransomed* quite a number of you."

23. Another line that is useful for men and causes that have been really or seemingly slandered, is to show why the facts are not as supposed; pointing out that there is a reason for the false impression given. Thus a woman, who had palmed off her son on another woman, was thought to be the lad's mistress because she embraced him; but when her action was explained the charge was shown to be groundless. Another example is from the *Ajax* of Theodectes, where Odysseus tells Ajax the reason why, though he is really braver than Ajax, he is not thought so.

24. Another line of argument is to show that if the *cause* is present, the *effect* is present, and if absent, absent. For by proving the cause you at once prove the effect, and conversely nothing can exist without its cause. Thus Thrasybulus accused Leodamas of having had his name recorded as a criminal on the slab in the Acropolis, and of erasing the record in the time of the Thirty Tyrants: to which Leodamas replied, "Impossible: for the Thirty would have trusted me all the more if my quarrel with the commons had been inscribed on the slab."²⁵⁹

25. Another line is to consider whether the accused person can take or could have taken a better²⁶⁰ course than that which he is recommending or taking, or has taken. If he has *not* taken this better course, it is clear that he is not guilty, since

²⁵⁶Fragm. from the *Meleager* of Antiphon. [F.S.]

²⁵⁷Cp. *Iliad*, x. 218–54. [Tr.]

²⁵⁸Both rhetoricians of the 5th cent. of whom nothing is known. [F.S.]

²⁵⁹Thrasybulus freed Athens in 403 B.C. from the rule of the Thirty Tyrants. Leodamas is probably the famous orator. [F.S.]

²⁶⁰I.e. better suited to effect the evil purpose with which he is charged. [Tr.]

no one deliberately and consciously chooses what is bad. This argument is, however, fallacious, for it often becomes clear after the event how the action could have been done better, though before the event this was far from clear.

26. Another line is, when a contemplated action is inconsistent with any past action, to examine them both together. Thus, when the people of Elea asked Xenophanes²⁶¹ if they should or should not sacrifice to Leucothea and mourn for her, he advised them not to mourn for her if they thought her a goddess, and not to sacrifice to her if they thought her a mortal woman.

27. Another line is to make previous mistakes the grounds of accusation or defence. Thus, in the *Medea* of Carcinus²⁶² the accusers allege that Medea has slain her children; "at all events," they say, "they are not to be seen" — Medea having made the mistake of sending her children away. In defence she argues that it is not her children, but Jason, whom she would have slain; for it would have been a mistake on her part not to do this if she *had* done the other. This special line of argument for enthymeme forms the whole of the *Art of Rhetoric* in use before Theodorus.²⁶³

28. Another line is to draw meanings from names. Sophocles, for instance, says,

O steel in heart as thou art steel in name.²⁶⁴

This line of argument is common in praises of the gods. Thus too, Conon²⁶⁵ called Thrasybulus²⁶⁶ *rash in counsel*. And Herodicus²⁶⁷ said of Thrasymachus,²⁶⁸ "You are always *bold in battle*"; of Polus,²⁶⁸ "you are always *a colt*"; and of the legislator Draco²⁶⁹ that his laws were those not of a human being but of a *dragon*, so savage were they. And, in Euripides, Hecuba says of Aphrodite,

²⁶¹Cp. 1399^{b6}. [F.S.]

²⁶²A tragedian, contemporary of Aristotle. [F.S.]

²⁶³Theodorus of Byzantium, outstanding teacher of rhetoric of 5th cent. [F.S.]

²⁶⁴Fragm. from the *Tyro* of Sophocles. [F.S.]

²⁶⁵The victor of Cnidus (394 B.C.). [F.S.]

²⁶⁶The liberator of Athens in 403 B.C. [F.S.]

²⁶⁷The physician (cp. 1361^{b5}). [F.S.]

²⁶⁸Thrasymachus and Polus, sophists and rhetoricians, are introduced by Plato in *Republic* I and in the *Gorgias*. [F.S.]

²⁶⁹The almost mythical Athenian lawgiver of the 7th cent. [F.S.]

Her name and Folly's (ἀφροσύνης) rightly begin alike,²⁷⁰

and Chaeremon writes

Pentheus—a name foreshadowing grief (πένθος) to come.²⁷¹

The Refutative Enthymeme has a greater reputation than the Demonstrative, because within a small space it works out two opposing arguments, and arguments put side by side are clearer to the audience. But of all syllogisms, whether refutative or demonstrative, those are most applauded of which we foresee the conclusions from the beginning, so long as they are not obvious at first sight—for part of the pleasure we feel is at our own intelligent anticipation; or those which we follow well enough to see the point of them as soon as the last word has been uttered.

XXIV. Besides genuine syllogisms, there may be syllogisms that look genuine but are not; and since an enthymeme is merely a syllogism of a particular kind, it follows that, besides genuine enthymemes, there may be those that look genuine but are not.

I. Among the lines of argument that form the Spurious Enthymeme the first is that which arises from the particular words employed.

a. One variety of this is when—as in dialectic, without having gone through any reasoning process, we make a final statement as if it were the conclusion of such a process, "Therefore so-and-so is not true," "Therefore also so-and-so must be true"—so too in rhetoric a compact and antithetical utterance passes for an enthymeme, such language being the proper province of enthymeme, so that it is seemingly the form of wording here that causes the illusion mentioned. In order to produce the effect of genuine reasoning by our form of wording it is useful to summarize the results of a number of previous reasonings:

²⁷⁰Euripides, *Troades*, 990. [Tr.]

²⁷¹Fragm. of Chaeremon, a tragedian of the 4th cent. [F.S.]

as “some he saved—others he avenged—the Greeks he freed.”²⁷² Each of these statements has been previously proved from other facts; but the mere collocation of them gives the impression of establishing some fresh conclusion.

- b. Another variety is based on the use of similar words for different things; e.g. the argument that the mouse must be a noble creature, since it gives its name to the most august of all religious rites—for such the Mysteries are.²⁷³ Or one may introduce, into a eulogy of the dog, the dog-star; or Pan, because Pindar said:

O thou blessed one!
Thou whom they of Olympus call
The hound of manifold shape
That follows the Mother of Heaven:²⁷⁴

or we may argue that, because there is much disgrace in there *not* being a dog about, there is honour in *being* a dog.²⁷⁵ Or that Hermes is readier than any other god to go shares, since we never say “shares all round” except of him.²⁷⁶ Or that speech is a very excellent thing, since good men are not said to be worth money but to be worthy of esteem²⁷⁷—the phrase “worthy of esteem” also having the meaning of “worth speech.”

2. Another line is to assert of the whole what is true of the parts, or of the parts what is true of the whole. A whole and its parts are supposed to be identical, though often they are not. You have therefore to adopt whichever of these two lines better suits your purpose. That is how Euthydemus argues:²⁷⁸ e.g. that any one knows that there is a trireme in the Peiracus, since he knows the separate details that make up this statement. There is

²⁷²Isocrates, *Evagoras*, 65–9. [Tr.]

²⁷³A pun on the similarity of the Greek words *mys* and *mysterion*. [F.S.]

²⁷⁴Fragm. of Pindar. [F.S.]

²⁷⁵Viz. a dog-philosopher, a Cynic. [Tr.]

²⁷⁶Alluding to a proverb. [F.S.]

²⁷⁷The same Greek word (λόγος) is here used for “speech” and “esteem”: hence what follows. [Tr.]

²⁷⁸A sophist known for his captious arguments. Cp. Plato’s dialogue *Euthydemus*. The argument of Euthydemus was some kind of fallacy. [F.S.]

also the argument that one who knows the letters knows the whole word, since the word is the same thing as the letters which compose it; or that, if a double portion of a certain thing is harmful to health, then a single portion must not be called wholesome, since it is absurd that two good things should make one bad thing. Put thus, the enthymeme is refutative; put as follows, demonstrative: “For one good thing cannot be made up of two bad things.” The whole line of argument is fallacious. Again, there is Polycrates’ saying that Thrasybulus put down thirty tyrants, where the speaker adds them up one by one. Or the argument in the *Orestes* of Theodectes, where the argument is from part to whole:

’Tis right that she who slays her lord should die.

“It is right, too, that the son should avenge his father. Very good: these two things are what Orestes has done.” Still, perhaps the two things, once they are put together, do not form a right act. The fallacy might also be said to be due to omission, since the speaker fails to say by whose hand a husband-slayer should die. 1401^b

3. Another line is the use of indignant language, whether to support your own case or to overthrow your opponent’s. We do this when we paint a highly-coloured picture of the situation without having proved the facts of it: if the defendant does so, he produces an impression of his innocence; and if the prosecutor goes into a passion, he produces an impression of the defendant’s guilt. Here there is no genuine enthymeme: the hearer infers guilt or innocence, but no proof is given, and the inference is fallacious accordingly.

4. Another line is to use a “Sign,” or single instance, as certain evidence; which, again, yields no valid proof. Thus, it might be said that lovers are useful to their countries, since the love of Harmodius and Aristogeiton caused the downfall of the tyrant Hipparchus.²⁷⁹ Or, again, that Dionysius is a thief, since he is a vicious man—there is, of course, no valid proof here; not every vicious man is a thief, though every thief is a vicious man.

²⁷⁹Cp. Plato, *Symposium*, 182 B, C. [Tr.]

5. Another line represents the accidental as essential. An instance is what Polycrates says of the mice, that they “came to the rescue” because they gnawed through the bowstrings.²⁸⁰ Or it might be maintained that an invitation to dinner is a great honour for it was because he was *not* invited that Achilles was angered with the Greeks at Tenedos.²⁸¹ As a fact, what angered him was the *insult* involved; it was a mere accident that this was the particular form that the insult took.

6. Another is the argument from consequence. In the *Alexander*,²⁸² for instance, it is argued that Paris must have had a lofty disposition, since he despised society and lived by himself on Mount Ida: because lofty people do this kind of thing, therefore Paris too, we are to suppose, had a lofty soul. Or, if a man dresses fashionably and roams around at night, he is a rake, since that is the way rakes behave. Another similar argument points out that beggars sing and dance in temples, and that exiles can live wherever they please, and that such privileges are at the disposal of those we account happy; and therefore every one might be regarded as happy if only he has those privileges. What matters, however, is the *circumstances* under which the privileges are enjoyed. Hence this line too falls under the head of fallacies by omission.

7. Another line consists in representing as causes things which are not causes, on the ground that they happened along with or before the event in question. They assume that, because B happens *after* A, it happens *because* of A. Politicians are especially fond of taking this line. Thus Demades said that the policy of Demosthenes was the cause of all the mischief, “for after it the war occurred.”²⁸³

²⁸⁰From Polycrates’, the sophist’s, encomium on mice. [F.S.]

²⁸¹Incident in a lost play of Sophocles. [F.S.]

²⁸²A speech probably by the sophist Polycrates. Cp. 1397^a21, 1398^a22, 1399^a3, 1401^b34. [F.S.]

²⁸³Demades, the orator, arranged the peace between Philip of Macedonia and Athens after the Athenian defeat at Chaironea and thereafter was the representative of the Macedonian party in Athens and an adversary of Demosthenes, the great orator. [F.S.]

8. Another line consists in leaving out any mention of time and circumstances. E.g. the argument that Paris was justified in taking Helen, since her father left her free to choose: here the freedom was presumably not perpetual; it could only refer to her first choice, beyond which her father’s authority could not go.²⁸⁴ Or again, one might say that to strike a free man is an act of wanton outrage; but it is not so in every case—only when it is unprovoked.

9. Again, a spurious syllogism may, as in “eristical” discussions, be based on the confusion of the absolute with that which is not absolute but particular. As, in dialectic, for instance, it may be argued that what-is-not *is*, on the ground that what-is-not *is* what-is-not; or that the unknown can be known, on the ground that it can be known to *be* unknown: so also in rhetoric a spurious enthymeme may be based on the confusion of some particular probability with absolute probability. Now no particular probability is universally probable: as Agathon says,

One might perchance say this was probable—
That things improbable oft will hap to men.²⁸⁵

For what is improbable does happen, and therefore it is probable that improbable things *will* happen. Granted this, one might argue that “what is improbable is probable.” But this is not true absolutely. As, in eristic, the imposture comes from not adding any clause specifying relationship or reference or manner; so here it arises because the probability in question is not general but specific. It is of this line of argument that Corax’s²⁸⁶ *Art of Rhetoric* is composed. If the accused is not open to the charge—for instance, if a weakling be tried for violent assault—the defence is that he was not likely to do such a thing. But if he *is* open to the charge—i.e., if he is a *strong* man—the defence is still that he was not likely to do such a thing, since he could be sure that people would think he

²⁸⁴Probably again from the *Alexander* of Polycrates. Cp. 1401^b20. [F.S.]

²⁸⁵Fragm. from a tragedy by Agathon. [F.S.]

²⁸⁶One of the earliest Sicilian teachers of rhetoric. [F.S.]

was likely to do it. And so with any other charge: the accused must be either open or not open to it: there is in either case an appearance of probable innocence, but whereas in the latter case the probability is genuine, in the former it can only be asserted in the special sense mentioned.²⁸⁷ This sort of argument illustrates what is meant by making the worse argument seem the better. Hence people were right in objecting to the training Protagoras²⁸⁸ undertook to give them. It was a fraud; the probability it handled was not genuine but spurious, and has a place in no art except Rhetoric²⁸⁹ and Eristic.

XXV. Enthymemes, genuine and apparent, have now been described; the next subject is their Refutation.

An argument may be refuted either by a counter-syllogism or by bringing an objection. It is clear that counter-syllogisms can be built up from the same lines of arguments as the original syllogisms: for the materials of syllogisms are the ordinary opinions of men, and such opinions often contradict each other. Objections, as appears in the *Topics*,²⁹⁰ may be raised in four ways — either by directly attacking your opponent's own statement, or by putting forward another statement like it, or by putting forward a statement contrary to it, or by quoting previous decisions.

1. By "attacking your opponent's own statement" I mean, for instance, this: if his enthymeme should assert that love is always good, the objection can be brought in two ways, either by making the general statement that "all want is an evil," or by making the particular one that there would be no talk of "Caonian love"²⁹¹ if there were not evil loves as well as good ones.

2. An objection "from a contrary statement" is

²⁸⁷Or "in the former not simply so!" [F.S.]

²⁸⁸The famous sophist. Cp. Plato's dialogue *Protagoras*. [F.S.]

²⁸⁹This remark entails no approval on the part of Aristotle. [F.S.]

²⁹⁰Cp. *Topics*, viii. 10. . . . [Tr.]

²⁹¹The incestuous love of Byblis for her brother Caunus. [Tr.]

raised when, for instance, the opponent's enthymeme having concluded that a good man does good to all his friends, you object, "That proves nothing, for a bad man does not do evil to all his friends."

3. An example of an objection "from a like statement" is, the enthymeme having shown that ill-used men always hate their ill-users, to reply, "That proves nothing, for well-used men do not always love those who used them well."

4. The "decisions" mentioned are those proceeding from well-known men; for instance, if the enthymeme employed has concluded that "Some allowance ought to be made for drunken offenders, since they did not know what they were doing," the objection will be, "Pittacus,²⁹² then, deserves no approval, or he would not have prescribed specially severe penalties for offences due to drunkenness."

Enthymemes are based upon one or other of four kinds of alleged fact: (1) Probabilities, (2) Examples, (3) Infallible Signs, (4) Ordinary Signs.²⁹³ (1) Enthymemes based upon Probabilities are those which argue from what is, or is supposed to be, usually true. (2) Enthymemes based upon Example are those which proceed by induction from one or more similar cases, arrive at a general proposition, and then argue deductively to a particular inference. (3) Enthymemes based upon Infallible Signs are those which argue from the inevitable and invariable. (4) Enthymemes based upon ordinary Signs are those which argue from some universal or particular proposition, true or false.

Now (1) as a Probability is that which happens usually but not always. Enthymemes founded upon Probabilities can, it is clear, always be refuted by raising some objection. The refutation is not always genuine: it may be spurious: for it consists in showing not that your opponent's premiss is not probable, but only in showing that it is not inevitably true. Hence it is always in defence rather than in accusation that it is possible to gain an advantage by using this fallacy. For

²⁹²One of the Seven Sages. [F.S.]

²⁹³Fallible signs. [Tr.]

the accuser uses probabilities to prove his case: and to refute a conclusion as improbable is not the same thing as to refute it as not inevitable. Any argument based upon what usually happens is always open to objection: otherwise it would not be a probability but an invariable and necessary truth. But the judges think, if the refutation takes this form, either that the accuser's case is not probable or that they must not decide it; which, as we said, is a false piece of reasoning. For they ought to decide by considering not merely what *must* be true but also what is *likely* to be true: this is, indeed, the meaning of "giving a verdict in accordance with one's honest opinion." Therefore it is not enough for the defendant to refute the accusation by proving that the charge is not *bound* to be true: he must do so by showing that it is not *likely* to be true. For this purpose his objection must state what is more usually true than the statement attacked. It may do so in either of two ways: either in respect of frequency or in respect of exactness. It will be most convincing if it does so in both respects; for

1403^a

if the thing in question *both* happens *oftener* as we represent it *and* happens more *as* we represent it, the probability is particularly great.

(2) Fallible Signs, and Enthymemes based upon them, can be refuted even if the facts are correct, as was said at the outset.²⁹⁴ For we have shown in the *Analytics*²⁹⁵ that no Fallible Sign can form part of a valid logical proof.

(3) Enthymemes depending on examples may be refuted in the same way as probabilities. If we have a negative instance, the argument is refuted, in so far as it is proved not inevitable, even though the positive examples are more similar and more frequent. And if the positive examples *are* more numerous and more frequent, we must contend that the present case is dissimilar, or that its conditions are dissimilar, or that it is different in some way or other.

(4) It will be impossible to refute Infallible Signs, and Enthymemes resting on them, by showing in any way that they do not form a valid logical proof: this, too, we see from the *Ana-*

lytics.²⁹⁶ All we can do is to show that the fact alleged does not exist. If there is no doubt that it does, and that it is an Infallible Sign, refutation now becomes impossible: for this is equivalent to a demonstration which is clear in every respect. . . .

BOOK III

I. In making a speech one must study three points: first, the means of producing persuasion; second, the style, or language, to be used; third, the proper arrangement of the various parts of the speech. We have already specified the sources of persuasion. We have shown that these are three in number;²⁹⁷ what they are; and why there are only these three: for we have shown that persuasion must in every case be effected either (1) by working on the emotions of the judges themselves, (2) by giving them the right impression of the speakers' character, or (3) by proving the truth of the statements made.

Enthymemes also have been described, and the sources from which they should be derived; there being both special and general lines of argument for enthymemes.

Our next subject will be the style of expression. For it is not enough to know *what* we ought to say; we must also say it *as* we ought; much help is thus afforded towards producing the right impression of a speech. The first question to receive attention was naturally the one that comes first naturally — how persuasion can be produced from the facts themselves. The second is how to set these facts out in language. A third would be the proper method of delivery; this is a thing that affects the success of a speech greatly; but hitherto the subject has been neglected. Indeed, it was long before it found a way into the arts of tragic drama and epic recitation: at first poets acted²⁹⁸ their tragedies themselves. It is plain that delivery has just as much to do with oratory as with poetry. (In connexion with poetry, it has been studied by Glaucon of

²⁹⁴i, c. 2, 1357^b13,14. [Tr.]

²⁹⁵*Anal. Pr.*, ii, 27. [Tr.]

²⁹⁶*Anal. Pr.*, ii, 27. [Tr.]

²⁹⁷i, c. 2. [Tr.]

²⁹⁸Or, "delivered." [Tr.]

Teos²⁹⁹ among others.) It is, essentially, a matter of the right management of the voice to express the various emotions—of speaking loudly, softly, or between the two; of high, low, or intermediate pitch; of the various rhythms that suit various subjects. These are the three things—volume of sound, modulation of pitch, and rhythm—that a speaker bears in mind. It is those who *do* bear them in mind who usually win prizes in the dramatic contests; and just as in drama the actors now count for more than the poets, so it is in the contests of public life, owing to the defects of our political institutions. No systematic treatise upon the rules of delivery has yet been composed;³⁰⁰ indeed, even the study of language made no progress till late in the day. Besides, delivery is—very properly—not regarded as an elevated subject of inquiry.³⁰¹ Still, the whole business of rhetoric being concerned with appearances, we must pay attention to the subject of delivery, unworthy though it is, because we cannot do without it. The right thing in speaking really is that we should be satisfied not to annoy our hearers, without trying to delight them: we ought in fairness to fight our case with no help beyond the bare facts: nothing, therefore, should matter except the proof of those facts. Still, as has been already said, other things affect the result considerably, owing to the defects of our hearers. The arts of language cannot help having a small but real importance, whatever it is we have to expound to others: the way in which a thing is said does affect its intelligibility. Not, however, so much importance as people think. All such arts are fanciful and meant to charm the hearer. Nobody uses fine language when teaching geometry.

When the principles of delivery have been worked out, they will produce the same effect as on the stage.³⁰² But only very slight attempts to

²⁹⁹Probably the rhapsode mentioned in Plato's dialogue *Ion*, 530 D. [F.S.]

³⁰⁰Aristotle's pupil Theophrastus was the first to provide a theory of delivery. [F.S.]

³⁰¹Or, "is thought to be vulgar, when viewed from a lofty standpoint," "on any noble view." [Tr.]

³⁰²A rendering now favored is "when the principles of style have been worked out they will produce the same effect as delivery." [F.S.]

deal with them have been made and by a few people, as by Thrasymachus in his "Appeals to Pity."³⁰³ Dramatic ability is a natural gift, and can hardly be systematically taught. The principles of good diction can be so taught, and therefore we have men of ability in this direction too, who win prizes in their turn, as well as those speakers who excel in delivery—speeches of the written or literary kind owe more of their effect to their diction than to their thought.

It was naturally the poets who first set the movement going; for words represent things, and they had also the human voice at their disposal, which of all our organs can best represent other things. Thus the arts of recitation and acting were formed, and others as well. Now it was because poets seemed to win fame through their fine language when their thoughts were simple enough, that the language of oratorical prose at first took a poetical colour, e.g. that of Gorgias.³⁰⁴ Even now most uneducated people think that poetical language makes the finest discourses. That is not true: the language of prose is distinct from that of poetry. This is shown by the state of things today, when even the language of tragedy has altered its character. Just as iambics were adopted, instead of tetrameters, because they are the most prose-like of all metres, so tragedy has given up all those words, not used in ordinary talk, which decorated the early drama and are still used by the writers of hexameter poems. It is therefore ridiculous to imitate a poetical manner which the poets themselves have dropped; and it is now plain that we have not to treat in detail the whole question of style, but may confine ourselves to that part of it which concerns our present subject, rhetoric. The other—the poetical—part of it has been discussed in the treatise on the *Art of Poetry*.³⁰⁵

II. We may, then, start from the observations there made, including the definition of style. 1404^b

³⁰³Thrasymachus of Chalcedon, sophist and teacher of rhetoric, sharply criticized by Plato. [F.S.]

³⁰⁴Another leading teacher of rhetoric of the 5th cent. [F.S.]

³⁰⁵*Poetics*, cc. 20–2. [Tr.]

Style to be good must be clear, as is proved by the fact that speech which fails to convey a plain meaning will fail to do just what speech has to do. It must also be appropriate, avoiding both meanness and undue elevation; poetical language is certainly free from meanness, but it is not appropriate to prose.³⁰⁶ Clearness is secured by using the words (nouns and verbs alike) that are current and ordinary. Freedom from meanness, and positive adornment too, are secured by using the other words mentioned in the *Art of Poetry*.³⁰⁷ Such variation from what is usual makes the language appear more stately. People do not feel towards strangers as they do towards their own countrymen, and the same thing is true of their feeling for language. It is therefore well to give to everyday speech an unfamiliar air: people like what strikes them, and are struck by what is out of the way. In verse such effects are common, and there they are fitting: the persons and things there spoken of are comparatively remote from ordinary life. In prose passages they are far less often fitting because the subject-matter is less exalted. Even in poetry, it is not quite appropriate that fine language should be used by a slave or a very young man, or about very trivial subjects: even in poetry the style, to be appropriate, must sometimes be toned down, though at other times heightened. We can now see that a writer must disguise his art and give the impression of speaking naturally and not artificially. Naturalness is persuasive, artificially is the contrary: for our hearers are prejudiced and think we have some design against them, as if we were mixing their wines for them. It is like the difference between the quality of Theodorus'³⁰⁸ voice and the voices of all other actors: his really seems to be that of the character who is speaking, theirs do not. We can hide our purpose successfully by taking the single words of our composition from the speech of ordinary life. This is done in poetry by Euripides, who was the first to show the way to his successors.

Language is composed of nouns and verbs. Nouns are of the various kinds considered in the

³⁰⁶Cp. beginning of *Poetics* 22. [F.S.]

³⁰⁷*Poetics*, cc. 21, 22. [Tr.]

³⁰⁸A celebrated actor of the time. [F.S.]

treatise on Poetry.³⁰⁹ Strange words, compound words, and invented words must be used sparingly and on few occasions: on *what* occasions we shall state later.³¹⁰ The reason for this restriction has been already indicated: they depart from what is suitable, in the direction of excess. In the language of prose, besides the regular and proper terms for things, metaphorical terms only can be used with advantage. This we gather from the fact that these two classes of terms, the proper or regular and the metaphorical—these and no others—are used by everybody in conversation. We can now see that a good writer can produce a style that is distinguished without being obtrusive, and is at the same time clear, thus satisfying our definition of good oratorical prose. Words of ambiguous meaning are chiefly useful to enable the sophist to mislead his hearers. Synonyms are useful to the poet, by which I mean words whose ordinary meaning is the same, e.g. πορεύεσθαι (advancing) and βαδίξειν (proceeding); these two are ordinary words and have the same meaning.

In the *Art of Poetry*,³¹¹ as we have already said, will be found definitions of these kinds of words; a classification of Metaphors; and mention of the fact that metaphor is of great value both in poetry and in prose. Prose-writers must, however, pay specially careful attention to metaphor, because their other resources are scantier than those of poets. Metaphor, moreover, gives style clearness, charm, and distinction as nothing else can: and it is not a thing whose use can be taught by one man to another. Metaphors, like epithets, must be fitting, which means that they must fairly correspond to the thing signified: failing this, their inappropriateness will be conspicuous: the want of harmony between two things is emphasized by their being placed side by side. It is like having to ask ourselves what dress will suit an old man; certainly not the crimson cloak that suits a young man. And if you wish to pay a compliment, you must take your metaphor from something better in the same line; if to disparage, from something worse. To illus-

³⁰⁹*Poetics*, c. 21. [Tr.]

³¹⁰iii, cc. 3, 7. [Tr.]

³¹¹Cp. *Poetics*, cc. 21, 22 [Tr.]

trate my meaning: since opposites are in the same class, you do what I have suggested if you say that a man who begs “prays,” and a man who prays “begs”; for praying and begging are both varieties of asking. So Iphicrates³¹² called Callias a “mendicant priest” instead of a “torch-bearer,” and Callias replied that Iphicrates must be uninitiated or he would have called him not a “mendicant priest” but a “torch-bearer.” Both are religious titles, but one is honourable and the other is not. Again, somebody calls actors “hangers-on of Dionysus,” but they call themselves “artists”: each of these terms is a metaphor, the one intended to throw dirt at the actor, the other to dignify him. And pirates now call themselves “purveyors.” We can thus call a crime a mistake, or a mistake a crime. We can say that a thief “took” a thing, or that he “plundered” his victim. An expression like that of Euripides’ Telephus,³¹³

King of the oar, on Mysia’s coast he landed,

is inappropriate; the word “king” goes beyond the dignity of the subject, and so the art is *not* concealed. A metaphor may be amiss because the very syllables of the words conveying it fail to indicate sweetness of vocal utterance. Thus Dionysius the Brazen³¹⁴ in his elegies calls poetry “Calliope’s screech.” Poetry and screeching are both, to be sure, vocal utterances. But the metaphor is bad, because the sounds of “screeching,” unlike those of poetry, are discordant and unmeaning. Further, in using metaphors to give names to nameless things, we must draw them not from remote but from kindred and similar things, so that the kinship is clearly perceived as soon as the words are said. Thus in the celebrated riddle

105^b I marked how a man glued bronze with fire to another man’s body,

the process is nameless; but both it and gluing are a kind of application, and that is why the applica-

³¹²Iphicrates, the Athenian general (cp. 1365^a28). Callias, a vain, foolish Athenian aristocrat in whose family the office of “torchbearer” was hereditary. The “torchbearer” led the procession from Athens to Eleusis on the fifth day of the Great Eleusinian. [F.S.]

³¹³A lost play. [F.S.]

³¹⁴Poet and rhetorician of the 5th cent. [F.S.]

tion of the cupping-glass is here called “gluing.” Good riddles do, in general, provide us with satisfactory metaphors: for metaphors imply riddles, and therefore a good riddle can furnish a good metaphor. Further, the materials of metaphors must be beautiful; and the beauty, like the ugliness, of all words may, as Licymnius says, lie in their sound or in their meaning.³¹⁵ Further, there is a third consideration—one that upsets the fallacious argument of the sophist Bryson, that there is no such thing as foul language, because in whatever words you put a given thing your meaning is the same. This is untrue. One term may describe a thing more truly than another, may be more like it, and set it more intimately before our eyes. Besides, two different words will represent a thing in two different lights; so on this ground also one term must be held fairer or fouler than another. For both of two terms will indicate what *is* fair, or what *is* foul, but not simply their fairness or their foulness, or if so, at any rate not in an equal degree. The materials of metaphor must be beautiful to the ear, to the understanding, to the eye or some other physical sense. It is better, for instance, to say “rosy-fingered morn,” than “crimson-fingered” or, worse still, “red-fingered morn.” The epithets that we apply, too, may have a bad and ugly aspect, as when Orestes is called a “mother-slayer”; or a better one, as when he is called his “father’s avenger.” Simonides,³¹⁶ when the victor in the mule-race offered him a small fee, refused to write him an ode, because, he said, it was so unpleasant to write odes to half-asses: but on receiving an adequate fee, he wrote

Hail to you, daughters of storm-footed steeds,

though of course they were daughters of asses too. The same effect is attained by the use of diminutives, which make a bad thing less bad and a good thing less good. Take, for instance, the banter of Aristophanes in the *Babylonians*³¹⁷ where he uses “goldlet” for “gold,” “cloaklet” for “cloak,” “scofflet” for “scoff,” and “plaguelet.”

³¹⁵A teacher of rhetoric and a dithyrambic poet. [F.S.]

³¹⁶The lyric poet. [F.S.]

³¹⁷A lost play. [F.S.]

But alike in using epithets and in using diminutives we must be wary and must observe the mean. . . .

XIII. A speech has two parts. You must state your case, and you must prove it. You cannot either state your case and omit to prove it, or prove it without having first stated it; since any proof must be a proof of something, and the only use of a preliminary statement is the proof that follows it. Of these two parts the first is³¹⁸ called the Statement of the case, the second part the Argument, just as we distinguish³¹⁹ between Enunciation and Demonstration. The current division is absurd. For "narration" surely is part of a forensic speech only: how in a political speech or a speech of display can there be "narration" in the technical sense? or a reply to a forensic opponent? or an epilogue³²⁰ in closely-reasoned speeches? Again, introduction, comparison of conflicting arguments, and recapitulation are only found in political speeches when there is a struggle between two policies. They *may* occur then; so may even accusation and defence, often enough; but they form no essential part of a political speech. Even forensic speeches do not always need epilogues;

³¹⁸Sc. in rhetoric. [Tr.]

³¹⁹Sc. in dialectic. [Tr.]

³²⁰Or "peroration," except that the ἐπίλογος, or conclusion of a speech, is usually a longer affair than what we now understand by "peroration." [Tr.]

not, for instance, a short speech, nor one in which the facts are easy to remember, the effect of an epilogue being always a reduction in the apparent length. It follows, then, that the only necessary parts of a speech are the Statement and the Argument. These are the essential features of a speech; and it cannot in any case have more than Introduction, Statement, Argument, and Epilogue.³²¹ "Refutation of the Opponent" is part of the arguments: so is "Comparison" of the opponent's case with your own, for that process is a magnifying of your own case and therefore a part of the arguments, since one who does this *proves* something. The Introduction does nothing like this; nor does the Epilogue—it merely reminds us of what has been said already. If we make such distinctions we shall end, like Theodorus and his followers, by distinguishing "narration" proper from "post-narration" and "pre-narration," and "refutation" from "final refutation."³²² But we ought only to bring in a new name if it indicates a real species with distinct specific qualities; otherwise the practice is pointless and silly, like the way Licymnius³²³ invented names in his *Art of Rhetoric*—"Secundation," "Divagation," "Ramification."³²⁴

³²¹For "statement" we should probably read "narration." Aristotle here corrects what he said in 1414^a30. [F.S.]

³²⁴A technical term of uncertain meaning. [F.S.]

Anonymous

fl. ca. 84 B.C.E.

The *Rhetorica ad Herennium* is the oldest surviving complete rhetoric manual in Latin. Its author is unknown. The title is drawn from the manuscript's address to a man named C. Herennius, about whom nothing else is known. It was probably written around 84 B.C.E., at about the time that Cicero wrote *De Inventione*. Its treatment of forensic invention is similar to Cicero's—word for word in some places—and in spite of other differences, the similarities persuaded readers from medieval times to the early Renaissance that the work was Cicero's. It was even called *Rhetorica Secunda* to identify it as the second of his early treatises; this one covered all five canons of rhetoric, whereas *De Inventione* concentrates only on invention. The work gained prestige and influence from its association with Cicero and also from its comprehensive treatment of the five canons.

Renaissance Latinists dropped the work from the Ciceronian canon and put forward a professional rhetorician named Cornificius as the likely author. Scholarly opinion now inclines against him, too, seeing the *Rhetorica ad Herennium* as the work of an unknown young man who must have been much like Cicero when he wrote *De Inventione*: well-to-do, energetic, and preparing for public life through the study of rhetoric, philosophy, and law. Like *De Inventione*, the *Rhetorica ad Herennium* may have been worked up from lecture notes. It is highly unlikely that the author knew Cicero's text, but he many well have worked with the same rhetoric teacher.

The *Rhetorica ad Herennium* is composed of four books: I and II, on invention, principally stasis theory as applied to forensic oratory; III, on invention in deliberative and ceremonial oratory and on arrangement, delivery, and memory; and IV (included here), the longest book by far, on style. The work is not noted for any original contributions to rhetorical theory but rather for presenting a detailed picture of Roman rhetoric of the period and its Greek foundations. The discussion of style has been particularly influential. The author follows or adapts Aristotle's pupil Theophrastus in dividing the kinds of style into grand, middle, and plain, and the "virtues" or qualities of style into elegance, composition, and dignity. He also reflects the period's increased interest in figures, which are sorted into figures of diction and figures of thought. Book IV of the *Rhetorica ad Herennium* became an increasingly influential pattern for rhetoric manuals from its own day up through the Renaissance.

The main influences upon this work are the Greek thinkers Aristotle, Theophrastus, and Hermagoras. Nevertheless, the author never cites them and in fact frequently inveighs against Greek rhetoric. For example, at the beginning of Book IV, he attacks as "Greek" the practice of borrowing examples to illustrate rhetorical principles. Rather, he argues, the rhetorician should create the examples, because they will ratify his skill and suit the lesson more aptly than anything borrowed. Yet in this very passage the author himself appears to borrow from a Greek source. Indeed,

throughout his work he uses translated borrowings from Greek poets and orators, who are not cited, although he does cite the Roman sources from whom he also borrows.

There has been scholarly controversy over this author's treatment of Greek sources, especially in Book IV. Current opinion regards him not as a plagiarist but rather as one who believed that free translation was a creative act. His disparagement of the Greek sources can be understood as Roman defensiveness about the older and certainly very influential culture. Note in this connection that Antonius, one of the practiced speakers in Cicero's *De Oratore*, remarks that he has concealed his own knowledge of Greek literature in order to retain his political popularity. Even the choice to write the treatise in Latin, suggests classicist A. D. Leeman, had political implications. Rhetoric instruction had often been conducted in Greek, so choosing Latin made a strong statement about the viability of Roman culture. Later Roman writers, less defensive, often reverted to Greek rhetorical terms, such as names for the figures, in their treatises. Rhetoric scholar Patrick Sinclair has argued that the author of the *Rhetorica ad Herennium* shows throughout a pragmatic desire to serve the values of the aristocratic Romans who were the orator's most important audience. In this way as in others, the *Rhetorica ad Herennium* gives a detailed portrait of Hellenized Roman rhetoric instruction in the period that produced some of the greatest Latin orators.

Selected Bibliography

The standard translation is *Ad C. Herennium de Ratione Dicendi (Rhetorica ad Herennium)*, translated by Harry Caplan (Loeb Classical Library, 1954). Caplan's excellent introduction summarizes theoretical and textual issues.

Most histories of rhetoric discuss the *Rhetorica ad Herennium*, usually in conjunction with Cicero's *De Inventione*, but little scholarship has focused on it exclusively. For the text's cultural background, see Richard Leo Enos, *Roman Rhetoric: Revolution and the Greek Influence* (1995). A.D. Leeman locates the work in the history of Roman rhetoric and analyzes Book IV extensively in *Orationis Ratio: The Stylistic Theories and Practice of the Roman Orators, Historians, and Philosophers* (1963). On the text's attention to the values of its upper-class audience, see Patrick Sinclair, "The *Sententia* in *Rhetorica ad Herennium*: A Study in the Sociology of Rhetoric" (*American Journal of Philology* 114 [1993]: 561–80).

Rhetorica ad Herennium

Book IV

I. Inasmuch as in the present Book, Herennius, I have written about Style, and wherever there was need of examples, I have used those of my own making, and in so doing have departed from the practice of the Greek writers¹ on the subject, I must in a few words justify my method. And that I make this explanation from necessity, and not from choice, is sufficiently indicated by the fact that in the preceding Books I have said nothing by way either of preface² or of digression. Now, after a few indispensable observations, I shall, as I undertook to do, discharge my task of explaining to you the rest of the art. But you will more readily understand my method when you have learned what the Greeks say.³

On several grounds they think that, after they have given their own precepts on how to embellish style, they must for each kind of embellishment offer an example drawn from a reputable orator or poet.⁴ And their first ground is that in doing so they are prompted by modesty, because it seems a kind of ostentation not to be content to teach the art, but to appear desirous themselves of creating examples artificially.

Translated by Harry Caplan.

¹See note on 4. v. 7 below. [Tr.]

²Cf. the long prefaces to the books of Cicero, *De Inv.* [Tr.]

³The character of this Introduction to Book 4 (only the final argument and some of the illustrations are Roman) suggests a Greek origin. It reflects the debates between Greeks and Greeks—on Atticism as against Asianism, or the old rhetoric, based on the imitation of the ancients (μίμησις τῶν ἀρχαίων), as against the modern (νεωτερισμός). Hermagoras, to whose reliance on the ancients Cicero, *De Inv.* 1. vi. 8, refers, and whom Cicero in his Introduction to that work attacks, was doubtless also in the author's mind. See Paul Wendland, *Quaestiones Rhetoricae*, Göttingen, 1914. As our notes show, in spite of the argument in this Introduction, Book 4 contains numerous examples taken (though often with considerable changes) from a variety of sources, both Roman and Greek. [Tr.]

⁴Rhetoric and poetry meet expressly also in 4. i. 2, ii. 3, iii. 5, iv. 7, v. 7, v. 8, xxxii. 43, xxxii. 44, and 2. xxii. 34. The Peripatetic school encouraged the close relationship between the two. [Tr.]

That, they say, would be showing themselves off, not showing what the art is. Hence it is in the first place a sense of shame which keeps us from following this practice, for we should appear to be approving of ourselves alone, to be prizing ourselves, scorning and scoffing at others. For when we can take an example from Ennius, or offer one from Gracchus,⁵ it seems presumptuous to neglect these and to have recourse to our own examples.

In the second place, examples, they say, serve the purpose of testimony; for, like the testimony of a witness, the example enforces what the precept has suggested and only to a slight degree effected.⁶ Would not a man be ridiculous, then, if in a trial⁷ or in a domestic procedure⁸ he should contest the issue on the basis of his own personal testimony? For an example is used just like testimony to prove a point; it should properly therefore be taken only from a writer of highest reputation, lest what ought to serve as proof of something else should itself require proof. In fact, inventors of examples must either prefer themselves to all others and esteem their own products most of all, or else deny that the best examples are those taken from the orators or poets of highest reputation. If they should set themselves above all others, they are unbearably conceited; if they should grant to any others a superiority over themselves and yet not believe that the examples of these others excel their own, they cannot explain why they concede this superiority.

II. And furthermore, does not the very prestige of the ancients not only lend greater authority to their doctrine but also sharpen in men the desire to imitate them? Yes, it excites the ambitions and whets the zeal of all men when the hope is

⁵Ennius and Gracchus served as models for Crassus in his youth; cf. Cicero, *De Oratore* 1. 34. 154. [Tr.]

⁶See note on 4. iii. 5 below. [Tr.]

⁷Whether civil or criminal. [Tr.]

⁸In which the *paterfamilias* exercises his jurisdiction. See Mommsen, pp. 16 ff.; Wenger, *Institutes of the Roman Law of Civil Procedure*, pp. 9 f. [Tr.]

implanted in them of being able by imitation⁹ to attain to the skill of a Gracchus or a Crassus.

Finally, they say, the highest art resides in this: in your selecting a great diversity of passages widely scattered and interspersed among so many poems and speeches, and doing this with such painstaking care that you can list examples, each according to its kind, under the respective topics of the art. If this could be accomplished by industry alone, we should yet deserve praise for not having avoided such a task; but actually, without the highest art it cannot be done. For who, unless he has a consummate grasp of the art of rhetoric, could in so vast and diffuse a literature mark and distinguish the demands of the art? Laymen, reading good orations and poems, approve the orators and poets, but without comprehending what has called forth their approval, because they cannot know where that which especially delights them resides,¹⁰ or what it is, or how it was produced. But he who understands all this, and selects examples that are most appropriate, and reduces to individual principles of instruction everything that especially merits inclusion in his treatise, must needs be a master artist in this field. This, then, is the height of technical skill—in one's own treatise to succeed also in using borrowed examples!

When the Greeks make such assertions, they influence us more by their prestige than by the truth of their argument. For what I really fear is that some one may consider the view contrary to mine adequately recommended because its supporters are the very men who invented this art and are now by reason of their antiquity quite universally esteemed. If, however, leaving the prestige of the ancients out of consideration, they are willing to compare all the arguments, point for point, they will understand that we need not yield to antiquity in everything.

III. First, then, let us beware lest the Greeks offer us too childish an argument in their talk about modesty. For if modesty consists in saying

⁹Cf. the place of Imitation in our author's theory, as set forth in I. ii. 3 above, with the position taken in this Preface (see esp. 4. iv. 7 and 4. vi. 9 below) against borrowing examples which should serve as models for imitation. [Tr.]

¹⁰The like point, with respect to rhythm, is made by Cicero, *Orator* 51. 173. [Tr.]

nothing or writing nothing, why do they write or speak at all? But if they do write something of their own, then why does modesty keep them from composing, themselves, everything they write? It is as if some one should come to the Olympic games to run, and having taken a position for the start, should accuse of impudence those who have begun the race—should himself stand within the barrier and recount to others how Ladas¹¹ used to run, or Boiscus¹² in the Isthmian games. These Greek rhetoricians do likewise. When they have descended into the race-course of our art, they accuse of immodesty those who put in practice the essence of the art; they praise some ancient orator, poet, or literary work, but without themselves daring to come forth into the stadium of rhetoric.¹³ I should not venture to say so, yet I fear that in their very pursuit of praise for modesty they are impudent. Some one may say to them: "Now what do you mean? You are writing a treatise of your own; you are creating new precepts for us; you cannot confirm these yourself; so you borrow examples from others. Beware of acting impudently in seeking to extract from the labor of others praise for your own name." Indeed, if the ancient orators and poets should take the books of these rhetoricians and each remove therefrom what belongs to himself, the rhetoricians would have nothing left to claim as their own.¹⁴

¹¹Of Sparta, a celebrated long-distance runner (c. 450 B.C.), winner in the Olympic games, whose speed is often referred to by Roman authors; see P.-W. 12. 380-1. [Tr.]

¹²Text corrupt. The runner "Boiscus" (if that reading is correct) is elsewhere unknown. The name (of a Thessalian boxer) occurs in Xenophon, *Anab.* 5. 8, and (of a Samian) in W. Dittenberger, *Syll. Inscript. Graec.*, 3rd ed., Leipzig, 1915, No. 420. [Tr.]

¹³Cf. *Corpus Fabularum Aesopicarum*, ed. Hausrath, *Fab.* 33 (1), about the man who, boasting when away from Rhodes that he had "beaten the Olympic record" in a jump he had made at Rhodes, and promising to produce witnesses of his exploit if his hearers would come to Rhodes, was challenged to repeat the leap where he was. [Tr.]

¹⁴In Horace, *Epist.* 1. 3. 15 ff., Celsus is advised to be self-reliant, and not to draw upon writers whose works he has used in the library of the temple of Apollo—"lest, if by chance some day the flock of birds come to reclaim their feathers, the wretched crow stripped of his stolen colors excite laughter." Cf. the jackdaw in Phaedrus, *Fab. Aesop.* 1. 3. and Babrius, *Mythiamb. Aesop.* 72. Philodemus, *Rhet.*, ed. Sudhaus, 2. 67-8, says that in drawing certain technical prin-

“But,” they say, “since examples correspond to testimony, it is proper that, like testimony, they should be taken from men of the highest reputation.”¹⁵ First and foremost, examples are set forth, not to confirm¹⁶ or to bear witness, but to clarify.¹⁷ When I say there is a figure of speech which, for instance, consists of like-ending words, and take this example from Crassus: *quibus possumus et debemus*,¹⁸ I am setting up, not testimony, but an example. The difference between testimony and example is this: by example we clarify the nature of our statement, while by testimony we establish its truth. Furthermore, the testimony must accord with the proposition, for otherwise it cannot confirm the proposition. But the rhetoricians’ performance does not accord with what they propose. How so? In that they promise to write a treatise of the

principles from other arts, such as dialectic, the rhetoricians have “decked themselves out with borrowed plumage.” Cf. also in Lucian, *Pseudolog.* 5. the sophist’s speech, “like Aesop’s jackdaw patched together with borrowed plumes of many colors.” [Tr.]

¹⁵Cf. the rule in Theon 8 (Spengel 2. 110. 25) that in epideictic the judgment must be taken from reputable men. [Tr.]

¹⁶But cf., just above, *eas confirmare*, and 4. xlv. 57, end, *exemplo conprobatum*. [Tr.]

¹⁷Cf. Aristotle, *Problem.* 18.3 (916 b): “We more readily believe in facts to which many bear witness, and examples and tales are like witnesses; furthermore belief through witnesses is easy;” *Rhet.* 2. 20 (1934 a): “If we lack enthymemes, we must use examples as logical proofs . . . If we have enthymemes, we must use examples as witnesses, subsequent and supplementary to the enthymemes. . . . When they follow the enthymemes examples function like witnesses.” Cf. also the definition and functions of the figure *exemplum*, 4. xlix. 62 below, and note. On Example as rhetorical induction see Aristotle, *Rhet.* 1. 2 (1356 b, 1357 b), and cf. *Anal. Pr.* 2. 24 (68 b ff.); for its place in Cicero’s theory of argumentation, *De Inv.* 1. xxix. 44 ff., esp. 49, and *De Oratore* 2.40.169. See further Quintilian, 5.11.1 ff., and on the *exemplum* in deliberative speaking 3. v. 9 above. [Tr.]

¹⁸From the celebrated speech delivered before an Assembly of the people in B.C. 106 by L. Licinius Crassus in support of the law by which Q. Servilius Caepio sought, on behalf of the Senate, to wrest the judicial powers from the equites. In Cicero, *De Oratore* 1. 52. 225, the passage is fuller: “Deliver us from our miseries, deliver us from the jaws of those whose cruelty cannot have enough of our blood; suffer us not to be slaves to any but yourselves as a whole, *whom we both can and ought to serve*.” See also Cicero, *Paradoxa Stoic.* 5. 41. The figure of speech is Homoeoteleuton; see 4. xx. 28 below. [Tr.]

art, and then mostly bring forward examples from authors who were ignorant of the art. Now who can give authority to his writings on the art unless he writes something in conformity with the art?¹⁹ Their performance is at variance with what they seem to promise; for when they undertake to write the rules of their art, they appear to say that they have themselves invented what they are teaching to others, but when they actually write, they show us what others have invented.

IV. “But,” say they, “this very choice from among many is difficult.” What do you mean by difficult? That it requires labor? Or that it requires art? The laborious is not necessarily the excellent. There are many things requiring labor which you would not necessarily boast of having done—unless, to be sure, you thought it a glorious feat to have transcribed by your own hand whole dramas²⁰ or speeches! Or do you say that that kind of thing requires exceptional art? Then beware of appearing inexperienced in greater matters, if you are going to find the same delight in a petty thing as in a great. Doubtless no one quite uncultivated can select in this way; yet many who lack the highest art can. For any one at all who has heard more than a little about the art, especially in the field of style, will be able to discern all the passages composed in accordance with the rules; but the ability to compose them only the trained man will possess. It is as if you should wish to choose maxims from the tragedies of Ennius,²¹ or messengers’ reports from the tragedies of Pacuvius; if, however, just because no one who is quite illiterate can do this, you should suppose that having done it, you are most highly cultivated, you would be foolish, because any person moderately well-read could do it easily. In the same fashion if, having chosen from orations or poems examples marked by definite tokens of art, you should suppose that your per-

¹⁹Cf. Cicero, *De Inv.* 1. vi. 8: “But for a speaker it is a very unimportant thing to speak concerning his art—that Hermagoras has done; by far the most important thing is to speak in conformity with his art—and this, as we all see, Hermagoras was altogether incapable of doing.” [Tr.]

²⁰The task of copying was usually entrusted to slaves. [Tr.]

²¹Cf. Isocrates, *Ad Nicocl.* 44, on the selection of maxims from the outstanding poets. [Tr.]

formance gives proof of superlative art on the ground that no ignoramus is capable of it, you would be in error, because by this token that you offer we see only that you have some knowledge, but we shall need still other tokens to convince us that you know a great deal. Now if to discern what is written artistically proves your mastery of the art, then a far better proof of this mastery is to write artistically yourself. For though the artistic writer will find it easy to discern what has been skillfully written by others, the facile chooser of examples will not necessarily write with skill himself. And even if it is an especial mark of artistic skill, let them employ this faculty at another time, and not when they themselves should be conceiving, creating, and bringing forth.²² In short, let them devote their artistic power to this purpose—to win esteem as worthy themselves to be chosen as models by others, rather than as good choosers of others who should serve as models for them.

Against the contentions of those who maintain that we should use borrowed examples I have said enough. Now let us see what can be said from my own particular point of view.²³

V. Accordingly I say that they are not only at fault in borrowing examples, but make an even greater mistake in borrowing examples from a great number of sources.²⁴ And let us first look at my second point. Were I granting that we should borrow examples, I should establish that we ought to select from one author alone. In the first place, my opponents would then have no ground²⁵ for opposing this procedure, for they might choose and approve whom they would,

²²Cf. the Preface to the *Rhet. ad Alex.* (1421 a): "For the so-called Parian sophists, because they did not themselves give birth to what they teach, have no love for it, in their tasteless indifference, and peddle it about for money." [Tr.]

²³After the Greek writers have had their say, and have been refuted, our author takes up his own "constructive" case; see 4. i. 1. [Tr.]

²⁴The theory and practice of presenting examples from a variety of sources were doubtless Peripatetic; the rhetoricians criticized belong perhaps to the second century B.C. The use of one's own examples, on the other hand, goes back to Corax (see Paul Wendland, *Anaximenes von Iampsakos*, Berlin, 1905, pp. 31 ff.) and was characteristic of the sophists and of the author of the *Rhet. ad Alex.* Note that neither point of view can be regarded as characteristically Greek. [Tr.]

²⁵Their theory is set forth in 4. i. 1–ii. 3 above. [Tr.]

poet or orator, to supply them with examples for all cases, one on whose authority they could rely.²⁶ Secondly, it is a matter of great concern to the student whether he should believe that every one can attain the sum total of qualities, or that no one can, or that one individual can attain one quality and another individual another quality. For if the student believes that all qualities can exist in one man, he himself will strive for a mastery of them all. But if he despairs of this achievement, he will occupy himself in acquiring a few qualities, and with these be content. Nor is this surprising, since the teacher of the art himself has been unable to find all the qualities in one author. Thus, when examples have been drawn from Cato, the Gracchi, Laelius, Scipio, Galba, Porcina, Crassus, Antonius, and the rest, and some as well from the poets and historians, the learner will necessarily believe that the totality could have been taken only from them all, and that barely a few examples could have been taken from only one. He will therefore be content with emulating some one author²⁷ and distrust his own single power to possess the sum total of qualities possessed by all the authors. Now it is disadvantageous for the student to believe that one person cannot possess all qualities; and so I say, no one would fall into this opinion if the rhetoricians had drawn examples from one author alone. Actually, the fact that the writers on rhetoric have presented neither their own examples nor those of some single author, or even two, but have borrowed from all the orators and poets, is a sign that they themselves have not believed that any one individual can be brilliant in all the branches of style. Moreover, should any one wish to show that the art of rhetoric is of no benefit for speaking, he might well in support employ the argument that no one man has been able to master all the branches of rhetoric. Is it not ridiculous for a rhetorician himself to approve by his own judgment what thus supports

²⁶In Cicero, *De Oratore* 2. 22. 90–3, Antonius discusses the imitation of some one good model; Quintilian, in 10. 5. 19, urges the student to follow this "custom of our ancestors," but in 10. 2. 23 advises him not to devote himself entirely to imitating one particular style. Seneca, *Contr.* 1, *Praef.* 6, takes a stand against the adoption of a single model, however eminent. [Tr.]

²⁷Who exemplifies only a few virtues. [Tr.]

the theory of those who utterly condemn the art of rhetoric?²⁸

I have, then, shown that if examples were always to be borrowed, the borrowing should have been from one author. VI. Now we shall learn from the following that they should not have been borrowed at all.

Above all, an example which is cited by a writer on an art should be proof of his own skill in that art. It is as if a merchant selling purple or some other commodity should say: "Buy of me, but I shall borrow from some one else a sample of this to show you." So do these very people who offer merchandise for sale go in search of a sample of it elsewhere; they say: "We have piles of wheat," but have not a handful of grain to show as a sample.²⁹ If Triptolemus, when dispensing seed to mankind, had himself borrowed it from other men, or if Prometheus, wishing to distribute fire amongst mortals, had himself gone about with an urn begging a few coals of his neighbors, he would have appeared ridiculous. Do not these schoolmasters, teachers of public speaking to all the world, see that they are acting absurdly when they seek to borrow the very thing they offer to bestow? If any one should say that he has discovered the richest of deeply hidden springs, and tell of the discovery while suffering extreme thirst and lacking the wherewithal to slake his thirst, would he not be a laughingstock? When these writers declare that they are not only the masters of the springs, but are themselves the wellsprings³⁰ of eloquence, and when it is their duty to water the talents of all, do

²⁸Here is reflected the quarrel, in the second century, between philosophers and rhetoricians concerning education; see Hans von Arnim, *Leben und Werke des Dio von Prusa*, Berlin, 1898, ch. 1, Hubbell, *The Rhetorica of Philodemus*, pp. 364–82, Kroll in P.-W., "Rhetorik," coll. 1080–90. For example, the three Greek philosophers who came as ambassadors from Athens to Rome in 155 B.C. (and wielded considerable influence there) were all opposed to rhetoric—the Academic Carneades, the Peripatetic Critolaüs, and the Stoic Diogenes the Babylonian. [Tr.]

²⁹Cf. Plutarch, *Desmosth.* 23: "Further, [when Alexander demanded the surrender of the Athenian leaders,] Demosthenes said: 'Just as we see merchants selling their stock of wheat by means of a few grains which they carry about with them in a bowl as a sample, so by giving us up, you, without knowing it, give yourselves up too, all of you.'" [Tr.]

³⁰Cf. Longinus, *De Sublim.* 13. 3: "Plato, who from that great Homeric spring drew to himself countless side streams;" Quintilian, 10. 1. 46, and Dionysius Halic., *De Compos.*

they not think it will be laughable if, whilst making the offer to do so, they are themselves parched with drought? Not thus did Chares learn from Lysippus how to make statues.³¹ Lysippus did not show him a head by Myron,³² arms by Praxiteles, a chest by Polycleitus. Rather with his own eyes would Chares see the master fashioning all the parts; the works of the other sculptors he could if he wished study on his own initiative. These writers believe that students of this subject can be better taught by another method.

VII. Furthermore, borrowed examples simply cannot be so well adapted to the rules of the art because in speaking each single topic is in general touched lightly, so that the art may not be obvious. In instructing, on the other hand, one must cite examples that are drafted expressly to conform to the pattern of the art. It is afterwards, in speaking, that the orator's skill conceals his art,³³ so that it may not obtrude and be apparent to all. Thus also to the end that the art may be

Verb. 24, on Homer, as source of inspiration, representing his own conception of Ocean (*Il.* 21. 196–7). [Tr.]

³¹In the eyes of Rhodians, Chares, who produced the Colossus in 280 B.C., would belong in this list of celebrated sculptors of Greece. Lysippus, his teacher, was a contemporary of Alexander the Great; Myron *fl.* 460 B.C.; Praxiteles was born c. 390 B.C.; Polycleitus *fl.* 450–20 B.C. Rhetoricians liked to use the graphic arts for comparison in their theory, *Cf.*, for example, Cicero, *De Inv.* 2. i. 1 ff., *Brutus* 18. 70, *Orator* 2. 8 ff.; Horace, *Ars Poet.*, *init.* (poem and paintings, as in 4. xxviii. 39 below); Quintilian, 12. 10. 1 ff.; Dionysius Halic., *De Imit.* 6 (ed. Usener-Radermacher, 2[1]. 203, and for the method contrary to that in our author's analogy, *fragm.* 6a, p. 214); Theon 1, in Spengel 2. 62. 1 ff. *Cf.* also 4. xi. 16 below: "set the style in relief, as with colors"; Cousin, *Études sur Quintilien*, 1. 658 ff.; Friedrich Blass, *Die griechische Beredsamkeit in dem Zeitraum von Alexander bis auf Augustus*, Berlin, 1865, pp. 222 ff.; E. Bertrand, *De pictura et sculptura apud veteres rhetores*, Paris, 1881; Julius Brzoska, *De canone decem oratorum Atticorum quaestiones*, Breslau, 1883, pp. 69 ff., 81 ff.; Lessing, Laokoon. [Tr.]

³²Cicero, *Brutus* 19. 75, likens the pleasurable effect of Naevius' *Bellum Punicum* to that yielded by a work of Myron; *cf.* also Dionysius Halic., *De Thuc.* 4. [Tr.]

³³*Cf.* 1. x. 17, 2. xxx. 47, and 4. xxiii. 32. The idea is widespread in ancient rhetoric; *cf.* Aristotle, *Rhet.* 3. 2 (1404 b): "Hence may be inferred the need to disguise the art we employ, so that we give the impression of speaking naturally, not artificially. Naturalness is persuasive, artifice is the contrary. People take offense at a speaker who employs artifice, and think he has designs on them—as if he were mixing drinks for them;" also 3. 7 (1408 b). See further Philodemus, *Rhet.*, ed. Sudhaus, 1. 200; Dionysius Halic., *De Lys.* 8;

better understood is it preferable to use examples of one's own creation.

Finally, I have been led to this method by another consideration also—the remoteness from our own usage of the technical terms³⁴ I have translated from the Greek. For concepts nonexistent among us could not have familiar appellations. The translated terms, therefore, must seem rather harsh at first—that will be a fault of the subject, not mine. The rest of my treatise will be devoted to examples. If, however, these which I have here set down had been borrowed from other sources, the result would have been that anything apt in this book would not be mine, but whatever is a little rough or strange would be assigned to me as my own particular contribution. So I have escaped this disadvantage also.

On these grounds, although esteeming the Greeks as the inventors of the art, I have not followed their theory of examples. Now it is time to turn to the principles of Style.

I shall divide the teaching of Style into two parts. First I shall state the kinds to which oratorical style should always confine itself,³⁵ then I shall show what qualities style should always have.

VIII. There are, then, three kinds of style, called types,³⁶ to which discourse, if faultless,

confines itself: the first we call the Grand; the second, the Middle; the third, the Simple.³⁷ The Grand type consists of a smooth and ornate arrangement of impressive words.³⁸ The Middle type consists of words of a lower, yet not of the lowest and most colloquial, class of words. The Simple type is brought down even to the most current idiom of standard speech.

A discourse will be composed in the Grand style if to each idea are applied the most ornate words that can be found for it, whether literal or figurative; if impressive thoughts are chosen, such as are used in Amplification and Appeal to Pity; and if we employ figures of thought and figures of diction which have grandeur—these I shall discuss later.³⁹ The following will be an example of this type of style:

“Who of you, pray, men of the jury, could de-

³⁷ἀδρόν (μεγαλοπεπές, περιττόν), μέσον (μιχτόν), ισχνόν (λιτόν), and for other terms see W. Schmid, *Rhein. Mus.* 49 (1894). 136 ff. Here is the first extant division of the styles into three. Cf. especially Cicero, *De Oratore* 3. 45. 177, 52. 199, 55. 212, *Orator* 5. 20 ff., 23. 75 ff.; Dionys. Halic., *De Demosth.* 1 ff., and for the doctrine as transferred to Composition (ἀνυθεσις), *De Composit. Verb.*, chaps. 21 ff.; Quintilian, 12. 10. 58 ff.; also Varro in Gellius 6. 14. To Cicero (*Orator* 21. 69 ff.), following a Hellenistic (and doubtless Peripatetic) concept, each of the styles represents a function of the orator, the plain (*subtile*) serving for proof (*probare*), the middle (*modicum*) for delight (*delectare*), and the vigorous (*vehemens*) for swaying the hearers (*flectere*). Scholars are not in agreement on the ultimate origin of the fixed categories; some assign the doctrine to Theophrastus (see A. Körte, *Hermes* 64 [1929]. 80, and Wilhelm Kroll, *Rhein. Mus.* 62 [1907]. 86 ff., *Introd.* to ed. of Cicero, *Orator* [Berlin, 1913], p. 4, note 1, and “Rhetorik,” coll. 1074 f.), while others deny this attribution (see G. L. Hendrickson, *Amer. Journ. Philol.* 25 [1904]. 125–46 and 26 [1905]. 249–90, and Stroux, *De Theophrasti virt. dic.*, Leipzig, 1912, chaps. 1, 7, and 8). On varying views of the part played by the Peripatetic ethical idea of the mean (μεσότης) in the development of the doctrine see especially the articles by Hendrickson and Kroll, and S. F. Bonner in *Class. Philol.* 33 (1938). 257–66. Cf. the four types of style in Demetrius, *De Elocut.* 36, the twofold division in Cicero, *Brutus* 55. 201; and see Fritz Wehrli, “Der erhabene und der schlichte Stil in der poetisch-rhetorischen Theorie der Antike,” *Phyllobolia für Peter von der Mühl*, Basel, 1946, p. 29. Quintilian, 12. 10. 66 ff., considers the limitation to three styles arbitrary. [Tr.]

³⁸Echoed below in connection with Epanaphora (xiii. 19), Antithesis (xv. 21), Interrogation (xv. 22), Paronomasia (xxiii. 32), Surrender (xxix. 39—provoking pity), and Asyndeton (xxx. 41—animation). [Tr.]

³⁹4. xiii. 19 ff. [Tr.]

Dionysius, *Ars Rhet.* 8. 16 (ed. Usener-Radermacher, 2 [1]. 322); Longinus, *De Sublim.* 22. 1; “For art is perfect when it seems to be nature, and nature is effective when she contains art hidden within her,” 17, 1–2, 38. 3; Anon. Seg. 94, in Spengel-Hammer 1 (2). 369; Hermogenes, *De Meth. Gravit.* 17 (ed. Rabe, p. 433); Philostratus, *Vita Apollon.* 8. 6; Longinus, in Spengel-Hammer 1 (2). 195. 4; Cicero, *De Inv.* 1. xviii. 25, 1. lii. 98, *Brutus* 37. 139, *De Oratore* 2. 37. 156, 2. 41. 177, *Orator* 12. 38, *Part. Orat.* 6. 19; Ovid, *Metam.* 10. 252; Quintilian, 1. 11. 3, 2. 5. 7, 4. 1. 8–9, 4. 1. 54, 4. 1. 56–58, 4. 2. 59, 4. 2. 126–7, 9. 4. 144, 11. 2. 47. [Tr.]

³⁴ὀνόματα τεχνικά. Cf. Varro in Cicero, *Academ.* 1. 6. 24: “Since we are treating unusual subjects you will no doubt allow me on occasion to use words unheard of before, as the Greeks themselves do, and they have now been treating these subjects for a long time”; Cicero, *Orator* 57. 211. [Tr.]

³⁵The three kinds do not occur in every correct discourse, but the kinds of correct discourse are limited to these three. [Tr.]

³⁶χαρακτήρες, ἡλίσματα. Notice the word *figura*. Our author's term corresponding to English “figure of speech” is *exornatio* (σχῆμα), as in 4. xiii. 18 below (Cicero's term, *lumen*, is used only in 4. xxiii. 32 below); *figura* as “figure of speech” appears first in Quintilian. [Tr.]

wise a punishment drastic enough for him who has plotted to betray the fatherland to our enemies? What offense can compare with this crime, what punishment can be found commensurate with this offense?⁴⁰ Upon those who had done violence to a freeborn youth, outraged the mother of a family, wounded,⁴¹ or—basest crime of all—slain a man, our ancestors exhausted the catalogue of extreme punishments; while for this most savage and impious villainy they bequeathed no specific penalty.⁴² In other wrongs, indeed, injury arising from another's crime extends to one individual, or only to a few; but the participants in this crime are plotting, with one stroke, the most horrible catastrophes for the whole body of citizens. O such men of savage hearts! O such cruel designs! O such human beings bereft of human feeling! What have they dared to do, what can they now be planning? They are planning how our enemies, after uprooting our fathers' graves, and throwing down our walls, shall with triumphant cry rush into the city; how when they have despoiled the temples of the gods, slaughtered the Conservatives and dragged all others off into slavery, and when they have subjected matrons and freeborn youths to a foeman's lust, the city, put to the torch, shall collapse in the most violent of conflagrations! They do not think, these scoundrels, that they have fulfilled their desires to the utmost, unless they have gazed upon the piteous ashes of our most holy fatherland. Men of the jury, I cannot in words do justice to the shameful of their act; yet that disquiets me but little, for you have no need of me. Indeed your own hearts, overflowing with patriotism, readily tell you to drive this man, who would have betrayed the fortunes of all, headlong from this commonwealth,⁴³ which he would have

⁴⁰Cf. Cicero, *Verr.* 2. 2. 16. 40: "How shall one deal with this man? What punishment can be found commensurate with his lawlessness?" [Tr.]

⁴¹On the criminal law in respect to wounding with intent to kill, see Mommsen, p. 627. [Tr.]

⁴²Cf. the ninth commonplace in 2. xxx. 49 above, the comparison of crimes. [Tr.]

⁴³This passage (see also 4. xxxvi. 48 and 4. xxxix. 51 below, and 2. xxviii. 45 above) is not to be taken (with Mommsen, p. 972, note 1) as evidence that interdiction was the legal punishment for treason exacted of a citizen. Note "bequeathed no specific penalty" above in this example, and

buried under the impious domination of the foulest of enemies."⁴⁴

IX. Our discourse will belong to the Middle type if, as I have said above,⁴⁵ we have somewhat relaxed our style, and yet have not descended to the most ordinary prose, as follows:

"Men of the jury, you see against whom we are waging war—against allies who have been wont to fight in our defense, and together with us to preserve our empire by their valor and zeal. Not only must they have known themselves, their resources, and their manpower, but their nearness to us and their alliance with us in all affairs enabled them no less to learn and appraise the

see Ernst Levy, *Die röm. Kapitalstrafe*, Sitzungsber. Heidelberg. Akad. (philos.-hist. Klasse) 21, 5 (1930-31). 20 ff. [Tr.]

⁴⁴The example is of an *amplificatio criminis*, belonging to the Conclusion of a speech. For an analysis of this passage, see Jules Marouzeau, *Rev. de Philol.* 45 (1921). 155-6, and *Traité de stylistique appliqué au Latin*, Paris, 1935, p. 181: The diction is grandiloquent, but not artificial as in the passage below illustrating the swollen style. Note the elegant and learned abstract in *-tus (dominatu)* for *-tio*, the archaic genitive *deum*, the far-fetched *hostilem libidinem* (adj. serving for genitive of noun), the artificial disjunctions (e.g., *idoneam . . . poenam*), the periods, the tripartite interjections, the chiasmus in *violassent ingenuum, matremfamilias constuprassent*, The play on words (*hominem humanitate, excogitare cogitarit*), the accumulation of epithets and of superlatives, the contrasts as in *uno consilio, universis civibus*, the variety in the echoes (*quo pacto, quo modo*), the periphrasis in *huius sceleris qui sunt adfines*, the expressive verbs (*excogitare, constuprassent, machinantur, conflagrata, trucidatis*), and the poetic words (e.f., *moenibus*). Figures of speech are Paronomasia (see 4. xxi. 29 below) in *excogitare . . . cogitarit*, Isocolon (see 4. xx. 27 below) in *Quod maleficium . . . comparari, quod huic . . . inveniri*, Apostrophe (see 4. xv. 22 below) in *O feros animos . . . humanitate*, Reasoning by Question and Answer (see 4. xvi. 23 below) in *Quaid agere, etc.*, and Surrender (see 4. xxix. 39 below) in the last two sentences of the passage. The passage contains no periods ending with monosyllables; the example of the middle style below contains a few. It contains sixteen dichorees (- - -) in the clausulae; the example of the middle style contains eight, and that of the simple style only one. See Friedrich Blass, *Die Rhythmen der asianischen und römischen Kunstprosa*, Leipzig, 1905, pp. 107-9; Konrad Burdach, *Schleisch-böhmische Briefmuster aus der Wende des vierzehnten Jahr-hunderts* (Vom Mittelalter zur Reformation 5), Berlin, 1926, pp. 106 ff.; and the notes on 4. xix. 26 and 4. xxxii. 44 below. Dionysius Halic., *De Demosth.*, ch. 1, chooses Gorgias and Thucydides as representatives of the grand style. [Tr.]

⁴⁵4. viii. 11. [Tr.]

power of the Roman people in every sphere. When they had resolved to fight against us, on what, I ask you, did they rely in presuming to undertake the war, since they understood that much the greater part of our allies remained faithful to duty, and since they saw that they had at hand no great supply of soldiers, no competent commanders, and no public money—in short, none of the things needful for carrying on the war? Even if they were waging war with neighbors on a question of boundaries, even if in their opinion one battle would decide the contest, they would yet come to the task in every way better prepared and equipped than they are now. It is still less credible that with such meager forces they would attempt to usurp that sovereignty over the whole world which all the civilized peoples, kings, and barbarous nations have accepted, in part compelled by force, in part of their own will, when conquered either by the arms of Rome or by her generosity. Some one will ask: “What of the Fregellans? Did they not make the attempt on their own initiative?” Yes, but these allies would be less ready to make the attempt precisely because they saw how the Fregellans fared.⁴⁶ For inexperienced peoples, unable to find in history a precedent for every circumstance, are through imprudence easily led into error; whilst those who know what has befallen others can easily from the fortunes of these others draw profit for their own policies.⁴⁷ Have they, then, in taking up arms, been impelled by no motive? Have they relied on no hope? Who will believe that any one has been so mad as to dare, with no forces to depend on, to challenge the sovereignty of the Roman people? They must, therefore, have had some motive, and what else can this be but what I say?⁴⁸

⁴⁶By destroying Fregellae when, after a long history of loyalty, she rebelled in 125 B.C., Rome kept her Italian confederacy intact. See. 4. xv. 22 and 4. xxvii. 37 below. The figure here is Hypophora; see 4. xxiii. 33 below. [Tr.]

⁴⁷For the maxim (see 4. xvii. 24 below) cf. Terence, *Heaut. Tim.* 221; Publilius Syrus 177 (ed. J. Wight Duff and A. M. Duff): “From another’s fault a wise man corrects his own,” 60: “In another’s misfortune it is good to descry what to avoid,” and 133; Livy, 22. 39. 10; Tacitus, *Annals* 4. 33. [Tr.]

⁴⁸Whether the example is an excerpt from a speech actually delivered, or our author’s own creation, is uncertain. The

X. Of the Simple type of style, which is brought down to the most ordinary speech of every day, the following will serve as an example:

“Now our friend happened to enter the baths, and, after washing, was beginning to be rubbed down. Then, just as he decided to go down into the pool, suddenly this fellow turned up. “Say, young chap,” said he, “your slaveboys have just beat me; you must make it good.” The young man grew red, for at his age he was not used to being hailed by a stranger. This creature started to shout the same words, and more, in a louder voice. With difficulty the youth replied: “Well, but let me look into the matter.” Right then the fellow cries out in the tone of his that might well force blushes from any one; this is how aggressive and harsh it is—a tone certainly not practiced in the neighborhood of the Sundial, I would say, but backstage, and in places of that kind.⁴⁹ The young man was embarrassed. And no wonder, for his ears still rang with the scoldings of his tutor, and he was not used to abusive language of this kind. For where would he have seen a buffoon, with not a blush left, who thought of himself as having no good name to lose, so that he could do anything he liked without damage to his reputation?”

Thus the examples themselves are enough to make clear the types of style. For one arrangement of words is of the simple type, another again belongs to the grand, and another belongs to the middle.

But in striving to attain these styles, we must

sentiments are such as Q. Varius Hybrida might have uttered in support of his law (90 B.C.) prosecuting those who by malicious fraud compelled the allies to war against Rome; confederates at Rome are referred to in the example of the slack style, 4. xi. 16 below. The present example belongs to the *ratiōnis confirmatio* of an argument (see 2. xviii. 28 above), and is not so impassioned as the example of the grand style above. Dionysius Halic., *De Demosth.*, ch. 3 ff., chooses Thrasymachus, Isocrates, and Plato as representatives of the middle style. [Tr.]

⁴⁹The Sundial, in the Forum, was a much frequented meeting-place for gossip; cf. Cicero, *Pro Quinctio* 18. 59. The Roman citizen ordinarily looked down upon actors as beneath his dignity; they were usually freedmen or slaves. For the connection between the stage and vice see, e.g., Cicero, *In Cat.* 2. 5. 9. [Tr.]

avoid falling into faulty styles closely akin to them.⁵⁰ For instance, bordering on the Grand style, which is in itself praiseworthy, there is a style to be avoided. To call this the Swollen⁵¹ style will prove correct. For just as a swelling often resembles a healthy condition of the body, so, to those who are inexperienced, turgid and inflated language often seems majestic—when a thought is expressed either in new or in archaic words, or in clumsy metaphors, or in diction more impressive than the theme demands,⁵² as follows: “For he who by high treason betrays his native land, will not have paid a condign penalty albeit hurtl’d into gulfs Neptunian. So punish ye this man, who hath builded mounts of war, destroyed the plains of peace.”⁵³ Most of those who fall into this type, straying from the type they began with, are misled by the appearance of grandeur and cannot perceive the tumidity of the style.

XI. Those setting out to attain the Middle style, if unsuccessful, stray from the course and

⁵⁰παρραχέιμενα ἀμαρτήματα. Cf. Longinus, *De Sublim.*, ch. 3, and Horace, *Ars Poet.* 24–8. These deviations (παρεχβάσεις) are Peripatetic in concept; excess in style is judged in relation to the mean. The faulty styles were known to Marcus Varro (Gellius 6. 14); cf. also Demetrius, *De Elocut.* 114, 186, 236, 302. [Tr.]

⁵¹οιδούν, ἐπηρμένον, ὑπεροβάλλον, φυσῶδες. Cf. Longinus, *De Sublim.* 3. 4: “Evil are the swellings (ὄγκου), both in the body and in diction, which are inflated and unreal, and threaten us with the reverse of our aim” (tr. W. Rhys Roberts); Horace, *Ars Poet.* 27. [Tr.]

⁵²Thus violating propriety (τὸ πρόπον). See notes on 3. xv. 26, 4. xi. 16, 4. xii. 17, and 4. xv. 22, and Introduction, p. xx. For a study of the history of this principle, see Max Pohlenz, *Nachrichten von der Gesellsch. der Wissensch. zu Göttingen (Philol.-histor. Klasse)*, 1933, pp. 53–92. [Tr.]

⁵³Marouzeau, *art. cit.*, pp. 157–8, and *Traité*, p. 181, analyzes the learned affectations in spelling, forms, and construction, all embraced by a *tour de force* in four lines. Note the archaic forms *subplici*, *poenite*, and the Lucretian *montis*; the curious *depultus*, representing the primitive form of the participle; the ancient deponent *fabricari*; the emphatic *venditare*; *perduellionibus*, rare example of an abstract in the plural (the author elsewhere uses *maiestas*; for the difference between the two crimes see H. F. Jolowicz, *Historical Intro. to the Study of Roman Law*, 2nd ed., Cambridge, 1952, p. 327); the highly poetic *lacunas*; the disjunction of *Neptunias* and *lacunas*; the adjective *Neptunias* for the genitive of the noun; the learned double metaphor in *montis* and *campos*. These passages illustrating the faulty styles were doubtless made up by our author, with the examples of the faultless styles in view. [Tr.]

arrive at an adjacent type, which we call the Slack⁵⁴ because it is without sinews⁵⁵ and joints; accordingly I may call it the Drifting, since it drifts to and fro, and cannot get under way with resolution and virility. The following is an example: “Our allies, when they wished to wage war with us, certainly would have deliberated again and again on what they could do, if they were really acting of their own accord and did not have many confederates from here, evil men and bold.⁵⁶ For they are used to reflecting long, all who wish to enter upon great enterprises.”⁵⁷ Speech of this kind cannot hold the hearer’s attention, for it is altogether loose, and does not lay hold of a thought and encompass it in a well-rounded period.

Those who cannot skillfully employ that elegant simplicity of diction discussed above, arrive at a dry and bloodless kind of style which may aptly be called the Meager. The following is an example: “Now this fellow came up to this lad in the baths. After that he says: ‘Your slaveboy here has beat me.’ After that the lad says to him: ‘I’ll think about it.’ Afterwards this fellow called the lad names and shouted louder and louder, while a lot of people were there.” This language, to be sure, is mean and trifling, having missed the goal of the Simple type, which is speech composed of correct and well-chosen words.

Each type of style, the grand, the middle, and the simple, gains distinction from rhetorical figures, which I shall discuss later.⁵⁸ Distributed sparingly, these figures set the style in relief, as with colors; if packed in close succession, they set the style awry.⁵⁹ But in speaking we should

⁵⁴εχλευμένον, διαλευμένον. Cf. Cicero, *Orator* 68. 228. [Tr.]

⁵⁵For the analogy cf. Fortunatianus 3. 9 (Halm, p. 126): “What style is the reverse of the middle style? The lukewarm, slack, and, as I may call it, sinewless style”; and Horace, *Ars Poet.* 26–7. [Tr.]

⁵⁶The phrase *malos et audaces* is used by Sisenna, fragm. 110, *Hist. Rom. Reliquiae*, ed. Hermann Peter, Leipzig, 1914, 1. 291. “Here” refers to Rome. [Tr.]

⁵⁷Cf. Sophocles, *Electra* 320: “Yes, a man entering upon a great enterprise likes to pause.” [Tr.]

⁵⁸4. xiii. 18 below. [Tr.]

⁵⁹Thus violating propriety; see note on 4. x. 15 above. If *oblitam* be the correct reading, then “they produce an overloaded, or overdaubed, style.” [Tr.]

vary the type of style, so that the middle succeeds the grand and the simple the middle, and then again interchange them, and yet again. Thus, by means of the variations,⁶⁰ satiety is easily avoided.

XII. Since I have discussed the types to which style should confine itself, let us now see what qualities should characterize an appropriate and finished style. To be in fullest measure suitable to the speaker's purpose such a style should have three qualities: Taste, Artistic Composition,⁶¹ and Distinction.⁶²

Taste makes each and every topic seem to be expressed with purity and perspicuity. The sub-heads under Taste are Correct Latinity and Clarity.

It is Correct Latinity⁶³ which keeps the language pure, and free of any fault. The faults in language which can mar its Latinity are two: the Solecism and the Barbarism. A solecism occurs if the concord between a word and one before it in a group of words is faulty. A barbarism occurs if the verbal expression is incorrect. How to

avoid these faults I shall clearly explain in my tract on Grammar.⁶⁴

Clarity renders language plain and intelligible. It is achieved by two means, the use of current terms and of proper terms. Current terms are such as are habitually used in everyday speech. Proper terms are such as are, or can be, the designations specially characteristic of the subject of our discourse.⁶⁵

Artistic Composition consists in an arrangement of words which gives uniform finish to the discourse in every part. To ensure this virtue we shall avoid the frequent collision of vowels,⁶⁶ which makes the style harsh and gaping, as the following: "Bacae aeneae amoenissime inpendebant."⁶⁷ We shall also avoid the excessive recurrence of the same letter,⁶⁸ and this blemish the following verse will illustrate—for at this juncture, in considering faults, nothing forbids me to use examples from others:

O Tite, tute, Tati, tibi tanta, tyranne, tulisti.⁶⁹

And this verse of the same poet:

⁶⁰*Tractatio*; see note to 2. xviii. 27 above. Dionysius Halic., *De Demosth.*, chaps. 8 ff., thinks that Demosthenes best blended all three types of style. [Tr.]

⁶¹σύνθεσις ὀνομάτων, ἁρμονία. The scanty treatment of Artistic Composition in 4. xii. 18 below is confined to the avoidance of faults rather than to constructive theory. [Tr.]

⁶²The qualities were chiefly treated by the Peripatetics and Stoics. The Theophrastan scheme is here modified. The four qualities in Theophrastus' system were Purity (Ἐλληνισμός), Clarity (σαφήνεια), Appropriateness (τὸ πρέπον), and Ornamentation (χατασκευή), this last embracing Correct Choice of Words (ἐχλογὴ ὀνομάτων), Artistic Composition (ἁρμονία), and the Figures (σχήματα). Thus for our author, *elegantia* comprises two primary qualities of Theophrastus' scheme; Appropriateness (see note on 4. x. 15 above) is here missing; the ornamentation residing in the choice of words is left unconsidered (except for what he says under *explanatio*, and his treatment of Metaphor among the figures; see 4. xxxiv. 45 below); Artistic Composition is a primary quality, and is not treated as a branch of Ornamentation; finally, Ornamentation, represented by *dignitas*, is limited to the Figures. See Stroux, *De Theophrasti virt. dic.*, pp. 22–3, 64–7. [Tr.]

⁶³Corresponds to Ἐλληνισμός among the Greek rhetoricians. Solecism and barbarism were studied chiefly by the Stoics. Cf. Quintilian, I. 5. 5 ff., I. 5. 34 ff.; C. N. Smiley, *Latinitas and ΕΛΛΗΝΙΣΜΟΣ*, Madison, 1906; Hubbell, *The Rhetorica of Philodemus*, p. 295, note 4; Volkmann, p. 396, note 1; Alexander Numenii, *De Schemat.*, in Spengel 3. 9. 25: "Barbarism involves correction of a word, solecism of the syntax." [Tr.]

⁶⁴At this juncture in the discussion of Style rhetoricians would refer to grammatical studies; cf. Quintilian, 8. I. 2; Martianus Capella, 5. 508. Whether our author ever wrote a tract on Grammar we do not know; see notes on 3. ii. 3 and 3. xvi. 28 above. This is the earliest mention in extant literature of a specific Latin *ars grammatica*. The close connection between grammatical and rhetorical studies is characteristic of Rhodian education. [Tr.]

⁶⁵The regular designations of things, literal as against metaphorical, the designations "which were so to speak born with the things themselves" (Cicero, *De Oratore* 3. 37. 149). [Tr.]

⁶⁶Hiatus, σύγχρουσις φωνηέντων. On this subject cf. Dionysius Halic., *De Composit. Verb.*, ch. 23, and especially Demetrius, *De Elocut.* 2. 68 ff., 5. 299, who, while warning against a jerky style, yet points to the force, music, and harmony of speech that hiatus can bring. Isocrates and his followers, and Demosthenes, avoided hiatus, Thucydides and Plato [in his earlier dialogues] did not; see Cicero, *Orator* 44. 150 ff. Philodemus, *Rhet.*, ed. Sudhaus, I. 163, thinks hiatus rather frigid, but sometimes convenient. [Tr.]

⁶⁷"The copper-colored berries hung most invitingly"; Asian in style.

⁶⁸Alliteration; most often Paramoeon to the grammarians; Homoeoprophoron to Martianus Capella (5. 514). Alliteration (as it has been called since early modern times) played a larger rôle in Latin than in Greek style; see Schmalz-Hofmann, pp. 801–3, Marouzeau, *Traité*, pp. 42–7, and Eduard Wölfflin, "Zur Allitteration," *Mélanges Boissier*, Paris, 1903, pp. 461–4. [Tr.]

⁶⁹Thyself to thyself, Titus Tatius the tyrant, thou tookest those terrible troubles" (fragm. 108, tr. Warmington); from

quoiquam quicquam quemquam, quemque quisque
conveniat, neget.⁷⁰

And again, we shall avoid the excessive repetition of the same word,⁷¹ as follows:

Nam cuius rationis ratio non extet, ei
rationi ratio non est fidem habere admodum;⁷²

Again, we shall not use a continuous series of words with like case endings,⁷³ as follows:

Flentes, plorantes, lacrimantes, obtestantes.⁷⁴

Again, we shall avoid the dislocation of words,⁷⁵ unless it is neatly effected—and this I shall discuss later. Coelius persists in this fault, as the following illustrates: “In priore libro has res ad te scriptas, Luci, misimus, Aeli.”⁷⁶ One should likewise avoid a long period, which does violence both to the ear of the listener and to the breathing of the speaker.

These vices of composition avoided, we must devote the rest of our efforts to conferring Distinction upon the style. XIII. To confer dis-

Ennius' *Annals*, Bk. I. See Vahlen p. 18. Cf. Charisius, ed. Barwick, p. 370, and Donatus, in Keil, *Gramm. Lat.* 4. 398. 20. [Tr.]

⁷⁰Marx suggests that in the original play this verse might have been preceded by something like *cum debere carnufex*. “[Since the rascal] denies that anyone [owes] anything to anyone, whoever sues whomever.” We do not know from which play (comedy) of Ennius the verse comes. [Tr.]

⁷¹Transplacement. See 4. xiv. 20 below. [Tr.]

⁷²“For when the reasonableness of a reason is not evident, in that reason it is not reasonable to put any faith at all.” These iambic senarii are by Marx, *Proleg.*, p. 118, thought to be in the style of Ennius. [Tr.]

⁷³Homoeoptoton. See 4. xx. 28 below. [Tr.]

⁷⁴“Bewailing, imploring, weeping, protesting,” Spondaic hexameter, assigned without certitude to Ennius; see Vahlen, p. 16, Warmington 1. 462. Cf. Charisius, ed. Barwick, p. 371; Diomedes, in Keil, *Gramm. Lat.* 1. 447. 16; and Donatus, in Keil 4. 398. 23. [Tr.]

⁷⁵Hyperbaton, see 4. xxxii. 44 below. [Tr.]

⁷⁶L. Coelius Antipater, after 121 B.C., dedicated his *Punic War* (in seven books) to L. Aelius Stilo. In the Preface to Book I he promised that he would use Hyperbaton only when necessary (Cicero, *Orator* 69. 230), but he violated this principle, as here in the Preface to Book II: “In the previous Book, Lucius Aelius, I dedicated to you the account of these events.” Following a normal word order the sentence would read: *In priore libro, Luci Aeli, has res scriptas ad te misimus*. Note also that beginning with the fourth word we have a complete dactylic hexameter—an example of epic influence. [Tr.]

inction upon style is to render it ornate,⁷⁷ embellishing it by variety. The divisions under Distinction are Figures of Diction and the Figures of Thought.⁷⁸ It is a figure of diction if the adornment is comprised in the fine polish of the language itself. A figure of thought derives a certain distinction from the idea, not from the words.

Epanaphora⁷⁹ occurs when one and the same word forms successive beginnings for phrases expressing like and different ideas, as follows: “To you must go the credit for this, to you are thanks due, to you will this act of yours bring glory.” Again: “Scipio razed Numantia, Scipio destroyed Carthage, Scipio brought peace, Scipio saved the state.” Again: “You venture to enter the Forum? You venture to face the light? You venture to come into the sight of these men? Dare you say a word? Dare you make a request of them? Dare you beg off punishment?”⁸⁰ What can

⁷⁷χατασχευή (sometimes χόσμος), which includes also *gravitas* (μεγαλοπρέπεια) and *suavitas* (τὸ ἡδύ), as is made clear in 4. lvi. 69 below; see also Cicero, *De Inv.* 2. xv. 49. Ornamentation, worked out exclusively by Figures, dominates our author's theory of Style. The Atticists opposed this kind of domination; see Cicero, *Orator* 23. 78–24. 79. [Tr.]

⁷⁸σχήματα (see note on 4. viii. 11 above) λέξεως and σχήματα διανοίας. The distinction, here met for the first time, is best discussed by Quintilian, 9. 1. 10 ff. Fortunatianus, 3. 10 (Halm, pp. 126–7), divides figures of diction into the grammatical (λέξεως) and the rhetorical (λόγου), probably following a Stoic author. The ancients regarded Gorgias of Leontini (fifth century B.C.) as the inventor of σχήματα. Our author's treatment is the oldest extant formal one, yet represents a period preceding that of complete systematization (that of Quintilian and Phoebammon). Tropes are considered at 4. xxxi. 42 below; the figures of thought begin at 4. xxxv. 47. The ancient rhetoricians differ sometimes greatly, sometimes slightly, in their definitions of figures, which became excessively numerous as refinements were made in distinguishing them. The line of demarcation between tropes and figures, and that between figures of thought and figures of diction were often vague. See Quintilian, Bks. 8 and 9, especially 9. 1. ff.; Julius Rufinianus, *De Schem. Dian.* 1. in Halm, pp. 59–60; Willy Barczat, *De figurarum disciplina atque auctoribus*, diss. Göttingen, 1904; Hermann Schrader in *Hermes* 39 (1904). 563–603; Kroll, “Rhetorik,” coll. 1108–12; Volkman, pp. 415 ff., 456 ff.; Cousin, *Études sur Quintilien*, 1. 437–517, and vol. 2. [Tr.]

⁷⁹ἐπιαναφορά. ἐπιβολή in Rutilius Lupus, 1. 7 (Halm, p. 6), is the same figure but also allows the use of synonyms instead of repeating the precise word. [Tr.]

⁸⁰Cf. the epanaphora of *tu* in the passage from the speech (Cicero, *De Oratore* 2. 55. 226) delivered by L. Licinius Crassus *pro Plancio* against M. Junius Brutus c. 91 B.C.:

you say in your defense? What do you dare to demand? What do you think should be granted to you? Have you not violated your oath? Have you not betrayed your friends? Have you not raised your hand against your father? Have you not, I ask, wallowed in every shame?" This figure has not only much charm, but also impressiveness and vigor in highest degree; I therefore believe that it ought to be used for both the embellishment and the amplification of style.

In Antistrophe⁸¹ we repeat, not the first word in successive phrases, as in Epanaphora, but the last, as follows: "It was by the justice of the Roman people that the Carthaginians were conquered, by its force of arms that they were conquered, by its generosity that they were conquered." Again: "Since the time when from our state concord disappeared, liberty disappeared, good faith disappeared, friendship disappeared, the common weal disappeared." Again: "Gaius Laelius was a self-made man, a talented man, a learned man, to good men and good endeavor a friendly man; and so in the state he was the first man." Again: "Is it acquittal by these men that you are demanding? Then it is their perjury that you are demanding, it is their neglect of their reputation that you are demanding, it is the surrender of the laws of the Roman people to your caprice that you are demanding."⁸²

XIV. Interlacement⁸³ is the union of both figures, the combined use of Antistrophe and

"You dare behold the light of day? You dare look these people in the face? You dare present yourself in the forum, within the City, in the plain view of the citizens? You do not tremble in fear of that corpse, you do not tremble in fear of the very images [of your ancestors]?" [Tr.]

⁸¹ἀντιστροφή. ἐπιφορά in Rutilius Lupus 1. 8 (Halm, pp. 6–7). Cf. Disjunction, 4. xxvii. 37 below. [Tr.]

⁸²A free paraphrase of Aeschines, *Adv. Ctes.* 198: "Whoever, then, on the question of the penalty asks for your vote, is asking for the remission of your anger; but whoever in the first speech asks for your vote, is asking for the surrender of your oath, is asking for the surrender of the law, is asking for the surrender of the democratic constitution." The Greek original likewise illustrates Antistrophe. [Tr.]

⁸³συμπλοχή. Cf. Aeschines, *Adv. Ctes.* 202: "Against yourself you are calling him, against the laws you are calling him, against the democratic constitution you are calling him." Cf. also the *complexio* (Résumé of an argument) of 2. xviii. 28 above. [Tr.]

Epanaphora, which are explained above; we repeat both the first word and the last in a succession of phrases, as follows: "Who are they who have often broken treaties? The Carthaginians. Who are they who have waged war with severest cruelty? The Carthaginians. Who are they who have marred the face of Italy? The Carthaginians. Who are they who now ask for pardon? The Carthaginians."⁸⁴ See then how appropriate it is for them to gain their request." Again: "One whom the Senate has condemned, one whom the Roman people have condemned, one whom universal public opinion has condemned, would you by your votes acquit such a one?"

Transplacement makes it possible for the same word to be frequently reintroduced, not only without offense to good taste, but even so as to render the style more elegant, as follows: "One who has nothing in life more desirable than life cannot cultivate a virtuous life."⁸⁵ Again: "You call him a man, who, had he been a man, would never so cruelly have sought another man's life."⁸⁶ But he was his enemy. Did he therefore wish thus to avenge himself upon his enemy, only to prove himself his own enemy?" Again: "Leave riches to the rich man, but as for you, to riches prefer virtue, for if you will but compare riches with virtue, riches will in your eyes prove scarcely worthy to be the lackeys of virtue."

To the same type of figure belongs that which occurs when the same word is used first in one function, and then in another, as follows: "Why do you so zealously concern yourself with this matter, which will cause you much concern?" Again: "To be dear to you would bring me joy—

⁸⁴Quintilian, 9. 3. 31, also cites the example, but without naming the figure. The passage might have come from a debate of the sort engaged in by Cato the Elder and Publius Scipio Nasica; see note on 3. ii. 2 above. [Tr.]

⁸⁵Cf. Alexander Numenii (first half of second Christian century), *De Schemat.*, in Spengel 3. 37: "It is noble to live if one but learns how one ought to live." [Tr.]

⁸⁶This passage may belong to the *controversia* concerning the murder of Sulpicius, 1. xv. 25 above. Cf. Euripides, *Androm.* 590–1: "You a man, most cowardly even of cowards? Where have you any claim to consideration as a man?"; Philemon, fragm. 119, in Kock, *Com. Att. Fragm.* 2. 515: "Tell me, have you any right to speak? You go prattling among men, as though you were a man?" [Tr.]

if only I take care it shall not in anguish cost me dear.”⁸⁷ Again: “I would leave this place, should the Senate give me leave.”⁸⁸

In the four kinds of figures which I have thus far set forth,⁸⁹ the frequent recourse to the same word is not dictated by verbal poverty; rather there inheres in the repetition an elegance which the ear can distinguish more easily than words can explain.

XV. Antithesis⁹⁰ occurs when the style is built upon contraries, as follows: “Flattery had pleasant beginnings, but also brings on bitterest endings.”⁹¹ Again: “To enemies you show yourself conciliatory, to friends inexorable.” Again: “When all is calm, you are confused; when all is in confusion, you are calm. In a situation requiring all your coolness, you are on fire; in one requiring all your ardor, you are cool.”⁹² When there is need for you to be silent, you are uproarious; when you should speak, you grow mute. Present, you wish to be absent; absent, you are

⁸⁷Lit., “To be loved would be pleasant, if only we should take care that there is no bitterness in that love.” Quintilian, 9. 3. 69–70, considers this a flat pun even when used in jest, and quotes the example as something to be avoided, not imitated. Cf. Lucretius 4. 1133 ff. [Tr.]

⁸⁸Lit., “I would come to you if the Senate should grant me permission.” Cf. The Pompeian distich, *Corp. Inscr. Lat.* 4. 4971:

Sei quid Amor valeat nostei, sei te hominem scis,
Commiseresce mei, da veniam ut veniam.

“If you have learned the power of Love, if you know that you are human, pity me; give me leave to come.” [Tr.]

⁸⁹4. xiii. 19–xiv. 21. [Tr.]

⁹⁰ἀντίθεσις, ἀντίθετον, *contrapositum* (Quintilian, 9. 3. 81). In Cicero, *Part. Orat.* 6. 21, a feature of the agreeable (*suave*) style. See 4. xlv. 58 below, and cf. *contrarium*, 4. xviii, 25 below. [Tr.]

⁹¹Cf. the saying assigned to Critias (leading spirit of the Thirty Tyrants) in Stobaeus, 3. 14. 2: “He who so bears himself towards his friends that he does everything to oblige them, renders hateful for the future that which is a pleasure for the nonce”; also Alexis, fragm. 295, in Kock, *Com. Att. Fragm.* 2. 402: “Avoid a pleasure which brings harm in its wake.” [Tr.]

⁹²Cf. Sophocles, *Antig.* 88: “You have a hot spirit for cold business”; Horace, *Arts Poet.* 465: “Empedocles . . . coolly leapt into burning Aetna”; Alexander Numenii, *De Schemat.*, in Spengel 3.36–7: “They bathe the chilled men in hot springs.” Cf. with our author’s last example of Antithesis *Anth. Pal.* 11. 305: “Among grammarians you are a Platonist; but if asked about the doctrines of Plato, you are again a grammarian.” [Tr.]

eager to return.⁹³ In peace, you keep demanding war; in war, you yearn for peace. In the Assembly, you talk of valor; in battle, you cannot for cowardice endure the trumpet’s sound.” Embellishing our style by means of this figure we shall be able to give it impressiveness and distinction.

Apostrophe⁹⁴ is the figure which expresses grief or indignation by means of an address to some man or city or place or object, as follows: “It is you I now address, Africanus, whose name even in death means splendor and glory to the state! It is your famous grandsons⁹⁵ who by their own blood have fed the cruelty of their enemies.” Again: “Perfidious Fregellae, how quickly, because of your crime, you have wasted away!⁹⁶ As a result, of the city whose brilliance but yesterday irradiated Italy, scarce the debris of the foundations now remains.” Again: “Plotters against good citizens,⁹⁷ villains, you have sought the life of every decent man! Have you assumed such power for your slanders thanks to the perversions of justice?” If we use Apostrophe in its proper place, sparingly, and when the importance of the subject seems to demand it,⁹⁸ we shall instill in the hearer as much indignation as we desire.

Not all Interrogation⁹⁹ is impressive or elegant, but that Interrogation is, which when the points against the adversaries’ cause have been

⁹³Cf. Horace, *Serm.* 2. 7. 28: “At home you long for the country; in the country, fickle man, you extol to heaven the distant city.” [Tr.]

⁹⁴ἀποστροφή, ἐχθρότης. Quintilian, 9. 2. 27, considers as a figure only that kind of *exclamatio* which is simulated and artfully composed, and in 9. 3. 97 assigns *exclamatio* to the figures of thought; cf. also 9. 2. 38, 9. 3. 24–6, and 4. 1. 63. [Tr.]

⁹⁵Cornelia, daughter of the elder Scipio Africanus, was the mother of the Gracchi. [Tr.]

⁹⁶Cf. the passage, often used by rhetoricians, in Aeschines, *Adv. Ctes.* 133: “But Thebes, Thebes our neighbor-state, has in one day been swept from the midst of Hellas.” After M. Fulvius Flaccus’ bill granting Roman franchise to the Italian allies failed to pass, Fregellae revolted and was destroyed in 125 B.C. See 4. ix. 13 and 4. xxvii. 37. [Tr.]

⁹⁷Probably addressed to the public informers (*quadruplicatores*). [Tr.]

⁹⁸A consideration of propriety, τὸ πρέπον. See note on 4. x. 15 above. [Tr.]

⁹⁹ἔρωτήματα. *Rogatio* in Cicero, *De Oratore* 3. 53. 203. Assigned by Quintilian, 9. 3. 98, to the figures of thought; see also 9. 2. 7 on the “rhetorical question.” [Tr.]

summed up, reinforces the argument that has just been delivered, as follows: “So when you were doing and saying and managing all this, were you, or were you not, alienating and estranging from the republic the sentiments of our allies? And was it, or was it not, needful to employ some one to thwart these designs of yours and prevent their fulfillment?”¹⁰⁰

XVI. Through the figure, Reasoning by Question and Answer,¹⁰¹ we ask ourselves the reason for every statement we make, and seek the meaning of each successive affirmation, as follows: “When our ancestors condemned a woman for one crime, they considered that by this single judgment she was convicted of many transgressions. How so? Judged unchaste, she was also deemed guilty of poisoning. Why? Because, having sold her body to the basest passions, she had to live in fear of many persons. Who are these? Her husband, her parents, and the others involved, as she sees, in the infamy of her dishonor. And what then? Those whom she fears so much she would inevitably wish to destroy. Why inevitably? Because no honorable motive can restrain a woman who is terrified by the enormity of her crime, emboldened by her lawlessness, and made heedless by the nature of her sex. Well now, what did they think of a woman found guilty of poisoning? That she was necessarily also unchaste. Why? Because no motive could more easily have led her to this crime than base love and unbridled lust. Furthermore, if a woman’s soul had been corrupted, they did not consider her body chaste. Now then, did they observe this same principle with respect to men?

¹⁰⁰Cf. Demosthenes, *De Corona* 71, on Philip: “By these acts was he, or was he not, committing wrong, breaking treaty, and violating the terms of peace? And was it, or was it not, right that some man of the Hellenes should come forth to stop these incursions?” This passage was a favorite of the rhetoricians. It may well be that our author has in mind Q. Varius Hybrida, speaking on behalf of his law *de maiestate* (90 B.C.); see 4. ix. 13 above, and note. [Tr.]

¹⁰¹ἀιτιολογία, ἐξετασμός. Assigned by Quintilian, 9. 3. 98, to the figures of thought. Cf. *sibi ipsi responsio* in Cicero, *De Oratore* 3. 54. 207 and Quintilian, 9. 3. 90, and 4. xxiv. 34 below, with note; also ἀπόφασις in Julius Rufinianus 8 (Halm, p. 40; cf. ἀπόφασις [*infinitio*] in 1. xvii. 27 above). To be distinguished from *ratiocinatio*, the Type of Issue (Reasoning from Analogy), 1. xi. 19 above. [Tr.]

Not at all. And why? Because men are driven to each separate crime by a different passion, whereas a woman is led into all crimes by one sole passion.”¹⁰² Again: “It is a good principle which our ancestors established, of not putting to death any king captured by force of arms.”¹⁰³ Why is this so? Because it were unfair to use the advantage vouchsafed to us by fortune to punish those whom the same fortune had but recently placed in the highest station. But what of the fact that he has led an army against us? I refuse to recall it. Why? Because it is characteristic of a brave man to regard rivals for victory as enemies, but when they have been vanquished to consider them as fellow men, in order that his bravery may avail to put an end to war, and his humanity to advance peace. But had that king prevailed, he would not, would he, have done the same? No, no doubt he would have been less wise. Why, then, do you spare him? Because it is my habit to scorn, not emulate, such folly.” This figure is exceedingly well adapted to a conversational style, and both by its stylistic grace and the anticipation of the reasons, holds the hearer’s attention.

XVII. A Maxim¹⁰⁴ is a saying drawn from life, which shows concisely either what happens or ought to happen in life, for example: “Every beginning is difficult.” Again: “Least in the habit of giving reverence to the virtues is he who has always enjoyed the favors of fortune.” Again: “A free man is that man to be judged who is a slave to no base habit.”¹⁰⁵ Again: “As poor as the man who has not enough is the man who cannot have enough,”¹⁰⁶ Again: “Choose the noblest way of living; habit will make it enjoyable.” Simple

¹⁰²Cf. Quintilian, 5. 11. 39: “Would not an adulteress on trial for poisoning be regarded as condemned by the judgment of Marcus Cato, who said that every adulteress was the same as a poisoner?” [Tr.]

¹⁰³This was true, e.g., of Perseus and Syphax, but not strictly of Jugurtha. [Tr.]

¹⁰⁴γνώμη. Aristotle, *Rhet.* 2. 21 (1394 a–1395 b), offers the classic treatment of maxims. On the virtue of brevity in maxims, see Demetrius, *De Elocut.* 9. *Sententia* is excluded from the figure by Quintilian (9. 3. 98). [Tr.]

¹⁰⁵Cf. Cicero, *Paradoxa Stoic.* 5. 35: “All wicked men are therefore slaves—slaves, I say!”; Diogenes Laertius 7. 21; Philo, *Quod Omnis Probus Liber Sit.* [Tr.]

¹⁰⁶A saying of Epicurus: “Nothing is ‘enough’ to him who deems ‘enough’ to be ‘too little.’” (C. Wotke in *Wiener Studien* 10 [1888]. 197, No. 68). [Tr.]

maxims of this sort are not to be rejected, because, if no reason is needed, the brevity of the statement has great charm. But we must also favor that kind of maxim which is supported by an accompanying reason, as follows: "All the rules for noble living should be based on virtue, because virtue alone is within her own control, whereas all else is subject to the sway of fortune."¹⁰⁷ Again: "Those who have cultivated a man's friendship for his wealth one and all fly from him as soon as his wealth has slipped away. For when the motive of their intercourse has disappeared, there is nothing left which can maintain that friendship."

There are also maxims which are presented in double form. Without a reason, as follows: "They who in prosperity think to have escaped all the onslaughts of fortune are mistaken; they who in favorable times fear a reversal are wise in their forethought." With a reason, as follows: "They who think that the sins of youth deserve indulgence are deceived, because that time of life does not constitute a hindrance to sound studious activities. But they act wisely who chastise the young with especial severity in order to inculcate at the age most opportune for it the desire to attain those virtues by which they can order their whole lives." We should insert maxims only rarely, that we may be looked upon as pleading the case, not preaching morals. When so interspersed, they will add much distinction. Furthermore, the hearer, when he perceives that an indisputable principle drawn from practical life is being applied to a cause, must give it his tacit approval.¹⁰⁸

XVIII. Reasoning by Contraries¹⁰⁹ is the figure which, of two opposite statements, uses one

¹⁰⁷Cf. the Stoic principle assigned to Pythagoras in Stobaeus, 3. 1. 29: "This is God's law: Virtue is the strong and stable thing; all else is nonsense." Cf. also 4. xix. 27 below. [Tr.]

¹⁰⁸Cf. Aristotle, *Rhet.* 2. 21 (1395 b): "Hearers are delighted when a speaker succeeds in expressing as a universal truth the opinions they hold about particular cases." [Tr.]

¹⁰⁹ἐνθύμημα, σχήμα ἐχ τοῦ ἐναντίου. See Quintilian, 5. 10. 2: "There are some who call a conclusion from consequents an epicheireme, while you would find that a majority are of opinion that an enthymeme is a conclusion from incompatibles. And that is why Cornificius calls it Reasoning by Contraries;" 9. 3. 99: "I shall pass by those authors who have set

so as neatly and directly to prove the other, as follows: "Now how should you expect one who has ever been hostile to his own interests to be friendly to another's?"¹¹⁰ Again: "Now why should you think that one who is, as you have learned, a faithless friend, can be an honorable enemy? Or how should you expect a person whose arrogance has been insufferable in private life, to be agreeable and not forget himself when in power, and one who in ordinary conversation and among friends has never spoken the truth, to refrain from lies before public assemblies?" Again: "Do we fear to fight them on the level plain when we have hurled them down from the hills? When they outnumbered us, they were no match for us; now that we outnumber them, do we fear that they will conquer us?" This figure ought to be brief, and completed in an unbroken period. Furthermore, it is not only agreeable to the ear on account of its brief and complete rounding-off, but by means of the contrary statement it also forcibly proves what the speaker needs to prove; and from a statement which is not open to question it draws a thought which is in question, in such a way that the inference cannot be refuted, or can be refuted only with much the greatest difficulty.

XIX. Colon or Clause¹¹¹ is the name given to a sentence member, brief and complete, which does not express the entire thought, but is in turn supplemented by another colon, as follows: "On the one hand you were helping your enemy." That is one so-called colon; it ought then to be

almost no limit to the invention of technical terms, and have even assigned to figures what really belongs under arguments." Cf. the *topos a fortiori* in Aristotle, *Rhet.* 2. 23 (1397 b); *Contentio* (ἀντίθετον) in 4. xv. 21 above and 4. xlv. 58 below. [Tr.]

¹¹⁰Cf. Isocrates, *Ad Callim.* 56: "One who is so base where the interests of others are concerned—what would he not dare where his own are concerned?" [Tr.]

¹¹¹χῶλον. The concept originated in comparison with the human body; it came into rhetoric from the art of music. The doctrine of Colon, Comma, and Period is Peripatetic; cf. Aristotle, *Rhet.* 3. 9 (1409 a ff.). Quintilian, 9. 3. 98, excludes Colon and Comma from the list of figures. See A. du Mesnil, *Begriff der drei Kunstformen der Rede: Komma, Kolon, Periode, nach der Lehre der Alten*, in *Zum zweihundertjährigen Jubiläum des königl. Friedrichs-Gymnas.*, Frankfurt on O., 1894, pp. 32–121. [Tr.]

supplemented by a second: "And on the other you were hurting your friend." This figure can consist of two cola, but it is neatest and most complete when composed of three, as follows: "You were helping your enemy, you were hurting your friend, and you were not consulting your own best interests." Again: "You have not consulted the welfare of the republic, nor have you helped your friends, nor have you resisted your enemies."

It is called a Comma or Phrase when single words are set apart by pauses in staccato speech, as follows: "By your vigor, voice, looks you have terrified your adversaries." Again: "You have destroyed your enemies by jealousy, injuries, influence, perfidy." There is this difference in onset between the last figure and the one preceding: the former moves upon its object more slowly and less often, the latter strikes more quickly and frequently. Accordingly in the first figure it seems that the arm draws back and the hand whirls about to bring the sword to the adversary's body, while in the second his body is as it were pierced with quick and repeated thrusts.

A Period¹¹² is a close-packed and uninterrupted group of words embracing a complete thought. We shall best use it in three places: in a Maxim, in a Contrast,¹¹³ and in a Conclusion. In a Maxim as follows: "Fortune cannot much harm him who has built his support more firmly upon virtue than upon chance." In a Contrast, as follows: "For if a person has not placed much hope in chance, what great harm can chance do him?" In a Conclusion, as follows: "But if Fortune has her greatest power over those who have committed all their plans to chance, we should not entrust our all with her, lest she gain too great a domination over us."¹¹⁴ In these three types a compact style is so necessary for the force of the

¹¹²περίοδος. For other Latin equivalents of this term see Cicero, *Orator* 61. 204, *De Oratore* 3. 48. 186; Quintilian, 9. 4. 22. [Tr.]

¹¹³ἐνθύμημα. See 4. xviii. 25 above. [Tr.]

¹¹⁴For the theme cf. 4. xvii. 24 above. Our author, unlike other post-Aristotelian rhetoricians, does not say that the Period is comprised of *membra*, yet this example seems to contain four—the upper limit usually allowed; see, e.g., Cicero, *Orator* 66. 222, and Demetrius, *De Elocut.* 1. 16, but also Quintilian, 9. 4. 125. On the theory of the Period see esp. Aristotle, *Rhet.* 3. 9 (1409 a ff.); Demetrius, *op. cit.*, 1. 10 ff.,

period that the orator's power seems inadequate if he fails to present the Maxim, Contrast, or Conclusion in a press of words. But in other cases as well it is often proper, although not imperative, to express certain thoughts by means of periods of this sort.

XX. We call Isocolon¹¹⁵ the figure comprised of cola (discussed above)¹¹⁶ which consist of a virtually equal number of syllables. To effect the isocolon we shall not count the syllables—for that is surely childish—but experience and practice will bring such a facility that by a sort of instinct we can produce again a colon of equal length to the one before it, as follows: "The father was meeting death in battle; the son was planning marriage at his home. These omens wrought grievous disasters." Again: "Another man's prosperity is the gift of fortune, but this man's good character has been won by hard work." In this figure it may often happen that the number of syllables seems equal without being precisely so—as when one colon is shorter than the other by one or even two syllables, or when one colon contains more syllables, and the other contains one or more longer or fuller-sounding syllables, so that the length or fullness of sound of these matches and counterbalances the greater number of syllables in the other.

The figure called Homoeoptoton¹¹⁷ occurs when in the same period two or more words appear in the same case, and with like terminations, as follows: "Hominem laudem egentem virtutis, abundantem felicitatis?"¹¹⁸ Again: "Huic omnis in pecunia spes est, a sapientia est animus remo-

5. 244, 303; Cicero, *Orator* 62. 211 ff.; and Josef Zehetmeier, "Die Periodenlehre des Aristoteles;" *Philologus* 85 (1930). 192–208, 255–84, 414–36. Aristotle recognized only periods of either one or two cola, and in fact the division into cola was not of primary importance in his theory. [Tr.]

¹¹⁵ἰσόχωλον. Sometimes classed as a variety of *πάρισον*, *παρίσωσις*, parallelism in structure. The next three figures (cf. also Alliteration, 4. xii. 18 above) represent *παρόμοιον*, *παρομοίωσις*, parallelism in sound. Together with Antithesis (4. xv. 21 above) this and the next three figures comprise the so-called Gorgianic figures. Isocrates exemplifies the extensive and effective use of Isocolon. [Tr.]

¹¹⁶4. xix. 26. [Tr.]

¹¹⁷ὁμοίωσις. Cf. 4. xii. 18 above. [Tr.]

¹¹⁸"Am I to praise a man abounding in good luck, but lacking in virtue?" [Tr.]

tus; diligentia comparat divitias, negligentia corrumpt animum, et tamen, cum ita vivit, neminem prae se ducit hominem.”¹¹⁹

Homoeoteleuton occurs when the word endings are similar, although the words are indeclinable, as follows: “You dare to act dishonorably, you strive to talk despicably; you live hatefully, you sin zealously, you speak offensively.” Again: “Blusteringly you threaten; cringingly you appease.”

These two figures, of which one depends on like word endings and the other on like case endings, are very much of a piece. And that is why those who use them well generally set them together in the same passage of a discourse. One should effect this in the following way: “Perditissima ratio est amorem petere, pudorem fugere, diligere formam, neglegere famam.”¹²⁰ Here the declinable words close with like case endings, and those lacking cases close with like terminations.

XXI. Paronomasia¹²¹ is the figure in which, by means of a modification of sound, or change of letters, a close resemblance to a given verb or noun¹²² is produced, so that similar words express dissimilar things. This is accomplished by many different methods: (1) by thinning or contracting¹²³ the same letter, as follows: “Hic qui se magnifice iactat atque ostentat, venit antequam Romam venit;”¹²⁴ (2) and by the reverse: “Hic

¹¹⁹“This man places all his hope in money; from wisdom is his soul withdrawn. Through diligence he acquires riches, but through negligence he corrupts his soul. And yet, living so, he counts no one any one before himself.” Cf. *neglegentiam . . . diligentiam* in Terence, *Andria* 20 f. [Tr.]

¹²⁰“A most depraved principle it is—to seek love and to shun self-respect, to esteem beauty and to slight one’s own good name.” [Tr.]

¹²¹παρονομασία. Cicero, *Orator* 25. 84, warns the speaker of the Attic plain style against the kind of Paronomasia which is produced by the change of a letter; yet cf. *De Oratore* 2. 63. 256 on Paronomasia in verbal witticisms. See Eduard Wölfflin, “Das Wortspiel im Lateinischen,” *Sitzungsb. Bayer. Akad. der Wiss. (philos.-philol. und histor. Classe)*, 1887 (2), pp. 187–208. [Tr.]

¹²²Our author knows four parts of speech: proper name, or noun (*nomen*, ὄνομα), verb (*verbum*, ῥήμα), common noun, or appellative (*vocabulum*, προσήγοριον), conjunction (*coniunctio*, σύνδεσμος); “noun” would include “adjective,” as in No. 7 below. [Tr.]

¹²³συντολή. Cf. the figure *complexio*, 4. 14. 20 above. [Tr.]

¹²⁴“That man who carries himself with a lofty bearing and makes a display of himself was sold as a slave before coming

quos homines alea vincit, eos ferro statim vincit;”¹²⁵ (3) by lengthening the same letter, as follows: “Hinc avium dulcedo ducit ad avium;”¹²⁶ (4) by shortening the same letter: “Hic, tametsi videtur esse honoris cupidus, tantum tamen curiam diligit quantum Curiam?”¹²⁷ (5) by adding letters, as follows: “Hic sibi posset temperare, nisi amori mallet obtemperare;”¹²⁸ (6) and now by omitting letters, as follows: “Si lenones vitas set tamquam leones, vitae tradidisset se;”¹²⁹ (7) by transposing letters, as follows: “Videte, iudices, utrum homini navo an vano credere malitis;”¹³⁰ (8) by changing letters, as follows: “Deligere oportet quem velis diligere.”¹³¹

to Rome;” *venit* is a contraction of *veniit*, and precedes the *tenuē* (*venit*). [Tr.]

¹²⁵“Those men from whom he wins in dice he straightway binds in chains;” *tenuē* precedes *pleniū* (*vincit* = *vinciit*). [Tr.]

¹²⁶“The sweet song of the birds draws us from here into pathless places.” Quintilian, 9. 3. 69–71, quotes this pun, and the play upon *amari* in 4. xiv. 21 above, as examples to be avoided, not imitated, being flat even when used in jest; he marvels that this artifice is included in the textbooks. Virgil, *Georg.* 2. 328, puns on the same words. Note in connection with the problem of authorship of our treatise that the example here used for *adnominatio* is, according to Quintilian, called an example of *traductio* by Cornificius; cf. 4. xiv. 20 above. [Tr.]

¹²⁷“Does this man, although he seems desirous of public honor, yet love the Curia [the Senate-house] as much as he loves Curia?” The M group of MSS. reads *Curian meretricem*. On this and the next three types of Paronomasia cf. in Phoebammon (Spengel 3. 45 ff.) the four principles governing the formation of all figures: lack, superabundance, transposition, interchange (ἔνδοξα, πλεονασμός, μετάθεσις, ἐναλλαγῆ); in Quintilian, 1. 5. 6 and 1. 5. 38 ff., the four ways of committing barbarisms and solecisms, and, in 6. 3. 53, the poor jests formed by punning in these ways; in Philo, *De aetern. mundi* 22. 113, the four ways (Peripatetic doctrine) in which corruption occurs: addition (πρόσθεσις), subtraction (ἀφαίρεσις), transposition (μετάθεσις), and transmutation (ἀλλοίωσις); and H. Usener, *Sitzungsb. Bayer. Akad. der Wiss. (philos.-philol.-hist. Cl.)*, 1892, pp. 628–31. Cf. also Cicero, *Part. Orat.* 6. 19, on the causes of obscurity in words and periods. [Tr.]

¹²⁸“This man could rule himself, if only he did not prefer to submit to love.” [Tr.]

¹²⁹“If he had avoided panders as though they were lions, he would have devoted himself to life;” the text is corrupt. Tertullian, *Apol.* 50. 12, puns on the same words. [Tr.]

¹³⁰“See, men of the jury, whether you prefer to trust an industrious man or a vainglorious one.” [Tr.]

¹³¹“You ought to choose such a one as you would wish to love.” A form of the saying attributed to Theophrastus, that

These are word-plays which depend on a slight change or lengthening or transposition of letters, and the like. XXII. There are others also in which the words lack so close a resemblance, and yet are not dissimilar. Here is an example of one kind of such word-plays: "Quid veniam, qui sim, quem insimulem, cui prosim, quae postulem, brevi cognoscetis."¹³² For in this example there is a sort of resemblance among certain words, not so complete, to be sure, as in the instances above, yet sometimes serviceable. An example of another kind: "Demus operam, Quirites, ne omnino patres conscripti circumscripti putentur."¹³³ In this paronomasia the resemblance is closer than in the preceding, yet is not so close as in those above, because some letters are added and some at the same time removed.

There is a third form of paronomasia, depending on a change of case in one or more proper nouns.¹³⁴ In one noun, as follows: "Alexander of Macedon with consummate toil from boyhood trained his mind to virtue. Alexander's virtues have been broadcast with fame and glory throughout the world. All men greatly feared Alexander, yet deeply loved him. Had longer life been granted Alexander, the Macedonian lances would have flown across the ocean." Here a single noun has

one must not first love and then judge, but first judge and then love (οὐ φιλοῦντα δεῖ χρίνειν ἀλλὰ χρίναντα φιλεῖν); see Plutarch, *De fraterno amore* 8 (482 B); Rutilius Lupus 1. 6 (Halm, p. 6); Seneca, *Epist.* 3. 2, *De Moribus* 48; Cicero, *De Amic.* 22. 85; Publilius Syrus 134 (ed. J. Wight Duff and A. M. Duff); Stobaeus, 4. 27. 14; Sidonius Apollinaris, *Epist.* 5. 11. 1. In modern form: "If you suspect a man, do not employ him; if you employ a man, do not suspect him." [Tr.]

¹³²"Why I come, who I am, whom I accuse, whom I am helping, what I ask for you will soon know." Cf. Plautus, *Poen.* 992:

adei atque appella quid velit, quid venerit,
qui sit, quoiatis, unde sit.

"Go up to him and ask him what he wants, why he has come, who he is, of what country, and whence he comes." [Tr.]

¹³³"Let us see to it, fellow-citizens, that the Conscript Fathers be not thought to have been utterly duped." Quintilian, 9. 3. 72, considers this kind of paronomasia as producing the very worst of trivial effects. Seneca, *Suas.* 7. 11. reproves for bad taste a speaker who punned on *scripsit* and *proscripsit*. It has been conjectured (see Kroehnert, p. 31) that Crassus may have uttered these words when speaking on behalf of the Servilian law; see note on 4. iii. 5. [Tr.]

¹³⁴Polyptoton (πολύπτωτον). [Tr.]

been inflected, undergoing changes of case. Several different nouns, with change of case, will produce a paronomasia, as follows: "An undeserved death by violence prevented Tiberius Gracchus, while guiding the republic, from abiding longer therein. There befell Gaius Gracchus a like fate, which of a sudden tore from the bosom of the state a hero and staunch patriot. Saturninus, victim of his faith in wicked men, a treacherous crime deprived of life. O Drusus, your blood bespattered the walls of your home, and your mother's face.¹³⁵ They were only now granting to Sulpicius every concession,¹³⁶ yet soon they suffered him not to live, nor even to be buried."¹³⁷

These last three figures—the first based on like case inflections, the second on like word endings, and the third on paronomasia—are to be used very sparingly when we speak in an actual cause, because their invention seems impossible without labor and pains. XXIII. Such endeavors, indeed, seem more suitable for a speech of entertainment than for use in an actual cause.¹³⁸ Hence the speaker's credibility, impres-

¹³⁵Irmentraud Haug, *Würzburger Jahrb. für die Altertumswissenschaft* 2 (1947). 113, argues that the reference is to the bust of Drusus' father. [Tr.]

¹³⁶When in 88 B.C. the quarrel between *populares* and *optimates* grew serious, Sulla suspended the *iusstium*, and fled to his army. Then Sulpicius, in control, put through his measures granting the new Italian citizens a fuller share in political power, and transferring the command in the East to Marius. [Tr.]

¹³⁷The sentiments are those of the Marian party. Ti. Sempronius Gracchus was clubbed to death by Scipio Nasica and his followers in 133 B.C. (see 4. iv. 68 below); C. Sempronius Gracchus was killed in flight after the consul Opimius and his band had stormed the Aventine, in 121 B.C.; L. Appuleius Saturninus was stoned and torn to pieces by a mob in the State-house, in 100 B.C.; M. Livius Drusus was, according to Velleius Paterculus, 2. 14, stabbed by an assassin in the area before his house, in 91 B.C.; on the death, in 88 B.C., of P. Sulpicius Rufus see note on 1. xv. 25 above. Cicero, *De Harusp. Resp.* 19. 41 and 20. 43, in which all the above except Drusus are used as *exempla*, and Seneca, *Octavia* 882–9, in which the fates of the Gracchi and Drusus are joined, may have used the same source as did our author; cf. also Seneca, *Ad Marc. de Cons.* 16. 3 f. [Tr.]

¹³⁸These figures serve epideictic better than judicial or deliberative oratory. Cicero warns the speaker of the Attic plain style against the use of these three figures (and of Isocolon, *Orator* 25. 84), but allows them in epideictic discourse (*Orator* 12. 38, *Part. Orat.* 21. 72); Quintilian, 8. 3. 12, also justifies the full use of ornamentation in epideictic. [Tr.]

siveness, and seriousness are lessened by crowding these figures together. Furthermore, apart from destroying the speaker's authority, such a style gives offense because these figures have grace and elegance, but not impressiveness and beauty. Thus the grand and beautiful can give pleasure for a long time, but the neat and graceful quickly sate the hearing, the most fastidious of the senses.¹³⁹ If, then, we crowd these figures together, we shall seem to be taking delight in a childish style; but if we insert them infrequently and scatter them with variations throughout the whole discourse, we shall brighten our style agreeably with striking ornaments.

Hypophora¹⁴⁰ occurs when we enquire of our adversaries, or ask ourselves, what the adversaries can say in their favor, or what can be said against us; then we subjoin what ought or ought not to be said—that which will be favorable to us or, by the same token, be prejudicial to the opposition, as follows: “I ask, therefore, from what source has the defendant become so wealthy? Has an ample patrimony been left to him? But his father's goods were sold. Has some bequest come to him? That cannot be urged; on the contrary he has even been disinherited by all his kin. Has he received some award from a civil action, whether in the older or the more recent form of procedure? Not only is that not the case, but recently he himself lost a huge sum on a wager at law.¹⁴¹ Therefore, if, as you all see, he has not grown rich by these means, either he has a gold mine in his home, or he has acquired monies from an illicit source.”

XXIV. Another example: “Time and time again, men of the jury, have I observed that numerous defendants look for support in some honorable deed which not even their enemies can impeach. My adversary can do no such thing. Will

¹³⁹Cf. Cicero, *Orator* 44. 150, and *De Oratore* 3. 25. 97 ff.; also Longinus, *De Sublim.*, ch. 7, and Plutarch, *De recta ratione audiendi* 7 (41 E). [Tr.]

¹⁴⁰ὑποφορά, ἀνθυποθορά. Assigned by Quintilian, 9. 3. 98, to the figures of thought. The figure *subiectio* is to be distinguished from the *subiectio* of 2. xviii. 28 and 4. xvii. 24. [Tr.]

¹⁴¹The *sponsio* in a civil suit was an agreement by the litigants that the loser of the case would pay a certain sum of money. [Tr.]

he take refuge in his father's virtue? On the contrary, you have taken your oath and condemned him to death. Or will he turn to his own life? What life, and wherein lived honorably? Why, the life that his man has lived before your eyes is known to all of you. Or will he enumerate his kinsmen, by whom you should be moved? But he has not any. He will produce friends? But there is no one who does not consider it disgraceful to be called that fellow's friend.” Again: “Your enemy, whom you consider to be guilty, you doubtless summoned him to trial? No, for you slew him while he was yet unconvicted. Did you respect the laws which forbid this act? On the contrary, you decided that they did not even exist in the books. When he reminded you of your old friendship, were you moved? No, you killed him nevertheless, and with even greater eagerness. And then when his children grovelled at your feet, were you moved to pity? No, in your extreme cruelty you even prevented their father's burial.”¹⁴² There is much vigor and impressiveness in this figure because, after having posed the question, “What ought to have been done?”, we subjoin that that was not done.¹⁴³ Thus it becomes very easy to amplify the baseness of the act.

In another form of the same figure we refer the hypophora to our own person,¹⁴⁴ as follows: “Now what should I have done when I was surrounded by so great a force of Gauls? Fight? But then our advance would have been with a small band. Furthermore, we held a most unfavorable position. Remain in camp? But we neither had reinforcements to look for, nor the wherewithal to keep alive. Abandon the camp? But we were blocked. Sacrifice the lives of the soldiers? But I thought I had accepted them on the stipulation that so far as possible I should preserve them unharmed for their fatherland and their parents. Reject the enemy's terms? But the safety of the

¹⁴²This passage may perhaps belong to the *controversia* on the murder of Sulpicius in 1. xv. 25 above. [Tr.]

¹⁴³Cf., in Quintilian, 9. 2. 106, προέχθεσις, “which means telling what ought to have been done and then what has been done”; also προέχθεσις (*divisio*), 1. x. 17 above. [Tr.]

¹⁴⁴Cf. *sibi ipsi responsio* in Quintilian, 9. 3. 90, there adjudged a figure of thought rather than of diction; *ratiocinatio*, 4. xvi. 23 above. [Tr.]

soldiers has priority over that of the baggage.”¹⁴⁵ The result of an accumulation of this kind of hypophora is to make it seem obvious that of all the possibilities nothing preferable to the thing done could have been done.

XXV. Climax¹⁴⁶ is the figure in which the speaker passes to the following word only after advancing by steps to the preceding one, as follows: “Now what remnant of the hope of liberty survives, if those men *may* do what they *please*, if they *can* do what they *may*, if they *dare* do what they *can*, if they *do* what they *dare*, and if you *approve* what they *do*?” Again: “I did not conceive this without counseling it; I did not counsel it without myself at once undertaking it; I did not undertake it without completing it; nor did I complete it without winning approval of it.”¹⁴⁷ Again: “The industry of Africanus brought him excellence, his excellence glory, his glory rivals.”¹⁴⁸ Again: “The empire of Greece belonged to the Athenians; the Athenians were overpowered by the Spartans; the Spartans were overcome by the Thebans; the Thebans were conquered by the Macedonians; and the Macedonians in a short time subdued Asia in war and joined her to the empire of Greece.” The constant repetition of the preceding word, characteristic of this figure, carries a certain charm.

Definition¹⁴⁹ in brief and clear-cut fashion

¹⁴⁵Popilius is speaking; see 1. xv. 25 above. [Tr.]

¹⁴⁶χλιμαξί. Also ἐπιπλοχή, *ascensus*, and *catena*. This figure joins with Epanaphora, Antistrophe, Interlacement, Transplacement, and Antanaklasis (4. xiii. 19–xiv. 21 above) to form a complete theory of Repetition. [Tr.]

¹⁴⁷Quintilian, 9. 3. 55, and others cite, and our author in this example imitates, Demosthenes, *De Corona* 179; “I did not say this and then fail to make the motion; I did not make the motion and then fail to act as an ambassador; I did not act as an ambassador and then fail to persuade the Thebans.” Cf. *Rom.* 10. 14; Rosalind in Shakespeare, *As You Like It* 5. 2: “For your brother and my sister no sooner met but they looked; no sooner looked but they loved; no sooner loved but they sighed; no sooner sighed but they asked one another the reason; no sooner knew the reason but they sought the remedy; and in these degrees have they made a pair of stairs to marriage”; St. Augustine, *Confessions* 7. 10: *O aeterna veritas et vera caritas et cara aeternitas!*; also Lane Cooper, *Sevane Rev.* 32 (1924). 32–43. [Tr.]

¹⁴⁸Quintilian, 9. 3. 56, uses the same example, representing it as from a Latin author. [Tr.]

¹⁴⁹ὁρισμός. Cf. Definition, the subtype of Legal Issue, 1. xi. 19, 1. xii. 21, and 2. xii. 17 above. Quintilian, 9. 3. 91, un-

grasps the characteristic qualities of a thing, as follows: “The sovereign majesty of the republic is that which comprises the dignity and grandeur of the state.” Again: “By an injury is meant doing violence to some one, to his person by assault, or to his sensibilities by insulting language, or to his reputation by some scandal.” Again: “That is not economy on your part, but greed, because economy is careful conservation of one’s own goods, and greed is wrongful covetousness of the goods of others.” Again: “That act of yours is not bravery, but recklessness, because to be brave is to disdain toil and peril, for a useful purpose and after weighing the advantages, while to be reckless is to undertake perils like a gladiator, suffering pain without taking thought.”¹⁵⁰ Definition is accounted useful for this reason: it sets forth the full meaning and character of a thing so lucidly and briefly that to express it in more words seems superfluous, and to express it in fewer is considered impossible.

XXVI. Transition¹⁵¹ is the name given to the figure which briefly recalls what has been said, and likewise briefly sets forth what is to follow next, thus: “You know how he has just been conducting himself towards his fatherland; now consider what kind of son he has been to his parents.” Again: “My benefactions to this defendant you know; now learn how he has requited me.” This figure is not without value for two ends: it reminds the hearer of what the speaker has said, and also prepares him for what is to come.

like “Cornificius and Rutilius,” excludes *finitio* from the figures of diction. The figure goes back to Prodicus’ Correct Use of Terms (ὀρθότης ὀνομάτων); see Radermacher, *Artium Scriptores*, pp. 67 ff. [Tr.]

¹⁵⁰The last two examples may also illustrate *distinctio* (παρδιαστολή); see Quintilian, 9. 3. 65; “But this depends wholly on definition, and so I doubt whether it is a figure,” and 9. 3. 82. [Tr.]

¹⁵¹A figure combining the functions of the *enumeratio* of 2. xxx. 47 above (ἀνάμνησις, ἀνακεφαλαίωσις, παλλογία) and *propositio* (προέχθεσις = *propositio quid sis dicturus* in Cicero, *De Oratore* 3. 53. 203 and *Orator* 40. 137; cf. the *expositio* [έχθεσις] of 1. x. 17 above). Cf. in Anon. Seg. 12 (Spengel-Hammer 1 [2]. 354) ἀνάνεωσις, a means used in the Proem to induce receptiveness—“we recall the points previously made, and mark out those we intend to discuss,” and the second type of the figure μετὰβασις in Rutilius Lupus 2. 1 (Halm, pp. 12 f.). Quintilian, 9. 3. 98, without defining *transitio*, classes it as a figure of thought; *transitus* in 9. 2. 61 is rejected as a figure. [Tr.]

Correction retracts what has been said and replaces it with what seems more suitable, as follows: "But if the defendant had asked his hosts, or rather had only hinted, this could easily have been accomplished." Again: "After the men in question had conquered, or rather had been conquered—for how shall I call that a conquest which has brought more disaster than benefit to the conquerors?" Again: "O Virtue's companion, Envy, who art wont to pursue good men, yes, even to persecute them." This figure makes an impression upon the hearer, for the idea when expressed by an ordinary word seems rather feebly stated, but after the speaker's own amendment it is made more striking by means of the more appropriate expression. "Then would it not be preferable," some one will say, "especially in writing, to resort to the best and choicest word at the beginning?" Sometimes this is not preferable, when, as the changes of word will serve to show, the thought is such that in rendering it by an ordinary word you seem to have expressed it rather feebly, but having come to a choicer word you make the thought more striking. But if you had at once arrived at this word, the grace neither of the thought nor of the word would have been noticed.

XXVII. Paralipsis¹⁵² occurs when we say that we are passing by, or do not know, or refuse to say that which precisely now we are saying, as follows: "Your boyhood, indeed, which you dedicated to intemperance of all kinds, I would discuss, if I thought this the right time. But at present I advisedly leave that aside. This too I pass by, that the tribunes have reported you as irregular in military service. Also that you have given satisfaction to Lucius Labeo for injuries done him I regard as irrelevant to the present matter. Of these things I say nothing, but return to the issue in this trial."¹⁵³ Again: "I do not mention that you have taken monies from our allies; I do

¹⁵²παράλειψις, ἀντίφρασις, *praeteritio*, and sometimes παρα-σιώπησις, which Quintilian, 9. 3. 99, excludes from the figures. *Occultatio* is assigned by Quintilian in 9. 3. 98 to the figures of thought. Cf. *praecisio*, 4. xxx. 41 below, and Cicero's *reticentia* (*De Oratore* 3. 53. 205, and *Orator* 40. 138). [Tr.]

¹⁵³Speaker, opponent, and Labeo all are unknown. The date may perhaps be assigned to the time of the Marsic war, about 90 B.C.; see Friedrich Muenzer, P.-W. 12. 245. [Tr.]

not concern myself with your having despoiled the cities, kingdoms, and homes of them all. I pass by your thieveries and robberies, all of them." This figure is useful if employed in a matter which it is not pertinent to call specifically to the attention of others, because there is advantage in making only an indirect reference to it, or because the direct reference would be tedious or undignified, or cannot be made clear, or can easily be refuted. As a result, it is of greater advantage to create a suspicion by Paralipsis than to insist directly on a statement that is refutable.¹⁵⁴

Disjunction¹⁵⁵ is used when each of two or more clauses ends with a special verb, as follows: "By the Roman people Numantia was destroyed, Carthage razed, Corinth demolished, Fregellae overthrown. Of no aid to the Numantines was bodily strength; of no assistance to the Carthaginians was military science; of no help to the Corinthians was polished cleverness; of no avail to the Fregellans was fellowship with us in customs and in language."¹⁵⁶ Again: "With disease physical beauty fades, with age it dies."¹⁵⁷ In this example we see both clauses, and in the preceding each several clause ending with a special verb.

Conjunction occurs when both the previous and the succeeding phrases are held together by placing the verb between them, as follows: "Either with disease physical beauty fades, or with age."

It is Adjunction when the verb holding the sentence together is placed not in the middle, but at the beginning or the end. At the beginning, as follows: "Fades physical beauty with disease or age." At the end, as follows: "Either with disease or age physical beauty fades."

Disjunction is suited to elegant display, and so we shall use it moderately, that it may not cloy;

¹⁵⁴Cf. Quintilian, 9. 2. 75. [Tr.]

¹⁵⁵διεζευγμένον. Quintilian, 9. 3. 64, says that devices like this and the two following are so common that they cannot lay claim to the art which figures involve. [Tr.]

¹⁵⁶Only the first sentence of this translation preserves the Disjunction, which cannot be rendered throughout without violating normal English word order. [Tr.]

¹⁵⁷Cf. Isocrates, *Ad Demonicum* 6: "For beauty is spent by time or wasted by disease." The saying was popular among Greek Patristic writers; see Engelbert Drerup, *Isocratis Opera Omnia*, Leipzig, 1906, 1. 95. [Tr.]

Conjunction is suited to brevity, and hence is to be used more frequently. These three figures spring from a single type.

XXVIII. Reduplication¹⁵⁸ is the repetition of one or more words for the purpose of Amplification or Appeal to Pity, as follows: "You are promoting riots, Gaius Gracchus, yes, civil and internal riots." Again: "You were not moved when his mother embraced your knees? You were not moved?"¹⁵⁹ Again: "You now even dare to come into the sight of these citizens, traitor to the fatherland? Traitor, I say, to the fatherland, you dare come into the sight of these citizens?" The reiteration of the same word makes a deep impression upon the hearer and inflicts a major wound upon the opposition—as if a weapon should repeatedly pierce the same part of the body.

Synonymy or Interpretation¹⁶⁰ is the figure which does not duplicate the same word by repeating it, but replaces the word that has been used by another of the same meaning, as follows: "You have overturned the republic from its roots; you have demolished the state from its foundations." Again: "You have impiously beaten your father; you have criminally laid hands upon your parent." The hearer cannot but be impressed when the force of the first expression is renewed by the explanatory synonym.

Reciprocal Change occurs when two discrepant thoughts are so expressed by transposition that the latter follows from the former although contradictory to it, as follows: "You must eat to live, not live to eat."¹⁶¹ Again: "I do not write poems, because I cannot write the sort I

¹⁵⁸ἀναδίπλωσις. In Quintilian, 9. 3. 28, *adiectio*. For the first example cf. Demosthenes, *De Corona* 143, a favorite passage with the rhetoricians: "War is that you are bringing into Attica, Aeschines, an Amphictyonic war." [Tr.]

¹⁵⁹This passage may perhaps belong to the *controversia* on the murder of Sulpicius in 1. xv. 25 above. [Tr.]

¹⁶⁰συνωνυμία. Quintilian, 9. 3. 98, denies that this is a figure. [Tr.]

¹⁶¹Ascribed to Socrates. See the Stoic C. Musonius Rufus (first Christian century) in Stobaeus, 3. 18. 37; Plutarch, *Quomodo adulesc. poet. aud. deb.* 4 (21 E); Gellius 19. 2; Athenaeus 4. 158 F.; Diogenes Laertius 2. 34; Stobaeus, 3. 17. 21 ("Socrates, when asked in what respect he differed from the rest of men, replied: 'Whereas they live in order to eat, I eat in order to live.'"); Macrobius, *Sat.* 2. 8. 16. Cf. also Quintilian, 9. 3. 85; Clement of Alexandria, *Paed.* 2. 1, and *Strom.* 7. 14; Isidore, *Etyim.* 2. 21. 11. [Tr.]

wish, and I do not wish to write the sort I can."¹⁶² Again: "What can be told of that man is not being told; what is being told of him cannot be told." Again: "A poem ought to be a painting that speaks; a painting ought to be a silent poem."¹⁶³ Again: "If you are a fool, for that reason you should be silent; and yet although you should be silent, you are not for that reason a fool." One cannot deny that the effect is neat when in juxtaposing contrasted ideas the words also are transposed. In order to make this figure, which is hard to invent, quite clear, I have subjoined several examples—so that, well understood, it may be easier for the speaker to invent.

XXIX. Surrender is used when we indicate in speaking that we yield and submit the whole matter to another's will, as follows: "Since only soul and body remain to me, now that I am deprived of everything else, even these, which alone of many goods are left me, I deliver up to you and to your power. You may use and even abuse me in your own way as you think best; with impunity make your decision upon me, whatever it may be; speak and give a sign—I shall obey." Although this figure is often to be used also in other circumstances, it is especially suited to provoking pity.

Indecision occurs when the speaker seems to ask which of two or more words he had better use, as follows: "At that time the republic suffered exceedingly from—ought I to say—the folly of the consuls, or their wickedness, or both."¹⁶⁴ Again: "You have dared to say that,

¹⁶²Porphyrio on Horace, *Epist.* 2. 1. 257, attributes this saying to Aristarchus of Samothrace (first half, second century B.C.), the editor and critic of Homer. Cf. *Anth. Pal.* 6. 1: "For I [Lais] do not wish to see myself as I am, and cannot see myself as I used to be." [Tr.]

¹⁶³The saying is ascribed to Simonides (sixth century B.C.) in Plutarch, *De glor. Athen.* 3(346 F); see also *Quaest. Conviv.* 9. 15 (748 A), *Quomodo adulesc. poet. aud. deb.* 3 (17 F), *Quomodo adulat. ab amic. internosc.* 15 (58 B), *De vita et poes. Hom.* 216 (ed. Bernardakis, 7, 460). Cf. Cicero, *De Leg.* 3. 1. 2: "It can truly be said that the magistrate is a speaking law, the law on the other hand a silent magistrate"; Horace, *Ars Poet.* 361: "A poem is like a painting"; *Anth. Pal.* 11. 145; and Lessing, *Laokoon*, Preface. [Tr.]

¹⁶⁴ἀπορία, διαπόρησις. Quintilian, 9. 3. 88, uses virtually the same example, after making the point that Indecision can belong to either the figures of thought or the figures of diction. Cf. Demosthenes, *De Corona* 20: "Now what helped

you of all men the—by what name worthy of your character shall I call you?”

Elimination¹⁶⁵ occurs when we have enumerated the several ways by which something could have been brought about, and all are then discarded except the one on which we are insisting, as follows: “Since it is established that the estate you claim as yours was mine, you must show that you took possession of it as vacant land, or made it your property by right of prescription, or bought it, or that it came to you by inheritance. Since I was on the premises, you could not have taken possession of it as vacant land. Even by now you cannot have made it your property by right of prescription. No sale is disclosed. Since I am alive, my property could not have come to you by inheritance. It remains, then, that you have expelled me by force from my estate.” This figure will furnish the strongest support to conjectural arguments, but unlike most other figures, it is not one which we can use at will, for in general we can use it only when the very nature of the business gives us the opportunity.

XXX. Asyndeton¹⁶⁶ is a presentation in separate parts, conjunctions being suppressed, as follows: “Indulge your father, obey your relatives, gratify your friends, submit to the laws.” Again: “Enter into a complete defense, make no objection, give your slaves to be examined, be eager to find the truth.” This figure has animation and great force,¹⁶⁷ and is suited to concision.

Aposiopesis occurs when something is said and then the rest of what the speaker had begun to say

him . . . ? The cowardice, ought I to say, or the stupidity, or both, of the other Greek states.” [Tr.]

¹⁶⁵Now called the Method of Residues when used in Refutation. Quintilian, 5. 10. 66 ff. and 7. 1. 31 ff., considers this *argumentorum genus ex remotione* under Proof and Refutation, not under the Figures; see also Cicero, *De Inv.* 1. xxix. 45 (*enumeratio*), and Quintilian, 9. 3. 99, in note on 4. xviii. 25 above. Cf. in Aristotle, *Rhet.* 2. 23 (1398 a), the *topos* from logical division (*ἐχ διαίρεσεως*). [Tr.]

¹⁶⁶ἀσύνδετον. Various also διάλυσις, *solutum*, *dissolutio*. Aristotle, *Rhet.* 3. 12(1413 b): “Asyndeta . . . are rightly condemned in the literary style, but in the controversial style speakers do indeed use them because of their dramatic effect.” Cf. *dissolutum*, the slack style (4. xi. 16 above). [Tr.]

¹⁶⁷The quality of σφοδρότης. Plutarch, *De vita et poes.* *Hom.* 40 (ed. Bernardakis, 7. 355), assigns to Asyndeton the qualities of rapidity and emotional emphasis. [Tr.]

is left unfinished, as follows: “The contest between you and me is unequal because, so far as concerns me, the Roman people—I am unwilling to say it, lest by chance some one think me proud. But you the Roman people has often considered worthy of disgrace.” Again: “You dare to say that, who recently at another’s home—I shouldn’t dare tell, lest in saying things becoming to you, I should seem to say something unbecoming to me.” Here a suspicion, unexpressed, becomes more telling than a detailed explanation would have been.

Conclusion¹⁶⁸ by means of a brief argument, deduces the necessary consequences of what has been said or done before, as follows: “But if the oracle had predicted to the Danaans that Troy could not be taken without the arrows of Philoctetes, and these arrows moreover served only to smite Alexander, then certainly killing Alexander was the same as taking Troy.”¹⁶⁹

XXXI. There remain also ten Figures of Diction, which I have intentionally not scattered at random, but have separated from those above, because they all belong in one class. They indeed all have this in common, that the language departs from the ordinary meaning of the words¹⁷⁰ and is, with a certain grace, applied in another sense.

Of these figures the first is Onomatopoeia¹⁷¹ which suggests to us that we should ourselves

¹⁶⁸Like συμπερασμα in logic. Quintilian 9. 3. 98, denies that *conclusio* is a figure. Cf. the *conclusio* of 1. iii. 4 and the *duplex conclusio* of 2. xxiv. 38 above. [Tr.]

¹⁶⁹Philoctetes killed Paris with the bow and arrows of Heracles, and thus fulfilled the oracle revealed by the Trojan seer Helenus that only by means of those weapons could Troy be taken. [Tr.]

¹⁷⁰These ten figures of diction are *tropi* (τροποι, tropes), a term our author does not use; cf. Quintilian, 8. 6. 1: “A trope is an artistic change of a word or phrase from its proper signification to another.” Tropes were at first, as here, not separated from figures of thought and diction (σχηματα). Cicero, *Brutus* 18. 69, tells us that the division was of Greek origin. Even in the time of Quintilian (see 9. 1. 1–9) the line of demarcation was not always clear. [Tr.]

¹⁷¹ὀνοματοποιία. Cf. Julius Caesar in Gellius, 1. 10. 4: “Avoid as you would a rock, an unheard-of and unfamiliar word.” Cicero admits unusual (old-fashioned), new, and metaphorical words, although recognizing that these are allowed more freely in poetry than in oratory; see *De Orator* 3. 38. 152 ff., *Orator* 20. 68 and 24. 81, and also the advice which Horace, *Ars Poet.* 46 ff. and *Epist.* 2. 2. 119–21, gives to poets to use neologisms, but with restraint. Quintilian likewise tolerates neologisms despite the danger in their use, but

designate with a suitable word, whether for the sake of imitation or of expressiveness, a thing which either lacks a name¹⁷² or has an inappropriate name. For the sake of imitation, as follows: our ancestors, for example, said “roar,” “bellow,” “murmur,” “hiss;” for the sake of expressiveness, as follows: “After this creature attacked the republic, there was a hullabaloo among the first men of the state.” This figure is to be used rarely, lest the frequent recurrence of the neologism breed aversion; but if it is used appropriately and sparingly, then the novelty, far from offending, even gives distinction to the style.

Antonomasia or Pronomination designates by a kind of adventitious epithet a thing that cannot be called by its proper name; for example, if some one speaking of the Gracchi should say: “Surely the grandsons of Africanus did not behave like this!”; or again, if some one speaking of his adversary should say: “See now, men of the jury, how your Sir Swashbuckler there has treated me.” In this way we shall be able, not without elegance, in praise and in censure, concerning physical attributes, qualities of character, or external circumstances,¹⁷³ to express ourselves by using a kind of epithet in place of the precise name.¹⁷⁴

XXXII. Metonymy is the figure which draws from an object closely akin or associated an expression suggesting the object meant, but not called by its own name. This is accomplished by substituting the name of the greater thing for that of the lesser, as if one speaking of the Tarpeian Rock should term it “the Capitoline”; . . . ; or by substituting the name of the thing invented for that of the inventor, as if one should say “wine” for “Liber,” “wheat” for “Ceres”;¹⁷⁵ “. . . ;” or

does not allow Roman speakers the imitative type of Onomatopoeia, although this was “held as one of the highest virtues by the Greeks;” see 1. 5. 71 f., 8. 6. 31 f., 8. 3. 35–37. Cf. also Gellius, 11. 7. 1: “But as for me I think it more objectionable and censurable to use words that are new, unknown, and unheard-of than to use those that are hackneyed and mean.” [Tr.]

¹⁷²See note on Metaphor, 4. xxxiv. 45 below. [Tr.]

¹⁷³Cf. 3. vi. 10 above. [Tr.]

¹⁷⁴*Pro nomine*, hence the name for the figure, *Pronominatio*. [Tr.]

¹⁷⁵Liber and Ceres are common metonyms; see Cicero, *De Oratore* 3. 42. 167, advising the frequent use of this kind

the instrument for the possessor, as if one should refer to the Macedonians as follows: “Not so quickly did the Lances get possession of Greece,” and likewise, meaning the Gauls: “nor was the Transalpine Pike so easily driven from Italy”; the cause for the effect, as if a speaker, wishing to show that some one has done something in war, should say: “Mars forced you to do that”; or effect for cause, as when we call an art idle because it produces idleness in people, or speak of numb cold because cold produces numbness. Content will be designated by means of container as follows: “Italy cannot be vanquished in warfare nor Greece in studies”; for here instead of Greeks and Italians the lands that comprise them are designated. Container will be designated by means of content:¹⁷⁶ as if one wishing to give a name to wealth should call it gold or silver or ivory. It is harder to distinguish all these metonymies in teaching the principle than to find them when searching for them, for the use of metonymies of this kind is abundant not only amongst the poets and orators but also in everyday speech.

Periphrasis is a manner of speech used to express a simple idea by means of a circumlocution, as follows: “The foresight of Scipio crushed the power of Carthage.” For here, if the speaker had not designed to embellish the style, he might simply have said “Scipio” and “Carthage.”

Hyperbaton¹⁷⁷ upsets the word order by means either of Anastrophe¹⁷⁸ or Transposition. By Anastrophe, as follows: “Hoc vobis deos immortales arbitror dedisse virtute pro vestra.”¹⁷⁹ By Transposition, as follows: “Instabilis in istum

of figure, and *De Natura Deorum* 2. 23. 60, citing Terence, *Eunuch.* 732; Quintilian, 8. 6. 24: “It would be too bold for the severe style of the forum to tolerate our saying ‘Liber’ for ‘wine’ and ‘Ceres’ for ‘bread.’” [Tr.]

¹⁷⁶Quintilian, 8. 6. 24–5, approves the substitution of container for content, but allows the converse only to poetic practice. [Tr.]

¹⁷⁷ὑπερβατόν. See 4. xii. 18 above. [Tr.]

¹⁷⁸ἀναστροφή. Reversal of order. Quintilian, 8. 6. 65, defines ἀναστροφή, as a transposition confined to two words. [Tr.]

¹⁷⁹“This I deem the immortal gods have vouchsafed to you in reward for your virtue.” The strictly correct order would have been *pro vestra virtute*; *virtūtē prō vēstrā* gives the most favored clausula. [Tr.]

plurimum fortuna valuit. Omnes invidiose eripuit bene vivendi casus facultates.”¹⁸⁰ A transposition of this kind, that does not render the thought obscure, will be very useful for periods, which I have discussed above;¹⁸¹ in these periods we ought to arrange the words in such a way as to approximate a poetic rhythm,¹⁸² so that the periods can achieve perfect fullness and the highest finish.

XXXIII. Hyperbole¹⁸³ is a manner of speech exaggerating the truth, whether for the sake of magnifying or minifying something. This is used independently, or with comparison. Independently, as follows: “But if we maintain concord in the state, we shall measure the empire’s vastness by the rising and the setting of the sun.” Hy-

¹⁸⁰“Unstable Fortune has exercised her greatest power on this creature. All the means of living well Chance has jealously taken from him.” Here the adjectives are separated from the nouns they modify; *fortūnā vālūt* and especially *cusūs fācūltātēs* were favored clausulae (see not next above). Our author employs the dichoree (- - -) most. See the study of the cadences in A. W. de Groot, *Der antike Prosarhythmus*, Groningen and The Hague, 1921, pp. 106–7; in Henri Bornecque, *Les Clausules Métriques Latines*, Lille, 1907, pp. 542 ff., 579 f.; and in Burdach, *Schlesisch-böhmische Briefmuster*, pp. 110ff.; also the notes on 4. viii. 12 and 4. xix. 26, and the next note here below. [Tr.]

¹⁸¹4. xix. 27. The doctrines of rhythm were not taught as part of the regular curriculum by the Atticizing rhetoricians (Cicero, *De Oratore* 3. 49. 188); our author does not mention Rhythm under Composition in 4. xii. 18 above, save indirectly in his reference to concinnity in Hyperbaton. Here, however, he is under Asian influence. Cf. Cicero, *Orator* 69. 229: “We must not transpose words in an obvious manner for the sake of achieving a better cadence or a more flowing rhythm”; Dionysius Halic., *De Composit. Verb.*, ch. 4; and Blass, *Die Rhythmen der asian. und röm. Kunstprosa*, pp. 33 ff. Our author in his rhythms represents the transition between Asian rules and those followed by Cicero; see Bornecque, *op. cit.*, p. 546. On our author’s generally ambivalent position with respect to Asianism, see Burdach, *op. cit.*, pp. 96 ff. [Tr.]

¹⁸²Cicero, *Orator* 56. 187 f.: “It is, then, quite clear that prose should be tightened up by rhythm, but be free of meter . . . There are, to be sure, no rhythms other than those used in poetry”; Crassus in *De Oratore* 1. 33. 151: “Good collocation and good arrangement of words are perfected in writing by means of a certain rhythm and measure not poetical, but oratorical.” Thrasymachus of Chalcedon (fifth century B.C.) was the inventor of prose rhythm, and Isocrates excelled in its use (Cicero, *Orator* 52. 175). [Tr.]

¹⁸³ὑπερβολή. Aristotle, *Rhet.* 3. 11 (1413 a), says that the use of Hyperbole is a juvenile characteristic, betraying vehemence. Cf. Quintilian, 8. 6. 67 ff. [Tr.]

perbole with comparison is formed from either equivalence or superiority. From equivalence, as follows: “His body was as white as snow, his face burned like fire.” From superiority, as follows: “From his mouth flowed speech sweeter than honey.” Of the same type is the following: “So great was his splendor in arms that the sun’s brilliance seemed dim by comparison.”

Synecdoche occurs when the whole is known from a small part or a part from the whole. The whole is understood from a part in the following: “Were not those nuptial flutes reminding you of his marriage?” Here the entire marriage ceremony is suggested by one sign, the flutes. A part from the whole, as if one should say to a person who displays himself in luxurious garb or adornment: “You display your riches to me and vaunt your ample treasures.” The plural will be understood from the singular, as follows: “To the Carthaginian came aid from the Spaniard, and from that fierce Transalpine. In Italy, too, many a wearer of the toga shared the same sentiment.” In the following the singular will be understood from the plural: “Dread disaster smote his breasts with grief; so, panting, from out his lungs’ very depth he sobbed for anguish.” In the first example more than one Spaniard, Gaul, and Roman citizen are understood, and in this last only one breast and one lung.¹⁸⁴ In the former the quantity is minified for the sake of elegance, in the latter exaggerated for the sake of impressiveness.

Catachresis is the inexact use of a like and kindred word in place of the precise and proper one, as follows: “The power of man is short,” or “small height,” or “the long wisdom in the man,” or “a mighty speech,” or “to engage in a slight conversation.” Here it is easy to understand that words of kindred, but not identical, meaning have been transferred on the principle of inexact use.

XXXIV. Metaphor¹⁸⁵ occurs when a word

¹⁸⁴In ancient physiology the lungs were considered to be the right and left halves of a single organ, with the windpipe as the common outlet; cf., for example, Aristotle, *De Part. Animal.* 3. 6–7 (668 b ff.), *Hist. Animal.* 2. 17 (507 a 19). [Tr.]

¹⁸⁵μεταφορά. Cf. Aristotle, *Rhet.* 3. 2 (1405 a) ff., *Poet.*, ch 21; Demetrius, *De Elocut.* 2. 78 ff.; Quintilian, 8. 6. 4 ff. According to Cicero, *Orator* 27. 92, metaphor is used for the sake of charm (*suavitas*) or because of the lack (*inopia*) of a

applying to one thing is transferred to another, because the similarity seems to justify this transference. Metaphor is used for the sake of creating a vivid mental picture, as follows: "This insurrection awoke Italy with sudden terror"; for the sake of brevity¹⁸⁶ as follows: "The recent arrival of an army suddenly blotted out the state"; for the sake of avoiding obscenity, as follows: "Whose mother delights in daily marriages"; for the sake of magnifying, as follows: "No one's grief or disaster could have appeased this creature's enmities and glutted his horrible cruelty";¹⁸⁷ for the sake of minifying, as follows: "He boasts that he was a great help because, when we were in difficulties, he lightly breathed a favoring breath";¹⁸⁸ for the sake of embellishment, as follows: "Some day the prosperity of the republic, which by the malice of wicked men has withered away, will bloom again by the virtue of the Conservatives." They say that a metaphor ought to be restrained,¹⁸⁹ so as to be a transition with good reason to a kindred thing, and not seem an indiscriminate, reckless, and precipitate leap to an unlike thing.

Allegory is a manner of speech denoting one thing by the letter of the words, but another by their meaning. It assumes three aspects: comparison, argument, and contrast. It operates through a comparison when a number of metaphors originating in a similarity in the mode of expression are set together, as follows: "For when dogs act

proper word; cf. also *De Oratore* 3. 38. 155. Quintilian, 8. 6. 6, says that we use metaphor from necessity or because it achieves greater expressiveness or beauty. Cf. *translatio criminis*, 2. xv. 22 above and *translatio*, the subtype of Legal Issue, 1. xii. 22. [Tr.]

¹⁸⁶Quintilian, 8. 6. 8, terms Metaphor a shorter Simile. [Tr.]

¹⁸⁷This may perhaps belong to the *controversia* concerning the murder of Sulpicius, 1. xv. 25 above. [Tr.]

¹⁸⁸Cf. Cicero, *Leg. Agr.* 2. 5. 13, on the unintelligible speech of the once truculent Rullus: "The keener-witted persons standing in the Assembly suspected that he had meant to say something or other about an agrarian law"; Quintilian, 8. 4. 28, quotes this sentence of Cicero in illustration of *ratio minuendi*. [Tr.]

¹⁸⁹Cicero, *De Oratore* 3. 41. 165, makes the same point; cf. also Aristotle, *Rhet.* 3. 2 (1405 a), Cicero, *Epist. ad Fam.* 16. 17 (Theophrastus' *verecunda tralatio*), Longinus, *De Sublim.* 32. 3, Quintilian, 8. 3. 37. [Tr.]

the part of wolves, to what guardian, pray, are we going to entrust our herds of cattle?" An Allegory is presented in the form of argument when a similitude is drawn from a person or place or object in order to magnify or minify, as if one should call Drusus a "faded reflection of the Gracchi." An Allegory is drawn from a contrast¹⁹⁰ if, for example, one should mockingly call a spendthrift and voluptuary frugal and thrifty. Both in this last type, based on a contrast, and in the first above, drawn from a comparison, we can through the metaphor make use of argument. In an Allegory operating through a comparison, as follows: "What says this king—our Agamemnon, or rather, such is his cruelty, our Atreus?" In an Allegory drawn from a contrast: for example, if we should call some undutiful man who has beaten his father "Aeneas,"¹⁹¹ or an intemperate and adulterous man "Hippolytus."¹⁹²

This is substantially all I have thought it necessary to say on the Figures of Diction. Now the subject itself directs me to turn next to the Figures of Thought.

XXXV. Distribution occurs when certain specified rôles are assigned among a number of things or persons,¹⁹³ as follows: "Whoever of you, men of the jury, loves the good name of the Senate, must hate this man, for his attacks upon that body have always been most insolent. Whoever of you wishes the equestrian order¹⁹⁴ to be most resplendent in the state, must want this person to have paid the severest penalty, so that he may not be, through his personal shame, a stain and disgrace to a most honorable order. You who have parents, must prove by your punishment of this creature that undutiful men do not find favor with you. You who have children, must set forth an example to show how great are the punish-

¹⁹⁰Cf. Quintilian, 8. 6. 54 ff. (*ironia, illusio*); *Rhet. ad Alex.* ch. 21, 1434 a (*ειρωνεία*); Anon., *De Trop.*, in Walz 8. 722 (*ἀντίφρασις*). [Tr.]

¹⁹¹Called *pious* for his devotion to Anchises, his father. [Tr.]

¹⁹²Rejected the advances of his stepmother Phaedra. [Tr.]

¹⁹³Of *πράγματα* or of *πρόσωπα*. Cf. the distinction in the third kind of *narratio*, 1. viii. 13 above. [Tr.]

¹⁹⁴In accordance with the *Lex Plautia Iudiciaria* of 90/89 B.C. both senators and knights (and also some of the *plebs*) served as *iudices* in the criminal courts. Sulla restored the senatorial monopoly in 82/81 B.C. [Tr.]

ments that have been provided in our state for men of that stamp." Again, "The Senate's function is to assist the state with counsel; the magistracy's is to execute, by diligent activity, the Senate's will; the people's to choose and support by its votes the best measures and the most suitable men." Again, "The duty of the prosecutor is to bring the charges; that of the counsel for the defense to explain them away and rebut them; that of the witness to say what he knows or has heard; that of the presiding justice to hold each of these to his duty. Therefore, Lucius Cassius, if you allow a witness to argue and to attack by means of conjecture, passing beyond what he knows or has heard, you will be confusing the rights of a prosecutor with those of a witness, you will be encouraging the partiality of a dishonest witness, and you will be ordaining for the defendant that he defend himself twice."¹⁹⁵ This figure has richness, for it embraces much in little and, by assigning to each his duty, severally distinguishes a number of entities.

XXXVI. It is Frankness of Speech¹⁹⁶ when, talking before those to whom we owe reverence or fear, we yet exercise our right to speak out, because we seem justified in reprehending them, or persons dear to them, for some fault. For example: "You wonder, fellow citizens, that every one abandons your interests? That no one undertakes your cause? That no one declares himself your defender? Blame this upon yourselves; cease to wonder. Why indeed should not every one avoid and shun this situation of your making? Bethink yourselves of those whom you have had for defenders; set their devotion before your eyes, and next consider what has become of them

¹⁹⁵From the celebrated speech delivered in 113 B.C. (or at the end of 114) by L. Licinius Crassus in defense of Licinia, accused with other Vestals of unchastity and condemned. L. Cassius Longinus Ravilla (whose rule was to insist on the question of the motive: *Cui bono?*—"for whose advantage was the crime?") was the examining magistrate. [Tr.]

¹⁹⁶παρηγοσία, *oratio libera*. Quintilian, 9. 2. 27 and 9. 3. 99, denies that this is a figure. Cf. Isocrates, *De Pace* 72 f.: "While hating those who revile you to your hurt as bearing malice to the state, you ought to praise those who admonish you for your benefit, and think them the best of your fellow-citizens, and think that best of all is the man who can demonstrate most vividly the defects of your practices and the misfortunes that arise from them." [Tr.]

all. Then remember that thanks to your—to speak aright—indifference, or cowardice rather, all these men have been murdered before your eyes, and thanks to your own votes their enemies have reached the highest estate."¹⁹⁷ Again: "Now what was your motive, men of the jury, in hesitating to pass sentence on this abominable man, or in allowing him a new trial?"¹⁹⁸ Were not the facts charged plain as day? Were they not all proved by witnesses? Was not the answer, on the other hand, feeble and trifling? Did you at this point fear that in condemning him at the first hearing you would be considered cruel? While avoiding a reproach for cruelty, which you would have been far from incurring, you have incurred another reproach—you are considered timid and cowardly. You have met with very great losses, private and public, and now when even greater losses seem to impend, you sit and yawn. During the day you wait for night, at night you wait for day. Every day some troublesome and unpleasant news is announced—yet even now will you temporize longer with the author of these our ills, and nourish him for the destruction of the republic; will you keep him in the commonwealth as long as you can?"

XXXVII. If Frank Speech of this sort seems too pungent, there will be many means of palliation, for one may immediately thereafter add something of this sort: "I here appeal to your virtue, I call on your wisdom, I bespeak your old habit," so that praise may quiet the feelings aroused by the frankness. As a result, the praise frees the hearer from wrath and annoyance, and the frankness deters him from error. This precaution in speaking, as in friendship, if taken at the right place, is especially effective in keeping the hearers from error and in presenting us, the speakers, as friendly both to the hearers and to the truth.

¹⁹⁷Whether this passage derives from a speech actually delivered we do not know. The sentiments are appropriate to a tribune of the time of Marius. [Tr.]

¹⁹⁸The renewal (*ampliatio*) of a case followed the verdict *non liquet* by the jury, and the president's pronouncement *amplius* (*cognoscedum*). Renewals had to be repeated until the verdict of *fecisse videtur* or *non fecisse videtur* was rendered. The *Lex Acilia Repetundarum* (123/2 B.C.) provided against the abuses of this power by juries; it permitted the jury no more than one renewal in a single case at penalty of a fine. [Tr.]

There is also a certain kind of frankness in speaking which is achieved by a craftier device, when we remonstrate with the hearers as they wish us to remonstrate with them, or when we say “we fear how the audience may take” something which we know they all will hear with acceptance, “yet the truth moves us to say it none the less.”¹⁹⁹ I shall add examples of both these kinds. Of the former, as follows: “Fellow citizens, you are of too simple and gentle a character; you have too much confidence in every one. You think that every one strives to perform what he has promised you. You are mistaken, and now for a long time you have been kept back by false and groundless hope, in your fatuity choosing to seek from others what lay in your power, rather than take it yourselves.”²⁰⁰ Of the latter kind of Frank Speech the following will be an example: “I enjoyed a friendship with this person, men of the jury, yet of that friendship—although I fear how you are going to receive what I shall say, I will yet say it—you have deprived me. Why? Because, in order to win your approval, I have preferred to consider your assailant as an enemy rather than as a friend.”

Thus this figure called Frankness of Speech will, as I have shown, be handled in two ways: with pungency, which, if too severe, will be mitigated by praise; and with pretense, discussed

¹⁹⁹Cf. Plato, *Phaedo* 91B: “And I would enjoin upon you to be giving only little thought to Socrates, but much more to the truth”; and the saying attributed to Aristotle by Cervantes: *Amicus Plato, sed magis amica veritas*. (See James Condamin, *Répertoire Alphabétique des Citations*, Lyons and Paris, 1926, pp. 26 ff.) [Tr.]

²⁰⁰It has been suspected (see Friedrich Ellendt in Meyer-Dübner, *Orator. Rom. Fragm.*, 2nd ed., p. 235, and Kroehnert, p. 30) that this may be a fragment from the speech *De legibus promulgatis* delivered (in 122 B.C.) by Gaius Gracchus, the words here being directed against M. Livius Drusus; but there is no real evidence to substantiate the conjecture. Rutilius Lupus, 2. 18 (Halm, pp. 20–21), uses as an example of this figure the following passage from Demosthenes (*Fragm. Orat. Att.*, Ed. Baiter-Sauppe, fragm. 54, p. 257): “But shall I refrain from speaking the truth frankly before you? No, I say. I shall not be silent, because the common welfare demands speech. It is by your own doing, men of Athens, that the state is in such great peril. For you have failed to defend yourselves, by recklessly believing every one and by esteeming as most useful the opinions of those whose counsels are most cowardly.” [Tr.]

above, which does not require mitigation, because it assumes the guise of Frank Speech and is of itself agreeable to the hearer’s frame of mind.

XXXVIII. Understatement occurs when we say that by nature, fortune, or diligence, we or our clients possess some exceptional advantage, and, in order to avoid the impression of arrogant display, we moderate and soften the statement of it, as follows: “This, men of the jury, I have the right to say—that by labor and diligence I have contrived to be no laggard in the mastery of military science.” If the speaker had here said “be the best” he might have spoken the truth, but would have seemed arrogant. He has now said quite enough both to avoid envy and to secure praise. Again: “Was it then because of avarice or of need that he entered upon the crime? Avarice? But he was most generous to his friends, and that is a sign of generosity, a virtue opposed to avarice. Need? But his father left him a patrimony that was—I do not wish to exaggerate—not the smallest.”²⁰¹ Here again, calling the patrimony “large” or “very large” was avoided. This, then, is the precaution we shall take in setting forth the exceptional advantages which we or our clients enjoy. For things of this sort, if you handle them indiscreetly, in life provoke jealousy and in a speech antipathy. Therefore just as by circumspection we escape jealousy in life, so by prudence we avoid antipathy in speaking.

XXXIX. Vivid Description²⁰² is the name for the figure which contains a clear, lucid, and impressive exposition of the consequences of an act, as follows: “But, men of the jury, if by your votes you free this defendant, immediately, like a lion released from his cage, or some foul beast

²⁰¹It has been conjectured (see Ellendt in Meyer-Dübner, *Orator. Rom. Fragm.*, 2nd ed., p. 256, and Kroehnert, p. 31) that this passage may have its source in the speech delivered by Marcus Antonius, in 98 B.C. in defense of Manius Aquilius, accused of extortion; cf. Cicero, *Pro Flacco* 98: “Aquilius, who had been convicted of extortion on many charges and by many witnesses.” But there is no real evidence for the ascription. [Tr.]

²⁰²διὰ τὸ πῶς. Cf. *demonstratio* (Ocular Demonstration), 4. lv. 68 below, and *consequentium frequentatio* in Cicero, *Part. Orat.* 16. 55. The figure is useful for exciting emotions; cf. the tenth commonplace of Amplification in 2. xxx. 49 above. [Tr.]

loosed from his chains,²⁰³ he will slink and prow about in the forum,²⁰⁴ sharpening his teeth to attack every one's property, assaulting every man, friend and enemy, known to him or unknown, now despoiling a good name, now attacking a life, now bringing ruin upon a house and its entire household, shaking the republic from its foundations. Therefore, men of the jury, cast him out from the state, free every one from fear, and finally, think of yourselves. For if you release this creature without punishment, believe me, gentlemen, it is against yourselves that you will have let loose a wild and savage beast."

Again: "For if you inflict a heavy penalty upon the defendant, men of the jury, you will at once by a single judgment have taken many lives. His aged father, who has set the entire hope of his last years on this young man, will have no reason for wishing to stay alive. His small children, deprived of their father's aid, will be exposed as objects of scorn and contempt to their father's enemies. His entire household will collapse under this undeserved calamity. But his enemies, when once they have won the bloody palm by this most cruel of victories, will exult over the miseries of these unfortunates, and will be found insolent on the score of deeds as well as of words."

Again: "For none of you, fellow citizens, fails to see what miseries usually follow upon the capture of a city. Those who have borne arms against the victors are forthwith slain with extreme cruelty. Of the rest, those who by reason of youth and strength can endure hard labor are carried off into slavery, and those who cannot are deprived of life. In short, at one and the same time a house blazes up by the enemy's torch, and they whom nature of free choices has joined in the bonds of kinship or of sympathy are dragged apart. Of the children, some are torn from their parents' arms, others murdered on their parents' bosom, still others violated at their parents' feet.

²⁰³Cf. the example of Comparison in Aristotle, *Rhet.* 3. 3 (1406 b): "Androtion said of Idrieus that he was 'like a cur let loose from his chain, that flies at you and bites'; so Idrieus, let loose from his chains, was vicious." [Tr.]

²⁰⁴Cf. the second example of Simile, 4. xlix. 62 below, and the passage of Demosthenes cited in note. [Tr.]

No one, men of the jury, can, by words, do justice to the deed, nor reproduce in language the magnitude of the disaster."²⁰⁵

With this kind of figure either indignation or pity can be aroused, when the consequences of an act, taken together as a whole, are concisely set forth in a clear style.

XL. Division²⁰⁶ separates the alternatives of a question and resolves each by means of a reason subjoined, as follows: "Why should I now reproach you in any way? If you are an upright man, you have not deserved reproach; if a wicked man, you will be unmoved." Again: "Why should I now boast of my deserts? If you remember them, I shall weary you; if you have forgotten them, I have been ineffective in action, and therefore what could I effect by words?" Again: "There are two things which can urge men to illicit gain: poverty and greed. That you were greedy in the division with your brother we know, that you are poor and destitute we now see. How, therefore, can you show that you had no motive for the crime?" There is the following difference between the present kind of Division and that other which forms the third part of a discourse, and which I treated in Book I, next after Statement of Facts: the former Division operates

²⁰⁵The example is Greek in origin; see the similar example (illustrating διάνοις) in Herodian (Walz 8. 603). Notice that the speaker addresses the hearers as *Quirites* at first, and as *iudices* at the end. For content and diction cf. the example of the grand style, 4. viii. 12 above. Cf. also in Homer, *Il.* 9. 591 ff., Cleopatra's description of the woes that come to men whose city is captured: "The warriors are slain, the city is wasted by fire, and strangers lead captive the children and deep-girdled women"; the example of Metathesis from an unknown author in Isidore, *Rhet.* 21. 34 (Halm, p. 521): "Recall your minds to the spectacle of an unhappy city that has been stormed, and imagine that you see all the burning, the killing, the plundering, the pillaging, the bodily injury done the children, the taking captive of the matrons, the slaying of the old men"; Dio Chrysostom 32. 89; and Caesar in Sallust, *Cat.* 51. 9. [Tr.]

²⁰⁶προσάποδοσις, Distributive Reply. In *distributis supposita ratio* in *De Oratore* 3. 54. 207; Quintilian, 9. 3. 93, doubts whether *distributis subiecta ratio* is a figure. The figure is related to Dilemma (*duplex conclusio*), used in argumentation; see 2. xxiv. 38 above. Cf. *distributio* (4. xxxv. 47) and *ratiocinatio* (4. xvi. 23). Cf. also Trimalchio on Agamemnon's *controversia* in Petronius 48: "If the business took place, there is no argument; if it did not, it is all nonsense." [Tr.]

through the Enumeration or Exposition of the topics to be discussed throughout the whole discourse; whereas here the Division at once unfolds itself, and by briefly adding the reasons for the two or more parts, embellishes the style.

Accumulation²⁰⁷ occurs when the points scattered throughout the whole cause are collected in one place so as to make the speech more impressive or sharp or accusatory, as follows: "From what vice, I ask, is this defendant free? What ground have you for wishing to acquit him of the suit? He is the betrayer of his own self-respect, and the waylayer of the self-respect of others; covetous, intemperate, irascible, arrogant; disloyal to his parents, ungrateful to his friends, troublesome to his kin; insulting to his betters, disdainful of his equals and mates, cruel to his inferiors; in short he is intolerable to every one."

Of the same kind is that other Accumulation, which is very useful in conjectural causes, when the implications, which were petty and weak because expressed separately, are collected in one place and so seem to make the subject evident and not dubious, as follows:²⁰⁸ "Do not, therefore, men of the jury, do not consider singly the things I have said, but join them all together and combine them into one.

XLI. "If the defendant profited from the victim's death; if also his life is full of dishonor, his heart most avaricious, and his family fortune very meager; and if that crime benefited no one but him;²⁰⁹ and if no one else could have done the deed with equal skill, or he himself could not have done it by methods more apt; if he neglected nothing that was necessary for the crime, and did nothing that was not necessary; and if he not only sought the most suitable place, but also a favorable occasion for entering upon the crime, and the most opportune moment for undertaking it; if he spent the longest period of time in exe-

²⁰⁷συναθροισμός. Cf. *enumeratio* in 2. xxx. 47 above, and *consummatio* in Quintilian, 9. 2. 103. [Tr.]

²⁰⁸The example that follows is a summary of a conjectural case (with its dependence on the topics of circumstantial evidence) according to the principles set forth above in 2. ii. 3 ff. [Tr.]

²⁰⁹Cf., in 2. iv. 6 above, the prosecutor's use of Comparison, and for this whole passage Quintilian, 7. 2. 42-44, on Intention (*consilium*). [Tr.]

cuting it, and not without the greatest hope of concealing and completing it; and besides, if, before the victim was murdered, the defendant was seen alone, in the place in which the murder was committed; if soon afterward, during the very commission of the crime, the voice of the victim was heard; if it is established that then, after the murder, the defendant returned home, at dead of night; that on the next day he spoke of the man's murder haltingly and inconsistently—if all these indications are proved, partly by witnesses, and partly by the confessions upon torture which have been adduced in confirmation, and by public opinion, which, born of evidence, must necessarily be true; then, gentlemen, it is your duty to gather all these indications into one, and arrive at definite knowledge, not suspicion, of the crime. To be sure, some one or two of these things can by chance have happened in such a way as to throw suspicion upon this defendant; but for everything to coincide from first to last, he must have been a participant in the crime. This cannot be the result of chance." This figure has force, and in a conjectural issue is almost always essential; in the other types of causes and indeed in all discourse it is to be used occasionally.

XLII. Refining²¹⁰ consists in dwelling on the same topic and yet seeming to say something ever new. It is accomplished in two ways: by merely repeating the same idea, or by descanting upon it. We shall not repeat the same thing precisely—for that, to be sure, would weary the hearer and not refine the idea—but with changes. Our changes will be of three kinds: in the words, in the delivery, and in the treatment.

Our changes will be verbal when, having expressed the idea once, we repeat it once again or oftener in other, equivalent terms, as follows: "No peril is so great that a wise man would think it ought to be avoided when the safety of the fatherland is at stake. When the lasting security of the state is in question, the man endowed with good principles will undoubtedly believe that in defense of the fortunes of the republic he ought to shun no crisis of life, and he will ever persist in

²¹⁰A *χρεία*, a thought (usually ethical) developed in detail in accordance with definite rules; a favorite type of *progymnasma*. [Tr.]

the determination eagerly to enter, for the fatherland, any combat, however great the peril to life.”

Our changes will reside in the delivery if now in the tone of conversation, now in an energetic tone, and now in variation after variation of voice and gesture, repeating the same ideas in different words, we also change the delivery quite strikingly. This cannot be described with complete effectiveness, and yet it is clear enough. Hence there is no need of illustration.

The third kind of change, accomplished in the treatment, will take place if we transfer the thought into the form of Dialogue or into the form of Arousal.

XLIII. Dialogue—which I shall soon more fully discuss in its place²¹¹ and shall now touch upon briefly, as far as may be sufficient for the present purpose—consists in putting in the mouth of some person language in keeping with his character, as follows (for the sake of greater clarity, to continue the same theme as above): “The wise man will think that for the common weal he ought undergo every peril.²¹² Often he will say to himself: ‘Not for self alone was I born, but also, and much more, for the fatherland. Above all, let me spend my life, which I owe to fate, for the salvation of my country. She has nourished me. She has in safety and honor reared me even to this time of life. She has protected my interests by good laws, the best of customs, and a most honorable training. How can I adequately repay her from whom I have received these blessings?’ According as the wise man often says this to himself, when the republic is in danger, he on his part will shun no danger.”

Again, the idea is changed in the treatment by means of a transfer to the form of Arousal, when not only we ourselves seem to speak under emotion, but we also stir the hearer, thus: “Who is possessed of reasoning power so feeble, whose soul is bound in such straits of envy, that he would not heap eager praise upon this man and judge him most wise, a man who for the salvation of the fatherland, the security of the state, and the prosperity of the republic eagerly under-

takes and gladly undergoes any danger, no matter how great or terrible? For my part, my desire to praise this man adequately is greater than my power to do so, and I am sure that this feeling of inadequacy is shared by all of you.”

The theme, then, will be varied in speaking in these three ways: in the words, in the delivery, in the treatment. In the treatment we shall vary the theme by two means: by Dialogue and by Arousal.

But when we descant upon the same theme, we shall use a great many variations. Indeed, after having expressed the theme simply, we can subjoin the Reason, and then express the theme in another form, with or without the Reasons;²¹³ next we can present the Contrary²¹⁴ (all this I have discussed under Figures of Diction); then a Comparison and an Example (about these I shall say more in their place);²¹⁵ XLIV. and finally the Conclusion (The essential details of which were discussed in Book II, when I showed how one should bring arguments to a close; in this Book²¹⁶ I have explained the nature of that figure of diction which is called Conclusion). A Refinement of this sort, which will consist of numerous figures of diction and of thought, can therefore be exceedingly ornate.

The following, then, will illustrate a treatment in seven parts—to continue the use of the same theme for my example, in order that you may know how easily, by the precepts of rhetoric, a simple idea is developed in a multiple manner.²¹⁷

“The wise man will, in the republic’s behalf, shun no peril,²¹⁸ because it may often happen that if a man has been loath to perish for his country it will be necessary for him to perish with her. Further, since it is from our country that we receive all our advantages, no disadvantage incurred on her behalf is to be regarded as severe.²¹⁹

²¹³Cf. 4. xvii. 24. [Tr.]

²¹⁴Cf. 4. xviii. 25. [Tr.]

²¹⁵4. xlv. 59–xlix. 62. [Tr.]

²¹⁶4. xxx. 41. [Tr.]

²¹⁷The *tractatio* (ἐξεργασία) of the *chria* is freer than that of the *epicheireme* in 2. xix. 28 ff. This is our oldest extant illustration of a *chria*. Cf. the *tractatio* in Hermogenes, *Pro-gymn.* 3 (ed. Rabe, pp. 6–8). [Tr.]

²¹⁸The Theme expressed simply (χρησία). [Tr.]

²¹⁹The Reasons (αἰτίαι). [Tr.]

²¹¹4. lii. 65 below. [Tr.]

²¹²A *quaestio infinita* (θέσις); see Quintilian, 3. 5. 5 ff. [Tr.]

“I say, then, that they who flee from the peril to be undergone on behalf of the republic act foolishly,²²⁰ for they cannot avoid the disadvantages, and are found guilty of ingratitude towards the state.²²¹

“But on the other hand they who, with peril to themselves, confront the perils of the fatherland, are to be considered wise, since they render to their country the homage due her, and prefer to die for many of their fellow citizens instead of with them. For it is extremely unjust to give back to nature, when she compels, the life you have received from nature, and not to give to your country, when she calls for it, the life you have preserved thanks to your country; and when you can die for fatherland with the greatest manliness and honor, to prefer to live in disgrace and cowardice; and when you are willing to face danger for friends and parents and your other kin, to refuse to run the risk for the republic, which embraces all these and that most holy name of fatherland as well.²²²

“He who in a voyage prefers his own to his vessel’s security, deserves contempt. No less blameworthy is he who in a crisis of the republic consults his own in preference to the common safety. For from the wreck of a ship many of those on board escape unharmed, but from the wreck of the fatherland no one can swim to safety.²²³

“It is this that, in my opinion, Decius²²⁴ well understood, who is said to have devoted himself to death, and, in order to save his legions, to have plunged into the midst of the enemy. He gave up his life, but did not throw it away; for at the cost of a very cheap good he redeemed a sure good, of a small good the greatest good. He gave his life, and received his country in exchange. He lost his life, and gained glory, which, transmitted with

²²⁰Expression of the theme in a new form. [Tr.]

²²¹The Reasons. [Tr.]

²²²The argument from the Contrary (ἐχ τοῦ ἐναντίου). [Tr.]

²²³The argument by Comparison (ἐχ παραβολῆς). [Tr.]

²²⁴The national hero P. Decius Mus, in 295 B.C. at Sentinum in the war against the Samnites, flung himself upon the weapons of the enemy, and by this act of devotion brought victory to the Romans. The like act was attributed to his father (who bore the same name) in a battle against the Latins in 340 B.C. This story was a favorite historical example (see Exemplification, 4 xlix. 62 below) of patriotism. [Tr.]

highest praise, shines more and more every day as time goes on.²²⁵

“But if reason has shown and illustration confirmed that it is fitting to confront danger in defense of the republic, they are to be esteemed wise who do not shrink from any peril when the security of the fatherland is at stake.”²²⁶

It is of these types, then, that Refining consists. I have been led to discuss it at rather great length because it not only gives force and distinction to the speech when we plead a cause, but it is by far our most important means of training for skill in style. It will be advantageous therefore to practice the principles of Refining in exercises divorced from a real cause, and in actual pleading to put them to use in the Embellishment of an argument, which I discussed in Book II.

XLV. Dwelling on the Point occurs when one remains rather long upon, and often returns to, the strongest topic on which the whole cause rests. Its use is particularly advantageous, and is especially characteristic of the good orator, for no opportunity is given the hearer to remove his attention from this strongest topic. I have been unable to subjoin a quite appropriate example²²⁷ of the figure, because this topic is not isolated from the whole cause like some limb, but like blood²²⁸ is spread through the whole body of the discourse.

Through Antithesis contraries will meet. As I have explained above, it belongs either among

²²⁵The argument from Example (ἐχ παραδειγμάτων), and the testimony of antiquity (μαρτύρια τῶν παλαιῶν). [Tr.]

²²⁶Conclusion (ἐπίλογος). [Tr.]

²²⁷Anon. *Schemata Dianoias*, in Halm, p. 72. 7, cites in illustration of this figure the famous beginning of Cicero’s first oration against Catiline: “How long, in heaven’s name, Catiline, will you abuse our patience? How much longer yet will that madness of yours make mock of us? To what limit will your unbridled audacity vaunt itself?” [Tr.]

²²⁸The basis is the common comparison of a discourse with the human body. Cf. ἄδρον (4. viii. 11 above), ἰσχνόν (4. x. 14 above), and esp. *sufflata* (4. x. 15 above), and *dissolutum* (*sine nervis et articulis*) and *exile* (4. xi. 16 above); Cicero, *Brutus* 9. 36 and 16. 64, and *Orator* 23. 76; Horace, *Serm.* 2. 1. 2; in Plato, *Phaedrus* 264 C. Socrates’ principle that every discourse is constructed like a living creature, with a body of its own and a head and feet, and Aristotle, *Poet.*, ch. 7 (1450 b). See also La Rue Van Hook, *The Metaphorical Terminology of Greek Rhetoric and Literary Criticism*, Chicago diss., 1905, pp. 18 ff. [Tr.]

the figures of diction²²⁹ as in the following example: “You show yourself conciliatory to your enemies, inexorable to your friends”; or among the figures of thought, as in the following example: “While you deplore the troubles besetting him, this knave rejoices in the ruin of the state. While you despair of your fortunes, this knave alone grows all the more confident in his own.” Between these two kinds of Antithesis there is this difference: the first consists in a rapid opposition of words; in the other opposing thoughts ought to meet in a comparison.

Comparison²³⁰ is a manner of speech that carries over an element of likeness from one thing to a different thing. This is used to embellish or prove or clarify or vivify. Furthermore, corresponding to these four aims, it has four forms of presentation: Contrast, Negation, Detailed Parallel, Abridged Comparison. To each single aim in the use of Comparison we shall adapt the corresponding form of presentation.

XLVI. In the form of a contrast, in order to embellish, Comparison is used as follows: “Unlike what happens in the palaestra, where he who receives the flaming torch is swifter in the relay race than he who hands it on, the new general who receives command of an army is not superior to the general who retires from its command. For in the one case it is an exhausted runner who hands the torch to a fresh athlete, whereas in this it is an experienced commander who hands over the army to an inexperienced.” This could have been expressed quite simply, clearly, and plausibly without the Comparison, as follows: “They say that usually it is inferior generals who take over the command of armies from superior.” But the Comparison is used for embellishment, so as to secure a certain distinction for the style. It is moreover presented in the form of a contrast. For

²²⁹4. xv. 21. The ancient rhetoricians differed widely, some regarding Antithesis as a figure of diction, others as a figure of thought, and still others as belonging to both classes; see Cousin, *Études sur Quintilien*, 2. 46–8. [Tr.]

²³⁰παραβολή. This figure and the next two form a common triad in post-Aristotelian rhetoric. In Cicero, *De Inv.* 1. xxx. 49, they are divisions of *comparabile* (Ἐδμοίωσις). Cf. Metaphor and Allegory, 4. xxxiv. 45, 46 above, among the figures of diction. Comparisons are invented, but drawn from real life; see note on Exemplification, 4. xlix. 62 below. [Tr.]

a Comparison in the form of a contrast is used when we deny that something else is like the thing we are asserting to be true.

In the form of a negation and for the purpose of proof, Comparison will be used as follows: “Neither can an untrained horse, however well-built by nature, be fit for the services desired of a horse, nor can an uncultivated man, however well-endowed by nature, attain to virtue.”²³¹ This idea has been rendered more plausible, for it becomes easier to believe that virtue cannot be secured without culture, when we see that not even a horse can be serviceable if untrained. Thus the Comparison is used for the purpose of proof, and moreover is presented in the form of a negation, as is clear from the first word of the Comparison.

XLVII. Comparison will be used also for greater clarity—the presentation being in abridged form—as follows: “In maintaining a friendship, as in a footrace, you must train yourself not only so that you succeed in running as far as is required, but so that, extending yourself by will and sinew, you easily run beyond that point.” Indeed this Comparison serves to make more obvious the poor reasoning evinced by the detractors of those who, for example, are protectors of a friend’s children after his death; for a runner ought to have enough speed to carry him beyond the goal, and a friend so much goodwill that in the devotion of friendship he may reach even beyond what his friend is capable of perceiving. The Comparison is moreover presented in abridged form, for one term is not detached from the other as in the other forms, but the two are conjoined and intermingled in the presentation.

A Comparison will be used for vividness, and be set forth in the form of a detailed parallel,²³² as follows: “Let us imagine a player on the

²³¹Cf. Xenophon, *Memorabilia* 4. 1. 3: “Such as believed themselves good by nature and looked down upon learning, Socrates would teach that the greater the natural endowments, the greater is the need of education, pointing out that spirited and impetuous thoroughbreds, if they are tamed when young, become useful and excellent horses, but if not broken in, become intractable and worthless;” also Quintilian, 5. 11. 24 f. [Tr.]

²³²See note on Exemplification, 4. xlix. 62 below. [Tr.]

lyre²³³ who has presented himself on the stage, magnificently garbed, clothed in a gold-embroidered robe, with purple mantle interlaced in various colors, wearing a golden crown illumined with large gleaming jewels, and holding a lyre covered with golden ornaments and set off with ivory. Further, he has a personal beauty, presence, and stature that impose dignity. If, when by these means he has roused a great expectation in the public, he should in the silence he has created suddenly give utterance to a rasping voice, and this should be accompanied by a repulsive gesture, he is the more forcibly thrust off in derision and scorn, the richer his adornment and the higher the hopes he has raised. In the same way, a man of high station, endowed with great and opulent resources, and abounding in all the gifts of fortune and the emoluments of nature, if he yet lacks virtue and the arts that teach virtue, will so much the more forcibly in derision and scorn be cast from all association with good men, the richer he is in the other advantages, the greater his distinction, and the higher the hopes he has raised." This Comparison, by embellishing both terms, bringing into relation by a method of parallel description the one man's ineptitude and the other's lack of cultivation, has set the subject vividly before the eyes of all. Moreover the Comparison is presented in the form of a detailed parallel because, once the similitude has been set up, all like elements are related.

XLVIII. In Comparisons we must carefully see to it that when we present the corresponding idea for the sake of which we have introduced the figure we use words suited to the likeness. The following is an example: "Just as the swallows are with us in summer time, and when driven by the frost retire, . . ." Keeping the same comparison, and using Metaphor, we now say: "so false friends are with us in a peaceful season of our life, and as soon as they have seen the winter of our fortune, they fly away, one and all." But the invention of Comparisons will be easy if one can frequently set before one's eyes everything ani-

²³³The story of Evangelus of Tarentum at the Pythian games; see Lucian, *Adv. Indoctum* 8–10. Cf. also Socrates in Xenophon, *Memorabilia* 1. 7. 2, on the bad flute-player considered in connection with imposture and the life of virtue. [Tr.]

mate and inanimate, mute and articulate, wild and tame, of the earth, sky, and sea, wrought by art, chance, or nature, ordinary or unusual, and can amongst these hunt out some likeness which is capable of embellishing or proving or clarifying or vivifying. The resemblance between the two things need not apply throughout, but must hold on the precise point of comparison.

XLIX. Exemplification²³⁴ is the citing of something done or said in the past, along with the definite naming of the doer or author. It is used with the same motives as a Comparison. It renders a thought more brilliant when used for no other purpose than beauty; clearer, when throwing more light upon what was somewhat obscure; more plausible, when giving the thought greater verisimilitude; more vivid, when expressing everything so lucidly that the matter can, I may almost say, be touched by the hand. I would have added individual specimens of each type had I not under Refining demonstrated the nature of Exemplification,²³⁵ and, under Comparison, made clear the motives for its use.²³⁶ Therefore I have been unwilling to make my discussion of it either too brief for it to be understood, or too long once it is understood.

²³⁴παράδειγμα. Examples are drawn from history. Aristotle, *Rhet.* 2. 20 (1393) a ff., divides Examples into this type and also that which is invented (but drawn from real life), and the latter again into the Comparison (see 4. xlv. 59 above) and the Fable. Cf. *Rhet. ad Alex.*, ch. 8 (1429 a–1430 a), and Quintilian, 5. 11. 1 ff. and 8. 3. 72 ff. Examples are recommended especially in deliberative speaking, 3. v. 9 above; cf. Isocrates, *Ad Demonicum* 34, Aristotle, *Rhet.* 1. 9 (1368 a) and 3. 17 (1418 a). Both embellishment (cf. 2. xxix. 46 above) and proof (cf. 3. iii. 4 above) are here included among the functions of Example by our author. In 4. iii. 5 above the function is declared to be *demonstratio*, not *confirmatio* or *testificatio*; see note. For *facti et dicti* in the definition cf. Quintilian's recommendation in 12. 2. 29 that the speaker know and ponder the noblest things "said and done" in the past, and the title of Valerius Maximus' work, *Factorum et Dictorum Memorabilium Libri IX*; also Thucydides' division of his material into λόγοι and ἔργα. See Karl Alewell, *Über das rhetorische παράδειγμα*, Kiel diss., Leipzig, 1913, especially pp. 18 ff. Marius Plotius (Keil, *Gramm. Lat.* 6. 469) and Apsines, *Ars Rhet.* 8 (Spengel-Hammer 1 [2]. 281. 10 ff.) treat four methods of drawing examples: from the like, the contrary, the greater, the less; cf. 4. xlv. 59 above. [Tr.]

²³⁵4. xlv. 57 above. [Tr.]

²³⁶4. xlv. 59 above. [Tr.]

Simile²³⁷ is the comparison of one figure with another, implying a certain resemblance between them. This is used either for praise or censure. For praise, as follows: "He entered the combat in body like the strongest bull, in impetuosity like the fiercest lion."²³⁸ For censure, so as to excite hatred, as follows: "That wretch who daily glides through the middle of the Forum like a crested serpent, with curved fangs, poisonous glance,²³⁹ and fierce panting, looking about him on this side and that for some one to blast with venom from his throat—to smear it with his lips, to drive it in with his teeth, to spatter it with his tongue." To excite envy, as follows: "That creature who flaunts his riches, loaded and weighed down with gold, shouts and raves like a Phrygian eunuch-priest of Cybele²⁴⁰ or like a soothsayer." To excite contempt, as follows: "That creature, who like a snail silently hides and keeps himself in his shell, is carried off, he and his house, to be swallowed whole."

Portrayal²⁴¹ consists in representing and depicting in words clearly enough for recognition the bodily form of some person, as follows: "I mean him, men of the jury, the ruddy, short, bent

²³⁷εἰχών. Puttenham's "Resemblance by Imagerie or Pourtrait." Cf. Aristotle, *Rhet.* 3. 4 (1406) b ff. In post-Aristotelian rhetoric this appears as a special figure, separate from *similitudo* (Comparison), 4. xlv. 59 above, to which it is yet closely akin; Minucianus, *De Epich.* 2 (Spengel-Hammer 1 [2]. 342) attributes greater vividness to εἰχών. Quintilian, 5. 11. 24, advises that this kind of comparison should be used less often than the kind which helps to prove our point. Cf. Cicero, *De Inv.* 1. xxx. 49. Polybius Sard. (Spengel 3. 108) gives nine figures related to εἰχών. [Tr.]

²³⁸Cf. Aristotle, *Rhet.* 3. 4 (1406) b: "When Homer [cf. *Il.* 20. 164] says of Achilles, 'Like a lion he rushed to meet his foe,' that is εἰχών." [Tr.]

²³⁹βασχανος ὀφθαλμός. For the example cf. Demosthenes, *Adv. Aristogeit.* 1. 52: "But he moves through the marketplace like a snake or a scorpion with sting raised, darting here and there, looking about for someone upon whom to bring down misfortune or calumny or evil of some kind." [Tr.]

²⁴⁰The Galli derived their name from a river Gallus in Phrygia; who drank of it went mad (Ovid, *Fasti* 4. 366). The worship of the Phrygian Mother Goddess was characterized by extreme wildness. [Tr.]

²⁴¹χαραχτηρίσμός, favored in comedy; e.g., Terence, *Hecyra* 439–41: "Well, I'll describe him so that you will recognize him—he is tall, ruddy, curly-headed, heavy-set, bleary-eyed, and has a face like a corpse." Quintilian, 9. 3. 99, excludes this from the figures. [Tr.]

man, with white and rather curly hair, blue-grey eyes, and a huge scar on his chin, if perhaps you can recall him to memory." This figure is not only serviceable, if you should wish to designate some person, but also graceful, if fashioned with brevity and clarity.

L. Character Delineation²⁴² consists in describing a person's character by the definite signs which, like distinctive marks, are attributes of that character; for example, if you should wish to describe a man who is not actually rich but parades as a moneyed man, you would say: "That person there, men of the jury, who thinks it admirable that he is called rich, see now first with what an air he surveys us. Does he not seem to you to be saying: 'I'd gladly give you clients' doles, if you didn't try my patience!' Yes, once he has propped his chin on his left hand²⁴³ he thinks that he dazzles the eyes of all with the gleam of his jewelry and the glitter of his gold. When he turns to his slave boy here, his only one—I know him, and you do not, I think—he calls him now by one name, now by another, and now by a third: 'Ho there, you, Sannio,' says he, 'come here, see that these barbarians²⁴⁴ don't turn things upside down,' so that unknowing hearers may think he is selecting one slave from among many. Whispering in the boy's ear he tells him either to arrange the dining-couches at home, or to ask his uncle for an Ethiop²⁴⁵ to attend him to the baths, or to station the Asturian thoroughbred before his front door, or to make ready some other flimsy stage property which should set off his vainglory.

²⁴²ἠθοποιία. *Morum ac vitae imitatio* in Cicero, *De Oratore* 3. 53. 204. Cf. Theophrastus, *Characters*, especially xxiii, "Pretentiousness." Theophrastus developed the type; Roman comedy favored it (cf. the narratives in Terence, and, for the theme, the *Miles Gloriosus* of Plautus). Of the orators Lysias employs Ethopoeia with special skill. ἠθοποιία may be connected with the simple style (see 4. x. 14 above), although the example of the figure shows an artificial elegance which *sermo* rarely had. Quintilian, 9. 3. 99, excludes ἠθοποιία from the figures. [Tr.]

²⁴³This gesture, used by Palaestrio in Plautus, *Miles Gloriosus* 209, is interpreted as indicating thought. Cf. the statue of Polyhymnia, No. 195 in A. Baumeister, *Bilder aus dem griech. und röm. Altertum*, Munich, 1889. [Tr.]

²⁴⁴Unlike Sannio, who was doubtless home-born. [Tr.]

²⁴⁵In Theophrastus, *Characters* 21. 4, the Man of Petty Ambition "sees to it that his attendant shall be an Ethiop." [Tr.]

Then he shouts, that all may hear: 'See to it that the money is carefully counted before nightfall,²⁴⁶ if possible.' The boy, by this time well knowing his master's character, says: 'You had better send more slaves over there if you want the counting done today.' 'Go then,' he answers, 'take with you Libanus and Sosia.' 'Very good, sir.'

"Then by chance come guests, whom the rascal had invited while traveling abroad in splendor. By this event the man is, you may be sure, quite embarrassed, but he still does not desist from his natural fault. 'You do well,' says he, 'to come, but you would have done better to go straight to me at my house.' 'That we would have done,' say they, 'had we known your house.' 'But surely it was easy to find that out from anyone. Still, come with me.'

"They follow. In the meanwhile all his conversation is spent in boasting. He asks: 'How are the crops in the fields?' He says that because his villas have been burnt, he cannot go to them, and does not yet dare rebuild them, 'although on my Tusculan estate, to be sure, I have commenced an insane undertaking—to build on the same foundations.'

LI. "While saying this he comes to a certain house in which a banqueting club was to meet on that very day. As if in fact he knew the owner, the rascal now enters the house with his guests. 'Here,' says he, 'is where I live.' He scrutinizes the silver which had been laid out, inspects the dining-couch which had been spread, and indicates his approval. A little slave boy comes up. He says aloud to the man that the master is about to arrive; would he wish to leave? 'Indeed?' says the man. 'Let us be off, my friends. My brother has arrived from the Falernian country. I shall go to meet him. Do come here at four o'clock.'²⁴⁷ The guests depart. The rascal rushes posthaste to his own home. They, as he had bidden, come at four o'clock. They ask for him, discover whose house it is, and, hoodwinked, betake themselves to an inn.

²⁴⁶Cf. Calpurnius Siculus 3. 63 f.; "Let him only vie in feeding kids in number equal to my bulls as these are counted at nightfall." [Tr.]

²⁴⁷The dinner hour; cf. Martial, *Epigr.* 4. 8. 7, 7. 51. 11. [Tr.]

"They see the man the next day, tell him their story, make their complaint and their accusation. He assures them that they had been deceived by the similarity of the place and had missed their way by a whole street; he had, to the prejudice of his health, waited for them late into the night. To his boy Sannio he had given the job of borrowing vessels, coverings, and servants, and the little slave, not wanting in cleverness, had quite energetically and artfully procured all these. The rascal leads his guests to his home. He says he has accommodated one of his friends with the loan of his largest mansion for a wedding. The boy reports that the silver is being recalled; for the lender had misgivings. 'Off with you,' says our man, 'I have obliged him with a mansion, I have given him my household of slaves. Does he want the silver, too? And yet, although I have guests, let him use it; we shall be content with Samian.'²⁴⁸

"Why should I tell what he next brings to pass? Such is the character of the man that what he effects by empty boasting and showing-off in one day I could hardly recount if I talked a whole year."

Character Delineations of this kind which describe the qualities proper to each man's nature carry very great charm, for they set before our eyes a person's whole character, of the boastful man, as I undertook to illustrate, or the envious or pompous man, or the miser, the climber, the lover, the voluptuary, the thief, the public informer—in short, by such delineation any one's ruling passion can be brought into the open.

LII. Dialogue²⁴⁹ consists in assigning to some person language which as set forth conforms with his character, for example: "When the city overflowed with soldiers, and all the citizens, oppressed by fear, kept themselves at home, this fellow appeared in military cloak, armed with a sword, in his hand a javelin. Three young men, equipped like him, follow behind. Suddenly he

²⁴⁸In this ware metal shapes were imitated. By no means the humblest ware, Samian yet represents the inferiority of earthen vessels as against those of metal. See F. O. Waagé, *Antiquity* II (1937). 46–55. [Tr.]

²⁴⁹διήλογοι. Quintilian, 9. 2. 29 ff., joins this figure and Personification (next below) as one. Cf. 4. xliii. above. [Tr.]

bursts into the house, and in a loud voice shouts: 'Where is he, the wealthy owner of this house? Why has he not appeared before me? Why are you silent?' At this all are struck dumb with terror. The wife of the unhappy man, bursting into tears, throws herself at this creature's feet, and says: 'By all that is dearest to you in life, I pray you, pity us.²⁵⁰ Destroy not anew them that are destroyed.²⁵¹ Use your good fortune kindly. Remember that you are human.' 'Why do you not surrender him to me and cease wailing into my ears? He shall not escape.'

"Meanwhile word of this person's arrival and of his clamorous threats of death is brought to the master of the house. Immediately upon receipt of these tidings, 'Hark, Gorgias,' he says to the attendant of his children, 'hide them, defend them, see that you bring them up safe to young manhood.' Hardly, had he uttered these words when, behold, this person appears, and says: 'You are still here, rash fool? Has not my voice frightened you to death? Appease my enmity and sate my wrath with your blood.' The master, with proud spirit, replies: 'I feared I might really be conquered. Now I see: You do not wish to contend with me in a trial at law, where failure brings shame, and success glory. You wish to kill me. True, I shall be killed, but I will die unconquered.' 'Sententious even at the point of death! You do not wish to beg your life of me when you see I have you in my power?' Then the woman: 'Nay, truly he begs and implores you. I plead with you, be moved to pity. And do you, in heaven's name, clasp his knees. He has you in his power. He has prevailed over you, and do you now prevail over your spirit.' 'Why do you not cease, my wife,' says he, 'to utter words unworthy of me? Be silent, and attend to your tasks. And you, why do you not, once for all, rob me of life, and yourself, by my death, of every hope of

enjoying life?' The intruder thrust the weeping woman from him, and as the master began to say something or other, worthy, I am sure, of his manliness, buried the sword in his side."²⁵²

I think that in this example the language assigned to each person was appropriate to his character—a precaution necessary to maintain in Dialogue.

There are likewise Hypothetical Dialogues, as follows: "Indeed what do we think those people will say if you have passed this judgment? Will not every one say as follows:——?" And then one must add what they will say.

LIII. Personification²⁵³ consists in representing an absent person as present, or in making a mute thing or one lacking form articulate, and attributing to it a definite form and a language or a certain behavior appropriate to its character, as follows: "But if this invincible city should now give utterance to her voice, would she not speak as follows? 'I, city of renown, who have been adorned with numerous trophies, enriched with unconditional triumphs, and made opulent by famous victories, am now vexed, O citizens, by your dissensions. Her whom Carthage with her wicked guile, Numantia with her tested strength, and Corinth with her polished culture, could not shake, do you now suffer to be trod upon and trampled underfoot by worthless weaklings?'" Again: "But if that great Lucius Brutus should now come to life again and appear here before you, would he not use this language? 'I banished

²⁵²Whereas the example of Character Delineation next above is in the spirit of comedy, this example is tragic in nature. As the notes indicate, it is probably of Greek origin, despite certain of its distinctively Roman features. Marx, *Proleg.*, p. 108, thinks that it may perhaps be referred to the *controversia* concerning the murder of Sulpicius, i. xv. 25 above. [Tr.]

²⁵³πρὸς ὄψιν ποιοῦν. Representing an absent person as present would not today be regarded as strictly within the meaning of Personification. Cf. Cicero, *De Oratore* 3. 53. 205 (*personarum ficta inductio*); Quintilian, 9. 2. 29–37. See Georg Reichel, *Quaestiones Progymnasm.*, diss. Leipzig, 1909, pp. 75–88, on this figure as a *progymnasma*. Making the dead speak was sometimes called εἰδωλοποιία. Cf. Cicero, *Orator* 25. 85: "[The unaffected Attic speaker] will not represent the commonwealth as speaking, or call the dead from the lower world." Volkman, p. 490, excludes Personification from the figures of thought; see also pp. 280 and 312 on its uses. [Tr.]

²⁵⁰The style is Greek. Cf., for example, Euripides, *Androm.* 892–3: πρὸς σε τῶνδε γονάτων ὄχτειρον ἡμᾶς ("I implore you by these knees, take pity on me"), and *Medea* 324; Sophocles, *Oed. Col.* 250, and *Philoct.* 468. [Tr.]

²⁵¹Cf. Euripides, *Alc.* 1065: "Take me not captive who am already captive"; Sophocles, *Antig.* 1030: "What feat is it to slay the slain anew?"; Ovid, *Epist. ex Ponto* 4. 16. 51: "What pleasure do you find, Malice, in driving the steel into limbs already dead?" [Tr.]

kings; you bring in tyrants. I created liberty, which did not exist; what I created you do not wish to preserve. I, at peril of my life, freed the fatherland; you, even without peril, do not care to be free.”²⁵⁴ Personification may be applied to a variety of things, mute and inanimate. It is most useful in the divisions under Amplification and in Appeal to Pity.

Emphasis²⁵⁵ is the figure which leaves more to be suspected than has been actually asserted. It is produced through Hyperbole, Ambiguity, Logical Consequence, Aposiopesis, and Analogy.

The emphasis is produced through Hyperbole²⁵⁶ when more is said than the truth warrants, so as to give greater force to the suspicion, as follows: “Out of so great a patrimony, in so short a time, this man has not laid by even an earthen pitcher wherewith to seek a fire for himself.”²⁵⁷

The emphasis is produced through Ambiguity²⁵⁸ when a word can be taken in two or more senses, but yet is taken in that sense which the speaker intends; for example, if you should say concerning a man who has come into many legacies: “Just look out, you, who look out for yourself so profitable.”²⁵⁹ LIV. Even as we must avoid those ambiguities which render the style obscure, so must we seek those which produce an emphasis of this sort. It will be easy to find them if we know and pay heed to the double and multiple meanings of words.

²⁵⁴Such sentiments as are expressed in these two passages might have been uttered by tribunes of the plebs in the time of Marius; see Kroehnert, p. 32. L. Junius Brutus liberated Rome from the Tarquins and founded the Roman consulate. [Tr.]

²⁵⁵ἔμφασις. Meaning conveyed by implication. Really more a trope than a figure. Cf. Quintilian, 8. 3. 83: “There are two kinds of Emphasis; one means more than it says, the other often means something it does not say.” [Tr.]

²⁵⁶See 4. xxxiii. 44 above (*superlatio*). [Tr.]

²⁵⁷This passage is in the spirit of the excerpts, in Cicero, *De Oratore* 2. 55. 223–6, from the speech delivered in probably 91. B.C. by L. Licinius Crassus on behalf of Cn. Planc(i)us against M. Junius Brutus, who had squandered his patrimony. Kroehnert, p. 31, thinks it may come from this speech, but there is no real evidence for the ascription. [Tr.]

²⁵⁸Quintilian, 6. 3. 47 ff., considers the play on double meanings only rarely telling, unless helped out by the facts.

²⁵⁹The play is upon the double meaning of *cernere*: to “discern” and, in judicial language, “to enter upon an inheritance;” this: “you who know exceedingly well how to enter upon bequests.” [Tr.]

Emphasis by Logical Consequence is produced when one mentions the things that follow from a given circumstance, thus leaving the whole matter in distrust; for example, if you should say to the son of a fishmonger: “Quiet, you, whose father used to wipe his nose with his forearm.”

The emphasis is produced through Aposiopesis²⁶⁰ if we begin to say something and then stop short, and what we have already said leaves enough to arouse suspicion, as follows: “He who so handsome and so young, recently at a stranger’s house—I am unwilling to say more.”

The emphasis is produced through Analogy, when we cite some analogue and do not amplify it, but by its means intimate what we are thinking, as follows: “Do not, Saturninus, rely too much on the popular mob—unavenged lie the Gracchi.”²⁶¹

This figure sometimes possesses liveliness and distinction in the highest degree; indeed it permits the hearer himself to guess what the speaker has not mentioned.

Conciseness²⁶² is the expressing of an idea by the very minimum of essential words, as follows: “On his way he took Lemnus, then left a garrison at Thasus, after that destroyed the Bithynian city, Cius; next, returning to the Hellespont, he forthwith occupies Abydus.”²⁶³ Again: “Just recently

²⁶⁰See 4. xxx. 41 above (*praecisio*). [Tr.]

²⁶¹L. Appuleius Saturninus, of praetorian descent, after being removed from the quaestorship by the Senate, joined the *populares*, and thereafter by demagoguery and violence fought the Senate until he was, in 100 B.C., declared a public enemy by that body and slain, the mob participating; see note on 4. xxii. 31 above. Saturninus was influenced by the political ideas of C. Gracchus. On his grain-bill see 1. xii. 21 above. [Tr.]

²⁶²βραχυλογία. Also, from another point of view, *επιτροχασμός*. Cf. *distincte concisa brevitatis* and *percursorio* in Cicero, *De Oratore* 3. 53. 202. Quintilian in 9. 3. 99 denies that βραχυλογία is a figure, yet in 9. 3. 50 treats it as a form of Asyndeton. [Tr.]

²⁶³Text and reference are uncertain. Friedrich Muenzer (*Philologus* 89 [1934]. 215–25) believes that the expedition made in 202–200 B.C. by Philip V of Macedon (Rome declared war in 200) is indicated. Cius was the city on the Propontis in Bithynia. The Rhodians were active against Philip; this passage may come from an actual oration, perhaps delivered, Muenzer thinks, by Apollonius Molo or Apollonius ὁ μαλαχός. W. Warde Fowler, *Class Rev.* 29 (1915). 136–7, and *Roman Essays and Interpretations*, Oxford, 1920, pp.

consul, next he was first man of the state; then he sets out for Asia; next he is declared a public enemy and exiled; after that he is made general-in-chief and finally consul for the seventh time.”²⁶⁴ Conciseness expresses a multitude of things within the limits of but a few words, and is therefore to be used often, either when the facts do not require a long discourse or when time will not permit dwelling upon them.

LV. It is Ocular Demonstration when an event is so described in words that the business seems to be enacted and the subject to pass vividly before our eyes. This we can effect by including what has preceded, followed, and accompanied the event itself, or by keeping steadily to its consequences or the attendant circumstances, as follows: “As soon as Gracchus saw that the people were wavering, in their fear that he might, by the Senate’s decree, be moved to change his mind, he ordered a convocation of the Assembly. In the meanwhile, this fellow, filled with wicked and criminal designs, bounds out of the temple of Jupiter. In a sweat, with

eyes blazing,²⁶⁵ hair bristling, toga awry, he begins to quicken his pace, several other men joining him. While the herald is asking attention for Gracchus, this fellow, beside himself, plants his heel on a bench, breaks off a leg of it with his right hand, and orders the others to do likewise. When Gracchus begins a prayer to the gods, these creatures in a rush attack him, coming together from all quarters, and a man in the crowd shouts: ‘Fly, Tiberius, fly! Don’t you see? Look behind you, I say!’ Then the fickle mob, stricken with sudden fear, take to flight. But this fellow, frothing crime from his mouth, breathing forth cruelty from the depth of his lungs, swings his arm, and, while Gracchus wonders what it means, but still does not move from the place where he stood, strikes him on the temple. Gracchus does not impair his inborn manliness by a single cry, but falls without uttering a sound. The assassin, bespattered with the pitiable blood of the bravest of heroes, looks about him as if he had done a most admirable deed, gaily extends his murderous hand to his followers as they congratulate him, and betakes himself to the temple of Jupiter.”²⁶⁶ Through this kind of narrative Ocular Demonstration is very useful in amplifying a matter and basing on it an appeal to pity, for it sets forth the whole incident and virtually brings it before our eyes.

LVI. I have here carefully collected all the principles of embellishing style. If, Herennius, you exercise yourself diligently in these, your speaking will possess impressiveness, distinction, and charm. As a result you will speak like a true orator, and the product of your invention will not be bare and inelegant, nor will it be expressed in commonplace language.

Now let us again and again jointly insist (for the matter will concern us both) upon our seeking, constantly and unremittingly, by study and exercise, to master the theory of the art. Others

95–99, thinks the reference is to Lucullus and his fleet in 84 (85) B.C., when he was clearing the Hellespont and Aegean of the forces of Mithridates for Sulla. Marx (*Viminacium*), *Rhein. Mus.* 47 (1892). 157–9, doubts the possibility of establishing the reference. For other conjectures, see A. von Domaszewski, *Jahreshefte der oesterr. archaeol. Inst. in Wien* 5 (1902). 147–9 (Lysimachia, in the Thracian Chersonese, and Lucullus), and H. Jordan, *Hermes* 8 (1874). 75–7 (Lysimachia, and Antiochus III after his defeat in 191 B.C. by the Romans at Thermopylae).

Alexander Numenii, *De Schemat.* (Spengel 3. 22), cites in illustration of ἐπιτροχασμός Demosthenes, *Phil.* 3. 27: “He has gone to the Hellespont; formerly he marched against Ambracia; Elis—that important city in the Peloponnese—he holds; against the Megarians he plotted lately.” If our author’s example does not come from a speech actually delivered, it may be an imitation of this passage. [Tr.]

²⁶⁴The reference is to Marius; see W. Warde Fowler, *Journ. of Philol.* 10 (1882). 197–205, and *Roman Essays and Interpretations*, pp. 91–95. Marius was consul for the first time in 107 B.C., and for the fifth in 101; in 100, during his sixth consulship, spent at Rome, he was in complete control of the state; he departed for Asia in voluntary exile in 99; when, after the contest with Sulla in 88, he was declared a public enemy by the Senate and exiled, he fled to Africa; he returned to Italy in the middle of 87, and soon thereafter received from Cinna the proconsular *imperium* and the *fasces*; he held the consulship for the seventh time in January 86 for a few days until his death. The career of Marius was a common theme in the rhetorical schools; cf. Seneca, *Contr.* 1. 1. 5, Valerius Maximus, 6. 9. 14. [Tr.]

²⁶⁵Cf. Cicero, *Verr.* 2. 5. 62. 161: “He [Verres] came into the Forum burning with criminal fury; his eyes blazed, and cruelty stood out on every feature of his face;” cited by Quintilian, 9. 2. 40, and by Gellius, 10. 3. 9. [Tr.]

²⁶⁶This is a partisan narrative, probably from a *controversia*, of the murder of Ti. Gracchus in 133 B.C. by P. Cornelius Scipio Nasica Serapio and his followers. On the accounts that we have in the ancient historians see Friedrich Muenzer, *P.-W.* 4. 1503. [Tr.]

find this difficult for three main reasons: they have no one with whom it is a pleasure to practice, or they lack self-confidence, or they do not know the right path to follow. For us none of these difficulties exists. We practice together gladly because of our friendship, which, originating in blood relationship, has in addition been strengthened by the study of philosophy. We are not without self-confidence, both because we have made no little progress, and because there are other and better studies which we pursue in life more intently, so that even if, in public speaking, we have not reached our goal, we shall miss but a little of the wholly perfect life.²⁶⁷ And

²⁶⁷Philodemus, *Rhet.*, ed. Sudhaus, I. 250, says that the art of rhetoric does not conduce to a life of happiness. [Tr.]

finally, we know the path to follow, because from these books no principle of rhetoric has been omitted.

Indeed I have shown how in every type of cause one ought to find ideas. I have told how it is proper to arrange these. I have disclosed the method of delivery. I have taught how we can have a good memory. I have explained the means by which to secure a finished style. If we follow these principles, our Invention will be keen and prompt, our Arrangement clear and orderly, our Delivery impressive and graceful, our Memory sure and lasting, our Style brilliant and charming. In the art of rhetoric, then, there is no more. All these faculties we shall attain if we supplement the precepts of theory with diligent practice.

Cicero

106–43 B.C.E.

Marcus Tullius Cicero was born near the rural town of Arpinum, Italy, to a family of the equestrian order (upper middle class). Cicero's family had upper-class connections, however, and they were able to obtain for him and his brother Quintus, to whom Cicero's major work of rhetorical theory, *De Oratore* (*Of Oratory*), is addressed, the kind of education usually reserved for members of the patrician order, those destined for high public office. The young men were sent to Rome to study rhetoric in Greek with Greek teachers, and they stayed in the home of the aristocratic politician Crassus (Cicero's spokesman in *De Oratore*). Cicero was also apprenticed to the noted lawyer Quintus Scaevola (who appears in *De Oratore*), and Cicero and his ambitious young friends flocked to hear eloquent politicians such as Sulpicius Rufus (also a character in *De Oratore*).

CICERO'S PLACE IN RHETORIC

Legal oratory was an important pathway to advancement in ancient Rome. Typically, although litigants might speak for themselves, they also enlisted one or more "patrons" who would plead their cases. Juries were large, trials were public and lengthy, and eloquent orators quickly attracted a following. The establishment of good character, both for the speaker and his client, was often crucial to winning a case. Excellence in forensic oratory could lead to political influence, since Roman law was considered to be the foundation of the state, and legal cases often had political implications. Conversely, high birth and political influence, as well as rhetorical skill, could make a man a powerful advocate. But even a nonpatrician might rise high through oratory, as Cicero's career illustrated. For most of his life, Rome was a republic governed by a senate. Prominence achieved through courtroom oratory could lead to political office and the chance to use one's rhetorical powers in directing the state.

Cicero launched his public career as a lawyer in his early twenties, in 81 B.C.E., not long after he wrote *De Inventione* (ca. 86 B.C.E.). This early treatise shows signs of having been amassed from Cicero's student notebooks. Although Cicero may have intended it to discuss all five canons of rhetoric, either he never completed it or the complete work did not survive. The text we have concentrates only on invention and, more specifically, on the use of stasis theory to define arguments in forensic speeches and on the proper formation of the parts of a forensic speech. Cicero later (in *De Oratore*) downplayed the work. Nevertheless, *De Inventione* and the *Rhetorica ad Herennium* (p. 243), which was also long thought to be Cicero's work, became the most widely read treatises on classical rhetoric after the classical period. For later rhetoricians, these works, both heavily influenced by Greek rhetoric, became the standard sources for the three categories of speech (deliberative, forensic, ceremonial) and also for the five canons of the rhetorical composing process (invention, arrangement, style, memory, delivery).

Cicero quickly became known as one of the most eloquent speakers in Rome. Around 79 B.C.E. he traveled to Greece and Asia Minor, a tour that wealthy young men often undertook to further their education but which, in his case, may already have been motivated in part by a need to absent himself for political reasons. He had just successfully defended a man accused of parricide by a protégé of Rome's then most powerful leader, Sulla. Cicero studied philosophy at the Academy in Athens, and from that point on he began to explore more deeply the Platonic and Aristotelian ideas to which his Greek teachers had introduced him in Rome. He regarded his knowledge of philosophy as crucial to his development as a rhetorician, evidently viewing it more as an aid to practical affairs than as a search for absolute truth.

Upon his return, Cicero became ever more active in the volatile political life of Rome. With his eloquence he overcame the social class barrier and won election to a series of offices, culminating in the highest, that of consul (analogous to the U.S. presidency), in 63 B.C.E. During this period representative government and the rule of law were gradually losing power (shortly after Cicero's death, the Republic would be replaced by the Empire). Cicero at first identified himself with liberal political factions, but he later turned to the Roman Senate in hope of finding a stronger defense against tyrants who would impose their rule by military force.

For personal safety, Cicero withdrew from Rome several times, and he was exiled for a year in 58. He used this enforced leisure to pursue scholarly and literary activities, including the composition of a number of treatises on rhetoric: *De Oratore* (excerpted here), 55 B.C.E.; *Brutus, Orator*, and *De Optimo Genere Oratorum*, 46; *De Partitione Oratoriae*, 45; and *Topica*, 44. Cicero discusses rhetorical theory, particularly the relationship between rhetoric and philosophy, in *De Oratore*, *De Partitione Oratoriae* (a summary prepared for his son Marcus), and *Topica* (an adaptation of Aristotle's philosophical topics for rhetorical invention; for more on the topics, see the headnote for Aristotle, p. 169). The conflict between "Atticist" and "Asiatic" standards of style is addressed in *Brutus* (a critical catalog of over two hundred Roman orators), *Orator* (excerpted here; a defense of Cicero's own range of styles), and *De Optimo Genere Oratorum* (a brief introduction to Cicero's edition—now lost—of Demosthenes's famous speech "On the Crown," in which Cicero depicts Demosthenes as the consummate rhetorical stylist).

The debate over Atticist and Asiatic styles had political overtones, in that such important leaders as Brutus and Julius Caesar espoused Atticism. The Atticists, actually neo-Atticists, distrusted the influence of later Greek rhetoric on Roman culture. They argued for the purity of diction and simplicity of syntax that they found in the early Greek eloquence of the Ten Attic Orators, especially Lysias. Atticists wished to establish a standard of "Latinity" for Roman oratory that would enforce similar purity and simplicity. They would resolve questions of grammar and usage by referring to the earliest Latin authors. Asiatic stylists, in contrast, sought epigrammatic terseness or florid emotionalism, after the manner of the Greek Sophistic Movement as it had prospered and evolved in Asia Minor.

Cicero's own style is characterized by amplification—naming the same thing two or three different ways in succession, adding elaborating or qualifying clauses,

and otherwise developing the periodic sentence pioneered by Isocrates. Cicero aims to evoke heightened emotions and at the same time to explore every facet of an idea—in Cicero's view, stylistic ornateness contributes to the development of content. Such ornateness earned him the label of Asiatic, which was to some extent deserved. Cicero was an avid admirer of Greek rhetoric, a subject he had studied in Athens and Rhodes. But Cicero vehemently denied affiliation with the Asiatics because he saw them as ignorant of philosophy. Yet he also condemned the Atticists for limiting the rhetorician's resources. Let the usage of contemporary, educated men and women—not ancient models—set the standard, he argued. Then the good orator can master the variety of styles needed for success on different occasions (he describes three such styles in *Orator*). If the rhetorician wishes to serve his country, he should cultivate such practical skills, not antiquarian literary interests.

Both as rhetorician and as politician, Cicero increasingly found himself defending isolated positions. He had no followers among the younger orators of his day. He also saw his republican ideals go down to defeat. The fifties and forties were times of great political upheaval in Rome. Orators were frequently constrained from speaking freely, and when they did speak, were often unable to influence the course of events. Street violence and governmental instability created conditions that were ripe for the emergence of a single strong leader who could restore order. One of the first of these was Julius Caesar. After Caesar's assassination in 44 B.C.E., Cicero attacked Mark Antony because he seemed the next most likely candidate for tyrant. Cicero supported Caesar Octavian in hopes that the mild young man would leave governing to the senate. But Cicero had lost his audience—or, more accurately, the prevailing political violence had destroyed any audience for rhetoric. When Antony and Octavian allied, temporarily as it turned out, Octavian agreed to Antony's demand that Cicero be killed. In 43 B.C.E. the old man was stabbed in his litter as he was fleeing the country, so the story goes, and his hands and head—which had written and spoken so powerfully—were nailed to the rostrum, the main public speakers' platform, in Rome (which was usually decorated with trophies of war). Octavian later defeated Antony and became the first Roman emperor, taking the title of Augustus. Ironically, Cicero had made Mark Antony's grandfather Antonius a principal character in *De Oratore*, the one who contests the views of Cicero as expressed through Crassus.

Scholars have seen the death of Cicero as a symbol not only of the power that orator commanded in Republican Rome, power that made him a real political threat, but also of the powerlessness imposed on rhetoric under the emperors, when no one dared to speak on political issues. Although he may have had no stylistic imitators in his own day, Cicero exerted great influence in the later classical period and dominated the study and practice of rhetoric up to the Renaissance, remaining strongly influential thereafter. His style in Latin stands as a model of excellence, and his political career has become synonymous with high-minded patriotism. Cicero, in his rhetorical theory, collected most of what was known about Isocrates, Plato, and Aristotle, gave it his own political stamp, and transmitted it both through Quintilian (p. 359) and through his own works, which along with the *Rhetorica ad Herennium* were by far the most widely read of any classical rhetorical treatises up to the

Renaissance. Much of our knowledge of rhetorical theory and practice from the time of Theophrastus, Aristotle's pupil, through Cicero's own day comes from Cicero's treatises on rhetoric.

De Oratore is generally regarded as Cicero's most complete, mature statement of his views on rhetoric. Its format imitates the Platonic dialogue, though Cicero's work is considerably longer. Cicero says that it imitates Aristotle as well—perhaps the format of his lost dialogue on rhetoric, the *Gryllus*. Also, Aristotle's *Rhetoric* had been brought to Rome shortly before Cicero began *De Oratore*, which is the first work to show its influence since the time of Theophrastus. The participants in the dialogue are all historical figures known to Cicero in his youth. The patrician Crassus, who had been consul and who had instructed young Cicero in rhetoric, promotes excellence in oratory by uniting broad learning and the study of both rhetoric and philosophy. The other principal discussant, Antonius, argues that natural eloquence, the most important qualification for excellence, can profit from instruction only in a more narrowly conceived, formulaic rhetoric. Crassus is generally viewed as the main spokesman for Cicero, but Cicero also does not entirely disagree with everything Antonius says—as in the Platonic dialogues, in which it can be erroneous to identify Plato's views exactly with those of Socrates. Although there are more long speeches here and fewer dialectical exchanges than in most Platonic dialogues, Cicero does show the speakers developing and modifying their positions during the debate. Hence it is difficult to point to any one passage as a concise statement of Cicero's rhetorical theory.

SYNOPSIS OF *DE ORATORE*

The excerpts here include selections from all three books of *De Oratore*. What follows is a synopsis of the entire work.

De Oratore begins with Cicero's nostalgic address to his brother Quintus, which recalls their student days. He then offers to expound his view of rhetoric by relaying a conversation that supposedly occurred at the country villa of Crassus. There the company discussed rhetoric in a pleasant outdoor setting in explicit emulation of Plato's *Phaedrus*.

Crassus begins much as Isocrates does in the *Antidosis*, by emphasizing oratory's crucial function in distinguishing human beings from animals and making civil order possible. He rejects the strictures brought against rhetoric in Plato's *Gorgias*. The rhetorician must master the branch of philosophy devoted to "human life and conduct" (Bk. I, Ch. 15).

Antonius objects that such knowledge is unnecessary because eloquence proceeds primarily from natural ability. Crassus, like Isocrates, agrees that natural ability is paramount. But Crassus then summarizes the usual Greco-Roman rhetoric curriculum as a valuable support to natural ability. Next he explains, with many examples, why the orator must know Roman law.

Antonius now takes the floor and announces (falsely) that he has no formal training in rhetoric. Like Socrates in the *Gorgias*, Antonius says one must begin by defining the scope of rhetoric: It is simply learning how to "use language agreeable

to the ear, and arguments suited to convince” in forensic and political debates (Bk. I, Ch. 49). Demosthenes exemplifies someone who needed no instruction other than practical experience to master this art.

Book I concludes with Crassus complaining that Antonius’s rhetorician is too much the “mechanic”; Crassus suspects Antonius of taking this view merely to oppose him, that is, to argue from antitheses like the Sophists they both deplore.

Book II begins with the resumption of the dialogue the following morning. Quintus Catulus and Gaius Julius Caesar have joined the company. Antonius opens the discussion by returning to the initial task he set for himself (Bk. I, Ch. 48), to define the scope of rhetoric. Again sounding like Socrates in the *Gorgias*, Antonius asserts that oratory is no art, for it deals in opinion, not knowledge. Hence it is “a subject which is founded upon falsehood, which seldom attains to demonstration, which sets its snares to entrap the fancies and often the delusions of mankind” (Bk. II, Ch. 7). Nevertheless, one can undertake the Aristotelian project of finding out “the reason why some speak better than others,” which makes oratory, if no art, at least wear “the likeness of an art” (Bk. II, Ch. 8).

Style and arrangement are the special province of rhetoric. Antonius would develop a young man’s rhetorical ability by asking him to imitate good models in both speech and writing. Next the student should practice arguing actual lawsuits, employing stasis theory. Common topics are useful only if intimately grounded in social custom and the circumstances of the particular case. Antonius claims to be following Aristotle in these views.

Turning from the use of rational appeals to the winning of the audience’s “favor,” Antonius suggests a mild, modest style for ethical appeals and a more fiery style for pathetic appeals. The orator should feel the emotions he wishes to evoke. Wit is also crucial to ethical and pathetic appeals, but it cannot be taught systematically. Antonius invites Caesar to discuss wit, which he does with many examples. Antonius then concludes Book II with brief discussions of rational appeals, panegyrics (ceremonial speeches), and memory.

Book III begins in an elegiac mood, with Cicero deploring the deaths of so many of the participants depicted in his dialogue, and reminding Quintus of the violence that often attends political careers. His consolation is to compose this dialogue, memorializing Crassus as Plato did Socrates.

Crassus now resumes the dialogue by resisting Antonius’s suggestion that he discuss style or “embellishment.” Words and matter cannot be separated in this way. Nevertheless, Crassus is willing to say that good style is always “correct, lucid, ornate and suitably appropriate to the particular matter under consideration” (Bk. III, Ch. 10). One learns correctness and lucidity in childhood, especially from one’s mother. Ornateness and appropriateness come not from rules but from broad learning.

Crassus indicts Socrates and Plato for separating philosophy and rhetoric. By so doing they “robbed” Isocrates, Gorgias, and others who deserved the name of philosopher. Crassus admires the wide-ranging interests of Gorgias and the other Sophists as well as their application of philosophy to political science. The Athenian leader Pericles, Plato’s student Dio (Dionysius), and Isocrates’ student Timotheus

are examples of the active philosopher Crassus admires. Crassus values the orator who possesses learning, for such an orator has the wisdom of the Platonic philosophers, but they do not have his power.

Returning to a more technical discussion of style, Crassus says that one should mold everyday language in a “dignified” style or a plain one, or chart a middle course between the two, depending upon the occasion. This is not hard to do if one simply strives to match thoughts and words. Then even the unlearned audience will respond. Next Crassus briefly discusses delivery.

The dialogue concludes with Catulus praising Crassus’s learning in these terms: He could “instruct the Greeks themselves” (Bk. III, Ch. 60).

Selected Bibliography

Cicero was a prolific writer, and much of his work survives. In addition to the works specifically on rhetoric, his letters repay attention in light of the insight they provide into the lives of the classical rhetoricians and their stylistic influence in the Renaissance. Standard translations of Cicero’s works on rhetoric (from which the excerpts below are taken) are those in the Loeb Classical Library series: *Brutus. Orator*, trans. G. L. Hendrickson and H. M. Hubbell (1962); *De Inventione. De Optimo Genere Oratorum. Topica*, trans. H. M. Hubbell (1960); *De Oratore, Books I and II*, trans. E. W. Sutton and H. Rackham (1959); and *De Oratore, Book III. De Fato. Paradoxa Stoichorum*, trans. H. Rackham (1960). Another highly regarded translation is Reverend John Selby Watson’s, a selection from which is now available in *Cicero on Oratory and Orators*, ed. Ralph Micken (1862; rpt. 1970, Southern Illinois University Press Landmark Series; reissued 1986, preface R. L. Enos). Micken’s introduction provides some useful bibliography.

Most histories of rhetoric discuss Cicero. For an overview of his career, consult George Kennedy’s *The Art of Rhetoric in the Roman World* (1972). Martin Clarke locates Cicero’s practice within the rhetoric education of his day in *Rhetoric at Rome* (1953). A good view of how Cicero’s speeches worked in his legal and political milieu can be gained from Paul Prill, “Cicero in Theory and Practice: The Securing of Good Will in the *Exordia* of Five Forensic Speeches” (*Rhetorica* 4 [1986]: 93–109), and James M. May, *Trials of Character: The Eloquence of Ciceronian Ethos* (1988). Important biographies are Torsten Petersson, *Cicero: A Biography* (1963), and Thomas N. Mitchell, *Cicero: The Ascending Years* (1979) and *Cicero: The Senior Statesman* (1991). On Cicero’s rhetorical theory, see H. M. Hubbell, *The Influence of Isocrates on Cicero, Dionysius and Aristides* (1913). A good brief introduction is “Cicero’s Rhetorical Theory” by Donovan J. Ochs (in *A Synoptic History of Classical Rhetoric*, ed. James J. Murphy, 1983, 1990). Placing the rhetorical theory in the context of Cicero’s political and moral philosophy is Richard McKeon’s “Introduction to the Philosophy of Cicero” (in *Marcus Tullius Cicero: Brutus. On the Nature of the Gods. On Divination. On Duties*, trans. H. Poteat, 1950).

For helpful discussions of Cicero’s literary style, see A. D. Leeman, *Orationis Ratio: The Stylistic Theories and Practices of the Roman Orators* (2 vols., 1963), and G. M. A. Grube, “Cicero: The Education of the Orator” (in his *The Greek and Roman Critics*, 1965). Richard Leo Enos has argued that Cicero’s style is influenced both by the cognitive characteristics of literacy and by Cicero’s intention to suggest broad-ranging political criticism through comments on specific events (*The Literate Mode of Cicero’s Legal Rhetoric*, 1988; this book also contains a helpful bibliography). For the influence of Cicero’s Latin style on writing in En-

glish, see W. G. Crane, *Wit and Rhetoric in the Renaissance* (1937); Morris Croll, *Style, Rhetoric, and Rhythm* (1966); W. S. Howell, *Logic and Rhetoric in England 1500–1700* (1956) and *Eighteenth-Century British Logic and Rhetoric* (1971); and S. Michael Halloran and Merrill D. Whitburn, “Ciceronian Rhetoric and the Rise of Science: The Plain Style Reconsidered” (in *The Rhetorical Tradition and Modern Writing*, ed. James J. Murphy, 1982).

From *De Oratore*

In Three Books Addressed to His Brother Quintus

BOOK I

Introduction. The author's circumstances.

I. When as often happens, brother Quintus, I think over and recall the days of old, those men always seem to me to have been singularly happy who, with the State at her best, and while enjoying high distinctions and the fame of their achievements, were able to maintain such a course of life that they could either engage in activity that involved no risk or enjoy a dignified repose. And time was when I used to imagine that I too should become entitled, with wellnigh universal approval, to some opportunity of leisure and of again directing my mind to the sublime pursuits beloved of us both, when once, the career of office complete and life too taking the turn towards its close,¹ the endless toil of public speaking and the business of canvassing should have come to a standstill. The hopes so born of my thoughts and plans have been cheated, alike by the disastrous times of public peril and by my manifold personal misfortunes. For the time of life which promised to be fullest of quiet and peace proved to be that during which the greatest volume of vexations and the most turbulent tempests arose. And notwithstanding

Books I and II translated by E. W. Sutton and H. Rackham; Book III translated by H. Rackham.

¹The metaphors are borrowed from the Circus. *Decursu honorum = decursis honoribus*: Cicero had been successively augur, quaestor, aedile, praetor, consul, and proconsul. [Tr.]

my desire, and indeed my profound longing, no enjoyment of leisure was granted me, for the cultivation and renewed pursuit, in your company, of those arts to which from boyhood you and I have been devoted. For in my early years² I came just upon the days when the old order was overthrown; then by my consulship I was drawn into the midst of a universal struggle and crisis, and my whole time ever since that consulship I have spent in stemming those billows which, stayed by my efforts from ruining the nation, rolled in a flood upon myself. But none the less, though events are thus harassing and my time so restricted, I will hearken to the call of our studies, and every moment of leisure allowed me by the perfidy of my enemies, the advocacy of my friends and my political duties, I will dedicate first and foremost to writing. And when you, brother, exhort and request me, I will not fail you, for no man's authority or wish can have greater weight with me than yours.

Education of the orator.

II. And now I must bring back to mind the recollection of an old story, not, I admit, as clear in detail as it might be, but, to my thinking, suited to what you ask; so that you may learn what men renowned above all others for eloquence have thought about the whole subject of oratory. For it is your wish, as you have often told me, that—since the unfinished and crude essays,³ which slipped out of the notebooks of my boy-

²Cicero was about eighteen years old at the outbreak of the civil strife between Marius and Sulla. [Tr.]

³The reference is to the juvenile *De Inventione* of Cicero, in two books. [Tr.]

hood, or rather of my youth, are hardly worthy of my present time of life and of my experience gained from the numerous and grave causes in which I have been engaged—I should publish something more polished and complete on these same topics; and generally you disagree with me, in our occasional discussions of this subject, because I hold that eloquence is dependent upon the trained skill of highly educated men, while you consider that it must be separated from the refinements of learning and made to depend on a sort of natural talent and on practice.

Great orators—why rare.

And for my own part, when, as has often happened, I have been contemplating men of the highest eminence and endowed with the highest abilities, it has seemed to me to be a matter for inquiry, why it was that more of them should have gained outstanding renown in all other pursuits, than have done so in oratory. For in whatever direction you turn your mind and thoughts, you will find very many excelling in every kind, not merely of ordinary arts, but of such as are almost the greatest. Who, for instance, in seeking to measure the understanding possessed by illustrious men, whether by the usefulness or the grandeur of their achievements, would not place the general above the orator? Yet who could doubt that, from this country alone, we could cite almost innumerable examples of leaders in war of the greatest distinction, but of men excelling in oratory a mere handful? Nay further, among the men who by their counsel and wisdom could control and direct the helm of state, many have stood out in our own day, and still more in the history of our fathers and even of our remoter ancestors, and yet through lengthy ages no good orator is to be found, and in each successive generation hardly a single tolerable one. And that no one may think that other pursuits, which have to do with abstruse branches of study, and what I may call the varied field of learning, should be compared with this art of oratory, rather than the merits of a commander or the wisdom of a statesman-like senator, let him turn his attention to these very kinds of art, and look around to see who, and how many, have been distinguished

therein; in this way he will most readily judge how scarce orators are now, and ever have been.

Eminence in all fields rare.

III. For indeed you cannot fail to remember that the most learned men hold what the Greeks call “philosophy” to be the creator and mother, as it were, of all the reputable arts, and yet in this field of philosophy it is difficult to count how many men there have been, eminent for their learning and for the variety and extent of their studies, men whose efforts were devoted, not to one separate branch of study, but who have mastered everything they could whether by scientific investigation or by the methods of dialectic. Who does not know, as regards the so-called mathematicians, what very obscure subjects, and how abstruse, manifold, and exact an art they are engaged in? Yet in this pursuit so many men have displayed outstanding excellence, that hardly one seems to have worked in real earnest at this branch of knowledge without attaining the object of his desire. Who has devoted himself wholly to the cult of the Muses, or to this study of literature, which is professed by those who are known as men of letters, without bringing within the compass of his knowledge and observation the almost boundless range and subject matter of those arts?

I think I shall be right in affirming this, that out of all those who have been engaged in the infinitely copious studies and learning pertaining to these arts, the smallest number of distinguished men is found among poets and orators; and even in this small number—within which a man of excellence very rarely emerges—if you will make a careful comparison of our own national supply and that of Greece, far fewer good orators will be found even than good poets. And this should seem even more marvellous because the subjects of the other arts are derived as a rule from hidden and remote sources, while the whole art of oratory lies open to the view, and is concerned in some measure with the common practice, custom, and speech of mankind, so that, whereas in all other arts that is most excellent which is farthest removed from the understanding and mental capacity of the untrained, in ora-

tory the very cardinal sin is to depart from the language of everyday life, and the usage approved by the sense of the community.

Oratory an attractive but difficult study.

IV. And yet it cannot truly be said either that more men devote themselves to the other arts, or that those who do so are stimulated to close study by greater pleasure, higher hopes, or more splendid rewards. In fact, to say nothing of Greece, which has ever claimed the leading part in eloquence, and of Athens, that discoverer of all learning, where the supreme power of oratory was both invented and perfected, in this city of our own assuredly no studies have ever had a more vigorous life than those having to do with the art of speaking.

For as soon as our world-empire had been established, and an enduring peace had assured us leisure, there was hardly a youth, athirst for fame, who did not deem it his duty to strive with might and main after eloquence. At first indeed, in their complete ignorance of method, since they thought there was no definite course of training or any rules of art, they used to attain what skill they could by means of their natural ability and of reflection. But later, having heard the Greek orators, gained acquaintance with their literature and called in Greek teachers, our people were fired with a really incredible enthusiasm for eloquence. The importance, variety, and frequency of current suits of all sorts aroused them so effectually, that, to the learning which each man had acquired by his own efforts, plenty of practice was added, as being better than the maxims of all the masters. In those days too, as at present, the prizes open to this study were supreme, in the way of popularity, wealth, and reputation alike. As for ability again—there are many things to show it—our fellow-countrymen have far excelled the men of every other race. And considering all this, who would not rightly marvel that, in all the long record of ages, times, and states, so small a number of orators is to be found?

But the truth is that this oratory is a greater thing, and has its sources in more arts and branches of study, than people suppose.

Its wide demands on the student;

V. For, where the number of students is very great, the supply of masters of the very best, the quality of natural ability outstanding, the variety of issues unlimited, the prizes open to eloquence exceedingly splendid, what else could anyone think to be the cause, unless it be the really incredible vastness and difficulty of the subject? To begin with, a knowledge of very many matters must be grasped, without which oratory is but an empty and ridiculous swirl of verbiage; and the distinctive style has to be formed, not only by the choice of words, but also by the arrangement of the same; and all the mental emotions, with which nature has endowed the human race, are to be intimately understood, because it is in calming or kindling the feelings of the audience that the full power and science of oratory are to be brought into play. To this there should be added a certain humor, flashes of wit, the culture befitting a gentleman, and readiness and terseness alike in repelling and in delivering the attack, the whole being combined with a delicate charm and urbanity. Further, the complete history of the past and a store of precedents must be retained in the memory, nor may a knowledge of statute law and our national law in general be omitted. And why should I go on to describe the speaker's delivery? That needs to be controlled by bodily carriage, gesture, play of features and changing intonation of voice; and how important that is wholly by itself, the actor's trivial art and the stage proclaim; for there, although all are laboring to regulate the expression, the voice, and the movements of the body, everyone knows how few actors there are, or ever have been, whom we could bear to watch! What need to speak of that universal treasure-house the memory? Unless this faculty be placed in charge of the ideas and phrases which have been thought out and well weighed, even though as conceived by the orator they were of the highest excellence, we know that they will all be wasted.

Let us therefore cease to wonder what may be the cause of the rarity of orators, since oratory is the result of a whole number of things, in any one of which to succeed is a great achievement, and let us rather exhort our children, and the others

whose fame and repute are dear to us, to form a true understanding of the greatness of their task, and not to believe that they can gain their coveted object by reliance on the rules or teachers or methods of practice employed by everybody, but to rest assured that they can do this by the help of certain other means.

even if only pursued for practical purposes, as at Rome.

VI. And indeed in my opinion, no man can be an orator complete in all points of merit, who has not attained a knowledge of all important subjects and arts. For it is from knowledge that oratory must derive its beauty and fullness, and unless there is such knowledge, well-grasped and comprehended by the speaker, there must be something empty and almost childish in the utterance. Not that I am going to lay so heavy a burden upon orators—least of all upon our own, amid all the distractions of life in Rome—as to hold that there is nothing of which it is permissible for them to be ignorant, although the significance of the term “orator,” and the mere act of professing eloquence, seem to undertake and to promise that every subject whatsoever, proposed to an orator, will be treated by him with both distinction and knowledge. But being assured that to most men this appears a vast and indeed limitless enterprise, and perceiving that the Greeks, men not only abounding in genius and learning, but also amply endowed with leisure and the love of study, have already made a sort of division of the arts—nor did every student of theirs work over the whole field by himself, but they separated from other uses of speech that portion of oratory which is concerned with the public discussions of the law courts and of debate, and left that branch only to the orator—I shall not include in this work more than has been assigned to this type of oratory by the all but unanimous judgment of the most eminent men, after investigation and long argument of the matter;

Dialogue form appropriate for the present subject.

nor shall I recall, from the cradle of our boyish learning of days gone by, a long string of precepts, but I shall repeat the things I heard of as

once handled in a discussion between men who were the most eloquent of our nation, and of the highest rank in distinction of every kind. Not that I despise what the Greek craftsmen and teachers of oratory have left us; but that is open to the view and ready to the hand of every man, nor could it be more happily set forth or more clearly expounded by any interpretations of my own, so that you will forgive me, brother mine, I do believe, if I prefer to Greek instruction the authoritative judgment of those to whom the highest honors in eloquence have been awarded by our own fellow-countrymen.

Date, scene, and persons.

VII. I remember then being told how, at the time when Philippus, though consul, was furiously assailing the policy of the leading men, and the tribuneship of Drusus, undertaken in support of the power of the Senate, had begun to show symptoms of shock and weakness, Lucius Crassus, on the plea of recruiting his energies, betook himself during the days of the Roman Games to his seat at Tusculum, whither (as the story went) there came Quintus Mucius, once his father-in-law, and Marcus Antonius, a partner in the political designs of Crassus, and a man united with him in the closest intimacy. There had also gone out of town, in the company of Crassus, two young men who were very great friends of Drusus, and in whom the older generation at that time reposed high hopes of their maintaining the traditions of their order: they were Gaius Cotta, just then seeking the tribuneship of the commons, and Publius Sulpicius, who was thought likely to become a candidate for that magistracy in succession to him.⁴ This party, on the first day and up to a very late hour, held long debate together, concerning the crisis and the state of politics generally, which in fact had been the occasion of their meeting. And Cotta recounted many things which were spoken of in that discussion with

⁴All the participants in this dialogue are historical figures Cicero had known in his youth. He had been apprenticed to Quintus Scaevola, a noted lawyer, and may also have studied rhetoric with Lucius Crassus, the most celebrated political orator of the day. Marcus Antonius was the grandfather of the man who had Cicero killed, Mark Antony. [Ed.]

deep regret by the three speakers of consular rank, in such inspired fashion that (in his words) no evil had since befallen the community which those men, so long before, had not seen to be hanging over it; but (he would add) when the colloquy was completely finished, so exquisite was the urbanity displayed by Crassus, that, as soon as they had bathed and settled down to table, the melancholy turn taken by the earlier discussion was wholly banished, and such was the man's pleasantness and so great the charm of his humor that it seemed as though a day in the Senate-house was closing with supper at Tusculum.

Then Cotta went on to say how on the morrow, when those older men had rested sufficiently and everyone had come into the garden-walk, Scaevola, after taking two or three turns, observed, "Crassus, why do we not imitate Socrates as he appears in the *Phaedrus* of Plato? For your plane-tree has suggested this comparison to my mind, casting as it does, with its spreading branches, as deep a shade over this spot, as that one cast whose shelter Socrates sought⁵—which to me seems to owe its eminence less to 'the little rivulet' described by Plato than to the language of his dialogue—and what Socrates did, whose feet were thoroughly hardened, when he threw himself down on the grass and so began the talk which philosophers say was divine—such ease surely may more reasonably be conceded to my own feet." "Nay," answered Crassus, "but we will make things more comfortable still," whereupon, according to Cotta, he called for cushions, and they all sat down together on the benches that were under the plane-tree.

Thesis: the importance of oratory to society and the state.

VIII. In that place, as Cotta was fond of relating, Crassus introduced a conversation on the pursuit of oratory, with a view to relieving all minds from the discourse of the day before. He began by saying that Sulpicius and Cotta seemed not to need exhortation from him but rather commendation, seeing that thus early they had acquired

such skill as not merely to be ranked above their equals in age, but to be comparable with their elders. "Moreover," he continued, "there is to my mind no more excellent thing than the power, by means of oratory, to get a hold on assemblies of men, win their good will, direct their inclinations wherever the speaker wishes, or divert them from whatever he wishes. In every free nation, and most of all in communities which have attained the enjoyment of peace and tranquillity, this one art has always flourished above the rest and ever reigned supreme. For what is so marvelous as that, out of the innumerable company of mankind, a single being should arise, who either alone or with a few others can make effective a faculty bestowed by nature upon every man? Or what so pleasing to the understanding and the ear as a speech adorned and polished with wise reflections and dignified language? Or what achievement so mighty and glorious as that the impulses of the crowd, the consciences of the judges, the austerity of the Senate, should suffer transformation through the eloquence of one man? What function again is so kingly, so worthy of the free, so generous, as to bring help to the suppliant, to raise up those that are cast down, to bestow security, to set free from peril, to maintain men in their civil rights? What too is so indispensable as to have always in your grasp weapons wherewith you can defend yourself, or challenge the wicked man, or when provoked take your revenge?

"Nay more (not to have you for ever contemplating public affairs, the bench, the platform, and the Senate-house), what in hours of ease can be a pleasanter thing or one more characteristic of culture, than discourse that is graceful and nowhere uninstructed? For the one point in which we have our very greatest advantage over the brute creation is that we hold converse one with another, and can reproduce our thought in word. Who therefore would not rightly admire this faculty, and deem it his duty to exert himself to the utmost in this field, that by so doing he may surpass men themselves in that particular respect wherein chiefly men are superior to animals? To come, however, at length to the highest achievements of eloquence, what other power could have been strong enough either to gather

⁵*Phaedrus* 229 A, 230 B. [Tr.]

scattered humanity into one place, or to lead it out of its brutish existence in the wilderness up to our present condition of civilization as men and as citizens, or, after the establishment of social communities, to give shape to laws, tribunals, and civic rights? And not to pursue any further instances—wellnigh countless as they are—I will conclude the whole matter in a few words, for my assertion is this: that the wise control of the complete orator is that which chiefly upholds not only his own dignity, but the safety of countless individuals and of the entire State. Go forward therefore, my young friends, in your present course, and bend your energies to that study which engages you, that so it may be in your power to become a glory to yourselves, a source of service to your friends, and profitable members of the Republic.”

Thesis challenged: (1) the achievement of oratory questioned;

IX. Thereupon Scaevola observed, in his courteous way, “On his other points I am in agreement with Crassus (that I may not disparage the art or the renown of my father-in-law Gaius Laelius, or of my son-in-law here), but the two following, Crassus, I am afraid I cannot grant you: first your statement that the orators were they who in the beginning established social communities, and who not seldom have preserved the same intact, secondly your pronouncement that, even if we take no account of the forum, of popular assemblies, of the courts of justice, or of the Senate-house, the orator is still complete over the whole range of speech and culture. For who is going to grant you, that in shutting themselves up in walled cities, human beings, who had been scattered originally over mountain and forest, were not so much convinced by the reasoning of the wise as snared by the speeches of the eloquent, or again that the other beneficial arrangements involved in the establishment or the preservation of States were not shaped by the wise and valiant but by men of eloquence and fine diction? Or do you perhaps think that it was by eloquence, and not rather by good counsel and singular wisdom, that the great Romulus gathered together his shepherds and refugees, or brought about mar-

riages with the Sabines, or curbed the might of the neighboring tribes? Is there a trace of eloquence to be discerned in Numa Pompilius? Is there a trace in Servius Tullius? Or in the other kings who have contributed so much that is excellent to the building-up of the State? Then even after the kings had been driven forth (and we note that such expulsion had itself been accomplished by the mind of Lucius Brutus and not by his tongue), we do not see how all that followed was full of planning and empty of talking? For my part, indeed, should I care to use examples from our own and other communities, I could cite more instances of damage done, than of aid given to the cause of the State by men of first-rate eloquence, but putting all else aside, of all men to whom I have listened except to you two, Crassus, it seems to me that the most eloquent were Tiberius and Gaius Sempronius, whose father, a man of discretion and character, but no speaker whatever, was many a time and most particularly when Censor the salvation of the commonwealth. Yet it was not any studied flow of speech, but a nod and a word of his that transferred the freedmen into the city tribes;⁶ and had he not done so, we should long ago have lost the constitution which, as it is, we preserve only with difficulty. His sons, on the other hand, who were accomplished speakers and equipped for oratory with every advantage of nature or training, after they had taken over a State that was flourishing exceedingly because of their father’s counsels and their ancestors’ military achievements, wrecked the commonwealth by the use of this eloquence to which, according to you, civil communities still look for their chief guidance.

(2) other factors of civilization more important;

X. “What of our ancient ordinances and the customs of our forefathers? What of augury, over which you and I, Crassus, preside, greatly to the welfare of the Republic? What of our religious rites and ceremonies? What of those rules of private law, which have long made their home in

⁶Ti. Sempronius Gracchus, censor 169 B.C., enforced an existing rule. Freedmen not owning land worth at least 30,000 HS. were limited to the four city tribes. The restriction was removed, probably in 304, but was restored in 220. [Tr.]

our family, though we have no reputation for eloquence? Were these things contrived or investigated or in any way taken in hand by the tribe of orators? Indeed I remember that Servius Galba, a man who spoke as a god, and Marcus Aemilius Porcina and Gaius Carbo himself, whom you crushed in your early manhood, were all of them ignorant of the statutes, all at a complete loss among the institutions of our ancestors, all uninstructed in the law of the Romans; and except yourself, Crassus, who rather from your own love of study, than because to do so was any peculiar duty of the eloquent, have learned the Roman system from our family, this generation of ours is unversed in law to a degree that sometimes makes one blush.

(3) the only field of oratory the law courts and parliament.

“But as for the claim you made at the close of your speech, and made as though in your own right—that whatever the topic under discussion, the orator could deal with it in complete fullness—this, had we not been here in your own domain, I would not have borne with, and I should be at the head of a multitude who would either fight you by injunction, or summon you to make joint seizure by rule of court, for so wantonly making forcible entry upon other people’s possessions.

“For, to begin with, all the disciples of Pythagoras and Democritus would bring statutory process against you, and the rest of the physicists would assert their claims in court, elegant and impressive speakers with whom you could not strive and save your stake. Besides this, schools of philosophers, back to great Socrates their fountain-head, would beset you: they would demonstrate that you have learned nothing concerning the good in life, or of the evil, nothing as to the emotions of the mind or of human conduct, nothing of the true theory of living, that you have made no research at all and are wholly without understanding respecting these things; and after this general assault upon you each sect would launch its particular action against you in detail. The Academy would be at your heels, compelling you to deny in terms your own allegation,

whatever it might have been. Then our own friends the Stoics would hold you entangled in the toils of their wranglings and questionings. The Peripatetics again would prove that it is to them that men should resort for even those very aids and trappings of eloquence which you deem to be the special aids of orators, and would show you that on these subjects of yours Aristotle and Theophrastus wrote not only better but also much more than all the teachers of rhetoric put together. I say nothing of the mathematicians, men of letters or devotees of the Muses, with whose arts this rhetorical faculty of yours is not in the remotest degree allied. And so, Crassus, I do not think you should make professions so extensive and so numerous. What you are able to guarantee is a thing great enough, namely, that in the courts whatever case you present should appear to be the better and more plausible, that in assemblies and in the Senate your oratory should have most weight in carrying the vote, and lastly, that to the intelligent you should seem to speak eloquently and to the ignorant truthfully as well. If you can achieve anything more than this, therein you will seem to me not an orator but a Crassus, who is making use of some talent that is peculiarly his own and not common to orators in general.”

Reply to challenge: function of oratory wider—it requires science, and science requires style.

XI. Then Crassus replied, “I know very well, Scaevola, that these views of yours are often put forward and discussed among the Greeks. For I listened to their most eminent men, on my arrival in Athens as a quaestor from Macedonia, at a time when the Academy was at its best, as was then asserted, with Charmadas, Clitomachus and Aeschines to uphold it. There was also Metrodorus, who, together with the others, had been a really diligent disciple of the illustrious Carneades himself, a speaker who, for spirited and copious oratory, surpassed, it was said, all other men. Mnesarchus too was in his prime, a pupil of your great Panaetius, and Diodorus, who studied under Critolaus the Peripatetic. There were many others besides, of distinguished fame as philosophers, by all of whom, with one voice as it were, I perceived that the orator was driven

from the helm of State, shut out from all learning and knowledge of more important things, and thrust down and locked up exclusively in law-courts and petty little assemblies, as if in a pounding-mill. But I was neither in agreement with these men, nor with the author and originator of such discussions, who spoke with far more weight and eloquence than all of them—I mean Plato—whose *Gorgias* I read with close attention under Charmadas during those days at Athens, and what impressed me most deeply about Plato in that book was, that it was when making fun of orators that he himself seemed to me to be the consummate orator. In fact controversy about a word has long tormented those Greeklings, fonder as they are of argument than of truth. For, if anyone lays it down that an orator is a man whose sole power is that of speaking copiously before the Praetor or at a trial, or in the public assembly or the Senate-house, none the less even to an orator thus limited such critic must grant and allow a number of attributes, inasmuch as without extensive handling of all public business, without a mastery of ordinances, customs and general law, without a knowledge of human nature and character, he cannot engage, with the requisite cleverness and skill, even in these restricted activities. But to a man who has learned these things, without which no one can properly ensure even those primary essentials of advocacy, can there be anything lacking that belongs to the knowledge of the highest matters? If, on the other hand, you would narrow the idea of oratory to nothing but the speaking in ordered fashion, gracefully and copiously, how, I ask, could your orator attain even so much, if he were to lack that knowledge whereof you people deny him the possession? For excellence in speaking cannot be made manifest unless the speaker fully comprehends the matter he speaks about. It follows that, if the famous natural philosopher Democritus spoke with elegance, as he is reported and appears to me to have spoken, those notable subjects of his discourse belonged to the natural philosopher, but his actual elegance of diction must be put down to the orator. And if Plato spoke with the voice of a god of things very far away from political debate, as I allow that he did, if again Aristotle and Theophrastus and

Carneades, on the themes which they treated, were eloquent and displayed charm of style and literary form, then, granting that the topics of their discourse may be found in certain other fields of research, yet their actual style is the peculiar product of this pursuit which we are now discussing and investigating, and of no other. For we see that sundry authorities dealt with these same subjects in spiritless and feeble fashion, Chrysippus for instance, reputed as he is to have been the most acute of disputants, and not to have failed to meet the requirements of philosophy just because he had not acquired this gift of eloquence from an alien art.

XII. "What then is the difference, or by what means will you discriminate between the rich and copious diction of those speakers whom I have mentioned, and the feebleness of such as do not adopt this variety and elegance of language? The sole distinction will surely be that the good speakers bring, as their peculiar possession, a style that is harmonious, graceful, and marked by a certain artistry and polish. Yet this style, if the underlying subject matter be not comprehended and mastered by the speaker, must inevitably be of no account or even become the sport of universal derision. For what so effectually proclaims the madman as the hollow thundering of words—be they never so choice and resplendent—which have no thought or knowledge behind them? Therefore whatever the theme, from whatever art or whatever branch of knowledge it be taken, the orator, just as if he had got up the case for a client, will state it better and more gracefully than the actual discoverer and the specialist. For if anyone is going to affirm that there are certain ideas and subjects which specially belong to orators, and certain matters whereof the knowledge is railed-off behind the barriers of the Courts, while I will admit that these oratorical activities of ours are exercised within this area with less intermission than elsewhere, nevertheless among these very topics there are points in abundance which even the so-called professors of rhetoric neither teach nor understand. Who indeed does not know that the orator's virtue is pre-eminently manifested either in rousing men's hearts to anger, hatred, or indignation, or in recalling them from these same passions to

mildness and mercy? Wherefore the speaker will not be able to achieve what he wants by his words, unless he has gained profound insight into the characters of men, and the whole range of human nature, and those motives whereby our souls are spurred on or turned back. And all this is considered to be the special province of philosophers, nor will the orator, if he take my advice, resist their claim; but when he has granted their knowledge of these things, since they have devoted all their labor to that alone, still he will assert his own claim to the oratorical treatment of them, which without that knowledge of theirs is nothing at all. For this is the essential concern of the orator, as I have often said before,—a style that is dignified and graceful and in conformity with the general modes of thought and judgment.

Rhetoric is a science.

XIII. “And while I acknowledge that Aristotle and Theophrastus have written about all these things, yet consider, Scaevola, whether it is not wholly in my favor, that, whereas I do not borrow from them the things that they share with the orator, they on their part grant that their discussions on these subjects are the orator’s own, and accordingly they entitle and designate all their other treatises by some name taken from their distinctive art, but these particular books as dealing with Rhetoric. And indeed when, while a man is speaking — as often happens — such commonplaces have cropped up as demand some mention of the immortal gods, of dutifulness, harmony, or friendship, of the rights shared by citizens, by men in general, and by nations, of fair-dealing, moderation or greatness of soul, or virtue of any and every kind, all the academies and schools of philosophy will, I do believe, raise the cry that all these matters are their exclusive province, and in no way whatever the concern of the orator. But when I have allowed that they may debate these subjects in their holes and corners, to pass an idle hour, it is to the orator none the less that I shall entrust and assign the task of developing with complete charm and cogency the same themes which they discuss in a sort of thin and bloodless style. These points I used to argue at Athens with the philosophers in person,

under pressure from our friend Marcus Marcellus, who is now Aedile of the Chair,⁷ and assuredly, if he were not at this moment producing the Games, would be taking part in our present colloquy; indeed even in those days of his early youth his devotion to these studies was marvelous.

Exposition demands both knowledge and style.

“But now as regards the institution of laws, as regards war and peace, allies and public dues, and the legal rights assigned to classes of citizens according to variations of rank and age, let the Greeks say, if they please, that Lycurgus and Solon (although I hold that they should be rated as eloquent) were better informed than Hyperides or Demosthenes, who were really accomplished and highly polished orators; or let our own folk prefer in this regard the Ten Commissioners—who wrote out the Twelve Tables and were necessarily men of practical wisdom—to Servius Galba and your father-in-law Gaius Laelius, whose outstanding renown for eloquence is established. For never will I say that there are not certain arts belonging exclusively to those who have employed all their energies in the mastery and exercise thereof, but my assertion will be that the complete and finished orator is he who on any matter whatever can speak with fullness and variety.

The orator must know the facts.

XIV. “Indeed in handling those causes which everybody acknowledges to be within the exclusive sphere of oratory, there is not seldom something to be brought forth and employed, not from practice in public speaking—the only thing you allow the orator—but from some more abstruse branch of knowledge. I ask, for instance, whether an advocate can either assail or defend a commander-in-chief without experience of the art of war, or sometimes too without knowledge of the various regions of land or sea? Whether he can

⁷The “curule” *aediles* were distinguished from the *aediles plebis* by their right to use the *sella curulis* and the *toga praetexta*. [Tr.]

address the popular assembly in favor of the passing or rejection of legislative proposals, or the Senate concerning any of the departments of State administration, if he lack consummate knowledge—practical as well as theoretical—of political science? Whether a speech can be directed to inflaming or even repressing feeling and passion—a faculty of the first importance to the orator—unless the speaker has made a most careful search into all those theories respecting the natural characters and the habits of conduct of mankind, which are unfolded by the philosophers?

Science and philosophy must come to oratory for style.

“And I rather think I shall come short of convincing you on my next point—at all events I will not hesitate to speak my mind: your natural science itself, your mathematics, and other studies which just now you reckoned as belonging peculiarly to the rest of the arts, do indeed pertain to the knowledge of their professors, yet if anyone should wish by speaking to put these same arts in their full light, it is to oratorical skill that he must run for help. If, again, it is established that Philo, that master-builder who constructed an arsenal for the Athenians, described the plan of his work very eloquently to the people, his eloquence must be ascribed not to his architectural, but rather to his oratorical ability. So too, if Marcus Antonius here had had to speak on behalf of Hermodorus upon the construction of dockyards, having got up his case from his client, he would then have discoursed gracefully and copiously of an art to which he was not a stranger. Asclepiades also, he with whom we have been familiar both as physician and as friend, at the time when he was surpassing the rest of his profession in eloquence, was exhibiting, in such graceful speaking, the skill of an orator, not that of a physician. In fact that favorite assertion of Socrates—that every man was eloquent enough upon a subject that he knew—has in it some plausibility but no truth: it is nearer the truth to say that neither can anyone be eloquent upon a subject that is unknown to him, nor, if he knows it perfectly and yet does not know how to shape and polish his style, can he speak fluently even upon that which he does know.

The orator can get up technicalities, but he must be versed in political and moral science.

XV. “Accordingly, should anyone wish to define in a comprehensive manner the complete and special meaning of the word, he will be an orator, in my opinion worthy of so dignified a title, who, whatever the topic that crops up to be unfolded in discourse, will speak thereon with knowledge, method, charm and retentive memory, combining with these qualifications a certain distinction of bearing. If however someone considers my expression ‘whatever the topic’ to be altogether too extensive, he may clip and prune it to his individual taste, but to this much I shall hold fast—though the orator be ignorant of what is to be found in all the other arts and branches of study, and know only what is dealt with in debate and the practice of public-speaking; none the less, if he should have to discourse even on these other subjects, then after learning the technicalities of each from those who know the same, the orator will speak about them far better than even the men who are masters of these arts. For example, should our friend Sulpicius here have to speak upon the art of war, he will inquire of our relative Gaius Marius, and when he has received his teachings, will deliver himself in such fashion as to seem even to Gaius Marius to be almost better informed on the subject than Gaius Marius himself; while if his topic is to be the law of private rights, he will consult yourself and, notwithstanding your consummate learning and skill in these very things which you have taught him, he will surpass you in the art of exposition. If again some matter should confront him wherein he must speak of human nature, human vices or the passions, of moderation or self-control, of sorrow or death, then perhaps if he thinks fit—although an orator must have knowledge of such things—he will have taken counsel with Sextus Pompeius, a man accomplished in moral science; so much he will assuredly achieve, that whatever his subject and whoever his instructor, on that subject he will express himself far more gracefully than his master himself. Nevertheless, if he will listen to me, since philosophy is divided into three branches, which respectively deal with the mysteries of nature, with the subtleties of dialectic

tic, and with human life and conduct, let us quit claim to the first two, by way of concession to our indolence, but unless we keep our hold on the third, which has ever been the orator's province, we shall leave the orator no sphere wherein to attain greatness. For which reason this division of philosophy, concerned with human life and manners, must all of it be mastered by the orator; as for the other matters, even though he has not studied them, he will still be able, whenever the necessity arises, to beautify them by his eloquence, if only they are brought to his notice and described to him.

The orator, like the poet, needs a wide education.

XVI. "Indeed if it is agreed in learned circles that a man who knew no astronomy—Aratus to wit—has sung of the heavenly spaces and the stars in verse of consummate finish and excellence, and that another who was a complete stranger to country life, Nicander of Colophon, has written with distinction on rural affairs, using something of a poet's skill and not that of a farmer, what reason is there why an orator should not discourse most eloquently concerning those subjects which he has conned for a specific argument and occasion? The truth is that the poet is a very near kinsman of the orator, rather more heavily fettered as regards rhythm, but with ampler freedom in his choice of words, while in the use of many sorts of ornament he is his ally and almost his counterpart; in one respect at all events something like identity exists, since he sets no boundaries or limits to his claims, such as would prevent him from ranging whither he will with the same freedom and license as the other. For with regard to your remark, Scaevola, that, had you not been in my domain, you would not have endured my assertion that the orator must be accomplished in every kind of discourse and in every department of culture, I should certainly never have made that assertion, did I consider myself to be the man I am endeavoring to portray. But, as was often said by Gaius Lucilius—who was not altogether pleased with you, and for that very reason less intimate with myself than he wished, but for all that an instructed critic and thorough gentleman of the city—my opinion is

this, that no one should be numbered with the orators who is not accomplished in all those arts that befit the well-bred; for though we do not actually parade these in our discourse, it is none the less made clear to demonstration whether we are strangers to them or have learned to know them. Just as ball-players do not in their game itself employ the characteristic dexterity of the gymnasium, and yet their very movements show whether they have had such training or know nothing of that art; and, just as, in the case of those who are portraying anything, even though at the moment they are making no use of the painter's art, there is nonetheless no difficulty in seeing whether or not they know how to paint; even so is it with these same speeches in the Courts, the popular assembly and the Senate-house—granting that the other arts may not be specially brought into play, still it is made easily discernible whether the speaker has merely floundered about in this declamatory business or whether, before approaching his task of oratory, he has been trained in all the liberal arts."

The position challenged;

XVII. At this point Scaevola smilingly declared: "Crassus, I will strive with you no longer. For, in this very speech you have made against me, you have by some trick so managed matters as both to grant me what I said did not belong to the orator, and then somehow or another to wrest away these things again and hand them over to the orator as his absolute property. And as regards these subjects, when on my arrival in Rhodes as praetor I discussed with Apollonius, that supreme master of this science of rhetoric, the things that I had learned from Panaetius, he as usual jeered at philosophy and expressed contempt for it and talked at large in a vein more graceful than serious; whereas your argument has been of such a kind that you not only refrained from despising any of the arts or sciences, but described them all as the attendants and handmaids of oratory. And for my own part, if ever any one man should have mastered all of them, and that same man should have united with them this added power of perfectly graceful expression, I cannot deny that he would be a remarkable kind of man and

worthy of admiration; but if such a one there should be, or indeed ever has been, or really ever could be, assuredly you would be that one man, who both in my opinion and in that of everyone else, have left all other orators—if they will pardon my saying so—almost without glory. But if you yourself, while lacking nothing of the knowledge that has to do with law-court speaking and politics, have nevertheless not mastered the further learning which you associate with the orator, let us see whether you may not be attributing to him more than the real facts of the case allow.”

but defended as an ideal.

Here Crassus interposed: “Remember that I have not been speaking of my own skill, but of that of an orator. For what have men like myself either learned or had any chance of knowing, who entered upon practice before ever we reached the study of theory, whom our professional activities in public speaking, in the pursuit of office, in politics, and about the affairs of our friends, wore out ere we could form any conception of the importance of these other matters? But if you find such excellence in me who, if perhaps—as you hold—I have not been completely wanting in ability, have assuredly been wanting in learning and leisure and (to tell the truth) in the requisite enthusiasm for instruction as well, what think you would be the quality and stature of an orator in whom all that I have not attained should be combined with ability such as my own or greater?”

This ideal again challenged as unpractical and unattainable.

XVIII. Thereupon Antonius observed: “Crassus, to my mind you establish your case, and I do not doubt that, if a man has grasped the principles and nature of every subject and of every art, he will in consequence be far better equipped as a speaker. But in the first place such knowledge is hard to win, especially in the life we lead, and amid the engagements that are ours, and then again there is the danger of our being led away from our traditional practice of speaking in a style acceptable to the commonalty and suited to

advocacy. For it seems to me that the eloquence of these men, to whom you referred just now, is of an entirely different kind, albeit they speak gracefully and cogently, either upon natural philosophy or upon the affairs of mankind: theirs is a polished and flowery sort of diction, redolent rather of the training-school and its suppling-oil than of our political hurly-burly and of the Bar. For—when I think of it—although it was late in life and only lightly that I came into touch with Greek literature, still, when on my journey to Cilicia as proconsul I reached Athens, I tarried there for several days by reason of the difficulty in putting to sea: at any rate, as I had about me daily the most learned men, pretty nearly the same as those whom you have lately mentioned, a rumor having somehow spread among them that I, just like yourself, was usually engaged in the more important causes, every one of them in his turn contributed what he could to a discussion on the function and method of an orator.

“Some of them were for maintaining, as did your authority Mnesarchus⁸ himself, that those whom we called orators were nothing but a sort of artisans with ready and practiced tongues, whereas no one was an orator save the wise man only, and that eloquence itself, being, as it was, the science of speaking well, was one type of virtue, and he who possessed a single virtue possessed all of them, and the virtues were of the same rank and equal one with another, from which it followed that the man of eloquence had every virtue and was a wise man. But this was a thorny and dry sort of language, and entirely out of harmony with anything we thought. Charmadas, however, would speak far more copiously upon the same topics, not that he intended thereby to reveal his own opinion—it being an accepted tradition of the Academy always and against all comers to be of the opposition in debate—just then, however, he was pointing out that those who were styled rhetoricians and propounded rules of eloquence, had no clear comprehension of anything, and that no man could

⁸Mnesarchus represents the Stoics, whose fundamental doctrine of the unity and coequality of all virtues implies that the philosopher alone can be an orator. [Tr.]

attain skill in speaking unless he had studied the discoveries of the philosophers.

Report of debate at Athens: is there a science of rhetoric, or does oratory depend on aptitude and practice?

XIX. “Certain Athenians, accomplished speakers and experienced in politics and at the Bar, argued on the other side, among them too being that Menedemus, who was lately in Rome as my guest; and when he asserted that there was a special sort of wisdom, which had to do with investigating the principles of founding and governing political communities, this roused up a man of quick temper⁹ and full to overflowing of learning of every kind and a really incredible diversity and multiplicity of facts. For he proceeded to inform us that every part of this same wisdom had to be sought from philosophy, nor were those institutions in a State which dealt with the immortal gods, the training of youth, justice, endurance, self-control, or moderation in all things, or the other principles without which States could not exist or at any rate be well-conditioned, to be met with anywhere in the paltry treatises of rhetoricians. Whereas, if those teachers of rhetoric embraced within their art so vast a multitude of the noblest themes, how was it, he inquired, that their books were stuffed full of maxims relating to prefaces, perorations and similar trumpery—for so did he describe them—while concerning the organization of States, or the drafting of laws, or on the topics of fair-dealing, justice, loyalty, or the subduing of the passions or the building of human character, not a syllable was to be found in their pages? But as for their actual rules he would scoff at them by showing that not only were their authors devoid of that wisdom which they arrogated to themselves, but they were ignorant even of the true principles and methods of eloquence. For he was of opinion that the main object of the orator was that he should both appear himself, to those before whom he was pleading, to be such a man as he would desire to seem (an end to be attained by a reputable mode

of life, as to which those teachers of rhetoric had left no hint among their instructions), and that the hearts of his hearers should be touched in such fashion as the orator would have them touched (another purpose only to be achieved by a speaker who had investigated all the ways wherein, and all the allurements and kind of diction whereby, the judgment of men might be inclined to this side or to that); but according to him such knowledge lay thrust away and buried deep in the very heart of philosophy, and those rhetoricians had not so much as tasted it with the tip of the tongue. These assertions Menedemus would strive to disprove by quoting instances rather than by arguments, for, while reciting from his ready recollection many magnificent passages from the speeches of Demosthenes, he would demonstrate how that orator, when by his eloquence he was compelling the passions of the judges or of the people to take any direction he chose, knew well enough by what means to attain results which Charmadas would say that no one could compass without the aid of philosophy.

XX. “To this Charmadas replied that he did not deny to Demosthenes the possession of consummate wisdom and the highest power of eloquence, but whether Demosthenes owed this ability to natural talent or, as was generally agreed, had been a devoted disciple of Plato, the present question was not what Demosthenes could do, but what those rhetoricians were teaching. More than once too he was carried so far away by his discourse as to argue that there was no such thing as an art of eloquence; and after showing this by arguments—because, as he said, we were born with an aptitude alike for coaxing and unctuously stealing into favor with those from whom a boon had to be sought, and for daunting our antagonists by threats, for setting forth how a deed was done, and establishing our own charges and disproving the allegations of the other side, and for making, in the closing words of a speech, some use of protest and lamentation (in which operations he declared that every resource of the orator was brought into play), and because habit and practice sharpened the edge of discernment and quickened the fluency of delivery, then he would also support his case by an

⁹Charmadas of the Academy. [Tr.]

abundance of instances. For in the first place (he would say) not a single writer on rhetoric—it looked as if of set purpose—had been even moderately eloquent, and he searched all the way back to the days of one Corax¹⁰ and a certain Tisias who, he stated, were acknowledged to have been the founders and first practitioners of this art, while on the other hand he would cite a countless host of very eloquent men who had never learned these rules or been at all anxious to make their acquaintance; and among these—whether in jest or because he thought so and had even so heard—he went on to mention me in the list, as one who had never studied those matters and yet (according to him) had some ability in oratory. To one of these points of his—that I had never learned anything—I readily agreed, but as to the other I considered that he was either making game of me or was even himself mistaken. He said, however, that there was no ‘art’ which did not consist in the knowledge and clear perception of facts, all tending to a single conclusion and incapable of misleading; but everything with which orators dealt was doubtful and uncertain, since all the talking was done by men who had no real grasp of their subject, and all the listening by hearers who were not to have knowledge conveyed to them, but some short-lived opinion that was either untrue or at least not clear. In a word, he then looked like persuading me that no craft of oratory existed, and that no one could speak with address or copiously unless he had mastered the philosophical teachings of the most learned men. And in these discussions Charmadas was wont to speak with warm admiration of your talents, Crassus, explaining that he found in me a very ready listener, in yourself a most doughty antagonist.

Real eloquence unknown.

XXI. “And so, won over by these same views, I actually wrote down in a little pamphlet—which slipped abroad without my knowledge or consent and got into the hands of the public—the statement that I had known sundry accomplished

¹⁰By using the words *nescio quo* Antonius affects ignorance of literary history. [Tr.]

speakers, but no one so far who was eloquent, inasmuch as I held anyone to be an accomplished speaker who could deliver his thought with the necessary point and clearness before an everyday audience, and in accord with what I might call the mental outlook of the average human being, whereas I allowed the possession of eloquence to that man only who was able, in a style more admirable and more splendid, to amplify and adorn any subject he chose, and whose mind and memory encompassed all the sources of everything that concerned oratory. If this is a hard matter for ourselves, because, before we have entered on the required study, we are overwhelmed by the hunt for office and the business of the Bar, none the less let it be accepted as attainable in fact and in the nature of things. For personally, so far as I can form a prediction, and judging from the vast supply of talent which I see existent among our fellow-citizens, I do not despair of its coming to pass that some day some one, keener in study than we are or ever have been, endowed with ampler leisure and earlier opportunity for learning, and exhibiting closer application and more intensive industry, who shall have given himself up to listening, reading and writing, will stand forth as an orator such as we are seeking, who may rightly be called not merely accomplished but actually eloquent; and after all, to my mind either Crassus is such a man already, or, should some one of equal natural ability have heard, read and written more than Crassus, he will only be able to improve to some slight extent upon him.”

Crassus reluctantly consents to give his views.

At this point, “We never looked for it,” exclaimed Sulpicius, “but it has fallen out, Crassus, just as both I and Cotta earnestly hoped, I mean that you two should slip into this particular conversation. For on our way hither we were thinking that it would be delightful enough if, while you and Antonius were talking about anything else, we might still manage to catch from your discourse something worth remembering; but that you should enter at large upon so real and well-nigh exhaustive a discussion of this whole matter—be it practice, art or natural talent—seemed to us a thing we could hardly hope for.

The fact is that I, who from my earliest manhood was aglow with enthusiasm for you both, and a positive devotion to Crassus—seeing that on no occasion did I leave his side—could never get a word out of him respecting the nature and theory of eloquence, although I pleaded in person, besides making frequent trial of him through the agency of Drusus, whereas on this subject you, Antonius,—and what I shall say is true—have never failed me at all in my probings or interrogatories, and have many a time explained to me what rules you were wont to observe in practical oratory. Now then that each of you has opened up a way of reaching these very objects of our quest, and since it was Crassus who led off in this discussion, grant us the favor of recounting with exactness of detail, your respective opinions upon every branch of oratory. If we do win this boon from you both, I shall be deeply grateful, Crassus, to this school in your Tusculan villa, and shall rank these semirural training-quarters of yours far above the illustrious Academy and the Lyceum.”

XXII. Thereupon the other rejoined, “Nay, Sulpicius, but let us rather ask Antonius, who both has the ability to do what you demand, and, as I understand you to say, has been in the habit of so doing. For as for me, you yourself have just told us how I have invariably run away from all discussions of this sort, and time and again have refused compliance with your desire and indeed your importunity. This I used to do, not from arrogance or churlishness, nor because I was unwilling to gratify your entirely legitimate and admirable keenness—the more so as I had recognized that you were above all other men eminently endowed by nature and adapted for oratory—but in solemn truth it was from want of familiarity with arguments of that kind, and awkwardness in handling those theories set forth in what claims to be an art.”

Cotta then observed, “Since we have secured what seemed most difficult—that you, Crassus, should say anything at all about these matters—as for what remains, it will now be our own fault if we let you go without explaining to us all that we have been inquiring about.” “Limiting the inquiry, I imagine,” answered Crassus, “to those subjects which, as the phrase goes in accepting

an inheritance, are within my knowledge and power.” “By all means,” returned Cotta, “for what is beyond your own power or knowledge, who among us is so shameless as to claim to be within his own?” “In that case,” replied Crassus, “provided that I may disclaim powers which I do not possess, and admit ignorance of what I do not know,—put what questions to me you please.”

Is there a science of rhetoric?

“Well then,” said Sulpicius, “what we ask you to tell us first is your opinion of the view Antonius advanced just now—whether you hold that there is any such thing as an ‘art’ of oratory?” “How now?” exclaimed Crassus, “Do you think I am some idle talkative Greekling,¹¹ who is also perhaps full of learning and erudition, that you propound me a petty question on which to talk as I will? For when was it, think you, that I troubled myself about these matters or reflected upon them, and did not rather always laugh to scorn the effrontery of those persons who, from their chairs in the schools, would call upon any man in the crowded assemblage to propound any question that he might have to put? It is related that Gorgias of Leontini was the author of this practice, who was thought to be undertaking and professing something very magnificent when he advertised himself as ready for any topic whatever on which anyone might have a fancy to hear him. Later, however, they began to do this everywhere, and are doing it to this day, with the result of there being no theme so vast, so unforeseen, or so novel, that they do not claim to be prepared to say about it all that there is to be said. But had I supposed that you, Cotta, or you, Sulpicius, wished to listen to anything of the kind, I would have brought some Greek or other here to amuse you with discussions of that sort; and even now this can easily be managed. For staying with Marcus Piso (a young man, but already given up to this pursuit, possessing talent of the highest order and deeply devoted to myself) there is Staseas the Peripatetic, a man whom I know well

¹¹For the use of the diminutive to indicate the contempt felt at Rome for the degenerate Greek of the day cf. §§47, 221, and Juvenal iii. 78 *Graeculus esuriens*. [Tr.]

enough, and who, as I understand to be agreed among experts, is quite supreme in that department of his.”

XXIII. “Staseas! what Staseas? what Peripatetic are you talking to me about?” said Mucius. “It is for you, Crassus, to comply with the wishes of young men, who do not want the everyday chatter of some unpracticed Greek, or old sing-songs out of the schools, but something from the wisest and most eloquent man in the world, and one who, not in the pages of pamphlets, but in the most momentous causes, and that too in this seat of imperial power and splendor, holds the first place for judgment and eloquence; they are anxious to learn the opinion of the man whose footsteps they long to follow. Moreover, just as I have always accounted you the ideal orator, even so I have never ascribed to you higher praise for eloquence than for kindness, which quality it becomes you on the present occasion to exercise to the very utmost, and not to run away from the discussion into which two young men of eminent ability are desirous of your entering.”

No, there is not a science in the strict sense, but experience can furnish a system of rules.

“For my part,” answered the other, “I am anxious to humor your friends, and I shall make no difficulty about saying, in my brief fashion, what I think upon each point. And to that first question—since I do not think it dutiful, Scaevola, for me to disregard your claims—I answer, ‘I think there is either no art of speaking at all or a very thin one,’ all the quarreling in learned circles being really based upon a dispute about a word. For if, as Antonius just now explained, an art is defined as consisting in things thoroughly examined and clearly apprehended, and which are also outside the control of mere opinion, and within the grasp of exact knowledge, then to me there seems to be no such thing as an art of oratory. For all the kinds of language we ourselves use in public speaking are changeable matter, and adapted to the general understanding of the crowd. If however the actual things noticed in the practice and conduct of speaking have been heeded and recorded by men of skill and experi-

ence, if they have been defined in terms, illuminated by classification, and distributed under subdivisions—and I see that it has been possible to do this—I do not understand why this should not be regarded as an art, perhaps not in that precise sense of the term, but at any rate according to the other and popular estimate. But whether this be an art, or only something like an art, assuredly it is not to be disdained; we must however understand that certain other qualifications are of greater consequence for the attainment of eloquence.”

Crassus gives results of his own experience.

XXIV. Thereupon Antonius observed that he heartily agreed with Crassus, in that he was neither wedded to Art with the devotion of those for whom the whole virtue of oratory resided in an art, nor on the other hand did he put her away altogether, as did most of the philosophers. “But I think, Crassus,” he continued, “that you will be doing these two a favor, if you will set forth those things which in your opinion may be more profitable to oratory than even Art herself.”

“I will certainly name them,” replied Crassus, “as I have once begun, beseeching you however not to publish abroad these trifles of mine; although I too will restrain myself, so as not to seem a sort of master and professional, volunteering some observations of my own, but just one of all the many Roman citizens, a man modestly qualified through experience of public affairs, and not altogether untrained, who has stumbled by chance upon your discussion. The truth is that, when in quest of an office, I used in canvassing to send Scaevola away from me, explaining to him that I proposed to be silly,¹² that is, to make myself winsome in my wooing, and this required some silliness if it was to be well done, whereas our friend here was of all men the one in whose presence I was least willing to appear silly. Yet he it is whom on the present occasion Fate has appointed to be an eye-witness and observer of

¹²*Ineptus*, generally equivalent to “unhappy” or “incongruous,” is here used loosely as meaning “silly.” Crassus felt that his talking about oratory was as silly a business as was shaking hands with everybody when canvassing. [Tr.]

my silliness. For what is sillier than to talk about talking, since talking in itself is ever a silly business, except when it is indispensable?"

"Proceed none the less, Crassus," said Mucius, "for I will take upon myself that reproach you are dreading."

The requirements of the orator: natural gifts are essential;

XXV. "This then is my opinion," resumed Crassus, "that in the first place natural talent is the chief contributor to the virtue of oratory; and indeed in those writers on the art, of whom Antonius spoke just now, it was not the principles and method of oratory that were wanting, but inborn capacity. For certain lively activities of the intelligence and the talents alike should be present, such as to be at once swift in invention, copious in exposition and embellishment, and steadfast and enduring in recollection; and if there be anyone disposed to think that these powers can be derived from art, a false belief—for it would be a glorious state of things if art could even kindle or waken them into life; engrafted and bestowed by art of a certainty they cannot be, for they are all the gifts of nature,—what will he say of those other attributes which undoubtedly are innate in the man himself: the ready tongue, the ringing tones, strong lungs, vigor, suitable build and shape of the face and body as a whole? And, in saying this, I do not mean that art cannot in some cases give polish,—for well I know that good abilities may through instruction become better, and that such as are not of the best can nevertheless be, in some measure, quickened and amended—, but there are some men either so tongue-tied, or so discordant in tone, or so wild and boorish in feature and gesture, that, even though sound in talent and in art, they yet cannot enter the ranks of the orators. While others there are, so apt in these same respects, so completely furnished with the bounty of nature, as to seem of more than human birth, and to have been shaped by some divinity.

"Great indeed are the burden and the task that he undertakes, who puts himself forward, when all are silent, as the one man to be heard concerning the weightiest matters, before a vast assembly

of his fellows. For there is hardly a soul present but will turn a keener and more penetrating eye upon defects in the speaker than upon his good points. Thus any blunder that may be committed eclipses even those other things that are praiseworthy. Not that I am pressing these considerations with the idea of frightening young men away altogether from the pursuit of oratory, should they possibly lack some natural endowment. For who does not observe that Gaius Coelius, a man of my own time and of new family, reached high renown as the result of that very modest degree of eloquence which—such as it was—he had succeeded in attaining? Who again does not know that Quintus Varius, your own contemporary, a man of wild and repellent aspect, has attained great popularity in public life, through whatever practical ability of that kind he has possessed?

though the ideal is hard to attain.

XXVI. "But since it is 'The Orator' we are seeking, we have to picture to ourselves in our discourse an orator from whom every blemish has been taken away, and one who moreover is rich in every merit. For even though the multiplicity of litigation, the diversity of issues, and the rabble of rusticity thronging our public places, give opportunity even to the most faulty speakers, we shall not for that reason lose sight of this our objective. In those arts then, in which we are looking, not for any necessary utility, but some method of freely bringing delight to the intellect, how critical—I had almost said how disdainful—are our judgments! For there are no lawsuits or contentions to compel mankind to sit through bad acting on the stage, as they would bear with indifferent oratory in Court. Therefore our orator must carefully see to it, that he not only contents those whom it is necessary to satisfy, but is wonderful as well in the eyes of such as have the right to judge freely. And now, if you would know it, among my most familiar friends I will publish in simple language what I think, on which I have hitherto always kept silence and deemed silence fitting. In my view, even the best orators, those who can speak with the utmost ease and elegance, unless they are diffident in approaching a discourse and diffident in beginning

it, seem to border on the shameless, although that can never come to pass. For the better the orator, the more profoundly is he frightened of the difficulty of speaking, and of the doubtful fate of a speech, and of the anticipations of an audience. On the other hand, the man who can do nothing in composition and delivery that is worthy of the occasion, worthy of the name of an orator, or of the ear of the listener, still seems to me to be without shame, but he never so agitated in his speaking; for it is not by feeling shame at what is unbecoming, but in not doing it, that we must escape the reproach of shamelessness. While as for him who is unashamed—as I see is the case with most speakers—I hold him deserving not merely of reprimand, but of punishment as well. Assuredly, just as I generally perceive it to happen to yourselves, so I very often prove it in my own experience, that I turn pale at the outset of a speech, and quake in every limb and in all my soul; in fact, as a very young man, I once so utterly lost heart in opening an indictment, that I had to thank Quintus Maximus for doing me the supreme service of promptly adjourning the hearing, the moment he saw that I was broken-down and unnerved by fear.”

At this point the whole company began to nod approval one to another, and to talk together. For there was a marvelous kind of modesty about Crassus, though this was so far from being any disadvantage to his oratory, as positively to help it, by bearing witness to his integrity.

Orators judged less leniently than actors.

XXVII. Presently Antonius observed: “I have often noticed, Crassus, that, as you say, both you and the other orators of the first rank—although in my opinion no one has ever been your peer—are deeply disturbed when you are beginning a speech. Now on investigating the reason of this—how it was that, the greater an orator’s capacity, the more profoundly nervous he was—I discovered this twofold explanation: first, that those who had learned from experience and knowledge of human nature understood that, even with the most eminent orators, the fate of a speech was sometimes not sufficiently in accordance with their wish; wherefore, as often as they spoke, they were justifiably fearful, lest what could possibly happen

some time should actually happen then. Secondly there is something of which I often have to complain, that, whenever tried and approved exponents of the other arts have done some work with less than their wonted success, their inability to perform what they knew how to perform is explained by their being out of the humor or hindered by indisposition (people say, ‘Roscius was not in the mood for acting today,’ or ‘He was a little out of sorts’); whereas, if it is an orator’s shortcoming that is being criticized the same is thought due to stupidity. But stupidity finds no apology, since no man’s stupidity is set down to his having been ‘out of sorts’ or ‘that way inclined.’ And so in oratory we confront a sterner judgment. For judgment is passing upon us as often as we speak; moreover one mistake in acting does not instantly convict a player of ignorance of acting, but an orator, censured on some point of speaking, is under an established suspicion of dullness once for all, or at any rate for many a day.

Variety of gifts expected in the orator.

XXVIII. “Now as for that remark of yours that there were very many qualifications which an orator must derive from nature, or he would not be greatly aided by tuition, I thoroughly agree with you; and in this respect I most particularly approved of that very eminent instructor Apollonius of Alabanda, who, though teaching for hire, would not for all that suffer such pupils as, in his judgment, could never turn out to be orators, to waste their labor with him, but would send them on their ways, and urge and exhort them to pursue those arts for which he thought them respectively fitted. It is enough, indeed, for acquiring all other crafts, just to be a man like other men, and able to apprehend mentally and to preserve in the memory what is taught, or even crammed into the learner, should he chance to be dull beyond the ordinary. No readiness of tongue is needed, no fluency of language, in short none of those things—natural state of looks, expression, and voice—which we cannot mold for ourselves. But in an orator we must demand the subtlety of the logician, the thoughts of the philosopher, a diction almost poetic, a lawyer’s memory, a tragedian’s voice, and the bearing al-

most of the consummate actor. Accordingly no rarer thing than a finished orator can be discovered among the sons of men. For attributes which are commended when acquired one apiece, and that in but modest degree, by other craftsmen in their respective vocations, cannot win approval when embodied in an orator, unless in him they are all assembled in perfection.”

Defects are noticed at once.

“And yet observe,” said Crassus at this point, “how much more care is exercised in an extremely mean and trivial craft than in this art, which is admittedly the greatest. For again and again do I hear Roscius declaring that so far he has never succeeded in finding a single pupil of whom he really approved; not that there were not some who were acceptable, but because, if there was any blemish whatever in them, he himself could not endure it. For nothing stands out so conspicuously, or remains so firmly fixed in the memory, as something in which you have blundered. And so, to take this comparison with this player as our standard of an orator’s merit, do you not see how he does nothing otherwise than perfectly, nothing without consummate charm, nothing save in the manner befitting the occasion, and so as to move and enchant everybody? Accordingly he has long ago brought it about that, in whatsoever craft a man excelled, the same was called a Roscius in his own line. For myself, in demanding in an orator this absolute perfection, from which I myself am far removed, I am behaving shamelessly, since I want forgiveness for myself, but I do not forgive the others. For the man who is without ability, who makes mistakes, whose claim—in a word—does him discredit, should in my judgment, as Apollonius directed, be thrust down to such work as he can perform.”

The natural gifts of Sulpicius and Cotta:

XXIX. “Would you then,” said Sulpicius, “direct Cotta here, or myself, to be studying the common law or the soldier’s art? For who can attain to that sublime and universal perfection which you demand?” And the other answered: “For my part, it is precisely because I recognized in you two a

really remarkable and indeed splendid genius for oratory, that I have set forth all these considerations, while to stimulate you men of ability no less than to discourage the inefficient is the object of my discourse; and although I have noted in both of you talent and industry of the highest order, still as regards these advantages which depend upon the outer man, concerning which I have perhaps said more than the Greeks are wont to do, as manifested in yourself, Sulpicius, they are divine. For never, I think, did I listen to a speaker better qualified in respect of gesture, and by his very bearing and presence, or to one with a voice more resonant and pleasing; while those on whom these gifts have been bestowed by nature in smaller measure, can none the less acquire the power to use what they have with propriety and discernment, and so as to show no lack of good taste. For lack of that is above all else to be avoided, and as to this particular failing it is especially difficult to lay down rules, difficult not only for me, who talk of these matters like papa laying down the law, but even for the great Roscius himself; whom I often hear affirming that the chief thing in art is to observe good taste, though how to do this is the one thing that cannot be taught by art. But, by your leave, let us shift our conversation to other subjects, and chat at last in our own fashion, and not as rhetoricians.”

“On no account whatever,” returned Cotta: “for since you keep us in this pursuit and do not send us away to some other art, we must now further beseech you to explain to us your own power in oratory, however much you make it out to be;—for we are not too greedy: we are quite content with what you call your ‘ordinary eloquence’—and (so as not to outstrip that small degree of skill you have attained as a speaker), since you tell us that the qualities to be sought from nature are not excessively deficient in ourselves, the thing we wish to know from you is what further requisite you consider should be acquired.”

their need of training.

XXX. Crassus smiled at this and replied: “What else do you suppose, Cotta, but enthusiasm and something like the passion of love? without

which no man will ever attain anything in life that is out of the common, least of all this success which you covet. Not that I look upon you two as needing incitement in that direction, perceiving as I do, from the trouble you are giving even to myself, that you are aflame with only too fervent a desire. Yet assuredly endeavors to reach any goal avail nothing unless you have learned what it is which leads you to the end at which you aim. And so, since the burden you lay upon me is a lighter one, and you are not examining me in the art of oratory, but as to this ability of my own, however insignificant it is, I will explain to you my habitual method, nothing particularly mysterious or exceedingly difficult, nothing grand or imposing, just the plan I used to follow in bygone times, when I was a young man, with liberty to busy myself in that pursuit of yours."

At these words Sulpicius exclaimed: "Cotta, behold our longed-for day! For the thing that by entreaties, or lying in wait, or spying, I could never secure—I mean a chance of observing what Crassus was doing for the purposes of training or rehearsal, I do not say at first-hand, but at least by getting some hint from Diphilus, his secretary and reader—this I hope you and I have gained, and we are now to learn from his own lips everything that we have long been desiring."

The school course in rhetoric.

XXXI. "And yet I think, Sulpicius," continued Crassus, "that after hearing them you will be less likely to wonder at my observations than to decide that, when you were longing to hear them, there was no ground for your longing. For I shall tell no mystery, nothing worthy of your waiting, nothing that you have not heard already, or that is new to anyone. For to begin with, in regard to what befits a free-born man of liberal education, I will not deny that I learned those commonplace and well-worn maxims of teachers in general: first, that the duty of an orator is to speak in a style fitted to convince; next, that every speech has to do either with the investigation of a general question, wherein no persons or occasions are indicated, or with a problem that is concerned with specific individuals and times; moreover that in both cases, whatever the subject for de-

bate, it is usual for inquiry to be made in respect thereof, either whether a deed was done or, if it was done, what is its character, or again by what name is it known or, as some add, whether it appears to have been done lawfully; further that contentions also arise out of the construction of a document, wherein there is some ambiguity or contradiction, or something is so expressed that the written word is at variance with the intention; and again that to all these kinds certain modes of proof are assigned as appropriate. Again I heard that, of such questions as are distinct from general issues, some have their place in courts of justice, others in deliberations; while there was yet a third kind, which had to do with the extolling or reviling of particular persons; and that there were prescribed commonplaces¹³ which we were to employ in the law courts where equity was our aim; others for use in deliberations, all of which were arranged for the benefit of those to whom we might be giving counsel; and others again in panegyric, wherein the sole consideration was the greatness of the individuals concerned. And, since all the activity and ability of an orator falls into five divisions, I learned that he must first hit upon what to say; then manage and marshal his discoveries, not merely in orderly fashion, but with a discriminating eye for the exact weight as it were of each argument; next go on to array them in the adornments of style; after that keep them guarded in his memory; and in the end deliver them with effect and charm: I had also been taught that, before speaking on the issue, we must first secure the goodwill of our audience; that next we must state our case; afterwards define the dispute; then establish our own allegations; subsequently disprove those of the other side; and in our peroration expand and reinforce all that was in our favor, while we weakened and demolished whatever went to support our opponents.

Rules of diction.

XXXII. "I had listened also to the traditional precepts for the embellishment of discourse itself: that we must speak, in the first place, pure and cor-

¹³These *loci communes* are the "stock" arguments and general reflections referred to in §56 *supra*. [Tr.]

rect Latin, secondly with simple lucidity, thirdly with elegance, lastly in a manner befitting the dignity of our topics and with a certain grace; and on these several points I had learned particular maxims. Moreover I had seen art called in to aid even those qualities which are peculiarly the endowment of nature; for example, concerning delivery and the memory, I had taken a taste of certain rules which, though concise, involved much practice.

Practice essential.

“For it is matters like these that employ nearly all the learning of your professors; and if I were to call this learning useless, I should be lying. For in fact it contains certain reminders, as it were, for the orator, as to the standard he must apply on each occasion, and must keep in mind, if he is not to wander from whatever course he has set himself. But to my thinking the virtue in all the rules is, not that orators by following them have won a reputation for eloquence, but that certain persons have noted and collected the doings of men who were naturally eloquent: thus eloquence is not the offspring of the art, but the art of eloquence: even so, as I said before, I do not reject art, for though perhaps hardly essential to right speaking, still it is no ignoble help towards right knowledge. There is also a certain practical training that you must undergo—though indeed you two are already in full career,—I mean it is for those who are at the start of their race, and can even thus early learn beforehand and practice, by a training like that for the games, what will have to be done in the fighting-line, so to speak, of the Courts.”

“This training,” said Sulpicius, “is the very thing we wish to understand: and none the less we are longing to hear you on those precepts of the art over which you have briefly run, although those too are not unknown to us. But of them presently; for the moment we want your opinion on the training itself.”

Rules for preparatory training.

XXXIII. “I certainly approve,” replied Crassus, “of what you yourselves are in the habit of doing, when you propound some case, closely

resembling such as are brought into Court, and argue it in a fashion adapted as nearly as possible to real life. Most students however, in so doing, merely exercise their voices (and that in the wrong way), and their physical strength, and whip up their rate of utterance, and revel in a flood of verbiage. This mistake is due to their having heard it said that it is by speaking that men as a rule become speakers. But that other adage is just as true—that by speaking badly men very easily succeed in becoming bad speakers. This is why, in those exercises of your own, though there is a value in plenty of extempore speaking, it is still more serviceable to take time for consideration, and to speak better prepared and more carefully. But the chief thing is what, to tell the truth, we do least (for it needs great pains which most of us shirk)—to write as much as possible. The pen is the best and most eminent author and teacher of eloquence, and rightly so. For if an extempore and casual speech is easily beaten by one prepared and thought out, this latter in turn will assuredly be surpassed by what has been written with care and diligence. The truth is that all the commonplaces, whether furnished by art or by individual talent and wisdom, at any rate such as appertain to the subject of our writing, appear and rush forward as we are searching out and surveying the matter with all our natural acuteness; and all the thoughts and expressions, which are the most brilliant in their several kinds, must needs flow up in succession to the point of our pen; then too the actual marshalling and arrangement of words is made perfect in the course of writing, in a rhythm and measure proper to oratory as distinct from poetry.

“These are the things which in good orators produce applause and admiration; and no man will attain these except by long and large practice in writing, however ardently he may have trained himself in those off-hand declamations; he too who approaches oratory by way of long practice in writing, brings this advantage to his task, that even if he is extemporizing, whatever he may say bears a likeness to the written word; and moreover if ever, during a speech, he has introduced a written note, the rest of his discourse, when he turns away from the writing, will proceed in unchanging style. Just as when a boat is moving at

high speed, if the crew rest upon their oars, the craft herself still keeps her way and her run, though the driving force of the oars has ceased, so in an unbroken discourse, when written notes are exhausted, the rest of the speech still maintains a like progress, under the impulse given by the similarity and energy of the written word.

XXXIV. "For my part, in the daily exercises of youth, I used chiefly to set myself that task which I knew Gaius Carbo, my old enemy, was wont to practice: this was to set myself some poetry, the most impressive to be found, or to read as much of some speech as I could keep in my memory, and then to declaim upon the actual subject matter of my reading, choosing as far as possible different words. But later I noticed this defect in my method, that those words which best befitted each subject, and were the most elegant and in fact the best, had been already seized upon by Ennius, if it was on his poetry that I was practicing, or by Gracchus,¹⁴ if I chanced to have set myself a speech of his. Thus I saw that to employ the same expressions profited me nothing, while to employ others was a positive hindrance, in that I was forming the habit of using the less appropriate. Afterwards I resolved—and this practice I followed when somewhat older,—to translate freely Greek speeches of the most eminent orators. The result of reading these was that, in rendering into Latin what I had read in Greek, I not only found myself using the best words—and yet quite familiar ones—but also coining by analogy certain words such as would be new to our people, provided only they were appropriate.

"To proceed, the control and training of voice, breathing, gestures and the tongue itself, call for exertion rather than art; and in these matters we must carefully consider whom we are to take as patterns, whom we should wish to be like. We have to study actors as well as orators, that bad practice may not lead us into some inelegant or ugly habit. The memory too must be trained by carefully learning by heart as many pieces as possible both from our Latin writers and the foreigner. Moreover in this work I do not altogether dislike the use as well, if you are accustomed to it, of that system of associating commonplaces

with symbols¹⁵ which is taught in the profession. Then at last must our Oratory be conducted out of this sheltered training-ground at home, right into action, into the dust and uproar, into the camp and the fighting-line of public debate; she must face putting everything to the proof and test the strength of her talent, and her secluded preparation must be brought forth into the daylight of reality. We must also read the poets, acquaint ourselves with histories, study and peruse the masters and authors in every excellent art, and by way of practice praise, expound, emend, criticize, and confute them; we must argue every question on both sides, and bring out on every topic whatever points can be deemed plausible; besides this we must become learned in the common law and familiar with the statutes, and must contemplate all the olden time, and investigate the ways of the senate, political philosophy, the rights of allies, the treaties and conventions, and the policy of empire; and lastly we have to cull, from all the forms of pleasantry, a certain charm of humor, with which to give a sprinkle of salt, as it were, to all of our discourse.

"Well, I have poured out for you all my ideas, and perhaps any chance patriarch, upon whom you had fastened at some party or other, would have given the same replies to your interrogatories."

Further detail requested.

XXXV. When Crassus had finished these observations, a general silence ensued. But though the company held that he had said enough on the topic propounded to him, yet they felt that he had ended far more speedily than they could have wished. Then Scaevola inquired, "Well, Cotta, why are you two silent? Does nothing come to mind on which you would like to question Crassus further?"

Views of Antonius, gained from his experience.

XLVIII. "For my part," answered Antonius, "I see and feel myself in evident straits, not only in being questioned as to things beyond my knowledge and experience, but also because this time

¹⁴The speeches of C. Gracchus were studied as models in the rhetorical schools of the Empire. [Tr.]

¹⁵Crassus is speaking of some system of mnemonics, such as Antonius discusses in Book II, lxxxvi–lxxxviii. [Tr.]

your friends do not let me shirk a situation from which in Court I always do my best to run away, I mean that of speaking next after yourself, Crassus. But I shall the more courageously approach this undertaking of your choice, in that I hope for the same fortune in this discussion which generally befalls my speeches; namely, that no elegance of diction will be expected of me. For I am not going to speak of an art which I never learned, but of my own practice; and those very commonplaces, which I have set down in my notebook, are no traditions taught to me by some one or other, but such as have been used in actual affairs and at the Bar: and if they do not commend themselves to men of your consummate accomplishment, pray blame your own unfairness in seeking to learn of me things I did not know; and extol my good nature in answering you with a good grace, won over by your enthusiasm, not my own discretion."

"Just go on, Antonius," returned Crassus. "For there is no danger of your delivering yourself without such practical wisdom that not a man of us will repent of having urged you on to this discussion."

"Yes, I will go on," said the other: "and I will do what I think should be the first thing done in every debate, which is that the subject for discussion should be clearly ascertained, so that a discourse may not have to ramble and lose itself, if perhaps the disputants do not understand the issue in one and the same sense."

The orator, like the soldier, the statesman and the philosopher, is a specialist.

"For, if the question chanced to be as to the nature of the general's art, I should think it proper to settle at the outset, who is a general: and, having defined him as a man in charge of the conduct of war, we should then add some particulars of troops, encampment, marching formation, close fighting, investment of towns, food-supply, laying and avoidance of ambushes, and all else pertaining to the management of warfare; and those men who are intellectually and theoretically masters of these subjects I should call generals, citing as examples men like Scipio and Fabius Maximus, and making mention of Epaminondas and Hannibal and persons of that type.

"But if we were inquiring who is he that has devoted his experience, knowledge, and enthusiasm to the guidance of the State, I should define him thus: 'Whoever knows and uses everything by which the advantage of a State is secured and developed, is the man to be deemed the helmsman of the State, and the originator of national policy,' and I should tell of Publius Lentulus that illustrious leader, of Tiberius Gracchus the elder, Quintus Metellus, Publius Africanus, Gaius Laelius, and countless others, some from our own community and some from abroad. If again the question were, who is rightly described as learned in the law, I should say it is the man who is an expert in the statutes, and in the customary law observed by individuals as members of the community, and who is qualified to advise, direct the course of a lawsuit, and safeguard a client, and in this class I should refer to Sextus Aelius, Manius Manilius, and Publius Mucius.

XLIX. "And, to come now to the pursuits of the more trivial arts, if the devotee of music, the philologist, or the poet should be under examination, I could explain in like fashion their several claims, and the most that ought to be required of each. Lastly, of the philosopher himself, who by virtue of his special faculty and wisdom stands alone in claiming something like omniscience, there is after all a kind of definition, to the effect that he who strives to know the significance, nature and causes of everything divine or human, and to master and follow out as a whole the theory of right living, is to be thus denominated. But the orator, since it is he whom we are studying, I myself do not picture as Crassus did, who I thought included, under the single vocation and title of orator, omniscience in every topic and every art: in fact I take him to be a man who can use language agreeable to the ear, and arguments suited to convince, in law court disputes and in debates of public business. Such a man I call an orator, and would have him endowed besides with intonation, delivery, and a certain charm.

Crassus's definition far too wide.

"Now our friend Crassus seemed to me to delimit the range of the orator, not by the bounds of the art concerned, but by the wellnigh infinite extent of his own talent. For by his verdict he even

handed over to the orator the helm of statesmanship; and I thought it passing strange, Scaevola, that you should grant him this point, when times without number the Senate has agreed with you on matters of extreme gravity, though your speech has been short and without ornament. Indeed if Marcus Scaurus, who I am told is at his country-house not far away, one of the highest authorities on statesmanship, had happened to hear that the influence natural to his own worth and wisdom was being claimed by yourself, Crassus, as the right of an orator, he would, I do believe, instantly proceed hither and thoroughly frighten us chatterers by the mere look on his face: for, though no mean speaker, he yet relies rather on his knowledge of higher politics than on the art of oratory. Then too, if a man is capable in both ways, such as the originator of national policy who is also a good senator, he is not just for that reason an orator; nor did the accomplished orator, who happens also to be outstanding in public administration, attain that special knowledge through his fluency in speaking. There is a vast difference between these gifts, and far apart are they sundered; nor was it by any uniform theory and method that Marcus Cato, Publius Africanus, Quintus Metellus and Gaius Laelius, orators all, gave brilliance to their own style and to the reputation of their community.

Wide culture not indispensable for the orator.

L. "For neither the nature of things, nor any statute or custom, requires any one man to refrain from learning more than one art. And so, although Pericles was the most eloquent man at Athens, and also for very many years the leader of national policy in that community, it is not therefore to be supposed that these two accomplishments pertain to one and the same man or art; nor, because Publius Crassus combined eloquence with legal learning, does it follow that knowledge of common law is implied in oratorical ability. For if everyone who, while outstanding in some art and capacity, has embraced another art as well, is thereby to create the belief that such subsidiary knowledge is a specific part of that wherein he excels, we may on the same principle assert that to play well at ball or

Twelve-Lines¹⁶ is a peculiarity of common lawyers, since Publius Mucius did both things to perfection; and by the same line of argument those also whom the Greeks call 'natural philosophers' may be pronounced to be poets into the bargain, seeing that Empedocles, a natural philosopher, has composed a notable poem. But in reality even the moral philosophers themselves, who would have all things for their own, in right of dominion and in fact of possession as well, do not venture to claim that either geometry or the pursuit of music belongs to the moral philosopher, merely because Plato is admitted on all hands to have been pre-eminent in those arts.

"And, if for once we decide to place all the arts in subjection to the orator, our case may more acceptably be stated in this way, that, since ability to speak ought not to starve and go naked, but to be besprinkled and adorned with a kind of charming variety in many details, it is the part of a good orator to have heard and seen much, and to have run over much in thought and reflection, as well as in his reading, not acquiring all this as his own possession, but tasting what belongs to others. For I agree that he ought to be a shrewd sort of man, and nowhere an untrained recruit, and no stranger or sojourner in his sphere of action.

To influence his audience he needs knowledge of the world;

LI. "Nor again, Crassus, am I greatly troubled by those histrionics of yours, the favorite medium of philosophers, setting forth that by the spoken word no man can kindle the feelings of his hearers, or quench them when kindled (though it is in this that the orator's virtue and range are chiefly discerned), unless he has gazed into the depths of the nature of everything, including human characters and motives: in which connection the orator must needs make philosophy his own; and in this pursuit we see that whole lives of most tal-

¹⁶In Cicero's time, and much later, *pila* was no definite game, but a series of gymnastic exercises for the promotion of bodily suppleness and health. *Duodecim scripta* involved dice-throwing, and the use of differently colored counters on a special board, divided into spaces by 12 slanting lines. [Tr.]

ented and leisured persons have been consumed. The copiousness of their learning and the wide range of their art I am so far from despising that in fact I ardently admire these: yet for ourselves, busied in the public life of this community, it is enough to know and give expression to such things concerning human characters as are not alien to human character.

“For what grand and impressive speaker, trying to make an arbitrator angry with his opponent, was ever at a loss merely through not knowing whether wrath is a vehement heat of the mind, or a strong desire to avenge pain?¹⁷ Who, in seeking by his word to confound and stir up the other feelings in the minds of a tribunal or popular assembly, has uttered the hackneyed sayings of the philosophers? Of whom some deny to the feelings any rightful place at all within the mind, regarding it as an infamous crime to awaken such in the hearts of a tribunal, while others, pretending to some tolerance and a closer approach to the facts of life, assert that the feelings should be exceedingly temperate, or rather of only trivial force.

“The orator however by his words greatly magnifies and exaggerates the grievousness of such things as in everyday life are thought evils and troubles to be shunned, while he enlarges upon and beautifies by his eloquence whatever is commonly deemed delectable and worthy to be desired: and he does not wish to appear so completely a sage among fools, as to have his hearers either regarding him as a clumsy Greekling, or for all their approval of the orator’s talent and astonishment at his wisdom, yet taking it ill that they themselves are foolish: but in such way does he range over men’s souls, and explore their feelings and thoughts, that he needs no philosophers’ definitions, and does not inquire in his discourse whether ‘the supreme good’ is subjective or objective, whether it is to be defined as virtue or pleasure, or whether these two can be wedded together, or, to be sure, whether, as some have thought, nothing can be known for certain, nothing clearly understood and apprehended. On these questions I admit that the teaching is abundant and manifold, and the theories numerous,

copious and varied; but we, Crassus, are looking for something different, and widely different. We require a man of sharpness, ingenious by nature and experience alike, who with keen scent will track down the thoughts, feelings, beliefs, and hopes of his fellow-citizens and of any men whom on any issue he would fain win over by his word.

he does not require philosophy.

LII. “He ought to feel the pulses of every class, time of life, and degree, and to taste the thoughts and feelings of those before whom he is pleading or intending to plead any cause; but his philosophical books he should keep back for a restful holiday, such as this one of ours at Tusculum, so as not to borrow from Plato, if ever he has to speak of justice and righteousness; for Plato, when he thought fit to put these things into writing, depicted in his pages an unknown sort of republic, so completely in contrast with everyday life and the customs of human communities were his considered statements concerning justice. But if his ideas were approved in real nations and States, who would have allowed you, Crassus, for all your high reputation, and all your splendor as a political leader, to express yourself as you did before a densely crowded assembly of your fellow-citizens? ‘Deliver us out of our woes, deliver us out of the jaws of those whose ferocity cannot get its fill of our blood; suffer us not to be in bondage to any, save to yourselves as a nation, whose slaves we can and ought to be.’ I pass over ‘woes,’ in which, according to the philosophers, the brave can never become involved; I pass over ‘jaws,’ out of which you desire to be delivered, for fear of your blood being sucked out of you by an unjust judgment, a thing which they say cannot befall the wise; but ‘slavery,’ did you dare to say that not yourself only, but the entire Senate, whose interests you were that day upholding, could be slaves?

“Can Virtue be a slave, Crassus, according to those authorities of yours, whose maxims you include within the range of the orator’s knowledge? She who for ever and alone is free, and who, though the body is made prisoner of war or bound with chains, ought still to hold fast to her own rights and unrestricted freedom in all things!

¹⁷Cf. Aristotle, *Rhet.* II. ii. 2. [Tr.]

And as for your further pronouncement, that the Senate not only 'can' but actually 'ought to' be the slaves of the nation, could any philosopher be so unmanly, spiritless and weak, so resolved to make physical pleasure and pain the standard of everything, as to approve of this suggestion that the Senate is in bondage to the nation, when it is to the Senate that the nation itself has committed the power of controlling and guiding it, as some driver might hand over his reins?

Indeed philosophy might disapprove of some effective lines of pleading.

LIII. "And so, although I personally thought these words of yours inspired, Publius Rutilius Rufus, a man of learning and devoted to philosophy, used to say they were not only wanting in discretion, but positively unseemly and disgraceful. He it was who used also to censure very severely Servius Galba, whom he claimed to remember well, for having worked upon the compassion of the assembly, when Lucius Scribonius was moving for his prosecution, after Marcus Cato, a troublesome and bitter foe to Galba, had harangued the Roman people in a rough and violent strain: this speech Cato himself has recorded in his *Early History*.

"As I was saying, Rutilius used to find fault with Galba, for having almost hoisted on to his shoulders, with his own hands, his ward Quintus, the son of his near relative Gaius Sulpicius Gallus, so that his appearance might set the assembly a-weeping, by recalling the memory of his most illustrious father; and for having committed two small sons of his own to the guardianship of the nation; and for having proclaimed, like a soldier making his will under arms, without scales or tablets, that he appointed the Roman people to be their guardians in their fatherless plight. The result, according to Rutilius, was that Galba, though at that time weighed down by popular ill-will and hatred, actually secured an acquittal by means of these histrionics, and I also find the incident recorded in Cato's book, with the comment that 'but for his employment of boys and blubbing, the accused would have got his deserts.' These methods Rutilius used roundly to condemn, affirming that banishment or death it-

self was better than such abjectness. Nor was this mere talk on his part, but he meant what he said, and acted upon it himself. For though, as you know, that great man was a pattern of righteousness, and there was no more honorable and blameless individual in the community, he declined not only to crave mercy of his judges, but also to be defended more eloquently or elaborately than the plain truth of the matter permitted. To Cotta here, though a highly accomplished young man and his sister's son, he allotted but a fragment of his case. Quintus Mucius too argued a part of it in his own way, with no trappings, his diction simple and crystal-clear.

"But had you spoken that day, Crassus—you who were saying just now that the orator must have recourse to the ordinary debates of the philosophers for the material of his speeches—and had you been allowed to plead for Publius Rutilius, in no philosophic style but in your own, then, even though those judges had been—as they were—accursed and pernicious men deserving of death, the power of your eloquence would none the less have rent away all savagery from the bottom of their hearts. As matters stand, a man of such quality has been lost, through his case being conducted as if the trial had been taking place in that ideal republic of Plato. None of his counsel groaned or shrieked, none was pained at anything, or made any complaint, or invoked the State, or humbled himself. In a word, not one of them stamped a foot during those proceedings, for fear, no doubt, of being reported to the Stoics.

The instance of Socrates.

LIV. "Thus did a Roman of consular rank follow the example of great Socrates of old who, as he was the wisest of all men, and had lived the most blameless of lives, defended himself in person, when indicted on a capital charge, in such fashion as to seem no submissive prisoner, but the teacher or domestic superior of his judges. Indeed on Lysias, a most accomplished orator, bringing him a written speech, to be committed to memory, if he thought proper, for use in his defense at his trial, he read it not unwillingly, and said it was aptly phrased: 'But,' quoth he, 'just as, if you had brought me a pair of Sicyonian

half-boots, were they never so easy and well-fitting, I should reject them as womanish, even so I think your speech is skillful oratory but not the utterance of a brave man.’ And so he too was condemned, not only at the first count, when the tribunal merely determined the issue of conviction or acquittal, but also on the further vote which they were bound by law to give. For at Athens, on a defendant being convicted of an offense carrying no fixed penalty, something like an appraisal of liability was made and, when the judges’ vote was being taken, the accused was asked what was the highest assessment, as it were, that he owned to having thoroughly merited. When this question was put to Socrates he replied that he had earned the distinction of the most splendid preferments and rewards, with provision for him, at the public expense, of daily sustenance in the Hall of the Presidents, this being rated among the Greeks as the highest of honors. His answer so incensed the tribunal that they condemned a perfectly blameless man to death. Had he indeed been acquitted, as I devoutly wish he had been—not that it is any business of ours—but for the sake of his vast genius, how could we ever endure your philosophers, who even as it is, with their Master condemned solely for the offense of inexperience in oratory, yet tell us that it is from themselves that the rules of eloquence ought to be sought? For my part I have no quarrel with them as to which of these faculties is the better or more real; I simply say that theirs and ours are two distinct things, and that consummate eloquence can exist quite apart from philosophy.

Nor does the orator need wide knowledge of law.

LV. “For I see now, Crassus, the purpose of your so ardent affection for the common law. Indeed I saw it as you were speaking. First you did service to Scaevola, whom we are all most justly bound to love for his exceeding great courtesy: seeing his Art to be portionless and unadorned, you have enriched and decorated her with the dower of diction. Secondly, having squandered upon her too much work and labor, since you had at home an encourager and instructor in that pursuit, you were afraid that, unless you glorified

that Art of yours by eloquence, you would have lost your labor.

“But I myself have no quarrel with this art of yours either. By all means let it be of such consequence as you would have it be. For indisputably it is a noble art, extending far and wide and touching the concerns of many, while it has ever been held in the highest repute, and even now the most illustrious citizens are the leaders in that field. But see to it, Crassus, that, in your desire to deck out the science of common law in new-fangled and foreign apparel, you do not at the same time despoil and strip her of what has been confirmed to her and made her own. For if you were to put it in this way, that the man learned in the law is an orator, and likewise the orator is one learned in the law, you would be setting up two glorious arts, on an equality with each other, and partners in one grandeur. But as it is you admit that a man may be learned in the law without possessing this eloquence which we are investigating, and that many such have appeared; while you deny the possibility of the existence of an orator who has not acquired that legal knowledge as well. So by your account the learned lawyer, in and by himself, is nothing but a circumspect and sharp kind of pettifogger, a crier of legal actions, a chanter of legal formulas, a trapper of syllables; but, because the orator in Court often employs the aid of the law, you have therefore associated your legal knowledge with Eloquence, as a little maid to follow at her heels.

Indeed often the law is uncertain,

LVI. “But as for your wondering at the shamelessness of those counsel who either made great professions, though ignorant of small details, or dared to handle in Court the highest topics of common law, though they knew nothing about them, and had never studied them, there is a simple and obvious excuse in each case. For there is nothing marvelous in a man, who is ignorant of the formalities of marriage by purchase, being none the less able to conduct the case of a woman married in that manner; nor, because the same kind of skill is exercised in steering a little craft as a large vessel, does it follow that he, who does not know the technical phrases required for

the division of an inheritance, cannot conduct a suit for the partition of an estate. Why! to take your own citations of most important proceedings before the Hundred Commissioners, which turned upon questions of law, which of those cases, pray, could not have been most handsomely argued by a man of eloquence unversed in law? Indeed in all those suits, as in that very one of Manius Curius, recently conducted by yourself, and in the dispute over Gaius Hostilius Mancinus, and again in the matter of the boy born of the second wife, before her predecessor had received notice of divorce, dissent as to the law was complete in the most learned circles.

and then it is eloquence that wins.

I ask then, of what service was legal knowledge to an advocate in those cases, when that learned lawyer was bound to come off victorious, who had been upheld, not by his own dexterity but by a stranger's, that is to say, not by legal knowledge but by eloquence?

"Often too have I heard how, when Publius Crassus was a candidate for the aedileship, and Servius Galba, his senior and a past consul, was in attendance upon him, having arranged a marriage between his son Gaius and the daughter of Crassus, a certain countryman approached Crassus to obtain his opinion: he took Crassus apart and laid the facts before him, but brought away from him advice that was more correct than conformable to his interest; whereupon Galba, noting his chagrin, accosted him by name, inquiring what the question was on which he had consulted Crassus. Having heard the client's tale and observing his agitation, 'I see,' said he, 'that Crassus was preoccupied and distracted when he advised you': he then seized Crassus himself by the hand and asked, 'How now, what ever entered your head to suggest such an opinion?' Upon this the other, with the assurance of profound knowledge, repeated that the position was as he had advised and the point unarguable. Galba however, sportively and with varied and manifold illustrations, brought forward a number of analogies, and urged many considerations in favor of equity as against rigid law, and it is related that Crassus, being no match for him in discussion—though

ranked among the accomplished, Crassus came nowhere near Galba—took refuge in authorities, and pointed out his own statement both in the works of his brother Publius Mucius, and in the textbook of Sextus Aelius, yet after all admitted that Galba's argument seemed to him persuasive, and very near the truth.

LVII. "And yet those cases which are such that the law involved in them is beyond dispute, do not as a rule come to a hearing at all. Does anyone claim an inheritance under a will made by the head of a household before the birth of a son of his? No one; since it is settled law that the will is revoked by such subsequent birth. Thus there are no judicial decisions on this branch of the law. And so the orator may safely disregard all this region of unquestionable law, being as it certainly is by far the larger portion of the science: while, as for the law which is unsettled in the most learned circles, it is easy enough for him to find some authority in favor of whichever side he is supporting, and having obtained a supply of thronged shafts¹⁸ from him, he himself will hurl these with all the might of an orator's arm. Unless indeed (let me say this by the kind indulgence of our excellent friend here Scaevola) it was by means of the works and maxims of your father-in-law that you argued the case for Manius Curius? Did you not rather snatch at the chance of protecting righteousness and upholding last wills and the intentions of dead men?

"And in my opinion, at any rate—for I often heard you and was at your elbow—it was by your wit and charm and highly refined pleasantries that you won the vast majority of your verdicts, while you were mocking at that over-subtlety of Scaevola's, and marveling at his cleverness in having thought out the proposition that a man must be born before he can die; and while, amusingly and with a sense of humor, as well as shrewdly, you were adducing numerous examples, gathered from statutes and senatorial ordinances, and also from everyday life and conversation, in which our pursuit of the letter instead of the spirit would lead to no result. And so the Court was filled with gaiety and delight:

¹⁸These were javelins with a slinging-strap to help the thrower. [Tr.]

but of what avail your practice in the common law was to you in these proceedings I cannot see; it was your surpassing power of eloquence, in union with consummate cheerfulness and grace, that proved of service.

“That very Mucius, upholder of his ancestral science, and champion, as it were, of his hereditary rights—what argument did he introduce in that case wherein he was opposed to you, which sounded like a borrowing from common law? What statute did he read over? What did he reveal in his speech that would have been too obscure for the uninitiated? Surely his entire address was concerned with the one contention that the written word ought to prevail to the uttermost. Yet it is in this kind of thing that all students are trained in the schools, when in mock trials of this kind they are taught to uphold in turn the written word and true equity.

“I presume too that, in *The Soldier’s Case*,¹⁹ if you had been counsel for the heir or for the soldier, you would have betaken yourself to *Precedents in Pleading*²⁰ by Hostilius, and not to the force of your own ability in oratory! On the contrary, if you had been propounding the will, you would have so managed matters that the entire security of every will would have seemed to be staked on the issue of those proceedings; and, if you had been appearing for the soldier, you would by your eloquence, in your usual way, have called up his father from the shades; you would have set him in sight of all; he would have embraced his son and tearfully committed him to the care of the Hundred Commissioners; I pledge my word he would have made every stone weep and wail, with the result that the whole section beginning ‘As the tongue hath proclaimed it’ would have seemed no part of the Twelve Tables, which you rate higher than all the libraries, but just a piece of moralizing doggerel by some professor.

Given a general knowledge of law, special points can be looked up.

LVIII. “For as to your indictment of the young for their laziness, in that they do not commit to

memory that art of yours, its exceeding simplicity being your first point, I leave the question of its simplicity to those who parade about in the haughty assurance imparted by this art, just as though it were extremely difficult, and do you yourself see to this, who describe an art as simple which by your own admission is not yet an art at all, but some day, should somebody have learned another art, and so be able to make an art of this one, will then become an art: secondly you urge its copious delights, in which respect they all resign in your favor this pleasure of yours, and are content themselves to go without it, nor is there a man among them who, if ever he had to learn some work by heart, would not choose for that purpose the *Teucer* of Pacuvius rather than Manilius’s *Conditions of Sale*. Taking next your opinion that love of country obliges us to get a knowledge of the devices of our ancestors, do you not observe that the ancient statutes have either sunk into the decrepitude of their old age, or been repealed by modern legislation? And as for your belief that men are made good by the common law, since by its rules prizes are offered to virtue and punishments appointed for vice, I certainly used to regard virtue as being taught to mankind (assuming it to be methodically teachable at all) by training and persuasion, not by threats, and force and even terror. For thus much, at any rate, we can learn even without legal study; namely, how lovely a thing it is to eschew evil.

“Now as to myself, to whom alone you allow the faculty of doing justice to my cases without any legal knowledge, I give you this answer, Crassus, that I never learned the common law, and yet never felt the want of that knowledge in the suits I was able to argue before the Praetor. For it is one thing to be a craftsman in a specific subject and art, and another to be no dullard or raw hand in social life and the general practices of mankind. Which of us may not survey his estate or go to see his rural concerns, whether in quest of profit or of amusement? Yet no one passes his days so bereft of sight and sense as to be wholly ignorant of the nature of sowing and reaping, or of the lopping of trees and pruning of vines, or of the times of year for doing these things, or of how they are done. If then some one

¹⁹See §175, *supra*. [Tr.]

²⁰A work otherwise unknown. [Tr.]

of us has occasion to look over his estate, or give some commission to his agent, or order to his bailiff, on details of husbandry, need he get by heart the volumes of Mago of Carthage? Or may we be satisfied with our own mother-wit? If so then, especially as we are worn out with legal and other business and with public affairs, why may we not likewise be well enough equipped in common law, to the extent at any rate of not seeming to be sojourners and strangers in our own country? And if some day an exceptionally doubtful case were submitted to us, it would be quite easy, I suppose, to take counsel with Scaevola here; although in fact the parties themselves, whose affair it is, furnish us with all the professional opinions and researches. If again the dispute relates to a question of fact, or to boundaries, without our having a view of the very spot, or to account-books and entries, we are obliged to get up complicated and often troublesome matters: if we have to master statutes, or the opinions of the learned in the law, are we afraid of not being able to do so, just because, from our youth upwards, our study of the common law has been inadequate?

LIX. "Is a knowledge of the common law, then, useless to an orator? I cannot assert that any knowledge is useless, least of all to one whose eloquence ought to be furnished with material in plenty; but the essential needs of an orator are many and weighty and hard to come by, so that I would not dissipate his energy over too wide a field of study.

Similarly delivery does not require special study.

"Who would deny that in his movements and carriage the orator must have the bearing and elegance of Roscius? Yet no one will urge young devotees of eloquence to toil like actors at the study of gesture. What is so essential to an orator as intonation? Yet no devotee of eloquence will become, by my advice, a slave to his voice, after the manner of the Greek tragedians, who both for many a year practice declamation from their chairs, and every day, before their performance on the stage, lie down and gradually raise the voice, and later, after playing their parts, take their seats, and bring it back again from the high-

est treble to the lowest bass, and in a way regain control of it. If we had a fancy to do this, the parties whose cases we had undertaken would lose their cases, before we had recited our hymn or chant the regulation number of times.

"But if we are not to work hard either at gesture, a great help to an orator, or at intonation, that singular and unrivaled recommendation and prop of eloquence; and if in each of these matters we can attain only such proficiency as corresponds to the leisure allowed us amid this array of daily duties; how much the less must we sink into becoming engrossed with getting by heart the common law, of which a general knowledge may be gained even without instruction, and which bears this unlikeness to those other things, that intonation and gesture cannot be acquired all at once and caught up from external sources, while anything in the law that is of use for a particular case, may be fetched, as hurriedly as you please, from experts or textbooks!

"This is why those most accomplished speakers,²¹ for all their own profound skill, have with them in Court assistants learned in the law, and these, as you said a little while ago, are called attorneys. In this respect our own folk have done infinitely better, by requiring the statutes and rules of law to be safeguarded by the influence of most illustrious men. But after all, had they thought it necessary, this idea of training the orator himself in the common law, instead of giving him an attorney to help him, would not have failed to occur to the Greeks.

Old age does not require knowledge of the law to give it occupation.

LX. "As for your theory that old age is redeemed from loneliness by a knowledge of the common law, possibly a large fortune will do as much. However we are not investigating our own advantage, but the essential needs of the orator. And yet, as we are taking from a single artist a number of details for our likeness of an orator, that same Roscius is fond of saying, that, the older he grows, the slower he will make the flute-player's rhythms and the lighter the music. Now if he, fettered as he

²¹The most eloquent Greek orators. [Tr.]

is by a definite system of measures and meters, is none the less thinking out some relief for his old age, how much more easily can we not merely slacken our methods, but change them altogether! For you cannot fail to see, Crassus, how many and diverse are the styles of oratory, a fact which I should almost think you have been the first to make plain, who for a long time have been speaking in a far lighter and calmer fashion than was your wont; though the present serenity of your very dignified discourse finds as ready acceptance as did your extreme energy and passion of old: and there have been many orators including, we are told, the famous Scipio and Laelius, who obtained all their results by discourse little more emphatic than the ordinary, and never strained their lungs or shouted, as Servius Galba did. But if some day you should be unable or unwilling to do even this, are you afraid that the house of such a man and citizen as yourself will be left desolate by the rest of the community, just because it may no longer be the shrine of the litigious? Truly I am so far from agreeing with that view of yours, that I not only do not think the prop of old age is to be found in the multitude of those who come to seek its counsel, but I look for that loneliness which you dread, as I might for a haven. For I hold that the finest prop of old age is its leisure.

General culture is sufficient.

“But the remaining acquirements—useful as they are—I am speaking of history, and a knowledge of public law, and the ways of the ancients, and a store of precedents—I shall borrow, if ever I need them, from my friend Congus, an excellent man who is thoroughly versed in these things. And I shall not object to these young men reading and listening to everything, and busying themselves with every fitting pursuit and with general culture—as you advised just now—: but, I vow, they do not seem to me to have so very much time to spare, provided that they hope to accomplish and follow out all your bidding, Crassus; for I thought that the conditions you imposed were rather too rigorous for their time of life, though possibly necessary for the attainment of the end of their desire. Indeed, the impromptu exercises on problems set, the elaborate and con-

sidered reflections, and your practice of written composition, which you justly called the finishing schoolmaster of eloquence, all demand much toil; and that comparison of the student’s own dissertation with the writings of others, and the unprepared estimate of another’s work, by way of praise or disparagement, approval or refutation, involve exceptional efforts of memory and of the imitative faculty as well.

LXI. “Then that further claim of yours was terrifying, and upon my word I am afraid that its effect will be to deter rather than encourage. For you would have every man of us be a kind of Roscius in his own line; and you said that the approbation accorded to the good points of a speech is short-lived in comparison with the enduring aversion inspired by its shortcomings, whereas I hold that the criticism of our oratory is less squeamish than that directed upon actors. This explains why I see that, even when hoarse, we are often listened to with rapt attention, since the very fact of our hoarseness and our case grip the audience: while Aesopus, should he be a little husky, is hissed off the stage. For, in those arts of which nothing is expected save the gratification of the ear, offense is given directly that gratification is at all weakened. But of oratory the fascinating features are many, and even if all are not there in perfection—still, most of them are highly developed—such as are actually present must needs be thought marvelous.

The important thing is practice.

“And so, to return to our starting-point, let us take the orator to be, as Crassus defined him, a man who can speak in a way calculated to convince. But let him be shut up within the sphere of the daily intercourse and public life of bodies politic; and forsaking all other pursuits, be they as noble and glorious as you please, let him press forward night and day (so to speak) in this single vocation, and do as the famous Athenian Demosthenes²² did, whose pre-eminence in oratory is

²²For the great orator’s ways of conquering his natural handicaps see Schaefer’s *Demosthenes*, vol. i. pp. 299–301; Cicero, *De Finibus* v. 2. 5; Plutarch’s *Life of Demosthenes* (c. 11); and Quintilian x. 3. 30. [Tr.]

unhesitatingly admitted, and whose zeal and exertions are said to have been such that at the very outset he surmounted natural drawbacks by diligent perseverance: and though at first stuttering so badly as to be unable to pronounce the initial *R.* of the name of the art of his devotion,²³ by practice he made himself accounted as distinct a speaker as anyone; later on, though his breath was rather short, he succeeded so far in making his breath hold during a speech, that a single oratorical period—as his writings prove—covered two risings and two fallings of tone; moreover—as the tale goes—it was his habit to slip pebbles into his mouth, and then declaim a number of verses at the top of his voice and without drawing breath, and this not only as he stood still, but while walking about, or going up a steep slope.

“By encouragements of this sort, Crassus, I thoroughly agree with you that the young should be spurred on to severe application: all else that you have brought together from various and dissimilar pursuits and arts, though you yourself have attained everything, I nevertheless regard as lying outside the strict business and function of an orator.”

Adjournment of the debate.

LXII. At the conclusion of these observations of Antonius, Sulpicius, and Cotta too, appeared to be in grave doubt as to which of the two speakers' discourses bore the closer resemblance to the truth. Presently Crassus replied: “Antonius, you are making our orator something of a mechanic; and I rather suspect you are really of a different opinion, and are gratifying that singular liking of yours for contradiction, in which no one has ever outdone you; the exercise of this power belongs peculiarly to orators, though nowadays it is in regular use among philosophers, and chiefly those who make a practice of arguing at extreme length either for or against any proposition whatever laid before them. Now I did not think it my duty, especially before my present audience, to delineate only the possible quality of such a speaker as would live in Court, and bring thither nothing more than the needs of his cases de-

²³Rhetorica. [Tr.]

manded; but I was envisaging a loftier ideal when I stated my view that the orator, especially in our own community, ought to lack nothing in the way of equipment. You on the other hand, having enclosed within certain narrow confines the whole function of an orator, will the more easily expound to us the result of your investigations into his duties and rules: but that, I think, must be another time. For our talk today has been long enough. Now too Scaevola, as he has arranged to go to his Tusculan villa, will rest awhile, until the heat has abated; and let us ourselves, considering the time of day, take care of our health.”

This suggestion pleased everybody. Then Scaevola observed: “I devoutly wish that I had not arranged with Laelius to arrive at my Tusculan villa today; I should like to hear Antonius.” And, as he got up, he added with a smile: “For I was not so much vexed by his tearing our common law to tatters, as delighted by his admission that he knew nothing about it.”

BOOK II

Rules for practice.

XXII. “Let this then be my first counsel, that we show the student whom to copy, and to copy in such a way as to strive with all possible care to attain the most excellent qualities of his model. Next let practice be added, whereby in copying he may reproduce the pattern of his choice and not portray him as time and again I have known many copyists do, who in copying hunt after such characteristics as are easily copied or even abnormal and possibly faulty. For nothing is easier than to imitate a man's style of dress, pose or gait. Moreover, if there is a fault, it is not much trouble to appropriate that and to copy it ostentatiously, just as that Fufius, who even now is raving in the political world, though his voice has gone, fails to attain the energy in speaking which Gaius Fimbria certainly possessed, though hitting off his uncouth mouthings and broad pronunciation. For all that, however, he did not know how to choose the model whom he would most willingly resemble, and it was positively the faults in his chosen pattern that he elected to copy. But he

who is to proceed aright must first be watchful in making his choice, and afterwards extremely careful in striving to attain the most excellent qualities of the model he has approved.

The various schools of oratory.

“Why now is it, do you suppose, that nearly every age has produced its own distinctive style of oratory? Of this truth we can judge less easily in the case of our own orators, since they have left but very few writings on which a judgment could be based, than as regards the Greeks, from whose works the method and tendency of the oratory of every generation may be understood. Quite the earliest, of whom we have any authentic remains, are Pericles and Alcibiades, with Thucydides of the same generation, all of them accurate, pointed, terse and wealthier in ideas than diction. These were followed by Critias, Themamenes and Lysias: we possess many writings of Lysias, of Critias a few; Theramenes is but a name to us. Their uniformity of style could never have come about, had they not kept before them some single model for imitation: they all still retained the peculiar vigor of Pericles, but their texture was a little more luxuriant. Then behold! there arose Isocrates, the Master of all rhetoricians, from whose school, as from the Horse of Troy, none but leaders emerged, but some of them sought glory in ceremonial, others in action.

XXIII. “And indeed the former sort, men like Theopompus, Ephorus, Philistus, Naucrates and many more, while differing in natural gifts, yet in spirit resemble one another and their Master too; and those who betook themselves to law-suits, as did Demosthenes, Hyperides, Lycurgus, Aeschines, Dinarchus, and several others, although of varying degrees of ability, were none the less all busy with the same type of imitation of real life, and as long as the imitation of these persisted, so long did their kind of oratory and course of training endure. Afterwards, when these men were dead and all remembrance of them gradually grew dim and then vanished away, certain other less spirited and lazier styles of speaking flourished. Then came Demochares, said to have been the son of Demosthenes’ sister,

and after him the distinguished Demetrius of Phalerum, the most elegant, to my thinking, of all that school, and others like them. And, if we please to trace this subject down to our own times, we shall find, that just as today all Asia is copying the great Menecles of Alabanda and his brother Hierocles, both of whom I have heard, so there has always been some speaker whom the majority would fain resemble. Let him then, who hopes by imitation to attain this likeness, carry out his purpose by frequent and large practice, and if possible, by written composition: if our friend Sulpicius here were to do so, his diction would be far more condensed; at present, as countrymen are wont to say of grass in times of extreme productiveness, it occasionally has a certain luxuriance about it, which should be grazed off by the pen.”

Here Sulpicius interposed, “Truly you give me good counsel and I thank you for it, but I fancy that even you, Antonius, have done but little scribbling.”

To which Antonius made answer, “As though I could not teach others what I lack myself; though certainly I am credited with not even keeping accounts!

But gifted individuals can dispense with models.

But what little I can do in this direction can be judged from my financial situation, and in the other from what I say. And indeed we see that there are many who copy no man, but gain their objects by natural aptitude, without resembling any model. And the truth of this may be observed in you two, Caesar and Cotta, for one of you has acquired a degree of humor and wit unusual in orators, at any rate in our own, and the other a thoroughly keen and subtle type of oratory. Curio too, your contemporary, whose father I consider quite the most eloquent of his day, seems to me to copy no one in particular, though in the dignity, refinement and copiousness of his language he has given expression to what may be called his own peculiar pattern and type of oratory, of which I could judge to perfection in that action which he conducted against me before the Hundred Commissioners, on behalf of the brothers Cossi; on that occasion he lacked no qualification

which an orator of insight, not of copiousness alone, should possess.

First master facts of case.

XXIV. “However, to introduce at last this man we are portraying to the business of trials and lawsuits, especially such cases as involve rather more trouble—someone will perhaps laugh at this axiom, for it is not so much shrewd as necessary, and comes from an adviser who is no fool, rather than from a learned Master—we shall first instruct him to get up carefully and thoroughly whatever cases he proposes to conduct. This is no canon of the schools, for the cases set to the boys are simple. ‘Statute forbids a foreigner to mount the wall; a foreigner mounts; he has driven off the enemy; he is prosecuted.’ It is no trouble to get up a case like that, and so they are right in giving no directions for mastering the case, for this is just about the type of wording in cases set in the schools. But in the law courts documents, evidence, informal agreements, formal contracts, relationship by blood or marriage, magisterial orders, opinions of counsel, and finally the life-history of the parties to the proceedings, must all be examined; and we see that it is generally through neglect of these matters that cases are lost, particularly such as concern private rights, for these are often of peculiar difficulty. Thus some practitioners, wishing their business to be thought large, and themselves to be seen flitting from lawsuit to lawsuit all round the courts, argue cases which they have not got up. Herein they incur very grave reproach, either of carelessness, if their services are volunteered, or of bad faith, if they are retained; but that reproach is deemed all the greater, in that no man can speak, without the direst disgrace, on a subject which he has not mastered. And so, while scorning the accusation of laziness, in reality the more serious, they encounter as well that of dullness, which they themselves more sedulously avoid.

“It is my own practice to take care that every client personally instructs me on his affairs, and that no one else shall be present, so that he may speak the more freely; and to argue his opponent’s case to him, so that he may argue his own and openly declare whatever he has thought of

his position. Then, when he has departed, in my own person and with perfect impartiality I play three characters, myself, my opponent and the arbitrator. Whatever consideration is likely to prove more helpful than embarrassing I decide to discuss; wherever I find more harm than good I entirely reject and discard the topic concerned. In this way I gain the advantage of reflecting first on what to say and saying it later, two things which most people, trusting in their talent, do simultaneously, though those same individuals would certainly speak rather more successfully, if they thought fit to take one occasion for reflection and another for speaking.

The issue then manifest, under one of three heads:

“When I have thoroughly mastered the circumstances of a case the issue in doubt comes instantly to my mind. For of all the issues disputed among men, whether the matter is criminal, as a charge of outrage, or a civil proceeding, as one relating to an inheritance, or a discussion of policy, as one touching a war, or of a personal kind, as a panegyric, or a philosophical debate, as on the way to live, there is not one of which the point is not either what has been done, or what is being done, or going to be done, or as to the nature of description of something.

(1) fact of alleged act,

XXV. “In almost all our cases, in prosecutions at any rate, the usual defense is a plea of not guilty. For, in trials for extortion, the most important class, nearly every allegation must be denied, and, on a charge of corrupt practices, lavish generosity can seldom be distinguished from profuse bribery; in cases of assassination, poisoning or misappropriation a denial is the inevitable plea. Thus in Court the first class of cases is that of disputed facts; debate generally proceeds from something still to come, seldom from anything present or past.

(2) its nature,

Often too the question is not whether something be the fact or not, but what is its nature; as, when

I heard Gaius Carbo, in his consulship, defending Lucius Opimius before the people, he denied no detail of the killing of Gaius Gracchus, but urged that it was justifiable and for the public safety; or as when Publius Africanus made answer to that very Carbo (by then a tribune of the commons with changed political views and putting a question as to Tiberius Gracchus), that 'his death appeared to be justifiable.'

(3) *its definition.*

Now all acts may be defended as justifiable which are such that the doing thereof was a duty, or permissible, or necessary, or which are shown to have been done inadvertently or by accident. Again the question is one of definition, when the terms in which an act should be described are in dispute, as in the main contention between myself and our friend Sulpicius at the trial of Norbanus.²⁴ For, while admitting most of our friend's indictment, I still maintained that the defendant was not guilty of 'treason,' since the whole case depended on the construction of this word, by virtue of the Statute of Appuleius.²⁵ And in such proceedings some lay down a rule that each side shall concisely define the debatable term, a proposition which I myself always think thoroughly childish. For definition of terms is another thing when controversy arises among specialists touching the intimate concerns of the arts, for instance when inquiry is made as to the essential nature of an art, a statute or a community, in which circumstances scientific method ordains that the significance of whatever you are defining shall be made plain, with no omission or redundancy. But in that case of ours Sulpicius did no such thing nor did I attempt it, since we both, to the utmost of our power, enlarged with all our fluency upon the meaning of 'act of treason.' For, in the first place, if the addition or subtraction of a word be seized on, a definition is often wrung from our grasp, and then too the very suggestion savors of the schools and a training little better than elementary, and lastly the definition cannot

reach the understanding and reason of the arbitrator, as it slips by him before he has taken it in.

These three issues explained.

XXVI. "But in that kind of cases, wherein the nature of something is in issue, a further contest often arises out of the construction of a document, when the only possible dispute comes from an equivocation. For the mere fact that letter and spirit are at variance involves something of an equivocation; and this is solved directly the missing words are supplied, and, when these are inserted, it is contended that the sense of the writing has become plain. And, if uncertainty arises from passages which contradict one another, there emerges no new sort of problem, but a double example of the former kind. And this will either prove insoluble, or will be so solved, that by the restoration of the words omitted, whichever version we are upholding will be completed. It follows that only one class is left of problems turning on the writer's language, these arising where something has been equivocally expressed.

"Now, although there are several kinds of equivocation (better understood, I think, by the so-called logicians, and unknown to these²⁶ friends of ours, who should understand them just as well), yet the most common, in the whole range of verbal or written intercourse, is the equivocation due to the omission of a word or words. And they are wrong again in distinguishing between this sort of cases, concerned with documentary construction, and those where the nature of something is in debate; for never is the precise character of anything so closely investigated as in the construction of a document, which has nothing in common with questions of fact.

"Then questions of three kinds in all may fall under debate and dispute—what is being done, or has been done or is going to be done, or what is the nature of something, or what is its right designation? For that further question, added by sundry Greeks, whether something was lawfully done, is completely covered by the question of its nature.

²⁴See §197 n. [Tr.]

²⁵In 100 B.C., appointing a commission to investigate treasons committed during the Cimbrian war, 113–101 B.C. [Tr.]

²⁶*I.e.*, the rhetoricians. [Tr.]

Three objects in view.

XXVII. “But to return at length to my own plan. As soon then as I have received my instructions and classed the case and taken the matter in hand, the very first thing I determine is that point to which I must devote all such part of my speech as belongs peculiarly to the issue and the verdict. Next I contemplate with the utmost care those other two essentials, the one involving the recommendation of myself or my clients, the other designed to sway the feelings of the tribunal in the desired direction. Thus for purposes of persuasion the art of speaking relies wholly upon three things: the proof of our allegations, the winning of our hearers’ favor, and the rousing of their feelings to whatever impulse our case may require.

Facts must be established by evidence or argument.

For purposes of proof, however, the material at the orator’s disposal is twofold, one kind made up of the things which are not thought out by himself, but depend upon the circumstances and are dealt with by rule, for example documents, oral evidence, informal agreements, examinations, statutes, decrees of the Senate, judicial precedents, magisterial orders, opinions of counsel, and whatever else is not produced by the orator, but is supplied to him by the case itself or by the parties: the other kind is founded entirely on the orator’s reasoned argument.

Methods of handling these acquired by study.

And so, with the former sort, he need only consider the handling of his proofs, but with the latter, the discovery of them as well. And indeed those professors, after distinguishing a larger number of types of cases, suggest proofs in plenty for each type. But, even if this plan is better fitted for training the young, to the end that, directly a case is propounded, they may have authorities from which they can forthwith borrow ready-made proofs, yet it is a symptom of congenital dullness to follow up the tiny rills, but fail to discern the sources of things: and by this time it is the privilege of men of our years and experi-

ence to call up what we want from the water’s head, and to discern the springs of every stream.

“And, to begin with, that class of things supplied to the orator we shall have to study constantly, with a view to the general use of similar instances; for in attacking or defending documents, witnesses or examinations by torture, and also in dealing with all other such subjects, it is our habit to discuss either the whole class in the abstract, or individual occasions, persons or circumstances in the concrete: these commonplaces (I am speaking to you, Cotta and Sulpicius) you ought, by dint of large study and practice, to have ready at hand. It would be a long story for me to unfold just now the right way to corroborate or weaken witnesses, documents, or examinations. All this demands no great talent but vast practice, and Art and her maxims only to this extent—that it be illuminated by good and effective diction. So too those subjects of the other class, produced entirely by the orator, are easy enough to think out, but call for clearer and highly finished exposition. Thus, while in our cases we have these two objectives, first what to say, and secondly how to say it, the former, which seems to be art pure and simple, cannot indeed dispense with art, though it needs but ordinary skill to discover what ought to be said; but it is in the latter that the orator’s godlike power and excellence are discerned, that is, his delivery of what he has to say in a style elegant, copious, and diversified.

Mode of stating arguments effectively left to Crassus.

XXVIII. “Accordingly, as you have once for all so resolved, I shall not object to working out completely (you will judge of the measure of my success) that former²⁷ portion, dealing with those commonplaces from which may be drawn a speech such as to attain those three things which alone can carry conviction; I mean the winning over, the instructing and the stirring of men’s minds. For these are the three. But how to embellish these arguments we have at hand him who could teach the world, the man who first made this accomplishment habitual among us, did most to improve it, and alone has mastered it. For I

²⁷*I.e., inventio*, or the discovery of what to say. [Tr.]

think, Catulus (and I shall say so without fear of being suspected of flattery), that I have listened often and attentively to every one of the rather more brilliant speakers of our day, Greek and Roman alike. And so, if there be anything in me (as I think I may hope there is, now that men of your talents take so much trouble to hear me), it is because no orator ever delivered a speech in my hearing which did not settle deep within my memory. And I, being what I am, and so far as I am competent to judge, after hearing all the orators, do unhesitatingly decree and pronounce as follows, that not one of them all possessed so many and excellent resources of diction as appear in Crassus. Therefore, if you share this estimate of mine, it will, I think, be no unfair division of labor if, having begotten, nurtured and made strong this orator, whom I am now molding as I planned, I hand him over to Crassus, to be clothed and fitted out.”

Crassus urges Antonius to explain his own method.

Here Crassus observed: “Nay, Antonius, you go on with your plan. For it ill becomes a good and generous father to refuse clothing and equipment to the child you have begotten and reared, especially as you cannot plead poverty. For what did that advocate lack, in the way of resource, passion, energy or greatness, who in closing his case did not hesitate to call forward the defendant²⁸ of consular rank, and tear open his tunic, and display to the tribunal the scars on the old general’s breast? Who again, in his defense of a factious and frenzied client, prosecuted by Sulpicius here, did not hesitate to glorify civil discord in itself, and to show, in most convincing terms, that many popular movements are justifiable, and no one by any possibility answerable for them; that moreover civil discord has often been aroused in the interest of the community, witness the expulsion of the kings and the establishment of the authority of tribunes; that the outbreak of Norbanus,²⁹ arising as it did from public mourning and indignation against Caepio, who had lost his army, could not have been restrained and was

justifiably kindled. Could this line of argument, so hazardous, startling, treacherous, and unfamiliar, be handled otherwise than by oratorical power and readiness truly marvelous? What shall I say of the lamentation over Gnaeus Mallius, or of that over Quintus Rex? What of countless other cases, wherein the really unequalled acuteness, universally recognized as yours, was not the most brilliant feature, but those very qualifications, which you would now delegate to me, were consistently displayed in outstanding excellence by yourself?”

Stoic doctrine useless for the orator.

XXXVIII. “But, to recall Oratory to the point at which this digression started, do you observe that, of those three most illustrious philosophers, who visited Rome as you told us, it was Diogenes who claimed to be teaching an art of speaking well, and of distinguishing truth from error, which art he called by the Greek name of dialectic? This art, if indeed it be an art, contains no directions for discovering truth, but only for testing it. For as to every proposition that we enunciate with an affirmation of its truth or falsity, if it be affirmed without qualification, the dialecticians undertake to decide whether it be true or false; and, if again it be stated hypothetically, with collateral propositions annexed, then they decide whether these others are properly annexed, and whether the conclusion drawn from each and every reasoning is correct: and in the end they prick themselves with their own barbs, and by wide investigation discover not only difficulties such as they themselves can no longer solve, but also others by which webs already attacked, or rather wellnigh unwound, are tangled up again. In this connection then that eminent Stoic is of no help to us, since he does not teach me how to discover what to say; and he actually hinders me, by finding many difficulties which he pronounces quite insoluble, and by introducing a kind of diction that is not lucid, copious and flowing, but meager, spiritless, cramped, and paltry; and, if any man commends this style, it will only be with the qualification that it is unsuitable to an orator. For this oratory of ours must be adapted to the ears of the multitude, for charming

²⁸M'. Aquilius, see §194 n. [Tr.]

²⁹See §197 n. [Tr.]

or urging their minds to approve of proposals, which are weighed in no goldsmith's balance, but in what I may call common scales.

Insight of Aristotle and ability in argument of Carneades.

“Let us therefore renounce entirely that art which has too little to say when proofs are being thought out, and too much when they are being assessed. That Critolaus, whose visit in company with Diogenes you recall, might have been more useful, I think, in this pursuit of ours. For he was a follower of your Aristotle, from whose doctrines you think my own differ but little. And between this Aristotle (I read also that book of his, setting forth the rhetorical theories of all his fore-runners, and those other works containing sundry observations of his own on the same art), and these true professors of this art, there seemed to me to be this difference—that he surveyed these concerns of the art of rhetoric, which he disdained, with that same keen insight, by which he had discerned the essential nature of all things; whereas those others, considering this the only thing worth cultivating, have dwelt upon the treatment of this single subject, without his sagacity, but, in this one instance, with larger practice and closer application. As for Carneades, however, the extraordinary power and diversity of his oratory would be extremely to our liking; since, in those debates of his he supported no contention without proving it, and attacked none which he did not overthrow. But this is rather more than should be asked of the authors and teachers of these maxims.

The doctrine of “topics,” which are derived either from the case itself or from without.

XXXIX. “For my part, if just now I were to want a complete novice trained up to oratory, I should rather entrust him to these untiring people, who hammer day and night on the same anvil at their one and only task, for them to put into his mouth none but the most delicate morsels—everything chewed exceedingly small—in the manner of wet nurses feeding baby-boys. But should he, whom I have had liberally educated in theory,

and who by this time has some tincture of practice, show also signs of sufficient natural acuteness, I will hurry him off to that source where no sequestered pool is landlocked, but from it bursts forth a general flood; to that teacher who will point out to him the very homes of all proofs, so to speak, illustrating these briefly and defining them in terms. For in what respect could a speaker be at a loss, who has contemplated everything to be employed in a speech, for purposes of either proof or disproof, or to be derived from the essential nature of the case, or adopted from without? Intrinsic arguments, when the problem concerns the character of the subject as a whole, or of part of it, or the name it is to bear, or anything whatever relating to the subject; extrinsic arguments, on the other hand, when topics are assembled from without and are not inherent in the nature of the case.

“If the problem concerns the whole subject, the general idea of it has to be made plain by definition; for example: ‘If sovereignty be the grandeur and glory of the State, it was violated by the man who delivered up to the enemy an army of the Roman People, not by him who delivered the man that did it into the power of the Roman People.’ But if only a part is being dealt with, its nature must be explained by distribution, as follows: ‘The right course, in a situation affecting the welfare of the State, was to obey the Senate, or to set up another advisory body, or to act on his own initiative: to set up another body would have been insolence, to follow his own counsel, arrogance; therefore he should have taken the advice of the Senate.’ If the argument turns on a word, remember Carbo’s ‘If a consul’s duty is to consult the interests of his native land, what else has Opimius done?’ If it turns on something correlated with the subject, the proofs come from several sources or commonplaces; for we shall investigate connected terms, and general heads with their subdivisions, and resemblances and differences, and opposites, and corresponding and concurrent circumstances, and so-called antecedents, and contradictories, and we shall track down the causes of things, and the effects proceeding from causes, and investigate things of relatively greater, equal, or lesser significance.

XL. “An instance of proof deduced from con-

nected terms is: 'If the highest praise is due to loyalty, you should be stirred at the sight of Quintus Metellus mourning so loyally.' One of deduction from a general term is: 'If the magistracies ought to be under the control of the Roman People, why impeach Norbanus, whose conduct as tribune was subservient to the will of the community?'

"As a deduction from a subdivision of a general head take: 'If we are bound to esteem all who make the interests of the State their care, surely our commanders-in-chief stand foremost, by whose strategy, valor and hazards we preserve both our own security and the grandeur of our sovereignty.' Then, as a deduction from resemblance, we have: 'If the wild beasts cherish their young, what tenderness ought we to bear to our children!' One from difference, on the other hand, is: 'If it be the mark of uncivilized folk to live but for the day, our own purposes should contemplate all time.' And, in cases involving both resemblance and difference, analogies are found in the deeds or the words or the fate of other people, and feigned tales must often be cited. Again, as a deduction from an opposite, take: 'If Gracchus did wickedly, Opimius did nobly.' And, as one from corresponding circumstances: 'If he was killed by a sword, and you, his enemy, were caught on the very spot with a bloody blade, and none other than yourself was seen there or had any motive, and you were ever a man of violence, what doubt could we feel as to the crime?' And, to illustrate deduction from concurrent circumstances, antecedents, and contradictories, we remember Crassus arguing in his youth: 'This tribunal, Carbo, is not going to deem you a patriotic citizen just because you defended Opimius: clearly you were only pretending, and had some other end in view, inasmuch as in your harangues you frequently lamented the death of Tiberius Gracchus, and you were a party to the murder of Publius Africanus,³⁰ and you brought in that statute³¹ during your tribuneship, and always disagreed with the patriotic.' And a deduc-

³⁰P. Cornelius Scipio Africanus Minor, who captured Carthage 146 B.C., died in 129, probably from a stroke, but the Gracchans were suspected of assassination. [Tr.]

³¹Apparently extending the use of the ballot. [Tr.]

tion from the causes of things is: 'If you would abolish covetousness, you must abolish its mother, profusion.' And one from the effects of causes is: 'If we are using the funds of the Treasury to aid war and beautify peace, let us become the slaves of taxation.' And, to show how we shall compare things of relatively greater, lesser and equal significance, a deduction from the greater is: 'If good repute is above riches, and money is so keenly desired, how far more keenly should fame be desired?' For one from the lesser take:

Just for a slender acquaintance!
So heartfelt his grief at her death!
What had he loved her? What sorrow
Will he show for his father — for me?

For one from the equal we have: 'It is one and the same man's part to snatch the State's money and lavish it to her detriment.'

"Finally, proofs adopted from outside are such as rest upon no intrinsic force of their own but upon external authority, instances being: 'This is true, for Quintus Lutatius said so': 'This evidence is false, for torture has been employed': 'This must inevitably follow, for I am reading from the documents.' Of all this kind of thing I spoke just now.

A brief treatment is enough, as attention and acumen will do more than theory.

XLI. "I have sketched these topics as shortly as possible. For if I wished to reveal to somebody gold that was hidden here and there in the earth, it should be enough for me to point out to him some marks and indications of its positions, with which knowledge he could do his own digging, and find what he wanted, with very little trouble and no chance of mistake: so I know these indications of proofs, which reveal to me their whereabouts when I am looking for them; all the rest is dug out by dint of careful consideration. But what type of proofs best befits each type of case needs not consummate art to dictate, but only ordinary talent to decide. For our immediate task is not to display any system of speaking, but to hand on to highly educated men certain

lessons, as I may call them, learned from our own practice. Accordingly, with these commonplaces firmly established in his mind and memory, and roused into activity with every topic proposed for discussion, nothing will be able to elude the orator, either in our own contentions at the Bar, or in any department whatever of speaking. If however he shall succeed in appearing, to those before whom he is to plead, to be such a man as he would desire to seem, and in touching their hearts in such fashion as to be able to lead or drag them whithersoever he pleases, he will assuredly be completely furnished for oratory.

Variety of treatment essential.

“Again, we see that the discovery of what to say is wholly insufficient, unless you can handle it when found. But the handling should be diversified, so that your hearer may neither perceive the art of it, nor be worn out by too much monotony. You ought to formulate your proposition, and give the reasons for its being what it is; and from those same commonplaces you should sometimes draw your conclusion, and sometimes abandon them to pass elsewhere; often it is better not to formulate expressly, but to make it plain, by affirming the underlying principle, what the formulation would have been; if you are putting a parallel case to something, you should first show how it is like, and then annex the matter in hand; as a rule you should conceal the intervals between successive proofs, to prevent them from being counted, so that, though separate in fact, they may seem blended in statement.

Favor of audience must be secured.

XLII. “I am running over these things in a hurry, and like a half-trained man who is facing experts, in order that we may come at last to those more essential matters. Now nothing in oratory, Catulus, is more important than to win for the orator the favor of his hearer, and to have the latter so affected as to be swayed by something resembling a mental impulse of emotion, rather than by judgment or deliberation. For men decide far more problems by hate, or love, or lust, or rage, or sorrow, or joy, or hope, or fear, or illusion, or

some other inward emotion, than by reality, or authority, or any legal standard, or judicial precedent, or statute. And so, unless you think differently, let us proceed to the things I spoke of.”

Arrangement to be discussed later.

“Even now,” returned Catulus, “there seems to be a little something missing, Antonius, from your exposition, which you should clear up, before setting out for that region whither you say you are bound.” “Pray what is that?” asked the other. “Your view as to the right arrangement and distribution of proofs,” said Catulus, “in which connection your practice always strikes me as ideal.”

“Observe, Catulus,” came the answer, “how far I am ideal in that kind of thing: upon my word, but for your suggestion, the notion would never have entered my head: so that you may look upon me as generally running into those ways, in which now and then I seem effective, just in the course of speaking, or rather by accident. And indeed that factor which, through failure to recognize it, I was passing by unnoticed, as I might a human stranger, is second to none in the making of oratorical success, but, for all that, I think you have been premature in asking me for my theory of the arrangement and distribution of topics. For had I based the orator’s essential power solely upon his proofs, and upon his establishing personally his actual case, it would not be the time to say a word as to the arrangement and marshalling of proofs. But since I have assumed three³² elements in discovery and discussed only one of them, it will be time to conclude by investigating the arrangement of a speech as a whole, when I have first discussed the two elements that remain.

Means of securing favor of audience.

XLIII. “A potent factor in success, is for the characters, principles, conduct, and course of life, both of those who are to plead cases and of their clients, to be approved, and conversely those of their opponents condemned; and for the

³²See the opening of Chapter xxxv, *supra*. [Tr.]

feelings of the tribunal to be won over, as far as possible, to goodwill towards the advocate and the advocate's client as well. Now feelings are won over by a man's merit, achievements or reputable life, qualifications easier to embellish, if only they are real, than to fabricate where non-existent. But attributes useful in an advocate are a mild tone, a countenance expressive of modesty, gentle language, and the faculty of seeming to be dealing reluctantly and under compulsion with something you are really anxious to prove. It is very helpful to display the tokens of good-nature, kindness, calmness, loyalty, and a disposition that is pleasing and not grasping or covetous, and all the qualities belonging to men who are upright, unassuming and not given to haste, stubbornness, strife or harshness, are powerful in winning goodwill, while the want of them estranges it from such as do not possess them; accordingly the very opposites of these qualities must be ascribed to our opponents. But all this kind of advocacy will be best in those cases wherein the arbitrator's feelings are not likely to be kindled by what I may call the ardent and impassioned onset. For vigorous language is not always wanted, but often such as is calm, gentle, mild: this is the kind that most commends the parties. By 'parties' I mean not only persons impeached, but all whose interests are being determined, for that was how people used the term in the old days. And so to paint their characters in words, as being upright, stainless, conscientious, modest, and long-suffering under injustice, has a really wonderful effect; and this topic, whether in opening, or in stating the case, or in winding-up, is so compelling, when agreeably and feelingly handled, as often to be worth more than the merits of the case. Moreover so much is done by good taste and style in speaking, that the speech seems to depict the speaker's character. For by means of particular types of thought and diction, and the employment besides of a delivery that is unruffled and eloquent of good-nature, the speakers are made to appear upright, well-bred and virtuous men.

Importance of inspiring suitable emotions in audience:

XLIV. "But closely associated with this is that dissimilar style of speaking which, in quite an-

other way, excites and urges the feelings of the tribunal towards hatred or love, ill-will or well-wishing, fear or hope, desire or aversion, joy or sorrow, compassion or the wish to punish, or by it they are prompted to whatever emotions are nearly allied and similar to these passions of the soul, and to such as these.

"Another desirable thing for the advocate is that the members of the tribunal, of their own accord, should carry within them to Court some mental emotion that is in harmony with what the advocate's interest will suggest. For, as the saying goes, it is easier to spur the willing horse than to start the lazy one. But if no such emotion be present, or recognizable, he will be like a careful physician who, before he attempts to administer a remedy to his patient, must investigate not only the malady of the man he wishes to cure, but also his habits when in health, and his physical constitution.

"This indeed is the reason why, when setting about a hazardous and important case, in order to explore the feelings of the tribunal, I engage wholeheartedly in a consideration so careful, that I scent out with all possible keenness their thoughts, judgments, anticipations, and wishes, and the direction in which they seem likely to be led away most easily by eloquence. If they surrender to me, and as I said before, of their own accord lean towards and are prone to take the course in which I am urging them on, I accept their bounty and set sail for that quarter which promises something of a breeze. If however an arbitrator is neutral and free from predisposition, my task is harder, since everything has to be called forth by my speech, with no help from the listener's character. But so potent is that Eloquence, rightly styled, by an excellent poet, 'soulbending sovereign of all things,' that she can not only support the sinking and bend the up-standing, but, like a good and brave commander, can even make prisoner a resisting antagonist.

success of Crassus in this.

XLV. "These are the details for which Crassus was playfully importuning me just now, when he said that I always handled them ideally, and he praised what he called the brilliant treatment of

them in the cases of Manius Aquilius, Gaius Norbanus, and sundry others. Now I give you my word, Crassus, that I always tremble when these things are handled by yourself in Court: such is the mental power, such the passion, so profound the indignation, ever manifest in your glance, features, gesture, even in that wagging finger of yours; so mighty is the flow of your most impressive and happy diction, so sound, true and original your sentiments, and so innocent of coloring-matter or paltry dye, that to me you seem to be not merely inflaming the arbitrator, but actually on fire yourself.

The speaker must himself feel the emotions he wishes to excite;

“Moreover it is impossible for the listener to feel indignation, hatred, or ill-will, to be terrified of anything, or reduced to tears of compassion, unless all those emotions, which the advocate would inspire in the arbitrator, are visibly stamped or rather branded on the advocate himself. Now if some feigned indignation had to be depicted, and that same kind of oratory afforded only what was counterfeit and produced by mimicry, some loftier art would perhaps be called for. As things stand, Crassus, I do not know how it may be with yourself or the rest, but in my own case there is no reason why I should lie to men of consummate experience, who are also my best friends: I give you my word that I never tried, by means of a speech, to arouse either indignation or compassion, either ill-will or hatred, in the minds of a tribunal, without being really stirred myself, as I worked upon their minds, by the very feelings to which I was seeking to prompt them. For it is not easy to succeed in making an arbitrator angry, with the right party, if you yourself seem to treat the affair with indifference; or in making him hate the right party, unless he first sees you on fire with hatred yourself; nor will he be prompted to compassion, unless you have shown him the tokens of your own grief by word, sentiment, tone of voice, look, and even by loud lamentation. For just as there is no substance so ready to take fire, as to be capable of generating flame without the application of a spark, so also there is no mind

so ready to absorb an orator’s influence, as to be inflammable when the assailing speaker is not himself aglow with passion.

as he naturally will, considering his themes: examples.

XLVI. “Again, lest haply it should seem a mighty miracle, for a man so often to be roused to wrath, indignation and every inward emotion—and that too about other people’s business—the power of those reflections and commonplaces, discussed and handled in a speech, is great enough to dispense with all make-believe and trickery: for the very quality of the diction, employed to stir the feelings of others, stirs the speaker himself even more deeply than any of his hearers. And, not to have us astonished at this happening in litigation, or before arbitrators, or in the impeachments of our friends, or among a crowd of people, or in political life, or public debate, when not only our talent is under criticism (no great matter, though even this should not be overlooked, when you have claimed a proficiency attained by few), but other and far more important attributes are on trial, I mean our loyalty, sense of duty, and carefulness, under whose influence, even when defending complete strangers, we still cannot regard them as strangers, if we would be accounted good men ourselves. However, as I said, not to have this seem a marvel among us, what can be so unreal as poetry, the theater or stage plays? And yet, in that sort of things, I myself have often been a spectator when the actor-man’s eyes seemed to me to be blazing behind his mask, as he spoke those solemn lines,

Darest thou part from thy brother, or Salamis enter
without him,
Dreading the mien of thy sire not at all?

Never did he utter that word ‘mien,’ without my beholding an infuriated Telamon maddened by grief for his son. Whenever too he lowered his voice to a plaintive tone, in the passage,

Aged and childless,
Didst tear and bereave and didst quench me, forgetting
the death of thy brother,
Forgetting his tiny son, though entrusted to thee as
a guardian?

I thought I heard sobs of mourning in his voice. Now if that player, though acting it daily, could never act that scene without emotion, do you really think that Pacuvius, when he wrote it, was in a calm and careless frame of mind? That could never be. For I have often heard that—as they say Democritus and Plato have left on record—no man can be a good poet who is not on fire with passion, and inspired by something very like frenzy.

Instance of Antonius himself, in cases of Aquilius and Norbanus.

XLVII. “Do not suppose then that I myself, though not concerned to portray and reproduce in language the bygone misfortunes and legendary griefs of heroes, and though presenting my own personality and not representing another’s, did without profound emotion the things I did when closing that famous case,³³ in which my task was to maintain Manius Aquilius in his civic rights. For here was a man whom I remembered as having been consul, commander-in-chief, honored by the Senate, and mounting in procession to the Capitol; on seeing him cast down, crippled, sorrowing and brought to the risk of all he held dear, I was myself overcome by compassion before I tried to excite it in others. Assuredly I felt that the Court was deeply affected when I called forward my unhappy old client, in his garb of woe, and when I did those things approved by yourself, Crassus—not by way of technique, as to which I know not what to say, but under stress of deep emotion and indignation—I mean my tearing open his tunic and exposing his scars. While Gaius Marius, from his seat in court, was strongly reinforcing, by his weeping, the pathos of my appeal, and I, repeatedly naming him, was committing his colleague³⁴ to his care, and calling upon him to speak himself in support of the common interests of commanders-in-chief, all this lamentation, as well as my invocation of every god and man, every citizen and ally, was

³³Aquilius was consul in 101 B.C. After suppressing the Servile War in Sicily, he was prosecuted in 98 B.C. for extortion, but successfully defended by Antonius (*cf.* §188). [Tr.]

³⁴Marius was consul for the fifth time in 101 B.C. [Tr.]

accompanied by tears and vast indignation on my own part; had my personal indignation been missing from all the talking I did on that occasion, my address, so far from inspiring compassion, would positively have deserved ridicule. And so I am telling you this, Sulpicius, as naturally such a kindly and accomplished teacher would do, in order to help you to be wrathful, indignant, and tearful in your speech-making.

“But why indeed should I teach this to you, who, in prosecuting my comrade and quaestor,³⁵ had kindled such a blaze, not by eloquence only but far more by vehemence, indignation, and fiery enthusiasm, that I hardly ventured to draw near and put it out? For all the advantages in that case had been yours: you were citing to the Court the violence, the flight, the stone-throwing and the tribunes’ ruthlessness that marked the disastrous and lamentable affair of Caepio; then too it was established that Marcus Aemilius, chief of Senate and chief of State, had been struck by a stone, while it was undeniable that Lucius Cotta and Titus Didius, on trying to veto a resolution, had been forcibly driven from sanctuary.

XLVIII. “In the result, while you, only a stripling, were thought to be conducting this public prosecution with consummate distinction, I, a past censor, was thought to be acting not quite honorably in bearing to defend a factious citizen, who moreover had been merciless to a past consul in distress. Citizens of the best repute formed the tribunal; men of respectability crowded the Court; so that I had difficulty in winning a grudging sort of acceptance of my plea that at any rate my client was my old quaestor. In these circumstances how can I say I used any particular technique? What I did I will relate, if you think fit, you will give my line of defense some place or other in your system.

³⁵I.e., Gaius Norbanus, who had been Antonius’s quaestor in 103 B.C. (*cf.* Book II, ~ ~ 89, 107, 124). Q. Servilius Caepio, as proconsul in Gaul, had been the main cause of the crushing defeat inflicted upon the Roman army by the Cimbri at Arausio. Being subsequently prosecuted and condemned for his treason and embezzlement in Gaul, he was exiled. Norbanus had been active in the proceedings against him, and this led to the prosecution of Norbanus himself by the aristocrats in 95 B.C., when Antonius conducted his defense, as here described. [Tr.]

"I classified all the types of civil discord, their weaknesses and dangers, and that part of my speech I derived from all the vicissitudes in the history of our own community, winding up with the assertion that civil discords, though always troublesome, had yet sometimes been justifiable and well-nigh unavoidable. Next I discussed the considerations lately recalled by Crassus; how that neither the expulsion of kings from this State, nor the establishment of tribunes of the commons, nor the frequent restriction of the consuls' power by decrees of the commons, nor the bestowal upon the Roman People of the right of appeal, that famous buttress of the State and defense of freedom, could any of them have been effected without aristocratic opposition; and that, if those particular civil discords had been beneficial to our community, the mere fact of a popular movement having been caused must not instantly be counted against Gaius Norbanus for heinous wickedness and indeed a capital offense. That if rightfulness had ever been conceded to an incitement of the Roman People to sedition—a concession which I was showing to have been frequent—there had never been a juster cause than this one. After that I altered my course and turned my entire speech into a denunciation of the running-away of Caepio and a lament for the destruction of his army: in this way, besides chafing anew by my words the sores of people mourning for their own folk, I was kindling the feelings of the Roman Knights, who constituted the Court I was addressing, into fresh hatred of Quintus Caepio, from whom they had been estranged already over the composition of the criminal Courts.³⁶

XLIX. "But when I felt I had a firm hold on the Court and on my line of defense, and I had won the goodwill of the public, whose claims I had upheld even when involved with civil discord, and I had turned all hearts on the tribunal in favor of my cause, by reason either of the national disaster, or of yearning grief for kindred, or of private hatred of Caepio, then I began to blend with this impetuous and violent type of or-

³⁶Caepio in 106 B.C. had proposed to deprive the *equites* of their monopoly of the jury functions, and to have the tribunals composed of senators and *equites* in equal proportions. [Tr.]

atory that other mild and gentle type, which I have already discussed, pleading that I was fighting for my comrade, who by ancestral tradition should stand in a filial relation to myself, and also (I might say) for my own fair fame and general welfare; no happening could more deeply disgrace my reputation, or cause me more bitter sorrow, than for it to be thought that I, so often the savior of complete strangers to myself, provided only they were my fellow-citizens, had been unable to aid my own comrade. I begged the Court, should they see me affected by justifiable and loyal grief, to excuse this in consideration of my years, official career and achievements, particularly if, in the course of other trials, they had observed that I always made my petitions on behalf of friends in jeopardy, never for myself. Thus all through that speech for the defense, and indeed the trial itself, it was in the fewest possible words that I glanced over and lightly touched the matters which seemed dependent upon scientific treatment, I mean my discussion of the Statute of Appuleius,³⁷ and my exposition of the nature of treason. By means of these two modes of speech, the one inflammatory, the other eulogistic, and neither of them much elaborated by rules of art, I so managed the whole of that case as to seem most passionate when reviving hatred of Caepio, and mildest when describing my conduct towards my own connections. So, Sulpicius, it was rather by working upon, than by informing, the minds of the tribunal, that I beat your prosecution on that occasion."

Sulpicius testifies to Antonius's success in the latter case.

L. Here Sulpicius observed, "Upon my word, Antonius, your account of those matters is true, for never did I see anything slip through the fingers in the way that verdict slipped that day through mine. For when (as you told us) I had left you with a conflagration rather than a case to dispose of—ye Gods!—what an opening you made! How nervous, how irresolute you seemed! How stammering and halting was your delivery! How you clung at the outset to the solitary excuse

³⁷See Book II, §107, n. b. [Tr.]

everyone was making for you—that you were defending your own familiar friend and quaestor! So, in the first place, did you prepare the way towards getting a hearing! Then, just as I was deciding that you had merely succeeded in making people think intimate relationship a possible excuse for your defending a wicked citizen—lo and behold!—so far unsuspected by other people, but already to my own serious alarm, you began to wriggle imperceptibly into your famous defense, of no factious Norbanus, but of an incensed Roman People, whose wrath, you urged, was not wrongful, but just and well-deserved. After that what point against Caepio did you miss? How you leavened every word with hatred, malice, and pathos! And all this not only in your speech for the defense, but also in your handling of Scaurus and the rest of my witnesses, whose evidence you rebutted by no disproof, but by fleeing for refuge to that same national outbreak. When just now you were reminding us of these things, I certainly felt no need for any maxims, for that actual reproduction, in your own words, of your methods of defense is to my mind the most instructive of teaching.”

Rules and cautions for emotional oratory.

“For all that,” answered Antonius, “we will, if you please, go on to set forth the principles we generally adopt in speaking, and the points we chiefly keep in view: for a long career and experience in the most weighty affairs have taught us, by this time, to hold fast to the ways of stirring the feelings of mankind.

LI. “My own practice is to begin by reflecting whether the case calls for such treatment; for these rhetorical fireworks should not be used in petty matters, or with men of such temper that our eloquence can achieve nothing in the way of influencing their minds, unless we would be deemed fit objects of ridicule, or even of disgust, as indulging in heroics over trifles, or setting out to uproot the immovable. Now, since the emotions which eloquence has to excite in the minds of the tribunal, or whatever other audience we may be addressing, are most commonly love, hate, wrath, jealousy, compassion, hope, joy, fear, or vexation, we observe that love is won if

you are thought to be upholding the interests of your audience, or to be working for good men, or at any rate for such as that audience deems good and useful. For this last impression more readily wins love, and the protection of the righteous esteem; and the holding-out of a hope of advantage to come is more effective than the recital of past benefit. You must struggle to reveal the presence, in the cause you are upholding, of some merit or usefulness, and to make it plain that the man, for whom you are to win this love, in no respect consulted his own interests and did nothing at all from personal motives. For men’s private gains breed jealousy, while their zeal for others’ service is applauded.

“And here we must be watchful, not to seem to extol unduly the merits and renown—jealousy’s favorite target—of those whom we would have beloved for their good works. Then too, from these same commonplaces, we shall learn as well to instigate hatred of others as to turn it away from ourselves and our clients: and these same general heads are to be employed in kindling and also in assuaging wrath. For, if you glorify the doing of something ruinous or unprofitable to your particular audience, hate is engendered: while, if it be something done against good men in general, or those to whom the particular doer should never have done it, or against the State, no such bitter hate is excited, but a disgust closely resembling ill-will or hate. Fear again is struck from either the perils of individuals or those shared by all: that of private origin goes deeper, but universal fear also is to be traced to a similar source.

Prevalence of jealousy.

LII. “The treatment of hope, joy, and vexation is similar to this, and identical in each case, but I rather think that the emotion of jealousy is by far the fiercest of all, and needs as much energy for its repression as for its stimulation. Now people are especially jealous of their equals, or of those once beneath them, when they feel themselves left behind and fret at the others’ upward flight; but jealousy of their betters also is often furious, and all the more so if these conduct themselves insufferably, and overstep their rightful claims on

the strength of pre-eminent rank or prosperity; if these advantages are to be made fuel for jealousy, it should before all be pointed out that they were not the fruit of merit; next that they even came by vice and wrongdoing, finally that the man's deserts, though creditable and impressive enough, are still exceeded by his arrogance and disdain. To quench jealousy, on the other hand, it is proper to emphasize the points that those advantages were the fruit of great exertion and great risks, and were not turned to his own profit but to that of other people; and that, as for any renown he himself may seem to have won, though no unfair recompense for his risk, he nevertheless finds no pleasure therein, but casts it aside and disclaims it altogether: and we must by all means make sure (since most people are jealous, and this failing is remarkably general and widespread, while jealousy is attracted by surpassingly brilliant prosperity) that the belief in such prosperity shall be weakened, and that what was supposed to be outstanding prosperity shall be seen to be thoroughly blended with labor and sorrow.

Appeals to compassion.

Lastly compassion is awakened if the hearer can be brought to apply to his own adversities, whether endured or only apprehended, the lamentations uttered over someone else, or if, in his contemplation of another's case, he many a time goes back to his own experience. Thus, while particular occasions of human distress are deeply felt, if described in moving terms, the dejection and ruin of the righteous are especially lamentable. And, just as that other kind of style, which by bearing witness to the speaker's integrity is to preserve the semblance of a man of worth, should be mild and gentle (as I have repeatedly said already), so this kind, assumed by the speaker in order to transform men's feelings or influence them in any desired way, should be spirited and emotional.

Conciliatory style and unhurried treatment of emotional passages.

LIII. "But these two styles, which we require to be respectively mild and emotional, have some-

thing in common, making them hard to keep apart. For from that mildness, which wins us the goodwill of our hearers, some inflow must reach this fiercest of passions, wherewith we inflame the same people, and again, out of this passion some little energy must often be kindled within that mildness: nor is any style better blended than that wherein the harshness of strife is tempered by the personal urbanity of the advocate, while his easygoing mildness is fortified by some admixture of serious strife.

"Now in both styles of speaking, the one demanding passion and strife, and the other adapted to recommendation of the speaker's life and manners, the opening of a speech is unhurried, and none the less its closing should also be lingering and long drawn-out. For you must not bound all of a sudden into that emotional style, since it is wholly alien to the merits of the case, and people long to hear first just what is peculiarly within their own cognizance, while, once you have assumed that style, you must not be in a hurry to change it. For you could not awaken compassion, jealousy or wrath at the very instant of your onset, in the way that a proof is seized upon as soon as propounded, and a second and third called for. This is because the hearer's mentality corroborates the proof, and no sooner is it uttered than it is sticking in his memory, whereas that passionate style searches out an arbitrator's emotional side rather than his understanding, and that side can only be reached by diction that is rich, diversified, and copious, with animated delivery to match. Thus concise or quiet speakers may inform an arbitrator, but cannot excite him, on which excitement everything depends.

Argument to be met by argument, appeal to emotion by exciting the contrary.

"By this time it is plain that the power to argue both sides of every question is abundantly furnished from the same commonplaces. But your opponents' proof must be countered, either by contradicting the arguments chosen to establish it, or by showing that their desired conclusion is not supported by their premises and does not follow therefrom; or, if you do not so rebut it, you must adduce on the opposite side some proof of

greater or equal cogency. Lastly appeals, whether mild or passionate, and whether for winning favor or stirring the feelings, must be swept aside by exciting the opposite impressions, so that goodwill may be done away with by hate, and compassion by jealousy.”

BOOK III

Relation of oratory to philosophy.

XV. “This method of attaining and of expressing thought, this faculty of speaking, was, I say, designated by the ancient Greeks’ wisdom; this was the source that produced men like Lycurgus and Pittacus and Solon of old, and after their likeness came the Coruncanii and Fabricii, the Catos and Scipios of Rome, not so much perhaps as the result of instruction but owing to a similarity of intention and of will. Others again with the same wisdom but a different principle as to life’s purposes pursued tranquillity and leisure—for instance Pythagoras, Democritus, and Anaxagoras—and these abandoned the sphere of government and gave themselves entirely to study; and owing to its tranquillity and to the intrinsic attractiveness of knowledge, which is the sweetest of human pleasures, this life of study laid its charm on a larger number of persons than was advantageous to the commonwealth. Consequently when men of outstanding intellectual ability devoted themselves to this pursuit, as a result of this unlimited command of unoccupied free time, persons of very great learning, being supplied with overabundant leisure and extreme fertility of intellect, formed the opinion that it was their duty to devote themselves to the pursuit of far more numerous lines of investigation than was really necessary. For in old days at all events the same system of instruction seems to have imparted education both in right conduct and in good speech; nor were the professors in two separate groups, but the same masters gave instruction both in ethics and in rhetoric, for instance the great Phoenix in Homer, who says that he was assigned to the young Achilles by his father Peleus to accompany him to the wars in order to make him “an orator and man of action too.” But just as persons usually engaged in constant daily employment, when de-

barred from work because of the weather, betake themselves to tennis or gambling or dicing or even devise for themselves some novel game to occupy their leisure, so when the persons in question have been debarred from their work of politics by the circumstances of the time or have chosen to take a vacation, some of them have devoted themselves entirely to poetry, others to mathematics and others to music, and others also have created for themselves a new interest and amusement as dialecticians, and have spent the whole of their time and their lives in the sciences that were invented for the purpose of molding the minds of the young on the lines of culture and of virtue.

XVI. “But as there have been certain persons and those a considerable number who either held a high position on account of their twofold wisdom, as men of action and as orators—two careers that are inseparable—for instance, Themistocles and Pericles and Theramenes, or other persons who were not themselves so much engaged in public life but were professional teachers of this same wisdom, for instance Gorgias, Thrasymachus, Isocrates, persons have been found who being themselves copiously furnished with learning and with talent, but yet shrinking on deliberate principle from politics and affairs, scouted and scorned this practice of oratory. The chief of these was Socrates, the person who on the evidence of all men of learning and the verdict of the whole of Greece, owing not only to his wisdom and penetration and charm and subtlety but also to his eloquence and variety and fertility easily came out top whatever side in a debate he took up; and whereas the persons engaged in handling and pursuing and teaching the subjects that we are now investigating were designated by a single title, the whole study and practice of the liberal sciences being entitled philosophy, Socrates robbed them of this general designation, and in his discussions separated the science of wise thinking from that of elegant speaking, though in reality they are closely linked together; and the genius and varied discourses of Socrates have been immortally enshrined in the compositions of Plato, Socrates himself not having left a single scrap of writing. This is the source from which has sprung the undoubtedly absurd and

unprofitable and reprehensible severance between the tongue and the brain, leading to our having one set of professors to teach us to think and another to teach us to speak. For because of the plurality of schools that virtually sprang from Socrates, owing to the fact that out of his various and diverse discussions, ranging in every direction, one pupil had picked up one doctrine and another another, there were engendered families at discord with one another and widely separated and unlike, although all philosophers claimed and sincerely claimed the title of followers of Socrates.

Views of the post-Aristotelians.

XVII. "And in the first place from Plato himself sprang Aristotle and Xenophon, on one of whom was bestowed the name of the Peripatetic School and on the other that of the Academy; and next from Antisthenes, who in the Socratic discourse had been captivated chiefly by the ideal of endurance and hardness, came first the Cynics and next the Stoics; and then from Aristippus, who had taken delight rather in the Socratic discussions on the subject of pleasure, was derived the Cyrenaic philosophy, which Aristippus and his successors maintained without modification, whereas the contemporary thinkers that make pleasure the sole standard of value, in doing so with greater modesty neither satisfy the claims of virtue, which they do not despise, nor successfully defend pleasure, which they wish to embrace. There have also been other groups of philosophers who almost all professed to be followers of Socrates, the Eretrians, the pupils of Erillus, the Megareans, the school of Pyrrho, but these have long ago been routed out of existence by the forceful arguments of the aforesaid schools. But from among the systems still surviving, the philosophy that has undertaken the championship of pleasure, although some may accept it as true, is nevertheless quite remote from the man whom we are seeking and whom we wish to be the political leader of the nation, guiding the government and pre-eminent for wisdom and eloquence in the Senate, in the assembly of the people and in public causes. And nevertheless no wrong will be done to that phil-

osophy by us, for we shall not be debarring it from a position that it aspires to occupy, but it will be reposing where it wishes to be, in its own charming gardens, where moreover as it reclines it gently and tactfully appeals to us to abandon the platform and the courts and parliament—perhaps a wise invitation, particularly in the present state of public affairs. However for my part my present inquiry is not which system of philosophy is the truest but which is the most fully akin to the orator. Consequently let us dismiss the masters in question, without any derogatory comment, as they are excellent fellows and happy in their belief in their own happiness, and only let us warn them to keep to themselves as a holy secret, though it may be extremely true, their doctrine that it is not the business of a wise man to take part in politics—for if they convince us and all our best men of the truth of this they themselves will not be able to live the life of leisure which is their ideal.

XVIII. "Moreover, the Stoics, of whom I by no means disapprove, I nevertheless dismiss—and I do not fear their anger, because anger is quite unknown to them, and I am grateful to them for being the only one of all the schools that has pronounced eloquence to be a virtue and a form of wisdom. But clearly there is something in them that is quite out of keeping with the orator whom we are depicting: in the first place their assertion that all those who are not wise are slaves, brigands, enemies, madmen, and that all the same nobody is wise—yet it would be the height of folly to place a public meeting or the Senate or any assembly of people under the direction of a person who holds the view that not one of those present is sane, or a citizen, or a free man. There is the further point that even the style of their discourse, though possibly subtle and undoubtedly penetrating, yet for an orator is bald, unfamiliar, jarring on the ear of the public, devoid of clarity, fullness, and spirit, while at the same time of a character that makes it quite impossible to employ it in public speaking; for the Stoics hold a different view of good and bad from all their fellow-citizens or rather from all other nations, and give a different meaning to "honor," "disgrace," "reward," "punishment"—whether correctly or otherwise does not concern us now, but

if we were to adopt their terminology, we should never be able to express our meaning intelligibly about anything.

“There remain the Peripatetics and the Academics, though the latter are really two schools of thought under one name. For Plato’s nephew Speusippus and his pupil Xenocrates and Xenocrates’ pupils Polemo and Crantor did not seriously disagree on any point of opinion from Aristotle, their fellow-pupil under Plato, although possibly they were not his equals in fullness and variety of style; whereas Polemo’s pupil Arcesilas, to begin with, selected for adoption from the various writings of Plato and the Socratic dialogues the dogma that nothing can be apprehended with certainty either by the senses or by the mind; and he is said to have employed a remarkably attractive style of discourse in rejecting mental and sensory judgment entirely and to have initiated the practice—an entirely Socratic one it is true—of not stating his own opinion but arguing against the opinions put forward by everyone else. From this source descended the more recent Academy of our day, in which the almost inspired intellectual acumen and rhetorical fluency of Carneades have made him the leading figure; and though at Athens I got to know a number of his pupils, I myself nevertheless can recommend as entirely reliable authorities my father-in-law Scaevola, who in his youth heard Carneades at Rome, and my friend the distinguished Quintus Metellus, son of Lucius, who used to say that as a young man he heard him on many occasions at Athens when he was already showing signs of age.

Eloquence needs more than rhetorical theory.

XIX. “However, the streams of learning flowing from the common watershed of wisdom, as rivers do from the Apennines, divided in two, the philosophers flowing down into the entirely Greek waters of the Eastern Mediterranean with its plentiful supply of harbors, while the orators glided into the rocky and inhospitable Western seas of our outlandish Tuscany, where even Ulysses himself lost his bearings. Consequently if we are contented with this degree of eloquence, and with the orator who knows that one

must either deny the charge brought against one, or if one cannot do that then prove that the action of the accused party was either a right action, or due to someone else’s fault or transgression, or legal, or not illegal, or inadvertent, or inevitable, or incorrectly designated in the charge, or that the proceedings being taken are irregular and illegal; and if you people think it sufficient to learn the instructions drawn up by your writers on the science of rhetoric, instructions nevertheless that have been expounded³⁸ by Antonius in a much more graceful and more copious form than they are enunciated by the authors in question—well, if you are content with these rules and also the ones you have desired me to state, you are making the orator abandon a vast, immeasurable plain and confine himself to quite a narrow circle. If on the other hand you chose to follow the famous Pericles of old, or even our friend Demosthenes with whom his many writings have made us better acquainted, and if you have grown to love that glorious and supreme ideal, that thing of beauty, the perfect orator, you are bound to accept either the modern dialectic of Carneades or the earlier method of Aristotle. For, as I said before, the older masters down to Socrates used to combine with their theory of rhetoric the whole of the study and the science of everything that concerns morals and conduct and ethics and politics; it was subsequently, as I have explained, that the two groups of students were separated from one another, by Socrates and then similarly by all the Socratic schools, and the philosophers looked down on eloquence and the orators on wisdom, and never touched anything from the side of the other study except what this group borrowed from that one, or that one from this; whereas they would have drawn from the common supply indifferently if they had been willing to remain in the partnership of early days. But just as the old pontiffs owing to the vast number of sacrifices decided to have a Banquet Committee of three members, though they had themselves been appointed by Numa for the purpose among others of holding the great Sacrificial Banquet of the Games, so the followers of Socrates cut connection with the practicing

³⁸Book II, §§104–13, 162–73. [Tr.]

lawyers and detached these from the common title of philosophy, although the old masters had intended there to be a marvelously close alliance between oratory and philosophy.

Value of oratory resumed: the orator needs wide culture.

XX. “This being so, I will enter a brief plea on my own behalf, and will beg you to believe that what I say is not said about myself personally but about the orator as such. For I myself am a person who, having been given by my father an extremely careful education in my youth, and having brought into public life an amount of talent of which I am myself conscious, although not the amount with which you perhaps credit me, cannot assert that I pursued the studies with which I am now dealing exactly in the manner in which I am going to say they ought to be pursued: inasmuch as I came forward as a public advocate at an extremely early age, and when only one and twenty conducted the impeachment of a very eloquent and very distinguished man³⁹—in fact public life was my education, and practical experience of the laws and institutions of the state and the custom of the country was my schoolmaster. Though thirsty for those accomplishments of yours of which I am speaking I had only a small taste of them, having during my quaestorship in Asia secured the services of a professor of rhetoric from the Academy, a person of about the same age as myself, the great Metrodorus whose memory Antonius recalled;⁴⁰ and also on my way home from Asia, at Athens, where I should have made a longer stay if I had not been so angry with the authorities there for refusing to repeat the celebration of the mysteries, for which I had arrived two days late; and consequently the fact that I include in my treatment this extensive and important field of learning is not only not in my favor but rather tells against me—for my subject is not what I myself can achieve but what the orator as such can—and against these exponents of the science of rhetoric, who are exceedingly foolish persons, as they only write about

the classification of cases and the elementary rules and the methods of stating the facts; whereas eloquence is so potent a force that it embraces the origin and operation and developments of all things, all the virtues and duties, all the natural principles governing the morals and minds and life of mankind, and also determines their customs and laws and rights, and controls the government of the state, and expresses everything that concerns whatever topic in a graceful and flowing style. In this field I for my part occupy myself to the best of my ability, and with such capacity as is supplied me by my natural talents, my limited studies, and my practical experience; though all the same I really do not yield much ground in debate to those who have pitched their camp for their lifetime solely in this province of philosophy.

XXI. “For what proof can our friend Gaius Velleius bring to show that pleasure is the chief good, which I on my side am not able with greater fertility either to maintain if I choose or to rebut, by drawing on the arguments set out by Antonius, thanks to this practice in oratory in which Velleius is a tiro but every one of us an expert? For what is there that can be said on the subject of virtue by Stoics such as Sextus Pompeius or the two Balbi or my friend Marcus Vigellius who lived with Panaetius, to make it necessary either for me or for any one of you to give ground to them in debate? For philosophy does not resemble the other sciences—for what good will a man be in geometry if he has not studied it? or in music? He will either have to hold his tongue or be set down as a positive lunatic; whereas the contents of philosophy are discovered by intellects of the keenest acumen in eliciting the probable answer to every problem, and the results are elaborated with practiced eloquence. In this situation our popular orator, though perhaps inadequately schooled, having nevertheless had experience in speaking, will anyway be enabled merely by that ordinary experience to give those persons a sound drubbing, and will not allow them to despise and look down on him; whereas if there has really ever been a person who was able in Aristotelian fashion to speak on both sides about every subject and by means of knowing Aristotle’s rules to reel

³⁹C. Carbo, see Book I, §40. [Tr.]

⁴⁰Book II, §360. [Tr.]

off two speeches on opposite sides on every case, or in the manner of Arcesilas and Carneades argue against every statement put forward, and who to that method adds the experience and practice in speaking indicated, he would be the one and only true and perfect orator. For an orator cannot have sufficient cogency and weight if he lacks the vigor that public speaking demands, and cannot be adequately polished and profound if he lacks width of culture. Consequently let us for our part allow your old Mr. Raven⁴¹ to hatch

⁴¹See Book I, §91. [Tr.] The name of Corax, one of the earliest rhetoricians, means *raven* or *crow*. Bombastic or overly formulaic rhetoric was often termed the “bad egg of a bad Crow,” and condemnations of it, as here, were lodged against “old Mr. Raven.” [Ed.]

out his own chicks in the nest, so that they may fly abroad as annoying and tiresome bawlers, and permit some Pamphilus⁴² or other to sketch out a subject of this importance on his tapes, like a nursery game, and let us for our part within the narrow limits of the debate of yesterday and today unfold the function of the orator in its entirety, provided it be granted that the subject is so extensive that it might be supposed to fill all the volumes of the philosophers, books which none of those gentlemen have ever had in their hands.”

⁴²Quintilian iii. 6. 34 mentions a rhetorician of this name. The exact nature of his *memoria technica* here alluded to it does not seem possible to discover. Reid thinks *deliciae* means “pets,” because Catullus uses the word of Lesbia’s sparrow. [Tr.]

From *Orator*

69 The man of eloquence whom we seek, following the suggestion of Antonius, will be one who is able to speak in court or in deliberative bodies so as to prove, to please and to sway or persuade. To prove is the first necessity, to please is charm, to sway is victory; for it is the one thing of all that avails most in winning verdicts. For these three functions of the orator there are three styles, the plain style for proof, the middle style for pleasure, the vigorous style for persuasion; and in this last is summed up the entire virtue of the orator. Now the man who controls and combines these three varied styles needs rare judgment and great endowment; for he will decide what is needed at any point, and will be able to speak in any way which the case requires. For after all the foundation of eloquence, as of everything else, is wisdom. In an oration, as in life, nothing is harder than to determine what is appropriate. The Greeks call it *πρέπον*; let us call it *decorum* or “propriety.” Much brilliant work has been done in laying down rules about this; the subject is in fact worth mastering. From ignorance of this mistakes are made not only in life

but very frequently in writing, both in poetry and in prose. . . .

It follows that we must seek the type and pattern of each kind—a great and arduous task, as we have often said; but we should have considered what to do when we were embarking; now we must certainly spread our sails to the wind, no matter where it may carry us. First, then, we must delineate the one whom some deem to be the only true “Attic” orator. He is restrained and plain, he follows the ordinary usage, really differing more than is supposed from those who are not eloquent at all. Consequently the audience, even if they are no speakers themselves, are sure they can speak in that fashion. For that plainness of style seems easy to imitate at first thought, but when attempted nothing is more difficult. For although it is not full-blooded, it should nevertheless have some of the sap of life, so that, though it lack great strength, it may still be, so to speak, in sound health. First, then, let us release him from, let us say, the bonds of rhythm. Yes, the orator uses certain rhythms, as you know, and these we shall discuss shortly; they have to be employed with a definite plan, but in a different

Translated by H. M. Hubbell.

style of speech; in this style they are to be wholly eschewed. It should be loose but not rambling; so that it may seem to move freely but not to wander without restraint. He should also avoid, so to speak, cementing¹ his words together too smoothly, for the hiatus and clash of vowels has something agreeable about it and shows a not unpleasant carelessness on the part of a man who is paying more attention to thought than to words.

78 But his very freedom from periodic structure and cementing his words together will make it necessary for him to look to the other requisites. For the short and concise must not be handled carelessly, but there is such a thing even as a careful negligence. Just as some women are said to be handsomer when unadorned—this very lack of ornament becomes them—so this plain style gives pleasure even when unembellished: there is something in both cases which lends greater charm, but without showing itself. Also all noticeable ornament, pearls as it were, will be excluded; not even curling-irons will be used; all cosmetics, artificial white and red, will be rejected; only elegance and neatness will remain. The language will be pure Latin, plain and clear; propriety will always be the chief aim. Only one quality will be lacking, which Theophrastus mentions fourth among the qualities of style—the charm and richness of figurative ornament. He will employ an abundance of apposite maxims dug out from every conceivable hiding place; this will be the dominant feature in this orator. He will be modest in his use of what may be called

79 the orator's stock-in-trade. For we do have after a fashion a stock-in-trade, in the stylistic embellishments, partly in thought and partly in words. The embellishment given by words is twofold, from single words and from words as they are connected together. In the case of "proper" and ordinary words, that individual word wins approval which has the best sound, or best expresses the idea; in the case of variations from the common idiom we approve the metaphor, or a borrowing from some source, or a new formation or the archaic and obsolete (yet even obsolete and archaic words are to be classed as

"proper" except that we rarely use them). Words 81 when connected together embellish a style if they produce a certain symmetry which disappears when the words are changed, though the thought remains the same; for the figures of thought which remain even if the words are changed are, to be sure, numerous, but relatively few are noticeable. Consequently the orator of the plain style, provided he is elegant and finished, will not be bold in coining words, and in metaphor will be modest, sparing in the use of archaisms, and somewhat subdued in using the other embellishments of language and of thought. Metaphor he may possibly employ more frequently because it is of the commonest occurrence in the language of townsman and rustic alike. The rustics, for example, say that the vines are "bejewelled,"² the fields "thirsty," the crops "happy," the grain "luxuriant." Any of these metaphors is bold 82 enough, but there is a similarity to the source from which the word is borrowed, or if a thing has no proper term the borrowing seems to be done in order to make the meaning clear, and not for entertainment. The restrained speaker may use this figure a little more freely than others, but not so boldly as if he were speaking in the grandest style. Consequently impropriety—the nature of which should be plain from what has been said about propriety—appears here too, when a metaphor is far-fetched, and one is used in the plain style which would be appropriate in another. This unaffected orator whom certain people call 83 "Attic," and rightly so, except that he is not the only "Attic"—this orator will also use the symmetry that enlivens a group of words with the embellishments that the Greeks call σχήματα, figures as it were, of speech. (They apply the same word also to figures of thought.) He will, however, be somewhat sparing in using these. For as in the appointments of a banquet he will avoid extravagant display, and desire to appear thrifty, but also in good taste, and will choose what he is going to use. There are, as a matter of 84 fact, a good many ornaments suited to the frugality of this very orator I am describing. For this shrewd orator must avoid all the figures that I described above, such as clauses of equal length,

¹For this figurative use of *coagmentare* cf. *Brutus* 68. [Tr.]

²The buds are compared with jewels. [Tr.]

with similar endings, or identical cadences, and the studied charm produced by the change of a letter,³ lest the elaborate symmetry and a certain grasping after a pleasant effect be too obvious.

85 Likewise if repetition of words requires some emphasis and a raising of the voice, it will be foreign to this plain style of oratory. Other figures of speech he will be able to use freely, provided only he breaks up and divides the periodic structure and uses the commonest words and the mildest of metaphors. He may also brighten his style with such figures of thought as will not be exceedingly glaring. He will not represent the State as speaking⁴ or call the dead from the lower world,⁵ nor will he crowd a long series of iterations into a single period. This requires stronger lungs, and is not to be expected of him whom we are describing or demanded from him. For he will be rather subdued in voice as in style. But

86 many of these figures of thought will be appropriate to this plain style, although he will use them somewhat harshly: such is the man we are portraying. His delivery is not that of tragedy nor of the stage; he will employ only slight movements of the body, but will trust a great deal to his expression. This must not be what people call pulling a wry face, but must reveal in a well-bred manner the feeling with which each thought is uttered.

87 A speech of this kind should also be sprinkled with the salt of pleasantry, which plays a rare great part in speaking. There are two kinds, humour and wit. He will use both; the former in a graceful and charming narrative, the latter in hurling the shafts of ridicule. Of this latter there are several kinds,⁶ but now we are discussing another subject. We here merely suggest that the orator should use ridicule with a care not to let it be too frequent lest it become buffoonery; nor

88 ridicule of a smutty nature, lest it be that of low face; nor pert, lest it be impudent; nor aimed at

³Cf. *De Oratore* 2. 256, quoting from Cato, *nobiliorem, mobiliorem*. [Tr.]

⁴e.g. *In Cat. 1* 18 (*patria*) tecum, Catilina, sic agit et quodam modo tacita loquitur. [Tr.]

⁵e.g. *Pro Caelio* 33: Cicero calls Appius Claudius Caccus from the dead to witness the shame of his descendants. [Tr.]

⁶Cicero had discussed this at length in *De Oratore* 2. 253–289. [Tr.]

misfortune, lest it be brutal, nor at crime, lest laughter take the place of loathing; nor should the wit be inappropriate to his own character, to that of the jury, or to the occasion; for all these points come under the head of impropriety. He will also avoid far-fetched jests, and those not made up at the moment but brought from home; for these are 89 generally frigid. He will spare friends and dignitaries, will avoid rankling insult; he will merely prod his opponents, nor will he do it constantly, nor to all of them nor in every manner. With these exceptions he will use wit and humour in a way in which none of these modern “Attics” do, so far as I know, though this is certainly an outstanding mark of Attic style. For my part, I judge 90 this to be the pattern of the plain orator—plain but great and truly Attic; since whatever is witty and wholesome in speech is peculiar to the Athenian orators. Not all of them, however, are humorous. Lysias is adequate and so is Hyperides; Demades is said to have excelled them all, Demosthenes is considered inferior. Yet it seems to me that none is cleverer than he; still he is not witty so much as humorous; the former requires a bolder talent, the latter a greater art.⁷

The second style is fuller and somewhat more 91 robust than the simple style just described, but plainer than the grandest style which we shall presently discuss. In this style there is perhaps a minimum of vigour, and a maximum of charm. For it is richer than the unadorned style, but plainer than the ornate and opulent style. All the 92 ornaments are appropriate to this type of oration, and it possesses charm to a high degree. There have been many conspicuous examples of this style in Greece, but in my judgement Demetrius of Phalerum led them all. His oratory not only proceeds in calm and peaceful flow, but is lighted up by what might be called the stars of “transferred” words (or metaphor) and borrowed words. By “transferred” I now mean, as often before, words transferred by resemblance from another thing in order to produce a pleasing effect, or because of lack of a “proper” word; by

⁷The discussion of the plain style is extended by Cicero out of all proportion to the space allotted to the middle and grand styles, because this was the chief point of debate between him and the Atticists. [Tr.]

“borrowed”⁸ I mean the cases in which there is substituted for a “proper” word another with the same meaning drawn from some other suitable sphere. It is, to be sure, a “transfer” when Ennius
93 says

I am bereft of citadel and town,⁹

but a “transfer” of quite a different kind than when he says

Dread Africa trembled with terrible tumult.¹⁰

The latter is called ὑπαλλαγή or “hypallage” by the rhetoricians, because as it were words are exchanged¹¹ for words; the grammarians call it μετωνυμία or “metonymy” because nouns¹² are transferred. Aristotle, however, classifies them all under metaphor and includes also the misuse of terms, which they call κατάχρησις or “catachresis,” for example, when we say a “minute” mind instead of “small”; and we misuse related words on occasion either because this gives pleasure or because it is appropriate. When there is a continuous stream of metaphors, a wholly different style of speech is produced; consequently the Greeks call it ἀλληγορία or “allegory.”¹³ They are right as to the name, but from the point of view of classification Aristotle does better in calling them all metaphors. The Phalerian uses these very frequently, and they are attractive to a degree; and although he has many metaphors, yet the cases of metonymy are more numerous than
94 in any other orator. To the same oratorical style—I am discussing the mean and tempered style—belong all figures of language, and many of thought. This speaker will likewise develop his arguments with breadth and erudition, and use commonplaces without undue emphasis. But why speak at length? It is commonly the philo-

⁸Literally “changed.” [Tr.]

⁹Ennius, *Andromache*, Frag. 88 V.². *Remains of Old Latin*, L.C.L., i. p. 250. [Tr.]

¹⁰Ennius, *Annales* Frag. 310 V.². Ennius wrote: “Africa terribili tremit horrida terra tumultu,” *Remains*, I. p. 114. Cf. Cic. *De Oratore* 3. 167. [Tr.]

¹¹Latin *summutantur* = Greek ὑπαλλάττονται. [Tr.]

¹²Aeolic ὄνυμα is the basis of μετωνυμία for the word metonymy. [Tr.]

¹³Cicero intends *alia oratio* to be a literal translation of ἀλληγορία. [Tr.]

sophic schools which produce such orators:¹⁴ and unless he be brought face to face with the more robust speaker, the orator whom I am describing will find approval on his own merits. It is, as a
96 matter of fact, a brilliant and florid, highly coloured and polished style in which all the charms of language and thought are intertwined. The sophists are the source from which all this has flowed into the forum, but scorned by the simple and rejected by the grand, it found a resting-place in this middle class of which I am speaking.

The orator of the third style is magnificent,⁹⁷ opulent, stately and ornate; he undoubtedly has the greatest power. This is the man whose brilliance and fluency have caused admiring nations to let eloquence attain the highest power in the state; I mean the kind of eloquence which rushes along with the roar of a mighty stream, which all look up to and admire, and which they despair of attaining. This eloquence has power to sway men’s minds and move them in every possible way. Now it storms the feelings, now it creeps in; it implants new ideas and uproots the old. But there is a great difference between this and the
98 other styles. One who has studied the plain and pointed style so as to be able to speak adroitly and neatly, and has not conceived of anything higher, if he has attained perfection in this style, is a great orator, if not the greatest. He is far from standing on slippery ground, and, when once he gets a foothold, he will never fall. The orator of the middle style, whom I call moderate and tempered, once he has drawn up his forces, will not dread the doubtful and uncertain pitfalls of speaking. Even if not completely successful, as often happens, he will not run a great risk; he has not far to fall. But this orator of ours whom we
99 consider the chief,—grand, impetuous and fiery, if he has natural ability for this alone, or trains himself solely in this, or devotes his energies to this only, and does not temper his abundance with the other two styles, he is much to be despised. For the plain orator is esteemed wise because he speaks clearly and adroitly; the one who employs the middle style is charming; but the co-

¹⁴Demetrius of Phalerum, whom Cicero regards as the outstanding orator in this style, was a Peripatetic. [Tr.]

pious speaker, if he has nothing else, seems to be scarcely sane. For a man who can say nothing calmly and mildly, who pays no attention to arrangement, precision, clarity or pleasantry—especially when some cases have to be handled entirely in this latter style, and others largely so,—if without first preparing the ears of his audience he begins trying to work them up to a fiery passion, he seems to be a raving madman among the sane, like a drunken reveller in the midst of sober men.

100 We have him now, Brutus, the man whom we are seeking, but in imagination, not in actual possession. If I had once laid my hands on him, not even he with his mighty eloquence would have persuaded me to let him go. But we have certainly discovered that eloquent orator whom Antonius never saw. Who is he, then? I will describe him briefly, and then expand the description at

greater length. He in fact is eloquent who can discuss commonplace matters simply, lofty subjects impressively, and topics ranging between in a tempered style. You will say, “There never was such a man.” I grant it; for I am arguing for my ideal, not what I have actually seen, and I return 101 to that Platonic Idea of which I had spoken; though we do not see it, still it is possible to grasp it with the mind. For it is not an eloquent *person* whom I seek, nor anything subject to death and decay, but that absolute quality, the possession of which makes a man eloquent. And this is nothing but abstract eloquence, which we can behold only with the mind’s eye. He, then, will be an eloquent speaker—to repeat my former definition—who can discuss trivial matters in a plain style, matters of moderate significance in the tempered style, and weighty affairs in the grand manner.

Longinus

fl. ca. 50 C.E.

“Longinus” is the name customarily given to the unknown author of *On the Sublime*. The text was long thought to have been written by Cassius Longinus, a noted literary critic and statesman of the third century C.E. But the text lacks any citations later than the first century C.E., and it treats Caecilius’s work *On Sublimity*, known to be a first century text, as contemporary; this, along with other items of internal evidence, has convinced scholars that it dates from the first century. The author is generally supposed to have been a Greek or Hellenized Jew who taught rhetoric to Roman clients such as the man to whom *On the Sublime* is addressed (also unidentified, but presumed to have been a real person).

Since *On the Sublime* is not mentioned in any classical sources, scholars believe that it may have been written for private circulation only, probably by a teacher for a pupil. It has survived only through medieval copies of a manuscript that was missing about one-third of its length (the lacunae are indicated in the text following). The earliest of these copies dates from the tenth century C.E. The text was little known until it was published in Basle by Francis Robertello in 1554, after which time it began to attract scholarly attention. The first English translation appeared in 1652, and a 1674 translation by the French literary critic Nicolas Boileau became widely known and launched the text on a career of far-ranging influence in European letters.

The influence of a rhetorician’s text on literary criticism may be explained in part by the fact that in classical times the study of literature was not divorced from the study of rhetoric. Although Aristotle distinguished sharply between rhetoric and poetic, most ancient students of literature did not follow his lead. They would have described themselves as rhetoricians, not as literary critics, and they went to literature to find material that could help their students—specifically, that could help them learn how to affect an audience as they desired. The rhetoricians studied history, philosophy, and oratory as well as poetry and drama because they considered any text that had deliberate designs on its audience as suitable for critical evaluation. Texts were evaluated not only on how well they accomplished their purpose technically, but also on whether their purpose was morally worthy—that is, whether their content was sound.

Many treatises of ancient criticism comprise mainly lists of tropes and figures illustrated by examples from literature and accompanied by vague, generalized moral judgments. *On the Sublime* follows this same basic pattern, but also departs from it in ways that have led scholars to praise it as the best written and most thoughtful of any ancient critical treatise. “Longinus” is able to link technical proficiency and a noble personal character in the study of the sublime because, he says, only a person who possesses both can produce great writing. Moreover, the audience’s character is almost as important as the artist’s. A text’s sublimity is not determined solely by the features of that text; it depends, too, on the effect on the audience, foremost among whom “Longinus” locates himself. His text is unusual for the moving and

convincing way in which it presents his own reactions to literature. His taste is evident in his willingness to forgo the usual exhaustive catalog of tropes and figures; he selects only those that bear on the topic of sublimity, and his choice of literary illustrations is particularly felicitous, focusing on the Greek authors Homer, Herodotus, Plato, and Demosthenes but also, surprisingly, bringing in Cicero and the Hebrew Bible. “Longinus” also avoids dryness by refusing to claim that the topic he is studying can be reduced to rules entirely. Although literary method can help the artist to produce the sublime, and the audience to appreciate it, the sensitivity born of long experience is the best guide for all.

The author of *On the Sublime*, then, closely resembles the ideal orator as described by Quintilian (the author’s possible contemporary), the Roman lawyer and rhetoric teacher in whom the classical rhetorical tradition culminates (see p. 359). This ideal orator is acutely alive to the subtleties of verbal effects, but sees these effects as dependent on the moral qualities of the artist and audience as much as on their taste in stylistic embellishments. It is as if “Longinus” is saying that the sublime can be produced only by the “good man speaking well” whom Quintilian seeks to mold: This person is not an unattainable ideal for “Longinus,” as he sometimes seems for Quintilian, but rather the necessary source of existing texts that do give their audiences the experience of the sublime. This superlative rhetorician answers the objections of Plato against rhetoric: His inherent morality, without which he would be unable to produce such fine effects, also prevents him from using these effects to evil purposes.

There remains the problem of how to define the “sublime.” “Longinus” sees it as a quality that has a powerful emotional impact on its audience or, more specifically, an impact that awakens the audience members to their “higher natures.” At the same time, this impact cannot be securely tied to any stylistic features. Classical rhetoric by the Roman period typically divided style into three types: grand, middle, and plain, according to the elaboration and formality of their language. The grand style, the most elaborate and formal, was generally associated with the most serious and elevated subjects—literary tragedy, impassioned forensic oratory, important political decisions, and the like. One might suppose the grand style to have the most powerful emotional impact on its audience and therefore to be the most likely vehicle of sublimity. So “Longinus” indeed presents it—most of his examples display the grand style—but he is at pains to show that sublimity may also be conveyed by less elaborate and formal styles in contexts where simplicity is more appropriate, so long as the thoughts expressed elevated the audience. Scholars have debated a more precise definition of sublimity in “Longinus” without arriving at a consensus; some prefer to define his topic as “great writing,” feeling that this phrase includes more of his true scope.

On the Sublime achieved its greatest influence in the eighteenth century, since it satisfied both the neoclassical interest in stylistic analysis and the proto-romantic desire for more personal and emotional elements in the creation and appreciation of literature. Literary critic and biographer W. Jackson Bate has said that “Longinus,” more than any other critic ancient or modern, “served as a source of authoritative encouragement in the great shift in critical approach and

values that was to culminate in European romanticism.”¹ His influence waned in the nineteenth century, perhaps because this shift had been accomplished and European countries were now producing their own critics who reflected “Longinian” sensibilities—such as Matthew Arnold, with whom “Longinus’s” translator W. Rhys Roberts compares him.² Interest revived again and has held steady in the twentieth century because of *On the Sublime*’s important place in the history of literary criticism. The text is also an important example of the fusion of stylistic and moral concerns that rhetoric has striven for in response to the criticisms of Plato.

Selected Bibliography

Our text is the translation of D. A. Russell, *Longinus on Sublimity*, published separately in 1964 and in the collection *Ancient Literary Criticism: The Principal Texts*, ed. D. A. Russell and M. Winterbottom (1972). The translation by W. Rhys Roberts, *Longinus on the Sublime* (1899, 1907), provides an extensive introductory survey of the issues involved in assigning an author and date to this text, as well as helpful notes. G. M. A. Grube’s translation, *On Great Writing (On the Sublime)* (1957), includes an introduction that is especially readable for beginning students.

A longer version of Grube’s introductory essay on “Longinus” appears as a chapter in his *Greek and Roman Critics* (1965). Russell frequently refers to “Longinus” and places him in his classical context in *Criticism in Antiquity* (1981). W. Jackson Bate discusses “Longinus” in *Criticism: The Major Texts* (1952, enlarged ed. 1970). For the influence of “Longinus” on European literature, see T. R. Henn, *Longinus and English Criticism* (1934); S. H. Monk, *The Sublime: A Study of Critical Theories in Eighteenth-Century England* (1935); Jules Brody, *Boileau and Longinus* (1958); and Paul H. Fry, *The Reach of Criticism: Method and Perception in Literary Theory* (1983).

From *On the Sublime*

1.1 My dear Postumius Terentianus,
You will recall that when we were reading together Caecilius’ monograph *On Sublimity*, we felt that it was inadequate to its high subject, and failed to touch the essential points. Nor indeed did it appear to offer the reader much practical help, though this ought to be a writer’s

Translated by D. A. Russell.

principal object. Two things are required of any textbook: first, that it should explain what its subject is; second, and more important, that it should explain how and by what methods we can achieve it. Caecilius tries at immense length to explain to us what sort of thing “the sublime” is, as though we did not know; but he has somehow passed over as unnecessary the question how we can develop our nature to some degree of great-

ness. However, we ought perhaps not so much to blame our author for what he has left out as to commend him for his originality and enthusiasm.

You have urged me to set down a few notes on sublimity for your own use. Let us then consider whether there is anything in my observations which may be thought useful to public men. You must help me, my friend, by giving your honest opinion in detail, as both your natural candour and your friendship with me require. It was well said that what man has in common with the gods is “doing good and telling the truth.”

3 Your education dispenses me from any long preliminary definition. Sublimity is a kind of eminence or excellence of discourse. It is the source of the distinction of the very greatest poets and
4 prose writers and the means by which they have given eternal life to their own fame. For grandeur produces ecstasy rather than persuasion in the hearer; and the combination of wonder and astonishment always proves superior to the merely persuasive and pleasant. This is because persuasion is on the whole something we can control, whereas amazement and wonder exert invincible power and force and get the better of every hearer. Experience in invention and ability to order and arrange material cannot be detected in single passages; we begin to appreciate them only when we see the whole context. Sublimity, on the other hand, produced at the right moment, tears everything up like a whirlwind, and exhibits the orator’s whole power at a single blow.

2. 1 Your own experience will lead you to these and similar considerations. The question from which I must begin is whether there is in fact an art of sublimity or profundity.¹ Some people think it is a complete mistake to reduce things like this to technical rules. Greatness, the argument runs, is a natural product, and does not come by teaching. The only art is to be born like that. They believe moreover that natural products are very much weakened by being reduced to the bare bones of a textbook.

¹This is to translate *bathous*. The simple, eighteenth-century emendation *pathous* means “emotion.” Boileau omits the word. The English word “bathos” seems to have acquired its meaning from a misunderstanding of this passage; see Pope’s *Peri Bathous or on the Art of Sinking* (1728). [Tr.]

In my view, these arguments can be refuted by 2 considering three points:

- (i) Though nature is on the whole a law unto herself in matters of emotion and elevation, she is not a random force and does not work altogether without method.
- (ii) She is herself in every instance a first and primary element of creation, but it is method that is competent to provide and contribute quantities and appropriate occasions for everything, as well as perfect correctness in training and application.
- (iii) Grandeur is particularly dangerous when left on its own, unaccompanied by knowledge, unsteadied, unballasted, abandoned to mere impulse and ignorant temerity. It often needs the curb as well as the spur.

What Demosthenes² said of life in general is 3 true also of literature: good fortune is the greatest of blessings, but good counsel comes next, and the lack of it destroys the other also. In literature, nature occupies the place of good fortune, and art that of good counsel. Most important of all, the very fact that some things in literature depend on nature alone can itself be learned only from art.

If the critic of students of this subject will bear these points in mind, he will, I believe, come to realize that the examination of the question before us is by no means useless or superfluous.

[Lacuna equivalent to about two of these printed pages]

Faults incident to the effort to achieve sublimity: turgidity, puerility, false emotion, frigidity.

... restrain the oven’s mighty glow.
For if I see but one beside his hearth,
I’ll thrust in just one tentacle of storm,
and fire his roof and turn it all to cinders.
I’ve not yet sung my proper song.³

3. 1

²*Oration* 23. 113. [Tr.]

³Aeschylus, fr. 281 Nauck. The speaker is Boreas, the North Wind, who is enraged with King Erechtheus of Athens because he will not give him his daughter Orithyia. As the passage is incomplete, the point of the critical comment is lost. [Tr.]

This is not tragedy; it is a parody of the tragic manner—tentacles, vomiting to heaven, making Boreas a flute-player, and so on. The result is not impressiveness but turbid diction and confused imagery. If you examine the details closely, they gradually sink from the terrifying to the contemptible.

Now if untimely turgidity is unpardonable in tragedy, a genre which is naturally magniloquent and tolerant of bombast, it will scarcely be appropriate in writing which has to do with real life. Hence the ridicule attaching to Gorgias of Leontini's "Xerxes, the Persians' Zeus" and "their living tombs, the vultures," or to various things in Callisthenes, where he has not so much risen to heights as been carried off his feet. Clitarchus is an even more striking example; he is an inflated writer, and, as Sophocles has it,

blows at his tiny flute, the mouth-band off.⁴

Amphicrates, Hegesias, Matris—they are all the same. They often fancy themselves possessed when they are merely playing the fool.

Turgidity is a particularly hard fault to avoid, for it is one to which all who aim at greatness naturally incline, because they seek to escape the charge of weakness and aridity. They act on the principle that "to slip from a great prize is yet a noble fault." In literature as in the body, puffy and false tumours are bad, and may well bring us to the opposite result from that which we expected. As the saying goes, there is nothing so dry as a man with dropsy.

While turgidity is an endeavour to go above the sublime, puerility⁵ is the sheer opposite of greatness; it is a thoroughly low, mean, and ignoble vice. What do I mean by "puerility"? A pedantic thought, so over-worked that it ends in frigidity. Writers slip into it through aiming at originality, artifice, and (above all) charm, and then coming to grief on the rocks of tawdriness and affectation.

A third kind of fault—what Theodorus called "the pseudo-bacchanalian"—corresponds to these in the field of emotion. It consists of untimely or

⁴Fr. 701 Nauck. [Tr.]

⁵The context shows what is meant: the shallow pedantry of the immature. [Tr.]

meaningless emotion where none is in place, or immoderate emotion where moderate is in place. Some people often get carried away, like drunkards, into emotions unconnected with the subject, which are simply their own pedantic invention. The audience feels nothing, so that they inevitably make an exhibition of themselves, parading their ecstasies before an audience which does not share them.

But I reserve the subject of emotion for another place,⁶ returning meanwhile to the second fault of those I mentioned: frigidity. This is a constant feature in Timaeus, who is in many ways a competent writer, not without the capacity for greatness on occasion, learned and original, but as unconscious of his own faults as he is censorious of others', and often falling into the grossest childishness through his passion for always starting exotic ideas. I will give one or two examples; Caecilius has already cited most of those available.

(i) In praise of Alexander the Great, Timaeus writes: "He conquered all Asia in fewer years than it took Isocrates to write the *Panegyricus* to advocate the Persian war." What a splendid comparison this is—the Macedonian king and the sophist! On the same principle, the Lacedaemonians were very much less brave than Isocrates: it took them thirty years to capture Messene,⁷ whereas he took only ten to write the *Panegyricus*!

(ii) Listen also to Timaeus' comment on the Athenians captured in Sicily. "They were punished for their impiety to Hermes and mutilation of his statues, and the main agent of their punishment was one who had a family connection with their victim, Hermocrates the son of Hermon."⁸ I cannot help wondering, my dear Terentianus, why he does not also write about the Tyrant

⁶Presumably in the lost passage. [Tr.]

⁷In the eighth century B.C. Our other sources make this war last twenty years; we do not know the source of the variant (assuming the text to be correct). [Tr.]

⁸The disastrous Athenian expedition against Syracuse (415–413 B.C.) had been preceded by a mysterious incident at Athens, in which the "Hermae" in the city were mutilated one night. [Tr.]

Dionysius, “because he was impious towards Zeus and Heracles, Dion and Heracles robbed him of his throne.”⁹

4 But why speak of Timaeus, when those heroes of letters, Xenophon and Plato, for all that they were trained in Socrates’ school, forget themselves sometimes for the sake of similar petty pleasures? Thus Xenophon writes in *The Constitution of the Lacedaemonians*: “You could hear their voice less than the voice of stone statues, you could distract their eyes less than the eye of bronze images; you would think them more bashful than the very maidens in the eyes.”¹⁰ It would have been more in keeping with Amphicrates’ manner than Xenophon’s to speak of the pupils of our eyes as bashful maidens. And what an absurd misconception to think of everybody’s pupils as bashful! The shamelessness of a person, we are told, appears nowhere so plainly as in the eyes. Remember the words Achilles uses to revile Agamemnon’s violent temper: “Drunken sot, with a dog’s eyes!”¹¹ Timaeus, unable to keep his hands off stolen property, as it were, has not left the monopoly of this frigid conceit to Xenophon. He uses it in connection with Agathocles, who eloped with his cousin from the unveiling ceremony of her marriage to another: “Who would have done this, if he had not had harlots in his eyes for pupils (*koras*)?”¹²

6 And what of Plato, the otherwise divine Plato? He wants to express the idea of writing-tablets. “They shall write,” he says, “and deposit in the temples of memorials of cypress.”¹³ Again: “As for walls, Meguilles, I should concur with Sparta in letting walls sleep in the earth and not get up.”¹⁴ Herodotus’ description¹⁵ of beautiful

⁹Dionysius II, expelled in 356. The name Dion is etymologically connected with Zeus (accusative *Dia*, genitive *Dios*). [Tr.]

¹⁰The word *korē* means both “girl” and “pupil”; Xenophon replaces it by *parthenos*, which means unambiguously “maiden.” [Tr.]

¹¹*Iliad* 1. 225. — The text of this sentence . . . is uncertain, but the general sense beyond doubt. [Tr.]

¹²Agathocles was ruler of Syracuse from 317 to 287. The “unveiling ceremony” was normally held on the third day after the marriage. [Tr.]

¹³*Laws* 741 c. [Tr.]

¹⁴*Laws* 778.d. [Tr.]

¹⁵Herodotus 5. 18. [Tr.]

women as “pains on the eyes” is the same sort of thing, though it is to some extent excused by the fact that the speakers are barbarians and drunk — not that it is a good thing to make an exhibition of the triviality of one’s mind to posterity, even through the mouths of characters like these.

All such lapses from dignity arise in literature through a single cause: that desire for novelty of thought which is all the rage today. Evils often come from the same source as blessings; and so, since beauty of style, sublimity, and charm all conduce to successful writing, they are also causes and principles not only of success but of failure. Variation, hyperbole, and the use of plural for singular are like this too; I shall explain below the dangers which they involve.¹⁶

Some marks of true sublimity.

At this stage, the question we must put to ourselves for discussion is how to avoid the faults which are so much tied up with sublimity. The answer, my friend, is: by first of all achieving a genuine understanding and appreciation of true sublimity. This is difficult; literary judgement comes only as the final product of long experience. However, for the purposes of instruction, I think we can say that an understanding of all this can be acquired. I approach the problem in this way:

In ordinary life, nothing is truly great which it is great to despise; wealth, honour, reputation, absolute power — anything in short which has a lot of external trappings — can never seem supremely good to the wise man because it is no small good to despise them. People who could have these advantages if they chose but disdain them out of magnanimity are admired much more than those who actually possess them.¹⁷ It is much the same with elevation in poetry and literature generally. We have to ask ourselves whether any particular example does not give a show of grandeur which, for all its accidental trappings, will, when dissected, prove vain and hollow, the kind of thing which it does a man

¹⁶See chaps. 23 and 38. [Tr.]

¹⁷Compare Aristotle’s “magnanimous man”: *Nicomachean Ethics* 4. 3. [Tr.]

2 more honour to despise than to admire. It is our nature to be elevated and exalted by true sublimity. Filled with joy and pride, we come to believe we have created what we have only heard. When a man of sense and literary experience hears something many times over, and it fails to dispose his mind to greatness or to leave him with more to reflect upon than was contained in the mere words, but comes instead to seem valueless on repeated inspection, this is not true sublimity; it endures only for the moment of hearing. Real sublimity contains much food for reflection, is difficult or rather impossible to resist, and makes a strong and ineffaceable impression on the memory. In a word, reckon those things which please everybody all the time as genuinely and finely sublime. When people of different trainings, ways of life, tastes, ages, and manners all agree about something, the judgement and assent of so many distinct voices lends strength and irrefutability to the conviction that their admiration is rightly directed.

The five sources of sublimity; the plan of the book.

- 8.1 There are, one may say, five most productive sources of sublimity. (Competence in speaking is assumed as a common foundation for all five; nothing is possible without it.)
- (i) The first and most important is the power to conceive great thoughts; I defined this in my work on Xenophon.
 - (ii) The second is strong and inspired emotion. (These two sources are for the most part natural; the remaining three involve art.)
 - (iii) Certain kinds of figures. (These may be divided into figures of thought and figures of speech.)
 - (iv) Noble diction. This has as subdivisions choice of words and the use of metaphorical and artificial language.¹⁸
 - (v) Finally, to round off the whole list, dignified and elevated word-arrangement.

2 Let us now examine the points which come under each of these heads.

I must first observe, however, that Caecilius

¹⁸Or "and coined words." [Tr.]

has omitted some of the five—emotion, for example. Now if he thought that sublimity and emotion were one and the same thing and always existed and developed together, he was wrong. Some emotions, such as pity, grief, and fear, are found divorced from sublimity and with a low effect. Conversely, sublimity often occurs apart from emotion. Of the innumerable examples of this I select Homer's bold account of the Aloadae:

Ossa upon Olympus they sought to heap; and on
Ossa
Pelion with its shaking forest, to make a path to
heaven—

and the even more impressive sequel—

and they would have finished their work . . . ¹⁹

In orators, encomia and ceremonial or exhibition pieces always involve grandeur and sublimity, though they are generally devoid of emotion. Hence those orators who are best at conveying emotion are least good at encomia, and conversely the experts at encomia are not conveyers of emotion. On the other hand, if Caecilius thought that emotion had no contribution to make to sublimity and therefore thought it not worth mentioning, he was again completely wrong. I should myself have no hesitation in saying that there is nothing so productive of grandeur as noble emotion in the right place. It inspires and possesses our words with a kind of madness and divine spirit.

(i) Greatness of thought.

The first source, natural greatness, is the most important. Even if it is a matter of endowment rather than acquisition, we must, so far as is possible, develop our minds in the direction of greatness and make them always pregnant with noble thoughts. You ask how this can be done. I wrote elsewhere something like this: "Sublimity is the echo of a noble mind." This is why a mere idea, without verbal expression, is sometimes admired for its nobility—just as Ajax's silence in the Vision of the Dead is grand and indeed more sub-

¹⁹*Odyssey* II. 315–17. [Tr.]

lime than any words could have been.²⁰ First
3 then we must state where sublimity comes from:
the orator must not have low or ignoble thoughts.
Those whose thoughts and habits are trivial and
servile all their lives cannot possibly produce
anything admirable or worthy of eternity. Words
will be great if thoughts are weighty. This is why
splendid remarks come naturally to the proud;
4 the man who, when Parmenio said, "I should
have been content" . . .²¹

[Lacuna equivalent to about six pages.]

*Successful and unsuccessful ways of representing
supernatural beings and of exciting awe.*

5 . . . the interval between earth and heaven. One
might say that this is the measure not so much of
Strife as of Homer.²²

Contrast the line about Darkness in Hesiod—
if the *Shield* is by Hesiod:

Mucus dripped from her nostrils.²³

This gives a repulsive picture, not one to excite
awe. But how does Homer magnify this divine
power?

As far as a man can peer through the mist,
sitting on watch, looking over the wine-dark sea,
so long is the stride of the gods' thundering horses.²⁴

He uses a cosmic distance to measure their speed.
This enormously impressive image would make
anybody say, and with reason, that, if the horses
of the gods took two strides like that, they would
find there was not enough room in the world.

6 The imaginative pictures in the *Battle of the
Gods* are also very remarkable:

²⁰*Odyssey* 11. 563. Note that this is not an example, but a
simile illustrating the point that ideas in themselves can be
grand. [Tr.]

²¹Parmenio said to Alexander that if he were Alexander
he would be content, and would not go on fighting. "So would
I, if I were Parmenio," replied Alexander. [Tr.]

²²The reference is to *Iliad* 4. 440 ff., where Strife is de-
scribed as having her head in the sky and walking on the
earth. "Longinus" means that Homer too is a colossus of cos-
mic dimensions. [Tr.]

²³*Shield of Heracles* 267. [Tr.]

²⁴*Iliad* 5. 770-2. [Tr.]

And the great heavens and Olympus trumpeted
around them.
Aidoneus, lord of the dead, was frightened in his
depths;
and in fright he jumped from his throne, and shouted,
for fear the earth-shaker Poseidon might break
through the ground,
and gods and men might see
the foul and terrible halls, which even the gods de-
test.²⁵

Do you see how the earth is torn from its founda-
tions, Tartarus laid bare, and the whole universe
overthrown and broken up, so that all things—
Heaven and Hell, things mortal and things im-
mortal—share the warfare and the perils of that
ancient battle? But, terrifying as all this is, it is
blasphemous and indecent unless it is interpreted
allegorically; in relating the gods' wounds, quar-
rels, revenges, tears, imprisonments, and mani-
fold misfortunes, Homer, or so it seems to me,
has done his best to make the men of the Trojan
war gods, and the gods men. If men are unhappy,
there is always death as a harbour in trouble;
what he has done for his gods is to make them
immortal indeed, but immortally miserable.

Much better than the *Battle of the Gods* are
8 the passages which represent divinity as genu-
inely unsoiled and great and pure. The lines
about Poseidon, much discussed by my predeces-
sors, exemplify this:

The high hills and the forest trembled,
and the peaks and the city of Troy and the Achaean
ships
under the immortal feet of Poseidon as he went his
way.
He drove over the waves, and the sea-monsters
gambolled around him,
coming up everywhere out of the deep; they recog-
nized their king.
The sea parted in joy; and the horses flew onward.²⁶

Similarly, the lawgiver of the Jews,²⁷ no ordi-
9 nary man—for he understood and expressed

²⁵See *Iliad* 21. 388 and 20. 61 ff. [Tr.]

²⁶See *Iliad* 13. 18 ff., and 20. 60. [Tr.]

²⁷"The lawgiver of the Jews": This is Moses, traditionally
supposed to be the author of the first five books of the Bible,
which comprise the Torah of Jewish law. "Longinus's" refer-

God's power in accordance with its worth— writes at the beginning of his *Laws*: "God said"—now what?—"Let there be light,' and there was light; 'Let there be earth,' and there was earth."²⁸

10 Perhaps it will not be out of place, my friend, if I add a further Homeric example—from the human sphere this time—so that we can see how the poet is accustomed to enter into the greatness of his heroes. Darkness falls suddenly. Thickest night blinds the Greek army. Ajax is bewildered. "O Father Zeus!" he cries,

"Deliver the sons of the Achaeans out of the mist, make the sky clear, and let us see; in the light—kill us."²⁹

The feeling here is genuinely Ajax's. He does not pray for life—that would be a request unworthy of a hero—but having no good use for his courage in the disabling darkness, and so angered at his inactivity in the battle, he prays for light, and quickly: he will at all costs find a shroud worthy of his valour, though Zeus be arrayed against him.

Comparison between the Iliad and the Odyssey.

11 In this passage, the gale of battle blows hard in Homer; he

Rages like Ares, spear-brandishing, or the deadly fire
raging in the mountains, in the thickets of the deep wood.
Foam shows at his mouth.³⁰

ence to Jewish scripture is unique among non-Christian classical writers, a fact that has given rise to much scholarly speculation, summarized in Roberts. Although some scholars believe that the reference is a later Christian interpolation, the accepted opinion is that "Longinus" was a Hellenized Jew (Jewish by religion, Greek by culture), or that he lifted the reference from Caecilius, known to be Jewish, or that, as an exceptionally well-educated man, he was familiar with the Jewish texts entering the larger Roman world in the first century. [Ed.]

²⁸Controversy about the genuineness of this reference to Genesis I has raged since the eighteenth century. For the influence of the reference on literary taste, see S. H. Monk, *The Sublime*, 33. [Tr.]

²⁹*Iliad* 17. 645 ff. [Tr.]

³⁰From *Iliad* 15. 605 ff. [Tr.]

In the *Odyssey*, on the other hand—and there are many reasons for adding this to our inquiry—he demonstrates that when a great mind begins to decline, a love of story-telling characterizes its old age. We can tell that the *Odyssey* was his second work from various considerations, in particular from his insertion of the residue of the Trojan troubles in the poem in the form of episodes, and from the way in which he pays tribute of lamentation and pity to the heroes, treating them as persons long known. The *Odyssey* is simply an epilogue to the *Iliad*:

There lies warlike Ajax, there Achilles,
there Patroclus, the gods' peer as a counsellor,
and there my own dear son.³¹

For the same reason, I maintain, he made the whole body of the *Iliad*, which was written at the height of his powers, dramatic and exciting, whereas most of the *Odyssey* consists of narrative, which is a characteristic of old age. Homer in the *Odyssey* may be compared to the setting sun: the size remains without the force. He no longer sustains the tension as it was in the tale of Troy, nor that consistent level of elevation which never admitted any falling off. The outpouring of passions crowding one on another has gone; so has the versatility, the realism, the abundance of imagery taken from the life. We see greatness on the ebb. It is as though the Ocean were withdrawing into itself and flowing quietly in its own bed. Homer is lost in the realm of the fabulous and incredible. In saying this, I have not forgotten the storms in the *Odyssey*, the story of Cyclops, and a few other episodes; I am speaking of old age—but it is the old age of a Homer. The point about all these stories is that the mythical element in them predominates over the realistic.

I digressed into this topic, as I said, to illustrate how easy it is for great genius to be perverted in decline into nonsense. I mean things like the story of the wineskin, the tale of the men kept as pigs in Circe's palace ("howling piglets," Zoilus called them), the feeding of Zeus by the doves (as though he were a chick in the nest), the ten days on the raft without food, and the im-

³¹Spoken by Nestor, *Odyssey* 3. 109 ff. [Tr.]

probabilities of the murder of the suitors.³² What can we say of all this but that it really is “the dreaming of a Zeus”?³³

15 There is also a second reason for discussing the *Odyssey*. I want you to understand that the decline of emotional power in great writers and poets turns to a capacity for depicting manners. The realistic description of Odysseus’ household forms a kind of comedy of manners.

Selection and organization of material.

0. 1 Now have we any other means of making our writing sublime? Every topic naturally includes certain elements which are inherent in its raw material. It follows that sublimity will be achieved if we consistently select the most important of these inherent features and learn to organize them as a unity by combining one with another. The first of these procedures attracts the reader by the selection of details, the second by the density of those selected.

Consider Sappho’s treatment of the feelings involved in the madness of being in love. She uses the attendant circumstances and draws on real life at every point. And in what does she show her quality? In her skill in selecting the outstanding details and making a unity of them:

2 To me he seems a peer of the gods, the man who sits facing you and hears your sweet voice and lovely laughter; it flutters my heart in my breast. When I see you only for a moment, I cannot speak; my tongue is broken, a subtle fire runs under my skin; my eyes cannot see, my ears hum; cold sweat pours off me; shivering grips me all over; I am paler than grass; I seem near to dying; but all must be endured . . .³⁴

3 Do you not admire the way in which she brings everything together—mind and body, hearing

³²For these various stories, see *Odyssey* 10. 17 ff., 10. 237 ff., 12. 447 ff., 22. 79 ff. [Tr.]

³³Sense uncertain. Possibly the text is corrupt. “A sick man’s dream” has been suggested: cf. Horace, *The Art of Poetry*, above, p. 279. [Tr.]

³⁴See D. L. Page, *Sappho and Alcaeus*, Oxford, 1955, chap. 2, for this poem (= Sappho, fragment 31). Eighteenth-century translation by Ambrose Phillips, *Spectator* 229, with criticism by Addison; Romantic translation by W. Headlam, *Oxford Book of Greek Verse in Translation*, no. 141; recent version by Richmond Lattimore, *Greek Lyrics*, 2nd edn., Chicago, 1960, p. 39. [Tr.]

and tongue, eyes and skin? She seems to have lost them all, and to be looking for them as though they were external to her. She is cold and hot, mad and sane, frightened and near death, all by turns. The result is that we see in her not a single emotion, but a complex of emotions. Lovers experience all this; Sappho’s excellence, as I have said, lies in her adoption and combination of the most striking details.

A similar point can be made about the descriptions of storms in Homer, who always picks out the most terrifying aspects. The author of the *Arimaspea* on the other hand expects these lines to excite terror:

This too is a great wonder to us in our hearts:
there are men living on water, far from land, on the deep sea:
miserable they are, for hard is their lot;
they give their eyes to the stars, their lives to the sea;
often they raise their hands in prayer to the gods,
as their bowels heave in pain.³⁵

Anyone can see that this is more polished than awe-inspiring. Now compare it with Homer (I select one example out of many):

He fell upon them as upon a swift ship falls a wave, huge, wind-reared by the clouds. The ship is curtained in foam, a hideous blast of wind roars in the sail. The sailors shudder in terror: they are carried away from under death, but only just.³⁶

Aratus³⁷ tried to transfer the same thought:

A little plank wards off Hades.

But this is smooth and unimpressive, not frightening. Moreover, by saying “a plank wards off Hades,” he has got rid of the danger. The plank *does* keep death away. Homer, on the other hand, does not banish the cause of fear at a stroke; he gives a vivid picture of men, one might almost say, facing death many times with every wave

³⁵From a lost poem attributed to Aristeas of Proconnesus, a prophet of Apollo said to have travelled in Siberia in the seventh century B.C. The lines perhaps express the surprised comment of innocent continentals, deep in Asia, on the tales they have heard about ships and seagoing. [Tr.]

³⁶*Ibid.* 15. 624 ff. [Tr.]

³⁷*Phaenomena* 299. [Tr.]

that comes. Notice also the forced combination of naturally uncompoundable prepositions: *hupek*, “from under.” Homer has tortured the words to correspond with the emotion of the moment, and expressed the emotion magnificently by thus crushing words together. He has in effect stamped the special character of the danger on the diction: “they are carried away from under death.”

7 Compare Archilochus on the shipwreck, and Demosthenes on the arrival of the news (“It was evening . . .”).³⁸

In short, one might say that these writers have taken only the very best pieces, polished them up and fitted them together. They have inserted nothing inflated, undignified, or pedantic. Such things ruin the whole effect, because they produce, as it were, gaps or crevices, and so spoil the impressive thoughts which have been built into a structure whose cohesion depends upon their mutual relations.³⁹

Amplification.

11.1 The quality called “amplification” is connected with those we have been considering. It is found when the facts or the issues at stake allow many starts and pauses in each section. You wheel up one impressive unit after another to give a series
2 of increasing importance. There are innumerable varieties of amplification:⁴⁰ it may be produced by commonplaces, by exaggeration or intensification or arguments, or by a build-up of action or emotion. The orator should realize, however, that none of these will have its full effect without sublimity. Passages expressing pity or disparagement are no doubt an exception; but in any other instance of amplification, if you take away the sublime element, you take the soul away from

³⁸The example from Archilochus cannot be certainly identified. That from Demosthenes (*On the Crown* 169) describes the alarm at Athens when news arrived of Philip’s occupation of Elatea (339 B.C.): “It was evening when somebody brought the *prutaneis* the news that Elatea was captured. Some of them got up in the middle of dinner and began to drive the traders from the stalls in the *agora* and burn the wicker hurdles. Others sent for the generals and gave instructions to the trumpeter. The town was full of uproar.” [Tr.]

³⁹Text uncertain in detail; general sense clear. [Tr.]

⁴⁰See Quint. 8. 4. [Tr.]

the body. Without the strengthening influence of the sublimity, the effective element in the whole loses all its vigor and solidity.

What is the difference between this precept and the point made above about the inclusion of vital details and their combination in a unity? What in general is the difference between amplification and sublimity? I must define my position briefly on these points, in order to make myself clear.

I do not feel satisfied with the definition given
12.1 by the rhetoricians: “amplification is expression which adds grandeur to its subject.” This might just as well be a definition of sublimity or emotion or tropes. All these add grandeur of some kind. The difference lies, in my opinion, in the fact that sublimity depends on elevation, whereas amplification involves extension; sublimity exists often in a single thought, amplification cannot exist without a certain quantity and superfluity. To give a general definition, amplification is an
2 aggregation of all the details and topics which constitute a situation, strengthening the argument by dwelling on it; it differs from proof in that the latter demonstrates the point made . . .

[Lacuna equivalent to about two pages.]

Same general subject continued:

A comparison between Plato and Demosthenes, with a word on Cicero.

. . . spreads out richly in many directions into an open sea of grandeur. Accordingly, Demosthenes, the more emotional of the two, displays in abundance the fire and heat of passion, while Plato, consistently magnificent, solemn, and grand, is much less intense—without of course becoming in the least frigid. These seem to me,
3 my dear Terentianus—if a Greek is allowed an opinion—to be also the differences between the grandeur of Cicero and the grandeur of Demosthenes. Demosthenes has an abrupt sublimity; Cicero spreads himself. Demosthenes burns and ravages; he has violence, rapidity, strength, and force, and shows them in everything; he can be compared to a thunderbolt or a flash of lightning. Cicero, on the other hand, is like a spreading conflagration. He ranges everywhere and rolls majestically on. His huge fires endure; they are re-

newed in various forms from time to time and repeatedly fed with fresh fuel.—But this is a comparison which your countrymen can make better than I.

Anyway, the place for the intense, Demosthenic kind of sublimity is in indignant exaggeration, in violent emotion, and in general wherever the hearer has to be struck with amazement. The place for expansiveness is where he has to be deluged with words. This treatment is appropriate in *loci communes*, epilogues, digressions, all descriptive and exhibition pieces, historical or scientific topics, and many other departments.

To return to Plato, and the way in which he combines the “soundless flow”⁴¹ of his smooth style with grandeur. A passage of the *Republic*⁴² you have read makes the manner quite clear: “Men without experience of wisdom and virtue but always occupied with feasting and that kind of thing naturally go downhill and wander through life on a low plane of existence. They never look upwards to the truth and never rise, they never taste certain or pure pleasure. Like cattle, they always look down, bowed earthwards and tablewards; they feed and they breed, and their greediness in these directions makes them kick and butt till they kill one another with iron horns and hooves, because they can never be satisfied.”

Imitation of earlier writers as a means to sublimity.

Plato, if we will read him with attention, illustrates yet another road to sublimity, besides those we have discussed. This is the way of imitation and emulation of great writers of the past. Here too, my friend, is an aim to which we must hold fast. Many are possessed by a spirit not their own. It is like what we are told of the Pythia at Delphi: she is in contact with the tripod near the cleft in the ground which (so they say) exhales a divine vapour, and she is thereupon made pregnant by the supernatural power and forthwith prophesies as one inspired. Similarly, the genius of the ancients acts as a kind of oracular cavern, and effluences flow from it into the minds of

⁴¹Plato, *Theaetetus* 144 b. [Tr.]

⁴²*Republic* 9. 586 a (adapted). [Tr.]

their imitators. Even those previously not much inclined to prophesy become inspired and share the enthusiasm which comes from the greatness of others. Was Herodotus the only “most Homeric” writer? Surely Stesichorus and Archilochus earned the name before him. So more than any, did Plato, who diverted to himself countless rills from the Homeric spring. (If Ammonius had not selected and written up detailed examples of this, I might have had to prove the point myself.) In all this process there is no plagiarism. It resembles rather the reproduction of good character in statues and works of art.⁴³ Plato could not have put such a brilliant finish on his philosophical doctrines or so often risen to poetical subjects and poetical language, if he had not tried, and tried wholeheartedly, to compete for the prize against Homer, like a young aspirant challenging an admired master. To break a lance in this way may well have been a brash and contentious thing to do, but the competition proved anything but valueless. As Hesiod says, “this strife is good for men.”⁴⁴ Truly it is a noble contest and prize of honour, and one well worth winning, in which to be defeated by one’s elders is itself no disgrace.

We can apply this to ourselves. When we are working on something which needs loftiness of expression and greatness of thought, it is good to imagine how Homer would have said the same thing, or how Plato or Demosthenes or (in history) Thucydides would have invested it with sublimity. These great figures, presented to us as objects of emulation and, as it were, shining before our gaze, will somehow elevate our minds to the greatness of which we form a mental image. They will be even more effective if we ask ourselves “How would Homer or Demosthenes have reacted to what I am saying, if he had been here? What would his feelings have been?” It makes it a great occasion if you imagine such a jury or audience for your own speech, and pretend that you are answering for what you write before judges and witnesses of such heroic stature. Even more stimulating is the further thought: “How will

⁴³Text uncertain: perhaps “the reproduction of beauty of form . . .” [Tr.]

⁴⁴*Works and Days* 24: healthy rivalry contrasted with the strife that produces war. [Tr.]

posterity take what I am writing?" If a man is afraid of saying anything which will outlast his own life and age, the conceptions of his mind are bound to be incomplete and abortive; they will miscarry and never be brought to birth whole and perfect for the day of posthumous fame.

Visualization (phantasia).

- 15.1 Another thing which is extremely productive of grandeur, magnificence and urgency, my young friend, is visualization (*phantasia*). I use this word for what some people call image-production. The term *phantasia* is used generally for anything which in any way suggests a thought productive of speech;⁴⁵ but the word has also come into fashion for the situation in which enthusiasm and emotion make the speaker *see* what he is saying and bring it *visually* before his audience. It will not escape you that rhetorical visualization has a different intention from that of the poets: in poetry the aim is astonishment, in oratory it is clarity. Both, however, seek emotion and excitement.

Mother, I beg you, do not drive them at me,
the women with the blood in their eyes and the
snakes —
they are here, they are here, jumping right up to me.⁴⁶

Or again:

O! O! She'll kill me. Where shall I escape?⁴⁷

The poet himself saw the Erinyes, and has as good as made his audience see what he imagined.

- 3 Now Euripides devotes most pains to producing a tragic effect with two emotions, madness and love. In these he is supremely successful. At the same time, he does not lack the courage to attempt other types of visualization. Though not formed by nature for grandeur, he often forces himself to be tragic. When the moment for greatness comes, he (in Homer's words)

whips flank and buttocks with his tail
and drives himself to fight.⁴⁸

⁴⁵A Stoic definition. [Tr.]

⁴⁶Euripides, *Orestes* 255–7. Orestes sees the Furies. [Tr.]

⁴⁷Euripides, *Iphigenia in Tauris* 291. Again Orestes and the Furies. [Tr.]

⁴⁸*Iliad* 20. 170. [Tr.]

For example, here is Helios handing the reins to Phaethon:⁴⁹

"Drive on, but do not enter Libyan air —
it has no moisture in it, and will let
your wheel fall through —"

and again:

"Steer towards the seven Pleiads."
The boy listened so far, then seized the reins,
whipped up the winged team, and let them go.
To heaven's expanse they flew.
His father rode behind on Sirius,
giving the boy advice: "That's your way, there:
turn here — turn here."

May one not say that the writer's soul has mounted the chariot, has taken wing with the horses and shares the danger? Had it not been up among those heavenly bodies and moved in their courses, he could never have visualized such things.

Compare, too, his Cassandra:

Ye Trojans, lovers of horses . . .⁵⁰

Aeschylus, of course, ventures on the most heroic visualizations; he is like his own Seven against Thebes —

Seven men of war, commanders of companies,
killing a bull into a black-bound shield,
dipping their hands in the bull's blood,
took oath by Ares, by Enyo, by bloodthirsty
Terror —

in a joint pledge of death in which they showed themselves no mercy. At the same time, he does sometimes leave his thoughts unworked, tangled and hard. The ambitious Euripides does not shirk even these risks. For example, there is in Aeschylus a remarkable description of the palace of Lycurgus in its divine seizure at the moment of Dionysus' epiphany:

⁴⁹Fr. 779 Nauck. Euripides' lost *Phaethon* told the story of Phaethon's marriage and how his mother Clymene revealed to him that Helios was his father; he then begs to be allowed to drive the sun's chariot, and disaster follows. The passages quoted are probably from a messenger's speech recounting Phaethon's fall. [Tr.]

⁵⁰Fr. 935 Nauck, perhaps from the *Alexandros*. As the context is lost, we do not know the point. Compare p. 473, n. 4 for a similar abridged quotation, where "Longinus" assumes his readers to know the context. [Tr.]

the palace was possessed, the house went bacchanal.

Euripides expresses the same thought less harshly:

the whole mountain went bacchanal with them.⁵¹

7 There is another magnificent visualization in Sophocles' account of Oedipus dying and giving himself burial to the accompaniment of a sign from heaven,⁵² and in the appearance of Achilles over his tomb at the departure of the Greek fleet.⁵³ Simonides has perhaps described this scene more vividly than anyone else; but it is impossible to quote everything.

8 The potential examples, as I said, have a quality of exaggeration which belongs to fable and goes far beyond credibility. In an orator's visualizations, on the other hand, it is the element of fact and truth which makes for success; when the content of the passage is poetical and fabulous and does not shrink from any impossibility, the result is a shocking and outrageous abnormality. This is what happens with the shock orators of our own day; like tragic actors, these fine fellows see the Erinyes, and are incapable of understanding that when Orestes says

Let me go; you are one of my Erinyes,
you are hugging me tight, to throw me into Hell,⁵⁴

he visualizes all this *because he is mad*.

9 What then is the effect of rhetorical visualization? There is much it can do to bring urgency and passion into our words; but it is when it is closely involved with factual arguments that it enslaves the hearer as well as persuading him. "Suppose you heard a shout this very moment outside the court, and someone said that the prison had been broken open and the prisoners had escaped—no one, young or old, would be so casual as not to give what help he could. And if someone then came forward and said 'This is the man who let them out,' our friend would never

⁵¹Aeschylus, fr. 58 Nauck; Euripides, *Bacchae* 726. Euripides makes the idea easier by adding the notion that the mountain *shared* the ecstasy of the bacchanals themselves. [Tr.]

⁵²Closing scene of *Oedipus Coloneus*. [Tr.]

⁵³Probably in the lost *Polyxena*. It is possible that something is lost between this sentence and the reference to Simonides. [Tr.]

⁵⁴Euripides, *Orestes* 264–5. [Tr.]

get a hearing; it would be the end of him."⁵⁵ There is a similar instance in Hyperides' defence of himself when he was on trial for the proposal to liberate the slaves which he put forward after the defeat.⁵⁶ "It was not the proposer," he said, "who drew up this decree: it was the battle of Chaeronea." Here the orator uses a visualization actually in the moment of making his factual argument, with the result that his thought has taken him beyond the limits of mere persuasiveness. Now our natural instinct is, in all such cases, to attend to the stronger influence, so that we are diverted from the demonstration to the astonishment caused by the visualization, which by its very brilliance conceals the factual aspect. This is a natural reaction: when two things are joined together, the stronger attracts to itself the force of the weaker.

This will suffice for an account of sublimity of thought produced by greatness of mind, imitation, or visualization.⁵⁷

(iii) *Figures*:⁵⁸ an example to illustrate the right use of figures: the "oath" in "on the crown."

The next topic is that of figures. Properly handled, figures constitute, as I said, no small part of sublimity. It would be a vast, or rather infinite, labour to enumerate them all; what I shall do is to expound a few of those which generate sublimity, simply in order to confirm my point.

Here is Demosthenes putting forward a demonstrative argument on behalf of his policy.⁵⁹ What would have been the natural way to put it? "You have not done wrong, you who fought for the liberty of Greece; you have examples to prove this close at home: the men of Marathon, of Salamis, of Plataea did not do wrong." But instead of this he was suddenly inspired to give voice to the oath by the heroes of Greece: "By those who risked their lives at

⁵⁵Demosthenes 24. 208. [Tr.]

⁵⁶I.e. after Philip's victory at Chaeronea (338 B.C.). The speech is not extant. [Tr.]

⁵⁷Note that this is not a complete summary of chaps. 9–15. [Tr.]

⁵⁸The second "source," emotion, does not appear in its expected place: see p. 460. [Tr.]

⁵⁹The passage discussed is in 18. 208. Cf. below, p. 575. [Tr.]

Marathon, you have not done wrong!" Observe what he effects by this single figure of conjuration, or "apostrophe" as I call it here. He defies his audience's ancestors, suggesting that it is right to take an oath by men who fell so bravely, as though they were gods. He inspires the judges with the temper of those who risked their lives. He transforms his demonstration into an extraordinary piece of sublimity and passion, and into the convincingness of this unusual and amazing oath. At the same time he injects into his hearers' minds a healing specific, so as to lighten their hearts by these paeans of praise and make them as proud of the battle with Philip as of the triumphs of Marathon and Salamis. In short, the figure enables him to run away with his audience.

3 Now the origin of this oath is said to be in the lines of Eupolis:

By Marathon, by *my* battle,
no one shall grieve me and escape rejoicing.⁶⁰

But the greatness depends not on the mere form of the oath, but on place, manner, occasion, and purpose. In Eupolis, there is nothing but the oath; he is speaking to the Athenians while their fortunes are still high and they need no comfort; and instead of immortalizing the men in order to engender in the audience a proper estimation of their valour, he wanders away from the actual people who risked their lives to an inanimate object, namely the battle. In Demosthenes, on the other hand, the oath is addressed to a defeated nation, to make them no longer think of Chaeronea as a disaster. It embraces, as I said, a demonstration that they "did no wrong," an illustrative example, a confirmation, an encomium,
4 and an exhortation. Moreover, because he was faced with the possible objection "your policies brought us to defeat—and yet you swear by victories!" he brings his thought back under control and makes it safe and unanswerable, showing that sobriety is needed even under the influence of inspiration: "By those who *risked their lives* at Marathon, and *fought in the ships* at Salamis and Artemisium, and *formed the line* at Plataea!" He never says *conquered*; throughout he withholds the word for the final issue, because it was a

⁶⁰From the lost comedy *Demoi*. Eupolis parodies Euripides, *Medea* 395 ff. [Tr.]

happy issue, and the opposite to that of Chaeronea. From the same motives he forestalls his audience by adding immediately: "all of whom were buried at the city's expense, Aeschines—all, not only the successful."

The relation between figures and sublimity.

At this point, my friend, I feel I ought not to pass
17. over an observation of my own. It shall be very brief: figures are natural allies of sublimity and themselves profit wonderfully from the alliance. I will explain how this happens.

Playing tricks by means of figures is a peculiarly suspect procedure. It raises the suspicion of a trap, a deep design, a fallacy. It is to be avoided in addressing a judge who has power to decide, and especially in addressing tyrants, kings, governors, or anybody in a high place. Such a person immediately becomes angry if he is led astray like a foolish child by some skilful orator's figures. He takes the fallacy as indicating contempt for himself. He becomes like a wild animal. Even if he controls his temper, he is now completely conditioned against being convinced by what is said. A figure is therefore generally thought to be best when the fact that it is a figure is concealed.

Thus sublimity and emotion are a defence and a marvellous aid against the suspicion which the use of figures engenders. The artifice of the trick is lost to sight in the surrounding brilliance of beauty and grandeur, and it escapes all suspicion. "By the men of Marathon . . ." is proof enough. For how did Demosthenes conceal the figure in that passage? By sheer brilliance, of course. As fainter lights disappear when the sunshine surrounds them, so the sophisms of rhetoric are dimmed when they are enveloped in encircling grandeur. Something like this happens in painting: when light and shadow are juxtaposed in colours on the same plane, the light seems more prominent to the eye, and both stands out and actually appears much nearer. Similarly, in literature, emotional and sublime features seem closer to the mind's eye, both because of a certain natural kinship⁶¹ and because of their brilliance. Consequently, they always show up above the figures, and overshadow and eclipse their artifice.

⁶¹See below, chap. 35. [Tr.]

Quintilian

ca. 35–96 C.E.

Marcus Fabius Quintilian was born in the Roman province of Calagurris in Spain, probably to a well-to-do Spanish family that had obtained citizenship in the Empire. He was educated both in Roman schools in Spain and in Rome itself, where he studied rhetoric with the famous forensic orator and consul, Domitus Afer. Quintilian's background and training thus resemble Cicero's; however, he was a provincial, one of many who flocked to Rome in imperial times and enriched its culture. When Afer died, around 59 C.E., Quintilian returned to Spain to practice law and to teach rhetoric. He returned to Rome in 68 in the entourage of Galba, who was briefly emperor. There followed a year of great political upheaval in which two other men seized the throne before Vespasian established his reign. Somehow Quintilian avoided being swept away in Galba's downfall, and he began teaching rhetoric, for which he soon became renowned. Vespasian gave him the first imperial endowed chair in rhetoric in 71. During a teaching career of more than twenty years, Quintilian received other honors as well, and he instructed such illustrious pupils as the satirist Juvenal; Suetonius, and perhaps also Tacitus, historians who were also successful imperial administrators; Pliny the Younger, noted for his volumes of highly rhetorical letters; and young men from the imperial household. Apparently Quintilian taught only young men, and his writings address the education of men only. Of his few published works, the only one extant is the magisterial *Institutes of Oratory* (*Institutio Oratoria*), composed in the years following his retirement from teaching in 90 C.E. The work was published in 95. Quintilian's death date is uncertain but apparently followed shortly thereafter.

It is a commonplace of the history of rhetoric, one encouraged by contemporary commentators such as Tacitus,¹ that the Rome of Quintilian's day afforded no scope for the practice of rhetoric. Certainly, larger political issues came under close imperial scrutiny and censorship. It could be fatal to express views inimical to the emperor. But good forensic oratory and epideictic oratory were still needed; indeed, they needed to be rescued from the declamatory excesses that were fashionable in Rome. Vespasian associated the rhetorical display of the Second Sophistic with the corruption of previous emperors, which he was determined to reform. This may be one reason why he extended his patronage to Quintilian, who declared himself the enemy of rhetorical excesses. Quintilian published a condemnation, *On the Causes of Corruption in Oratory*, in about 85 C.E. (now lost), and he consistently called for a return to the good style of Cicero. Quintilian did teach declamation in his school, but he tried to prune its excesses and to better suit it for practical life.

Historians of rhetoric often compare Quintilian unfavorably with Cicero to demonstrate the decline of rhetoric under the emperors. Quintilian never claimed to

¹See Tacitus, *Dialogus de Oratoribus* (*Dialogue on Orators*), ca. 75 C.E., in Tacitus, *Agricola*, trans. M. Hutton, rev. R. M. Ogilvie; *Germania*, trans. M. Hutton, rev. E. H. Warmington; *Dialogus*, trans. W. Peterson, rev. M. Winterbottom; 2d ed. (Cambridge: Harvard University Press, 1970).

be Cicero's equal and frequently cites him as the greatest Latin master of eloquence. Born only about eighty years after Cicero's death, Quintilian found no scope for the kind of powerful political career Cicero pursued. He practiced oratory only in forensic speeches, and his *Institutes* devotes much more attention to the forensic than to any other kind of oratory. Some historians of rhetoric, if they do not share Tacitus's avowed cynicism about the retreat of rhetoric teachers like Quintilian to the classroom, do seem to take Quintilian somewhat less seriously than the other major classical rhetoricians because of his uninvolved in the admittedly tricky and treacherous political life of his day.

Along the same lines, the *Institutes* is often praised faintly as a masterful synthesis that adds little of importance to classical rhetorical theory. Quintilian almost seems to encourage us to view his work as derivative, for his method of approaching any subject is first to canvass numerous Greek and Latin authors, summarizing their perspectives in some detail, and then to indicate his own position by aligning himself with one of these authorities (often Cicero). Yet Quintilian does not treat these sources in a servile manner; he analyzes them acutely and provides enough detail about them to give modern readers a sense of their work even if the originals are now lost.

Quintilian's insistence that the good speaker be a good man is usually cited as the only important idea for which he might claim originality. Yet, in its broad outlines, this idea is already familiar from Plato's *Phaedrus*, Isocrates' *Antidosis*, and Cicero's *De Oratore*. As historian of rhetoric James J. Murphy explains, some scholars have noted that Quintilian does differ from his rhetorical predecessors in his much more detailed attention to pedagogy.² The *Institutes* gives advice on the development of a good man who speaks well, from his birth through his early education, apprenticeship, mature career, and dignified retirement. Earlier books in the *Institutes* seem addressed to parents and teachers, as when Quintilian recommends giving the infant ivory alphabet blocks to play with, or when he condemns corporal punishment. Later books address the adult orator himself, as when Quintilian advises on what kind of court cases to take and how much to charge clients. Although Plato, Isocrates, and Cicero all claimed an interest in training the young—indeed, the first two devoted themselves to teaching, like Quintilian—none goes into such detail as Quintilian does.

Quintilian's focus on the lifelong development of the orator may have theoretical implications. Like his predecessors, Quintilian recommends that the orator study philosophy; but in spite of the otherwise exhaustive nature of Quintilian's treatise, he goes into much less detail on what the orator should study than, for example, Cicero does in *De Oratore*. Quintilian wishes to call attention not just to the quantity of the orator's reading, but to the sincerity with which he applies the ideas to life. Quintilian seems to think the orator must undergo not so much training as formation, in the sense of a religious vocation. Those in authority over the young man must see to this formation while he is young; upon maturity he assumes responsibil-

²James J. Murphy, "Introduction," in *Quintilian on the Teaching of Speaking and Writing*, ed. James J. Murphy (Carbondale: Southern Illinois University Press, 1987), pp. xiii, xxxix.

ity for his own moral development. By thoroughly blending instruction in rhetoric with moral philosophy, Quintilian implicitly responds to Plato's fears about the corrupt uses of oratory.

Quintilian compares the teacher-student relationship to one between a loving father and a devoted son (all the more poignant in that his own two sons predeceased him). Thus the teacher would inspire love of learning, not fear of punishment. Quintilian believes in adapting instruction to age and ability and eschewing pettifogging controversies over rhetorical classifications in favor of teachable syntheses. He stresses the importance of instilling good habits of composition and delivery, so that eventually the orator may express himself with seemingly natural facility. These and many other facets of Quintilian's pedagogy suggest that he wants to design a total environment for encouraging love of the good, as embodied in caring teachers, as well as mastery of rhetorical technique, as simplified in the practicing orator's rules of thumb.

Like Cicero in *De Oratore*, Quintilian feels he must answer charges that the ideal he seeks is impossible for mortals to achieve, that such a good man will be hard to find. Quintilian's answer is that he will make one, through what modern readers might regard as an interdisciplinary effort involving educational psychology, sociology, literary criticism, and moral philosophy. Quintilian's insistence on the moral element may bespeak his own quiet desperation about what sort of leader would be needed to galvanize the corrupt Rome of his day. At any rate, this emphasis may help to explain why Quintilian became a particularly influential resource for Christian rhetoricians from the early Middle Ages until well into the nineteenth century. Some version of the *Institutes*, though not always a complete one, was available throughout the period.

Included here are Book II and substantial portions of Books X and XII. What follows is a synopsis of the entire *Institutes of Oratory*.

SYNOPSIS OF *INSTITUTES OF ORATORY*

Book I treats the earliest stages of the orator's education. Fathers are encouraged to have high hopes for their sons. The boy's mother, nurse, and pedagogue should speak good Latin. Formal education can begin at about age three and will involve speaking Greek and reading and writing Latin (instruction in rhetoric at this time was bilingual). Quintilian argues that a good school provides better education than home tutoring because it offers peer criticism. Early signs of a young student's aptitude, he finds, are a good memory and a talent for mimicry.

Grammar is the first course of study. The boy must master correctness, perspicuity, elegance, and standard spelling and punctuation. He should read aloud from Latin poets and prose writers, analyzing their style. Good beginning exercises for his written and oral compositions are retelling fables and illustrating maxims, the earliest exercises in a series inherited from Greek education called the *progymnasmata*. Music, mathematics, acting, gymnastics, and dance should also be introduced.

Book II describes the next level of formal education, when the boy is ready to go from the grammarian to the rhetorician, usually as a young adolescent. Quintilian

here prescribes the more advanced exercises of the progymnasmata, exercises in speaking and writing that progress ultimately to the topic “praise or blame of laws.” The teacher should not correct the boys’ compositions very much. Their subjects should be as close to real life as possible—not the usual fantastic declamations about pirates kidnapping heirs and so on. This instruction in rhetoric cannot be approached in rule-book fashion, says Quintilian. He defines rhetoric as the “art of speaking well,” punning on “well” to mean both effectively and virtuously. Oratory that does not move its hearers toward the good is not “rhetoric,” by Quintilian’s definition. Natural ability and learning contribute equally to rhetorical skill (a departure from Isocrates and Cicero, who gave natural ability primacy). Mastery of rhetoric should be considered a “virtue” because it entails intimate knowledge of the good.

Book III rehearses Quintilian’s scholarly sources for his views of rhetoric. The art of rhetoric has five parts: “invention, arrangement, expression, memory, and delivery or action” (Bk. III, Ch. 3). The three kinds of subject matter for speeches are “the panegyric [epideictic], the deliberative, and the judicial [forensic]” (Bk. III, Ch. 4). Oratorical ability is produced by nature, art (including imitation), and practice. The three “offices” an orator must accomplish in every speech are “to inform, to move, to please” (Bk. III, Ch. 5). Oratory may treat of “indefinite theses” (“Should a man marry?”) or “definite,” circumstantial “causes” (“Should Cato marry?”) (Bk. III, Ch. 5). The best version of stasis theory asks three questions: “whether a thing is,” “what it is,” and “of what species it is” (Bk. III, Ch. 6; note that Quintilian departs from the four-question format of Aristotle and Hermagoras). Quintilian concludes this book with advice on how to compose panegyric, deliberative, and judicial speeches.

Book IV begins a discussion of invention by telling how to manage the parts of a forensic speech. Book V goes into more detail on kinds of proof: the “inartificial”—for example, legal precedent, evidence from torture, and the like—and the “artificial,” divisible into “indications” (signs), “arguments” (enthymemes), or “examples” (Bk. V, Ch. 9). Quintilian suggests that the essential characteristic of the enthymeme is to establish a doubtful point by reference to a point that is more probable. He observes that argument by example works best in conversation, which is why Socrates favored it. Book VI returns to the parts of a speech and discusses the conclusion, which is especially appropriate to emotional appeals. Quintilian emphasizes that the orator must strive to feel the emotions he attempts to invoke in his audience and must use the skill of the poet to picture scenes that bring forth these emotions.

Although Books IV, V, and VI ostensibly deal with forensic speeches only, Quintilian drops several hints that what he says about invention can be applied to all kinds of speeches. In Book VII he turns to arrangement, the second part of the art of rhetoric. Quintilian declines to specify the parts of a speech, suggesting that those parts should be included that will be most effective on a particular occasion: For example, sometimes an exordium will be very important and sometimes it should be omitted. Again, while discussing arrangement in terms of forensic speeches, Quintilian implies that his statements can be applied more broadly. The bulk of his discussion concentrates on stasis theory.

Book VIII turns to the third part of the art of rhetoric: expression, style, or, as Quintilian terms it, “elocution.” Above all one should try to sound like a native Roman, not a naturalized citizen (ironic advice, considering Quintilian’s own provincial origin). “Perspicuity” is the chief excellence of style. “Embellishment” (the use of “ornaments”) is what most distinguishes each individual orator’s style. Amplification, *sententia* (epigrams), and tropes such as metaphor, allegory, and irony should all be used, but sparingly.

Book IX begins by differentiating tropes and figures. In a trope, words are turned from their usual meaning to something quite different, whereas figures simply use words in a slightly unusual way, unlike daily speech. Quintilian enumerates the figures; he follows Cicero and favors a shorter list than other ancient authorities. He suggests that figures can be used to tactfully veil one’s thoughts, in politically risky situations, for instance.

Book X discusses the importance of reading and writing to the development of oratorical powers. The book’s audience now seems to be adult rhetoricians. Style, like morals, can be improved by imitating good models, says Quintilian. Book XI briefly treats memory and delivery, the last two parts of the art of rhetoric, setting them in a discussion of *ethos*. Quintilian says that “propriety” is served by speaking both “what is to the [practical] purpose” and “what is [morally] becoming”; but if these are at odds, choose the latter, as Socrates did at his trial (Bk. XI, Ch. 1). Quintilian gives much less attention to *kairos*, or the situation of the speech, than do other rhetoricians, such as Aristotle. Thus it seems that Quintilian defines propriety much more in terms of the speaker’s integrity, which should be steadfast. But this emphasis could also reflect the reduced opportunities in Quintilian’s day for using rhetoric in real-life times and places.

Book XII begins with Quintilian’s longest and strongest argument for the necessity of the orator’s being a good man. The quality of mind he seeks is shaped by the study of moral philosophy, civil law, history, and poetry. “Presence of mind” or grace under pressure is crucial to success. Quintilian advises the mature orator on such matters as what causes to prefer (defense is better than prosecution), how to prepare a lawsuit, and how to correct one’s style (oratorical style should sound more like writing than like everyday conversation). Cicero is held up as the best model. The book, and the *Institutes of Oratory*, conclude with Quintilian’s appraisal of his own career and his advice on what the orator should do in old age.

Selected Bibliography

The standard translation is *The “Institutio Oratoria” of Quintilian*, trans. H. E. Butler (Loeb Classical Library, 4 vols., 1921). Highly regarded as closer to the flavor of Quintilian’s Latin is the translation excerpted here, *“Institutes of Oratory,” or, Education of an Orator*, trans. Reverend John Selby Watson (2 vols., 1856). A selection from this edition is now available in *Quintilian on the Teaching of Speaking and Writing*, ed. James J. Murphy (1987). For a helpful concordance of Quintilian’s ideas and additional background information, see the translation by Charles E. Little, *Quintilian the Schoolmaster* (2 vols., 1951). Keith Erickson’s “Quintilian’s *Institutio Oratoria* and *Pseudo-Declamationes*” (*Rhetoric Society Quarterly* 11

[1981]: 45–62) is a thousand-item bibliography that deals with Quintilian’s influence up to the modern period.

Most histories of rhetoric and of education discuss Quintilian. A good place to start is George Kennedy’s treatment in *The Art of Rhetoric in the Roman World* (1972) and *Quintilian* (1969). For Quintilian’s relationship to other rhetoricians, see Michael Winterbottom, “Quintilian and the *Vir Bonus*” (*Journal of Roman Studies* 54 [1964]: 90–97), and Thomas M. Conley, *Rhetoric in the European Tradition* (1990). On using Quintilian’s rhetorical theory to set knowledge in specific contexts, see John D. O’Banion, “Narration and Argumentation: Quintilian on *Narratio* as the Heart of Rhetorical Thinking” (*Rhetorica* 5 [1987]: 325–51).

Histories of education that treat Quintilian include Stanley F. Bonner, *Education in Ancient Rome from the Elder Cato to the Younger Pliny* (1977); Donald Leeman Clark, *Rhetoric in Greco-Roman Education* (1957); Martin Clarke, *Rhetoric at Rome* (1953); and Aubrey Gwynn, S.J., *Roman Education from Cicero to Quintilian* (1926). On Roman education in rhetoric after Quintilian, see Robert A. Kaster’s *Guardians of Language: The Grammatician and Society in Late Antiquity* (1988). Rehabilitation of Quintilian’s pedagogy for modern teachers of writing has begun, in James J. Murphy’s work, for example: See the introduction to his edited volume, *Quintilian on the Teaching of Speaking and Writing* (1987); “The Modern Value of Ancient Roman Teaching Methods of Teaching Writing, with Answers to Twelve Current Fallacies” (*Writing on the Edge* 1 [1989]: 28–37); and “Roman Writing Instruction as Described by Quintilian” (in *A Short History of Writing Instruction: From Ancient Greece to Twentieth-Century America*, ed. Murphy, 1990). See also Merrill D. Whitburn’s “The Ideal Orator and Literary Critic as Technical Communicators: An Emerging Revolution in English Departments” (in *Essays on Classical Rhetoric and Modern Discourse*, ed. Robert J. Connors, Lisa S. Ede, and Andrea A. Lunsford, 1984).

BOOK II

Chapter I

Boys are not put under the professor of rhetoric early enough; reasons why they should begin to receive instruction from him at an earlier age. § 1–3. The professions of the grammarian and teacher of rhetoric should be in some degree united, 4–13.

1. It has been a prevalent custom (which daily gains ground more and more) for pupils to be sent to the teachers of eloquence, to the Latin teachers always, and to the Greeks sometimes, at a more advanced age than reason requires. Of this practice there are two causes: that the rhetoricians, especially our own, have relin-

quished a part of their duties, and that the grammarians have appropriated what does not belong to them. 2. The rhetoricians think it their business merely to declaim, and to teach the art and practice of declaiming, confining themselves, too, to deliberative and judicial subjects,¹ (for others they despise as beneath their profession,) while the grammarians, on their part, do not deem it sufficient to have taken what has been left them, (on

¹The other department of eloquence, the demonstrative or *epideictic*, which ought to command the attention of rhetoricians, they despise. Thus in the speeches of Seneca the father, we see only *suasoriae* and *controversiae*, deliberative and judicial addresses; and in the declamations circulated under the name of Quintilian we find nothing but mere *controversiae*. *Spalding*. Quintilian would have narratives, or statements of facts, eulogies, and invectives, to form part of the first exercises in rhetoric, as will appear hereafter. *Capperonier*. [Tr.]

Translated by John Selby Watson.

which account also gratitude should be accorded them,) but encroach even upon *prosopopeia*² and suasory³ speeches, in which even the very greatest efforts of eloquence are displayed. 3. Hence, accordingly, it has happened, that what was the first business of the one art has become the last of the other, and that boys of an age to be employed in higher departments of study remain sunk in the lower school, and practice rhetoric under the grammarian. Thus, what is eminently ridiculous, a youth seems unfit to be sent to a teacher of declamation until he already knows how to declaim.

4. Let us assign each of these professions its due limits. Let *grammar*, (which, turning it into a Latin word, they have called *literatura*, "literature,") know its own boundaries, especially as it is so far advanced beyond the humility indicated by its name, to which humility the early grammarians restricted themselves; for, though but weak at its source, yet, having gained strength from the poets and historians,⁴ it now flows on in a full channel; since, besides the art of speaking correctly, which would otherwise be far from a comprehensive art, it has engrossed the study of almost all the highest departments of learning; 5. and let not *rhetoric*, to which the power of eloquence has given its name, decline its own duties, or rejoice that the task belonging to itself is appropriated by another; for while it neglects its duties, it is almost expelled from its domain. 6. I would not deny, indeed, that some of those who profess grammar, may make such progress in knowledge as to be able to teach the principles of oratory; but, when they do so, they will be discharging the duties of a rhetorician, and not their own.

7. We make it also a subject of inquiry, when a boy may be considered ripe for learning what

²By *prosopopeia* we must here understand speeches suited to the characters of persons by whom they are supposed to have been spoken. Quintilian speaks of them in b. ii. c. 8. *Regius*. Such are the speeches in Livy and other historians. *Turnebus*. [Tr.]

³*Suasorias*. Speeches of the kind which they call *deliberative*, differing from *controversiæ*, which is a term properly applied only to *judicial* pleadings. *Capperonier*. The term *suasoriæ* included both *persuatory* and *dissuatory* speeches. [Tr.]

⁴Whom the grammarians undertake to explain and illustrate. *Capperonier*. [Tr.]

rhetoric teaches. In which inquiry it is not to be considered of what age a boy is, but what progress he has already made in his studies. That I may not make a long discussion, I think that the question *when a boy ought to be sent to the teacher of rhetoric*, is best decided by the answer, *when he shall be qualified*. 8. But this very point depends upon the preceding subject of consideration; for if the office of the grammarian is extended even to suasory speeches, the necessity for the rhetorician will come later. If the rhetorician, however, does not shrink from the earliest duties of his profession, his attention is required even from the time when the pupil begins narrations, and produces his little exercises in praising and blaming. 9. Do we not know that it was a kind of exercise among the ancients, suitable for improvement in eloquence, for pupils to speak on *theses*,⁵ *common places*,⁶ and other questions, (without embracing particular circumstances or persons,) on which causes, as well real as imaginary, depend? Hence it is evident how dishonorably the profession of rhetoric has abandoned that department which it held originally,⁷ and for a long time solely. 10. But what is there among those exercises, of which I have just now spoken,⁸ that does not relate both to other matters peculiar to rhetoricians, and, indisputably, to the sort of causes pleaded in courts of justice? Have we not to make statements of facts in the forum? I know not whether that department of rhetoric is not most of all in request there. 11. Are not eulogy and invective often introduced in those disputations? Do not common places, as well those

⁵By this term Quintilian means *quæstiones infinitæ*, on either side of which a rhetorician may speak with plausibility. This kind of exercise was in use in Cicero's time, when what we now call *declamations*, as Seneca observes, were called *theses*. *Turnebus*. *Theses*, or *quæstiones infinitæ*, are questions or topics not circumscribed by any particulars relating to persons, places, or times; *theses* being thus distinguished from *hypotheses*. *Capperonier*. See ii. 4, 24; iii. 5, 5, 7; Cic. Orat. c. 14. 36; Topic. c. 21. *Spaulding*. [Tr.]

⁶"*Communes loci*," says *Turnebus*, "are general disquisitions on points of morality; or questions on points of law, on which the speaker might take either the affirmative or negative side;" as *how far we ought to trust witnesses*, or *what credit should be given to written documents*. [Tr.]

⁷Suetonius observes that the old rhetoricians employed themselves greatly in *progymnasmata*. *Turnebus*. [Tr.]

⁸He means at the end of sect. 8. *Spaulding*. [Tr.]

which are levelled against vice, (such as were composed, we read, by Cicero,⁹) as those in which questions are discussed generally, (such as were published by Quintus Hortensius, as, *Ought we to trust to light proofs?* and *for witnesses and against witnesses*;) mix themselves with the inmost substance of causes? 12. These weapons are in some degree to be prepared, that we may use them whenever circumstances require. He who shall suppose that these matters do not concern the orator, will think that a statue is not begun when its limbs are cast.¹⁰ Nor let any one blame this haste of mine (as some will consider it) on the supposition that I think the pupil who is to be committed to the professor of rhetoric is to be altogether withdrawn from the teachers of grammar. 13. To these also their proper time shall be allowed, nor need there be any fear that the boy will be overburdened with the lessons of two masters. His labor will not be increased, but that which was confounded under one master will be divided; and each tutor will thus be more efficient in his own province. This method, to which the Greeks still adhere, has been disregarded by the Latin rhetoricians, and, indeed, with some appearance of excuse, as there have been others to take their duty.¹¹

Chapter II

Choice of a teacher, § 1–4. How the teacher should conduct himself towards his pupils, 5–8. How the pupils should behave, 9–13. Some additional observations, 14, 15.

1. As soon therefore as a boy shall have attained such proficiency in his studies as to be able to comprehend what we have called the first pre-

⁹Gesner very properly refers to the end of the preface to the *Paradoxes*, where Cicero observes that he used, for the sake of exercise, to occupy himself about the $\theta\epsilon\tau\iota\chi\acute{\alpha}$ of the schools, that is, on questions having no reference to particular circumstances or persons. . . . But whether “we read” should be understood as signifying that Quintilian had himself read Cicero’s compositions, or that he had merely seen some reference to them in some other writer, we have nothing to enable us to decide. The latter supposition appears to me the more probable. *Spalding*. [Tr.]

¹⁰See Aristotle’s *Rhetoric*, i. 16. [Tr.]

¹¹Namely the grammarians who continue their instruction even after pupils are put under the rhetorician. [Tr.]

cepts of the teachers of rhetoric, he must be put under the professors of that art.

2. Of these professors the morals must first be ascertained; a point of which I proceed to treat in this part of my work, not because I do not think that the same examination is to be made, and with the utmost care, in regard also to other teachers, (as indeed I have shown in the preceding book,¹²) but because the very age of the pupils makes attention to the matter still more necessary. 3. For boys are consigned to these professors when almost grown up, and continue their studies under them even after they are become men; and greater care must in consequence be adopted with regard to them, in order that the purity of the master may secure their more tender years from corruption, and his authority deter their bolder age from licentiousness. 4. Nor is it enough that he give, in himself, an example of the strictest morality, unless he regulate, also, by severity of discipline, the conduct of those who come to receive his instructions.

Let him adopt, then, above all things, the feelings of a parent towards his pupils, and consider that he succeeds to the place of those by whom the children were entrusted to him. 5. Let him neither have vices in himself, nor tolerate them in others. Let his austerity not be stern, nor his affability too easy, lest dislike arise from the one, or contempt from the other. Let him discourse frequently on what is honorable and good, for the oftener he admonishes, the more seldom will he have to chastise. Let him not be of an angry temper, and yet not a conniver at what ought to be corrected. Let him be plain in his mode of teaching, and patient of labor, but rather diligent in exacting tasks than fond of giving them of excessive length. 6. Let him reply readily to those who put questions to him, and question of his own accord those who do not. In commending the exercises of his pupils, let him be neither niggardly nor lavish; for the one quality begets dislike of labor, and the other self-complacency. 7. In amending what requires correction, let him not be harsh, and, least of all, not reproachful; for that very circumstance, that some tutors blame as if they hated, deters many young men from their

¹²See c. 5. [Tr.]

proposed course of study. 8. Let him every day say something, and even much, which, when the pupils hear, they may carry away with them, for though he may point out to them, in their course of reading, plenty of examples for their imitation, yet *the living voice*, as it is called, feeds the mind more nutritiously, and especially the voice of the teacher, whom his pupils, if they are but rightly instructed, both love and reverence. How much more readily we imitate those whom we like, can scarcely be expressed.

9. The liberty of standing up and showing exultation, in giving applause,¹³ as is done under most teachers, is by no means to be allowed to boys; for the approbation even of young men, when they listen to others, ought to be but temperate. Hence it will result that the pupil will depend on the judgment of the master, and will think that he has expressed properly whatever shall have been approved by him. 10. But that most mischievous *politeness*, as it is now termed, which is shown by students in their praise of each other's compositions, whatever be their merits, is not only unbecoming and theatrical,¹⁴ and foreign to strictly regulated schools, but even a most destructive enemy to study, for care and toil may well appear superfluous, when praise is ready for whatever the pupils have produced. 11. Those therefore who listen, as well as he who speaks, ought to watch the countenance of the master, for they will thus discern what is to be approved and what to be condemned; and thus power will be gained from composition, and judgment from being heard.¹⁵ 12. But now, eager and ready, they not only start up at every period, but dart forward, and cry out with indecorous transports. The compliment is repaid in kind, and upon such applause depends the fortune of a declamation; and hence result vanity and self-conceit, inso-much that, being elated with the tumultuous ap-

¹³Not to the master, but to one another, as Spalding observes, and as appears from what follows. [Tr.]

¹⁴Such as is given by spectators in the theater; see i. 2, 9. Spalding. Quintilian appears also to intimate the *insincerity* of the applause. [Tr.]

¹⁵*Sic stilo facultas continget, auditione iudicium.* The style meant is that of the speaker or reciter himself, who brings with him from home a written speech, which is the *auditio* or "recitation heard" by his fellow students that form the audience. Spalding. [Tr.]

probation of their class-fellows, they are inclined, if they receive but little praise from the master, to form an ill opinion of him. 13. But let masters, also, desire to be heard themselves with attention and modesty; for the master ought not to speak to suit the taste of his pupils, but the pupils to suit that of the master. If possible, moreover, his attention should be directed to observe what each pupil commends in his speeches, and for what reason; and he may then rejoice that what he says will give pleasure, not more on his own account than on that of his pupils who judge with correctness.

14. That mere boys should sit mixed with young men, I do not approve; for though such a man as ought to preside over their studies and conduct, may keep even the eldest of his pupils under control, yet the more tender ought to be separate from the more mature, and they should all be kept free, not merely from the guilt of licentiousness, but even from the suspicion of it. 15. This point I thought proper briefly to notice; that the master and his school should be clear of gross vice, I do not suppose it necessary to intimate. And if there is any father who would not shrink from flagrant vice in choosing a tutor for his son, let him be assured that all other rules, which I am endeavoring to lay down for the benefit of youth, are, when this consideration is disregarded, useless to him.

Chapter III

A pupil should be put under an eminent teacher at first, not under an inferior one, § 1–3. Mistakes of parents as to this point, 3, 4. The best teacher can teach little things best, as well as great ones, 5–9. The pupils of eminent teachers will afford better examples to each other, 10–12.

1. Nor is the opinion of those to be passed in silence, who, even when they think boys fit for the professor of rhetoric, imagine that he is not at once to be consigned to the most eminent, but detain him for some time under inferior teachers, with the notion that moderate ability in a master is not only better adapted for beginning instruction in art, but easier for comprehension and imitation, as well as less disdainful of undertaking

the trouble of the elements. 2. On this head I think no long labor necessary to show how much better it is to be imbued with the best instructions, and how much difficulty is attendant on eradicating faults which have once gained ground, as double duty falls on succeeding masters, and the task indeed of unteaching is heavier and more important than that of teaching at first. 3. Accordingly they say that Timotheus, a famous instructor in playing the flute, was accustomed to ask as much more pay from those whom another had taught as from those who presented themselves to him in a state of ignorance. The mistakes committed in the matter, however, are two; one, that people think inferior teachers sufficient for a time, and, from having an easily satisfied appetite, are content with their instructions; (such supineness, though deserving of reprehension, would yet be in some degree endurable, if teachers of that class taught only worse, and not less;) 4. the other, which is even more common, that people imagine that those who have attained eminent qualifications for speaking will not descend to inferior matters, and that this is sometimes the case because they disdain to bestow attention on minute points, and sometimes because they cannot give instruction in them. 5. For my part, I do not consider him, who is unwilling to teach little things,¹⁶ in the number of preceptors; but I argue that the ablest teachers can teach little things best, if they will; first, because it is likely that he who excels others in eloquence, has gained the most accurate knowledge of the means by which men attain eloquence; 6. secondly, because method,¹⁷ which, with the best qualified instructors, is always plainest, is of great efficacy in teaching; and lastly, because no man rises to such a height in greater things that lesser fade entirely from his view. Unless indeed we believe that though Phidias made a Jupiter well, another might have wrought, in better style than he, the accessories to the decoration of the work; or that an orator may not know how to

¹⁶Comp. i. 4, 23. [Tr.]

¹⁷*Ratio*. *Ratio* is the same as *theoria*; opposed to *praxis*. *Spaulding*. Quintilian means *method*; and intimates that the more learned teacher will be more methodical, the less learned less methodical. *Turnebus*. [Tr.]

speak; or that an eminent physician may be unable to cure trifling ailments.

7. Is there not then, it may be asked, a certain height of eloquence too elevated for the immaturity of boyhood to comprehend it? I readily confess that there is; but the eloquent professor must also be a man of sense, not ignorant of teaching, and lowering himself to the capacity of the learner; as any fast walker, if he should happen to walk with a child, would give him his hand, relax his pace, and not go on quicker than his companion could follow. 8. What shall be said, too, if it generally happens that instructions given by the most learned are far more easy to be understood, and more perspicuous than those of others? For perspicuity is the chief virtue of eloquence, and the less ability a man has, the more he tries to raise and swell himself out,¹⁸ as those of short stature exalt themselves on tiptoe,¹⁹ and the weak use most threats. 9. As to those whose style is inflated, displaying a vitiated taste, and who are fond of sounding words,²⁰ or faulty from any other mode of vicious affectation, I am convinced that they labor under the fault, not of strength, but of weakness, as bodies are swollen, not with health, but with disease, and as men who have erred from the straight road generally make stoppages.²¹ Accordingly, the less able a teacher is, the more obscure will he be.

¹⁸*Dilatate*. In allusion, perhaps, to the fable of the frog and the ox, Phædr. i. 24. *Spaulding*. [Tr.]

¹⁹*Staturâ breves in digitos eriguntur*. An illustration borrowed by Johnson in his *Life of Gray*, who, he says, is "tall by walking on tip-toe." [Tr.]

²⁰*Tumidos, et corruptos, et tinnulos*. The *tumidi* are those who are foolishly ambitious of sublimity; the *corrupti*, those who are always aiming to say something witty or clever; the *tinnuli*, those who seek for fine-sounding words and phrases. *Rollin*. [Tr.]

²¹*Devertunt. Devertunt in hospitia*, go to seek lodging for the night, and thus arrive at a later period at their place of destination, which, if they had kept to the right road, they might have reached on the day on which they started. *Spaulding*. An obscure passage, and perhaps not free from unsoundness. The second comparison, like the first, ought to indicate something wrong lying hid under the appearance of what is right. . . . We may suppose that those who have quitted the right track, see for *deverticula*, bye-roads, for the sake of amusing themselves, or of shortening the remainder of their journey. *Rollin*. The reader may use his judgment as to which of these two illustrations is to be preferred. That of *Rollin* may receive

10. It has not escaped my memory, that I said in the preceding book,²² (when I observed that education in schools was preferable to that at home,) that pupils commencing their studies, or but little advanced in them, devote themselves more readily to imitate their school-fellows than their master, such imitation being more easy to them. This remark may be understood by some in such a sense, that the opinion which I now advocate may appear inconsistent with that which I advanced before. 11. But such inconsistency will be far from me; for what I then said is the very best of reasons why a boy should be consigned to the best possible instructor, because even the pupils under him, being better taught than those under inferior masters, will either speak in such a manner as it may not be objectionable to imitate, or, if they commit any faults, will be immediately corrected, whereas the less learned teacher will perhaps praise even what is wrong, and cause it, by his judgment, to recommend itself to those who listen to it. 12. Let a master therefore be excellent as well in eloquence as in morals; one who, like Homer's Phœnix, may teach his pupil at once to speak and to act.

Chapter IV

Elementary exercises, § 1. Narratives, or statements of facts, 2-4. Exuberance in early compositions better than sterility, 4-8. A teacher should not be without imagination, or too much given to find fault with his pupil's attempts, 8-14. The pupil's compositions should be written with great care, 15-17. Exercises in confirmation and refutation, 18, 19. In commendation and censure of remarkable men, 20-21. Common places, 22, 23. Theses, 24, 25. Reasons, 26. Written preparations for pleadings, 27-32. Praise and censure of particular laws, 33-40. Declamations on fictitious subjects a later invention, 41, 42.

I. I shall now proceed to state what I conceive to be the first duties of rhetoricians in giving instruction to their pupils, putting off for a while the consideration of what is alone called, in com-

something like support from Liv. ix. 7: *Et legentibus velut deverticula amœna—quærerem.* [Tr.]

²²C. 2, sect. 26. [Tr.]

mon language, *the art of rhetoric*; for to me it appears most eligible to commence with that to which the pupil has learned something similar under the grammarians.

2. Since of *narrations*, (besides that which we use in pleadings,) we understand that there are three kinds; the *fable*,²³ which is the subject of tragedies and poems,²⁴ and which is remote, not merely from truth, but from the appearance of truth;²⁵ the *argumentum*, which comedies represent, and which, though false, has a resemblance to truth;²⁶ and the *history*, in which is contained a relation of facts; and since we have consigned poetic narratives to the grammarians,²⁷ let the historical form of commencement of study under the rhetorician; a kind of narrative which, as it has more of truth, has also more of substance.

3. What appears to me the best method of narrating, I will show when I treat of the judicial part of pleading.²⁸ In the meantime it will suffice to intimate that it ought not to be dry and jejune, (for what necessity would there be to bestow so much pains upon study, if it were thought sufficient to state facts without dress or decoration?) nor ought it to be erratic, and wantonly adorned with far-fetched descriptions, in which many speakers indulge with an emulation of poetic license. 4. Both these kinds of narrative are faulty; yet that which springs from poverty is worse than that which comes from exuberance.

From boys perfection of style can neither be required nor expected; but the fertile genius, fond of noble efforts, and conceiving at times a more than reasonable degree of ardor, is greatly to be preferred. 5. Nor, if there be something of exuberance in a pupil of that age, would it at all displease me. I would even have it an object with

²³Or mythological subject. [Tr.]

²⁴That is *epic* poems, in which we find much that is at variance, not only with truth, but with probability; narratives which Aristotle in his *Poetics* calls ἄλογα, ἀδύνατα. *Capperonier.* [Tr.]

²⁵As the fables of Atreus and Thyestes, Medea, Iphigenia, and all the stories of metamorphoses. Cic. *Rhetor.* i. 19. *Camperarius.* [Tr.]

²⁶As approaching nearer to nature and the real events of life. [Tr.]

²⁷Book i. c. 4. [Tr.]

²⁸Book iv. c. 2. [Tr.]

teachers themselves to nourish minds that are still tender with more indulgence, and to allow them to be satiated, as it were, with the milk of more liberal studies. The body, which mature age may afterwards nerve, may for a time be somewhat plumper than seems desirable. 6. Hence there is hope of strength; while a child that has the outline of all his limbs exact commonly portends weakness in subsequent years. Let that age be daring, invent much, and delight in what it invents, though it be often not sufficiently severe and correct. The remedy for exuberance is easy; barrenness is incurable by any labor. 7. That temper in boys will afford me little hope in which mental effort is prematurely restrained by judgment. I like what is produced to be extremely copious, profuse even beyond the limits of propriety. Years will greatly reduce superfluity; judgment will smooth away much of it; something will be worn off, as it were, by use, if there be but metal from which something may be hewn and polished off, and such metal there will be, if we do not make the plate too thin at first, so that deep cutting may break it. 8. That I hold such opinions concerning this age, he will be less likely to wonder who shall have read what Cicero²⁹ says: "I wish fecundity in a young man to give itself full scope."

Above all, therefore, and especially for boys, a *dry master* is to be avoided, not less than a dry soil, void of all moisture, for plants that are still tender. 9. Under the influence of such a tutor, they at once become dwarfish, looking as it were towards the ground, and daring to aspire to nothing above everyday talk. To them, leanness is in place of health, and weakness instead of judgment; and, while they think it sufficient to be free from fault, they fall into the fault of being free from all merit. Let not even maturity itself, therefore, come too fast; let not the must, while yet in the vat, become mellow, for so it will bear years, and be improved by age.

10. Nor is it improper for me, moreover, to offer this admonition; that the powers of boys sometimes sink under too great severity in correction; for they despond, and grieve, and at last hate their work, and, what is most prejudicial,

while they fear every thing, they cease to attempt any thing. 11. There is a similar conviction in the minds of the cultivators of trees in the country, who think that the knife must not be applied to tender shoots, as they appear to shrink from the steel, and to be unable as yet to bear an incision. 12. A teacher ought therefore to be as agreeable as possible, that remedies, which are rough in their own nature, may be rendered soothing by gentleness of hand; he ought to praise some parts of his pupils' performances, to tolerate some, and to alter others, giving his reasons why the alterations are made; and also to make some passages clearer by adding something of his own. It will also be of service too at times, for the master to dictate whole subjects himself, which the pupil may imitate and admire for the present as his own. 13. But if a boy's composition were so faulty as not to admit of correction, I have found him benefited whenever I told him to write on the same subject again, after it had received fresh treatment from me, observing that "he could do still better," since study is cheered by nothing more than hope. 14. Different ages, however, are to be corrected in different ways, and work is to be required and amended according to the degree of the pupil's abilities. I used to say to boys when they attempted any thing extravagant or verbose, that "I was satisfied with it for the present, but that a time would come when I should not allow them to produce compositions of such a character." Thus they were satisfied with their abilities, and yet not led to form a wrong judgment.

15. But that I may return to the point from which I digressed, I should wish *narrations* to be composed with the utmost possible care; for as it is of service to boys at an early age, when their speech is but just commenced, to repeat what they have heard in order to improve their faculty of speaking; (let them accordingly be made, and with very good reason, to go over their story again, and to pursue it from the middle, either backwards or forwards; but let this be done only while they are still at the knees of their teacher, and, as they can do nothing else, are beginning to connect words and things, that they may thus strengthen their memory;) so, when they shall have attained the command of pure and correct language, extemporary garrulity, without waiting

²⁹De Orat. ii. 21. [Tr.]

for thought, or scarcely taking time to rise,³⁰ is the offspring of mere ostentatious boastfulness. 16. Hence arises empty exultation in ignorant parents, and in their children contempt of application, want of all modesty, a habit of speaking in the worst style, the practice of all kinds of faults, and, what has often been fatal even to great proficiency, an arrogant conceit of their own abilities. 17. There will be a proper time for acquiring facility of speech, nor will that part of my subject be lightly passed over by me; but in the mean time it will be sufficient if a boy with all his care, and with the utmost application of which that age is capable, can write something tolerable. To this practice let him accustom himself, and make it natural to him. He only will succeed in attaining the eminence at which we aim, or the point next below it, who shall learn to speak correctly before he learns to speak rapidly.

18. To *narrations* is added, not without advantage, the task of refuting and confirming them, which is called ἀνασχευή and κατασχευή.³¹ This may be done, not only with regard to fabulous subjects, and such as are related in poetry, but with regard even to records in our own annals; as if it be inquired *whether it is credible that a crow settled upon the head of Valerius when he was fighting, to annoy the face and eyes of his Gallic enemy with his beak and wings*, there will be ample matter for discussion on both sides of the question; 19. as there will also be concerning *the serpent, of which Scipio is said to have been born*, as well as about *the wolf of Romulus*, and *the Egeria of Numa*. As to the histories of the Greeks, there is generally license in them similar to that of the poets. Questions are often wont to arise, too, concerning the time or place at which a thing is said to have been done; sometimes even about a person; as Livy, for instance, is frequently in doubt, and other historians differ one from another.

³⁰*Vix surgendi mora*. They scarcely allow themselves time to rise from their seat before they begin to speak. *Cap-peronier*. [Tr.]

³¹The meaning of these terms is pretty well intimated by Quintilian himself; ἀνασχευή is *refutation*, and κατασχευή is *assertion*. Turnebus. More concerning them may be seen in Aphthonius. [Tr.]

20. The pupil will then proceed by degrees to higher efforts, *to praise illustrious characters* and *censure the immortal*; an exercise of manifold advantage; for the mind is thus employed about a multiplicity and variety of matters; the understanding is formed by the contemplation of good and evil. Hence is acquired, too, an extensive knowledge of things in general; and the pupil is soon furnished with *examples*, which are of great weight in every kind of causes, and which he will use as occasion requires. 21. Next succeeds exercise in *comparison, which of two characters is the better or the worse*, which, though it is managed in a similar way, yet both doubles the topics, and treats not only of the nature, but of the degrees of virtues and of vices. But on the management of praise and the contrary, as it is the third part of rhetoric, I shall give directions in the proper place.³²

22. *Common places*, (I speak of those in which, without specifying persons, it is usual to declaim against vices themselves, as against those of *the adulterer, the gamester, the licentious person*,) are of the very nature of speeches on trials, and, if you add the name of an accused party, are real accusations. These, however, are usually altered from their treatment as general subjects to something specific, as when the subject of a declamation is *a blind adulterer, a poor gamester, a licentious old man*. 23. Sometimes also they have their use in a defense; for we occasionally speak in favor of *luxury* or *licentiousness*,³³ and a procurer or parasite is sometimes defended in such a way, that we advocate, not the person,³⁴ but the vice.

24. *Theses*, which are drawn from the comparison of things, as *whether a country or city life is more desirable*, and *whether the merit of a lawyer or a soldier is the greater*, are eminently proper and copious subjects for exercise in speaking, and contribute greatly to improvement, both in the province of persuasion and in discussions on

³²B. iii. c. 7. [Tr.]

³³Gesner observes that Cicero has done something of this kind in his oration for Cælius, though with great caution and modesty. There is certainly some palliation of those vices offered in c. 17–21. *Spaulding*. [Tr.]

³⁴For then it would cease to be a *locus communis*, and become a *cause*. *Spaulding*. [Tr.]

trials. The latter of the two subjects just mentioned is handled with great copiousness by Cicero in his pleading for Muræna. 25. Such theses as the following, *whether a man ought to marry*, and *whether political offices should be sought*, belong almost wholly to the deliberative species, for, if persons be but added, they will be suatory.³⁵

26. My teachers were accustomed to prepare us for *conjectural causes*³⁶ by a kind of exercise far from useless, and very pleasant to us, in which they desired us to investigate and show *why Venus among the Lacedæmonians was represented armed*;³⁷ *why Cupid was thought to be a boy, and winged, and armed with arrows and a torch*, and questions of a similar nature, in which we endeavored to ascertain the intention, or object about which there is so often a question in controversies. This may be regarded as a sort of *chria*.³⁸

27. That such questions as those about witness, *whether we ought always to believe them*, and concerning arguments, *whether we ought to put any trust in trifling ones*, belong to forensic pleading, is so manifest that some speakers,³⁹ not undistinguished in civil offices, have kept them ready in writing, and have carefully committed them to memory, that, whenever opportunity should offer, their extemporary speeches might be decorated with them, as with ornaments fitted into them.⁴⁰ 28. By which practice, (for I cannot delay to express my judgment on the point,) they appeared to me to confess great weakness in themselves. For what can such men produce appropriate to particular causes, of which the aspect

³⁵*Suasoria*, persuatory or dissuatory; i.e., deliberative. [Tr.]

³⁶In which it is inquired whether a thing is, or is not; why anything is as it is; with what intention anything was done. Such questions were said to belong to the *status conjecturalis*; see b. vii. c. 2. *Capperonier*. [Tr.]

³⁷The cause is said by Lactantius, Inst. Div. i. 20, to have been the bravery exhibited by the Spartan women on a certain occasion against the Messenians, when a temple was vowed to *Venus armata*. [Tr.]

³⁸See i. 9, 4. [Tr.]

³⁹As Hortensius; see ii. 1, 11. *Spalding*. [Tr.]

⁴⁰*Emblematis*. The word signifies anything that is inserted in or applied to any other thing. Thus in Cicero *emblemata* is used for ornaments attached to gold and silver vases, capable of being taken off at pleasure. *Rollin*. [Tr.]

is perpetually varied and new? How can they reply to questions propounded by the opposite party? How can they at once meet objections, or interrogate a witness, when, even on topics of the commonest kind, such as are handled in most causes, they are unable to pursue the most ordinary thoughts in any words but those which they have long before prepared? 29. When they say the same things in various pleadings, their cold meat, as it were, served up over and over again, must either create loathing in the speakers themselves, or their unhappy household furniture, which, as among the ambitious poor, is worn out by being used for several different purposes, must, when detected so often by the memory of their hearers, cause a feeling of shame in them; 30. especially as there is scarcely any *common place* so *common*, which can incorporate well with any pleading, unless it be bound by some link to the peculiar question under consideration, and which will not show that it is not so much inserted as attached; 31. either because it is unlike the rest, or because it is very frequently borrowed without reason, not because it is wanted, but because it is ready; as some speakers, for the sake of sentiment, introduce the most verbose common places, whereas it is from the subject itself that sentiments ought to arise. 32. Such remarks are ornamental and useful if they spring from the question, but every remark, however beautiful, unless it tends to gain the cause, is certainly superfluous, and sometimes even noxious. But this digression has been sufficiently prolonged.

33. The *praise or censure of laws* requires more mature powers, such as may almost suffice for the very highest efforts. Whether this exercise partakes more of the nature of deliberative or controversial oratory, is a point that varies according to the custom and right of particular nations. Among the Greeks the proposer of laws was called to plead before the judge; among the Romans it was customary to recommend or disparage a law before the public assembly.⁴¹ In either case, however, few arguments, and those al-

⁴¹Certain judges were appointed by the assembly of the people called *nomothetæ*, before whom the proposer of a new law had to appear and support it; his adversaries were the defenders of the old law which the new one would abrogate. *Spalding*. [Tr.]

most certain,⁴² are advanced; for there are but three kinds of laws, relating to *sacred, public, or private rights*. 34. This division has regard chiefly to the commendation of a law,⁴³ as when the speaker extols it by a kind of gradation, because it is *a law*, because it is *public*, because it is *made to promote the worship of the gods*. 35. Points about which questions usually arise, are common to all laws,⁴⁴ for a doubt may be started, either concerning the right of him who proposes the law, (as concerning that of *Publius Clodius who was accused of not having been properly created tribune*,⁴⁵) or concerning the validity of the proposal itself, a doubt which may refer to a variety of matters, as for instance, *whether the proposal has been published on three market-days*, or whether the law may be said to have been proposed, or to be proposed, *on an improper day, or contrary to protests, or to the auspices, or in any other way at variance with legitimate proceedings; or whether it be opposed to any law still in force*. 36. But such considerations do not enter into these early exercises, which are without any allusion to persons, times, or particular causes. Other points, whether treated in real or fictitious discussions, are much the same; for the fault of any law must be either *in words* or *in matter*. 37. As to words, it is questioned *whether they be sufficiently expressive; or whether there is any ambiguity in them; as to matter, whether the law is consistent with itself; whether it ought to have ref-*

erence to past time, or to individuals. But the most common inquiry is, *whether it be proper or expedient*. 38. Nor am I ignorant that of this inquiry many divisions are made by most professors; but I, under the term *proper*, include consistency with *justice, piety, religion*, and other similar virtues. The consideration of justice, however, is usually discussed with reference to more than one point; for a question may either be raised about the subject of the law, as *whether it be deserving of punishment or reward*, or about the *measure of reward or punishment*, to which an objection may be taken as well for being *too great* as *too little*. 39. Expediency, also, is sometimes determined by the nature of the measure, sometimes by the circumstances of the time. As to some laws, it becomes a question, *whether they can be enforced*. Nor ought students to be ignorant that laws are sometimes censured *wholly*, sometimes *partly*, as examples of both are afforded us in highly celebrated orations. 40. Nor does it escape my recollection that there are laws which are not proposed for perpetuity, but with regard to temporary honors or commands, such as the *Manilian law*, about which there is an oration of Cicero. But concerning these no directions can be given in this place; for they depend upon the peculiar nature of the subjects on which the discussion is raised, and not on any general consideration.

41. On such subjects did the ancients, for the most part, exercise the faculty of eloquence, borrowing their mode of argument, however, from the logicians. To speak on fictitious cases, in imitation of pleadings in the forum or in public councils, is generally allowed to have become a practice among the Greeks, about the time of Demetrius Phalereus. 42. Whether that sort of exercise was invented by him, I (as I have acknowledged also in another book⁴⁶) have not succeeded in discovering; nor do those who affirm most positively that he did invent it, rest their opinion on any writer of good authority; but that the Latin teachers of eloquence commenced this practice towards the end of the life of Lucius Crassus, Cicero tells us; of which teachers the most eminent was Plotius.

⁴²*Fere certa*. In opposition to the particulars to which he alludes in the following section, *de quibus quæri solet*, i.e., *dubitari*. The arguments advanced in favor or condemnation of a law are generally such as can have but one tendency, that is, to prove the law to be either extremely good or extremely bad; they are very seldom such as can be turned to advantage on either side of the question. *Spalding*. [Tr.]

⁴³It is only however the old law that can be thus praised; for the new, when it is proposed, is not properly a law. *Spalding*. [Tr.]

⁴⁴The points meant by Quintilian, says Spalding, are such as regard the mere form and mode of proposing or bringing forward a law; for whether a law was good or bad would appear from the nature and tendency of it. [Tr.]

⁴⁵Clodius, being a patrician by birth, could not be made a tribune of the people, without having been first made a plebeian by adoption. Cicero maintained that his adoption had been irregular, *Pro Domo*, c. 13–17, where reference is also made to the *auspices* and to *three market-days*; on which the reader may consult Ernesti's *Clavis*. *Spalding*. [Tr.]

⁴⁶If that acknowledgment was made in the book *De Causis Corruptæ Eloquentiæ*, it does not occur in the Dialogue which we have under that title. *Spalding*. [Tr.]

Chapter V

Advantages of reading history and speeches, § 1–3. On what points in them the professor of rhetoric should lecture, 4–9. Faulty composition may sometimes be read, to exercise the pupil's judgment, 10–13. Usefulness of this exercise, 14–17. Best authors to be read at an early age, 18–20. The pupil should be cautious of imitating very ancient or very modern writers, 21–26.

1. But of the proper mode of declaiming I shall speak a little further on; in the meanwhile, as we are treating of the first rudiments of rhetoric, I should not omit, I think, to observe how much the professor would contribute to the advancement of his pupils, if, as the explanation of the poets is required from teachers of grammar, so he, in like manner, would exercise the pupils under his care in the reading of history, and even still more in that of speeches; a practice which I myself have adopted in the case of a few pupils, whose age required it,⁴⁷ and whose parents thought it would be serviceable to them. 2. But though I then deemed it an excellent method, two circumstances were obstructions to the practice of it; that long custom had established a different mode of teaching, and that they were mostly full-grown youths, who did not require that exercise, that were forming themselves on my model. 3. But though I should make a new discovery ever so late, I should not be ashamed to recommend it for the future. I know, however, that this is now done among the Greeks, but chiefly by assistant-masters, since the time would seem hardly sufficient, if the professors were always to lecture to each pupil as he read. 4. Such lecturing, indeed, as is given, that boys may follow the writing of an author easily and distinctly with their eyes, and such even as explains the meaning of every word, at all uncommon, that occurs, is to be regarded as far below the profession of a teacher of rhetoric.

5. But to point out the beauties of authors, and, if occasion ever present itself, their faults, is eminently consistent with that profession and engagement, by which he offers himself to the pub-

⁴⁷For most of his pupils, according to the custom of the Romans, had come to Quintilian at too advanced an age. See c. 1, sect. 1 and 8. *Spalding*. [Tr.]

lic as a master of eloquence, especially as I do not require such toil from teachers, that they should call their pupils to their lap, and labor at the reading of whatever book each of them may fancy. 6. For to me it seems easier, as well as far more advantageous, that the master, after calling for silence, should appoint some one pupil to read, (and it will be best that this duty should be imposed on them by turns,) that they may thus accustom themselves to clear pronunciation; 7. and then, after explaining the cause for which the oration was composed, (for so that which is said will be better understood,) that he should leave nothing unnoticed which is important to be remarked, either in the *thought* or the *language*; that he should observe what method is adopted in the *exordium* for conciliating the judge; what *clearness, brevity, and apparent sincerity*, is displayed in the *statement of facts*; what *design* there is in certain passages, and what well concealed *artifice*; (for that is the only true art in pleading which cannot be perceived except by a skillful pleader;) 8. what judgment appears in the *division* of the matter; how subtle and urgent is the *argumentation*; with what force the speaker excites, with what amenity he soothes; what severity is shown in his *invectives*, what urbanity in his *jests*; how he commands the feelings, forces a way into the understanding, and makes the opinions of the judges coincide with what he asserts. 9. In regard to the *style*, too, he should notice any expression that is peculiarly appropriate, elegant, or sublime when the *amplification* deserves praise; what quality is opposed to it, what phrases are happily *metaphorical*, what figures of speech are used, what part of the *composition* is smooth and polished, and yet manly and vigorous.

10. Nor is it without advantage, indeed, that inelegant and faulty speeches, yet such as many, from depravity of taste, would admire, should be read before boys, and that it should be shown how many expressions in them are inappropriate, obscure, tumid, low, mean, affected, or effeminate; expressions which, however, are not only extolled by many readers, but, what is worse, are extolled for the very reason that they are vicious; 11. for straightforward language, naturally expressed, seems to some of us to have nothing of

genius; but whatever departs, in any way, from the common course, we admire as something exquisite; as, with some persons, more regard is shown for figures that are distorted, and in any respect monstrous, than for such as have lost none of the advantages of ordinary conformation. 12. Some, too, who are attracted by appearance, think that there is more beauty in men who are depilated and smooth, who dress their locks, hot from the curling-irons, with pins, and who are radiant with a complexion not their own, than unsophisticated nature can give as if beauty of person could be thought to spring from corruption of manners.

13. Nor will the preceptor be under the obligation merely to teach these things, but frequently to ask questions upon them, and try the judgment of his pupils. Thus carelessness will not come upon them while they listen, nor will the instructions that shall be given fail to enter their ears; and they will at the same time be conducted to the end which is sought in this exercise, namely that they themselves may conceive and understand. For what object have we in teaching them, but that they may not always require to be taught?

14. I will venture to say that this sort of diligent exercise will contribute more to the improvement of students than all the treatises of all the rhetoricians that ever wrote; which doubtless, however, are of considerable use, but their scope is more general; and how indeed can they go into all kinds of questions that arise almost every day? 15. So, though certain general precepts are given in the military art, it will yet be of far more advantage to know what plan any leader has adopted wisely or imprudently, and in what place or at what time; for in almost every art precepts are of much less avail than practical experiments. 16. Shall a teacher declaim that he may be a model to his hearers, and will not Cicero and Desmosthenes, if read, profit them more? Shall a pupil, if he commits faults in declaiming, be corrected before the rest, and will it not be more serviceable to him to correct the speech of another? Indisputably; and even more agreeable; for every one prefers that others' faults should be blamed rather than his own. 17. Nor are there wanting more arguments for me to offer; but the advan-

tage of this plan can escape the observation of no one; and I wish that there may not be so much unwillingness to adopt it as there will be pleasure in having adopted it.

18. If this method be followed there will remain a question not very difficult to answer, which is, what authors ought to be read by beginners? Some have recommended inferior writers, as they thought them easier of comprehension; others have advocated the more florid kind of writers, as being better adapted to nourish the minds of the young. 19. For my part, I would have the best authors commenced at once, and read always; but I would choose the clearest in style, and most intelligible; recommending Livy, for instance, to be read by boys rather than Sallust, who, however, is the greater historian, but to understand him there is need of some proficiency. 20. Cicero, as it seems to me, is agreeable even to beginners, and sufficiently intelligible, and may not only profit, but even be loved; and next to Cicero, (as Livy⁴⁸ advises,) such authors as most resemble Cicero.

21. There are two points in style on which I think that the greatest caution should be used in respect to boys: one is that no master, from being too much an admirer of antiquity should allow them to harden, as it were, in the reading of the Gracchi, Cato,⁴⁹ and other like authors; for they would thus become uncouth and dry; since they cannot, as yet, understand their force of thought, and, content with adopting their style, which, at the time it was written, was doubtless excellent, but is quite unsuitable to our day, they will appear to themselves to resemble those eminent men. 22. The other point, which is the opposite of the former, is, lest, being captivated with the flowers of modern affectation, they should be so seduced by a corrupt kind of pleasure, as to love that luscious manner of writing which is the more agreeable to the minds of youth in proportion as it has more affinity with them. 23. When their taste is formed, however, and out of danger of

⁴⁸Quintilian repeats this advice of Livy in x. 1, 39, where he says that it was given in a letter to his son. But the letter is lost. *Spalding*. [Tr.]

⁴⁹The speeches of the Gracchi are lost. Of the many books that Cato wrote none has survived but his treatise on agriculture. [Tr.]

being corrupted, I should recommend them to read not only the ancients, (from whom if a solid and manly force of thought be adopted, while the rust of a rude age is cleared off, our present style will receive additional grace,) but also the writers of the present day, in whom there is much merit. 24. For nature has not condemned us to stupidity, but we ourselves have changed our mode of speaking, and have indulged our fancies more than we ought; and thus the ancients did not excel us so much in genius as in severity of manner. It will be possible, therefore, to select from the moderns many qualities for imitation, but care must be taken that they be not contaminated with other qualities with which they are mixed. 25. Yet that there have been recently, and are now, many writers whom we may imitate entirely, I would not only allow, (for why should I not?) but even affirm. 26. But who they are it is not for everybody to decide. We may even err with greater safety in regard to the ancients; and I would therefore defer the reading of the moderns, that imitation may not go before judgment.

Chapter VI

In composition, the pupil should have but moderate assistance, not too much or too little.

1. There has been also a diversity of practice among teachers in the following respect. Some of them, not confining themselves to giving directions as to the division of any subject which they assigned their pupils for declamation, developed it more fully by speaking on it themselves, and amplified it not only with proofs but with appeals to the feelings. 2. Others, giving merely the first outlines, expatiated after the declamations were composed, on whatever points each pupil had omitted, and polished some passages with no less care than they would have used if they had themselves been rising to speak in public.

Both methods are beneficial; and, therefore, for my own part, I give no distinction to either of them above the other; but, if it should be necessary to follow only one of the two, it will be of greater service to point out the right way at first, than to recall those who have gone astray from their errors; 3. first, because to the subsequent

emendation they merely listen, but the preliminary division they carry to their meditation and their composition; and, secondly, because they more willingly attend to one who gives directions than to one who finds faults. Whatever pupils, too, are of a high spirit, are apt, especially in the present state of manners, to be angry at admonition, and offer silent resistance to it. 4. Not that faults are therefore to be less openly corrected; for regard is to be had to the other pupils, who will think that whatever the master has not amended is right. But both methods should be united, and used as occasion may require. To beginners should be given matter designed,⁵⁰ as it were, beforehand, in proportion to the abilities of each. 5. But when they shall appear to have formed themselves sufficiently on their model, a few brief directions may be given them, following which, they may advance by their own strength without any support. 6. It is proper that they should sometimes be left to themselves, lest, from the bad habit of being always led by the efforts of others, they should lose all capacity of attempting and producing anything for themselves. But when they seem to judge pretty accurately of what ought to be said, the labor of the teacher is almost at an end; though, should they still commit errors, they must be again put under a guide. 7. Something of this kind we see birds practice, which divide food, collected in their beaks, among their tender and helpless young ones; but, when they seem sufficiently grown, teach them, by degrees, to venture out of the nest, and flutter round their place of abode, themselves leading the way; and at last leave their strength, when properly tried, to the open sky and their own self-confidence.⁵¹

⁵⁰*Præformata*. A metaphorical expression borrowed from architects, who sketch out their work either by *sciographia*, *ichnographia*, or *orthographia*. Turnebus. [Tr.]

⁵¹Valerius Flaccus, vii. 375:

Qualis adhuc teneros supremum pallida fœtus
Mater ab excelso produxit in aëra nido,
Hortaturque sequi, brevisusque insurgere pennis;
Illos cœrulei primus ferit horror Olympi;
Jamque redire rogant, adsuetaque quæritur arbor.

As when the anxious dam her tender young
Leads from their lofty nest to loftier skies,
Bidding them follow her, and rise upborne

Chapter VII

Pupils should not always declaim their own compositions, but sometimes passages from eminent writers.

1. One change, I think, should certainly be made in what is customary with regard to the age of which we are speaking. Pupils should not be obliged to learn by heart what they have composed, and to repeat it, as is usual, on a certain day, a task which it is fathers that principally exact, thinking that their children then only study when they repeat frequent declamations; whereas proficiency depends chiefly on the diligent cultivation of style. 2. For though I would wish boys to compose, and to spend much time in that employment, yet, as to learning by heart, I would rather recommend for that purpose select passages from orations or histories, or any other sort of writings deserving of such attention. 3. The memory will thus be more efficiently exercised in mastering what is another's than what is their own; and those who shall have been practiced in this more difficult kind of labor, will fix in their minds, without trouble, what they themselves have composed, as being more familiar to them; they will also accustom themselves to the best compositions, and they will always have in their memory something which they may imitate, and will, even without being aware, reproduce that fashion of style which they have deeply impressed upon their minds. 4. They will have at command, moreover, an abundance of the best words, phrases, and figures, not sought for the occasion, but offering themselves spontaneously, as it were, from a store treasured within them. To this is added the power of quoting the happy expressions of any author, which is agreeable in

common conversation, and useful in pleading; for phrases which are not coined for the sake of the cause in hand have the greater weight, and often gain us more applause than if they were our own.

5. Yet pupils should sometimes be permitted to recite what they themselves have written, that they may reap the full reward of their labor from that kind of applause which is most desired.⁵² This permission will most properly be granted when they have produced something more polished than ordinary, that they may thus be presented with some return for their study, and rejoice that they have deserved to recite their composition.

Chapter VIII

Variety of talent and disposition in pupils requires variety of treatment, § 1–5. How far an inclination for any particular line of study should be encouraged and cultivated, 6–15.

1. It is generally, and not without reason, regarded as an excellent quality in a master to observe accurately the differences of ability in those whom he has undertaken to instruct, and to ascertain in what direction the nature of each particularly inclines him; for there is in talent an incredible variety; nor are the forms of the mind fewer than those of the body. 2. This may be understood even from orators themselves, who differ so much from each other in their style of speaking, that no one is like another, though most of them have set themselves to imitate those whom they admired. 3. It has also been thought advantageous by most teachers to instruct each pupil in such a manner as to cherish by learning the good qualities inherited from nature, so that the powers may be assisted in their progress towards the object to which they chiefly direct themselves. As a master of palæstric exercises, when he enters a gymnasium full of boys, is able, after trying their strength and comprehension in every possible way, to decide for what kind of exercise each ought to be trained; 4. so a teacher

⁵²That is, the applause of their fellow students. If they merely wrote, and did not recite, they would gain, as Spalding observes, the commendation of the master only. [Tr.]

On half-grown wings; the blue expanse, first tried,
Strikes them with dread; they, fluttering, chirp for leave
Back to return, and seek th' accustom'd tree.

Of which lines the germ, as Burmann remarks, is found in Ovid, Met. vii. 213:

Velut ales ab alto
Quæ teneram prolem produxit in aëra nido,
Hortaturque sequi.

The simile is very happily adopted by Goldsmith:

And as a bird each fond endearment tries,
To lure her new-fledged offspring to the skies. [Tr.]

of eloquence, they say, when he has clearly observed which boy's genius delights most in a concise and polished manner of speaking, and which in a spirited, or grave, or smooth, or rough, or brilliant, or elegant one, will so accommodate his instructions to each, that he shows most ability; 5. because nature attains far greater power when seconded by culture; and he that is led contrary to nature, cannot make due progress in the studies for which he is unfit, and makes those talents, for the exercise of which he seemed born, weaker by neglecting to cultivate them.

6. This opinion seems to me (for to him that follows reason there is free exercise of judgment even in opposition to received persuasions) just only in part. To distinguish peculiarities of talent is absolutely necessary; and to make choice of particular studies to suit them, is what no man would discountenance. 7. For one youth will be fitter for the study of history than another; one will be qualified for writing poetry, another for the study of law, and some perhaps fit only to be sent into the fields. The teacher of rhetoric will decide in accordance with these peculiarities, just as the master of the *palæstra* will make one of his pupils a runner, another a boxer, another a wrestler, or fit him for any other of the exercises that are practised at the sacred games.

8. But he who is destined for public speaking must strive to excel, not merely in one accomplishment, but in all the accomplishments that are requisite for that art, even though some of them may seem too difficult for him when he is learning them; for instruction would be altogether superfluous if the natural state of the mind were sufficient. 9. If a pupil that is vitiated in taste, and turgid in his style, as many are, is put under our care, shall we allow him to go on in his own way? Him that is dry and jejune in his manner, shall we not nourish, and, as it were, clothe? For if it be necessary to prune something away from certain pupils, why should it not be allowable to add something to others? 10. Yet I would not fight against nature; for I do not think that any good quality, which is innate, should be detracted, but that whatever is inactive or deficient should be invigorated or supplied. 11. Was that famous teacher, Isocrates, whose writings are not stronger proofs that he spoke well, than his

scholars that he taught well, inclined, when he formed such an opinion of Ephorus and Theopompus as to say that "*the one wanted the rein and the other the spur,*" to think that the slowness in the duller, and the ardor in the more impetuous, were to be fostered by education? On the contrary, he thought that the qualities of each ought to be mixed with those of the other. 12. We must so far accommodate ourselves, however, to feeble intellects, that they may be trained only to that to which nature invites them; for thus they will do with more success the only thing which they can do. But if richer material fall into our hands, from which we justly conceive hopes of a true orator, no rhetorical excellence must be left unstudied. 13. For though such a genius be more inclined, as indeed it must be, to the exercise of certain powers, yet it will not be averse to that of others, and will render them, by study, equal to those in which it naturally excelled; just as the skillful trainer in bodily exercise, (that I may adhere to my former illustration,) will not, if he undertakes to form a pancratiast, teach him to strike with his fist or his heel only, or instruct him merely in wrestling, or only in certain artifices of wrestling, but will practice him in everything pertaining to the pancratiastic art.

There may perhaps be some pupil unequal to some of these exercises. He must then apply chiefly to that in which he can succeed. 14. For two things are especially to be avoided; one, to attempt what cannot be accomplished; and the other, to divert a pupil from what he does well to something else for which he is less qualified. But if he be capable of instruction, the tutor, like Nicostratus whom we, when young, knew at an advanced age, will bring to bear upon him every art of instruction alike, and render him invincible, as Nicostratus was in wrestling and boxing,⁵³ for success in both of which contests he was crowned on the same day. 15. How much more must such training, indeed, be pursued by the teacher of the future orator! For it is not enough that he should speak concisely, or artfully, or vehemently, any more than for a singing master to excel in acute, or middle, or

⁵³A pancratiast and wrestler. See Pausan. v. 21. The saying, ἐγὼ ποιήσω πάντα χατὰ Νιχόστρατον, which occurs twice in Suidas, in ἐγὼ and Νιχόστρατος, is said to refer to a player of that name. [Tr.]

grave tones only, or even in particular subdivisions of them; since eloquence is, like a harp, not perfect, unless, with all its strings stretched, it be in unison from the highest to the lowest note.

Chapter IX

Pupils should regard their tutors as intellectual parents.

1. Having spoken thus fully concerning the duties of teachers, I give pupils, for the present, only this one admonition, that they are to love their tutors not less than their studies, and to regard them as parents, not indeed of their bodies, but of their minds. 2. Such affection contributes greatly to improvement, for pupils, under its influence, will not only listen with pleasure, but will believe what is taught them, and will desire to resemble their instructors. They will come together, in assembling for school, with pleasure and cheerfulness; they will not be angry when corrected, and will be delighted when praised; and they will strive, by their devotion to study, to become as dear as possible to the master. 3. For as it is the duty of preceptors to teach, so it is that of pupils to show themselves teachable; neither of these duties, else, will be of avail without the other. And as the generation of man is effected by both parents, and as you will in vain scatter seed, unless the furrowed ground, previously softened, cherish it, so neither can eloquence come to its growth unless by mutual agreement between him who communicates and him who receives.

Chapter X

Remarks on declamations, § 1, 2. Injudiciousness in the choice of subjects has been an obstruction to improvement in eloquence, 3–5. On what sort of subjects pupils may be permitted to declaim, 6–8. What alterations should be made in the common practice, 9–15.

1. When the pupil has been well instructed, and sufficiently exercised, in these preliminary studies, which are not in themselves inconsiderable; but members and portions, as it were, of higher branches of learning, the time will have nearly arrived for entering on deliberative and judicial subjects. But before I proceed to speak of those

matters, I must say a few words on the art of declamation, which, though the most recently invented⁵⁴ of all exercises, is indeed by far the most useful. 2. For it comprehends within itself all those exercises of which I have been treating, and presents us with a very close resemblance to reality; and it has been so much adopted, accordingly, that it is thought by many sufficient of itself to form oratory, since no excellence in continued speaking can be specified, which is not found in this prelude to speaking. 3. The practice however has so degenerated through the fault of the teachers, that the license and ignorance of declaimers have been among the chief causes that have corrupted eloquence. But of that which is good by nature we may surely make a good use. 4. Let therefore the subjects themselves, which shall be imagined, be as like as possible to truth; and let declamations to the utmost extent that is practicable, imitate those pleadings for which they were introduced as a preparation. 5. For as to *magicians*,⁵⁵ and the *pestilence*, and *oracles*,⁵⁶ and *stepmothers more cruel than those of tragedy*, and other subjects more imaginary than these, we shall in vain seek them among *sponsions* and *interdicts*.⁵⁷ What, then, it may be said, shall we never suffer students to handle such topics as are above belief, and (to say the truth) poetical, so that they may expatiate and exult in their subject, and swell forth as it were into full body? 6. It would indeed be best not to suffer

⁵⁴See i. 4, 41, 42. [Tr.]

⁵⁵Such a subject as that of the tenth of the declamations ascribed to Quintilian, entitled *Sepulchrum Incantatum*. [Tr.]

⁵⁶*Pestilentiam, et responsa*. These two words appear to refer to the same subject, which is that of the 326th declamation of those called Quintilian's: A people suffering from pestilence sent a deputy to consult an oracle about a remedy; the answer given him was that he must sacrifice his own son. On his return he communicated the oracle to his son, but concealed it from the public authorities, telling them that they had to perform certain sacred rites. When the rites were finished, the pestilence did not abate; and the son then put himself to death. After the pestilence had subsided, the father was accused of treason to the state. See also *Declamat*, 384, and the 19th and 43rd of those ascribed to Calphurnius Flaccus. [Tr.]

⁵⁷Law terms; *sponsio* was when a litigant engaged to pay a certain sum of money if he lost the cause; an *interdict* was when the prætor ordered or forbade anything to be done, chiefly in regard to property. *Turnebus*. [Tr.]

them; but at least let not the subjects, if grand and turgid, appear also, to him who regards them with severe judgment, foolish and ridiculous; so that, if we must grant the use of such topics, let the declaimer swell himself occasionally to the full, provided he understands that, as four-footed animals, when they have been blown with green fodder, are cured by losing blood, and thus return to food suited to maintain their strength, so must his turgidity be diminished, and whatever corrupt humors he has contracted be discharged, if he wishes to be healthy and strong; for otherwise his empty swelling will be hampered at the first attempt at any real pleading.

7. Those, assuredly, who think that the whole exercise of declaiming is altogether different from forensic pleading, do not see even the reason for which that exercise was instituted. 8. For, if it is no preparation for the forum, it is merely like theatrical ostentation, or insane raving. To what purpose is it to instruct a judge, who has no existence? To state a case that all know to be fictitious? To bring proofs of a point on which no man will pronounce sentence? This indeed is nothing more than trifling; but how ridiculous is it to excite our feelings, and to work upon an audience with anger and sorrow, unless we are preparing ourselves by imitations of battle for serious contests and a regular field? 9. Will there then be no difference, it may be asked, between the mode of speaking at the bar, and mere exercise in declamation? I answer, that if we speak for the sake of improvement, there will be no difference. I wish, too, that it were made a part of the exercise to use names;⁵⁸ that causes more complicated, and requiring longer pleadings, were invented; that we were less afraid of words in daily use; and that we were in the habit of mingling jests with our declamation; all which points, however we may have been practiced in the schools in other respects, find us novices at the bar.

10. But even if a declamation be composed merely for display, we ought surely to exert our

⁵⁸Which were not introduced in declamations; for *pater*, *tyrannicida*, *abdicator*, *raptor* were used as general terms, rendering the whole performance less animated, and less like reality. In *suasoriae orationes* persons were specified, but to them Quintilian seems to make no reference in these remarks. *Spalding*. [Tr.]

voice in some degree to please the audience. 11. For even in those oratorical compositions, which are doubtless based in some degree upon truth, but are adapted to please the multitude, (such as are the panegyrics which we read, and all that *epideictic* kind of eloquence,) it is allowable to use great elegance, and not only to acknowledge the efforts of art, (which ought generally to be concealed in forensic pleadings,) but to display it to those who are called together for the purpose of witnessing it. 12. Declamation therefore, as it is an imitation of real pleadings and deliberations, ought closely to resemble reality, but, as it carries with it something of ostentation, to clothe itself in a certain elegance. 13. Such is the practice of actors, who do not pronounce exactly as we speak in common conversation, for such pronunciation would be devoid of art; nor do they depart far from nature, as by such a fault imitation would be destroyed; but they exalt the simplicity of familiar discourse with a certain scenic grace.

14. However some inconveniences will attend us from the nature of the subjects which we have imagined, especially as many particulars in them are left uncertain, which we settle as suits our purpose, as *age*, *fortune*, *children*, *parents*, *strength*, *laws*, and *manners of cities*; and other things of a similar kind. 15. Sometimes, too, we draw arguments from the very faults of the imaginary causes. But on each of these points we shall speak in its proper place. For though the whole object of the work intended by us has regard to the formation of an orator, yet, lest students may think anything wanting, we shall not omit, in passing, whatever may occur that fairly relates to the teaching of the schools.

Chapter XI

Some think instruction in oratory unnecessary, § 1, 2. Boasts and practices of the ignorant, 3–5. Some study only parts of their speeches; want of connection in their matter, 6, 7.

1. From this point, then, I am to enter upon that portion of the art with which those who have omitted the preceding portions usually commence. I see, however, that some will oppose me at the very threshold; men who think that elo-

quence has no need of rules of this kind, and who, satisfied with their own natural ability, and the common methods of teaching and exercise in the schools, even ridicule my diligence; following the example of certain professors of great reputation. It was one of those characters, I believe, who, being asked what a *figure* and what a *thought* was, answered that “he did not know, but that, if it had any relation to his subject, it would be found in his declamation.” 2. Another of them replied to a person who asked him “whether he was a follower of Theodorus or Apollodorus,” “I am a prize-fighter.”⁵⁹ Nor could he indeed have escaped an avowal of his ignorance with greater wit. But such men, as they have attained eminent repute through the goodness of their natural powers, and have uttered many things even worthy of remembrance, have had very many imitators that resemble them in negligence, but very few that approach them in ability. 3. They make it their boast that they speak from impulse, and merely exert their natural powers; and say that there is no need of proofs or arrangement in fictitious subjects, but only of grand thoughts, to hear which the auditory will be crowded, and of which the best are the offspring of venturesomeness. 4. In meditation, also, as they use no method, they either wait, often for some days, looking at the ceiling for some great thought that may spontaneously present itself, or, exciting themselves with inarticulate sounds, as with a trumpet, they adapt the wildest gestures of body, not to the utterance, but to the excogitation of words.

5. Some, before they have conceived any thoughts, fix upon certain heads, under which

⁵⁹*Percontanti* Theodorus an Apollodorus esset, Ego, *inquit*, *parmularis* sum. Theodorus and Apollodorus were well-known rhetoricians, often mentioned by Quintilian, and leaders of parties. That *parmularius* signifies one who favored the gladiators in the theater and arena, called *Thraces* from their armor, has been shown by the commentators on Suet. Domit. c. 10. . . . The man to whom Quintilian alludes intimates that he knew whom to favor in the arena and the circus, but that for parties among rhetoricians he had no care. *Gesner*. “It is almost the same as if a person, upon being asked whether he were a Nominalist or a Realist, were to reply, ‘I am a Carthusian,’ that is, I do not care for or do not know the names Nominalist and Realist.” Scheller’s *Lexicon*, s. v. *parmularius*. [Tr.]

something eloquent is to be introduced; but, after modulating their words to themselves, aloud and for a long time, they desert their proposed arrangement, from despairing of the possibility of forming any connection, and then turn to one train of ideas, and again to another, all equally common and hackneyed. 6. Those however who seem to have most method, do not bestow their efforts on fictitious causes, but on common topics, in which they do not direct their view to any certain object, but throw out detached thoughts as they occur to them. 7. Hence it happens that their speech, being unconnected and made up of different pieces, cannot hang together, but is like the notebooks of boys, in which they enter promiscuously whatever has been commended in the declamations of others. Yet they sometimes strike out fine sentiments and good thoughts (for so indeed they are accustomed to boast); but barbarians and slaves do the same; and, if this be sufficient, there is no art at all in eloquence.

Chapter XII

Why the ignorant often seem to speak with more force than the learned, § 1–3. They attack more boldly, and are less afraid of failure, 4, 5. But they cannot choose judiciously, or prove with effect, 6. Their thoughts sometimes striking, 7. Apparent disadvantages of learned polish, 8. Unlearned speakers often vigorous in delivery, 9, 10. Occasionally too much admired by teachers of oratory, 11, 12.

1. I must not forbear to acknowledge, however, that people in general adopt the notion that the unlearned appear to speak with more force than the learned. But this opinion has its origin chiefly in the mistake of those who judge erroneously, and who think that what has no art has the more energy; just as if they should conceive it a greater proof of strength to break through a door than to open it, to rupture a knot than to untie it, to drag an animal than to lead it. 2. By such persons a gladiator, who rushes to battle without any knowledge of arms, and a wrestler, who struggles with the whole force of his body to effect that which he has once attempted, is called so much the braver; though the latter is often laid prostrate by his own strength, and the other, however violent his assault, is withstood by a gentle turn of his adversary’s wrist.

3. But there are some things concerning this point that very naturally deceive the unskillful; for *division*, though it is of great consequence in pleadings, diminishes the appearance of strength; what is rough is imagined more bulky than what is polished; and objects when scattered are thought more numerous than when they are ranged in order.

4. There is also a certain affinity between particular excellences and faults, in consequence of which a *railer* passes for a *free speaker*, a *rash* for a *bold* one, a *prolix* for a *copious* one. But an ignorant pleader rails too openly and too frequently, to the peril of the party whose cause he has undertaken, and often to his own. 5. Yet this practice attracts the notice of people to him, because they readily listen to what they would not themselves utter.

Such a speaker, too, is far from avoiding that venturesomeness which lies in mere expression, and makes desperate efforts; whence it may happen that he who is always seeking something extravagant, may sometimes find something great; but it happens only seldom, and does not compensate for undoubted faults.

6. It is on this account that unlearned speakers seem sometimes to have greater copiousness of language, because they pour forth every thing; while the learned use selection and moderation. Besides, unlearned pleaders seldom adhere to the object of proving what they have asserted; by this means they avoid what appears to judges of bad taste the dryness of questions and arguments, and seek nothing else but matter in which they may please the ears of the court with senseless gratifications.

7. Their *fine sentiments* themselves, too, at which alone they aim, are more striking when all around them is poor and mean; as lights are most brilliant, not amidst shades as Cicero says,⁶⁰ but amidst utter darkness. Let such speakers therefore be called as ingenious as the world pleases, provided it be granted that a man of real eloquence would receive the praise given to them as an insult.

⁶⁰De Orat. iii. 26. The reference was first discovered by Almelooven. Gesner justly observes that Quintilian alludes to the passage in jest. [Tr.]

8. Still it must be allowed that learning does take away something, as the file takes something from rough metal, the whetstone from blunt instruments, and age from wine; but it takes away what is faulty; and that which learning has polished is less only because it is better.

9. But such pleaders try by their delivery to gain the reputation of speaking with energy; for they bawl on every occasion and bellow out every thing *with uplifted hand*, as they call it, raging like madmen with incessant action, panting and swaggering, and with every kind of gesture and movement of the head. 10. To clap the hands together, to stamp the foot on the ground, to strike the thigh, the breast, and the forehead with the hand, makes a wonderful impression on an audience of the lower order,⁶¹ while the polished speaker, as he knows how to temper, to vary, and to arrange the several parts of his speech, so in delivery he knows how to adapt his action to every variety of complexion in what he utters; and, if any rule appears to him deserving of constant attention, it would be that he should prefer always to be and to seem modest. But the other sort of speakers call that force which ought rather to be called violence.

11. But we may at times see not only pleaders, but, what is far more disgraceful, teachers, who, after having had some short practice in speaking, abandon all method and indulge in every kind of irregularity as inclination prompts them, and call those who have paid more regard to learning than themselves, foolish, lifeless, timid, weak, and whatever other epithet of reproach occurs to them. 12. Let me then congratulate them as having become eloquent without labor, without method, without study; but let me, as I have long withdrawn from the duties of teaching and of speaking in the forum, because I thought it most honorable to terminate my career while my services were still desired, console my leisure in meditating and composing precepts which I trust will be of use to young men of ability, and which, I am sure, are a pleasure to myself.

⁶¹*Mirè ad pullatum circum facit.* The color or dirt of the *toga*, and still more of the *tunica*, which many of the poor wore without anything over it, characterizes a multitude of the lower and uneducated class of people. So Plin. Ep. vii. 17: *Illos quoque sordidos et pullatos reveremur.* See Quint. vi. 4. 6. *Spalding.* [Tr.]

Chapter XIII

Quintilian does not give rules from which there is no departure; pleaders must act according to the requisitions of their subjects, 1–7. What an orator has chiefly to keep in view, and how far rules should be observed, 8–17.

1. But let no man require from me such a system of precepts as is laid down by most authors of *books of rules*, a system in which I should have to make certain laws, fixed by immutable necessity, for all students of eloquence, commencing with the *proæmium*, and what must be the character of it, saying that the *statement of facts* must come next, and what rule must be observed in stating them; that after this must come the *proposition*, or as some have preferred to call it, the *excursion*,⁶² and then that there must be a *certain order of questions*; adding also other precepts, which some speakers observe as if it were unlawful to do otherwise, and as if they were acting under orders; 2. for rhetoric would be a very easy and small matter, if it could be included in one short body of rules, but rules must generally be altered to suit the nature of each individual case, the time, the occasion, and necessity itself; consequently, one great quality in an orator is discretion, because he must turn his thoughts in various directions, according to the different bearings of his subject. 3. What if you should direct a general, that, whenever he draws up his troops for battle, he must range his front in line, extend his wings to the right and left, and station his cavalry to defend his flanks? Such a method will perhaps be the best, as often as it is practicable; but it will be subject to alteration from the nature of the ground, if a hill come in the way, if a river interpose, if obstruction be caused by declivities, woods, or any other obstacles; 4. the character of the enemy, too, may make a change necessary, or the nature of the contest in which he has to engage; and he will have to fight, sometimes with his troops in extended line, sometimes in the form of wedges, and to employ, sometimes his auxiliaries, and sometimes his own legions; and sometimes it will be of advantage to turn his back in pretended flight. 5. In like manner, whether an

exordium be necessary or superfluous, whether it should be short or long, whether it should be wholly addressed to the judge, or, by the aid of some figure of speech, directed occasionally to others, whether the statement of facts should be concise or copious, continuous or broken, in the order of events or in any other, the nature of the causes themselves must show. 6. The case is the same with regard to the order of examination, since, in the same cause, one question may often be of advantage to one side, and another question to the other, to be asked first; for the precepts of oratory are not established by laws or public decrees, but whatever is contained in them was discovered by expediency. 7. Yet I shall not deny that it is in general of service to attend to rules, or I should not write any; but if expediency shall suggest anything at variance with them, we shall have to follow it, deserting the authority of teachers.

8. For my part I shall, above all things,

Direct, enjoin, and o'er and o'er repeat.

that an orator, in all his pleadings, should keep two things in view, *what is becoming*, and *what is expedient*; but it is frequently *expedient*, and sometimes *becoming*, to make some deviations from the regular and settled order, as, in statues and pictures, we see the dress, look, and attitude, varied. 9. In a statue, *exactly* upright, there is but very little gracefulness,⁶³ for the face will look straight forward, the arms hang down, the feet will be joined, and the whole figure, from top to toe, will be rigidity itself; but a gentle bend, or, to use the expression, motion of the body, gives a certain animation to figures. Accordingly, the hands are not always placed in the same position, and a thousand varieties are given to the countenance. 10. Some figures are in a running or rushing posture, some are seated or reclining, some are uncovered, and others veiled, some partake of both conditions. What is more distorted and elaborate than the Discobolus of Myron? Yet if any one should find fault with that figure for not being upright, would he not prove himself void of all understanding of the art, in which the very novelty and difficulty of the execution is what is most deserving of praise?

⁶²See b. iv. c. 3, 4. [Tr.]

⁶³Quintilian had some notion of the waving line of beauty, of which Hogarth has so ably treated. [Tr.]

11. Such graces and charms rhetorical figures afford, both such as are in the thoughts and such as lie in words, for they depart in some degree from the right line, and exhibit the merit of deviation from common practice. 12. The whole face is generally represented in a painting, yet Apelles painted the figure of Antigonus with only one side of his face toward the spectator, that its disfigurement from the loss of an eye might be concealed. Are not some things, in like manner, to be concealed in speaking, whether, it may be, because they ought not to be told, or because they cannot be expressed as they deserve? 13. It was in this way that Timanthes, a painter, I believe, of Cythnus,⁶⁴ acted, in the picture by which he carried off the prize from Colotes, of Teium; for when, at the sacrifice of Iphigenia, he had represented Calchas looking sorrowful, Ulysses more sorrowful, and had given to Menelaus the utmost grief that his art could depict, not knowing, as his power of representing feeling was exhausted, how he could fitly paint the countenance of the father, he threw a veil over his head, and left his grief to be estimated by the spectator from his own heart. 14. To this device is not the remark of Sallust somewhat similar, *For I think it better to say nothing concerning Carthage, than to say but little?* For these reasons it has always been customary with me, to bind myself as little as possible to rules which the Greeks call *καθολικὰ*, and which we, translating the word as well as we can, term *universalia* or *perpetualia*, “general” or “constant”; for rules are rarely found of such a nature, that they may not be shaken in some part, or wholly overthrown.

⁶⁴*Timanthes, opinor, Cythnius.* See Plin. H. N. xxxv. 36; Cic. Orat. c. 22; Val. Max. viii. 11, ext. But it has been justly observed that the painter took the hint from Euripides, Iphig. Aul. 1550. *Spalding.* What Euripides says is, that “Agamemnon, when he saw Iphigenia going to be sacrificed, uttered a groan, and, turning away his head, shed tears, veiling his face with his robe.” *Spalding* remarks that the doubt implied in *opinion* refers to the country of Timanthes, Quintilian not being certain whether he was a Cythnian or not; though why Quintilian should have been so anxious to avoid error about the painter’s country, when he was merely making a passing observation on his picture, it is not easy to say. For further particulars about Timanthes and his painting, the reader may consult Smith’s Dict. of Biog. and Mythol. [Tr.]

But of rules I shall speak more fully, and of each in its own place. 15. In the mean time, I would not have young men think themselves sufficiently accomplished, if they have learned by art some one of those little books on rhetoric, which are commonly handed about, and fancy that they are thus safe under the decrees of theory. The art of speaking depends on great labor, constant study, varied exercise, repeated trials, the deepest sagacity, and the readiest judgment. 16. But it is assisted by rules, provided that they point out a fair road, and not one single wheel-rut, from which he who thinks it unlawful to decline, must be contented with the slow progress of those who walk on ropes. Accordingly, we often quit the main road, (which has been formed perhaps by the labor of an army,) being attracted by a shorter path; or if bridges, broken down by torrents, have intersected the direct way, we are compelled to go round about; and if the gate be stopped up by flames, we shall have to force a way through the wall. 17. The work of eloquence is extensive and of infinite variety, presenting something new almost daily; nor will all that is possible ever have been said of it. But the precepts which have been transmitted to us I will endeavor to set forth, considering, at the same time, which of them are the most valuable, whether anything in them seems likely to be changed for the better, and whether any additions may be made to them, or anything taken from them.

Chapter XIV

Of the term rhetoric or oratory, § 1–4. Heads under which Quintilian considers the art of oratory, 5.

1. Some who have translated *ῥητορικὴ* from Greek into Latin, have called it *ars oratoria* and *oratrix*. I would not deprive those writers of their due praise, for endeavoring to add to the copiousness of the Latin language, but all Greek words do not obey our will, in attempting to render them from the Greek, as all our words, in like manner, do not obey that of the Greeks, when they try to express something of ours in their own tongue. 2. This translation is not less harsh than the *essentia* and

entia of Flavius,⁶⁵ for the Greek οὐσία: nor is it indeed exact, for *oratoria* will be taken in the same sense as *elocutoria*, *oratrix* as *elocutrix*, but the word *rhetoric*, of which we are speaking, is the same sort of word as *eloquentia*, and it is doubtless used in two senses by the Greeks. 3. In one acceptation it is an adjective, *ars rhetorica*, as *navis piratica*: in the other a substantive, like *philosophia* or *amicitia*. We wish it now to have the signification of a substantive, just as γράμματιχῆ is rendered by the substantive *literatura*, not by *literatrix*, which would be similar to *oratrix*, nor by *literatoria*, which would be similar to *oratoria*; but for the word *rhetorice*, no equivalent Latin word has been found. 4. Let us not, however, dispute about the use of it, especially as we must adopt many other Greek words; for if I may use the terms *physicus*, *musicus*, *geometres*, I shall offer no unseemly violence to them by attempting to turn them into Latin; and since Cicero himself uses a Greek title for the books which he first wrote upon the art, we certainly need be under no apprehension of appearing to have rashly trusted the greatest of orators as to the name of his own art.

5. Rhetoric, then, (for we shall henceforth use this term without dread of sarcastic objections,) will be best divided, in my opinion, in such a manner, that we may speak first of the *art*, next of the *artist*, and then of the *work*. The *art* will be that which ought to be attained by study, and is the *knowledge how to speak well*. The *artificer* is he who has thoroughly acquired the art, that is, the orator, whose business is *to speak well*. The *work* is what is achieved by the artificer, that is, *good speaking*. All these are to be considered under special heads; but of the particulars that are to follow, I shall speak in their several places; at present I shall proceed to consider what is to be said on the first general head.

⁶⁵It is probable that he is the same person whom writers in general call Papirius Fabianus, a contemporary of Seneca, a philosopher well acquainted with the nature of things, as he is called by Plin. H. N. xxxvi. 24. Both the Senecas, father and son, say a great deal of him, the one in the Praef. Controv. ii. p. 132–34; the other in the Epist. ad Lucil. 100. Spalding. But from Sen. Ep. 58, it appears, according to the emendation of Muretus, now generally adopted, that Cicero had previously used the word. Compare Quint. viii. 3. 53. [Tr.]

Chapter XV

What rhetoric is, § 1, 2. To call it the power of persuading is to give an insufficient definition of it, 3–9. To call it the power of persuading by speech is not sufficient, 10, 11. Other definitions, 12–23. That of Gorgias in Plato; that of Plato or Socrates in the Phædrus, 24–31. That of Cornelius Celsus, 32. Other definitions more approved by Quintilian, 33–37. Quintilian's own definition, 38.

1. First of all, then, we have to consider what rhetoric is. It is, indeed, defined in various ways; but its definition gives rise chiefly to two considerations, for the dispute is, in general, either concerning the *quality of the thing itself*, or concerning the comprehension of the terms in which it is defined. The first and chief difference of opinion on the subject is, that some think it possible even for bad men to have the name of orators; while others (to whose opinion I attach myself) maintain that the name, and the art of which we are speaking, can be conceded only to good men.⁶⁶

2. Of those who separate the talent of speaking from the greater and more desirable praise of a good life, some have called rhetoric merely a *power*, some a *science*, but not a *virtue*,⁶⁷ some a *habit*, some an *art*, but having nothing in common with science and virtue; some even an abuse of art, that is, a χαχοτεχνία.⁶⁸ 3. All these have generally supposed, that the business of oratory lies either in *persuading*, or in *speaking in a manner adapted to persuade*, for such art may be attained by one who is far from being a good man. The most common definition therefore is, that *oratory is the power of persuading*. What I call a *power*, some call a *faculty*, and others a *talent*, but that this discrepancy may be attended

⁶⁶This was the opinion also of Cato the Censor, given in his book *De Oratore* addressed to his son, as appears from Seneca the father, Praef. ad Controv. i. i., a remarkable passage, and worthy of attention from the studious. *Orator est, Marce fili, vir bonus dicendi peritus*. Antonius, in Cic. De Orat. ii, 20, distinguishes the orator from the good man, as does also Cicero himself, Invent. i. 3, 4. See Quintilian xii. 1, 1; and Proœm. tot. op. sect. 9. Spalding. [Tr.]

⁶⁷See c. 20. [Tr.]

⁶⁸We call that art a χαχοτεχνία which has not a good, but a bad end, as the magic art; and some abuse oratory to the hurt of their fellow creatures. Turnebus. [Tr.]

with no ambiguity, I mean by *power*, δύναμις. 4. This opinion had its origin from Isocrates, if the treatise on the art, which is in circulation under his name, is really his.⁶⁹ That rhetorician, though he had none of the feelings of those who defame the business of the orator, gives too rash a definition of the art when he says; “That rhetoric is the *worker of persuasion*, πειθοῦς δημιουργός for I shall not allow myself to use the peculiar term that Ennius applies to Marcus Cethegus, *SUADÆ medulla*. 5. In Plato too, Gorgias, in the Dialogue inscribed with his name, says almost the same thing; but Plato wishes it to be received as the opinion of Gorgias, not as his own. Cicero, in several passages of his writings, has said, that the duty of an orator is *to speak in a way adapted to persuade*. 6. In his books on Rhetoric also, but with which, doubtless, he was not satisfied,⁷⁰ he makes the end of eloquence to be *persuasion*.

But money, likewise, has the power of persuasion, and interest, and the authority and dignity of a speaker, and even his very look, unaccompanied by language, when either the remembrance of the services of any individual, or a pitiable appearance, or beauty of person, draws forth an opinion. 7. Thus when Antonius, in his defense of Manius Aquilius, exhibited on his breast, by tearing his client’s robe, the scars of the wounds which he had received for his country, he did not trust to the power of his eloquence, but applied force, as it were, to the eyes of the Roman people, who, it was thought, were chiefly induced by the sight to acquit the accused. 8. That Servius Galba⁷¹ escaped merely through the pity which

⁶⁹The treatise of Isocrates Cicero (de Invent. ii. 2) intimates that he had not seen. There is a learned discussion of Manutius concerning it in a note on Epist. ad Div. i. 9. He conjectures that there may have been a treatise of Isocrates the younger, of Apollonia, a disciple of the greater Isocrates, mentioned by Harpocration (in ἐπαχτός) and Suidas. See Ruhnk. Hist. Crit. Oratt. Græcc. prefixed to Rutilus Lupus, p. 84. seqq. Spalding. [Tr.]

⁷⁰He shows his dissatisfaction with his *Rhetorica*, or books *de Inventione*, “qui sibi exciderint,” Orat. i. 2, *init*. See Quint. iii. 1, 20; iii. 6, 58, 63. Spalding. [Tr.]

⁷¹When he was prætor in Spain he had put to death a body of Lusitanians after pledging the public faith that their lives should be spared; an act for which he was accused before the people by the tribune Libo, who was supported by Cato. Turnebus. See Cic. de Orat. i. 53. [Tr.]

he excited, when he not only produced his own little children before the assembly, but carried round in his hands the son of Sulpicius Gallus, is testified, not only by the records of others, but by the speech of Cato. 9. Phryne too, people think, was freed from peril, not by the pleading of Hyperides, though it was admirable, but by the exposure of her figure, which, otherwise most striking, he had uncovered by opening her robe. If, then, all such things *persuade*, the definition of which we have spoken is not satisfactory.

10. Those, accordingly, have appeared to themselves more exact, who, though they have the same general opinion as to rhetoric, have pronounced it to be the *power of persuading by speaking*. This definition Gorgias gives, in the Dialogue which we have just mentioned, being forced to do so, as it were, by Socrates. Theodectes, if the treatise on rhetoric, which is inscribed with his name, is his, (or it may rather, perhaps, as has been supposed, be the work of Aristotle,) does not dissent from Gorgias, for it is asserted in that book, that the object of oratory is *to lead men by speaking to that which the speaker wishes*. 11. But not even this definition is sufficiently comprehensive; for not only the orator, but others, as harlots, flatterers, and seducers, persuade, or *lead to that which they wish*, by speaking. But the orator, on the contrary, does not always persuade; so that sometimes this is not his peculiar object; sometimes it is an object common to him with others, who are very different from orators. 12. Yet Apollodorus varies but little from this definition, as he says, that the first and supreme object of judicial pleading is *to persuade the judge, and to lead him to whatever opinion the speaker may wish*, for he thus subjects the orator to the power of fortune, so that, if he does not succeed in persuading, he cannot retain the name of an orator. 13. Some, on the other hand, detach themselves from all considerations as to the event, as Aristotle, who says, that *oratory is the power of finding out whatever can persuade in speaking*. But this definition has not only the fault of which we have just spoken, but the additional one of comprehending nothing but invention, which, without elocution, cannot constitute oratory. 14. To Hermagoras, who says, that the object of oratory is *to speak persuasively*,

and to others, who express themselves to the same purpose, though not in the same words, but tell us that the object of oratory is *to say all that ought to be said in order to persuade*, a sufficient answer was given when we showed that *to persuade* is not the business of the orator only.

15. Various other opinions have been added to these, for some have thought that oratory may be employed about *all subjects*, others only about *political affairs*, but which of these notions is nearer to truth, I shall inquire in that part of my work which will be devoted to the question.

16. Aristotle seems to have put everything in the power of oratory when he says, that it is *the power of saying on every subject whatever can be found to persuade*: and such is the case with Patrocles,⁷² who, indeed, does not add *on every subject*, but, as he makes no exception, shows that his idea is the same, for he calls oratory *the power of finding whatever is persuasive in speaking*, both which definitions embrace invention alone. Theodorus,⁷³ in order to avoid this defect, decides oratory to be *the power of discovering and expressing, with elegance, whatever is credible on any subject whatever*. 17. But, while one who is not an orator may find out what is credible as well as what is persuasive, he, by adding *on any subject whatever*, grants more than the preceding makers of definitions, and allows the title of a most honorable art to those who may persuade even to crime. 18. Gorgias, in Plato, calls himself a master of persuasion in courts of justice and other assemblies, and says that he treats both of what is just and what is unjust; and Socrates allows him the art of *persuading*, but not of *teaching*.

19. Those who have not granted all subjects to the orator, have made distinctions in their definitions, as they were necessitated, with more anxi-

⁷²He is mentioned again, iii. 6, 44. Nothing more is known of him than is to be learned from these two passages. [Tr.]

⁷³I do not suppose him to be the same that is mentioned in sect. 21, for Quintilian would scarcely have added "of Gadara" when he mentioned him the second time, unless he had intended to distinguish the one from the other. We must suppose, therefore, that it is Theodorus of Byzantium who is meant; a rhetorician mentioned by Plato Phædr. p. 266 E, as well as by Quint. iii. I, II; and see Cic. Brut. c. 12; Orat. c. 12. Spalding. [Tr.]

ety and verbosity. One of these is Ariston, a disciple of Critolaus, the Peripatetic, whose definition of oratory is, that it is *the science of discovering and expressing what ought to be said on political affairs, in language adapted to persuade the people*. 20. He considers oratory a *science*, because he is a Peripatetic, not a *virtue*, like the Stoics,⁷⁴ but, in adding *adapted to persuade the people*, he throws dishonor on the art of oratory, as if he thought it unsuited to persuade the learned. But of all who think that the orator is to discourse only on political questions, it may be said, once for all, that many duties of the orator are set aside by them; for instance, all *laudatory* speaking, which is the third part of oratory.⁷⁵ 21. Theodorus, of Gadara, (to proceed with those who have thought oratory an *art*, not a *virtue*,) defines more cautiously, for he says, (let me borrow the words of those who have translated his phraseology from the Greek,) that oratory is *an art that discovers, and judges, and enunciates with suitable eloquence, according to the measure of that which may be found adapted to persuading, in any subject connected with political affairs*. 22. Cornelius Celsus, in like manner, says that the object of oratory is *to speak persuasively on doubtful and political matters*. To these definitions there are some, not very dissimilar, given by others, such as this: *oratory is the power of judging and discoursing on such civil questions as are submitted to it, with a certain persuasiveness, a certain action of the body, and a certain mode of delivering what it expresses*. 23. There are a thousand other definitions, but

⁷⁴Cicero, de Orat. iii. 18, says that *the Stoics alone, of all the philosophers, have called eloquence virtue and wisdom*; see also Acad. Quæst. i. 2. The Stoics necessarily held this opinion, as they also gave *dialectics* and *physics* the name of *virtues*, Cic. de Fin. iii. 21; and of dialectics, taken in its widest sense, oratory or rhetoric may be considered as a part. The Stoics, indeed, make the word ἐπιστήμη the basis of all their definitions of virtues; see Stob. Eclog. p. 167, ed. Antv.; and virtue itself is defined by Musonius Rufus, the master of Epictetus, as *knowledge not merely theoretical, but practical*: Stob. Serm. p. 204, ed. Tigr. If therefore the definition of eloquence in the text had proceeded from a Stoic, and not a Peripatetic, he would have acknowledged it to be a virtue by the very admission that it was knowledge. See c. 20 of this book. Spalding. [Tr.]

⁷⁵The *epideictic*, the other two parts being the *deliberative* and the *judicial*. [Tr.]

either similar, or composed of similar elements, which we shall notice when we come to treat upon the subjects of oratory.

Some have thought it neither a *power*, nor a *science*, nor an *art*; Critolaus calls it the *practice of speaking*; (for such is the meaning of the word *τρούβη*;) Athenæus,⁷⁶ *the art of deceiving*.⁷⁷ 24. But most writers, satisfied with reading a few passages from Plato's *Gorgias*,⁷⁸ unskillfully extracted by their predecessors, (for they neither consult the whole of that dialogue, nor any of the other writings of Plato,) have fallen into a very grave error, supposing that that philosopher entertained such an opinion as to think that *oratory was not an art, but a certain skillfulness in flattering and pleasing*; 25. or, as he says in another place, the *simulation of one part of polity*, and the *fourth sort of flattery*, for he assigns two parts of polity to the body, *medicine*, and, as they interpret it, *exercise*, and two to the mind, *law* and *justice*, and then calls the *art of cooks* the flattery or simulation of *medicine*, and the *art of dealers in slaves* the simulation of the effects of *exercise*, as they produce a false complexion by paint and the appearance of strength by unsolid fat; the simulation of *legal science* he calls *sophistry*, and that of *justice* *rhetoric*. 26. All this is, indeed, expressed in that Dialogue, and uttered by Socrates, under whose person Plato seems to intimate what he thinks; but some of his dialogues were composed merely to refute those who argued on the other side, and are called *ἐλεγχτικοί*: others were written to teach, and are called *δογματικοί*. 27. But Socrates, or Plato, thought that sort of oratory, which was then practiced, to be of a dogmatic character, for he speaks of it as being *κατὰ τοῦτον τὸν τρόπον ὃν ὑμεῖς πολιτεύεσθε*,⁷⁹ "according to the manner in which you manage public affairs," and understands oratory of a sincere and honorable nature. The dispute with Gorgias is accordingly thus terminated: "It is therefore

⁷⁶He is mentioned again, iii. 1, 16. Nothing more is known of him than is to be learned from these two passages of Quintilian. [Tr.]

⁷⁷It is strange that among those who said that oratory was neither a *power*, nor a *science*, nor an *art*, Quintilian should rank one who called it the "art of deceiving." *Spalding*. [Tr.]

⁷⁸Plato *Gorg.* sect. 43, *seqq.* p. 462, ed. Steph. [Tr.]

⁷⁹Sect. 120, p. 500 C. [Tr.]

necessary that the orator be a just man, and that the just man should wish to do just things."⁸⁰ 28. When this has been said, Gorgias is silent, but Polus resumes the subject, who, from the ardor of youth, is somewhat inconsiderate, and in reply to whom the remarks on simulation and flattery are made. Callicles, who is even more vehement, speaks next, but is reduced to the conclusion, that "he who would be a true orator must be a just man, and must know what is just;"⁸¹ and it is therefore evident, that oratory was not considered by Plato an evil, but that he thought true oratory could not be attained by any but a just and good man. 29. In the *Phædrus* he sets forth still more clearly, that the art cannot be fully acquired without a knowledge of justice, an opinion to which I also assent. Would Plato, if he had held any other sentiments, have written the *Defense of Socrates*, and the *Euology* of those who fell in defense of their country,⁸² compositions which are certainly work for the orator? 30. But he has even inveighed against that class of men who used their abilities in speaking for bad ends. Socrates also thought the speech, which Lysias had written for him when accused, improper for him to use, though it was a general practice, at that time, to compose for parties appearing before the judges speeches which they themselves might deliver; and thus an elusion of the law,⁸³ by which one man was not allowed to speak for another, was effected. 31. By Plato, also, those who separated oratory from justice, and preferred what is probable to what is true, were thought no proper teachers of the art, for so he signifies, too,

⁸⁰Sect. 35, p. 460 C. [Tr.]

⁸¹Sect. 136, p. 508 C. [Tr.]

⁸²Plato wrote a funeral oration on some Athenians who had fallen in battle; a composition, says Cicero, which was so well received, that it was recited publicly on a certain day in every year. *Turnebus*. [Tr.]

⁸³Of this law I have found no mention in any other author, nor has any one of Quintilian's commentators paid due attention to this passage. That what he says is true, and that it was not customary at Athens for one man to speak for another, seems to be shown by the fact that in the works of the Greek orators the litigants always speak for themselves. The only exception was, when the litigant had not the privilege of speaking, as Callias, who was a *metæc*, and for whom Lysias spoke; (see *Lys. Orat. v.*, and *Wolf. Prol. in Lept. p. 69*;) and persons under age, and women. *Spalding*. He adds a few more remarks, which the reader may consult. [Tr.]

in his Phædrus. 32. Cornelius Celsus, moreover, may be thought to have been of the same opinion with those to whom I have just referred, for his words are, *the orator aims only at the semblance of truth*; and he adds, a little after, *not purity of conscience, but the victory of his client, is the reward of the pleader*. Were such assertions true, it would become only the worst of men to give such pernicious weapons to the most mischievous of characters, and to aid dishonesty with precepts; but let those who hold this opinion consider what ground they have for it.

33. Let me, for my part, as I have undertaken to form a *perfect orator*, whom I would have, above all, to be a *good man*, return to those who have better thoughts of the art. Some have pronounced oratory to be identical with *civil polity*; Cicero calls it *a part of civil polity*; and a *knowledge of civil polity*, he thinks, is nothing less than wisdom itself. Some have made it a part of *philosophy*, among whom is Isocrates.⁸⁴ 34. With this character of it, the definition that *oratory is the science of speaking well*, agrees excellently, for it embraces all the virtues of oratory at once, and includes also the character of the true orator, as he cannot speak well unless he be a good man. 35. To the same purpose is the definition of Chrysippus, derived from Cleanthes,⁸⁵ *the science of speaking properly*. There are more definitions in the same philosopher, but they relate rather to other⁸⁶ questions. A definition framed in these terms, *to persuade to what is necessary*, would convey the same notion, except that it makes the art depend on the result. 36. Areus⁸⁷

⁸⁴This we may suppose to have been said in the lost treatise mentioned in sect. 4. In the rest of his writings he is accustomed to use the word *philosophy* with more latitude than was usual; as in the Panegyric, ἡ περὶ τοῦς λόγους φιλοσοφία. Spalding. [Tr.]

⁸⁵"Cleanthes wrote a treatise on the art of rhetoric, and so did Chrysippus, but their writings were of such a nature that if a man wished his mouth closed for ever he has nothing to do but read them." Cic. de Fin. iv. 3. In their definition the expression doubtless was ὀρθῶς λέγειν, instead of εὖ λέγειν, which is found in Sext. Empir. p. 289, and Diog. Laërt. vii. 42. Spalding. [Tr.]

⁸⁶Not to this, whether eloquence is to be attributed to a good man only. [Tr.]

⁸⁷He may possibly have been the Stoic philosopher of Alexandria, for whose sake Cæsar Octavianus spared that city; see Plut. in Anton. p. 953 A. His name is sometimes

defines oratory well, saying that it is *to speak according to the excellence of speech*. Those also exclude bad men from oratory who consider it as the knowledge of civil duties, since they deem such knowledge virtue; but they confine it within too narrow bounds, and to political questions. Albutius,⁸⁸ no obscure professor or author, allows that it is the *art of speaking well*, but errs in giving it limitations, adding, *on political questions*, and *with probability*, of both which restrictions I have already disposed; those, too, are men of good intention, who consider it the business of oratory *to think and speak rightly*.

37. These are almost all the most celebrated definitions, and those about which there is the most controversy; for to discuss all would neither be much to the purpose, nor would be in my power; since a foolish desire, as I think, has prevailed among the writers of treatises on rhetoric, to define nothing in the same terms that another had already used; a vainglorious practice which shall be far from me. 38. For I shall say, not what I shall invent, but what I shall approve; as, for instance, that *oratory is the art of speaking well*; since, when the best definition is found, he who seeks for another must seek for a worse.

This being admitted, it is evident at the same time what object, what highest and ultimate end, oratory has; that object or end which is called in Greek τέλος, and to which every art tends; for if oratory be *the art of speaking well*, its object and ultimate end must be to speak well.

Chapter XVI

Oratory said by some to be a pernicious art, because it may be perverted to bad ends, § 1–4. We might say the same of other things that are allowed to be beneficial, 5, 6. Its excellences, 7–16. The abundant return that it makes for cultivation, 17–19.

I. Next comes the question *whether oratory is useful*; for some are accustomed to declaim

written Arius, the Greek being Ἀρειος, See Fabric. bibl. Gr. Harl. vol. iii., p. 540. Spalding. [Tr.]

⁸⁸Caius Albutius Silus, of Novaria, a rhetorician of the age of Augustus. See Senec. Rhet. Contro. iii. præf. p. 197 Bip.; also Sueton. de Rhet. 6. [Tr.]

violently against it, and, what is most ungenerous, to make use of the power of oratory to lay accusations against oratory; 2. they say that *eloquence is that which saves the wicked from punishment; by the dishonesty of which the innocent are at times condemned; by which deliberations are influenced to the worse; by which not only popular seditions and tumults, but even inexplicable wars, are excited; and of which the efficacy is the greatest when it exerts itself for falsehood against truth.* 3. Even to Socrates, the comic writers make it a reproach that *he taught how to make the worse reason appear the better*; and Plato on his part says that Tisias and Gorgias⁸⁹ professed the same art. 4. To these they add examples from Greek and Roman history, and give a list of persons who, by exerting such eloquence as was mischievous, not only to individuals but to communities, have disturbed or overthrown the constitutions of whole states; asserting that eloquence on that account was banished from the state of Lacedæmon, and that even at Athens, where the orator was forbidden to move the passions, the powers of eloquence were in a manner curtailed.

5. Under such a mode of reasoning, neither will generals, nor magistrates, nor medicine, nor even wisdom itself, be of any utility; for Flaminus⁹⁰ was a general, and the Gracchi, Saturnini, and Glauciæ were magistrates; in the hands of physicians poisons have been found; and among those who abuse the name of philosophers have been occasionally detected the most horrible crimes. 6. We must reject food, for it has often given rise to ill health; we must never go under roofs, for they sometimes fall upon those who dwell beneath them; a sword must not be forged for a soldier, for a robber may use the same weapon. Who does not know that fire and water, without which life cannot exist, and, (that I may not confine myself to things of earth,) that the sun and moon, the chief of the celestial luminaries, sometimes produce hurtful effects?

7. Will it be denied, however, that the blind

⁸⁹"Tisias and Gorgias, by the power of words, make small things great, and great things small." Plato Phædr. p. 267, A.; see also p. 273, A, B, C. *Spalding*. [Tr.]

⁹⁰The general who was defeated by Hannibal at the lake Thrasimenus. [Tr.]

Appius, by the force of his eloquence, broke off a dishonorable treaty of peace about to be concluded with Pyrrhus? Was not the divine eloquence of Cicero, in opposition to the agrarian laws, even popular?⁹¹ Did it not quell the daring of Catiline, and gain, in the toga, the honor of thanksgivings, the highest⁹² that is given to generals victorious in the field? 8. Does not oratory often free the alarmed minds of soldiers from fear, and persuade them, when they are going to face so many perils in battle, that glory is better than life? Nor indeed would the Lacedæmonians and Athenians influence me more than the people of Rome, among whom the highest respect has always been paid orators. 9. Nor do I think that founders of cities would have induced their unsettled multitudes to form themselves into communities by any other means than by the influence of the art of speaking,⁹³ nor would legislators, without the utmost power of oratory, have prevailed on men to bind themselves to submit to the dominion of law. 10. Even the very rules for the conduct of life, beautiful as they are by nature, have yet greater power in forming the mind when the radiance of eloquence illumines the beauty of the precepts. Though the weapons of eloquence, therefore, have effect in both directions, it is not just that that should be accounted an evil which we may use to a good purpose.

11. But these points may perhaps be left to the consideration of those who think that the substance of eloquence lies in the power to persuade. But if eloquence be the *art of speaking well*, (the definition which I adopt,) so that a true *orator* must be, above all, *a good man*, it must assuredly be acknowledged that it is a useful art. 12. In truth, the sovereign deity, the parent of all things, the architect of the world, has distinguished man from other beings, such at least as were to be mortal, by nothing more than by the faculty of speech. 13. Bodily frames superior in size, in

⁹¹A speech against the agrarian laws could not have been well received by the people, without being in the highest degree forcible and eloquent. "While you spoke, (O Cicero!) the tribes relinquished the agrarian law, that is, their own meat and drink." Plin. H. N. vii. 31. [Tr.]

⁹²Being preliminary to a triumph, by which, however, it was not always followed. Cic. Ep. ad Div. xv. 5. [Tr.]

⁹³See Cicero de Inv. i. 2; De Orat i. 8. [Tr.]

strength, in firmness, in endurance, in activity, we see among dumb creatures, and observe, too, that they have less need than we have of external assistance. To walk, to feed themselves, to swim over water, they learn, in less time than we can, from nature herself, without the aid of any other teacher. 14. Most of them, also, are equipped against cold by the produce of their own bodies; weapons for their defense are born with them; and their food lies before their faces; to supply all which wants mankind have the greatest difficulty. The divinity has therefore given us reason, superior to all other qualities, and appointed us to be sharers of it with the immortal gods. 15. But reason could neither profit us so much, nor manifest itself so plainly within us, if we could not express by speech what we have conceived in our minds; a faculty which we see wanting in other animals, far more than, to a certain degree, understanding and reflection. 16. For to contrive habitations, to construct nests, to bring up their young, to hatch them,⁹⁴ to lay up provision for the winter, to produce works inimitable by us, (as those of wax and honey,) is perhaps a proof of some portion of reason; but as, though they do such things, they are without the faculty of speech, they are called *dumb and irrational*. 17. Even to men, to whom speech has been denied, of how little avail is divine reason! If, therefore, we have received from the gods nothing more valuable than speech, what can we consider more deserving of cultivation and exercise? or in what can we more strongly desire to be superior to other men, than in that by which man himself is superior to other animals, especially as in no kind of exertion does labor more plentifully bring its reward? 18. This will be so much the more evident, if we reflect from what origin, and to what extent, the art of eloquence has advanced, and how far it may still be improved. 19. For, not to mention how beneficial it is, and how becoming in a man of virtue, to defend his friends, to direct a senate or people by his counsels, or to lead an

⁹⁴Do they then bring them up before they hatch them? Yet the expression of Homer is exactly similar, ἔτραφεν ἡδ' ἐγένοντο. *Spalding*. Guthrie ignorantly supposed (let me be pardoned for noticing so small a matter) that *excludere* meant to exclude the young ones from the nest when they are able to shift for themselves. [Tr.]

army to whatever enterprise he may desire, is it not extremely honorable to attain, by the common understanding and words which all men use, so high a degree of esteem and glory as to appear not to speak or plead, but, as was the case with Pericles, to hurl forth lightning and thunder?

Chapter XVII

Oratory is manifestly an art, § 1–4. Yet some have denied that it is, and said that its power is wholly from nature, 5–8. Examples from other arts, 9, 10. Every one that speaks is not an orator, 11–13. Opinion of Aristotle, 14. Other charges against oratory; that it has no peculiar subject or matter, and that it sometimes deceives, 15–18. Refutation of these charges, 19–21. Unfairly objected to it that it has no proper end, 22–26. Not pernicious because it sometimes misleads, 27–29. Another objection, that it may be exerted on either side of a question, and that it contradicts itself; answered, 30–36. Oratory is sometimes ignorant of the truth of what it asserts; but the same is the case with other arts and sciences, 36–40. Confirmation of its being an art, 41–43.

1. There would be no end if I should allow myself to expatiate, and indulge my inclination, on this head. Let us proceed, therefore, to the question that follows, *whether oratory be an art*. 2. That it is an art, every one of those who have given rules about eloquence have been so far from doubting, that it is shown by the very titles of their books, that they are written *on the oratorical art*; and Cicero also says, that what is called *oratory is artificial eloquence*. This distinction, it is not only orators that have claimed for themselves, (since they may be thought, perhaps, to have given their profession something more than its due,) but the philosophers, the Stoics, and most of the Peripatetics, agree with them. 3. For myself, I confess, that I was in some doubt whether I should look upon this part of the inquiry as necessary to be considered; for who is so destitute, I will not say of learning, but of the common understanding of mankind, as to imagine that the work of building, or weaving, or molding vessels out of clay, is *an art*, but that oratory, the greatest and noblest of works, has attained such a height of excellence *without being an art*? 4. Those, indeed, who have maintained the

contrary opinion, I suppose not so much to have believed what they advanced, as to have been desirous of exercising their powers on a subject of difficulty, like Polycrates, when he eulogized Busiris and Clytæmnestra; though he is said also to have written the speech that was delivered against Socrates; nor would that indeed have been inconsistent with his other compositions.⁹⁵

5. Some will have oratory to be a natural talent, though they do not deny that it may be assisted by art. Thus Antonius, in Cicero *de Oratore*, says that oratory is *an effect of observation*, not *an art*; but this is not advanced that we may receive it as true, but that the character of Antonius, an orator who tried to conceal the art that he used, may be supported. 6. But Lysias seems to have really entertained this opinion; for which the argument is, that the ignorant, and barbarians, and slaves, when they speak for themselves, say something that resembles an *exordium*, they *state facts, prove, refute*, and (adopting the form of a *peroration*) *deprecate*. 7. The supporters of this notion also avail themselves of certain quibbles upon words, that *nothing that proceeds from art was before art*, but that mankind have always been able to speak for themselves and against others; that teachers of the art appeared only in later times, and first of all about the age of Tisias and Corax;⁹⁶ that oratory was therefore before art, and is consequently not an art. 8. As to the period, indeed, in which the teaching of oratory commenced, I am not anxious to inquire; we find Phœnix, however, in Homer,⁹⁷ as an instructor, not only in acting but in speaking, as well as several other orators; we see all the varieties of eloquence in the three generals,⁹⁸ and contests in eloquence proposed among the young men, and among the figures on the shield of Achilles are

⁹⁵Because in every case he took the wrong side. [Tr.]

⁹⁶Corax was a Sicilian, who, about B.C. 470, secured himself great influence at Syracuse by means of his oratorical powers. He is said to have been the earliest writer on rhetoric. Tisias was his pupil. See Cic. Brut. 12; de Orat. i. 20; Quint. iii. 1, 8. [Tr.]

⁹⁷Il. ix. 432. [Tr.]

⁹⁸The *copious* style in the oratory of Nestor; the *simple* in that of Menelaus; and the *middle* in that of Ulysses. See Aul. Gell. vii. 14; Clarke ad Il. iii. 213. Capperonier thinks that Phœnix, Ulysses, and Ajax are meant, the speakers in the deputation to Achilles, Iliad ix. [Tr.]

represented both law-suits and pleaders. 9. It would even be sufficient for me to observe, that *everything which art has brought to perfection had its origin in nature*, else, from the number of the arts must be excluded *medicine*, which resulted from the observation of what was beneficial or detrimental to health, and which, as some think, consists wholly in experiments, for somebody had, doubtless, bound up a wound before the dressing of wounds became an art, and had allayed fever by repose and abstinence, not because he saw the reason of such regimen, but because the malady itself drove him to it. 10. Else, too, *architecture* must not be considered an art, for the first generation of men built cottages without *art*; nor *music*, since singing and dancing, to some sort of tune, are practiced among all nations. 11. So, if *any kind of speaking whatever* is to be called oratory, I will admit that oratory existed before it was an art; but if every one that speaks is not an orator, and if men in early times did not speak as orators, our reasoners must confess that an orator is formed by art, and did not exist before art. This being admitted, another argument which they use is set aside, namely, that *that has no concern with art which a man who has not learned it can do*, but that men who have not learned oratory can make speeches. 12. To support this argument they observe, that Demades, a waterman, and Æschines, an actor, were orators; but they are mistaken; for he who has not learned to be an orator cannot properly be called one, and it may be more justly said, that those men learned late in life, than that they never learned at all; though Æschines, indeed, had some introduction to learning in his youth, as his father was a teacher; nor is it certain that Demades did not learn; and he might, by constant practice in speaking, which is the most efficient mode of learning, have made himself master of all the power of language that he ever possessed. 13. But we may safely say, that he would have been a better speaker if he had learned, for he never ventured to write out his speeches for publication, though we know that he produced considerable effect in delivering them.

14. Aristotle, for the sake of investigation, as is usual with him, has conceived, with his peculiar subtlety, certain arguments at variance with

my opinion in his Gryllus,⁹⁹ but he has also written three books *on the art of rhetoric*, in the first of which he not only admits that it is an art, but allows it a connection with civil polity, as well as with logic.¹⁰⁰ 15. Critolaus, and Athenodorus, of Rhodes, have advanced many arguments on the opposite side. Agnon,¹⁰¹ by the very title of his book, in which he avows that he brings an accusation against rhetoric, has deprived himself of all claim to be trusted.¹⁰² As to Epicurus, who shrunk from all learning, I am not at all surprised at him.

16. These reasoners say a great deal, but it is based upon few arguments; I shall therefore reply to the strongest of them in a very few words, that the discussion may not be protracted to an infinite length. 17. Their first argument is with regard to the *subject* or *matter*, “for all arts,” they say, “have some *subject*,” as is true, “but that oratory has *no peculiar subject*,” an assertion which I shall subsequently prove to be false. 18. The next argument is a more false charge, for “no art,” they say, “acquiesces in false conclusions, since art cannot be founded but on perception, which is always true; but that oratory adopts false conclusions, and is, consequently, not an art.” 19. That oratory sometimes advances what is false instead of what is true, I will admit, but I shall not for that reason acknowledge that the speaker acquiesces in false conclusions, for it is one thing for a matter to appear in a certain light to a person himself, and another for the person to make it appear in that light to others. A general often employs false representations, as did Hannibal, when, being hemmed in by Fabius, he tied faggots to the horns of oxen, and set them on fire, and, driving the herd up the opposite hills in the night, presented to the enemy the appearance of a retiring army; but Hannibal merely deceived

⁹⁹The work is lost. Gryllus was the son of Xenophon, that was killed at Mantinea. Aristotle seems to have borrowed his name; and he related, according to Diog. Laërt. ii. 58, that many eulogies were written on Gryllus, even for the sake of pleasing his father. The Gryllus of Aristotle is mentioned by Diog. Laërt. v. 22. *Spalding*. [Tr.]

¹⁰⁰Rhet. i. 2, 1. [Tr.]

¹⁰¹Of Athenodorus and Agnon nothing certain is known. *Spalding*. [Tr.]

¹⁰²The title of his book shows that he is not an impartial judge. [Tr.]

Fabius; he himself knew very well what the reality was. 20. Theopompus, the Lacedæmonian, when, on changing clothes with his wife, he escaped from prison in the disguise of a woman, came to no false conclusion concerning himself, though he conveyed a false notion to his guards. So the orator, whenever he puts what is false for what is true, knows that it is false, and that he is stating it instead of truth; he adopts, therefore, no false conclusion himself, but merely misleads another. 21. Cicero, when he threw a mist, as he boasts, over the eyes of the judges in the cause of Cluentius, was not himself deprived of sight; nor is a painter, when, by the power of his art, he makes us fancy that some objects stand out in a picture, and others recede, unaware that the objects are all on a flat surface.

22. But they allege also, that “all arts have a certain definite end to which they are directed; but that in oratory there is sometimes no end at all, and, at other times, the end which is professed is not attained.” They speak falsely, however, in this respect likewise, for we have already shown, that oratory has an end, and have stated what that end is, an end which the true orator will always attain, for he will always *speak well*. 23. The objection might, perhaps, hold good against those who think that the end of oratory is *to persuade*, but my orator and his art, as defined by me, do not depend upon the result; he indeed who speaks directs his efforts towards victory, but when he *has spoken well*, though he may not be victorious, he has attained the full end of his art. 24. So a pilot is desirous to gain the port with his vessel in safety, but if he is carried away from it by a tempest, he will not be the less a pilot, and will repeat the well-known saying, “May I but keep the helm right!”¹⁰³ 25. The physician makes the health of the patient his object, but if, through the violence of the disease, the intemperance of the sick person, or any other circumstance, he does not effect his purpose, yet, if he has done

¹⁰³A proverbial expression, from the Greek ὀρθῶν τὰν νεῦν: a portion of a prayer to Neptune: Grant, O Neptune, that I may guide the ship right. Spalding refers to Cic. ad Q. Fr. i. 2; Ep. ad Div. xii. 25; Sen. Epist. 85; Aristid. in Rhod. 542 ed. Jebb; Stobæus. p. 577; Isodore, Orig., who gives from Ennius, *Ut clavum rectum teneam navimque gubernem*; also Sen. Cons. ad M. Fil. c. 16; Erasmus, Adag. iii. 1, 28. [Tr.]

everything according to rule, he has not lost sight of the object of medicine. So it is the object of an orator to speak well, for his *art*, as we shall soon show still more clearly, consists in the *act*, and not in the *result*. 26. That other allegation, which is frequently made, must accordingly be false also, that *an art knows when it has attained its end, but that oratory does not know*, for every speaker is aware when he has spoken well.

They also charge oratory with having recourse to vicious means, which no true arts adopt, because it advances what is false, and endeavors to excite the passions. 27. But neither of those means is dishonorable, when it is used from a good motive, and, consequently, cannot be vicious. To tell a falsehood is sometimes allowed, even to a wise man; and the orator will be compelled to appeal to the feelings of the judges, if they cannot otherwise be induced to favor the right side. 28. Unenlightened men sit as judges,¹⁰⁴ who must, at times, be deceived, that they may not err in their decisions. If indeed judges were wise men; if assemblies of the people, and every sort of public council, consisted of wise men; if envy, favor, prejudice, and false witnesses, had no influence, there would be very little room for eloquence, which would be employed almost wholly to give pleasure. 29. But as the minds of the hearers waver, and truth is exposed to so many obstructions, the orator must use artifice in his efforts, and adopt such means as may promote his purpose, since he who has turned from the right way cannot be brought back to it but by another turning.

30. Some common sarcasms against oratory are drawn from the charge, that orators speak on both sides of a question; hence the remarks, that "*no art contradicts itself, but that oratory contradicts itself*"; that "*no art destroys what it has itself done, but that this is the case with what oratory does*"; that "*it teaches either what we ought to say, or what we ought not to say*, and that, in the one case, it cannot be an art, because it teaches what is not to be said, and, in the other, it cannot be an art, because, when it has taught

¹⁰⁴The reader will remember that the *judices* of the Romans were similar to our jurymen, but more numerous. See Adam's Roman Antiquities, or Smith's Dict. of Gr. and Rom. Ant. [Tr.]

what is to be said, it teaches also what is directly opposed to it." 31. All these charges, it is evident, are applicable only to that species of oratory which is repudiated by a good man and by virtue herself; since, where the cause is unjust, there true oratory has no place, so that it can hardly happen, even in the most extraordinary case, that a real orator, that is, a good man, will speak on both sides. 32. Yet, since it may happen, in the course of things, that just causes may, at times, lead two wise men to take different sides, (for the Stoics think that wise men may even contend with one another, if reason leads them to do so,¹⁰⁵) I will make some reply to the objections, and in such a way that they shall be proved to be advanced groundlessly, and directed only against such as allow the name of orator to speakers of bad character. 33. For *oratory does not contradict itself*; one cause is matched against another cause, but not oratory against itself. If two men, who have been taught the same accomplishment, contend with one another, the accomplishment which they have been taught will not, on that account, be proved not to be an art; for if such were the case, there could be no art in arms, because gladiators, bred under the same master, are often matched together; nor would there be any art in piloting a ship, because, in naval engagements, pilot is often opposed to pilot; nor in generalship, because general contends with general. 34. Nor does oratory *destroy what it has done*, for the orator does not overthrow the argument advanced by himself, nor does oratory overthrow it, because, by those who think that the end of oratory is to persuade, as well as by the two wise men, whom, as I said before, some chance may have opposed to one another, it is probability that is sought; and if, of two things, one at length appears more probable than the other, the more probable is not opposed to that which previously appeared probable; for as that which is more white is not adverse to that which is less white, nor that which is more sweet contrary to that

¹⁰⁵The Stoics were compelled to hold this opinion, for they said that to govern a state was the business of a wise man, and yet could not venture to affirm that a wise man was to be found in any particular state only. I cannot at this moment, however, find any passage among the ancient authors expressly to that effect. *Spalding*. [Tr.]

which is less sweet, so neither is that which is more probable contrary to that which is less probable. 35. Nor does oratory ever *teach what we ought not to say*, or that which is contrary to what we ought to say, but that which we ought to say in whatever cause we may take in hand. 36. And truth, though generally, is not always to be defended; and public good sometimes requires that a falsehood should be supported.¹⁰⁶

In Cicero's second book *De Oratore*,¹⁰⁷ are also advanced the following objections: *that art has place in things which are known, but that the pleading of an orator depends on opinion, not on knowledge, since he both addresses himself to those who do not know, and sometimes says what he himself does not know.* 37. One of these points, whether the judges have a knowledge of what is addressed to them, has nothing to do with the art of the orator; to the other, that *art has place in things which are known*, I must give some answer. Oratory is the art of speaking well, and the orator knows how to speak well. 38. But it is said, he does not know whether what he says is true; neither do the philosophers, who say that fire, or water, or the four elements, or indivisible atoms, are the principles from which all things had their origin, know that what they say is true; nor do those who calculate the distances of the stars, and the magnitudes of the sun and the earth, yet every one of them calls his system an *art*,¹⁰⁸ but if their reasoning has such effect that they seem not to *imagine*, but, from the force of their demonstrations, to *know* what they assert, similar reasoning may have a similar effect in the case of the orator. 39. But, it is further urged, he does not know whether the cause which he advocates has truth on its side; nor, I answer, does the physician know whether the patient, who says that he has the head-ache, really has it, yet he will treat him on the assumption that his assertion is true, and medicine will surely be allowed to be an art. Need I add, that oratory does not always purpose to say what is true, but does always purpose to say what is like truth? but the orator must

¹⁰⁶Compare c. 7, sect. 27, and sect. 27–29 of this chapter.

[Tr.]

¹⁰⁷C. 7. The words are put into the mouth of Antonius.

[Tr.]

¹⁰⁸Or *science*, as we should now term it. [Tr.]

know whether what he says is like truth or not. 40. Those who are unfavorable to oratory add, that pleaders often defend, in certain causes, that which they have assailed in others; but this is the fault, not of the art, but of the person.

These are the principal charges that are brought against oratory. There are others of less moment, but drawn from the same sources.

41. But that it is an *art*, may be proved in a very few words; for whether, as Cleanthes maintained, *an art is a power working its effects by a course*, that is *by method*, no man will doubt that there is a certain course and method in oratory; or whether that definition, approved by almost everybody, that *an art consists of perceptions consenting and cooperating to some end useful to life*, be adopted also by us, we have already shown that everything to which this definition applies is to be found in oratory. 42. Need I show that it depends on understanding and practice, like other arts? If logic be an art, as is generally admitted, oratory must certainly be an art, as it differs from logic rather in *species* than in *genus*. Nor must we omit to observe that in whatever pursuit one man may act according to a method, and another without regard to that method, that pursuit is an art; and that in whatever pursuit he who has learned succeeds better than he who has not learned, that pursuit is an art.

43. But, in the pursuit of oratory, not only will the learned excel the unlearned, but the more learned will excel the less learned; otherwise there would not be so many rules in it, or so many great men to teach it. This ought to be acknowledged by every one, and especially by me, who allow the attainment of oratory only to the man of virtue.

Chapter XVIII

Arts or sciences are of three kinds; rhetoric is a practical art or science, § 1, 2. Partakes of the nature of arts of other kinds, 3–5.

1. But as some arts consist merely in an insight into things, that is, knowledge of them, and judgment concerning them, such as *astronomy*, which requires no *act*, but is confined to a mere understanding of the matters that form the subject of it (a sort of art which is called θεωρητική, “theo-

retic"¹⁰⁹); others in action, the object of which lies in the act, and is fulfilled in it, leaving nothing produced from it (a sort of art which is called *πραχτική*, "practic"), as *dancing*; 2. others in production, which attain their end in the execution of the work which is submitted to the eye (a sort which we call *ποιητική*, "productive"), as *painting*, we may pretty safely determine that *oratory* consists in act, for it accomplishes in the act all that it has to do. Such indeed has been the judgment pronounced upon it by every one.

3. To me, however, it appears to partake greatly of the other sort of arts; for the subject of it may sometimes be restricted to contemplation; since there will be oratory in an orator even though he be silent; and if, either designedly, or from being disabled by any accident, he has ceased to plead, he will not cease to be an orator, more than a physician who has left off practice ceases to be a physician. 4. There is some enjoyment, and perhaps the greatest of all enjoyments, in retired meditation; and the pleasure derived from knowledge is pure when it is withdrawn from action, that is, from toil, and enjoys the calm contemplation of itself. 5. But oratory will also effect something similar to a productive art in written speeches and historical compositions, a kind of writings which we justly consider as allied to oratory. Yet if it must be classed as one of the three sorts of arts which I have mentioned, let it, as its performance consists chiefly in the mere act, and as it is most frequently exhibited *in act*, be called an *active*, or a *practical* art, for the one term is of the same signification as the other.

Chapter XIX

Nature and art; nature contributes more to oratory, in students of moderate ability, than art; in those of greater talent, art is of more avail; an example.

I. I am aware that it is also a question whether *nature* or *learning* contributes most to oratory. This inquiry, however, has no concern with the subject of my work; for a perfect orator can be

¹⁰⁹Such *artes* we call "sciences." The term *art* we distinguish from science by applying it only to that which produces something, as painting, architecture. [Tr.]

formed only with the aid of both; but I think it of great importance how far we consider that there is a question on the point. 2. If you suppose either to be independent of the other, nature will be able to do much without learning, but learning will be of no avail without the assistance of nature. But if they be united in equal parts, I shall be inclined to think that, when both are but moderate, the influence of nature is nevertheless the greater; but finished orators, I consider, owe more to learning than to nature. Thus the best husbandman cannot improve soil of no fertility, while from fertile ground something good will be produced even without the aid of the husbandman; yet if the husbandman bestows his labor on rich land, he will produce more effect than the goodness of the soil of itself. 3. Had Praxiteles attempted to hew a statue out of a millstone, I should have preferred to it an unhewn block of Parian marble;¹¹⁰ but if that statuary had fashioned the marble, more value would have accrued to it from his workmanship than was in the marble itself. In a word, nature is the material for learning; the one forms, and the other is formed. Art can do nothing without material; material has its value even independent of art; but perfection of art is of more consequence than perfection of material.

Chapter XX

Whether rhetoric be a virtue, as some call it, § 1-4. Proofs of this, according to the philosophers, 5-7. Other proofs, 8-10.

I. It is a question of a higher nature, whether oratory is to be regarded as one of those *indifferent* arts, which deserve neither praise nor blame in themselves, but become useful or otherwise according to the characters of those who practice them; or whether it is, as many of the philosophers are of opinion, a positive *virtue*.¹¹¹

¹¹⁰The lover of art will hardly agree with Quintilian. *Spalding*. But, as Rollin observes, nothing could have been less suitable for sculpture than the stone used for millstones; and Quintilian might suppose that it would have been impossible, even for a Praxiteles, to have produced even a tolerable statue from it. [Tr.]

¹¹¹See note on c. 15, sect. 20. "Virtues are distinguished by Aristotle into two kinds, the *intellectual*, which are exerted in the discovery of truth and the accomplishment of our ob-

2. The way, indeed, in which many have proceeded and still proceed in the practice of speaking, I consider either as *no art*, ἀτεχνία, as it is called, (for I see numbers rushing to speak without rule or learning, just as impudence or hunger has prompted them,) or as it were a *bad art*, which we term χαχοτεχνία; for I imagine that there have been many who have exerted, and that there are some who still exert, their talent in speaking to the injury of mankind. 3. There is also a kind of ματαιοτεχνία, a vain imitation of art, which indeed has in itself neither good nor evil, but a mere frivolous exercise of skill, such as that of the man who sent grains of vetches, shot from a distance in succession, and without missing, though a needle, and whom Alexander, after witnessing his dexterity, is said to have presented with a bushel of vetches; which was indeed a most suitable reward for his performance.¹¹²

4. To him I compare those who spend their time, with great study and labor, in the composition of declamations, which they strive to make as unlike as possible to anything that happens in real life.

But that oratory which I endeavor to teach, of which I conceive the idea in my mind, which is attainable only by a good man, and which alone is true oratory, must be regarded as *a virtue*. 5. This is an opinion which the philosophers support by many subtle arguments, but which appears to me to be more clearly established by the simpler mode of proof which follows, and which is pecu-

jects, under which head oratory may be included, as it is an art; and the *moral*, which influence the will, actions, and conduct, under which head Quintilian shows that oratory may also be ranked as a virtue." *Turnebus*. [Tr.]

¹¹²It has been a question what sort of performance we should conceive this man's to have been. Naudæus, or Naudé, in his *Syntagma de Studio Liberali*, cited by Bayle, Art. Macedonia, note S, says that the man put a pea in his mouth, and, blowing it out, made it stick upon the point of the needle. The interpretation is adopted by Bayle, and by Spalding; by Bayle with the utmost confidence, and by Spalding with some hesitation, for he admits that the verb *inserere* is hardly applicable to the fixing of peas on the point of a needle. For my part, I consider that the expression *inserere in acum* wholly forbids us to understand anything else than that the peas were driven through the needle's eye. We may suppose it to have been a peculiar needle, with a large eye, made for the purpose. How the peas were impelled, Quintilian leaves us to conjecture. [Tr.]

liarily my own. What is said by the philosophers is this: If it is a quality of virtue to be consistent with itself as to what ought to be done and what ought not to be done, (that quality, namely, which is called *prudence*,) the same quality will have its office as to what ought to be said or not to be said. 6. And if there are virtues, for the generation of which, even before we receive any instruction, certain principles and seeds are given us by nature,¹¹³ (as for that of justice, of which some notion is manifested even in the most ignorant and the most barbarous,) it is evident that we are so formed originally as to be able to speak for ourselves, though not indeed perfectly, yet in such a manner as to show that certain seeds of the faculty of eloquence are in us. 7. But in those arts which have no connection with virtue, there is not the same nature.¹¹⁴ As there are two kinds of speech, therefore, the *continuous*, which is called *oratory*, and the *concise*, which is termed *logic*, (which Zeno thought so nearly connected that he compared the one to a clenched fist, and the other to an open hand,) if the art of disputation¹¹⁵ be a virtue, there will be no doubt of the virtue of that which is of so much more noble and expansive a nature.

8. But I wish the reader to understand this more fully and plainly from what is done by oratory; for how will an orator succeed in *eulogy*, unless he has a clear knowledge of what is honorable and what is disgraceful? Or in *persuasion*, unless he understands what is advantageous? Or in *judicial pleadings*, unless he has a knowledge of justice? Does not oratory also demand fortitude, as the orator has often to speak in opposition to the turbulent threats of the populace, often with perilous defiance of powerful individuals, and sometimes, as on the trial of Milo, amidst surrounding weapons of soldiers? So that if oratory be not a virtue, it cannot be perfect.¹¹⁶

9. If, moreover, there is a sort of virtue in

¹¹³The Stoics and Academics said that the seeds of virtues were innate in us, and that, if we would but suffer them to grow, they would secure us a happy life. *Turnebus*. [Tr.]

¹¹⁴I wish that he had given an illustration of this position. [Tr.]

¹¹⁵*Ars Disputatrix*. That is, dialectics or logic. If mere dry logic be a virtue, how much more will rich and forcible eloquence be a virtue! [Tr.]

¹¹⁶On the contrary, if oratory be *perfect oratory*, it must necessarily be a *virtue*. [Tr.]

every species of animals, in which it excels the rest, or the greater number, of other animals, as force in the lion, and swiftness in the horse, and it is certain that man excels other animals in reason and speech, why should we not consider that the distinctive virtue of man lies as much in eloquence as in reason? Crassus in Cicero¹¹⁷ justly makes an assertion to this effect: "For eloquence," says he, "is one of the most eminent virtues," and Cicero himself, in his own character, both in his epistles to Brutus,¹¹⁸ and in many other passages of his writings, calls eloquence a virtue.

10. But, it may be alleged, a vicious man will sometimes produce an exordium, a statement of facts, and a series of arguments, in such a way that nothing shall be desired in them. So, we may answer, a robber will fight with great bravery, yet fortitude will still be a virtue; and a dishonest slave will bear torments without a groan, yet endurance of pain will still merit its praise. Many other things of the same nature occur, but from different principles of action. Let what I have said, therefore, as to eloquence being a virtue, be sufficient, for of its usefulness I have treated above.

Chapter XXI

Opinions as to the subject of rhetoric, § 1–4. That of Quintilian, which agrees with those of Plato and Cicero, 5, 6. Objections to it noticed, 7–11. No dispute between rhetoric and philosophy about their respective subjects, 12, 13. The orator not obliged to know everything, 14, 15. He will often speak better on arts than the artists themselves, 16–19. The opinion of Quintilian supported by those of other authors, 20–23.

1. As to the *material* of oratory, some have said that it is *speech*; an opinion which Gorgias in Plato¹¹⁹ is represented as holding. If this be un-

¹¹⁷De Orat. iii. 14. [Tr.]

¹¹⁸This passage the learned have in vain sought in the Epistles to Brutus; nor is their disappointment at all wonderful, if the ingenious and learned Tunstall is right, in his Epistle to Middleton, in condemning those epistles as spurious. His condemnation has an authoritative supporter in Ruhnken, ad Vell. Pat. ii. 12. *Spalding*. Of the spuriousness of the epistles to Brutus, as they are called, few, surely, will now be found to doubt. Such is their poverty of matter, and affectation of style, that it is wonderful that Middleton should ever have thought them comparable to the genuine letters of Cicero. [Tr.]

¹¹⁹Plato Gorg. p. 449–E. [Tr.]

derstood in such a way that a discourse, composed on any subject, is to be termed a *speech*, it is not the material, but the work; as the statue is the work of a statuary; for speeches, like statues, are produced by art. But if by this term we understand mere words, words are of no effect without matter. 2. Some have said that the material of oratory is *persuasive arguments*; which indeed are part of its business, and are the produce of art, but require material for their composition. Others say that its material is *questions of civil administration*; an opinion which is wrong, not as to the quality of the matter, but in the restriction attached; for such questions are the subject of oratory, but not the only subject. 3. Some, as oratory is a *virtue*, say that the subject of it is *the whole of human life*. Others, as no part of human life is affected by every virtue, but most virtues are concerned only with particular portions of life, (as *justice, fortitude, temperance*, are regarded as confined to their proper duties and their own limits,) say that oratory is to be restricted to one special part, and assign to it the *pragmatic* department of ethics, or *that which relates to the transactions of civil life*.

4. For my part, I consider, and not without authorities to support me, that the material of oratory is *everything that may come before an orator for discussion*. For Socrates in Plato seems to say to Gorgias¹²⁰ that *the matter of oratory is not in words but in things*. In the Phædrus he plainly shows that oratory has place, not only in judicial proceedings and political deliberations, but also in private and domestic matters. Hence it is manifest that this was the opinion of Plato himself.¹²¹

5. Cicero, too, in one passage,¹²² calls the material of oratory the topics which are submitted to it for discussion, but supposes that particular topics only are submitted to it. But in another passage¹²³ he gives his opinion that an orator has to speak upon all subjects, expressing himself in the following words: "The art of the orator, however, and his very profession of speaking well, seems to undertake and promise that he will speak ele-

¹²⁰Gorg. pp. 449–54. [Tr.]

¹²¹As being put into the mouth of Socrates. [Tr.]

¹²²De Orat. i. 15; Inv. i. 4. [Tr.]

¹²³De Orat. i. 6. [Tr.]

gantly and copiously on whatever subject may be proposed to him.” 6. In a third passage,¹²⁴ also, he says: “But by an orator, whatever occurs in human life (since it is on human life that an orator’s attention is to be fixed, as the matter that comes under his consideration) ought to have been examined, heard of, read, discussed, handled, and managed.”

7. But this *material* of oratory, as we define it, that is, the subjects that come before it, some have at one time stigmatized as indefinite,¹²⁵ at another as not belonging to oratory, and have called it, as thus characterized, an *ars circumcurrens*, an infinitely discursive art, as discoursing on any kind of subject. 8. With such as make these observations I have no great quarrel; for they allow that oratory speaks on all matters, though they deny that it has any peculiar *material*, because its material is manifold. 9. But though the material be manifold, it is not infinite; and other arts, of less consideration, deal with manifold material, as *architecture*, for instance, for it has to do with everything that is of use for building; and the art of *engraving*, which works with gold, silver, brass, and iron. As to *sculpture*, it extends itself, besides the metals which I have just named, to wood, ivory, marble, glass, and jewels. 10. Nor will a topic cease to belong to the orator because the professor of another art may treat of it; for if I should ask what is the material of the statuary, the answer will be “brass”; or if I should ask what is the material of the founder of vases, that is the worker in the art which the Greeks call *χαλκευτική*, the reply would also be “brass”; though vases differ very much from statues. 11. Nor ought medicine to lose the name of an art, because anointing and exercise are common to it with the *palæstra*, or because a knowledge of the quality of meats is common to it with cookery.

12. As to the objection which some make, that it is the business of *philosophy* to discourse of what is good, useful, and just, it makes nothing against me; for when they say a philosopher, they

¹²⁴De Orat. iii. 14. [Tr.]

¹²⁵*Infinitam*. Indefinite, indeterminate; because it represents oratory as devoted to no particular subject, but as ready to exert itself on any topic on which men can speak. *Capperonier*. [Tr.]

mean a good man; and why then should I be surprised that an orator, whom I consider to be also a good man, should discourse upon the same subjects? 13. especially when I have shown, in the preceding book,¹²⁶ that philosophers have taken possession of this province because it was abandoned by the orators, a province which had always belonged to oratory, so that the philosophers are rather trespassing upon our ground. Since it is the business of logic, too, to discuss whatever comes before it, and logic is uncontinuous oratory, why may not the business of continuous oratory be thought the same?

14. It is a remark constantly made by some, that *an orator must be skilled in all arts if he is to speak upon all subjects*. I might reply in this in the words of Cicero,¹²⁷ in whom I find this passage: “In my opinion no man can become a thoroughly accomplished orator, unless he shall have attained a knowledge of every subject of importance, and of all the liberal arts;” but for my argument it is sufficient that an orator be acquainted with the subject on which he has to speak. 15. He has not a knowledge of all causes, and yet he ought to be able to speak upon all. On what causes, then, will he speak? on such as he has learned. The same will be the case also with regard to the arts and sciences; those on which he shall have to speak he will study for the occasion, and on those which he has studied he will speak.

16. What then, it may be said, will not a builder speak of building, or a musician of music, better than an orator? Assuredly he will speak better, if the orator does not know what is the subject of inquiry in the case before him, with regard to matters connected with those sciences. An ignorant and illiterate person, appearing before a court, will plead his own cause better than an orator who does not know what the subject of dispute is; but an orator will express what he has learned from the builder, or the musician, or from his client, better than the person who has instructed him. 17. But the *builder* will speak well on *building*, or the *musician* on *music*, if any point in those arts shall require to be established by his opinion; he will not be an orator, but he

¹²⁶Procem. sect. 10 *seqq.* [Tr.]

¹²⁷De Orat. i. 6. [Tr.]

will perform his part like an orator, as when an unprofessional person binds up a wound, he will not be a surgeon, yet he will act as a surgeon.

18. Do subjects of this kind never come to be mentioned in *panegyric*, or *deliberative*, or *judicial* oratory? When it was under deliberation, whether a harbor should be constructed at Ostia,¹²⁸ were not orators called to deliver opinions on the subject? yet what was wanted was the professional knowledge of the architect. 19. Does not the orator enter on the question, whether discolorations and tumors of the body are symptoms of ill health or of poison?¹²⁹ yet such inquiries belong to the profession of medicine. Will an orator never have to speak of dimensions and numbers? yet we may say that such matters belong to mathematics; for my part, I believe that any subject whatever may, by some chance, come under the cognizance of the orator. If a matter does not come under his cognizance, he will have no concern with it.

20. Thus I have justly said, that *the material of oratory is everything that is brought under its notice for discussion*, an assertion which even our daily conversation supports, for whenever we have any subject on which to speak, we often signify by some prefatory remark, that the matter is laid before us. 21. So much was Gorgias¹³⁰ of opinion that an orator must speak of everything, that he allowed himself to be questioned by the people in his lecture-room, upon any subject on which any one of them chose to interrogate him. Hermagoras also, by saying, that “the matter of oratory lies in the cause and the questions¹³¹ connected with it,” comprehends under it every subject that can possibly come before it for discussion. 22. If indeed he supposed that *the questions* do not belong to oratory, he is of a different opinion from me; but if they do belong to oratory, I

¹²⁸See Suet. Claud. c. 20, where it is stated that the work had often been contemplated by Julius Cæsar, but deferred from time to time on account of its difficulty. [Tr.]

¹²⁹Cicero touches on this medical part, so to speak, of eloquence in his speech for Cluentius, c. 10. *Spalding*. [Tr.]

¹³⁰Plato Gorg. p. 447 C. In reference to this passage of Plato, see Cic. de Orat. iii. 32; i. 22; de Inv. i. 5; de Fin. ii. 1. [Tr.]

¹³¹See iii. 5, 16, iii. 6, 2. The questions meant are *general questions*, as, “Whether the senses may be trusted,” “Whether an old man ought to marry,” and the like, which Cicero excludes from the department of the orator, de Invent. i. 6. [Tr.]

am supported by his authority, for there is no subject that may not form part of a cause or the questions connected with it. 23. Aristotle,¹³² too, by making three kinds of oratory, the *judicial*, the *deliberative*, and the *demonstrative*, has put almost everything into the hands of the orator, for there is no subject that may not enter into one of the three kinds.

24. An inquiry has been also started, though by a very few writers, concerning the *instrument* of oratory. The instrument I call *that without which material cannot be fashioned and adapted to the object which we wish to effect*. But I consider that it is not the art that requires the instrument, but the artificer. Professional knowledge needs no tool, as it may be complete though it produces nothing, but the artist must have his tool, as the engraver his graving-instrument, and the painter his pencils, I shall therefore reserve the consideration of this point for that part of my work in which I intend to speak of *the orator*. . . .¹³³

BOOK X

Chapter II

Of imitation; necessity of it, and remarks upon it, § 1–13. Not every quality, even in eminent authors, is to be imitated; necessity of judgment in the choice of models for imitation, 14–21. We are not to imitate one author only, 22–26. Not to imitate style only, 27, 28.

1. From these authors, and others worthy to be read, a stock of words, a variety of figures, and the art of composition, must be acquired; and our minds must be directed to the imitation of all their excellences; for it cannot be doubted that a great portion of art consists in *imitation*, since, though to invent was first in order of time, and holds the first place in merit, yet it is of advantage to copy what has been invented with success. 2. Indeed the whole conduct of life is based on the desire of doing ourselves that which we approve in others.¹³⁴ Thus boys follow the traces of letters in order to acquire skill in writing; thus musicians follow the voice of their teachers,

¹³²Rhet. i. 3, 3; Cic. de Invent. i. 5. [Tr.]

¹³³B. xii. c. 5. [Tr.]

¹³⁴We might suppose that this sentence suggested to Adam Smith his *Theory of Moral Sentiments*. [Tr.]

painters look for models to the works of preceding painters, and farmers adopt the system of culture approved by experience. We see, in short, that the beginnings of every kind of study are formed in accordance with some prescribed rule.

3. We must, indeed, be either like or unlike those who excel; and nature rarely forms one *like*, though imitation does so frequently. But the very circumstance that renders the study of all subjects so much more easy to us, than it was to those who had nothing to imitate, will prove a disadvantage to us, unless it be turned to account with caution and judgment.

4. Undoubtedly, then, imitation is not sufficient of itself, if for no other reason than that it is the mark of an indolent nature to rest satisfied with what has been invented by others. For what would have been the case, if, in those times which were without any models, mankind had thought that they were not to execute or imagine anything but what they already knew? Assuredly nothing would have been invented. 5. Why then is it unlawful for anything to be devised by us which did not exist before? Were our rude forefathers, led, by the mere natural force of intellect, to the discovery of so many things, and shall not we be roused to inquiry by the certain knowledge which we possess that those who sought, found? 6. When those who had no master in any subject, have transmitted so many discoveries to posterity, shall not the experience which we have in some things assist us to bring to light others, or shall we have nothing but what we derive from other men's bounty, as some painters aim at nothing more than to know how to copy a picture by means of compasses and lines?

7. It is dishonorable even to rest satisfied with simply equalling what we imitate. For what would have been the case, again, if no one had accomplished more than he whom he copied? We should have nothing in poetry superior to Livius Andronicus, nothing in history better than the Annals of the Pontiffs; we should still sail on rafts; there would be no painting but that of tracing the outlines of the shadow which bodies cast in the sunshine.¹³⁵ 8. If we take a view of all arts,

¹³⁵That such delineation was the origin of painting every one asserts; who first practiced it, no one tells us. See Pliny,

no one can be found exactly as it was when it was invented; no one that has confined itself within its original limits; unless, indeed, we have to convict our own times, beyond all others, of this unhappy deficiency, and to consider that now at last nothing improves; for certainly nothing does improve by imitation only. 9. But if it is not allowable to add to what has preceded us, how can we ever hope to see a complete orator, when among those, whom we have hitherto recognized as the greatest, no one has been found in whom there is not something defective or censurable? Even those who do not aim at the highest excellence, should rather try to excel, than merely follow, their predecessors; for he who makes it his object to get before another, will possibly, if he does not go by him, get abreast of him. 10. But assuredly no one will come up with him in whose steps he thinks that he must tread, for he who follows another must of necessity always be behind him. Besides, it is generally easier to do more, than to do precisely the same; since exact likeness is attended with such difficulty that not even nature herself has succeeded in contriving that the simplest objects,¹³⁶ and such as may be thought most alike, shall not be distinguished by some perceptible difference. 11. Moreover, everything that is the resemblance of something else, must necessarily be inferior to that of which it is a copy, as the shadow to the substance, the portrait to the natural face, and the acting of the player to the real feeling. The same is the case with regard to oratorical composition; for in the originals, which we take for our models, there is nature and real power, while every imitation, on the contrary, is something counterfeit, and seems adapted to an object not its own. 12. Hence it happens that declamations have less spirit and force than actual pleadings, because in one the subject is real, in the other fictitious. In addition to all this, whatever excellences are most remarkable in an orator, are inimitable, as natural talent,

H. N. xxxv. 3; Athenag, Leg. pro Christ. p. 59 ed. Dechair. Gesner. [Tr.]

¹³⁶*Res simplicissimæ*. That is, those among which the least variety is found; those which we must not expect to be much distinguished one from another; as blades of grass and leaves. Spalding. [Tr.]

invention, energy, easiness of manner, and whatever cannot be taught by art. 13. In consequence, many students, when they have selected certain words, or acquired a certain rhythm of composition, from any orator's speeches, think that what they have read is admirably represented in their own sentences; though words fall into desuetude, or come into use, according to the fashion of the day, of that the most certain rule for their use is found in custom, and they are not in their own nature either good or bad, (for in themselves they are only sounds,) but just as they are suitably and properly applied, or otherwise; and when our composition is best adapted to our subject, it becomes most pleasing from its variety.

14. Everything, therefore, relating to this department of study, is to be considered with the nicest judgment. First of all, we must be cautious as to the authors whom we would imitate, for many have been desirous to resemble the worst and most faulty originals. In the next place, we must examine what there is in the authors whom we have chosen for models, that we should set ourselves to attain, for even in great writers there occur faulty passages and blemishes, which have been censured by the learned in their remarks on one another; and I wish that our youth would improve in their oratory by imitating what is good, as much as they are deteriorated in it by copying what is bad.

15. Nor let those who have sufficient judgment for avoiding faults, be satisfied with forming a semblance, a mere cuticle, if I may so express myself, of excellence, or rather one of those images of Epicurus, which he says are perpetually flying off from the surfaces of bodies. 16. This, however, is the fate of those who, having no thorough insight into the merits of a style, adapt their manner, as it were, to the first aspect of it; and even when their imitation proves most successful, and when they differ but little from their original author, in language and harmony, they yet never fully attain to his force or fertility of language, but commonly degenerate into something worse, lay hold on such defects as border on excellences, and become tumid instead of great, weak instead of concise, rash instead of bold, licentious instead of exuberant, tripping instead of dignified, careless instead of simple. 17. Accordingly, those who have produced something dry and inane, in a rough and inele-

gant dress, fancy themselves equal to the ancients; those who reject embellishment of language or thought, compare themselves, forsooth, to the Attic writers; those who become obscure by curtailing their periods, excel Sallust and Thucydides; the dry and jejune rival Pollio; and the dull and languid, if they but express themselves in a long period, declare that Cicero would have spoken just like themselves. 18. I have known some, indeed, who thought that they had admirably represented the divine orator's manner in their speeches, when they had put at the end of a period *esse videatur*.¹³⁷ The first consideration, therefore, for the student, is, that he should understand *what he proposes to imitate*, and have a thorough conception *why it is excellent*.

19. Next, in entering on his task, let him consult his own powers, (for some things are inimitable by those whose natural weakness is not sufficient for attaining them, or whose natural inclination is repugnant to them,) lest he who has but a feeble capacity, should attempt only what is arduous and rough, or lest he who has great but rude talent, should waste his strength in the study of refinement, and fail of attaining the elegance of which he is desirous; for nothing is more ungraceful than to treat of delicate subjects with harshness. 20. I did not suppose, indeed, that by the master whom I instructed in my second book,¹³⁸ those things only were to be taught, to which he might see his pupils severally adapted by nature; he ought to improve whatever good qualities he finds in them; to supply, as far as he can, what is deficient; to correct some things and to alter others; for he is the director and regulator of the minds of others; to mold his own nature may be more difficult. 21. But not even such a teacher, however he may wish everything that is right to be found in the highest excellence in his pupils, will labor to any purpose in that to which he shall see that nature is opposed.

There is another thing also to be avoided, a matter in which many err; we must not suppose that poets and historians are to be the objects of our imitation in oratorical composition, or orators and declaimers in poetry or history. 22. Every species of writing has its own prescribed law;

¹³⁷IX. 4, 73. [Tr.]

¹³⁸C. 8. [Tr.]

each its own appropriate dress; for comedy does not strut in tragic buskins, nor does tragedy stop along in the slipper of comedy: yet all eloquence has something in common; and let us look on that which is common as what we must imitate. 23. On those who have devoted themselves to one particular kind of style, there generally attends this inconvenience, that if, for example, the roughness of some writer has taken their fancy, they cannot divest themselves of it in pleading those causes which are of a quiet and subdued nature; or if a simple and pleasing manner has attracted them, they become unequal to the weight of their subject in complex and difficult causes; when not only the nature of one cause is different from that of another, but the nature of one part of a cause differs from that of another part, and some portions are to be delivered gently, others roughly, some in a vehement, others in an easy tone, some for the purpose of informing the hearer, others with a view to excite his feelings; all which require a different and distinct style. 24. I shall not, therefore, advise a student to devote himself entirely to any particular author, so as to imitate him in all respects. Of all the Greek orators Demosthenes is by far the most excellent; yet others, on some occasions, may have expressed themselves better; and he himself has expressed many things better on some occasions than on others. But he who deserves to be imitated most, is not therefore the only author to be imitated. 25. "What then?" the reader may ask, "is it not sufficient to speak on every subject as Cicero spoke?" To me, assuredly, it would be sufficient, if I could attain all his excellences. Yet what disadvantage would it be to assume, on some occasions, the energy of Cæsar, the asperity of Cælius, the accuracy of Pollio, the judgment of Calvus? 26. For besides that it is the part of a judicious student to make, if he can, whatever is excellent in each author his own, it is also to be considered, that if, in a matter of such difficulty as imitation, we fix our attention only on one author, scarcely any one portion of his excellence will allow us to become masters of it. Accordingly, since it is almost denied to human ability to copy fully the pattern which we have chosen, let us set before our eyes the excellences of several, that different qualities from different writers may fix themselves in our minds, and that

we may adopt, for any subject, the style which is most suitable to it.

27. But let imitation (for I must frequently repeat the same precept¹³⁹) not be confined merely to words. We ought to contemplate what propriety was observed by those great men,¹⁴⁰ with regard to things and persons; what judgment, what arrangement, and how everything, even what seems intended only to please, was directed to the attainment of success in their cause. Let us notice what is done in their exordium; how skillful and varied is their statement of facts; how great is their ability in proving and refuting; how consummate was their skill in exciting every species of emotion; and how even the applause which they gained from the public was turned to the advantage of their cause; applause which is most honorable when it follows unsolicited, not when it is anxiously courted. If we gain a thorough conception of all these matters, we shall then be such imitators as we ought to be. 28. But he who shall add to these borrowed qualities excellences of his own, so as to supply what is deficient in his models, and to retrench what is redundant, will be the complete orator whom we desire to see; and such an orator ought now surely to be formed, when so many more examples of eloquence exist than fell to the lot of those who have hitherto been considered the best orators; for to them will belong the praise, not only of surpassing those who preceded them, but of instructing those who followed.

Chapter III

Of writing; utility of it, § 1–4. How, and what, we should write; necessity of correction, 5–14. Judicious exercise requisite, 15–18. Objections to dictation, 19–21. A retired place desirable for composition; of writing at night, 22–27. But retirement cannot always be secured, and we must do our best in the circumstances in which we find ourselves, 28–30. Further remarks, 31–33.

1. Such, then, are the means of improvement to be derived from external sources. But of those which we must secure for ourselves, *practice in*

¹³⁹Comp. sect. 13, 16. [Tr.]

¹⁴⁰Who are named in the preceding paragraph. [Tr.]

writing, which is attended with the most labor, is attended also with the greatest advantage. Nor has Cicero without reason called the pen *the best modeler and teacher of eloquence*; and by putting that opinion into the mouth of Lucius Crassus, in his Dialogues on the character of the Orator,¹⁴¹ he has united his own judgment to the authority of that eminent speaker.

2. We must write, therefore, as carefully, and as much, as we can; for as the ground, by being dug to a great depth, becomes more fitted for fructifying and nourishing seeds, so improvement of the mind, acquired from more than mere superficial cultivation, pours forth the fruits of study in richer abundance, and retains them with greater fidelity. For without this precaution, the very faculty of speaking extempore will but furnish us with empty loquacity, and words born on the lips.¹⁴² 3. In writing are the roots, in writing are the foundations of eloquence; by writing resources are stored up, as it were, in a sacred repository, whence they may be drawn forth for sudden emergencies, or as circumstances require. Let us above all things get strength, which may suffice for the labor of our contests, and may not be exhausted by use. 4. Nature has herself appointed that nothing great is to be accomplished quickly, and has ordained that difficulty should precede every work of excellence;¹⁴³ and she has even made it a law with regard to gestation, that the larger animals are retained longer in the womb of the parent.

5. But as two questions arise from this subject, *how*, and *what*, we ought principally to write, I shall consider them both in this order. Let our pen be at first slow, provided that it be accurate. Let us search for what is best, and not allow ourselves to be readily pleased with whatever presents itself; let judgment be applied to our thoughts, and skill in arrangement to such of

¹⁴¹De Orat. i. 33. [Tr.]

¹⁴²In *labris nascentia*. Not coming from the depths of the understanding. [Tr.]

¹⁴³In allusion, probably, to the line of Hesiod, Op. et Di. i. 287,

Τῆς δ' ἀρετῆς ἰδρωῶτα θεοὶ προσᾶρξοιθεν ἔθηχαν.

Where Virtue dwells, the gods have plac'd before

The dropping sweat that springs from ev'ry pore. *Elton*.

[Tr.]

them as the judgment sanctions; for we must make a selection from our thoughts and words, and the weight of each must be carefully estimated; and then must follow the art of collocation, and the rhythm of our phrases must be tried in every possible way, since any word must not take its position just as it offers itself. 6. That we may acquire this accomplishment with the more precision, we must frequently repeat the last words of what we have just written; for besides that by this means what follows is better connected with what precedes, the ardor of thought, which has cooled by the delay of writing, recovers its strength anew, and, by going again over the ground, acquires new force; as is the case, we see, in a contest of leaping; men run over a certain portion of ground that they may take a longer spring, and be carried with the utmost velocity to the other part on which they aim at alighting; as in hurling a javelin, too, we draw back the arm; and, when going to shoot an arrow, we pull back the bowstring. 7. At times, however, if a gale bear us on, we may spread our sails to it, provided that the license which we allow ourselves does not lead us astray; for all our thoughts please us at the time of their birth; otherwise they would not be committed to writing. But let us have recourse to our judgment, and revise the fruit of our facility, which is always to be regarded with suspicion. 8. Thus we learn that Sallust wrote; and his labor, indeed, is shown in his productions. That Virgil wrote very few verses in a day Varus bears testimony.¹⁴⁴ 9. With the speaker, indeed, the case is different; and I, therefore, enjoin this delay and solicitude only at the commencement of his course; for we must make it first of all our object, and must attain that object, to write as well as we can; practice will bring celerity; thoughts, by degrees, will present themselves with greater readiness, words will correspond to them, and suitable arrangement will follow; and everything, in a word, as in a well ordered household, will be ready for service. 10. The sum of the whole matter, indeed, in this; that by writing quickly we are not brought to

¹⁴⁴See Aul. Gell. xvii. 10, where it is related that Virgil used to say of himself, that he licked his verses into shape as bears lick their cubs. [Tr.]

write well, but that by writing well we are brought to write quickly. But after this facility has been attained, we must then, most of all, take care to stop and look before us, and restrain our high-mettled steeds with the curb; a restraint which will not so much retard us, as give us new spirit to proceed.

Nor, on the other hand, do I think that those, who have acquired some power in the use of the pen, should be chained down to the unhappy task of perpetually finding fault with themselves. 11. For how could he perform his duty to the public, who should waste his life in polishing every portion of his pleadings? But there are some whom nothing ever satisfies; who wish to alter everything, and to express everything in a different form from that in which it first occurs to them. Some, again, there are, who, distrustful of themselves, and paying an ill compliment to their own powers, think that accuracy in writing means to create for themselves extraordinary difficulties. 12. Nor is it easy for me to say which I regard as more in the wrong, those whom everything that they produce, or those whom nothing that they produce, pleases; for it is often the case even with young men of talent, that they wear themselves away with useless labor, and sink into silence from too much anxiety to speak well. In regard to this subject, I remember that Julius Secundus,¹⁴⁵ a contemporary of mine, and, as is well known, dearly beloved by me, a man of extraordinary eloquence, but of endless labor, mentioned to me something that had been told him by his uncle. 13. This uncle was Julius Florus,¹⁴⁶ the most celebrated man for eloquence in the provinces of Gaul, (for it was there that he practiced it,) and, in other respects, an orator to be ranked with few, and worthy of his relationship to Secundus. He, happening one day to observe that Secundus, while he was still working at school, was looking dejected, asked him what was the reason of his brow being so overcast. 14. The youth used no concealment, but told him that that was the third day that he had been vainly endeavoring, with his utmost efforts, to find an

exordium for a subject on which he had to write; whence not only grief had affected him in respect to the present occasion, but despair in regard to the time to come. Florus immediately replied with a smile, *Do you wish to write better than you can?* 15. Such is the whole truth of the matter; we must endeavor to speak with as much ability as we can, but we must speak according to our ability. For improvement there is need of application, but not of vexation with ourselves.

But to enable us to write more, and more readily, not *practice* only will assist, (and in practice there is doubtless great effect,) but also *method*, if we do not, lolling at our ease, looking at the ceiling, and trying to kindle our invention by muttering to ourselves,¹⁴⁷ wait for what may present itself, but, observing what the subject requires, what becomes the character concerned, what the nature of the occasion is, and what the disposition of the judge, set ourselves to write like reasonable beings; for thus nature herself will supply us not only with a commencement but with what ought to follow. 16. Most points, indeed, are plain, and set themselves before our eyes if we do not shut them; and accordingly not even the illiterate and untaught have long to consider how to begin; and therefore we should feel the more ashamed if learning produces difficulty. Let us not, then, imagine that what lies hid is always best; or, if we think nothing fit to be said but what we have not discovered, we must remain dumb.

17. A different fault is that of those who wish, first of all, to run through their subject with as rapid a pen as possible, and, yielding to the ardor and impetuosity of their imagination, write off their thoughts, extemporaneously, producing what they call a rough copy,¹⁴⁸ which they then go over again, and arrange what they have hastily poured forth; but though the words and rhythm of the sentences are mended, there still remains the same want of solid connection that there was originally in the parts hurriedly thrown together. 18. It will be better, therefore, to use care at first,

¹⁴⁵C. 1, sect. 120. [Tr.]

¹⁴⁶Spalding supposes this to be the Julius Florus to whom Horace addresses the third epistle of his first book. [Tr.]

¹⁴⁷Comp. ii. 11, 4. [Tr.]

¹⁴⁸*Silvam*. The thoughts being committed to writing, without any regular order, like trees in a wood. Cicero uses the word more than once in this sense. [Tr.]

and so to form our work from the beginning that we may have merely to polish it, and not to mold it anew. Sometimes, however, we may give a loose to our feeling, in the display of which warmth is generally of more effect than accuracy.

19. From my disapprobation of carelessness in writing, it is clearly enough seen what I think of the fine fancy of dictation;¹⁴⁹ for in the use of the pen, the hand of the writer, however rapid, as it cannot keep pace with the celerity of his thoughts, allows them some respite; but he to whom we dictate urges us on, and we feel ashamed at times to hesitate, or stop, or alter, as if we were afraid to have a witness of our weakness. 20. Hence it happens, that not only inelegant and casual expressions, but sometimes unsuitable ones, escape us, while our sole anxiety is to make our discourse connected; expressions which partake neither of the accuracy of the writer nor of the animation of the speaker; while, if the person who takes down what is dictated, prove, from slowness in writing, or from inaccuracy in reading, a hindrance, as it were, to us, the course of our thought is obstructed, and all the fire that had been conceived in our mind is dispelled by delay, or, sometimes, by anger at the offender. 21. Besides, those gestures which accompany the stronger excitements of the mind, and which, in some degree, rouse the imagination, such as waving of the hand, alteration of the features, turning from side to side, and all such acts as Persius satirizes, when he alludes to a negligent species of style, (the writer, he says,

Nec pluteum cædit, nec demorsos sapit ungues,
Nor thumps his desk, nor tastes his bitten nails,)

are utterly ridiculous except when we are alone. 22. In short, to mention once for all the strongest argument against dictation, privacy is rendered impossible by it; and that a spot free from wit-

¹⁴⁹*De illis dictandi deliciis.* Self-indulgence, and dislike of labor, had then become so prevalent that men of any station were growing careless about manual dexterity in writing, and, subsequently, *to dictate*, instead of *to write*, became a great portion of the business of the learned. Thus Sidonius Apollinaris, viii. 6, says that he had excelled many others *vario dictandi genere*, "in the various departments of dictation," and speaks of the three employments *certandi, dictandi, lectitandique*. Gesner. [Tr.]

nesses, and the deepest possible silence, are the most desirable for persons engaged in writing, no one can doubt.

Yet we are not therefore necessarily to listen to those, who think that groves and woods are the most proper places for study, because, as the free and open sky, they say, and the beauty of sequestered spots, give elevation to the mind and a happy warmth to the imagination. 23. To me, assuredly, such retirement seems rather conducive to pleasure than an incentive to literary exertion; for the very objects that delight us must, of necessity, divert our attention from the work which we designed to pursue; for the mind cannot, in truth, attend effectually to many things at once, and in whatever direction it looks off, it must cease to contemplate what had been intended for its employment. 24. The pleasantness, therefore, of the woods, the streams gliding past, the breezes sporting among the branches of the trees, the songs of birds, and the very freedom of the extended prospect, draw off our attention to them; so that all such gratifications seem to me more adapted to relax the thoughts than to brace them. 25. Demosthenes acted more wisely, who secluded himself in a place where no voice could be heard, and no prospect contemplated, that his eyes might not oblige his mind to attend to anything else besides his business. As for those who study by lamplight, therefore, let the silence of the night, the closed chamber, and a single light, keep them as it were wholly in seclusion. 26. But in every kind of study, and especially in such nocturnal application, good health, and that which is the principal means of securing it, regularity of life,¹⁵⁰ are necessary, since we devote the time appointed us by nature for sleep and the recruiting of our strength, to the most intense labor; but on this labor we must not bestow more time than what is too much for sleep, and what will not leave too little for it; 27. for weariness hinders application to writing; and daylight, if we are free from other occupations, is abundantly sufficient for it; it is necessity that drives men en-

¹⁵⁰*Frugalitas.* Beware of circumscribing the meaning of this word within the limits to which we at present generally confine it, and of understanding it merely as temperance in regard to meat and drink. It signifies *boni mores*, as in xii. 1, 8. Spalding. [Tr.]

gaged in business to read at night. Yet study by the lamp, when we come to it fresh and vigorous, is the best kind of retirement.

28. But silence and seclusion, and entire freedom of mind, though in the highest degree desirable, cannot always fall to our lot; and therefore we must not, if any noise disturbs us, immediately throw aside our books, and deplore the day as lost, but we must strive against inconveniences, and acquire such habits, that our application may set all interruptions at defiance; for if we direct our attention, with our whole mental energy, to the work actually before us, nothing of all that strikes our eyes or ears will penetrate into the mind. 29. Does a casual train of thought often cause us not to see persons in our way, and to wander from our road, and shall we not attain the same abstraction if we resolve to do so? We must not yield to excuses for idleness; for if we fancy that we must not study except when we are fresh, except when we are in good spirits, except when we are free from all other cares, we shall always have some reason for self-indulgence. 30. In the midst of crowds, therefore, on a journey, and even at festive meetings, let thought secure for herself privacy. Else what will be the result, when we shall have, in the midst of the forum, amid the hearing of so many causes, amid wranglings and casual outcries, to speak, perhaps on a sudden, in a continued harangue, if we cannot conceive the memoranda which we enter on our tablets, anywhere but in solitude? For this reason Demosthenes, though so great a lover of seclusion, used to accustom himself, by studying on the seashore, where the breakers dashed with the loudest noise, not to be disconcerted at the uproar of public assemblies.

31. Some lesser matters also (though nothing is little that relates to study) must not be left unnoticed; one of which is, that we can write best on *waxen tablets*, from which there is the greatest facility for erasing, unless, perchance, weakness of sight¹⁵¹ requires the use of parchment; but parchment, though it assists the sight, yet, from the frequent movement of the hand backwards and forwards, while dipping the pen in the ink,

¹⁵¹The letters, it appears, were plainer and more legible on parchment or paper than on waxen tablets. [Tr.]

causes delay, and interrupts the current of thought. 32. Next we may observe, that in using either of these kinds of material, we should take care to leave some pages blank, on which we may have free scope for making any additions (since want of room sometimes causes a reluctance to correct, or, at least, what was written first makes a confused mixture with what is inserted). But I would not have the waxen tablets extravagantly broad, having found a youth, otherwise anxious to excel, make his compositions of too great a length, because he used to measure them by the number of lines, a fault which, though it could not be corrected by repeated admonitions, was at last removed by altering the size of his tablets. 33. There should also be a portion of space left vacant on which may be noted down what frequently occurs *out of order* to persons who are writing, that is, in reference to other subjects than those which we have in hand; for excellent thoughts sometimes start into our minds, which we cannot well insert in our pages, and which it is not safe to delay noting down, because they sometimes escape us, and sometimes, if we are anxious to keep them in memory, divert us from thinking of other things. Hence they will be properly deposited in a place for memoranda.

Chapter IV

Observations on correction; we must not indulge in it too much.

1. Next follows *correction*, which is by far the most useful part of our studies; for it is believed, and not without reason, that the pen is not least serviceable when it is used to erase.¹⁵² Of correction there are three ways, to *add*, to *take away*, and to *alter*.

In regard, however, to what is to be *added* or *taken away*, the decision is comparatively easy and simple; but to compress what is tumid, to raise what is low, to prune what is luxuriant, to regulate what is ill-arranged, to give compactness to what is loose, to circumscribe what is extravagant, is a two-fold task; for we must reject things

¹⁵²When it prunes luxuriance and exuberance of style. See Cicero de Orat. ii. 23. [Tr.]

that had pleased us, and find out others that had escaped us. 2. Undoubtedly, also, the best method for correction is to lay by for a time what we have written, so that we may return to it, after an interval, as if it were something new to us, and written by another, lest our writings, like newborn infants, compel us to fix our affections on them.

3. But this cannot always be done, especially by the orator, who must frequently write for present purposes; and correction must therefore have its limits; for there are some that return to whatever they compose as if they presumed it to be incorrect; and, as if nothing could be right that has presented itself first, they think whatever is different from it is better, and find something to correct as often as they take up their manuscript, like surgeons who make incisions even in sound places; and hence it happens that their writings are, so to speak, scarred and bloodless, and rendered worse by the remedies applied. Let what we write, therefore, sometimes please, or at least content us, that the file may polish our work, and not wear it to nothing. To the time, too, allowed for correction, there must be a limit; for as to what we hear about Cinna's *Zmyrna*,¹⁵³ that it occupied nine years in writing, and about the Panegyric of Isocrates, which they who assign the shortest period to its production,¹⁵⁴ assert to have been ten years in being finished, it is of no import to the orator, whose aid would be useless if it were so long in coming.

Chapter V

What sort of composition we should practice; of translating Greek into Latin, § 1–8. Of putting the writing of eminent authors into other words, 9–11. Of theses, common places, declamations, and other species of composition and exercise, 12–20. Cases for declamation should be as similar as possible to real cases, 21–23.

1. The next point is, to decide *on what we should employ ourselves when we write*. It would be a

¹⁵³*Zmyrna* or *Myrrha*, see ix. 2, 64. The author was Caius Helvius Cinna; and that he was nine years about the poem, (or play, as Gedoyne inclines to think it,) is stated in one of the epigrams of Catullus. Horace's term of "nine years" was probably taken from Cinna's period of devotion to his work. [Tr.]

¹⁵⁴Some say that it occupied fifteen years, as Plutarch observes in his *Life of Isocrates*. *Spalding*. [Tr.]

superfluous labor, indeed, to detail what subjects there are for writing, and what should be studied first, or second, and so on in succession; for this has been done in my first book,¹⁵⁵ in which I prescribed the order for the studies of boys, and in my second,¹⁵⁶ where I specified those of the more advanced; and what is now to be considered, is whence copiousness and facility of expression may be derived.

2. To translate Greek into Latin our old orators thought to be a very excellent exercise. Lucius Crassus, in the well-known books of Cicero *De Oratore*,¹⁵⁷ says that he often practiced it; and Cicero himself, speaking in his own person,¹⁵⁸ very frequently recommends it, and has even published books of Plato and Xenophon¹⁵⁹ translated in that kind of exercise. It was also approved by Messala; and there are extant several versions of speeches made by him, so that he even rivalled the oration of Hyperides for Phryne in delicacy of style, a quality most difficult of attainment to Romans. 3. The object of such exercise is evident; for the Greek authors excel in copiousness of matter, and have introduced a vast deal of art into the study of eloquence; and, in translating them, we may use the very best words, for all that we use may be our own. As to figures,¹⁶⁰ by which language is principally ornamented, we may be under the necessity of inventing a great number and variety of them, because the Roman tongue differs greatly from that of the Greeks.

4. But the conversion of Latin writing into other words will also be of great service to us. About the utility of turning poetry into prose, I suppose that no one has any doubt; and this is the

¹⁵⁵C. 9. [Tr.]

¹⁵⁶C. 4, 10. [Tr.]

¹⁵⁷I. 34. [Tr.]

¹⁵⁸I am not able to point out any passage to that effect in Cicero's works; for I have no recollection that the study of Greek literature is recommended by him otherwise than generally, as at the beginning of the first book *De Officiis*, in the books *De Finibus*, and in that part of the *Brutus* where he speaks of his own plan of study. *Spalding*. [Tr.]

¹⁵⁹The *Timæus* and *Protagoras* of Plato, and the *Æconomics* of Xenophon. [Tr.]

¹⁶⁰Verbal figures, says *Spalding*, and figures of grammar rather than of rhetoric, the allusion being to the art which a translator must use in rendering from Greek into Latin. See i. 1, 13; iv. 2, 118. [Tr.]

only kind of exercise that Sulpicius is said to have used; for its sublimity may elevate our style, and the boldness of the expressions adopted by poetic license does not preclude the orator's efforts to express the same thoughts in the exactness of prose. He may even add to those thoughts oratorical vigor, supply what has been omitted, and give compactness to that which is diffuse, since I would not have our paraphrase to be a mere interpretation, but an effort to vie with and rival our original in the expression of the same thoughts. 5. I therefore differ in opinion from those who disapprove of paraphrasing Latin orations,¹⁶¹ on the pretext that, as the best words and phrases have been already used, whatever we express in another form, must of necessity be expressed worse. But for this allegation there is no sufficient ground; for we must not despair of the possibility of finding something better than what has been said; nor has nature made language so meager and poor that we cannot speak well on any subject except in one way; unless we suppose, indeed, that the gestures of the actor can give a variety of turns to the same words, but that the power of eloquence is so much inferior that when a thing has been once said, nothing can be said after it to the same purpose. 6. But let it be granted that what we conceive is neither better than our original nor equal to it; yet it must be allowed, at the same time, that there is a possibility of coming near to it. 7. Do not we ourselves at times speak twice or oftener, and sometimes a succession of sentences, on the same subject, and are we to suppose that though we can contend with ourselves we cannot contend with others? If a thought could be expressed well only in one way, it would be but right to suppose that the path of excellence has been shut against us by some of our predecessors; but in a reality there are still innumerable modes of saying a thing, and many roads leading to the same point. 8. Conciseness has its charms, and so has copiousness; there is one kind of beauty in metaphorical, another in simple expressions; direct expressions become one subject, and such as are varied by figures another. In addition, the difficulty of the exercise is most serviceable. Are not our great-

¹⁶¹Something to this effect is said by Crassus in Cicero de Orat. i. 34. [Tr.]

est authors by this means studied more carefully? For, in this way, we do not run over what we have written in a careless mode of reading, but consider every individual portion, and look, from necessity, thoroughly into their matter, and learn how much merit they possess from the very fact that we cannot succeed in imitating them.

9. Nor will it be of advantage to us only to alter the language of others; it will be serviceable also to vary our own in a number of different forms, taking certain thoughts for the purpose, and putting them, as harmoniously as possible, into several shapes, just as different figures are molded out of the same wax. 10. But I consider that the greatest facility in composition is acquired by exercise in the simplest subjects; for in treating of a multiplicity of *persons, causes, occasions, places, sayings, and actions*, our real weakness in style may readily escape notice amidst so many subjects which present themselves on all sides, and on some of which we may readily lay hold. 11. But the great proof of power is to expand what is naturally contracted, to amplify what is little, to give variety to things that are similar, and attraction to such as are obvious, and to say with effect much on a little.

To this end *indefinite questions* will much contribute, questions which we call *θεσεις*, and on which Cicero, even when he had become the first orator in his country, used to exercise himself. 12. Next in utility to these are *refutations and defenses of sentences*; for as a sentence is a sort of decree and order, whatever questions may arise regarding the subject of it, may also arise regarding the decision on the subject. Next stand *commonplaces*, on which we know that accomplished orators have written. For he who shall succeed in treating fully on questions that are plain and direct, and do not involve any complicated inquiries, will be still better able to expatiate on such as admit of excursive discussion, and will be prepared for any cause whatever. 13. All causes, indeed, rest on general questions; for what difference does it make, for instance, whether *Cornelius, as tribune of the people, is accused of having read to the people the manuscript of a proposed law*, or whether we have to consider the general question, *Is it a breach of the dignity of office, if a magistrate reads his own law to the people in his own person?* What

difference does it make whether the question to be tried is, *Did Milo lawfully kill Clodius?* or, *Ought a liar-in-wait to be killed, or a mischievous member of the commonwealth, even though he be not a liar-in-wait?* What is the difference whether the question is, *Did Cato act properly in giving up his wife to Hortensius?* or, *Does such a proceeding become a respectable man?* Decision is pronounced concerning the persons, but the dispute concerns the general questions.

14. *Declamations*, too, such as are usually pronounced in the schools, are, if but adapted to real cases, and made similar to actual pleadings, of the greatest service, not only while our education has still to reach maturity, (for the exercise is alike both in conception and in arrangement,) but even when our studies are said to be completed, and have obtained us reputation in the forum; since eloquence is thus nurtured and made florid, as it were, on a richer sort of diet, and is refreshed after being fatigued by the constant roughnesses of forensic contests. 15. Hence, also, the copious style of *history* may be tried with advantage for exercising the pen; and we may indulge in the easy style of *dialogues*. Nor will it be prejudicial to our improvement to amuse ourselves with verse; as athletes, relaxing at times from their fixed rules for food and exercise, recruit themselves with ease and more inviting dainties. 16. It was from this cause, as it seems to me, that Cicero threw such a glorious brilliancy over his eloquence, that he used freely to ramble in such sequestered walks of study; for if our sole material for thought is derived from law cases, the gloss of our oratory must of necessity be rubbed off, its joints must grow stiff, and the points of its wit be blunted by daily encounters.

17. But though this feasting, as it were, of eloquence, refreshes and recruits those who are employed, and, as we may say, at war, in the field of the forum, yet young men ought not to be detained too long in fictitious representations and empty semblances of real life; to such a degree, I mean, that it would be difficult to familiarize them, when removed from such illusions, to the occupations of the forum; lest, from the effect of the retirement in which they have almost wasted away their life, they should shrink from the field of action as from too dazzling sunshine. 18. This is said indeed to have been the case with Porcius

Latro, who was the first professor of rhetoric of any eminence, so that, when he was called on to plead a cause in the forum, at the time that he bore the highest character in the schools, he used earnestly to entreat that the benches of the judges might be removed into the hall; for so strange did the open sky appear to him, that all his eloquence seemed to lie within a roof and walls. 19. Let the young man, then, who has carefully learned skill in conception and expression from his teachers, (which will not be an endless task if they are able and willing to teach,) and who has gained a fair degree of facility by practice, choose some orator, as was the custom among the ancients, whom he may follow and imitate; let him attend as many trials as possible, and be a frequent spectator of the sort of contest for which he is intended. 20. Let him set down cases also in writing, either the same that he has heard pleaded, or others, provided that they be on real facts, and let him handle both sides of the question; and, as we see in the schools of gladiators, let him exercise himself with arms that will decide contests,¹⁶² as we observed that Brutus did in composing a speech for Milo.¹⁶³ This is a much better practice than writing replies to old speeches, as Cestius¹⁶⁴ did to the speech of Cicero on behalf of Milo, though he could not have had a sufficient knowledge of the other side from reading only the defense.

21. The young man will thus be sooner qualified for the forum, whom his master has obliged to approach in his declamations as nearly as possible to reality, and to range through all sorts of cases, of which masters now select only the easiest parts, as most favorable for exhibition. The ordinary hindrances to such variety in cases, are the crowd of pupils, the custom of hearing the classes on stated days, and, in some degree, the influence of parents, who count their sons' declamations rather than judge of the merit of them. 22. But a good master, as I said, I believe, in my

¹⁶²*Decretoriis*. "The gladiators," says Seneca the Rhetorician, *Controv. lib. iv. præf.* "exercise themselves with heavier arms than those with which they actually fight." So Caligula is said by Suetonius, c. 54, to have used *pugnatoria arma*, which are the same as those here called *decretoria* by Quintilian. *Spalding*. [Tr.]

¹⁶³C. I, sect. 23. [Tr.]

¹⁶⁴A man of Greek origin, who practiced rhetoric at Rome. See Seneca the father, p. Bip. 399. *Spalding*. [Tr.]

first book, will not encumber himself with a greater number of pupils than he can well undertake to teach; he will put a stop to all empty loquacity, allowing everything to be said that concerns the question for decision, but not everything, as some would wish, within the range of possibility; and he will relax the stated course for speaking by granting longer time, or will permit his pupils to divide their cases into several parts, for one part carefully worked out will be of more service than many only half finished or just attempted. 23. It is from this desultoriness that nothing is put in its proper place in a speech, and that what is introduced at the beginning does not keep within its due bounds, as the young men crowd all the flowers of eloquence into what they are just going to deliver, and hence, from a fear of losing opportunities in the sequel, throw their commencement into utter confusion.

Chapter VI

Of thought and premeditation.

1. Next to writing is *meditation*, which indeed derives strength from it, and is something between the labor of writing and the trial of our fortune in extemporary speaking; and I know not whether it is not more frequently of use than either; for we cannot write everywhere and at all times; but there is abundance of time and room for thought. Meditation may in a very few hours embrace all points of the most important causes. When our sleep is broken at night, meditation is aided by the very darkness. Between the different stages in the pleading of a cause it finds some room to exercise itself, and never allows itself to be idle. 2. Nor does it only arrange within its circle the order of things, (which would itself be a great assistance to us,) but forms an array of words, and connects together the whole texture of a speech, with such effect, that nothing is wanting to it but to write it down. That, indeed, is in general more firmly fixed in the memory, on which the attention does not relax its hold from trusting too securely to writing.

But at such power of thought we cannot arrive suddenly or even soon. 3. In the first place, a certain *form* of thinking must be acquired by great practice in writing, a form which may be contin-

ually attendant on our meditations; a *habit* of thinking must then be gradually gained by embracing in our minds a few particulars at first, in such a way that they may be faithfully repeated; next, by additions so moderate that our task may scarcely feel itself increased, our power of conception must be enlarged, and sustained by plenty of exercise; power which in a great degree depends on memory, and I shall consequently defer some remarks on it till I enter on that head of my subject.¹⁶⁵ 4. Yet it has already been made apparent,¹⁶⁶ that he to whom nature does not obstinately refuse her aid, may, if assisted only by zealous application, attain such proficiency that what he has merely meditated, as well as what he has written and learned by heart, may be faithfully expressed in his efforts at oratory. Cicero indeed has acquainted us that, among the Greeks, Metrodorus of Scepsis,¹⁶⁷ and Emphylius¹⁶⁸ of Rhodes, and Hortensius among our own countrymen, could, when they pleaded a cause, repeat word for word what they had premeditated.

5. But if by chance, while we are speaking, some glowing thought, suggested on the instant, should spring up in our minds, we must certainly not adhere too supersitiously to that which we have studied; for what we meditate is not to be settled with such nicety, that room is not to be allowed for a happy conception of the moment, when thoughts that suddenly arise in our minds are often inserted even in our written compositions. Hence the whole of this kind of exercise must be so ordered that we may easily depart from what we have arranged and easily return to it; since, though it is of the first importance to bring with us from home a prepared and precise array of language, yet it would be the greatest folly to reject the offerings of the moment. 6. Let our *premeditation*, therefore, be made with such care that fortune, while she is unable to disappoint,

¹⁶⁵B. xi. c. 2. [Tr.]

¹⁶⁶*Eo tamen pervenit, sc. res;* "the subject has come to this," that is, what has been previously said is sufficient to show this. [Tr.]

¹⁶⁷He was celebrated for the cultivation of his memory. See Cicero de Orat. ii. 88. See also Pliny, H. N. vii. 24. [Tr.]

¹⁶⁸The name Emphylius does not occur in any work of Cicero that we now have. A rhetorician of that name is mentioned by Plutarch as the companion of Brutus, Vit. Brut. c. 2. [Tr.]

may have it in her power to assist us. But it will depend on the strength of our memory, whether that we have embraced in our minds flows forth easily, and does not prevent us, while we are anxious and looking back, and relying on no hope but that of recollection, from casting a glance in advance; otherwise I should prefer extemporaneous venturesomeness to premeditation of such unhappy coherence. It has the very worst effect to be turning back in quest of our matter, because, while we are looking for what is in one direction, we are diverted from what is in another, and we derive our thoughts rather from mere memory than from our proper subject. Supposing, too, that we had to depend wholly on premeditation or wholly on the conceptions of the moment, we know very well that more may be imagined than has been imagined. . . .

BOOK XII

Introduction

1. I have now arrived at by far the most important part of the work which I had contemplated. Had I imagined, when I first conceived the idea of it, that its weight would have been so great as that with which I now feel myself pressed, I should have earlier considered whether my strength would be able to bear it. But, at the commencement, the thought of the disgrace that I should incur if I did not perform what I had promised, kept me to my undertaking; and afterwards, though the labor increased at almost every stage, yet I resolved to support myself under all difficulties, that I might not render useless what had been already finished. 2. For the same reason at present, also, though the task grows more burdensome than ever, yet, as I look towards the end, I am determined rather to faint than to despair.

What deceived me, was, that I began with small matters; and though I was subsequently carried onwards, like a mariner by inviting gales, yet, as long as I treated only of what was generally known, and had been the subject of consideration to most writers on rhetoric, I seemed to be still at no great distance from the shore, and had many companions who had ventured to trust themselves to the same breezes. 3. But when I entered upon regions of elo-

quence but recently discovered,¹⁶⁹ and attempted only by very few, scarcely a navigator was to be seen that had gone so far from the harbor as myself; and now, when the orator whom I have been forming, being released from the teachers of rhetoric, is either carried forward by his own efforts, or desires greater aid from the inmost recesses of philosophy, I begin to feel into how vast an ocean I have sailed, and see that there is

— *Cælum undique et undique pontus,*

On all sides heaven, and on all sides sea.

I seem to behold, in the vast immensity, only one adventurer besides myself, namely Cicero; and even he himself, though he entered on the deep with so great and so well equipped a vessel, contracts his sails, and lays aside his oars, and contents himself with showing merely what sort of eloquence a consummate orator ought to employ. But my temerity will attempt to define even the orator's moral character, and to prescribe his duties. Thus, though I cannot overtake the great man that is before me, I must, nevertheless, go rather than he, as my subject shall lead me. However, the desire of what is honorable is always praiseworthy, and it belongs to what we may call cautious daring, to try that for failure in which pardon will readily be granted.

Chapter 1

A great orator must be a good man; according to Cato's definition, § 1, 2. A bad man cannot be a consummate orator, as he is deficient in wisdom, 3–5. The mind of a bad man is too much distracted with cares and remorse, 6, 7. A bad man will not speak with the same authority and effect on virtue and morality as a good man, 8–13. Objections to this opinion answered, 14–22. A bad man may doubtless speak with great force, but he would make nearer approaches to perfect eloquence if he were a good man, 23–32. Yet we must be able to conceive arguments on either side of a question, 33–35. A good man may sometimes be justified in misleading those whom he addresses, for the attainment of some good object, 36–45.

1. Let the orator, then, whom I propose to form, be such a one as is characterized by the definition

¹⁶⁹Because the ancient orators used but a rude kind of language, not having discovered that regular and numerous com-

of Marcus Cato, *a good man skilled in speaking*.¹⁷⁰

But the requisite which Cato has placed first in this definition, that an orator should be *a good man*, is naturally of more estimation and importance than the other. It is of importance that an orator should be good, because, should the power of speaking be a support to evil, nothing would be more pernicious than eloquence alike to public concerns and private, and I myself, who, as far as is in my power, strive to contribute something to the faculty of the orator, should deserve very ill of the world, since I should furnish arms, not for soldiers, but for robbers. 2. May I not draw an argument from the condition of mankind? Nature herself, in bestowing on man that which she seems to have granted him preeminently, and by which she appears to have distinguished us from all other animals,¹⁷¹ would have acted, not as a parent, but as a step-mother, if she had designed the faculty of speech to be the promoter of crime, the oppressor of innocence, and the enemy of truth; for it would have been better for us to have been born dumb, and to have been left destitute of reasoning powers, than to have received endowments from providence only to turn them to the destruction of one another.

3. My judgment carries me still further; for I not only say that he who would answer my idea of an orator, must be a good man, but that no man, unless he be good, can ever be an orator. To an orator discernment and prudence are necessary; but we can certainly not allow discernment to those, who, when the ways of virtue and vice are set before them, prefer to follow that of vice; nor can we allow them prudence, since they subject themselves, by the unforeseen consequences of their actions, often to the heaviest penalty of the law, and always to that of an evil conscience. 4. But if it be not only truly said by the wise, but always justly believed by the vulgar, that no man is vicious who is not also foolish, a fool, assuredly, will never become an orator.

position which was afterwards adopted by Thrasymachus and Gorgias, and brought to such a height of excellence by Isocrates. *Turnebus*. [Tr.]

¹⁷⁰See note on ii. 15. 1. [Tr.]

¹⁷¹See ii. 16, 16, *seq.* [Tr.]

It is to be further considered that the mind cannot be in a condition for pursuing the most noble of studies, unless it be entirely free from vice; not only because there can be no communion of good and evil in the same breast, and to meditate at once on the best things and the worst is no more in the power of the same mind than it is possible for the same man to be at once virtuous and vicious; 5. but also, because a mind intent on so arduous a study should be exempt from all other cares, even such as are unconnected with vice; for then, and then only, when it is free and master of itself, and when no other object harasses and distracts its attention, will it be able to keep in view the end to which it is devoted. 6. But if an inordinate attention to an estate, a too anxious pursuit of wealth, indulgence in the pleasures of the chase, and the devotion of our days to public spectacles, rob our studies of much of our time,¹⁷² (for whatever time is given to one thing is lost to another,) what effect must we suppose that ambition, avarice, and envy will produce, whose excitements are so violent as even to disturb our sleep and our dreams? 7. Nothing indeed is so preoccupied, so unsettled, so torn and lacerated with such numerous and various passions, as a bad mind; for when it intends evil, it is agitated with hope, care, and anxiety, and when it has attained the object of its wickedness, it is tormented with uneasiness, repentance, and the dread of every kind of punishment. Among such disquietudes, what place is there for study, or any rational pursuit? No more certainly than there is for corn in a field overrun with thorns and brambles.

8. To enable us to sustain the toil of study, is not temperance necessary? What expectations are to be formed, then, from him who is abandoned to licentiousness and luxury? Is not the love of praise one of the greatest incitements to the pursuit of literature? But can we suppose that the love of praise is an object of regard with the unprincipled? Who does not know that a principal part of oratory consists in discoursing on justice and virtue? But will the unjust man and the vicious treat of such subjects with the respect that is due to them?

9. But though we should even concede a great

¹⁷²Compare i. 12, 18. *Spalding*. [Tr.]

part of the question, and grant, what can by no means be the case, that there is the same portion of ability, diligence, and attainments, in the worst man as in the best, which of the two, even under that supposition, will prove the better orator? He, doubtless, who is the better man. The same person, therefore, can never be a bad man and a perfect orator, for that cannot be perfect to which something else is superior.

10. That I may not seem, however, like the writers of Socratic dialogues, to frame answers to suit my own purpose, let us admit that there exists a person so unmoved by the force of truth, as boldly to maintain that a bad man, possessed of the same portion of ability, application, and learning, as a good man, will be an equally good orator, and let us convince even such a person of his folly.

11. No man, certainly, will doubt, that it is the object of all oratory, that what is stated to the judge may appear to him to be true and just; and which of the two, let me ask, will produce such a conviction with the greater ease, the good man or the bad? 12. A good man, doubtless, will speak of what is true and honest with greater frequency; but even if, from being influenced by some call of duty, he endeavors to support what is fallacious, (a case which, as I shall show, may sometimes occur,) he must still be heard with greater credit than a bad man. 13. But with bad men, on the other hand, dissimulation sometimes fails, as well through their contempt for the opinion of mankind, as through their ignorance of what is right; hence they assert without modesty, and maintain their assertions without shame; and, in attempting what evidently cannot be accomplished, there appears in them a repulsive obstinacy and useless perseverance; for bad men, as well in their pleadings as in their lives, entertain dishonest expectations; and it often happens, that even when they speak the truth, belief is not accorded them, and the employment of advocates of such a character is regarded as a proof of the badness of a cause.

14. I must, however, notice those objections to my opinion, which appear to be clamored forth, as it were, by the general consent of the multitude. Was not then Demosthenes, they ask, a great orator? yet we have heard that he was not a good

man. Was not Cicero a great orator? yet many have thrown censure upon his character. To such questions how shall I answer? Great displeasure is likely to be shown at any reply whatever; and the ears of my audience require first to be propitiated. 15. The character of Demosthenes, let me say, does not appear to me deserving of such severe reprehension, that I should believe all the calumnies that are heaped upon him by his enemies, especially when I read his excellent plans for the benefit of his country and the honorable termination of his life. 16. Nor do I see that the feeling of an upright citizen was, in any respect, wanting to Cicero. As proofs of his integrity, may be mentioned his consulship, in which he conducted himself with so much honor; his honorable administration of his province; his refusal to be one of the twenty commissioners;¹⁷³ and, during the civil wars, which fell with great severity on his times, his uprightness of mind, which was never swayed, either by hope or by fear, from adhering to the better party, or the supporters of the commonwealth. 17. He is thought by some to have been deficient in courage, but he has given an excellent reply to this charge, when he says, *that he was timid, not in encountering dangers, but in taking precautions against them*;¹⁷⁴ an assertion of which he proved the truth of his death, to which he submitted with the noblest fortitude. 18. But even should the height of virtue have been wanting to these eminent men, I shall reply to those who ask me whether they were orators, as the Stoics reply when they are asked whether Zeno, Cleanthes, and Chrysippus, were wise men; they say that they were great and deserving of veneration, but that they did not attain the highest excellence of which human nature is susceptible.

19. Pythagoras desired to be called, not *wise*, like those who preceded him, but a *lover of wisdom*. I, however, in speaking of Cicero, have often said, according to the common mode of

¹⁷³For dividing the lands of Campania. See Vell. Pat. ii. 45; Dion Cass. xxxviii. 1; Cicero ad Att. ix. 2. [Tr.]

¹⁷⁴I have not been able to find these words in Cicero, nor have any of the commentators pointed them out. The sentiment Cicero often expresses; when, for example, he complains of the rashness of the party of Pompey; as in Ad Fam. vi. 21, and in many other passages. *Spalding*. [Tr.]

speech, and shall continue to say, that he was a *perfect orator*, as we term our friends, in ordinary discourse, *good and prudent men*, though such epithets can be justly given only to the perfectly wise. 20. But when I have to speak precisely, and in conformity with the exactness of truth, I shall express myself as longing to see such an orator as he himself also longed to see;¹⁷⁵ for though I acknowledge that Cicero stood at the head of eloquence, and that I can scarcely find a passage in his speeches to which anything can be added, however many I might find which I may imagine that he would have pruned, (for the learned have in general been of opinion that he had *numerous excellences* and *some faults*, and he himself says that he had cut off most of his *juvenile exuberance*,¹⁷⁶) yet, since he did not claim to himself, though he had no mean opinion of his merits, the praise of perfection, and since he might certainly have spoken better if a longer life had been granted him, and a more tranquil season for composition, I may not unreasonably believe that the summit of excellence was not attained by him, to which, notwithstanding, no man made nearer approaches. 21. If I had thought otherwise, I might have maintained my opinion with still greater determination and freedom. Did Marcus Antonius declare that *he had seen no man truly eloquent*,¹⁷⁷ though to be eloquent is much less than to be a perfect orator; does Cicero himself say that *he is still seeking for an orator*, and merely conceives and imagines one; and shall I fear to say that in that portion of eternity which is yet to come something may arise still more excellent than what has yet been seen? 22. I take no advantage of the opinion of those who refuse to allow great merit to Cicero and Demosthenes even in eloquence; though Demosthenes, indeed, does not appear sufficiently near perfection even to Cicero himself, who says that he *sometimes nods*,¹⁷⁸ nor does Cicero appear so

to Brutus and Clavus,¹⁷⁹ who certainly find fault with his language even in addressing himself, or to either of the Asinii,¹⁸⁰ who attack the blemishes in his style with virulence in various places.

23. Let us grant, however, what nature herself by no means brings to pass, that a bad man has been found endowed with consummate eloquence, I should nevertheless refuse to concede to him the name of orator, as I should not allow the merit of fortitude to all who have been active in the field, because fortitude cannot be conceived as unaccompanied with virtue. 24. Has not he who is employed to defend causes need of integrity which covetousness cannot pervert, or partially corrupt, or terror abash, and shall we honor the traitor, the renegade, the prevaricator, with the sacred name of orator? And if that quality, which is commonly called *goodness*, is found even in moderate pleaders, why should not that great orator, who has not yet appeared, but who may hereafter appear, be as consummate in goodness as in eloquence? 25. It is not a plodder in the forum, or a mercenary pleader, or, to use no stronger term, a not unprofitable advocate, (such as he whom they generally term a *causidicus*,) that I desire to form, but a man who, being possessed of the highest natural genius, stores his mind thoroughly with the most valuable kinds of knowledge; a man sent by the gods to do honor to the world, and such as no preceding age has known; a man in every way eminent and excellent, a thinker of the best thoughts and a speaker of the best language. 26. For such a man's ability how small a scope will there be in the defense of innocence or the repression of guilt in the forum, or in supporting truth against falsehood in litigations about money? He will appear great, indeed, even in such inferior employments, but his powers will shine with the highest luster on greater occasions, when the counsels of the senate are to

¹⁷⁵Orat. c. 2; De Orat. iii. 22. [Tr.]

¹⁷⁶See c. 6. sect. 4; Cic. Brut. c. 91. [Tr.]

¹⁷⁷Cic. Orat. c. 5; De Orat. iii. 22. [Tr.]

¹⁷⁸*Dormitare interim dicit*. See x. 1, 24. Is the passage of Cicero lost in which this expression occurred? Or did Quintilian, after using it with regard to Homer, in the place to which I have just referred, attribute it to Cicero through a lapse of memory? *Gesner*. [Tr.]

¹⁷⁹Gesner refers to the Dial. de Orat. c. 18, where Calvus is said to have called Cicero *solutus* and *enervis*; Brutus, *fractus* and *elumbis*. See ix. 4, 1; xii. 10, 12. [Tr.]

¹⁸⁰Father and son. The son wrote a book in which he compared his father with Cicero; Pliny. Ep. vii. 4, 4, says that he had read it. It was answered by the Emperor Claudius according to Sueton. c. 41 and Aul. Gell. xvii. 1. *Gesner*. That Asinius Pollio criticized Cicero with great illiberality appears from Senec. Suasor. *Spalding*. [Tr.]

be directed, and the people to be guided from error into rectitude. 27. Is it not such an orator that Virgil appears to have imagined, representing him as a calmer of the populace in a sedition, when they were hurling firebrands and stones?

*Tum pietate gravem et meritis si forte virum quem
Conspexere, silent, arrectisque auribus adstant,
Then if perchance a sage they see, rever'd
For piety and worth, they hush their noise,
And stand with ears attentive.*

We see that he first makes him a *good man*, and then adds that he is *skilled in speaking*:

*Ille regit dictis animos, et pectora mulcet,
With words
He rules their passions and their breasts controls.*

28. Would not the orator whom I am trying to form, too, if he were in the field of battle, and his soldiers required to be encouraged to engage, draw the materials for an exhortation from the most profound precepts of philosophy? for how could all the terrors of toil, pain, and even death, be banished from their breasts, unless vivid feelings of piety, fortitude, and honor, be substituted in their place? 29. He, doubtless, will best implant such feelings in the breasts of others who has first implanted them in his own; for simulation, however guarded it be, always betrays itself, nor was there ever such power of eloquence in any man that he would not falter and hesitate whenever his words were at variance with his thoughts. 30. But a bad man must of necessity utter words at variance with his thoughts; while to good men, on the contrary, a virtuous sincerity of language will never be wanting, nor (for good men will also be wise) a power of producing the most excellent thoughts, which, though they may be destitute of showy charms, will be sufficiently adorned by their own natural qualities, since whatever is said with honest feeling will also be said with eloquence.

31. Let youth, therefore, or rather let all of us, of every age, (for no time is too late for resolving on what is right,) direct our whole faculties, and our whole exertions, to this object;¹⁸¹ and perhaps to some it may be granted to attain it; for if

¹⁸¹The attainment of virtue and eloquence. [Tr.]

nature does not interdict a man from being good, or from being eloquent, why should not some one among mankind be able to attain eminence in both goodness and eloquence? And why should not each hope that he himself may be the fortunate aspirant? 32. If our powers of mind are insufficient to reach the summit, yet in proportion to the advances that we make towards it will be our improvement in both eloquence and virtue. At least, let the notion be wholly bannished from our thoughts, that perfect eloquence, the noblest of human attainments, can be united with a vicious character of mind. Talent in speaking, if it falls to the lot of the vicious, must be regarded as being itself a vice, since it makes those more mischievous with whom it allies itself.

33. But I fancy that I hear some (for there will never be wanting men who would rather be eloquent than good) saying "Why then is there so much art devoted to eloquence? Why have you given precepts on rhetorical coloring, and the defense of difficult causes, and some even on the acknowledgment of guilt,¹⁸² unless, at times, the force and ingenuity of eloquence overpowers even truth itself? for a good man advocates only good causes, and truth itself supports them sufficiently without the aid of learning." 34. These objects I shall endeavor to satisfy, by answering them, first, concerning my own work, and, secondly, concerning the duty of a good man, if occasion ever calls him to the defense of the guilty.

To consider how we may speak in defense of what is false, or even what is unjust, is not without its use, if for no other reason than that we may expose and refute fallacious arguments with the greater ease; as that physician will apply remedies with the greater effect to whom that which is hurtful is known. 35. The Academicians, when they have disputed on both sides of a point of morality, will not live according to either side at hazard; nor was the well known Carneades, who is said to have argued at Rome, in the hearing of Cato the Censor, with no less force against the observance of justice than he had argued the day before in favor of it, an unjust man. But *vice*, which is opposed to *virtue*, shows more clearly what virtue is; *justice* becomes more manifest

¹⁸²IV. 2, 68-75; xi. I, 76. [Tr.]

from the contemplation of *injustice*; and many things are proved by their contraries. The devices of his adversaries, accordingly, should be as well known to the orator, as the stratagems of an enemy in the field to a commander.

36. Even that which appears, when it is first stated, of so objectionable a character, *that a good man, in defending a cause, may sometimes incline to withhold the truth from the judge*,¹⁸³ reason may find cause to justify. If any one feels surprised that I advance this opinion, (though this is not mine is particular, but that of those whom antiquity acknowledged as the greatest masters of wisdom,¹⁸⁴) let him consider that there are many things which are rendered honorable or dishonorable, not by their own nature, but by the causes which give rise to them. 37. For if *to kill a man* is often an act of virtue, and *to put to death one's children* is sometimes a noble sacrifice;¹⁸⁵ and if it is allowable to do things of a still more repulsive nature when the good of our country demands them, we must not consider merely what cause a good man defends, but from what motive, and with what object he defends it. 38. In the first place, every one must grant me, what the most rigid of the Stoics do not deny, that a good man may sometimes think proper to tell a lie,¹⁸⁶ and occasionally even in matters of small moment, as, when children are sick, we make them believe many things with a view to promote their health, and promise them many which we do not intend to perform; 39. and much less, is it forbidden to tell a falsehood when an assassin is to be prevented from killing a man, or an enemy to be deceived for the benefit of our country; so that what is at one time reprehensible in a slave is at another laudable even in the wisest of men. If this be admitted, I see that many causes may occur for which an orator may justly undertake a case of such a nature, as, in the absence of any

¹⁸³See iv, 5, 6. [Tr.]

¹⁸⁴Among these we must number Panætius, as appears from Cicero Off. ii. 14. Compare Quint. 11. 17, 26. *Spalding*. [Tr.]

¹⁸⁵The examples of Ahala, Scipio Nasica, Brutus, and Manlius will at once occur to the reader. *Spalding*. [Tr.]

¹⁸⁶See ii. 17, 27. Examples of well-intended concealment of truth are given also by Plato, Rep. ii. p. 382 Steph. *Spalding*. [Tr.]

honorable motive, he would not undertake. 40. Nor do I say this only with reference to a father, a brother, or a friend, who may be in danger, (because even in such a case I would allow only what is strictly lawful), though there is then sufficient ground for hesitation, when the image of justice presents itself on one side, and that of natural affection on the other; but let us set the point beyond all doubt. Let us suppose that a man has attempted the life of a tyrant, and is brought to trial for the deed; will such an orator as is described by us, be unwilling that his life should be saved? and, if he undertake to defend him, will he not support his cause before the judge by the same kind of misrepresentation as he who advocates a bad cause? 41. Or what if a judge would condemn a man for something that was done with justice, unless we convince him that it was not done; would not an orator, by producing such conviction, save the life of a fellow-citizen, when he is not only innocent but deserving of praise? Or what if we know that certain political measures are in contemplation, which, though just in themselves, are rendered detrimental to the commonwealth by the state of the times, shall we not adopt artifices of eloquence to set them aside, artifices which, though well-intended, are nevertheless similar to those of an immoral character?

42. No man, again, will doubt, that if guilty persons can by any means be turned to a right course of life, and it is allowed that they sometimes may, it will be more for the advantage of the state that their lives should be spared than that they should be put to death. If, then, it appear certain to an orator, that a person against whom true accusations are brought, will, if acquitted, become a good member of society, will he not exert himself that he may be acquitted?

43. Suppose, again, that a man who is an excellent general, and without whose aid his country would be unable to overcome her enemies, is accused of a crime of which he is evidently guilty, will not the public good call upon an orator to plead his cause? It is certain that Fabricius made Cornelius Rufinus,¹⁸⁷ who was in other respects a bad citizen, and his personal enemy, consul, by voting for him when a war threatened

¹⁸⁷Cicero de Orat. 11. 66; Aul. Gell iv. 8. [Tr.]

the state, because he knew him to be a good general; and when some expressed their surprise at what he had done, he replied, that *he had rather be robbed by a citizen than sold for a slave by the enemy*. Had Fabricius, therefore, been an orator, would he not have pleaded for Rufinus even though he had been manifestly guilty of robbing his country?

44. Many similar cases might be supposed, but even any one of them is sufficient; for I do not insinuate that the orator whom I would form should often undertake such causes; I only wish to show that if such a motive as I have mentioned should induce him to do so, the definition of an orator, *that he is a good man skilled in speaking*, would still be true.

45. It is necessary, too, for the master to teach, and for the pupil to learn, how difficult cases are to be treated in attempting to establish them; for very often even the best causes resemble bad ones, and an innocent person under accusation may be urged by many probabilities against him; and he must then be defended by the same process of pleading as if he were guilty. There are also innumerable particulars common alike to good and bad causes; as oral and written evidence, and suspicions and prejudices to be overcome. But what is probable is established or refuted by the same methods as what is true. The speech of the orator, therefore, will be modeled as circumstances shall require, uprightness of intention being always maintained.

Chapter II

An orator must study to maintain a high moral character, § 1, 2. Tendencies to virtue implanted by nature may be strengthened by cultivation, 3–9. Division of philosophy into three parts, natural, moral, and dialectic; remarks on the last kind, 10–14. On moral philosophy, 15–20. On natural philosophy, 21–23. Observations on the different sects of philosophers; an orator need not attach himself to any sect in particular, but may be content with learning what is good wherever it is to be found, 24–31.

1. Since an orator, then, is a good man, and a good man cannot be conceived to exist without virtuous inclinations, and virtue, though it receives certain impulses from nature, requires

notwithstanding to be brought to maturity by instruction, the orator must above all things study *morality*, and must obtain a thorough knowledge of all that is just and honorable, without which no one can either be a good man or an able speaker. 2. Unless, indeed, we feel inclined to adopt the opinion of those who think that the moral character is formed by nature, and is not at all influenced by discipline; and who, forsooth, acknowledge that manual operations, and even the meanest of them, cannot be acquired without the aid of teachers, but say that we possess virtue, (than which nothing has been given to man that raises him nearer to the immortal gods,) unsought and without labor, simply because we are born what we are. 3. But will that man be temperate, who does not know even what temperance is? Or will that man be possessed of fortitude, who has used no means to free his mind from the terrors of pain, death, and superstition? Or will that man be just, who has entered into no examination of what is equitable and good, and who has never ascertained from any dissertation of the least learning, the principles either of the laws which are by nature prescribed to all men, or of those which are instituted among particular people and nations? Of how little consequence do they think all this, to whom it appears so easy! 4. But I shall say no more on this point, on which I think no man, who *has tasted of learning*, as they say, *with but the slightest touch of his lips*, will entertain the least doubt.

I pass on to my second proposition,¹⁸⁸ that no man will ever be thoroughly accomplished in eloquence, who has not gained a deep insight into the impulses of human nature, and formed his moral character on the precepts of others and on his own reflection. 5. It is not without reason that Lucius Crassus, in the third book *De Oratore*,¹⁸⁹ asserts that everything that can come under discussion respecting equity, justice, truth, goodness, and whatever is of an opposite nature, are the proper concerns of the orator; and that the philosophers, when they inculcate those virtues with the force of eloquence, use the arms of the

¹⁸⁸This must be understood as contained in the latter half of sect. 1. [Tr.]

¹⁸⁹C. 19, 27, 31. [Tr.]

orator and not their own. Yet he admits that the knowledge of these subjects must now be sought from philosophy, because philosophy, apparently, seems to him to be more fully in possession of them. 6. Hence also it is that Cicero remarks, in many passages both of his books and of his letters,¹⁹⁰ that the power of eloquence is to be derived from the deepest sources of wisdom, and that accordingly the same persons were for a considerable time the teachers at once of eloquence and of morality.

This exhortation of mine, however, is not designed to intimate that I should wish the orator to be a philosopher, since no other mode of life has withdrawn itself further from the duties of civil society, and all that concerns the orator. 7. Which of the philosophers, indeed, ever frequented courts of justice, or distinguished himself in public assemblies? Which of them ever engaged even in the management of political affairs on which most of them have given such earnest precepts? But I should desire the orator, whom I am trying to form, to be a kind of *Roman wise man*, who may prove himself a true statesman, not by discussions in retirement, but by personal experience and exertions in public life. 8. But because the pursuits of philosophy have been deserted by those who have devoted their minds to eloquence, and because they no longer display themselves in their proper field of action, and in the open light of the forum, but have retreated, at first into the porticoes and gymnasia, and since into the assemblies of the schools,¹⁹¹ the orator must seek that which is necessary for him, and which is not taught by the masters of eloquence, among those with whom it has remained, by perusing with the most diligent application the authors that give instruction in virtue, that his life may be in conformity with a thorough knowledge of divine and human things; and how much more

¹⁹⁰It would be tedious to refer to passages; and I wish that I could point out a greater number in the letters than I can. But I find one, which I may notice here, in the epistle to Cato (Ad. Fam. xiv. 4) where he says that philosophy was introduced both by Cato and himself to the forum. See de Orat. iii. 15; Tuscul. i. 3; Orat. c. 21. *Spalding*. [Tr.]

¹⁹¹Quintilian alludes first to the condition of philosophy among the ancient Greeks, and then to its condition among the Romans in his own time. *Spalding*. [Tr.]

important and noble would these things appear, if those were to teach them who could discourse on them with the highest eloquence? 9. Would that there may some day come a time, when some orator, perfect as we wish him to be, may vindicate to himself the study of philosophy, (which has been rendered odious as well by the arrogant assumptions, as by the vices, of those who have disgraced its excellent nature,) and by a reconquest as it were, annex it again to the domain of eloquence!

10. As philosophy is divided into three parts, *physics*, *ethics*, and *dialectics*, by which of the three is it not allied with the business of the orator?

To consider them in the order contrary to that in which I have named them, no man can surely doubt whether the last, which is wholly employed about words, concerns the orator, if it be his business to know the exact significations of terms, to clear ambiguities, to disentangle perplexities, to distinguish falsehood from truth, and to establish or refute what he may desire; 11. though, indeed, we shall not have to use these arts with such exactness and preciseness in pleadings in the forum, as is observed in the disputations of the schools; because the orator must not only instruct his audience, but must move and delight them, and to effect that object there is need of energy, animation, and grace; the difference between the orator and the dialectician being as great as that in the courses of rivers of an opposite character; for the force of streams that flow between high banks, and with a full flood, is far greater than that of shallow brooks, with water struggling against the obstructions of pebbles. 12. And as the teachers of wrestling do not instruct their pupils in all the *attitudes*, as they call them, that they may use all that they have learned in an actual struggle with an adversary, (for more may be effected by weight, and firmness, and ardor,) but that they may have a large number of artifices, of which they may adopt one or other as occasion may require; 13. so the art of logic, or of *disputation*, if we had rather give it that name, though it is often of the greatest use in definitions and deductions, in marking differences and in explaining ambiguities, in distinguishing and dividing, in perplexing and

entangling, yet, if it assumes to itself the whole conduct of a cause in the forum, will prove but a hindrance to what is better than itself, and will waste, by its very subtilty, the strength that is divided to suit its niceties. 14. We may accordingly see that some people, extremely acute in disputations, are, when they are drawn beyond the sphere of calling, no more able to support any important exertion of eloquence, than certain little animals, which are active enough to escape being caught in a small space, can prevent themselves from being seized in an open field.

15. As to that part of philosophy which is called *moral*, the study of it is certainly wholly suited to the orator; for in such a variety of causes, (as I have remarked in the preceding books,) in which some points are ascertained by conjecture,¹⁹² others are settled by definition,¹⁹³ others are set aside by the law,¹⁹⁴ others fall under the state of exception,¹⁹⁵ others are determined by syllogism,¹⁹⁶ others depend on a comparison of different laws,¹⁹⁷ others on explanations of ambiguous terms,¹⁹⁸ scarcely a single cause can occur in some part of which considerations of equity and morality are not concerned. Who does not know, also, that there are numbers of cases which depend entirely on the estimation of the quality of an act, a question purely moral? 16. In deliberative oratory, also, what means would there be of exhortation unconnected with questions of honesty? As to the third kind of oratory, too, which consists in the duties of praising and censuring, what shall be said of it? It is assuredly engaged about considerations of right and wrong. 17. Will not an orator have to speak much of justice, fortitude, abstinence, temperance, piety? Yet the good man, who has a knowledge of these virtues, not by sound and name only, not as heard merely by the ear to be repeated by the tongue, but who has embraced them in his heart, and thinks in conformity with

¹⁹²*Status conjecturalis*. iii. 6, 31, 45. [Tr.]

¹⁹⁴*Status legalis*. iii. 6, 45. [Tr.]

¹⁹⁵*Status translativus*, or "state of exception." iii. 6, 23. [Tr.]

¹⁹⁶See iii. 6, 15. [Tr.]

¹⁹⁷B. vii. c. 7. [Tr.]

¹⁹⁸B. vii. c. 9. [Tr.]

them, will have no difficulty in conceiving proper notions about them, and will express sincerely what he thinks.

18. Again, as every general question is more comprehensive than a particular one, as a part is contained in the whole while the whole is not included in a part, no one will doubt that general questions are intimately connected with that kind of studies of which we are speaking. 19. As there are many points also which require to be settled by appropriate and brief definitions, whence one *state* of causes is called the *definitive*,¹⁹⁹ ought not the orator to be prepared for giving such definitions by those who have given most attention to that department of study? Does not every question of equity depend either on an exact determination of the sense of words, or on the consideration of what is right, or on conjecture respecting the intention of the author of something written? and of all such questions part will rest on logical and part on ethical science. 20. All oratory, therefore, naturally partakes of these two departments of philosophy; I mean all oratory that truly deserves the name; for mere loquacity, which is ignorant of all such learning, must necessarily go astray, as having either no guides, or guides that are deceitful.

But the department of *natural* philosophy, besides that it affords so much wider a field for exercise in speaking than other subjects, inasmuch as we must treat of divine in a more elevated style than of human things, embraces also the whole of moral science, without which, as I have just shown,²⁰⁰ there can be no real oratory. 21. For if the world is governed by a providence, the state ought surely to be ruled by the superintendence of good men. If our souls are of divine origin, we ought to devote ourselves to virtue, and not to be slaves to a body of terrestrial nature. Will not the orator frequently have to treat of such subjects as these? Will he not have to speak of auguries, oracles, and of everything pertaining to religion, on which the most important deliberations in the senate often depend, at least if he is to be, as I think that he ought to be, a well qualified statesman? What sort of eloquence can be imagined, in-

¹⁹⁹III. 6, 31. [Tr.]

²⁰⁰Sect. 15. [Tr.]

deed, to proceed from a man who is ignorant of the noblest subjects of human contemplation?

22. If what I say were not evidently supported by reason, we might nevertheless believe it on the authority of examples; for it is well known that Pericles, of whose eloquence, though no visible proofs of it have come down to us, not only historians, but the old comic writers, a class of men not at all inclined to flattery, say that the power was scarcely credible, was a hearer of Anaxagoras, the great natural philosopher; and that Demosthenes, the prince of all the orators of Greece, attended the lectures of Plato. 23. As to Cicero, he frequently declares²⁰¹ that he owed less to the schools of the rhetoricians than to the gardens of the Academy. Nor indeed would so wonderful a fertility of mind have displayed itself in him, if he had circumscribed his genius by the limits of the forum, and not allowed it to range through all the domains of nature.

But from these reflections arises another question, *what sort of philosophers will contribute most to the improvement of eloquence*; though it is a question which will concern but a small number of sects. 24. Epicurus, in the first place, excludes us from all communication with him, as he directs his disciples to flee from all learning *with the utmost speed at which they can sail*.²⁰² Nor does Aristippus, who makes the chief happiness to consist in the pleasures of the body, encourage us to support the fatigues of study. As to Pyrrho, what concern can he have with our labor, he who is not certain whether there are judges to whom he speaks, or a defendant for whom he pleads, or a senate in which his opinion is to be given? 25. Some think the Academy most serviceable to eloquence, as its practice of disputing on both sides of a question is closely allied to the exercises preparatory to pleading in the forum; and they add as a proof of their opinion that that sect has produced men extremely eminent in eloquence.²⁰³ The Peripatetics also boast that they

²⁰¹The passage in the *Orator*, c. 3, has readily occurred to the commentators; but as Quintilian uses the word “frequently,” I could wish to find more passages in Cicero to that effect. *Spalding*. [Tr.]

²⁰²II. 17, 15. [Tr.]

²⁰³As Plato, whom Demosthenes is said to have been old enough just to hear, Carneades, and Cicero himself. *Gesner*. [Tr.]

have a strong bearing upon oratory,²⁰⁴ as the practice of speaking on general questions for the sake of exercise had its origin chiefly among them. The Stoics, though they must allow that copiousness and splendor of eloquence have been wanting in most of their eminent men,²⁰⁵ yet assert that no philosophers can either support proofs with greater force, or draw conclusions with greater subtilty. 26. But this is a notion among themselves, who, as if bound by an oath, or influenced by some superstitious obligation, think it criminal to depart from a persuasion which they have once embraced.

27. But an orator has no need to bind himself to the laws of any particular sect; for the office to which he devotes himself, and for which he is as it were a candidate, is of a loftier and better nature, since he is to be distinguished as well by excellence of moral conduct as by merit in eloquence. He will accordingly select the most eloquent orators for imitation in oratory, and for forming his moral character will fix upon the most honorable precepts and the most direct road to virtue. 28. He will indeed exercise himself on all subjects, but he will attach himself most to those of the highest and noblest nature; for what more fertile subjects can be found, indeed, for grave and copious eloquence, than dissertations on virtue, on government, on providence, on the origin of the human mind, and on friendship? These are the topics by which the mind and the language are alike elevated; *what is really good; what allays fear, restrains cupidity, frees us from the prejudices of the vulgar, and raises the mind towards the heaven from which it sprung*.

29. Nor will it be proper to understand those matters only which are comprehended in the sciences of which I have been speaking, but still more to know, and to bear continually in mind, the noble deeds and sayings which are recorded of the great men of antiquity, and which certainly are nowhere found in greater number or excellence than in the annals of our own commonwealth. 30. Will men of any other nation give

²⁰⁴For who has written better on the art of oratory than Aristotle, or who can be thought to have written more elegantly than Theophrastus? *Gesner*. [Tr.]

²⁰⁵See ii. 15, 35, and note. [Tr.]

better lessons of fortitude, justice, honor, temperance, frugality, contempt of pain and death, than a Fabricius, a Curius, a Regulus, a Decius, a Mucius, and others without number? for highly as the Greeks abound in precepts, the Romans, what is of far more importance, abound quite as much as in examples; 31. and that man will feel himself in a manner impelled by the biography of his country to a similar course of conduct, who does not think it sufficient to regard merely the present age, and the passing day, but considers that any honorable remembrance among posterity is but the just sequel to a life of virtue, and the completion of a career of merit. From this source let the orator whom I would form derive strong encouragements to the observance of justice, and let him show a sense of liberty drawn from hence in his pleadings in the forum and in his addresses to the senate. Nor will he indeed ever be a consummate orator who has not both knowledge and boldness to speak with sincerity.

Chapter III

Proofs that a knowledge of the civil law is necessary to an orator.

1. For such an orator, too, a knowledge of the *civil law* will be necessary, and of the manners and religion of that state, whatever it be, over which he shall endeavor to exert any influence; for what sort of an adviser will he be, whether in public or in private deliberations, who shall be ignorant of things by which a state is principally held together? or how will he not falsely call himself a defender of causes, who has to seek from another that which is of most importance to the pleading of his causes, almost like those who recite the writings of poets?²⁰⁶ 2. He will resemble in a manner a person carrying messages; what he desires the judge to believe, he will have to advance on the faith of another; and while he professes to aid parties going to law will stand in need of aid himself. Though this may indeed sometimes be done with but little inconvenience,

²⁰⁶Spalding supposes that actors are meant. Perhaps we should rather understand persons employed by poets who distrusted their voice or delivery, to recite their verses for them in public; as was the practice among the Romans of Quintilian's day. [Tr.]

when he shall bring before the judge what he has taught himself and arranged at home, and which he has learned by heart like other component parts of the cause, how will he fare with regard to those questions which often arise suddenly in the middle of a case? 3. Will he not look about him covered with shame, and ask questions of the inferior advocates²⁰⁷ on the benches? and even if he receives an answer, will he be able fully to comprehend what he hears, when he has to deliver it on the instant? Or will he be able to assert anything with confidence, or to speak with any appearance of sincerity for his clients? Perhaps he may in a set speech; but what will he do in altercations,²⁰⁸ where he must reply to the opposite party at once, and no time will be allowed him for gaining information? Or what if perchance a person skilled in the law be not at hand to prompt him? What if a person but imperfectly acquainted with the subject suggests to him something incorrect? For it is one of the greatest misfortunes of ignorance to fancy that whoever offers instruction is a man of knowledge.

4. I am not indeed forgetful of our practice, or unmindful of those who sit as it were by the store-chests²⁰⁹ to furnish weapons for forensic combatants; nor am I unaware that the Greeks also had the same custom, from whom the name of *pragmatici*,²¹⁰ bestowed upon these gentlemen, was derived. But I am speaking of a genuine orator who is to bring to the support of his cause not only his voice, but everything that can possibly be of service to it. 5. I would not think him therefore useless, if he stand perchance for his hour, or unskillful in establishing evidence. For who will prepare better than himself that which he shall wish to appear in the cause when he shall plead it? Unless, indeed, we consider that an able general is one who is active and brave in the field, and skilled in everything which an engagement

²⁰⁷*Minores advocatos*. Quintilian here uses *advocatus* for him *qui jus suggerit*, the attorney who suggested or explained points of law; or rather, perhaps, he alludes to the custom of having several advocates, so that he who spoke might be called the *major advocatus*, and the others, who assisted him with their advice, *minores*. Turnebus. [Tr.]

²⁰⁸See b. vi. c. 4. [Tr.]

²⁰⁹*Qui ad arculas sedent*. I suppose, says Buttmann, that Quintilian alludes to chests for holding weapons used in the *palæstræ* or other places of exercise. [Tr.]

²¹⁰III. 6, 59. [Tr.]

requires, but who knows neither how to levy troops, nor to muster or equip forces, nor to secure provisions, nor to select a position for a camp; though it is surely of more importance to make preparations for success in a fight, than to have the command in it. 6. But an orator would very greatly resemble such a general, if he should leave much that would promote his success to the management of others, especially as this knowledge of the civil law, which is of the utmost importance to him, is not so difficult to be acquired as it may perhaps appear to those who contemplate it from a distance. For every point of law, which is *certain*, rests upon something *written*, or upon *custom*; whatever is *doubtful* must be decided on grounds of equity. 7. What is written, or dependent on the custom of a country, is attended with no difficulty; for it is a matter of knowledge, not of invention,²¹¹ and points which are explained by the comments of lawyers, lie either in interpretations of words, or in distinctions between right and wrong. To understand the sense of every word in a law, is either common to all men of education, or peculiar to the orator; equity is understood by every honest man. 8. We, moreover, are supposing our orator to be a man eminently good and sensible; a man who, when he has devoted himself to the study of what is excellent in its nature, will not be greatly troubled if a lawyer differ from him in opinion, since lawyers themselves are allowed to hold various opinions on the same points.

9. But if he shall desire to know what lawyers in general have thought of any matter, he has only to apply himself to reading, than which nothing in his course of study is less laborious; and if many, from despair of acquiring the necessary qualifications for speaking in public, have betaken themselves in consequence to the study of law,²¹² how easy is it for the orator to attain that which those acquire, who, according to their own confession, cannot become orators! But Marcus Cato was both highly distinguished for eloquence, and eminent for his knowledge of law; and the merit of eloquence who also allowed to Scævola and Servius Sulpicius. 10. Cicero, too, was not only never at a loss, in pleading, for

a knowledge of law, but had even begun to write on it,²¹³ whence it appears that an orator may not only have time for learning law, but also for teaching it.

11. But let no man suppose that the precepts which I have offered respecting the necessity of attention to the moral character, and to the study of law, need not be regarded, because we have known many who, from dislike of the labor which they must undergo who aspire to eloquence, have resigned themselves to employments better suited to their indolence. Some of these have given themselves up to the white and red;²¹⁴ or have preferred to become *formularii*, or, as Cicero terms them, *leguleii*,²¹⁵ on pretense of choosing what was more useful, when they in reality sought only what was easier. 12. Others there have been, of equal indolence but greater arrogance, who, having suddenly²¹⁶ settled their countenance with affected gravity, and let their beards grow, have sat for a time, as if they looked with contempt on the study of oratory, in the schools of the philosophers, in order that, by assumed solemnity in public, while they are abandoned to licentiousness at home, they may assume authority to themselves by setting others at naught.

Chapter IV

The mind of an orator must be stored with examples and precedents.

I. But an orator ought to be furnished, above all things, with an ample *store of examples*, as well ancient as modern; since he should not only be acquainted with matters which are recorded in

²¹³It appears from Aulus Gellius, i. 22, that Cicero wrote one book which was entitled *De jure civili in artem redigendo*. Spalding. [Tr.]

²¹⁴*Ad album et rubricas*. By the *white* is meant the *jus prætorium*, or prætors' edicts, which were set forth *in albo*, "on white." By the *red* is signified the civil law, the titles and heads of which were written in red: Juv. Sat. xiv. 193. See Adam's Rom. Ant. p. 205, 8vo. ed. [Tr.]

²¹⁵Cicero de Orat. i. 55. "Thus the lawyer (*jurisconsultus*) is, of himself, nothing with you but a sort of wary and acute legalist (*leguleius*), an instructor in actions, a repeater of forms (*cantor formularum*, equivalent to *formularius*), a catcher at syllables." [Tr.]

²¹⁶After having devoted some time to the study of eloquence. Spalding. [Tr.]

²¹²See viii. 3, 79. [Tr.]

history, or transmitted from hand to hand as it were by tradition, or are of daily occurrence, but should not even be neglectful of the fictions of the more eminent poets; for those of the former kind have the authority of testimonies, or even of precedents; and the latter sort are either supported by the sanction of antiquity, or are supposed to have been invented by great men to serve as precepts. 2. Let the orator, therefore, know as many as possible of every kind; for hence it is that greater authority is attributed to old men, as they are thought to have known and seen more than others; a fact which Homer frequently attests. But we must not wait till the last stage of life to acquire authority; for study affords us such advantage, that, as far as knowledge of events is concerned, we seem even to have lived in past ages.

Chapter V

Necessity of firmness and presence of mind to an orator, § 1-4. Natural advantages to be cultivated, 5, 6.

1. Such are the acquirements of which I had promised to give an account. They are instruments, not of the art, as some have thought, but of the orator; they are the arms which he ought to have at hand, and with a knowledge of which he ought to be thoroughly prepared, united with a ready store of words and figurative language, as well as with power of imagination, skill in the disposition of materials, strength of memory, and grace of delivery.

2. But the most important of all qualities is steady presence of mind, which fear cannot shake or clamor intimidate, nor the authority of an audience restrain beyond the just portion of respect that is due to them; for though faults of an opposite nature, those of presumption, temerity, audacity, and arrogance, are in the highest degree offensive, yet without proper firmness, confidence, and courage, neither art, nor study, nor knowledge would be of the least avail, any more than weapons put into the hands of weakness and timidity. It is not without unwillingness, indeed, that I observe (for what I say may be misunderstood) that modesty itself, which, though a fault, is an amiable one, and frequently the parent of virtues, is to be numbered among qualities detri-

mental to the orator, and has had such an effect on many, that the merits of their genius and learning have never been brought into light, but have wasted away under the rust contracted in obscurity. 3. Should any young student, however, not yet sufficiently experienced in distinguishing the meaning of words, read this remark, let him understand that it is not a reasonable degree of diffidence which I blame, but an excess of modesty, which is a species of fear that draws off the thoughts from what we ought to do, whence proceeds confusion, repentance that we ever began, and sudden silence; and who can hesitate to number among faults an affection by the influence of which we become ashamed to do what is right? 4. Nor, on the other hand, should I be unwilling that he who is going to speak should rise with some concern, change color, and show a sense of the hazard which he is encountering; feelings which, if they do not arise within us, should be assumed. But this should be the effect of consciousness of the weight of our task, not of fear; and though we should be moved, we should not sink down in helplessness. The great remedy for bashfulness, however, is confidence in our cause; and any countenance, however likely to be daunted, will be kept steady by a consciousness of being in the right.

5. But there are, as I observed before, advantages from nature, which may doubtless be improved by art; such as good organs of speech and tone of voice, strength of body, and grace of motion; advantages which are often of such effect that they gain the possessor of them reputation even for genius. Our age has seen more fertile orators than Trachalus;²¹⁷ but, when he spoke, he seemed to be far above all his contemporaries; such was the loftiness of his stature, the fire of his eyes, the authority of his look, and the grace of his action; while his voice was, not indeed, as Cicero²¹⁸ desires, similar to that of actors in tragedy, but superior to that of any tragic actor that I ever heard. 6. I well remember that on one occasion, when he was speaking in the *Basilica Julia*²¹⁹ before the first tribunal, and the four com-

²¹⁷X. 1, 119. [Tr.]

²¹⁸De Orat. i. 28. [Tr.]

²¹⁹A large court or hall erected by Julius Cæsar in the forum. [Tr.]

panies of judges, as is usual, were assembled,²²⁰ while the whole place resounded with noise, he was not only heard and understood, but was applauded from all the four tribunals, to the great prejudice of those who were speaking at the same time. But the possession of such a voice is the very height of an orator's wishes, and a rare happiness; and whoever is without it, let it suffice for him to be heard by those to whom he immediately addresses himself. Such ought an orator to be; and such are the qualifications which he ought to attain. . . .

Chapter XI

The orator must leave off speaking in public before he fails through old age, § 1–4. How his time may be employed after he has retired, 5–7. Quintilian hastens to conclude his work; he shows that students have ample time for acquiring all the qualifications, as far as nature will allow, that he has specified, 8–20. He proves, from the examples of great men, how much may be done, and observes that even moderate attainments in eloquence are attended with very great advantages, 21–29. Exhortation to diligence, and conclusion, 30, 31.

1. The orator, after displaying these excellences of eloquence on trials, in councils, at the assemblies of the people, in the senate, and in every province of a good citizen, will think of bringing his labors to an end worthy of an honorable man and a noble employment, not because it is ever time to leave off doing good, or because it is not proper for one endowed with such understanding and talents to spend the longest possible time in so dignified an occupation, but because it becomes him to take care that he may not speak worse than he has been in the habit of speaking.

2. The orator does not depend merely on knowledge, which increased with years, but on strength of voice, lungs, and constitution, and if these are weakened or impaired by age or ill health, he

²²⁰The *centumviri litibus judicandis* were anciently divided into two *hastæ*, or companies, but subsequently into four tribunals. These four, on the occasion to which Quintilian alludes, were assembled in one hall. Trachalus was speaking at the one called *the first*, but his voice was so full and sonorous that he caught the attention of the people at the other three, who neglected their own business to applaud him. [Tr.]

must beware lest something of his usual excellence be missed, lest he should be obliged to stop from fatigue, lest he should perceive that what he says is imperfectly heard, and lest he should not recognize his former in his present self. 3. I myself saw Domitius Afer, by far the most eminent orator of all whom it has been my fortune to know, losing daily, at an advanced period of life, something of the authority which he had so justly acquired,²²¹ since when he, who had doubtless once been the prince of the forum, was speaking, some (what may well be thought disgraceful) laughed, while others blushed for him; and his inefficiency gave occasion to the remark, that *he had rather faint than leave off*. Yet his pleading, such as it was, was not bad, but inferior in energy to what it had been. 4. The orator, therefore, before he falls into the grasp of old age, will do well to sound a retreat, and gain the harbor while his vessel is still undamaged.

Nor, when he has done so, will less honorable advantages from his acquirements attend on him. He will transmit the history of his own times to posterity, or, as Lucius Crassus, in the books of Cicero,²²² expresses his intention to do, will explain points of law to those who consult him, or will compose a treatise on eloquence, or will set forth the finest precepts of morality in a style worthy of the subject. 5. In the meantime well-disposed youth, as was customary with the ancients, will frequent his house, and will consult him, as an oracle, on the best mode of attaining eloquence; and he, as a father in the art, will form them, and, as an old pilot on the ocean of oratory, will give them instruction respecting coasts and harbors, and show them what are the signs of tempests, and what management a ship may require under favorable or adverse winds; being induced to do so, not only by the common obligations of humanity, but by his love for his profession; for no man would like that art, in which he himself has been great, to fall into decay. 6. What, indeed, can be more honorable to a man, than to teach that of which he himself has a thorough knowledge? It was thus that Cicero says

²²¹Quintilian had studied rhetoric with Domitius Afer up to the time of the latter's death. [Ed.]

²²²De Orat. i. 42. [Tr.]

Cælius was brought to him by his father; and it was thus that, like a master, he exercised Pansa, Hirtius, and Dolabella, daily speaking and listening to them. 7. And I know not whether an orator ought not to be thought happiest at that period of his life, when, sequestered from the world, devoted to retired study, unmolested by envy, and remote from strife, he has placed his reputation in a harbor of safety; experiencing, while yet alive, that respect which is more commonly offered after death, and observing how his character will be regarded among posterity.

8. For my own part, I know that, as far as I could, with my moderate ability, I have imparted, candidly and ingenuously, whatever I previously knew, and whatever I could discover in furtherance of my present work, for the improvement of such as might wish to learn; and it is enough for an honorable man to have taught what he knows. 9. Yet I fear lest I may be thought, not only to require too much in expecting a man to be at once good and eloquent, but also to specify too many qualifications, by giving, in addition to so many accomplishments necessary to be gained in youth, precepts on morals, and enjoining a knowledge of civil law, not to mention the rules which I have laid down concerning eloquence; and I am apprehensive lest even those who allow that all these requirements were necessary to my design, should nevertheless dread them as too oppressive, and despair of fulfilling them before they proceed to a trial. 10. But let those who think thus, reflect, in the first place, how great the power of the human mind is, and how capable of accomplishing whatever it makes its object; since even arts of less importance than oratory, though more difficult of attainment, have been able to effect voyages over the ocean, to discover the courses and number of the stars, and to measure almost the whole universe. Next let them consider how honorable is the end which they desire to attain, and that no labor should be spared when such a reward is in view. 11. If they allow such conceptions to have due weight with them, they will the more easily be induced to believe that the way to eloquence is not impracticable, or indeed extremely difficult; for that which is the first and more important point, that an orator should be a

good man, depends chiefly on the will; and he who shall sincerely cherish a resolution to be good, will easily attain those qualifications that support virtue. 12. The duties incumbent upon us are not so complex or so numerous, that they may not be learned by the application of a very few years. What makes it so long a labor, is our own reluctance; the ordering of an upright and happy life is but a short task, if we but give our inclination to it. Nature formed us for attaining the highest degree of virtue; and so easy is it, for those who are well disposed, to learn what is good, that to him who looks fairly on the world, it is rather surprising that there should be so many bad men. 13. As water, indeed, is suitable to fishes, as the dry land to terrestrial animals, and the air that surrounds us to birds, so it ought to be more agreeable to us to live conformably to nature than at variance with her.

As to other qualifications, although we should include in our estimate of life, not the years of old age, but merely those of youth and manhood, it is apparent that there is time enough for acquiring them; for order, and method, and judgment, will shorten all labor. 14. But the fault lies, first, with teachers, who love to retain under them those whom they have taken in hand, partly from covetousness, in order to be longer in receipt of fees, partly from vanity, to make it appear that what they profess is very difficult, and partly perhaps from ignorance or neglect of the proper mode of teaching; and, secondly, in ourselves, who are fonder of dwelling on what we have learned than of learning what we do not yet know. 15. For, to confine myself chiefly to oratorical studies, of what advantage is it to declaim so many years in the schools as is customary with many, (to say nothing of those by whom a great portion of life is wasted in that exercise,) and to bestow so much labor on imaginary subjects, when it is possible to gain, in but a short time, a sufficient notion of real pleading, and of the rules of oratory? 16. In making this remark, I do not intimate that exercise in speaking should ever be discontinued, but only signify that we should not grow old in one species of exercise. We may be gaining general knowledge, learning the duties of ordinary life, and trying our strength in the

forum, while we are still scholars.²²³ The course of study is such, that it does not require many years; for any of those sciences, to which I have just alluded,²²⁴ may be comprised in a few treatises, so far are they from requiring infinite time and application. All else depends on practice, which will soon increase our ability. 17. Our knowledge of things in general will daily increase; though it must be admitted that the perusal of many books, by means of which examples of things may be gained from historians, and of eloquence from orators, is necessary for great advancement in it. It is requisite also that we should read, as well as some other things, the opinions of philosophers and eminent lawyers.

All this knowledge we may acquire; but it is we ourselves that make time short. 18. For how much time do we seriously devote to study? The empty ceremony of paying visits²²⁵ steals some of our hours, leisure wasted in idle conversation others, public spectacles and entertainments others. Take into consideration also our great variety of private amusements, and the extravagant care which we bestow on our persons; let traveling, excursions into the country, anxious meditations on our losses and gains,²²⁶ a thousand incentives to the gratification of the passions, wine, and the corruption of the mind with every species of pleasure, claim their several portions of our time; and not even that which remains will find us in a proper condition for study. 19. But if all these hours were allotted to study, our life would seem long enough, and our time amply sufficient, for learning, even if we take into account only our days; while our nights, of which a great part is more than enough for all necessary sleep, would add to our improvement. We now compute, not how many years we have studied, but how many we have lived. 20. Nor, if geometricians and grammarians, and profes-

sors of other sciences, have spent all their lives, however long they were, in their respective pursuits, does it follow that we should require several lives to learn several sciences; for they did not continue adding to their knowledge in these sciences to the time of old age, but were content with having merely learned them, and spent that great number of years rather in practicing than in acquiring.

21. To say nothing of Homer, in whom either instruction, or at least indisputable indications of knowledge in every kind of art are to be found; to make no mention of Hippias of Elis, who not only professed a knowledge of every liberal science, but used to have his dress, and ring, and shoes, all made with his own hand, and had so qualified himself as to require no one's assistance in anything;²²⁷ Gorgias, even in extreme old age, was accustomed to ask his auditors in his lecture-room to name the subject on which they wished him to speak. 22. What knowledge, or any value for literature, was wanting in Plato? How many lives did Aristotle spend in learning, so as not only to embrace within his knowledge all that relates to philosophers and orators, but to make researches into the nature of all animals and plants? Those great men had to discover branches of knowledge which we have only to learn. Antiquity has provided us with so many teachers, and so many models, that no age can be imagined more eligible for us, in regard to being born in it, than our own, for the instruction of which preceding ages have toiled.

23. If we look to our own countrymen, we see that Marcus Cato the Censor, an orator, a writer of history, eminently skilled alike in law and agriculture, amidst so many occupations in war, and so many contentions at home, and in an unpolished age, learned the Greek language in the very decline of life, as if to give an example to mankind that even old men may acquire what they desire to learn. 24. How much has Varro told us, or, let us rather say, has he not told us almost everything? What qualification for speaking was deficient in Cicero? But why should I multiply examples, when even Cornelius Celsus, a

²²⁷Cic. de Orat. iii. 32. [Tr.]

²²⁴Sect. 10. [Tr.]

²²⁵*Salutandi*. Visits of ceremony, to pay respect to great men, which were made in the morning. See Virg. Georg. ii. 461: *Ingentem foribus domus alta superbis Manè salutantum totis vomit œdibus undam*. [Tr.]

²²⁶*Calculorum anxie sollicitudines*. Calculations about income, interest of money, &c. *Buttmann*. [Tr.]

man of but moderate ability,²²⁸ has not only written on all literary studies, but has besides left treatises on the military art, on husbandry, and on medicine? Well worthy was he, if only for the extent of his design, to enjoy the credit of having known everything on which he wrote.

25. But, it may be said, to accomplish such a task is difficult, and no one has accomplished it. I answer, that in the first place, it is sufficient for encouragement in study, to know that it is not a law of nature that what has not been done cannot be done; and, in the second, that everything great and admirable had some peculiar time at which it was brought to its highest excellence. 26. Whatever luster poetry received from Homer and Virgil, eloquence received equal luster from Demosthenes and Cicero. Whatever is best, had at one time no existence. But though a man despair of reaching the highest excellence, (and yet why should he despair who has genius, health, aptitude, and teachers?) yet it is honorable, as Cicero says,²²⁹ *to gain a place in the second or third rank.* 27. If a man cannot attain the glory of Achilles in war, he is not, therefore, to despise the merit of Ajax or Diomedes; if he cannot rival the fame of Homer, he is not to condemn that of Tyrtæus. If men, indeed, had been inclined to think that no one would be better than he who was best at any given time, those who are now accounted best would never have distinguished themselves; Virgil would not have written after Lucretius and Macer;²³⁰ Cicero would not have pleaded after Crassus and Hortensius; nor would others, in other pursuits, have excelled their predecessors.

28. Even though there be no hope of excelling the greatest masters of eloquence, it is yet a great honor to follow closely behind them. Did Pollio

²²⁸See x. 1, 24. That the judgment of Quintilian on Celsus may not appear too unfavorable to those who have given their attention to him, we must consider that he is here compared with the greatest men of every age. *Gesner*. [Tr.]

²²⁹*Orat.*, c. 1. [Tr.]

²³⁰*VI.* 3, 96. [Tr.]

and Messala, who began to plead when Cicero held the highest place in eloquence, attain but little estimation during their lives, or transmit but little reputation to posterity? The advancement of the arts to the highest possible excellence would be but an unhappy service to mankind, if what was best at any particular moment was to be the last. 29. It may be added, that moderate attainments in eloquence are productive of great profit; and, if an orator estimates his studies merely by the advantage to be derived from them, the gain from inferior oratory is almost equal to that from the best. It would be no difficult matter to show, as well from ancient as from modern instances, that from no other pursuit has greater wealth, honor, and friendship, greater present and future fame, resulted to those engaged in it, than from that of the orator, were it not dishonorable to learning to look for such inferior recompense from one of the noblest of studies, of which the mere pursuit and acquirement confer on us an ample reward for our labor; for to be thus mercenary would be to resemble those philosophers²³¹ who say that virtue is not the object of their pursuit, but the pleasure that arises from virtue.

30. Let us then pursue, with our whole powers, the true dignity of eloquence, than which the immortal gods have given nothing better to mankind, and without which all nature would be mute, and all our acts would be deprived alike of present honor and of commemoration among posterity; and let us aspire to the highest excellence, for, by this means, we shall either attain the summit, or at least see many below us.

31. Such were the observations, Marcellus Victor, from which thought that the art of oratory might, as far as was in my power, derive some assistance from me; and attention to what I have said, if it does not bring great advantage to studious youth, will at least excite in them, what I desire even more, a love for doing well.

²³¹As the followers of Aristippus and Epicurus; Cicero de *Off.* iii. 33. [Tr.]

Part Two

MEDIEVAL RHETORIC

Introduction

The phrase *Middle Ages* refers to the period in European history from the fall of Rome to the Renaissance. During this thousand-year span, much Greco-Roman learning was lost, Christian leaders frequently denounced what was left, and Greco-Roman public forms of rhetoric all but disappeared. But rhetoric as a field of study did not disappear. Christian scholars preserved and studied some surviving classical texts—especially works by or attributed to Cicero (see Part One)—and under the influence of these texts, they created new forms of rhetoric suited to the developing European culture.

CHRISTIAN TREATMENTS OF RHETORIC TO AUGUSTINE

In the first four centuries of the Common Era, Roman society under the emperors was increasingly torn by conflict. Dynastic succession was far from certain, since a successful general could and often did usurp the throne. Rulers were despots. There were no public deliberations on national policy, and even in the law courts one had to be circumspect when treating private cases. Political oppression increasingly confined rhetoric to the study of style and to the declamatory rhetoric of the Second Sophistic (see Part One). Periodically Christians and Jews were persecuted: Nero martyred Peter and Paul in 67 C.E., the Jewish Temple in Jerusalem was razed in 70, and Jewish culture in Palestine dispersed after the failed revolt of Bar Kokhba and Rabbi Akiba in 132–135. Christianity continued to spread, however.

Meanwhile, Germanic tribes infiltrated the Empire from the north, sometimes invited as mercenaries and paid with land where they settled, and sometimes attacking for spoils. They sacked Rome in 410 C.E. Invaders from other regions also began to threaten Europe. Huns from central Asia, led by Attila, swept through to France around 450 C.E. Clearly, Greco-Roman cultural and political hegemony was breaking up, and Mediterranean civilization increasingly broke up, too, into a Latin-speaking western part and a Greek-speaking eastern part. These regions were separated by land as a result of Slavic invasions in the Balkans, and by sea because of increasing

Arab control of the Mediterranean. Rome continued to be an important city because the wealthy and well-protected senatorial families were based there, but a rival seat of government arose in Byzantium, in what is now Turkey. Constantine, who became emperor in 306 C.E., moved his administration there in 330 and changed the name to Constantinople. A convert to Christianity, Constantine legalized the religion in 313. The dynastic line that he established in Constantinople became the real power in the Empire thereafter, although the last Roman emperor was not deposed until 476.

Throughout the turmoil of the Roman Empire's collapse, Christian learning was maintained in the eastern Mediterranean. Origen, a Christian teacher and theologian, headed a famous school in Palestine in the mid-200s C.E. Talmudic textual commentary was flowering at this time, as Jews retreated from the ruined Temple into much smaller local gathering places for prayer and study (prototypes of the modern synagogue). Origen used Jewish exegetical methods to legitimate a kind of allegorical reading that extracted moral and spiritual meanings from the Bible. Also, drawing on Greco-Roman rhetorical concepts of persuasion, Origen developed a method of composing a homily, or sermon, that began with the meaning exegesis had discovered in the text and that employed colloquial, emotional language to move the audience to understand and apply this meaning in their lives. Historian of rhetoric George Kennedy suggests that what dialectic is to rhetoric in the Aristotelian system, hermeneutics, in this case biblical interpretation, is to homiletics for Origen and later Christian thinkers.¹

After Constantine gave Christianity his lavish support, the fourth century C.E. produced a number of eloquent Christians preaching simple homilies in Greek; an example is John Chrysostom, who became the chief priest, or patriarch, of Constantinople. These men were educated in Greco-Roman philosophy and rhetoric, including the works of Plato (see Part One), as well as in Judeo-Christian exegesis. They also sometimes denounced classical learning as inimical to Christianity, but this view was not as strong in the Byzantine empire as it was in western Europe. Rather, a scholarly tradition emerged and remained remarkably stable over the next ten centuries, while western Europe struggled to retain basic literacy. The ambivalent attitude toward Greco-Roman learning is aptly represented by the acts of two successive Byzantine emperors: In 392 Theodosius outlawed pagan religions, and in 425 Theodosius II founded a school in Constantinople that preserved much "pagan" learning for a thousand years.

In 529 C.E. the Byzantine emperor Justinian closed the schools of philosophy and rhetoric in Athens. Most of these schools' best teachers, however, had already migrated to Constantinople. Although besieged by the Arabs in 717 and conquered by the European Crusaders in 1204, Constantinople maintained its scholarly traditions essentially intact until it was conquered by the Turks in 1453. Attic Greek was the language of instruction, and the principal texts studied included the works of Homer, Demosthenes, Plato, Aristotle (see Part One), and Hermogenes, as well as the Bible. The intellectual elite, by and large, were not churchmen but laypeople of

¹George A. Kennedy, *Classical Rhetoric and Its Christian and Secular Tradition from Ancient to Modern Times* (Chapel Hill: University of North Carolina Press, 1980), p. 138.

high social position, participants in the imperial bureaucracy. Notable scholars included Michael Psellus; Anna Comnena, daughter of Emperor Alexius I; and, much later, George of Trebizond, who emigrated to Italy and restored the Byzantine Greek rhetorical tradition to western Europe in the Renaissance.

In the first and second centuries C.E., while political and ecclesiastical power was collecting in Constantinople and while Origen and others were consolidating a tradition of Greek-influenced Christian learning, Latin-speaking Christians felt embattled. They suffered the repeated attacks of Germanic pagans, only some of whom could be converted to Christianity. Yet amid this political turmoil, the only cultural refuge for Latin-speaking Christians, Greco-Roman learning, appeared irremediably tainted by the corruption of the late Empire. Not only was there no Christian content in Latin literature, but its subject matter was frequently downright salacious. It often bespoke a world-weariness and moral relativism that Christians abhorred. Hence the exclamation of Origen's Latin-speaking contemporary Tertullian: "What has Athens to do with Jerusalem? What concord is there between the Academy and the Church?"²

Tertullian, who like many of the early Latin Church leaders had been a professional rhetorician before his conversion, here condemns classical philosophy more than classical rhetoric. But Jerome (d. 420 C.E.), another important Latin Father of the Church, does not scruple to denounce classical rhetoric, although he too was well trained in it. "What has Horace to do with the Psalms, Virgil with the Gospels, Cicero with the Apostle?" Jerome exclaims in a letter on Christian education addressed to Eustochium, who later became an abbess.³ In the same letter he tells the now-famous story of his dream: During a severe illness, Jerome imagines himself called before a heavenly judge who condemns him for being more of a Ciceronian than a Christian and makes him promise to eschew all secular books. The implication seems to be that the good Christian should rely solely on the Bible and Christian commentary for her or his education. Yet even Jerome ultimately failed to give up his Cicero. Dangerous though classical learning might be, it also represented the only solid intellectual tradition available, and Jerome later included it in the curriculum of the monastery he founded. Historian and theorist of rhetoric James Kinneavy has argued that the Christian conception of faith—what kind of a belief it is and how it is achieved or induced—was influenced by Greek rhetorical concepts of persuasion.

Jerome's contemporary Augustine (354–430 C.E.; p. 450) recognized that classical learning was an invaluable resource for Christianity, and he attempted to reconcile the two. Augustine was thoroughly trained in classical rhetoric and taught it until shortly before his conversion. In his spiritual autobiography, the *Confessions* (ca. 398), he tells how Christianity was initially distasteful to him because the literary style of the Bible offended one accustomed to the sonorous sentences of Cicero. Yet Augustine also testifies that his very love for Cicero's philosophy prompted him to reexamine Christianity because his mother claimed that Christianity, too, was philosophical, and ultimately he was attracted by it. Classical learning had

²Quoted in Kennedy, p. 147.

³Quoted in Kennedy, p. 147.

other uses for the Christian, as Augustine shows in *On Christian Doctrine* (*De Doctrina Christiana*; ca. 397, 427; p. 456). Here Augustine in his role as bishop instructs Christian pastors in biblical hermeneutics and also in a homiletics that makes significant use of classical rhetoric. Augustine argues that it would be foolish for Christians to neglect this powerful means of teaching.

Augustine's authority in this matter legitimated the study of classical learning for all Latin-speaking Christians, including those of later ages for whom Latin was a scholarly, not a native, tongue. Augustine also recommended preparing compendiums of classical learning for easy reference by the Christian scholar. These initiatives prevented classical learning from being wholly lost. Yet many Christian intellectuals remained hostile. For example, the practice of making compendiums, which Augustine had advocated in a conservationist spirit, was defended by some as a way of keeping less trustworthy minds away from the dangerous classical texts themselves. Continuing political turmoil also contributed to the fragmentation and loss of knowledge, breaking down lines of communication as pagan tribes wandered around the isolated Christian towns and monasteries. Augustine's own episcopal seat of Hippo in North Africa was under Vandal siege at the time of his death.

RHETORIC UNDER SIEGE IN EUROPE TO 1000 C.E.

For the next five centuries — sometimes termed the “Dark Ages” — the sparse population of Europe survived in small local economic units, such as towns, religious houses, or noble families' estates or “manors,” that produced virtually everything their residents used. Most people never traveled more than a few miles from their place of birth. Trade and cultural exchange between regions ceased almost completely. Even minimum subsistence could be swept away by marauding invaders—central Asians in the 400s, Arab Muslims in the 600s and 700s, and Asians, Muslims, and Norsemen in the 900s. The religion of Islam, founded by the prophet Mohammed (d. 632), had arisen in the Middle East in the 600s, and its adherents quickly became a potent political and military force around the eastern and southern Mediterranean.

Only the Christian Church maintained any organizational structure beyond the local level in western Europe, and even the Church had to deal with frequent schisms and many sects. Civil authority and religious authority were often linked, thus enhancing the power of both. The bishop of Rome, thought to have been given secular as well as religious control of the city by Constantine as a means of maintaining some civil order in the face of pagan invasions, took the title of pope. This office was crucial to uniting western Christendom, even though it was regarded as renegade by the patriarchs in Constantinople, supposedly still the center of the Christian Church.

In 529 C.E., the same year that Justinian closed the schools of Athens, Benedict founded the monastery of Monte Cassino in Italy. Symbolizing the way Latin-speaking Christian culture would appropriate classical learning, Benedict built the monastery on the site of an old temple of Apollo and required that sacred texts replace the secular for his monks' reading, even though he himself had a good classi-

cal education and even though monasteries' scriptoriums copied and preserved many classical texts. Benedict's rules for monastic life were widely adopted in western Europe in the next few centuries. His authority helped to ensure that access to classical learning would be much more limited and controlled by the Church in the West than in Byzantium.

What was known of classical rhetoric was generally known from extremely brief and schematic digests prepared by Church scholars or approved classical authors. The first of these influential digests was composed by a non-Christian, Martianus Capella, a contemporary of Augustine's who lived in Carthage, the North African intellectual center to which Augustine had also been drawn. In 429 C.E. Martianus finished a long *prosimetrum*, or mixture of poetry and prose, titled *The Marriage of Philology and Mercury (De Nuptiis Philologiae et Mercurii)*, in which he describes seven necessary branches of education: grammar, dialectic, rhetoric, geometry, arithmetic, astronomy, and music. Martianus follows Cicero's contemporary Varro in this listing, although he omits two other arts that brought Varro's total up to nine—medicine and architecture.

Martianus's work, widely used as a school text throughout the Middle Ages, provided what became the definitive listing of the seven liberal arts, divided in medieval education into the trivium (the first three, with a linguistic focus) and the quadrivium (the last four, all mathematical). Martianus personifies the seven liberal arts as wedding guests. Rhetoric is a tall, handsome woman, ornamented with figures and tropes and fearsomely armed. In Martianus's formulation, rhetoric is concerned primarily with invention, the canon to which the writer devotes the most space, not surprising considering that he drew heavily on Cicero's *De Inventione*. Martianus also discusses style, as his personification of Rhetoric might suggest, especially that style which could be most effective in combative political and judicial deliberation. Cicero's *De Inventione* and the *Rhetorica ad Herennium*, also thought to be Cicero's (see Part One), were by far the most frequently used classical sources in rhetoric throughout the Middle Ages. Cicero's name occurs again and again, even if his work is put to new medieval uses.

Boethius (ca. 480–524 C.E.; p. 486), a Christian scholar with a knowledge of Greek, also drew on Cicero. Boethius was respected throughout the medieval period for his philosophy, logic, and commentary on Aristotle and Cicero. In his brief and highly schematic "An Overview of the Structure of Rhetoric" (p. 488), rhetoric is primarily concerned with style and is subordinate to dialectic. This view was shared by Boethius's fellow scholar and encyclopedist Cassiodorus, a Christian who, like Boethius, served an illiterate Ostrogothic ruler in Italy, Theodoric the Great. Among other activities, Boethius and Cassiodorus handled diplomatic correspondence; the rhetorical art of letter writing would become a formal discipline in the later Middle Ages. The presence of these scholars in the court testifies to the respect for Greco-Roman learning that often grew in pagan invaders who became somewhat assimilated to the culture.

Boethius was eventually executed on suspicion of plotting with the Byzantine emperor to remove Theodoric. Cassiodorus was captured during war with Byzantium and taken to Constantinople. Upon his return, the elderly Cassiodorus retired

to family estates at Vivarium in southern Italy and founded a monastery. His book directing the monks' education, *Institutiones Divinarum et Saecularium Litterarum*, cites Cicero, Quintilian, and the *Rhetorica ad Herennium*, but only briefly. Cassiodorus gave more emphasis to learning than Benedict did in his influential rules; he endowed his monastery with an excellent library and encouraged the preservation and copying of manuscripts. But Cassiodorus downplays rhetoric. He reorganizes the seven liberal arts of Martianus so as to place rhetoric between grammar and dialectic, thus suggesting that the study of rhetoric is preliminary to the study of dialectic. Further, he continues Martianus's emphasis on rhetoric as style by recommending that rhetoric be used in analyzing the style of the Bible.

Another influential compendium of classical learning was created by Archbishop Isidore of Seville (d. 636 C.E.), a monastic scholar pressed into service as an ecclesiastical administrator after the death of his brother, who had been archbishop of Seville before him. It seems that Isidore would have preferred to continue his studies. His work was shaped by monastic rules that both preserve classical study and limit its results to the collocation of fragments. His encyclopedic *Etymologiae* outlines the seven liberal arts, gives a political and literary history of the world, and, among other things, summarizes rhetoric, relying heavily on Cicero and Quintilian: "Rhetoric is the science of speaking well: it is a flow of eloquence on civil questions whose purpose is to persuade men to do what is just and good. . . . The orator is the good man skilled in speaking."⁴ Isidore identifies "civil questions" as the proper subject matter for rhetoric, suggesting that he is still thinking of rhetoric as primarily a secular and especially a legal occupation, though he adds that the questions must be answered in a morally correct way. He forbade his monks to study secular books, and so—without access to these works—his monks and other Christians of the period showed little influence of rhetoric in their preaching. His contemporary, Pope Gregory the Great, makes no mention of rhetoric when he treats preaching in his *Cura Pastoralis* (591 C.E.). Evidently most homilies continued in the same simple, loose structure inherited from the first centuries C.E.

At this time the best scholars of classical learning in Europe were Irish monks. The man who would become Saint Patrick was a Roman Christian who lived in England. He was captured by Irish raiders and spent several years as a slave in Ireland. After regaining his freedom, he returned to Ireland around 432 C.E. and proselytized for Christianity so successfully that tradition credits him with converting the entire island. Along with Christianity, Patrick and his followers brought the Latin language and classical learning to Ireland, where monasteries soon flourished and promoted the study and preservation of classical texts. By the time of Saint Columban (ca. 543–615 C.E.), these monasteries were sending missionaries to Scotland, northern Europe, France, and even Italy, where Columban established a monastery at Bobbio that became an important center of learning. Viking incursions greatly reduced the power of the Irish monasteries after about 800 C.E., but they

⁴Isidore of Seville, "The Etymologies, II. 1–15: Concerning Rhetoric," in *Readings in Medieval Rhetoric*, ed. Joseph M. Miller, Michael H. Prosser, and Thomas W. Benson (Bloomington: Indiana University Press, 1973), pp. 80, 81.

served as an important refuge of classical learning during the darkest centuries following the fall of Rome.

After Roman civilization and its schools disintegrated, some upper-class families attempted to continue education in Latin through home tutoring. But as the number of those literate in Latin continued to decline, such informal methods could not meet the Church's demand for a literate clergy. Increasingly, Latin became a foreign language and had to be taught as such. Pope Gregory the Great had permitted the foundation of song schools at the major cathedrals to provide training in music and in minimal Latin literacy for Church choristers. Literacy began—and for many ended—with the Bible in Latin. But sometimes the song schools also offered informal instruction in Latin grammar to a few young men, candidates for the priesthood or the sons of local leaders, although Gregory opposed such instruction. Gradually the cathedrals came to support not only song schools but also separate grammar schools whose curriculum attempted to roughly cover all seven liberal arts. Girls were not usually admitted to these schools and indeed were not usually educated in the liberal arts; home tutoring provided minimal literacy and numeracy for some girls from wealthy families.

Also in the seventh century C.E. Islam was extending its power in Palestine and Africa, and about seventy years after the deaths of Isidore and Gregory, Arab Muslims conquered Spain. An army of Frankish converts to Christianity stopped them from moving further into Europe at the Battle of Tours in 732. The Frankish kings allied themselves with the bishop of Rome, protecting his secular power from incursions by pagan tribes and Byzantine and Muslim empire builders and using his religious authority to bolster their own position. In 800, the pope crowned the Frankish king Charlemagne Emperor of the West. Charlemagne subdued pagan rulers in Italy and Germany, pushed the Muslims back over the Pyrenees, and sent embassies to the Byzantine emperor and to the chief Muslim caliph, Haroun al Rashid, in Baghdad. Charlemagne imposed the first large-scale political organization on western Europe since the fall of Rome.

Charlemagne also sought to make his capital city, Aix-la-Chapelle in France, into a cultural center. He encouraged the preservation of manuscripts, and his patronage ensured that many Latin texts were not lost. An improved script for speeding up copying—the Carolingian minuscule—bears his name. Nearly illiterate himself, Charlemagne founded a palace school for the education of his family and the nobility, and brought in scholars from all over Europe. Among them was Alcuin, an English monk who came to France in 781 to direct the school. Alcuin systematized the Church's earlier efforts to educate its clergy in Latin, greatly raising the level of clerical literacy and also encouraging Charlemagne to promote literacy among the general population—hence Charlemagne's proclamation of 785, *De Litteris Colendis*, directing the clergy to teach the laity grammar and rhetoric. Alcuin was unusual among the Church-educated of his day in that he greatly valued education in rhetoric. He composed a dialogue, *Disputatio de Rhetorica et de Virtutibus*, in which he depicts himself defending the study of rhetoric to the concerned Christian monarch. Charlemagne questions Alcuin, and the monk gives lengthy

answers drawing heavily on Cicero in which he stresses the civic usefulness of rhetoric, especially for the conduct of government. Rhetoric may also be used to encourage Christian virtue, Alcuin explains, if the neophyte practices speaking on virtuous subjects.

Alcuin had come to Charlemagne from a cathedral school at York, and by the late 700s such schools, developed from the song schools, could be found throughout Christian Europe. Charlemagne counted on them to provide the educated clergy who would spread literacy among the laity. In *Versus de Patribus Regibus et Sanctis Eboracensis Ecclesiae* (*Poem on the Bishops, Kings, and Saints of the Church of York*, ca. 790), Alcuin praises the learning available there:

There you will find the legacy of the ancient fathers:
All the Roman possessed in the Latin world,
Whatever famous Greece has transmitted to the Latins,
Draughts of the Hebrew race from Heaven's showers,
And what Africa has spread abroad in streams of light.⁵

Among those Alcuin names as represented in the York library are “keen-minded Aristotle,” “Cicero the great rhetorician,” Donatus, John Chrysostom, Jerome, Augustine, Cassiodorus, and Boethius. Even if Alcuin is exaggerating the endowment of his alma mater, the list is more complete and expresses a more expansive view of learning than that found in the work of Isidore, Cassiodorus, or Benedict. Although such schools could educate only a tiny fraction of the population—even most nobles were illiterate, and almost all women were—they did establish resources that would later be developed by medieval universities. These schools provided important supplements to the works preserved in the monasteries, where the commitment to learning was not always profound.

THE “RENAISSANCE OF THE TWELFTH CENTURY”

Charlemagne's empire fell apart after his death in 814 C.E., and further pagan incursions plagued Europe. The political turmoil contributed to crop failures and famines, and, as the millennium approached, people feared that the end of the world was truly at hand. Gradually, however, many of the invaders became Christianized, and around the year 1000 C.E. political conditions improved. Feudal governments headed by kings were established in France and England, and in 962 the pope crowned another Frankish king as emperor, creating the Holy Roman Empire from parts of Germany and Italy. These larger political entities curbed the power of local nobles, who reduced their destructive warfare with each other when they swore fealty to a royal government. Europe was in the throes of transition to larger national governments headed by hereditary kings, a process that would eventually give rise to the Hundred Years' War in the 1300s between England and France, as rival dynasties struggled for control of the two countries.

Nevertheless, greater political stability improved the quality of life, and popula-

⁵Alcuin, *The Bishops, Kings, and Saints of York*, ed. and trans. Peter Godman (Oxford: Clarendon Press, 1982), p. 123.

tions grew dramatically. Walled cities, formed as refuges from pagan, Arab, or Byzantine invasions, began to flourish as centers of commerce. Towns grew and more towns were founded. Craft guilds began to form, increasing the quality and distribution of manufactured goods. By the 1300s, urban industrial centers had developed in northern Italy and in northern France and Flanders. Literacy and numeracy began to spread more quickly among the lay population, both male and female. This growth occurred in spite of the depredations of warfare and the Great Plague of the mid-fourteenth century, which carried off about one-third of the population of Europe.

During this time the Church became an even stronger unifying force in western Europe, influencing political events by wielding political sanctions. The Roman bishop's anomalous position with respect to the Church in Constantinople was clarified in 1054, when the split between Rome and Constantinople was formalized, creating a Roman Catholic Church headed by the pope in western Europe and a Greek Orthodox Church headed by a patriarch in Palestine, Asia Minor, the Balkans, and Russia. The Church also attempted to strengthen itself by reaffirming the need for monastic asceticism and spirituality, reforms begun at Cluny in the tenth century. One sign of the Church's new power to direct political events was its launching of joint European military expeditions to free the land where Jesus lived and taught, and eventually other areas as well, from Muslim control. The first of these "Crusades" was called up by Pope Urban II in 1095, and over the next three hundred years the expeditions went to Palestine, Spain, and Sicily. One consequence was the introduction into Europe of Arab scholarship on classical learning, especially the teachings of Aristotle.

With the new prosperity brought on by the growth of political stability, and the contact with classical learning facilitated by the Crusades, a decided shift in European thinking occurred around the twelfth century C.E., a change literary historian Charles Haskins and other scholars have termed a renaissance.⁶ The renaissance of the twelfth century apparently entailed not only increased knowledge of classical literature, especially Greek, but also a different attitude toward the classical heritage, one akin to later Renaissance humanism in its optimistic emphasis on individual human powers. Study was less restricted by pious fears of contamination from classical sources and branched out in many directions.

For example, the study of grammar, as historian of rhetoric James J. Murphy argues, had for hundreds of years been essentially descriptive and had relied on the late-classical handbooks of Donatus and Priscian.⁷ But in the twelfth century a new interest in the nature of language arose, producing new grammars that took into account the changes in Latin since classical times. The study of style also received new emphasis. The classical teacher of grammar had analyzed poetry with students to demonstrate correct grammar and some use of tropes and figures. Grammar had been a preliminary subject for the youngest students. Although still for beginners in

⁶Charles H. Haskins, *The Renaissance of the Twelfth Century* (Cambridge: Harvard University Press, 1927); see also Kennedy, p. 188; James J. Murphy, *Rhetoric in the Middle Ages* (Berkeley: University of California Press, 1974), p. 123.

⁷Murphy, pp. 138–39, 161.

medieval times, the study of grammar ramified as students went on to cover virtually all five canons of classical rhetoric. The medieval grammarian might begin by working carefully through a passage of classical poetry, noting the standard and variant grammatical forms and explaining any figures and allusions: John of Salisbury depicts his beloved teacher Bernard of Chartres doing so in the *Metalogicon* (Bernard acknowledges his debt to the pedagogy of Quintilian in his own writings). Students were then encouraged to memorize and declaim the texts so analyzed, as well as to compose and declaim their own compositions in imitation of them. Older students looked at larger structures of arrangement, such as genre, and finally the most advanced students considered theories of rhetorical invention. Memory and delivery were also needed as students recited their own work, although, as medievalist Marjorie Curry Woods has pointed out, the order of instruction—from style to arrangement to invention—reverses the order of the classical canon and reflects the primacy given to studies related to logic, as invention was seen to be. It is placed last and designated for the most advanced students.

Late in the twelfth century, medieval grammarians began to produce treatises that described their educational approach, the “ars poetriae” or manuals of poetry writing (which also usually gave some attention to writing prose). These handbooks explored the use of tropes, figures, and descriptive formulas in detail, and sometimes treated other canons, especially arrangement. The *Rhetorica ad Herennium* (called in medieval times the *Rhetorica Nova* because it was thought to be a “new” rhetoric written by Cicero after he wrote *De Inventione*; see Part One) is often the source of the figures discussed. Matthew of Vendome’s *Ars Versificatoria* (ca. 1175), the first surviving example of these treatises, and Geoffrey of Vinsauf’s *Poetria Nova* (between 1200 and 1216; p. 506), by far the most popular, are often referred to as rhetorical treatises and their authors as rhetoricians, although they would have described themselves as grammarians. Geoffrey’s work acknowledges all five canons of classical rhetoric, however briefly, and the *Poetria Nova* was often used as a school text in rhetoric. These medieval poetry manuals are often discussed in scholarship on Geoffrey Chaucer (ca. 1342–1400), which often debates the extent to which he was influenced by the *Poetria Nova*.

Philosophy was also transformed in the twelfth century by the influence of Aristotle, whose works on logic were newly available through Arab and Jewish sources. Peter Abelard turned these new philosophical insights to the service of theology by examining apparent contradictions in Church doctrine through a new method of dialectics. His method was initially quite controversial, since it was seen as placing too much confidence in the power of human reason to resolve difficulties. Nevertheless, this intellectual technique grew and flourished, gaining the name *Scholasticism* because it was taught in the schools.

Although Scholasticism is seen as a new spirit of independent thought, arising out of the twelfth-century interest in classical studies, classical historian R. R. Bolgar suggests that its ascendance ultimately closed off the possibility for a full-fledged renaissance of classical learning at that time, because it elevated dialectic and generally subordinated grammar, rhetoric, and classical studies as mere prelimi-

naries.⁸ Increased attention to what had survived of classical rhetoric, mainly Cicero's *De Inventione* and the *Rhetorica ad Herrenium*, only revealed the discipline's irrelevance in a society from which the Roman law courts, scene of Cicero's triumph, had long since disappeared.

Dialectic flourished for its usefulness not only to theology but also to the increasingly professionalized disciplines of law and medicine. The relative positions of rhetoric and dialectic in the *Metalogicon* (1159) of John of Salisbury, Abelard's student, are revealing. Eloquence is promoted as an important study, bolstered by citations from Cicero and Quintilian. Yet what John means by eloquence seems mainly to be the study of stylistic ornamentation as found in the poetry-writing manuals. Eloquence thus is not securely identified with an independent discipline of rhetoric but instead merges into the concerns of grammar and is ancillary to the serious business of Aristotelian logic to which John devotes most of his treatise. By the thirteenth century, dialectic dominated European intellectual life, especially in Scholastic theology such as that of Thomas Aquinas (d. 1274), whose *Summa Theologica* remained a central pillar of Roman Catholic doctrine well into the nineteenth century. Scholasticism is still respected today for the rigor it imparted to Western thought, even if its methods have sometimes been denigrated as hair-splitting.

The Church was now entering a period of great growth and ferment that eventually culminated in the first movements of the Protestant Reformation in the late 1300s. Church-sponsored social service agencies, including hospitals and schools, grew quickly. New religious orders were founded, such as the Franciscans and Dominicans in the early 1200s, who quickly began to develop their own networks of schools at their religious houses. Other new movements, millennialist or utopian, were suppressed as heretical, and non-Christians in Europe—mainly Jews and Muslims—suffered increasing persecution. Jews were expelled from England and France in the late 1200s and were forced into restricted living areas, called ghettos, in Germany in the 1300s. Bishops and abbots demanded more consultative power in setting Church policies, which were discussed at increasingly frequent leadership councils. Ferment within the Church came to a crisis in the late 1300s, when from 1378 to 1418 two popes claimed authority, one in Rome and one, backed by the French king, in Avignon.

THE RISE OF THE UNIVERSITY

Educational institutions played a crucial role in the way European thought changed in the later Middle Ages, as the term *Scholasticism* suggests. More students came to the cathedral schools, especially where there were great teachers, such as Bernard and Thierry at Chartres, and a greater percentage of these students intended to devote themselves to secular pursuits. Education was not limited to clerics and to children of the nobility, for men of the new middle classes aspired to the learned

⁸R. R. Bolgar, *The Classical Heritage and Its Beneficiaries* (Cambridge: Cambridge University Press, 1954), pp. 200–11.

professions. In fact, the student population had more diverse social classes than it would at any later time before the modern period. Historian Joan Ferrante has argued that women not destined for the religious life were occasionally educated in these schools, as we may infer from Church pronouncements turning them out. Deeply learned women often headed abbeys and nunneries, and a few of these institutions supported libraries and scriptoria.

One such learned religious was Hildegard of Bingen (1098–1179). Immured with an anchoress at age seven, Hildegard became a leader of great influence, both religious and secular. After founding her own convent, she often traveled to other male and female religious houses to advise, heal, and even preach—apparently she occasionally addressed all-male audiences. She wrote voluminously, not only providing descriptions and theological interpretations of her many religious visions, but also compiling information on natural history and medicine. She corresponded with clergy and political leaders of the highest ranks and advised them, drawing on her authority as both theologian and prophetess. She also composed liturgical music that is still being sung today. Hildegard’s biographer Sabina Flanagan suggests that Hildegard was able to venture so far beyond the sphere usually allotted to medieval women because she claimed that her actions were commanded by God through her frequent and striking visions. Noting that Hildegard is the only woman to whom an entire volume of the *Patrologia Latina* is devoted, Ferrante wryly calls her “a ‘Father’ of the Church.”⁹

Where several schools were located in a cathedral city of sufficient size, what we now call universities began to develop. They did not necessarily spring from the cathedral schools themselves. More typically, several great teachers congregated along with the many students they attracted—in Paris or Oxford, for example. These embryonic universities did not have self-contained campuses. The students, usually ranging in age from the early teens to the early twenties, simply boarded in private homes or in houses run by teachers who offered both lodging and tutoring. They rented books from local stationers.

The collection of schools where lectures were offered was called a *studium*. A *studium* might gain the prestigious title *studium generale* because it drew students from a large geographical area, because its graduates were respected over a large area, or because in addition to instruction in the seven liberal arts (not all of which were always represented), it offered work in one or more of the graduate disciplines of law, medicine, and theology. The *studium* granted its graduates licenses to teach—*licentia docendi*—but the precise value of a given school’s licenses could be disputed. Eventually the Church undertook to regulate *licentia docendi*, and those schools gaining Church approval could license their graduates to teach anywhere in Christendom. The license also served as a newly professionalized credential for those who had completed the prescribed course of study in medicine or law. A teacher with a license from a prestigious school, such as the one in Paris, began to

⁹Joan M. Ferrante, “The Education of Women in the Middle Ages in Theory, Fact, and Fantasy,” in *Beyond Their Sex: Learned Women of the European Past*, ed. P. H. Labalme (New York: New York University Press, 1980), p. 22.

take on the stature of a modern university professor. Gradually these teachers organized themselves into a sort of guild called a *universitas*, a corporate entity that could own property and set educational policy. At Paris the *universitas* had to contend with ecclesiastical and civic authorities; at Bologna, with strong student organizations.

Students began to organize by lodging in large houses where they could band together according to country or region of origin. Students identified with their particular “nation,” as these sometimes transnational groupings were called, and the nations’ large lodging houses came to be called colleges. At Paris, where more of the students were young undergraduates, the colleges were supervised by young professors and postgraduate students who took on quasi-parental duties. At Bologna, where most of the students were grown men pursuing graduate professional studies, the nations wielded considerable power over what was taught and how professional credentials were granted, although the professors gradually consolidated their own control.

Universities became noted for particular areas of study. The scholars at Paris dominated theology well into the Renaissance. The Italian universities had initially served the more secular needs of the prosperous Italian towns, and hence law and medicine took preeminence. Bologna’s reputation as a site of legal studies was established early by the brilliant lectures of Irnerius (d. ca. 1125).

Scholastic teaching in the medieval university typically employed two methods, the *lectio* or lecture, in which the master teacher held forth, and the *disputatio*, or formal debate, in which both teachers and students orally proposed and attacked syllogisms. All instruction took place in Latin. Logic was always the most important subject of study, and theology was the highest discipline, closely followed by medicine and law. Of the seven liberal arts, the four mathematical ones (geometry, arithmetic, astronomy, and music) tended to be neglected or omitted altogether at the university level, while of the three language-based arts, dialectic was dominant and regarded as the only “adult” subject. Grammar was taught only to little boys, and rhetoric, where it retained any independent existence at all, was regarded as a preliminary subject to be studied schematically by the younger students. The works of Martianus Capella, Boethius, and Isidore were studied more often than the classical rhetorical texts. Of the classical texts, by far the most widely known were Cicero’s *De Inventione* and the *Rhetorica ad Herennium*, thought to be Cicero’s. Although they circulated widely, these texts were typically read only in conjunction with elaborate commentaries supplied by the professors. Quintilian was frequently mentioned, but his *Institutes of Oratory* (*Institutio Oratoria*; see Part One) was known only in fragments. Aristotle’s *Rhetoric* (*Rhetorica*; see Part One), translated into Latin in the twelfth century, was taught as part of moral philosophy.

Although law and theology were studied through a process of oral disputation that we might today regard as highly rhetorical, medieval scholars were uninterested in pursuing the connections with rhetoric. The one “adult” development of rhetoric at the university level, which occurred only in northern Italy, involved the composition of legal letters. The art of letter writing, or *ars dictaminis*, was often associated with education in law, since letters could be important legal documents.

Another sort of practical rhetoric emerged in the art of preaching, or *ars praedicandi*. The hyperlogical structure it imposed on sermons may have been influenced by the universities.

THE ARTS OF LETTER WRITING AND PREACHING

Letter writing hardly seems important enough today to merit a separate discipline. But in a largely illiterate society, official letters were often the only record of laws or commercial transactions and hence had legal standing. The person who could compose letters had access to considerable political power, as Cassiodorus had realized; he says that the literate minister must learn his illiterate ruler's "inmost thoughts, that he may utter them to [the king's] subjects. . . . He has to speak the king's words in the king's own presence . . . with suitable embellishments."¹⁰ The art of letter writing began with formulas for common types of letters to help the scribe less educated than Cassiodorus negotiate this tricky business. Both reflecting and advancing the current practice, in the 1080s Alberic, a monk in the monastery of Monte Cassino, wrote *Dictaminum Rarii* and *Breviarium de Dictamine*. These works drew on Ciceronian concepts of arrangement within standardized letter formats and encouraged the use of rhetorical figures and rhythmic Latin, which would later develop into a form of Latin prose used especially in letters, the *cursus*.

Alberic's methods for letter writing in Latin were developed by the professors of law at Bologna, as in the anonymous treatise *The Principles of Letter Writing (Rationes Dictandi*, ca. 1135; p. 496). These teachers of the *ars dictaminis* also occasionally gave instruction in forensic speaking, or *ars arengandi*. Later manuals on letter writing, whether in Latin or in vernacular languages, took on an encyclopedic quality, since they often included appendixes listing proverbs and historical and literary allusions that might be used to ornament one's missives. The manuals also give an interesting picture of medieval life, providing model letters on such topics as how an impecunious but diligent scholar should ask his father for more money and how the appeal should change if he knows his father has heard reports of his dissipation; or how a wife who has left an abusive husband should ask for legal assurances that he has changed his ways before she will return to him. Much later, Erasmus was to jest with this tradition in *On Copia* (or *Copia: Foundations of the Abundant Style*, 1511, p. 597; see Part Three).

If it is surprising that an art of letter writing developed at all, it is more surprising that an art of preaching did not develop sooner. After Augustine (d. 430), the only major work before the twelfth century was the *Cura Pastoralis* (591) of Pope Gregory the Great, noted above. The book details the duties of a bishop: To add to the power of his message, he must lead a good life and make himself loved. He must preach eloquently by varying the subject matter of his sermons (but not the style, apparently) to suit his audience. Gregory lists thirty-six pairs of human characters defined antithetically with suggestions on the material appropriate to each,

¹⁰Quoted in Murphy, p. 197.

such as the young and the old or “those who commit small but frequent faults” and “those who sometimes commit big faults.”¹¹ James J. Murphy and George Kennedy agree that Gregory’s approach shows little sign of the rhetorical learning he was said to have gained from his education in Roman schools.¹² Gregory himself on numerous occasions denounced such learning.

The approach to preaching began to change around 1200, however, perhaps following the twelfth-century renewal of interest in classical rhetoric, when Alain de Lille, a Cistercian monk, wrote *De Arte Praedicatoria* (ca. 1199). Like Gregory, he uses an image from Augustine to emphasize that the function of preaching is to “cure the disease” of sin: “Just as medicine can produce different remedies for a variety of diseases, so the preacher should adapt his healing admonitions.”¹³ Also like Gregory, Alain makes little overt use of classical rhetorical theory in organizing his treatise. For example, he reduces invention to scriptural hermeneutics; he does not mention arrangement, style, and memory; and he addresses delivery only to caution against display. Nevertheless, Alain’s approach seems more rhetorical than Gregory’s. He advocates appealing to authorities like Gregory, Jerome, and Augustine to persuade the audience by reason. He also habitually employs the organizational pattern of division, usually into three members, hence providing a model of arrangement that was to dominate preaching for centuries thereafter. He even suggests that these preaching methods could be adapted to guide men to the good in secular matters.

In the thirteenth century, a new form of preaching emerged that emphasized the rational persuasion seen in Alain. This new form is sometimes called the university sermon, perhaps because it was first or most often heard in university cities. The earliest collection of such sermons was published in Paris in 1231. This type of sermon is also called the thematic sermon because it takes a scriptural text as its theme and then explicates this text in great detail. Typically the text is divided phrase by phrase, sometimes word by word, and the body of the sermon consists of a series of miniature homilies, each drawing a moral lesson from a word or phrase and pointing it up with further citations from the Bible and other authorities. Many medieval manuals of preaching are extant. Like the manuals of letter writing, many are encyclopedic, with appendixes listing historical, biographical, and scientific anecdotes that might be worked effectively into a sermon. Robert of Basevorn’s *The Form of Preaching* (*Forma Praedicandi*, 1322; p. 528) is typical.

This emphasis on preaching and legal letter writing might seem to imply that women did not participate in rhetoric, since they seldom functioned as preachers or lawyers. Indeed, they seldom achieved literacy—and so could hardly leave records of the eloquence they undoubtedly exercised orally in many private, and some public, venues. The learning available to a female religious was restricted by the fact that only a few nunneries preserved and copied manuscripts, as did male monasteries. Members of female religious orders did not usually preach or engage in theological disputation. But the examples of Julian of Norwich (d. 1415), discussed

¹¹Murphy, p. 295.

¹²Murphy, p. 296; Kennedy, p. 179.

¹³Alan of the Isles, “A Compendium on the Art of Preaching, Preface and Selected Chapters,” in Miller, Prosser, and Benson, p. 237.

by rhetoric historian Cheryl Glenn, and Hildegard of Bingen show that they occasionally did so. Moreover, laywomen sometimes engaged in informal exhortation, whether as part of lay religious movements or—in another example from Glenn—as moved by their own inspiration, like Margery Kempe (d. ca. 1439). Upper-class women in secular life, too, though they might not be as well educated as their brothers and did not often speak in public, used carefully crafted speech behind the scenes to serve familial and national interests. In addition, as Malcolm Richardson has shown, medieval women at all social levels learned about letter writing from practical experience in serving the needs of craft guilds, family businesses, and noble estates.

Yet because, by and large, they did not use language in “rhetorical” ways, few medieval women produced works that might be called rhetoric texts, although Glenn presents persuasive arguments for medieval women’s rhetorical sophistication. Even Hildegard, so far as we know, did not write anything on how to preach, although she did preach to a variety of audiences. Perhaps the best place to look for medieval women’s reflections on language use is in texts that give advice to women on how to behave generally—what are sometimes called conduct books—which treat language use as well as other aspects of behavior. If women did not have overt political power, they could wield considerable covert power, whether in a royal court, a wealthy mercantile house, or, more modestly, in the domain of a simple farmer or craftsman. Advice on how to use language in these ways can be found, for example, in the *Book of the City of Ladies* and *The Treasure of the City of Ladies* (1405; pp. 544, 546) by Christine de Pizan (ca. 1364–ca. 1430). Born into an Italian family that was well connected at the French court, Christine is often called the first Western “woman of letters.” She was a poet, historian, and what we would now designate a feminist theorist, who supported herself and her family with her writing and who forged a new rhetorical persona for women. Her work looks ahead to the new possibilities for women’s education in rhetoric that would arise with the Renaissance.

The medieval period in rhetoric has no clear terminus. As the introduction to Part Three suggests, a long transition occurred between the medieval and Renaissance cultures that influenced the treatment of rhetoric. Renaissance writers tended to obscure this transition by claiming a clean break, emphasizing the novelty of their own approaches and underplaying the extent to which they were influenced by medieval developments. For example, while medieval attitudes toward rhetoric as a schematic subject still flourished in the fourteenth century, a richer, classicizing view, to which Renaissance scholars would lay claim as their exclusive territory, was already anticipated with the establishment of a chair in rhetoric at the University of Bologna in 1321, whose holder taught Cicero and Latin composition.

Furthermore, the “discoveries” of classical texts heralded with so much fanfare in the early fifteenth century ignored the existence of some of the discovered texts in complete or nearly complete versions throughout the medieval period. In 1416, Poggio Bracciolini unearthed a complete manuscript of Quintilian’s *Institutes of Oratory* in a neglected storeroom in the monastery of St. Gall in Switzerland. Though it was founded by Irish missionary-scholars eight centuries earlier, in

Bracciolini's time St. Gall's monks were not interested in classical scholarship. Bracciolini, one of the early Italian humanists, apparently suspected that the monks might have neglected manuscript treasures. But nearly complete texts of Quintilian were known in earlier periods. Cicero's mature work on rhetorical theory was reintroduced to European scholars who had long revered him through Bishop Gerardo Landriani's discovery in 1421 of a complete manuscript of Cicero's *De Oratore* (see Part One) in the cathedral of Lodi, Italy. But other works of Cicero's, if not *De Oratore*, had been known in the Middle Ages, indeed, had been among its most revered classical texts. Nevertheless, it is probably fair to say that in the Renaissance rhetoric moved away from medieval schematizing and subordination to dialectic and recovered the humanistic breadth that Cicero and Quintilian had tried to give it.

Selected Bibliography

Relatively little medieval work on rhetoric has been translated from Latin, in comparison with the wealth of classical works available in English. Sources of works reprinted here are cited in the headnotes. A good collection of short excerpts drawn from the entire period, including excerpts from Martianus Capella, Cassiodorus, and Isidore of Seville and containing useful information on secondary sources, is *Readings in Medieval Rhetoric* (ed. Joseph M. Miller, Michael H. Prosser, and Thomas W. Benson, 1973). A complete translation of Martianus, accompanied by helpful commentary on his place in intellectual history, is provided by William H. Stahl and Richard Johnson in the two-volume *Martianus Capella and the Seven Liberal Arts* (1977). James J. Murphy has edited *Three Medieval Rhetorical Arts* (1971), which includes English translations of medieval manuals on letter writing and on preaching (both are excerpted here), as well as a translation of Geoffrey of Vinsauf's *Poetria Nova* (also excerpted here) and translations of excerpts from medieval textbooks on Aristotelian dialectic. *The Bishops, Kings, and Saints of York* (ed. and trans. Peter Godman, 1982) presents Alcuin's long poem on his alma mater. One can find Alcuin's dialogue on rhetoric in *The Rhetoric of Alcuin and Charlemagne* (ed. and trans. Wilbur Samuel Howell, 1941).

James J. Murphy's *Medieval Rhetoric: A Select Bibliography* (2nd ed., 1989) includes helpful annotations; see also his bibliographic essay "The Middle Ages" (in *The Present State of Scholarship in Historical and Contemporary Rhetoric*, ed. Winifred Bryan Horner, 2nd ed., 1990). Another good listing of primary and secondary sources is Luke Reinsma's "The Middle Ages" (in *Historical Rhetoric: An Annotated Bibliography in English*, ed. Winifred Bryan Horner, 1980).

A number of comprehensive histories of rhetoric discuss medieval rhetoric. Helpful capsule biographies of important figures can be found in George Kennedy's *Classical Rhetoric and Its Christian and Secular Tradition from Ancient to Modern Times* (1980). R. R. Bolgar's *The Classical Heritage and Its Beneficiaries* (1954) centers on the medieval period. The chapter on the medieval period in Thomas M. Conley's *Rhetoric in the European Tradition* (1990) is especially enlightening on Cicero's influence in the period. Samuel IJsseling's revisionist *Rhetoric and Philosophy in Conflict* (trans. Paul Dunphy, 1976) includes chapters on Augustine and on rhetoric in the medieval university.

As for histories focusing on medieval rhetoric, the standard account of the period is James J. Murphy's *Rhetoric in the Middle Ages* (1974). Murphy treats Augustine as a pivotal figure and devotes long chapters to the arts of letter writing, verse writing (poetics), and preaching.

Perhaps the best short account of medieval rhetoric is Martin Camargo's "Rhetoric" (in *The Seven Liberal Arts in the Middle Ages*, ed. David L. Wagner, 1983). See also Marjorie Curry Wood's entry on "Rhetoric" in *Medieval England: An Encyclopedia* (ed. Paul E. Szarmach, M. Teresa Tavormina, and Joel T. Rosenthal, 1998). Helpful summaries of major works can be found in Charles Sears Baldwin's *Medieval Rhetoric and Poetic* (1928). For a magisterial and witty account of the entire medieval literary culture, see Ernst Curtius, *European Literature and the Latin Middle Ages* (trans. Willard Trask, 1953). Focusing on the early Christian centuries immediately preceding Augustine and Boethius is James Kinneavy's *Greek Rhetorical Origins of Christian Faith* (1987). Charles Homer Haskins's *The Renaissance of the Twelfth Century* (1927) treats the later Middle Ages. Among studies on particular authors, Richard Speer provides a good introduction to John of Salisbury, discussing his use of classical sources and Boethius, in "John of Salisbury: Rhetoric in the *Metalogicon*" (*Central States Speech Journal* 20 [1969]: 92–96). See also the bibliographies accompanying authors excerpted here.

An important account of medieval rhetorical theory, although comparing it somewhat unfavorably with the classical, is Richard McKeon's "Rhetoric in the Middle Ages" (1942; rpt. in *The Province of Rhetoric*, ed. Joseph Schwartz and John Rycenga, 1965). Martin Camargo discusses the possibility of a unified theory of medieval rhetorical arts in "Toward a Comprehensive Art of Written Discourse: Geoffrey of Vinsauf and the *Ars Dictaminis*" (*Rhetorica* 6 [1988]: 167–94). For an overview of the medieval treatment of Aristotle's distinction between rhetoric and dialectic, see Brother S. Robert, "Rhetoric and Dialectic According to the First Latin Commentary on the *Rhetoric* of Aristotle" (*New Scholasticism* 31 [1957]: 484–98).

For essays exemplifying the range of contemporary scholarship and for an excellent bibliography, see *Medieval Eloquence* (ed. James J. Murphy, 1978). Important scholars who have published collections of their work on medieval rhetoric and its transformations of the classical heritage include Erich Auerbach, *Literary Language and Its Public in Late Latin Antiquity and in the Middle Ages* (1958; trans. Ralph Manheim, 1965); and Harry Caplan, *Of Eloquence: Studies in Ancient and Medieval Rhetoric* (ed. Anne King and Helen North, 1970).

Rhetoric held a more subordinate position in medieval education than it did in the classical period or than it would in the Renaissance. Nevertheless, scholars who influenced the development of rhetoric were often associated with schools and, toward the end of the period, universities. A good introduction to the English schools that influenced other schools in Europe is Nicholas Orme's *English Schools in the Middle Ages* (1973). The standard work on medieval universities is H. Rashdall, *The Universities of Europe in the Middle Ages* (rev. ed. 1936); see also Gordon Leff's *Paris and Oxford Universities in the Thirteenth and Fourteenth Centuries: An Institutional and Intellectual History* (1968) and A. B. Cobban's *The Medieval Universities: Development and Organization* (1970). For an account of how medieval universities transformed the classical liberal arts, see Bruce Kimball's *Orators and Philosophers: A History of the Idea of Liberal Education* (1986). For medieval education in rhetoric, see Louis John Paetow, *The Arts Course at Medieval Universities with Special Reference to Grammar and Rhetoric* (1910); R. R. Bolgar, "The Teaching of Rhetoric in the Middle Ages" (in *Rhetoric Revalued*, ed. Brian Vickers, 1982); and Marjorie Curry Woods, "The Teaching of Writing in Medieval Europe" (in *A Short History of Writing Instruction*, ed. James J. Murphy, 1990).

Cheryl Glenn discusses the rhetorical sophistication of medieval women and places them in their cultural and historical setting, with special attention to Julian of Norwich and Margery Kempe, in *Rhetoric Retold: Regendering the Tradition from Antiquity through the Renaissance* (1997). On the education of women in the Middle Ages, especially learned reli-

gious, see Joan M. Ferrante, "The Education of Women in the Middle Ages in Theory, Fact and Fantasy" (in *Beyond Their Sex: Learned Women of the European Past*, ed. P. H. Labalme, 1980). Much can also be learned about the position of women from Sabina Flanagan's *Hildegard of Bingen, 1098–1179: A Visionary Life* (1989). On medieval women and the art of letter writing, see Malcolm Richardson, "Women, Commerce, and Rhetoric in Medieval England" (in *Listening to Their Voices: The Rhetorical Activities of Historical Women*, ed. Molly Meijer Wertheimer, 1997). For sources on medieval conduct books for women, see the headnote to Christine de Pizan.

Augustine

354–430 C.E.

Aurelius Augustinus, or Augustine, now a saint of the Roman Catholic Church, was born in Thagaste, North Africa, to Latin-speaking Berber parents. Augustine's father, Patricius, a small landowner and local official, remained a pagan until Augustine was in his teens, but his mother, Monica, was a devout Christian. Although she labored throughout Augustine's youth and young manhood to draw him to Christianity, Augustine did not convert until the age of thirty-two. His father promoted his secular education, sending him to the North African intellectual center of Carthage around 371 C.E. to study rhetoric. He received the best sort of late-classical education in letters.

By 374, at the age of twenty, Augustine was studying law on his own and supporting himself by teaching rhetoric. By this time he also had a two-year-old son with the mistress whom he was to keep until just before his conversion (her name is not recorded). In Carthage, he frequented the theater and gave himself over to the typical dissipations of the young professionals of the day. (Augustine paints an exaggerated picture of his vices in the *Confessions*, a spiritual autobiography written around 398, after his conversion.) He taught rhetoric in North Africa for about ten years.

During this period, Augustine was also seeking an intellectually satisfying religion, one that could speak to the philosophical interests aroused by his reading of Cicero's *Hortensius*, which draws heavily on Greek thought to discuss the relationship of rhetoric and philosophy. Augustine was attached for some time to Manichaeism, which sees the world as governed by two equal, struggling forces of good and evil. Meanwhile, in 383 he went to Rome to better himself professionally and a year later moved to Milan to accept a prestigious chair in rhetoric. Monica, now a widow, joined him there in 385, and at her urging Augustine began to study with Ambrose, bishop of Milan and an eloquent orator and subtle hermeneut. Ambrose's Christian circle was profoundly influenced by Neoplatonism, and scholars have debated the importance of this influence in drawing Augustine to the faith. In the *Confessions*, Augustine describes his progress toward conviction with sensitivity and wit. He was converted after hearing a divine voice in a country garden in 386. At Eastertime in 387, Ambrose baptized him and the illegitimate son he was raising. Soon thereafter Monica died.

Augustine made his way back to Thagaste by 388 and entered monastic life. Valerius, bishop of Hippo, ordained him in 391 and allowed him to found a monastery in Hippo, where Augustine remained for the next forty years. He became bishop of Hippo on the death of Valerius, around 396. In addition to fulfilling his pastoral duties, Augustine wrote voluminously, and many of his letters, sermons, theological and philosophical works, and biblical exegeses are extant. Augustine saw himself primarily as a controversialist, defending the correct doctrine of a young and volatile Christian Church against various heresies—as if transforming

for sacred use his old ambition to be a secular lawyer. The world around Augustine was volatile as well; his episcopal seat came under Vandal siege several times during his tenure, and Augustine died during another attack in 430.

THE SIGNIFICANCE OF *ON CHRISTIAN DOCTRINE*

The City of God (413–426), which according to some scholars was prompted by the sack of Rome in 410, is Augustine's most comprehensive application of Christian ideas to the governance of the secular state. His *Confessions* may be seen as illustrating the application of Christian ideas to the governance of one's own soul. *De Doctrina Christiana*, or *On Christian Doctrine*—Augustine's most important work on rhetoric—advises the Christian pastor on how to foster both psychological and social order by correctly interpreting the Scriptures and conveying this truth to diverse audiences.

Augustine wrote the first three books of *On Christian Doctrine* at about the time he became bishop of Hippo (ca. 397), and he wrote Book IV (included here) in 427, a few years before his death. The first three books discuss how to interpret the Bible. In assuming that the Bible requires expert exegesis, Augustine implies that it is as rich in both style and meaning as the classics of Greek and Roman literature. For the highly literate Augustine, the very difficulty of the scriptural text adds to its value, although perhaps this difficulty is a consequence of defective human understanding caused by humans' original fall from grace with the sin of Adam and Eve. Book IV takes up the important topic of how to convey the truths so discovered. It is important to remember, as medievalist John D. Schaeffer has argued, that Augustine is dealing primarily with oral sermons that are not composed in detail before delivery; the preacher may be prepared with notes (if his memory is not as compendious as Augustine's apparently was) and with well-stored knowledge of Scripture and Christian doctrine, but he must also be ready to adapt his discourse on the spot to the reactions of the audience.

Like many other late-classical and medieval Christians, Augustine was strongly influenced by Cicero in his views on rhetoric. He quotes or paraphrases Cicero several times in *On Christian Doctrine*. At the same time, Augustine (who apparently had little Greek) knew something of Plato and Aristotle through Latin translations and Neoplatonic compendiums. In *The City of God* he states that the Platonic philosophers come closer to the truth of Christianity than any other pagan thinkers. This view has influenced Western treatment of Plato well into modern times.

Scholars disagree on the extent to which Augustine follows Plato and Cicero. On the one hand, he seems as suspicious of the declamatory rhetoric of the Second Sophistic—a subject he once taught—as Plato is of the Sophistic rhetoric he condemns. Sounding Platonic, Augustine insists that wisdom (comprising, for him, the understanding of the Bible) is more important than eloquence. He also suggests that eloquence can be achieved without rhetorical training, especially if one has good models to imitate and if God answers one's humble prayers for aid. The separation of wisdom and eloquence implies a separation of things (truths, realities) and words

(signs of things), thus leading Augustine to the Platonic conclusion that language is only a means to the final, silent contemplation of divine truth.

Yet words are also a kind of thing for Augustine, and in Book IV of *On Christian Doctrine* he argues vigorously against the conclusion that, because rhetoric is not necessary for achieving truth, it is therefore wholly dispensable. Since people's understanding is imperfect, the Christian pastor cannot assume that they will accept Christian truths unaccompanied by persuasive words. Even the Bible exhibits a type of rhetorical eloquence. Moreover, the use of persuasion is justified by the importance of the message. Augustine thus shares with Cicero—and through him, with Isocrates—the conviction that rhetoric must be employed for people's own good. Philosopher Alan Brinton has argued, however, that Augustine always stressed that the truths of religion may not be compromised or deceptive methods employed for the sake of persuasion.

Augustine follows Cicero in discussing the three offices of rhetoric: pleasing, teaching, and moving to action. Because the appeal of Christianity is democratic, Augustine must attempt to exercise these offices on more diverse audiences than Cicero faced and also, like Isocrates, use writing to disseminate speeches—or in Augustine's case, sermons—more widely. Some scholars argue that Augustine also departs from Cicero in emphasizing teaching over the other two offices of rhetoric, an emphasis inspired by Augustine's conviction that he is offering his audiences the truth, whereas Cicero sought only to convey the plausible. According to religious historian John C. Cavadini, however, teaching must be accompanied by sweet, pleasing discourse so that it can wean people away from the false pleasures of the world to those that lead to God; only then will they be moved to amend their lives. Augustine and other Christian thinkers of the day did not believe that preaching alone could effect conversion. The preacher had to be supported by divine aid to make God's word acceptable to his hearers, and the hearers had to be prepared by divine aid to receive it. The preacher's function in conveying God's word, however, was extremely important and could assist the operation of divine grace—a grave responsibility for rhetoric. Some scholars see Augustine in *On Christian Doctrine* not so much denouncing the Second Sophistic as pruning its excesses in light of his own professionally developed taste and turning its secular epideictic oratory to homiletic uses.

On Christian Doctrine was widely used to train medieval preachers, as medievalist Thomas Amos has shown. It continued to be invoked frequently well into the Renaissance as an authoritative text on Christian preaching, although scholars disagree about the extent of its influence in this period. Still in print today, Augustine's text is still regarded as a major landmark in Christian thinking about biblical exegesis and preaching.

SYNOPSIS OF BOOKS I–IV

In the prologue to *On Christian Doctrine*, Augustine describes the work as conveying “certain precepts for treating the Scriptures,” thus emphasizing the hermeneutic (or interpretive) over the homiletic (or didactic). However, the relative length of the

chapters suggests a greater balance: The first three books, which discuss how to interpret the Bible, are only about twice as long, all together, as the last, which deals with how to convey the truths thus uncovered.

Book I discusses “things.” Things to be “enjoyed” make us blessed; things to be “used” sustain us on the way to blessedness. Augustine develops a Platonic metaphor here: For the Christian, being in the world is like being a traveler trying to return to his or her native land. The “land” is the condition of blessedness or love of God. Using another metaphor with Platonic overtones, one that became popular among later medieval writers, Augustine suggests that our worldly journey to blessedness should be a cleansing or healing process. God “cures” our impurities with the “medicine” of God’s word. Augustine says that God is to Christ as our thoughts are to our words.

Reading Scripture can help us on our journey to blessedness so long as our reading encourages charity, the love of one’s neighbor that leads to the love of God. Any interpretation that encourages charity is not wrong, says Augustine. But an interpretation should be corrected if it deviates from what the biblical author clearly intends, for otherwise the reader could come to love his or her interpretations more than what the Bible says and so fall into error. The reader needs faith, charity, and hope: to believe in God, love God, and hope to return to God.

In Book II, Augustine discusses the sign, that which “causes us to think of something beyond the impression the thing itself makes on our senses.” He says, “Conventional signs are those which living creatures show one another for the purpose of conveying . . . something they have sensed or understood.” Written words are signs of spoken words, which are signs of thoughts.

Scripture presents many obscurities to those who read carelessly, Augustine says, because God wants to correct our pride and make us value the meaning more highly since we must work hard for it. Familiarity with all the canonical Scriptures and a good memory for what one has read are essential prerequisites for correct interpretation. Augustine sorts interpretive problems into four categories: unknown literal, unknown figurative, ambiguous literal, and ambiguous figurative signs. A literal sign is used “as all men use it”; a figurative sign includes both its literal meaning and “something else.” To interpret unknown literal signs, a knowledge of languages, especially Hebrew and Greek, is essential. To interpret unknown figurative signs, Augustine advises finding out about the literal things to which they refer. For example, to understand Christ’s injunction that we be “wise like serpents,” one must know how serpents actually behave.

Augustine also commends the study of dialectical logic, “the science of disputation,” so long as one avoids “Sophisms.” Since God has made a “reasonable order of things,” to learn logic is to point out preexisting (divinely created) truth but not to create truth with one’s words. Augustine cautions against confusing knowledge of logic, the “rules of inference,” with knowledge of the “truth of propositions.” One may, unfortunately, have one without the other, and it is better to have truth than logic. Similarly, says Augustine, to study rhetoric or the “rules of eloquence” is to point out how God has made human nature amenable to persuasion. “Men did not themselves institute the fact that an expression of charity conciliates an audience,”

says Augustine. But one should take care not to use these rules to persuade people to falsehood.

The careful Christian scholar can also approach non-Christian philosophy. “If those who are called philosophers, especially the Platonists, have said things which are indeed true and are well accommodated to our faith,” says Augustine, “they should not be feared; rather, what they have said should be taken from them as from unjust possessors and converted to our use.” Here Augustine develops his famous comparison with the Israelites despoiling the Egyptians: At God’s command they took not the idols but the gold and silver ornaments. So too may Christian scholars take from classical learning not the superstition but what is valuable. This rebuttal of Tertullian and Jerome, who sternly rejected all classical learning (even though they made use of it themselves), was widely influential throughout the Middle Ages.

In Book III, Augustine turns to ambiguous signs. For ambiguous literal signs, he suggests that the reader make sure that punctuation and construing are accurate; comparing translations can help. The ambiguous figurative sign must first be recognized as figurative. “Whatever appears in the divine Word that does not literally pertain to virtuous behavior or to the truth of faith you must take to be figurative,” he says. The spiritually more advanced, however, may read figuratively where the “lower grades” read literally. To resolve the ambiguity of a figurative sign, Augustine suggests looking at how the sign is used elsewhere in Scripture. Also, the sign may be a trope (Augustine briefly describes several, including metaphor).

Although in Book II Augustine briefly referred to the “rules of eloquence” as if they were to be learned elsewhere, when he returned to write Book IV of *On Christian Doctrine*, almost thirty years after the first three books were written, he had obviously decided to give more attention to the way to teach the truth discovered in the Bible. Still, he says, he will not enumerate the “rules of rhetoric” here. Rather, he discusses the relationship between Christian truth and eloquence, as this relationship is demonstrated in the Bible and in pastoral practice. But he clearly shows how the Christian preacher can use precepts from classical rhetoric. Augustine employs Cicero’s conception of the three offices of rhetoric and also of the three levels of style. He fuses these categories more neatly than Cicero does, associating teaching with conveying “small things” in a “subdued” style, delighting with “moderate things” in a “temperate” style, and moving to action with “great things” in a “grand” style. The Christian orator should use subdued style to teach, temperate style to “condemn or praise,” and grand style when he wants to move to action, even though at all times he speaks of “great things” in that what he says always pertains to salvation.

God’s truth belongs ultimately to God, not the speaker. For this same reason, he who cannot think of anything to say may deliver the speech of another. Augustine’s sanctioning of a kind of plagiarism here influenced the medieval practice of quoting lengthily from other sources without attribution. Augustine himself was often the one to be so quoted—for his work has been enormously influential from his own day up to the present.

Selected Bibliography

On Christian Doctrine, translated by D. W. Robertson (1958), is the standard text. A good recent translation is R. P. H. Green's (1995). Another very good one, excerpted here, is Sister Thérèse Sullivan's *De Doctrina Christiana, Liber Quartus* (1930). Note that Sister Thérèse departs from the standard translation of the title, *On Christian Doctrine*, which we use throughout. She renders it as *On Christian Teaching* to emphasize the rhetorical activity Augustine discusses. Sister Thérèse's introduction and notes, also excerpted here, are especially helpful for the student attempting to situate Augustine in the classical rhetorical tradition. A good translation of the *Confessions* is R. S. Pine-Coffin's (1961). Relevant Loeb Classical Library editions are *Confessions* (trans. William Watts, 1631; rpt. 2 vols., 1922) and *The City of God* (trans. G. E. McCracken, W. Green, D. Wiesen, P. Levine, and E. M. Sanford, 7 vols., 1957–1972). A helpful selection of translated excerpts from a variety of Augustine's works, with commentary, is John Mourant's *Introduction to the Philosophy of St. Augustine* (1964).

Most histories of rhetoric discuss Augustine. See especially James J. Murphy, *Rhetoric in the Middle Ages* (1974). An engaging introductory biography is Henri-Irénée Marrou's *Saint Augustine and His Influence through the Ages* (trans. Patrick Hepburne-Scott, 1957). A biography that provides helpful information on Augustine's classical education is John O'Meara's *The Young Augustine* (1954). F. Van der Meer's *Augustine the Bishop* (trans. Brian Battershaw and G. R. Lamb, 1961) shows what Augustine's own preaching must have been like; it also provides synopses of both *On Christian Doctrine* and another very rhetorical work on how to compose oral instruction for small groups of new converts, the *Instruction for Beginners*. Augustine's sermons as oral performances are analyzed in John D. Schaeffer, "The Dialectic of Orality and Literacy: The Case of Book IV of Augustine's *De Doctrina Christiana*" (*PMLA* 111 [1996]: 1133–44). For Augustine's influence on medieval preaching, see "Augustine and the Education of the Early Medieval Preacher," by Thomas L. Amos (in *Reading and Wisdom: The "De Doctrina Christiana" of Augustine in the Middle Ages*, ed. Edward D. English, 1995); on Augustine's influence in the Renaissance, see, in the same volume, John Monfasani's "The *De Doctrina Christiana* and Renaissance Rhetoric."

Many scholars have traced the various classical influences on Augustine's views of rhetoric. W. R. Johnson discusses Augustine's adaptation of classical rhetoric, especially that of Isocrates, for a more heterogeneous audience in "Isocrates Flowering: The Rhetoric of Augustine" (*Philosophy and Rhetoric* 9 [1976]: 217–31). Ernest L. Fortin discusses Augustine's divergences from Cicero in "Augustine and the Problem of Christian Rhetoric" (*Augustine Studies* 5 [1974]: 85–100). For more on Augustine's similarities with Cicero, see James B. Eskridge, *Influence of Cicero upon Augustine in the Development of His Oratorical Theory for the Training of the Ecclesiastical Orator* (1912). Alan Brinton traces Plato's influence on Augustine in "Augustine and the Problem of Deception in Religious Persuasion" (*Religious Studies* 19 [1983]: 437–50) and argues that Augustine evaded Platonic strictures against rhetoric by depicting the Christian orator as conveying (religious) truth while scrupulously abstaining from any rhetorical strategies that would compromise the autonomy of the listener, who must make a free choice. In "Saint Augustine and the Debate about a Christian Rhetoric" (*Quarterly Journal of Speech* 46 [1960]: 400–10), James J. Murphy suggests that Augustine opposed both the excesses of the Second Sophistic and what Murphy calls the "Platonic rhetorical heresy" that Christians could dispense with the power of rhetoric. Joseph A. Mazzeo disputes this view, arguing that Augustine believed that the study of religious truth would incidentally provide all the eloquence one needed but that the highest level of contemplation was a realm of silence ("St. Augustine's Rhetoric of Silence," *Journal of the*

History of Ideas 23 [1962]: 175–96). Mazzeo’s view depicts Augustine as strongly influenced by Neoplatonism, but Marcia Colish disputes this influence in “St. Augustine’s Rhetoric of Silence Revisited” (*Augustine Studies* 9 [1978]: 15–24). Weighing in with those who see Augustine as using a full range of rhetorical resources is John C. Cavadini, who argues that pleasing discourse must be used to teach and move (“The Sweetness of the Word: Salvation and Rhetoric in Augustine’s *De Doctrina Christiana*, in “*De Doctrina Christiana*”: *A Classic of Western Culture*, ed. Duane W. H. Arnold and Pamela Bright, 1995).

On Christian Doctrine

Book IV

1. This work of mine, entitled, “Christian Teaching,”¹ I had, according to my first arrangement, divided into a certain two parts.² For after the

Translated by Thérèse Sullivan.

¹Doctrina is used, of course, in the classical sense of “teaching,” or “instruction”: cf. Cic. *De Orat.* 1, 48, 208: *illa non sunt aliqua mihi doctrina tradita, sed in rerum use causisque tractata.* [Tr.] In this note Sister Thérèse explains why she uses this title, *On Christian Teaching*, rather than the more common title, *On Christian Doctrine*. [Ed.]

²Augustine reduces the traditional fivefold division of oratory (*inuentio, dispositio, elocutio, memoria, actio*) to a twofold division. *Inuentio (modus inueniendi)*, he treats at length in the first three books of *De Doctrina Christiana*; *dispositio*, he omits; *elocutio, memoria*, and *actio (modus proferendi)*, he develops in Book IV, analyzing fully the first, and giving a passing notice to the other two. His emphasis on *inuentio* and *elocutio* is, however, only a natural one, and is by no means peculiar to him alone. Aristotle divides oratory into *εὐρεσις, λέξις*, and *τάξις* (*Rhet.* 3, 1, 1403b), treating *εὐρεσις (inuentio)* in his first two books, and dividing his last book between the other two, giving the first twelve chapters to *λέξις (elocutio)*, and the last six to *τάξις (dispositio)*. Both Cicero and Quintilian also recognize the greater importance of *inuentio* and *elocutio*, and though they do not leave undeveloped the other parts as Augustine does, they give greater space to the discussion of these two. In *De Orat.*, Cicero treats *inuentio, dispositio*, and *memoria* in Book II, and *elocutio* and *actio* in Book III; but in both these books more than two-thirds of the discussion is given to *inuentio* and *elocutio*, respectively. The *Rhetorica ad Herennium*, in four books, gives the first two, and a third of Book III to *inuentio*, the remainder of this book to *dispositio, pronuntiatio*, and *memoria*, and Book IV to *elocutio*. Quintilian devotes Books III through VI of *De Institut. Orat.* to *inuentio*, Book VII to *dispositio*, Books VIII and IX to *elocutio*.—Note the characteristically neat manner in which Augustine here states his twofold division, making use of common rhetorical figures in order to heighten

introduction, in which I answered those who were likely to be critical, I said: “There are two things upon which every treatment of the Scriptures depends: the means of discovering what the thought may be, and the means of expressing what the thought is. We shall discuss first the discovery of the thought, then its expression.” And so, because we have already spoken at length on the discovery of the thought, and have finished three books on this part alone, we shall, with the help of God, speak in brief on the expression of the thought, so as, if possible, to include all in one book, and to finish this whole work in four sections.

2. And so, first, in this introduction, I wish to put down the hopes of readers who, it may be, think that I am going to set forth the rules of rhetoric which I learned and taught in the public schools, and I wish to warn them not to look for this from me, not because such things have no utility, but because, if they have any, it must be got elsewhere if perchance a worthy person have time to learn even such things; but this must not be required of me, either in this work or in any other.

3. For since through the art of rhetoric both truth and falsehood are pleaded, who would be so bold as to say that against falsehood, truth as regards its own defenders ought to stand unarmed,

his contrast: polyptoton, in *intellegenda . . . intellecta*; homoioteleuton, in *modus inueniendi . . . sunt, modus proferendi . . . sunt*; and parison, in the close agreement in number of syllables in the contrasted clauses. The expression is artificial, but it flows spontaneously from the writer’s pen. [Tr.]

so that, forsooth, those who attempt to plead false causes know from the beginning how to make their audience well-disposed, attentive, and docile, while the others remain ignorant of it; so that the former utter their lies concisely, clearly, with the appearance of truth, and the latter state the truth in a way that is wearisome to listen to, not clear to understand, and finally, not pleasant to believe; so that one side, by fallacious arguments, attacks truth and propounds falsehood, the other has no skill either in defending the true, or refuting the false; so that the one, moving and impelling the minds of the audience to error by the force of its oratory, now strikes them with terror, now saddens them, now enlivens them, now ardently arouses them, but the other in the cause of truth is sluggish and cold and falls asleep! Who is so foolish as to be thus wise? Since, therefore, there has been placed equally at our disposal the power of eloquence, which is so efficacious in pleading either for the erroneous cause or the right, why is it not zealously acquired by the good, so as to do service for the truth, if the unrighteous put it to the uses of iniquity and of error for the winning of false and groundless causes?

4. But, whatever the rules and precepts are on this subject, which, with the addition of adroit oral practice in the use of a large vocabulary and rich diction, result in what we term eloquence, or oratory, they must be acquired by those who can do so quickly, outside of this treatise of ours, at a proper and fitting age, when a suitable amount of time has been set aside for them. For even the very masters of Roman eloquence themselves have not hesitated to say that no one can ever acquire this art at all unless he do so quickly. What need is there to question the truth of this? For even if these rules can at length finally be mastered by the plodder, we do not consider them of such value that we wish the mature, or even the later years of life, to be spent in their acquisition. It is enough that this be the concern of the young, and not even of all whom we wish trained for service in the Church, but of those whose attention is not required by a more pressing duty, and one which ought unquestionably to take precedence of this study. For in the case of a keen and ardent nature, eloquence will come more readily through

reading and hearing the eloquent, than through pursuing the rules of eloquence. Nor is the Church wanting in its own literature, even apart from the Canon which is with saving grace fixed in the place of supreme authority; and if a man of ability use this literature, although he has no further aim, but is occupied only with the matter which he finds there, even while he is attending to this alone, he becomes imbued with the eloquence of its diction. This is even especially the case if he adds practice in writing, or dictating, or too, even in speaking his views as guided by the rule of righteousness and faith. But if such ability be wanting, either the precepts of rhetoric will not be grasped, or if by dint of great labor they are grasped to some degree at least, they will be of no avail. For indeed even the very ones who have learned them, and express themselves fluently and elegantly, cannot all, when they are talking, think of these rules, in order to speak in accordance with them, unless the discussion be on the rules themselves. Nay more, I believe there are scarcely any who can do both things, viz., speak well, and in order to do so, think of the rules of oratory while speaking. For they have to be careful not to forget what they want to say, while they are attending to saying it according to theory. And yet, the rules of eloquence are found fully exemplified in the speeches and discourses of the eloquent, even though to arrive at that eloquence, or in the midst of that eloquence, these men did not think of them, whether indeed they had ever learned them, or whether perhaps they had not even slightly engaged in them. For they exemplify them because they are eloquent; they do not use them to become eloquent.

5. Wherefore, as children do not learn to talk except by listening to the talking of those who talk, why cannot men learn to be orators not by studying the rules of oratory, but by reading and listening to the orations of orators, and, in as far as it is possible, by imitating them? Is it not true that in actual experience we find that this is so? For we know many who are more eloquent without the rules of rhetoric than many who have learned them, but none who are eloquent without having read and heard the discussions and speeches of the eloquent. Children, for instance, would not even need the very rules of grammar,

through which the purity of speech is attained, if they had the opportunity of growing up and living with men who talked correctly. For though ignorant of the names of mistakes in speech, they would recognize whatever was faulty in the language of another, and would, because of their own good usage, criticize it and guard against it; just as city people, even when unlettered, criticize country people.

6. It is the duty, then, of the student and teacher of the Holy Scriptures, who is the defender of the true Faith, and the opponent of error, both to teach what is right, and to correct what is wrong,³ and in this function of discourse, to conciliate the hostile, to arouse the careless, and to inform those ignorant of the matter in hand, what they ought to expect. But when he finds his audience kindly disposed, attentive, and docile, or when he has himself made them so, the rest must be carried out as each case demands. If his hearers need information, the matter under discussion must be made clear by giving the history of the question, if indeed that is wanting. On the other hand, to make clear a doubtful matter, there is need of argument and the presentation of evidence.⁴ But if the audience needs to be aroused rather than to be informed, in order that they may

³As will be seen below, the foundation of Augustine's offices is entirely classical; the spirit is wholly Christian; the result is a new rhetorical ideal. [Tr.]

⁴The instruments of *docere* are exposition (*narratione*) and proof (*documentis adhibitis ratiocinandum est*), which are the matter, as Augustine will explain below, of the *genus submissum*, the "plain style"; the instruments of *mouere* are entreaty, reproach, upbraiding (*obsecrationes*, etc.), and the style accommodated to these is *genus sublime*, "grand." Note the intended omission of *conciliare* as an object in oratory. The fact is that Augustine is here recognizing the time-honored conception of the means of persuasion, established by Aristotle: the pragmatic or dialectical (*πίστευς ἐν αὐτῷ τῷ πράγματι* = *docere* with its *narratio* and *documenta*), and the rhetorical, properly so-called, *i.e.*, those means which lie outside of the facts, and look especially to emotional effect on the hearers (*πρὸς τὸν ἀχρυστήν* = *mouere* with its *obsecrationes*, etc.). *Conciliare*, in Aristotle, has a subordinate place under the means: *πρὸς τὸν ἀχρυστήν*. This interpretation of persuasion as twofold was carried on by the Peripatetic school, and thence was accepted by Dionysius, Auct. ad Her., and Cicero, etc. Augustine recognizes it here, as also in Contr. Cresc. 1, 13, 16, and in De Dial. 7. In Contr. Cresc., however, he draws such a sharp distinction between these two aspects of persuasion as to make one feel that he is separating them not merely as different phases of rhetoric, but as differ-

not be slow in living up to what they already know, and that they may give their assent to what they are convinced is true, greater powers of oratory are required. In such a case, entreaties and reproaches, exhortations and compulsion, and every other means conducive to stirring the heart, are necessary. And indeed, every one of the methods which I have enumerated are continually made use of by nearly all men in their efforts in speaking.

7. But as some do this bluntly, inelegantly, and coldly, while others, with tact, elegance, and force, the important thing now is that the instruction of which we speak, be made the business of one who, even though he has no powers of eloquence, does possess *wisdom* in arguing and speaking, so that he may do good to his audience, even though that be less than if he could at the same time use eloquence in speaking. But a man who has merely an empty flow of eloquence, ought to be the more guarded against as he is the more pleasing to his audience in those matters which have no expedience, and as, since his audience hears him speak with fluency, it judges that he likewise speaks with truth. This view, indeed, did not escape even those who considered rhetorical training necessary, for they hold that wisdom without eloquence is of small avail to a country, but that eloquence without wisdom is generally a great hindrance, and never a help. If, therefore, those who have given us the rules of oratory, in the very books in which they have treated this subject are forced through the urgency of truth to make this confession, ignorant as they are of the true, that is, of the supernal wisdom which comes down from the Father of lights, how much more are we, who are the children and the ministers of this wisdom, under obligation to hold no other opinion! But a man speaks with more or less wisdom as he is the more or less versed in the Holy

ent arts: dialectic (*subtiliter arguteque disserere, hoc est dialectice*), and rhetoric (*copiose ornateque explicare, hoc est eloquenter*). In reality they form, in his larger conception, the *officia oratoris*, including as was the custom of the schools somewhat before Cicero's time, and from his time on, a third, *conciliare*, recognized, especially by Augustine, as of vastly less importance than the other two, but a convenient middle ground between the extremes of dialectic and impassioned prose. [Tr.]

Scriptures—I do not mean in the very copious reading and memorizing of them, but in the true understanding and the careful investigation of their meaning. For there are some who read them, but indifferently; they read them in order to memorize them, but they are indifferent to understanding them. There can be no question but that they by far deserve the preference who know them less, word for word, but who look into the heart of the Scriptures, with the eyes of their own hearts. But he is better than either of these, who both quotes them at will, and understands them as he ought.

8. And so, for one who should speak with wisdom, even for the very reason that he cannot do so with eloquence, it is absolutely necessary that he remember the words of the Scriptures. For in as much as he sees himself poor in his own resources, in so much the more does it behoove him to be rich in those of the Scriptures, that what he says in his own words, he may prove by the Scriptures; and that he who was of little importance in his own words may gain, in some measure, from the authority of the great. For by his proofs he satisfies, even though he cannot satisfy by his bare statements. Furthermore, the man who wishes to speak not only with wisdom but also with eloquence, since indeed he will do more good if he be able to do both, I rather send to read or hear the eloquent, and to imitate them by practice, than advise to give his time to professors of rhetoric,⁵ on this condition, however, that those who are read and heard be recommended, in all truth, as men who have spoken

⁵Oratory degenerated into mere theatrical declamation, after Tiberius by the abolition of the assemblies closed to the orator his proper field. Schools of rhetoric became increasingly popular, but their professors through the superficiality and insincerity of their methods brought the name of “rhetorician” into ill-repute. Though Quintilian and Tacitus did their part to reclaim rhetoric from the excesses to which it had passed in their day, their influence was outweighed in the second and succeeding centuries by that of the Greek rhetors and sophists, so popular in those years. It is no wonder, therefore, that Augustine, feeling the distrust with which his age regarded rhetoricians, should be on his guard to explain his meaning in regard to them. See Norden 351 ff.; Lezat 11–12, 14, for a convenient summary of the conditions of oratory and rhetoric from Tiberius to Augustine. Cicero reflects the contempt of his time for *isti rhetores*, in the words which he ascribes to the Athenian Menedemus in *De Orat.* 1, 19, 87. [Tr.]

and who speak not only with eloquence, but also with wisdom. For those who speak eloquently are listened to with pleasure; those who speak with wisdom are heard with profit. Wherefore, the Scripture does not say, “The multitude of the eloquent,” but *The multitude of the wise is the welfare of the whole world*. But as often even bitter medicine must be taken, so always harmful sweets must be avoided. Still, what is better than wholesome sweets or sweet wholesomeness? For the greater the desire of sweets in such a case, the more readily does their wholesomeness prove beneficial. So there are churchmen who have expounded Sacred Scripture not only with wisdom, but also with eloquence; and for reading these, students and those at leisure have not sufficient time in which to exhaust them.

9. Here, someone perhaps may ask whether our authors, whose divinely inspired writings, with saving authority, make up the Canon for us, should be ranked merely as wise, or also as eloquent men. For myself, and for those whose opinions are the same as mine, this question is, of course, easily settled. For when I understand them, it seems to me that nothing can have more wisdom or even more eloquence. And I venture to state this also, that all who rightly understand what these writers say, understand too that they could not have spoken otherwise. For as there is a certain eloquence which is more becoming to youth, and a certain one to old age; and as eloquence does not deserve the name, if it be not in accord with the person who speaks, so there is a certain eloquence suitable to men especially worthy of the highest authority, and who are clearly inspired. With such eloquence have our authors spoken. No other is fitting to them, nor is theirs, to others; for it perfectly accords with them; but as it seems the more lowly, so it the more highly transcends others, not by its inflation, but by its solidity. Where, however, I do not understand these writers, then indeed their eloquence is less apparent to me, but still I doubt not but that it is such as it is where I do understand them. Indeed, that very obscurity of the divine and saving writings had, of necessity, to be mingled with such eloquence whereby our minds should profit, not only through the working out of their meaning, but also through the practice of their art.

10. All the merits and beauties of eloquence, about which those critics are puffed up, who, not because of its real greatness, but because of its bombast, prefer their own language to the language of our writers, I could, if there were time, point out in the Sacred Writings of those whom Divine Providence has provided to instruct us, and to bring us from this corrupt world to the world of the blessed. But it is not the points which they have in common with the pagan orators and poets that please me more than I can say, in their eloquence; what I admire and wonder at more, is that they so use our eloquence, through another kind of eloquence, as it were, of their own, that ours is not wanting to them, and still is not conspicuous in them, for it would not be fitting for them either to reject it, or to flaunt it. The former would be the case if they avoided it, the latter might be imputed to them if they made it too noticeable. And in those places where it happens to be recognized by scholars, the subject-matter is such that the words in which it is expressed seem not to have been sought out by the writer, but seem to belong naturally to the matter itself, as if, to express a comparison, wisdom came forth from its own dwelling-place, that is, from the heart of the wise man, and eloquence, its inseparable handmaid, followed, even though uninvited.

11. For who cannot but see what the Apostle⁶ wished to say and with what wisdom he has said it, in the following: *We glory in tribulations, knowing that tribulation worketh patience; and patience trial; and trial hope; and hope confoundeth not: because the charity of God is poured forth in our hearts, by the Holy Ghost; who is given to us?* Here if anyone, unlearnedly learned, so to speak, contend that the Apostle has followed the rules of rhetoric, will he not be laughed at by Christians, cultured and uncultured alike?⁷ And still we recognize here the figure called in Greek, *χλίμαξ*, in Latin, by some, *gradatio*—a name which they prefer to *scala*, lad-

⁶The Apostle is Paul. [Ed.]

⁷Norden (503), however, rightly observes that St. Paul knows well the figures of rhetoric, and half consciously, half unconsciously uses them as the occasion demands. An analysis of the preceding passage proves this.

Oxymoron: A. falls as naturally into figurative terms as does St. Paul, in the passage just quoted. [Tr.]

der—for the words or the thoughts are connected one with another, as, for example, here we see *patience* connected with *tribulation*, *trial* with *patience*, *hope* with *trial*. Another ornament, too, is recognized here, for after several elements marked off by an unbroken utterance in delivery, which we call *membra* and *caesa*, and the Greeks, *χῶλα* and *χόμματα*, there follows a rounded sentence, or period, which the latter call *περίοδος*, whose *membra* are held suspended by the voice of the speaker, until completed by the last one. For, of the *membra* preceding the period, the first one is, *since tribulation worketh patience*; the second, *and patience trial*; the third, *and trial, hope*. Then the period itself follows, which is completed in three *membra*, the first of which being, *and hope confoundeth not*; the second, *because the charity of God is poured forth in our hearts*; the third, *by the Holy Ghost, who is given to us*. But this, and things of this kind are set forth in the art of oratory. So, though we do not say that the Apostle followed the rules of eloquence, still, we do not deny that eloquence followed close upon his wisdom.

12. Writing to the Corinthians, in the second Epistle, he refutes certain false apostles from among the Jews, who were maligning him, and being obliged to speak of himself—granting it a kind of folly in himself—how wisely and how eloquently does he speak! But he is the attendant of wisdom, the master of eloquence; he follows the one, taking precedence of the other, and yet not spurning it as it follows him. *I say again* he says (let no man think me to be foolish, otherwise, take me as one foolish, that I also may glory a little). *That which I speak, I speak not according to God, but as it were in foolishness, in the matter of glorying. Seeing that many glory according to the flesh, I will glory also. For you gladly suffer the foolish; whereas yourselves are wise. For you suffer if a man bring you into bondage, if a man devour you, if a man take from you, if a man be lifted up, if a man strike you on the face. I speak according to dishonor, as if we had been weak. Wherein if any man dare (I speak foolishly), I dare also. They are Hebrews? So am I. They are Israelites? So am I. They are the seed of Abraham? So am I. They are the ministers of Christ? (I speak as one foolish); I am more; in*

labors, very often, in prisons more frequently, in stripes above measure, in deaths, many times. Of the Jews five times did I receive forty stripes, save one. Thrice was I beaten with rods, once I was stoned, thrice I suffered shipwreck, a night and a day I was in the depth of the sea. In journeyings often, in perils of water, in perils of robbers, in perils from my own nation, in perils from the Gentiles, in perils in the city, in perils in the wilderness, in perils in the sea, in perils from false brethren. In labors and painfulness, in watchings many times, in hunger and thirst, in fastings very often, in cold and nakedness. Besides those things which are without: my daily care, the solicitude for all the churches. Who is weak, and I am not weak? Who is scandalized, and I am not on fire? If I must needs glory, I will glory in the things that concern my infirmity. The great wisdom with which this is expressed, those who have their eyes open can see. But too, the mighty torrent of eloquence with which these words rush on, even one snoring in sleep must notice.

13. Furthermore, the scholar recognizes that it is the *caesa* called by the Greeks, *χόμματα*, and the *membra* and periods mentioned a little above, which interspersed as they are in the most fitting variety, have here produced the whole form and feature, so to speak, of the diction, whereby even the unlettered are pleased and moved. For from the beginning of the preceding quotation, periods are used. The first is the shortest, that is, it has only two *membra*—periods cannot have less than this, though they may have more—so the first is: *I say again, let no man think me to be foolish*. Another, made up of three *membra*, follows: *Otherwise, take me as one foolish, that I also may glory a little*. The third in order has four *membra*: *That which I speak, I speak not according to God, but as it were in foolishness, in this matter of glorying*. The fourth has two: *Seeing that many glory according to the flesh, I will glory also*. And the fifth has two: *For you gladly suffer the foolish; whereas yourselves are wise*. In like manner the sixth has two: *For you suffer if a man bring you into bondage*. Three *caesa* follow: *If a man devour you, if a man take from you, if a man be lifted up*. Then three *membra*: *If a man strike you on the face. I speak according to dishonor, as if we had been weak*. A period of

three *membra* then follows: *Wherein if any man dare (I speak foolishly), I dare also*. Then several distinct *caesa* are put in question form, and as many distinct *caesa* are returned in answer, three against three: *They are Hebrews? So am I. They are Israelites? So am I. They are the seed of Abraham? So am I*. But the fourth, put likewise as a question, is answered not by the balance of another *caesum*, but of a *membrum*: *They are the ministers of Christ? (I speak as one foolish), I am more*. Then the question form being fittingly dropped, the four following *caesa* pour forth: *In labors, very often, in prisons more frequently, in stripes above measure, in deaths many times*. Next a short period is inserted, for by keeping the voice raised in delivery, *Of the Jews five times* is to be set off as one *membrum*, with which is connected a second, *did I receive forty stripes save one*. Then the *caesa* are taken up again, and three are given: *Thrice was I beaten with rods, once I was stoned, thrice I suffered shipwreck*. A *membrum* follows: *A night and a day, I was in the depth of the sea*. Then fourteen *caesa* stream forth with most appropriate force: *In journeyings often, in perils of water, in perils of robbers, in perils from my own nation, in perils from the Gentiles, in perils in the city, in perils in the wilderness, in perils in the sea, in perils from false brethren. In labor and painfulness, in watchings many times, in hunger and thirst, in fastings very often, in cold and nakedness*. After this he inserts a period of three *membra*: *Besides those things which are without: my daily care, the solicitude for the churches*. And to this he adds two *membra* in question form: *Who is weak, and I am not weak? Who is scandalized, and I am not on fire?* Finally the whole passage, as though panting for breath, ends with a period of two *membra*: *If I must needs glory, I will glory in the things that concern my infirmity*. But because after this outburst, by inserting a bit of narrative he calms down after a fashion, and makes his reader calm down, it is impossible to express what a fine and pleasing effect he attains. For he continues with the words: *The God and Father of our Lord Jesus Christ, who is blessed forever, knoweth that I lie not*. And then he proceeds to tell in short how he has been in danger, and how he has escaped.

14. It would be tedious to follow out other points, or to indicate such features in other places of the Holy Scriptures. What, if in the passages at least which I have quoted illustrative of the Apostle's eloquence, I had also wished to point out the figures of speech taught in rhetoric? Would not serious-minded men consider that I was going too far, rather than any student, that I was satisfactory to him? All these things, when taught by professors, are esteemed of great value; they are bought at a great price, and sold with great display. Such display, even I fear to smack of, as I thus discuss these matters; but it has seemed necessary to answer the ill-informed who think that our writers deserve contempt, not because they do not possess, but because they do not make display of the eloquence which the former too highly esteem.⁸

15. But some perhaps may think that I have chosen the Apostle Paul as *the* example of our eloquence.⁹ For where he says, *Although I be rude in speech, yet not in knowledge*, he seems to have spoken thus merely by way of giving in to his detractors, not of confessing it as if he recognized it to be true. If, however, he had said, "I, indeed, rude in speech, but not in knowledge," no other meaning could possibly be taken from his words. Clearly, he did not hesitate to profess knowledge, without which he could not succeed as the teacher of the Gentiles. And, indeed, if we point out any thing of his as an example of eloquence, we assuredly point it out from those Epistles which even his detractors, themselves, who wanted his spoken word to be thought contemptible, admitted to be weighty and strong. And so I see that I must say something also of the eloquence of the Prophets, greatly cloaked as it is in a metaphorical style. The more, however, that they seem obscure by the use of figurative expressions, the more pleasing they are when their meaning has been made clear. But I must here quote some passage wherein I may not have to

⁸A., while quietly denouncing the excesses of Sophistic, is here led to express one of the principal aims of the present treatise: to prove the value of Holy Scripture as a model of style. [Tr.]

⁹Of modern critics, this seems to be the opinion of Norden (528), who holds that outside of St. Paul, the Scriptures have no intrinsic claim to be reckoned rhetorical. [Tr.]

explain what is said, but may merely commend the manner in which it is said. Wherefore, I shall draw especially from the book of that Prophet,¹⁰ who says that having been shepherd and herdsman, he was by divine appointment taken and sent to prophesy to the people of God: but not according to the Septuagint translators, who even themselves, working under the inspiration of the Holy Ghost, seem for this very reason to have expressed some things in a different way, in order that the attention of the reader might be rather directed to a study of the spiritual sense—and thus some of their passages are even more obscure because more figurative—but rather as the translation has been made from the Hebrew into the Latin language, done by the presbyter, Jerome, himself a skillful expounder of both tongues.

16. And so, when he was inveighing against the wicked, the proud, the luxurious, and those, therefore, who were totally indifferent to brotherly love, this peasant, or rather peasant become prophet, cried out, saying: *Woe to you that are wealthy in Sion, and to you that have confidence in the mountain of Samaria, ye great men, heads of the people, that go in with much state into the house of Israel. Pass ye over not Chalane, and see, and go from thence into Emath the great: and go down into Geth of the Philistines, and to all the best kingdoms of these: if their border be larger than your border. You that are separated unto the evil day: and that approach to the throne of iniquity: you that sleep upon beds of ivory, and are wanton on your couches: that eat the lambs of the flock, and the calves out of the midst of the herd: you that sing to the sound of psaltery: they have thought themselves to have instruments of music like David: that drink wine in bowls, and anoint themselves with the best ointments: and they are not concerned for the affliction of Joseph.* Tell me pray, would those very men who, as though themselves learned and eloquent, condemn our Prophet as unlettered and unskilled in speech, would they, if they had had to address some such rebuke to such people, have wanted to express themselves in any other way—those of them, of course, who would not have wanted to appear mad?

¹⁰The Prophet is Amos. [Ed.]

17. For what more could the sober ear desire in this passage? First of all, with what a clash does the mere denunciation beat against senses deadened, as it were, in order to arouse them: *Woe to you that are wealthy in Sion, and to you that have confidence in the mountain of Samaria: ye great men, heads of the people, that go in with state into the house of Israel!* Then in regard to the gifts of God who had bestowed on them wide regions for their kingdom, to show them how ungrateful they were, since they were then putting their confidence in the mountain of Samaria, where, in truth, idols were worshipped, he says: *Pass ye over to Chalane, and see, and go from thence into Emath the great: and go down into Geth of the Philistines, and to all the best kingdoms of these; if their border be larger than your border.* Moreover, also, in this passage the language is adorned by the names of places, as though by lights, to wit, *Sion, Samaria, Chalane, Emath the great, and Geth of the Philistines.* Then too, the words used in connection with these places are very fittingly varied, *you that are wealthy—have confidence—pass ye over—go—go down.*

18. Next, announcement is made that a future captivity under a cruel king is approaching, in the words: *You that are separated unto the evil day: and that approach to the throne of iniquity.* Then the evils of luxury are summed up: *You that sleep upon beds of ivory, and are wanton on your couches: that eat the lambs out of the flock, and the calves out of the midst of the herd.* These six *membra* make three periods of two *membra* each. For the writer does not say: “You that are separated unto the evil day, that approach to the throne of iniquity, that sleep upon beds of ivory, that are wanton on your couches, that eat the lambs out of the flock, and the calves out of the midst of the herd.” If he had so put it, it would, to be sure, be well expressed also, so that with the repetition of the same pronoun each of the six *membra* would be introduced, and each would be finished off by the fall of the speaker’s voice. But it is finer as it is written, with each two *membra* depending on one pronoun, in order to explain three ideas: one pertaining to the announcement of captivity. *You that are separated unto the evil day: and that approach to the throne of iniquity:*

the second, to unlawful pleasures: *You that sleep upon beds of ivory, and are wanton on your couches;* and the third, to gluttony: *that eat the lambs out of the flock, and the calves out of the midst of the herd;* so that the speaker is free either to complete each separately, and have six clauses, or to suspend by his voice the first, third, and fifth, and by connecting the second with the first, the fourth with the third, the sixth with the fifth, to make, very appropriately, three periods of two clauses each: one, to point out the impending calamity; the second, the unchaste couch; the third, the luxurious table.

19. Then he attacks the inordinate pleasure of the ears. And here having said, *You that sing to the sound of psaltery,* since the wise can use music wisely, he with admirable propriety checks his flow of invective, and now speaking not to them, but of them, in order to warn us to distinguish between the music of the wise, and the music of the licentious, he does not say, “You that sing to the sound of psaltery, and think you have instruments of music like David”; but when he has said to them what it behooves the licentious to hear, *You that sing to the sound of the psaltery,* he, after a manner, points out their ignorance to others, by adding, *They have thought themselves to have instruments of music like David; that drink wine in bowls, and anoint themselves with the best ointments.* These three *membra* are delivered in the best way, by holding suspended the first two members of the period, and rounding them out by the third.

20. But now as to what follows all this, *And they are not concerned for the affliction of Joseph,* whether it be read straight through as one *membrum*, or whether more fittingly the words, *And they are not concerned,* be held suspended, and then after setting them off, *for the affliction of Joseph* be introduced, thus making a period of two *membra*, it is with rare propriety that the wording does not read thus, “And they are not concerned for the affliction of their brother,” but in the place of “brother,” “Joseph” is put, that brotherhood in general may be expressed by the proper name of one whose fame stands out from among brothers, whether as regards the evil which he suffered, or the good which he paid in return. Really, I do not know whether that figure

whereby "Joseph" is made to express brotherhood in general is explained in that art which we have studied and taught. But what its beauty is, and how affecting it is to readers and men of thought, there is no need of telling a person if he does not feel it himself.

21. And indeed many more things which pertain to the rules of eloquence can be discovered in this same passage which we have taken as an example. But its value lies not so much in the instruction it affords a good audience if it be analyzed carefully, as in the sentiment it enkindles if it be read with feeling. For these words were not written by human industry, but were poured forth by Divine Intelligence, with wisdom and eloquence—wisdom not being intent on eloquence, but eloquence not deserting wisdom. For as certain very able and discerning orators have been able to perceive and state, if what is laid down in the so-called art of oratory could not be observed and noted and reduced to this discipline unless it were first found in the natural genius of orators, what wonder is there that it is found likewise in those men whom He has sent who fashions natural genius? Wherefore, let us claim that our canonical writers and doctors possessed eloquence too as well as wisdom—eloquence of such a kind as was fitting to men of their character.

22. But though we take some examples from their writings which can without difficulty be understood, still we ought by no means to think that our authors are to be imitated by us in those places where they speak with useful and helpful obscurity, either to exercise and, as it were, to refine the minds of their readers, or to break down the prejudices and to whet the zeal of those who are willing to learn, or, too, to keep in the dark the minds of the wicked, either that they may be converted to a good life, or be excluded from the mysteries. Such, indeed, has been their manner of expressing themselves, that those following them, who have understood and expounded them aright have acquired distinction also in the Church of God, not in the same degree, of course, but next in order. Their interpreters, therefore, ought not to express themselves in such a way as if putting themselves forward to be interpreted with like authority; but in all their dis-

courses they should labor, first and foremost, to be understood through their clearness of expression, in as far as this is possible, so that either he who does not understand is very slow of wit, or in the difficulty and subtlety of the matters which we wish to unfold and make clear, not in our manner of expressing them, lies the reason why what we say is not understood, or is understood but slowly.

23. There are some matters, which in their true force are not intelligible, or scarcely intelligible, no matter how great the eloquence, nor how extended nor how clear the speaker's explanation. Such matters should be put before a popular assembly either rarely, if necessity urges, or not at all. In books, however, which are so written that they, so to speak, hold the reader to themselves, when they are intelligible, or when they are not intelligible are still not a burden to those who do not wish to read them, and in conversations with others, the duty ought not to be neglected of bringing the truth—though it may be most difficult to understand, which we, however, have already grasped—to the understanding of others, no matter what the labor of discussion, provided that the listener or interlocutor have the desire to be informed, and that mental capacity be not wanting to enable him to receive the information in whatever manner presented, the instructor attending not to the degree of eloquence with which he teaches, but to the degree of clearness.

24. A studied leaning toward such clearness, at times neglects the more elegant expression, and has no concern for what sounds well, but for what tells and explains well what one aims to point out. And so it is that a certain authority says, in treating of such kind of speech, that it possesses a kind of careful negligence. Still, while this discounts florid expressions, it does not countenance vulgar ones. And yet good teachers have, or ought to have such care in teaching that a word which cannot be expressed in good Latin except obscurely and ambiguously, but which as given in the common idiom, has neither ambiguity nor obscurity, should be expressed not as the cultured, but rather as the uncultured are wont to express it. For if our translators have not hesitated to say, *I will not gather together their meetings for blood*

offerings, since they consider that the subject matter called for the plural use of the noun in this place, though in good Latin this word is used only in the singular, then why should a teacher of righteousness when addressing the unlettered, hesitate to use *ossum* for *os* for fear lest this word might be understood as coming not from the same form as *ossa*, but from the same form as *ora*, since the African ear does not distinguish between short and long vowels? For what is the good of correctness of speech if the understanding of the hearer does not follow it, since there is absolutely no reason for speaking if they for whose instruction we speak are not instructed by our speaking? And so, one who teaches will avoid all words which do not teach; and if in place of them he can use other correct expressions which are intelligible, he will choose these by preference, but if he cannot, either because they do not occur to him at the moment, he will use words even less correct, provided, however, that the matter itself be taught and learned correctly.

25. And this indeed must be insisted upon, that we may be understood, not only in conversations with one person or with several, but also much more when a sermon is being delivered before assemblies.¹¹ For in conversations, each one has the opportunity of questioning; but when all are quiet, that one may be heard, and all are turned toward him with fixed attention, then it is neither customary nor proper for any one to ask about what he has not understood, and for this reason it should be the special concern of the speaker to assist the silent listener. But an assembly eager to learn generally shows by some movement whether it has understood, and until it does show this, the matter in hand ought to be presented in many different forms; but this they have not the power of doing who deliver word for word what they have prepared and committed to memory.¹² However, as soon as it is clear that

¹¹Again in *De Catech. Rud.* 15, 23, Augustine differentiates between instruction given to a few in private and after a fashion familiarly, and a sermon properly so called, delivered to a congregation. With true pedagogical instinct, he recognizes wherein these are to be handled alike, wherein differently. [Tr.]

¹²Augustine is clearly advocating extempore address. That this was the method of preaching used by such re-

the matter has been understood, the discourse ought to be ended, or to pass on to other things. For though one gives pleasure when he clears up matters that need to be made understood, he becomes wearisome when he keeps hammering at things which are already understood, at least to those men whose whole expectation was centered in the solution of the difficulty in the matter under discussion. It is true that for the sake of giving pleasure, even well-known things are talked over; when, not the facts themselves, but the manner in which they are expressed, holds the attention. And if this itself also is now well known, and is popular with the audience, it makes almost no difference whether the man talking be a speaker or a reader. For generally, things which are attractively written are also read with pleasure, not only by those who come to know them for the first time; but even by those who have already made their acquaintance, and from whose memory they have not yet been effaced, are they reread not without pleasure; or they are listened to willingly by both classes. On the other hand, what a person has forgotten, when it is recalled to him, he learns again. But I am not now treating of how to please; I am speaking of how they are to be taught who desire instruction. That, indeed, is the best method, which results in the listener hearing the truth, and understanding what he hears. When this end has been attained, then there should be no further effort toward expounding the matter longer, as it were, but perhaps toward commending it, so that it may be fixed deep in the heart; but if it seem that this ought to be done, it must be done with such moderation as not to lead to weariness.

26. This, of course, is eloquence in teaching, whereby the result is attained in speaking, not that what was distasteful becomes pleasing, nor that what one was unwilling to do is done, but that what was obscure becomes clear. Still, if this be done in an unpleasing manner, its fruit falls to the very few zealous persons, forsooth, who are eager for the knowledge which is

owned speakers as Origen, Cyril of Jerusalem, John Chrysostom, Pope Faustus, Jerome, and especially Augustine himself, is shown by Deferrari 97-123; 193-211. [Tr.]

proposed for instruction, no matter how meanly and inelegantly it be explained. When they have once gained this end, they feast upon the truth itself with delight; and it is the fine characteristic of great minds that they love the truth in words, not just the words. For what is the use of a golden key if it cannot open what we want it to? Or what is the objection to a wooden one if it can do so, since we are asking nothing save that what is closed be opened? But as eating and learning have a certain similarity one to the other, because of the natural fastidiousness of most people, even the very food which is necessary for life's sustenance must have seasoning.

27. And so, a well-known orator¹³ has said, and has said truly that an orator ought to speak in such a way as to instruct, to please, and to persuade. Then he adds, "Instructing belongs to necessity; pleasing, to interest; persuading, to victory." Of these three, that which is given first place, the necessity of instructing, depends upon the things we say; the other two, upon our manner of saying them. Therefore, the man who speaks with the view to instructing, as long as he is not intelligible, should consider that he has not yet said what he wishes to say to the one whom he wishes to instruct. Because, though he has said what he himself understands, he should not be thought yet to have said it to him by whom he has not been understood; if, however, he has been understood, whatever the manner of his having said it, he has said it. But if his aim is also to please the one to whom he speaks, or to persuade him, he will not accomplish it by any manner of speaking whatsoever, but it is of moment how he speaks, in order to accomplish it. Moreover, as a listener must be pleased if his attention is to be held, so he must be persuaded if he is to be moved to action. And as he is pleased if you speak attractively, so he is persuaded if he likes what you promise, fears what you threaten, hates what you censure, embraces what you command, grieves over what you emphasize as deserving of grief, rejoices when you say something should gladden, sympathizes with those whom you by your words set before his eyes as objects of pity, shuns those whom you with threats consider

¹³The well-known orator is Cicero. [Ed.]

ought to be avoided—and so on in regard to whatever else in the way of moving the hearts of an audience is possible through powerful eloquence, not that they may know what they must do, but that they may do what they already know they ought to do.

28. But if they do not yet know this, instruction must, of course, precede persuasion. And perhaps, when the facts themselves have been learned, they will be so far moved, that there will be no longer need that they be moved by greater powers of eloquence. However, when there is need, this must be used; but there is then need when, although they know what they ought to do, they do not do it. And for this reason, instruction is of necessity. For men have the liberty of doing or not doing the things they know. But who would say that they ought to do what they do not know? And so it is that persuasion is not of necessity, because there is not always need of it if only the listener is in agreement with the one who is instructing, or also pleasing. But so it is that persuasion is of victory, because there is the possibility that a person may be instructed, and pleased, and still not give his assent. But what will the two former things avail if the third be lacking?¹⁴ For too, pleasing is not of necessity, since, indeed, when in a speech the truth is pointed out—a thing which belongs to instruction to do—it is not done by using eloquence, nor indeed is attention given to this, to please by the matter or the style itself, but the mere exposition of the truth gives pleasure through its very nature, since it is the truth. Whence it is that many times, even falsehood, when exposed and refuted, is a source of pleasure. For it does not please because it is falsehood, but because it is true that it is falsehood, the very explanation which shows that this is true, is a matter of pleasure.

¹⁴Granting that persuasion is the end of oratory (cf. Arist. Rhet. 1, 2, 1355 b: ἔστω δὲ ῥητορικὴ δύναμις περὶ ἕχαστον τοῦ θεωρηῆσαι τὸ ἐνδεχόμενον πιθανόν), *docere* and *delectare* are merely steps in a sort of geometrical progression, as Baldwin (2, 66) puts it, leading up to *flectere*; the one, *docere*, a necessary groundwork (*necessitatis*), the second, *delectare*, of use for the purpose of interesting (*suauitatis*), the third, *flectere*, the culminating point whose function is to win (*uictoriae*). The mutual dependence, yet individuality, of these offices is brought out even more clearly in the next chapter. [Tr.]

29. But because of those whom by reason of their prejudice truth does not satisfy if it is put in any other way than that whereby the speaker's words also are attractive, no small place has been given in oratory even to the art of pleasing. And still, when this is added, it is not enough for hardened natures who reap no profit from having understood and having enjoyed the instructor's speech. For what do these two things avail a person who both owns the truth and praises eloquence, but who does not give his assent, although it is for this alone that the speaker in an argument gives close attention to the matter which he is treating?¹⁵ For if the matters taught are such that knowledge of and belief in them are sufficient, agreement with them is nothing more than confessing their truth.¹⁶ But when a line of action is the matter of instruction, and that this be followed is the reason for the instruction, in vain is conviction that the words are true, in vain is the style of the speech pleasing, if action does not follow upon understanding. It is necessary, therefore, that the sacred orator, when urging that something be done, should not only teach in order to instruct, and please in order to hold, but also move in order to win. For indeed, it is only by the heights of eloquence that that man is to be moved to agreement who has not been brought to it by truth, though demonstrated to his own acknowledgment, even when joined with a charming style.¹⁷

¹⁵A restatement of the conclusion reached in chapter 12; but it is by such repetitions that Augustine hopes to drive home his point. *Flectere*, persuasion, is the final and most important stage in the "rhetorical progression"; it is the end of oratory: cf. Arist. Rhet. 1, 1, 1354a: αἱ γὰρ πίστευς ἔντεχνόν ἐστι μόνον, τὰ δ' ἄλλα προσθήχαι. Cic. De Inuent. 1, 5, 6: officium autem eius facultatis [oratoriae] uidetur esse dicere apposite ad persuasionem; finis persuadere dictione; De Orat. 1, 61, 260; *ibid.* 1, 31, 138: primum oratoris officium esse dicere ad persuadendum accommodare; *ibid.* 1, 49, 213: eum puto esse [oratorem], qui et uerbis ad audiendum iucundis et sententiis ad probandum accommodatis uti possit. [Tr.]

¹⁶*Docere* may at times end with itself; i.e., to inculcate a truth may be the end of persuasion. Generally, however, *action* is the end of persuasion, and then not only *docere* and *delectare*, but also *flectere* must be used if the speaker expects *victoria*. Augustine returns again in chapter 25 to *docere* as an end. [Tr.]

¹⁷A final statement of the importance of *flectere*. A. finds the climax of his chapter in the culminating point of the *officia*. [Tr.]

30. And for the sake of this charm,¹⁸ such an amount of trouble has been taken by men, that not only must we not follow, but even we must shun and detest the many abominably wicked and shameful deeds which are urged in this most elegant way by the evil and unjust, not to gain assent for them, but that they may be read eagerly for the mere sake of the pleasure in them. But may God keep from the Church what the prophet Jeremias relates of the synagogue, saying: *Fearful and dreadful things have been done in the land. The prophets prophesied falsehoods, and the priests clapped their hands; and my people loved such things: and what will you do in the future?* O eloquence, so much the more terrible as it is so unadorned; and as it is so genuine, so much the more powerful! O truly, an axe hewing the rock! For it was in this similitude that God Himself through this same prophet spoke of His own word, which He has uttered through the holy prophets. Far be it, then, far be it from us, that priests should applaud evil-speakers, and that the people of God should be pleased thereat! Far be such great madness from us, I say, for what shall we do in the future!¹⁹ And assuredly let what is said be less understood, less pleasing, less moving, but still let it be said; and let righteousness, not evil, gain a willing hearing!²⁰ But this undoubtedly would not be possible unless it possess charm.

¹⁸Having explained the right order of "rhetorical progression," Augustine, in this chapter, forces his reader to conclude for himself the false basis of sophistic teaching, even from the standpoint of art, since contrary to the theory just explained, the principal aim of the Sophists, by their own acknowledgment, is to please. *Delectare*, he insists, is only the middle stage; it cannot be made the end. This is proved here, and is concluded with finality in chapter 25. [Tr.]

¹⁹In itself, because it is false, and has brought rhetoric into ill-repute, Sophistic deserves to be repudiated. Still, where it alone is concerned, A.'s mode of attack is quiet, and at times even indirect. Here, however, since the danger of its influence upon the sacred orator is felt, the writer in his indignation falls into the grand style. [Tr.]

²⁰Augustine is claiming for the sacred orator a lower place than that of the Sophist in popular favor, if that must be, but a definite place, where truth may gain a willing hearing over falsehood. He sees the necessity of the concession that to make this hearing a willing one, the eloquence of the Church must also use, to a moderate degree, the quality of *delectatio*. [Tr.]

31. But in a strong people,²¹ such as are spoken of by God—*I will praise thee in a strong people*—that charm of style is not pleasing in which, though indeed falsehood is not involved, still, slight and unimportant truths are adorned with a foamy redundancy of expression, such as even great and enduring matters would not fittingly and worthily be adorned with. There is such an instance in one of the letters of the blessed Cyprian, which, I think, so fell out, or was thus done on purpose, in order that succeeding ages might know from what redundancy the soundness of the Christian teaching has recalled his style, and to what more dignified and reticent eloquence it has restricted him; which is such in his succeeding letters that he is safely admired, scrupulously copied, but with difficulty imitated. So he says in a certain passage: “Let us seek for that spot; the neighboring solitudes offer a retreat, where, as the wandering tendrils of the vine-shoots with overhanging interlacings creep along the trellis supports, the covering leaves have formed an arbor of vines.” This is certainly expressed with marvelously flowing exuberance of language, but because of its excessive profuseness, it is not pleasing to the serious reader. However, those who admire this style think that of a certainty those who do not express themselves after this manner, but rather keep their eloquence within bounds, cannot thus be eloquent, and not that they avoid such language by preference. For this reason, this holy man shows that he *can* thus express himself, since he has done so in this place, but that he does not *wish* to do so, for nowhere does he do so afterward.

32. And so, that orator of ours, in speaking of justice, holiness, and a good life, the subjects on which alone he should speak, strives, in as far as possible, when speaking on such subjects, to make his words understood, enjoyed, and persuasive; and this he should not doubt but that he can

²¹A caution, in consequence of the concession just granted. Even where legitimately used, *i.e.*, where charm is not employed to cloak falsehood, *delectatio* must in the speech of an ecclesiastic be used *in moderation*. The excess in St. Cyprian’s Epistle, quoted below, not only proves this point, but also shows that ecclesiastics have equal ability with Sophists in the use of ornament, though because of their good taste, they generally prefer a restrained diction. [Tr.]

do if it is possible, and in so far as it is possible, more through the piety of his prayers than through his orator’s skill, so that by praying for himself and for those whom he is going to address, he is a petitioner before a speaker.²² At the very time, then, when he is going to preach, before he loosens his tongue to speak, he should lift up his thirsting soul to God, in order to give forth what he will drink in, and to pour out what he will be filled with. For although on every topic which can be treated according to faith and love, there is much that may be said, and many ways in which it may be said by those versed therein, who knows either what is best for us on a special occasion to say, or what is best that others should hear from us, if it be not He who sees the hearts of all?²³ And who can make us say what we ought, and in the manner we ought to say it, if not He in whose hands are both ourselves and our words? And for this reason the one who would both know and teach should learn, of course, all that he has to teach, and should acquire such skill in speaking as becomes an ecclesiastic; but indeed at the time of the sermon itself he should consider that admonition rather as befitting a good disposition, which the Lord utters: *Take no thought how or what to speak: for it shall be given you in that hour what to speak. For it is not you that speak, but the Spirit of your Father that*

²²This is the great mark of distinction between pagan and Christian orator. As it is developed in the remainder of this chapter, it shows the Saint’s intense realization of, and faith in the existence and power of the supernatural. Quite in keeping with his style, however, Augustine does not disdain a play on words even here, though his purpose in doing so—to mark more clearly his antithesis—is plainly evident. Note paragonism coupled with chiasmus in *pietate magis orationum, quam oratorum facultate*, and paronomasia in *sit orator antequam doctor*. This lightness of treatment, because of its restraint, and because of the writer’s evident sincerity and earnestness, does not detract from the authority of the explanation. [Tr.]

²³The ecclesiastical orator must prepare himself with as great thoroughness as the pagan orator, but he must pass beyond the pagan in his belief that in reality all his power comes from God. Cicero himself, however, also advocates self-diffidence, as an essential to success in speaking. His lines are interesting as proving that humility is a natural, as well as a supernatural virtue. Cicero realizes that man cannot rely upon himself; Augustine knows that man not only cannot rely upon himself, but must rely wholly upon God. Cf. *De Orat.* 1, 26, 119. [Tr.]

speakes in you. And so, if the Holy Spirit speaks in those who are given over to persecution for the sake of Christ, why will He not do so also in those who give Christ to their disciples?

33. But if any one says there is no need to lay down rules as to what and how men should teach, since it is the Holy Spirit who forms the teacher, he can say likewise that we do not need to pray, since the Lord says: *Your Father knoweth what is needful for you, before you ask Him,* or that the Apostle Paul ought not to have given instructions to Timothy and to Titus as to what or how to instruct others. Nay, he who has been given the role of teacher in the Church ought to have before his eyes three of the Apostle's Epistles. In the first Epistle to Timothy, do we not read: *These things announce, and teach,* that is the things which he explained above? Do we not read there too: *An ancient man rebuke not, but entreat him as a father?* In the Second Epistle does he not say: *Hold the form of sound words, which thou hast heard of me?* And does he not say to him in the same place: *Carefully labor to present thyself approved unto God, a workman that needeth not to be ashamed, rightfully handling the word of truth?* There too is this: *Preach the word: be instant in season, out of season: reprove, entreat, rebuke in all patience and doctrine.* And so too to Titus, does he not say that a bishop ought to be persevering *in that faithful word which is according to doctrine, that he may be able in sound doctrine to convince the gainsayers?* There again he says: *But speak thou the things that become sound doctrine, that the aged men are sober,* and so on. There, too, we read: *These things speak, and exhort, and rebuke with all authority. Let no man despise thee. Admonish them to be subject to princes and powers.* When then should we think? Can it be that the Apostle holds contrary opinions to himself, since though he says that teachers are formed by the action of the Holy Spirit, he himself gives others instructions as to what and how they should teach? Or are we to understand that even with the outpourings of the Holy Spirit, man's help too is not to be dispensed with in the instructing of even the instructors themselves, and still, *neither he that planteth is anything, nor he that watereth, but God that giveth the increase?* And so it is that

though, too, holy men themselves should help, or even the holy Angels should lend their aid, no one learns aright the things which pertain to life with God, if he becomes not through God, docile to God, to whom it is said in the Psalms: *Teach me to do thy will, for Thou art my God.*²⁴ And therefore the Apostle says the like also to the same Timothy, speaking certainly as the master to his disciple: *But continue thou in those things which thou hast learned, and which have been committed to thee: knowing of whom thou hast learned them.* For as the medicine of the body, which is administered to men by men is of no avail except to those to whom God restores health, since He can cure even without it, though without Him, it cannot, and yet it is administered—and if this be done in kindness, it is counted among the works of mercy or charity—so, also, aids to learning, when given by men, are of help to the soul when God makes them of help, who could have given his Gospel to man even without man's agency or help.

34. He, therefore, who strives in speaking, to convince of what is good, since he is concerned with the threefold aim, viz., instructing, pleasing, and persuading, should pray and labor, as we have said above, to make himself understood, enjoyed, and persuasive. And when he accomplishes this rightly and fitly, he is not unworthily called eloquent, even though the agreement of his hearer does not follow him. For it is to these three points, viz., instructing, pleasing, and persuading, that the great authority on Roman eloquence²⁵ himself seems to wish to apply those other three points²⁶ in that place where he has

²⁴St. Augustine has the power of expressing truths of the deepest faith and spiritual penetration with such simplicity that the average reader is liable to see only the surface, and to miss the depth of meaning hidden within. This short sentence possesses the very key to all asceticism. [Tr.]

²⁵The great authority on Roman eloquence is Cicero. [Ed.]

²⁶Augustine's ingenious linking of Cicero's separate explanations of the styles and the offices makes a statement even more telling than Cicero's own expression of the relation between the two: cf. *Orat.* 21, 69: *erit igitur eloquens . . . is qui in foro causisque ciuilibus ita dicet, ut probet, ut delectet, ut flectat . . . sed quot officia oratoris, tot sunt genera dicendi: subtile in probando, modicum in delectando, uehemens in flectendo.* Thus we have developed the three traditional styles: the plain (*genus submissum*), the middle (*genus*

said, "He therefore will be eloquent, who can speak in a subdued manner on unimportant matters, in a moderate style on things of greater importance, and in a grand style on great matters," as if he would add also those other three points given above, and would express one and the same idea, thus: "He, therefore, will be eloquent who, in order to instruct, can speak in a subdued manner on unimportant matters; in order to please, in a moderate style on things of greater importance; and in order to persuade, in a grand style on great subjects."

35. Now our authority could have illustrated these three points, as explained by him, in legal cases; but he could not have done so here, i.e., in the instance of ecclesiastical questions, the type with which that form of discourse is concerned which we wish to describe. For in the former, those matters can be called unimportant where money questions are concerned; those are great

temperatum, or moderatum), the grand (*genus grande, or subline*). As the *officia oratoris* were found traceable to the Peripatetic School, so the styles grow out of Aristotle's conception of the two-fold aspect of persuasion, since as Cicero and Augustine show, the styles are merely an outflowing from the offices. Their history can quickly be summarized. Following the distinction of his master, Theophrastus took a step nearer to the definition of styles by applying Aristotle's division of *πίστεις* to language, speaking of *λόγος πρὸς τὰ πράγματα* and *λόγος πρὸς τοὺς ἀχρωμένους* (cf. fragment cited by Ammonius in *Aristotelis De Interpretatione Comm.* 65, 31). Of these parts the Stoics in the succeeding centuries, when they gained wide-spread influence, developed only the dialectical, and formulated a stylistic doctrine corresponding to pragmatic argument. Meanwhile, the Peripatetic School held to Aristotle's division of *πίστεις*, and in consequence must also early have developed a doctrine of style in accordance with it, though the actual record of this is not preserved. In *De Inventione*, we find the first record of a tacit or implied recognition of two styles corresponding to Aristotle's two aspects of argument. It must be recognized, however, that there is a long break in the tradition. Cicero merely echoes what was the traditional stylistic theory of his day. The same is, of course, true of the definition of the styles found in *Ad Her.* 4, 8, 11 (*sunt igitur tria genera, quae genera nos figuras appellamus, in quibus omnis oratio non vitiosa consumitur: unam grauem, alteram modiocrem, tertiam extenuatam uocamus*). This latter, however, is the earliest extant occurrence of the threefold division of style. Our next mention of the three styles is found in *De Orat.* 3, 45, 177; 3, 52, 199; 3, 55, 212. These references are mere allusions. Cicero gives his first clear explanation of the three styles and their development in *Orat.* 21, 69, quoted above. [Tr.]

where it is a question of the welfare and life of man; but where neither of these is concerned, and it is not a matter of pleading or judging, but merely of pleasing the listener, such questions are midway between the two, and for that reason are called "middling," that is "moderate." For "moderate" gets its name from *modus*, "measure," so we do not apply the term properly, but misuse it, when we say "moderate" for "small." However, in these discourses of ours, since indeed everything, especially all which we address to the people from our high position, we must direct to man's welfare—and that not his temporal but his eternal welfare—where, besides, we must warn against eternal destruction, all that we say is of great importance, even to the extent that even money matters themselves, whether in regard to gain or loss, when put forth by the ecclesiastical teacher ought not seem of small importance, let the amount be great or little. For the matter of justice is not of small importance, and this surely we must safeguard even as regards a small amount of money, since the Lord says: *He that is faithful in that which is least, is faithful also in that which is greater*. And so a little thing is a little thing, but to be faithful in a little thing is a great thing. For as it is the nature of a circle that all the lines drawn from a point in the middle to the circumference are equal, and this principle is the same in a large disk and in a small coin, so when justice is administered even in a small matter, the greatness of justice is not diminished.

36. Therefore, when the Apostle spoke of worldly trials (and with what, truly, were these concerned unless with money matters?), he said: *Dare any of you, having a matter against another, go to be judged before the unjust, and not before the saints? Know you not that the saints shall judge this world? And if the world shall be judged by you, are you unworthy to judge the smallest matters? Know you not that we shall judge angels, not to speak of things of this world? If therefore you have judgments of things pertaining to this world, set them to judge, who are the most despised in the Church. I speak to your shame. Is it so that there is not among you one wise man, that is able to judge between his brethren? But brother goeth to law with brother, and that before unbelievers. Already indeed there*

is plainly a fault among you, that you have lawsuits one with another. Why do you not rather suffer wrong? Why do you not rather suffer yourselves to be defrauded? But you do wrong and defraud, and that to your brethren. Know you not that the unjust shall not possess the kingdom of God? Why is it that the Apostle is so indignant, that he so upbraids, so reproaches, so rebukes, so threatens? Why is it that he calls the emotion of his soul to witness, with such numerous and harsh expressions? Why is it, finally, that he speaks in such a lofty strain on trivial matters? Is it that mere worldly questions deserved so much from him? Far from it! But he does so because of justice, charity, and righteousness, which no one in a sane mind can doubt but are great, even in things however insignificant.

37. Certainly, if we were to advise men how they ought to plead such worldly cases before ecclesiastical judges either for themselves or for their friends, we should be right in advising them to plead in a subdued manner, as of matters of small importance. But since it is a question of the eloquence of one whom we wish to be a teacher of those matters through which we are freed from eternal pains and brought to eternal happiness, it makes no difference where such things are treated, whether before the people or privately, whether with one person or with more, whether with friends or with enemies, whether in an unbroken speech or in a conversation, whether in tracts or in books, whether in letters, long or short, they are great; except perhaps that because a cup of cold water is a very little and unimportant thing, so what the Lord says is very little and unimportant, viz., that whosoever shall give one to his disciple shall not lose his reward; or, indeed, that when a preacher in the Church develops a sermon from this text, he ought to consider that he is talking on something of little weight, and so should express himself not in the moderate or in the grand style, but in the subdued style. It is not true that when we chance to speak to the people on this text, and God's Presence is with us so that we speak not unfittingly, that a kind of a flame darts forth, as it were, from that cold water, which inflames men's cold hearts to the accomplishment of works of mercy, through the hope of heavenly reward?

38. And still, although our teacher is necessarily the spokesman of great subjects, he need not necessarily always speak in the grand style, but in a subdued manner when something is being explained,²⁷ moderately when a thing is being criticized or commended,²⁸ but when something ought to be done, and we are speaking to those who ought to do it, although they do not wish to, then the matter which is an important one, should be stated in the grand style, and in a manner adapted to move their hearts.²⁹ But sometimes one and the same great matter is treated in a subdued way, if information is given; moderately, if commendation is made; and in the grand style, if adverse opinion is forced to change.³⁰ For what is greater than God Himself? But is that a reason why He should not be studied? Or should one who teaches about the unity of the Trinity use other than subdued language if he wishes to make a matter difficult of distinction understood, in as far as it is possible? In such a case, are embellishments demanded rather than proofs? Is the listener to be persuaded to do something, and not rather to be instructed so as to learn something? But when God is being praised either for Himself

²⁷As an example of the plain style, Auct. ad Her. gives a *narratio*, marked by a free, unconstrained, conversational tone; Cicero gives *Pro Caccina*, a piece of close reasoning; Augustine (Contr. Crese. 1, 16, 20) cites St. Paul on circumcision, or the distinction between the law and grace, and (De Doctr. 4, 20, 39) the 3rd and 4th chapters of the Epistle to the Galatians, all strictly dialectical. These models represent the two aspects of *docere* and the plain style: (1) its familiar, conversational side, and (2) its argumentative side: both, originally connoted in the Greek term *διαλέγεσθαι*. [Tr.]

²⁸Auct. ad Her. gives as example of the middle style, what seems to correspond to a *rationis confirmatio*, i.e., the elaboration of a proof; Cicero, the ornamental *De Manilia Lege*, with its praise of Pompey; Augustine, Cyprian's praise of virginity. This style is that most fitting for the panegyric. It depends on sound and rhythm for much of its pleasing effect. [Tr.]

²⁹To exemplify the grand style a peroration, highly figurative and elaborate, is given by Auct. ad Her.; the impassioned *Pro Rabirio* by Cicero; and 2 Cor. 6, 2-11 (ecce nunc tempus acceptabile, etc.) by Augustine. [Tr.]

³⁰The Auct. ad Her. (4, 8, 11ff.) exemplifies this by choosing a *narratio*, a *rationis confirmatio* and a *peroratio* to illustrate the different styles. All might belong to a single speech. Augustine proves the same possibility by showing, below, that the mysteries of God must be treated in the plain style, the praise of God in the middle style, the overthrowing of idols for the true worship of God, in the grand style. [Tr.]

or for His works, what a glory of beautiful and splendid language wells forth for one who can go to the very lengths of praise of Him whom no one fittingly praises, but whom no one fails to praise in one way or another. But if He be not worshipped, or if with Him or even before Him idols be worshipped, either demons or some other creature, the grievousness of this offense, and the exhortation to men to be converted from it, ought certainly be expressed in the grand style.

39. To speak more explicitly, we have an example of the subdued style in the Apostle Paul,³¹ where he says: *Tell me, you that desire to be under the law, have you not heard the law? For it is written that Abraham had two sons: the one by a bondwoman, and the other by a freewoman. But he indeed who was of the bondwoman, was born according to the flesh: but he of the freewoman, was by promise. Which things are said by an allegory. For these are the two testaments. The one from Mount Sinai, engendering to bondage; which is Agar. For Sinai is a mountain in Arabia, which hath affinity to that Jerusalem which now is, and is in bondage with her children. But that Jerusalem, which is above, is free: which is our mother.* So too, where he reasons, saying: *Brethren (I speak after the manner of a man) yet a man's testament, if it be confirmed, no one rendereth void, nor addeth to it. To Abraham were the promises made, and to his seed. He saith not, "And to his seeds," as to many, but as to one, "And to thy seed," which is Christ. Now this I say, that the testament which was confirmed by God, the law which was made after four hundred and thirty years, doth not weaken, to make the promises of no effect. For if the inheritance be of the law, it is no more of promise. But God gave it to Abraham by promise.* And because it might occur to the mind of the listener,

³¹St. Augustine chooses as examples of the plain style, first, a passage which, while being didactic, shows a certain amount of attractiveness through its incorporation of a narrative element—an allegory; next, a selection purely dialectical in its use of argument and refutation. This choice is in strict accordance with the conventional rhetorical theory, as explained above. The best classical authorities bear witness to the plain style as being the instrument of both the ordinary conversational narrative, and of strict logical demonstration. [Tr.]

“But why, therefore, was the law given if there is no inheritance of the law?” he put this objection to himself, as if raising a question: *What then was the law?* Then he answered: *It was set for the sake of transgression, until the seed should come, to whom he made the promise, being ordained by angels in the hand of a mediator. Now a mediator is not of one: but God is one.* And here arose an objection, which he put to himself: *Was the law then against the promises of God?* And he answered, *God forbid,* and gave his reason, saying: *For if there has been a law given which could give life, verily justice should have been by the law. But the Scripture hath concluded all under sin, that the promise by the faith of Jesus Christ might be given to them that believe—or something to that effect.* It belongs, therefore, to the duty of the teacher not only to make clear obscure matters, and to solve the difficulties in question, but also while this is being done, to anticipate other questions, which perchance may come up, so that our words may not be disproved or refuted by them, provided of course that the solution itself, also, of these occur along with them, lest we bring up what we cannot remove. On the other hand, it happens sometimes in the handling and solving of certain questions coming out of a first question, and of others coming out of these, that the strain of reasoning is drawn out to such an extent, that unless the disputant's memory be very strong and vigorous, he is not able to go back to the original question. But it is a very good thing to answer whatever objection can be raised, as it occurs, for fear lest it occur at a time when there will be no one to answer it, or lest it occur to someone present indeed, but silent, and he go away unhelped.

40. But in the following words from the Apostle we have an example of the moderate style: *An ancient man rebuke not, but entreat him as a father: young men, as brethren: old women, as mothers: young women, as sisters.* And in these words: *I beseech you therefore, brethren, by the mercy of God, that you present your bodies a living sacrifice, holy, pleasing unto God.* And almost the whole passage containing this exhortation is in the moderate style, but it is particularly fine in those places where, as with debts and pay-

ments, like things stand out with like, thus:³² *And having different gifts, according to the grace that is given us, either prophecy, to be used according to the rules of faith, or ministry in ministering; or he that teacheth, in doctrine; he that exhorteth, in exhorting; he that giveth, with simplicity; he that ruleth, with carefulness; he that showeth mercy, with cheerfulness. Let love be without dissimulation, hating that which is evil, cleaving to that which is good. Loving one another with the charity of brotherhood, with honor preventing one another. In carefulness, not slothful. In spirit fervent. Serving the Lord. Rejoicing in hope. Patient in tribulation. Instant in prayer. Communicating to the necessities of the saints. Pursuing hospitality. Bless them that persecute you: bless, and curse not. Rejoice with them that rejoice: weep with them that weep. Being of one mind one toward another.* And how beautifully is all this, flowing forth as it does, brought to a conclusion in a period of two *membra*: *Not minding high things, but consenting to the humble.* And a little below: *Persevering in this, render to all men their dues. Tribute, to whom tribute is due: custom, to whom custom: fear, to whom fear: honor to whom honor.* And this, flowing forth in *membra*, likewise is concluded by a period made up of two *membra*: *Owe no man anything, but to love one another.* And a little afterward: *The night is passed, and the day is at hand. Let us therefore cast off the works of darkness, and put on the armor of light. Let us walk honestly, as in the day: not in rioting and drunkenness, not in chambering and impurities, not in contention and envy: But put you on the Lord Jesus Christ, and make not provision for the flesh in its concupiscences.* If this were written: “And provision for the flesh in its concupiscences, make not,” it would doubtless please the ear with a more

³²Parallelism, particularly antithetical, and often emphasized by similar endings in clauses, amounting at times to rhymes (homoioteleuton), is a most important feature in the middle style, which differs from the grand style in its use of *figurae uerborum* (οχήματα λέξεως) rather than of *figurae sententiarum* (οχήματα διανοίας), and in the importance which it attaches to sound and rhythm rather than to vehemence of feeling and emotion. It traces its source to Gorgias and the first Sophists; it reached perfection in Isocrates: cf. *Orat.* 12, 38. [Tr.]

rhythmic close, but the stricter translator has preferred to keep even the exact word order. How this sounds in Greek,³³ the language in which the Apostle spoke, I leave to those to explain who are more versed in that tongue even to these technicalities; but to me, it seems that the word order—and it is the same as in our translations—does not even there run musically.

41. We must confess, certainly, that our writers are faulty in that elegance of style marked by rhythmic closings.³⁴ Whether this is the fault of translators, or, as I rather believe, they themselves purposely avoided such claptraps, I dare not say, since I confess I do not know. But this I do know, that if some one who understands this rhythm, arrange the endings of these writings in accordance with the law of the said rhythms, as can easily be done by replacing certain words by others of the same meaning, or by changing the existing order of words, he will recognize that none of those points which he has learned to consider important in the schools of the grammarians or rhetoricians are missing in these divinely inspired authors; and he will find many kinds of expressions of great beauty—beautiful indeed also in our own language, but especially so in theirs, none of which are to be found in that literature of which they are so vain. But care must be taken not to detract from the weight of the divine and authoritative utterances, while adding rhythm to

³³Augustine confesses to his youthful abhorrence of Greek (cf. *Conf.* 1, 14, 23), and admits his deficiency in it even in his maturer years. It is not from the standpoint of the professional scholar, therefore, that he makes his next assertion; he speaks merely as one who ventures his opinion, dictated by the general norm of taste. On the whole, however, it should be noted that Augustine’s knowledge of Greek was not inconsiderable: cf. Angus, S., *The Sources of the First Ten Books of the De Civitate Dei of St. Augustine* (Princeton, 1906), 236 ff.; De Labriolle 528. [Tr.]

³⁴Augustine’s criticism of Paul’s rhythm in the preceding paragraph, and his admission here and below of the deficiency of the inspired writers in the use of clausulae, even though rhythm, and especially cadences form such an important element of the middle style, is an indirect answer to sophisticated criticism of Christian style. A. has shown above, Paul’s artistry in the use of words, but he desires to prove that in Paul as in all the inspired writers, verbal beauty is not of paramount importance as it is in the Sophists, but that in the Christian writer, the ornaments of the middle style, when they occur, are always made subservient to the matter they embellish. [Tr.]

them.³⁵ For that musical training in which rhythm is thoroughly learned is so far from being lacking in our Prophets that the learned Jerome even makes mention of the meters used by some, in the Hebrew only however, for in order to keep the true meaning of the words he has not translated them metrically. But as for myself, to speak of my own tastes—better known to me, of course, than to others, and than those of others—although in my own language, as far as I think it reasonable, I do not neglect these rhythmic endings, still, in our authors I am better pleased to find them used very rarely.

42. The grand style of speaking³⁶ differs from this moderate style especially in this that it is not so much adorned by ornate expressions, as rendered passionate by the heart's emotions. For it uses, indeed, almost all of the ornaments of the other, but if it does not have them at hand, it does not seek them out. It is borne on, in fact, by its own vehemence, and catches up any beauty of style, which may occur, through the very force of the matter, but it does not put on any such through care of ornament. It is enough for its purpose, not that fitting terms be chosen with

³⁵Cicero's ideal is much the same, but expressed from the standpoint of one claiming the necessity of rhythm. He holds that that rhythm is best which is so unobtrusive as not to be noticed by the listener. Weighty matter makes this all the more possible. The audience is pleased by the beauty of the *thought* in the words, not realizing that technique has a great part to play in the accomplishment of the effect: cf. *Orat.* 58, 197. [Tr.]

³⁶The grand style and the temperate spring from the same source, the λόγος πρὸς τοὺς ἀχρωμένους of Theophrastus, representing rhetoric proper vs. λόγος πρὸς τὰ πράγματα, dialectic. It is of importance to distinguish between the two styles properly called rhetorical. The middle style is characterized by the ornaments of figures of words (οἰήματα λέξεως), the grand by the emotion of figures of thought (οἰήματα διανοίας). It was when these figures were themselves definitely distinguished that these two styles found their proper differentiation. The figures of words belong particularly to the middle style because they most readily bring about its end, *delectare*, the office as seen above, developed from Aristotle's conception of the personal character of the speaker (ἦθος) as a means of persuasion; the figures of thought belong particularly to the grand style as being most adapted to its end, *flectere*, that office conceived of by Aristotle as especially dealing with the emotions (πάθη). These traditional distinctions, Cicero takes over, explaining in *Orat.* 37, 128, the character of the two styles, which may together be called eloquence in the true sense of the word. [Tr.]

thought of the expression, but that they be governed by the ardor of the heart. For if a brave man be armed with weapons adorned with gold and jewels, being fully intent on battle, he accomplishes indeed what he does with these very arms, not because they are precious, but because they are arms; and still he himself is the same, and very formidable even when but anger furnishes a weapon for him at his seeking.³⁷ The Apostle urges that for the sake of the ministry of the Gospel all the evils of this life be suffered through the help of the consolation accompanying God's gifts. Great is the theme, and grandly it is treated, though still not without ornaments of style. *Behold says he now is the acceptable time; behold now is the day of salvation. Giving no offense to any man, that our ministry be not blamed. But in all things commending ourselves as the ministers of God, in much patience, in tribulations, in necessities, in trials, in stripes, in prisons, in seditions, in labors, in watchings, in fastings, in chastity, in knowledge, in long-suffering, in kindness, in the Holy Ghost, in charity unfeigned, in the word of truth, in the power of God; by the armor of justice on the right hand and on the left; by honor and dishonor, by evil report and good report; as deceivers and yet true; as unknown, and yet known; as dying and behold we live; as chastised, and not killed; as sorrowful, yet always rejoicing; as needy, yet enriching many; as having nothing, yet possessing all things. Behold him still on fire: Our mouth is open to you, O ye Corinthians, our heart is enlarged,* and so on, but it would take long to pursue it further.

43. And so, too, he urges upon the Romans that the sufferings of this world be overcome by charity, with certain hope in the help of God. His exhortation is in the grand style, and at the same

³⁷To prove that the essential of the grand style is emotional appeal, whether made with the help of ornaments of speech or not, A. proceeds to give three examples of this style, all of which are grand by reason of the emotion with which they throb, but all of which attain this end by different means: the first from 2 Cor. 6, 2–11, making use of figures of thought; the second from Rom. 8, 28–39, using the lesser ornaments, figures of words, but raising them above mere floridness of style by the ardor with which they are expressed; the third from Gal. 4, 10–20, wanting in embellishments, but grand by reason of its moving force. [Tr.]

time figurative. We know he says that to them that love God, all things work together unto good, to such as, according to His purpose, are called. For whom He foreknew, he also predestinated to be made conformable to the image of His Son; that He might be the Firstborn among many brethren. And whom He predestinated, them He also called. And whom he called, them He also justified. And whom He justified, them He also glorified. What shall we say then to these things? If God be for us, who is against us? He that spared not His own Son, but delivered Him up for us all, hath He not also, with Him, given us all things? Who shall accuse against the elect of God? God that justifieth? Who is he that shall condemn? Jesus Christ that died, but more, that is risen again; who is at the right hand of God, who also maketh intercession for us? Who then shall separate us from the love of Christ? Shall tribulation? or distress? or persecution? or famine? or nakedness? or danger? or the sword? As it is written: “For thy sake we are put to death all the day long. We are counted sheep for the slaughter.” But in all these things we overcome, because of Him that hath loved us. For I am sure that neither death, nor life, nor might nor height, nor depth, nor any other creature, shall be able to separate us from the love of God, which is in Jesus Christ our Lord.

44. And in writing to the Galatians,³⁸ although the whole Epistle is written in the subdued style, except at the very end where the moderate style is used, nevertheless he inserts one passage of such emotion, that destitute as it is of such ornament as we see in the selection just quoted, still it could not but be expressed in the grand style.³⁹ *You observe days he says and months, and years, and times. I am afraid of you, lest perhaps I have labored in vain for you. Be ye as I, because I also am as you: brethren, I beseech you: you have not injured me at all. And you know, how through infirmity of the flesh, I preached the Gospel unto*

³⁸This Epistle, as a whole, exemplifies the blending of the three styles in one composition, though with the predominance of one—the ideal in writing or speaking, which Augustine will treat of in chapters 22, 23, and 26. [Tr.]

³⁹An example of the unadorned grand style. The emotion of the writer is sufficient in itself without ornaments, to lift the listener to the higher levels of grandeur of speech. [Tr.]

you heretofore: and your temptation in my flesh, you despised not, nor rejected: but received me as an angel of God, even as Christ Jesus. Where then is your blessedness? For I bear you witness, that if it could be done, you would have plucked out your own eyes, and would have given them to me. Am I then become your enemy, because I tell you the truth? They are zealous in your regard not well: but they would exclude you, that you might be zealous for them. But to be zealous in good always, is good: and not only when I am present with you. My little children, of whom I am in labor again, until Christ be formed in you. And I would willingly be present with you now, and change my voice: because I am ashamed for you. Here have we examples of antithesis, or climax, or the resonance of *caesa* and *membra* or periods? And yet, notwithstanding, there is no flagging in the deep emotion with which we feel that the language of the passage is aglow.

45. But these writings of the Apostle, though clear, are nevertheless also deep, and are so written and handed down, that they not only require to be read and heard, but also to be explained, if anyone, not content with superficial knowledge of them, inquire also into their depths. Therefore, let us examine these kinds of style in the writings of those men who through their reading of the Scriptures have attained knowledge of the divine and saving truths, and have ministered it unto the Church. The blessed Cyprian uses the subdued style of speech in his book on the Sacrament of the chalice. For there he answers the question as to whether the chalice of the Lord should contain water only, or water mixed with wine. But we must give a passage therefrom by way of illustration. After the introduction, therefore, to his letter, already beginning his answer to the question proposed, he says: “But you should know that we have been taught in offering the chalice, to observe the tradition of the Lord, and not to do anything other than what the Lord first did for us, namely, to offer water mixed with wine in the chalice which is offered in commemoration of Him. For since Christ says, *I am the true vine*, the Blood of Christ is certainly not water, but wine; and so His Blood, by which we are redeemed and vivified, cannot possibly be held to be in the chalice when the chalice does not contain wine,

for in the wine is Christ's Blood manifested as foretold by the mystical testimony of all the Scriptures. For we find in the book of Genesis in regard to the sacrament, that Noe has foreshadowed it and has stood out as a type of our Lord's Passion, in that he drank wine and was inebriated therewith, and that in his own house he lay uncovered, with limbs bare; and that this nakedness of his father was exposed by his second son, but that by his elder and his younger it was covered up—but there is no need to carry the account further, since it is sufficient to explain this one point, that Noe, showing himself a type of the future reality, drank not water, but wine, and thus set forth a figure of our Lord's Passion. In like manner we see the sacrament of the Lord prefigured in the priest Melchisedech, according to what Holy Scripture testifies in these words: *But Melchisedech, the King of Salem, brought forth bread and wine. For he was the priest of the most high God, and he blessed Abraham.* And that Melchisedech was a figure of Christ, is declared in the Psalms, by the Holy Spirit, where in the person of the Father addressing the Son, He says: *Before the day star I begot Thee. Thou art a priest forever according to the order of Melchisedech.*" This and the remainder of the letter maintained the subdued style of speech, as is easy for readers to ascertain.

46. St. Ambrose, too, though treating a subject of great importance, to prove that the Holy Spirit is equal to the Father and the Son, uses, nonetheless, the subdued style, for the matter in hand calls not for embellishment in words, nor for the stirring of the emotions to move hearts, but for the proof of facts. And so, among other things in the introduction to this work he says: "Gedeon, being troubled when he heard through the oracle of God that though thousands of people would fail, still through one man God would save his people from the enemy, took a goat's kid, and in accordance with the instruction of the angel, placed the flesh thereof with unleavened bread upon a rock, and sprinkled them with broth; and as soon as the angel of God touched them with the tip of the rod which he carried, a flame burst forth from the rock, and thus was consumed the sacrifice which was offered. By this sign it seems to be indicated that the rock was a type of Christ,

for it is written: *They drank of the rock that followed them, and the rock was Christ.* This of course refers not to His Divinity, but to His Flesh which waters the hearts of His thirsting people with the ever-flowing tide of His Blood. It was therefore declared mystically that the Lord Jesus in His Flesh would be crucified and would wash away the sins of the whole world, and not only the sinful deeds, but also the evil desires of their hearts. For the flesh of the kid refers to sinful deeds; the broth to the allurements of the passions, as it is written: *For the people gave way to the worst passions, saying:— 'Who will feed us with flesh?'* and so the angel stretching forth his rod and touching the rock from which a flame came forth, signified that the Flesh of the Lord, filled with the Holy Spirit, would burn away all the sins of man's condition. And so it is that the Lord says: *I am come to cast fire on the earth,*" and so on, wherein he particularly devotes himself to setting forth and proving the matter.

47. The well-known encomium of virginity in Cyprian is an example of the moderate style: "Now our discourse directs itself to the virgins, who as their honor is higher, are therefore our greater care. They are the flower of the tree of the Church, the beauty and ornament of spiritual grace, its bright natural virtue: of its praise and honor, a work pure and untarnished, the image of God, answering to the sanctity of the Lord, the brighter portion of the flock of Christ. The glorious fruitfulness of their Mother the Church rejoices through them, and in them richly flowers; and in proportion as glorious virginity adds to her numbers, in so much does the Mother's joy increase." And in another place, at the end of the letter, he says: "*As we have borne the image of the earthly, let us bear also the image of the heavenly.* This image does virginity bear, righteousness bears it, holiness bears it, and truth; they bear it who are mindful of God's law, who observe justice with the fear of God, who are firm in faith, humble in fear, strong in every suffering, meek in sustaining injuries, ready to grant mercy, of one mind and heart in brotherly concord. And each one of these things, O holy virgins, ought you to keep, to love, to fulfill, for you with hearts free for God and for Christ, lead the way through your greater and better part, to the

Lord to whom you have dedicated yourselves. You who are advanced in years, be the teachers of the younger; you who are younger, minister to the older, and be an inspiration to those of your own age; urge on one another by mutual encouragement; rouse one another to glory by rivaling each other in acts of virtue; endure valiantly, proceed in the spiritual life, attain your goal gloriously; only, be mindful of us then when your virginity will begin to be in honor.”

48. Ambrose also uses the moderate, adorned style of speech when, as though in illustration, he holds up to virgins who have made their profession a model for their imitation. He says: “She was a virgin, not only in appearance, but in heart, who sullied not upright sentiments with any leanings toward deceit; humble of heart, dignified in speech, prudent in spirit, sparing of words, devoted to study, placing her hope not in the uncertainty of riches, but in the prayers of the poor, attentive to duty, respectful to discourse; one wont to seek God, not man, as the guide of her judgment; harming no one, but wishing well to all; rising to her elders, not envying her equals; avoiding boastfulness, following reason, loving virtue. When did she wound her parents even by a look? When did she disagree with her relatives? When did she condemn the humble? When did she mock the weak? When did she shun the needy? She was wont to go only into those gatherings of men which charity would not be shamed by, and which modesty would not permit her to pass by. There was nothing sharp in her glance, nothing bold in her words, nothing unseemly in her conduct; her bearing was not sensuous, nor her gait too free, nor her voice petulant, so that her outward appearance was an image of her soul, and was a picture of purity. For a fine house ought to be recognized as such at its very vestibule, and ought at the first step inside to show that no darkness lurks within, as though the light from the lamp inside were illuminating the parts without. What need to mention her abstemiousness in food, her superabundance in duties—the one exceeding the powers of nature, the other almost falling below nature’s needs; in the one case, no intermissions in time; in the other, the days doubled for fasting! But when the want of refection did arise, it was an-
